

2023 AAA/CASCA Annual Meeting Program

Table of Contents:

Wednesday, November 15	2 - 175
Thursday, November 16	175 - 457
Friday, November 17	457 - 752
Saturday, November 18	752 - 1047
Sunday, November 19	1047 - 1193
On Demand Sessions	1193 - 1226
Workshops	1226 - 1230
Installations	1230 - 1234
Special Events	1234 - 1269

Wednesday, November 15

1-080

Alternative Food Movements and the Threat of Cooption

12:00 PM - 1:45 PM TMCC - 714 B

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Food and Nutrition

ORGANIZER:

Ryan Adams (Lycoming College, Anthropology Department)

CHAIR:

Ashley McLeod

PRESENTER:

Ashley McLeod ,Gerardo Hernandez (Indiana University, Bloomington, Department of Anthropology),Ryan Adams (Lycoming College, Anthropology Department),Natalie Marshall (University of California, Los Angeles),Eva Steinberg

DESCRIPTION:

Alternative food movements throughout North America (Los Angeles, Indianapolis, Minneapolis, the American South) and the Caribbean (Puerto Rico) take on a range of forms and ideologies to counter and decolonize the mainstream, capitalist food system. This panel examines the motivations, identities, structures, ideas, impacts and implications of those various forms and ideologies of resistance. We ask, to what degree are sustainable, decolonizing, urban/community, permaculture, food sovereignty and other alternative food movements able to represent a real alternative to the mainstream, capitalist food system? To do this, we examine seed saving movements drawing on the notion of “heritage”; urban agriculture aligned with a community center addressing food insecurity; native-led culinary organizations and Indigenous entrepreneurs, chefs, and activists who are starting their own food businesses to further decolonial agendas; various community gardens and how each comes to objectify different social, political, and economic goals; and how food activists, chefs and farmers navigate colonial conditions to bring about an agroecology alternative to the capitalist food system.

Decolonial Cuisine: Entangled Politics of Food Revitalization in Native-led Culinary Organizations: This

paper follows three Minneapolis-based Indigenous culinary organizations—a market, a culinary education non-profit, and an award-winning full-service restaurant—and examines how they are utilizing a variety of methods to internally decolonize their culinary offerings and business practices while supporting their communities in a collective effort towards food revitalization and sovereignty. Significantly, Native culinary organizations exist at a tenuous crossroads, for they occupy complex political spaces as expressions of Indigenous identity and decolonization, and yet, the businesses are also subject to colonial capitalist market demands. As these organizations find widespread mainstream success, they are also criticized for their specific “decolonial” methods by community members, employees, and patrons. In examining the complexities produced in this emerging arena, I offer new insights into how Indigenous foods and identities are being (re)defined and (re)interpreted by food producers and consumers alike. Presenter: Ashley McLeod

Hearing the Souls of the Hungry: How Community Centers Uplift Their People : American youth today are developing a sense of their personal identities in relation to their social contexts and their interactions within them—often becoming more conscious of how their social identities relate to how they eat and the kinds of foods they have access to. Looking through the lens of the Felege Hiytwot Center, a non-profit urban youth STEM Agriculture Farm, this study examines the role of community centers in addressing food insecurity and the intersection of urban agriculture, food identity, race, and ethnicity. Over the span of eight weeks in the summer of 2022, students participated in surveys and mindful journaling about food insecurity, where data was collected on 15 students. Pre and post-survey data is centered around three aspects: (1) Students' relationship with food and eating while at the center; (2) Community contributions through science; And (3) how the center has provided for these students during the summer program. These data demonstrates that the center has provided a source of fresh, healthy produce for students and helped to promote sustainable agriculture practices in the local Indianapolis community. Because these students are taught how to grow, water, and harvest, they learn about the responsibilities of cultivation. This, in turn, gives the students a better understanding of where their food is coming from and access to these more diverse foods

that they are producing. This study argues that community-based urban agriculture initiatives play an important role in addressing food insecurity and promoting sustainable food practices at the local level, particularly in underserved and marginalized communities. Presenter: Gerardo Hernandez (Indiana University, Bloomington, Department of Anthropology)

Capitalism and Local Food in Puerto Rico: The agroecology movement in Puerto Rico has several components, including farmers with a range of social and ecological motivations, traditional and new urban market organizers and vendors, activists that overlap with several other emancipatory social movements like LGBTQ+ rights, anti-gentrification activism, and the University of Puerto Rico student movement, as well as chefs and restaurateurs at high-end restaurants with a farm-to-table concept. Different elements of this movement are centered on capitalist, non-capitalist, and anti-capitalist ideologies, and that presents a dilemma in terms of the degree to which the movement is prone to cooption by the mainstream capitalist food system. Presenter: Ryan Adams (Lycoming College, Anthropology Department)

“We’re Growing Differently”: Urban Gardens as Sites of Divergent Forms of Resistance in Los Angeles: While the popularity of urban agriculture has risen significantly in the United States over the last two decades, the social, political, and economic goals that undergird these urban growing projects vary widely across sites. This paper examines the semiotic landscapes of three urban food gardens in Los Angeles – particularly in the Mar Vista, West Adams, and Elysian Valley neighborhoods – in order to understand how these sites come to objectify participants’ divergent ideologies about capitalism, community-building, land relations, and the role of the state in alternative food movements. This analysis particularly takes into account how these urban gardens and participants’ visions of systems change are animated by different relationships to histories of racism, (dis)investment, and food (in)justice in Los Angeles. Presenter: Natalie Marshall (University of California, Los Angeles)

Contesting Heirlooms: The Un/Making of Heritage Crop Varieties: Amid growing alternative food movements, “heirloom” has come to signify the antithesis to conventional agricultural products: non-GMO, not uniformly shaped or colored, and more flavorful than their mass-produced counterparts. Whereas heirloom crops are, in theory, the product of generations of carefully selected open-pollinated plants that carry with

them the histories and traditions of that variety and its stewards, in reality, they are treated as static, unchanging entities, readily available for commercialization and mass-production. Heirlooms are desirable for their role as representatives of small, local, and alternative food movements, but, consequential to their rise in popularity, the stories and legacies of these crops falls to the wayside. In a way, the co-option of “heirlooms” represents a dual alienation: of the crop from its history and of communities from their seeds. This begs the question: What is obscured when a variety is labeled an “heirloom”? This paper traces the heirloom food movement in the US, landing on the work of the Utopian Seed Project and the Experimental Farm Network, organizations that seeks to promote crop biodiversity by connecting communities, seeds, and farmers. Their work straddles seed saving and breeding, complicating the traditional notion of a “heirloom” as a fixed entity. I argue that emphasizing the dynamism of seeds and plants offers a way to reconceptualize and reclaim heirloom crops. Presenter: Eva Steinberg

Belonging and Undocumented Young People in Transition: A Conversation

12:00 PM - 1:45 PM Virtual - Room 2
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Francesca Meloni

CHAIR:

Stephen Rusczyk (Montclair State University)

PRESENTER:

Francesca Meloni, Stephen Rusczyk (Montclair State University), Paloma Villegas, Francisco Villegas (Kalamazoo College, Anthropology and Sociology Department)

DESCRIPTION:

Scholars have often described undocumented migrants' belonging in terms of liminality - an in-between stage where subjects are in transition from one state to another (Menjívar 2006; Zavella 2011; Gonzales 2015; Boehm 2012). They argue that migrants find themselves neither from here nor there: they no longer fit into the cultural group of origin, and they are excluded from the 'host society,' with nowhere to belong. For undocumented young people, who are highly exposed to hybridization of identities and self-transformation,

this condition is said to be even more acute (Durham 2000). From this perspective, however, the primary attribute defining the condition of young people becomes one of deficit: the deprivation of identity, the failure to become incorporated, a condition of being stuck in a liminal phase where they wait to become complete. Using Francesca Meloni's new book 'Ways of Belonging: Undocumented Youth in the Shadow of Illegality' (forthcoming, Rutgers University Press) as the point of departure, this roundtable aims to bring nuanced and different perspectives on the experiences of belonging and the 'in-between' spaces inhabited by undocumented young people across various settings. How can we reconceptualise young people's belonging beyond normative and deficit assumptions? What does it mean to belong and endure in contexts of existential and legal uncertainty? How are configurations of 'illegality' embodied and experienced across different national contexts and social spaces? How can we understand undocumented young people's agency and resistance? And, what is the role of ethnography in narrating the stories and the struggles of undocumented young people? By bringing together six scholars who have conducted extensive ethnographic work with undocumented young people in different contexts (Canada, US, France, UK), this roundtable invites us to think about different ways that scholars can engage with activism, and how they can respond to political, social crises, and systemic violences of our contemporary societies. Collectively, the panel will share our experiences, dilemmas, lessons learnt, and ways of mobilising in academia and beyond.

Biomedical Objects: technologies, techniques, transitions

12:00 PM - 1:45 PM

TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Margaret MacDonald (York University), Matthew Rosen (Ohio University, Department of Sociology & Anthropology)

CHAIR:

Ellen Foley (Clark University, International Development, Community, and Environment Department), Margaret MacDonald (York University)

PRESENTER:

Janice Graham, Richard Powis, Bonnie Ruder, Adrienne Strong (University of Florida), Siri Suh (Brandeis University), Alexandra Widmer

DESCRIPTION:

The contemporary arena of global health is awash in innovative biomedical technologies: point-of-use drugs and devices, rapid diagnostic tests, personal monitoring devices for chronic illnesses, mHealth apps, new vaccines, hand-held imaging technology, and tech-enabled care such as telemedicine. This realm of objects also includes protocols, charts, checklists and audits. These biomedical objects are filling the new mandate for simple, high-impact, and low-cost solutions that can be scaled up without apparent need for health system infrastructure. Meanwhile basic biomedical technologies, supplies, and pharmaceuticals are often in short supply in health centres and hospitals across low and middle income countries, or missing in humanitarian medicine for reasons of policy and law. This Roundtable brings together medical anthropologists and critical global health scholars to discuss both so called 'innovative' and everyday biomedical objects – as well as the techniques and transitions of which they are a part. We seek to expand the notion of biomedical technology and challenge and nuance its positioning as a panacea in the inter-related projects of global health, health systems, and humanitarian medicine. While innovative biomedical technologies easily capture our attention, mundane materials are the foundation of strong health systems. How do medical anthropologists make sense of both innovative and mundane objects? What do we know about the ways in which biomedical technologies are present or absent, visible or invisible in formal and informal health care settings? And at the hands of various (public, private, authorised, unauthorised) providers? By what evidence, protocols, ideology, policy, funding, activism, regulatory regimes, commodity chains, market interests, 'relational

infrastructures' (Widmer 2023) and authoritative practice do they show up -- or not -- in health care settings? In this conversation we will also explore how biomedical technologies are entangled with the 'techniques' of biomedicine, particularly but not exclusively in the global South, that is, how the presence or absence, the use, non-use or improvised use of biomedical drugs and technologies might script and engender new subjectivities and transitions. We will also consider the role of users and co-designers who sometimes domesticate technologies and take them 'off script' in meaning and use. Roundtable participants will describe the technology or its absence they encountered in the field and explain how and why it captured their attention. They will address the intended, unintended, and improvised uses of emerging health technologies. Our conversation will attend to the conference theme of transitions by thinking about the clinical, social, cultural, economic, demographic, epidemiological or ideological transitions the health technologies may have been intended to join, create, or avoid in various settings. For instance, are they imagined as tools in the transition to reproductive justice? Or health equity? Or disease eradication? Or the creation of a regional centre of expertise?

DISCUSSANT:

Karen Ho (University of Minnesota)

DESCRIPTION:

This panel moves historically from the question of both

extinct and lively Patagonian life during colonial-capitalist expansion, and from the ways in which slave lives contributed in their vitality of early capitalist liquidity, to the contemporary era where 'zombie' and 'tax scavenged' houses in the urban Midwest allow for the tethering of questions of decay to financialization. We then move to the oil fields of West Texas, where immortalist petroleum corporations and the thousands of so-called 'zombie oil wells' they leave behind allow for an analysis of the uncanny energetics of capitalism's enduring destructive creations. We end with the necropolitical accounting of financialized urban water infrastructures and the ways in which 'water as life' rears up against it. Taken together, we ask what it means to call capitalism a 'simulacrum of life' and how capitalism mimics vitality while draining life of it; capitalizing on life while at the same time depriving life of life (Han 2022: 8). Working from the premise that capitalism is a necropolitical economy of organized destruction that cheapens and destroys life (Mbembe 2019), we analyze capitalism as necrotic force that simultaneously claims life and liveliness as its grounds (Sunder Rajan 2006). Capitalism, in short, does both – render the living dead as it renews its 'extractive-dispossessive form' in an era of financialized sovereignty (Gago 2015, 11) while at times rendering even the dead vibrant (in the form, for example, of financial instruments that allowed slaveholders to claim the value of dead or missing slaves and to thus profit from post-emancipation compensation schemes (Manjapra 2019)). What is alive – indeed immortal – is capital and the corporation alongside life; an immortality that finds new iterations in an increasingly authoritarian neoliberalism. The vitality of capitalism, in short, relies on the constant renewal of its necropolitical core; a vitality, as Byung-Chul Han puts it, where self-annihilation seems to be experienced as supreme aesthetic pleasure. Walter Benjamin described Fascism as an era where the threshold between the living and the dead collapsed – a collapse detectable in the violence of contemporary extractive capitalism as well. This point has long been made by indigenous movements that have long argued that extractive capitalism is a form of thievery that relies on the world's 'open veins' for sustenance (Estes 2019; Gómez-Barris 2017, xvii). It is this that social movements have long grasped when they speak, for example, of water as life; or of the contemporary era as a 'battle between Wall Street and Life.' What is at stake here are spaces and futures reclaimed; wrested from ruins and carved out alongside death. This panel seeks to explore this collapsing threshold, the grey-zone, the indeterminate living-dead order that is capitalism – its mechanisms,

aesthetics, violences, and politics. It also thinks through the life continuously arising out of and against it.

Life Itself: Darwin, Patagonia, and the Coming Catastrophe: As the site of centuries of successive processes of colonization and exploitation by European and United Statesian forces, Latin America has been iteratively mapped into hierarchies that are at once technoscientific and moral. Within these hierarchies, nature both separates scientific from political questions and acts as the ground of their encounter. At the southern tip of the Americas, the territory of Patagonia has long figured in imperial imaginations as the site of nature in its purest incarnation and thus as the ground for imperial theorizing about both the nature of the future and the future of nature. Charles Darwin's 1840s voyage on the *Beagle*, which was mapping trade routes for British merchants, brought him to his decisive encounter with Patagonia. Patagonia's extinct animal remains, along with what he perceived as its soon-to-be extinguished human populations, were critical to the development of his theory of natural selection and the understanding of life as an implacably evolving force that natural selection gifted to political theory in the age of global capitalist expansion. Darwin was deeply influenced by his senior contemporary Charles Lyell, the geologist who argued against Biblical catastrophism and for a steady state of nature over vast distances of time, and his theory of natural selection mapped life into this steady state. But both Patagonian territories and their human and more-than-human inhabitants refuse this grounding, manifesting both dramatic telluric activity and rapid species replacement through colonial rather than "natural" processes. This refusal in turn troubles the distinction between life itself and the ground from which it is thought to emerge and against which it is thought to operate. This paper uses these troubles to speculate on what resources Patagonian life might offer toward a newly political catastrophism, and what a politics of catastrophism might offer struggles against capitalism in Patagonia and beyond. Presenter: Carlota McAllister (York University)

Liquid Death (or, the Problem of Liquidity): This paper explores how merchants used the lives of enslaved and indigenous peoples to increase liquidity during the eighteenth and nineteenth centuries. Rather than conceptualizing human bondage primarily through the lens of commodification, this paper asks how slavery enabled new financial instruments and thus new financial possibilities and opportunities for economic growth. More specifically, I ask how and why merchants moving to the Deep South after the Transatlantic slave

trade was abolished in 1808 used slaves as collateral in mortgage agreements that gave them access to land in places like rural Virginia and Louisiana. In this context, a merchant's assets might include a woman he had purchased several years prior, and raped, as well as their bi-racial offspring; and, they might appear in public as a family. In other words, establishing families with enslaved people did not prevent planters from claiming them as financial assets. Wielding violence in the most intimate ways, these merchants capitalized on the commercial value of their children and intimate relations. Some of these planters would eventually draft wills that bequeathed assets to the women and children they simultaneously treated as family and held in bondage, fostering social and economic mobility for these newly freed people of color in a peculiar paradox. In this context, the lives—and, more specifically, the expertise—of enslaved workers became the basis for strategies merchants developed to increase liquidity. And, as I show, slave mortgages built on a novel conception of the mortgage that British colonists had developed with the dawn of the US colonies primarily as a strategy for dispossessing indigenous peoples. Presenter: Michael Ralph (Howard University)

Zombies, Scavengers and the Frontiers of Housing Financialization: The last American housing crisis gave rise to a strange figure in the urban Midwest: the Zombie House. Caught in between absentee occupants who had fled underwater mortgages but also absentee banks holding the mortgage who hesitated to take the property to deed, such houses moldered even as they became a locus of local anxieties concerning blight and unseemly activities. Subsequent policies have tamped down on the havoc associated with Zombie Houses, even as they have left largely intact a process that physically corrodes other precariously held residential properties: tax scavenging. In Cook County, Illinois, the annual Tax Scavenger Sale allows anyone to bid on and buy homeowners' outstanding property tax debt. Homeowners who already have difficulty navigating a regressive taxation system then become obligated to entities seeking to financialize municipal tax obligations. Based on ongoing research, this paper considers the Zombie House alongside the Tax Scavenged House in order to crack open the fraught relationship between house maintenance, decay, individualized responsibility, and the financialization of citizens' obligations to their commonweal. Presenter: Catherine Fennell (Columbia University)

Zombies: Corporate Immortalism and Extractive Necromancy: In the oil fields of West Texas, immortalist

petroleum corporations not only militate against the living but animate the dead. The world's most prolific fracking zone is beset by thousands of so-called 'zombies,' depleted oil wells abandoned by petroleum corporations over decades of extraction. Today, amidst the American shale revolution they are coming erratically to something like life. They corrode, rot, and ripen, erratically leaking hydrocarbons, industrial byproducts, and hazardous gases into water tables, landscapes, and atmospheres. In this paper, the undead stirrings of so much 'dead labor' in Texas summon a critique of corporate capitalism attuned less to cycles of creative destruction than to the uncanny energetics of its enduring destructive creations. Presenter: Cameron Hu (Research Institute for Sustainability, Helmholtz Centre Potsdam)

Wall Street versus Life: When water movements represent their struggle for water as commons as a 'battle between Wall Street and Life,' their represent the vitality of water and their struggles for it as buoyed by life and by the dependence of all life on earth on water. They also implicitly represent 'Wall Street' as necropolitical force that 'kills' life and violates its integrity and 'freedom.' The task of this paper is two-fold – first, to ask how financial instruments in the form of financialized water utilities generate the conditions for necropolitical life (by which I mean household indebtedness, infrastructural ruination, and pollution). Second, I ask how life – and the globally circulating slogan “Water is Life” – is articulated against this necropolitics across different scales and forms of political expression. Against the life-draining necropolitics of financialized accounting and forms of valuation, and against the simulation of vitality that is capitalism, water movements posit other modes of valuation and other modes of future making. As neoliberalism renews its “extractive-dispossessive form” in an era of financialized sovereignty (Gago 2015, 11), it renews its necropolitical core as well. And yet, it is also challenged by the vitality of the politics of water as life, now a rallying cry around the world. Presenter: Andrea Muehlebach (University of Toronto, Department of Anthropology)

1-145

Ecologies of War, Displacement, and Justice in More-than-Human Worlds

12:00 PM - 1:45 PM TMCC - 718 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Daniel Ruiz-Serna (McGill University, Department of Anthropology)

CHAIR:

Eleana Kim (University of California, Irvine, Department of Anthropology)

PRESENTER:

Daniel Ruiz-Serna (McGill University, Department of Anthropology), Bettina Stoetzer (Massachusetts Institute of Technology)

DISCUSSANT:

Karen Ho (University of Minnesota)

DESCRIPTION:

Recent approaches to war, displacement, and political violence underscore the way their afterlives recompose large communities of beings wherein humans and their orders are not the only ones. Counterintuitively, these approaches recast war and injustice as a generative structure, paying attention not just to what they prevent, hinder, or destroy but to their enduring condition and to the ecological re-configurations they entail. At the same time, projects that revolve around conservation, reparation, and citizenship turn topographies of fear into ecologies of hope but also of resistance, where new possibilities to understand justice, race, and environmental protection emerge. This roundtable brings together authors Eleana Kim (*Making Peace with Nature: Ecological Encounters Along the Korean DMZ*), Bettina Stoetzer (*Ruderal City: Ecologies of Migration, Race, and urban Nature in Berlin*), Munira Khayyat (*A Landscape of War: Ecologies of Resistance and Survival in South Lebanon*), and Daniel Ruiz-Serna (*When Forests Run Amok: War and its Afterlives in Indigenous and Afro-Colombian Territories*) to discuss how their respective ethnographic settings become unlikely conceptual and methodological neighbours. Situated in unsettled landscapes, these ethnographies discuss how the afterlives of war, displacement, and political violence are not only related to shrapnel and bullets but also to the way people, plants, animals, and places are simultaneously intertwined as objects and subjects of harmful political projects.

1-050

Enduring Colonialism under Authoritarian Regimes

12:00 PM - 1:45 PM

TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

University), Marshall Kramer (University of Chicago,
Department of Anthropology), Ting Hui Lau (National
University of Singapore, Department of Sociology)**

DISCUSSANT:

**Dwaipayyan Banerjee (Massachusetts Institute of
Technology)**

DESCRIPTION:

In the contemporary world, democracies are deconsolidating and authoritarianism is rising. At the same time, the world is becoming more multipolar and, as it does so, scholars are recognizing various forms of non-Western and South-South colonialism. In this context, imagining new ways of resisting, protesting, collaborating, and building solidarity has never been more urgent. But colonized subjects living within authoritarian regimes have limited possibility for protest and pay a high cost for dissent. For such subjects, the sheer fact of endurance can form a pragmatic politics of resistance. This panel focuses on the politics of endurance in such colonial contexts within authoritarian regimes. It asks: What is the relationship between colonialism and authoritarianism? How do people endure colonialism under authoritarian regimes? What material, cultural, and psychic resources do people draw on to endure and persist under conditions of erasure? How does endurance haunt colonial and authoritarian realities and imaginations? In what ways might endurance usher in change or itself constitute a mode of transitioning? Conventional understandings of endurance tend to assume that the choice to endure represents compliance or reproduces structures of domination. This panel unpacks the underrecognized potentials of endurance by examining ethnographically how people persist and resist across authoritarian colonial contexts in China, Myanmar, Palestine, Russia, and Singapore. Focusing on these core themes, the papers in the panel span a diverse range of analytical

objects. Menchaca Ruiz analyses the quotidian way Palestinians living under occupation make motions toward futures that are being actively foreclosed. Ferguson examines how Sakha speakers in Northeast Russia deploy language to covertly resist Russian colonial rule. McGrail examines data colonialism in Singapore, investigating how the Muslim minority endures and imagines alternative futures under oppressive surveillance regimes. Kramer unpacks the complex politics of indigenous extraction economies in Myanmar and how these indigenous political economies create new political possibilities within and beyond the colonial nation state. Lau examines how the intimate politics of staying together allow Indigenous Lisu communities in China to maintain their ways of life under forces of colonial erasure. Together the papers invite discussion about the forms of life possible under authoritarian rule and ongoing colonialism. Examining ethnographically the knotty configurations of complicity and hope that emerge under these conditions, panelists pay attention to the roles of imagination, silence, and haunting in allowing people to create meaning, maintain openings, and imagine new futures under conditions of death and foreclosure.

Somewhere in Advance of Nowhere: Palestinian Survivance : This presentation considers two sides of Palestinian survivance (Vizenor, 1999)—the habits of refusal that are cultivated and deployed to maneuver the foreclosures of future brought on by the Israeli occupation, as well as the active creation of “homeplace” (bell hooks 1990) as a site of resistance. Both of these efforts emphasize the quotidian as a critical site of future-building. I consider several vignettes of daily Palestinian survivance that, when taken together, illustrate how Palestinians conjure and make motions toward future in a place where a (sovereign) Palestinian future is being actively foreclosed. In doing so, I invite us to be attentive to the small gestures of Palestinian life, and to the knowledge nestled in those gestures, revealing a careful optimism—a refusal to resign to what is, and instead, an investment in what could be—a “flickering illumination of the not-yet-here” amidst the “totalizing rendering of reality of the here and now” (Muñoz 2019). Presenter: Laura Menchaca Ruiz (Bard College)
The Risks of 'Accidental' Language: Pushing Back Against Ongoing Russification through Sakha : This paper examines how Sakha speakers in northeastern Russia promote Sakha language through popular music and related media (e.g., YouTube and social media video sharing) in the midst of Putin's authoritarian regime-- which has been reducing linguistic rights and pushing

for the embrace of ethnonationalist Russian-speaking and Russian-centric identity over the last 5-10 years. Inspired by de Certeau's (1984) discussion of tactics and strategies I look at micro-level language planning from an 'accidental' angle (Moriarty and Pietikainen 2011). While young Sakha creatives may not always set out to explicitly engage in language policy and planning, they still have an influence on language ideologies and practices—and thus resist ongoing colonization via the Russian federal government. Focusing on the period from 2014 to present, I examine recent Russian federal policy that works to stymie the promotion and valorization of Indigenous and minority languages, and reveal how some young Sakha are negotiating their non-Russian identities and language ideologies through attention to language usage in online media. I consider the broader project of minority/Indigenous language maintenance (and its decolonial aims) in light of how many citizens with non-ethnic-Russian, Indigenous identities are speaking out on the importance of decolonizing senses of belonging in light of the full-scale war in Ukraine. For some Sakha, these 'accidental' or covert acts of resistance by creatives are not enough, and their acts are juxtaposed with direct calls in recent months by activists to be less covert and speak out more overtly against Russian colonization and the war. Presenter: Jenanne Ferguson (MacEwan University, Department of Anthropology)

Enduring and Resisting Data-colonialism through Art in Singapore : In the digital age, authoritarianism and colonialism are not only the domain of states. Increasingly, large tech companies encroach on public and private space in a process of data-colonialism. In Singapore, state and industry work together to annex increasing amounts of private data. The Smart City, created by Singtel and Govtech, is also a surveillance city and Singapore's Muslim minority feel its effects acutely. Muslim futures in Singapore are associated with violence, which in turn justifies surveillance. Therefore, imagining alternative futures has become a vital form of resistance for Singapore's Muslims. However, protest can result in harsh punitive measures, in 2022 two activists were arrested for 'illegal procession' whilst wearing anti-capital punishment t-shirts. Some Muslims activists have looked to art, a widely dismissed cultural form, as a site to challenge foreclosed futures. For example, in 2021, Substation, a Singaporean art space, closed due to high rents and was taken over by state-run Nation Arts Council. Despite gentrification and state takeovers, Substation's annual Septfest event went ahead. This included a new play by Malay Muslim activist and playwright Alfian Sa'at: "The death of

Singapore Theatre as scripted by the Infocomm media development authority." The play recounts its own censorship. By sticking to the script Sa'at undermines the state's authority to write the future. How does endurance against ambivalence and censorship allow for alternative futures to be molded? This paper examines how art complies with and resists data-colonial visions of the future, not only through their content but through their will to endure. Presenter: James McGrail (Leiden University)

Settler Colonialism and the Endurance of an Indigenous Political Economy in Upper Myanmar: This paper considers the enduring place of indigenous communities in the inter-Asian resource extraction economy of Upper Myanmar. Where Myanmar has recently made news as its democratic government has again transitioned to military rule, this paper attends to the multiple, inter-Asian colonialisms and authoritarianisms that indigenous Kachin, Rvwang, Lisu and Tai communities have endured from within and across national boundaries and regimes. Departing from debates over whether or not Myanmar's long-persecuted, non-Bamar communities should be understood as races or ethnicity within the referential framework of a Burmese nation (Walton 2013, Ferguson 2015, Campbell & Prasse-Freeman 2019), I argue that communities in Upper Myanmar should be understood as indigenous communities placing emphasis on how conflicts with the state are shaped by struggles over resources, lands, and lifeways. Following scholars of inter-Asia (van Schendel 2012, Chang & Tagglicozzo 2014, Cederlöf et al 2022, Sarma et al 2023), and particularly the work of C. Pat Giersch (2006), I trace out parallels between the economic and social life in this region and the multipolar colonial milieu of the Americas, suggesting that Upper Myanmar (as well as neighboring regions of India and China) constitutes an enduring zone of inter-Asian settler colonialism. In conclusion I think with theorists of indigenous political economy (Menzies & Butler 2001, 2008; Coulthard 2014; Neville & Coulthard 2019) to consider how the enduring and multiple roles of indigenous communities in resource extraction industries—from the production of rare hardwoods and earths to herbal medicines and endangered wildlife—form an indigenous political economy that creates new political possibilities within and beyond the nation state. Presenter: Marshall Kramer (University of Chicago, Department of Anthropology)

Staying Together: Indigenous Survivance on the China-Myanmar Border : In the Nu River Valley on the China-Myanmar Border, a region officially part of China,

Indigenous Lisu farmers have long been grappling with forces of Chinese colonial development. Since the 1980s, the Chinese state has been compelling Lisu to give up their subsistence lifeways, move into urban settlements, and send their children to government boarding schools. These processes have been disrupting Lisu indigenous lifeworlds, resulting in many Lisu experiencing development as a form of death. Nonetheless, official Chinese discourses frame development as a gift which Lisu must gratefully accept. Under the current Chinese administration, Indigenous groups like the Lisu have little avenue for protest and must find creative ways to survive, live meaningfully, and build community. What does it mean to endure colonization? How do people maintain their cultural way of life in a context where survival is premised on assimilation and erasure? In this paper, I theorize endurance through the Lisu notion of “stay” or nie. I unpack how everyday practices like storytelling, care, play, and prayer constitute modes of staying together under circumstances of loss and severance. Through these intimate practices Lisu stubbornly sustain their relationships with the land, refuse reconciliation, remember the ancestors, and imagine alternative possible futures. Examining how seemingly compliant ethnic minority farming peasants maintain antagonistic or oppositional relationships toward authoritarian power structures, this paper contributes to discussions about colonial subjectivity by complicating the binary between complicity and compliance, on the one hand, and resistance and protest, on the other. Presenter: Ting Hui Lau (National University of Singapore, Department of Sociology)

Global Japans: Probing the National, Digital, and Transnational Movements in the World

12:00 PM - 1:45 PM TMCC - 715 B

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Suma Ikeuchi (University of California, Santa Barbara)

CHAIR:

Suma Ikeuchi (University of California, Santa Barbara)

PRESENTER:

C. Anne Claus (American University), Suma Ikeuchi (University of California, Santa Barbara), Josh Pilzer, Kimberly Hassel (University of Arizona)

DISCUSSANT:

Christine Yano (University of Hawaii, Manoa)

DESCRIPTION:

The relationship between the national and the transnational is fraught with ambiguities. On one hand, there are constant tensions between nation-states and transnational regimes, as we witnessed during the COVID-19 global pandemic. Although nation-states alone cannot solve complex global issues such as decolonization and climate change, nationalism still holds unwavering sway over the psyches of many political subjects. At the same time, transnational movements, often mediated by digital media, can also challenge the statist visions for national harmony built on racial and gendered hierarchy. Either way, the national and the transnational are often cast in an antithetical light in such discourses. On the other hand, transnational movements can also reinforce nationhood, rather than undermining it. From guest worker system to the Belt and Road initiative, there exist ample evidence to the fact that cross-border flows of people, goods, capital, and information ultimately serve the interests of powerful nation-states. The key factor, of course, is the global market, which has been entangling the globe together since the dawn of modern era. Thus, the national and the transnational work together symbiotically, rather than being at odds. Given the above complexity, a general inquiry into the relationship between the national and the transnational is of critical importance today more than ever. This panel offers just such an inquiry by adopting the framework of 'Global Asias.' As Anthropologist Christine Yano wrote, 'Global Asias refers to transnational, transhistorical, and transgeographic flows, whether of peoples, ideas, practices, goods, diseases, and environmental concerns of Asia and its related communities (both inside and outside Asia) across time and space... Global Asias focuses on the circuits themselves, on the oceanic flows and dynamic encounters' (Yano 2021, 851). In conversation with the idea of Global Asias, the curated papers together probe this central question: How does the national, transnational, and the glocal take shape in interaction with various regimes of race, mobility, capitalism, colonialism, and technology? Extending the notion of Global Asias to Japan, the panelists explore the interconnected and border-crossing 'Global Japans' from diverse angles: the challenges facing the seafood cooking culture in Japan in contrast with the broader transnational sustainability efforts (Claus); a critical comparison of Filipino migrant care workers and eldercare technologies in aging Japan, and their relations to the global capitalist market (Ikeuchi); the

stories and songs of 'Korea's Hiroshima' from Korean atomic bomb survivors and their children (Pilzer); the potential of viral justice in the digital activism by Black Japanese youth, as well as the opportunities and dangers of social media as a global space (Hassel). With these critical examinations, the panel will stimulate a conversation about the tensions and confluences between the local, the global, the national, and the transnational. While the focus is on Japan, the forces under analysis go far beyond its territorial borders and course through many other spaces that are physical, digital, and psychological. As such, the panel firmly situates 'Global Japans' in Asia and in the world, making it relevant to the broader discipline of anthropology.

Imagining a Future Without Fish? Transformations in Japanese Culinary Culture: Seafoods are an indispensable part of Japanese cuisine for transnational audiences. This status is enshrined in UNESCO's 2014 World Heritage distinction—one that declares fish to be an integral part of washoku. Within Japan, however, traditional culinary culture is in transition as the consumption of meat in recent years has overtaken that of fish. Alongside the decline in fish (because of over harvesting and climate change) and fishers (who are aging out of the profession), seafood cooking culture today faces an unprecedented crisis. Fewer cooks are willing or even able to process and cook fish at home, putting government agencies and chefs alike on high alert. How are seafood advocates attempting to address the ensuing intertwined ecological, gastronomic, and cultural transformations? Rather than a highly technocratic approach that oftentimes emerges in environmental projects, contemporary responses to these changing conditions have enlisted the help of cultural icons like Sazae-san, Sakana-kun, and traditional rakugo poetry. This paper analyzes one project designed to remake cultural tastes through the substitution of one undesirable fish for other more beloved species. Based on ethnographic research conducted in 2022-2023, the paper illuminates how the project was conceived and undertaken, and furthermore analyzes underlying assumptions about who is responsible for responding to large-scale cultural changes. Using this example, the paper then delineates how approaches to sustainable seafood in Japan contrast with broader transnational efforts, contrasting their structural approach with consumer-based advocacy elsewhere, in order to illuminate the connections and contingencies that mark this global issue. Presenter: C. Anne Claus (American University)

Between Emotional Labor and Productive Care: Migrant Caregivers and Care “Robots” in Aging Japan: Care is at once a circulating resource and a relational practice (Buch 2015). As such, it sits at the ambiguous intersection of market and intimacy that constantly remakes the conditions of kinship. This paper asks the following question by approaching kinship not just in narrow juridical and genetic terms but more broadly as “mutuality of being” (Sahlins 2013): How does the global market of care impact the kin-making potential of caregiving? Japan, the nation with the oldest population in the world, has been experimenting with multiple “solutions” to care shortage over the past few decades. On one hand, an increasing number of migrants—initially Filipinos and Indonesians but increasingly Vietnamese—work as caregivers in Japan today. The marketization of care in the age of globalization fuels the phenomenon of “international division of reproductive labour” and often exploits the surplus value of migrants’ work (Parreñas 2015). On the other hand, the Japanese government has been heavily subsidizing the development of service robots, as some politicians embrace “uniquely Japanese” robots more enthusiastically than “foreign” migrants (Robertson 2014, 2017). Although the savior-like portrayals of care technologies in the media may not be realistic (Wright 2023), national policymakers continue to invest in what they call “productive care” in the hope that such care robots can turn into a profitable export industry for the demographically declining nation. Based on a fieldwork about Filipino caregivers and care technologies, this paper offers some preliminary insights about the evolving meaning of kinship in the globalizing landscape of care. Presenter: Suma Ikeuchi (University of California, Santa Barbara)

Hidden Japans: Listening to “Korea’s Hiroshima”: What is “Korea’s Hiroshima?” It is Hapcheon, a county in rural Southeastern Korea where tens of thousands of Koreans were recruited during the Japanese colonization of Korea (1910-1945) to work in the munitions factories of Hiroshima; at the same time it is a gloss for Korean modern experiences of that city, its atomic bombing at the hands of the United States, the 35,000 Koreans who died as a result, and the losses and sufferings of Korean survivors of the atomic bombing and their descendants. “Korea’s Hiroshima” is one or perhaps more hidden Japans, suppressed precisely to tidy the borders of the nation-state and to consolidate Japanese ownership of atomic victimization. But survivors and their children tell

stories and sing songs that contest that tidiness and that ownership, and demonstrate the ways that the nation is itself a transnationally distributed entity, enfolded with others, born in the transnationality of empire and echoing in the transnational circulation of language, song, story, and people. These hidden Japans in the mountains of Southeastern Korea are also a hidden Korea, suppressed in that place in the interest of tidying national identity and excusing one of the worst atrocities in the history of the world. Listening to the voices of the generations of Korean victims of the atomic bomb, one can hear both nations upended at once in victims' calls for global and national recognition, justice, and a demilitarized peace. Presenter: Josh Pilzer

Are the Kids Alright? Digital Activism, Identity, and Viral Justice in Contemporary Japan : Although smartphones and Social Networking Services (SNS) are perceived to be universal, they are localized differently based on context. In the case of Japan—a pioneer of mobile Internet—the localization of these technologies has reconfigured sociality following the erosion of *ibasho* (places of belonging) brought about by the economic downturn of the 1990s and more recently by the COVID-19 pandemic. In this paper, I introduce the intergenerational discourse on SNS and smartphone usage in contemporary Japan, with a focus on perceived danger *vis-à-vis* opportunities for community-building and intervention. I highlight the (dis)connections between youth narratives, adult concerns, and societal measures for digital safety. While many adults focused on “addiction” and life rhythms, youths centered cyberbullying and mental health. Youths' discussions of smartphones and SNS as mediators in sociality were accompanied by deep reflections on what these devices can and cannot do—along with what these devices should and should not do. I incorporate Ruha Benjamin's work on viral justice, highlighting the potential of the digital in instilling change in Japanese society. I use the case study of digital activism among Black Japanese youths during the Black Lives Matter (BLM) demonstrations of 2020. Black Japanese youths on Instagram and Twitter used storytelling to contest racialized stereotypes, address misunderstandings of BLM, and raise awareness of the racism experienced by Black individuals in Japan. Ultimately, storytelling constituted an intervention against the perception that “racism does not exist in Japan”—a perception that stems from global and local imaginations of Japan as

“homogeneous.” Presenter: Kimberly Hassel (University of Arizona)

Keeping Place in Transition: Urban Places, Relations, and Resistance ´

12:00 PM - 1:45 PM

TMCC - 802 A

Oral Presentation Session

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Jamon Halvaksz

CHAIR:

Amanda Micek (University of Texas, San Antonio, Department of Anthropology), Christina Frasier

PRESENTER:

Alisha Cherian ,Chun-Yu (Jo Ann) Wang (Stanford University, Department of Anthropology),Megan Sheehan (University of Arizona),Amanda Micek (University of Texas, San Antonio, Department of Anthropology),Christina Frasier ,Celeste Diaz Ferraro (Colorado College)

DESCRIPTION:

This session examines transitional urban places through the concept of 'place-keeping'. What does it mean to keep and maintain places in urban settings? How does one preserve stability in the face of rapid change? How do people preserve a sense of identity when facing urban issues like gentrification, rezoning, migration, state resettlement programs, pandemic transformations, and loss of important cultural institutions? How do communities maintain a sense of place when forced to migrate? Forces of change continuously exert pressure in urban spaces, and this session explores the relationships between people, entities, and contested places. We borrow the term place-keeping from urban planning in order to open a new space of thinking through the tension of phenomenological and post-structural ideas of the urban. Dempsey, Smith, and Burton (2015) define place-keeping as 'long-term and responsive management which ensures that the social, environmental and economic quality and benefits a place brings can be enjoyed by present and future generations' (13). While focused on governance and policy, the concept is also generative of quotidian consideration of what makes places loved and enjoyed. We use it to ask different kinds of questions of urban places: How are experiences of urban places, in this moment, kept meaningful in

spite of climate change, state agencies, corporations, racialized politics of planning, pandemic diseases, etc.? What sense of loss do people experience when their places succumb to commercial and governmental forces? What is the relationship between keeping place in rural and urban contexts? How do people use creativity to placekeep? Through placekeeping we will explore sites of resistance and struggle that maintain urban places and foster pockets of identity, relationality, and care. In keeping place, residents continue to make and remake their spaces as they wish by preserving tangible and intangible cultural practices. Placekeeping is also transitional, between being made and being taken away. More than just asking how we make places, this session explores how we retain them as part of who we are. Keeping place is a call to action, to fight for a shared space--for one's identity, as well as for the relationships that are valued by residents and their neighbors. While akin to counter-spaces (Lefebvre), placekeeping highlights the shared work of maintaining community, connecting to urban places as embodied and shared experiences. Placekeeping, for example, is the work of maintaining community spaces in the face of corporate and city planning. It is also where communities maintain local identity and heritages through performative work of community events, businesses, street art, murals, and sign painting practices. It is a language of place that resists the transition to hegemony and homogenization. Contributors to this session will highlight how we inhabit the city as lived places where values are at stake. But it also allows us to attend to urban places as sites of resistance to gentrification, food apartheid, state and local immigration policies, and social violence. By doing so, participants shift the focus from practices of making place to the ongoing routines of living in them.

The Right to Conviviality in the City: Indian Spaces in Interracial Singapore: Since its independence, the Singapore state has used a comprehensive strategy of racial integration to achieve racial harmony and maintain a certain racial hierarchy among its four official racial groups (Chinese, Malay, Indian, and 'Other'). The state ensures that Indian Singaporeans remain racial minorities demographically and politically through racial quotas in immigration and integrationist public housing policies. The latter in particular produce racially mixed neighborhoods, diluting the presence of Indian Singaporeans and other racial minorities across the island and designating much of public urban space as formally interracial and practically Chinese Singaporean. However, perceived, conceived, and lived (Lefebvre

1972) Indian spaces do exist as well. This paper focuses on the everyday (Low 2017) public spaces in Singapore that temporarily and routinely become 'Indian' through Indian social activity. This paper explores how Indian Singaporeans enacted a right to the city (Harvey 2008) as a right to conviviality against state policing, surveillance, and incursion as they reveled in two sets of spaces – the shared spaces of public housing estates known as 'void decks' and the annual festival spaces of Thaipusam in the city center. Through the social and phenomenological concept of 'making noise', this paper builds on urban scholarship on the sensorial (Hakins 2013, Kapoor 2021) and the ludic (Menoret 2014, Merabet 2014) as it attempts to gain a deeper understanding of the racial geographies of Indian Singaporean public life. Presenter: Alisha Cherian

Living Kampung in Taman: Reclaiming Chinese Rurality in Developing Malaysia : This paper disrupts race-based identification of social groups, occupations, spaces in colonial and post-colonial Malaysia, by exploring the overlooked and undertheorized reality of Chinese rurality in Pengerang, a small fishing village in Peninsular Malaysia. It does so by seeing the kampung (village) as multiple, overlapping processes of becoming rather than a self-evident administrative unit or ethno-religiously homogeneous community, and investigating the co-production of place and identity through discursive, practical, imaginative projects of dwelling. Specifically, it traces the development of multivalent yet situated semiotics of 'village' among the Pengerang Chinese Malaysians informed by pre-colonial and colonial frontier plantations, early post-colonial anti-communist incarceration camps, and contemporary oil development resettlement schemes. Post-colonial politics in Malaysia has focused on a project of creating 'New Malays' who are industrious and industrial, negating colonial identifications of race with particular occupations and spaces, i.e. Malays as rural agrarian workers and Chinese as urban commercial and industrial workers. This politics is apparent in the state-led, multi-billion dollar refinery and petrochemical development project that seeks to not only industrialize Pengerang, but also to urbanize it, i.e. relocating villagers from their kampung (traditional village settlements) to taman (modernized housing estate) that instantiates idyllic Islamic urbanism. In response to this forced resettlement, urbanization, and Islamization, relocated Chinese villagers creatively articulate a counter-space of the 'Temple Village' within the taman by

reappropriating pre-existing religious practices of rural sociality. Village reformations, this paper argues and ethnographically demonstrates, are place-keeping strategies in times of turbulent transitions for one to hold on to oneself, knit together past, present, and future, and imagine a good life. Presenter: Chun-Yu (Jo Ann) Wang (Stanford University, Department of Anthropology)

Multi-Local Place-Keeping: Venezuelan Migrants and Temporal Contestations of Place in Chile: Over the last three decades, Santiago, Chile has experienced rapid urbanization and exponential growth in migration. Migrants now account for 8% of Chile's population, up from just 0.8% in 1992 and 2.3% in 2012. Much of the post-2015 growth is linked to the influx of Venezuelan migrants. In this paper, I analyze Venezuelan practices of place-keeping and their contestation. Settling predominantly Santiago's historic core, Venezuelans engage with the city through daily routines, work, meeting everyday needs, and community activities. The cumulative impacts of making do illustrate how the "quiet encroachment of the ordinary" (Bayat 2010) can reshape urban places, highlighting the never fully defined or complete "city as a thing in the making" (Simone 2010:3). As migrants hang Venezuelan flags, play music and busk, gather at worksites, hawk typical street foods, form communities, and use public spaces, these uncoordinated actions transform the city from the ground up, presenting a participatory engagement with place-keeping. When Venezuelan migrants discuss their efforts to engage with these new urban sites, they often frame their actions in considerations of temporality (Bear 2014) and futural orientations (Bryant 2020). Reflections on their current neighborhoods, visited places, and communities in Santiago often link these sites to those they frequented in Venezuela. Practices of place-keeping, meaning making, and urban engagement are contrasted with reflections on the precarity, disuse, insecurity, and need for repair in places that they recall from their hometowns. Despite these often-unfavorable comparisons, many migrants voice their desire to return to Venezuela, thus framing their place-keeping practices as temporary engagements. I examine how the everyday practices of migrant place-keeping juxtapose reflections on past experiences and futural orientations rooted in Venezuela, highlighting migrant place-keeping as both multi-local and temporally uncertain. Presenter: Megan Sheehan (University of Arizona)

Rooted in Place: Community and Prison Gardens as Place-keeping Measures : In the face of change gardens remain rooted in place. They are a form of both place-making and place-keeping, meaningful spaces found in the midst of the rapidly changing urban world. Based on ethnographic research on the community gardens of San Antonio, Texas and the prison gardens of the broader Portland, Oregon area, I explore how garden spaces are sites of resistance. In this, I look at how dominant discourses related to food access and criminality are directly challenged through the place-keeping practices of gardening. While gardens were once common sites of ethnographic enquiry, they have largely been dismissed in recent years for being normative spaces that do not have revolutionary potential. Based on my fieldwork, I disagree and argue for a reconsideration of these spaces. An examination of gardens allows for a look at grassroots efforts to resist the subjugation of state and capitalist systems. Through participant-observation and interviews, I argue that gardens provide stability and a sense of home to individuals in transition: immigrants, those affected by the prison-industrial system, long term residents confronted with gentrification, etc. They are spaces where both individual and group identity are preserved when powerful outside forces push for their erasure. Presenter: Amanda Micek (University of Texas, San Antonio, Department of Anthropology)

Place-Keeping as Social Equity: Heritage and Gentrification in San Antonio, Texas: The process of gentrification exemplifies urban areas in transition. As the process of gentrification increases in San Antonio, Texas, people organize to resist changes in housing as well as the aesthetic changes in streetscapes that we see during gentrification. Drawing from space and place theory as well as value theory, this paper explores the relative value of streetscape aesthetics as markers of place and the effects of changes on the streetscape for community stakeholders. Social equity is at stake when residents, business owners, and places face gentrification. The paper advances anthropological theory by focusing on place-keeping practices, adding to space and place literature. To answer my research questions, I will be using ethnographic mixed methods to investigate these relationships. I will be engaging in ethnography-at-home with my field sites being San Antonio and Cameron County, which is located on the Texas-Mexico border. Presenter: Christina Frasier

Economic development as cultural preservation:
Combating gentrification for community well-being: San Antonio's largely Mexican-American "West Side" neighborhood is home to one of the poorest zip codes in the U.S., marginalized through a century of racial, political and economic oppression. The deeply-rooted community is fiercely proud of its many independently owned businesses, colorful murals, and vibrant cultural life that gave rise to the 1950s West Side Sound – music that "is to San Antonio what Motown is to Detroit." Yet despite being mere blocks from the Alamo – Texas' most prominent attraction – the West Side remained culturally and economically isolated from San Antonio's rocket-like growth. Small, locally-owned shops form a critical layer of the West Side's socio-cultural fabric, but when business owners achieve a measure of success they're often urged to leave the poverty-stricken area and relocate for greater opportunity in other parts of the city. The outflow depletes social and economic capital that might be reinvested in the neighborhood, driving a continual cycle of "up and out." In this paper, I explore the efforts of local business owners as they attempt to break this cycle while confronting San Antonio's economic success, which has crept into the West Side bearing all the hallmarks of urban gentrification. In response to the increasing displacement of businesses, homes and families, business owners reframed economic development as cultural preservation rather than economic growth. By recruiting investors for development of community assets and devising novel ownership schemes that placed neighborhood residents in control of how strategic land parcels would be developed, West Side business owners are championing place-based culture to retain local businesses while resisting the incursion of external developers. Thus, strategies of cultural preservation and placemaking are an attempt to upend neoliberal models of economic development and instead root economic growth in the well-being of community residents. Presenter: Celeste Diaz Ferraro (Colorado College)

Language, Practice, and Policy: The Discursive and Communicative Formation of Institutional Expertise

12:00 PM - 1:45 PM

TMCC - 606

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Yi-Ju Lai (University of Minnesota, Twin Cities)

PRESENTER:

Samuel Weeks ,Grace Cooper (Temple University),Martha Karrebaek (University of Copenhagen)

DESCRIPTION:

Language is central to the formation of expert subject, expertise, and institutional power. Papers in this panel will explore the diverse ways that language is central in the construction and formation of expertise and the reproduction of institutional forms of power.

Langue de bois, or, Discourse in Defense of an Offshore Financial Center: This paper brings together trends in Critical Discourse Analysis dating from the 1980s – which examine how language use and ideologies (re)produce social inequality – with current research in anthropology on neoliberalism and other emerging politico-economic formations. The paper addresses such a problematic with an empirical case: the language strategies, dubbed 'langue de bois,' that people affiliated with Luxembourg's offshore financial center employ to justify their practices. The contribution herein surveys the political rationality of the country's financial center by analyzing the 'langue de bois' that its representatives and boosters use. These language strategies, furthermore, enable Luxembourg's finance elites to socialize the domestic public's understanding of their activities. Presenter: Samuel Weeks

Building a Medical Sanctuary through Communicative Care: Undocumented Patients Socializing Medical Professionals into Structurally Competent Healthcare: Recent reports show a simultaneous decrease in U.S. life expectancy and an increase in healthcare spending; evidence suggests a correlation between these outcomes and exclusionary policies and practices within the healthcare system (Masters, Aron, and Woolf 2022). Some movement towards a universal system was made during the COVID-19 pandemic, including nationwide vaccine outreach, federal policies to cover pandemic-related medical bills for individuals and access to free COVID-19 testing kits through the United States Postal Service. While the Biden administration has stated the COVID-19 national and public health emergencies will not be renewed upon expiration in May 2023, it is clear the momentum for more inclusive, more effective, and less expensive health care will continue. The result of

this transitional period relies on the knowledge of experts traditionally understood within a policymaking context as those with experience in a field of study. In this presentation, I use a communicative care framework (Arnold 2016; Baldassar and Merla 2014) to underscore the expertise of undocumented and uninsured immigrant patients whose lived experiences with structural exclusion and health care stratification (Joseph 2017) offer medical professionals much-needed information about how to positively transform U.S. health care. I demonstrate how patients, through everyday forms of communication and collaboration, facilitate the language socialization (Ochs 1991; Stiver 2011) of medical professionals into structurally competent (Holmes 2013; Metzl 2011) health care. This presentation utilizes ethnographic data collected over five years of fieldwork in Philadelphia before and during the onset of the COVID-19 pandemic. Fieldwork included participant observation at a non-profit clinic for undocumented patients, in-depth patient interviews, and collaborations with medical professionals and community leaders. The research is grounded in methods, theories, and approaches from linguistic and medical anthropology (Black 2013; Buchbinder 2016; Clemente 2015) and responds to calls for more language-focused studies of care, health, and medicine (Arnold and Black 2020; Briggs 2020). We know undocumented patients are sophisticated and savvy navigators of exclusionary policies and practices within the U.S. healthcare system (Castañeda et al. 2015). Through an anthropological lens, we can recognize these skills as a form of expertise and identify how this knowledge manifests as forms of education and training within interactions between these patients and their providers. By explaining to their healthcare providers, the constraints placed on them through policies and other social forces, these patients offer valuable knowledge to these professionals and contribute to their capacity to practice medicine effectively in exclusionary social contexts. The goal of this presentation and the broader research is to offer alternative perspectives on the role of marginalized patient populations within healthcare and contribute ethnographic nuance to ongoing debates, discourses, and policymaking at the intersection of healthcare and immigration in the U.S. Presenter: Grace Cooper (Temple University)

Healthcare Danish for foreign educated healthcare professionals: Enregisterment through administrative texts, marketing texts, and language provision: Many wealthy countries experience a healthcare crisis due to a shortage of healthcare professionals, combined with

ageing populations and a subsequent increase in the need of healthcare services. A common strategy is to hire nurses and doctors trained abroad. The rise in global migration of healthcare professionals has been treated from various perspectives - structural, practical, ethical – in the social sciences (e.g., Bludau 2021; Heponiemi et al. 2018; Öhlander et al. 2000). However, we still know very little about the (socio)linguistic challenges of foreign educated professionals in the healthcare sector. This is particularly the case with regard to countries where the official language can be regarded as globally peripheral, as is the case in Denmark. In this paper, I will thus use language as an entry point to discuss a specific aspect of the phenomenon of healthcare migration, namely the linguistic register understood as necessary for working as a healthcare professional, and I will use Denmark as the national and social context of the study. The Danish welfare state guarantees free and equal access to healthcare for all citizens, and Danish citizens expect a high degree of service, including healthcare services, in return for the high level of taxation. Not the least for this reason, a crisis in the healthcare sector is of fundamental political significance. Currently, about 2100 foreign trained doctors work in Denmark, and it is argued that there will be a shortage of thousands of doctors and nurses within the next decade - so more foreign recruitment is seen as urgent, and it is also part of the current government's political strategy. Some foreign educated healthcare professionals are recruited directly, often through specialized agencies, others have migrated to the country prior to starting a procedure for getting accepted into the healthcare system, either as asylum seekers or seeking better job opportunities outside of their home country. One experience common to all non-Danes who wish to work as healthcare professionals is the need to learn the language. Various rules and regulations complicate the entry to the healthcare system, and some of these concern language. In general, communication and the creation of understanding is an important aspect of healthcare (Ellaham 2021), and language differences (or even barriers) have been shown to be a tremendous challenge for the provision of adequate healthcare (Ali & Watson, 2018; van Rosse et al., 2016; Bowen, 2001; Roberts 2009; Rasi, 2020). At the same time, we do not yet know what 'healthcare Danish' covers, i.e., what healthcare professionals are imagined needing to know in order to create understanding. We will use Agha's idea of enregisterment (Agha 2007) to analyse 'healthcare Danish'. We will approach the enregisterment of healthcare Danish drawing on administrative texts, marketing strategies from different

private companies which offer language tuition, and examples from teaching sessions. This paper thereby discusses language ideologies and imaginaries, and how these are used for administrative, economic, and instructional purposes. The data come from a project on foreign educated healthcare professionals in which administrators, doctors, nurses, language teachers and other stakeholders and relevant persons have been included. Presenter: Martha Karrebaek (University of Copenhagen)

1-065

Narrating Memory: Modalities of Being and Remembering

12:00 PM - 1:45 PM

TMCC - 707

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Judith Pine (Western Washington University, Department of Anthropology)

CHAIR:

Dominika Baran (Duke University)

PRESENTER:

Dominika Baran (Duke University), Shannon Ward (University of British Columbia, Okanagan), Jennifer Schlegel (Kutztown University, Department of Anthropology & Sociology), Colleen Cotter, Judith Pine (Western Washington University, Department of Anthropology), Sonya Pritzker (University of Alabama)

DESCRIPTION:

Narrative and memory are inherently and inseparably connected, and closely bound up with identity and the self, as has been observed by scholars across the humanities and social sciences since the beginning of what has been termed 'the narrative turn' (Riessman 1993). Giddens (1991) reflects on identity as rooted 'in the capacity to keep a particular narrative going' (54). Polkinghorne (1988), having defined narrative as 'the primary form by which human experience is made meaningful' (1), observes that narrative cannot exist without the plot, which 'functions to transform a chronicle or listing of events into a schematic whole by highlighting and recognizing the contribution that certain events make to the development and outcome of the story' (18-19). A similar point is made by Hinchman and Hinchman (2001): 'Through narrative emplotment, we organize, integrate, and seek an accommodation with temporality... emplotment

humanizes our experience of time, making its passage meaningful to us' (1). Within linguistic anthropology, Ochs and Capps (2001) observe that 'Putting the pieces of one's life experiences together in narrative is one way in which a human being can bring a sense of coherence and authenticity to his or her life' (252). In this panel, we focus on modalities of being and remembering, and how the narration of memories underscores, limits, or expands social identity and being in the past and present. Researchers of memory have pointed to numerous ways in which it is an ongoing and changing construct, a continuous re-invention and re-interpretation of the past rather than its precise recording (Schacter 1999, 2001; Schacter et al. 2003). For King (2001), collective memory and, correspondingly, collective forgetting, are both crucial for the construction of group identities and cultural belonging. Papers in this panel explore the narration of memories using the theoretical tools of linguistic anthropology. Presenters investigate how memories are co-constructed among Polish former refugee women/friends looking at photographs and places; how they create coherence in news narratives; how they highlight multilingual identities in ongoing Tibetan-Canadian community narratives; how language as a modality is intrinsic to Pennsylvania German community member identities; how the work of asserting indigenous identities in Lahu narratives may be accomplished through a semiotic transformation of geographic location; and how guided microphenomenological interviews create new routes for examining and instantiating social justice.

Encounters between past and present in Polish immigrant women's retelling of memories: This paper explores how memories of the past are told and collaboratively reconstructed while negotiating the present in the joint production of migration narratives among six Polish immigrant women living in Anglophone countries, who had met in an Italian refugee camp in late 1980s. The analysis examines data from interviews and conversations recorded in 2017 in Canada, in 2022 in Australia, and in 2023 in the US. Adopting Ochs and Capps' (2001) framework of narrative dimensions, and on Reyes and Wortham's (2015) approach to discourse analysis across speech events, I explore how the participants negotiate their present-day identities and group belongings as they move in time-space between their shared memories of life in Italy and subsequent experiences of immigration to the United States, Canada, and Australia, and the ongoing interactions during their reunions. Many co-told narratives in the data are launched while looking through old photo

albums; thus, the material objects – the photographs – become multimodal bridges between past and present as they link narrated events with narrating events and signal cross-event pathways (Reyes and Wortham 2015). I also discuss how the verb “to remember,” spoken in Polish and English, frames the re-telling of memories, and how multilingual practices intersect with how memories are re-told. By talking about photographs, about the people and places in them, as well as by invoking, questioning, and exploring their own acts of “remembering,” the women reshape and reinforce their present-day friendships and their individual roles within them. Presenter: Dominika Baran (Duke University)

Stories in Everyday Remembering: The Narrative Creation of Multilingual Selves in Early Childhood: In her memoir, Polish-Canadian author Eva Hoffman wrote, ‘The tiny gap that opened up when me and my sister were given new names can never be fully closed...but I begin to trust English to speak my childhood’ (1989, 273-4). Adults’ retrospective accounts demonstrate the challenges to forming a coherent self after losing one’s first language, and suggest that narrative can help reclaim the self in a new language. Complementary scholarly perspectives on self-formation emphasize the role of narrative in creating identities linked to particular codes (Koven 2007, Woolard 2011), and the grounding of codes in particular places through memory (Ward, Chow, and Ni 2022). We know less about how young children form their linguistic identities through everyday narrative remembering. Drawing from conversations between two Tibetan-Canadian siblings, this paper examines everyday narratives about linguistic identity to provide insight into language shift in early childhood. I ask: how do speakers narrate memories of using different languages? How do these narratives characterize the communicative competence of particular persons, especially based on age? By examining the stories that young children tell about languages, I demonstrate the real-time formation of selves tied to knowledge of the Tibetan mother tongue and the dominant language of English. I investigate the potential consequences of these everyday narratives of the self for language vitality and intergenerational relationships in immigrant families, while raising questions about the role of memory in creating multilingual selves in early childhood. Presenter: Shannon Ward (University of British Columbia, Okanagan)

“Everybody always used to talk Pennsylvania Dutch”: Remembering when: Using as data narratives from a Pennsylvania German dialect class and oral histories collected at an annual Pennsylvania German folk

festival, this paper examines how Pennsylvania Germans articulate individual and collective identities connected to an era when Pennsylvania German was commonly spoken and heard. Students and teachers in the dialect class provide narratives of the routine past and memories of dialect use consequential for language learning and articulating an authentic Pennsylvania German identity grounded in the mid-century era. Teachers may challenge student memories in ways that contest linguistic knowledge and cultural authenticity. At the folk festival, nonsectarian Pennsylvania Germans (also known as the Pennsylvania Dutch) provide oral histories about their daily lives “growing up Dutch.” They recollect changes in language use and farming practices in mid-century agricultural communities in southeastern Pennsylvania. Narrators invoke a collective identity of people who worked hard and “spoke the dialect” in rural communities where children were still educated in one-room schoolhouses during the primary years. Changes in agricultural practices, including the introduction of the combine, and the development of regional schools negatively impacted the use of the dialect, by restricting meaningful opportunities for its use. Speakers recount teachers critiquing or forbidding the dialect. This pivotal time of language shift is invoked in narratives from the oral histories and the dialect class interactions. These tellings reveal the schoolhouse of yore and the classroom of the ethnographic present as sites for the policing of language use and the contestation of authentic individual and collective Pennsylvania German identities. Presenter: Jennifer Schlegel (Kutztown University, Department of Anthropology & Sociology)

News narratives: How memory motivates news practice and reifies genre form: This paper examines issues of recurrence and circulation in news discourse and how it creates and is created by social memory alongside journalistic practice. I look at different levels on which news cyclicity can be studied: through the dynamics of text production, interaction, sources, ideology, and genre form, with a focus on the ritualization (cf. Goffman 1981) of genre form. The data show recurring news genre forms – seasonal stories, anniversary stories, and follow-up stories – and their function in reporting routines and the “specialized communicative role” (Goffman 1981: 2) that obtains from them both inside and outside the newsroom. A focus on news narratives and cycles in relation to genre shows how news is categorized by journalists in ways that are constituted by the textual and temporal circulations of genre form and practice, as well highlighting the collaborative memory-making process (Ochs and Capps

2001) that goes beyond the newsroom and frames the final outputs. This research relates to ethnographic investigations into other written domains and the iterative sourcing of text elements in news stories (e.g., Jacobs 1999, Van Hout 2010). Combining diachronic data and historical context directs our attention to the ways in which newspapers serve as repositories of social attitude, meaning, and memory, and, in the examples I discuss, how social memory can be located in and interrogated through the cyclicity of news discourse.

Presenter: Colleen Cotter

The place where it happened: semiotic geographies: The notion of indigeneity and its relationship to place is complicated in the Greater Mekong subregion, particularly but not exclusively the uplands of SE Asia and southwest China (Baird et al 2016, Leepreecha & Meixi 2019, Morton and Baird 2019). Assertions of indigenous identity cannot rest on the certainty of millennia of presence in geographic space predating the arrival of colonizing powers – the concept framed in the phrase “since time immemorial” often used in the US. The claim of autochthony does not, as a result, have the basis it has in those colonized spaces from which the modern political idea of indigeneity has emerged. Lahu, like other groups associated with the uplands and a past reliance on pioneer swidden cultivation, negotiate their identity with modern nation states from a position of disadvantage. Identity as indigenous people is an important element of this negotiation. Drawing on the retelling of the Lahu origin story in rural Yunnan and a life history narrative by a Lahu elder in northern Thailand, in which the work of memory places events in new places I will consider the way in which key locations (place of origin of a people and birthplace of an individual) may shift in response to political context, such that places themselves become complex semiotic operations indexing a relationship to place which, while distinct from the Western Apache place-relationships described by Basso, lay claim to an authentic indigeneity. Presenter: Judith Pine (Western Washington University, Department of Anthropology)

The Remembering Body: Narrating Pivotal Moments in Somatically Guided Interviews : This paper considers the collaborative narration of memory in the context of microphenomenological (MP) interviews, which draw upon a very specific set of non-inductive questions in order to somatically guide interviewees to investigate the micro-dynamics of a singular experience in the past (Petitmengin et al. 2019). Our data derive, specifically, from MP interviews conducted as part of a collaborative, ethnographic project entitled Living

Justice: Communication, Culture, and the Body in the Everyday Practice of Embodied Social Justice. This ongoing research investigates the ways in which over 50 global collaborators—all with significant training in the emerging field of embodied social justice (Menakem 2016; Johnson 2018; Haines 2019; Williams 2000, 2023)—seek to live (towards) justice in their everyday lives. Consisting of multiple conversations with collaborators as well as three collaborative ethnographic “time capsules” in which collaborators contributed photographs, video- and audio- recordings, and text-based reflections of moment-to-moment embodied experience, we specifically incorporated MP during initial interviews. Here, we engaged MP to further evoke embodied memories of specific moments that collaborators had emplotted, in their broader overall narrative, as “pivotal” in reconfiguring their understanding of themselves in the world. While attending to the multiple ways in which narrative practice shifts when interlocutors move into what has been described as an “evocation state” or during MP interviews, this paper also considers what the kind of embodied remembering that emerges in MP offers in terms of our theorization of the role of the body in narrating memory as well as the role of narrative in a person’s formulation of their embodied self in space and time. Presenter: Sonya Pritzker (University of Alabama)

Navigating Ethical Issues in Practicing Anthropology: An MPAAC Roundtable

12:00 PM - 1:45 PM Virtual - Room 1
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

National Association for the Practice of Anthropology

ORGANIZER:

Kerry Foshier

CHAIR:

Kerry Foshier

PRESENTER:

Robert Rubinstein ,Nathaniel Tashima ,Maureen Meyers ,Natalie Muyres ,Tanya Rodriguez ,Ken Anderson (Princeton University),Eric Gauldin (Texas State University, Department of Anthropology)

DISCUSSANT:

Lise Dobrin (University of Virginia, Department of Anthropology)

DESCRIPTION:

Building on past panels on ethical decision-making in practicing and applied anthropology, this roundtable will focus on examination of real, but anonymized, examples of ethical questions that have been raised by or about anthropologists who work outside the academy and identification of useful new resources or guideline updates. Anthropology has a robust literature associated with ethical conduct in traditional academic research and a history of asking penetrating questions about the ethical decision-making of anthropologists who work outside the academy. The American Anthropological Association (AAA) and the National Association for the Practice of Anthropology (NAPA) have made strides in developing guidelines and resources for applied and practicing anthropologists. However, resources and events that provide concrete answers to questions about how to think through and resolve ethical challenges are still needed. The roundtable will be divided into two segments. The first hour will focus on discussion of specific examples. Examples will be selected to address different work sectors and different types of ethical challenges, including those arising in the course of work activities other than research. Participants will examine each case in terms of the specific ethical questions raised, broader principles involved, relationship to disciplinary ethics guidelines, available resources, and strategies an anthropologist could use to navigate and address the issues involved. Discussion of cases will prioritize practical advice anthropologists can use to work through similar questions or challenges in their own careers. The second segment will focus on the identification of potential new resources that would be useful to applied and practicing anthropologists and whether or not updates to the AAA Principles of Professional Responsibility or NAPA Guidelines for Ethical Practice are warranted. This segment will be organized to maximize audience participation.

New Book Roundtable: Trust Matters: Parsi Endowments in Mumbai and the Horoscope of a City, by Leilah Vevaina

12:00 PM - 1:45 PM **TMCC - 713 A**
Roundtable/Town Hall - In-Person

REVIEWED BY:
Association for Political and Legal Anthropology

ORGANIZER:
Nada Moumtaz (University of Toronto)

CHAIR:

Namita Dharja (Rhode Island School of Design (RISD))

PRESENTER:

Leilah Vevaina (Chinese University of Hong Kong), Annelise Riles (Northwestern University), J. Barton Scott, Nada Moumtaz (University of Toronto), Scott MacLochlainn (Johns Hopkins University, Department of Anthropology)

DESCRIPTION:

Although numbering fewer than 60,000 in a city of over 12 million, Mumbai's Parsi community is one of the largest private landowners in the city due to its network of public charitable trusts. In *Trust Matters* Leilah Vevaina explores the dynamics and consequences of this conjunction of religion and capital, as well as the activities of giving, disputing, living, and dying it enables. As she shows, communal trusts are the legal infrastructure behind formal religious giving and ritual in urban India that influences communal life. Vevaina proposes the trusts as a horoscope of the city—a constellation of housing, temples, and other spaces providing possible futures. She explores the charitable trust as a technology of time, originating in the nineteenth century, one that structures intergenerational obligations for Mumbai's Parsis, connecting past and present, the worldly and the sacred. By approaching Mumbai through the legal mechanism of the trust and the people who live within its bounds as well as those who challenge or support it, Vevaina offers a new pathway into exploring property, religion, and kinship in the urban global South.

'Orgy of Destruction!' Green Wars and the Profitable Paradox of 'Human: World Destroyer/Saviour'

12:00 PM - 1:45 PM **TMCC - 604**
Oral Presentation Session

REVIEWED BY:
Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:
Nicolas Rasiulis

CHAIR:
Nicolas Rasiulis

PRESENTER:
Nicolas Rasiulis, Rebecca Witter (Appalachian State)

University), James Stinson (York University), Lee Mcloughlin

DISCUSSANT:

Rebecca Zarger (University of South Florida)

DESCRIPTION:

Humanity is waging 'war on nature,' 'becoming a weapon of mass extinction' in an 'orgy of destruction!' This allegation, exclaimed by UN SG Guterres at UN CBD COP 15 in 2022, doesn't only hearken the U.S. invocation of intelligence on 'weapons of mass destruction' in Iraq, which justified a U.S. military invasion, coup and occupation in Iraq. It also amplifies a chorus growing within global nature conservation: 'biodiversity loss is a security threat that should be addressed using military-security apparatus tools.' Proponents of this approach justify its violence (direct application or threat thereof) on the bases of the gravity of an array of threats posed by environmental apocalypse, and of some actors harming nature for profit (e.g. 'poachers' and 'illegal wildlife traders') being involved or implicated in drug/human/arms trafficking and/or terrorism. In a process which Lunstrum (2014) calls 'green militarization,' conservation endeavours incorporate lethal or non-lethal military and intelligence equipment and tactics, in some cases through partnerships with defence contractors and/or militaries. In tandem with the deployment of martial rhetoric in conservationist circles and media, green militarization is intensifying and transitioning to a point where the industry of focused and systemic violence has expanded into the market of 'green capitalism' (Sullivan 2009), a setting which Büscher and Fletcher (2018) call 'green wars.' Green wars marshal hard tactics (e.g. kinetic violence) and soft ones (e.g. counter-insurgency 'hearts and minds' community development and subversion, slow violence, etc.). As some green war fronts target 'threat finance,' we may speculate conservation finance is coalescing to some degree with defence and intelligence finance. Judging by the growing, conflictual and often siloed concerns with climate change, on one hand, and with current or proposed climate change policy (e.g. bovine downscaling in Netherlands; taxing livestock gastric methane in New Zealand), on the other, green wars are likely to continue intensifying and, perhaps, expanding into new domains and markets beyond the confines of parks. 'Orgy of destruction!' accounts for (in)conspicuousness of green wars at various scales. The panel engages with benefits and harms of green wars for humans and for the ecosystems we want to protect, as well as with the economic gains and losses green militarization enables, the (geo)political landscapes this fosters and by which it is fostered, and

the roles of ideology, morality, spectacle, finance and other power vectors in the valuation of beings, practices and narratives as worthy of either 'protected' or 'enemy' status. It situates green militarization within biosecurity more broadly, and in relation to states of exception, neo-imperialism, and psycho-colonization, themselves intensifying in a manifold, crisis-based transition helmed by post-COVID intensification of post-9/11 securitization of everyday life, and marked by war on most continents, namely in and around Ukraine, risking nuclear annihilation while forging what many (officials party to the belligerence, sober pol-mil analysts, and so-called 'conspiracy theorists' alike) call a 'new world order,' the outlines of which are yet to be determined. Ultimately, it grapples with existential, (geo)political-economic and ecological implications of heralding humanity as both world destroyer and saviour in an epoch of fetishized and capitalized chaos.

'Beyond that Hill lies the USA,' he joked: Reconnoitering/Upbraiding Eco-Militarization in Mongolia: Mongolian green militarization is soft. So subtle one can see it 8 years before noticing it—but palpable, pregnant with foreign power loci, sources, dynamics & applications, entangled with alien apparatuses & processes beyond only Mongolia. In the Mongolia–Russia borderland Taiga to which they are indigenous, Duha reindeer-herding hunter-gatherer households cohabit with 'endangered wildlife' & spirits co-entangled in shifting, nested webs of power & sovereignty, amid unequally profitable tourist & missionary invasions, & light infantry & park ranger patrols. IUCN-accredited Tengis-Shishged National Park (TSNP) occupies most of contemporary Duha territory. Marshalling (trans)local friend–enemy distinctions (generative of ambiguity-denying justifications of disparagement, & value increases of conflict-intensifying spectacle, commodities & securities) to manifest quasi-universal conservation incantations, U.S. "Sister Park" TSNP enforces mobility restrictions & de facto bans on hunting & foraging, imposed on Duha households by Mongolia in attempts to isolate perceived 'wilderness' from allegedly harmful 'humanity.' Dramaturgically, Duhas are discreetly laden with obverse personae: 'friend' & 'enemy' in the conservationist story of good vs evil that elides slow violence, & gives it sense & purpose in the hearts & minds of conservation agents & supporters, as well as in the PR & finance schemes of conservation apparatuses, & in the spectacular accumulation which produces & is produced by that story & that which incants it. This paper reports a reconnaissance of a fuzzy front of the green wars, tracing & upbraiding it up/downstream via: army &

ranger horse, reindeer & crowdsourced dirt bike patrols; surveillance scaffoldings; a park partner's spectacular, explicit identification of rangers with the defence of Mongolian lifeways, nature & nation in the footsteps of Mongolia's victorious WWII military toils; a Duha 'poacher' leaving the Taiga for mandatory military service. Presenter: Nicolas Rasiulis

The Conservation of MAN: Tracing continuity of conservation-related violence in Limpopo Borderlands: In the borderlands of Mozambique, South Africa, and Zimbabwe, the turn of the millennium implementation of transfrontier conservation aimed to achieve cross-border protections for biodiversity, sustainable economic development, and international peace and cooperation. Yet even as some aspects of the post-colonial and post-apartheid conservation labor force changed, heavy-handed and exclusionary practices remain. Over the past decade, the Great Limpopo Transfrontier Park became a hotbed of violence linked to a "war" on "poaching". In response to the rapid increase in the illegal hunting of black and white rhinoceroses, authorities securitized the border, recruiting "more boots on the ground" for stricter, sometimes lethal, monitoring and enforcements. Why this failure to transition? Political ecologists have traced green, violent responses to illegal wildlife hunting to institutions of coloniality, structural racism, and economic inequality, leaving all but unexamined, intersections with patriarchy and masculinity. Drawing from archival research, I trace the continuity of green violence in the Limpopo Borderlands to the priorities and practices defined and undertaken by generations of settler colonial men. Throughout the 20th century, Wardens and Rangers maintained power and authority through territorial practices of Othering; venturing and risk taking; and environmental care. In presenting a "Patriarchy of Conservation" in the Limpopo Borderlands, I am less concerned about an over-representation of men in conservation labor, and more concerned about the over-representation of MAN. To use Sylvia Wynter's phrasing, MAN is necessarily capitalized to show that 'he' is an ideological representation, albeit imbued with norms and practices that protect and socially reproduce green violence today. Presenter: Rebecca Witter (Appalachian State University)

Universal Ranger: SMART Environmental Subjects in the Biodiversity-Security-Technology Nexus: Over the past decade, linked processes of securitization and digitization have been working to create new regimes of biodiversity conservation at the intersection of an

emerging biodiversity-security-technology nexus. On one hand, the widespread reframing of the global biodiversity crisis, and specifically the impacts of the illegal wildlife trade, as an issue of national/international security, has led to a resurgence in militarized and enforcement-first approaches to conservation. At the same time, the growing involvement and influence of the technology industry in environmental governance has resulted in a proliferation of conservation-related digital platforms, technologies, and tools. Thus, rather than a simple return to earlier models of "fortress conservation," emerging modes of militarized conservation increasingly deploy the technologies and tactics of the smart city and platform/predictive policing. Based on a discursive and ethnographic examination of the Spatial Monitoring and Reporting Tool (SMART) and its use by park rangers in Belize, this paper explores how SMART is transforming the practice of conservation, relations of power and control within conservation organizations, and the production of "environmental subjects." We argue that SMART conservation is predicated on the creation of park rangers as "docile subjects," part of which involves a shift away from subjective modes of decision making that emphasize local/Indigenous knowledge, toward an emphasis on "objective data," automated decision trees, and algorithmic predictions. At the same time, we show how efforts to create SMART environmental subjects runs up against the skepticism and resistance of rangers themselves. Presenter: James Stinson (York University)

SMART Conservation? From Intimate Government to Algorithmic Ontopower in Belize: This paper presents a discursive and ethnographic analysis of the Spatial Monitoring and Reporting Tool (SMART) and its use in protected areas in Belize. SMART is a digital platform for conservation law enforcement that includes a desktop database, mobile and sensor-based data collection, and cloud-storage, making it possible to digitally to collect, store, share and analyze enforcement data on poaching, arrests and other events in close to real-time. The most recent update to the platform includes a predictive AI software program (PAWS AI), which predicts the location of future illegal activities, allowing for the automation of ranger patrol routes. In 2018, Belize adopted SMART as the country's official monitoring system for their protected area network. In this paper, we argue that the adoption and use of SMART in Belize has coincided with a shift away from disciplinary and neoliberal modes of deterrence and prevention of illegal activity, toward "post-panoptic" and automated processes of real-time detection, prediction and pre-emption, in line with

models of predictive policing. Framed as a transition from “intimate government” (Agrawal 2005) to algorithmic ontopower (Massumi 2015; Büscher 2018), we argue that efforts to expand conservation areas to meet the new CBD 30x30 target, combined with this shift toward the technological enforcement, particularly in the global south, could exacerbate conservation-related displacement and violence. We conclude by arguing for a move away from policing and enforcement-first approaches to conservation towards support for Indigenous rights and efforts to care for both people and the planet. TMCC - 713 B

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Scott Ross (George Washington University)

CHAIR:

Scott Ross (George Washington University), Sarah O'Sullivan (Capilano University, Anthropology Department)

PRESENTER:

Hannah Howard (Boston University), Julie Pelletier (University of Winnipeg), Indrakshi Tandon (American University in Dubai), Rachael Goodman (Mercer University, Department of International and Global Studies), Scott Ross (George Washington University)

DISCUSSANT:

Mark Schuller (Northern Illinois University, Department of Anthropology)

DESCRIPTION:

Since the 1970s, proponents of participation in development have insisted it is a transformative 'process of empowerment', whereby fostering the participation of target populations will increase their level of ownership, self-reliance, and commitment, leading to more 'sustainable' development. Indeed, one of the ultimate aims of the Sustainable Development Goals (SDGs), the global governance framework for guiding development policies worldwide, is to better involve the target populations of development interventions in decision-making at all levels. But what does it actually mean to participate in development

today? Who 'participates' and who 'develops'? For as long as participation has become the sine qua non of development practice, anthropologists and critical development anthropologists of development have been asking such questions. Scholars have demonstrated the ways that participation is more constraining than liberating (Cooke and Kothari 2001); shown how it endures regardless of whether it leads to material change (Green 2010); and explored the different ways 'participation' has been deployed across time, forming subjects along the way (Kelty 2019). Drawing on ethnographic insights into development programs from around the world, this two-part panel uses the encounter between development actors like NGOs and target populations as a springboard for thinking about the kinds of participation and possibilities that such an encounter engenders (Beck 2017, Olivier de Sardan 2005). Papers in this session show how participation in church kitchens in Greece enable or constrain social belonging; explore the 'myth' of participatory development and emerging notions of difference between NGO staff and aid recipients in India; show how international discourse about democracy get taken up in NGO work amid DR Congo's flawed national elections; critique the divide between NGOs working on Indigenous issues in central Africa and the Indigenous communities themselves; and unsettle development's colonial foundation through collaborative Indigenous community engagement.

Baking Belonging: Gendered and Racialized Participation in Two Church Kitchens: Contrary to development's focus on the “participation” of aid recipients in their own advancement, the various NGOs under the auspices of the Greek Orthodox Church in Athens do not easily lend themselves to such participatory action. Rather, it is the parish-level organizations – sometimes nominally or legally organized as NGOs but not always practically operable as such – that most readily inspire participation. In the kitchens of neighborhood churches, people gather to share coffee, prepare warm meals for those in need, and fill holiday care packages with pantry goods, but – perhaps more importantly – they also call attention to their own “fit” with the community, asserting their belonging to the Church and/or the city through their engagement. Based on my own fieldwork in various church kitchens, or *sussitia*, this presentation compares two case studies that highlight the possibilities of the aid encounter to create specific modes of being and belonging. In the first, neighborhood women contribute to the feeding of their own (relatively homogenous) community, creating a notably gendered mode of participation that reinforces

the liturgical life of the Church. In the second, the local parish in a highly diverse neighborhood sponsors a community kitchen but relies on migrant men for labor, inverting the common script for aid in Athens and enabling the men to facilitate their own – often contested – inclusion in Greek society. Presenter: Hannah Howard (Boston University)

Development in the Developed World: An Indigenous Example: Development models and projects focus primarily, if not entirely, on ‘other’ societies and countries and not on conditions in developed countries such as Canada and the U.S. Encounters between those identified as needing help and those who position themselves as helpers often play out the dynamics of ‘otherness,’ especially when aid workers go from their developed countries to underdeveloped countries. Sustainable Development Goals are conceived as relevant outside of the borders of the developed world. As the founding director of a master’s in development practice (MDP) degree in Canada that focuses on Indigenous development, I encountered attitudes ranging from incomprehension to hostility from others in the development field. The MDP in Indigenous Development challenges the standard approach to development by identifying and addressing development challenges in the developed world for Indigenous communities, by rejecting the one-size-fits-all solutions to development often touted by NGOs and national governments, by addressing the colonial foundation of inequality and oppression, and through a strengths-based approach to collaborative Indigenous community engagement. This paper provides an analysis of the MDP in Indigenous Development approach as well as a brief discussion of projects undertaken by MDP student development practitioners, offering a different look at development and development practitioners. Presenter: Julie Pelletier (University of Winnipeg)

Creating participation: development practices from central India : Participatory development projects are infused with the politics of participation and greatly influenced by its diverse social actors. Based on fieldwork conducted in central India, this paper argues that while the rationality of bottom-up and participatory approaches to better the conditions of farmers is undeniable, it is a mythical rationality. Often the primary achievement of such projects is to reproduce themselves rather than empower beneficiaries, as genuine participation would entail transfer of power and eventual withdrawal of development practitioners. Asking for participation from target communities is a complex process, as it is required and desired by NGOs,

but given warily, if at all. Yet, participation must exist to fulfill donor and state-agenda, and project implementers often resort to “creating” participation, which masks hierarchy, coercion and the true nature of bottom-up strategies in development. Therefore, despite promoting bottom-up and participatory approaches, popular development practice in India reproduces issues of elite capture, exclusion of the poor, and promotion of inequity (between men and women, and among women). This paper uses ethnographic data to elaborate on systems of relationships that exist in development activities, which define and influence project outcomes. These interactions between stakeholders are an illuminating commentary on agency and power politics in participatory development discourse. Presenter: Indrakshi Tandon (American University in Dubai)

A Different Difference: NGO Encounters Across Class, Region, and Nationality: At a non-governmental organization in India, now run and largely funded by Indians, new employees and interns expected to fundamentally understand the organization’s beneficiaries – the inhabitants of small rural villages in the foothills of the Himalayas. After all they were all Indian and most were Hindu. But what Indian workers found in their encounters with beneficiaries were difficulties in mutual understanding created by the experience of growing up in different places and class positions. From distinct views on water purification and proper dress to different expectations around relationships and family obligations, Indians were surprised and confused by how different they were from other Indians. Foreign interns and volunteers, on the other hand, were often less put out by the difficulties they encountered as they expected differences to be profound. The confusion and sometimes frustration at the lack of mutual understanding among fellow nationals illuminates not only the complexities of “localization” in development, but also the growing importance of different differences in a neoliberal globalizing India. While caste and religion were traditionally seen as the fundamental divisions in South Asia, today class and region of origin create equally and sometimes far more powerful differences in experience and orientation. Presenter: Rachael Goodman (Mercer University, Department of International and Global Studies)

Participating in NGO Democracy after the Democratic Republic of the Congo’s Rugged Elections: As part of a humanitarian intervention concerning security in northeastern Democratic Republic of the Congo, teams of NGO workers visit rural communities to host a series

of trainings culminating in the installation of two-way radios, connecting villages to a regional early warning network. Before the trainings can commence, however, humanitarians call a village general assembly in order to form—and elect local members to—a volunteer committee to safeguard the radio and implement NGO projects within the village. Drawing on ethnographic observations of these general assemblies that took place in the immediate aftermath of Congo’s widely disputed 2018 national elections, this paper shows the ways in which local Congolese villagers and Congolese humanitarians enacted, rearticulated, and played with the still developing concept of electoral democracy in the Congolese public sphere and the fetishization of electoral democracy as panacea in international post-conflict intervention. Humanitarians required elections to take a particular form, replicating and reinscribing the importance of procedure over democracy itself while simultaneously enacting progressive goals around representation and equity. At the same time, developments at the national stage around the elections’ disputed results and Félix Tshisekedi’s rigged victory filtered into these NGO-supervised elections as villagers and humanitarians alike joked about unrealistic results, avoided or failed to address problems of abuse of power and conflicts of interest, and otherwise tried to uphold electoral procedure amid national news of a stolen election. Presenter: Scott Ross (George Washington University)

DISCUSSANT:

Kabir Tambar (Stanford University)

DESCRIPTION:

Since the Second World War, legal, monetary and deliberative institutions have promoted participatory governing fictions, like the rule of law, freedoms of press and speech, free and fair voting, and free and rational markets. Political, media, market and legal institutions successfully stabilize these fictions through circulatory systems that have global reach. Mobilizing bureaucratic and infrastructural networks, participatory institutions gain their legitimacy, insofar as they have any, by drawing on ideas of popular participation that ground nation-state sovereignty. That is, another governing fiction has been that the period of colonial rule has successfully transitioned to a period of mass, popular participation enabled by these very institutions. Spurred by reflection on current democratic majoritarianism and authoritarianism, anthropologists and other scholars are increasingly skeptical of this transition, and have taken a new look at contemporary forms of colonialism and imperialism. While democratic forms of participation have been enjoyed by some, these entitlements are constitutively tied to inequality and dispossession for others. Moreover, McGranahan and Collins (2018) have noted in a recent volume that one characteristic of American imperialism is how it is obscured and never named as such. Could it be that this obscuring is a general phenomenon in the era of national sovereignty, where imperial practices are always legitimated as a form of popular participation? Is the rise of anti-democratic and illiberal political and economic forms an undoing of the post-Second World War consensus? Or are these participatory institutions morphing into mechanisms to uphold a new phase in imperial governance through, rather than against, the institutions of democracy, free markets and open media? This panel considers these questions across different participatory arenas and countries: markets, currencies, and monetary policy; judiciaries and legal protections; and journalism and other forms of cultural production. Papers will examine ties between participation and military and neo-imperial war-making—for example, the role of civic participation and ethical collectivist striving for Russian citizens support of the war against Ukraine or the marriage of military and judicial power in the name of democracy, in the case of the Israeli settler colonial state. Some examine the ways in which a language of participatory discourse and freedom of speech shape the exercise of and limits of human rights—for example the links between state sovereign violence, control over mobility and the

exercise of freedom of expression in Israel/Palestine, or the role of democratic proceduralism in justifying the exercise of sovereign state violence in human rights cases at the European Court of Human Rights. Others show the link between compulsory participation in imperial currency regimes, for example the dollar in Argentina or the links between rule of law and investment, in the Israeli case. In these examples, the right to participate as a consumer and citizen in a global economy shore up logics of imperial sovereignty through, not despite, the figuring of popular support and active engagement. Taken together these papers offer concrete, empirically grounded analysis of the links between ideologies of participation and the bureaucratic and infrastructural production of imperial and neo-imperial power.

Jurisdiction, empire, and sovereignty's procedural fix:
This paper analyzes the social and historical assumptions that shape proceduralism as an interpretive framework at the European Court of Human Rights. When legal actors at the Court invoke notions of “quality” procedures, it raises the question: how do people recognize quality when they see it. Looking at the landmark case of *Animal Defenders v. UK*, I argue that people discursively figure democratic qualities as a density of intertextual links to documents, parliamentary speech, and expert reports. The quality of discussion (thick, discursively figured) is in turn framed as evidence of a quality democratic process, through both overt and implicit linkages between democracy and liberal political institutions. In turn, these linkages are backstopped by implicit associations between Europeanness and democratic capacity. For example, links between culture, procedure and democratic maturity form the basis for common tropes throughout the Court and the Convention system. In this way, democratic practice is linked not only to formal politics and systems of governance but to levels of consciousness, or mentality. These tropes of cultural difference, legal consciousness and democratic maturity are part of a larger, shared register of East-West difference. But they also resonate with an imperial imaginary in international law, that links democratic capacity (through liberal forms) to the right to sovereignty. Taken together the analysis of procedure as an interpretative framework reveals how unspoken but materially palpable assumptions about culture and democracy shape judicial interpretation in the shadow of earlier imperial ambitions of international law.

Presenter: Jessica Greenberg (University of Illinois, Urbana-Champaign, Department of Anthropology)

Russia's 'Special Military Operation' and its ethical claims: That which many outside Russia call its war against Ukraine is internally narrated as a “special military operation” against NATO and Naziism. And despite the mobilization of untrained family men, staggering (under-declared) battlefield casualties, tremendous destruction and violence, this “special military operation” enjoys widespread public support. In this talk, I analyze how people make sense of its aims and claims. Drawing on my experience living and working in St. Petersburg since this undeclared war began, I show that public support is rooted in a particular logic of popular participation. Presenting imperial war as humanitarian effort, the state asks everyone to help out. And people do – not least because mobilized men (the unmobilized's husbands, fathers and brothers) regularly find themselves lacking such basic necessities as sleeping bags, bullet-proof vests, first-aid kits and socks. I see in such civic collectivism as demanded by Putin's “Russian World” an explicitly illiberal logic, echoed prior Russian and Soviet governance: like that of the “socialist democracy” that thrived in the Soviet Union on a commons of socialist property of which citizens' personal property was an inalienable part. It is a logic of a modern participatory democracy framed not as private rights and political freedoms but as personal ethical participation in a striving collectivist social. Presenter: Xenia Cherkaev

The U.S. Dollar as Medium of Empire, as Viewed from Argentina: In this paper, I explore the ambivalences that animate everyday engagements with the U.S. dollar in Buenos Aires, Argentina. The Argentine national economy has long been a highly inflationary one, and the current year-on-year inflation rate stands at over 100%. Within that context, individuals, households, corporations, and the government all rely on the dollar in several key ways. For example, the dollar is the medium of exchange for real estate and other large purchases. It also operates as a highly sought-after store of value and as an informal unit of account for prices of all sorts, from salaries to tomatoes. What is more, the dollar functions as the all-important asset that the national government manages to back its own currency, to service the foreign debt, and to enable exports and imports. These different engagements with the dollar coexist in considerable tension—even contradiction—

with one another, and their politics are the subject of heated debate. However, undergirding those contestations is a shared sense that buying and selling dollars is an utterly unavoidable act that configures one as participant in and agent of imperial power. Drawing on Judith Irvine's discussion of "shadow conversations" and the indeterminacy of participant roles, I sketch the emergent participation framework of situated dollarized interactions in Buenos Aires in order to conceptualize the dollar as medium of empire. Presenter: Sarah Muir (CUNY, City College, Department of Anthropology, Gender Studies, and International Studies)

The Politics of Mobility & Expression across Participatory Empires : States that purport to be the bastions of free expression and democracy use restrictions on mobility—and fictions of sovereignty—to limit oppositional speech. Palestinians in the West Bank live with an authority that performs a "sleight of hand sovereignty," a system with some of the symbolic and repressive elements of the state but guaranteeing Palestinians no security or independence. While "sleight of hand sovereignty" would seem to be distinct to the Palestinian Authority as it operates under Israeli military occupation, in fact, a transnational system of control on mobility serves to use ideas of sovereignty and security to restrict expression in the very systems that should be global networks of free expression: the university and the world of human rights. In 2021 Israel declared six Palestinian human rights and civil society organizations to be terrorist organizations. As a result of this, the United States refused two of their leaders visas to the United States, limiting their ability to speak in important forums. In 2022, Israel announced new restrictions on visitors to the Occupied Territories that directly target Palestinian academic institutions. These restrictions on mobility are based on the prerogative of sovereign states to decide who can enter them; they also hinge on engrained racialized logics of the War on Terror. Under the guise of security and sovereignty, they enact and enforce Israeli settler colonialism and US empire. These cases expose sovereignty as a curtain for empire, and the ways in which mobility and expression are intertwined. Presenter: Amahl Bishara (Tufts University, Department of Anthropology)

Can there be a "People's Army/Economy" without Judicial Review in Imperial Israel? : The new Israeli government elected in November 2022 has been called variously the most right-wing or ultranationalist or

simply fascist ever. Its agenda includes overhauling the judiciary to ensure that the Supreme Court cannot have final say on government decision. The attempt to neutralize the remaining check on government power has led to intense contests to define democracy, with Prime Minister Binyamin Netanyahu's critics comparing his ploy to install himself as an elected dictator akin to Orbán of Hungary or Erdoğan of Turkey. The government's efforts also have led to widespread protest from the centrist secular population, and in particular from military reservists and high tech workers. This paper will consider the protest movement of these two sectors in particular, and what it reveals about the judiciary's role in supporting the Israeli state's settler colonial project. Important for military reservists is the legitimacy of judicial review, and the cover it provides for their actions against civilian populations, like Palestinians in the West Bank and Gaza. The much lauded tech workers drive up to 50% of Israeli exports and are crucial to Israel's reputation as the 'start up nation.' For them, the judiciary is central to international commerce. These sectors cannot win electorally, in part due to their inability to ally with Palestinian citizens. Yet they play an outsized role in the military and economy. The protests thus show how the Israeli imperial formation functions in part via the legitimacy it gains through institutions of citizen participation. DESCRIPTION:

Within the US tech industry, demands for growth have shaped the experience of working in tech. One consequence of this demand is the seemingly endless requirements for corporations, workers, activists, and societies writ large to 'pivot.' As tech industries and tech-adjacent AI researchers move from cryptocurrency to large language sets, from oversight boards to singly-owned social media spaces, from tracking pandemics to metaphorically describing misinformation as contagion, and from design with to redesigning communities, we ask: what kind of transition is a pivot? What kinds of politics do these pivots inaugurate and what histories do they erase? Pivots are often traced to particular movements within managerial discourse, like the 'lean' startup notion of continuous innovation. These canonical histories provide only one vector for understanding the social work pivots do to align bodies and the temporalities of computing technologies, and to align patterns of labor and subjectivities with the rhythms of digitally-mediated capitalisms. This panel aims to provide an account of the consequences of managerial orientations toward pivots along with a wider, more contextualized and embodied understanding of the pivot as a technology, a feeling, a timescape, and a narrative frame that delineates the shape of laboring bodies and computing technologies, both human and algorithmic. Pivots gesture toward both uncertain futurities of tech use and shifts in our own thinking about technologies. As we center the pivot as a method and as a social fact in technological worlds, we also seek to understand how this focus can help us produce theory from, with, and alongside communities that work in and are worked on by tech. A pivot can imply a direction, a moment in time, and a technological process. Exploring the temporal, the affective, and the narratological in the pivot, we hope to use the idea of the pivot to trace the relations of power entangled in current technological processes. Papers in this session will track the kinds of labor involved in a pivot, especially for women and BIPOC workers who are often placed in a position of power just as a particular tech innovation is coming under criticism, or community members who might be left to contend with the wake trailing behind a pivot away from social media governance and toward free speech absolutism, or from education in the moment to future-oriented education. We ask, is it possible to 'appropriate' the pivot? How do minoritized tech workers pivot their identities, their language practices, their presence and presentation of selves to think with the pivot but also against it? We also track the cultural imaginary of the pivot as it operates narratively to anchor an individual's move

from technology insider to outsider, or as a narrative of necessary personal growth. Do pivots mark particular kinds of transitions? Do these transitions work for certain individualized figures and not for others? Finally, we interrogate the nature of the transitions implied in the pivot to better understand the technical imaginaries that are enabled through such terms.

How Does a Platform Feel? Resonance, Rhythm and '72 hours more" on Brazilian WhatsApp: Who has not felt a chat get tense? Or sensed it become suffused with camaraderie? In this talk, I explore what it means to say that a digital space feels a certain way, and how are such feelings shared. Grounded in research in Brazil and on Brazilian social media platforms, I take up the curious case of the watchword "72 hours more" among supporters of extreme-right former president Bolsonaro. The day after his defeat in the second round of voting, they began protesting the result and at one, a police officer took the crowd's microphone. 'We have to hold out for 72 hours so that the president can take a stand," he told them, adding that a sage show of strength would get them the support of the military forces. A video of the interaction quickly spread. When Bolsonaro spoke only two days later, he did not explicitly concede, and, encouraged, his supporters began the countdown again. Over the next two months, the deadline lost its mooring in actual calendar days or time. Just wait '72 hours more" instead became a kind of pivot around which collective hopes for military invention turned in new insurrectionist directions. These led to 8 January 2023, when a Bolsonarist mob stormed and ransacked the seats of the three branches of government in Brasília. In analyzing this case, I suggest that rhythms and pivots such as those of '72 hours" can help understand how spaces feel and conceptualize what is often simply termed affective resonance. Presenter: Meg Stalcup (University of Ottawa)

Pivoting Across the Techno-Borderlands: "Pivoting Across the Techno-Borderlands" examines how people in the tech startup world think and move with "the pivot," a term that calls for changes to a software product that might better align it with market dynamics. I show how Mexican and Latinx hacker-entrepreneurs pivot their identities, their language practices, their presence and presentation of selves as they reconfigure the market logics of agility, competitiveness, and risk to creatively combine them with logics of hacking characterized by reinvention, playfulness, and resistance. I follow the trajectory of the founder of a

startup closely across the US-Mexico border to show how his project is first aimed at disrupting politics as usual in Mexico, then pivoted away into a pizza delivery platform after he becomes immersed in the cultures of Silicon Valley, but then ends up returning to global politics in surprising ways. I argue that this happens because he mobilizes migration as a type of hack as he learns to think with but also against the pivot across the techno-borderlands. Presenter: Hector Beltran

The Pivot Goes to Hollywood: Maintaining Expertise at the Entertainment-Technology Nexus : In 2018, I attended to community formation around virtual reality in Los Angeles. In the shadow of Hollywood, it was imagined that VR could find its potential as the next great media and technology platform. Production companies established VR branches; actors and producers entered the “immersive space.” In the southern Californian context, I observed how expectations scholars in the anthropology of technology often have for emerging technologies were refigured due to the influence of the entertainment industry. My research uncovered a different meaning of “tech” that circulated in LA, such that expertise native to Hollywood came to be seen as essential to VR’s success. And yet, in 2022, after spending a pandemic-length time away from the city and community, I returned to find that where conversations had once been about VR, they had pivoted to “web3.” In the LA Convention Center, which four years ago had hosted VRLA, NFTLA was taking place. As I reconnected with folks whom I had known from VR, they updated me on their NFT/crypto/metaverse ventures. This paper examines how, in LA, one emerging technology came to so fluidly replace another. I explore how “the pivot,” which in Silicon Valley emerged as a strategy for keeping startups solvent, played a different social role in Los Angeles. For those operating at the entertainment-technology nexus, pivots enabled individuals to maintain their authority and expertise in new areas. It affirmed the expansive meaning of “tech,” which kept the field open to those with expertise not often recognized as technological work. Presenter: Lisa Messeri (Yale University, Department of Anthropology)

Knowing Technology in the Times of Platforms and Pivots: This paper sketches an epistemology of technology drawn from the practices of residents, especially community organizers, attempting to know “smart city” projects in San Diego, a highly militarized

border city. I present two years participant-observation of the work of a 30-organization coalition that responded to San Diego’s acquisition of 3,000 surveillance-technology equipped streetlights by calling for oversight policies while also defunding several smart city technologies, including the “smart streetlights” and Shotspotter gunshot detection systems. Organizers’ task was not only to know the technologies’ present configurations but to speculate about target technologies’ future possibilities. In the logic of the technology platform, a technology might be used for many purposes. In the logic of a corporate pivot, a technology company may attempt to redeploy its installations, its production capacities, or the data it draws from people towards new lines of profit. To know technologies in times of platforms and pivots, organizers drew not only on documentation of or interaction with the technologies or technology companies, but personal and community histories of their interactions with the institutional sponsors of the technologies. This could mean the San Diego Police Department, the FBI, or Border Patrol, for example – the known or potential users of technology and customers of these technology companies. Residents’ histories of repression, enclosure, and extraction were how organizers attempted to know the probable futures of technology cast against other futurities of neighborhood, kinship, and lifecourse. Presenter: Lilly Irani (University of California, San Diego)

Demystification and Remystification: Tech Swerves and Activist Pivots: Big Tech companies have witnessed seemingly radical changes over the past several years, with ownership changing hands, rounds of layoffs, and new ‘revolutionary’ ideas like cryptocurrency losing cache in scandal, only to be replaced with newer, seemingly more revolutionary, technologies. Meanwhile, the effects of these swerves both mask ongoing structural problems created by these industries and produce cascading effects that ripple out from these changes. In this paper, I trace the aftermath of some of these swerves through the lens of demystification and remystification. I argue that, while much contemporary thinking on the power of digital and social media technologies unfolds through the idiom of revealing the underpinnings of technological enchantment, this narrative often serves to displace enchantment onto other sites of technological production. In other words, efforts to demystify the tech industry often simply remystify new formations of

technocapital. In place of a search for final causes or ultimate demystifications, I offer demystification and remystification as processes through which we might trace a technical object as it moves across territories, as it is seen from different subject positions, and as it comes to ground in particular locales. To do this, I offer an account of activists' ongoing work to raise the issue of caste hate speech and caste discrimination in tech companies. I argue that, even while changes in ownership and policy at these companies require activists to pivot, they have been able to create compelling narratives around caste-based discrimination by drawing tech companies into a wider ambit of debate that places these companies within labor and housing rights writ large. This story exemplifies the situated nature of tech mystifications: for those on the receiving end of caste-based hate, for instance, company products do appear straightforward. This case allows an analysis of how and for whom mystification operates. Presenter: Sareeta Amrute (The New School)

Pivoting To the Future Through Design in Post-Katrina New Orleans: In the years following 2005's Hurricane Katrina, an ambitious set of education reformers took the unprecedented step of converting an entire public school district over to publicly funded but privately operated charter schools. These moves were justified with reference to the so-called blank slate provided by the storm and the pre-existing emergency of failing schools and bad teachers. However, as this transformation approached ten years old the temporality of reform began to shift from one of emergency to an enduring encounter. The tabula rasa upon which pro-charter reformers had projected their visions of a district entirely composed of a privately managed portfolio of schools had become a mirror. As opposed to the immediate period after the levee failures, the recent past of schooling could no longer be described in terms of the "nightmares" of Pre-Katrina schools. Reformers had to answer for their own records and reckon with the consequences. In the words of a reformer turned entrepreneur, "New Orleans wasn't thinking about the future. We were only thinking about recovery..." This paper attends to the ways that a particular group of education reformers pivoted to design and design thinking as a way of breaking through a temporal impasse in the reform project and regain legitimacy in the eyes of the schooling public. This pivot is of a piece with a broader turn towards technological solutions to racialized education inequality in New

Orleans which relocate the skill and autonomy of educators into new firms dominated by settler interests and professional class collaborators. Presenter: Christien Tompkins

DISCUSSANT:

Nicole Fabricant (Towson University, Department of Sociology, Anthropology & Criminal Justice)

DESCRIPTION:

Since the early 2000s, various anthropologists have analyzed the phenomenon of 'muted' and 'color-blind' racisms (Mullings 2005; Winant 2001; Bonilla-Silva 2006), while others focusing on the production of knowledge have pointed to how essentialized differences have migrated from the biological sciences to a more diffused logic in population sciences, genomics, and econometrics (Fullwiley 2011; Murphy 2017; Roberts 2011; Tamarkin 2020). All of these authors have gestured to a 'postracial' deployment of difference, or a denial of race's continued social salience that 'allow[s] race to continue to determine conditions of access and inclusion' (Amrute 2016: 59). Nevertheless, our contemporary illiberal moments' mainstreaming of white nationalisms, as well radical and progressive movements' continued insistence on racial violence and inequity gestures to a transition to a still-incipient, post-post-racial reconfiguration (Maskovsky 2017). This panel seeks to address what comes after the post racial moment: are these contemporary articulations reassertions of former, more overt forms of racism, or do they demand new ways of analyzing and identifying how difference confers in

bodies? How are people accounting for the receding possibility of a post-racial society? How are the racisms proliferating in this failed post-racial moment continuous with or divergent from past forms? By posing these questions, we seek to think through this moment as one of transition, or reiteration—a reproduction of old or moribund ways of packaging essential differences that is also a moment of genuinely novel rearticulation. Mourning the Racial Self: Jewish Social Reproduction in contemporary Germany. : I am examining the production of racial differences between secular practices of managing the Jewish faith and the social reproduction of Jewish life in Germany. In both cases, racial difference emerges as the unreproducible and/or untranslatable excess of these processes, pointing to a need to more closely examine where secularism and racial capitalism converges. At the same time, differences constituted by race present a unique challenge to Germany's long-standing (arguably the longest) commitment to post-racialism. Moreover, practices of social reproduction and political secularism anticipated post-racial discourse long before (that is, before 1945) its de facto, hegemonic status. I argue that this (re)racialization of Jewish life in contemporary Germany is both muted by, and points to a transition away from, post-racial articulations of difference. The latter of which is often expressed through an illiberal politics that, in a tenor commensurate with a post-

fordist mourning (Mühlbach and Shoshan 2012) of a compromised/lost post-racial future, redeploys racial politics that is affectively saturated with grief. Alongside an analysis of racial capitalism and secularism, then, this paper also explores the affective politics implicated in the transition away from post-racialism. Bibliography Muehlebach, A., & Shoshan, N. (2012). *Post-Fordist Affect: Introduction*. *Anthropological Quarterly*, 85, 317-343. Presenter: Julian Ross

National Security, Sovereignty, and Control of Lithium Commodity Chains: Transnational governance institutions and many of the largest multinational energy companies have articulated that a shift from the use of fossil fuels is necessary to mitigate the unfolding climate crisis. A common solution advanced to realize this transition is the production of renewable energy storage systems and batteries for technologies such as electrical grids and electric vehicles. Lithium is an essential component of the technologies currently envisioned as necessary. The largest known reserves of this critical resource are located in South America's Lithium Triangle, which encompasses parts of Chile, Bolivia, and Argentina, while most of the world's lithium processing capacity is controlled by Chinese companies. The actualization of the United States' and Europe's green energy futures necessitates navigating relationships with these governments. As incentives for investment in these technologies grow, discourses tying "national security" to "energy independence" and sustainability are proliferating in Global North countries. This choice in rhetoric contributes to the production of these Global South nations as potential obstacles to continued dominance by Global North countries. Through an examination primarily of US government energy policy and media reportage related to investment in lithium industrialization, this paper seeks to identify languages of state speculation of geopolitical competition over new frontiers of development to grasp at the ways state administrators construct an imagination around the North's threatened global standing. Presenter: Mar Ovalle-Meda

So Fat That You Can See It From the Front: Blackness, Beauty and the Medical Industrial Complex : In creating new bodily aesthetic realities for Black women and femmes, plastic surgeons and allied beauty industries are tasked with not only fulfilling the wishes of their consumer base but also enacting their "professional" and "medical" vision of the "perfected body". The achievement of this idealized form is not without complications as many of these aesthetic medical procedures carry high levels of physical rejection and

more disastrous outcomes. This paper endeavors not to explore the reasoning behind Black women and femmes choice to undergo precarious bodily augmentation, or the journey of such processes, but rather aims to examine how the medical industrial complex's promise of health under the guise of beauty contributes to Black death and Black feminine erasure via the promotion of an assumed post racial hyper feminine body. This body and its contours have Black femininities at its foundation, yet have largely become devoid of related historical signifiers depending on the race of the patient. This paper argues that these procedures are direct forms of cultural and gender affirmation for Black women and femmes yet the associated dangers and risks are normalized by social networks and medical professionals. The increasing access to such surgeries with a clear lack of heavier emphasis of its problematic nature continues the corporeal and racial disciplining of Black women and femmes reifying existing racial hierarchies in the United States. Finally, how can we hold the creation of the Black feminine and its oppression together in tension to more thoroughly delineate continued societal fears of Black women and femmes in the US? Presenter: Cassandra Barnes (CUNY, Graduate Center, Department of Anthropology)

The Politics of Hereditary Worthiness in the Speculative World of Techie Pronatalists: This paper explores how eugenic designations of worthiness are being transformed, rejected and reiterated in contemporary natalisms through an examination of a particular strand techno-optimist pronatalism in the United States. Focusing on the platform and online presence of an advocacy group who call themselves "the first true pronatalist movement," this paper probes how they conceptualize categories like wealth, intelligence, ability and race in relationship to heredity. This group, socially adjacent to Silicon Valley, is concerned primarily with predicted economic and civilizational decline brought about by a slowing birth rate. Their solution to this widespread concern is to encourage the most educated and wealthy among us to have as many children as possible, aided by assisted reproductive technology. They embrace the development of the most precise and complete, at this point highly speculative, technologies of embryonic polygenic testing to guide the creation of the smartest, 'best' offspring. This paper argues that this project overtly eschews racial categorization while embracing heredity as a central mode through which to envision and manage the future in ways that bears relevance to and refigures certain eugenic categories of worthiness and unworthiness. While this group presents a somewhat unique vision, their understanding of

demographic crisis, eschewal of racial categories, and speculative practices, financial, genetic and affective, are shared by wider publics and have potentially profound political effects. Presenter: Googie Karrass

Mongrel Moralities: Transforming Racializations, Disposability, and Care in California : This paper explores how California's eugenics movement of the 20th century set the foundation for progressive racial formations based on the idea of "protecting" the public and the state's resources from its growing Latine population. Specifically, I will look at how California's concurrent projects of sterilization, deportation, and "better breeding" came to be understood along the lines of race, gender, and physiology before articulating difference based on individual responsibility and morality (Stern 2016). This history shows that racialization is inextricable from the political subjectivity of Latine communities in the United States, as illustrated by continued narratives of illegality and criminality. I argue that while still stemming from California's eugenics project, beliefs of morality and meritocracy, as opposed to more outright racisms, are used to justify a subordinated Latine social position. To show this reconfiguration of race, I will trace, both historically and ethnographically, how the Latine presence within prisons and cannabis farms in California is predicated on logics of deviance and disposability. Additionally, in light of the harm and devaluation that cultivates a disposable Latine subject, I aim to lay out the ways these spaces also work to cultivate an interdependency based on well-being and autonomy. Executive Roundtable/Townhall - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Harjant Gill (Towson University, Department of Sociology, Anthropology & Criminal Justice)

CHAIR:

Fiona P. McDonald (University of British Columbia, Okanagan)

PRESENTER:

Harjant Gill (Towson University, Department of Sociology, Anthropology & Criminal Justice), Richard Fung, Zulfikar Hirji, John Greyson

DESCRIPTION:

This executive roundtable session brings together pioneering Canadian ethnographic filmmakers and visual anthropologists – Richard Fung (OCAD), John Greyson (York), and Zulfikar Hirji (York) to engage in a lively conversation about locating queer, diasporic, transnational perspectives in ethnographic film and visual representation facilitated by Fiona P. McDonald (UBC Okanagan). The three Toronto-based scholar-filmmakers will draw on examples from their current and past film and media projects to illustrate their critiques of ethnographic cinema, visual and multimodal anthropology. This roundtable discussion builds on larger ongoing projects of decentering Americanist perspectives and decolonizing visual anthropology including Harjant Gill's 2021 essay 'Decolonizing visual anthropology: Locating transnational, diasporic, queers-of-color voices in ethnographic cinema' published in *American Anthropologist* 123 (1): 36-49. Gill (Towson) will serve as a commentator and fourth panelist. Drawing on their vast knowledge and experiences as filmmakers and scholars, panelist will comment on the recent transitions in field of visual anthropology and documentary cinema towards multimodality (Collins et al. 2017), and how queer, diasporic, and transnational perspectives find a voice and locate themselves within this shifting landscape of film and anthropology. This roundtable panel is presented by the Society for Visual Anthropology in conjunction with the SVA Film and Media Festival which will run concurrently, showcasing films and media featuring overlapping themes and stories of transitional landscapes, transnational people, trans-identities, and so on.

Repair, Mending, Maintenance, and Care: Are They Political Activities?

12:00 PM - 1:45 PM **TMCC - 501 A**

Oral Presentation Session

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Petra Kuppinger (Monmouth College)

CHAIR:

Petra Kuppinger (Monmouth College)

PRESENTER:

Page McClean (University of Colorado, Boulder, Department of Anthropology), Kathleen Skoczen (Southern Connecticut State University), Petra Kuppinger (Monmouth College), Subhadra Channa (University of Delhi), Hope Reidun St. John (University of Washington, Department of Anthropology), Jimil Ataman (University of Pennsylvania, Department of Anthropology)

DESCRIPTION:

Recent years witnessed increased activities and activism in the sphere of repair, mending, upcycling, maintenance, and care of material items. After decades of being told to quickly discard items once they are even slightly worn, dirty, damaged, or simply out of style, growing numbers of consumers started to challenge toss-it and everything-needs-to-be-perfect-mentalities, and actively confront products' planned obsolescence. Individuals and groups request that companies produce fixable goods and provide repair manuals. On the hands-on side, people seek to make things last by way of individual and communal practices of care, maintenance, and repair. Repair cafés, open repair workshops, repair manuals and assistance, tool exchanges, or apps help consumers extend the lifespans of their belongings. Volunteers and helpers mend jeans, fix coffee makers, or restore bicycles. They teach mending and fixing skills or creatively upcycle products and materials. In addition to voluntary efforts there are commercial project with pursuing similar aims. Entrepreneurs created global repair businesses where especially electronics are fixed and then sold elsewhere. People join, volunteer, or professionally work in repair circuits across the globe in different capacities, by choice or for lack of other opportunities. With the insane abundance of material goods, global repair landscapes have proliferated at rapid speed. Until recently, this global scenery of repair and maintenance has received little attention from anthropologists and other social scientists. This panel takes an ethnographic look at diverse activities and activism in the realm of repair, mending, repair, recycling, upcycling, maintenance, and care. Papers explore concrete places across the globe where individuals or groups repair, mend, upcycling, maintain, and care for materials items in efforts to expand their use and lifespan. Panelists introduce people, places, materials, techniques, and technologies that work to make things last in very different contexts. Concretely, panelists introduce the

complex domestic world of sari/fabric reuse and repurposing in India, practices of doing slow fashion in the United States, repair cafés in Germany, the rural economy of the repurposing and gifting of discarded items in the Dominican Republic, and the complex material and creative scenery of the rescue and repair of old film cameras in the United States in Canada. Theoretically this panel engages small-scale ethnographies of repair in larger contexts of critical landscapes of consumption, anti-consumerism, make-do, and political activism. Papers theorize repair activities beyond their immediate material context and situate them in the realm of political activism and subversion. Panelists argue that repair efforts are political acts that challenge the dominance and detrimental nature of dominant global hyper-consumerism. One fixed vacuum cleaner, restored bicycle, upcycled bed sheet, or visibly mended sweater might not make a dent, but the sum total of the vast scope of repair activities makes a tangible material difference (it diverts tons of materials from landfills), and very crucially it makes a powerful political and economic statement by prolonging the lifespan of goods and profoundly confronting dominant toss-it economies. Repair and care activities can make powerful statements about capitalist consumerism and possibilities of a different future.

Rural Resistance: Ingenuity, Value, and Repair in Patagonia: For rural Patagonians, repair and mending are not new activities. However, their persistence in spite of increasing infrastructural connection to central Chile suggests that they may be acts of cunning and resistance to the pressures of Chilean neoliberal values imposed on their communities. Ingenio, the ingenuity required to solve problems with what is at hand, has become a tactic to resist the transformation of their communities and cultures into what they see as an undesirable foreign set of ways. This paper will discuss various acts of ingenuity that seek to repair the disconnections to land, identity, and community brought by so-called “connectivity.” After providing a historical overview of why repair, repurposing, and mending were critical forms of survival in a place without a road, I will discuss how maintaining these skills takes on a new political meaning today. Holding on to what Chileans might call “junk” provides an insurance policy against the imperative to buy new things that have arrived with the road - things that are designed to break and increase consumption. The use of compost to “repair” soil that has recently been dismissed by outsiders and state agricultural experts as poor quality enables food sovereignty, a link to local

foodways, and independence to choose what one grows and eats without relying on the packaged foods that arrive by truck. Through their actions and in conversation, people’s forms of reuse and repair contrast with their examples of breakdown they use to critique the state and its disposable economic values. Presenter: Page McClean (University of Colorado, Boulder, Department of Anthropology)

Transitioning Dominican Reusing, Repurposing, and Recycling Networks in a New Economy: Among development experts in the Global South there is much concern about, and considerable investment being made in, teaching people how to recycle their trash. The visible, overwhelming, and destructive presence of garbage leaking into ecosystems is an environmental crisis. In small cities and rural areas of the Dominican Republic (DR), residents may not understand questions about recycling or composting. Assumptions that these practices do not exist however, are premature. While there were no terms or labels for recycling or composting, with ethnographic research one finds a broad range of practices surrounding reusing, repurposing, and recycling. It is true that the concept of garbage has fundamentally transformed with the widespread introduction of nonorganic trash. As wealth has expanded in the DR so too has commercial consumption which now resembles North American patterns, with fancy supermarkets and their version of dollar stores. Items are now made of plastic, wrapped in plastic, or both. Communities are inundated with plastic trash. While dealing with this nonorganic material may pose mounting challenges, one does not need to look far to see long-established and impressive networks of reusing, repurposing and recycling. Despite the lack of terminology for these practices, rural areas of the DR have had a gift economy whereby discarded waste of all types, bottles, cans, metal, cardboard, food waste, etc., has been recirculated. Ethnographic research from the northeast DR suggests that the vast networks are likely to transition and adapt to these new challengers rather than disappear. Presenter: Kathleen Skoczen (Southern Connecticut State University)

Saving the world one toaster at a time? Notes on repair cafés: Most consumer goods come with planned obsolescence that makes them quickly dysfunctional and largely impossible to fix. Things are to be used, discarded, and rapidly replaced without much questioning. Many individuals have become frustrated with this reality that is profitable for corporations but detrimental to people and the planet. Recent years

witnessed the emergence of quests to lengthen the lifespan of material items through repair, mending, or repurposing. This paper examines the global initiative of repair cafés and how it seeks to make ecological, political, and economic contributions with the repair of household appliances, electronics, bicycles, or textiles. With over 2500 local chapters, repair cafés fix more than 47,000 things across the globe every month (www.repaircafe.org). Based on one year of ethnographic fieldwork at a repair café in Stuttgart, Germany, this paper introduces the work of this initiative and analyzes its contribution to social and ecological urban sustainability. I explore the motivations of volunteers who work at repair café events, and visitors who bring their possessions for repair. I describe exemplary work processes and social encounters at these events where interesting debates about “stuff” and the politics and economics of material goods unfold. Theoretically, this paper engages debates about grassroots environmental politics and movements, and questions of how effective small initiatives can be on a larger scale. I show how repair cafés are located in larger networks of similar small-scale activities and activism that add up to increasingly more powerful ecological and political voices. Presenter: Petra Kuppinger (Monmouth College)

The Immense Possibilities of Six Yards of Cloth: Power within the Indian Domestic Domain : South Asia embodies a culture of conservation, recycling, repair and restoration. It would not be an exaggeration to say that almost nothing gets thrown away unless it has been recycled multiple numbers of time. In this universe of cyclical objects, there is one article that provides immense possibilities to the otherwise marginalized category of women, especially those who are confined to the space of the home and have little independent existence outside of the patriarchal space that stifles them. This paper explores the six yards of cloth that is the most common article of clothing for a majority of women in India (also South Asia) and provides a resource that may be recycled and reworked to provide possibilities both economic and aesthetic to its wearers. I introduce a woman’s world of barter and exchange where it also plays a key role. Depending upon the material and design (there is an immense variety) a sari can be converted to anything from a babies nappie (clothes diaper), menstrual cloth, alternative articles of clothing, items with commercial value, to articles of artistic imagination to being bartered for other household items (with female partners). The decision making, the exchange networks and the possibilities that are imaginable to recycle it fall entirely within the

female domain where men have no role. It therefore provided a space of freedom that is in itself a power resource stretching limits of patriarchal gate keeping. Presenter: Subhadra Channa (University of Delhi)

Mechanical repair and chemical consumption: Entanglements of rescue in contemporary film photography: Rescued from estate sales, attics, and thrift stores by photography hobbyists and professionals alike, aging film cameras have become unanticipated benefactors of the resurgent interest in film photography over the last decade. Once resigned to being a casualty of technology’s digital turn, film cameras the world over have become targets of renewed attention and care amidst the repopularization of analog media formats like celluloid film and vinyl records. While the re-enlivening of previously unwanted technological objects may initially appear to be a byproduct of proliferation of anticonsumerist socialities rooted in practices of care, repair, and making do, contemporary film photography offers a more complex case study in the interplay between repair, reuse, and consumption. Although the functional life of a film camera may be extended through practices of rescue, recycling, and repair, this extended life facilitates potentially contentious material consumption in other ways through the reliance on environmentally harmful chemical reagents in the production of light-sensitive emulsions and film developers. Simultaneously enmeshed in photographers’ resistance to technological obsolescence, creative practice, and active chemical consumption, contemporary film photography draws into focus the complex and contingent entanglements between caring, consumptive, and creative practices through which relationships between material and imagined worlds are enacted. Drawing from ethnographic fieldwork with photographers in Seattle, USA and Vancouver, Canada, this paper argues for a situated understanding of material care that is attuned not only to practices of care as forms of resistance, but also to their entanglements within ongoing practices of creative labor and aesthetic production. Presenter: Hope Reidun St. John (University of Washington, Department of Anthropology)

Making an Ethical Life: Slow Fashion as a Practice of Care : “Slow fashion” encompasses a burgeoning social movement, grassroots clothing industry, and thriving community that collectively aims to unstitch the global systems of fast fashion by weaving together everyday practices, alternative models for fashion production, and an online community. In this paper I draw on 18 months of ethnographic research I conducted on the

slow fashion community across Seattle, Washington, Portland, Oregon, and on Instagram. I will trace ways slow fashion invites practitioners into a hands-on practice of doing slow fashion; here skills-based education processes centered around learning about the political economies of clothing and well as how to make and mending clothing are being practiced and performed as a kind of lifestyle politics. To do this, I position slow fashion within the broader landscape of consumer-activist movements. Here, slow fashion advertises itself as a mode of feminist political action where the 'personal is political.' Practitioners are then mapping how and why they do slow fashion onto a broader framework for ethical living. I show how slow fashion practice is intended to (and in some cases does) repair the waste-driven, profit-seeking inequitable and unjust system(s) that produce and sustain contemporary fashion. Ultimately, this paper will explore the possibilities and contradictions that emerge when doing slow fashion is used as a practice of caring-for and caring-about the human and nonhuman actors that are entangled in the fashion industry. Presenter: Jimil Ataman (University of Pennsylvania, Department of Anthropology)

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Frederick Nadeau

PRESENTER:

Eric Henry ,Benjamin Staple ,Elliot Montpellier (University of Pennsylvania),Isabelle Henrion-Dourcy (Universite Laval),Dorian Juric

DESCRIPTION:

This panel coalesces around themes of social media ethics, virtual and non-virtual communications in both performances of cultural continuity and transgressions, and methodological conundrums. The role of song is explored among the Tibetan diaspora and -along with poetry and rumour-migration in Bosnian-Herzegovina. Social media 'attacks', anonymity, and explorations in media 'piracy' and computational ethnographies are punctuated with concerns over how to represent and ethically engage with new emerging forms of cultural data.

My Death Threat: Digital Anonymity, Institutional Frameworks and Malicious Discourse: In 2022 I received an email sent to my university account with the ambiguous subject 'Disgusting' which proceeded to call me a plague and promised I would not last long. In this paper, I present an autoethnographic account of how this email was received and then circulated through various bureaucratic institutions: academic, legal, security and human resources frameworks. I will discuss how discourse is transformed and recontextualized through these various frameworks, gradually dulling its immediacy and illocutionary force. These processes are in turn embedded within emerging technologies of virtual communication, raising new media ideologies regarding how discourse is understood and interpreted through various communicative channels. Gendered and racialized dimensions also affect how institutions evaluate and act to resignify such messages. Institutional discourse, in other words, becomes the agentive force in such real world issues, disengaged from the actions and voices of human actors. Presenter: Eric Henry

Outlaw (Re)production: Digital Media Piracy as Transformative Cultural Tradition: Called thieves and trespassers, digital media pirates ply the currents of cyberspace, negotiating a dangerous and sometimes ambiguous course between law, morality, and identity. This paper is based on ethnographic research with the now-defunct pirate community Kickass Torrents, shortly before it was seized and shutdown by the US Department of Homeland Security in 2016, and explores the cultural dimensions of digital media piracy as an everyday tradition of resistance. Lacking legitimacy, pirates collaboratively create their own virtual communities and internal systems of valuation. Within its own techno-moral frame, piracy becomes a 'weapon of the weak' (Scott 1985) as pirates practice resistance to laws they perceive to be unjust. In responding to copyright laws, geo-blocking, and digital enclosure (Boyle 2003), pirates find agency in the illegitimate and illegal. Pirates create themselves through practice and discourse, by the act of infringement and by drawing on traditions of historical maritime piracy (Graeber 2023) and legends of outlaw folk heroes, such as Robin Hood (Hobsbawm 1969). Like outlaw folk heroes, pirates are marked by moral ambiguity and ethical relativity. Through transgression, pirates see themselves as working in the public good by offering access to and preservation of otherwise inaccessible art and culture. Piracy is a transformative process in which software is 'cracked,' its code materially modified and symbolically

stripped of etic values, before being reproduced and re-valued as an almost-identical copy, or translation, in a pirate gift economy. I argue that piracy is a traditional practice of folk appropriation that transforms legally-enclosed commercial goods into illegally-accessible 'pirate versions,' and, in doing so, translates them into an underground virtual commons. Presenter: Benjamin Staple

An Ethnographic “Thick and Thin” Redux: crossmediality, user-generated content, and proprietary data: Taking up the call for an itinerant approach to ethnography for the crossmedial televisuality (Hine 2011), this paper argues for greater engagement with digital humanities (DH) approaches to incorporate computational methods in the ethnographic study convergence cultures (Jenkins 2006). As surveying tools, DH methods can be paired with careful analysis of particularities of communication and media use. Such methods can help track changing trends in specific television drama pages commercial use over time, identify moments of contestation, and locate diachronic shifts in the qualia of user-viewer engagement with shows' themes and their digital (after)lives (Chumley and Harkness 2013). This approach puts into practice Marcus' call to stick to ethnographic ideals around the description of cultural practices across mobile and multi-sited space (Marcus 2010). His metaphor of 'thick and thin' is useful for thinking about how to approach thinly-descriptive datasets produced by user-viewers of dramas' social media sites in descriptive fashion. With a proliferation of user generated content (Gauntlett 2011) and burgeoning anthropological focus on data and attention (Pedersen, Albris, and Seaver 2021; Douglas-Jones, Walford, and Seaver 2021) questions of access and how to parse large quantities of content and proprietary cultural datasets – within narrow social media corpora linked to one culture industry – are vital. Methodological experimentation is critical to developing a thick descriptive approach to data (Wang 2013; boyd and Crawford 2012). With a focus on informal labor of creative professionals experiencing rapid digitalisation and distinctive platformization, the paper situates ethnographic experimentation through multi-valanced data from Pakistan, the diaspora, and online. Presenter: Elliot Montpellier (University of Pennsylvania)

Targeting the youth: Traditional Opera in a disintegrating Tibetan diaspora: 'Are we finished as a people?' The Tibetan diaspora that has settled in South Asia since 1959 has often be hailed as an example of cultural resilience and cohesiveness, as well economic success and relative political visibility. But with the

intensification of repression in Tibet since the 2010s, and the hemorrhagic migration of Tibetans in South Asia to Indian cities and Western countries, there is a growing feeling of despair among exile Tibetans, over the very survival of their language, religion and culture. Tibetan enrollment in monasteries and schools in India has dropped sharply, replaced with monks and pupils sent from borderland Himalayan regions in Ladakh, northern Nepal and Arunachal Pradesh. Tibetan refugee anxieties about the future transpire in the current official injunction to save against all odds the most emblematic, yet demanding, Tibetan performing art: traditional opera (ache lhamo). In this presentation, I shall examine the Tibetan exile policy and practice of Tibetan opera, as they played out in the Shoton (Yoghurt festival devoted to Opera) in South India in March 2023. Out of the ten opera troupes present, four were made up of teenagers: an innovation, since the acting techniques require a lot of time to be mastered. They felt mandated to 'save Tibetan culture', while most of the other troupes and the audience were composed of elderly people. I will analyze how the transmission of this art form required several transitions on and off the stage, including simplification, digitalization and transnationalization of the pedagogy. This will lead to a final reflection on the imbrication of youth, cultural preservation, and YouTube in a fragmenting diaspora. Presenter: Isabelle Henrion-Dourcy (Universite Laval)

Gazija or Guzija? Crossing the Line of Hate Speech in Bosnian Anti-Migrant Nativism: In 2018, when flows of migrants were re-routed through Bosnia-Herzegovina and bottle-necked in the north-western Bosnian Krajina region, there was a local outpouring of support and voluntarism. Growing subsequent waves of migrants, acts of criminality and chaos, and a lethargic state response quickly soured relations and precipitated the emergence of a number of small networks of nativist activists. While not as extreme as similar groups in other regions of the Balkans who turned militant, these networks fought for a return to normality in their region while sending a clear message that their new guests were no longer welcome. In this presentation, I explore the role that rumour, conspiracy theory, folk poetry, and song played in motivating and escalating nativist activism and conveying anti-migrant messaging in the heat of the crisis, as well as how those sentiments obscured the complex realities of on-the-ground human interactions. Presenter: Dorian Juric

Stir: Porous Silos and Unsettling Collaborations in Art-Science-Anthropology

12:00 PM - 1:45 PM **TMCC - 801 B**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Timothy Choy (University of California, Davis)

CHAIR:

Michael J. Hathaway (Simon Fraser University)

PRESENTER:

Jen Rose Smith (University of Washington), Morgaine Lee, Keith Williams, Suzanne Brant, Shiho Satsuka (University of Toronto, Department of Anthropology), Timothy Choy (University of California, Davis)

DISCUSSANT:

Zoe Todd, Iván Sandoval Cervantes (University of Nevada, Las Vegas, Department of Anthropology)

DESCRIPTION:

This roundtable critically and creatively explores the potential of re-mixing art, science and anthropology. Recently, a variety of stimulating projects combining art, science and anthropology have emerged, as the limits of siloed disciplinary practices for engaging with the complexity of life become increasingly apparent to practitioners in those fields and in the world at large. The panel explores the possibilities of agitating and re-mixing art and science, while also asking, how might anthropologists and other practitioners in these conjoined spaces understand and work non-innocently with the openings that 'art-science-anthropology' collaborations offer in the present moment without reproducing the colonial worldings that gave us those categories and modes of interest as such? Panelists will approach these questions based on a variety of situated engagements with art, science and anthropology, including: philosophical and artistic exploration with fish, speculative elaborations of lichen biology, explications of the colonial aesthetics of ice in Anthropocene arts and sciences, culinary arts of huitlacoche, beadwork following mushroom forms, curatorial collaborations with artists employing pursuing art-science projects, and enrollments of fungi as filmic collaborators. We ask not only how the specificities of organisms and materials alter what is brought to the table for practitioners and projects - whether

conceptual vocabularies, repertoires of technique, or inventories of material - but also how differently situated practitioners negotiate the terms by which phenomena might register as 'life,' 'matter,' and 'form' in the first place. What methods, we ultimately ask, are available or might be made for holding art, science, and anthropology in tension, for grappling in a situated way with coloniality, knowledge, and creativity while working closely with other living beings and rethinking ways of connecting, sensing, and knowing? While reckoning with the colonial legacy of the division between arts and science, panelists approach these questions without seeking romantic unity or anthropological holism. Rather, they tune into the resonance and dissonance generated by re-mixing and stirring these realms. Might non-innocent stirrings of art, science and anthropology support transitions towards repair of ongoing colonial relationships and practices?

Student Discourse on College Mental Health: liminal spaces and liminal roles in interdisciplinary research with college students

12:00 PM - 1:45 PM **TMCC - 717 A**

Conversation/Debate - In-Person

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Alicia DeNicola (Emory University, Oxford College, History and Social Sciences Division)

CHAIR:

Alicia DeNicola (Emory University, Oxford College, History and Social Sciences Division)

PRESENTER:

Alicia DeNicola (Emory University, Oxford College, History and Social Sciences Division), Cody Nelson (Emory University), Julia Kwak, Gracie Wilson

DESCRIPTION:

Much has been written on the liminality and transitory nature of the American undergraduate experience. In recent years, there has also been a significant uptick in stories about undergraduate counseling and the epidemic of mental health issues plaguing colleges. What happens when you teach students to interview and code and they begin asking themselves and their fellow students how they talk about their own mental health? What happens when the Director of Counseling and Career Services gets involved and anthropology and

psychology begin to translate for each other? What happens when the college experience literally transitions into a research experience? The proposed roundtable includes three students, an anthropology professor and the Director of Counseling and Career services at a small liberal arts school in the south. We discuss 1) the ways in which the ethnographic experience allows for overlaps between students and researchers, teachers and students, psychology and anthropology and 2) how these liminal spaces serve students--not just as research but also as transformative experiences in students' own ideas of mental health (whether for those interviewed or those coding the data).

The (Im)possibility of Work/Life Balance — A Roundtable on Parenting and Academia

12:00 PM - 1:45 PM TMCC - 716 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Bambi Chapin

CHAIR:

Bambi Chapin ,Christine El Ouardani

PRESENTER:

Christine El Ouardani ,Pinky Hota ,Janie Lee ,Camee Maddox (University of Maryland, Baltimore County, Department of Sociology, Anthropology, & Public Health),Caroline Melly (Smith College, Department of Anthropology),Sara Vieira (University of British Columbia, Okanagan),Talia Weiner (University of West Georgia, Department of Anthropology)

DISCUSSANT:

Elise Berman (University of North Carolina, Charlotte, Department of Anthropology)

DESCRIPTION:

This roundtable calls together anthropologist-parents and others who care for children to share their struggles and challenges in performing both roles simultaneously, a seemingly impossible balancing act, as well as to share how we have and can organize within academic institutions. The COVID-19 pandemic brought parents' increasingly untenable work-life balancing act into sharp relief. However, even before pandemic-related shutdowns brought our classrooms into our homes, faculty parents-particularly parents who identify as women and especially women of color-faced significant

barriers in the workplace (Dapiton et al. 2020; Harris et al. 2019; Hunter and Leahey 2010). These academics carry the physical and emotional stress of shouldering the majority of childcare/housework at home along with what is often a disproportionately heavy service load and unrecognized/uncompensated mentoring and DEIA labor at universities and professional organizations---all on top of basic teaching and research responsibilities. Many of our institutions foreground efforts to work toward gender and racial equity and promote a 'work-life balance' to their employees. However, the primary responsibility for separating and performing competing roles at work and at home is born by the individual. Further, policies put in place to support faculty parents are often inadequate and do not account for diminished research productivity, especially for primary caregivers, parents of children with special needs, and those who are seen as the 'more flexible' caregiver in their family units, caregiving which often extends to others beyond their children. Taking advantage of university policies when they are in place leads to diminished wages with each tenure clock stoppage, exacerbating pay inequities and insufficiencies. Pay constraints contribute to difficulties in obtaining childcare, reliance on co-parents and informal supports who may live and work far away from our campuses. When these parenting academics are also in marginal positions as graduate students, adjunct instructors, and what the AAA calls 'un/underemployed,' there are even fewer institutional supports and assurances. This roundtable brings together panelists, each with our own parenting projects and academic trajectories, to share frustrations, struggles, strategies, and complaints (Ahmed 2021) as we have worked to balance these roles in conflict. Our panelists come from diverse racial and ethnic backgrounds, occupy academic positions ranging from contingent to tenured, have differing citizenship statuses, and are part of a variety of family configurations including queer and differently abled families. We look forward to a lively conversation about how these intersectional identities have shaped our experiences and careers. In keeping with recent work that has called for us to turn our anthropological lens back on our own institutions to analyze our own problems, recognizing that equity work starts at home, these panelists will share our encounters with institutional and disciplinary practices and policies that sometimes help and often don't.

1-130

The Ethics of Reflecting on Ethical Practice

12:00 PM - 1:45 PM **TMCC - 714 A**

Roundtable/Town Hall - In-Person

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Paige Edmiston (University of Colorado, Boulder, Department of Anthropology)

CHAIR:

Katie Kilroy-Marac ,Carole McGranahan (University of Colorado, Boulder, Department of Anthropology)

PRESENTER:

Alexandra Dantzer ,Kelly Fayard (University of Denver, Department of Anthropology),Angela Jenks ,Tomas Matza (University of Pittsburgh, Department of Anthropology)

DISCUSSANT:

Paige Edmiston (University of Colorado, Boulder, Department of Anthropology)

DESCRIPTION:

In 2022, American Ethnologist published a new online series, 'Your Sincerely, An Uncertain Anthropologist' (Dantzer and Edmiston 2022). Aiming to create a space for collective reflection without reproducing the straightening effects of standardized ethics, this ongoing series invites anthropologists to discuss the ethical dilemmas they encounter in every aspect of their work. Playing with 'advice column' in form, 'An Uncertain Anthropologist' publishes ethical questions from anthropologists alongside responses from their colleagues who can speak to grappling with similar uncertainties. If we agree that collective reflection on our ethical practice is a useful way for dwelling in productive uncertainty about the ethics of what we do, what then does this collective reflection entail? In the process of developing and editing this series, we (the editors of 'An Uncertain Anthropologist') have encountered our own ethical uncertainties: How do (and could and should) we decide which questions merit discussion and whose voices are elevated in response? How can we be accountable, as editors, for the effects our decisions produce? In short, how do we ethically edit a series on ethics? Using 'Yours Sincerely, An Uncertain Anthropologist' as a grounding case study, this roundtable invites an open exploration of the uncertainties, practicalities, and possibilities of convening 'ethical discussions' within anthropology (Wynn 2017).

1-120

The Ethnography of Reading at Thirty: Opening up to Moments of Transition

12:00 PM - 1:45 PM **TMCC - 712**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Humanistic Anthropology

ORGANIZER:

Margaret MacDonald (York University),Matthew Rosen (Ohio University, Department of Sociology & Anthropology)

CHAIR:

Ellen Foley (Clark University, International Development, Community, and Environment Department),Margaret MacDonald (York University),Seema Golestaneh (Cornell University, Department of Anthropology),Britt Halvorson (Colby College)

PRESENTER:

Janice Graham ,Richard Powis ,Bonnie Ruder ,Adrienne Strong (University of Florida),Siri Suh (Brandeis University),Alexandra Widmer ,Charlotte Christiansen ,Line Dalsgård (Aarhus University, School of Culture and Society),Jonathan Boyarin ,Rashmi Sadana (George Mason University, Department of Sociology & Anthropology),Amina Tawasil (Teachers College, Columbia University, Department of International and Transcultural Studies),Andrew Brandel (University of Chicago)

DISCUSSANT:

Ingie Hovland (University of Georgia),Shinjung Nam (Sungkyunkwan University)

DESCRIPTION:

The proposed roundtable brings together an international and interdisciplinary group of scholars who have approached reading not as a bounded event but as a succession of moments of transition, moving back and forth, between words and life. Rather than operating from universalist assumptions about how people interact with and make meaning from written texts, each of the session participants has drawn on the legacy of The Ethnography of Reading (Boyarin 1993) to explore new relations between language, meaning, memory, imagination, and practice. Bringing together scholars who have kept their ears tuned to the voices in and around the texts they encountered and constructed in the process of bringing the ethnography of reading

into the twenty-first century, the proposed roundtable will explore meaningful points of overlap and divergence in recent ethnographic reader studies, including the multimodal reading practices of adolescent girls in Singapore (Loh); how texts move through translation and commentary (Brandel); emergent forms of Confucian classical education in China (Zeng); collective reading and social critique in South Korea (Nam); antiracist reading practices promoted by political activists in Brazil (da Silva); connections between reading and materiality in Christian (Halvorson and Hovland), Islamic (Golestaneh), and Marxist (Kanna) textual communities; embodied and intersubjective effects of shared reading in Denmark and Norway (Christiansen and Dalsgård; Fagerlid); and reading the urban now in Delhi (Sadana), Tirana (Rosen), and New York City (Tawasil).

1-025

The Space In-Between Marriage in Law and Marriage in Practice

12:00 PM - 1:45 PM

TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Maryam Roosta

CHAIR:

Katherine Lemons

PRESENTER:

Maryam Roosta ,Uzma Zafar ,Srimati Basu (University of Kentucky),Siobhan Magee ,Aobo Dong (Emory University),Amy Brainer

DISCUSSANT:

Rose Wellman (University of Michigan, Dearborn, Department of Behavioral Sciences),Katherine Lemons

DESCRIPTION:

By dwelling on the in-betweenness of marriage as a regulated institution and marriage as deployed relations in life, this panel aims to understand the unexpected effects of legal categories of marriage. The articulation of marriage as law produces prescriptions and prohibitions and defines legitimate sex acts by showing us whose relations and which desires can receive recognition (Povinelli 2002). Both anthropological theory and the law emphasizes the role of culture in specifying the modality of relations between sexes (Borneman 1997) to ensure order and the existence of groups. Marriage is treated as a tool for regulating and

governing the family life as the core institution of nation-state. However, the legal recognition of marriage protects a particular form of marriage and family, generating certain inclusions, exclusions, and boundaries (Borneman 1996; Franklin and McKinnon 2002). Modern legal frameworks conjure these exclusions and inclusions as natural and immobile (Butler 1999). Nevertheless, changes in marriage challenges the immobility of concepts of family, kin, and gender. Individuals could manipulate marriage regulations to secure their desirable relations and family arrangements. In practice, the law does not simply clarify categories and cases; through its inclusions and exclusions, it creates a room for ambiguity and in-betweenness. This panel embraces the spontaneity and unpredictability of relations by exploring the in-betweenness of legal categories of marriage and the ways people build their relations of intimacy. Rather than simply fixing marriage in law, the panel is interested to explore the interplay between marriage law and people's strategies around it to excavate the potentiality of relations. We attend to in-betweenness where individuals navigate between marriage laws and their own desires to ask these questions: what strategies are employed by individuals around marriage laws to receive the mark of legitimacy? And how do these strategies configure their gendered subjectivity? Various papers of the panel look at the contested terrain of marriage laws in China, India, Iran, Pakistan, and USA to go beyond the analytical frames of western and non-western kinship concepts and achieve a comparative understanding of blurriness of marriage and law. This panel opens up the possibility to rethink marriage as law in the face of ongoing transitions and uncertainty by underlining contestations and negotiations around the complexities of marriage.

Women Navigating Verbal Temporary Marriage Contracts in Iran: Blurred Marriage Law Boundaries: Temporary marriage, also known as mut'ah or sigheh, is a form of marriage in Shia Islam that allows for a time-limited contractual relationship between a man and a woman. The duration of the marriage can range from a few hours to several months, with a predetermined end date specified in the contract. In contemporary Iran, legal experts and women's rights activists widely believe that sigheh creates legal loopholes because, contrary to permanent marriage, does not require a witness nor registration. Moreover, in 2007 the government removed the legal requirement to register temporary marriages. Women's rights advocates mainly discuss the consequences of not registering sigheh by highlighting the loss of legal and financial safeguards for women and

children resulting from such marriages and formalizing sex work (Osanloo 2015). Based on ethnographic fieldwork conducted in Tehran between 2021 and 2022 with various NGOs and Telegram channels which connect individuals seeking temporary marriage, I examine the challenges and opportunities of removing the legal obligation for registering temporary marriage. The shift towards entirely verbal temporary marriage contract has also created a complex situation for women who enter them as it can be difficult to prove that their relationship fell under the umbrella of a temporary marriage in case of any legal disputes. Despite the challenges, the loopholes caused by verbal temporary marriage contract engender unintended potentialities for women which could obscure the boundaries between marriage law and non-marital relations. This paper explores how the blurriness of temporary marriage law is navigated, strategized, and experienced by women. Presenter: Maryam Roosta

Non Legal 'In Laws' and Re-formations of Khandaan in the Marriages of Pakistani Transmen: This paper explores the (in)significance of NGO activism and the Transgender Persons (Protection of Rights) Act 2018 for transmen, and their pursuit of shara'ih nikahs for marital legitimacy in Pakistan. As legislation which recognizes all rights but their right to marry, the TPA 2018 imagines trans persons to be citizens devoid of sexuality while simultaneously providing sexed citizenship options in the category of khwaja sira (transwoman and transwomen) and khunsa-i-mushkil (hermaphrodite and intersex persons). Transmen reckon with a plurality of legal narratives around marriage to which they are invisible, such as shara'ih nikahs before imams of the local neighborhood and court marriage under Muslim Family Laws Ordinance 1961. I follow their kinward orientation in relationships with their partners as they cocreate intimate conjugal lives across chasms of legality. Specifically, I look at how transmen use symbolic terms of kinship organization such as 'biwi', 'bahu' and 'bhabhi' for their partners as strategies of the everyday to legitimize their non-legal marriages within familial networks. I explore how this reshapes the traditional meaning of 'khandaan' (family) and being 'khandaani' (family-oriented) for them. In looking at the kin-aesthetic activities (Bradway and Freeman 2022) around being 'biwi', I parse moments of longitudinal possibility in lived marital bonds that stretch the traditional modes of participation in the 'joint' family system. I trace transmen's marriages as apertures of visibility into psychic lives of intimacy beyond legal marriage through an exploration of approaches to avoiding traditional practices of arranged marriage,

nikah ceremonies and rites entailing conjugal transparency. Presenter: Uzma Zafar

Monstrous Wives and Beleaguered Husbands: The Politics and Poetics of Indian Men's Rights Activists: Nivedita Menon (2012) suggests that the intense ferment in gender relations in contemporary India, prominently including the legal domain, portends an "implosion" in marriage, meaning an irreversible shift in the expectations and entitlements implied in a normative marital contract. This paper traces accusations of "imploding" marriage in contemporary India through the contentions of a group of men with legal troubles who claim that marriage is a bad faith contract, weaponized by their wives, feminists and the State: antifeminist Men's Rights Activists campaigning for changes to laws of marriage and gender-based violence. This presentation will focus in particular on some of their creative representations of the crisis – including poetry and posters -- drawing on my ethnographic work with MRAs in several Indian cities. These examples portray the imaginaries of those who seek to re-code marital duties and obligations: ascribing greed and naivete, critiquing gendered dependencies inscribed in law (as a mark of their own progressiveness), while simultaneously protecting structural privileges of labor and resources that are corollaries of the same normative contract. Such just-so resistances to marriage involve a modern makeover, rather than a challenge to the logic of "traffic" in sex-gender systems (Rubin, 1973). Presenter: Srimati Basu (University of Kentucky)

'The state in the street': marriage and the persistent life of 'community feeling' in Virginia: In the groundbreaking Public Vows, Nancy Cott used 'community feeling' to denote how, in the beginnings of the US, people's relationships were informally policed by those around them. Communities could, for example, support or denounce interracial couples. This context added further texture to the multiple and overlapping meanings of US marriage law: federal, state, religious. More recently, in debates in the run up to Marriage Equality, 'community feeling' was scaled-up into 'public opinion', but the core dynamic prevailed- marriage was not just an intimate issue but a social one and, of course, a key civil rights issue. In this paper, based on fieldwork in 2017 and 2018 Virginia, I argue that community feeling persists as a key touchstone in local conceptions of legally-recognised marriage. Drawing on ethnography with married couples, religious leaders, lawyers, and wedding professionals, I analyse frequent references to how couples will be treated in public

spaces, writ large as ‘the street’. In what I call ‘the state in the street’, my interlocutors often cast community feeling as both cause of potential danger and a source of support for their marriages - with implications for local conceptualisations of policing and justice. I denaturalise ‘safety’ and ‘protection’ as local idioms for conceptualising kinship. I discuss how these ideas play out when, although ‘threat’ has always been central to US political discourse, attention to potential danger in public spaces is heightened. Presenter: Siobhan Magee

Gamifying Marriage: Utah, Zoom, and Chinese LGBT Couples beyond Nominal Marriage : In 2019, the clerks at Utah County south of Salt Lake City allowed issuing marriage licenses completely online, thanks to a particular interpretation of marriage statutes in the state of Utah. During the pandemic, this tech-driven initiative inadvertently designated Utah county the virtual destination of online weddings for couples around the globe, including hundreds of LGBT couples from mainland China. Despite the illegality of same-sex marriage back home and the remnants of same-sex marriage opposition in Utah, these gay and lesbian Chinese couples were able to take advantage of the legal loopholes – getting married on Zoom with an officiant located in Utah, where the state’s Constitution continues to define marriage heteronormatively.

This paper continues the study of the performativity of marriage and kinship underlying “form” (nominal) marriages between a gay man and a lesbian in China. It argues that both nominal marriage and Utah online weddings have served as creative outlets for Chinese LGBT couples facing societal marginalization and familial pressures under hegemonic gendered norms. But unlike other more idealized means to circumventing heteronormative expectations, these Chinese LGBT couples must often involve a hegemonic “third party” as a precondition to their happiness or survival. The two phenomena also demonstrate how hegemonic marriage systems could be gamified or hijacked by queer people – such that the Foucauldian games of truth underlying these systems could become challenged by and imbued with new power relations and symbolic interpretations previously unexpected. Presenter: Aobo Dong (Emory University)

Finding ‘the one’: Romanticizing (queer) marriage and naturalization in a settler colony: This talk places queer marriage migration to the United States in the context of ongoing settler colonialism and the supporting ideology of US exceptionalism. Through this lens, the talk explores how a ‘bona fide’ marriage and naturalization are co-constructed as lifelong dreams that

romanticize and sanitize both institutions of their violent histories. My focus will be on ways that queer binational couples absorb, react to, and resist this storying of their lives together as they perform it for state officials. The talk draws from fieldwork online and offline with binational same-sex and different-sex couples in which one or both partners is LGBTQ+ or holds another non-normative sexuality or gender.

Trans Latinx Methodologies: Storywork and Spirit Praxis

12:00 PM - 1:45 PM

Virtual - Room 4

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Association of Latina/o and Latinx Anthropologists

ORGANIZER:

Aimee Villarreal (Texas State University, Department of Anthropology)

CHAIR:

Andrea Bolivar (University of Michigan)

PRESENTER:

Marcia Ochoa ,Aimee Villarreal (Texas State University, Department of Anthropology),Andrea Bolivar (University of Michigan),Kerry White (University of Michigan, Ann Arbor),Macario Garcia (Kennesaw State University, Department of Geography & Anthropology)

DISCUSSANT:

Sarah Luna (Tufts University)

DESCRIPTION:

It has been said that ethnography is love, our capacity to demonstrate love, generosity, respect, and reciprocity to share communal space. Ethnography is an offering or ceremony that brings multiple energies together, mends fractured knowledges, and brings differences into relation, into a balance with one another. Ethnography is the lifeblood of anthropology, what we offer to the world through words, dialogue, images, sounds, translations, and conversations. What, then, are the possibilities of Trans Latinx Anthropology? As a nascent field that is still in graduate school for the most part, Trans Latinx Anthropology brings in Latinx Studies and Transgender Studies, exploring intersections between

Latinidad and transgender identities, communities, experiences, and artistic productions. Trans Latinx ethnography, in particular, may offer novel theoretical and methodological interventions that productively challenge, expand upon, and transform anthropology by opening interdisciplinary conversations between scholars working in Latinx Studies, Transgender Studies, and other related fields such as Queer Theory, Chicana Studies, and Feminist Chicana Studies. Ethnographers who engage trans Latinx studies work closely with communities outside of academia, such as trans Latinx artists, performers, and activists, and thereby offering new ways of thinking outside binaries and across disciplinary boundaries. At this juncture, the possibilities for Trans Latinx Anthropology are endless. This panel sets out to begin to define or at least contour some of the major questions or interventions that trans Latinx Anthropology offers, with a focus on the theoretical, methodological, and political possibilities of ethnography in particular. What is trans Latinx ethnography? Or, in other words, what can it be and do? What contributions might trans Latinx ethnography offer to Latinx Studies, Transgender Studies, Trans Latinx Studies, and Anthropology more broadly? What methodologies are inspired by trans Latinx ethnographic undertakings, collaborations, or explorations? How might trans Latinx ethnography be uniquely situated to answer crucial questions about race, gender, and sex in the current moment of anti-trans and anti-drag legislation in conservative states? Each panelist will share an offering—which may be ethnographic, artistic, or imaginative in nature -to engage the aforementioned provocations.

Transferring and Transplanting: Ethnographies of Responsibility and Complicity in Biotechnical Interventions and Institutions

12:00 PM - 1:45 PM

TMCC - 803 A

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Krisjon Olson

PRESENTER:

Yehuda Goodman ,Krisjon Olson ,Alexandra Frankel (York University),Chloe Wong-Mersereau (University of Toronto, Department of Anthropology),Monir Moniruzzaman

DESCRIPTION:

The presentations convened in this session share a fundamental concern with paradoxes, promises, and unintended consequences of techniques for transferring and transplanting bodily substances. Based on ethnographic research in a range of geopolitical, cultural, and institutional contexts, they demonstrate that the health and social motivations, institutions, regulations, and technologies that make such events possible are never value-neutral or disengaged from local and global forces of power. These ironies and hierarchies are evident in discourses of donation, assumptions about the linearity of illness and the life course, hegemonic assumptions about individual responsibility, and abuses of power among medical professionals.

Ironic Bodies: Competing Discourses in a Weight Loss Surgery Clinic: Fieldwork around consultations between doctors and patients at a weight-loss surgical clinic (WLS) in Israel reveals profound tensions that problematize the dominant biomedical discourse. First, although WLS works according to biomedical logic and is represented as a 'biomagical' procedure that alters the body, surgeons also work along the lines of a neoliberal logic that assumes patients are solely responsible for the surgery's success. Second, applying a multidisciplinary approach that invites additional experts to guide patients' diets and lifestyle diffuses the responsibility among the diverse experts. Third, family and peers' support is crucial for the surgery's success, thus pointing to the multiple actors and contradictory perspectives that guide the treatment. Hence, WLS is worked out through a series of deep ironies: Underscoring the importance of the biomedical intervention yet revealing its shortcomings in modifying patients' bodies; glorifying the surgeon's work but at the same time emphasizing patients' responsibilities and the role of other experts; and perpetuating dependency on experts yet stressing the power of patients' significant others. These ironies destabilize both the power of biomedicine and the neoliberal assumptions of autonomous individuals. Presenter: Yehuda Goodman

Disability Politics and Sternotomy Scar Sociality: The Transition from Pediatric to Adult Care for Young People with Congenital Heart Disease: Disability Politics of Sternotomy Scar Sociality: The Transition from Pediatric to Adult Medical Care for Young People with Congenital Heart Disease My recent research investigates the impact of technology dependence and organ transplant on the identities of youth with congenital heart disease (CHD) as they transition from pediatric to adult

healthcare. While advances in surgical and medical interventions have led to an increase in life expectancy for children with CHD, many survivors (40% of the 1.4 million in the United States) face lifelong disabilities. (Chowdhury et al. 2021) The healthcare system is often unprepared for the complex medical needs, communication challenges, and care requirements of child survivors. Consequently, up to 62% of survivors drop out during the transition from pediatric to adult congenital cardiac care, resulting in high-risk surgical procedures, ICU admissions, or premature death. (Moons et al. 2021) Survivors face a disability-health paradox as they age into a system of care that was not designed to meet their. Many receive advanced therapies (e.g., heart transplant, mechanical support, stents) children, but an estimated 83% of survivors suffer severe early physical and psychosocial complications, accounting for 10% of healthcare spending in the United States. (Briston et al. 2016; Chen et al. 2011) My research draws on five years of fieldwork in two pediatric cardiac intensive care units to explore how advanced therapies are transformed into rights, gifts, and entitlements in adulthood. By conducting ethnographic research in two hospitals, three clinics, device manufacturer training programs, and survivor networks, I demonstrate how patterns of clinical care, rules, and procedures for new technologies (e.g., mechanical circulatory support, artificial hearts, ventricular assist devices, and pacemakers) introduce disability politics into survivorship. My study sheds light on the ways in which the healthcare system fails to address structural and personal transition in child survivors of congenital heart disease and the implications over their life course which widen gender, racial, and ethnic disparities. Presenter: Krisjon Olson

Bifurcated logics: Struggles with Distress and Bodymind Experience in Transplant Medicine: Solid organ transplantation is often considered a pinnacle of achievement in contemporary biomedicine, and transplant programs are frequently high-profile sources of innovation, expertise, and funding for hospital systems. But as transplantation draws on metaphors of 'rebirth,' the 'gift of life,' and hopeful futurities, medical and psychosocial complications are common and span the transplant temporal frame. In a number of centers, recognition of the importance of psychosocial support for transplant recipients has led to transplant teams' collaboration with psychiatric consult liaison (CL) services, establishing vital avenues for support while in hospital. Increased attention to psychosocial experiences potentially recognizes imbrications of physical and mental wellbeing. But bifurcated logics of

self/other, mind/body persist in the field of transplantation even as its practices disrupt these logics. This paper unpacks attempts to recognize mental health and psychosocial challenges in transplant medicine and the unintended consequences of how such recognitions unfold in the field. Through observation of transplant CL psychiatry clinic rounds, on transplant wards, and interviews with patients and healthcare practitioners, this paper traces efforts to cultivate bodymind care, examining how these can have the paradoxical effect of glossing CL interventions as exclusively 'minded.' This glossing can yield unintended material consequences: annexing mental distress in relation to bodied/physical experience, and labelling any distress as psychiatric rather than interrelated biosocial processes that engender bodymind harm. Here, electronic Medical Records (EMR) and charting practices play a role in the production of frictions surrounding psychosocial support in transplant medicine, as digital infrastructures that generate and foreclose opportunities for reinterpretation and re-examination of different approaches to emotional distress. These frictions have critical, material implications for how and what kinds of care are administered. Taking a critical disability studies lens, this paper asks how the bodymind concept might be made meaningful and legible in the context of transplant medicine. Presenter: Alexandra Frankel (York University)

The Specter of Cure: Transforming Liver Transplant Narratives and Temporality Through Multimodal Digital Storytelling: Conventional biomedical narratives of the liver transplant experience follow a linear temporal structure with a distinctive before, during, and after transplantation. Transplant recipients however, express something closely akin to a pantemporal experience of illness in which transplant time is multiple, disjointed, and patchy. Drawing on the theoretical framework of hauntology, this research study examines the friction between what is present and what is absent within transplant narratives. I aim to complicate singular narratives using ethnographic interviews and short digital stories co-created by long-term liver transplant recipients to expand our understanding of the transplant experience. Digital storytelling as a method allows us to capture what is phenomenologically difficult to translate into words through the layering of images, sound, narration and rhythm. Linear transplant narratives place illness in the past and promote a future free from illness and disability. This affectively flattens the transplant experience into a singular narrative that does not attend to the complexities of long-term liver transplant survivorship. What emerges in the analysis of

the digital stories is the presence of a curative spectre that is ever present and yet absent. The digital stories bring forward the affects of uncertainty that come with the transitions of living long-term with a liver transplant and chronic illness. These stories expand biomedical narratives that circulate in relation to liver transplantation by attending to the pantemporal rhythms, and affective spectres that are layered into the digital stories. Presenter: Chloe Wong-Mersereau (University of Toronto, Department of Anthropology)

“We are not the Police and our Job is not to Spy on Our Patients”: The Role of Medical Professionals in Human Organ Trafficking: While organ trafficking is outlawed in almost every country in the world, the trade in vital organs, such as kidneys, livers, and corneas from malnourished bodies of marginalized populations has continued in various parts of the world. Scholars have investigated how the business of buying or selling organs centers around major actors, such as brokers, recipients, and sellers, however little is known about the role of medical professionals in the organ trade. As the trade cannot be carried out without the involvement of medical professionals, in this presentation, I examine how a group of transplant doctors, laboratory technicians, and hospital staff has been involved in the organ trade in Bangladesh and elsewhere. They do not directly participate in this trade, but they put a blind eye on it, thus this business advances in the plain sight in national, transnational, and international settings. These medical professionals are complicit to organ trade as they accumulate individual profit from it, although their professional codes of conduct prohibit them to participate in this trade. Medical professionals therefore play a dubious role, while their greed overtakes their principles, motivates them to make more money, and in turn aid to advance this trade. If their covert business is exposed by media outlets, these professionals proclaim that they are not the police and their role is to provide health services to the ailing patients, instead of spying on them and investigating the organ trade. Predominantly, medical professionals are silent to identify, monitor, and report this illicit practice; as a result, organ trade remains as if it is business as usual. I argue that medical professionals play a complicit role in the organ trade and that contributes to bioviolence, exploitation, and suffering against the poor. The secrecy and silence of the physicians reveals that they are the beneficiaries of this trade, while the poor are tricked or coerced to sell their organs for the benefits of the privileged few. Transforming “Application” - Revisiting the Intersections Between Medical Anthropology and Clinical Practice

12:00 PM - 1:45 PM

Virtual - Room 3

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Paula Martin (University of Chicago)

CHAIR:

Paula Martin (University of Chicago), Joshua Franklin (University of Pennsylvania, Department of Anthropology)

PRESENTER:

Zehra Mehdi (Columbia University), Joshua Franklin (University of Pennsylvania, Department of Anthropology), Michelle Munyikwa (University of Pennsylvania), Kristi Ninnemann (Case Western Reserve University, Department of Anthropology), Carter Carter , Laura Duncan , Paula Bronson

DISCUSSANT:

Na'amah Razon (University of California, Davis)

DESCRIPTION:

There is currently an intensifying attention to the intersection of anthropology and clinical practice. The discipline has never been isolated from clinical work. However, multiple factors have contributed to a renewed interest in anthropological engagements with clinical practice: critiques of disengaged anthropological theorizing, material concerns with the viability of anthropology within higher education, persistent demand from clinical disciplines for critical perspectives as well as demands from students and informants to be accountable for the practical implications of our research. This roundtable brings together scholars trained in both anthropology and health professions to interrogate how the practice of clinical work shapes the practice of anthropology. Medical anthropology as a subfield has a complex and shifting relationship to the health professions. Nancy Scheper-Hughes argued over three decades ago: 'Clinical medical anthropology has become a new 'commodity,' carefully sanitized, neatly packaged, pleasant tasting (no bitter aftertaste)--the very latest and very possibly the most bourgeois product introduced into the medical curriculum' (1990, 191). While this simplified framework oriented around 'cultural competency' (Kleinman and Benson 2006)

remains a dominant image of anthropology's role in clinical disciplines (Franklin and Munyikwa 2021), in this roundtable, we move beyond this unidirectional lens, or a narrow view of anthropology's potential 'application,' to explore the more expansive theoretical, methodological, and ethical relations that we suggest emerge from the dual practice of anthropology and clinical care. At the same time, we look to integrate clinical disciplines such as nursing, social work, psychology, and physical therapy, which are often marginalized both in medical anthropology and healthcare more broadly. Inspired by scholarship that has queried the relationship between researchers and their objects of study in feminist, indigenous, and queer contexts (for example, TallBear (2014)), we focus on scholars working at the intersections of anthropology and clinical fields by virtue of their own training and practice within a clinical discipline. In this roundtable, we ask each other: How does clinical practice shape anthropological thinking and work? What affordances exist within clinical work for anthropological thinking? What limitations? What conceptual frameworks exist at this intersection, beyond structural competency (Metzl and Hansen 2014) or critiques of 'medicalization' (Rose 2007)? How does clinical training and practice affect our understanding of anthropology? What political or ethical commitments are built, or challenged, by clinical engagement (Sue 2022, Sufrin 2022)? Is there a difference in this regard between clinical training and practice? What happens if, or when, we share commitments with those who would otherwise be relegated to the role of interlocutor? What analytics, outside of 'application' might illuminate these personal and disciplinary entanglements?

Transition for queer refugees in Northern Europe: In-between in inclusion and exclusion

12:00 PM - 1:45 PM

TMCC - 603

Oral Presentation Session

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Gudbjorg Ottosdottir (University of Iceland)

CHAIR:

Árdís Ingvars

PRESENTER:

Árdís Ingvars ,Maja Hertoghs ,Gudbjorg Ottosdottir (University of Iceland),Linda Sólveigar Guðmunds.

DESCRIPTION:

In this session, we discuss preliminary findings from an Icelandic research project: Queer Refugees in Queer Utopias: Inclusions and Exclusions and engage with the theme of transition. The project aims to generate knowledge on social experiences of people who flee persecution because of their sexual orientation or gender identity and expression (SOGIE, of reception, integration, and deportation in Iceland and in a transnational context, with a particular focus on Italy and Greece, countries Iceland commonly deports SOGIE refugees to. The project seeks to generate knowledge regarding their identities and lived experiences and includes a comparative lens with research in the Netherlands, as both countries tend to be heralded as gender and queer social utopias in northern Europe. Current knowledge highlights that migration and sexuality intersect to create multiple intersecting relations of power, including with social status regarding 'race', class, gender, geopolitical location, and citizenship. Ideas of SOGIE refugee identities being false and requiring an extra burden of proof are pervasive in asylum systems and influence professional practices. The majority of SOGIE refugees tend to be deported to countries known for homo- and transphobic hate crimes. A sense of connection and belonging to each new location is thus often fraught with complex attachments and feelings. SOGIE refugees must socially navigate conflicting social and cultural discourses on gender, sexuality, race, and ethnicity, which characterize the varied social and digital spaces they are involved in, such as the LGBTQ+ community, ethnic community, community of formal reception and services, as well as general society. In transnational perspectives migrants remain in-between national contexts, rather than simply moving from one context to the other. When linked to queerness, queer migrants that move to one national location from another will not necessarily have to avail themselves to the kinds of 'queerness' available to them in the country they relocate to; contacts with their country of origin and with various diasporas across diverse socio-cultural and queer spaces allow them access to 'other queerness'. Migration research has tended to overlook experiences in relation to sexual and gender identity processes through processes such as migration. For queer refugees, the transmigration of queerness potentially entails juggling different sexual and gender identities that afford different kinds of privileges and opportunities in different national and social contexts, and managing how these identities interconnect. Transmigration of queerness thus involves the translation of the belonging, privilege, politics and imaginaries that make up various sexual and gender

identities. In addition, socio-spatial locations are intricately linked to relations and distributions of power and, consequently, to hegemonic, compliant, marginalized and subordinated queerness, categories that percolate queer experiences. The session engages with transition through exploring identity processes, space and belonging drawing on preliminary findings in the project in four presentations, on experiences of Sogie refugees, deported Sogie refugees, professionals in Iceland and prior research in the Netherlands. We draw on perspectives of transnational migration, space and queerness.

Crafting queer time in buckled up temporalities of Dublin regulated SOGIE refugees : The Dublin III regulation requires irregular refugees to state their case and submit asylum application in first European country they enter. Yet people who can seek protection due to fear of being persecuted because sexual orientation and/or gendered identities and expressions (SOGIE), often fear disclosing intimate lives or sexual curiosities in early immigration encounters. In times of nationalistic upheavals and contested refugee laws, queer applications can further be met with distrust. Thus, in fear of repatriation, some move onwards to countries where LGBTQI+ rights are nationally celebrated, only to be sent back. This paper builds on semi-structured interviews and walk-along discussions with nine Dublin-returned SOGIE refugees, as well as documented conversations with eighteen local stakeholders, conducted in Italy and Greece in 2022. The SOGIE refugees in this study described their first experiences of European queer lives as liminal and temporal. When denied protection due to the Dublin agreement, they became dependant on the black market and were put under ambiguous surveillance. After being forcefully or voluntarily deported to the first European country of entry, they discover their cases lost or dismissed. With assistance from queer organization, they re-applied but under the stigma of feigning their queer identities to finally get asylum. In this sense, the promise of queer curiosity and alternated future, was buckled up once more. In such times, however, they crafted a hybrid meaning of queer temporalities, recounting masculine bravery and endurance, articulating queer belongings through transnational languages and alter-assembling reciprocity in digital and real queer worlds. Presenter: Árdís Ingvars

The state's sexual desires. The performance of sexuality in the Dutch asylum procedure: The facticity of sexuality is a key driver of the asylum procedure in LGBTQIA cases, where non-heterosexual identities can be

grounds for gaining a 'status' as refugee. Underlying the process, is a conception of sexuality as a fixed, invisible but ever-present identity. Sexuality is operationalized in the asylum procedure in ways very much akin to what is commonly called an infrastructure; sexual identity becomes an infrastructure of personhood. The veracity and facticity of this infrastructure can only be ascertained in live encounters during the asylum procedure, i.e. through interviews in which the asylum seeker must present as non-heterosexual and, as such, as threatened. The procedure becomes a test of sexual veracity and facticity by means of a truthful performance. This performance is primarily discursive, but it is also bodily in terms of the way bodily comportment is considered indicative of a 'true story'. The procedure operates with a conception of truth that is strictly procedural, referring to facts but these are fundamentally beyond the reach of the asylum administrators. Facticity is rather one of trustworthiness and narrative and performative believability. Believability hinges on the presence of 'details' (which stand in for facts) and on the existence of a linear sexual storyline (of awareness, coming out, and persecution). The procedure offers a prime case in which states and governmental apparatuses sort and sanction sexual identities by means of a procedural kind of 'truth game' (Foucault). This paper highlights the specific kinds of gender and sexual performance legitimized and sanctioned. We show that 'giving an account of oneself (Butler) in the context of the asylum procedure is very much informed by the state's desires in the realm of sexuality. Presenter: Maja Hertoghs

Working with queer refugees in queer utopia: Social worker's experiences: People who flee persecution because of sexual orientation or gender identity and expression (SOGIE) constitute a vulnerable group of refugees. Research highlights that migration and sexuality intersect to create multiple intersecting relations of power, including social status regarding 'race,' class, gender, geopolitical location, and citizenship (Luibhéid, 2014; Ehrkamp, 2017; Wright, 2018; Llewellyn, 2020). The majority of SOGIE refugees tend to be deported and their sense of connection and belonging to each new migration location is fraught with complex attachments and relationships in conflicting social, cultural, and political discourses which characterize everyday social and digital and transnational spaces they are in, such as the LGBTQ+ and ethnic communities, community of social services (Murray, 2014). Research has focused on the legal experiences of SOGIE refugees but much less on their social experiences, including those pertaining to social

support services involved in their lives. In the presentation I discuss preliminary findings on the experiences of social workers of working with SOGIE refugees, based on 15 semi structured interviews. The research is part of the larger project on lived experiences of Sogie refugees in Iceland, exploring their inclusion and exclusion. The findings indicate that social workers experience a number of issues and challenges in engaging with sexual and gender identities of SOGIE refugees which relate to limited knowledge and awareness of differently gendered and sexual realities, needs and issues facing SOGIE refugees. Experiences were mixed and shaped by number of factors, such as their personal identities, knowledge and perceptions of sexual and gender diversity, professional training and perspectives, work culture and policies of inclusion informing their practice and roles. In the presentation I discuss and reflect on the implications findings may have for social work practice with SOGIE refugees. Presenter: Gudbjorg Ottosdottir (University of Iceland)

SOGIE refugees' transitional existence: Belonging and exclusion in Iceland: Sexual migration (Cantu, 1999) refers to transnational movements of migrants who seek to distance themselves from oppression in the countries of origin. It queries into what kind of transitions occur in sexual self-definitions and practices, when people cross borders, regarding issues of sexual normativity and the histories of these new destinations (Carillo, 2004). In theory, SOGIE refugees are 'welcome' once they withstand intensive asylum procedures set up by Western states, to test if a person is 'genuinely' and 'properly' gay/queer (Hertoghs & Schinkel, 2018). But, when SOGIE refugees have formally/legally become part of the nation-state, they often do not feel welcomed or a sense of belonging within that context. In the past decade Iceland, and more specifically Reykjavik, has increasingly been branded as a 'gay paradise' (Ellenberger, 2017), which is a recreation of older images of Icelandic 'exceptionalism'. This has led to the country being portrayed as a commercialized 'pink destination' for tourists and citizens alike. Selected quota SOGIE refugees are, for example, invited to take up residence in Iceland and ceremonially welcomed by the prime minister. Accompanying homonationalist notions in the queer community and the wider Icelandic society, it the fact that, Iceland's connection to racism is in many ways characterized by demonstrations of innocence, as the country did not participate directly in the colonial projects. Nonetheless, Icelandic national identity has been constructed in close dialogue with both colonialism and racism and is embedded in whiteness and masculine characteristics (Loftsdóttir,

2011; 2014). Examining experiences of affective belonging and the politics of belonging regarding SOGIE refugees and asylum seekers allows for a critical understanding of the contradictory modes of 'exclusionary moments' vis-à-vis the image of Iceland as the perfect destination for queers around the globe. Presenter: Linda Sólveigar Guðmunds.

Transitions in Death and Dying (Part 1)

12:00 PM - 1:45 PM

TMCC - 802 B

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Sabrina Lessard (McGill University)

CHAIR:

Sylvie Fortin

PRESENTER:

Sylvie Fortin ,Caitlin Cassady (Wayne State University),Louise Chartrand (University of Manitoba),Marie-Eve Samson (University of Montreal),Alyson Stone ,Rachel Cummings

DISCUSSANT:

Ellen Badone (McMaster University, Department of Anthropology)

DESCRIPTION:

Dying and death are both times of transition and liminality (Jordan et al., 2015). Without clear markers establishing the threshold at which a person begins to die (Kaufman and Morgan 2005), we can identify several transitions that mark the non-linear trajectories of people who are on these paths: a time of illness, a time of end of life (hours, days before death), a time of death (Fortin, Le Gall et al. forthcoming) and a time beyond death (Lavoie et al., 2009). These transitions take many forms: social, changes between different states of being (Turner 1977; van Gennep 1909); physiological, decrease in physical and cognitive capacities, progression of the disease; spatial, between places such as home, home of a relative, hospital, long-term care center, hospice (Leibing, Guberman and Wiles 2016); relational, disruptive for loved ones (friends or family). These liminal states are at the same time bearers of uncertainty, suffering, hope, renewal and transformation for the (terminally) ill persons and their loved ones. They are also states of permeability where life and death become one. This panel invites presenters to explore these end-of-life transitions for ill

persons (of all ages) and their loved ones, reflecting on what can be celebrated or denounced in the 'in-between' time, exploring these liminal spaces, documenting the markers (and decisions or decision paths) that shape these transitions or the ethical and moral challenges they raise as well as how these transitions shape or reshape social relations and relationships and, in fine, how death and life are entwined. Transitions, Good and Bad Deaths: Dying as a Temporal Sequence : Based on pre-pandemic research conducted in Montreal with relatives who supported a child, an adult or a senior through illness and end of life, this paper discusses the time of dying as a temporal sequence. Identified as the (long) time of illness, the time of end of life (hours, days preceding death) and the time of death, each time of this temporal sequence will have its bearing on the good and bad death as perceived by the relatives. When people refer to bad death - are they referring to the time of illness, the time of end of life or the time of death? We wonder whether a gap between these three times is or can favor a bad death. Can the time of illness be 'stolen' by an accelerated time of end of life? Is it this fear that prevails when loved ones or the patient refuse pain relief or euthanasia (as practiced in Quebec), this latter

practice introducing a pace that alters this this time of dying and end of life to that of death? The imbalance between these different times or, on the contrary, their concordance seems to give rise to a bad perception of death or, on the contrary, a good death at the heart of 'dying with dignity' discourse. As recalls the French emeritus professor Sicard (2012), this dignity does not belong to those who suffer or enjoy, but to those who see, i.e. the look of the other. Presenter: Sylvie Fortin

Time to Death in Medical Aid in Dying: Creating Best Practices on the Margins of Medicine: Medical aid in dying (MAiD) is practiced uniquely in the United States where terminally ill persons wishing to hasten death can only do so legally by self-ingesting lethal medications. Self-ingestion (instead of intravenous administration) means absorption somewhere in the digestive tract. This results in a range of what MAiD physicians call "time(s) to death": the liminal period in which the person is unconscious but not yet dead, where loved ones hold vigil. The work discussed here extends Kaufman's (2005) time for dying by examining how MAiD physicians form subjectivities about a good death in order to create best practices on the margins of medicine. On the surface, shortening time to death fits with the oft cited quest for control over dying; and clinicians typically want to meet the expectations of most seeking MAiD: a quick, painless release from suffering (or the anticipation of it). However, analysis of ethnographic data from a MAiD national conference and physician practice narratives (n=19) call into question the value of an ever-shorter time from ingestion to death. Physician narratives of "beautiful deaths" often describe loved ones warmly reminiscing or making loving connections during the time the person is dying. Yet, the physicians practicing MAiD, insist that the primary goal is shorter timeframes to death and more certainty about when it will occur. This paper examines how physicians attempt to create best practices by making sense and meaning out of the time to death and considers implications for the "good death". Presenter: Caitlin Cassady (Wayne State University)

Situated Identity: A Week in Margarita's Life: Technology has been a known to blur the boundaries when it comes to life and death. The ventilator more commonly known as life support is one of those technology. When a person is mechanically ventilated, the person becomes 'betwix' as Margaret Lock explained, between life and death. However, to get out of this state, either the

person recovers, or the person dies. At times, neither of those scenarios happens, and a decision of whether to keep using the ventilator becomes an enigma. In this paper, we will describe a week in the life of Margarita. Margarita was a 92-year-old female that was put on the ventilator because of a pneumonia. Through her story and her weeks journey, we would like to introduce the notion of situated identity, were we argue that knowledge about Margarita's state and wishes depends on who and when this knowledge is shared. For some, Margarita was suffering and should be removed from the ventilator immediately so that she can have a dignify death. For others, Margarita was a fighter, therefore using mechanical ventilation to maintain her living condition was legitimate. For others, at the beginning of the week the used of the machine was legitimate but then became deleterious with additional medical knowledge. However, only a few of those voices are heard when decision of life and death are being made, the rest will stay silent always wondering if they could have done something different that might have changed the outcome. Presenter: Louise Chartrand (University of Manitoba)

Revisiting the Notion of Filial Piety in Elderly Care: Moral Dilemmas and Generational Transitions: This presentation revisits the notion of filial piety in a migratory context, in light of moral dilemmas lived between generations in elderly and end-of-life care situations. Authors have shown how filial piety has undergone various transformations both in Asia and in the migratory context (Ikels 2004; Ferrer et al. 2017). This presentation builds on this literature and on the case of elderly people of Cambodian, Laotian and Vietnamese origins in Montreal (Canada), and of their loved-ones involved in care. On the one hand, it shows the increasing social isolation of some elderly people as they age, the difficulties for younger people to communicate and truly understand the experiences of their ageing parents and the possible moral breakdown (Zigon 2007) that occurs at the end of life, as the responsibility of care becomes almost unbearable but institutionalization remains inconceivable. These results challenge familialist views towards immigrant families, and particularly those of Asian descent, which influence access to health and social services (Buch 2015; Brotman 2003). Presenter: Marie-Eve Samson (University of Montreal)

Having a "Lifetime" of Treatment Left: The Liminal Space of Advanced Cancer: This paper is broadly concerned with the transitions that make up everyday life and what happens when a person is in a transitional state that is not recognized by society. Specifically, I focus on the transitions that patients with advanced cancer go through as they move forward from their diagnosis. Patients regularly shared stories that demonstrated their desire to get past treatment. Although for most patients, being 'done treatment' signals an important step away from the hospital and towards 'normal life,' for the patient with advanced disease, treatment is never over. Drawing on ethnographic fieldwork in a Canadian cancer hospital, I argue that it is this specific context of a "lifetime" of treatment – the availability of modern cancer treatment in terms of what can be done and for how long – that has produced the liminal space of advanced disease. In conversations with patients facing serious cancers, it seemed to me that they inhabited a kind of 'middle ground' between, on the one hand, the world of oncology and its culture of cure and survivorship, and, on other hand, the world of palliative care and its culture of death and dying. I draw on the classical literature examining liminality in anthropology and expand on it by showing how incurable cancer presents a unique kind of prolonged liminality. I argue that we cannot see patients with advanced disease because they are structurally invisible, and deviate from the recognized figures of the Fighter, the Survivor or the person who lost her battle. Presenter: Alyson Stone

Spiritual Transitions at the End of Life: 'Deathbed phenomena' are the surprisingly common spiritual experiences that happen at the end of life: visions of dead relatives, beautiful gardens and bright lights or observing coincidences at the time of death (clocks stopping, dogs barking) (Fenwick et al 2007; Claxton & Dunnett 2018). Routinely discussed within palliative care circles but little-known beyond (Kessler 2010; Lamb & Finucane 2022), they are an under-recognised source of liminality at the modern day deathbed. Such extraordinary events mark transitions from life to death. They represent a move away from the rational, modern world towards an unknown other. They open a liminality in time, suspending its linear, mechanical progression and entangling present-day dying with past deaths. In doing so these experiences reshape social relations: they often mark meaningful changes in relations between the dying and their loved ones, and profoundly

impact the experience of grief (Benning & Rominger 2016). Crucially, they also remake professional relations of care. How do clinicians - socialised in materialist biomedicine - respond to reports, or even personal experiences of such events? Based on ethnographic research of a hospice in-patient unit in south London this presentation will consider how these experiences open a liminality in the role of carer at the end of life: somewhere between professionalism and affective relation. It will attend to the ethical and moral challenges this middle ground poses, and ultimately ask what kind of care becomes possible in the interstitial moments these extraordinary events create. Transitions in the Anthropology of Global Christianity: The Next Generation?

12:00 PM - 1:45 PM TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Alana Sá Leitão (University of Toronto, Department of Anthropology)

CHAIR:

Alana Sá Leitão (University of Toronto, Department of Anthropology)

PRESENTER:

Alana Sá Leitão (University of Toronto, Department of Anthropology), Devaka Premawardhana (Emory University), Sarah Riccardi-Swartz (Northeastern University, Department of Sociology & Anthropology), Sophia Omokanye, Valerio Di Fonzo (University of New Mexico, Department of Anthropology)

DISCUSSANT:

Simon Coleman (University of Toronto, Department of Anthropology)

DESCRIPTION:

Transitions in Studies of Global Christianity: A New Generation? At the beginning of the 2000s anthropologists such as Joel Robbins (2003), Fenella Cannell (2006), and Matthew Engelke and Matt Tomlinson (2006), were inviting us to consider the development of an Anthropology of Christianity. Of

course, the anthropological study of Christians had been conducted for decades already; but at that intellectual moment the proposal emerged to reimagine this field as a self-conscious comparative project. Two decades later, when the viability of the sub-discipline has now been demonstrated by that generation of scholars, this panel considers the relevance of their project for new scholars making fresh contributions to the study of Global Christianity. Different forms of Christianity have seen a large expansion in parts of the world, including Latin America, Africa, and Asia. With the importance of and Christianity becoming clear in a period of globalization and post-secularity, the establishment of a more dialogical enterprise for thinking about Christianity as its own subfield has been welcomed by many. It has also helped contribute to larger debates in Anthropology relating to social continuity and discontinuity, the category of person, and, more recently, political theologies. In 2014, almost ten years ago, Joel Robbins reflected on the development of a 'middle aged' Anthropology of Christianity and where it might be going. How long would it last? What mistakes were made in the past? What were the new trends? As one more generation of scholars engages in the study of Christianity, these questions are again relevant. In recent years, researchers have encountered new challenges, questions, and changes in the world and in their fieldwork. As Christian movements express ambitions at multiple scales they challenge the fieldwork choices of a new cohort of scholars. Recognizing how heterogeneous Christianity is, scholars have begun increasingly and self-consciously to investigate many different varieties of adherent. This panel brings together young scholars from different universities who have worked in different parts of the world to discuss their distinctive inputs to new trajectories in the study of Christianity.

Global Christianity? Challenges in the Comparative Study of Contemporary Christian Churches: The Anthropology of Christianity as a subfield has been constituted by a disproportionate number of studies on Pentecostalism, with attention directed in a large extent to Latin America and Africa. In this sense, The Universal Church of the Kingdom of God in Brazil has attracted many researchers impressed by its growth in members and its social importance in different parts of the world. This presentation contributes to a more recent discussion on the development of the Anthropology of Christianity, questioning not only why mega Pentecostal churches like the UCKG are often favored as a research field, but also what we can and cannot learn by

investigating this kind of Christianity. Drawing from my own research with the UCKG in Brazil and Canada, I discuss how the field that I and many others chose to helps us understand how themes important to anthropology, such as politics, community, and self, are developing in contemporary society. Nevertheless, I go on to demonstrate the importance of showing how a larger variety of “Christianities” interact with these themes. I also show the significance of investigating how different forms of Christianity are unfolding with new dynamics in regions where this topic has still not caught the attention of many researchers, such as South and South East Asia. We need to be attentive to new contexts in order to keep developing a comparative project and understand the importance of Christianity as a multi-faceted tradition. Presenter: Alana Sá Leitão (University of Toronto, Department of Anthropology)

Too Much Christianity in the Anthropology of Christianity? : In this paper I draw on Samuli Schielke's (2010) 'farewell to the project of an anthropology of Islam' to ask, paraphrasing Schielke's own provocation: is there too much Christianity in the anthropology of Christianity? To address this question, I survey the live debates within the anthropology of Islam between those who emphasize piety and perfection and those, like Schielke, who emphasize ambiguity and ambivalence. I also look to the anthropology of Buddhism and anthropology of Hinduism as resources for alternate theoretical models anthropologists of Christianity could have, but mostly did not, pursue. While the anthropology of Christianity's attention to highly committed Christians in highly expansive churches has served a valuable purpose—namely, that of making Christianity a legitimate topic of anthropological inquiry—there is now good reason to recalibrate: not to rebury Christianity but to decenter it. The aim of this paper is not to bid farewell to the anthropology of Christianity, but to spotlight what has long been a blind spot: half-hearted and multiply religious Christians who engage the religion in relation to other religions and other world-making projects. Such people are unlikely to be captured by anthropologies predefined as being 'of Christianity,' and yet Christianity does still matter. How to attend to Christianity as a shaper, though not a determinant, of people's everyday lives should be, I suggest, a question of central concern for a next-generation anthropology of Christianity. Presenter: Devaka Premawardhana (Emory University)

Historical Treatments and Future Placings of Orthodox Christianity in Anthropology: As a theoretical contribution to the current history of anthropology and its intellectual futurity, this paper explores the prior and contemporary place or inclusion of Orthodox Christianity as a neglected sub-field in the anthropology of Christianity. In doing so, I consider the marginalized stance of (Eastern) Orthodox Christianity, questioning why Orthodoxy is a “Christianity of alterity” that is often viewed as distinct from Catholicism and Protestantism, and is thereby often subject to Orientalist approaches. Rather than trying to resolve the tensions in the anthropology of Christianity that result from a long dismissal of eastern forms of Christianity, I seek to provide a contextual intervention for Orthodoxy by tracing the Protestant bias that has shaped our discipline and showing emerging intersectional and interdisciplinary trends in the new literature of the field. Finally, as an anthropologist of Orthodox Christianity in the United States, I aim to grapple with the theoretical and methodological challenges I have encountered in the field and the academy. At the same time, I will also offer alternative ways that we might approach the study of Orthodox Christianity; gesturing to the capacious possibilities we can utilize for understanding better the social life worlds, geopolitics, and moral economies of Orthodox Christians in both local and global contexts. Presenter: Sarah Riccardi-Swartz (Northeastern University, Department of Sociology & Anthropology)

Exploring Christian Heterogeneity and Place-making strategies of Nigerian Pentecostals: As the anthropology of Christianity continues to self-consciously explore new forms of Christianity (Robbins, 2014) and the way Christian traditions shape anthropology as a discipline itself (Canell, 2005;2006; Bialecki et al., 2008), more and more work explicitly focuses on issues of space (Schieffelin, 2014; Bandak, 2014; Huang, 2014). Despite the critiques that Pentecostalism continues to be the chief recipient of anthropological attention (Howell, 2003; Hann, 2007), I understand the invitation to study Christian heterogeneity (Bialecki et al., 2008) in an alternative way of studying Nigerian Pentecostal place-making strategies with a self-reflexive perspective as a Christian thinker. Drawing on ethnographic methods, I identify spatial, social, and cultural strategies deployed by religiously motivated migrants of Nigerian Pentecostalism as they both target and aim to transform Toronto's suburban landscapes into places of strong religious as well as ethnic identification. Focusing on the

central role maps play in Pentecostal religious practices (Knibbe 2009) and the way they provide strategies through which city-dwelling believers contest, negotiate, reimagine, and transform urban, suburban and ex-urban spaces, the aim is to juxtapose more official, “secular” demographic maps showing where migrant populations are concentrated with specific Pentecostal constructions of a religiously informed cartographic visibility in relation to the city. These multi-scalar, multi-media processes of “mapping, building and inhabiting” (Tweed, 2006, p. 82) combined with a self-conscious perspective are likely to take the research beyond old “territorial warfare models” of Pentecostal mission to uncover a much more nuanced negotiation of identity and citizenship within one of the most ethnically diverse cities in the world. Presenter: Sophia Omokanye

Who is the Catholic Church? Examining the Practices of a Jesuit NGO in the Peruvian Amazon : A methodological problem, when conducting research with the Catholic Church, is how to define our object of study. What or who are we examining when we look at a tradition that assumes many different institutional forms? I discuss this problem through my ethnographic research with the Jesuit mission in the Nieva, Cenepa, and Santiago districts, in the province of Condrocanqui, Amazon region, Peru. There, the Jesuits have a school, a radio, a botanical and spiritual center, and a NGO that promotes sustainable development and political consciousness. These institutions include non-indigenous and Awajún indigenous personnel, and only few of them self-identity as Catholics. Influenced by liberation theology and the doctrine of incarnation, missionaries were encouraged to 'incarnate' themselves in native society. At present, the Church looks to Amazonian indigenous peoples for inspiration with respect to policies of 'eco-theology'. The Jesuit NGO, Agricultural Service for Research and Economic Promotion (SAIPE), combines theological statements, ideas of sustainable development, and indigenous knowledge. Here, I ask to what extent these dimensions can be seen as emerging from “heterogeneous and unequal encounters” between Jesuits, state officials, national and international Catholics and lay institutions, and indigenous communities. In this way, the paper presents the Catholic Church not as a homogenous religious institution but as complex entanglement of disparate religious and lay individuals, discourses and practices.

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

A.J. Faas (San Jose State University)

CHAIR:

A.J. Faas (San Jose State University), Caela O'Connell (University of North Carolina, Chapel Hill, Department of Anthropology)

PRESENTER:

Skyler Inman ,Caela O'Connell (University of North Carolina, Chapel Hill, Department of Anthropology),Irena Leisbet Ceridwen Connon ,Jake Dean (University of California, Santa Barbara, Department of Anthropology),A.J. Faas (San Jose State University)

DESCRIPTION:

In this panel, we are interested in exploring how space is materially, institutionally, socially, and semiotically constructed as alternatively 'safe' and 'unsafe.' We are also interested in the potential for alternative reconstructions of 'safe' and 'unsafe' spaces. Each of the contributors find that those-humans and nonhumans alike-who live in those spaces often express alternative visions for those spaces and thereby unsettle dominant scientific and political logics of the safe and the unsafe. We are interested in what we might learn by placing investigations of a range of spaces deemed safe/unsafe according to various calculi in conversation. Contributors reckon with the un-making of refuge in transnational refugee experiences with the state and structural violence, contending political visions of risk and Nature, multispecies encounters with 'green' capitalist development, and plural and intersectional perceptions and experiences with a changing (and increasingly extreme) climate. Each contributor works through the problems associated with working through multiple forms and nested layers of inequality and alterity towards alternative visions of the good to guide projects of reconstructing safe/unsafe spaces.

Un-Making Refuge: Urban Affect and the Afterlives of Bureaucratic Violence in Israel: The “asylum seeker” is

often portrayed as inhabiting an in-between space: a temporal and bureaucratic middle-ground that is located between the unsafe and the safe. The emplotment of the soon-to-be refugee, therefore, is a story of arrival, processing, and eventually integration. While this is a tidy narrative, it does not always materialize. In Israel, where the political and bureaucratic establishment is deeply invested in maintaining a majority-Jewish citizenry, non-Jewish asylum seekers are suspended in a bureaucratic holding pattern. In this paper, I focus on the personal narratives and experiences of Eritrean asylum seekers in South Tel Aviv, a community that has lived in a state of semi-permanence since arriving between 2006-2013. My interlocutors live in Israel without refugee status—some having done so for almost two decades—and their lives are punctuated by multiple forms of bureaucratic violence. The burdensome policies under which they live aim to prevent assimilation and incentivize what the government calls “voluntary deportation.” Based on ethnographic fieldwork conducted from 2021 until the present day, I analyze the afterlives of these forms of exclusion and coercion. Eritrean asylum seekers often narrate the landscape of Tel Aviv as dangerous and uncertain—an experience that is deeply tied to the bureaucratic violence they face. While the state’s actions cast doubt on the possibility of achieving asylum, I investigate the ways in which members of this community fashion safety within what they perceive as an otherwise unsafe space. Presenter: Skyler Inman

Coastal Communities, Adaptation, and (Un)Making Safe Futures: Drawing threads from ethnographic work in the Caribbean and North and South America (St. Lucia, the Galapagos Archipelago, Gulf Coast, Texas, and Ocracoke Island, North Carolina). Among these diverse locales sit communities each proximate to national and global environmental conservation preserves and living with climate change, flood risks, and extreme weather. This paper takes up the question of the roles of safety and its absences—presumed, measured, and perceived and the tension within the designation of spaces as safe or unsafe. I examine whether this tension opens up an alternative means of future-making that might reconcile longstanding inequalities or at minimum be inclusive of the human-environmental interdependencies that span our past, present, and futures in the spaces that we inhabit, the homes in which we dwell, and the ecosystems that we impact and depend on. What does adaptation and safety look like for multigenerational farming knowledge when confronted with shifting flood patterns that break with traditional ecological knowledge and render safe spaces hazardous? Who is

safe in the future if making homes safe in the present disrupts communities and unmakes legacies? What does it mean to mitigate risk from large-scale natural hazards but endemically exposed to chronic waste or slow onset disasters? I bring tensions between environmental assessments and participants’ perspectives on past, current, and future risks and community-based adaptation into conversation with one another looking across cases and cultures to muddle assumptions of safety and displace essentializing narratives that can foster inequality and subvert successful adaptation strategies. Presenter: Caela O’Connell (University of North Carolina, Chapel Hill, Department of Anthropology)

‘Who’s (Still) Laughing in the Face of Danger?’ Encountering Extreme Weather in Rural Scotland: This paper examines diversity in encountering un/safety the Scottish rural extreme weather context, highlighting the complexity of the relationship between safety and risk. Drawing on relational theory, it explores how narratives of people from rural Scotland affected by extreme weather reveal how perceptions of and responses to un/safety and risk can be understood as situational processes involving people and particularities of place. Furthermore, examining differences in affective responses to extreme weather amongst long-term local residents and more recent migrants shows how differences in responses are rooted in divergences in cultural norms that shape and are shaped by the intersections of people and places, and which thus mediate encounters with extreme weather, perceptions of being and feeling safe, and responses to risk. In the case of long-term residents, gender-specific norms can be seen to influence encounters with weather, which reveals important insights that also help explain why more recent encounters with worsening extreme weather were more likely to have been associated with loss and alienation than encounters with extreme weather in the past. The paper concludes that perceptions of un/safety in the extreme weather context do not merely result from engagement with weather-related risks, but reflect broader affectual responses to and negotiations with risk, which emerge from multiple relational entanglements with weather, landscape, people, institutions, and memories, embedded upon and shaped by specific cultural norms, and which exceed one-dimensional binary definitions of safety and unsafety and simple conceptual linear relationships between safety and risk commonly used in official policy and practice. Presenter: Irena Leisbet Ceridwen Connon

Sanctuary, Ecotourism, and Green Capitalism: 'Safe' Spaces for the Pacific Gray Whale: While spaces are designated as 'safe' and 'unsafe' for humans with respect to disaster and ecological crisis, humans also designate spaces 'safe' and 'unsafe' for more-than-human beings. My research on conservation-as-development projects for Pacific gray whales at Laguna San Ignacio and Laguna Ojo de Liebre in Baja California Sur finds that the advertisements of environmental NGOs (E-NGOs) and ecotourism camps alike place immense focus on the 'safety' of whale-watching experiences for whales themselves. Thus, it comes as no surprise that these lagoons are collectively designated as the 'Whale Sanctuary of El Vizcaíno' by UNESCO. The irony of this attempt at 'greening' the capitalist development of tourism is that the act of whale-watching is contributing to 'unsafe' conditions for gray whales. The carbon emissions of tourists' plane flights and car rides to these lagoons contribute to the cycles that melt Arctic ice—changing the currents and stability of benthic gray whale feeding zones. The sonar pollution of boats has been shown to demonstrably change whale behavior. So, who decides whether whale sanctuaries, whale-watching zones, and conservation areas are actually 'safe' for Pacific gray whales? Should actors with vested economic and ecological interests in ecotourism and conservation get to decide for whales the safety of Laguna San Ignacio and Laguna Ojo de Liebre? This paper interrogates the claims of E-NGOs and ecomodernist proponents of conservation zones, problematizing the proposition of this sanctuary. I argue that the term sanctuary, the ecotourism industry, and the idea of whale 'safety' have been weaponized as one tool to revive hope that capitalism can masquerade as the very solution to its own problems. Whale-watching as an allegedly ecologically sensitive form of consumption is instead a neoliberal transformation from material commoditization to a service-based one (Neves, 2010), not any true representation of safety for the gray whale. Presenter: Jake Dean (University of California, Santa Barbara, Department of Anthropology)

Convivir in a High-Risk Zone? Contested Political Designations of Space in the Ecuadorian Highlands: Following the 1999 and 2006 eruptions of stratovolcano Tungurahua in highland province of Chimborazo, Ecuador, the state designated areas in the vicinity of the volcano as “high risk,” which they often struggled to bound and justify the zones due to fluctuations in the reach of ash and pyroclastic material. These designations went largely uncontested until recovery and resettlement programs from 2006-2009 failed to develop economic opportunities and campesinos

resettlers began returning to their home villages on the volcano to cultivate and raise animals. This process revealed two themes in the politics of designating risk zones. The first was that the designation barred both public investment in devastated infrastructure (roads, bridges, water) and bank credit for agricultural inputs. The second was that the risk zone designation aided and abetted a thirty-year project of urbanizing the canton, itself an extension of a 400-year colonial project of settling the region. Since 2011, campesinos have contested this designation of space, at once unmapping both its politics and the scientific claims that underwrite them. Instead, they have organized their return to their home villages and, in place of the “high risk” designation, have proposed an alternative logic for remaking and sustaining life in the shadow of the volcano, *convivir* (co-living). *Convivir* is at once a principle for co-living with a more-than-human community, above all with the volcano they regard as *abuela* (grandmother) and a range of operations and collaborations for rebuilding and emergency operations. In this paper, I discuss the productive tensions between these contrasting political processes for (un)making (un)safe spaces. Presenter: A.J. Faas (San Jose State University)

DISCUSSANT:

Gabriel Torres Colon (Vanderbilt University, Department of Anthropology)

DESCRIPTION:

In her seminal fictional series, *Parable of the Sower* and *Parable of the Talents*, the Nebula and Hugo award-winning author Octavia E. Butler writes, 'The only lasting truth is Change,' commenting on the regularity and persistence of social and cultural change. This story chronicles the chaos of social upheavals and the emergence of new ways of being. Beyond fictitious worlds, the necessity of change is also central to our understanding of life. As initially articulated by Charles Darwin and Alfred Russel Wallace in the 19th century, evolution is the explanatory framework behind how species emerge, change, and go extinct over time. As a late-nineteenth-century discipline, anthropology and its practitioners have also changed over time. From a discipline that served eugenic and imperialistic agendas towards a field more concerned with anti-racist and social justice movements, change within the discipline has been both consistent and critical. With recent calls for letting anthropology burn and decolonization, the seeds for further changes to anthropological praxis have already been sown. In this panel, anthropologists from across the subdisciplines provide emerging perspectives on new approaches to address questions about the body: how we study it, how we describe it, how it meaningfully demarcates difference, and how it is an experiential vessel for subjectivity. Panelists propose novel approaches for understanding materiality in social life, the corporeal body, biological experiences, relational become(ings), and embodied epistemologies. Crossing intra- and inter-disciplinary boundaries that include medical anthropology, queer theory, bioarchaeology, Latinx theory, critical race theory, and autoethnography, panelists critically engage avenues for a cross-cultural and theoretically eclectic approach to the study of socially embodied differences. Inspired by solidarities, collaboration, and coalitions of marginalized peoples in response to our changing discipline, ultimately this panel is called to envision a decolonized and anti-racist anthropology.

At Home?: Rethinking the Repatriation of Anthropology as an Asian American Ethnographer: The anthropological turn to reflexivity in the 1990s ushered discussions on the gendered and racialized makeup of the field. While the call for studying up inferred the repatriation of anthropology by examining lateral structures of power in the Global North (Gusterson 1997), for many anthropologists of color, the field was already at home. In her landmark ethnography *Mules*

and *Men*, Zora Neale Hurston was working at home in Florida. Narayan (1993) and Zavella (1993) further complicated the insider/outsider race and class boundaries in a field that is presumed to be elsewhere in the discipline. Nonwhite anthropologists have experienced at home differently through ethnographic encounters where locals try to emplace them. Williams (2021) who identifies as African American in the US, was racialized as white in Venezuela. Chinese American Lee (2021) found that in the Andes, though she was not perceived to be a gringa, structurally she was representative of the institutions of the Global North. In my autoethnographic paper, I revisit this body of literature on the field and social difference through my embodied experiences at the start of the global pandemic. For me in the field in Italy from September 2019-March 2020, I found that depending on the situation, being Asian American seemed to be constructed around cold war discourses of the model minority myth while also often verging on the abject figure attached to gendered and racialized notions of the yellow peril. Presenter: Sophea Seng (California State University, Long Beach)

Re-Thinking Skin Color: A Material Feminist Approach to Race in Dermatology: Dermatology is the medical specialty dedicated to the management of skin disease. The first part of this disease management process generally involves identifying disease, often by visualizing, describing, and classifying lesions in order to come to a potential diagnosis. In this process, color of both the lesion and the patient's "constitutive" skin color can be crucial factors for determining a diagnosis. How, in a country where skin color is a quintessential marker for racialization of the body, do or can dermatologists engage with a diversity of patients with varying skin tones without reproducing racialized disparity? What can anthropologists learn from the methods being forged in dermatology to do so? In this paper, I draw on fieldwork among dermatologists and trainees in the US to show how these professionals navigate understanding skin color as a difference that matters in terms of disease prevention, detection, and treatment, while attempting to move away from commonly held notions that connect skin color to race and thus to whole sets of assumptions about behavior, character, disease status, and more. My research suggests that one way we might understand embodied difference apart from race is by thinking about the practical (sometimes biological, sometimes not) ways in which embodied difference matters. Bridging this anti-racist theory with feminist theory, I draw on feminist materialist thinking (Roy and Subramaniam 2016) to

destabilize how we think about skin color and race together and to forge a new path forward. A material feminist approach to skin has significant race-liberatory potential. I suggest that one path forward is to think the body materially in a way that is neither racial nor descriptively biological. I turn to function and use melanin as a case study in thinking about embodied difference. Material feminism may give us a “grammar” (Spillers 1987) for talking about difference in skin color without relying on the tropes of race or racism.

Presenter: Yesmar Oyarzun (Rice University, Department of Anthropology)

Palimpsestous Analyses: Mapping Geographies of Racialized Encounters using the “New Latinx South”: In this conceptual article, we advance the palimpsest as a heuristic and tool of inquiry for analyzing the competing, multiplicitous, layered, and relational becomeings of Latinidad(es). Contributing to timely theorizations about (un)ruly Latinidades that insist on theorizing Latinx in ways that push back against marginalization, oppression, and erasure within and outside of Latinidad, the palimpsest offers an important spatial lens to this scholarship. Grounded in critical Black, Latinx, and Indigenous geographic thought, we argue that the palimpsest foregrounds the possibility of the versatile and dynamic, rather than linear, assimilative and bounded, (path)ways to examine, intervene toward, and fight the erasure of constellations of (multiplicitous Latinx) relations that are always already seeping through, bleeding into, writing over, and reproducing previous relations. Using El Sur Latinx as a case to demonstrate the significance of the palimpsest, we draw on research vignettes, media documents, and other cultural texts about Latinx-driven demographic change in the South - what we call palimpsestuous moments - to show how critical spatial thinking adds significant layers to discussions about the construction, contingency, and complexity of Latinidad(es). We contend that a palimpsestuous lens grounded in Black and Latinx geographies opens up broader theoretical questions about the study of and ethno-racial experiences of Latinidad, as well as foregrounds unexplored research opportunities for the study of Latinidad more generally. (Co-authored with Timothy Monreal, University at Buffalo) Presenter: Rebeca Gamez

Body by Colonialism: Engaging the (False) Sex Binary in Biological Anthropology: The influence of feminist and queer theorists on (bio)archaeological research has been significant, as they challenge the notion that opposition to the normative is exclusively linked to sex

and gender categories. Scholars such as Blackmore (2011), Geller (2016), and Voss (2000) have contributed to this perspective. The term 'queer,' derived from the German word 'quer,' has various translations, including 'askew,' 'crosswise,' and 'transverse,' and it represents a critique of normalized and legitimized aspects of analysis. As emphasized by archaeologists who use feminist and queer theory, such as Arden (2008), Blackmore (2011), Geller (2008), and Hollimon (2011), incorporating a queer analysis does not involve discovering ancient 'homosexuality,' but rather prioritizes those who are often marginalized or ignored in academic research. When studying ancient populations, Bioarchaeologists and Skeletal Biologists often rely on the skeletal remains to draw scientific conclusions. Although the analysis follows standard protocols established by Buikstra and Ubelaker (1990), many of the methods employed in this field are not strictly binary. This paper aims to explore how queer theory influences and transforms knowledge about the human body and its biological experiences within biological anthropology. By treating the body as a complete and fixed entity, it becomes difficult to investigate human behavior and physiology beyond the binary framework. This study challenges the traditional categories and approaches to biological research and acknowledges that questioning these categories does not erase the significance of biology. On the contrary, by critically analyzing biology, it is possible to reject the false binary that limits [bioarchaeological] research. Presenter: Benjamin Schaefer (University of Illinois, Chicago, Department of Anthropology)

Assia: An Anti-Racist Call to Abolish the Body: In the postgenomic era, our approaches to questions of racialized difference are increasingly being forced to be rescaled: The whole corporeal body is replaced by the biospecimen; the biospecimen is replaced by the creation of information; and, in our current phase of big data, where investment firm Blackstone, LLC can be a majority stakeholder in Ancestry.com through a \$4.7 billion investment deal, information is being proprietarily defined divorced from technical, scientific, and biomedical expertise through increasingly rhetorical articulations of doing “good,” and likewise challenging our ideas of how to approach an anti-racist approach to racism becomes embodied different through critical engagement with biology. This paper will draw on fieldwork on genetic reconnection programs in Cameroon, this paper using the concept of “Assia,” a phrase articulating the recognition of shared loss, to shed light on how modes of kinship making in Cameroon, which includes correcting genetic ideas of

belonging in order to make African Americans potential kin. In doing so, this paper aims to build on the anti-racist work of Sankofa paradigms developed that challenge Western approaches to how power unfolds in processes of scientific knowledge production. However, by considering loss as a grounding framework, rather than recovery, this paper also aims to consider how an anti-racist approach to embodiment requires us to abolish the whole corporeal body as the grounding force for an anti-essentialist critique today. Activism Through Submission? On the Question of Foregrounding Piety in Political Work

2:15 PM - 4:00 PM TMCC - 716 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Connie Gagliardi (University of Toronto, Department of Anthropology)

CHAIR:

Hannah Mayne ,Usmon Boron

PRESENTER:

Connie Gagliardi (University of Toronto, Department of Anthropology), Hannah Mayne ,Fatima Siwaju ,Victoria Sheldon (University of Toronto, Department of Anthropology), Meaghan Weatherdon (University of San Diego)

DISCUSSANT:

Amira Mittermaier (University of Toronto, Department of Anthropology), Seth Palmer

DESCRIPTION:

This roundtable seeks to interrogate how contemporary ethnography can trouble otherwise common conceptual distinctions between religion, activism, and politics. Following the work of Saba Mahmood (2005; 2012), our session engages with forms of religious submission and/or living according to religious tradition that trouble the analytical closures that often undergird academic engagement with the political work of activism. Taking seriously the role that religious practices and modes of being can play within political landscapes (Hirschkind 2006), we ask how to foreground the place and role of God (Mittermaier 2019) when studying pious political action. How do we position action that is both

ethical and political at once, while simultaneously avoiding a structuring hierarchy that privileges politics and relegates piety to functionality? To do this, we probe the 'cross-fertilizations' between religious ways of being and political imaginations; places where 'a collective political imagination may be spurred by ethical acts of pious submission' (Palmer 2021: 65). Here, our engagement expands upon Mahmood, as we query how religious people, through or with their piety, explicitly seek to transform the socio-political order in which they are living. Citing our respective research, we will discuss diverse examples of religious life that lead people into explicit acts that make changes in their society on a political scale. In this comparative vein, we explore how efforts to do 'political work' can be carried out through piety and/or ritual. We conclude our queries by holding open the possibility for an alternative conceptualization of 'politics,' whereby any action intent on shaping the conditions of one's collective existence can be deemed 'political' (Hirschkind 2006: 8). To frame our discussion and foster conversation, our roundtable will be structured around three questions, to which each presenter will respond: 1. If, and how, does your research look at religious actors who, through or with their piety, come to work on socio-political scales? What are the 'cross-fertilizations' of religious ways of being and political imaginations (Palmer 2021)? 2. What are the pious practices with which one tries to affect change on a social and/or political level? Is there a critique of the use of such practices, and of conceptions of 'piety' more broadly, when we pay attention to work focused on the socio-political level? 3. How does a focus on pious action engender an alternative conception of what we consider 'political'? What are the temporalities of (religious) activism? The presenters on this roundtable each engage in research on actors working in pious and political contexts, but in a diverse array of places and spaces: Palestinian Christian iconographers in Bethlehem (Connie Gagliardi); female Orthodox Jewish protestors in Jerusalem (Hannah Mayne); Cree youth of Whapmagoostui engaged in walking the law (Meaghan Weatherdon); Black Muslim women of the Colombian Pacific (Fatima Siwaju); and ecumenically-disciplined public health activists in Kerala, South India (Victoria Sheldon). The roundtable will also feature Amira Mittermaier and Seth Palmer as discussants, and Usmon Boron as chair.

PRESENTER:

Daniel Rosenblatt (Carleton University), Nicole Taylor, Ine Beljaars (University of British Columbia), Toneille Bent (Anthropology), Gabriel Jderu, Michael Anranter (University of Vienna, Department of Social and Cultural Anthropology)

DESCRIPTION:

This panel is focused on social identity, interrogating how membership is performed and what it can mean.

The Freedom of the Slopes—Skiing as a Cultural Complex: In this paper I provide an overview of a project that tries to describe and situate the 'culture of skiing' and discuss some of the methodological and theoretical concerns raised by such an ethnographic object. Why do an ethnography of skiing? The short answer is in order to explore the ways North Americans imagine alternatives to seeing life as a quest for stability and economic success. Although outsiders often see skiing simply as a pastime of the rich and semi-rich, within the cultural world that surrounds skiing in North America there is a recurrent theme of skiing as something that draws people away from the path they are 'supposed' to be on and towards a more fulfilling life. This follows from a widely accepted understanding among skiers that skiing is the 'best thing in the world.' More profoundly, although people do not always say so in so many words, an important part of what draws skiers to skiing is that they see it as a way to experience 'freedom.' Obviously, there is much to unpack in such statements. This paper begins such an unpacking but also tries to say something general about the theoretical and methodological lessons we can take from the attempt to understand this kind of ethnographic object. What is a 'cultural world' in the sense of something at least partially shared by some people within an encompassing entity like 'North American society'? How do we understand different people's relationships to such a world—the ways they come to be a part of it and the varied ways in which they talk and think about it? Since when we talk about valuing success and stability we are talking about what we might term 'class culture,' how do we talk about class in relation to individual preferences, pursuits, and understandings? Since the pleasure and freedom associated with skiing are embodied, how can we talk about the relationship

between the way the meanings of physical activity are shaped by some combination of culturally available meanings, individual experience and what we might term the bodily affordance of certain activities?

Presenter: Daniel Rosenblatt (Carleton University)

Body Positivity on Social Media: Implications for Self-Image: Co-author: Mimi Nichter, PhD, Professor Emerita, School of Anthropology, The University of Arizona Social media has intensified body image dissatisfaction as it encourages frequent comparisons and a heightened awareness of others' evaluations. Prior to the emergence of social media, images and advertisements in print media provided consumers with subtle and overt messages on how viewers, particularly women, should look, and the ads changed infrequently (i.e., once a month) with the publication of a new magazine. Fast forward to today's media environment, where people are highly interactive consumers and producers of carefully curated, rapidly changing content. Young adults, many of whom report spending hours a day online, continually view social media posts from friends, influencers, and advertisers, all of which serve as sources of comparison and reminders of how they should look. Additionally, feedback mechanisms, such as likes and comments, make it all too obvious which body ideals and body 'assets' people consider attractive. This presentation explores, from the perspectives of college women in the US, how the body positivity movement is influencing body image ideals, social comparison, and body acceptance. In recent years, body positivity posts have grown exponentially on social media. The focus of this movement, which has its roots in the fat liberation movement, is about accepting one's body and rejecting narrowly defined and largely unobtainable body ideals. In principle, the body positivity movement challenges assumptions that fat bodies are not active and fit and recognizes that women can be healthy and beautiful at any size. We explore key themes that emerged from interview and focus group discussions on body image - authenticity, self-branding, surveillance, and the arduous work of beauty and identity - within the broader context of the body positivity movement and its effects on body image ideals and self-esteem for young women. Findings emerged from ethnographic research with more than 100 college students over the course of three years (2017 – 2020). Our methods for this study included in-depth interviews, focus groups, writing prompts, and long-term participant observation in college students' social media sites. Presenter: Nicole Taylor

Transitions in Motion: A Cultural History of Salsa in the Netherlands: The salsa dance scene in the Netherlands emerged from a transnational network of cultural exchange and migration that linked the Caribbean, South America, North America and the Netherlands. Introduced to the Netherlands by immigrants, travellers and international students, salsa first materialized in Amsterdam in the mid-1970s, where it quickly gained popularity among a diverse group of people. It subsequently spread to other parts of the country. As people from different cultural backgrounds adopted and adapted salsa to their cultural movement repertoires, salsa in the Netherlands saw the transfusion of styles, such as the idiosyncratic Antillean and zouk-salsa in the 1990s. The birth of the global salsa dance festival industry in 1997 marked a significant shift in the Dutch dancescape. To 'dance with the world,' internationally established dance styles were adopted and largely faded away local styles. Significantly, the transformation of cultural practices facilitated the formation of hybrid identities whereby salsa dancing served as a vehicle to negotiate cosmopolitan modernity, subjectivity and belonging in the Netherlands. Through a combination of archival research and interviews with key figures in the Dutch salsa community during the COVID-19 pandemic, this paper traces the development of the salsa dance scene in the Netherlands from its emergence in the mid-1970s to the turn of the millennium, focusing on its transoceanic connections that shaped the emergence of salsa as a popular dance form. By analyzing the critical role of individuals and their transnational and diasporic connections, media technology, music venues, dance schools, and salsa festivals in the early Dutch salsa scene, this paper contributes to studies of cultural globalization and cosmopolitan identity formation. Presenter: Ine Beljaars (University of British Columbia)

Club Quarantine During the Pandemic: Social Identities and 'High Vibrations!' in an Instagram Music Community: The global COVID-19 pandemic sent the world's citizens into a tailspin. In the United States, beyond the challenge of the pandemic, a surreal backdrop of social unrest, racial violence and political strife presented. Safety and peace seemed challenging to locate, and fear and loss dominated worldwide. In March of 2020, a virtual and musical space of community, refuge and healing emerged in the form of a phenomenon known as Club Quarantine. 'CQ' was birthed when Derrick Jones, a former rapper and music producer-turned-DJ began playing live sets via his Instagram page. From 200 friends and followers, the community grew to draw 100,000 visitors to the virtual

club at its most strongly-attended set. CQ was not only a space for virtual concerts, it was also a space for storytelling, fundraising for key causes, merchandise sales and advertising. The result has been a sort of 'digital intimacy' (Ulfstjerne, 2020) among the attendees and DNice. Through the pandemic times of uncertainty, fear and loss, I explore my own experience of the ways CQ provided sanctuary. What have I learned through my time immersed in this virtual music space? This is an autoethnographic presentation based on my participant observation of CQ sets on Derrick's live Instagram page from 2020-2022, a review of DNice's archived sets, and my own ongoing reflections. I incorporate ritual theory (Vendenberg, Berghman & Schaap, 2020) to discuss the ways that CQ became an ongoing part of my everyday life and the lives of others, as well as the meaning this ritual had for me and those whom I witnessed in this space. In addition, I use Bourdieu's theories related to cultural, social and symbolic capital to discuss the ways I witnessed personalities interact and social identities, mine included, form in this virtual space. My autoethnographic account reveals many instances of growth, awareness and education about my identity and the identities of others in this virtual space based on the CQ rituals and different forms of capital deployed and employed. Presenter: Toneille Bent (Anthropology)

Moto-mobility, gender, and repairs: How do female motorcyclists maintain and repair their motorcycles?: The association between motorcycle and masculinity has been a cultural reality in the 20th century, but things are changing rapidly. Drawing on ethnographic data collected from 2012, I discuss the cultural complications generated by the entrance of women into the world of motorcycles. If one approaches maintenance and repair as heterogeneous networks of human actors and non-human actants, I ask how do female motorcyclists stabilize such networks to keep their bikes functional? What kind of labor do they need to deploy, what objects and actors do they need to enter into a relationship with, what sites do they need to visit, and what knowledge do they need to master in order to keep their bikes in a functional state? The ethnographic material reveals that the female bikers whom I got to know approach repair primarily in three ways: as emotional laborers and dependent participants inside male biker groups; as apprentices who gravitate around repair shops, where they often perform minor repairs and support the social reproduction of the male mechanics; and, finally, as actors seeking maintenance and repair autonomy in order to perform minor and major repairs by themselves. These three strategies reflect female motorcyclists' responses to the gendered

nature of moto-mobility and generally reproduce male domination in motorcycling. Presenter: Gabriel Jderu

Between Trust and Mistrust: (Mis)trust at a Bulgarian Rest Stop (and at Home).: Only in recent years, have anthropologists paid greater attention to trust and mistrust, shaping them into distinct and clearly delineated concepts based on ethnographic records of social interaction. Since then, trust, once understood as a rather desirable state, has been translated into heuristics and actions. Mistrust, distrust, and suspicion, once considered antonyms of trust, became practices of exceptional detachment, but also creativity and productivity (Carey 2018; Mühlfried 2018, 2022; Osella 2022). For this paper, I propose to accept trust and mistrust as independent but interrelated concepts of social interaction. In the midst of both, however, I add (mis)trust to describe what takes place in-between trust and mistrust. Using conversations and interactions about offering, selecting, ordering and serving food and drinks at a rest stop in north-western Bulgaria (2019-2021), I argue that what changes the social fabric is attributable to neither trust nor mistrust. Instead it links to the disorientation, overwhelm, and emptiness that finds expression when shifting from an assumed regulatory inherent in mistrust to the flexibility inherent in trust. In fact, respective sensations strengthen an experience with creative potential for reading, interpreting and changing interpersonal relationships. The paper closes with a note on how (mis)trust situated between trust and mistrust may deserve greater attention not only as a concept for explaining social interaction, but also as a guide for conducting ethnographic research. Anthropologists in Environmental Assessment

2:15 PM - 4:00 PM TMCC - 803 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Jessica O'Reilly (Indiana University, Bloomington)

CHAIR:

Jessica O'Reilly (Indiana University, Bloomington)

PRESENTER:

Ben Orlove ,Elizabeth Marino ,Kathleen Galvin (Colorado State University)

DESCRIPTION:

Scientific assessments emerged in the early 1900s as a tool and a process for providing expert advice to decision makers. Assessments accelerated over the past century, as seeking scientific advice became an enshrined value of technocratic governance. In turn, assessments became more formalized and increasingly distinct from related academic exercises like conferences and workshops. This roundtable brings together anthropologists who have worked as authors in massive national and international environmental assessments, including United States National Climate Assessments, Intergovernmental Panel on Climate Change assessment reports, and reports of the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services. Presenters will discuss their role as anthropologists in interdisciplinary teams, the process of writing and communicating anthropological knowledge in environmental assessments, and the possibilities and limitations of environmental assessments as decision-making devices.

Changing Concepts of Parenthood, Families, and Reproductive Technologies

2:15 PM - 4:00 PM

TMCC - 606

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Anaïs Martin

PRESENTER:

Sabrina Zeghiche ,Anaïs Martin ,Anureet Lotay (University of Victoria, Department of Anthropology),Kiran Jyoti Kaur

DESCRIPTION:

This session brings together papers that examine changing family structures. Papers examine not only the changing dynamics of reproductive technologies and

donor-conceived offspring, but the changing family structures and dynamics among migrant Punjabi families abroad and those that are left behind. The loneliness of left-behind parents in Punjab is juxtaposed with the construction of families and reproductive lives in the migrant diaspora. In the technology realm, the changing roles of anonymity and reproductive fraud create new forms of legal, medical, and social scrutiny.

'My existence lies on a deception' – The experience of donor-conceived adults in the context of insemination fraud: For several years, concerns about third-party reproduction have been evident in many countries. However, despite growing concerns, several loopholes remain in the legislation governing sperm donation. For example, important issues (such as collecting, maintaining and updating donor records, verifying donor medical history, carrying out genetic screening) are left to the discretion of sperm clinics and sperm banks or are the subject of professional recommendations only, with no requirement that these recommendations be implemented or monitored. This state of affairs has led to a number of abuses, such as insemination fraud, which occurs when the physician performing an insemination knowingly substitutes a different sperm sample (from another donor, another patient (father-to-be) in the clinic, or the physician himself) for the sperm sample chosen by the parents without their knowledge or consent. Today, approximately 50 physicians were found to have committed such acts in North America, Europe, South America and Africa. Although these cases have received significant media attention, they have largely gone un-addressed by academia. This paper presentation aims to broaden our understanding of insemination fraud by examining the experiences of donor-conceived adults affected by it. More specifically, our aim is to focus on what insemination fraud implies at the personal and relational level. At the personal level, we want to examine what it means for donor-conceived adults to discover that the intended progenitor was deliberately swapped by the doctor. At the relational level, we want to examine if and how insemination fraud reshuffles genetic ties and how this may impact (kinship) bonds. A qualitative study was conducted, involving semi-structured interviews with 17 participants (13 women and 7 men) who discovered they were conceived with the sperm of a different man than the one intended by their parents. Participants were aged between 23 and 60 and came from different countries: USA (9), Canada (6), England (1), Ecuador (1). A thematic analysis was conducted on all the transcripts, using the NVivo qualitative data analysis software. Three themes were

identified: 1) a (temporary) identity realignment; 2) the reshuffling of genetic ties; and 3) a feared or real weakening of (kinship) bonds. More specifically, the analysis showed firstly that the discovery of insemination fraud induced in participants an identity misalignment since their sense of identity rested partially on an erroneous genetic lineage. Secondly, it showed that insemination fraud led to both a shrinking and an expansion of genetic ties since former genetic ties 'disappeared' while new ones were introduced. Lastly, it showed that insemination fraud, by revealing the absence of genetic ties with the father, induced in some cases a disconnect between family members. In conclusion, insemination fraud can have profound repercussions on donor-conceived people, both at the personal and at the relational level. Therefore, it is important that this phenomenon receive the medical, legal and social scrutiny it deserves and that we move away from the silencing or the trivialisation response that it has received so far. Presenter: Sabrina Zeghiche

From Anonymity to Availability: Exploring Contacts Between Formerly Anonymous Gamete Donors and their Donor Offspring: Co-author: Isabel Côté (Full Professor, Holder of the Canada Research Chair in Third Party Reproduction and Family Ties, Université du Québec en Outaouais, QC, Canada). Third-party reproduction has opened new possibilities for infertile couples. It has long been subject to donors being unknown: anonymity was supposed to protect all parties by preventing donors from being invested as parents. However, over the past 30 years, that rule has been increasingly criticized for its detrimental impact on donor conceived people. Several countries have lifted anonymity; and where it still prevails, many donor offspring have circumvented it by using commercial DNA-testing. Unforeseen contacts have thus been made between sperm or egg donors and the people they helped to conceive. Those contacts are likely to become more and more frequent. Yet, little empirical research is available on the matter, especially from the point of view of donors. From an anthropological standpoint, the phenomenon raises questions relating to new family forms and multi-parenthood, namely what it means to have more than two people participate in conceiving a child and how it challenges the central role procreation supposedly plays in Euro-American kinship. This paper presentation will therefore examine the following questions: how do the men and women who donated anonymously experience being contacted by their donor offspring? How do they position themselves towards those donor offspring? The presentation will draw on data from an on-going qualitative study based on in-

depth interviews with anonymous gamete donors who were contacted by a donor offspring (9 sperm donors and 1 egg donor from Australia and the US as of March 2023). Participants have mainly been recruited on social media. All have donated in a clinic, a gamete bank or a doctor's office between the 1970s and the 1990s. The majority was first contacted by a donor offspring in the last 6 years, through a DNA-testing website or a State-register. All current participants have responded to those contact-requests and built a relationship with at least some of their donor offspring. The presentation will describe the transition these donors have experienced from being anonymous to being known. The transition is informed by changes in the meaning donors have given to their donation: personal events (such as becoming parents) and the evolution of the sociopolitical context regarding anonymity have shed new light on their role as donors throughout their life course. As a result, while most study-participants were originally comfortable being anonymous, they now express their wish to 'be available' for their donor offspring. They state the importance of sharing information about themselves when requested, and they emphasize their willingness to be present when donor offspring need and ask for it. From those results, the presentation will discuss how the idea of 'being available' forms a specific kind of connection between donors and donor offspring, that puts them at the edges of mainstream definitions of kinship. Presenter: Anaïs Martin

Phulkari: Reproduction, Family, and the Fabric of the Punjabi Diaspora in Canada: Diasporic subjectivity is defined by diversity and hybridity, as it blurs the boundaries of nation, ethnicity and homeland by negotiating simultaneous, ongoing attachments to multiple identities (Brazier and Mannur 2003). While globalizing economic and political macroprocesses shape these diasporic identities, it is individuals, households and families that are key to understanding constructions of home and belongingness in diasporic communities. This paper presentation will discuss the results of my doctoral study which looks at how Punjabi Canadian families experience pregnancy loss, asking specifically how the cultural complexity of a diasporic identity in a globalized world can affect responses. As Rapp (2001, 469) writes 'pathologized or otherwise stigmatized reproduction can be used as a red thread' to more clearly bring globalized stratifications into view (Hough 2010). I extend this textile metaphor to understand pregnancy loss among the Punjabi diaspora in Canada allowing for the examination of the reproductive lives of women and families against the

shifting norms of the ideal family, womanhood, motherhood, and national identity in transnational contexts. I use theories of diaspora, identity and belonging to show how diasporic Indians inhabit liminal spaces where memory and ideology collide, and cultural and political terrains are contested, to fashion a multiply-constituted ethnic identity. Using textile metaphors indigenous to Punjabi culture, I examine the microlevel, the embodied, and the everyday migrant subjectivities and practices that allow diasporic Punjabis to be 'here', 'there' and in-between to better understand how families and reproductive lives are constructed in the diaspora. Presenter: Anureet Lotay (University of Victoria, Department of Anthropology)

Transnational migration and the changing lives of left-behind parents: A case study of village Khizarabad, Punjab (India): The state of Punjab has a long and continuing history of migration and its roots are embedded in the Punjab region of undivided India. In the contemporary times, a humongous craze is seen among Punjabis to go abroad. Slowly and steadily the process which started of something to fulfill the needs of an individual has become a trend and a status symbol. Mobility of the migrants to other nations has significantly affected their lives as well as the lives of their families who are left-behind in their country of origin. The dynamics of family has changed because of the migration process. The present study is an attempt to understand the changes experienced by the left-behind parents in their lives after the migration of their children. As it is difficult to comprehensively study the changes in all the areas hence in the study an attempt has been made to study the transformation on economic and emotional front. The study was conducted in village Khizarabad located in district Sahibzada Ajit Singh (S.A.S.) Nagar of Punjab (India). Primary data for the present qualitative study were collected from 30 left-behind parents using in-depth interview method. Couple interviews were considered as one parent and one interview. Snowball sampling technique was used to identify the households. All the changes which were experienced by the left-behind parents on the economic and emotional front were documented using narratives in the present study. The study found that the lure to migrate internationally is very strong among the Punjabis. Often the cost of this lure is paid by the left-behind parents. After the migration of a young adult from a family, he/she is expected to support their left-behind families in the home country financially. Migrants support their left-behinds financially and send them remittances from time to time. These remittances have elevated the

financial conditions of these left-behinds. There were cases where left-behind parents did not want their children to send large sum of money back home. Instead, they want their children to save that money and use it for their settlement in their country of migration. The findings of the study also revealed that the emotional cost suffered by the left-behind parents was quite high. The remittances received by the left-behind parents have elevated their financial condition but at the same time has decreased their emotional support. For them migration is an emotionally exhaustive process which has left a void in their lives. On the emotional front, parents suffer from empty nest syndrome, which is a condition and not a disorder in which a feeling of sadness and loss is experienced by the parents after their child leaves home. This syndrome was observed especially among the mothers of the emigrants as they are considered as the primary care givers. Parents dream of sending their children abroad but they themselves grapple with loneliness after their migration. Parents try to compensate the absence of their children by different means like talking to the migrant children over mobile phone, by visiting their relatives and by engaging themselves in different activities. Another reason for increasing loneliness among the left-behind parents was the emergence of nuclear families. After the migration of their children and in the absence of joint families left-behind parents have nothing to fill that void. Presenter: Kiran Jyoti Kaur

Affairs), Sojung Kim (Johns Hopkins University, Department of Anthropology), Aaron Neiman

DISCUSSANT:

Lawrence Cohen (University of California, Berkeley, Department of Anthropology)

DESCRIPTION:

This panel invites papers that experiment with alternative modes of conceptualizing otherness, asking how moving away from state-sponsored categories of difference may expand political horizons and possibilities of expression. A robust literature has examined how concepts of otherness that structure anthropological knowledge are embedded in histories of imperial expansion and colonialism (Asad 1973; Fabian 2014 [1983]; Leistle 2015; Trouillot 2003). More broadly, how we understand others is inevitably tainted by loaded categories of political, ethnic, racial, class-based, and gendered difference (e.g., Feldman 1991; Malkki 1995; Aretxaga 2005). At once indebted to the aforementioned literatures and also in search of different ways of describing how violence marks relations, this panel invites papers that suspend these categories and attend to conceptualizations of otherness as they emerge in everyday forms of language and life in contexts of violence. We are especially interested in papers that use ethnographic description itself to theorize processes of thinking, relating, wounding, and desiring between people and communities across difference, thus expanding our conceptualization of politics and ethics (e.g., Das 2020; Garcia 2010; Han 2020; Pinto 2019; Stevenson 2014). The papers gathered together on this panel engage the following core questions: How and drawing from what genealogies or resources do people live with, question, or transform categories of otherness? Where and under what conditions do we witness the hardening of the boundaries around others? How do categories of otherness change in time, as 'we' become 'others' and 'others' become 'us'? What intellectual, political, and ethical work might it do to consider not only an 'external' other, but the other within? By addressing these questions, the panel attends to the unfoldings and unmakings of categories of otherness in everyday life, thus inviting new political engagements with otherness amid new configurations of difference and violence. Uncanny Encounters: Undoing "Migration" Through Practices of City-Making in Chile: Over the last decade, Chile has become the main destination for Latin American immigrants. In a self-fashioned "white mestizo" nation, the "sudden" appearance of predominantly Black and Indigenous people from Haiti, Venezuela, Colombia, Peru, and Bolivia has led to intense debates concerning "immigrants" as a whole. This paper combines notes from archival and ethnographic research on what I conceptualize as "uncanny encounters" that happen in the northern border city of Antofagasta across changing racial, ethnic, classed, and gendered categories of difference surrounding what we today call "migration." Antofagasta is an industrial city constituted in the twentieth-century by the "immigration"—never termed as such at the time—of recently "Chileanized" Indigenous and "mestizo" indentured laborers. I show that uncanny encounters with the "ragged" bodies of these laborers as they settled in the urban peripheries eventually led national elites to establish one of the earliest and strongest welfare states in Latin America to protect the "weakened" "Chilean race." Today, the city is gripped by xenophobic authorities and vigilante groups claiming that "immigrant" settlements put "Chileans" at risk by exposing them to crime and claiming their already limited access to means-tested social services. Ethnographic depictions of three uncanny encounters—between Black and Indigenous women jointly building their settlements; Andean Indigenous performers in the

settlements and Antofagastinos with long-suppressed Indigenous roots; and "immigrant" and "Chilean" working-class "pobladores" struggling for housing rights—offer an account of otherness that can erode the hold that xenophobic discourses have on nationalized subjects in Chile and elsewhere. Building on Latin American decolonial theories of otherness that draw from Levinas' ethics of intersubjective responsibility, I ask what a liberatory politics of migration might look like today. Presenter: Pablo Seward Delaporte (Stanford University, Department of Anthropology)

"May You Continue to Grow in My Worn Womb": Hoping, Mourning, and Desiring the Bi-National Child: This paper describes a creative act of mourning, "Shiva Mevuyemet Le'zikhrah" (Directed Shiva for Her Memory), that congealed in the contingencies surrounding the untimely death of my friend and interlocutor, Pnina. Pnina was founder and director of the Lod Theatre Center in Israel, a theatre which operated in a municipal bomb shelter and bridged therapeutic impulses from psychodrama with aesthetic influences from Poor Theatre. According to Jewish religious law (halakha), first-degree relatives may not sit shiva (a mourning ritual) should their loved one pass away immediately before a holiday. In the absence of communal mourning opportunities in Pnina's case, her theatrical ensemble organized a "Directed Shiva" in the form of an open-mic night as a way to mourn without trespassing rabbinic law. Close attention to the acts of the open-mic night thus reveals how theatre becomes a space for the stitching together of life and death in a context saturated with violence. I illustrate this through an ethnographic analysis of my entrance into Pnina's "Pregnancy Diaries" on this night, poems she wrote for her then unborn son Noury during the seventh month of her pregnancy which coincided with the May 2021 war and pogroms. During the years that I knew her, Pnina frequently spoke to me of having two children – her theatre and her Noury. Showing how Pnina's friends lent their bodies to the expression of her desire for a "bi-national child" during her theatrical shiva, I suggest that there is something particular in the tone of mourning that developed which may be key for thinking through what it is to make this form of life inhabitable rather than jettisoning a violent everyday (Das 2016). Locating the twin births of Noury and the Theatre Center "in the crevices between the everyday and crisis" (Das and Han 2016), I consider the ethical and political stakes of Pnina's birthing of a different mode of

dwelling with others. Presenter: Talia Katz (Johns Hopkins University, Department of Anthropology)

Othering the Ordinary: Boundary Parenting and the Making of “Safe” and “Unsafe Adults”: Boundaries have emerged as a critical site of ethical parenting. In the digital worlds of what I refer to as “Boundary Parenting,” child safety educators enjoin (mostly) mothers from around the world to shore up the psychic and physical boundaries of their children in order to prevent their sexual victimization. The goal of Boundary Parenting is nothing less than to upend rape culture, not by dismantling patriarchy, but by empowering children. The movement sees sexual violence stitched into the fabric of everyday childcare encounters: in hugs imposed by grandma, in compulsory hygiene, in mixed-age daycare settings. Mothers who ascribe to Boundary Parenting teachings seek to recruit a community of “safe adults” around their children. What distinguishes “safe adults” from “unsafe adults” is not the propensity for committing sexual abuse *per se*, but a demonstrable commitment to attending to age-based power differentials while honoring children’s capacity for agency. In this talk, I explore the deliberative practices that go into differentiating “safe adults” from “unsafe adults.” In contrast to earlier generations of child abuse prevention, these othering practices are not leveled at strangers in white vans or pedophile groomers, that is, at an otherness that is ineffable. Rather, they other the ordinary, by challenging intimates whose practices of caregiving, while conventional, are understood to create conditions in which children are vulnerable to abuse. This notion of “unsafe” broadly applies to any behavior a child is compelled to undertake, even as it smuggles in connotations of deviant forms of sexual predation and naturalizes children’s fear of difference. Drawing on three years of fieldwork carried out in virtual parenting groups, digital Boundary Parenting workshops and as part of coparenting with others in the fleshy world, I examine the political and ethical possibilities of making “safe adults.” Presenter: Sonia Rupcic (Center for Healthcare Organization and Implementation Research, Veterans Affairs)

Inordinate Knowledge of Kinship: North Korean Migrant Women’s Voices in the Domestic: This paper contemplates on the boundaries of otherness in the realm of kinship by exploring how inordinate knowledge of kinship is endured in the everyday life of North Korean migrant women living in South Korea. The North

Korean Famine in the late 1990s induced a massive influx of North Koreans into northeast China, mostly low-income young women. After forming families in China, upon declaring themselves to the South Korean state, however, North Korean migrant women’s kin relations are deemed illegitimate, and women are compelled to found new households. It allows state’s surveillance of kinship relations, and criminalizes contact between kin across national borders. Through scenes of family rituals held by North Korean migrant women, whose transnational kinship relations are marked by the violence of the Partition of Korea and women’s multiple migrations, this paper examines in the context of the ongoing war what it is like to live with others in the absence of kin. What are kinds of intimacies achieved (and corroded) in the domestic as women migrants navigate multiple legal regimes, economic precarity, and obligations to dispersed kin under the pressure of state surveillance? This paper brings an ethnographic lens and archival research to bear on the question of how the imagery of political disorder into which immigrant lives of women are placed folds into disorders of kinship in the intricate intermeshing of the political and the domestic, the public and the private. Being attuned to voices of women on their genealogies, gesturing towards reinhabiting relations with others whom they call kins and families, this paper suggests ethnographic attention to women’s experiences of homes and intimacies may shift the focus on North Korean migrant women from the geopolitics of North and South to ways in which disordered politics emerge in everyday life. Presenter: Sojung Kim (Johns Hopkins University, Department of Anthropology)

“Everybody Has Mental Health”?: Australia’s Offshore Refugees and Psychic Nonbelonging: Among the many ways which refugee Otherness is violently constituted, offshore detention stands out for its brutal logic of “deterrence” of would-be asylum-seekers. For humanitarian and practical reasons, such a policy of detaining undocumented boat arrivals outside the target country has rarely been implemented— save for a handful of wealthy Western nations including, perhaps most notoriously, Australia. For more than twenty years, thousands of men, women, and children have been indefinitely detained and tortured in Australia’s offshore processing centers, located in the sovereign countries of Nauru and Papua New Guinea in exchange for foreign aid. I give background on the extraordinary deprivation

in these camps and subsequent widespread psychiatric violence experienced by the detainees within them. I then turn to original ethnographic fieldwork with a group of professional therapists from mainland Australia who volunteer to provide crisis counseling to these individuals— whose legal right to a mobile phone has been upheld in Australian courts— via WhatsApp. Drawing upon interviews and participant-observation with this group, I show how they use the affordances (and limitations) of messaging apps to deliver care under extreme circumstances, and how they attempt to create genuine moments of interpersonal belonging which attempt to counter this social death. I conclude by drawing attention to a bitter irony: increasingly, domestic public mental health campaigns call upon everyday Australians to inquire after the Other, to ask, “are you okay?” and to consider the nation’s mental health at the population level. The case of my informants suggests that there are major exceptions to the growing refrain that “everybody has mental health.”

Education in Raciolinguistic Transitional Spaces

2:15 PM - 4:00 PM

TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Hilario Lomeli (Vanderbilt University)

PRESENTER:

Thierry Elin-Saintine (Stockton University, Department of Sociology and Anthropology), Char Ullman (University of Texas at El Paso), Hilario Lomeli (Vanderbilt University), Jia-Hui Stefanie Wong (Trinity College), Jordan Corson (Stockton University, Department of Sociology and Anthropology)

DESCRIPTION:

This oral presentation consists of papers that critique and counter raciolinguistic hegemonic norms in institutional spaces. In some papers, creative practices, which include counternarrating, demonstrate not only resilience but also the potential for change. The first paper, *A Revisionist History of Mathematics Education*, using the case of a successful Black student, Kawhi, spotlights the identity work that some Black and Brown students engage in daily and continually in order to

formulate, articulate, and, at times, navigate different ways of belonging to traditions and academic practices, like mathematics education, that never considered their under-representation a problem or that are typically derogatory of them. The second paper, *The Importance of Recognizing Identities in Teaching and Beyond*, shows the ways the employees and policies of a Florida school district were listening subjects who re-formed student and parent identities within the added confines of the electronic records system—codifying and reproducing raciolinguistic enregisterment and colonialism, inhibiting families' access to resources and education. The third paper, *Being and Researching in the Third Space Embracing Cultural, Linguistic, and Professional Hybridity*, focuses on the learning experiences and identity development of Facundo, a Chicax doctoral student who began his life in Ciudad Juarez, Mexico, grew up in Chicago, and returned to the borderland for his master's and his doctoral work. Using a communities of practice framework (Lave & Wenger, 1991), this study shows the challenges and experiences through which minoritized students develop their skills and identities as qualitative researchers. The fourth paper, *The Violence of Redemption*, based on ethnographic fieldwork with Latinx youth in an alternative school in Houston, Texas, this study reveals the ways youth felt unwanted, tossed aside, and ignored, illuminating a systematic process of disposability taking place within the everyday order of U.S. schooling. The fifth paper, *Centering Counternarratives of Communities of Color*, draws on data collected in Connecticut, after a law was passed to require high schools to offer a Black and Latinx course. The author examines how one Black educator engaged her mostly Black and Latinx students in recognizing dominant narratives and centering counternarratives of Black and Latinx communities. The last paper, *Education on the Move*, follows nine youth at a newcomer school and documents their creative educational practices (informal education), inside and outside of the school, that are not bound by the institutional schooling context that they are a part of.

A Revisionist History of Mathematics Education: Managing and challenging stereotypes about “who” and “what” is a math person: In the midst of the preponderance of data on the academic failures or underperformance of Black and Brown students in mathematics, this study's participant, Kawhi, particularly stands out. As the product and inheritor of a rich legacy and often untold history of BIPOC families socializing their kids to view and use schooling as a rebuke to enduring negative race-based stereotypes, he epitomized the idea of 'Black pride' and was fully

committed to repurposing the classroom as an anti-racist project. Indeed, he graduated college with a Bachelor's in accounting and currently works as a staff accountant for a prestigious firm in Philadelphia. However, reducing Kawhi's journey from Oxford high school—an under-resourced, racially and socioeconomically isolated public school—to working at a world-renowned accounting firm to another 'success' story can do more harm than inspire. Such interpretation can further the 'urban education tale': the specious characterization of those who go on to lead so-called productive lives as 'survivors' or 'gritty', and the continued denigration of others, pushed or pulled out of school, as anti-intellectuals or too lazy. This critical ethnographic study of Kawhi's math identity construction pushes against the urban education tale; it complicates the assumed one-dimensional and unidirectional relationship that exists between classroom success and academic identity. Using the concept of epistemic oppression—the limitation of who can be knowers and what counts as legitimate knowledge—and its corollary epistemic agency, this study shows that Kawhi's history of success in math classrooms and his perceived social responsibility to 'prove them wrong' did not shield or immunize him from the depths, pervasiveness, and policing powers of prevailing racial ideologies in academic learning. I contend that Kawhi, similar to other Black and Brown academically identified learners for whom negative academic stereotypes exist, had to perform a kind of stereotype management that entails revising and rewriting history just enough to allow space to reflect on, wrestle with, and imagine beyond the longstanding and widespread assumptions about the intellectual and cultural superiority of White men that dominates mathematics and other academic disciplines. He engaged in revisionist mathematics history so that it could provide an alternative to euromodernity, a better and more inclusive explanation for the under-representation of people who look like him in STEM fields. This study spotlights the identity work that some Black and Brown students engage in daily and continually in order to formulate, articulate, and, at times, navigate different ways of belonging to traditions and academic practices, like mathematics education, that never considered their under-representation a problem or that are typically derogatory of them. Presenter: Thierry Elin-Saintine (Stockton University, Department of Sociology and Anthropology)

Being and Researching in the Third Space Embracing Cultural, Linguistic, and Professional Hybridity: This paper is drawn from a larger ethnographic study that foregrounds the stories and perspectives of doctoral students from minoritized backgrounds, including those who identify as Latinx, Black, differently-abled, and queer. Study participants were taking a year-long course in which they learned about and actually conducted an ethnographic case study. Working in research teams, the doctoral students were dropped into an already-set-up field site, a first-year composition course that almost all undergraduates take. There, these cub ethnographers attempted to understand the co-construction of identities, ideologies, and texts, while they were simultaneously learning about ethnography. The larger study from which this paper was pulled sought to identify how the processes of learning to conduct ethnographic research underpin doctoral students' success, confidence, and persistence in the academy. The larger project also considered the challenges and experiences through which minoritized students develop their skills and identities as qualitative researchers, using a Communities of Practice theoretical framework (Lave & Wenger, 1991). Here, I focus on the learning experiences and identity development of Facundo, a Chicana doctoral student who began his life in Ciudad Juarez, Mexico, grew up in Chicago, and returned to the borderland for his master's and his doctoral work. Facundo saw himself in third space theory, convincing his teammates that they should use it to analyze their data, which they did. Throughout the first semester of the year-long course, Facundo frequently fell back onto his internalized model of research from his master's work in history, where he had focused on oral history. I analyze the kind of back-and-forth movement in his learning to conduct ethnographic research. Reflective about his own learning process, Facundo learned to take in written feedback from his professors and oral feedback from his teammates throughout the course. And perhaps because oral history and ethnography have some things in common, this similarity led to his thinking that he could build on the approach that he knew so well in the case study course, which turned out not to be true. Currently, Facundo is on his way to earning a doctorate. But Yosso (2013) reminds us that there are 'very serious leaks in the Chicana/o educational pipeline' (p. 4). Racism is implicit, explicit, and systemic, and it starts in elementary school and continues throughout Chicana

students' lives. She makes clear if we start with 100 Chicana elementary students, 'less than one will receive a doctorate' (Yosso, 2013, p. 4). Facundo is on his way becoming part of that tiny group. Presenter: Char Ullman (University of Texas at El Paso)

The Violence of Redemption: Racialized Disposability, Alternative Schooling, and Latinx Youth: Following Moten and Harney's (2021) call to ask what lies beneath and beyond institutions of control, this paper explores the experiences of Latinx youth in alternative schools, which are often seen as a last resort for youth labeled 'at risk' in U.S. schools. Situated as places of correction and redemption for criminalized youth, these sites of organized abandonment (Harvey 1989) instead warehouse youth cataloged as disposable, serving as a critical technology of the state to manage surplus groups of racialized, immigrant, and/or disabled subjects. Deploying an anthropology of becoming framework (Biehl & Locke 2010; 2017) that renders both subjects and institutions as open-ended, ongoing, and incomplete, the paper traces the lives of youth as they navigate the inter-locking institutions of immigration, schooling, and policing. Based on two years of fieldwork with Latinx youth in an alternative school in Houston, Texas, the ethnographic methods (e.g. interviews, observations, pláticas (Fierros & Bernal 2015)) reveal the ways youth respondents' claims of feeling unwanted, tossed, aside and ignored illuminated a systematic process of disposability taking place within the everyday order of U.S. schooling. Drawing on theories of disposability (Evans & Giroux 2015) and social death (Cacho 2012), the ethnographic study demonstrates how disposability distinctly functions as a mechanism of white supremacy, impacting not only particular schools, but also ghettoized communities that live the wake of Houston's toxic petrochemical industry. The production of racialized Latinx youth as at-risk subjects was central to the ways they were routed into under-resourced, disciplinary spaces where little was expected of them beyond compliance. This work acts as a call to reassert the indisposability of youth—not just in educational practice, but as a broader ethical framework of care that challenges the often uncaring, inequitable systems that vulnerable youth exist within. A politic and education system that believes in student indisposability is fundamentally one that cares about all youth—and that abolishes the normative metrics of value, as well as the institutions that reinforce them. Presenter: Hilario Lomeli (Vanderbilt University)

Centering Counternarratives of Communities of Color: Teaching and Learning Black and Latinx Studies in Connecticut: Since the 1960s, activists have advocated for ethnic studies education that includes the histories, cultures, and experiences of communities of color. Beginning in 2022-23, Connecticut requires high schools to offer a Black and Latinx Studies course. This state legislation is the first of its kind, and offers possibility to schools and communities for needed expansions of social studies curriculum. Drawing on data collected as part of a larger ethnographic study that explores the experiences of high school teachers and students of Black and Latinx Studies courses in the Hartford, Connecticut area, this paper examines how one Black educator engaged her mostly Black and Latinx students in recognizing dominant narratives and centering counternarratives of Black and Latinx communities. The paper draws on critical race theory (CRT), especially its concept of counterstories. CRT emphasizes that analyses of inequity in U.S. society often fail to fully consider the role of race and racism, and highlights the value of experiential knowledge and counternarratives, particularly those of people of color (Bell, 1992; Ladson-Billings & Tate, 1995; Solórzano & Yosso, 2002). This approach gives voice to stories that have historically been ignored or silenced, values their experiences and knowledges, and thus challenges dominant ways of thinking (Delgado, 2000; Dixson & Rousseau, 2005). I analyze ethnographic data collected in the 2022-23 school year, which included participant observation in high school Black and Latinx Studies classes, interviews with teachers and students, group reflection sessions with teachers and students, and document analysis of state curriculum and teacher-created class materials. I argue that by teaching students to identify and analyze dominant narratives and counternarratives, this teacher supported her students of color in seeing themselves and their communities as central in U.S. history and society. Students also developed the skills to critique and challenge dominant narratives in ways that destabilized their status as dominant. They came to see themselves as current and future activists working to continually challenge master narratives and offer fuller portrayals of history and current society. Furthermore, I argue that while the new state requirement and curriculum for Black and Latinx Studies offer opportunity and create the conditions for this critical teaching and learning, significant work is required by teachers, schools, and/or districts to ensure that the

course deeply engages with counternarratives. Engaging with this year's theme of Transitions, this paper offers an example of how teachers and students are navigating a new state requirement to offer Black and Latinx Studies in high schools. At a time when teaching about race and racism in K-12 schools has become a social and political touchpoint of increasing national attention, it is essential that critical educational scholarship go beyond simply responding to attacks and instead shift focus to places like Connecticut, where there are efforts to increase curricular content around issues of race and racial oppression. By highlighting an educational space where Black and Latinx voices are centered, this paper contributes to conversations about what type of education is needed in schools, resists pressure to allow right-wing perspectives to dictate such discussions, and reclaims narratives about why teaching about race and racism is necessary. Presenter: Jia-Hui Stefanie Wong (Trinity College)

Educations on the Move: Countless reforms and interventions have sought to improve academic outcomes for immigrant-origin students, with labels like 'at-risk' rushing forth to solve the 'dropout crisis.' And yet, even in culturally and linguistically affirmative environments, youth still fall to the educational margins. This paper studies with nine youth who attend a newcomer school in New York City. Moving across schools, nonformal education spaces, and everyday life, these youth's educational practices verify that they are not simply waiting for school reforms. Their educational lives are not bound to institutional spaces or the logics of schooling. Instead, they routinely take up educational practices that are intellectually rigorous, joyous, rebellious, and fulfilling. These practices reveal educations that are not held to a single place or purpose. Instead, they are present in schools, on subways, at museums, in neighborhoods, across many other places, and always on the move. Building on theories of resistance, equality, and ungovernance, this critical ethnographic work playfully studies with recently-immigrated youth as they engage and explore their educational practices in distinct spaces and how these practices shift across time and place. The paper also interrogates the relationship between educational practices and spaces. Rather than scientifically mapping educational life and bringing it into existing schooling logics, the paper moves through affective surges, sensing and feeling practices bubbling to life. In school hallways, walking through neighborhoods, riding the

subway, youth took up unauthorized learning and speculative, resistant forms of collective study. The paper sees educational worlds made and negotiated as part of ongoing spatial flows, ones that challenge dominant conceptions of education. Learning, unlearning, becoming, and unbecoming are always at work and on the move. The paper ultimately challenges researchers and educators to consider how education might be reconceptualized to better respond to marginalization and exclusion and, in the process, provoke new understandings of education itself. Presenter: Jordan Corson (Stockton University, Department of Sociology and Anthropology)

Embodiment and social identity in the archaeology of the Americas

2:15 PM - 4:00 PM

TMCC - 712

Oral Presentation Session

REVIEWED BY:

Archaeology Division

ORGANIZER:

Madison Aubey

PRESENTER:

Madison Aubey ,Alba Menéndez Pereda ,Diane Slocum (University of North Carolina, Chapel Hill, Department of Anthropology)

DESCRIPTION:

This session addresses the archaeological study of phenomenological and embodied experience, both past and present, and considers various forms of social identity, such as gender, race, and class. Case studies span North America, Mesoamerica, and South America.

Identity and Resistance in the Material Culture of Black Mobile: As the second most prolific exporter of cotton in the mid-19th century, Mobile, Alabama was built by enslaved laborers. As such, after the Emancipation Proclamation, there was, necessarily, a dramatic reordering of both economic and social structures. Facilitated by the Freedmen's Bureau, newly freed Black Mobilians sought out education and employment by the thousands. In addition to this new economic landscape, newly emancipated Black people gained geographic autonomy, with the ability to invest in land and live far from the prying eyes of a former overseer or enslaver. By doing a comparative analysis of the archaeological material found at the Perryman house

near Magnolia Cemetery and the Peter Lee house in Africatown-two free Black sites in what was at the time unincorporated Mobile-I explore the different ways in which 'free' Black life was carried out in the American South directly after Emancipation. The two sites-the family home of a respected Black midwife whose family had been enslaved for generations and that of a Fon nobleman of Dahomey who had been aboard the last slave ship to reach the United States from Africa in 1860-offer insight into those aspects of material culture that were unifying to the Black experience in Mobile at the time, as well as the ways in which different Black families materially expressed their unique heritage counter to notions of a monolithic Black experience. Additionally, as I engage with these two sites through collections already excavated, I discuss the value of collections-based research in the archaeology of marginalized communities and the phenomenological experience of handling such materials as a form of care. Presenter: Madison Aubey

Making Sacredness: Female Religious Specialists in the Inca Empire: The Inca Empire, known at the time as Tahuantinsuyu (ca. 1440-1532), was an Andean society characterized by gender parallelism and gender complementarity. At the head of this imperial entity was the Sapa Inca whose dominion over the men inhabiting the territory subjugated by the Inca was complemented by that of his sister-wife, the Coya, who governed over the female subjects of the empire. Regarding the leadership for the imperial religion, a male so-called high priest, known as Vila Oma, is known to have lived at the religious complex of the Coricancha in Cuzco. Nevertheless, the female counterpart of this figure is missing from the documentary, artistic, and archaeological records. It is possible that the Inca did not possess a dual system of religious authority parallel to their political one. Yet, the overall absence of evidence for female religious specialists within the Inca Empire is striking. Ethnohistoric sources record the participation of women in activities that supported the Inca imperial religious industry, including the *accha*, or 'chosen women,' who wove fine textiles and brewed the maize beer to be consumed at religious and political events, or women who served as healers and diviners. Colonial-period chroniclers, of Indigenous and European origin, labelled these women as nuns, sorcerers, and vestal virgins, denoting cultural biases, lack of understanding, and language limitations. With a few notable exceptions (see, for example, Artzi 2016, Nair 2020, Silverblatt 1978, and Vieira Powers 2000), within modern scholarship, the role of women within Inca state religion has been largely overlooked and, when it

has been discussed, the focus has been on these women's enclosed lifestyle and the control imposed on their sexuality by the Inca government. Focused on the capital of Cuzco as the religious center of this vast empire and adopting a gendered anthropology of religion approach, in this paper I examine the role women played in the creation of sacredness in the heartland of the Inca Empire through the knowledge they possessed and the ceremonies they led, within which their presence was critical. Often described as agents playing a significant role in Inca religious ceremonies yet in a service position, in this paper I argue that the women who contributed to the running of Inca religion operated as specialists in their own right, not as support personnel, nor as attendants, but as religious leaders. Presenter: Alba Menéndez Pereda

Assigning Gender to Elite Maya Burials: A Case Study from Xunantunich, Belize: Perceptions of gender categories and associated material correlates have altered in recent decades leading archaeologists to question the extent to which modern beliefs influence interpretations of gender roles in the past. This paper shows how Western assumptions that link physical activities and specific material culture to maleness prevent identification of female rulers in the Maya region. Archaeologists have long equated Classic-period Maya rulership with men and considered female rulers as exceptions. In this paper, I explore the notion that Classic-period elite Maya women have been overlooked in the archaeological record due to presumptions including 1) that there are specific material culture proxies for masculinity and 2) that all robust skeletons are men. Drawing on an example from Classic-period Xunantunich, Belize, and deploying a feminist approach, I consider constructions of gender based on Maya cultural perspectives and bioarchaeology to demonstrate contradictions in Western binary views of gender identity. This analysis is applied to an elite burial, originally misidentified as a male, to illuminate evidence for physically powerful female rulers at this time. PRESENTER:

John Mathias (Florida State University), Pasama Cole-Kweli (University of Kentucky, Department of Anthropology), E. Christian Wells (University of South Florida), Abby Vidmar (National Association for the Practice of Anthropology), Krista Harper (University of Massachusetts, Amherst, Department of Anthropology)

DISCUSSANT:

Antoinette Jackson (University of South Florida, Department of Anthropology)

DESCRIPTION:

Recent federal funding initiatives in the U.S. are contributing massive resources to assist communities with environmental justice challenges, including the Bipartisan Infrastructure Law that invests \$5.4 billion in cleaning up legacy pollution at Superfund and brownfields sites and the Inflation Reduction Act that invests \$3 billion for environmental and climate justice. Similar initiatives have emerged in other countries. However, research demonstrates that many frontline and frontline communities involved in environmental justice organizing efforts at the grass-roots level are unprepared to take advantage of these resources. Anthropologists have become adept at building important bridges between research and policy advocacy and are thus uniquely positioned to build capacity with community partners seeking environmental justice. This panel explores opportunities and challenges of environmental justice organizing with global case studies focused on interventions based on participatory and outcome-driven research. The greater goal of this panel is to examine the prospects for expanding integration of anthropological and social science considerations in environmental justice organizing and how anthropological concepts might inform these efforts more broadly.

Following Activists, Following Injustice: Strategies for Contributing to Environmental Justice: John Mathias How can anthropological research contribute to environmental justice? Based on fieldwork in Kerala, India and the southeastern US, I consider two contrasting approaches and analyze the challenges I have faced in taking each. In the first approach, an

anthropologist can seek out people who are already fighting for environmental justice and study what they do, looking for opportunities to contribute to their struggle. This is a widely recommended approach in “engaged” and “activist” anthropology. In the second approach, the anthropologist can use research to identify environmental injustices and develop recommendations or tools for rectifying these injustices. This is a standard approach to applied social science in social work, a field in which I am also trained. These two approaches are not mutually exclusive and can be complementary, but this paper focuses on how and why anthropologists may choose to foreground one strategy over the other. Critically examining key moments from my fieldwork, I describe how each approach presupposed different meanings of environmental justice, afforded different kinds of collaboration, and resulted in different kinds of empirical material. While one’s approach may often be shaped more by circumstance than by choice, careful consideration of their differences can help anthropologists to be mindful of the limitations of our contributions to environmental justice. Presenter: John Mathias (Florida State University)

Protecting Rural Black Futures: Land, Legacy, and Environmental Justice in the Lowcountry: Pasama Cole-Kweli For over twenty years, Beaufort County, South Carolina, has upheld St. Helena Island’s Cultural Protection Overlay (CPO)--a zoning ordinance established to protect the ‘living culture’ and coastal resources that form the foundation of this rural historic Gullah Geechee sea island community. However, a recent development proposal for a luxury golf course has placed this ordinance under contention, igniting a robust local response that (re)invigorates critical conversations about racial inequity, climate vulnerability, and environmental justice in the region. St. Helena Island’s fight to protect the CPO is one of many ongoing land justice efforts in the Gullah Geechee Cultural Heritage Corridor, where exclusionary policies, land dispossession, and climate change increasingly threaten African-American ecological relationships that have endured for centuries. This case study offers an entry point into a broader conversation about the complex social dynamics and relations of power that underscore rural environmental justice organizing efforts and anthropology’s usefulness for untangling these dynamics. Drawing from two years of engaged ethnographic fieldwork in St. Helena Island and surrounding areas, this paper considers how anthropology, informed by transdisciplinary scholarship, can translate the experiences and outcomes that

emerge from community organizing efforts into equity-driven policies that protect both people and place. Presenter: Pasama Cole-Kweli (University of Kentucky, Department of Anthropology)

Environmental Justice Organizing for Chronic Contamination: The Case of Tallevast, Florida: E. Christian Wells and Grey W. Caballero While there are a growing number of success stories where communities with environmental justice challenges have been able to achieve procedural, distributive, or even restorative justice, what happens in situations of chronic environmental contamination where hazardous substances persist for prolonged or unknown periods, or where remediation is impossible (e.g., “Cancer Alley,” Rocky Flats)? In these cases, environmental justice organizing expands to include coping with contamination and creating strategies for resilience. In this paper, we examine the racially segregated community of Tallevast in the central Gulf Coast of Florida, where we have been working with a community-based nonprofit to advocate for environmental justice in the wake of groundwater contamination caused by the American Beryllium Company and its subsidiaries since the 1960s. Oral histories documented from community residents indicate that their environmental justice organizing has evolved to include not just the human and environmental health impacts of the contamination but also the social, political, and economic determinants of health and persistence in the community. The research also underscores the important role of Black women as leaders and activists in the environmental justice movement. By leveraging feminist tactics, such as collaborative research and coproduction of knowledge, Black women in Tallevast have been successful at developing and asserting their own knowledge base to fight against not only public health threats but also the interwoven systems of race, class, and gender oppression that (re)produce those threats. Presenter: E. Christian Wells (University of South Florida)

'Saying No to Nopetro': Environmental Justice Activism in North Port St. Joe, Florida: Abby Vidmar Across the country and under the Biden administration, the liquefied natural gas (LNG) industry is expanding as demands for alternative fuel sources increase due to global socio-political tensions. On the panhandle of Florida, the community of North Port St. Joe, a historically African American community that has a history of racial segregation and environmental contamination, is the proposed site of the latest LNG export hub facility. In the past few years, North Port St.

Joe residents have banded together to combat the history of environmental injustice, and recently were awarded three EPA grants to address high levels of toxins, resident health and wellbeing, jobs, and community stakeholder collaboration. The proposed LNG facility runs counter to the goals of environmental justice activism that North Port St. Joe residents have been fighting for. Recently, community activism across the city of Port St Joe has erupted in response to and against the proposed LNG facility. Residents who had previously been absent in environmental justice activism in the community are now joining North Port St Joe activists due to their shared opposition of the facility. This presentation will examine the ways in which shared opposition over environmental threats resulted in partnership and activism that crossed political and racial binaries and histories in Port St. Joe. Finally, the benefits and challenges of these newer partnerships and my role as an anthropologist and activist working with North Port St Joe residents will be discussed. Presenter: Abby Vidmar (National Association for the Practice of Anthropology)

Co-designing Research and Solutions for a Just Energy Transition: Krista Harper, Nicholas Caverly, Charlie Sullivan, and Teniel Rhiney The Inflation Reduction Act of 2022 invests \$369B in clean energy infrastructure and attempts to promote a more just energy system through the “Justice40” initiative that sets a goal of prioritizing disadvantaged “energy communities” for 40 percent of benefits from federal investments. This presentation addresses tensions that emerge in efforts to design energy research and policy implementation that support the desires of environmental justice communities now framed as “energy communities.” In particular, we discuss a key dilemma shared by researchers and advocates: how to reckon with historical and ongoing “slow violence” of environmental injustice in ways that move from a “damage-centered” to a “desire-centered” research paradigm. We draw on an ongoing, interdisciplinary community-based participatory research partnership created to co-design equitable pathways to the renewable energy transition. Our paper emerged from the author’s experiences as “actants” in sociotechnical collaboration with engineers and community organizers, especially in CBPR design processes that navigated divergent understandings of energy justice, varied identities and values that people bring to knowledge production, and the process of developing research priorities with community partners to redress legacies of extractive research practice. These processes highlighted how members of local EJ communities desired the stated goals of a just energy

transition—clean, beautiful, and accessible environments for everyone. And yet, based on lived realities of injustice at intersections of race, language, gender, and class, many also feared that research and policy implementation designed to achieve their desires would ultimately exclude them in new ways. We suggest that linking community-based research and advocacy relies on holding complex and competing desires of EJ communities in common view. Presenter: Krista Harper (University of Massachusetts, Amherst, Department of Anthropology)

Exploring Activist Anthropology in “Fighting to Breathe: Race, Toxicity, and The Rise of Youth Activism in Baltimore” and “Laboring for Justice: The Fight Against Wage Theft in an American City.”

2:15 PM - 4:00 PM **TMCC - 714 B**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for the Anthropology of North America

ORGANIZER:

Rebecca Galemba (University of Denver)

CHAIR:

Nicole Fabricant (Towson University, Department of Sociology, Anthropology & Criminal Justice)

PRESENTER:

Nicole Fabricant (Towson University, Department of Sociology, Anthropology & Criminal Justice), Rebecca Galemba (University of Denver), Mubbashir Rizvi (American University), Nicholas Copeland (Virginia Tech), Mariela Nuñez-Janes

DESCRIPTION:

Charles Hale (2001) defined activist research as that which helps us better understand the root problems of inequality, oppression, and violence; is carried out as a collective alongside those who are subject to such conditions. Activist anthropology has often been used to transform the conditions of structural inequality. For years, anthropologists have done activist anthropology. However, the hyper-individualism of the academy and the gendered, classed, and racialized assumptions undergirding the focus on the solo, intrepid fieldwork, limit how many young scholars, especially scholars of color can work within this framework. For example, Berry et al. (2017: 558) highlight how activist anthropologists have largely neglected the racialized,

gendered, and embodied experiences of the ethnographer, which limits its potential to dismantle 'extractivist forms of knowledge,' erases the violence they experience, and operates to reinforce existing power hierarchies within the discipline. This roundtable brings together experts in activist anthropology to discuss new developments, opportunities, and tensions through two recent ethnographies, 'Fighting to Breathe: Race, Toxicity, and The Rise of Youth Activism in Baltimore' (Nicole Fabricant, University of California Press 2022) and 'Laboring for Justice: The Fight Against Wage Theft in an American City' (Rebecca Galemba, Stanford University Press 2023). Both books offer opportunities to think through the importance of activist anthropology within their own respective cities. Each scholar saw research, teaching, and activism as part of holistic practice of building collective spaces of reflecting, thinking, and action. Both authors struggle to capture the daily tensions, unequal power dynamics, positionalities, and their relationship to and within these movements for justice. As activist ethnographers move beyond the lone scholar model to working with and alongside communities, this panel pushes anthropologists to explore the challenges and benefits of this model especially in a moment of multiple and intersecting crises. Finally, the roundtable encourages panelists to draw on their own work, pointing to how collaborative anthropology can articulate a more responsible and self-reflective praxis of solidarity and justice alongside social movements.

Gendering Documents: Passport Entanglements and Feminist Scholarship on Mobility

2:15 PM - 4:00 PM **TMCC - 713 A**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Heath Cabot (University of Bergen)

CHAIR:

Sahana Ghosh (National University of Singapore)

PRESENTER:

Nicole Constable (University of Pittsburgh, Department of Anthropology), Rachel Silvey (University of Toronto), Radhika Mongia

DISCUSSANT:

Sealing Cheng (The Chinese University of Hong Kong), Mahmoud Keshavarz (Uppsala University)

DESCRIPTION:

This roundtable asks how to attend to the ineluctable, but always incomplete, power of documents and bureaucracy in both facilitating and regulating mobility. Since the late 1990s/early 2000s, documents have emerged as crucial topics of ethnographic investigation (see Brenneis 1996, Hull 2003, Riles 2000). Scholars of mobility, of science and technology, and political and legal anthropologists alike have foregrounded how documents variously reassert and disrupt projects of control and capture (Riles 2006, Vismann 2008). Bureaucratic materialities (Cabot 2012), aesthetics (Keshavarz 2018), and procedures are thus rich fields of research that highlight the omniscience, but also indeterminacy, of institutions of power. For border crossers, documents convey regimes of surveillance while also enabling certain mobilities, denoting boundaries and 'gray zones' between legality and illegality (Coutin 2000). Documents also inscribe racialized and gendered exclusions (Mongia 2018, 2003), with often intimate effects: on labor, sociality, kinship, friendship, desire, and love (Cheng 2021, 2011; Faier 2009; Tadiar 2004). Nicole Constable's new book, *Passport Entanglements: Protection, Care, and Precarious Migrations* (UC Press 2022), builds on her extensive corpus of work to examine how identity documents—specifically, passports—both facilitate and render precarious the mobility of domestic workers in Hong Kong. Constable's scholarship (like Silvey's and Ghosh's) has explored the gendered, racialized aspects of this form of mobility, with a feminist attunement to issues of marginalization, the (often invisible) care work these women take on, and the lives and relations that women weave even in such contexts. In her earlier work, Constable stood clearly alongside (and on the side of) her migrant interlocutors. But her latest book demanded that she attend to passports' transnational entanglements in sometimes nefarious dimensions of bureaucracy and more ethically ambiguous actors, such as government officials and migration brokers (Lindquist 2017). This dilemma reflects the complex ethical fields of bureaucratic infrastructures, and documents' entanglements in diverse sites and contexts. Using Constable's book as a springboard, and drawing on their own extensive work on these topics, participants will discuss how to approach bureaucracy through a feminist concern for issues of invisibility, marginalization, and their intimate effects; while also considering the incompleteness and unpredictability of bureaucratic projects of capture.

DISCUSSANT:

Nancy Ries (Colgate University)

DESCRIPTION:

How is the 'current situation' in Russia to be approached analytically? Has post-socialist 'transition' ended, and is Putinism the inevitable outcome? Can 'patriotism' – one of the most obscure and, at the same time, discursively fecund Russian concepts – be made sense of in the wake of the war? We envision this session as an opportunity to discuss the state of affairs in Vladimir Putin's Russia through the heuristic of patriotism, with its attendant constellation of emic terms and practices. We propose this undeniably loaded term as a flexible framing device, which as such can and should be probed and pushed against, rather than a normative a-priori. Our panelists bring forth ethnographic and critical perspectives from Russian and Russia-adjacent peripheries and borderlands (the Far East, Sino-Russian contact zones), occupied areas (Crimea), ethnic regions (Tatarstan), and social margins (political and religious minorities). Throughout Russian history, patriotism has gone through multiple declinations, embodying different ideas of attachment to the state. The Soviet state employed patriotism as an alternative to ('bourgeois') nationalism, linking it to the moral-military duty to defend the fatherland. In the 1990s, patriotism was employed by the Communist party, which, in its strategic alliance with the Russian nationalists, formed the 'patriotic opposition.' If the early transition era has been marked by a 'patriotism of despair' (Oushakine

2009), subsequent phases have been marked by something at once more optimistic and more sinister. When Putin came to power, he placed patriotism as the core of his 'traditional values' project. Since 2014, patriotism has been recast as unquestionable support of the Kremlin's adventurism but also reclaimed by many of Putin's critics. Scholars have explored the many declinations of transition-era Russian patriotism, in its 'glamorous,' 'orthodox' (Kanzler & Scharlaj 2017), or 'blockbuster' (Norris 2012) forms, and in its interlockings with modernization (Dufy 2015), consumption (Goode 2016), and mobilization (Stockdale 2016). While this scholarship has furthered our understanding of the functions, aesthetics, and modes of engagement with the state in Russia, much work remains to be done in light of the rupture of February 2022 – which appears to have ended one chapter of the post-Soviet era and ushered in something new and as yet undertheorized. Through this session we investigate the relationship between individual subjectivities and collective formations in wartime Russia, as well as the temporalities, genealogies, and territorialities underlying Putin's 'special military operation' – including the questions of when wartime 'actually' began, and what its 'actual' scope (regional or universal) is? Our panelists explore a variety of crucial periods and turning points in Russia's transition era – the 1990s, the 2000s, 2014, and 2022 – and take our collective analytical effort across multiple scales, from the local (Oparin, Martin, Simonova), to the national (Sidorkina), to the geopolitical (Pulford) and the 'cosmic' (Benussi). Our contributors provide a bird's eye view of the multiple versions of internalized relation to the state under Putin, encompassing fervent loyalty (and transnational sympathy), tacit condemnation, escapism, all the way to open criticism, allowing us greater insight into the peculiar affective and political matrix of Russian patriotism at a time of crisis.

Truth is with us: Universalist nationalism and simulacral messianism in wartime Russia: It has been observed that Putin-era Russian nationalism possesses "cosmic," "eschatological," or "civilizational" connotations, setting it apart from "typical" European nationalisms and providing a moral justification for Vladimir Putin's attempts at imperial world-making (or remaking) in Ukraine. This universalist dimension transcends ethnic and state boundaries in what is cast as a continental – if not global – redemptive embrace, all the while coexisting with exclusionary supremacism, xenophobic parochialism, and often racialized ethnic hierarchies. This paper attempts to explore the seemingly paradoxical gap between insular nation-mindedness and

messianic universalism in Russia by looking closely at a key emic category: pravda, or "truth." Although pravda's relevance to Russian political life has been recognized since at least the Soviet times, the ways in which the Putinist project weaponizes verity require further investigation. This paper argues that notions such as "post-truth" are useful to understand some aspects of Putin's Russia, but insufficient to capture the regime's positive, triumphalist claims to verity. Drawing on the thought of Alain Badiou about truth and simulacra, as well as ethnographic material from Tatarstan and Russia "proper," this contribution argues that Putinist Russia's cosmic/messianic nationalist ethos relies on an ontological ambiguity between "genuinely" universal truth-events and truth-projects – religious Revelation and political Revolution – and their factional, simulacral appropriations, from the Baptism of Rus' to the WWII victory. This ambiguity makes aspects of Putinism's ethos resonant even beyond the ethnic Russian demographic, but ultimately works to reinforce an unambiguously neo-imperial, reactionary regime. Presenter: Matteo Benussi (Ca' Foscari University of Venice)

Great states and the boundaries of Eurasian power: Chinese ethnology of the Russia-Ukraine conflict: Outside interest in Chinese responses to the post-2014 Russian invasions of Ukraine has been extensive. Broad questions around "what China thinks" have overlaid more specific enquiries: might Beijing act as peace-maker? How does the invasion square with the Chinese Communist Party's longstanding insistence on the sanctity of sovereignty and each state's right to its own "internal affairs"? Studies of texts from PRC-based thinkers and policymakers have sought to answer these questions, but the ethno-national, and thus crudely anthropological, analysis inherent in them has been less explored. This paper engages with how PRC establishment intellectuals have digested Putinist justifications for the invasion on the basis of Ukraine's existential illegitimacy, and specifically Putin's complaint that first Lenin's division of Soviet peoples into "nations" and later Kyiv's "derussification" policies created the fiction of Russian/Ukrainian distinctness. Such ethnicity-rooted thinking adds intrigue to mostly supportive official perspectives from China. On one hand, PRC actors cannot wholly disavow the Leninist legacy of ethnic categories given its importance to China's own minzu system. On the other, Chinese arguments that Russia has legitimate interests in Ukraine might imply agreement that Russians and Ukrainians are somehow "the same" (and thus that no "interference in internal affairs" occurred?). But if so, where might the limits of

sameness lie? And if each great power (daguo) – according to official views – has its own ethno-national “interests,” then are ethnicising or racialising paradigms and the foundations of patriotism in e.g. China, Russia or the USA simply incommensurate with one another? Amid shifting geographies of Eurasian power and identity, this paper asks – and offers tentative answers to – questions about how far a Chinese intelligentsia accepts Putin’s ethno-national revisionism and a patriotism that demands the slaughter of supposed co-ethnics. Presenter: Ed Pulford (University of Manchester)

Heritage-related activities before the war and now in Russia: Escapism, Opposition, or Patriotism? : This presentation focuses on non-state practices aimed at saving, preserving, and popularizing Russia’s architectural heritage in the shadow of war. In the Soviet period, dealing with heritage was, on the one hand, external to the political domain (sometimes explicitly), but, on the other hand, it signaled a certain social and political positionality. Heritage work within public organizations or academic institutions often implied a latent opposition to the state’s political line, especially if the focus was on pre-revolutionary, religious or bourgeois heritage: work (research and restoration) on such monuments was one of the few legitimate ways to talk about “old Russia” and faith. In the “transition era,” heritage preservation practices were often in opposition to destructive, corrupt state policies and semi-legal business interests. More recently, there has been a boom of interest in both pre-revolutionary and Soviet architectural heritage. One of the most striking manifestations of a growing grassroots involvement in heritage work is a series of successful civil society projects for the purchase and restoration of peasant houses, noble estates, and city mansions. The war in Ukraine didn’t stop such projects. Has February 2022 changed the moral attitudes of heritage promoters? How do Russia’s heritage-makers see the future of their activity in the face of war? How have they adjusted their relationships with local administrations and communities? Are grassroots preservation projects a form of escapism? I suggest that even before the war, an adaptive and resistant alternative form of patriotism was created through non-state heritage activity, expressing itself in a particular focus on the local, sometimes at the expense of broader social and political problems. Presenter: Dmitriy Oparin

Corporeal patriotism and cross-temporal imagination in contested Crimea: In this paper, I explore the cross-temporal imagination and experience of “in-

betweenness” in the contested territory of Crimea, annexed by Russia in 2014. Crimea has a complicated historical past and a central role in multiple wars including the latest invasion of Russia to Ukraine. The status of the contested territory raises the question of “feeling to belong” to one or another state through time. It challenges the classic idea of patriotism as devotion to one country. While national belonging has been a scene of vigorous debates, I observe the sense of attachment to the state through people’s relation to the past. I discover the ‘corporeal knowledge’ of local residents, which is collaboratively performed through the reenactment of past wars. While looking at ways people relate to the past, I have discovered a vibrant scene of historical war reenactment (also called “living history”) and military simulation games, which I explored as a way to dig into the experience of belonging to the local community, in post-2014 reality. In particular, I focus on the reenactment of the Soviet—Afghanistan war of 1979 — 1989. The last Soviet war in Afghanistan is a turning point in Crimean history, which after the Soviet Union collapse ended up being in a status of contested territory between Russia and Ukraine. Going back there is a way to repeat battlefields of the past to incorporate this experience to the current life. The current war in Ukraine and the forced alliance of people with the Russian government blocked many historical debates directly by the state or indirectly by the dominant public opinion. In a situation when a verbal discussion has become impossible, I rely on visualized corporeal knowledge and visual metaphors to explore the appearance of the past in the present and people’s lives in between times, spaces, and patriotic attachments. Presenter: Aleksandra Simonova (University of California, Berkeley)

Patridiots vs. Libtards: Searching for a “Critical” Patriotism in the Wreckage of (Culture) War: The post-transition 2010s in Russia began with Russian flags brandished at “For Fair Elections” rallies – in the name of anti-authoritarian mobilization and cross-political solidarity – and ended with the regime’s triumph over the opposition. One touchstone that Russia observers have used to explain the regime’s public dominance in the past decade has been the Kremlin’s skillful mediatization of the “two Russias” culture war. This imaginary has pitted an anti-liberal, conservative silent majority against a liberal, cosmopolitan “beau monde” in a battle over “values” (tsennosti). One such value was patriotism, whose “uncritical” version became associated with “uncultured” bodies (the vatniki or “patridiots”). Those who opposed this “uncritical patriotism” were themselves caricatured as the unpatriotic, liberal opposition (liberasty or “libtards”).

Was there ever a political register that could publicly articulate a “cultured” or “critical” patriotism, evading the terms of the culture war? Who tried to elaborate this kind of patriotism before February 2022, and what is left of it? Presenter: Maria Sidorkina (University of Texas at Austin)

Pseudo-patriotism: An Old Believers’ critique: As the war in Ukraine continues, the Russian leadership has sought to strengthen the common identity between state and family. President Putin in his speeches invokes a sacred connection between mother-/father-land, God, and the family that justifies the patriotic sacrifices of each for all. Russia’s streets, meanwhile, are bedecked with posters that declare the motto that “we won’t leave our own (svoi) behind”. Though the identity of “our own” (svoi) is left underdetermined, the import is of an all-encompassing totality that includes those currently “protected” in Donbas and Ukraine. Yet some ordinary Russians find less than convincing the image of Russia as one big organic family-motherland for whose aims they or their families should willingly sacrifice themselves. Their everyday experiences of the neoliberal state often leave the impression of encountering anything but a beneficent family-like agent. This paper describes a group of Orthodox Old Believers in the Russian Far East who cast doubt on this wartime patriotic discourse. As family-centric believers in Russia’s messianic vocation, the Old Believers contrast their own stance with (what they see as) the state’s pseudo- or “schizo-” patriotism. The paper draws out the implications of their immanent critique by way of the anthropological theories of Maurice Bloch and Louis Dumont. Presenter: Dominic Martin (University of Oxford)

PRESENTER:

Yanina Gori (University of California, Los Angeles), Gillian Bogart (University of California, Santa

Cruz, Department of Anthropology), Alyssa A. James (Columbia University, Department of Anthropology), Sarah Bruno

DISCUSSANT:

Amelia Moore (University of Rhode Island)

DESCRIPTION:

'To most ethnologists the island is a mere locus, not the focus of study, and as locus it is generalized to the extent that it becomes substitutable to just about any other place' (Ronström 2013), perhaps even continental in image and representation. This panel responds to Ronström's challenge and invites anthropologists working across diverse subfields, geographical areas, and methods to think critically about their field-site as an 'island,' foregrounding the experimental, theoretical, and ethnographic material that this orientation opens. Islands are many things, but most often considered: fetish objects of fascination and exploration, metaphorical places of possibility and promise; sites of colonial expansion, because 'islands, unlike continents, look like property' (Edmond and Smith 2003); regarded (especially in early anthropological scholarship) as 'discrete' and 'bounded' cultural laboratories, where archaic and mythical cultures survive; and borderlands for colonial powers, always the site of encounter, in the periphery, as politico-strategic outposts to guard territories (Greverus 1997). In these ways, islands are important because they are how the West comes to know itself, through fantasy, images, ideas, and representations. But in this paradigm, islands are almost always construed in relation to the mainland, 'regarded merely...as metonyms of imperialism, rather than as specific locations generating their own potentially self reflective...metaphors' (Edmond and Smith 2003). Drawing from Hau'ofa's (1993) seminal claim that 'a sea of islands' far better describes the varied field-sites explored in this panel rather than 'islands in a far sea', how can anthropologists use archipelagic thinking (Glissant 1997) to reframe, rethink, and reconsider our theoretical engagements and interlocutors' experiences? If, like Benítez-Rojo (1996), we consider islands in unbounded and intimate relation to one another, producing repetitions that 'unfold and bifurcate...where every repetition is a practice that necessarily entails a difference', what epistemological frameworks emerge? Keeping in mind that 'islands beg and resist interpretation...they are at once microcosm and excess, the original and the supplement of continents' (Edmond and Smith 2003), each panelist offers an answer to the question: why and how does it matter that our ethnographies occur on islands?

Isolation and Solidarity: The Art of Transition in Cuba: As economic, political, and ecological disasters intensify in their repetitions, archipelagos like the Caribbean are privileged site for inquiring into questions of historicity, colonial trauma and sovereignty, resistance, resilience, and solidarity (Bonilla 2017, 2019, 2023; Trouillot 1992, 2003, 2021). In this presentation, I explore how artists of the oldest LGBTQI+ cultural center in Cuba's provinces mediate and remediate 'disasters,' from Hurricane Irma to Covid-19. El Mejunje, the Concoction, was founded in the 90s, at a moment of historical 'transition,' when the dissolution of the Soviet Bloc and the continuation of US sanctions economically isolated the island. As a result, the State's infrastructures of provisioning of food, electricity, and medicines broke down and people, particularly queer artists, acquired a central role in the infrastructure of provisioning of those affective goods and services (Simone 2004, Garth 2020, Brotherton 2012). I trace how artists at the Concoction, in the 90s and its haunting repetition in the present, cultivate forms of solidarity that activate people as a form of infrastructure, mediating and remediating lack through their performances. By engaging with the past and present of this queer community, I highlight how Cuba, as a "repeating island" (Benítez-Rojo 1996) is made, unmade, and remade through movement between "centers" and "peripheries," between the city of Santa Clara and the countryside, between Cubans residing within and outside of the island. Presenter: Yanina Gori (University of California, Los Angeles)

A View from the Coast: Oceanic perspectives guide us to perceive islands in relation to other islands and to vast, watery worlds often characterized by fluidity, mobility and movement. This paper builds upon oceanic and archipelagic thinking to experiment with a coastal perspective. I consider coastal livelihood practices on Timor, a Lesser Sunda Island of Eastern Indonesia, to show how coasts exist as part of a continuum that links aquatic and terrestrial realms, as well as different moments across time. I emphasize how the island's coast is made up of dynamic intertidal ecosystems, interstitial places shaped by political processes, and sites of contemporary and historical commercial intercourse. Presenter: Gillian Bogart (University of California, Santa Cruz, Department of Anthropology)

Island Feelings Across Time and Space: In Martinique there is a popular belief that the volcanoes La Soufrière in Saint Vincent and Mont Pelée in Martinique share magmatic storage reservoirs. In 1902, just weeks after an eruption of La Soufrière, Mont Pelée erupted and sent shock waves through the world as it leveled Saint-

Pierre, formerly the capital city dubbed 'The Paris of the Caribbean.' The heat, smoke, and ash of this pyroclastic eruption killed 30,000 people within seconds, making it the third deadliest volcanic eruption in history. The eruption of La Soufrière in 2021 activated concerns about a potential eruption in Martinique, as both volcanoes simultaneously showed signs of increased activity at the end of 2020. The state and media response has been the proliferation of scientific discourse through the Volcanological and Seismological Observatory of Martinique and interviews with scientists and elected officials that emphasize there is no connection between Caribbean volcanoes. Yet, these assertions have been no match for Martinicans' feelings that these volcanic islands are linked. In this paper, I will discuss the ways Black forms of archipelagic feeling are illegible as scientifically grounded in colonial, normative discourses. Despite attempts to reinforce Continental epistemologies that construct islands as isolated and separate, Martinicans use history, experience, and collective memory to feel themselves into relation with the greater Caribbean and world at-large. Presenter: Alyssa A. James (Columbia University, Department of Anthropology)

Unbounded Nation: Archipelagic Verve in Puerto Rican Anthropology: "After [Hurricane] Maria, bomba had more fire." - Indigo Waters Bombera from the Bay September 2019 Bomba is not the only thing that has had more fire in Puerto Rico, the oldest genre of Afro-Puerto Rican dance and music stands alongside the stringent critiques of local and imperial governances and the mutual relief between the States and archipelago. Puerto Ricans are moving stateside to join the "Diasporican," or Puerto Ricans in the diaspora conglomerate, due to colonial conditions put in place long before Maria exacerbated their austerity (Bonilla & LeBrón 2019). Bearing in mind the more public vested interest in studies around Puerto Rico post-Maria and in the wake of Puerto Rico's Summer 2019 uprisings, this paper asks what there is to learn about diaspora and archipelagic ontologies that were made to weaken colonial subjects but instead forge together multiple vectors of strength. Using the theoretical framework of emotional dexterity (Bruno 2022), I see how the ingrained and perceived rupture of a body of islands is sutured into a beating rhythm of archipelagic ways of enduring and thought. This paper draws on ethnographic field research and current and past discourses surrounding Caribbean transnational organizing. It stands alongside others on this panel to ask and witness what there might be to learn from small places bounded together by nationalism. I aim to offer a

meditation of how a group of separate bodies (of land) might provide a better understanding of how solidarity is maintained and built. Puerto Rico has had its place in anthropology's past and also, and it can push the discipline's future. Presenter: Sarah Bruno

DISCUSSANT:

Andrea Morrell (Guttman Community College, CUNY)

DESCRIPTION:

In this roundtable we will examine the concept of justice: how our own understandings of justice shape our research and work-and, simultaneously, how our ethnographic encounters shape our understandings of justice. While the participants in the roundtable are grappling with similar questions in our attempts to ascertain what justice looks like in practice (rather than in theory or in the law), we come to these questions from an array of research perspectives: social anthropology on race in Eastern Europe, prison research in the US, gender-based violence work in International Development, food justice and hunger in the U.S. The ethnographic peculiarity of our different projects allows us to linger on the unique tones each project brings to the question of justice, pause to identify through-lines, and highlight the creative tension that emerges from our different perspectives. Rather than offering a definitive framework for the anthropology of justice, this roundtable encourages an expansive, iterative perspective on justice as a practice. The questions that animate our work—and that will organize our conversation are: What do we mean by justice? What does it look like in our research, methods, and analysis?

What roles do liberation, feminism, antiracism, decolonization, and/or abolition play in shaping our understanding? How do our ethnographic encounters—including the social realities and unique interlocutors we encounter—help us develop a more complex and nuanced theory of justice? What role does grace have in our work? Can we center love and extend grace while staying true to a rigorous theory of justice and to our personal commitments to working toward justice? Do we call this work feminist? What does our work contribute to feminist theories of justice? Recognizing that we are inevitably works-in-progress, how have our intellectual journeys shaped our own evolving understandings of and commitments to justice? How do we work on justice (criminal, social, affective)? Chandra Mohanti reminds us that 'ideas are always communally wrought, not privately owned.' (2003:1) This roundtable invites participants to co-create the answers to these questions, in solidarity, and through our differences, in order to deepen and expand our communal ideas about justice.

DESCRIPTION:

Papers in this panel explore a wide range of ways in which people know, learn, share, and relate to ecologies and landscapes. They explore the role of play in environmental education and activism, and the power of historical narratives and contemporary practices in shaping ecological relationships. Papers address engagements with underwater worlds among freedivers, agritourism in Sardinia, historical narratives of urban infrastructures and ecologies in Singapore, gardeners' efforts to preserve cultural heritage and sustainability in the U.S., forms of pro-environmental

action that lie outside the framework of 'environmental activism,' collaborative efforts to convey scientific knowledge to public audiences, the role of gaming in shaping environmental knowledge and action.

The art of immersion: forging ocean-human relations through freediving: In this paper, I investigate freedivers' everyday experiences coping with the underwater world and vernacular knowledge forged by accumulated sensory and lived practices. Freedivers rely on a single breath and no supplemental oxygen to swim into the depths of the ocean. They train for years to master the risky art of oceanic immersion. In each journey below the surface, freedivers contend with the physical and physiological limits of the human body. Through ethnographic research among freedivers in Dahab, Egypt, renowned for the 'Mecca of diving,' I will discuss how freedivers experience and deal with the disturbance from the depths of the ocean, what encourages freedivers to endure the discomfort and risk and keep pursuing freediving journeys, and how do accumulated practices potentially affect freedivers' environmental awareness, knowledge, and value. 'Being in underwater worlds disturbs' humans (Picken and Ferguson 2013, 333; Raycraft 2020, 312). Under the water, human bodies are hindered by unfamiliar statuses such as lagged movement, different senses of weight and orientation, and strengthened or weakened capacity of eyes and ears (Merchant 2011, 223; Picken and Ferguson 2013, 334). Humans can never fully 'dwell' in the sea amid other oceanic actants and thence experiences alienation (Jue 2020, 57; Picken and Ferguson 2013, 333). To stay longer, deeper, and most importantly safer in the ocean, most contemporary freedivers begin their journey through skill training. During months of intensive training, they learn kinetic movements, mental adaptation, and safety protocol. However, their skill is not limited to physical or mental capacity. Instead, accumulated diving practices potentially enculturate freedivers to other-than-human agents in water and to 'particular relations with the environment, equipment, and other people (Downey 2022, 104).' To understand these processes. I specifically focus on formal skill training as a shared experience of becoming a freediver. I plan to conduct participant observation at AIDA 3 course to delve into how freedivers pragmatically cope with the ocean. To be certificated, freedivers are required to safely swim deeper than the depths of neutral buoyance – where divers neither rise nor sink – and free fall – where divers

begin to plummet without minimal movements. Thus, I expect to glimpse the sensorial and lived experiences that compose the art of immersion. Ultimately, I will argue how freedivers begin to forge vernacular knowledge of ocean-human relations as a first step of the art of immersion, the work of freedivers as they strive to become a part of the ocean. A look at Sardinian agritourism through sea-green lenses: A look at Sardinian agritourism through sea-green lenses Giacomo Del Chiappa, Ph.D. Associate Professor of Marketing & Management University of Sassari, Italy Cristina E. Ciocirlan, Ph.D. Associate Professor of Management Elizabethtown College, USA
ABSTRACT Agritourism is a sustainable form of tourism, a tool to protect natural resources, cultural identity, and the biodiversity of a region. It is a subset of rural tourism and an antidote to mass tourism, where the tourist becomes embedded in the local community and connects with the place and people at a deeper level. Agritourism is often practiced in socially vulnerable settings, such as rural Sardinia, where it is run by small and medium-sized family farms. By diversifying into agritourism, small farmers contribute to biodiversity, landscape conservation, and environmental management. In contrast to traditional tourism (Venice, Paris, Rome), agritourism has the potential to increase biodiversity, reduce deforestation, and contribute to human health. However, the environmental sustainability of agritourism is the least studied in the literature. In Sardinia in particular, agritourism research has focused heavily on the sociological and economic aspects, and insufficiently on its environmental aspects. To bridge this gap, this study uses the Theory of Planned Behaviour (TPB), enhanced with environmental

awareness and knowledge, to analyse the beliefs and behaviours of agritourism farmers in rural Sardinia. Our study is unique in several ways. This is the first time in the literature that the TPB is employed to examine the environmental sustainability of agritourism in Sardinia. A timely and exploratory topic, the study also analyses farmers' perceptions of the link between environmental sustainability and human health. The recent pandemic has intensified attention to environmental sustainability across the world, as many of the root causes of climate change also increase the risk of infectious diseases. Our study also uses a mixed methodology, under-utilized in tourism research. We first collect qualitative data via in-depth interviews, to understand farmers' indirect beliefs (behavioural, normative, and control beliefs). Second, we collect quantitative data via surveys to evaluate the direct and indirect variables of the TPB. By using a solid two-part methodology based on mixed methods, our study belongs to a minority of TPB articles characterised by methodological rigor (Yuriev et al., 2020). Third, in contrast with the majority of TPB studies, we pay particular attention to measuring the indirect variables (behavioural, normative, and control beliefs), and thus leverage the main advantage of the TPB theory. We also adapt the indirect variables to the specific context of Sardinian agritourism, and we enhance the TPB with domain-specific variables, i.e., environmental awareness and environmental knowledge. Such variables are essential for the design of interventions to enhance sustainability. Future studies should determine whether these additional variables will consistently determine behaviour to the extent that they can be considered a permanent addition to the theory. Presenter: Cristina Ciocirlan

Buried waters: heterochronous infrastructure and abandoned railway tracks in Singapore.: A 26 kilometre stretch of disused railway tracks that cut vertically down into Singapore's downtown core remain an oddity in the built-up metropolis. In land-scarce Singapore, its suspended development affords a long stretch of uninterrupted space where animals, people, water, canals and conversation interact and co-exist. The tracks were built by the British to connect Singapore's port to its resource rich and much larger neighbour, Malaysia. It now serves as one of the island's few remaining links to its rural past. The country's rainfall rich meteorology shapes its geomorphology, and I draw attention to unnoticed bodies of water in and around

the railway and the hydraulic infrastructures built to contain it. I describe walks with informants, where the presence of unexpected bodies of water elicit social memories and demonstrate the ways in which water richly engages memory and the senses (Limbert 2001). Heritage activists have also inserted themselves into this landscape, producing their own sense of legitimacy and identity around water. Hydraulic infrastructures on and adjacent to the land chronicle the development of the island and provide an entanglement with temporality that counter the distinct socio-temporality of illimitability suggested by infrastructure construction elsewhere on the island. At the same time, the affective qualities of water (Strang 2004) create ecologically embedded relationships that crosscut geographies and time. Together, water and infrastructure provide fruitful terrain for exploring the temporal and spatial dimensions of living with the expectation of continual change, an experience constitutive of being Singaporean. Presenter: Jean Chia (University of Toronto, Department of Anthropology)

Transitions of Garden and Culture: Vandana Shiva asserts that cultural diversity works well when communities are free to manage their ecosystems and use them sustainably for the common good (Shiva 2022). This paper presents ethnographic research on gardeners in Central New York and Montana who have participated in semi-structured interviews-with particular focus to gardeners' thoughts about their efforts to preserve cultural heritage, promote social wellbeing, and built ecological sustainability. Our two research sites offer a significant contrast between different geographic regions, namely population size and climate. Montana offers a sparse, mostly rural population; a decidedly arid 12-15 inches of yearly moisture on average, and short frost-free time period; by comparison, Central New York has a much more urban environment, double the annual moisture, and a significantly longer growing season. A comparison between the two regions allows for a more fine-tuned consideration of the challenges and benefits of gardening in a range of contexts. Following such activist scholars as Shiva, the research project examines significantly different geographical regions to gage the possible interconnections between gardening and community sharing, gardening and cultural diversity, and gardening and ecological sustainability. Put another way, the research considers the degree to which gardening ties gardeners to the social norms of a

community and culture and fosters practices of cooperation and social well-being (Valle 2022). Above all, in looking to the future, the research explores the possibilities for the garden to be a site for creative, sustainable change. Presenter: Ernest Olson (Wells College, Department of Sociology and Anthropology)

Making Mosquitoes SUCK!: Engaged Anthropology for Engaging Science Comics: Climate change is altering mosquito habitats in ways that make community participation in control and prevention imperative. Cities in warmer regions of the country are experiencing higher rates of mosquito-borne disease, suggesting that mosquitoes and their pathogens are adapting to climatic temperature shifts. This risk is particular; it varies by neighborhood. Mosquito samples collected from less wealthy areas, ones characterized by infrastructure issues such as abandoned structures, have more and larger mosquitoes than wealthier areas. This makes mosquito control and prevention an environmental justice issue. The CDC itself has warned that the need for mosquito control is beyond the capacity of public health departments. This poses the question: How do you cultivate a local sense of public health responsibility when scientists, like entomologists, are not trained in translating their specialized knowledge to everyday audiences? This presentation focuses on a collaboration between an educational anthropologist and a medical entomologist resulting in the Mosquitoes SUCK! science comic. In our NIH-funded Urban Ecosystems Project, the entomological focus on the urban ecosystem was mosquito-human interaction, particularly control and prevention. Because of the project's connection to a university-based promise program, the anthropological focus was on a local urban ecosystem as a site of aspiration and attainment with respect to college-going. Working together, our purpose was to use the theme of mosquitoes and public health to enhance the teaching and learning of science in partner communities, especially empowering the youth to be local agents of health and education change. Delivering two-week summer day camps, after school programming, family outreach events, and school-based professional development for teachers, we created the Mosquitoes & Me curriculum. In 2022, drawing on activities with a subset of Mosquitoes & Me youth enrolled in a weekend Comic Book Club, we published Mosquitoes SUCK! as a way of conveying essential aspects of that curriculum and amplifying public education around the critically important but not widely

understood content of mosquito science. Science comics, we believed, provided one answer to the complex question of how to translate science to broad publics. In and of itself, using science comics for public science communication is not necessarily noteworthy. Research, for example, has documented the effect of visual features on cognition. What makes Mosquitoes SUCK! noteworthy is the way that it captures the particularity of its origin arising out of the place, people, and purpose of our larger project. The presentation will describe four steps to the robust creation of comics for public science communication. First, the narrative has to be driven by a clear conceptual foundation. Second, the narrative has to be grounded in a scientifically relevant setting. Third, there have to be engaging characters moving the narrative forward. Fourth, these first three steps need to work together to advance a compelling storyline. This presentation will use these characteristics to demonstrate the responsiveness of Mosquitoes SUCK! to the particularities of its people, place, and purpose-driven origin and provide suggestions for others who want to use comics to convey scientific, or anthropological, information to the public. Limited complementary copies of Mosquitoes SUCK! will be available. Presenter: Katherine Richardson Bruna (Iowa State University)

“Playing for the Planet”: Exploring Daoist Environmentalism and Shentai Wenming (Ecological Civilization) through the Greening of China’s Online Games: The video game industry has largely escaped scrutiny in discussions about corporate accountability and environmental ethics surrounding climate change, even while the data centres needed to power online games are substantial contributors to ecological degradation and global CO2 emissions (Mills et al., 2019). In 2019, the United Nations launched the Playing for the Planet Alliance, which called on video game studios to reach more than 1 billion players worldwide with environmentally friendly 'green game' scenarios. In 2021, two large studios from mainland China, Netease and TiMi (a subsidiary of Tencent), joined the Alliance and entered the UN sponsored Green Game Jam competition with activation scenarios in games like Honor of Kings (王者荣耀). These scenarios frequently make use of a Daoist inspired collapsing of the boundaries between humans, animals, and natural phenomena. While imaginary spaces in video games evoke Daoism to cultivate an ecological sensibility in players, the deployment of traditional Chinese culture in

the name of environmentalism belies other corporate interests and political aims lurking underneath. This paper describes what is happening inside and outside the imaginary spaces of China's 'green games'. I investigate what kinds of eco-friendly attitudes and behaviours these games encourage among players. I also trace the contradictory aims and ambitions contained in official rhetoric emphasizing a harmonious and synergistic relationship between the global expansion of China's technology companies, environmental sustainability, and the state's official political doctrine of 'ecological civilization', shengtai wenming (生态文明). Landscapes of Pain Care: New Conversations in and Beyond Oncology Care in Africa

2:15 PM - 4:00 PM **TMCC - 711**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

CHAIR:

Megan Cogburn (University of Florida, Department of Anthropology), Adrienne Strong (University of Florida)

PRESENTER:

Emma Hanley, Jacob Roman (University of Florida, Department of Anthropology), Mohamed Rafiq (New York University, Shanghai), Megan Cogburn (University of Florida, Department of Anthropology)

DISCUSSANT:

Adrienne Strong (University of Florida)

DESCRIPTION:

In and around Africa, pain remains the driving force behind the motivation to seek oncological care in biomedical hospitals and health facilities. Oncology care begins and ends with pain, yet the caring for pain, and its associated linguistic and social worlds, has received less attention in the anthropological and public health literatures. Moreover, while pain care and oncology have a rich history in Africa (e.g. Livingston 2012, Mika 2021) we also seek to explore landscapes of pain care in and beyond the cancer ward, considering other chronic illnesses and their associated physical, social, psychological, and spiritual pains. Across Africa, there is a growing need for palliative care, with one of its primary goals to improve quality of life by acknowledging and managing these different landscapes

of pain through biomedical and social means. In this roundtable we seek to open up new conversations on the social, linguistic, and biomedical landscapes of pain care both as related to and extending beyond cancer. We take a linguistic approach to talking about pain and cancer, understanding that these cultural lexicons and idioms are unfolding and important sources of knowledge for addressing these topics. Moreover, we look at different global to local scales in the production of social, linguistic, and biomedical knowledge surrounding pain care, as well as cancer, including international partnerships, donor relations, and global policies impacting cancer care provision and understandings and practices of pain care. For the roundtable, to start this conversation, we will pose questions to the participants including: How do people talk about pain, cancer, and their associated relationships? How does a new way of speaking about pain and cancer shape what practices count as care, and in turn how do existing care practices inside and outside of health facilities shape local lexicons surrounding pain and cancer? How do we measure pain? How are scales used and understood in different places? How do nurses and physicians in sub-Saharan Africa talk about pain? What are the driving forces behind those living with chronic pain inside and outside of the oncology ward? What are gendered dynamics of pain care? We know that cancer is social, in what ways is pain social? How are evolving policies and donor priorities related to healthcare services, cancer, palliative and pain care impacting care practices and opportunities, as well as assemblages of care on the ground in various sites?

1-155

Living with Ghosts in Transitional Times

2:15 PM - 4:00 PM **TMCC - Hall G - MI**

Executive Oral Presentation Session - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Rosanna Dent

CHAIR:

Emma Kowal

PRESENTER:

Jennifer Brown, Jenny Davis (University of Illinois, Urbana-Champaign, Department of Anthropology), Trevor Engel, Rosanna Dent, Eden Medina, Vivette Garcia-Deister, Emma Kowal

DESCRIPTION:

Times of transition attempt to make the present history.

The last half-century has seen a plethora of transitions towards social infrastructures that are intended to benefit Black and Indigenous people, women, queer people, people living with disability, and other groups who those in power have historically considered less than human and subjected to violence of all kinds. In many societies, policies, laws, practices, and structures of authority have been remade and renewed in efforts to make the world less harmful. These efforts are always uneven and incomplete, beset with vulnerabilities and erasures. But even if social change were flawless, this would not avoid a larger problem: the past is often resistant to being left behind. This executive panel examines how the ghostly traces of the past exert their presence, often at the precise moment they are believed to have been left behind for good. We draw on a promiscuous range of accounts of haunting, from Derrida's hauntology of 'absent presences', to Gordon's ghosts of gendered and racialized violence that demand a 'something to be done', to Youngblood Henderson's 'postcolonial ghost dancing' as a method of uncovering ongoing colonial practices. Settler colonies, in particular, abound with ghosts. So-called postcolonial societies that depend on the repression of the violent colonial past and the ongoing denial of Indigenous sovereignty make for constitutively uncanny places, at once homely and unhomely, settled and unsettled, familiar and strange. Ghosts and spirits are an everyday presence in many Indigenous communities, reflecting the porousness of the categories of human, non-human, land, self, living, dead, past, and future. In colonial times, some of these ghosts have become highly syncretic, providing resources for comprehending a confusing present. Liberal, multicultural, anti-racist and decolonial efforts to create more liveable worlds are also rife with the ghosts of their equally well-meaning predecessors, including proponents of assimilation and eugenics. And objects of all kinds are liable to haunting, with museums a favourite haunt for ghosts. Papers in this session examine the ghosts of scientific and anthropological practice in varied contexts across the Americas, Europe, and Australia. We also consider the limits and possibilities of hauntological methodologies. When our fieldsites and archives contain ghosts of one kind or another, we must decide how to approach them. We can seek to understand their haunting presence in the lives of our interlocutors, or account for them directly as non-human actors in a pluriversal politics. Ghosts can also be teachers, showing us how to fashion accounts of the social that haunt existing disciplinary frameworks. Learning to live with ghosts is an imperative in worlds wracked by violent pasts and presents, and in transition to more just futures.

Decay and Renewal: The Spectral Nature of Human-Salmon Relationships in Southeast Alaska: In a shaky video from early in 2022, a semi-circle of stones arises from the bottom of the ocean floor. The camera moves through water filled with the skeletons plankton to reveal an 11,000-year-old stone fish weir in Shakan Bay, just west of Prince of Wales Island in southeast Alaska. This finding illustrates both the importance of human-salmon relationships to Alaska Native peoples and the impact of climate change, since this weir was found 170 feet below the surface of the ocean. Specters of fish provide deep and tangible connections for Alaska Native peoples to time immemorial. We have always lived with ghosts. Just miles away from Shakan Bay, salmon return to small streams and tributaries to spawn and ultimately die. Many present-day Alaska Native people spend late summer and early fall gathering and preserving salmon for eating and sharing throughout a long winter. In this paper, I examine the spectral relationship of Alaska Native people to salmon. I show how traces, like an 11,000-year-old salmon weir and carcasses of salmon on the rainforest floor, influence federal and state wildlife management policies while acting as ghostly portents of climate change. The remnants of Alaska Native life found on an ocean floor reinforce oral narratives of traditional salmon management and have been used as evidence related to policy changes on subsistence fishing. Similarly, these ghostly stones illustrate coastal changes related to climate change and remind us that Alaska Native people have survived and thrived through many cycles of decay and renewal. Presenter: Jennifer Brown

Accountability to Ancestors: Attending to the Ghosts of Anthropology: In their Glossary of Haunting, Tuck and Ree tell us "Decolonization must mean attending to ghosts and arresting widespread denial of the violence done to them" (2013: 647). Looking around the halls and classrooms of Anthropology departments and museums, one might assume that the work of addressing the field's harm to Indigenous people was already complete—if it weren't for the ghosts. More than thirty years after the passing of the Native American Graves Protection and Repatriation Act (NAGPRA) more than 100,000 Ancestors remain unrepatriated in US institutions. This paper explores what research and repatriation ethics could look like if, instead of answering to department heads, tenure review committees, granting agencies, or journal reviewers, Anthropology attended fully to and for its ghosts. To do so, I discuss my own accountability as an Indigenous anthropologist to Ancestors as a framework,

and fuel, for addressing non-compliance with NAGPRA; working to repatriate ethnographic and linguistic collections; and in conversations toward developing ethics in biological Anthropology. Here attending to what haunts us, to Indigenous Ancestors, provides a framework for longitudinal, multi-generational accountability, ethics, and planning. Far from a discussion of far-gone, past practices or something other subfields should attend to, I argue that if anything still connects the four fields of Anthropology, it is what haunts us and the shared obligations to attend to them. Presenter: Jenny Davis (University of Illinois, Urbana-Champaign, Department of Anthropology)

Haunting Afterlives: What can Indigenous bodies in museum collections teach us: In this paper, I look to the haunting afterlives of bodily objects in nineteenth-century anthropological and anatomical collections, particularly those from Indigenous and/or disabled bodies. Historical bodily collections are among the most haunting and haunted institutions of knowledge-making due to the thousands of bodily objects that were stolen and preserved for Western scholars' study and consumption. What do these ghosts tell us? They are the legacy of generations of transinstitutionalization, a process that pressed people through punitive institutions in life and then into museum collections in death. They sound echoes of eugenic and hierarchical classification by anthropologists and anatomists that deemed Indigenous peoples as less than human. They show how scientists conceived of "disability" as an attractive feature to promote the "curious" and "extraordinary" characteristics of bodies, thereby justifying their collection and study. These ghosts pose the question, can current attempts of (some) museums to reconcile their bodily collections by situating them within the historical context in which they were collected sufficiently account? Or, do they simply serve to reify the violence of settler colonial states against Indigenous peoples? Using scientific texts, collectors' papers, and Chinookan writings about Chinookan "flattened" skulls in the United States and Germany and additional research on Indigenous bodies in Rudolph Virchow's collection of in Berlin, I will explore how the various "ghosts" and voices that inhabit these collections came to be. By identifying these ghosts, we can better understand what should haunt our minds when we think about these collections. Presenter: Trevor Engel

Haunting Returns: Spectral/Digital Archives : Anthropologists leave their own kinds of ghostly presences. Academic ancestors—lively, present, loved,

and loathed—frequent the places they made into fieldsites. Their memory may haunt the people and Peoples they studied with questions about their work, its circulations, and the ways scholars profited from time in the field. Anthropological scholarship, consolidated into what Audra Simpson calls regulatory bodies of knowledge, can extend the violence of past depictions into the present. The enduring presence of anthropologist-ancestors may also adhere to the material traces of their work. This paper explores the spectral qualities of digital returns of photographs, audio recordings, and other scientific materials. It is grounded in a collaboration between a group of A'uwẽ (Xavante) Elders, leaders, and community members and a group of non-A'uwẽ academics, including myself. As we build a digital archive to return documentation, A'uwẽ are reunited with images and sounds of their ancestors. But simultaneously, in the well-intentioned project of return and its alluring promises of justice, we are forced to reckon with the ghosts of social and physical anthropologists past. By bringing anthropological ancestors back as a subject of our collective work, what can we learn about living with ghosts? This paper inquires into the transitions that digital returns facilitate for knowledge-making and scientific sovereignty, and asks, where might calling up ghosts fall short? Presenter: Rosanna Dent

Forensic Ghost Stories: Science and Haunting in Chile's Democratic Transition: In 1991 the Chilean government exhumed 126 sets of remains from the largest anonymous burial site used by the Pinochet dictatorship to hide the bodies of those it had disappeared and executed. By 2002, the Chilean government had identified and returned 96 sets of these remains to their families. In 2006 it came to light that at least half of these identifications (48) were wrong. In the book *Ghostly Matters*, sociologist Avery Gordon uses the idea of haunting as a way to uncover individuals, things, or ideas that historical conditions banished, but that continue to persist at the margins. Scholars such as Banu Subramaniam in the field of STS show how scientific practices can also be a place where ghosts remain, including the ghosts of eugenics in present day studies of biological variation. In this paper I build on the work of scholars such as Gordon and Subramaniam to illuminate how things that are pushed to the margins reappear and persist in the domain of scientific practice. These hauntings shape how scientific findings are mobilized to create accounts of the past that people may (or may not) accept as true. Such hauntings shaped Chile's transition to democracy in the aftermath of dictatorship. The misidentifications extended the violence of the regime by revictimizing families who had

lost loved ones. They cast further doubt on the commitment of the state to goals of truth and repair and while illuminating the elusiveness of emotional and historical closure. Presenter: Eden Medina

Knowing Without: There are enough disappeared persons reported in Mexico's national registry to fill the entire Estadio Azteca, which is the largest football stadium in Mexico, and the third largest stadium in the Americas. Construction of this stadium—with a capacity for 110,000 people—overlapped with the beginning of Mexico's "dirty war" in the 1960s. The victims of disappearance from this period still haunt the national registry, and more names are added every day to the specters of those who disappeared in the previous century. At the same time, over 52,000 bodies remain unidentified in Mexico's forensic services. How can we produce knowledge of what is not there? This paper proposes 'knowing without' as an epistemology that is different from agnotology (the structural production of ignorance). 'Knowing without' is distinct in that absence of knowledge is not the object of interest. It works both as philosophical dictum (absence as starting point to produce knowledge) and ethnographic mode (being without, working without). It is also different from absentology (the sociology of things that are not there) because although 110,000 people have disappeared, their absence is not empty and leaves something behind that can be felt, experienced and known. Drawing from my experience fieldnoting death and disappearance in Mexico, I approach these haunting presences by offering elements for an epistemology of 'without'. Presenter: Vivette Garcia-Deister

Haunting Biology: Genomics and Justice in Indigenous Australia: Indigenous-led genomic science promises to unlock the benefits of genomics for Indigenous people in a way that protects them from the harmful legacies of racial science. In Australia over the last decade, genomics has become a common tool in studies of Indigenous health, with several 'Aboriginal reference genome' projects in progress; ancient DNA studies of deep Indigenous history have proliferated; and growing numbers of Indigenous people are using direct-to-consumer genomic ancestry testing to inform their family history and identity. Many of these projects are led by Indigenous scientists and/or are under Indigenous governance but are still haunted by earlier modes of knowledge production that used Indigenous biological difference as a tool of oppression. This paper considers how biological difference is understood within twenty-first century Indigenous genomics. Is it a racist ruse, a stubborn residue of racial pseudoscience? Is it

something that exists but that should not be allowed to have social or political relevance? Or is it a potentially empowering force that can be unlocked by newly accurate science? Or by being under Indigenous control? I propose these questions can be usefully framed as questions about ghosts. Are the ghosts of past efforts to define Indigenous biological difference a helpful presence? Or should we aim to exorcise them? Can an Indigenous-led genomics escape these ghosts? And are there better and worse ways to be haunted? I consider existing approaches to ghostliness and argue for an alternative way of interacting with the ghosts of racial science: living with them. Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Mark McIntyre

PRESENTER:

Mark McIntyre ,Gabriella Santini ,Nakeyah Giroux-Works (Université Laval)

DESCRIPTION:

These papers examine processes of industrial exploitation and deindustrialization and the economic and environmental impacts in their wake. From the formation of 'environmental subjects' among the Masai facing land privatization in Kenya, to the transition of industrial farming on the Canadian Prairies, forest conservation in Quebec, and the aftermath of coal mining in Cape Breton, presenters elaborate on how people have come together to create both new 'communities' and futures.

Fielding dreams: exploring hopeful practices in Glace Bay's Number 11 neighbourhood: Processes of deindustrialization have informed much of how Glace Bay residents construct and perform their life making projects. Glace Bay residents have been navigating processes of deindustrialization and the resultant precarity since before the closings of the last of Cape Breton's major coal mines and steel plant. In 2023, approximately 22 years after the shutdown of these last major industrial plants, residents are still grappling with the challenges of making life within the frameworks of

deindustrialization, marked by unemployment, poverty, out-migration, community and infrastructure ruination, and general precariousness. Yet, despite continued engagements with a precarity stemming from the processes of deindustrialization, communities within Glace Bay continue on. Within this context, I have been interested in the practices and tactics (1) that Glace Bay residents take up within the current framings and experiences of deindustrialization, as well as those constellations of practices that emerge within the work of planning and hoping, for individual, familial, entrepreneurial, ecological, and community futures. While Glace Bay has experienced much loss and despair in the last two decades, in recent years several neighbourhood community organizations have formed with an aim to take up revitalization projects around the region that might foster community well being, as well as fuel imaginations of hope and future for current Glace Bay's residents and subsequent generations. This paper engages one of these community organizations, the Number Eleven Volunteer Society (NEVS), and their work to take a derelict and abandoned baseball field, owned by the Cape Breton Region Municipality (CBRM), in their neighbourhood and transform it into a mixed-use, outdoor athletics facility and community hub for the Number 11 community and other Glace Bay residents of all ages. Number 11, named for the Dominion No. 11 coal mine [Emery seam] from which the district formed around, is recognized within Glace Bay as marginalized and low socio-economic status neighbourhood. While Glace Bay as a whole has faced great struggles through experiences of precarity, Number 11 is known as being particularly impacted by high poverty rates, inadequate housing, and intergenerational cycles of poverty and addictions. Within this, I look at how hopeful community practices are taken up as tactics to reconfigure diminished aspirational capacities (2) to those that engage imaginations of optimistic futures and build worlds that reflect ideas of the good life within otherwise precarious life-ways. Further, if hope is a radical temporal reorientation of knowledge (3), hopeful practices offer a space to consider what this knowledge is for: (potentially) agency; capacity; construction of self and the world. 1: de Certeau, Michel. 1984. *The Practice of Everyday Life*. Land Subdivision and Shifting Environmental Ethics in the Maasai Mara, Kenya: Community-managed areas such as Maasai group ranches in Kenya have succumbed to land individuation and privatization in recent decades, causing a portion of the land in former group ranches to undergo considerable degradation. The subdivision of former Maasai group ranches into individualized private titles, in conjunction with the growing monetization of rural livelihoods and increasing demographic pressures, has often led to land enclosures and unsustainable harvesting, adversely affecting formerly community-managed natural resources such as forests, grassland, and wildlife. This paper is a case study of Oloirien Group Ranch, which was recently subdivided in 2017 - a process which was riddled with corruption and inequality. How did this process affect the way Maasai understand and engage with the environment? In cases where community members are indeed adopting environmentally damaging practices, what might be done to help the formation of environmental subjects, or 'people who care about the environment' (Agrawal 2005)? First, this paper explores how the rapid transformation in land tenure has led Maasai community members to reorient their engagement with the environment and to change their conceptions of their interests. Then, drawing from Agrawal's work on 'environmentality,' this paper explores avenues for the formation of a more sustainable Maasai environmental subjectivity in a post-subdivision context. This paper will be based on a preliminary analysis of the data collected during doctoral fieldwork, which took place from January to October 2023 among Maasai communities in Oloirien, Kenya. Over the course of nine months, participant observation was conducted, semi-structured interviews were carried out and oral testimonies were collected. Archival research has also been conducted to verify the accuracy of some historical events recalled in testimonies. Presenter: Gabriella Santini

Agrochemical Transitions on the Canadian Prairies: Resurfacing Fields and Farms: Dryland grain farmers of the Canadian Prairies find themselves in the midst of an important transition. Challenges to the high-input chemical systems, which rely heavily on herbicides for weed control and synthetic fertilizers for soil nutrient replacement, force farmers to rethink a farm management system that has dominated the region since the mid-1990s. The purpose of this paper is to highlight the main challenges to this high-input system, including herbicide resistant weeds, chemical residue regulations, crop diseases, and greenhouse gas

emissions. Additionally, I will provide historical context for how the high-input system came to dominate the Prairies, which represents another major transition in grain farming that began in the 1930s and continued through the 1980s. This transition involved the replacement of field tillage practices for weed control with herbicide weed management. Finally, I will describe alternatives to this dominant system including organic farming, pasture restoration, and perennial crops. With each transition in farm management style, farmers engage with their soils in different ways. They create different types of surfaces on their fields, which creates different ways of being in and knowing this landscape. Check:

Construire et réfléchir autrement à l'espace forestier. Ethnographie d'initiatives citoyennes et collectives de plantation d'arbres au Bas-Saint-Laurent, Québec.: Réfléchir à l'avenir de la forêt implique d'interroger les réalités de son exploitation industrielle, telle que la perte de biodiversité associée aux conditions de son exploitation, et les stratégies gouvernementales instaurées pour assurer la durabilité de ses ressources, incluant les aires protégées et les programmes de reboisement. Cela implique aussi de retracer les initiatives alternatives aux modèles de la conservation forestière néolibérale, soit celles développées dans une perspective de transition sociale et écologique. De tels projets proposent une réforme des rapports sociaux, politiques, économiques à la forêt, et s'engagent dans des approches de la conservation basées sur des actions citoyennes, communautaires et collaboratives. Dans cette présentation, j'examine deux stratégies de mises en valeur de la forêt utilisées par des organismes, des citoyens-nes et des collectifs de la région du Bas-Saint-Laurent : les aménagements comestibles appelés « forêts nourricières » et les plantations d'arbres à des fins de compensation carbonique, que j'ai nommé « plantation climatique ». À priori non liées, ces pratiques de plantation de végétaux proposent de rebâtir des liens sociaux autour d'espaces oubliés et dégradés, de multiplier les communs forestiers au sein des milieux de vie et de déployer de nouvelles manières de « faire communauté » avec le monde végétal. Cette communication vise donc à ouvrir une fenêtre inédite sur les façons dont des espoirs écologiques d'une meilleure cohabitation avec la forêt se concrétisent par des expérimentations sociales innovantes qui bousculent les représentations conventionnelles de la forêt. Oral Presentation Session

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Kelli Finn

PRESENTER:

Kelli Finn ,Holly Dygert (Bryant University),Diah Irawaty (SUNY, Binghamton University, Department of Anthropology)

DESCRIPTION:

The study of reproductive justice for anthropological inquiry requires a renewed lens given the ways reproductive freedom is threaten from the local to the global scale. This panel explores global politics and reproductive rights across different geographic locations taking account the stakes of reproductive choices, life, and survival. Panelists discuss interconnected yet diverging topics related to motherhood, religion, abortion, migration, and transnationalism. Regions represented include Mexico, U.S., Ireland, and Indonesia.

Abortion Access in America: An Analysis on Mexican Abortion Groups Providing Care to Residents in a Post-Roe United States: In June 2022, the United States Supreme Court overturned the legal precedent set in Roe v. Wade, which protected a person's constitutional right to abortion care on a national scale. This decision has led to each state's ability to decide the legal status of abortion care for themselves. Several months prior, the Mexican Supreme Court decriminalized abortions within the country. At the moment, two U.S. states that share a border with Mexico have outlawed abortion while one Mexican state has now legalized the practice. The change in legal status, and the increased popularity of medication abortion, has led to Mexican abortion networks reshaping their organizations to provide abortion medications to individuals in the United States and aiding Americans seeking abortion services in Mexico. In this paper, I use news articles to examine how Mexican organizations aid Americans in accessing abortion care after the overturning of Roe v. Wade. I argue Mexican groups providing abortion care are examples of transnational solidarity through identification of a shared struggle against unjust state power. This resistance has led to the shared goal of

subverting oppression and seeking political change.

Presenter: Kelli Finn

Rights Against Justice: An Ethnographic Examination of the Workings of “Reproductive Rights” in an Indigenous Ñuu Savi (Mixtec) Village in Mexico: As a reproductive rights paradigm gained traction in international circles in the 1990s, BIPOC feminists pointed out that the approach fell short of achieving reproductive justice, especially for marginalized populations. Reproductive rights and reproductive justice have since come to be seen as divergent activist projects tethered to the particular social locations of more (in the case of rights) and less (in the case of justice) advantaged populations. In this article, I consider the relationship between rights and justice from a different, ethnographic vantage point. Based on data collected primarily during eighteen months of research in the early 2000s, a time when the reproductive health and rights of women and adolescents became prominent in Mexican public health efforts, I examine the workings of 'reproductive rights' in an Indigenous Ñuu Savi (Mixtec) village in southern Mexico. The paper shows how Mexican public health providers used liberal assumptions about rights-bearing subjects to promote the reproductive 'choices' of some while deeming others too culturally encumbered to make such determinations. Moreover, they drew from this distinction to justify coercing women they perceived as culturally-encumbered to undergo tubal ligation procedures. This work thus shows how the shift to a 'reproductive rights' paradigm produced new social distinctions in which and through which reproductive injustices were differentially inflicted on villagers. Presenter: Holly Dygert (Bryant University)

Negotiating Motherhood and Family: The Politics of Money and Gifts among Indonesian Transnational Mothers: Being engaged with the anthropological study of money and gifts, I examine the growing feminist political consciousness among women from the grassroots level as a newly formed local feminism through the reproduction of new meaning on the practices of sending money and gifts they are involved. Based on my doctoral fieldwork in West Java and West Nusa Tenggara, the two largest sending areas of female transnational migrant domestic workers in Indonesia, this paper elaborates on how Indonesian transnational mothers who work as domestic workers leverage their migration experience to reclaim their new identity and power and instrumentalize and strategize the money and gifts they sent as a novel modality and to (re)claim the identity, rebuild connectivity, and exercise agency in various settings, modes, and modalities. Through their

understanding of money more politically, transnational female domestic workers show their transformation by reconceptualizing and practicing new forms of non-prescriptive and non-mandatory 'tainted' motherhood and a deviant model of family practices. The ethnography closely observes how grassroots women can construct a political meaning of money and approach it to challenge the existing gender and family norms. This paper explores how these transnational mothers are capable of utilizing their experiences of being transnational domestic workers to not only negotiate the persistent traditional gender and motherhood and family norms but also challenge the state's gender ideology of motherhood and the family in Indonesia. They practice the transformative and strategic resistance and even subversion face-to-face the pervasive and entrenched discriminative and unjust gender, motherhood, and family norms to disrupt, upset, and destabilize the ingrained patriarchal social orders and cultural-religious norms. Oral Presentation Session

REVIEWED BY:

Culture and Agriculture

ORGANIZER:

Megan Styles (University of Illinois Springfield)

PRESENTER:

Mohammad Ainul Haque ,Michael Dunford (Australian National University, Department of Anthropology),Hector Fletes Ocón

DESCRIPTION:

The papers in this panel explore how farmers navigate periods of agricultural transition – from commons to uncommons, local to global, traditional to modern, and (sometimes) back again.

Maintaining the Local in a Globalized World: Recording the Experiences of a Homesteader from Ochre Pit Cove of Newfoundland and Labrador, Canada.: In recent years, homesteading becomes popular in the urban and rural areas of Newfoundland and Labrador, Canada (NL). Homesteading encourages a lifestyle of self-reliance involving people in sustenance agriculture and the minimal production of clothing, craftwork, textile and so

on. The increasing number of people engaged in subsistence farming has begun to get attention across the province. Modern urban homesteading in NL has flourished with a 'back-to-the-land' approach reflecting a desire to go back to the simplicity of the past and resist the mechanical life of consumerism and globalization. Scholars have analyzed the potential of modern urban homesteading in maximizing independence, self-sufficiency, food security and financial solvency. However, homesteading could be rewarding in placemaking, connecting an individual to family histories and apprehending his/her position within the local and global food culture. This paper is an outcome of a semi-structured interview conducted with Kyle Dew from Ochre Pit Cove of Newfoundland and Labrador. Concentrating on Kyle's ten years of homesteading experiences, this paper examines how intra-provincial movement affects Kyle's sense of place and belonging and how he creates meaningful experiences in the new place through homesteading. It also analyses homesteading as a means of materializing family history and maintaining the local culture in a globalized world. This research is informed by the folkloristic understanding of place, region, and memory as well the cultural theory of migration and globalization. Presenter: Mohammad Ainul Haque

Tree cycles as labor cycles in Myanmar's Ta'ang Hills: In Myanmar's tea-producing highlands, tea cultivators ascribe a traditional division of labor to tea trees at different life stages: saplings are excused from work; middle-aged trees produce leaves; favored older trees produce seeds. This traditional pattern of 'tree work' is undergoing a massive transition: in the last decade, newly erratic weather patterns (especially hailstorms) have disrupted this division, leading many farmers to purchase seeds and saplings from specialist nurseries. My paper will show how this commodification of seeds and saplings indexes a simultaneous transition in human tea labor, which is newly commodified: traditional reciprocal arrangements between highland tea producers and lowland agricultural communities have been increasingly replaced by intra-highland wage work. Data for this paper was collected by the author via interviews and participant observation, as well as in collaboration with two indigenous Ta'ang researchers, who helped guide the author's research process. Presenter: Michael Dunford (Australian National University, Department of Anthropology)

Challenges of the agroecological transition. Policies and experiences from Chiapas: The social and environmental degradation of the global food system has led to

reflections and actions on its reconstitution. The pressures for change have come mainly from small farmers and peasants (many of them grouped in the *Vía Campesina* organization). But also from public organizations, some on a global scale such as the World Bank or the FAO. Multinational corporations that participate in different segments of the food system, such as production of inputs, seeds, fertilizers, transformation and distribution, have also joined this process, with their own interests, discourses and strategies. A transformation program in which some of these actors converge (with different perspectives) refers to agroecology. Valuing and recovering the ancestral knowledge of peasants throughout the planet, agroecology is established as a (transdisciplinary) science, a practice and an action program. It tries not only to transform agriculture but also the food system as a whole and the social inequality that prevails in marginalized sectors of rural and urban spaces. The Mexican government established in the 2018-2024 Administration a focus on the agroecological transition. For this, it has established different programs. It has also opened spaces for research/advocacy oriented towards this transition. This communication discusses the scope and challenges faced by this program. The importance of examining this process from the perspective of agroecological reconfiguration, which addresses different material and immaterial dimensions of agroecological change, is discussed. Finally, some preliminary results of a project financed by Conacyt, oriented to the agroecological transition, are examined, taking up the achievements and the heterogeneity of the perspectives with which the small producers of Chiapas appropriate these initiatives. The presentation is complemented by an analysis of the own research experience for the agroecological transition, considering the challenges of communication, accompaniment and knowledge between actors. Neopagan Aesthetics

2:15 PM - 4:00 PM

TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Logan Elson

CHAIR:

Roger Lohmann (Trent University)

PRESENTER:

Logan Elson ,Roger Lohmann (Trent University),Barbara Jane Davy ,Sabina Magliocco (University of British Columbia, Department of Anthropology)

DESCRIPTION:

Neopaganism denotes reconstructions of idealized past religious beliefs or customs from research on folkloric, literary, ethnohistoric, and material sources. The original 'Pagan' indigenous religions that Neopagans use as inspiration are typically associated with particular peoples and lands, as they were before they were overwhelmed or destroyed by later influences and developments such as conversion to Christianity. In this session we analyze Neopagan cases in terms of the aesthetics with which participants appreciate and express beliefs, behaviours, and artifacts associated with particular traditions. Here aesthetics refers to styles and patterns of imagery in art, ritual, lore, and other forms of expression that characterize and are favoured by particular tastes of beauty. Neopagans, like other human groups, use aesthetic styles to demarcate identity and differentiate communities. Some characterize the entirety of their religious experience in aesthetic terms. Their aesthetics can be manifested in a variety of forms. These include material culture such as jewellery, clothing, and ritual implements; and performance, as in ceremonies, celebrations, and literary productions. Aesthetic distinctions are also found in the beliefs and moral ideals of practitioners. All three are often present together as components of Neopagan religious experience, each forming part of a cohesive whole. Individuals may be drawn to particular Neopagan traditions for their aesthetic values: for example: folks in search of strong, Eurocentric masculine representations may be drawn to the bearded muscle-man aesthetic of Germanic Heathenry. In contrast, the mother earth goddess of sexuality-centric Wicca appeals to those searching for powerfully feminine aesthetic. Some are drawn to nature motifs and ecological engagement. Others are drawn to counter-cultural aesthetic experience and identity. While aesthetic commonalities draw Neopagans together into communities, Neopagans use aesthetic differences as the basis for distinguishing other groups and traditions from their own. Eclectic and reconstructionist aesthetic modalities can compete and generate conflicts. This panel examines manifestations and ramifications of aesthetics in Neopagan communities. We use these cases to theorize the role of aesthetics in religion and human organization more broadly. Questions of notable interest include: how aesthetics inform or encourage engagement with Neopagan community; how Neopagan aesthetics offer a

mode of identity construction both within the community and outside of it; and how aesthetics encourage ways of interaction with not only other Neopagans and the dominant culture, but also with the non-human world.

Emergent Aesthetic Production of Place in an Ontario Heathen Sacred Enclosure: Place-making involves associating localities with elements of lore and wisdom. These associations are evoked by existing features of real or virtual spaces, or developed by altering the space. People make places in accord with aesthetic ideals sourced from past and contemporary traditions that accord with present desired potentials. I trace these characteristics of place-making among Germanic Neopagans, also known as Heathens. Heathens recreate an aesthetic of religious experience inspired by ancient Germanic cultures. They do this by interpreting historical and mythical texts and mobilizing these interpretations in religious practice. In current Heathenry, it is common to create sacred places, usually in the form of altars, enclosures, or other stationary objects placed in inspiring localities on the landscape. A case in point is an outdoor enclosure called the Vé, dedicated to the worship of Odin, Thor, and other Heathen gods at Raven's Knoll in Eganville, Ontario. This Vé is enclosed with nine wooden poles, symbolizing the nine realms of Heathen cosmology, and decorated with figurines, animal furs, and other ritual implements associated with Heathen deities. Both its original construction and its subsequent removal to higher ground reflect ancient Germanic aesthetics drawn from the archaeological record, historical sources such as the Icelandic sagas, and current designs and motifs. The combination of these elements generates emergent aesthetic productions that bear similarities to place-making in other cultural contexts, including among ancient Pagan Icelanders, modern Western Apache, and even inhabitants of online environments such as Second Life. Presenter: Logan Elson

Why Once a Wiccan: How Intermingled Beliefs, Identities, and Aesthetics Propel and Repel in Neopagan: This autoethnographic essay demonstrates how beliefs, identities, and aesthetics can be analyzed to describe, measure, and compare religious orientations. I trace how they figured in my adoption, participation, and abandonment of Wicca as a university student in the 1980s. Although these three factors infiltrated one another, I was primarily attracted by aesthetics and repelled by beliefs; Identify followed suit. Early on I found Wiccan beliefs acceptable because they were presented as optional and they contrasted

favourably with dominant religious notions in my culture. Neopaganism offered exciting identification with my distant ancestors and social connections with contemporaries. Most attractive were the aesthetics like robed and naked rituals in forests beneath full moons, seeing a nature goddess in earth and moon, interlace motifs, and feeling magical power flowing. These resonated with my ecotopian ideals. I participated in multiple Wiccan groups' activities, read Wiccan authors, and used Wiccan categories for spiritual development. I continued to enjoy Wiccan aesthetics, but increasingly found the beliefs problematic. As a self-described nature religion, I had naively assumed its tenets, despite artistic license, were reality based. Yet supernatural notions like reincarnation and the physical reality of magical "energy" were literally accepted by most around me. Even beliefs I found appealing, like the idea that trees have spirits, lost their lustre as I recognized they were unsupported by evidence. I could not be party to willfully promoting misinformation; but I retained wistful appreciation for Wiccan aesthetics, now sullied by association. Presenter: Roger Lohmann (Trent University)

Tyr Tales from the European Bronze Age to Contemporary Heathen Offerings.: In Old Norse literature the god Tyr appears as warrior god, the only one brave enough to place his hand in the mouth of the monstrous wolf Fenrir to trick him into being fettered in an effort to stave off Ragnarok and the destruction of the Aesir gods. Snorri Sturluson's Prose Edda tells this story of how Tyr's courage to serve as a guarantor of the Aesir's word that they will free Fenrir resulted in the warrior losing his right hand. Contemporary Heathens revive religious traditions associated with the gods featured in Old Norse literature, including Tyr. Tyr has a complicated history, interpreted variously as a god of war by Cornelius Tacitus, an Indo-European sky god by Max Müller, a god of law by Georges Dumézil, and more recently as an invention of Sturluson by Marteinn Sigurðsson. Contemporary Heathens who hold inclusion as a central value, such as those of Raven's Knoll in eastern Ontario, present a striking innovation in regarding Tyr as a wounded warrior, disabled immigrant, and model of service to community. This study of changing ideals of masculinity and valuation of the warrior ethos in contemporary Heathenry builds on a two-year study of the Heathens of Raven's Knoll from 2018-2019 and ongoing participant observation and interviews in association with a ritual dedicated to Tyr at Raven's Knoll in 2023. Presenter: Barbara Jane Davy

Vernacular Heterotopias in the Anthropocene: Aesthetics and Ethics in Fairy Gardens: This paper examines the aesthetics of fairy gardens: assemblages of fairy-themed figurines and related objects typically constructed in public-facing outdoor areas, such as parkways, front gardens, and parks. Designed to attract public attention, these assemblages combine mass-produced and hand-crafted items, juxtaposing them in ways that create new meanings and invite community participation. Drawing on cultural historian Luke Morgan's reading of Foucault (2015:36), I argue that these assemblages constitute vernacular heterotopias, disrupting cultural binaries by both reproducing and inverting them. Building on my earlier work with Neopagan iconography (Magliocco, 2001), I apply the principle that aesthetics often reflect ethics. The aesthetics of fairy gardens unsettle the urban and suburban landscape with seemingly animated beings possessing personhood and agency, suggesting notions of enchanted nature rooted in the "new animisms" (Harvey, 2019) that include eco-critical perspectives. Yet they also reflect gender role stereotypes and convey subtle messages about race and class, reflecting nostalgia for a precolonial, preindustrial past, a fantasy world in which the climate crisis is also non-existent, and fairies continue to enchant a pristine environment. I argue that fairy gardens are a vernacular aesthetic response to climate grief, environmental degradation and collapse, creating landscapes of longing in which magic permeates the sense of place. Presenter: Sabina Magliocco (University of British Columbia, Department of Anthropology)

DISCUSSANT:

Cal Biruk (McMaster University, Department of Anthropology)

DESCRIPTION:

Since the 1970s, proponents of participation in development have insisted it is a transformative 'process of empowerment', whereby fostering the participation of target populations will increase their level of ownership, self-reliance, and commitment, leading to more 'sustainable' development. Indeed, one of the ultimate aims of the Sustainable Development Goals (SDGs), the global governance framework for guiding development policies worldwide, is to better involve the target populations of development interventions in decision-making at all levels. But what does it actually mean to participate in development today? Who 'participates' and who 'develops'? For as long as participation has become the sine qua non of development practice, anthropologists and critical development anthropologists of development have been asking such questions. Scholars have demonstrated the ways that participation is more constraining than liberating (Cooke and Kothari 2001); shown how it endures regardless of whether it leads to material change (Green 2010); and explored the different ways 'participation' has been deployed across time, forming subjects along the way (Kelty 2019). Drawing on ethnographic insights into development programs from around the world, this two-part panel uses the encounter between development actors like NGOs and target populations as a springboard for thinking about the kinds of participation and possibilities that such an encounter engenders (Beck 2017, Olivier de Sardan 2005). Papers in this session follow how former inmates in northern Uganda attempt to navigate new lives amid post-conflict society's expectations; demonstrate Indigenous Aymara residents wielding of complaint as a strategy to hold Bolivian institutions accountable; investigate the politics of vulnerability among HIV-positive savings and loan members in northern Uganda; explore the politics of participation in controversial Palestinian-Israeli peacebuilding initiatives; and show how sexual and gender minorities in Uganda use HIV/AIDS programming to sustain more diverse queer projects.

Forbidden Vulnerability: HIV and development in post-conflict northern Uganda: This paper explores a community-based NGO's development project for an HIV-positive Village Savings and Loan Association (VSLA)

in the post-conflict Acholi subregion of northern Uganda. VSLAs are self-sustaining savings and loan groups that have become popular among development organizations for how they are imagined as addressing Acholi aid-dependency following 20 years of war and forced displacement into camps. The end of the war in 2006 coincided with the scaleup of antiretroviral therapy (ART) that transformed HIV into a "chronic yet manageable" condition. Today, an HIV-positive status is no longer enough to render someone "vulnerable", making them ineligible for material aid despite the fact that living with HIV and maintaining ART adherence continues to be extraordinarily difficult. It is within this contemporary post-conflict and imagined post-HIV vulnerability context that this paper contextualizes the vastly different intentions and expectations that motivated the NGO and the VSLA to participate in this development encounter. For the NGO staff, the project had the potential to foster personal responsibility, self-sufficiency, and "positive living" among beneficiaries. For the VSLA members, participating was a technique to safeguard against future health-related crises. Through publicly participating in this development project, the VSLA members were demonstrating their virtuousness and deservingness of care and support from others, ironically, precisely because of the heightened uncertainty that HIV brought to their lives. Presenter: Sarah O'Sullivan (Capilano University, Anthropology Department)

Participatory Planning and the Practice of Complaint in Bolivia: This talk centers on complaining (*renegando*) as a form of political engagement and possibility in Bolivian participatory planning spaces. During Evo Morales's presidency, state policymakers, aided by NGO workers, promoted community participation in local health policy planning. While neoliberal reformers first enacted popular participation policies in the 1990s (Cameron 2009; Postero 2007), the Morales administration repositioned participatory health planning as part of a more progressive agenda: local participation would grant a central decision-making role to social movements and contribute to decolonizing the national health care system. I turn to how, as health services continued to fall short, Indigenous Aymara residents of a rural highland town engaged in practices of verbal complaint during planning meetings. Bolivian state officials and NGO workers sought to manage complaints by changing the subject or reminding participants of all that institutions were doing on their behalf. Taking up

Sara Ahmed's call to "giv[e] complaint a hearing" (2021: 3), I point to complaint as a strategy for holding Bolivian institutions accountable to their promises of decolonization. Like resentment and contention, complaint in participatory spaces rejected liberal settler moves toward reconciliation and commensuration (Coulthard 2014; Simpson 2014, 2016). Instead, it opened up possibilities for participants to generatively rework – and sometimes rupture – their relationships with state and development agencies. Presenter: Gabriela Morales (Scripps College)

"āḥnā mawḡūdyn!" Presence as an Index of Respect in Israeli-Palestinian Peacebuilding: Peacebuilding practitioners in Palestine-Israel seek to measure their work through public presence and calculate the number of individuals in a room to demonstrate the impact of their programming. Many peacebuilding initiatives in Palestine-Israel are designed using Gordon Allport's (1954) socio-psychological theory of contact which posits that when equal sized groups meet and get to know one another, violence is reduced. Yet evidence of participation in peacebuilding programs creates problems for Palestinians who refuse to have their presence documented in photos and will tell family that they are studying or going to training to avoid perceptions that they are engaged in a Palestinian taboo of taṭbī' or normalizing Israeli occupation. This paper draws upon eighteen months of ethnographic fieldwork, interviews, and document analysis from 2018-2023 to explore how presence and participation are used by Palestinians as an index of respect and to make a claim to moral superiority. I examine how the double meaning of "āḥnā mawḡūdyn" (we exist; we are present) complicates notions of participation as either agency or cooptation in peacebuilding practice and elucidates how participation takes on multiple meanings as it is measured, competed for, and claimed by individuals engaged in different projects of political claim-making. Presenter: Alyssa Paylor (University of Notre Dame)

Owning Aid: Queer Liberation Through Disease in Uganda: In Uganda, where queer people are regularly arrested by the Uganda Police Force (UPF), sex workers are murdered and disappeared, and the operations of non-governmental organizations (NGOs) are raided and halted, criminalized communities of sexual and gender minorities are sustaining the politics of their broader movements for liberation by affixing their work to one of Uganda's largest annual development aid budgets:

HIV/AIDS.1 Using disease to gain a seat at the table of state agencies that previously ignored their criminalized identities, a national network of community-based organizations serving "key populations" for HIV/AIDS engages in high-level technical meetings with the Ugandan Ministry of Health, Uganda AIDS Commission, and officials of development aid agencies where they monitor the accounting of HIV/AIDS funding and advocate for investment in the "full financing" of HIV. Drawing on long term ethnographic fieldwork² from Kampala, Uganda (2015-2022) with "key population" HIV activists and workers of NGOs and state aid agencies, this paper traces the way HIV exceptionalism³, in its second decade, has transformed not only the politics of Uganda's social movements for sexual and gender liberation but also the relations of 'ownership' criminalized communities have with HIV/AIDS foreign assistance. 1 In 2019 Uganda's annual budget for HIV alone was over \$490 million, while its general healthcare budget was a mere \$318 million. 2 The ethnography in this paper highlights the weeks before, during, and after a "Community Led Monitoring" workshop (2022) where for the first time criminalized "key population" HIV activist assembled and presented their accounting on where multi-million-dollar HIV funds targeting "key populations" in the country were invested. 3 HIV exceptionalism, in which HIV is positioned as an exceptional disease requiring a unique health and socio-legal response, has garnered funding that has saved millions of lives Presenter: Austin Bryan (Northwest University)

DISCUSSANT:

Aisha Beliso-DeJesus (Princeton University)

DESCRIPTION:

Ethnographies of policing have long focused on the patrol field as the primary site in which to study police epistemes. Anthropologists of police (Barker 1999; Cabot 2018; Salem and Larkins 2021) and interdisciplinary ethnographers of state violence (Alves and Vargas 2017; LeBrón 2019), often using the dominant modality of the police ride-along, have invited us to the streets of Paris where refugees are policed (Fassin 2013), to the back-alley beats of Taiwanese officers (Martin 2019), and elsewhere. Yet, as Tyre Nichols' highly mediatized death at the hands of five Memphis police officers once again reveals in the long citational chain of anti-Black police violence, what happens in the patrol field is not merely evidence of a unitary 'police culture' that can be corrected through diversity efforts, body cameras, or more effective training programs. Focusing the ethnographic gaze solely on sites of 'real life,' street-level police work leaves unaddressed the imaginaries of racialized violence inscribed in training. Scholarship on the possibilities and limits of police reform, both within and outside the U.S. (Akarsu 2020; Babül 2017; Hornberger 2011), suggests the need to transition toward a model of police ethnography that necessarily encompasses sites beyond 'the street.' This panel adjusts the aperture of the anthropological lens to examine how police trainings and paradigms shape the methods, objects, epistemes, and ethics of police, as well as those of the ethnographer. We build on the work of anthropologists like Aisha Beliso-De Jesús (2020) for whom the training worlds of police recruits and instructors cannot be extricated from the settler colonial fantasies and metaphors that render racial imaginaries of violent Black, Brown, and Indigenous neighborhoods shareable, inhabitable, and mobile before recruits enter the patrol field. Such imaginaries are visible today in the ongoing police killings and state abandonment of Indigenous Canadians, the 'Cop City' training facility in Atlanta, and anti-Black and anti-immigrant police violence worldwide. Our panel engages with the following questions: -What do ethnographies of police training allow us to understand that ethnographies of 'real-life' policing do not? What forms of racialized and

gendered violence do they clarify and obscure? What metaphors, temporalities, and performances of 'reality' do they produce? -What conceptual and political distinctions/convergences emerge in comparing (or comparative) studies of police training globally? What do (mis)translations across contexts produce? - How should we parse the politics of anthropologists' engagement in police training, both broadly as a form of 'dirty anthropology' (Jauregui 2013) vis-a-vis our imbrication in state violence, and specifically as a space that seems to compel involvement in 'improvement'? What does such involvement in ethnography's 'double binds' (Zilberg 2016) open and foreclose? - Lastly, by revealing the tacit, teachable models that mobilize policing's racial/izing optics, how might 'studying up' (Nader 1972) in sites of police training offer the anthropology of policing a route to resist the reformism of minor repairs?

Racial (Re)Visions: Staging Anti-Black Optics and "Reasonable Force" in Police Training Scenarios: Police reform remains a contentious strategy for disrupting the crisis of repetition that marks the extralegal murders of Black and Brown Americans by police in the U.S. For scholars of abolition, reform cannot address how these acts of anti-Black and anti-immigrant state violence are not aberrations or exceptional, but rather foundational to policing and, I argue, inscribed into routine encounters between patrol officers and civilians. Based on more than five years of fieldwork with patrol officers and training officers in East County, San Diego, my research takes up these concerns – principally, to find a grammar otherwise to articulate the ordinary anti-Black violence of police-civilian encounters – by ethnographically examining the performance scripts that shape officers' and recruits' training and professional vision in interaction. As a performance ethnographer and volunteer role-play actor in San Diego's police academy, I follow these scripts from academy to patrol field to illustrate how police violence emerges as performative acts of citation that render racialized violence a tacit expectation of training rather than an object of its address. In this talk I will demonstrate how visual logics embedded within these theatrical simulations are constitutive of sociolegal categories like "reasonable force" as recruits and actors improvise scenes together. Performance ethnography in police training sites offers the anthropology of policing an ethnographic view of the racial (re)visions enforced in staged conflicts of asymmetrical threat while suggesting reperformances can visualize the mobility of

performative citations sustaining the asymmetrical conditions of anti-Blackness in and beyond the police academy. Presenter: Christina Aushana (University of California, Santa Barbara)

Officer Safety Time: The Racialized Temporalities of U.S. Police Scenario Training : U.S. police reform advocates often press police departments to shift away from fear-laden “warrior” survival trainings and toward reality-based or scenario trainings, which involve immersively role-playing scenarios such as making an arrest.

Scenario trainings promise to teach officers to suppress fear, counter racial bias, and calibrate uses of force.

Drawing on 16 months of ethnographic research with police officers in Maryland, this paper explores the racialized temporality of scenario trainings. In these trainings, police learn to “think threat first,” enacting a purportedly colorblind temporality of survival whose ultimate imagined adversary is the poor Black civilian. Moreover, scenario trainings that use virtual reality technology—often vaunted as a cutting edge of police reform—tend to produce an airtight conviction that threat could have been present, rendering inevitable the force required to stop it. I examine the legally sanctioned radical presentism of threat perception, in which trainings seal antiblack violence into a single decision point evacuated of history. I also explore the subjunctive certainties—that danger could always exist—that are reinscribed, contra reformist aspirations, through scenario world-building. Finally, I argue that reality-based trainings cement a racialized temporality I call officer safety time, which forecloses the desired futures imagined by reformism. Presenter: Jessica Katzenstein (Harvard University)

The Police/Citizen Inside Out : How do police officers, not just as implementers, but as educators, students, thinkers, and knowledge producers, engage with the question of policing and police violence? As part of my ethnographic research on the implementation of police reforms in Turkey, I followed the 2016 cohort of Turkish Police Academy trainees over a year, sitting in on all of their classes at the reformed Academy. In addition to showing how new security frameworks crept into police education and training curriculums, pedagogies, and routines, my ethnography in the Academy revealed trainees' contradictory ethical and political reflections on 'reform' and “police violence,” accounting for the multiplicity of policing cultures that this process produces. This talk will focus on the ways that soon-to-

be police officers discuss, theorize, and negotiate their role in society, with a particular emphasis on changing fantasies of 'terrorist enemy' and 'good citizen' in the classroom settings. By capturing the trainees' personal stories, aspirations, and classed, gendered, and racialized backgrounds, the talk provides a unique window into the process of becoming state-subjects. I argue that ethnographies of police training and police worldmaking practices are essential, not complementary, for understanding policing in its 'real-life' context. With police reforms turning the police inside out, I propose that anthropologists focus more on police knowledge practices and the pedagogical/dialogical space of their transition from 'ordinary citizens' to 'the police.' Presenter: Hayal Akarsu (Utrecht University)

The Room of Becoming: Where Recruits Learn to Be Cops: Police officers are known to be highly acceptant of rape myths (false beliefs about rape, its victims, and its perpetrators) while investigating sexual assault (Estrich, 1987; Rich, 2018). To probe the impact training can have on reducing this acceptance, I conducted a 2-year ethnographic study at a progressive American police academy. After attending lectures that directly address some key rape myths, recruits are challenged to enact their newly formed police identity and expertise (Agha, 2005; Summerson Carr, 2010; Urciuoli, 2008) in a role-play with an actor-as-rape-victim. The recruits are expected to utilize discursive practices established in the institution of policing (Hall, 1985), merged with the training at this specific academy, as a way of passing the “professional scrutiny” they are about to undergo by trainers (Goodwin, 1994). Using various discourse analysis methods grounded in linguistic anthropology (Bucholtz, 2001; Duranti, 1997; Hymes, 1986; Wortham, 2005), patterns quickly emerged across all recruits. During the role-play the recruits allow for a broader understanding of what rape is and who can be raped, reproducing their training. However, outside of the interviews themselves, recruits rely on their prior ideas on rape, including rape myths, to make statements about victims. By closely analyzing the recruits' linguistic constructions of rape and rape victims both in and out of the role-plays it becomes evident that deeply held rape myths are still prevalent amongst the recruits even after explicit training- an insight only available through ethnographic research at an academy, because of the allowance for comparison of ‘the ideal’ enregisterment of the cop identity to the enactment by the recruits, and

to the performance of their non-cop selves. Presenter:
Britni Moore (Society for the Anthropology of Work)

Two Decades of Police Training in Guatemala: When the peace accords were signed in Guatemala in 1996, a civil conflict of 36 years was ended and created a new civil police force, the National Civil Police (Policia Nacional Civil, PNC). From the start a very important aspect of the police reform process was police training and therefore a new police academy (APNC) was opened in 1997. Police training was almost non-existing before and the low educational level of the police personnel was subjected to criticism and worries. With the help of a multitude of foreign donors' police education was developed at the police academy. This paper discusses the highlights of almost thirty years of police training in Guatemala. It will exam the initial police training given by the Spanish Civil Guards and the United Nations Verification Commission in Guatemala (MINUGUA), the training programs provided by the Dutch Organization for Internationalization in Education (NUFFIC) in 2000s, and the more recent U.S. State Bureau of International Narcotics and Law Enforcement (INL) training. It will show that over the years different donors and different educational models were implemented at the police academy, often blueprints of policing models implemented in other countries. Those programs were not very well adapted to the Guatemalan situation, there was little ownership of the training programs by the Guatemalan PNC or the government and no long-term sustainable police training programs were developed. Plural Governance and Contestations of Power: Multiscalar Approaches

2:15 PM - 4:00 PM

TMCC - 718 B

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Salwa Hoque

PRESENTER:

Salwa Hoque ,Matthew West (George Mason University),Stefan Aykut ,Júlia Savarego (Federal University of São Carlos (UFSCar)/University of

Edinburgh),Raja Swamy (University of Tennessee, Knoxville, Department of Anthropology)

DESCRIPTION:

This panel brings together anthropological approaches to instances of plural governance. Paying attention to the dynamics between actors, institutions, and issues playing out at multiple distinct scales, the papers in this panel grapple with hybrid governance, blurred jurisdictions, and relations between the digital and legal realms.

Applying Legal Pluralism in the Digital Sphere: There is a global trend to digitize law with the assumption that it will improve the implementation of justice. For instance, digital legal databases are used extensively by lawyers and researchers worldwide to gather information as they are assumed to save time and hold all-inclusive resources. This paper documents the shortcomings of digital legal databases in a comparative analysis of Bangladesh's urban secular state courts and rural Islamic non-state courts (shalish) to note how digitizing law reinscribes asymmetrical distributions of power that impacts subaltern Muslim women in the global South in specific ways. I conducted fourteen months of ethnographic fieldwork in Bangladesh to study plural legal systems, archival research to study court records, and semi-structured interviews with Supreme Court lawyers, legal aid NGO workers, rural women, and figures that run shalish: community leaders, religious figures, village elders, and local politicians. The concept of legal pluralism permits conceptualizing law outside a state-centric perspective and broadens the scope to include alternate legal systems that are prevalent in society (Moore 1973; Merry 1988; Tamanaha 2008). I argue that applying the concept of legal pluralism in the online space allows us to 'see' how the current practice of digitizing law relies on modern legal epistemic frameworks and only one version of law – state courts; it erases Islamic legal thought as well as rural Muslim women's understandings of law and their socio-legal experiences. Digital legal databases are neither neutral, nor exhaustive. I develop the term 'neocolonial digitality' to explain how modern epistemic frameworks intimately connect the spheres of the law and the digital, reinforcing racialized and gendered forms of discrimination against rural women in Bangladesh. This work contributes new insights on how technologies replicate historical forms of discrimination as well as generate newer forms of power and exclusion that are not overtly visible. In this paper, I explain two aspects that are visibilized when applying legal pluralism to study digital legal databases. First, the concept of neocolonial digitality emerging from this study provide

new ways to understand prevalent questions of archives and the politics of knowledge. There is much research on how colonial archives can recycle hegemonic narratives, but also provide grounds for counter-narratives (Spivak 1988; Trouillot 1995; Gandhi 1998; Stoler 2010). There is, however, much less research on how legacies of colonialism and neocolonial power can operate through digital archives and disproportionately disseminate knowledge that can harm marginalized communities in postcolonial states in the global South. Second, analyzing digital databases is critical since they provide the datasets that artificial intelligence (AI) is trained on. If the digitized data is biased, then the automated outputs will inevitably generate skewed results. I focus on how AI Judges – that is using artificial intelligence to generate legal verdicts – are trained to replicate the judgements made by elite state courts. While AI is considered neutral, applying legal pluralism in this context demonstrates how such tools are trained to follow only one form of legal reasoning, which might not align with alternate frames of justice. Hence, the biases employed by elite state courts are reinscribed in legal automation. Presenter: Salwa Hoque

'From Pirates to Patents: A Story of Structure, Chinese Values, and Transitions between Secrecy, Property, and the Nation in Taiwan': This paper tells the story of two transformations centered on the making of Taiwanese patents. At a micro-level, it tells the story of the making of property out of corporate secrets as patent engineers translate technical skills from the lab into the logical language of the law. Secrecy is a boundary-making process and the Taiwanese semiconductor company I conducted participant observation fieldwork in abounded in instruments to protect such knowledge from dispersal. Patents, on the other hand, though emerging from corporate secrets are almost an inversion of them; while preventing the exercise of knowledge, they also disclose that knowledge broadly. The process of transitioning from one to the other in a way that gives future owners power to influence global supply chains has taken the emergence of a new kind of legally-oriented engineer. At a macro-level, this paper also tells the story of Taiwan's own industry-wide transition from accused 'pirate' to an increasingly vocal advocate for stronger, rather than weaker, intellectual property protections. I argue that this latter transition, and the fact that China has not, yet, done the same, is best explained in terms of economic structures, the accumulation of legal knowledge, and the production of patent engineers rather than in terms of reified ideas of 'culture' deployed as either Chinese values or a Chinese

culture of piracy. Presenter: Matthew West (George Mason University)

Circles of Global Climate Governance. Power, Performance and Contestation at the UN Climate Conference COP26 in Glasgow: The presentation examines the UN climate conference (COP26) organised in Glasgow in November 2021 as a transnational mega-event, which constituted not only an important moment in international climate talks, but also a temporary convergence point for a multitude of actors and an arena for conflicts and contestation over framing within a broader global policy space. This perspective draws on collective ethnographic observations at COP26. It allows offering a more comprehensive view of the current state of global climate politics than analyses focused mainly on the negotiations. Over two weeks eight researchers from different backgrounds and with distinct positionalities explored the material, spatial and social dimensions of the conference. We identify three circles of climate governance, which framed practices, interactions and debates in Glasgow. These comprise an inner circle of state-led negotiations ('The In'), an official side programme ('The Off') and a relatively heterogeneous wider environment of self-organised events ('The Fringe'). Each circle is populated by a different set of actors and enacts a distinct representation of 'the global'. Our analysis of dynamics within each of these circles shows that climate governance has entered a new and contradictory phase, where some boundaries are blurred while others are reaffirmed, and where old conflicts resurface while new dividing lines appear. The Paris architecture for reporting and review has been finalised, but thus far the new approach has failed to close gaps between pledges and objectives for mitigation and climate finance. Global political and corporate elites have seemingly come to acknowledge the climate emergency and the need for a global low-carbon transformation, but the solutions proposed in Glasgow remained partial and fragile, and tightly contained within the dominant horizon of capitalist market- and techno-fixes. The communication strategy of the UNFCCC and the UK Presidency used increasingly radical terms to convey urgency and momentum, which in turn risked emptying activist notions of their content and force. A growing part of the climate movement reacted with critiques of corporate takeover and calls for 'real zero' instead of 'net zero'. In the conclusion, we examine a series of contentious issues, and provide avenues for reflection on the future of climate governance and on the use of global event ethnography as a methodology. Presenter: Stefan Aykut

The embedded relationship between settling and evicting: Capão das Antas Camp (São Carlos, SP - Brazil) transitioning to an Agroecological Village: This paper presentation aims to ethnographically reflect on the transition taking place at Capão das Antas Camp - a rural occupation of struggle for Agrarian Reform (at São Carlos city, São Paulo State, Brazil). For over 11 years, the Camp was targeted by a repossession process whose claimant, and owner of the land, was São Carlos City Hall. The pretext used to legally defend the eviction was to recur to the different Environmental Laws that rule over the land occupied by the acampados. After years of struggle, it is precisely another approach of the environmental expertise argument that is used to legitimize that people from Capão can remain in the land while securing the protection of the area. However, only around 80 of the 200 families living in the camp would be settled according to the Agroecological Village project. During the presentation, I shall explore the tensions between a settlement process that inherently has eviction in its core, as many other apparent opposition pairs that are more fluid, embedded, and fulfilled of contingencies than hasty analyses would point. I argue that the many differentiation processes are part of the legal management of lives, which must be constantly transformed into juridic categories. But the proprietary language of Law fails in contending the complexity and multiplicity of life. And what seems contradictory is precisely what guarantees the working apparatus of the Law. It is not simply a matter of legal practices that do not resonate with legal theory. It is not a paradox, it is the way the State management invades our and other beings lives. New relations and home recreations arise from the State machine. People from Capão das Antas are daily confronted by attempts of life simplification while they simultaneously occupy the land and the Law in a resistance movement intrinsic to their struggle for living another world. Presenter: Júlia Savarego (Federal University of São Carlos (UFSCar)/University of Edinburgh)

Rhythm, Rift, and Rupture: steps towards a critical disaster studies framework: This paper presents an anthropologically grounded theoretical framework for a critical disaster studies. If disaster studies is to go beyond simply restating the obvious truths of our time – that vulnerability and risk disproportionately burden the poor and marginalized, or that systemic historical patterns and practices of structured violence impinge upon the well-being of much of humanity, – it needs to place at center the politically urgent questions of our present moment, specifically climate catastrophe and the ever-destructive scourge of capitalism that promises

to only intensify and worsen disaster events and processes. What disasters reveal for us are not merely inequalities and maldistributions but fundamental contradictions of the dominant way in which life is ordered on earth, that demand politically transformative rather than reformist responses. I argue for a critical disaster studies approach that links the micro processes of life-making with the macro processes and underlying contradictions shaping the contours of deepening capitalist exploitation. Moving beyond a focus on vulnerability I argue for a centering of exploitation, both of humans and non-human nature. Such normalized everyday processes feed the accumulation needs of capital at the expense of both humans and non-human nature, but also impose harms on the bodies and lives of those providing labor or too politically weak to protect themselves. These ecologically catastrophic activities are not aberrations but rhythmic everyday practices embedded in normalized productive inequalities, the metabolic rift that capitalism embodies. This rift cannot be addressed by simply calling for a redistribution of harm or wealth, or by tempering the activities of profit-mongering corporations, but by questioning fundamental assumptions of our liberal capitalist political and economic order itself. A critical disaster studies therefore links micro practices to systemic contradictions, and then further towards examining the political possibilities of systems in crisis, when dominant assumptions driving the conduct of life come undone and new understandings are fought over, such as the growing fight to define the terms of how we ought to understand the meanings and possibilities of climate action. By linking thus rhythm, rift, and rupture, a critical disaster studies moves towards more firmly tying critique to politics, and in doing this must also link its concerns with multiple sites of political struggle against capitalism and the range of social tyrannies it feeds upon, but also necessarily for an ecosocialist future that links social and ecological well-being and rejects all forms of exploitation. A theoretical endeavor such as this one must of course be grounded in concrete case studies, and as such I draw upon two concrete case studies on everyday precarity, deepening systemic contradiction and political rupture with ecological and political implications on a planetary scale. I draw upon studies focusing on the crisis of marine fisheries and the oceans on the one hand, and on the disastrous trajectory of fossil capitalism on the other. Both are useful for a consideration of two key problems confronting a critical disaster studies attentive to systemic contradiction and political possibility: the normalized everyday life-making processes deemed vital

while also exploitative and destructive, to the urgent need to rethink how humans relate to nature, and to each other. Presenter: Raja Swamy (University of Tennessee, Knoxville, Department of Anthropology)

Remembrance, recognition, and belonging in late life

2:15 PM - 4:00 PM

TMCC - 802 A

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Olivia Killias

CHAIR:

Casey Golomski (University of New Hampshire, Department of Anthropology)

PRESENTER:

Victoria Kumala Sakti ,Thalia Gigerenzer (Princeton University, Department of Anthropology),Rivka Eisner ,Olivia Killias

DISCUSSANT:

Jessica Robbins-Panko (Wayne State University, Department of Anthropology)

DESCRIPTION:

In this panel, we explore how late life is shaped by remembrance, belonging, and recognition. In public representations, older adults tend to get essentialized as passive, oriented towards the past, embodying conservative political values – in opposition to supposedly active, progressive youth (Coe & Thelen 2017: 3; see also Robbins 2021). Cati Coe and Tatjana Thelen have recently criticized such representations and argued that in the last decades of the twentieth century, anthropologists have partly participated in them, by tending to depoliticize old age (2017:2). By focusing on 'remembrance', we want to bring questions of political recognition and belonging back to the heart of the conversation about old age. In her groundbreaking ethnography *Number Our Days* (1979), Barbara Myerhoff vividly described how older Eastern European Jewish residents of Venice, California, reflected about their long lives, bonded and argued in 'living history' classes that she organized, and shared an acute sense that their ways of life would be 'lost' after their passing; participating in Myerhoff's research was interpreted by them as a way of transmitting their memories. While Myerhoff's interlocutors were socially marginalized, there are other instances in which older adults have

been politically singled out as important historical witnesses and encouraged to 'perform remembering' for the generations to come (Eisner 2018; see also Robbins 2021). Moral personhood in old age can be premised upon the ability to participate in remembering a shared past. Yet anthropological work, especially in the literature on dementia (e.g., Kontos, 2006; Taylor, 2008), has long shown the importance of considering memory beyond cognition, 'as grounded, embodied and at times resistant practice' (Kidron 2016). When older Poles (some of them diagnosed with Alzheimer's) sing patriotic songs together in a daycare center, as described in Jessica Robbins' work, remembrance, both cognitive and embodied, is experienced as a source of sociality (Robbins 2021). Even in the wake of histories of violence, injustice, and injury, a shared past can be a source of sociality, as in Casey Golomski's depiction of black nurses and white residents joking 'despite and because of radical difference' in the aftermath of apartheid in a South African nursing home (Golomski 2020: 286). In such contexts, however, the past can also be the source of suffering, animosity, or resentment. In this panel, we engage these issues by addressing the following questions: How do forms of remembrance draw on collective pasts? Whose pasts, and which kinds of past relations, are brought into the present, and which are foreclosed? What kind of moral sentiments have those pasts produced among older adults? How do forms of care in late life foster or inhibit remembering? And how is remembering – as cognitive, material, sensory, or embodied practice – related to social and political recognition (see Taylor 2008)? We encourage panelists to engage with these issues, while also reflecting on their positionalities. As anthropologists, we are often directly confronted with the question of what needs to be remembered and by whom, and it shapes our fieldwork in crucial ways: one of the reasons people participate in our research is because they want their narratives to be heard (and remembered) by others. This panel is collaboratively organized by Olivia Killias and Jessica Robbins-Panko.

Dealing with difficult pasts in later life: Remembrance as repair after violence in Timor-Leste: In the aftermath of massive violence, there is often an acute need to make meaning and achieve shared understandings of past experiences of violence, grief, and loss. Collective remembrance is essential to this process. In post-independence Timor-Leste, commemorative practices draw on memories of past traumas during the Indonesian military occupation and their ongoing effects. These events bring together individuals, families, and communities to collectively "perform

remembering” of specific pasts, to remind others (including the state) of forgotten or silenced memories, and reaffirm their sense of belonging and place in history. Older East Timorese play a crucial role in preparing and facilitating commemorative practices due to their ancestral and ritual knowledge. However, they have also endured multiple wartime experiences and displacement during the Indonesian regime, which can have long-term and far-reaching implications on their physical and mental health, as well as their familial and communal bonds as they age. Despite this, little attention has been paid to the effects of memories of difficult pasts on the ageing experiences of the East Timorese population, particularly in West Timor. Based on long-term ethnographic research with East Timorese communities in Timor-Leste and Indonesia, this talk examines the narratives and embodied practices of remembrance among older adults. It focuses on what kinds of remembrance practices are used, what goals they serve, how past (and contested) memories of violence manifest in late life among older East Timorese, and how families provide care, foster or inhibit the remembering of specific pasts. This talk aims to contribute to current anthropological scholarship on ageing that challenges predominant views of older people as passive (Thelen and Coe 2019; Robbins 2021). Instead, it highlights how older East Timorese are often at the forefront of repairing ruptured bonds through remembrance practices. Presenter: Victoria Kumala Sakti

Irfan’s Story: Memories of Displacement Among Elderly Muslims in Delhi, India: This paper explores the relationship between memory and place-making among elderly Muslim residents of low-income neighborhoods in Delhi, India. I focus on the life story of Irfan, who migrated to Delhi from a small village in the 1970s and experienced multiple slum evictions in the city. The experience of slum eviction—in which slum residents were told, often without advance notice, to vacate their homes overnight—featured prominently in Irfan’s narrative of his life, affecting the most intimate life events such as his marriage and the birth of his children. As Emma Tarlo has noted, for much of India’s urban poor, the experience of slum eviction did not only mean a loss of one’s physical home. It also resulted in a profound loss of a social world and sense of belonging, especially for India’s marginalized Muslim population (Tarlo 2003). In centering Irfan’s story of displacement, this paper asks: what kinds of collective memory of place are possible amidst conditions of acute housing precarity? How can shared pasts be kept alive in situations of constant displacement? In paying close

attention to the way Irfan vividly evoked the landscapes of places he had lived, I argue that elderly, low-income Muslims creatively resisted their own displacement through a particular kind of narrative, which kept alive memories of places that had been lost or destroyed. For example, Irfan evoked the sweetness of mangoes in his ancestral village alongside detailed descriptions of the particular smells of different neighborhoods in Delhi. Throughout the paper, I show how Irfan’s narrative challenges the idea of a singular, individual life story: this becomes evident in the way his narrations were constantly interrupted, contested and retold by his family members. Presenter: Thalia Gigerenzer (Princeton University, Department of Anthropology)

“For those who surround us”: A Vietnamese daughter practices care across geography and generations: Daughters in Vietnam are often the primary caregivers for aging parents. Traditionally, married women live in patrilineal, multi-generational homes and end up caring for in-laws, as well as their own mother and father, in old age. At the same time, Vietnam’s turbulent twentieth century of colonialism, war, and rapid modernization has shattered, reconfigured, and stretched notions and enactments of “traditional family” into new forms, even while feelings of moral duty and love continue to hold. Due to war, the daughter at the center of this story describes “first meeting” her mother at age twenty-one, when she was already a young adult. Though her mother spent over two decades fighting in the American War, the daughter was drawn to graduate school in the United States, where she now resides part time. Despite her mother’s absence during her own childhood, this choice of living abroad carries deep feelings of guilt for “not being there” as her mother grows older and unable to care for herself. Drawing on ethnographic fieldwork with Vietnamese women veterans, familial interviews, and conversations between friends of over twenty years, this paper addresses practices of collective remembering, filial responsibility, love, and belonging through one diasporic daughter’s efforts to care for her aging, veteran mother with late-stage Alzheimer’s in Ho Chi Minh City. Specifically, she and I wonder together: what is it to perform care and love for a dying parent from afar? If a typical family structure is broken by war, how can it be remade and remembered across generations? What types of gendered, moral obligations for filial care remain, and what has changed, amidst the expansive socio-cultural transformations taking place across contemporary Vietnam? This small study of particular lives seeks to explore what can be learned about collective forms of remembrance, family-making,

care, and belonging through performances of, and divergence from, norms of filial duty. Presenter: Rivka Eisner

Caring for a shared past: eldercare as recognition in the aftermath of Dutch colonialism: Grounded in ethnographic fieldwork in a 'culturally specific' nursing home in the Netherlands, this paper explores volunteers' involvement in eldercare, and asks how they articulate caring for older residents with caring about a shared past – a past that is framed both as cultural heritage and traumatic history. Catering to the needs of older adults broadly defined as 'Indisch', most of them born and raised in the colonial Dutch East Indies, Indisch nursing homes have a long and colonially inflected genealogy. I argue that in the contemporary Netherlands, Indisch eldercare is presupposed upon a logic of (late) political recognition – recognition for trauma, losses and injustices suffered during World War II and the subsequent 'repatriation' to the Netherlands. Volunteers play a key role in this process of recognition. As in other nursing homes in the Netherlands, in the wake of eldercare reforms, volunteers have become an essential part of daily life in the institution: they assist paid staff with the cooking of meals, organize bingo afternoons, take residents for walks, or organize large public World War II commemorations. Hence, for volunteers, often adults claiming Indisch heritage themselves, care goes beyond the daily care for frail residents to include care about a shared colonial past, of which nursing home residents are considered to be the last living witnesses. Focusing on volunteers, I explore how their care practices foster remembrance, how residents with dementia change the terms of what remembrance might mean, and more generally, how remembrance in late life is tied up with collective negotiations over the colonial past and questions of belonging in the postcolonial present. Researching and Writing Lives in Transition: The Ethical and Epistemological Challenges of Studying Individuals and Communities in Flux

2:15 PM - 4:00 PM TMCC - 717 B

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Christina Woolner (University of Cambridge)

CHAIR:

Christina Woolner (University of Cambridge)

PRESENTER:

Lisa Gilman (George Mason University), Alex Perullo (Bryant University), Christina Woolner (University of Cambridge), Kenedid Hassan

DESCRIPTION:

Transitions are processes of change during which individuals and communities undergo transformations that impact their sense of self, relationships with others, and social roles. These transformations may be desired and intentional, filled with a sense of joy and hopefulness about what is to come, or they may be overwhelming and disorienting, fraught with anxiety and uncertainty and accompanied by feelings of grief or loss. Whether these processes occur on a personal level, such as changing jobs or dealing with a bereavement, or they involve more wide-reaching political or environmental upheaval – or even disciplinary transformation – periods of transition offer anthropologists unique opportunities to understand how humans are constantly working to re-make themselves and re-frame their place in the world. Yet studying transitions, and writing about lives in transition, comes with its own set of ethical, and epistemological challenges: What happens when transitions (inevitably) exceed the boundaries of a given research project, and our lives as researchers become entangled in the lived transitions of others? How are we to make sense of the 'before' and 'after' when memories are malleable, and futures are unknowable? What are we to do when the uncertain consequences of transitions press upon our own senses of self, and the responsibilities we feel towards others? What are the effects of making normative assumptions about the nature of 'transition' in others' lives? How best might we write about moments in time that we know to be inevitably transitory and fleeting, and when epistemological regimes are themselves in constant flux? This panel considers these questions through a range of research encounters that bring the challenges and possibilities of researching, representing and experiencing transition into focus: Lisa Gilman reflects on the ethical and methodological issues that arise when doing fieldwork with refugees, people whose lives are by definition precariously in flux. Alex Perullo draws on neuroscience to examine the malleability of people's individual memories, which can impact approaches researchers take to studying the lives and transitions of individuals and communities. Christina Woolner considers how the sense of grief that comes with the passing of two primary research interlocutors might

help us to re-think how we write about inevitably transitory research experiences. And Kenedid Hassan considers the real-world implications of research agendas that make normative assumptions about social and environmental transition and the desirability of change. Collectively, contributions to this panel encourage reflection on the ethical and epistemological challenges of studying and representing transitional life experiences, and the emotional work that this requires from us as researchers. In doing so, we aim to promote a deeper appreciation of the consequences of transition in the lives of our interlocutors and in our own lives as researchers.

Fieldworking in Motion: Ethical and Methodological Reflections about Doing Research with Refugees : I am currently working on a global, multi-sited project about arts initiatives by displaced peoples/refugees for displaced peoples/refugees. This ethnographically-driven project seeks to counter negative homogenizing discourse about refugees by humanizing and bringing visibility to the real lives and experiences of diverse displaced people across the world. The first phase is with Syrians in Turkey, Uyghurs in France, and Congolese, Burundians, and Rwandans in Malawi. The project is set within motion: individuals and communities who are in transitional, liminal states caused by emotional, cultural, geographic, linguistic, political, and physical upheaval. Since the project started (virtual and in-person fieldwork began in 11/2021), events have produced additional small and dramatic transformations for the people at the center of the research: marriages, childbirth, illnesses, death, shifts in legal status, resettlement to new countries, and the earthquake in Turkey and Syria that killed, retraumatized, and re-displaced thousands of Syrians. In my presentation, I reflect on ethical and methodological questions associated with researching within this messy tangle of transitions. Is it ethical to do research in these settings? What should the research goals be, and who should determine them? How does one do research on trauma without retraumatizing? How do fieldworkers address their own emotions? When, how, and whom should or can fieldworkers help? How does one present information when the truth may be unclear or itself be transitory? How does one write or present when there may be dangerous risks in making things public?
Presenter: Lisa Gilman (George Mason University)

Malleable Memories: Interviewing and Memory in Comprehending Life's Transitions: In conducting ethnographic interviews, researchers rely on other people's memories to comprehend social, cultural, and

historical situations. Recent research in neuroscience, however, demonstrates that our memories undergo numerous forms of transition and transformation both over time and during the recall process. In addition to forms of decay that can occur with memories over time, we also experience interference where forms of noise can alter or shift our memories in substantial ways. We can also make errors in retrieving information where those errors can then be encoded and stored with the original memory. This reconstruction not only alters the original memory, it can also impact other, connected memories. These elements of decay, interference and reconstruction illustrate that memory represents a process that is both malleable and transitional. Through comprehending the dynamics of memory, this paper argues that researchers can develop novel approaches to both interviewing and working with information learned in interviews. Rather than conceptualizing interviews as static records, researchers can develop approaches that draw on the dynamics of memory to better comprehend motivations, interests, and beliefs entangled in people's memories. In other words, the changes that occur in memories can reveal people's personal transitions in their own lives. This allows researchers to draw on the malleability of memories to better reflect on and comprehend transitions in life documented in the interview process. Presenter: Alex Perullo (Bryant University)

Writing Lives After Death: A Reflection on Friendship, Loss, and Narrating Transitory Encounters: Shortly after I arrived in Somaliland in 2015 to begin research on the social and political lives of love songs, a friend gave me some advice: "Interview the big guys before it is too late." I heeded his advice enthusiastically, though only in retrospect did I come to understand the gravitas of its time-sensitive nature: in 2022 the two artist-interlocutors and friends who most profoundly shaped my research—the beloved singer Khadra Daahir and celebrated oud-player Cabdinaasir Macallin Caydiid—passed away. This paper attempts to make sense of the complex mix of personal loss and professional anxiety that their deaths precipitated, especially in relation to what it means to write about research encounters that are inevitably transitory. Drawing on anthropological and phenomenological accounts of grief, I ask: What does it mean to grieve people who were interlocutors, but also friends? Can or should we let grief seep from the realm of felt experience into our scholarly writing? Does death—perhaps the ultimate life transition—shift the dynamics of our authorial and ethnographic responsibility? While I ask more questions than I answer, I ultimately suggest that grief might work to

bring into sharper focus inherently transition nature of ethnographic research and the ethical-political questions of representation that should always shape our writing, while simultaneously softening the edges between the personal and the analytical in favour of celebrating the intimate entanglements that make ethnographic praxis itself potentially so transformative. Presenter: Christina Woolner (University of Cambridge)

Researching Frankincense in Somaliland: A Note on Methods : Knowledge about frankincense producers in Somaliland has been shaped by successive and evolving research regimes: from colonial and postcolonial administrations that gathered data for specific political and economic ends, to contemporary research informed by environmentalist concerns and a proclaimed commitment to participatory action-driven research and 'impact'. While the research field is in constant flux, each of these research regimes has claimed to have the interests of 'marginalized' and 'poor' farmers at their core, while making normative assumptions about the desirability of social change and the transformation of the frankincense sector. Based on six years of research with frankincense producers, Somaliland policy-makers and international industry and environmentalist stakeholders, this paper will reflect on the underlying political and epistemological assumptions that these evolving research regimes each make, and the effects of this research on the livelihoods of frankincense producers. Presenter: Kenedid Hassan

TMCC - 709

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Kathe Managan (University of Louisiana at Lafayette)

CHAIR:

Christa Burdick (University of Massachusetts, Amherst, Department of Anthropology)

PRESENTER:

Kathe Managan (University of Louisiana at Lafayette), Christa Burdick (University of Massachusetts, Amherst, Department of Anthropology), Anita Zandstra, Kristina Wirtz (Western Michigan University)

DISCUSSANT:

Monica Heller (University of Toronto, Department of Anthropology)

DESCRIPTION:

Anthropology's abiding interest in practices of placemaking has never ignored the role of linguistic and semiotic processes inherent in constructing and circulating place-based identities or positionalities (Agha 2005; Basso 1996; Gal and Irvine 1995, 2019; Irvine and Gal 2000). Heller, Jaworski and Thurlow (2014) suggest that the contemporary period is simultaneously characterized by mobility, as being in place becomes a temporary condition, and by a desire for stability and emplacement. Within the transitions and transformations inherent to late capitalism, the modalities, ideological frameworks, and conditions of possibility for the regimentation of emplaced identities have shifted dramatically, leading scholars to similarly shift their attention to the processes through which value is attached to, or communicated through, place and language (e.g., Cavanaugh and Shankar 2014, 2019; Duchêne and Heller 2012; Heller 2011). This panel approaches such processes of valuation and evaluation of language and place as concomitant and scalar-characterized by the regimentation of relationships along many dimensions, including between the local and global, the traditional and modern, and the profitable and unprofitable. Following Lempert and Carr (2016), we understand scales-such as the global or the local- not as concepts that exist a priori in the world, but as semiotic and ideological constructions, made, resisted, and embedded within diverse power relations. While an authoritative anthropological theory of value has proven elusive (Graeber 2001), this panel engages a broad array of ethnographic sites to consider the similarities and differences that emerge in diverse valorizations of both language and place, emplaced language, or 'languaged' place. By what semiotic processes are such valorizations accomplished and scaled, and by what systems of power are they enabled or constrained? What tensions arise within perhaps competing articulations of value as locally meaningful and/or economically profitable? Our papers explore how social actors navigate their social worlds, engaging in scalar evaluations of language and place in a variety of contexts. Managan considers a transition in discourses on the value of French in Louisiana from a symbol of local ethnic heritage to an economic asset in the global marketplace, especially via tourist connections to the francophone world. Burdick studies branding practices in France, where experts learn to communicate diverse places as 'attractive' (along axes of profitability and authenticity) while negotiating their

own expertise as agents for a place's promotion as well as aspects of its governance. Zandstra analyzes the production/scaling of localness/globalness in Bolivian memes that draw on discourses of regional, national, and foreign. Patlan uses a dialogical and ethnopoetic approach to study Kichwa cultural production for local/global markets in the context of local language loss and a more global (hemispheric) Indigenous identification. Wirtz examines scaled evaluations of multilingualism and language learners in a dual language school in the US Midwest, where a salient contrast emerges between Spanish as a heritage language and as a global language.

The contested value of French heritage in Louisiana : Drawing on insight from scholarship such as Duchêne and Heller (2012), Heller, Jaworski and Thurlow (2014), this paper explores a transition in discourses on the value of French in Louisiana. Whereas French language activism in the late 1960s centered on the value of French as an index of Louisiana's distinctive Cajun ethnic identity, more recent efforts conceptualize French as a valuable economic asset that can give Louisiana citizens an advantage in the global marketplace. For example, Nous Foundation, established in 2020, organized an Economic Forum in January 2023 with the motto "French means business in the United States." The event featured a job fair and talks on topics such as "Tourism, culture and economy in Louisiana." This is an important shift in thinking about the value of French, since efforts to provide French-language education to Louisiana's students often run up against claims from parents and lawmakers that French has no practical value in the US today. My research centers on tourism because of its prominent role in Louisiana's economy, its ability to attract francophone visitors and its promise of employment to students who learn French. Drawing on participant observation, focus groups, interviews and surveys, this paper analyzes competing claims about the value of French in Louisiana, including its value in attracting French-speaking tourists and their money to the state. I consider the semiotic process by which the value of French is evaluated and its implications, including a shift from a "chronotope of heritage" (Cavanaugh 2019) to a chronotope of modernity and a shift from valorizing "Cajun French" as distinctive local identity to a focus the utility of French is connecting Louisianans to the wider francophone world.

Presenter: Kathe Managan (University of Louisiana at Lafayette)

Placing Value and Valuing Place: Place Brand Expertise & the Semiotics of Territorial Attractiveness: Over the last thirty years, the once novel practice of place branding

has grown so ubiquitous that current attempts to "sell" place (as an enregistered set of carefully selected semiotic resources) now seem almost commonplace. And while scholars have increasingly shown that the success of any place branding project is never guaranteed (see Graan 2013), relatively less ethnographic attention has been paid to the professional development of place branders and marketers, whose daily work includes arguing for the economic value of a defined place. This paper attends to emergent semiotic (e)valuations of place within discourses and metrics of territorial attractiveness as they unfold at academic and practitioner place marketing conferences—authorized institutional spaces where representatives from quite diverse places assemble to share theories, learn best practices, and network. Drawing on fieldwork conducted at three major conferences and interviews with practitioners in Strasbourg, France, I examine the competing value regimes that emerge across expert discussions and shouted disagreements over how to make any place "attractive" to a global audience, while maintaining older commitments to transparency, good governance, and authenticity for (certain) local inhabitants. I approach the ideological work of place brand experts—as well as their own situated enactments of expertise (Carr 2010)—as contingent upon myriad acts of semiotic differentiation (Gal and Irvine 2019) in which the qualities, perspectives, and scales of place (and their promoters) that are understood as valuable are distanced from those that are not, but never uncontestedly so. Presenter: Christa Burdick (University of Massachusetts, Amherst, Department of Anthropology)

Discourses of foreignness and contestatory identity positioning in a Bolivian meme cycle : In November 2022, amid anti-government protests in Santa Cruz, Bolivia, a novel meme cycle announced a surprising new hybrid identity: the "Croaceños," a fusion of the Spanish demonyms *croatas* ("Croats") and *cruceños*, or residents of Santa Cruz. These memes were a mocking response to the words of a prominent supporter of Bolivia's national government, who had recently issued an ultimatum to Santa Cruz-based opposition leaders, calling them "Croats" and "Yugoslavs" and accusing them of promoting separatism in the Bolivian lowlands. In this paper I argue that the *Croaceños* memes contribute to the construction of a contestatory identity position that people from Santa Cruz mobilize in ongoing debates about regional difference and national belonging. I call this identity position contestatory because it responds (Spanish: *contestar*) to an

opponent's provocation by contesting its logic. By tracing the history of talk about foreigners from the Balkans in Bolivian political discourse, I show how the governing party discursively dislocates Santa Cruz from the Bolivian body politic—and how the memes created by Santa Cruz residents respond by producing locality (Appadurai, 1996) through humorous claims to identity on a global scale. I also draw parallels between the Croaceños memes and another discourse of foreignness that was coopted by its target group: the “polacos” (“Polish”) epithet aimed at Catalans by other Spaniards (Woolard, 2016). In both contexts, I show how regional political movements reframed their opponents' words as comic incongruities, playing on conventional scale relations and repurposing discourses of foreignness as a badge of local pride. Presenter: Anita Zandstra

Scaling the value of multilingualism in the United States : A striking aspect of the 2017 AAAS report, “America’s Languages: Investing in Language Education in the 21st Century,” is how it narrates the value of learning languages by scaling different categories of language and degrees of learning into distinct regimes of relative value. For example, the value of knowing a “world language” “is critical to success in business, research, and international relations,” whereas minoritized languages are “the object of school- and community-based reclamation and retention efforts.” I compare this powerful institutional scaling project to similar regimes of contrasting value produced in interviews with students of a midwestern-U.S. dual-language public elementary school (2013-2017). Similar ideological work across the “expert” narratives and the children’s interviews demonstrates how scaling projects are part of children’s language socialization at school. Both articulate widespread American language ideologies as contrasting scalar narratives emplacing speakers and language functions. Spatial scaling is brought together with the scaling of temporal trajectories and social stratifications of language learners to present “commonsense” arguments for the value of language education. Prompted by these scales of value, interview questions about the school’s dual language approach, and an interactional frame contrasting adult and child positionalities, the young language learners sharply differentiated the value of English and Spanish when narrating the significance of being bilingual for their own lives. My goal in offering this comparative analysis is to denaturalize these scale-making projects while showing their role in the pervasive regimentation of value with regard to language learning and multilingualism in the U.S. Presenter: Kristina Wirtz (Western Michigan University)

Melinda Gonzalez (Rutgers University)

CHAIR:

Melinda Gonzalez (Rutgers University)

PRESENTER:

Gerpha Gerlin (Northwestern University), Maria Hamilton

DISCUSSANT:

Brittany Franck, David Kofi Mensah (Northern Arizona University, Department of Anthropology)

DESCRIPTION:

Since 2020, anthropologists have been navigating the ongoing threats of COVID-19 and increasing disastrous events. From forest fires, to earthquakes, to hurricanes, war, and concerns over illness, researchers have faced increasing mental health strains to their own personhood while observing their research participants experiencing declining mental health. In these past few years, we have wondered: what is the cost of conducting ethnographic research while confronting constant threats to our own lives? How can we do research that doesn't reproduce structural or institutional harms to our research participants and students? And how can we rethink our methods, theoretical approaches, and the dissemination of our scholarship through new paradigms that address the material realities of both researcher and researched? In this virtual roundtable lead by the Anthropology and Mental Health Interest Group (AMHIG), we consider the impacts of ethnographic research to the mental health of researchers and participants as well as the unique role of the Anthropology of Mental Health in addressing such concerns. We will discuss and consider transdisciplinary approaches and solutions to ongoing mental health crisis amongst students, faculty, and research participants, including the use of poetry and performance, the arts as method, and collaborations with clinical mental health professionals.

1-255

The Inequities of Green Transitions and Technoscientific Solutions

2:15 PM - 4:00 PM

TMCC - 801 A

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Erin Fitz-Henry

PRESENTER:

Erin Fitz-Henry ,Anna Bettini ,Martin Gubsch ,Julia Radomski

DESCRIPTION:

This panel examines the inequities embedded in 'green' transitions. Presenters consider how climate programs and technoscientific interventions shape environmental governance, knowledge, and practice. Papers explore a range of topics and research sites, including the role of racial justice movements in the U.S. and Bolivia in defining 'just transitions,' renewable energy and the legal conflicts around land in Canada, the tension surrounding industrial development and renewable energy in Colombia, the role of Silicon Valley in Argentinean agriculture, a failed hydroelectric project in the Ecuadorian Amazon, and an emerging enthusiasm for biodiversity as a valuable resource in Colombia.

From 'Just Transitions' to Reparative Transformations: This paper reflects on one aspect of the rapidly growing body of interdisciplinary research on just transitions toward post-carbon economies that we think has not been robustly enough explored: the difference that reparative approaches to historical injustice might make to how these transitions are conceptualized and enacted in different parts of the world. To advance this argument, we turn to recent anthropological scholarship on reparations (Schirrer 2020; Edoh and Umubyeyi 2021; Ferdinand 2021), and particularly reparations for slavery, colonization and genocide, to draw out critical insights that might helpfully expand and redirect scholarship on just transitions to more fully address the needs not just of workers and affected communities, but the ongoing legacies of what Olufemi Taiwo has recently called, the 'global racial empire' (Taiwo 2022). Specifically, we draw attention to the need for just transitions work to 1) draw on broader temporalities that foreground the long afterlives of colonial genocide and slavery; 2) more thoroughly recognize geographical interconnectedness across nation-state boundaries; 3) redirect processes of highly racialized global

distribution; and 4) attend to more radically 'pluriversal' possibilities for rectifying these inequalities (Escobar 2019). We anchor our discussion in preliminary interviews with US-based racial justice movements alongside close readings of the reparative demands embedded in the Cochabamba People's Declaration in Bolivia (2010) and the Black Hive's Black Climate Mandate in the US (2022). By analyzing these reparative arguments, we make the case for an anthropology of climate change, and specifically, of just transitions, that attends more carefully to the growing intersections between racial and ecological justice and to the creative range of transition proposals that are currently taking shape at these intersections. Presenter: Erin Fitz-Henry

Nature Conservation vs. Renewable Energy Farms: Land Grabbing, Contested Spaces, and Legal Actions in Alberta, Canada.: In the last decade, a boom in the construction of solar and wind farms has begun in the rural areas of Alberta. Through this development, the provincial government hopes to create more job opportunities while benefitting small communities with lease and property tax payments and community funds. However, as these projects have expanded, local opposition has risen on land use, conservation and preservation of environmental, cultural and scenic values and impacts on farming activities. Not-for-profit environmental organizations and conservationists have expressed concerns about the siting of these renewable energy projects, demanding more regulations to protect local flora and fauna. Through legal proceedings and actions, community members and local not-for-profit organizations have attempted to make their voices heard in increasing regulations on siting for renewable energy projects to protect the local flora and fauna. Tension and disagreements with renewable energy companies have caused many to consider the green energy transition negatively, reverting to support oil and gas companies that, with their social license to operate, have established stronger ties with these communities. Drawing from ethnographic fieldwork in rural Alberta and recent legal cases developed opposing renewable energy projects, this paper discusses the social challenges within energy scapes that diverse groups are facing. In my presentation, I argue how different types of justice when developing green energy infrastructures need to be considered. I emphasize how only by including more community-based approaches and involvement conflicts and tensions will be reduced. Presenter: Anna Bettini

Social Movements and Green Development - Understanding Friction Arising from Industrial

Development, renewable Energy, and Socioecological Relationships in Colombia: Nature and political ecology are intrinsically linked with each other, meaning that reactions to climate change are embedded in the cultural perception of land and nature. Industrial development efforts, despite all critical reflections, often share the problem that they presuppose the logic of long-lasting improvement of living conditions through material change. Their approach and analysis is guided by an ideological framework that often shines through even the most participatory projects. Discrepancies between ideological frameworks between money-givers, private companies and the people owning and living in and around territories of interest cause conflicts on unequal grounds, conflicts that do have parties on every level of scale. As such, the implementation of wind generators by national and international private companies, supported by regional governments and the EU in the northern Guajira of Colombia to produce green hydrogen for export to European nations transforms socioecological relationships and is being contested by several degrowth anti-colonial social movements, all the while other urban movements in Colombia and Europe support a modernist idea of energy transition. There is a profound global debate about the solution for the energy crisis going on and on every level from local indigenous organizations, through urban intellectuals up to international politics. These debates then flow back to specific local conflicts and aggressions: Displacement, assassinations and destruction as consequence of political debate about degrowth, industrialization, green development and collective (non-) ownership and perception of nature. The constitutional protection and prior consultation laws create spaces for conflict resolution, but not for bridging epistemological divides. This paper presents results of a three-month participant observation on how to confront climate change, (green) development aiming to demonstrate how different conceptions of nature and human progress cause friction that might escalate to armed conflict and affect existing conflict situations. Presenter: Martin Gubsch

Performing failure: Coca Codo Sinclair and the theatrics of project outcomes: The Coca Codo Sinclair (CCS) hydroelectric project, located in the Ecuadorian Amazon, is widely considered to be a catastrophic failure, despite producing approximately 25% of Ecuador's national energy consumption on a daily basis. Internationally, CCS has become emblematic of political and environmental threats posed by Chinese development finance. Domestically, CCS represents the most prominent example of ex-President Rafael Correa's

'white elephant' infrastructure projects. On a local level, CCS is an exemplar of state neglect and extractive development. Across scales, these narratives of failure are populated by actors, both human and non-human, who play a role in defining the project's outcomes. In the case of CCS, these actors include a diverse cast of dramaturgical characters including rivers, landslides, fissured pipes, *correísmo*, and great power politics. This paper argues that the success or failure of development projects is defined by the 'performances' of the multiple actors of which they are constituted. Drawing on Science and Technology Studies (STS) and the study of politics as performance, project outcomes can be productively read as theatrical assemblages. An interpretive ethnographic analysis of CCS highlights the dynamic, contingent, and politically imbued sources of project outcomes. Presenter: Julia Radomski

Tourism in Transition Part 1 (ATIG)

2:15 PM - 4:00 PM

TMCC - 715 B

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Celia Tuchman-Rosta (Denison University)

CHAIR:

Michael Di Giovine (West Chester University, Department of Anthropology & Sociology)

PRESENTER:

Anna Duda ,Cynthia Van Gilder ,Kayley Whalen ,Atak Ayaz ,Rachel Horner Brackett (Augustana College, Department of Sociology & Anthropology)

DISCUSSANT:

Celia Tuchman-Rosta (Denison University)

DESCRIPTION:

Tourism is undergoing myriad transitions in the wake of the COVID pandemic, with growing concerns about environmental impacts, as many economies shift towards service industries, and as sustainable, community-based tourism projects continue to develop. These include transitions towards virtual tourism during the height of the COVID pandemic and in response to environmental stressors as well as transitions toward forms of tourism with social equity or climate justice goals. The challenges of rapid change in the industry can be perceived negatively, as a destabilizing and potentially destructive trend. Yet tourism transitions also open generative spaces that ignite imaginative

experimentation. Anthropological work has often highlighted the transformative nature of tourism. Valene Smith (1977, 1989, 2001), for example, 'revisited' her collection *Hosts and Guests: The Anthropology of Tourism* repeatedly, each time taking into account changes in research on tourism and in the impacts of tourism on the economy, culture, and the environment. Other work has focused on how tourist expectations and imaginaries of a destination impact the way that local communities present their cultural traditions, sometimes leading to substantive cultural change (Bruner 2001 and Picard 2005). Discussions of the detrimental changes to the environment caused by mass tourism including impacts on water supply and a high-carbon footprint have also been a common thread (Pattullo 2003 and Chambers 2009). Other work has focused on transitions in tourism based on violence and terrorism, COVID anxieties, the emergence of medical and fertility tourism, and virtual tourism and the use of other technologies (Ness 2005, Isaac 2014, Barbosa et al. 2021, Ackerman 2012). The Anthropology of Tourism Interest Group (ATIG) has organized a two-part session to further explore current transitions in tourism. The papers in these sessions go beyond documenting change in tourism and how or why transformations occur. Each paper sits within the moment of transition exploring the generative process and the contradictions and ramifications that emerge through it. In the first session, *Tourism in Transition Part 1*, papers explore a broad array of transitions in tourism. Some papers examine identity transformation (both cultural identity and transgender identity) and transitions toward inclusivity, solidarity and acceptance. Others focus on intergenerational change and memory work as tourist sites evolve. Lastly, some papers focus on environmental transformation and sustainable practices highlighting the ways that agri/ecotourism may have the potential to circumvent legal restrictions and/or have the potential to alleviate ecological and economic concerns. Together, the papers in this session explore the tumultuous nature of tourism in transition: What outcomes might these transitions yield?

Mrągowo as a Polish Nashville: Between local and global tourist's gaze on country music : Located in the Mazurian region, Polish Mrągowo is most often associated with the International Country & Folk Picnic which has been organized annually since 1982. Highlighting American cultural products, the festival became a symbol of longing for the freedom everyone was craving in the time of the People's Republic of Poland. Over time, the city has changed under the influence of the festival and hotels and restaurants have

follow American trends. Despite the fact that today it no longer plays as important a role as it used to, the Country festival has left a great legacy, which regulars still recognize through their annual attendance. Using a semiotic and hermeneutic analysis of photos, this paper will clarify the attitude of residents, tourists and countrymen to the festival heritage. Thus far, scholarship has not reflected on the heritage of Piknik Country in the context of the changing realities of Mrągowo and the rest of Poland. The covid-19 pandemic showed how great the festival's value is, seen today not primarily as a music destination, but as a meeting place for people who have been coming to the event for more than 40 years. Especially after the pandemic, conversations emerged about the heritage of the Polish country festival – what to do to ensure that this historic event survives, since the average age of attendees today is high – they are mainly people who nostalgically recall their youth and express their rebellion against the communist authorities by attending the Country Picnic in the 1980s. Presenter: Anna Duda

From Rainbows to Huki: Shifting Identities at the Polynesian Cultural Center: Coauthors: Cynthia L. Van Gilder and Dana R. Herrera The Polynesian Cultural Center (PCC) was built by the Latter Day Saints (LDS) as a money-making enterprise to support programs at their university in Hawai'i. This extraordinarily popular attraction welcomes 700,000 visitors annually to experience their 42-acre park comprised of six traditional Polynesian "villages," each representing a different culture. The PCC proudly claims to be culturally authentic, with villages presided over by "cultural mentors," and staffed by Polynesian church members. The villages and their "inhabitants" are presented in the timeless vacuum of the traditional; at each village, tourists digest a unique, bite-sized, reductive identity for that island culture, as embodied in music/dance performances. These identities draw on deep, historical tropes of racism and colonialism, and confirm stereotyped "native" identities (e.g., "fierce" Maori, and "erotic" Tahitians). Whereas once these identities were repeated without change throughout the experience at the park, recently, the centerpiece canoe pageant was radically changed to reflect a post-contact narrative that erases these individual musical signifiers, and presents instead a vision of pan-Polynesian shared identity. Here we analyze the significance of the radical discursive changes in the canoe pageant, contextualizing its

narrative in the rapidly transitioning world of the Pacific Islander diaspora, including intergenerational conflict around multi-culturalism, heritage, and identity, as well as the shifting identity politics in the local LDS community. Furthermore, we demonstrate the power of computational anthropology to provide tourism anthropologists with “thick data” from the liminal world of internet commentary, via “scraping” of popular tourist review sites to ascertain reactions to these PCC changes. Presenter: Cynthia Van Gilder

Transitioning to Trans Inclusive Tourism : For years, so-called “LGBT tourism” has been overwhelmingly geared towards cisgender people, leaving out the specific desires of transgender and nonbinary (“trans”) people nearly altogether. Existing trans travel content typically focuses on rights and safety, such as challenges with security screenings, discrimination, harassment, and assault. This misses the opportunity to explore what can make trans travel feel rewarding. As trans culture and communities face ongoing erasure and attacks, trans travel can be a way to uncover trans history, explore one’s identity, and build solidarity with global trans communities. In this paper, I will explore how we can transition LGBT tourism into being fully trans inclusive. As a trans travel content creator and international activist, I have experienced the positive benefits of travel for learning about trans culture and finding affirming communities with other activists and cultural workers. One common trend I’ve witnessed is how trans travelers often blur the boundaries between tourist, expat, and refugee, perhaps starting as a tourist trying to find acceptance and then once they do, finding ways to continue to live outside their home countries for months or even years at a time — which mirrors my own experiences. Drawing from extensive field notes I have compiled through conversations with trans tourists and expats while traveling in Southeast Asia, Latin America, and Europe, accompanied by new ethnographic interviewers, I will highlight the opportunities to transition existing LGBT travel resources to be trans-inclusive, and the need to create new resources based on finding trans joy and acceptance. Presenter: Kayley Whalen

Enotourism in the Making: Wine Legislation and Sales in Turkey : The year 2013 marked a turning point for the wine industry in Turkey as the legislation banning alcohol promotion and advertisement became a decree, and the country’s first wine route was formed in the

same year. A group of small-scale and quality-oriented wine producers initiated the Thrace Wine Route, which aims to boost eco&enotourism in Thrace, the lands of Turkey on the European continent. This co-habitation platform for small-scale and quality-oriented wine producers seeks to mobilize the region’s tourism potential by dwelling on its terroir. The wine business is a three-legged commerce. Along with cultivating grapes (agriculture) and turning them into wine (production), sales and branding carry a significant role in determining the faith of wineries. However, as the above-mentioned law prevents producers from running free tasting events with potential customers and sponsoring events to augment the brand value, producers had to find alternative options for boosting their sales. As a result, wine production in Turkey turned into an enotourism project. To avoid violating the 2013 legislation, winery owners became restaurateurs and hoteliers, pushing them to reconsider their sentiments about being active in the wine industry. Analyzing how wine is governed in Turkey, a country at the margins of Europe, this presentation asks: What is the role of tourism in circumventing laws suppressing alcohol production and consumption? Who benefits from the enotourism taking place within the fences of wineries? Lastly, what forms of distinction does this new form of tourism offer on top of boosting fine wine? Presenter: Atak Ayaz

Sustainable Transitions at a Tuscan Agritourism Estate: For the past several decades, local and international interest in rural, “traditional” Tuscan life and heritage food production led to the restoration of thousands of estates for agritourism. Today Tuscany boasts over 4,000 registered agritourism sites, tapping into a pre-COVID market of 42 million visitors annually. My longitudinal research at one agritourism estate, the Tenuta di Spannocchia, highlights the tensions and transitions that emerge between agritourists’ expectations for an “authentic” experience of rural Tuscany and the quotidian exigencies of farm labor. An early adopter of sustainable agriculture, forestry, and architectural restoration, Spannocchia is deeply rooted in its mission to serve as an international model for sustainability and responsible tourism. However, two crises emerged alongside COVID-19 and challenge the estate’s long-term strategies: 1) an outbreak of African swine flu that threatens the survival of heritage breed Cinta Senese pigs raised and butchered at the estate, and 2) a dramatic reduction in the estate’s water supply, the San Bernardino spring, due to severe drought underscored by

climate change. Faced with these unprecedented challenges, producers at Spannocchia must attend not only to locally situated economic and ecological concerns, but also to the fluctuating expectations and demands of international visitors. This paper examines the transition in how agritourism at Spannocchia operates within an increasingly narrow window of sustainability. DISCUSSANT:

Pamela Downe (University of Saskatchewan)

DESCRIPTION:

The global transition to agile regulations has sped up and advanced the market adoption of emerging biotechnologies such as vaccines, biotherapeutics and other medical devices. Acting as modest witnesses, this panel applies a methodologically rigorous and critical lens to the evidence, expertise and authority behind COVID-19 vaccines. We ask whether all the checks and balances for their safety, efficacy and quality were applied before they were approved for the public. We consider various (types of) publics' responses, including approaches to the pandemic response by various underserved, remote and equity deserving communities, and unpack polarization of open and anti-science, of early vaccine adopters and the vaccine hesitant. At the core of this roundtable is an anthropological inquiry into scientific practices and

political decision-making in transition, questioning how and why some COVID-19 countermeasures were approved, adopted, even mandated while others were not.

Natashe Lemos Dekker (Leiden University)

DESCRIPTION:

Dying and death are both times of transition and liminality (Jordan et al. 2015). Without clear markers establishing the threshold at which a person begins to die (Kaufman and Morgan 2005), we can identify several transitions that mark the non-linear trajectories of people who are on these paths: a time of illness, a time of end of life (hours, days before death), a time of death (Fortin, Le Gall et al. forthcoming) and a time beyond death (Lavoie et al., 2009). These transitions take many forms: social, changes between different states of being (Turner 1977; van Gennep 1909); physiological, decrease in physical and cognitive capacities, progression of the disease; spatial, between places such as home, home of a relative, hospital, long-term care center, hospice (Leibing, Guberman and Wiles 2016); relational, disruptive for loved ones (friends or family). These liminal states are at the same time bearers of uncertainty, suffering, hope, renewal and transformation for the (terminally) ill persons and their loved ones. They are also states of permeability where life and death become one. This panel invites presenters to explore these end-of-life transitions for ill persons (of all ages) and their loved ones, reflecting on what can be celebrated or denounced in the 'in-

between' time, exploring these liminal spaces, documenting the markers (and decisions or decision paths) that shape these transitions or the ethical and moral challenges they raise as well as how these transitions shape or reshape social relations and relationships and, in fine, how death and life are entwined. Liminality and Disruptions of Deathscapes and Death Care in Singapore: This paper examines the cultivated transience of deathscapes in Singapore, and its impact on grieving and the provision of death care. In the framing ethnographic vignette of the paper, two interlocutors discuss how, for one, her experience of visiting a new Muslim cemetery precluded her from lingering. She shared that Muslim people formerly planted trees on graves to provide shelter so they became a communal space for visiting, but visiting the reinterred mass graves, trees were sidelined and heat swamped, making visitors hurry on. The second interlocutor working in sustainability, whose reflection provides the title of this paper, responded that this was symptomatic of how systems in Singapore are designed so people spend as little time as possible on things, with bearing on how they care. These experiences reflect the personal stakes of the 1988 New Burial Policy which limits burials in Singapore to 15 years, after which graves are exhumed and remains are cremated or re-

interred, depending on religious requirements. Just as private citizens had to shift in their commemorations of the dead, this paper then argues that the unsettling of homes for the dead is multi-scalar occurrence, from the level of the individual to that of funeral businesses. Engaging funeral companies who have had their funeral home premises repossessed for redevelopment, this paper follows their grouse that the constant destabilizing of death-related spaces in Singapore render their provisions of death care limited and liminal. Presenter: Jill Jie'en Tan (Yale University, Department of Anthropology)

'There was no Otherwise': Narrative of the Space Between for Nine Kenyan Children : Critical anthropological analysis of complex interactions of power, agency, and culture in constructions of child dying aids in our understanding of what and how differences in experience of child death occur, and their impact on theory and practice. End of life care for children is developing in postcolonial contexts under Western goals of 'good' death focused on advance, open awareness of dying and controlled preparation for death. In settings such as Kenya, where impending death is not openly discussed and illness and death experience may be shaped by structural constraints, critical theorizations of the sociocultural dying process of children and its meaning have so far remained unknown. This study takes a highly iterative, care-centred methodological approach to coproduce narratives of the space between life and death with the families of nine children who died from cancer in March and April 2022 in Western Kenya over the course of nine months from July 2022 through April 2023. Seeking to understand critically if and how children in Kenya die, as an active and desired social process, these narratives suggest multiple, non-linear spaces between illness, death and beyond bodily death, where these spaces and their narrative re-telling are constructing and constructed by the political economy of care. These demonstrate complex interactions between culture, class, and politics, where children's illness, dying, death, bereavement and their dynamic (un)certainities are as much shaped by social belief as by structures of inequity, suggesting important challenge and opportunity for shaping care at the 'end' of (physical) life. Presenter: Callie Daniels-Howell (University College London)

Palliative Care as a Movement: Care and System Transformation during COVID-19: Palliative care is a unique form of healthcare in Toronto, Ontario both in its administration and in relation to the kinds of care it

offers to patients. It focuses on quality of life and alleviation of pain to those who are living with a life-limiting illness and provides support to the caregivers and families that extends beyond the death of their loved ones. This holistic person-centered approach is unusual to the management of illness and injury in other healthcare domains that palliative care comes in contact with. In this presentation, I will be looking at palliative care as a complex social landscape of distinct-but-interrelating institutions. I will be presenting a thematic analysis of qualitative research conducted in 2022/2023 by Temmy Latner's Research Centre for Palliative Care amongst the palliative care physicians. I will be giving voice to the palliative care professionals who are in daily basis negotiating the role of palliative care and contributing towards the system transformation. In this research I am attending to how communication and care are entangled and how they become mutually constitutive not only in 'patient-doctor' encounters but between interprofessional collaboration that has the potential to improve healthcare outcomes (Arnold and Black 2020, 573; Reeves et al. 2017). I will present the transformations that 'came to be' during COVID-19 and left a lasting impact towards a person-centered care in an institutional context; and how communications and collaborations amount to resilience and shared care that contribute towards a different kind of death. Presenter: Tiina Maripuu (University of Toronto, Department of Anthropology)

At the Threshold of Acceptability: When is Death Legitimized?: In Canada, it is common for older individuals to die in geriatric institutions after a long and progressive decline punctuated by episodes of acute illness, during which choices must be made about whether to "prolong live or consider death" (Fortin, Le Gall and Dorval 2016, 1). Based on ethnographic research conducted in two Montreal public geriatric institutions, the presentation explores the moral issues surrounding end-of-life decision-making for older individuals. We demonstrate that when there is no consensus on the type of care to provide (comfort care or life-prolonging care), a "morally acceptable" balance between the well-being of patient, their family, and the health care team seems to be considered. In this context, the goal is to limit the suffering of the older person rather than provide "unreasonable" care. This balance is negotiated based on a certain moral threshold (an imaginary limit) where the death of an older person becomes legitimate. Recognition of the end of life is therefore intrinsically linked to a (moral) value judgment regarding the "right time to die"

(Kellehear, 2007, p. 236) – not too early, but not too late either and the "enough" (enough treatment, enough life). Through this presentation, we hope to contribute to a better understanding of the differentiated meaning and value of life and death in our society. Presenter: Sabrina Lessard (McGill University)

Living while Dying: Hospice Care in the Transition Between Diagnosis and Death: People with life-limiting illnesses have been described as living in "prognostic time...in which the conclusion haunts the story itself" (Jain, 2013, p. 40). By focusing on the temporal period during end-of-life care, this paper attends to dying not as a physiological event, but a space and time in which people with life-limiting illnesses and their caregivers continue living, having social and intimate relationships, and making decisions about their care while dying. I draw on ethnographic research at a community hospice in Toronto, where palliative involvement does not begin during active stages of death, but instead at terminal diagnosis. Rather than operating as an in-patient hospice with beds available in the 72 hours before death, this organization uses a network of volunteers and staff to coordinate care in the years, months, or weeks while families negotiate life-limiting conditions. Volunteers are matched with clients and visit them in their homes for 4 hours weekly to provide personalized support through respite and comfort care, social programming, practical support, and legacy work. Hospices attend to the social, existential, psychological, and emotional dimensions of quality of life. In this liminal space-time of dying, this research is attentive to people's desires, hopes, and sense of future, their feelings of grief and loss, their hobbies, routines, and dispositions—the many ways in which their lives intermingle with and inform their prognosis. This research describes a vibrant and lively community simultaneously grappling with changing relationships to hope, biomedicine, and caregiving networks, and also, spending their limited time well. DESCRIPTION:

Anthropologists have long been examining and critiquing the multiple ways in which technology has been incorporated into childbirth, supposedly to mitigate risks to the pregnant person or to the fetus. Physicians trained in obstetrics and gynecology (ob/gyn) have commonly helped to support the technocratization of pregnancy and childbirth—the notion that technological innovations will correct flaws in human reproduction. In recent years, there have been a series of detractors to the technocratic paradigm within obstetrics. Ob/gyns across the globe have begun supporting low-intervention births, singleton vaginal breech births, and 'gentle' cesarean births – practices that, until recently, have been met with disdain, ostracization, and harsh professional ramifications for the practitioners who provide these humanistic services. What does this pattern of resisting dominant patterns of technocratic obstetric practices tell us, as social scientists, about the formation of physicians, the creation of risk, and the practice of obstetrics? This oral presentation session seeks to understand the issues of how obstetrics as a field and as a practice are conceived and enacted, respectively. We are also interested in critical inquiry into the formation of the professional identities of ob/gyns.

Creating the Anthropology of Obstetrics and Obstetricians : Obstetrics as a field has risen to prominence over the past century, and by now has become the dominant model for understanding pregnancy and childbirth in almost all countries. The roles of obstetricians – physicians specifically trained to “manage” pregnancy and childbirth – have been the subject of limited social scientific inquiry over the past 50 years. Much anthropological attention has been paid to the field of obstetrics, yet little had been paid to the perspectives of obstetricians themselves. In this powerpoint presentation, I will review the limited data surrounding anthropological inquiries into obstetrics and obstetricians, and will discuss a recently published three-volume book series called *The Anthropology of*

Obstetrics and Obstetricians: The Practice, Maintenance, and Reproduction of a Biomedical Profession, co-edited by myself and by Robbie Davis-Floyd. The three volumes in this book series are: Volume I. *Obstetricians Speak: On Training, Practice, Fear, and Transformation*; Volume II. *Cognition, Risk, and Responsibility in Obstetrics: Anthropological Analyses and Critiques of Obstetricians’ Practices*; Volume III. *Obstetric Violence and Systemic Disparities: Can Obstetrics Be Humanized and Decolonized?* In my presentation, I will draw from all three volumes to show how this book series aims to rectify a gap in our understandings of obstetricians’ roles in pregnancy and childbirth. In this way, I hope to shed a light on the critical need to broaden an anthropological view of reproduction by specifically focusing on forms of knowledge and power at the level of obstetricians’ practices. Presenter: Ashish Premkumar (University of Chicago)

Transitions in Obstetrics: The Paradigm Shifts of Humanistic and Holistic Obstetricians: In this proposed paper, using a powerpoint presentation, I will critically explore the paradigm shifts from the technocratic model of birth and health care to the humanistic and holistic models made by some obstetricians in various countries. This presentation will be based on interviews conducted by my colleague Eugenia Georges and myself with 32 Brazilian obstetricians, and on several of the chapters in the co-edited collected called *Obstetricians Speak: On Training, Practice, Fear, and Transformation*, which came out in July of 2023 and which was co-edited by myself and by our session co-organizer Ashish Premkumar. During my presentation, I will explore these obstetricians’ motivations for making a paradigm shift, explain what they were transitioning from and to, and describe the multiple ramifications of these paradigm shifts, which have included both personal and professional satisfaction and, most unfortunately, severe bullyings, ostracisms, and outright persecutions by their obstetric “colleagues” and by the obstetric establishments in their respective cities. I will also describe the humanistic changes that these ob/gyns have been able to make in their respective hospitals, and will explore the interesting issue of whether or not these changes have been long-lasting, or have vanished after the retirement from obstetric practice of some of these humanistic and holistic obstetricians. Presenter: Robbie Davis-Floyd (Rice University, Department of Anthropology)

Rehumanizing Birth in Puerto Rico: Transitions in Perinatal Health Care Training and Collaboration :

Recent legislation in Puerto Rico condemns acts of obstetric violence committed against pregnant and birthing people on the island—a concern that has been at the center of midwifery and birth advocacy for decades. Previous ethnographic research has described how Puerto Rico’s colonial healthcare system has shaped provider training and practice, creating conditions that contribute to the normalization of dehumanized perinatal care. However, recent movements, mobilization, and collaboration on the island suggests that some physician trainings and practices are evolving to rehumanize perinatal care. Such movements include educational opportunities for providers and professionals, collaboration between various perinatal care providers and support professionals, and institutional recognition of the presence and practice of midwifery. These notable strides are a product of ongoing and new partnerships; however, these successes do not come without challenges and contradictions, creating an environment in which new sites of friction also characterize the efforts to rehumanize birth. In this paper, I will discuss how an anthropology of healthcare systems and ethnographic research in Puerto Rico can facilitate our understanding of the local (Puerto Rican) and national efforts to rehumanize perinatal health care. I examine how recent movements are acts of resistance against obstetric violence, discussing the ways in which anthropological inquiry can document a cultural, paradigmatic shift in perinatal care practice and can provide a platform for healthcare modeling that can inform perinatal healthcare practices with an emphasis on physician training and collaboration among medical doctors and midwives. Presenter: Holly Horan (University of Alabama, Department of Anthropology)

Transitions in Swiss Obstetrics: Humanizing Cesarean Births while Lowering Their Rates: In Switzerland, one in three deliveries is by cesarean, despite documented short- and long-term risks for children and for birthing parents. One of the highest in Europe, this rate also contrasts with a growing resistance among Swiss ob/gyns against overly interventionist obstetric practices that result in iatrogenic issues and deteriorate childbirth experiences. However, in practice, Swiss ob/gyns struggle to reverse the cesarean trend, in part due to their reluctance to support vaginal deliveries in cases of breech presentation, multiple births, or after a previous cesarean. In parallel, some Swiss hospitals have recently introduced “gentle” cesareans as the default surgical birth protocol. Enhancing parents’ participation in their child’s birth, this new approach leads to a humanization of the operating room. Reconciling these two aims—

reducing the cesarean rate and humanizing cesarean births—proves challenging and raises moral dilemmas for ob/gyns. If parents request a cesarean birth, how should ob/gyns balance information about humanized cesarean protocols and specific risks associated with a surgical birth? How strongly should they promote vaginal delivery or try to change a pregnant person’s mind? How should they describe the advantages of gentle cesareans without advertising them as an equally safe way to give birth? Based on fieldwork combining ethnographic observations in two Swiss public hospitals and on in-depth interviews with ob/gyns, in this paper I will examine how Swiss ob/gyns cultivate a comprehensive approach to childbirth choices, including the means of delivery, and distance themselves from the technocratic obstetric culture that they learned during their trainings. Presenter: Caroline Chautems

Transitioning toward Increasing Access to Doula Support for Clients Seeking Obstetric Care : The United States is grappling with a perinatal health crisis, characterized by elevated rates of maternal morbidity and mortality and preterm birth. A national movement is underway to increase access to doula support for birthing people. Doulas provide continuous, therapeutic, and individualized care throughout the prenatal, intrapartum, and postpartum periods. Doula support has been associated with a range of healthy birth outcomes, including increased maternal satisfaction with birth, vaginal birth after cesarean, term delivery, and breastfeeding initiation. National calls for patient-centered, evidence-based practices, including expanded access to perinatal care providers and supports, situate doulas at the center of a transitional moment in US maternity care. Until recently, in the state of Alabama, perceptions of doula support have been hostile and stigmatizing. Using my early ethnographic research in Alabama, in this paper, I will examine the embrace of, curiosity about, and resistance to doula support from the perspectives of perinatal healthcare providers, professionals, and birthers. My analysis will explore how biomedical authoritative knowledge and subversive knowledge both conflict and co-conspire within the context of increasing access to doula support in a state with a deeply oppressive history of maternity care. I will discuss how historical contexts shape contemporary perspectives and the ways in which the provision of doula support in the current era, particularly in collaboration with an obstetric practice, resists the structural violence that is the underbelly of the perinatal healthcare crisis in the US. Presenter: Emily Locke (University of Alabama, Department of Anthropology)

Transitions in Obstetrics: The Political Economy behind the Increasing Rates of Cesarean Birth : Within biomedical birthing contexts, there is a significant but frequently overlooked association between cesarean birth and maternal mortality. The World Health Organization estimates that only 10-15% of the birthing population needs to birth surgically; however, in the United States more than one in three birthers receive a cesarean. Bangladesh has experienced a 51% increase in the rate of cesarean births in recent years. Given the growing global practice of cesarean birth, we compared the social, biological, and political-economic factors connected to the high rates of cesarean birth in Bangladesh and the United States. This comparison illustrates how the obstetric imaginary has shaped providers' and patients' perceptions of the necessity of cesarean birth in low and high resource contexts. Early ethnographic pilot research in these two contexts, which included the perspectives of physicians who performed cesarean births and patients who received them, indicates that in Bangladesh, a significant number of primary cesarean births are performed by physicians without specialized training in maternal health care. There are also limited opportunities for vaginal birth after cesarean, driving up the total cesarean birth rate. Cesarean birth in both contexts is frequently performed in the absence of shared decision making, informed consent, and post-operative care education. Perspectives from providers and patients identify strategies for de-coupling this sometimes necessary medical procedure from poor perinatal health outcomes so that it can be respected as an essential, lifesaving procedure when used ethically. Paper to be presented with Tanvi Padalkar [tpadalkar@crimson.ua.edu]
Presenter: Rabeya Khatun

Transitioning from Punitive to Healing-Centered Obstetric Care: In 2022, the Alabama Maternal Mortality Review Committee identified that substance use disorders (SUDs) were key contributors to almost half of all pregnancy-associated and pregnancy-related deaths. State, county, and city level entities in some areas of Alabama are working diligently to decrease preventable maternal mortality cases associated with substance use. Given the complexity of SUD as a chronic and relapsing condition, best practices for clinical professionals include continuous skills training associated with harm reduction for all members of the clinical care team. However, structural and healthcare system barriers negatively impact the capacity of perinatal healthcare providers in Alabama to adequately serve pregnant people living with an SUD. Using a critical anthropology

of trauma lens, I examine how obstetric providers deploy the notion of "trauma" in their interactions with pregnant patients with SUDs and how this deployment articulates with clinical perceptions of moral responsibility and personhood. I describe the ways in which fetocentrism and punitive policies shape these complex and subjective meaning-making processes that occur within the context of the clinical encounter. I will discuss strategies and ethnographic projects that introduce and embed the concept of "trauma-informed care" in obstetric practice in Alabama and explain how this concept is an essential component of improving the quality of care for pregnant patients with SUDs.

PRESENTER:

Hannah Quinn (University of Toronto, Department of Anthropology), Rebecca-Eli Long (Purdue University, Department of Anthropology), Paras Arora, Helena Fietz (Rice University, Department of Anthropology)

DISCUSSANT:

Matthew Wolf-Meyer (SUNY, Binghamton University, Department of Anthropology)

DESCRIPTION:

Under ableist conditions where disability is understood as a limitation, failure, and undesirable aspect of the human condition, what does attending to disabled joy afford? How can disabled joy both upend and reproduce normative relationships and systems? As disabled and non-disabled researchers conducting fieldwork with disabled participants, we approach joy as an analytic, a practice, a poetic, and an emergent quality of our fieldwork relations and questions. This roundtable draws on ethnographic research relationships in Brazil,

India, Canada, and the United States between disabled people, their family members, caregivers, service providers, and educators. Across various field sites and methodologies, roundtable participants share a common focus on cognitive disability or neurodivergence—a category that can cast suspicion on the emotional capacity of those labeled with cognitive disabilities in the first place. We ask how disabled joy can perhaps move beyond descriptions of cognitive disability as lacking, as well as orient us away from anthropology's tendency to focus on disability as an iteration of the 'suffering slot'. Moreover, The anthropology of emotions has focused overwhelmingly on normative expressions of emotion, based on ideas about the cultivation of proper and improper ways of being emotional. Focusing on disability experiences opens up how we imagine emotional experience and broadens the range of emotional expressions. To talk about disabled joy we need to talk about care, play, crafting, and friendship at residential care institutions, NGOs, day centers, and vocational education spaces. We challenge the idea that joy is incompatible with fieldwork with and as disabled people, let alone in disabled life. However, we also treat joy with hesitation, recognizing how disabled people's joy can be cultivated for non-disabled sensibilities, upholding ableist social structures. Under ableist conditions, depictions of disabled joy run the risk of celebrating those lives that most closely align with normative bodyminds, that serve to entrench compulsory able-bodiedness and able-mindedness. Bringing perspectives from feminist anthropology, STS, queercrip theory, and multimodal ethnographies, we ethnographically explore how disabled joy can animate anti-ableist anthropologies and coalition-building.

Sarah Raskin (Virginia Commonwealth University), Lovisa Näslund (Stockholm

University), Matteo Valoncini (University of Bologna), Renita Thedvall (Stockholm University)

DISCUSSANT:

Peter Taber (University of Arizona)

DESCRIPTION:

There is an ongoing interest within digital anthropology (Boellstorff, 2008; Coleman, 2010; Horst & Miller, 2012; Maurer, 2015) of the impact of vast amounts of data and their use in the construction of algorithms (Beer, 2017; Kockelman, 2013; Lury & Day, 2019; Seaver, 2017, 2018; Wilf, 2013). This research has focused on the social power of algorithms and the need to understand algorithms as the insides of social processes and thus integral parts of the social world (Beer, 2017). Algorithms should therefore be viewed not as objects in culture, but rather as culture – enacted assemblages of meaning and practices that can be engaged with empirically (Seaver, 2017). The main empirical focus in anthropological algorithms studies has been on 'algorithmic personalization' (Lury & Day, 2019), i.e. how algorithms intensify contemporary forms of individualism by providing each consumer with distinct patterns or styles of consumer behaviour, creating a personalized recommendation and thereby a seemingly endless variation in algorithmic forms of sociality (Hallinan & Striphas, 2014; Striphas, 2015; Wilf, 2013). Understanding algorithms as culture, we recognize the social powers of algorithms, but shift the focus from the variation and personalization that algorithms enable to algorithms as bureaucratization and rationalization processes within organizations. Bureaucracy as performed by algorithms is based on the idea that rules are universal and predictable, and their application egalitarian. As algorithms replace other forms of organizational governance, in effect, an algocracy, a 'rule of the algorithm' or 'rule of the code' is created (Aneesh, 2009). As bureaucratic systems have been accused to produce indifference to human problems (Herzfeld, 1992) shifts of decisions to the algorithms also seem to decentre the human (Matzner, 2019). The increasing reliance on algorithms to organize and enable modern society (Parisi, 2019; Totaro & Ninno, 2014) forces us to reconsider the impact digitalization has on the enactment of policy and agency (Ziewitz, 2015) and specifically the content and nature of algorithm-aided work (Shestakofsky, 2017). The aim of this panel is to explore algorithmic governance in the context of contemporary policy processes Our goal is to examine how algorithms operate in different policy and organizational settings, including state bureaucracies, universities, national organizations and international institutions. We draw on a range of papers to shed

ethnographic and theoretical light on the relationship between algorithms and governance, the utopian visions of putting forward this as the future, the empirical and ethical critiques, and the practicalities and real effects of implementing these policies, making them the instrument for channeling policy.

Artificial intelligence in research administration:

Extending tensions in the governance of higher e:

Higher ed administrators have used artificial intelligence in increasingly varied and expansive ways over the last twenty years. In U.S. universities, it is now common to use algorithms to guide admissions decisions, course enrollment recommendations, and other substantive processes in students' educational and early professional trajectories. Critical studies of algorithmic governance in higher ed administration have examined these and other student-side applications, and their complicated and contested effects on privacy, equity, and other concerns. Yet as the use of artificial intelligence has also extended into universities' other major power domains and function, scholarship has not yet followed. This paper investigates the application of artificial intelligence into the administration of research and its implications: for scholars, for funders, and for research participants, among others. Drawing on observations made while participating in a service project to improve documentation of community engaged research at an R01 institution using IRB protocols, I consider the transition to algorithmic governance in research administration. Presenter: Sarah Raskin (Virginia Commonwealth University)

The efficiency machine: Aspirations for AI in Swedish

social services: In June 2021, the Swedish government decided that Swedish public offices should increase their use of AI. The ambition is that with the use of AI, public offices will be able to make Swedish society better, and gains in the form of decreased costs and increased revenues and productivity will materialise. One of the public services where the implementation of AI and automated decision making is expected to transform how public authority is performed is the social services, which in Sweden is the responsibility of the municipality. To this end, municipalities are encouraged to increase the automation of decision making, and new digital platforms are developed with a larger degree of decision support. The utopian ambition is that as a result, a new, more efficient and better social worker will emerge, with whose help the wicked problems of poverty and marginalisation will be reduced. In this paper, I focus on how these national aspirations of the government are interpreted by actors

on a national level, creating an idea of how AI and automated decision making should be used in social services in Sweden. The ethnography consists of interviews with key actors in the field, such as AI Sweden, labour unions, the Swedish Association of Local Authorities and Regions, digital strategists in municipalities, and field studies at workshops and events where public authorities try to make this change happen. Drawing on notions of the cyborg (Haraway 1985) and early 20th century hopes and fears of "man extended by machine" (Marinetti, 1911) and "human-machines" (Schmitt 1924), we argue that what emerges is a new, cyborg social worker, part automated system and part human, where social work is intertwined with and indistinguishable from the digital system used to perform it. Presenter: Lovisa Näslund (Stockholm University)

Uncovering the untold story of data: From a GP's clinic to clinical governance in Italy: Italy's healthcare system has undergone significant digital transformation because of the impact of Covid-19. Within a fragmented healthcare system driven by health emergencies such transformations attracted interests of private and non-private actors, transforming the in territorial services. The Local Health Authority (LHA) relies heavily on digitized information flows to make decisions about citizen health management, specially through the analysis of data packages that are received from the territory and analyzed at the regional level. The LHA uses this information to allocate resources appropriately. For this purpose, the area of Information Communication Technology (ICT) is crucial. However, it is not sufficient to focus solely on the technical aspects of software and hardware to fully understand how data packages are constructed and utilized for governance. It is critical to understand the epistemological implications of data analysis, and how social studies of science can aid in policymaking. I want to analyse preliminary results of an ethnography carried out in a general practitioner (GP) outpatient clinic in Bologna (Italy). These results show how digital technologies assist the GP's daily work and have an impact on clinical practice and how and what data feed the flow of information between the clinic and the LHA. Indeed, a continuous trade-off occurs between what the network of human and non-human actors can do, between what the software enables and what financial accounting rewards or discourages. GP clinic represents an epistemological knot in producing and interpreting data that orientate not only LHA governance but also GP medical practice. Presenter: Matteo Valoncini (University of Bologna)

Silencing through algorithmic systems: In this paper, I want to explore the notion of silencing in relation to bureaucratic organizations turning towards algorithmic systems to perform work. As has been demonstrated bureaucratic organizations induce types of reductions, as they, for example, transform people to documentary person[s] (Hull, 2012b), a particular kind of personhood based solely on the information created through documentation and 'thin' social interaction. Here, I focus on what happens to the employees when algorithmic systems are used in the interaction with clients. Particular focus is placed on what kind of knowledge that becomes valued. The paper is based on an ongoing ethnographic study among social workers within the social services, more specifically social assistant benefits, in Sweden. The focus of the study is on algorithmic governance through digital systems. In other words, algorithms are used to make recommendations for decisions on whether a client should receive financial aid from the municipality if they are not able to support themselves. The algorithmic system not only reduces the clients into documentary persons, silencing parts of their personhood, but also social workers competences, silencing parts their work practices in favor of others. The notion of silencing has been studied in relation to social class, gender and ethnicity with a focus on deliberate attempts to silence, cohesively or through more subtle measures. I want to explore the often unintentional, even accidental, silencing that occurs when human intelligence is increasingly replaced by the artificial intelligence of algorithms changing the way work is performed and the way bureaucrats encounter citizens. DISCUSSANT:

Greg Thompson (Brigham Young University, Department of Anthropology)

DESCRIPTION:

Our panel revisits classic themes of Japanese ethnography through recent original field research in Tokyo, Japan, questioning how Japan has changed to meet new emerging challenges. Even before the Covid-19 pandemic, Japanese society was wracked by a succession of national emergencies, such as the 2011 Tōhoku earthquake and the Fukushima Nuclear Disaster. Japanese society's gradual but steady aging also provided a unique crisis as politicians and Japanese citizens grappled with the twin problems of urbanization and a declining labor force. In the backdrop of these crises, the rise of a young precariat, and continued reticence over multicultural immigration, these papers explore the centripetal and centrifugal forces of retrenchment and redefinition along common cultural fault lines of alterity and belonging in contemporary Japanese cosmopolitanism. Drawing from recent work in the anthropology of hope and capitalist realism, our panel argues that a subtraction of imagined possibilities does not wholly define Japanese cosmopolitanism. Instead, we explore how residents of Tokyo actively cultivate hope against common fears of loneliness, isolation, and biopolitical decline. As a result, an anthropological perspective on Japanese society emerges that breaks with common stereotypes of Japanese cultural intransigence and instead focuses on how residents of Japan's largest metropolis reevaluate contemporary challenges through exploring residents' hopes for overcoming what seems to be near insurmountable challenges in contemporary Japanese society. The panel's presenters are all undergraduate students who recently completed eight weeks of anthropological fieldwork as part of Brigham Young University's ethnographic fieldschool in Tokyo, Japan. During their research, each student explored themes of alterity, identity, and hope as part of a broader project studying transformations in Tokyo's cosmopolitanism. Sarai Brown and Kaliopasi Uhi both look at issues of racism and multiculturalism in Tokyo, emphasizing the dual roles fear and hope have played in the experience of immigrants and foreign expatriate residents of Japan. Cyrus Lee and Rhiannan Boseman examine how the attention and awareness of others, from sports to arcade gaming in Tokyo, have become key themes in understanding fears of loneliness and the hope of belonging in Japanese recreational activities. Similarly,

Cambrie Ball examines how convicts understand rehabilitation through disciplinary modes of 'belonging,' and draws out how Japanese disciplinary regimes are being exported across the globe. Lastly, Sydney Nai reminds us that the flip side of hope is fear. She argues that we can better understand the hopes of Japanese cosmopolitanism by examining cultural anxieties portrayed through horror genres in Japanese media and how that media is consumed in Tokyo and worldwide. Through this comparative examination of alterity, hope, and belonging, this panel's presenters, all undergraduate students, argue for a broader understanding of Japanese cosmopolitanism against the stereotypes of isolationism and intransigence, instead emphasizing the dynamism of Japanese responses to local and global problems.

Race, Biopower, and Hope in Cosmopolitan Tokyo: This paper traces the historical roots of racialized alterity in nihonjinron (Japanese Nationalism) and how those discourses have framed the contemporary experiences of racism felt by gaijin (expatriate immigrants) in Tokyo, Japan. In doing so, I will grapple with Michel Foucault's troubled relationship with Japanese studies and the relative conceptual usefulness of biopower and governmentality in understanding Japanese history and contemporary culture. I argue that there is still much to gain from Foucault's insights into how biopower is so thoroughly enmeshed with the workings of Empire and the making of Japanese citizens. Today Japanese politics is often haunted by questions of the biopolitical, such as an aging population, declining birth rates, and the Covid-19 pandemic. Similar to Mark Neocleous's work on "immunity politics," I argue that this broad interest in the biopolitical and immunological buttresses a racial politics of otherness that both Japanese and gaijin residents in Tokyo intimately feel. Furthermore, I argue that these racial politics of cosmopolitan Tokyo are caught in a double bind, where broad multiculturalism is not only tolerated or regarded as a curio but is actively encouraged on both the state and community level. In this paper, I explore how both gaijin and Japanese residents of Tokyo interpellate themselves within this double bind and how people look for ways of distinguishing themselves as independent of this double bind. I argue this hope for a more multicultural and cosmopolitan society is a profound force in the life of residents in Tokyo today. Presenter: Kaliopasi Uhi

Gaming Alone: The Metropolis and the Mental Life in Tokyo Arcades: This paper examines the social components of loneliness and isolation in Japan. In doing so, I argue for a contemporary reanalysis of Georg

Simmel's famous argument in "The Metropolis and the Mental Life," through the clientele of Tokyo arcades. The young men who frequent these locales are often experiencing deep, and sometimes shameful, loneliness. Yet, the arcades are awash with the sounds of intense interactions between both people and machines. This sonic intensity doesn't mean the arcade is a site that cures pathologies of loneliness in Japan. Instead, the arcade has become a site understood as a stage on which people dramatize their loneliness. Similarly, these Japanese young men understand their gaming as an attempt to connect to a broader global culture of capitalist media consumption that overcomes the isolation of Japanese social life. In this sense, the cosmopolitan aspirations of young Japanese gamers are both a symptom and cure for the anonymizing effects of living in the mega-metropolis of Tokyo. Furthermore, I argue that, for many of these young men, arcade gaming is an attempt to cloak themselves in the particularity of an individuated identity, which contrasts with the social masks they understand themselves as wearing during the regular course of life in the city. Lastly, I argue that we must appropriately appreciate fears of loneliness in Japanese society by understanding how young Japanese men practice hope for greater connections through communal gaming. Presenter: Cyrus Lee

Training to Be Aware of Others: Sports, Respect, and Cosmopolitanism Tokyo: During the 2022 World Cup in Qatar, media observers were astonished by how Japanese spectators' meticulously cleaned their surroundings. This paper compares Erving Goffman's argument about demeanor to Takeo Doi's description of amae in the hopes of better understanding Japanese concepts of favor and respect in public situations like sporting events. I argue that dramaturgical approaches to the self and the Japanese awareness of dependence on others are foregrounded in both spectatorial and participatory roles in public sporting events. This research describes these dual roles as spectators and participants as public commitments of respect. Early in life, kinship networks and schooling institutions train people to be sensitive in their awareness of others. I argue that in Japan, collaborative sports have become important techniques of the body in training people in that awareness. These techniques include how Japanese people think of their bodily dispositions while participating in sports and viewing them. Furthermore, team sports have become a central way Japanese people think of themselves as participants and spectators of the global political order and the regional politics of East Asia. Lastly, I argue that organized sports

have become a widely recognized venue for appreciating the role hope plays in thinking about the possible futures of a cosmopolitan Japan, with broad awareness and respect for cultural others. I make this argument based on observations of Japanese sporting events and my participation in community sporting activities in Tokyo. Presenter: Rhiannan Boseman

Kakyō in Japan: The Ambivalence of Cosmopolitan Belonging in Tokyo: This paper explores the experiences of Chinese and Taiwanese immigrants living in Japan (Kakyō, 華僑), focusing on the issues of racism and discrimination they face in Japanese society. From discriminatory language to exclusionary practices in employment and housing, these immigrants are often met with hostility and prejudice in their daily lives. Drawing on ethnographic research conducted in Tokyo and Yokohama, this study highlights how the experiences of these immigrants to Japan are shaped by historical and cultural factors, from the legacy of colonialism to contemporary political tensions. This paper also examines Kakyō responses in navigating their experiences of racism and discrimination in Japan. The range of coping strategies these immigrants in Japan have developed include seeking out supportive social networks, creating their own spaces of belonging, and maintaining a strong sense of cultural identity transposed into their new contexts. Finally, this paper considers the broader implications of racism against Kakyō immigrants in Japan, particularly concerning Japan's global positioning. This study contributes to a general understanding of the complex and nuanced dynamics of racism and discrimination in contemporary Japan. It highlights the need for greater awareness and sensitivity toward the experiences of Kakyō immigrants in the country. However, it ultimately outlines how Kakyō immigrants, and many Japanese citizens, hope for a more cosmopolitan Tokyo. I argue that these debates about cosmopolitanism provide a powerful window into understanding the anxieties and hopes for greater belonging among Japanese and Kakyō immigrants. Thus, the experience of Kakyō immigrants mirrors a general Japanese experience of belonging. Presenter: Sarai Brown

Honor, Shame, and Hope: Cultural Contexts of Disciplinary Rehabilitation in Japan : My paper explores the social meanings of penal incarceration, recidivism, and rehabilitation in Tokyo, Japan. The country's steady decline in the prison population, crime rate, and recidivism forms the background for exploring cultural values of honor, shame, and hope in Japanese culture. In addition, I compare the development and practice of

these values against Michel Foucault's seminal work on the western genealogy of disciplinary power. In doing so, I compare how socialization through religious, familial, and cultural institutions produce disciplined subjects in Japan. By understanding participants' cultural values and how these shape discipline, I argue we can better understand contextual factors contributing to rehabilitation within the Japanese landscape. I argue that these principal contributing factors are the deeply rooted cultural values of honor, shame, and hope, paired with an emerging emphasis on building communal resilience. An appropriate cross-cultural application of such findings to countries with high recidivism rates, such as the United States, may further infuse a movement of growth and acceptance for incarcerated individuals to replace the existing shame and perpetuation. I argue that is an essential factor in how Japanese people think of their society as orthogonal to Western models of penal punishment, and further the case of their culture of honor and resilience as a prime cultural export to the rest of the world. Anthropologists Confront The Global Rise of Fascism

4:30 PM - 6:15 PM

TMCC - 718 B

Late-Breaking Roundtable/Town Hall - In-Person

REVIEWED BY:

ORGANIZER:

Maddalena Gretel Cammelli

CHAIR:

Don Kalb (University of Bergen, Department of Social Anthropology), Maddalena Gretel Cammelli

PRESENTER:

Wagner Guilherme Alves da Silva (University College Dublin), Maddalena Gretel Cammelli, Erin Fitz-Henry, Jeff Maskovsky (CUNY, Graduate Center, Department of Anthropology)

DISCUSSANT:

Don Kalb (University of Bergen, Department of Social Anthropology)

DESCRIPTION:

Are we transiting towards a world ruled by new forms of fascism? How can anthropology investigate the multiple and varied manifestations of fascism today? In the last 6

months, reactionary political currents have made significant advances: we have seen the consolidation of proto-fascist power in Turkey and India, Trump continues to prove popular in the US while war and militarism appear on a daily basis as a looming horizon in the US and Europe. In Italy, the Meloni government is gaining support and respectability as its members constantly make declarations promoting a revisionist view of fascist history (the latest statement of this type was made following the anniversary of the Bologna massacre, on August 2). In a global perspective, a variety of new forms of fascism appear to be emerging out of its historical shape: interconnections with different political actors, new forms of economic development and digitalisation, and the critical condition of environmental crisis are all key aspects to explore. How can ethnography be used as a tool to unveil concrete critical junctures as expressions of political and social authoritarianism, the exploitation of the planet, racism, sexism, violence and the intricate connections among these forces? This roundtable will discuss this pressing topic from multiple perspectives anchored in ethnography and in conversation with theory and history, placing particular emphasis on comparing current manifestations of fascism in both the global north and south thanks to a group of scholars representing universities inside and outside of the United States who offer a global perspective, not only on the rise of forms of fascism but on anthropology itself. In particular, the roundtable will focus on: - The current reconfiguration of capitalism and the digital transition and its consequences for labour and social relations in terms of class transformation, alienation and political choices; - Responses to the deepening ecological crisis that draw explicitly on highly xenophobic, culturally nationalist discourses that display significant analogies with previous iterations of fascist ideologies. The concept of nature in a trans-humanist world that is evolving due to the digital revolution and its impact on human-nature relations as well as socio-political and geo-political relations; - Fascism as an ideologically-driven presence in capitalist society: how does it take contemporary shape and how may ethnographic research explore, expose and confront it? Eco-Feminist ethnography as a research agenda to engage with the political implications of anthropological research on this topic. The roundtable participants are not interested in debating what fascism means in strictly political theoretical or comparative terms. Instead, they will consider it alongside other important political terms such as illiberal democracy, withering liberalism, right wing populism, the illiberal turn, and authoritarian populism in order to probe the social and political

dynamics at play across the world today. The roundtable will discuss how and why fascism is taking incipient form in different political spaces, how its rise relates to various expressions of disillusionment with liberal democracy, how it relates to global shifts in political economy with differential effects across the North, South, and East and, most importantly, how to enact our scholarly obligation to thwart its rise.

DESCRIPTION:

What are the topoi of Anthropos? This panel features 'bestly tales' (Mathur 2021)--ethnographic stories of human and animal encounter--that ferret out the spaces 'when' or, rather, where 'species meet' (Haraway 2008). Over the past two decades, 'multispecies ethnography' has bulled human-animal entanglements into the foreground of contemporary anthropological scholarship (Kirksey and Helmreich 2010). In dialogue with the transdisciplinary field of animal studies (Hayward and Weinstein 2015), these scholars have examined the co-constitution of human and animal forms of life, their 'becoming' (Despret 2008), as well as their 'becoming without' (Reis-Castro 2021), that is, their 'detachment' (Candea 2010) and their 'separation' (Kelly and Lezaun 2014) from one another. Thanks to these efforts, we have empirically and theoretically rich accounts of care (Salazar Parreñas 2018), ethics (Sharp 2018), kinship (Franklin 2008), intimacy (Govindrajana 2018), and justice (Chao et al. 2022) as inter-, or trans-, species relations. In spite of the implicit spatiality of what many anthropologists, following Haraway (2003),

have characterized as the 'contact zone,' the spaces of encounter have weaseled out of explicit analysis (noteworthy exceptions include Blanchette 2020; Ingold 2007; and Tsing et al. 2017). By invoking the 'feral' (Barua 2021) metaphors of the badger, we seek to badger space-to populate conventionally human territories with animal subjects-and to badger space-to pester, to nag, dog-matically anthropocentric philosophies about space in its material and semiotic dimensions. Heeding Terike Haapoja's (2023) insight that 'it is the cage that constructs the nonhuman as well as the human outside the cage,' we will survey how the built and natural environments configure what 'forms' (Kohn 2013) human and animal relationships take and how, in turn, those relationships re-configure their environs. How, for example, does 'animal housing' (Bjørkdahl and Druglitrø 2016), the 'architectures of domestication' (Anderson et al. 2017), mediate between species? To what extent does the locality and translocality of encounter matter, whether in clinics (Nading 2014), laboratories (Keck 2020), sanctuaries (Abrell 2021), temples (Fuentes 2010), farms (Weiss 2016), reserves (Lowe 2017), or parks (Stoetzer 2023)? How do these physical and imaginative spaces buttress or otherwise weaken the ontological 'caesura' (Agamben 2002) partitioning humans from animals? We will discuss how to 'look both ways' (Tsing 2022) and query how animals make sense of the space of encounter (see Despret 2022; also Escobar 2018). We hope to catalogue a spatial bestiary that will hound a politics of 'conviviality' (Hinchliffe and Whatmore 2006) for the 'zoopolis' (Wolch 1998).

Oyster Formations: Toward a Biomineral Politics of Place
: This paper posits the oyster reef as a site of place formation that emerges at the intersection between land and sea, saltwater and freshwater, and human and nonhuman. I theorize a "biomineral politics of place," a play on "biomineralization," which is the technical term for the process through which a bivalve generates its shell. Through ethnographic materials collected from sixteen months of fieldwork in coastal Louisiana, I argue that cultivated oyster reefs become geologic forms that inform the creation and use of coastal spaces. These reefs are generated by the slow accumulation of oyster zygotes and their ancestors, which in turn are lured by the consistency of water temperature, depth, and salinity, and stewarded by racialized regimes of human labor. As the constitution of coastal waters are transforming under conditions of climate change, however, oysters are refusing to cooperate, disappearing from some places and growing in new

locales. Here, I examine the spatial practices that emanate from these human-oyster collaborations and refusals: oyster reefs become persistent subsurface forms that in turn are navigational impositions, influencing how people move across the water and where people gather on land long after a reef has stopped being productive. Oyster reef formations continue to exist beyond the lifespan of an individual, enduring as places in practice and memory, around which people build political solidarities. These carefully cultivated areas are racialized landscape formations that are coproduced by human systems of value, oyster biology, and water chemistry, and they influence the way coastal space is created, understood, and moved through. Presenter: Hannah Eisler Burnett (New York University)

Syntopia: Anthropological Ganders in Architectural Nests: Around the world, rampant climate change, unbridled economic development, and other anthropogenic causes of habitat loss have driven animals out of their natural homes and into human settlements. Over the past decade, an emerging cadre of U.S.-based architects has mobilized in response to this ecological crisis under the paradigm of "habitecture"—a portmanteau of "habitat" and "architecture." Informed by ethology, the science of animal behavior, these architects have erected structures to house wild animals in the city that are attuned to their nonhuman forms of life. This paper analyses recent fieldwork conducted with 'habitects' who contributed birdhouses to the Brooklyn Botanic Garden's 'For the Birds exhibition.' Drawing on the work of Gaston Bachelard, Michel Foucault, and Donna Haraway, it proposes the concept of 'syntopia' to understand how these designers re-articulate the relation between space, species, and subjectivity. Their experiments with the architectonics of the bird nest, I argue, index a shift in praxis from architecture's long-standing anthropocentrism to an inter-subjective engagement with avian modes of dwelling, one which more broadly illuminates how the perceptual worlds of humans and animals cohere and incohere in, and through, the built environment. Presenter: Richard Fadok (University of Pennsylvania)

A Paradise of Rootstock : Hazel dormice are known both for their rarity in their native Britain and their love of hazelnuts, but they are in fact mostly now residents of orchards in the South of England, where they nest in

grassland and consume a wide variety of foods. They are, as a result, also the signature animal for a new appreciation of old orchards as semi-wild bio-diverse spaces supporting a wider range of species than either farmland or forests. These orchards, and the rich mix of flora and fauna they support, have become the object of a national campaign to restore 'veteran' orchards, known as the UK Orchard Project. In my English village, like many others across the country, community organisers espouse a new intersectional philosophy of orchard preservation that links concerns about global warming and the food chain to the tiny habitats of mice and the even smaller communities of insects, lichen and mosses in rotting old trees. In this presentation I record observations from local interactions with 'orchardists' concerned with creating new homes for dormice, as well as themselves, and other village inhabitants. Presenter: Sarah Franklin (University of Cambridge)

Biofilm Architecture: Durabilities of Microbial Space : How do microbiologists use architectural language and concepts to describe enduring spaces constituted by microbes? Electron microscope images of microorganisms reveal tightly woven networks of amyloid fibers, filamentous proteins characterized by their highly ordered folding structure. Having long been studied as aberrant aggregates found in animal bodies suffering from degenerative diseases, such as Alzheimer's and Parkinson's diseases, amyloid fibers are now also recognized as "functional proteins" that enable beneficial biological activity. For example, in the last twenty years, scientists have become increasingly interested in the role of amyloid fibers in biofilms, communities of microbial cells held together by a thick, sticky matrix of various macromolecules. Found on the surfaces ranging from stone monuments to hospital equipment, biofilms concern microbiologists working in domains ranging from heritage conservation to medicine. According to these scientists, amyloid is an 'attractive building material' for biofilms by enabling biofilms to adhere to a surface and assemble its physical architecture. As a result, amyloid fibers have become one possible key to the development of anti-biofilm treatments, and therefore a treatment for making human spaces endure. Moreover, amyloid may be good to engineer with, as scientists search for ways to transform biofilms into controllable nanomaterials useful for human needs. This paper examines how microbiologists today transform microbial forms of life into spaces of microbial construction and good things

for humans to construct space anew. Presenter: Grace Kim-Butler

Topologies of Space as Power: An Artful Horseback Ethnography of the 'Energy Bubble': This ethnographic story is told from horseback and from within the multispecies triad of the American West. On a good day, human and horse melt together through what has been termed 'feel' and the human experience is the merging of space between them – physically, mentally, emotionally.... What of the horse's feelings we know little. That is, except for what transpires between bodies only separated by a cow-hide saddle. The woman has learnt to feel every hesitation, initiative and change in focus of the gelding under her. This multispecies triad meet on the vast summer range up in the Rocky Mountains of Colorado. Human-horse teams, cow-calf pairs, the occasional bull. Space between humans, horses and cattle here is relational, elastic, and made up of meaning, shot through with power. Attending to the topology of multispecies relations we need to grasp what cowboys, ranchers and cowboying women in Colorado, as well as humans in Sweden engaged in horse practices inspired by the American West, talk about as an 'energy' or 'bubble' around humans, horses and cattle. As a horseback ethnographer, I have felt it too. As a spatially sensory experience, is difficult to put it in to academically accepted formulations or even ordinary sentences, so I rhyme, draw and color these spaces. In this talk I theorize space as power to be negotiated between species. I draw on a one-year multispecies ethnography on a working cattle ranch in the Rocky Mountains of Colorado as well as seven months amongst humans, horses and cattle in Sweden engaged in agriculture, sport or tourism inspired by the American West. I paint a multispecies intersectionality where individuals of different species work towards 'valued projects' beyond the resistance of species structures. I rhyme, in a cowboy poetry way, the reason for which it is fruitful to explore space as power, as meaning and as the very fabric of multispecies encounters. Presenter: Andrea Petitt (Southasia Institute of Advanced Studies)

Voluminous Socialities and Honeybee Breeding Topoi in Ukraine's Transcarpathia Region: According to Ukrainian honeybee researchers, Carpathian honeybees in the Transcarpathia region have long been at risk of disappearing because of hybridization with other kinds of honeybees. Yet the large-scale reproduction of

Carpathian bees by a state farm during Soviet times and by private breeders in independent Ukraine, means that they now have many “diasporas” (Ogden 2018) close by (Moldova) and far away (Siberia, Central Asia, Canada). These “diasporas,” however, are dependent on receiving bees from Transcarpathia. This paper homes in on a few spaces of encounter among bees, breeders, and researchers from the Prokopovych Beekeeping Institute that have enabled this transcontinental Carpathian honeybee assemblage to emerge and persist despite economic crises and the Russo-Ukrainian war. Transcarpathian breeders and researchers, like breeders elsewhere, engage honeybees’ distinctive sociality, haplodiploidy, polyandry, and aerial mating practices in their use of grafting and cell-building tools, mating hives and frames, isolated mating areas, microscopes, and computer programs. Bringing together scholarship about animal housing (Bjørkdahl and Druglitrø 2016), volume (Billé 2020, Jackman et al 2020), and scientific capacity in postcolonial states (Tousignant 2018), this paper describes voluminous socialities of honeybee breeding topoi through three sets of encounters: the ways in which honeybees in high mountain apiaries attracted researchers’ attention in the late 1960s led to their use in production-oriented beekeeping; the acquisition of bee samples and the conduct of morphometric analysis in researchers’ bedroom laboratories in 2019; and the arranging of maternal and paternal bee families in 2022 at a new collaborative, national park-based mating apiary. Presenter: Tanya Richardson

Critical ecologies of restoration and repair: Theory, method, practice

4:30 PM - 6:15 PM **TMCC - 713 B**
Roundtable/Town Hall - In-Person

REVIEWED BY:
Anthropology and Environment Society

ORGANIZER:
Monica Barra (University of South Carolina)

CHAIR:
Monica Barra (University of South Carolina)

PRESENTER:
Sarah Molinari (Worcester Polytechnic Institute), Marie Cruz Soto, Lydia Gibson (Columbia University)

DISCUSSANT:

Jessica Cattelino (University of California - Los Angeles (UCLA), Department of Anthropology)

DESCRIPTION:

Anthropologists have long examined ecological restoration as a process that reinforces settler colonial and state power, environmental knowledge hierarchies, and racialized and classed social inequalities. In doing so, their work has shown how ecological restoration perpetuates a status quo that upholds unequal power relations and environmental damage across societies. Taken more broadly, however, restoration can also be seen as a capacious practice that includes social redress, repair, and reparations aimed at dismantling structures of social and ecological oppression and harm. This roundtable aims to explore ecological restoration and restorative practices beyond government-sponsored restoration regimes and processes contingent upon idealized ecological relations. What other forms can restoration take that address social-ecological relations beyond merely 'fixing' ecologies and people? Can restoration be linked to practices of building more just worlds? What are the possibilities and barriers to advancing restoration praxis as a means of fostering reciprocity and restitution for groups most impacted by ecological restoration projects? Additionally, what kinds of anthropological methods are necessary to adopt a restorative orientation?

1-340

Entangled Infrastructures and Social Speculations

4:30 PM - 6:15 PM **TMCC - 717 B**
Oral Presentation Session

REVIEWED BY:

DESCRIPTION:
From water crisis in Cape Town to security apparatus in maximum security prisons in Norway to real estate financialization in Athens to digital technologies in remote areas in the Pacific to neon signs in Kansas, this panel explores various forms of infrastructure that shapes social speculations.

Security Absurdity: Institutional (Ill)Logics in Maximum Security Prisons in Norway: The institutional logic of maximum security prisons is to minimize risks of escape, contraband, or violence. This emphasis on security leads to harmful practices and policies, such as the use of solitary confinement, restrictions on access to education and rehabilitation programs, or the impositions of strict regimentation and control over prisoners. While such measures are intended to maintain security, they often aggravate underlying problems of violence and disorder and dehumanize incarcerated individuals. Recently, Norway has built five maximum security prisons, three of which are allegedly the most secure and technologically advanced in Europe. These prisons are based on a standardized architectural design consisting of four-pointed star-shaped blocks with three floors divided into eight units with the guard room in the middle. This panoptic design clearly signals a departure from the 'Nordic penal exceptionalism' characterized by small institutions, relative trust, and a focus on open prisons and rehabilitation. Based on ethnographic fieldwork in these facilities, this paper examines the paradoxical nature of technooptimistic security discourses and of the transformation of carceral institutions through surveillance technologies and ideologies. The securitization of society has led to the proliferation of security technologies in prisons, such as cameras, breath and movement sensors, and other monitoring systems. However, reliance on these devices poses challenges to the relationship between inmates and guards and 'dynamic security' in the institution. Dependence on technology leads to the reduction of human contact, thus depriving the guards of the affective and sensory components of communication and interaction with the inmates. This, in turn, affects the guards' ability to exercise discretion and prevent violence and other unwanted events. Additionally, the need for a reliable power supply to operate the technology highlights the vulnerability of high-tech prisons and the absurdity of overreliance on certain security measures. Based on episodes of power outages, when cameras failed to function, and other instances of dysfunctional security procedures, the paper proposes the concepts of institutional illogics to explain how the 'security measures' can both amplify and mitigate the risk of harm to incarcerated individuals and the guards. The guards' responses to system failures raise questions about the assumptions underlying the use of technologies in prisons and illustrate the logical breaks in security discourse. Moreover, they tell us something about the ideological and epistemic power of this discourse; ideological precisely because knowledge

(of failures or harms), does not break with this ideology. This can furthermore help us read the surveillance architecture and the actual panoptic architectures of these maximum security prisons through the lens of the materiality of ideology, uniquely revealing as it is brought to an extreme form in this closed-off and highly regulated setting. Finally, the paper argues that the (ill)logics of prisons reflects broader cultural anxieties about crime, risk, deviance, insecurity, and social disorder, as well as a pervasive sense of individualism and distrust of others. What do prisons reveal about contemporary societies, and reverse? How can we think their role in contemporary societies in the context of our pervasive obsession with security despite its dehumanizing potential? Presenter: Aleksandra Bartoszko

The Cape Town Water Crisis: Colorblind Policy and Technological Disciplining: The Cape Town Water Crisis in 2018 was infamous in international headlines as an unprecedented crisis moment of water scarcity and an inspiring moment of unity in one of the most racially segregated cities in the world. Here, I explore the city's water crisis response, focusing on both the government's policy of collective responsibility, and the roll-out of technological tools such as water meters. I argue that the language of collective responsibility was the political deployment of colorblind policy, and allowed for the policing and disciplining of the city's poor Black communities and informal settlements. As the language of the 'collective' swirled throughout the city, water meters restricting water use were disproportionately rolled out across already marginalized neighborhoods. The city's colorblind approach thus allowed for multiple scales of 'disciplining' of black and poor residents. In addition to the pervasive and false idea that a large amount of water wasting was occurring in townships and informal settlements, this disciplining took more material forms as well, predominately through the installation of water meters and water saving devices which occurred disproportionately in townships in low-income neighborhoods. As these were the focal point of many protests throughout the crisis for targeted marginalized communities, I trace the long history of water saving devices and use of such 'technological fixes' as part of South Africa's neoliberal and democratic processes. In doing so, I argue that the 2018 water crisis is a case of 'technological disciplining' of poor Black Capetonians. Importantly, access to water is enshrined in South Africa's constitution and in 2001, the State implemented a 'Free Basic Water' policy to provide all households 6,000L per month for free. Although this policy was

undergirded with an assertion of the human right to water, it meant that limits were implemented on the now widespread water meters installed in poor households, capping their usage to this amount. Loftus, referring to the paradox of FBW, states: 'the intended universal basic minimum has become the maximum amount that the poor is able to access' (2006). Through the historical legacy of these technologies, I argue that water saving devices are intertwined with a reconfigured economic subject-citizen who has access to needed amounts of water if they can 'buy their way in' and trace this use of technological devices during the crisis to a much longer historical trajectory of inequality. As water meters mediate between the state and subject, they crafts a subject who is already deemed irresponsible in their inability to operate within the now capital driven system. In relation to the water crisis, the metric for responsible citizenship was defined by the false notion that an approach rooted in equality produces citizens on equal footing. Colorblind policy is powerful because it is connected to the neoliberal capitalist system, through which it can feign the moral high ground while actively harming some people over others. Because it is rooted in the false sense of universal access, it can police and dismiss those who push back against it and claim them as illegitimate. I thus argue that the water crisis revealed not a collective city working together, but a doubling down of the creation of citizen-subjects through their relationships to capital. Presenter: Emily deWet

Techniques of Negation: Technological Dramas in the Digitizing Pacific: Based on fieldwork in diverse Pacific contexts (North & South), this paper interrogates the intensification of digital entanglements in remote, rural areas. Drawing on Pfaffenberger's notion of technological dramas, we detail the myths created by often urban designers and proponents of digitization, as they accompany, for example, new undersea cables and an increased use of wildlife trackers and unmanned vehicles. Simultaneously, we show how rural residents (and some occasional visitors) challenge these technologies, and the myths that surround them, through multi-scalar techniques of negation. These techniques highlight possibilities for 'saying no' to (some) digital technologies as they are variously destroyed, circumvented and subverted. For example, telecommunication towers are torn down; satellite-based mapping is obscured through tree planting and some digital platforms or services are simply not used. By focusing on techniques of negation, we challenge deterministic narratives of inevitability as they accompany global digitization and showcase, however

circumscribed, possibilities for autonomy in the digital age. Co-author: Geoffrey Hobbis Presenter: Stephanie Ketterer Hobbis (Wageningen UR)

The "White Haven" Motor Lodge: A Discussion of Neon Signs and Exclusion in Kansas: Driving through Overland Park between the 1950s and 2010, people would have passed the iconic White Haven Motor Lodge with its neon sign. How does the history of neon signs emerge in Kansas, and what type of 'modernism' was being promoted and for who around this 'white haven'? Histories of exclusion and white flight from urban centers are prevalent throughout the United States. For this talk, I will discuss the implications of white flight from Kansas City, Missouri, to the suburbs of Overland Park and the surrounding areas through an artifact of the era: the White Haven Motor Lodge neon sign. This larger-than-life relic is a sign of the times when neon was thriving in the United States, specifically along Route 66 and nearby areas, and it provides an entry into discussions of what neon futures (or disruptions) were being built by those engaging with these massive, glowing advertisements. Through oral histories, online discussions, and in-person interviews of people who remember the tenure of the White Haven Motor Lodge, I will argue that the sign, while being owned by a family named 'White' and symbolizing nostalgia for some, was also a sign of exclusion and discomfort for anyone not included in these 'white' futures. Expanding Understandings or Reinforcing stereotypes? Explorations of Gender and Sexuality in Educational Spaces

4:30 PM - 6:15 PM

Virtual - Room 4

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Allison Mattheis (California State University, Los Angeles)

PRESENTER:

Allison Mattheis (California State University, Los Angeles), Mario Pizarro Rojas, Sanjukta Sarkar (University of Arizona), Crystal Carter

DISCUSSANT:

CINDY Cruz (University of Arizona)

DESCRIPTION:

This roundtable session brings together scholars working in various educational settings to examine issues of gender and sexuality from anthropological perspectives. Collectively, our studies caution against an expectation of gradual transition to a more open and accepting society, and instead illustrate how contemporary forms of sexism and cis-heteronormativity reshape and reconstitute discrimination in the present day. We invite others to join us in a conversation centered around the work of six presenters and the insights of an expert discussant to explore how these aspects of identity are currently being (re)framed as 'controversial' in different spaces in ways that both reify and challenge existing stereotypes. The first presenter uses Foucauldian analysis as part of an autoethnography of their experiences parenting a non-binary second grader. Drawing on the concept of the panopticon, this study reveals how bodies are disciplined in ways that uphold normative concepts of gender. The second presentation similarly focuses on issues of gender and sexual identity in elementary school, through an anthropology of policy analysis of California public K-6 educators' knowledge of queer and trans responsive health and wellness education. In-depth interviews with teachers investigate how cultural understandings of individual and social identity are countered or reinforced by interpretations of policy. Using feminist ethnography, the third presenter explores gender(ed) literacies in middle school English Language Arts pedagogy. This work maps public perceptions of feminism in Arizona and how these perspectives are translated into classrooms. Drawing from her own insider perspective as a practicing public school educator, the fourth presenter examines the experiences of queer teachers in Oklahoma schools. This study illustrates the contradictory expectations of queer teachers to simultaneously serve as role models and to avoid acknowledgment of the existence of LGBTQ+ identities. Similarly utilizing their own experiences and identities as a graduate student in distinct fields and as a current higher education student affairs practitioner, presenter number five interrogates how queer and trans students of color navigate STEM graduate programs at Hispanic Serving Institutions. A combined analytic lens of Queer of Color Critique and the Organizational Framework for Decolonizing HSIs offers insights into these students' experiences. The final presenter draws on her expertise as a community educator and lifelong membership in the Black Church to explain the impact of public discourse that affirms women in clerical leadership on existing gender roles within denominational spaces. Ethnographic data

including detailed participant interviews and observations reveal particular forms of professional socialization that influence perceptions of women's roles as faith leaders. Following a 7-8 minute overview of each of these six studies, our discussant will offer commentary to synthesize themes and suggest additional areas of inquiry. We will then facilitate a dialogue among the seven participants and audience members, encouraging a focus on how to apply findings to enact change in various educational spaces.

Exploring Interstitiality within Intersectional Identities to Make Sense of Transitioning Education Contexts in Nebraska

4:30 PM - 6:15 PM

TMCC - 718 A

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Jessica Mitchell-McCollough (University of Nebraska, Lincoln)

CHAIR:

Jessica Mitchell-McCollough (University of Nebraska, Lincoln)

PRESENTER:

Jessica Mitchell-McCollough (University of Nebraska, Lincoln), Aprille Phillips (University of Nebraska, Kearney), Tricia Gray (University of Nebraska, Lincoln), Aprille Phillips (University of Nebraska, Kearney)

DESCRIPTION:

Following in the footsteps of Lusi (1998; Kentucky and Vermont), Noble and Smith (1999; Arizona and Delaware), and Hamann and Lane (2004; Maine and Puerto Rico), this session asserts complementary studies within the same state context can not only shed insight on a particular topic-in our case the interstitial spaces within intersectional identities-but offer a template for a unit of analysis (a state's educational context) that also applies elsewhere. In recent decades, as Nebraska has experienced demographic changes across both urban and rural areas (Pipher, 2002; Gouviea, Carranza, & Cogua 2005), there have been various efforts in support of preparing educators to meet the needs and leverage the assets of shifting populations of students (Reeves & Hamann, 2008), as well as exploration of dynamic shifts in educational programs offered to support students' unique

educational needs and opportunities, including language acquisition, cultural community wealth (Yosso, 2005), etc [insert examples pertinent to panel]. The upheaval of recent years, due to pandemic-induced unpredictability and political turmoil, has centered schooling in the state in an enduring amplification of polarized agendas. This is evident in all levels of education, including preK-12 classrooms, institutes of higher education, and policy-making boards of education. This panel will explore the interstitiality within intersectional identities across these various levels of education and the implications they have for a state in which both schooling and the profession of education are in a continued state of transition. Should transition provide an opportunity for innovation, then it is necessary to have a clear understanding of the mechanisms that create in-betweenness and thus possibility for disruption and transformation despite political and social climates that spawn opportunities for continued inequities. This panel aims to do just that: Phillips explores teachers' transition into school leadership role and the associated leveraging of identities to meet external, and often shifting demands; Gray examines how newcomer im/migrant students transition from newcomers to ambassadors or guides through their shared experiences of care as they co-construct what Yosso (2005) calls 'cultural community wealth;' Mitchell-McCollough problematizes the asserted intersectionality (Becker, 1990) of language policy intermediaries in a proposed dual language immersion program and suggests language-as-empowerment orientations (Heiman & Yanes, 2018) as a mechanism to build bridges that may engage key educational stakeholders in recognizing language identities and their power to transcend current gaps in educational needs. Eckerson considers the ways changes in the 'policy ecology' in the state present opportunities to reshape Seal of Biliteracy policy for greater equity and inclusion even as educational policy writ large across the state has become increasingly contentious. Taken together these papers interrogate the practices that key stakeholders in the Nebraska educational system use to situate their identities in order to mediate ever-transitioning state contexts.

Asserted Intersectionality in Language Policy and Planning: Lessons Learned from a Missed Opportunity: The role of schools in teaching or not teaching various languages has long been a means for Nebraska to variously welcome and not welcome the different peoples who have been attracted to this patch of America's Heartland. In recent decades, as Nebraska has experienced demographic shift, one program that has

experienced growth across a variety of contexts in Nebraska, and the US writ large, is dual language bilingual education (DLBE). When done well, these programs propose to critically integrate and engage students from different backgrounds for most or all of the school day in attempt to foster bilingualism, cross-cultural competence (Bears & De Jong, 2008) and critical consciousness (Cervantes-Soon, Dorner, Palmer, Heiman, Schwerdtfeger, & Choi, 2017). However, this model is also cautioned against for the ideological constraints that risk the gentrification of such programs (Palmer, 2010; Delavan, Valdez, & Freire, 2017). Informed by ethnography of language policy (Johnson, 2009) and drawing on lessons learned through dissertation research, this paper examines the ways various educational stakeholders make sense of DLBE and who it serves as they navigate decision making for a proposed but not yet founded two-way immersion dual language program in a mid-sized school district in Nebraska. Findings problematize the asserted intersectionality (Becker, 1990) of policy intermediaries from the local Board of Education as they obfuscate language policy and planning in contrast with that of representatives from a local community coalition as they aim to open space for multilingual education and opportunities for multilingual students. Presenter: Jessica Mitchell-McCollough (University of Nebraska, Lincoln)

The Passage to the Principalship: Sensemaking, Socialization, and Contested Expectations: In recent decades Nebraska has experienced demographic change and educator preparation and public school districts have developed a range of responses. School leadership preparation has long explored novice school building leaders' (e.g., assistant principals, principals) socialization and sensemaking in their passage from teacher identities to assuming new leadership roles and identities (e.g., Armstrong, 2010; Browne-Ferrigno, 2003). Early-career building leaders are expected to respond to ever-changing expectations placed on the education system by a wide range of stakeholders (e.g., Mehta, 2013; Tuma & Spillane, 2019). This ethnographically-informed instrumental case study (Stake, 1995) with data collected over the course of three years, examines the ways novice school administrators navigate their transition from classroom teachers and program coordinators to building leaders in a state experiencing demographic transition and a polarized policy context. It raises questions about the ways building leaders make sense of the expectations placed upon their roles and their shifting identities and the way that the system of education socializes them

into their new roles (e.g., Craft et al., 2016; Greenfield, 1985). It also interrogates the internal conflict novice leaders can experience when expected roles stand in conflict (e.g., Loder & Spillane, 2005). Findings highlight novice school leaders' agentic approaches to sensemaking (Weick, 1995) and response to technocratic policy demands, polarized public expectations, sense of "ultimate responsibility" for the school (Spillane & Lee, 2014), and their own ideals and motivations for transitioning into school leadership (e.g., Swen, 2020). Presenter: Aprille Phillips (University of Nebraska, Kearney)

Illuminating care in the co-construction of cultural community wealth in an English Learning (EL) class: The demographics of Washington River, a midwestern community of mostly white, monolingual English speakers in the New Latinx Diaspora, have shifted gradually due to immigration since the 1990s. Newcomer students at Washington River High School (WRHS) are placed into an English Learning (EL) classroom for a "sheltered" social studies class, where I explored how newcomer high school students construct citizen identities. The study of classroom life there offers insights into how students, a vibrant mix of backgrounds and personalities, cared for one another and thus, leveraged and grew their "cultural community wealth" (Yosso, 2005) in the interstices within their intersectional and transitioning identities. The care teachers demonstrate for their students is much more widely explored in research than the care students manifest toward each other (Watson, Sealey-Ruiz, & Jackson, 2016). Students in this classroom demonstrated care for each other by serving as guides to new students and as "cultural brokers" (Gentemann & Whitehead, 1983) to each other. They drew upon and co-constructed "cultural community wealth" (Yosso, 2005)—encompassing "aspirational, linguistic, familial, social, and navigational capital" (p. 78)—to help each other navigate their new realities and to imagine futures for themselves. As new students grew more comfortable and gained experience in the classroom, they grew into the role of guide as well, initiating newcomers into the policies and routines of schooling in the United States. Their demonstrations of care offer useful lessons in creating school spaces where newcomers' full selves are honored and humanized. Presenter: Tricia Gray (University of Nebraska, Lincoln)

Policy Ecology, Intersectionality, and the Seal of Biliteracy in Nebraska: During the past decade a grassroots educational policy initiative originating in California has led to the adoption of state Seal of

Biliteracy recognitions for high school graduates in nearly every US state, including Nebraska (Davin, et. al, 2022). While the effort intends to recognize the achievements of multilinguals, especially those with homegrown language proficiency, it has, in practice, often been the privilege of English-speaking second language learners in World Language courses rather than English-learning bilinguals, or speakers of less commonly taught heritage languages (Subtirelu, et al 2019; de Galbert & Woogen, 2022). Using a "policy ecology" framework (Weaver-Hightower, 2008) I examine the evolution of Nebraska's Seal of Biliteracy policy from initial failure to create implementation through legislation, to rapid expansion in school districts serving heritage speakers of Spanish, and eventual reification in the hands of the public universities through policies that award academic credit to recipients. The analysis illuminates how the intersectional identities and roles of various policy actors and shifting pressures from stakeholders have shaped opportunities for Nebraska's multilingual students. Findings reflect on the ways changes in the "policy ecology" in the state, including recent transitions at the Nebraska Department of Education, may present opportunities to reshape Seal of Biliteracy policy for greater equity and inclusion even as educational policy writ large across the state has become increasingly contentious. Presenter: Aprille Phillips (University of Nebraska, Kearney)

Nora Kenworthy

DESCRIPTION:

Global health systems and development funding throughout the Global South constitute a hodgepodge of donors, interests, funding platforms (schemes, mechanisms), and political stakes. Of late, funding from wealthy nations has ebbed and flowed, and recipient nations have had to find ways to survive these violent currents. In the wake of recent and successive global health emergencies (e.g., Ebola, COVID-19), and within the longue durée of neo-colonial relations between the global north and the Global South that heavily impact the latter, global health and development funding remain incredibly vital, and simultaneously hotly contested. Alongside global clarion calls to support the health systems and development aspirations of poorer nations in order to protect the wealthy ones, are insecure and inconsistent funding prerogatives that vacillate between narrow and onerous funding that can crowd out potential resources for vital but overlooked health sector needs, and domestic economic retrenchment from supporting international development programs (notions of austerity and economic restructuring come to mind). Because of the economic conditions traditional donor nations and donor agencies are experiencing, other forms of funding have emerged to fill the funding and resource gap, including crowdfunding and philanthrocapitalist, market-based investments. What are the ramifications of this turn to newer funding models? What are the implications of poor nations engaging in the dubious enterprise of crowdsourcing funding, which requires branding, narrativizing, and notions of 'marketability'? Philanthrocapitalism raises concerns of donors wanting moral and economic returns for their donations. Philanthropy is an investment vehicle to expand profits and capitalist futures, relying on developing nations' struggling health systems and development needs as 'untapped' or 'emerging' economic markets. Meanwhile, traditional forms of aid remain in competition with these privatized models of development financing. This panel will interrogate the various effects of these funding trends on global health and development funding across the Global South. These 'new' funding schemes are not necessarily new, but have existed in other forms in other sectors, but have crept their way into public sector funding schemes on the back of the growing capitalist creep into all sectors of society. This panel will explore what possibilities these funding trends open and what futures they foreclose, as well as what narratives and experiences they produce for peoples in underdeveloped nations, and what new politics they generate at the local, national, and

international levels, including for traditional modes of funding. If the norms and tactics around funding have changed, this panel takes seriously how communities, political collectivities, and ideologies have (or have not) changed as a result.

The Pitfalls of Reliance on Traditional Development Aid for Funding Health Systems: Development assistance for health (DAH) has increased steadily since the 2000s, averaging around \$35 billion per year over the past decade. While DAH has been the dominant funding modality for global health since the mid-twentieth century, market logics have created an expansion of financing models in recent years. Still, due to the entrenchment of traditional forms of foreign aid, most low-income country governments rely heavily on DAH for maintaining adequate funding of their health systems. Yet aid relies upon a moral economy of donation, with financing acting as a commodity that not only brings benefits to low-income countries, but also brings moral benefits to the donor. In the new age of financing models for global health, how do market dynamics disrupt the claim of "doing good" upon which traditional donors rely? In this paper, I analyze the tension between altruism and market dynamics in DAH. In any market, if confidence is disrupted, markets plummet. To demonstrate this empirically, I use Malawi's "Cashgate" scandal as an illustrative case, whereby donors pulled aid from the country in the wake of the discovery of stolen money from the government coffers by high-level government officials. In the aftermath of the scandal and loss of trust in government (and, consequently market confidence), the ostensible mission of DAH—bolstering the health sector—became secondary to the moral and/or material benefits of donors. In this way, such a sudden loss of funding exposed a major pitfall of reliance on external funding, which can destabilize a country's health system and leave it as vulnerable to shifts in will as private models often seen as riskier or less predictable. Presenter: Sara Fischer (University of Puget Sound)

How the convergence of effective altruism and philanthrocapitalism is remaking humanitarianism: Effective altruism and its constitutive tenet long-termism are future oriented endeavors directed at different time frames than those of humanitarian concern. Humanitarian emergency organizations address this with immediate action, which relies on varied institutional architectures to execute operational plans, enacted within a short timeframe and often with short-term goals. Advocated by conservative tech-entrepreneur billionaires like Musk, Thiel, and Gates,

long-termism and effective altruism demand that people and organizations should make decisions that positively improve future living conditions. Another tenet of effective altruism is “smart” allocation of resources. This emphasis on smart resource allocation has buoyed effective altruism’s relationship with philanthrocapitalism. Despite their well-documented shortcomings, these ideas have found their way into humanitarian frameworks, branding themselves as the ‘evolution of humanitarianism.’ The Bill and Melinda Gates Foundation, one of the few major proponents of philanthrocapitalism, has heavily invested in the drone-based company Zipline, that uses drones to deliver essential medicines to rural Ghana and Rwanda. Technology like drones is the avatar of “smart” investing that characterizes investors’ technophilic attitudes towards funding projects and solving social problems. Zipline’s proprietary drone technology purports to solve countries’ infrastructural problems and deliver important medicines, and thus, I consider this part of a class of “humanitarian technologies”. What is unclear is the effects this evolution would have on humanitarian efforts of the near future and how funding for humanitarian causes would change. Ethnographic analysis of Zipline’s work in Ghana will reveal some insights into how the convergence of effective altruism, long-termism, and philanthrocapitalism have leveraged humanitarian technology to create profit, and simultaneously reconfigure humanitarianism. Presenter: Ampson Hagan (University of North Carolina, Chapel Hill, Department of Anthropology)

Metric Tools of RMNCH Financing: This paper will examine the rise of metrics as tools of reproductive, maternal, newborn and child health (RMNCH) financing with implications about the pressing need for future research. As an example of one financing approach, the Global Financing Facility (GFF) is a privatized funding mechanism for reproductive, maternal, and infant health in under-resourced countries. It deploys mathematical modeling tools, such as the Lives Saved Tool (LiST) for health planning, evaluation, and costing. Metric modeling tools like LiST are designed specifically for use in low-income settings. And their use is quickly expanding. This paper will explore the ramifications of using modeling tools for global reproductive health planning. By analysing LiST, the paper will situate metric modeling tools of RMNCH finance as political and economic arrangements, rather than accepting their usual framing as apolitical, data-driven, and a common-sense approach to global health and reproductive healthcare financing. Presenter: Iweoma Udevi-Aruevoru

Financial 'innovation' and state-market boundaries in Global health: Anthropologists have long debated what constitutes the dividing line between states and markets. While Weberian theorists and theorists of neoliberalism have treated states and markets as essentially different, albeit related entities, recent anthropological writing on bureaucracy, corporate forms and financialisation suggests that their similarities may outweigh their differences. In this paper we explore the dividing line between states and markets empirically by focusing on the field of global health. Based on the study of how two World Bank trust funds (known as “IFFIm” and “the Pandemic Fund”) intervene in ongoing debates about the nature of global health financing, we identify a series of economic, political and moral aspects that distinguish states and markets in the minds of global health practitioners. We go on to question the extent to which state-market boundaries should be thought of as financial effects. Presenter: Felix Stein (University of Edinburgh)

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Allison Alexy (University of Michigan, Ann Arbor)

CHAIR:

Glenda Roberts (Waseda University)

PRESENTER:

Glenda Roberts (Waseda University), Vincent Mirza (University of Ottawa), Lin Sun

DISCUSSANT:

Allison Alexy (University of Michigan, Ann Arbor)

DESCRIPTION:

At a time when the dual-earner family is becoming more commonplace in Japan, and gender equality is simultaneously contested and embraced, this panel explores how people make meanings of family and work in this 21st century. We explore perspectives on how 'work/life balance,' albeit a concept fraught with contradictions, is approximated, or at times sought after, if not achieved. The presentations focus on the increasing number of women who marry yet who

continue to work. They find themselves in a moral vacuum, as there is little in the postwar cultural vocabulary nor is there sufficient institutional support to encourage, let alone valorize them. Having established that the gender paradigms of the previous generation still effect current institutional arrangements, this panel digs further into how men and women today enact gender in work and at home. Presentations suggest that women today are re-defining the relationship between marriage and work, that they are seeing work as an individual choice in a 'flexible life.' Indeed, life has become more flexible while it retains constraints and challenges.

The meaning of work for dual-earner urban professionals in Tokyo and Paris: Comparative Perspective: Based on fifty-one qualitative interviews of middle to upper-middle class women and men in their thirties through early fifties in Paris and Tokyo from 2018-2020, this paper seeks to develop a comparative understanding of how women and men reconcile the diverse commitments of work and family in two post-industrial societies across the globe. We consider such topics as the contexts for dual-career households, the changing meanings of work for women and men, and underlying tensions in these shifts. Recent transformations in gender roles, female workforce participation, and more varied living patterns and couple relationships, increasingly place pressure on younger and middle-aged couples with children. Our findings suggest that despite historical and cultural differences in the nexus of work and family in the two societies, not to mention diverging levels of government support for dual-worker families, there are interesting commonalities in practice of how couples reconcile work and family. Both in Japan and France naturalizing women as the main care givers is a fundamental aspect of how work and family balance is maintained.

Presenter: Glenda Roberts (Waseda University)
Autonomy and Participation: City Life, Marriage, Careers for Young Women in Tokyo: Based on fieldwork and interviews collected over the past decade, this paper examines how young single women in Tokyo are trying to make choices for their careers, navigating between the political economy of labour and reproduction. The paper looks at how these women make choices within an ever-changing context where the Japanese moral economy of the postwar coexists with a neoliberal articulation of individual responsibility for life choices. Their experiences reveal the important contradictions between the conservative work regime within companies and the flexible job market they have created, which creates impossible contradictions placing

women in both a precarious job market, and when they work in more stable conditions, results in the impossibility of having a career. I will discuss how, despite these contradictions, young women create meaningful work while attempting to find freedom of choice as they try to define work and life choices not only as a social and moral responsibility, but also as an individual choice. In other words, I seek to show how life choices articulated during the post-growth era are creating new configurations and new challenges within the context of urban Japan's ongoing economic and demographic challenges. Presenter: Vincent Mirza (University of Ottawa)

Recalibrating 'Woman's Happiness': The Changing Gender Strategies of Urban Working Mothers in Japan : The discourse of 'woman's happiness' (ona no shiawase), which attributed Japanese women's value and sense of happiness solely to the domestic sphere, pervaded postwar Japan: to be happy means to be associated with housewifery or 'womanlike' duties. This version of 'woman's happiness', however, has become increasingly contested in recent years due to multi-faceted structural transformations that can be traced back to the last days of the Japanese economic miracle. Today, for many married women in their 30s living in urban Japan, especially working-mothers, their sense of happiness no longer lies solely in the domestic realm of 'good wife, wise mother'. Instead, increasingly they began to derive satisfaction from how well they manage the delicate balance between family and work. Drawing on my fieldwork in Tokyo since 2015, this paper provides a detailed portrait of the gender strategies these women employ in their pursuit of work-life balance in a society where institutional and psychosocial support for working mothers is inadequate. It also explores the emotional consequences of these strategies for the women and their families. Through this analysis, I aim to propose alternative perspectives on womanhood and motherhood in the context of Japan's ongoing economic and demographic changes, while also highlighting potential challenges (often intangible) that may arise from these new approaches. Presenter: Lin Sun

California, Irvine, Department of Anthropology)**

DISCUSSANT:

**Amahl Bishara (Tufts University, Department of
Anthropology)**

DESCRIPTION:

We write from different positionalities as Black, Latina, and Asian children of immigrants, and/or queer cisgender women who in doing fieldwork 'return home'. Yet, rather than taking 'returning home' at face value, we conceptualize it as an assessment of what Lila Abu-Lughod (1991) has called a 'tracing of connections' or, in other words, as a way of tracking 'the historical processes by which it came to pass that people like ourselves could be engaged in anthropological studies of people like those' (ibid, 148). In conducting this panel, we build on previous feminist scholarship that began to question not just where anthropological knowledge got produced, but by whom it got produced by. In response to a globalizing world, Margery Wolf (1992) writes 'we can no longer assume that an isolated village will not within an amazingly short period of time move into the circuit of rapid social and economic change. A barefoot village kid who used to trail after you will one day show up at your doorstep with an Oxford degree and your book in hand' (Wolf 1992, 137 emphasis in original). In varying ways, the members of this panel are positioned as the child knocking on the door by those we encounter in the field and the discipline. Collectively, we complicate identity and reflexivity in today's methodological and political landscape decades after these concerns of the 1990s were articulated. How do global connections of the past and present tie us to our field sites today? We ask, what does it mean to be 'a guest and daughter' writing at this time (Abu-Lughod 2016). Our experiences with gender and daughterhood in our fieldwork in the U.S, Mexico, South Korea, and Jamaica have influenced us to analyze the category of daughter as moments sliding between connection and alienation (Kondo 1986).

Returning as Praxis: Fieldwork While Undocumented : In this paper, I build on Maya Berry's (2017) call for a

fugitive anthropology that examines fieldwork as a physical and epistemological space rigged with interlocking racial and gender hierarchies, as well as other forms of inequalities, to explore how being an undocumented immigrant woman has shaped my fieldwork. Between August 26 and December 15, 2022, I was allowed to travel back to Mexico for the first time in twenty three years. I intentionally used the word "allowed" because that trip was possible through Advance Parole (AP), a permit that allows qualifying Deferred Action for Childhood Arrivals (DACA) applicants to travel outside of the country and granted legal re-entry to the U.S. I was approved for educational purposes to conduct a comparative and transnational project that studies undocumented immigrant art politics and expression across borders to challenge notions of (non)citizenship and belonging. Following the tradition of Zora Neal Hurston, I explore how finding myself in my return was integral in the development of my fieldwork. What does it mean for an undocumented person to return to their home country under the conditions of AP and as an anthropologist? Presenter: Maria Ramirez (University of California, Irvine)

Fieldwork in the "motherland" as a transnational adoptee : As an adoptee who studies adoption and has experienced birth family search and reunion firsthand, my research is undeniably anchored by my positionality as a "native" anthropologist (Narayan 1993). Though, since my research also includes a community I am not a part of, birth families, I also consider myself to be located on the borders of my research (Ong 1995, 352). Following the lead of Black feminist anthropologists, I recognize that knowledge production and praxis simply cannot be disentangled (Harrison 2007). Unapologetically, I view my "identity as a seminal point of departure for [my] theorization and simultaneously as a point of entry for [my] ethnographic research" (McClaurin 2001, 16). But I have occasionally been warned against making too much of my personal connection to my research, which always leads me back to Behar's probe in *The Vulnerable Observer*, "Does an emotional response lessen or enhance intellectual understanding?" (16). Do my birth family search and reunion experiences lessen or enhance my intellectual capacity to examine the cultural constructions of kinship and the processes of seeking and negotiating kinship relations? Do my personal entanglements and identity-making projects lessen or enhance my intellectual capacity to locate birth families and adoptees within South Korean national memory? How does my position translating between adoptees and birth families within my field implicate "the negotiation of power" (Su 33)

inherent in translation? Most anthropologists now recognize that we are all deeply entangled in our field(s) and must attend to the ways that these entanglements influence our investigative inquiries and outcomes. How has my need to understand how my “personal history [is] implicated in larger social formations and historical processes” (E. Kim 2000, 43) both guided my research and given me the “courage to make my own experience into a resource” (Ahmed 2017, 12)? Presenter: Shannon Bae

Navigating Kingston as Dependent and Daughter : “I was, after all, a dependent and daughter with nothing to offer but my company” (Abu-Lughod 2016, 18). The intimacy of familiarity can be alienating. In my paper, I explore how my position as daughter colored my fieldwork. First as obligation, providing reproductive labor which, if only tacitly, my room and board was contingent upon. Then, as a relation which impacted the recruitment of participants for my research—who would speak to me for what reasons. Finally, as a specific position within the Jamaican imaginary. Being a daughter of my parents and of Jamaica offers a very specific window of analysis. To be a daughter of my parents offers a thick autoethnographic basis for gender, race, and class formation within Jamaica. It creates a very specific way that I interpret the world and am myself interpolated. It means that I am a light-skinned middle-class woman, where to be such a thing is written as ideal to the national brand (Cooper 2015; Thame 2017). In tension with this is the distance formed by both my singularity as an individual, as well as my own emigration from Jamaica and my return as anthropologist. I find myself interrogating the very thing I am meant to be. I am interested in how the act of returning has shifted my gaze, as well as how I am gazed upon. How does this impact my navigation of the field and my analysis of the Jamaican imaginary? Presenter: Janelle Levy (University of California, Irvine, Department of Anthropology)

CHAIR:

Bobi Steel

PRESENTER:

**Troy Fielder (University of Cambridge), Marie Lecuyer
, Nikki Shaner-Bradford , Matthew Engelke (Columbia
University)**

DESCRIPTION:

This roundtable session will discuss varying cultural and institutional ideas of death, burial, and the afterlife, and the subtle ways that these variations can influence concepts of sustainability and human connection to the planet among the living. As Scranton (2015) states, death is the 'one thing in life that we can absolutely count on getting done' (p.89) - it thus represents a fundamental point of unity between humans and more-than-human others. Does the way we care for the dead, dispose of bodies and mourn our loved ones (both human and non-human) change the way in which we see ourselves as part of a global ecosystem? In the current era of climate instability and biodiversity decline, mourning and grief are ever-present topics for many. But is there a 'better' way to approach matters of mortality? Is there a way to 'improve' the traditionally sterile, and human-centric outlooks on morbidity often found in the West, but also to find a respect for the earth through approaches towards death and bodily decomposition? How can we begin to understand the concept of a 'necroecology'? Featuring some of the leading scholars on subjects of grief, mourning and religious/secular/cultural approaches to death, this panel will consider what it means to 'die well' in the 21st Century.

Anthropology)**

PRESENTER:

**Olga Natasha Hernandez Villar (University of
Minnesota), Carlos E. Sanchez-Pimienta (University of**

Toronto), Ernesto Benitez (University of Virginia, Department of Anthropology), Jennifer Sierra ,Thaddeus Blanchette

DESCRIPTION:

This session addresses a number of crises associated with intersectional identities in the U.S. and throughout Latin America. The panel includes presentations on the identity of the ethnographer as an insider and outsider in Peru, the complexities and legal challenges involving immigrant child laborers in the United States, and the negotiation of indigenous people 's identities in remote areas and areas influenced by tourists, and the reversal of roles in which whiteness is exoticized and fetishized in the Americas. Through diverse research localities, this panel presents a diversity of views on the complexities of doing historical and contemporary anthropological research as identities, laws, and modes of research are stretched beyond clearly defined boundaries.

From unaccompanied children to child workers. A Not-So-Surprising Child Labor Crisis in the U.S.: Throughout this paper, I argue that the historical racial and immigration policies of the United States have contributed to the formation of the social, political, and economic structures that facilitate the exploitation of migrant children's labor by many industries. For now, I will center my analysis on agribusiness and how the nature of this job impedes children from accessing a dignified education. In 2022 alone, 45,324 unaccompanied children crossed the U.S. southern border (U.S. Customs and Border Protection, 2023). Additionally, there is no official information on Child Labor in the United States; neither UNICEF, World Bank, nor International Labor Organization databases records this data; still, an article in the New York Times claimed that approximately 60% of the children and youth that entered the United States are currently working (Dreier & Luce, 2023). Conceptual and contextual Framework I will divide this section into two parts. First, I will base my analysis on the concepts of Racial Formation and Racial Projects by Omi and Winant (2014). Omi and Winant's framework allows me to explain the historical construction of race and its implication today. The United States' economic structure was founded on the chattel slavery system and had its continuity with the Jim Crow south and the debt-peonage labor. Currently, the exploitation of people of color is perpetuated by other means, such as incarceration, being forced to work, and the construction of illegality, pushing them to

accept precarious jobs. This section will contextualize the direct connection between slavery and today's agriculture industry as a racial project. Secondly, I will contextualize the complicated relationship between Mexico and The United States and how Mexicans have been racialized in White U.S. society. As a result, I will be able to introduce the shift from farmers and land owners from using Black labor to Latino (migrant) labor in the farms. Lastly, I will briefly retrace the role played by the Neoliberal market and the implementation of Free Trade Agreements such as NAFTA (now replaced by the USMCA) and its effect on US-MX migration. Child Labor In this section, I will focus on the children who migrate to the United States. Where do they come from? Why do they migrate? In which conditions do they migrate? And how do they fare once they arrive? After trying to answer those questions, I will conduct a discourse analysis of an article published by the New York Times on February 15th, 2023, that addresses the plight of migrant children and their struggle to maintain a full-time job and attend school. This article contains languages that make child labor seem exceptional in the United States. Nevertheless, I argue that the United States economy has historically marginalized and exploited child labor, particularly children of color, and how specifically, the agriculture industry has a long history of employing children for the farm. Lastly, I will discuss the struggle migrant children face to access education and how their living conditions are set in such a way they are forced to drop out of school and continue working in extremely poor conditions that only maintain them in a cycle of poverty and discrimination. Presenter: Olga Natasha Hernandez Villar (University of Minnesota)

On enacting Xonacatlán Coca worldings in Mexico despite mestizaje: Latin American anthropologists like de la Cadena (2010, 2015), Escobar (2014, 2018), and Blaser (2009, 2021), have committed to fostering onto-epistemic openings (de la Cadena, 2017) within academic contexts dominated by the 'one-world world' (Law, 2015) of the Euro modern ontology (Blaser, 2009). In the context of ecological public health, current frameworks to understand the relationships between 'environments' and 'health' largely reproduce modern ontological premises (see Baquero et al., 2021). As a public health doctoral student, I approached the work of Latin American anthropologists to help me make a case for inviting ontological divergence within the ecological public health field. While Indigenous scholars in the

Global North are already advancing this endeavour by articulating the specificity and value of their worldings (Redvers et al., 2022; Tu'itahi et al., 2021), Indigenous ways of enacting reality in Latin America could offer different insights that remain to be articulated within the public health scholarship. My doctoral work is in partnership with inhabitants of El Salto and Juanacatlán, Mexico. Within the last four years, members of these communities reclaimed their Indigenous Coca identities and founded the Xonacatlán Indigenous Council. These events are part of the (so far successful) process of stopping a thermoelectric project from being developed in Juanacatlán. Our collaborative work explores the specificity of Xonacatlán Coca worldings through ethnographic and participatory action research approaches. The participatory component of the research process involves gathering stories of (more-than) human-nature relationships from local inhabitants to create a children's book that supports local Xonacatlán Coca resurgence efforts. For its part, the ethnographic components seek to explore (1) how the stories and practices of community members associated with the Xonacatlán Indigenous Council distribute the real. Theoretically, I articulate (1) Blaser's (2013) account of ontologies as forms of distributing the real that can be enacted through material-semiotic practices like stories with (2) Latin American accounts of modernity (Dussel, 1993, Machado de Oliveira, 2021) and mestizaje (Anchondo, 2016; Navarrete, 2016) as myths or stories. Through these theoretical tools, I argue that Xonacatlán Coca stories and practices simultaneously offer an alternative to the dominant myth of mestizaje in Mexico and challenge the modern one-world world. Indeed, inhabitants of El Salto and Juanacatlán challenge modern linear time and mestizaje's myth by 'TRANSITIONing back' to Indigeneity. Similarly, the human/Other binary is challenged by refusing to mimic the metropolitan (i.e., human) and striving for Coca resurgence (i.e., Other). The extent to which the human/nature binary is re-enacted or exceeded within Xonacatlán Coca worldings remains to be explored. Through this doctoral project, I seek to establish a dialogue with previous work showing complex interactions between modernity and Indigeneity within mestizaje in Latin American countries like Peru (de la Cadena, 2007) and Bolivia (Rivera, 2018). The proliferation of alternative stories to mestizaje may enable promising political options for worlding the world without relying on the modern linear sense of

time, and the human/nature and human/Other binaries. Presenter: Carlos E. Sanchez-Pimienta (University of Toronto)

Ecotourism and Indigenous Masculinities in Napo, Ecuador.: For centuries, Indigenous people in Ecuador have been ridiculed as backwards, irrational, and physically unattractive. However, the rise of ecotourism has contributed to a very different stereotype of Indigenous people as spiritually superior to consumerist cultures, wise, and connected to nature. Previous literature on Indigenous identity production within tourism spaces tends to focus on one or a combination of three main questions: 1) whether the associated self-transformation is economically driven; 2) whether it evidences the destruction or, conversely, the revitalization of local traditions, and 3) whether and to what extent Indigenous people in these spaces can exert their agency in performing their identities. These debates, while important, fail to fully capture the complex processes of adjustment and negotiation that Kichwa men in Napo, Ecuador, go through as they transition into service-based work. Often, the primary self-transformation with which they grapple as they begin working in ecotourism is not about how to perform their culture to tourists. Instead, it is about coming to terms with their own Indigenous identities, which many of them grew up trying to conceal due to the dominant society's pervasive anti-Indigenous racism. I argue that even as the self-transformation impacts them in profound ways and creates rifts between them and most other Kichwa people, participation in ecotourism has also allowed guides to contest long-standing racism at the local level. Furthermore, it has led to possibilities for self-transformation into more appreciated and respected versions of their ethnic, gendered, and sexed selves. Presenter: Ernesto Benitez (University of Virginia, Department of Anthropology)

From a Distal Insider to a Remote Outsider: On Being Interpellated as a "Gringa" among Shipibo-Konibos: This paper examines the gringo/gringa identity category largely assigned to foreigners in the Peruvian Amazon and Latin America regions. By reflecting on my 5-year ethnographic engagement with Shipibo-Konibos, an Indigenous society in the Peruvian Amazon, I will draw attention to the semiotic work that constitutes and legitimizes the gringo/gringa identity as a very productive category to make foreign visitors and

researchers legible to Shipibos. Moreover the gringo/gringa category expands beyond indexing foreign people in the Amazon. Shipibos themselves can index and embody a gringo/gringa identity by portraying phenotypic characteristics (e.g. lighter skin) and adopting a specific habitus (e.g. social isolation, lacking Shipibo proficiency, dressing in specific ways) (Bourdieu, 1977; Viveiros de Castro, 1998). Thus the gringo/gringa category becomes meaningful for playfully putting into question Indigenous identities and perceptions of Shipiboness. On the other hand, foreigners' identity is rarely put into question and Shipibos reject the idea of a gringo/gringa becoming Shipibo despite attempts made by these foreigners in adopting specific speech practices and modes of living (e.g. speaking Shipibo and marrying into Shipibo families). I argue that in disallowing the reverse (i.e. a gringo/gringa indexing a Shipibo identity), Shipibos articulate a strong critique to the irreconcilable power and economic asymmetries between the two (i.e. Shipibos vs foreigners) and the histories framing the active interactions the two parties have had for at least the past 100 years. In this paper I explore the productivity and limitations of the gringo/gringa category and what this identity says about how foreigners, including researchers, are perceived by this Indigenous society, and in turn what the semiotic work constituting the gringo/gringa category does for defining a Shipibo identity and an Indigenous identity. Indigenous identities have been the subject of discussion by scholars who describe these as highly contested, unstable and always defined in relationship to 'others' (Weaver, 2001; Merlan, 2009). This paper seeks to unpack ethnographically who these 'others' are and how they are recognized and constituted through Indigenous categorizations and epistemologies. The gringo/gringa category is widely used in Latin America and its diaspora and yet remains largely unexplored as a racial category (Kane, 1994/2004; Kane & Klein, 2013; Hayes, 2015). It is urgent that as scholars we comprehend and explore this category as it is through this identity that we are often understood in our research sites (or the equivalent racial category outside of Latin America). Even for a Latin American non-Indigenous researcher such as myself, this identity is assigned and inescapable. Thus this presentation seeks to question what does it mean to be a gringo/gringa researcher and how to reflect on the practices in our work as we are no longer 'unknown others' but embody a marked racial category. Presenter: Jennifer Sierra

The American Girls: 'White Slavery' and Imperial Projection in Rio de Janeiro, 1918.: We present a study of the way in which one nation state addressed the issue of questionable female migration, using the trafficking category not to safeguard the rights of its citizens, but to sanitize the reputation of the nation itself at a time when it was attempting to increase its status and projection in the world. The case analyzed involves a group of U.S. American dancers brought to Rio de Janeiro, Brazil during World War I. U.S. State Department officials involved with the case referred to these women as 'white slaves'. However, the documentary testimony by these men (and they were always men) and their activities and proposals regarding the presence of the 'American Girls' in Brazil reveals an underlying set of moral and political values which had little to do with combating human trafficking. Rather, what the case shows is how the 'struggle against white slavery' in the early 20th Century functioned as a surface of emergence, through which discourses concerning the nation, femininity, and the global ordering of peoples became manifest. We leave readers to draw parallels with today's attempts to stem the flow of 'the scourge of modern slavery'. Presenter: Thaddeus Blanchette

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Joshua Babcock (University of Chicago)

CHAIR:

Jay Ke-Schutte (Colorado State University)

PRESENTER:

Eman Elshaikh ,Xiao Ke (University of Pennsylvania),Shaheed Tayob ,David Kwok Kwan Tsoi (University of Illinois, Urbana-Champaign, Department of Anthropology)

DISCUSSANT:

Joshua Babcock (University of Chicago)

DESCRIPTION:

This session examines the imperialism of identities - not only the ways that particular identities are invented,

imposed, and internalized in and through processes of colonization (Fanon 1986 [1952]; Alatas 1977; Thiong'o 1981; Anzaldúa 1987; Inoue 2006; Chen 2010; Heller and McElhinny 2017; Ndlovu 2019), but also how 'identity' comes to stand as a model through which recognitions get forged; through which 'authentic' selves come to be projected and construed; and in terms of which individual and group-based claims can (and increasingly, must) be articulated (Crenshaw 1991; Bucholtz and Hall 2005; Cho, Crenshaw, and McCall 2013; Collins 2019; Boda 2022). Whether through categories like indigeneity, the native speaker, national identity, race, ethnicity, religion, gender, sexuality, dis/ability, culture, civilization, the public, etc., contributors to this panel consider identity as a process of model transfer: the projection of relations among entities from one arena of social action (Gal 2018) into another within/across reflexive scales (Tsing 2000; Carr and Lempert 2016). We consider how identity gets modeled via the normative expectations of a raciolinguistic Anglo-monolingualism located in the white, settler-colonial U.S. We examine the historical, institutional, and interactional (Rosa and Flores 2017) dynamics through which voices from somewhere aspire toward nowhere-ness, and through which the voice-from-nowhere (Gal and Woolard 2001, 7) and view-from-nowhere (Gal and Irvine 2019, 232–33) get contested and re-marked from below, finding themselves irreducibly located as coming from somewhere. Together, the papers take seriously the ways in which various (re)turns to reflexivity in and outside American anthropology come to reproduce ongoing identity imperialism.

Learning Arabic as a Path to Whiteness: This paper reflects on how the discourses of Shaykh Hamza Yusuf, a prominent Muslim-American leader, reshape the identity politics in some Muslim-American communities. I have argued that Yusuf's highly ideological conception of the Arabic language is mobilized to create powerful imaginaries of a "Golden Age" of Islamic history, which creates possibilities for new imagined social space-times and images of personhood (Elshaikh, forthcoming). Here, I extend this analysis to examine how these imagined histories and images of personhood produce possibilities for alignment with whiteness, demonstrating how language ideologies differentially stratify the Muslim-American community along racialized and classed axes. These stratifying effects reinforce existing imperialist power differentials that value whiteness, middle-classness, and their associated cultural practices and values. However, these positionalities are reassigned and redistributed in

mostly non-white middle-class Muslim communities, with power and prestige accruing along linguistic and economic lines, which I argue are intertwined.

Presenter: Eman Elshaikh

Identification as (anti-)Colonial Device: Genealogies of Amdo Tibetan Pastoralist/Nomadic Identities: In the early 20th century, Euro-American explorers observed various natural kinds and pastoralism in Amdo Tibet, while Chinese ethnographers and Communist cadres predominantly described tents and bandits. Nowadays, grassroots Tibetan ecological conservationists also work on nomadic tropes in advocating for indigenous land-use and eco-tourism. At the same time, Chinese local governments deploy pastoralism in the promotion of resettlement projects, construction aid, and poverty alleviation. What do these identifications presuppose, and how do they fit into the (anti-)colonial infrastructure? How do these identifications facilitate the conceptualization and more-than-human governance of a plateau region? In this paper, I move beyond the indigenous representation and quotidian equity that matters in liberal settings. Instead, I treat identification as a device (Michell 2002, Latour and Woolgar 1979), and see how identification projects entangle grass, soil, livestock, wildlife, and humans; as well as fit into the infrastructure of (anti-)colonial governance. Based on archival research of government documents and ethnographic work with grassroots ecological conservation groups in Amdo Tibet, I explore the presupposition and voicing structure (Bakhtin 1981, Agha 2005) of a few identifications and human subject identities in Amdo Tibet. I attempt to present the broader consequences of these identifications to the more-than-human worlds in Amdo Tibet. Presenter: Xiao Ke (University of Pennsylvania)

Fresh and Frozen Chicken in Mumbai: Texture and Taste; Profit and Presence; Theory and Subjectivity: The anthropology of industrial meat production and consumption turns around revelation and naturalisation as tropes of scholarly imagination, ethical mobilisation, and theoretical reflection. With revelation, ethnographers of industrial farming and slaughter reveal to audiences' violent practices ordinarily hidden from view. With naturalisation, the ethnographer accepts the inevitability and necessity of industrial agglomeration as a form of totalising efficiency that contains the seeds of its own undoing. Each centres liberal modes of thought and being, through the liberal subject as author and audience, assumptions of the proper place of human-animal violence in 'civilised' urban life, and analyses of economy that evacuate the entanglements of capital with race and colony. Yet, in Mumbai live chickens are

transported daily to Muslim dominated inner-city meat markets and butcher stores for slaughter according to customer request. Both Muslim and Hindu ritual practice recognise the relation between meat consumption and human-animal violence. The sensory experience of meat consumption at inner-city markets does not necessary elicit disgust and offense. And there is recognition by Muslim butchers of the intimacy between plans for urban modernisation, the extension of industrial forms of production and consumption in urban life, and the Hindu Right wing politics of anti-Muslim marginalisation. This paper thus presents an ethnography of inner-city butcher shops as sites of contestation, competition and ethical recognition between Muslim butchers, meat consumers, and industrial producers over the form, place, quality, and moral sensibilities of chicken production and consumption. In Mumbai an other-than-liberal ethics of the senses, debt, trust, and profit contests the reasonability, rationality, and inevitability of liberal and neoliberal morality and market practice. Presenter: Shaheed Tayob

Strategic Coloniality: Political Subjectivity and Multiple Hegemonies in Hong Kong: As the Chinese government has subjected Hong Kong to new and intense forms of political oppression and ideological mandate of nationalism—what Lee and Poon (2021) describe as “neo-colonialism,” what kinds of collectively mediated, bottom-up responses have taken shape? In this paper, I argue for the significance of an emergent cultural imaginary of Hong Kong as a transnational space, inhabited by political subjects who adopt a strategic blend of British coloniality and a locally distinctive form of Chineseness. I examine the emigration patterns following the implementation of the National Security Law in June 2020, which is the state’s heavy-handed response to the tumultuous Anti-Extradition Bill Movement in 2019 and early 2020. Against the political instability, the mass out-migration of skilled labor, including relatively young, educated middle-class, and their children, to the former colonizer, the UK and other anglophone commonwealth countries poses a threat of brain drain to Hong Kong; more importantly, these migratory routes are built upon, reinstate, and possibly reshape former colonial relationships. My analysis draws on ethnographic research from 2021 to 2023 in Hong Kong, as well as textual and interactional data. By locating multiple co-existing post-Cold War colonial and imperial structures (Chen 2010) in Hong Kong, I propose the concept of “strategic coloniality” to capture a distinctive colonial-emancipatory nexus in which multiple hegemonies propel the oppressed to strategically mobilize coloniality as a form of resistance

along the margins of China’s increasingly central position in a contemporary world order. Presenter: David Kwok Kwan Tsoi (University of Illinois, Urbana-Champaign, Department of Anthropology)

Kinship Remains: Biopower and Sovereign Perversions

4:30 PM - 6:15 PM

TMCC - 714 A

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Serra Hakyemez (University of Minnesota, Twin Cities, Department of Anthropology)

CHAIR:

Hoon Song (University of Minnesota, Twin Cities)

PRESENTER:

Jessica Cooper (University of Edinburgh), Caroline Doenmez (University of Minnesota), Serra Hakyemez (University of Minnesota, Twin Cities, Department of Anthropology), Amy Krauss (University of California, Santa Cruz), Emily Ng (University of Amsterdam), Nitzan Shoshan

DESCRIPTION:

As a source of meaning-making, kinship terms are used by modern nation-states (both colonial and post-colonial) to relate individuals not only to each other but also to sovereign authorities in power (Hobsbawm, Anderson). Kinship terms often construct nation-states in the patriarchal family image; state authorities intervene in families to ensure the life and well-being of citizen-subjects. The institutionalization of human life as a space of normativity summons a wide array of kinship images and intimate spaces. This panel grapples with quite a few of them: 'bastard' children and their substitute father Kim Il-sung in North Korea, 'terrorist bastards' and their illegitimate father Abdullah Öcalan in Northern Kurdistan, Indigenous children at risk and their 'caring' Mother Canada, aborted fetuses and their 'murderer' mothers in Mexico and the US, the dead monarch and her mourning subjects in the United Kingdom, the spirited kinship of the party-state in China, and the search of the 'people' for 'home' in Germany. By bringing these diverse images and spaces together, this panel considers kinship beyond the confines of biopolitical administration and interrogate its function in giving substance to national/popular sovereignty. The entanglement of sovereignty with kinship is ever more

pressing at moments of transition. Foucault's writings on biopolitics interrogate how social bonds are transformed with the transition of monarchical sovereignty to popular/national sovereignty. Notwithstanding this transition, something sacramental and magical, the 'royal flesh,' remains from the times of monarchies (Santner). The 'Thing' that cannot be captured by bios, that which exceeds biopolitical management, is sometimes called the object a (Lacan). Departing from the philosophy of (European) history in major key, this panel accounts for transitions of a different scale by asking what remains of an aborted fetus, an imprisoned political leader, and a monarch for seventy-one years. What are the remains of Canadian settler-colonialism, German populism, Korea War, and the cultural revolution of Mao? While some papers operate with the historicized concept of 'royal flesh,' others juxtapose it to 'the hieroglyphics of the flesh,' which de-historicizes (Spillers). This panel examines the remains of a corollary transition from kinship among monarchs to the people as kin. If monarchical sovereignty was under attack from the seventeenth to the nineteenth centuries, kinship as a system of organization has also received attacks from many fronts ranging from reproductive technologies to queer politics. Kinship operates simultaneously in the register of the phantasmatic order of the imaginary and the symbolic order of signification. It indexes binding intimacies and unbinding loss originating in culture wars, class wars, global wars, settler-colonial wars, and the like. The papers in this panel argue that kinship is laden with affect ranging from melancholy to anxiety to shame. It no longer offers a stable ground on which popular sovereignty can be erected as a phallic figure. Nevertheless, kinship 'remains' to define sovereign authorities and their enemies. What remains of kinship at a time when it is critically scrutinized for its heteronormative, patriarchal, and exclusionary structure? What kind of anxieties and enjoyment support the substance and subsistence of the kinship-sovereignty double?

Monarchy in Morning Dress: Law, Loss, Psychoanalysis: On 08 September 2022, Queen Elizabeth II passed away at Balmoral, the royal castle in the Scottish Highlands. Her death occurred amidst political action by the Scottish government to dissolve their political attachments to the British state; two days after Her Majesty asked Liz Truss to form a government in her name; one year after the death of her husband, Prince Philip, whose funeral the Queen attended under pandemic protocols, masked and isolated from her family; one year after Barbados left the Commonwealth;

two years after the then-Prime Minister Boris Johnson asked the Queen to prorogue Parliament so that he could act without their oversight, a request to which the Queen assented; six years after British voters voted to leave Europe; and seventy-one years after the Queen acceded to the throne. In the days following the monarch's death, it was impossible to speak of anything else throughout the UK. Drawing on observations of everyday life in Edinburgh at the time of the Queen's passing, I ask after the role of the monarchy within an ostensibly liberal-democratic state. Contrary to allegations of the monarchy as incidental, touristic, or antiquated, I suggest that the monarchy plays a foundational role in everyday life in Scotland by seating kinship relations within the state. I reckon with the curious cross-embodiment of monarch and subjects, brought to the fore in the context of her funeral, to insist that a theory of biopolitics engage with what Martin Amis has called 'the magic of monarchy' beyond practices of management and populational regulation. Presenter: Jessica Cooper (University of Edinburgh)

Dispossessing Mothers: Settler Sovereign Maternalism and Abductions of Indigenous Newborns : Manitoba has the highest number of children in foster care of any province in Canada, and 91% of them are Indigenous. Many of these children are in fact infants, taken from their mothers' arms by social workers within hours of being born when their families are deemed to pose a risk to their safety. This form of "violent care" (Stevenson 2014) is intimately linked to historical programs of Indigenous child removal by the Canadian state, all of which were rationalized by the supposed dysfunction and hopelessness of Indigenous families that required outside intervention. The brutality of this policy is masked by its proponents' insistent assertions of innocence. The "birth alert" policy that authorized these newborn apprehensions was officially ended in Manitoba in 2020; yet, in this moment of transition, Indigenous newborns continue to be apprehended in hospitals. This paper builds on the work of Indigenous feminists who have theorized the patriarchal aspects of Canadian state governance to consider the genealogy of a certain settler maternal logic that continues to animate contemporary understandings of power, parenthood, and social order made visible in the persistence of these apprehensions. Drawing on treaty negotiation records, Indigenous feminist scholarship, and ethnographic fieldwork conducted with Indigenous doulas in Manitoba, this paper contends that child welfare constitutes a contemporary form of colonial conquest. Like the land itself, Indigenous newborns are "discovered" again and again and claimed by the state

that requires their abduction to secure its right to dispossess. Presenter: Caroline Doenmez (University of Minnesota)

Two Sovereigns, One Body: The Perversion of Autonomy in Northern Kurdistan: Two master signifiers serve as the evidence of evidence collected for an ongoing “terror” case launched in 2009 against the political branch of the Kurdistan Workers' Party (PKK). One is Abdullah Ocalan, the PKK’s imprisoned leader, the other is Tayyip Erdogan, the autocratic president of the Turkish state. If a master signifier represents the subject for all other signifiers, as Lacan argues, how does law settle the doubling of a master signifier and the resultant existential legitimacy crisis? Through a hermeneutic reading of evidentiary documents, this paper draws attention to the crucial importance of the signifier “father” in statements recorded by the counter-terror police intercepting mundane phone conversations among Kurds. In utter paranoia, the prosecuting party asks: Is “father” the signified of a family patriarch? Is it a codename referring to the PKK’s political patriarch? Where is the patriarch of the Turkish nation situated in this chain of significations? The case under study is distinguished from endless other “terror” cases for two reasons. First, it spreads out to every single city in Turkey and Northern Kurdistan and imprisons Kurds from all socio-economic classes, genders, linguistic groups, ages, occupations, and family lineages. It gives substance to the magical term of popular sovereignty “the people” whose existence law presumes a priori. Second, it translates what Kurdish activists call “autonomy” into “separatist terrorism.” The third term through which these two terms are rendered identical is ‘father.’ I suggest that law resolves the conflict between two sovereigns over one body -- the people -- by oedipalizing the Kurds’ autonomy struggle. Presenter: Serra Hakyemez (University of Minnesota, Twin Cities, Department of Anthropology)

Forms of death within life: Imagining a politics of relation beyond biopower: The intensification of abortion criminalization in the U.S. and Latin America has involved the extreme erasure of state, police, and economic violence through appeals to the fetus’ pure exposure—but also, a radical delimitation of what is representable within feminist politics. For instance, in the Senate Judiciary Hearing following the repeal of Roe v. Wade in 2022, senators interrogated abortion rights advocates as to whether they condemn the killing of human beings—the implication being that if they did, their support of abortion access would be untenable. How might we understand the resurgence of abortion

criminalization to reveal the instabilities of biopolitical reason, as well as the anxiety of sovereignty imagined as decisive power over life and death? Drawing on ethnography with abortion care activists and doulas in Mexico, this paper traces how people supporting others to end pregnancy articulate an ethics of care as a praxis of calibration between life and death. I consider these visions of care for death within life (and responsibility for killing) in conversation with a genealogy of critique in black, Latin American, and queer feminist thought on reproductive labor and the power to make and unmake worlds through qualities of relation. Presenter: Amy Krauss (University of California, Santa Cruz)

Sovereignty, Anxiety, Disavowal: Filial Impossibilities and Spirited Kinship in China : The peculiarities of kinship have long been taken as explanatory in social scientific renderings of China, whether in terms of a capacity for or lack of capitalist development, or purported authoritarian, or more occasionally, democratic, tendencies in rule. In this paper, I consider kinship’s role in giving substance to national/popular sovereignty across two scenes: spirit mediumship and charismatic Christianity. In both, I approach this giving-substance in the wake of what’s experienced as failures of kinship and of the nation-state. Drawing from work at a temple in Henan, I attend to mediumistic speech and song that conjure Maoist visions of the People, while lamenting the collapse of filial piety and evacuation of virtue since market reforms. Drawing from work at a charismatic church in Shanghai, I follow the pastor and congregants’ accounts of the paternal dimension of divinity vis-à-vis the Chinese family and party-state. Rather than locating these conundrums solely ‘in’ China, I trace elements at play across gazes, including liberalist and other imaginaries of Maoism and of the ‘underground’ Chinese church. To address the theme of perversion as evoked by the panel, the paper considers Lacan’s formulation of the perverse structure as one centered on a sense of fundamental instability of the paternal function, paired with a certain interest in provoking anxiety in the other. Away from repression and foreclosure, as mobilized in neurosis and psychosis respectively, perversion, for Lacan, relies on another form of negation: disavowal. In conversation with papers in this panel, I explore how these elements—the instability of the paternal, the provocation of anxiety, and the move toward disavowal—speak to the scenes above, including the impossibilities surrounding contending figurations of the filial and the People. Presenter: Emily Ng (University of Amsterdam)

People, Territory, Homeland: Thinking about nationalism and Heimat today: In this paper I look at the political and social life of Heimat (homeland, home) in the present populist moment. If the people, understood in the key of nationalism as ethnos rather than demos, marks the political operation of calling forth a phantasmagoric being already at one with itself—through blood, fate, race, and so on—prior to history and politics; and if, furthermore, the people is reflected in its leader(s) directly as it were, both incarnating the same substance, the same Thing; then what is the scene or the stage where this mirroring, this embodiment, this kinship unfolds, is performed, comes to life? Territory, as the bounded extension of the political-administrative power of the biopolitical state, is merely part of the story. The people requires a scenery laden with affect, with intimacy, with memories and lived experience, with relations to place, people, nature imagined as immediate. Not national territory, then, but rather homeland, home, Heimat. Drawing on ethnographic fieldwork in the Brandenburg countryside, in this paper I trace the links between the current resurgence of Heimat in Germany and the recent rise of far-right nationalism. Heimat, I argue, evokes a notion of place and a corresponding imaginary of the people (Volk) that today is recruited for several contradictory political projects. Presenter: Nitzan Shoshan

Language, Race, and the Nation: Perspectives on the Colonial Linguistic Enterprise and Experience

4:30 PM - 6:15 PM

TMCC - 709

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Linfei Yi (University of Arizona)

PRESENTER:

Chantal Tetreault (Michigan State University, Department of Anthropology), Carmin Quijano (CUNY, The Graduate Center), Linfei Yi (University of Arizona), Nathan Wendte (University of Virginia, Department of Anthropology), Prashanth Kuganathan (University of Tennessee, Knoxville)

DESCRIPTION:

The colonial linguistic enterprise had long-term effects on shaping ideas around race, the nation, and the role of language in mediating those categories. Papers in this

panel examine a different aspect of these processes, highlighting processes of hybridization, translanguaging, and raciolinguistic erasure that is intimately connected with the colonial ingusitic project.

Linguistic Racialization of Heritage and Erasure of Culture for Arabic Language Learners in Post-Colonial France: This paper addresses the political, cultural, and educational stakes in the current public debate in France about the value of Arabic, using methods from linguistic and cultural anthropology such as ethnographic interviews and discourse analysis. Competing language ideologies that align with competing political agendas frame the question of whether and where to teach Arabic in France in different terms. Discourses on the left attempt to secularize and legitimize Arabic by moving instruction out of mosques and neighborhood associations, where it is currently most frequently taught, and into state-run public schools. At the same time, Islamophobic discourses emanating from the right politicize any type of Arabic educational reform in France as 'dangerous.' However, despite these differences across the political spectrum, Arabic remains institutionally and symbolically marginalized across France and continues to be framed as a threat to the sovereignty of the Republic in both left- and right-leaning discourses within the current political field in France. The importance of these public conversations and proposed educational reforms goes beyond the scope of language instruction to entail understandings of French identity in the context of immigration, globalization, and (post-)coloniality. Adding further complexity to this issue is the increasing value of English as part of a politicized commodification of languages in France and elsewhere (Heller, 2010). In other words, in many educational contexts, language is increasingly viewed as a type of capital within neoliberal globalization (Lo & Chi-Kim, 2012). At the same time that neoliberal pressures create an added value for English, the educational system in France has more typically valued 'difficult' and non-utilitarian foreign languages such as German, Russian, and Latin that are reserved for the most elite students from the highest socio-economic background. In sum, my ethnographic research conducted in 2022 shows a set of competing language ideologies and a belief in a linguistic hierarchy in France, the organization of which is determined by different languages' perceived symbolic value or 'capital' (Bourdieu, 1991). The proposed paper attempts to critically engage with these discourses through an analysis of the many challenges to engaging in so-called 'heritage' Arabic language learning in France. To do so, I contextualize

contemporary French attitudes toward Arabic by considering the educational and political landscapes for Arabic language instruction. As well, I analyze the institutional history of Arabic language instruction as it relates to France's transformation from a colonial to post-colonial power. First, I track how and where Arabic has been historically included and excluded within colonial and post-colonial French institutions to reveal how the language has been framed in ideological terms relative to this transformation. Second, I use these historical and theoretical frameworks to critique and contextualize the current right-wing turn in French public discourses relative to Arabic language instruction. My analysis draws upon 24 ethnographic interviews with students, teachers, and administrators in the Arabic linguistic market in France as well as a corpus of currently circulating language policies, public discourses, and media materials. Presenter: Chantal Tetreault (Michigan State University, Department of Anthropology)

The Untranslatable Colony: Language, Gender, and Political Legitimacy in Puerto Rico: Since the second half of the 20th century, the unincorporated territory of Puerto Rico has struggled to translate itself as a legitimate political entity before the U.S. and international forums. The fact that its official name since 1952, *Estado Libre Asociado de Puerto Rico*, could not be translated to the Free Associated State of Puerto Rico, because of 'a convoluted and misleading interpretation of the Spanish terms' (Trias Monge, 1997, p. 114) confirms this. Instead, the president of the United States and U.S. Congress opted for a different English name: the Commonwealth of Puerto Rico. From that moment on, Puerto Rican political figures have fought for their own legitimacy and domestic sovereignty before the U.S. institutions in English. However, their fight for political legitimacy reached a peak moment in the abrupt transition of Puerto Rico's governorship. In August 2019, governor Ricardo Rosselló resigned, pressured by mass protests against him and members of his cabinet. Based on the Commonwealth's Constitution, the Puerto Rican Supreme Court named the Secretary of Justice, Wanda Vázquez, as the governor's legitimate successor. In this way, Wanda became the first constitutional governor, which caused tensions among Puerto Rican elected politicians, who are mostly male. A couple of months after Wanda's appointment, a journalist and a Puerto Rican senator pointed out that Wanda has not been attending U.S. Congress hearings for amending Puerto Rico's Oversight, Management, and Stability Act (PROMESA) because she did not know English and she did not consider using a translator. To these comments, which were aired on

national radio, Wanda responded that she knew enough English to defend herself. However, she did not address the possibility to represent the people of Puerto Rico using a translator. In this paper, I examine Wanda's reluctance to allow others to translate her speech. Following Rodriguez's (2021) definition of translation as the transformation of linguistic forms into political performances, I argue that the *Estado Libre Asociado* is untranslatable because of its colonial nature. Moreover, I maintain that the Commonwealth depends on these communicational inequalities between local political figures and the U.S. government because they rhetorically impede any form of political performativity. Presenter: Carmin Quijano (CUNY, The Graduate Center)

Hybridities: Languages and Identities of Chinese Americans in the Borderlands during the Chinese Exclusion Act: Chinese Americans in the Arizona-Sonora borderlands, along with other Chinese or Asian Americans in the rest of the United States with a history of more than two hundred years, have been enduringly racialized and marginalized since their first arrivals in the mid century. Although there is growing attention drawn on Asian Americans in Latin American or border studies, issues specifically on identity intertwined with language and race of Chinese Americans have been hardly addressed, given that the Chinese immigrants live as part of this interstice space filled with different races, genders, geopolitical locales, languages, and more. Drawing on the literatures of language and identity, and Chinese diaspora, together with Chinese immigrants' lived history in the borderlands, this study aims to explore the cultural and racial identifications of Chinese Americans during the period when the Chinese Exclusion Act of 1882 coincided with the increasing demand of the Chinese labor in Mexico through the investigations of historical archives. Using multiple primary and secondary historical resources in the libraries and museums in southern Arizona, including artifacts, recordings of interviews, documentaries, newspapers, and so on, I intend to specifically explore in what ways and to what extent the Chinese immigrants use and learn what languages to navigate their identities through languages and cultures. The preliminary finding has shown that while some of the early Chinese immigrants perceived and are perceived as sojourners, like those in other areas of the United States who temporarily stay without cultural assimilation, others indicate their ambiguous identities by adjusting to the local languages and cultures. This study ultimately provides a historical account of the translingual, transcultural, and transracial experiences of the early Chinese immigrants. This study aims to

historize and contextualize my dissertation project with a focus on language ideology, race, and identity among Chinese Americans in the Arizona-Sonora borderlands. It is important to recognize the presence of Chinese Americans in the borderlands, not only because it covers the lacuna in the U.S.-Mexico border studies, but also because the presence of Chinese Americans and the formation of communities impact the larger Asian and Latin American communities nationwide and in Global Asia. Presenter: Linfei Yi (University of Arizona)

Translocal translanguage: the portability of Creole language behaviors between Louisiana and Texas: Migration between Southwest Louisiana and Southeast Texas has been a reality for centuries, but its strongest impacts have been felt in the last hundred years. Among these migrants have been members of the minoritized ethnolinguistic group known as Creoles, who emigrated to Texas with cultural and linguistic practices that distinguished them from much of the local population. While earlier generations of Creoles relocating from Louisiana to Texas often arrived without much exposure to English, today the number of their descendants still conversant in their heritage languages is rapidly dwindling. In this paper, I consider a sample of Texas-resident, Creole-English bilinguals whose linguistic practices draw from both Louisiana Creole and English in order to index an authentic identity for themselves and for others (cf. Lacoste, Leimgruber, and Breyer 2014). I seek to describe the features of these translingual practices (Canagarajah 2018), which I have already begun with earlier work examining phonological and morphological strategies for incorporating English loanwords into Louisiana Creole (Wendte 2020). But I also want to understand these practices in terms of their relationship to Creole space, which is inscribed in discrete, diffuse locales within the Gulf South. Specifically, I question whether the translingual practices of Texas-resident Creoles retain their indexical value as the travel across the state line and are evaluated by Louisiana-resident Creoles. In short, are Gulf South Creole translanguage behaviors translocal? This question also bears heavily on the issue of Creole access to voice (Blommaert 2005). To the extent that Creoles' translanguage is heard and understood in one place, how transportable is that semiotic potential to other places? Preliminary analysis indicates that Texas-resident Creoles and Louisiana-resident Creoles differ in their evaluations of translingual behaviors. From the perspective of Texas-resident Creoles, their translanguage (that is, Creole-English bilingual linguistic behaviors and practices) shows no major differences when compared to the translanguage of Louisiana-

resident Creoles. However, Louisiana-resident Creoles often ascribe to Texas-resident Creoles distinctive practices that index a lack of authenticity on several levels. The relationship between translanguage and heritage language for Creole bilinguals is rarely recognized; instead, as a result of Louisiana Creole's severe endangerment, the two risk being subconsciously conflated. And although language reclamation efforts have gone a long way in valorizing Louisiana Creole linguistic practices, those Creoles who find themselves outside of this domain may still find themselves linguistically marginalized. Teaching English Through Tamil: Translanguage During A Period of Transition in Postwar Sri Lanka: During British rule, the Jaffna peninsula was one of the primary sites of English language proliferation in colonial Ceylon due to many schools established by American missionaries. English language education is one of the primary reasons Jaffna Tamils were proportionately overrepresented in universities and an elite group of civil servants in the British Empire. Shortly after independence in 1948, the language ideologies of the island nation shifted from English primarily to Sinhala with the passage of the Sinhala Only Act of 1956. In the 1960s, the government banned English as an official medium of instruction in schools, and it became mandatory policy that Sri Lankan schoolchildren be educated in either Sinhala or Tamil and not the language of the colonizer. Thus, there was a generational divergence concerning the knowledge of English in Sri Lanka. Once the Sri Lankan Civil War commenced in 1983, there was an exodus mainly of the English-speaking elite and intelligentsia from the Jaffna peninsula to other parts of the island and the world. The rebel Liberation Tigers of Tamil Eelam (LTTE) controlled parts of north and east Sri Lanka as a de facto state for decades, including Jaffna, from 1990 to 1995.

Under their rule, primarily Tamil-only language ideologies were employed in governance and education. In 2009, the LTTE lost the civil war to the Sri Lankan government. The former war zones in the north and east have thus been spaces of transition for decades. Jaffna, in particular, has been in linguistic transition from the end of the colonial encounter and throughout the civil war. This peninsular area has transitioned with varying language ideologies contingent upon the respective nationalisms of who governed, ruled, or occupied. While postwar Sri Lanka has primarily embraced hegemonic Sinhala language ideologies, Jaffna is unique because it is an almost homogenous Tamil-speaking space. However, students today learn three or more languages in primary and secondary school in this transitional period of postwar development. This paper examines how Jaffna schoolchildren (both primary and secondary) learn English in a now primarily monolingual Tamil-speaking district with a rich English history. Based on ethnographic field research, it compares English language teaching (ELT) methods employed to make classrooms 'English only' environments versus those which utilize a translanguaging pedagogy. It finds that no one pedagogy unanimously fits all students best, varying primarily on the educational habitus of students and their family backgrounds. This study also analyzes how the mother tongue affects phonology and syntax for monolingual ethnic Tamil students learning English as a second language (ESL). Finally, it attempts to connect ELT pedagogies employed in schools in the microcosmic 'bubble' of primarily monolingual Jaffna with language in practice outside the classroom within a trilingual nation-state. Presenter: Prashanth Kuganathan (University of Tennessee, Knoxville)

Society for Linguistic Anthropology

ORGANIZER:

Sandhya Narayanan (University of Nevada, Reno)

CHAIR:

Donna Patrick (Carleton University, Department of Sociology & Anthropology)

PRESENTER:

Sandhya Narayanan (University of Nevada, Reno), Donna Patrick (Carleton University, Department of Sociology & Anthropology), Juan Luis Rodriguez, Hilary Parsons Dick (Arcadia University), Justin Richland (University of California, Irvine, Department of Anthropology), Eve Haque

DISCUSSANT:

Jessica Greenberg (University of Illinois, Urbana-Champaign, Department of Anthropology)

DESCRIPTION:

The relationship between language and law within linguistic anthropology has been grounded in the simple premise that the law and notions of legality and lawfulness are actuated through talk and language. Whether it be in the formation of legal professionals, enacting forms of legal control, or the question of a particular legal entity's power or authority to enact its laws, closer attention to the language has underscored the language ideological processes that enable institutional actors to mobilize laws into social action (see Mertz 1994; Philips 1998; Richland 2013). Less explored however, is how the law and notions of legality shape our understanding of a language and its speakers. In other words, what ways have different notions of the law and legality created and shaped new kinds of linguistic subjectivities? And how might these new or contested categories of linguistic subjecthood highlight how social actors are also engaging with juridical language in new ways to achieve their own legal ends? This roundtable seeks to discuss these ideas and issues across different legal, ethnographic, and linguistic contexts. Its intention is to have presenters find moments of convergence and divergence and to discuss how new kinds of linguistic subjectivities emerge through their interaction with legal systems and the language used to operate them. Presenters will highlight the various processes and practices that go into creating distinct kinds of linguistic subjects, who through their interaction with legal systems, are hierarchized and ranked into relative structures of inequality and privilege. Haque will focus on how the policing of language produces certain kinds of linguistic subjectivities in relation to debates around free speech. Dick will present new work on how the category of 'asylum seeker' becomes contested and negotiated through talk. Similarly, Rodriguez will discuss the discursive techniques that allow 'legal' Venezuelan diasporic expats to advocate for a democratic transition in Venezuela while also positioning recent asylum seekers as unworthy and unwanted. Patrick will explore how Indigenous groups in Northern Canada

have mobilized legal and rights-based discourse in language, education, and land to fight for greater political, institutional, and economic control in their traditional lands and territories. Narayanan will explore how competing kinds of linguistic subjectivities shape debates around intellectual property control for language reclamation projects between native tribes in Southern New England. Lastly, Richland will explore the role that legal language plays in shaping how US agencies and tribal governments interpret a 'meaningful tribal consultation', and the ensuing confrontation that emerges from differing interpretations about what is included in the scope of the consultation in relation to policy changes that impact tribal resources. PRESENTER:

Katie Kilroy-Marac ,Gretchen Herrmann ,María Blanco Esmoris ,Sasha Newell (Laboratoire d'Anthropologie des Mondes Contemporains (Lamc) of the Université libre de Bruxelles (ULB))

DISCUSSANT:

Kathryn Goldfarb (University of Colorado, Boulder, Department of Anthropology),Hannah Gould (University of Melbourne)

DESCRIPTION:

This roundtable gathers some of the authors from a

forthcoming homonymous edited volume along with a discussant to discuss the themes of hoarding, housekeeping, kinship, and waste. Across the globe in this late capitalist moment, increasing numbers of households are being overrun by the accumulation of domestic clutter. Since 2013, the DSM-V has included Hoarding Disorder as a form of mental illness. Almost simultaneously, Marie Kondo's Japanese approach to decluttering has sold millions of books, spawned television series, and classes on home organization. The need to keep things in the house conflicts quite directly with the imperatives of housekeeping, even though the housekeeper is also responsible for the storage and organizing of family belongings. The stigmatization of those with a compulsion to keep and the moral injunction to purge households of excess are parallel social forces pointing towards a moral panic surrounding the imbalance between the influx and egress of domestic belongings. While these tendencies have thus far primarily been approached through the genres of psychology and self-help, this book forum takes a cross-cultural stance in order to highlight the socioeconomic and cultural forces shaping domestic overaccumulation and broaden our understanding of the nexus of storage, housekeeping, and hoarding. In so doing, we make the contents of the home a central focal point for the analysis of kinship, allowing for the possibility that not only people but things make up the content of kin. Employing anthropological literatures on kinship, animism, materiality, and exchange, this volume demonstrates continuities between the global North and South while highlighting the spreading problem of unwanted clutter that increasingly threatens to take over domestic social space. At the same time, by placing housecleaning and storage as key processes of kin-making, our collection imagines kinship through its materializations in homes, possessions, and practices of removal. The household in these stories becomes a crucible in value transformation takes place along the lines of Thompson's famous 'rubbish theory', from fortune to rot, from junk to heirloom, from alienated to kin, from emotionally searing possessions to clutter to be sold at a yard sale. We highlight not only how value production forges the relations of kinship itself, but also kin relations become materialized and how those materializations emerge in turn as members of the kin group, becoming more and more difficult to remove. We turn to strategies of removal, minimalist aesthetics, and the moral injunction to declutter as an ideology with global and commodifiable clout. Often the processes of the negotiation of the remaining material possessions of the deceased become a key site in which kinship relations are reconfigured. Finally, the volume turns

towards the ways in which the waste matter being ejected from the home - which only furthers the problem of global accumulation— can be transfigured into resources for new forms of sociality.

Pragmatism in Ethnographies of Care: Epistemic Virtue or Vice?

4:30 PM - 6:15 PM

TMCC - 715 A

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Peter Muirhead (University of Toronto, Department of Anthropology)

CHAIR:

Laura Sikstrom (University of Toronto, Department of Anthropology)

PRESENTER:

Laura Beach (University of Toronto, Department of Anthropology), Csilla Kalocsai (Department of Psychiatry, University of Toronto), Peter Muirhead (University of Toronto, Department of Anthropology), Laura Sikstrom (University of Toronto, Department of Anthropology)

DESCRIPTION:

In healthcare and its adjacent carceral, legal, and educational arenas, experts often view pragmatism as a laudable and necessary virtue for effective care. While competence, efficiency and fairness are evident epistemic virtues in health care delivery (Sikstrom et al. 2022; Knopes and Cascio 2022), pragmatism has—outside the multi-species landscape of social housing (Carr 2015)—not yet been widely addressed in the ethnography of the 'psy disciplines'. After McAvooy, such disciplines are 'expert arenas where consequential judgements are made about people's mental health, behavior, cognitive capacities, personalities, and social functionality' (2014, 1527). In a popular sense, being pragmatic might mean foregrounding outcomes and efficacy over explanation and theory-building about people, systems, and their interweaved challenges. Being pragmatic might mean sacrificing other virtues, such as attentiveness, independence, and long-term thinking, to gain a means of action. This version of the concept seems a natural fit with neoliberal institutions where immediate solutions are valued, pairing also with a psychiatric nosology which has shifted historically to

reflect the immediate utility and speed of diagnostic categories over depth and sustained engagement (Phillips et al. 2012). On the other hand, pragmatism can also mean synthesizing a range of working explanations and approaches on the ground to inform clinical practice (Borden 2013). Following classical pragmatism (e.g. James 1907), this approach builds toward theory while still cautioning us against treating theory as the final word on any unfolding, inherently social issue. Drawing on both community and institutional fieldwork in North America, we address the context and implications of pragmatism as epistemic virtue, the ways experts are drawn to pragmatism as a guide and, after MacIntyre (1975), how pragmatism might transform into epistemic vice. For instance, bioethical approaches to medical assistance in dying in Canada have centered on the pragmatics of determining chronicity and capacity in crisis, frequently at the expense of preventative approaches and the social and existential aspects of suffering (Simmons et al. 2022). What other forms might care and expertise take under the aegis of pragmatism? We examine pragmatism through the ethnography of off-label prescribing in a Saskatchewan prison, an equity initiative for Black and Indigenous students in medicine, the implementation of artificial intelligence in a psychiatric hospital, and the path to leaving mental healthcare for long-term service users in two Canadian cities. Crucially, our examination of the pragmatic must also extend to the work of ethnography itself, and to the kinds of decisions we try, succeed, and fail to make in order to enact personal and disciplinary forms of virtuous pragmatism.

“Pam’s Not Allowed in Prison”: Pragmatism and psychotropic necropolitics in Canadian corrections: This paper explores the off-label use of psychotropic medications in prisons in Saskatchewan, Canada, where the vast majority of prisoners are Indigenous. This focus provides an entry into understanding contemporary forms of carceral-medical entanglement within settler-colonial contexts. Within the prison, praxis takes shape through a risk-oriented lens and pragmatism often trumps best practice. Drawing on interviews with correctional staff and formerly incarcerated individuals, I examine institutional motivations underlying prescription practices in prisons, including the over-use of antipsychotics alongside the denial of both prescribed and over-the-counter medications. The lived experience of prisoners challenges the legitimacy of stated pragmatic factors, reveals additional motivations, and centers so called “side-effects”, emphasizing the hidden violence of over-use/mis-use – including long-term impacts on physical health and the continued

neglect of mental health issues. These findings confirm scholarly critiques of prescription medication as a mechanism of governance, providing a pharmaceutical solution to the problems of over-crowding, lack of meaningful activity, lack of mental health support, and other associated pains of incarceration (e.g., de Menil & Cohen 2009, Hatch 2019, Kilty 2012). This psychotropic necropolitics is a form of ongoing settler-colonial violence. In examining the use of psychotropic medications not within the context of mental health care, but largely in the absence of it, this paper broadens the scope of anthropological study of psychopharmaceuticals. In drawing attention to the specific environment of the prison – in particular, provincial prisons in Saskatchewan – I expand upon Michael Oldani’s focus on “micro-geographies of high prescribing”, which highlights the norms, motivations, and justifications underlying prescription practices in particular places (2014, 263). Presenter: Laura Beach (University of Toronto, Department of Anthropology)

Limits of Sparking Justice: A Mentorship Program for Black and Indigenous Students in Medicine: While there have been multiple calls to attend to diversity in medical education over past decades, medicine has remained a predominantly white profession in Canada. Recent social activism to redress violence against Indigenous and Black people has led medical institutions to renew their commitment to EDI. Institutional efforts vary, but often include pathway programs. This paper explores the limits pragmatism produces when social justice efforts are realized in Canadian medical education. We examine a mentorship initiative called SPARK for Black and Indigenous medical students that was launched in 2021 at the University of Toronto. SPARK provides biomedical and epidemiological research experience for Black and Indigenous learners so they can compete more effectively for coveted residencies. Taking a pragmatic approach in a system where Black and Indigenous researchers and allies are hard to find, it adopts a mentorship model, whereby students are matched for a year with a research supervisor, a career and a community mentor. Fricker’s concept of epistemic injustice allows us to understand Black and Indigenous medical students’ experiences of exclusion from areas of knowledge production and mobilization. Within medicine’s racist structures, SPARK may function as a program of epistemic justice, transforming Black and Indigenous learners’ academic opportunities and supporting them in thinking through questions of identity, representation, and community. The limits of SPARK, however, are revealed through some of the mentor interviews that remind us that you can’t reliably

deliver justice “without embracing its values and principles as part of its ethos” (Fricker 2013, 1331). SPARK may only achieve its social justice outcomes if it prepares its mentors to critically reflect on their positionalities and rethink the possibilities of mentorship in medical education. Presenter: Csilla Kalocsai (Department of Psychiatry, University of Toronto)

On Leaving Well: Pragmatism in Distance from Psychiatric Care: At present, broad conjecture around the personal and political motivations of psychiatric service users pervades popular discourses around madness in North America. Drawing on community ethnographic fieldwork with former service users in Toronto, Ontario and Moncton, New Brunswick, this paper explores the forms of pragmatism that ex-service users invoke to justify and guide their exits from clinical relationships. Entanglements with family, clinicians, provincial healthcare systems, patient records, and medications are only some of the factors. I take long-time service users’ own deep familiarity with the daily politics of mental health and psychiatric treatment as a starting point. From there, I contend that the decision to leave often amounts to renegotiating clinician-patient dyads into more equitable forms of support, as well as weighing competing health needs against the realities of care and ongoing stigmatization. Rather than necessarily building on a discrete act of refusal, or a complete espousal of antipsychiatric or abolitionist principles, my participants’ decisions respond to epistemic injustice (Fricker 2007; Kidd et al. 2022), accruing pragmatically in what I term archives of refusal (see McGranahan 2016; Finkelstein 2019). Interviewing, including talking through pathographic writing and patient records, reveals considered appeals to epistemic virtue. This work contributes to a growing social science literature on the role of the “counter-clinic” between health social movements and biomedicine (Davis 2018; Giordano 2018; Underman and Sweet 2022), as extended to the networks of current and former psychiatric service users. Presenter: Peter Muirhead (University of Toronto, Department of Anthropology)

Pragmatic Paradoxes: An Institutional Ethnography of Fairness in Mental Health: The implementation of artificial intelligence (AI) in mental health is presenting us with new moral problems. These problems often manifest as everyday “pragmatic paradoxes” – or situations where individuals are subject to contradictory demands and interests, but lack the agency to negotiate them (Pina e Cunha et al. 2022). Drawing on ethnographic data from within a hospital-wide effort to

integrate an algorithmic system into a care pathway for major depressive disorder, I show how tensions between established principles (e.g., 'treat everyone the same') and the situated utility of any given piece of information (e.g., 'not all people need the same things') reverberate. I develop the argument further by exploring how the humans that inhabit this system (doctors, data scientists, patients) draw on various epistemic virtues, such as a willingness to consider other perspectives, to navigate these paradoxes. An understanding of how the individuals involved in this care pathway cultivate provisionally useful ways of knowing and then doing (Carr 2015) challenges the tendency to assume that "real" (or data-driven scientific knowledge) and "lived" experiences must be mutually exclusive terms. Surfacing the epistemic tensions underlying these paradoxes provides a more grounded discussion about the speculative claims that AI might 'tame' the so-called idiosyncratic practices in mental health. Presenter: Laura Sikstrom (University of Toronto, Department of Anthropology)

Rewinding Community: Diaspora, In-betweenness, and Collaboration in Global Asia

4:30 PM - 6:15 PM

TMCC - 603

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Tzu-Chi Ou

CHAIR:

Tzu-Chi Ou

PRESENTER:

Qiqi Jin ,Tzu-Chi Ou ,Sina Lee ,Seung Cheol Lee

DISCUSSANT:

JESOOK SONG (University of Toronto, Department of Anthropology)

DESCRIPTION:

The panel draws inspiration from the AAA theme of transitions to examine how different communities navigate the cracks in their social orders as they negotiate trans-identities. We will explore what community means in the face of exclusion, trauma, and displacement. Facing endless uncertainties, we all desire to rewind the clock back to some earlier times when we felt certain about our everyday lives. At which points do we want to rewind, pause, or even jump to another

time and space? We approach 'rewinding community' with a sense of experimentation and delve into those ruptures in social relationships. The panel features five papers exploring the complex relationships between diaspora, identity formation, and collaboration in contemporary Asia. The presenters highlight how communities create unexpected ways of restoring connection in excluded or marginalized places or spaces. The papers are based on ethnographic research conducted in Taiwan, Korea, and the US and feature a diverse range of subjects, including Hong-Kong diaspora, Southeast Asian migrant workers, Korean transnational adoptees, metropolitan shantytown dwellers, and NFT investors. We look at how the informants explore hidden, contested, or collaborative forms of community-making. The papers begin with a classical sense of community, with Hong Kongers who migrated to Taiwan and experienced trauma due to identity struggles, Southeast Asian migrant mothers in Taiwan who are denied permanent residence and citizenship status, Korean adoptees who have been returning to their homeland, community activists who politicize their 'cubicle village,' and a non-fungible token (NFT) investors' community who attempt to get rich together. But soon, the authors urge us to see how our informants redraw boundaries between traumatic and healing, legal and illegal, racial and national, public and common, speculative and communal. In doing so, they collaboratively forge the community anew, from illicit care networks, collaborative artistic expression, adoptees' third space, a time of futuring the common, to collector-investor communities. Together, these papers offer critical insights into the diverse ways in which community, diaspora, and identity are negotiated and contested in contemporary Asia. The panel aims to contribute to a deeper understanding of the complex and dynamic relationships between time and space, mobility and immobility, and belonging and exclusion in the Asian region. We expect the panel to stimulate interesting conversations about migration and diaspora, urban transformation, and financialization.

Art of Hong Kong Diaspora: Trauma and Healing Through Collaborative Ethnography in Taiwan: This paper explores the creativity, agency, and also vulnerability of the diaspora community and anthropologists in the field when encountering trauma, and highlights how the method of collaborative ethnography can foster reconnection and healing. Since 2019, over ten thousand Hong Kongers have migrated to Taiwan. Due to the constant identity and emotional struggles between Hong Kong and Taiwan, they have experienced traumas that are difficult to name. Through

participatory observation and co-curation, I invited several Hong Kongers who had similar experiences to express themselves anonymously through various art forms, such as painting, poetry, music, graffiti, and short films. These artistic expressions convey emotions of uncertainty, rootlessness, struggle, and haze, which can be recognized as trauma, and reflect how the experience of displacement has made their expressions fragmented and chaotic, causing a rupture in their relationship with themselves and others. Collaborative ethnography, through the more expansive and open medium of art, which allows for nuance in expression, can enable them to share and be seen so as to help them heal each other and rebuild connections with the world. Presenter: Qiqi Jin

Hidden Community: Illicit Childcare Networks of Southeast Asian Migrant Mothers in Taiwan: Southeast Asian migrant mothers in Taiwan face significant obstacles in accessing support for their families due to their denied permanent residence and citizenship status. This paper examines how illegality is intertwined with migrant motherhood and the challenges faced by families with “illegal” status or stateless children. The paper highlights the ways in which legal and underdocumented migrant workers sustain illicit networks to support each other and navigate the contradictions of the guest worker program in Taiwan. The paper argues that the legal and undocumented identities of migrant workers are not dichotomous. Instead, a 'shadow system' exists where legal and undocumented workers not only contrast but also assist each other. In this context, pregnant migrant workers and migrant mothers have found ways, sometimes through illicit means, to raise their children. The paper examines the informal childcare networks established by Southeast Asian migrant workers in Taiwan, which operate in a legal gray area and challenge conventional notions of community and citizenship. The author conducted interviews with migrants in shelters and medical institutions to explore the experiences of migrant mothers and the blurred identities of marginalized migrant workers. The paper sheds light on the need to challenge dichotomies that perpetuate their marginalization. Presenter: Tzu-Chi Ou

Lives in between: Cultural Identity Transformation of Korean Transnational Adoptees: Since the end of the Korean War in 1953, more than 220,000 Korean children have been placed for adoption in Western countries,

with the largest number adopted to the United States. Since the early 1990s, Korean adoptees have been returning to their homeland, South Korea. This study explores the journey of establishing relationships among the adoption triad, adoptees, adoptive and birth mothers, after adoptees reunite with their birth mothers. By examining their entangled relationship, this project focuses on how the newly formed relationships and the experiences of visiting South Korea influence adoptees' cultural identity formation and how they create Korean adoptees' third space by dismantling national and racial categories. This project reclaims transnational adoption as a gendered and racialized issue and challenge monolithic and patriarchal models of motherhood discourse by shedding light on the non-normative lived experiences and marginalized narratives of adoptees, Korean birth mothers, and American adoptive mother. This study applies transnational feminist epistemologies and methodologies to recover the forgotten stories of adoptees and their two mothers to document their lost histories. My project aims to explore the possibility of transnational solidarity among the adoption triad to critique the master discourse related to motherhood, gender, and race. Also, this study examines the third space created by adoptees as the space blurs traditional boundaries of national and racial identities. Presenter: Sina Lee

“Let's Get Rich Together”: The rise of speculative communities among South Korean NFT investors: This paper explores the relationship between financial speculation and community formation through an analysis of a non-fungible token (NFT) investors' community in South Korea. The concept of financialization has often been associated with the erosion or destruction of communities, and blockchain technology, with its emphasis on decentralization, has been interpreted as promoting an anti-communal, libertarian agenda. However, the self-referential structure of financial markets has given rise to various “speculative communities” that combine speculative and communal logics (Kompouros-Athanasidou, 2022). In particular, the emergence of blockchain-based NFT assets has led to the formation of ‘collector-investor communities’ that engage in asset valuation practices (cf. Boltanski & Esquerre, 2020). Drawing on fieldwork research conducted in an NFT investor community, this article offers an analysis of the inner logics of these new speculative communities and their broader implications

for our understanding of contemporary financialization.

Ruptured Worlds? Hope after Covid in South Asia's Garment Industry

4:30 PM - 6:15 PM Virtual - Room 3

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Dina M Siddiqi

CHAIR:

Dina M Siddiqi

PRESENTER:

Dina M Siddiqi ,Christian Strümpell ,Hasan Ashraf

DISCUSSANT:

Debarati Sen (University of Houston, Department of Comparative Cultural Studies)

DESCRIPTION:

This roundtable explores how a time of rupture and transition, such as the Covid 19 pandemic, opens up spaces of hope along with fears of dystopic presents and futures. It asks what transition as an analytical lens opens up and what it might obscure, in light of the crisis of global capitalism that the pandemic seems to have ushered in. For those involved in the global garment industry, Covid proved to be a prolonged moment of disruption and derailment, at the same time that it offered openings for reinvention and repurposing. Drawing on ethnographic engagements at multiple scales of South Asian garment producing centers, roundtable panelists explore the kinds of 'transition' inaugurated in the wake of the pandemic, by whom and for whom. The roundtable is inspired by new directions in the ethnographic study of industrial labor in South Asia (Karim 2023; Ruwanpura 2022; Hewamanne 2020 and 2021). The 'residue of hope' and 'cruel optimism' that Karim found in her interlocutors before the pandemic resonate strongly in the contexts under discussion. Geert de Neve (with co-author Grace Carswell), draws on fieldwork in two villages around Tiruppur, southern India, to explore rural households coping with the post-covid transition, whose earlier sense of optimism had been replaced with a much depleted sense of hope. Drawing on Berlant's 'cruel optimism,' and current debates on hope in development, he will explore how people maintain hope in the face of on-going uncertainty. Hasan Ashraf turns

his attention to the 'green transitioning' of Bangladesh's garment industry. Showcased as the new Green Industrialization and signifying sustainable development, this 'frenzy' of greening is calculated to neutralize emergent criticism of the negative impact of fast fashion on the climate. Ashraf draws on Karen Bakker's (2015) analysis to show how 'greening' transnational capital promotes corporate greenwashing and by extension, the neo-liberalization of nature. Christian Strumpell traces the long term restructuring of Bangladesh's garment labor force, from primarily rural, 'unskilled' and female to formally skilled, urban and male. Pandemic conditions intensified and accelerated this transition, which rests among other things on the automation process. He explores the shifting politics and gendered subjectivities that arise as a result. Dina M. Siddiqi will discuss the spaces for repositioning and repurposing opened up post-pandemic for those who labor in factories as for well owners of capital who see themselves as laboring for the nation. Drawing on Kathryn Olivarius's notion of immuno-capital, as elaborated by Sareeta Amrute and Myrthi Jegathesan (2022), she will explore the tactics and discourses that suppliers use to build up immunities, and reinvent themselves as both relevant and moral. She will juxtapose this to an exploration of a worker initiated and run online platform that has become a significant site of hope and dissent in the post pandemic era. Together the roundtable panelists ask what it means to practice hope amidst the debris of capitalist dys/utopia and its many 'transitions' and iterations (China Mieville 2016; Thembi Lockett 2019).

Bae (University of Michigan, Ann Arbor, Department of Anthropology), Britta Ingebretson (Fordham University Libraries)

DISCUSSANT:

Jenny Chio (University of Southern California)

DESCRIPTION:

The rural has often been framed as the traditional foil to urban modernity, often in morally charged gendered ways (Chatani 2015; Hodgson 2002; Jacka 2006; Lai 2016). For instance, the rural has been imagined as a site of traditional gender norms (Murphy 2010) or itself gendered as a feminine or masculine space. Likewise, across different societies the rural may be held up as a paragon of traditional moral values (Hill 1998) or as a site of immoral backwardness. In attending to gendered differentiation across time and space, as in the cases of rural women migrants' struggles and changes in cities (Gaetano 2009; Zhang 2014), many studies have emphasized the rupture between the urban/rural dyad along these gendered moral lines. However, such emphasis on rupture in scholarship may preclude close examination of social transitions in rural spaces (cf. Robbins 2001) and implicitly reinforce the idea that the rural must be defined in opposition to the urban. In a sense, the rural has been treated as a static anchor that gives rise to ever-changing fluctuating urbanity. Yet, as scholars of the rural have increasingly shown (Bluemel & McCluskey 2020; Casey 2009; Chio 2017; Choi 2020), rurality in both imagination and reality is itself a constitutive site of the modern as well as a productive arena of its own gender politics and moral negotiations. In order to explore the gendered politics of rural modernity in its own terms, papers in this panel draw on a variety of ethnographic contexts. Each paper illustrates contestations and changes taking place in rural spaces in which people interact with diverse values and ideas, which refuses the essentialization of the rural. Bayuga discusses a parallel religious modernity, as Chinese Catholic Nuns pilgriming to metro-Manila have struggled to negotiate gender ideologies in rural China in imagining future possibilities of Catholic China. Wilhoit identifies the rural as a space that can lead a change, as in alternative kinship patterns in the rural Andes, where othermothers play a key role in chosen families. Rautio examines Dong ethnic women's embodiment of textile techniques in Southwest China as both traditional and empowering, which displays the local uptake of the state-led heritage projects. Bae describes how Korean back-to-the-land people's use of address, especially their use of modern forms that acknowledge female individuality, are reframed by local elderly women as institutional which constructs

localized sensibilities of modernity. Ingebretson shows how rural Chinese women in Huangshan understand traditional sexual mores in the region differently from outside critics, as these rural women reframe the Neo-Confucian tradition as compatible with feminist socialist modernity. As such, each paper takes up a unique way to upend pre-existing linkages or assumptions of the urban/rural dyad, through a close examination of the interplay among modernity, morality, and gender in rural spaces.

Catholicism with Chinese Characteristics: Chinese Nuns and Infrastructures of Parallel Modernity: In China, Catholicism is primarily a rural religion—a faith whose infrastructure in the country was shaped by European missionaries converting villages. Since the period of High Socialism, the Church has undergone several shifts. The religion grew and following a “religious revival” in the late 1990s, Chinese Catholics began a professional pilgrimage process to metro-Manila to undergo religious and spiritual formation—a broad educational attempt to synchronize a Catholicism that was left-behind by global religious transformations because socialism cut the Chinese Church off from the Second Vatican Council’s developments in the 1970s. This paper describes the experiences of Chinese Catholic Nuns on this journey and their struggles to negotiate gender ideologies in rural China, encounters with cosmopolitan Catholicism in Manila, and their position as laborers in a religious institution seeking to support widely spread communities of believers. From this case, this paper argues that Chinese Catholic rural modernity hinges on the affordances of gendered religious bodies, Catholic nuns, to materially support and ideologically expand the capacity for Catholic China to imagine future possibilities that play with state limitations, expectations of religious orthodoxy, and a floating rural-urban demography. In this context, this paper highlights how this constellation of international religious forces pushes Chinese Catholics to envision a parallel religious modernity that straddles conditions determined by the Chinese state and religious inspiration from abroad. Presenter: George Bayuga (University of Colorado, Colorado Springs, Department of Anthropology)

Women’s Householding in the Rural Andes: Chosen Families, Othermothering and Demographic Transition: Drawing on a decade of ethnographic research in the rural Andes, this paper reconsiders linearity of visions of ‘the rural’ as a space receiving, rather than disseminating, social trends. Focusing specifically on concerns emerging from literature on the so-called ‘second demographic transition,’ I find that kinship patterns seen as novel and developing in urban areas

can be traced to much longer, gendered practices in the rural Andes. Rural women draw on local and historical iterations of the new kinship norms discussed with portent in urban contexts to produce innovative political strategies and to guarantee family well-being. This leads me to further argue that fears over increases in 'single motherhood' specifically misunderstand and misrepresent rural women's social, economic, and political strategies. This paper ultimately contests the applicability of the label "single mother" broadly in rural the rural Andes, arguing instead for a framework that acknowledges the key role of 'othermothers' as well as particular, gendered forms of chosen family. Hardly the purview of urban westerners, such 'alternative' kinship patterns are entrenched in areas like Ayacucho, Peru, where women pool resources and home spaces to make kin across biological and even species lines. Presenter: Mary Elena Wilhoit (University of Chicago)

Gender Politics and Textile Production in Southwest China: In Meili, a village in Guizhou province, Southwest China, a collective of Dong ethnic minority women regularly engage in labor-intensive practices to produce detailed and intricate patterns of fabric that adorn clothing worthy of ceremonial wear for the living and the dead. In this paper, I explore how the bodies of the women that master these techniques – including weaving, dyeing, double-faced weaving and embroidery – carry an allegorical bond with the fabric to endure and reinstate a social order that is bound to kin. As artisans, the women I write about not only engage in textile production as an avenue to uphold Dong practices passed down by their ancestors, but also to bolster their position in the family. More recently, state-led heritage projects are redefining textile production as an archetype of 'tradition' that upholds gender roles based on rural/urban and ethnic/Han dyads. The role that women artisans' play in Dong textile and craft production has evolved by granting women artisans' new reputational merit both within and beyond the family household. In my paper, I disentangle this contested terrain to offer new ways of understanding gender politics and textile production in a rural ethnic village in Southwest China today. Presenter: Suvi Rautio (University of Helsinki, Social and Cultural Anthropology)

Modern as Individual, Modern as Institutional: The Politics of Address among Korean Female Villagers: This paper explores how modern forms of address are reframed by local elderly women in a Buddhist return-to-the-farm village in South Korea. After the Asian Financial Crisis in 1997, a local Buddhist temple initiated

a social environmental movement. Many educated urbanites who had participated in democratization movements migrated to this mountainous rural village to pursue an alternative way of life drawing on egalitarian ideals. Among the changed village dynamics, the politics of address among locals and newcomers shows how different groups of villagers navigate their ethical boundaries, through which they reconstruct and reposition the notions of modernity. This address politics centers around the recognition of women as individuals, instead of so-and-so's wives and mothers which reinforce the patriarchal hierarchy. While newcomers assert that addressing one's proper names is to respect other people's individual identities, local elders say that addressing one's names is not respectful because that is a practice for addressing children. Local elders use a household name (taekho) drawing on the wife's hometown name which is to treat a married couple as one house unit. In other words, local elderly women used to gain respect by becoming more than oneself. This paper illuminates ethnographic moments when local elderly women are encouraged to use their proper names, such as in official meeting and public performance. For newcomer women, the use of proper name is purported to be everyday practice drawing on modern individualistic ideology; but for local elderly women, proper names are reframed as specific to modern institutional settings. Presenter: Yeon-ju Bae (University of Michigan, Ann Arbor, Department of Anthropology)

Confucian Feminism in Rural China: This talk examines how rural Chinese in Huangshan, Anhui Province, seek to reconcile their local Confucian legacy with modern "socialist" feminism. From the late 19th century onwards, liberal and socialist Chinese intellectuals, as well as Western scholars, have criticized Confucian philosophy for promoting oppressive and misogynistic views towards women and sexuality. In the 20th century, traditional practices like widow chastity, foot binding, and son preference were condemned as keeping women weak and "backward" and, by extension, holding back China's progress as a nation. Huangshan is a rural and undeveloped region whose industry is primarily based on tourism. In addition to its natural beauty, locals consider Huangshan's (disputed) status as the birthplace of Neo-Confucianism to be the primary draw. While promoting their region as a particularly "Confucian" part of China, locals must grapple with how to reframe the parts of Confucian heritage that are considered sexist and "backward" as compatible with feminist socialist modernity. I show that locals do this by reframing conservative sexual

mores as civilized and feminist rather than traditional. For example, an acrobatics show depicts a chaste widow as an independent woman who does not need a man rather than a woman prevented from remarrying by social norms. While relatively "liberal" sexual mores are often associated with urbanity and modernity, Huangshanese women considered their conservative mores to reflect their civilized and refined character. They instead contrasted themselves with rural women in other parts of Anhui whose relative sexual openness they considered vulgar. Presenter: Britta Ingebretson (Fordham University Libraries)
Discussion: Discussant: Jenny Chio (University of Southern California)

Talks, Ghosts, and Resistances on the Road: Automobility and Spatial Imaginaries and Actions

4:30 PM - 6:15 PM TMCC - 606
Oral Presentation Session

REVIEWED BY:
American Ethnological Society

ORGANIZER:
Neriko Doerr (Ramapo College of New Jersey, Salameno School of Humanities and Global Studies)

CHAIR:
Neriko Doerr (Ramapo College of New Jersey, Salameno School of Humanities and Global Studies)

PRESENTER:
Neriko Doerr (Ramapo College of New Jersey, Salameno School of Humanities and Global Studies), Cora Jakubiak (Grinnell College), Megan Saltzman (Mount Holyoke College), David Malinowski (San Jose State University)

DISCUSSANT:
Satsuki Takahashi (Hosei University)

DESCRIPTION:
Technologies of mobility not only move us physically in space, but also shape our relationships with the space imagined to be inhabited by our 'friends,' 'neighbors,' 'strangers,' 'foreigners,' and even ghosts, as well as police and government officials. These inhabitants dwell, traverse, and circulate this space on foot or in buses, cars, bicycles, scooters, etc., communicating with us in diverse, nuanced ways. The papers in this session investigate the contours of such daily experiences shaped by the prevalence of 'automobility.'

Automobility is a heterogeneous ensemble of discourses, institutions, laws, scientific statements, and philosophical propositions developed around automobiles. It involves Fordist capitalist accumulation, the global political and economic balance based on oil production and distribution, environmental debates on alternative energies, city and regional planning, work-home relationships, and specific subjectivities. Such subjectivities are shaped by notions of the 'good life,' road safety and drivers' license education, and changes in automobile use, including the shift from private car ownership to carsharing based on a network of vehicles used collectively, with the automobile seen as a service rather than a commodity (Manderscheid 2011; Urry 2004; Dowling and Simpson 2013). The first paper in this session examines California's roadside memorials of 'ghost bikes,' sites of commemoration to honor bicyclists who lost their lives on the road, in light of the affective regime of landscapes. Paralleling the absence of these cyclists' bodies with the increased absence of drivers in self-driven vehicles, this paper further analyzes these roadside memorials as a way to humanize the 'places in between,' exploring possibilities for a more spatially just society. The second paper illustrates the complex relationships between automobility-the lifestyle configured around the use of automobiles-and imaginaries of the 'rural idyll' as experienced by Chinese international students at a small, rural Midwestern college in the United States. The third paper investigates communicative practices specific to automobility-public, semi-distanced, mostly non-verbal, affective, and often ambiguous-in three kinds of interactions that develop on the road in New Jersey: around tailgating, flashing high beams, and the lights and sirens of ambulances. This paper further explores how these communicative practices that have no grammar books can inform language education that seeks to defy standardization processes. The fourth paper investigates everyday spatial control in Barcelona, Spain, by state apparatuses-including the police-to 'move individuals along,' on the one hand, and such individuals' quiet, elusive, and non-confrontational actions that nonetheless destabilize the 'normal order of things' and suggest the grit of democracy-heterogeneity, uncontrollability, and 'noise'-on the other. Together, this session explores automobility and its effects that have rarely been discussed in anthropology. The papers in this session suggest new ways to investigate the intertwined political economy on a global scale, technologies of the state and its (failed) enforcement, affective politics that connect mundane daily interactions and philosophical perspectives on life, physical movements that are informed by imaginings

and infrastructure of automobility, and the potentials for social justice.

Ambiguous Communications and the End of Language Standardization: What Driver Communication Tells Us: This paper examines the communicative practices among car drivers on the road that develop around three kinds of practices—tailgating, flashing high beams, and seeing the lights and sirens of ambulances—and connects their degree of ambiguity to a debate in foreign language education. The need for accuracy is at a maximum in communication on the road, as misunderstandings can have possibly fatal effects. Nonetheless, drivers' interpretations of other drivers' actions and their messages vary, showing a high degree of tolerance to ambiguity. This differs strikingly from other kinds of communicative practices that strive for accuracy and mastery of meaning (hook 1992). This paper's examination based on participant observation, interviews, news article analyses, and drivers' education literature contributes not only to the literature on automobility (i.e., discourses and practices around automobiles), which discusses cyclist-automobile driver communications (Castañeda 2020; Egan 2021) yet overlooks communications among drivers, but also to the debate on language standardization in foreign language classrooms. Teaching the standard variety language as the only "correct" one is a form of domination. Standard languages are chosen due to the dominant social status of their speakers, thus teaching them imposes the dominant group's speech onto others (Bourdieu 1991). Such imposition is often legitimized in the name of communication accuracy (Mori et al 2020). This paper suggests how ambiguity in driver communications can challenge this legitimization and inform the possibility of language education without standardization. Presenter: Neriko Doerr (Ramapo College of New Jersey, Salameno School of Humanities and Global Studies)

Chinese International Students' Experiences of Living (and Driving) in the U.S. Heartland: While a large body of scholarship has examined the factors that shape Chinese international students' college selection processes, few studies have focused specifically on the role of rurality in these same students' choices. Drawing from Beech's (2019) work on geographical imaginaries, this paper reports on a study that investigated how twenty Chinese international students discussed their decision to attend a small, private liberal arts college in the U.S. Cornbelt. While study participants explained their choice as a move to 'see the true heartland of America,' this choice rendered them dependent on cars

in ways that they had not anticipated. Study participants lamented the college's distance from major urban centers, which required them to drive long distances to get hot pot, go to Asian food stores, access airports, and conduct internships, among other lifestyle necessities. However, study participants also valued and spoke highly of the friendliness of what they called "America," a form of synecdoche that failed to recognize how the intimacy of small-town life is intimately connected to its lack of car culture. This study thus reveals the complex relations between automobility—the lifestyle configured around the use of automobiles—and imaginaries of the 'rural idyll' as experienced by Chinese international students at a small, rural U.S. Midwestern college. Presenter: Cora Jakubiak (Grinnell College)

Mobile Practices of Resistance in Barcelona's Public Spaces: Since neoliberalism began to settle into Barcelona in the late 1980s in preparation for the 1992 Olympics, the city has become increasingly regulated for private investors and tourists. As a result, many public spaces have been privatized and gentrification has evicted historic communities, businesses, and their public activities to the periphery. In addition, a long series of civic laws was enacted and has limited what one can do, see, and learn in public space (Rancière 2007). This paper will argue that, despite this crack-down on public space, small, overlooked mobile phenomena still persist and resist "in the cracks" of Barcelona's sidewalks, streets, and plazas (de Certeau 1980). Differing from large, confrontational forms of political resistance (such as protests or strikes), the paper will describe what the author found conducting in situ research on the mobile (pedestrian) economies and everyday practices of: undocumented immigrants, self-governed cultural collectives, and alternatives uses of public furniture. In the end, her presentation will show how 'the part of no part' manage to quietly bypass spatial hostility and carve out some agency of their own, albeit temporary (Rancière 2010). Presenter: Megan Saltzman (Mount Holyoke College)

Recalling the ghosts on the street: Bike memorial interventions in an era of automated automobility: This paper takes up the case of ghost bikes—iconic sites of commemoration created by the bereaved to honor bicyclists whose lives were lost on the road—in order to investigate the potential of affective concentrations in place to disrupt growingly insular networks of automobility and spatial exclusion. Building upon the notion of 'affective regimes' of dynamically structured feeling potential in semiotic landscapes (e.g., Wee & Goh, 2019), and drawing from a rich literature on roadside

memorials as “demonstrat[ing] a willingness to express grief in individual and unprescribed ways that can constitute an assumption of, or challenge to, current authorities” (Clark & Franzmann, 2006: 584), the paper reports on a combination of documentary photography, geosemiotic analyses, and roadside interviews carried out at ghost bike sites in the Santa Clara Valley, California, in summer 2023. In particular, the riderlessness of the ghost bike is read in parallel with the diminution of automobile driver agency in contexts of ubiquitous GPS navigation and (increasingly in the region under investigation) self-navigating vehicles: injury, death, and subsequent absence are ever-present dangers especially for those who walk, bike, or use other forms of active transportation in the company of cars, but also of course for car drivers and passengers. Yet, this paper argues, it is precisely the memorialized absence of these bodies from the road that calls upon all sorts of mobile subjects to recognize and humanize the ‘places in between’ as origins and destinations unto themselves, for a more spatially just society (Soja, 2010). Presenter: David Malinowski (San Jose State University)

The Anthropology of 'Colonial Hoarding': History, Repatriation, and the Future of Colonial Institutions

4:30 PM - 6:15 PM TMCC - 717 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Council for Museum Anthropology

ORGANIZER:

Brian Yang (University of Illinois, Urbana-Champaign)

CHAIR:

Brian Yang (University of Illinois, Urbana-Champaign)

PRESENTER:

Brian Yang (University of Illinois, Urbana-Champaign), Sarah Shulist (Queen's University), Rainer Buschmann, Carlton Shield Chief Gover (Indiana University, Bloomington, Department of Anthropology), Marisa Karyl Franz (New York University), Krystiana Krupa

DESCRIPTION:

After the tragic fire at the National Museum of Brazil in 2018 destroyed thousands of Indigenous belongings and ancestors along with invaluable documentation of Indigenous languages, there have been renewed calls all over the world to repatriate belongings, ancestors, and

extracted knowledge back to the communities dispossessed by colonial actors stored away in their museums and institutions. But what were the conditions that made such a tragic fire possible in the first place? This roundtable seeks to discuss one cause of this tragedy that it calls 'colonial hoarding.' Museums and other colonial institutions are built on the foundational logic of an entitlement to remove, collect, and store cultural objects under the auspices of preservation and exhibition of these belongings. As the tragedy highlights, however, the actions that colonial actors have done/are doing go beyond simple collecting for the purposes of preservation and exhibition. Rather, some of these collections have gotten so large that many of the objects cannot even be exhibited and the conditions in which they are stored frequently fail to preserve them. Such behavior can be understood as a symptom of wider patterns of activity that can possibly lead to the 'diagnosis' of 'hoarding disorder' in colonialism and its institutions. By understanding museums and other similar colonial institutions through this psychological anthropology framework of 'hoarding' this roundtable is not simply trying to describe or 'diagnose' a problem with museums, but rather this session is also attempting to illuminate possibilities for museums and institutions to practice an ethics of care with Indigenous and racialized communities, and informing practices surrounding the repatriation of Indigenous belongings, beings, and ancestors. Thinking about this year's theme 'Transition' and the focus on 'trans' as the operative word looking at in-betweenness, Chadwick Allen, in his work *Trans-Indigenous* (2012), offers a way to put contexts and experiences together, specifically for Indigenous contexts, without creating hierarchy. This roundtable will address this question of how one could understand colonial institutions through the framework of 'hoarding,' broadly understood, through a multidisciplinary, multisectoral, and multiexperiential approach. This panel includes scholars from history, anthropology, museum studies, literary studies, critical Indigenous studies, and linguistics, as well as applied anthropologists and NAGPRA practitioners. Additionally, this roundtable seeks to center the voices of Indigenous peoples, who have been disproportionately affected by colonial hoarding, by starting from a place of Indigeneity. By putting all these voices from different disciplines and sectors together, this roundtable seeks to engage with how to transition colonial institutions, such as museums, away from settler/colonial logic and towards a decolonial/anti-imperial one.

The Messy Task of Translation: Knowledge, Knowing, and Knower

4:30 PM - 6:15 PM

TMCC - 801 B

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Rehan Sayeed (McGill University, Department of Anthropology)

CHAIR:

Jean-Michel Landry (Carleton University, Department of Sociology & Anthropology)

PRESENTER:

Seema Golestaneh (Cornell University, Department of Anthropology), Rehan Sayeed (McGill University, Department of Anthropology), Philip Balboni (University of California, Berkeley, Department of Anthropology), Carolyn Beard (University of Toronto, Department of Anthropology)

DISCUSSANT:

Setrag Manoukian (McGill University, Department of Anthropology), Jonathan Boyarin

DESCRIPTION:

In theorizing how traditional religious knowledge is constructed, disseminated, embodied, and transmitted, central to which is the praxis of translation (or mistranslation)-conceived here as both in the literal and metaphorical sense-anthropological inquiries have traditionally focused on bodies, rituals, discourses, and texts imagined 'religious.' However, what could we learn from anthropological analyses of religious knowledge that delve deeper to include discourses, texts, rituals, and actors that, while not usually considered part of the institutional canon, contribute to it? For example, the inclusion of texts in forms other than those institutionally sanctioned, rituals enacted beyond the edifice of religious institutions, and other actors such as publishers, translators, and patrons who enable the institution's overall knowledge-making project. Recent anthropological works have highlighted the analytical import of attending to the epistemic fecundities of these untapped, less-trodden territories (see Boyarin 2020; Manoukian 2012; Mittermaier 2019; Pandolfo 2018; Tomlinson 2014), thus, drawing our attention to how religious subjects critically negotiate and navigate the ambiguities ('messiness') of their 'everyday' life. Such instances of negotiations and navigations appear

to transcend religious/secular, practicing/non-practicing, orthodox/heterodox, worldly/hereafter, and other such binaries that are still dominant in contemporary discourses about (and of) religion. In attuning to the intricacies of the institutionalized production of religious knowledge, the significance of extra-institutional domains emerges rather explicitly. Religious subject, and allied praxis of religious reasoning, then appears to be a mode of living in a constant semiotic struggle with the self, whether in forms contesting the probity of texts or rituals or the materiality of their diverse interpretations. 'The Messy Task of Translation' highlights the complex web of knowledge production by attending to the variegated (and uncommon) ways translation impinges on religio-secular aspirations. Thus, considering the subtleties of institutional (and extra-institutional) praxis of knowledge production, this panel seeks to conceptualize the relationship between translation and institutionalized religious knowledge.

Sanctioned Intimacies: Touch and Religious Knowledge in Iran : What kind of religious knowledge is transmitted via touch? The touching, caressing, and kissing of shrines, of the latticework (zarih) that surrounds elaborate tombs, of dusty common graces, is an extraordinarily common phenomenon in contemporary Iran. Such practices are certainly not taught in any sort of institutionalized religious setting, and it may be argued they even operate outside of the parameters of what we call ritual (if we understood ritual in the Turnerian sense). And yet while touch may not be taught in any formal settings, the cultivating of affection for saints and key figures in Islamic history is in fact something that is relayed in both institutional settings and practices and publications funded by the Iranian state. Indeed, whether it be discussed in a khotbeh (sermon) or in Qur'an classes in a local mosque or institute or a public billboard expressing sorrow during Muharram and Safar, feelings of intimacy and affection with saint figures is something is extraordinarily common throughout Iran, and is highly encouraged by many Shi'i authorities figures. It is worth exploring then, if this phenomenon of touching shrines, of wishing to connect with the deceased holy figure on a more intimate level, cannot be seen as both extra-institutional and institutional. In other words, even though the practice of touching and kissing is not discussed specifically, the desire for touch may emerge out of broader discourses surrounding the cultivation of affect for saints which is very much encouraged in institutional settings. Further complicating matters is that the phenomenon of physical connection of course long pre-

dates the Islamic Republic, making its origin points even harder to discern. This paper will hence explore how cultivations of intimacy in the broader religious milieu of Iran relates to the phenomenon of pursuing physical contact with shrines, therein exposing the difficulty in tracing and translating the influences of such a practice. Presenter: Seema Golestaneh (Cornell University, Department of Anthropology)

The Task of an 'Ālim: Inheriting Knowledge that Matters: 'The scholars are indeed the inheritors of the prophet (Al-'Ulama Waratha Al-Anbiya)' is an oft-referenced saying of the Prophet Muhammad that captures the centrality of knowledge ('ilm), and specifically the responsibility of the scholars ('ulama), in Islamic tradition. Anthropological works have demonstrated the centrality of text and practice in Islam (see Asad (1986), Lukens-Bull (1999), Messick (2018), and how the latter is contingent on the hermeneutical approach deployed to the former. Following this understanding, one can adumbrate piety, understood here as a state of being (not acting), and its ancillary expressions as a product of discursive translation (see Asad 2017), the semantic domain of which appears to neatly emerge out of the text into the world as lived by Muslims. However, what do we make of pedagogical efforts—institutional and extra-institutional—to reimagine piety beyond merely an epiphenomenon of belief, the concomitant givens of which have normatively been the text and practice? Based on thirteen-months (and ongoing) ethnographic fieldwork mapping the scenes of traditional Islamic learning in the Greater Toronto Area (GTA), this paper exposes us to the contested pedagogies of seeking knowledge ('ilm) and edification (tarbiyah) at play in the making of an 'alim (scholar). Tracing how students and graduates of 'secular' universities engage with Islamic religious sciences in the GTA, the main argument of this paper is that conceiving translation as a mode of articulation, the perlocutionary thrust of which wrests the discourse beyond the binary of text/practice (and institutional/extra-institutional), thus, laying bare the relations that legitimize it in the first place, affords a more nuanced understanding of the task (in Benjaminian sense) young students of knowledge (ṭullāb al-'ilm) inherit. Presenter: Rehan Sayeed (McGill University, Department of Anthropology)

Religious Translations and the Secular Consciousness: Edward Said and his Anthropological Critics: This paper advances one way to understand the relationship between religion, secularity, and translation within what Edward Said called a “purely secular consciousness.” The paper argues that for Said, as for other secular

thinkers (and their critics), “religion” and “the secular” can be seen as referring less to historical processes, cultural traditions, and sociopolitical institutions than to states—or what I will call “movements”—of mind. This almost psychocognitive understanding, wherein the mind alternates between “secular” and “religious” modes of conception, is everywhere present in the work of Said and other “secular critics”—even if it is rarely recognized, let alone thematized, by these critics. By thematizing this understanding, I work towards a “contrapuntal” reading not only of Said and secular criticism but also of anthropological critics of secularity, such as Talal Asad and Saba Mahmood. Questioning the tendency to consider religion and the secular principally through the lenses of social power, historical change, and political pressure, I pose the question of what it would mean to understand these concepts as referring to distinct states of mind within a dialectic of translation between the mind and what Said called “the chaos” of reality within which the mind is situated. Through this questioning, I rethink the stakes of both Saidian secular criticism and critical responses to it within anthropology and related fields. In doing so, I suggest that we are freer than we think to redefine the contents of “religion” and “the secular”—that we can translate them in new ways. Presenter: Philip Balboni (University of California, Berkeley, Department of Anthropology) Bread & Wine, Matzah and Manischewitz: Jewish-Christian Translation in the Christian Passover Seder: In this paper, I study the practice of Christian Passover seders in mainstream and evangelical Protestant churches in the United States. Though the Jewish holiday of Passover is not traditionally a site of Christian religious observation, some Christian communities have begun to host Passover seders during the Christian Holy Week, drawing parallels between the Jewish tradition of the Passover seder and the Christian traditions of Maundy Thursday, the last supper, and Eucharist (Communion). After detailing the practice of the Christian Passover seder, I untangle the logic behind the practice, which I identify as the attempted translation of ancient Jewish heritage onto modern Christian practice, attempted reclamation of Christianity’s Jewish heritage, and attempted understanding of Christianity in relation to Judaism. Finally, as a practitioner, I offer several alternatives to the practice of Christian Passover seders that center Jewish self-understanding and highlight practices endemic to Christian theological traditions. Tourism in Transition Part 2 (ATIG)

4:30 PM - 6:15 PM

TMCC - 715 B

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Celia Tuchman-Rosta (Denison University)

CHAIR:

Celia Tuchman-Rosta (Denison University)

PRESENTER:

Geoffrey White (University of Hawaii, Manoa), Magdalena Banaszekiewicz, Mollie Gossage, Michael Di Giovine (West Chester University, Department of Anthropology & Sociology)

DISCUSSANT:

Susan Frohlick (University of British Columbia, Okanagan, Department of Community, Culture and Global Studies)

DESCRIPTION:

Tourism is undergoing myriad transitions in the wake of the COVID pandemic, with growing concerns about environmental impacts, as many economies shift towards service industries, and as sustainable, community-based tourism projects continue to develop. These include transitions towards virtual tourism during the height of the COVID pandemic and in response to environmental stressors as well as transitions toward forms of tourism with social equity or climate justice goals. The challenges of rapid change in the industry can be perceived negatively, as a destabilizing and potentially destructive trend. Yet tourism transitions also open generative spaces that ignite imaginative experimentation. Anthropological work has often highlighted the transformative nature of tourism. Valene Smith (1977, 1989, 2001), for example, 'revisited' her collection *Hosts and Guests: The Anthropology of Tourism* repeatedly, each time taking into account changes in research on tourism and in the impacts of tourism on the economy, culture, and the environment. Other work has focused on how tourist expectations and imaginaries of a destination impact the way that local communities present their cultural traditions, sometimes leading to substantive cultural change (Bruner 2001 and Picard 2005). Discussions of the detrimental changes to the environment caused by mass tourism including impacts on water supply and a high-carbon footprint have also been a common thread (Pattullo 2003 and Chambers 2009). Other work has

focused on transitions in tourism based on violence and terrorism, COVID anxieties, the emergence of medical and fertility tourism, and virtual tourism and the use of other technologies (Ness 2005, Isaac 2014, Barbosa et al. 2021, Ackerman 2012). The Anthropology of Tourism Interest Group (ATIG) has organized a two-part session to further explore current transitions in tourism. The papers in these sessions go beyond documenting change in tourism and how or why transformations occur. Each paper sits within the moment of transition exploring the generative process and the contradictions and ramifications that emerge through it. The first session, *Tourism in Transition Part 1*, explores a broad array of transitions in tourism. In contrast, this session, *Tourism in Transition Part 2*, focuses on transitions to new forms of tourism. Some papers consider how the COVID pandemic has changed the tourism landscape creating challenges for tourism producers and encouraging the emergence of innovative alternatives. Others explore the development and rekindling of educational forms of travel which seek to challenge 'superficial' forms of sightseeing. Lastly, some papers focus on the use of sensory tools and technologies to transform connections to tourism/heritage sites. This session examines the transition of tourism sites and activities due to changing demographics, expectations, inspirations, and external challenges. Panelists grapple with: How is tourism re-imagined and how do new forms of tourism emerge?

Affective Technologies and the Future of War Tourism: Notes from WWII Normandy: When past wars remain within living memory, war tourism is inevitably tangled up with commemorative practices. What happens when there are no more witnesses? For World War II, the passing of the war generation now provokes public questioning about the transformation of interpretive and affective practices suited to war tourism in a post-memory world. Nowhere is this more evident than in Normandy France where the beaches of D-Day have for decades been an iconic focus for transnational memory work of returning veterans and other travelers affirming America's 'good war' narrative. In 2020 officials in Normandy, expressing concern for the future of the region's memory tourism, voiced their support for a new project that will create a destination for presenting the 'epic' story of D-Day in a large-scale theatrical production using performers and audiovisual media. Immediately controversial, the ensuing debate has been carried out in public fora, in news media, and in presentations and protests. In the process, the discussion has exposed longstanding conflicts and contradictions in Normandy war remembrance. The war

in Ukraine, which has fractured the vision of a liberated, peaceful Europe that once anchored WWII narratives, has only intensified the debate. This paper, drawing on a decade of fieldwork in Normandy's memoryscapes, offers a reflection on the role of immersive technologies in shaping the production of war memory and historical imaginaries generally. Presenter: Geoffrey White (University of Hawaii, Manoa)

Memories in transition: Transformative multisensorial experiences and difficult heritage sites: This paper addresses issues at the intersection of critical heritage studies and tourism studies by contributing to the debate on a transitory, performative mode of heritage. It sheds light on the process of the transformation of difficult heritage sites from sites of non-memory into tourist sites developed intentionally to attract visitors. KL Plaszow is a heritage site situated in Podgórze District, within 20 minutes from the Old Town in Krakow. From 1942, the German Nazi Labor Camp was established on 12 ha of the land formerly occupied by two Jewish cemeteries. For decades after the War, the site was largely unmarked—transformed into a semi-wild recreational area through a process of urbanization. In the absence of material reminders of the difficult past (with only a few monuments, which served as the only markers of remembrance), heritage of KL Plaszow remained on the periphery of consciousness. Although the camp became widely known after it was featured in Steven Spielberg's movie *Schindler's List* (1993), it was not until the initiation of the process of creating the Plaszow Museum - Memorial Site that a wider public debate began around the function and narrative of the space of the former camp. The aim of this paper is to explore how sensory practices offer a novel visitor experience, support memory work, and establish a wider heritage community. The paper uses ethnographic methods to provide insight into the role of a tour guide as choreographer incorporating multisensory tools to enhance bottom-up perspectives of heritage interpretation. Presenter: Magdalena Banaszkiwicz

A transition in Chinese tourism: from sightseeing to research travel: In this paper, I introduce *yanxue lüyou*, "research travel," also translated as "study tours," a relatively new direction for education, culture and tourism reform in China. It has emerged alongside the union of the culture and tourism bureaus and an overall push for "high quality development." As a kind of hands-on educational programming, research travel is typically contrasted with sightseeing, where tourists are assumed to only engage with or learn about their surroundings in a superficial way. The paper is based on firsthand

observations from my participation in a research travel conference and expert inspection tour in Leshan, Sichuan Province, in 2019, a review of Chinese language articles, and some follow-up interviews. Although China's research travel is said to be inspired in large part by North American practices (scouting, camps and field trips), there is little movement in the reverse flow of ideas. At this time there is also a lack of ethnographic studies on research travel programs. This paper offers an overview and preliminary discursive analysis of the research travel concept, identifies possible contradictions, and raises questions for future investigation. Presenter: Mollie Gossage

Transitioning to an Extended Reality: Virtual Pilgrimages and Digital Sacred Spaces: Amid the disruption and despair within the travel sector, the COVID-19 pandemic fostered significant transformation in pilgrimage and tourism, particularly in the ways devotees and site managers utilize digital technology to both extend and complement their experiences, as well as to accommodate audiences' different needs for spiritual engagement. The infrastructure needed to support both phenomena may exist in conjunction with in-person sites or as an extension of physical realities into the virtual realm. Based on in-person and virtual ethnography, this paper explores both phenomena using the case of a virtual pilgrimage under development by the authors and the cases of viral social media posts that have become digital sacred spaces. It explores such questions as what makes someone a virtual pilgrim, what characteristics are evident in virtual pilgrimages, what is the role of the platform host in shaping the pilgrimage, what is the role of the host in engaging with the pilgrim and/or visitor, and how visitor participation creates a virtual community. Finally, coupling results from a research study in which respondents were surveyed about their experiences and observations of virtual pilgrimage sites with online debates about discussions with Chat-GPT-animated virtual saints (including Padre Pio and St. Francis), the paper examines different demographics' views on the benefits and drawbacks of engaging in virtual pilgrimages and digital sacred spaces. Presenter: Michael Di Giovine (West Chester University, Department of Anthropology & Sociology)

[Transcending Earth: ethnographies of religion and spirituality in space exploration](#)

4:30 PM - 6:15 PM

TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Jenia Gorbanenko

CHAIR:

Jenia Gorbanenko

PRESENTER:

Deana Weibel (Grand Valley State University, Department of Anthropology), Jenia Gorbanenko, Hae-Seo Kim, Adryon Kozel

DESCRIPTION:

Studies at the interface between space exploration, religion, and spirituality, are a quickly growing interdisciplinary field. At present dominated by historians, astrosociologists and religious studies scholars, there is now a burgeoning interest in this subject amongst space anthropologists, whose ethnographic research this panel brings together. It is organized with the view of planting the seeds for a new field of studies in anthropology of religion – an inclusive anthropology of religion in space that studies how adherents of different belief systems make sense of space exploration and imagine their own spacefaring futures. For as long as people have been boarding rockets to transcend the Earth's boundary, astronauts and cosmonauts have also been seeking a spiritual transcendence to accompany them on their space travels. Famously, to prepare himself for disembarking during the first Moon landing in 1969, American astronaut Buzz Aldrin performed the Christian sacrament of communion. Later in 1988, Soviet cosmonaut Vladimir Titov shocked the ground control center in Korolev, at the time still under the officially atheist USSR, by congratulating them with the 1000th anniversary of the Christianization of Kyivan Rus' from outer space. As more people launch into space, the religious and spiritual make-up of space habitats is becoming more diverse as well. In 2007, the Department of Islamic Development in Malaysia issued a fatwa with guidelines for performing Islamic rites on the International Space Station. In 2023, a Japanese satellite developer Terra Space inc. and the Kyoto Daigoji temple are preparing to launch a Shingon Buddhist space temple into orbit. Admittedly, as Mary Jane Young aptly points out, Inuit shamans have been going to the Moon well before Buzz Aldrin and his crew (1987), which challenges us to think critically about who gets to define what constitutes space travel and transcendence of the Earth. Contributors to this panel are inviting anthropologists to explore these

phenomena ethnographically, and their papers demonstrate a range of perspectives with which one can approach the relationship between space exploration, religion and spirituality. Weibel looks at the Christian practices of American astronauts on- and off- Earth, as well as at the influence of Christianity on NASA. Similarly working with Christians, Gorbanenko describes how the topic of space exploration has been co-opted by certain Russian Orthodox priests and missionaries in their religious work as a means of gaining relevance before the wider public. Both Kim and Reid are challenging us to take Korean Shaman and Thai Buddhist cosmologies seriously and are inviting us to consider the value of thinking about space exploration and the cosmos otherwise. Some of these Buddhist ideas have been radically re-imagined by the SpaceKind community, who model themselves after the fictional monastic order of the Jedi and with whom Kozel conducted her fieldwork. Finally, drawing on ethnographic accounts of everyday mysticism, Tereshin ties these papers together, by asking a fundamental question: how has the human relationship with the cosmos shifted in the Space Age? Young, M. J., (1987) 'Pity the Indians of Outer Space': Native American Views of the Space Program, *Western Folklore*, 46(4).

Celestial Witnesses: Christianity at NASA and Astronaut Religiosity in “the Heavens”: Given that human spaceflight first occurred during the Cold War, a time of hostility between an officially atheistic Soviet Union and an overtly religious United States (often in response to fears of “Godless communism”), Christianity became an important influence on the American space program. Although the first public Bible reading from space was met with a backlash from American atheists that prompted NASA to encourage religious discretion, American space culture remains highly Christian. An ecumenical Christian astronaut prayer group, for instance, meets regularly in Houston and many Christian astronauts (of both Protestant and Catholic traditions) have participated in religious rituals while in space. This paper, based primarily on a series of ethnographic interviews with retired NASA astronauts, will consider the ways that Christian ideas and approaches have permeated American space culture, looking specifically at the influence of Christianity in astronaut narratives about their work, how experiences in space have either been seen through a Christian lens or modified Christian beliefs, how certain Christian rituals (particularly Catholic communion) have been practiced and modified in space, and how time in space creates religious capital, which combined with the social capital that can result from being chosen as a NASA astronaut in the first

place, gives some retired astronauts authority as Christian witnesses. I will also discuss resistance by non-Christian astronauts to NASA's Christian hegemony. Presenter: Deana Weibel (Grand Valley State University, Department of Anthropology)

Space as an icon: Christian virtues in translation: From painting icons, the religious paintings of saints, with the Earth's view from space in the background to setting up museums of space exploration on church grounds, there is a minority group of Russian Orthodox Christian priests and missionaries who have begun to engage with the topic of space exploration. They realize the potential of outer space as an icon for missionary work and use the allure of space, the awe and sublime that it instils, as a conduit for communicating the virtues of faith to the wider public. In this paper, I explain how space, presumably a profane thing, becomes an icon at the hand of the Orthodox. I will expand on how with the help of these space exploration themed Russian Orthodox places and things the Orthodox make their spiritual message more accessible to the different publics they address. These space themed places and things help the Russian Orthodox to perform the work of translation, when addressing those, for whom the traditional language of Orthodox Christianity may come across as obtuse. Today traditional icons, the religious paintings, do not captivate the non-religious, as much as they might have done in the past. Indeed, the thing with outer space is that it is relatable and exciting for a wider non-religious audience, and for its potential to inspire a person to take an interest in Orthodox Christianity and, thus, embark on their own journey to God, space, I argue, is also a kind of icon for the Orthodox. Presenter: Jenia Gorbanenko

Korean Shamanism as a Cosmology of Space: South Korea's national space agency, Korean Aerospace Research Institute (KARI) recently sent a lunar orbiter to probe and study the surface of the moon. In their own way, Korean shamans (mudang or manshin) claim to have been in touch with the moon for millennia, calling on the moon's power to heal, bring a good harvest, and fulfill the wishes of people on Earth. Dalmaji-kut, or the moon-welcome kut, is a ritual practiced throughout Korea that welcomes a plentiful and peaceful lunar new year. The shamans in Korea have a unique ability to connect with and embody the gods that rule these planetary bodies as well as phenomena of outer space. This ability is manifest in the shamans' ability to mediate between their clients and the gods to grant them wishes or to protect them from harm. This paper theorizes the practice of Korean shamanism as a

cosmology of space, focusing on the role that the shaman's relationship to planetary bodies play in the practice of Korean shamanism. Drawing on cosmological approach to the study of outer space (Valentine 2012), this paper reflects on the significance of reading Korean shamanism as a cosmology of space, in relation to the historical and political specificity of South Korea's national space program. David Valentine. 2012. "Exit Strategy: Profit, Cosmology, and the Future of Humans in Space." *Anthropological Quarterly* 85(4): 1045-67. Presenter: Hae-Seo Kim

Modelling morality and sacredness for the New Space Age through SpaceKind Jedi training: A new generation of spacefarers and enthusiasts within the space industry are calling for a reconsideration of what it means, morally, to be a member of a humanity responsible for an ailing, precious home planet while increasingly, enthusiastically exploring and settling new extraterrestrial territories. This paper will present recent ethnographic fieldwork to explore how SpaceKind, an online training course and community for the New Space Age, cultivates specific ethics and subjectivities modelled after the Jedi, a fictional monastic order in Star Wars. Participants are encouraged to think of themselves as the crew of Spaceship Earth (a concept popularized by R. Buckminster Fuller), to use the power of space to learn how to live on Earth collaboratively, and to model themselves after Jedi ideals in order to participate in the next step in human evolution more ethically. The convoluted path of New Space Age secular spirituality is put into a historical context, demonstrating briefly how the Jedi, Star Wars, and other important science fiction inspirations were crafted using a hodgepodge of Buddhist and Taoist ideas as understood and represented in mid-to-late 20th-century California through writers such as Joseph Campbell and Alan Watts. This paper reflects on the significance and narratives of the wider space industry and human futures in space, through a focus on how SpaceKind training aims to produce a new order of moral, neoliberal 'space leaders' through a blend of religious and speculative language, practices, and motifs. Transitional Tastes: Food and the negotiation of belonging

4:30 PM - 6:15 PM

TMCC - 605

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Food and Nutrition

ORGANIZER:

Paul Christensen

PRESENTER:

Timothy Grose ,Heangjin Park (Loyola Marymount University),Nancy Khalil ,Yuson Jung (Wayne State University),Paul Christensen

DESCRIPTION:

Food is well established as a material and metaphorical mechanism of belonging, inclusion and representation. Specific dishes and food items mark national identity, delineate membership, and forge social bonds. Equally important are the ways in which food foment contestation, forge division, and stir yearning for something desired but denied. Our panel considers how food and its myriad associated meanings is fought over as an ethnographically rich and varied terrain that can divide and include, comfort and denigrate, expand and constrict, as well as notions of identity, citizenship, belonging, and transition. Our papers include a consideration of onigiri (rice balls) as a simple and nostalgia-laden food item in Japan that is also the standard offering to the unhoused at outreach events, examining how the convenience of the item crashes against memory, nostalgia, and marginalization. It continues looking at unhoused communities through a study of an interfaith Thanksgiving meal in Boston, MA that provides a platform to understand how 'homelessness' is a nationally unique socially constructed category. It explores nationalist discourses on 'Korean' kimchi, analyzing how postcolonial nationalism in South Korea is articulated through mediated threats from others and the hopes of economic globalization. It examines the politics of global belonging by Bulgarian wine producers as they contest and claim their place and status in the global wine hierarchy while navigating established categories of the Old World vs. the New World in the global wine industry. It looks at how state-imposed cooking classes for Uyghur women in northeastern China are framed officially as a mechanism of inclusion while deliberately undermining. Taken together we seek to complicate the relationship between food and varying groups caught between seeking legitimacy and confronting the imposition of marginalization. Broadly, we demand a more nuanced consideration of how food, food items, techniques, standards, and access can help us better understand mechanisms of power, imposition, resistance, and contestation.

'Starting with Breakfast': 'Monotonous' Uyghur Food Systems and 'Civilized' Chinese Cuisine: Officially tasked

with forging intimate relationships with Uyghur families while providing them kindness, knowledge about religious policy, information about the laws, and Han culture—i.e., the “four commons and four gifts” (Ch. si tong si song)—fanghuiju work team are also gavage feeding Chinese cuisine to their government-assigned “relatives.” Specifically, home stays and “family schools” (Ch. jiating xuexiao) intend to replace indigenous diets, methods of food preparation, and culinary knowledge with largely Han-defined gastronomy. According to government documents and cadre blogs, focused training in domesticity nourishes Uyghurs with elevated “embodied quality” (Ch. suzhi) and “modern civilization” (Ch. xiandai wenming). Yet, preparing and consuming new foods risks weakening existing food systems and significantly altering indigenous lifeways. Contradictorily, the same cuisine Party officials crudely describe as “nan and hot tea” traditions (Ch. nang he cha) and seek to transform in Uyghur communities are being marketed as “traditional Xinjiang food” and devoured by domestic Han tourists. The result is an appropriation and desettlement of indigenous foods—severing it from Uyghur homes and reclaiming it as generic regional delicacies. Presenter: Timothy Grose

“Korea’s Kimchi, it’s for Everyone”: Nationalist Narratives on Korean Kimchi since 1990s : In 2020, kimchi made headlines in numerous South Korean, Chinese, American, and British news media due to a dispute over its cultural identity. The dispute was triggered by the ISO certification of 'paocai,' Chinese fermented salted vegetables. Kimchi, a Korean fermented salted vegetable with spicy seasonings, is conventionally translated in Mandarin as 'paocai.' This translational overlap fueled the misinterpretation that Chinese paocai won the international standard status over Korean kimchi, which was amplified by Chinese news outlets and infuriated the South Korean public. Nevertheless, accusations of cultural appropriation and nationalist aspirations for international recognition are not new in the controversy over the identity of Korean kimchi. Instead, the nationalist perception of Korean kimchi has been cultivated and intensified through imagined threats of cultural appropriation since the 1990s, when Japan was wrongfully accused of appropriating kimchi as Japanese food. Globalization ('seguehwa') was proposed as a solution to the threat to national culture and identity, including earning international recognition to boost kimchi's international sales. However, globalization did not guarantee a

recovery of national pride or identity, as South Koreans became more dependent on the import of kimchi from China, and international recognition was interpreted in the opposite way from what Korean nationalists hoped. In this presentation, I will analyze how the kimchi-paocai dispute in 2020 inherits the nationalist discourses on kimchi in South Korea since the 1990s, focusing on how nationalist discourses maintain their forms even when geopolitical and economic conditions change drastically over the last three decades. Through the case of kimchi, I will discuss how culture and economy, nation and international world are connected in the nationalist worldviews in contemporary South Korea. Presenter: Heangjin Park (Loyola Marymount University)

“In these United States, Homelessness is Who You Are” : This paper is based on an ethnographic project engaging homelessness in the US that follows an annual interfaith Thanksgiving meal served by a Boston-based Arab-immigrant, Muslim cafe owner at a long-standing Episcopal Church next door. Through the serving of the meal, a relationship emerges between the cafe and the church that helps distill how “homelessness” in the US emerges as a socially-constructed identity that is nationally particularized, marking and marginalizing individuals in similar logics as those of race, religion, sexuality or ethnicity. Ultimately, a meal helps us understand how social category is imagined in a US context and then treated and defined as a condition for bureaucratic fluidity. Presenter: Nancy Khalil

Politics of Belonging: Bulgarian Wine through Transitions: Food has indexed rightful global belongings for Eastern European citizens, as they transitioned from state socialism to neoliberal capitalism three decades ago. For example, having access to ethnic foods such as Chinese foods or Sushi, or global food brands such as McDonalds or Coca-Cola was important to ordinary citizens’ sense of global belonging. Food is an important medium through which citizens evaluate their place and belonging in the world. Wine for Bulgarians carry important cultural meanings in this regard: it does not merely reflect a national belonging. As an important cultural heritage commodity, it indexes a global belonging and connects them to the larger world through the global wine industry. During state socialism, Bulgarian wine was a primary export commodity bringing the Bulgarian state dollar income. While the wine produced for export then was considered of decent quality, the overall quality of the Bulgarian wines

improved tremendously in the aftermath of state socialism. The past decade saw another energized transition to high quality wines (“fine wine”) with numerous external recognitions at various international wine competitions. Yet their place in the global hierarchy of wine remains contested due to their ambiguous status as wine producers: does Bulgarian wine belong to the Old World (i.e. Western European) or New World (usually referencing the Americas, Oceanian) wine? This paper explores the politics of belonging for Bulgarian wine producers as they continue to claim their place and recognition in the competitive global wine market based on ethnographic and archival research in Bulgaria. Presenter: Yuson Jung (Wayne State University)

Onigiri and the weight of symbolic association: Onigiri, rice balls, are an omnipresent food item throughout Japan. Infinitely variable and versatile, they are mainstays in school lunches, convenience stores, day trip outings, picnics, and other social settings. Their ubiquity also generates a rich and varied slate of meanings and associations. Memories of home, parental affection, school trips, and harried student life are mixed in with onigiri as a tasty, accessible and affordable meal or snack. But onigiri are also the food item of choice for outreach groups doing support and care work among Tokyo’s unhoused and impoverished. There are obvious, practical reasons for this, low cost and easy transportability, but these conveniences only reveal a portion of the motivations. Onigiri in their infinite flexibility can mark kindness, intimacy, and affection as well as sorrow, suffering, and desperation. What then are the consequences of so many weighty associations? How can one simple food item do so much? My paper considers how outreach groups first acquire ingredients and then prepare, consume, and distribute hundreds of onigiri each week as a means of providing sustenance and sustaining relationships with those consigned to the vulnerable margins and precipices of life across Tokyo. In doing so, I consider how a symbolically heavy food item can simultaneously foster interpersonal bonds and remind individuals of their vulnerability through systematic neglect. Transitional Witnesses: Doula Care and Reproductive Justice

4:30 PM - 6:15 PM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Julie Searcy (Butler University, History and Anthropology Program)

CHAIR:

Sarah Rubin (Ohio University), L. Noel Marsh (University of Pittsburgh, Department of Anthropology)

PRESENTER:

Simona Spiegel (University of Notre Dame), Ellen Block (College of St. Benedict & St. John's University, Department of Sociology & Anthropology), Ayodele Foster-McCray, Alyssa Basmajian (Columbia University, Department of Sociomedical Sciences), Cynthia Gabriel

DISCUSSANT:

Hillary Melchior, Emily Locke (University of Alabama, Department of Anthropology)

DESCRIPTION:

Doulas have recently been on the forefront of public conversations about reducing reproductive health inequities. As politicians and media pay increasing attention to the long-standing maternal health inequities in the US and other places, doulas have been put forward as one strategy to address these injustices through their supportive care. As both researchers and practitioners, anthropologists can amplify the role doulas play in critical reproductive transitions. Doulas accompany people through reproductive liminal phases by offering one-on-one care and physical, emotional and informational support. Increasingly doulas are required to advocate for families in order to prevent obstetric violence and harm. Yet, doulas themselves occupy a liminal space in reproductive care. Doulas are marginalized in clinical spaces, which both enables and constrains their ability to advocate for and care for the families they serve. This roundtable discussion opens up space for doula researchers and practitioners to explore topics that include doulas and advocacy, embodied care, medical racism, obstetric violence, health inequities and reproductive justice.

Transitions in Matrilineal and Matricultural Systems: Exploring Changes in Women's Power

4:30 PM - 6:15 PM TMCC - 604

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Linnéa Rowlett

CHAIR:

Linnéa Rowlett

PRESENTER:

Patrick Jung, Esuna Dugarova (Columbia University), Kierra Beament, Matthew Cerjak, Stefania Renda (Ca' Foscari University of Venice), Linnéa Rowlett, Agung Wicaksono

DESCRIPTION:

'Transitions in Matrilineal and Matricultural Systems: Exploring Changes in Women's Power' explores transitions in the cultural systems - in the Geertzian sense of the term - which centralize women, also known as matricultures. That is, these presentations examine the changing situations, dynamics, and possibilities in matricultural systems around the world, from the communities who are strengthening or losing their matriculture to matricultural communities who are re-opening themselves to reclamations and re-definitions of gender, territory, and language. In particular, we explore the means and methods for these changes. Presentations feature communities in Siberia, China, upland Java, settler and Native America, and the First Nations of the Northern Northwest Pacific Coast. Topics include the role of Buryat women in community vitality and Buryat ethnocultural identity, expanding economic activity as the basis of a surging patriarchy in Java, the persistence of Ho-Chunk and Cherokee matriculture in the face of settler colonialism, the erosion of matriculture in contemporary United States, and cultural transformations evidenced in the integration of crest art to Raven's Tail robes of the Haida, Tsimshian, and Tlingit peoples. Similar to other cultural systems such as art, religion, or mathematics, employing the heuristic of matriculture allows for, among other things: cross-cultural comparisons; fresh insights into the social roles of women, men, children, and the entire community of humans, animals, and the environment; or renewed understandings of historically mis-labelled cultures. With Guédon's work in mind, then, and based

on Geertzian principles, the concept of matriculture is both a model of reality by rendering the structure of matricultures apprehensible and a model for reality, where psychological relationships are organized under its guidance.

Ho-Chunk Matriculture from the Fourteenth to the Nineteenth Centuries: Marie-Françoise Guédon observes that Siouan societies are split between matrilineal and matrilocal, and patrilineal and patrilocal systems. Guédon hypothesizes that patrilineality might be a relatively recent phenomenon as many patrilineal Siouan societies retain matrilineal characteristics. An examination of the Chiwere-Siouan Ho-Chunks from the fourteenth century (ca. 1300 CE) to the mid-seventeenth century (ca. 1650 CE) provides evidentiary support for Guédon's hypothesis. Archaeological data as well as later oral traditions suggest the Ho-Chunks possessed a matrilineal and matrilocal system as early as the fourteenth century and retained this system into the seventeenth century. A series of conflicts with other Native societies, particularly the Illiniwek, and the advent of the fur trade in the mid-seventeenth century resulted in a patrilineal reorganization. Ethnohistoric documents and ethnographic fieldwork indicate the Ho-Chunk people retained this patrilineal system during the eighteenth and nineteenth centuries, but important matrilineal elements remained evident, and women maintained an elevated status within Ho-Chunk society. Thus, the Ho-Chunks possessed a robust matriculture (as defined by Guédon) even with their transition to patrilineality. An examination of Ho-Chunk matriculture during these centuries requires scholars to eschew the traditional lines that separate "pre-contact" and "post-contact" history. Roger C. Echo-Hawk suggests using archaeological data and Native oral traditions to supplement ethnohistoric documentary sources. Doing so allows scholars to peer deeper into the human past beyond the arbitrary line that separates the pre-contact and post-contact eras. Presenter: Patrick Jung

Exploring Buryat matriculture: Spotlights Women's Agency and Changing Dynamics: The proposed presentation will focus on illuminating women's agency in sustaining Buryat ethnocultural identity amid geopolitical and socioeconomic transformations. It will reveal key markers of Buryat matriculture identified in the mythology, pre-colonial practices and religious arrangements, while exploring transitions and changing dynamics in the Buryat-Mongolian cultural system. The Buryats are an indigenous people of the Mongolian origin in Siberia colonized by the Russian empire in the 17th century. The colonial state has for centuries

suppressed native language, culture and religious practices, with significant implications for the Buryat-Mongolian cultural system. Over the past few decades, however, women's agency, in my view, has (re-)emerged as a de facto underlying force that ensures the community vitality and Buryat ethnocultural identity. Notably, this is manifested in women-led Buryat language preservation, post-Soviet feminization of lay Buddhism, and women-dominated care work. In this process, the scope of women's agency as workers, caregivers and custodians of culture has expanded amid shrinking resources and neoliberal welfare provision in the context of unequal power relations. Nonetheless, women have transcended the post-colonial realm and patriarchal arrangements to exercise their agency and reproduce culturally encoded knowledge, practices and values within and beyond frontiers. In the existing scholarship, the experiences of Buryats have been largely understudied, with little recognition of women's agency. My presentation will therefore contribute new knowledge on this matter by spotlighting women's power, voices and experiences in Buryat society. Presenter: Esuna Dugarova (Columbia University)

Herringbones to Formlines: Cultural Transitions in Northwest Coast Indigenous Women's Woven Art: The Northern American Northwest Coast Indigenous peoples share functioning matrilineal clan and lineage social structures, associated with inherited rights to display the crests identifying one's kin's group. Objects made by Haida, Tsimshian and Tlingit women demonstrate the various cultural transitions that lead to the present societies. In particular, the ceremonial robes woven by women provide evidence of a massive process of cultural transformation. The Raven's Tail robes, noticeable by their black and white geometric patterns, predate European contact. By the mid-late 18th century, weavers began transitioning to the curvilinear formlines and vibrant colors displaying crests on the Chilkat robes. Button blankets and painted robes followed the same trend. These crested robes highlight an issue still to be resolved, that is, the access of women artists to crest art in the past; was this access primarily a male enterprise while women were to be more involved with geometric designs? At first glance, the robes document the changes and cultural losses having taken place. A more detailed glance reveals a much richer process. While the technical aspects undergo great changes, the iconography does not appear to have changed in content or style. Furthermore, the robes themselves display a creativity that is ever more active today, and may even integrate pre-colonial values and motifs.

Transition here might lead to synthesis rather than loss.
Presenter: Kierra Beament

“Where Are Your Women?” The Persistence of Cherokee Women during the Long Eighteenth Century : Over the course of the long eighteenth century, Euro-Americans committed what Patrick Wolfe termed a structural genocide: they sought to wipe out Indigenous peoples by targeting the pillars of their community. In the case of the Cherokee, their women. After all, for as long as the Cherokee could remember, they fostered a matrilineal kinship system — a system that came to be at odds with Euro-American conceptions of hierarchy and gender once their lands had been invaded. How could Cherokee women resist the onslaught of settler colonial violence, both physical and intellectual? How did they negotiate the fraught spaces in which their power was constantly contested? This paper seeks to highlight the persistence — the survivance — of Cherokee women by focusing on their negotiations with Euro-American agents. In these spaces, Cherokee women asserted their cultural power by demanding a voice in the negotiations that determined their people’s future. Moreover, they did so in a way that invited Euro-American women to take part, asking the settlers “Where are your women?” Presenter: Matthew Cerjak

Tourist Development, Household Organization, and Gender Roles in Lugu Lake: This paper focuses on the ethnographic research I conducted in Lugu Lake between 2016 and 2020 during my PhD. I carried out fieldwork in two tourist-developed villages with the matrilineal Mosuo in Luoshui village and patrilineal Naxi in Dazu. One of my research goals was to investigate if and how gender roles change as we move from one sociocultural environment to another. The research highlights that in most of the matrilineal Mosuo families, the domestic economy is still managed by a dabu, who usually is a woman, and the person in charge of doing business with investors in the tourist space is chosen not according to his/her gender, but according to personal attitudes. On the contrary, the patrilineal Naxi village of Dazu’s domestic economy is managed by the family head who is a man, and men are usually responsible for conducting business with investors. Some studies have shown that ethnic tourism can cause the destruction of local cultures or the strengthening of ethnic identity. This research highlights that the tourism phenomenon is contributing to strengthening the cultural identity of the Mosuo ethnic group. Presenter: Stefania Renda (Ca' Foscari University of Venice)

Like the Tide: The Erosion of Contemporary American Matriculture by Christian Nationalists: Similar to the growth of National Socialism in 1930s Germany, the rise of contemporary Christian Nationalism in the United States is centred on a number of cultural markers found in rigidly patriarchal societies, especially binary gender identities that are ranked in a strict hierarchy which privileges males over females. Meanwhile, a strong marker of a flourishing matriculture is a wide range of culturally-acceptable gender identities, all of which usually share access to socially prominent roles and status. Along with other dangers, such as the threat to democratic governance, Christian Nationalism erodes American matriculture and diminishes the social opportunities available to women. This presentation will introduce markers for a flourishing matriculture, examine the methods and rhetoric used to develop a Christian Nationalist vision for American society, in particular those which affect women, and suggest some means of supporting the continuing development of American matriculture. Presenter: Linnéa Rowlett

The Expansion of Potato and the Strengthening of Patriarchy in Upland Java: In the last three decades, boom crops, including potatoes, have apparently brought about ambivalent transformations in Southeast Asian communities. In upland Java, potatoes have economically fulfilled the wishes of many uplanders to become wealthier. Many studies reveal that intensive potato cultivation, which is very costly and risky, generates several unexpected impacts, such as high economic inequality, extreme land accumulation, and serious environmental problems. The study of boom crops, however, rarely addresses what cultural factors are behind the frenzy of potato cultivation. This present study, based on long-term fieldwork in Tegal Nduwur village (Central Java) shows that the expansion of potato cultivation is not only underlain by people's desire to improve their economic condition. In this farming community, where men's social position was rather weak due to matrilineal land inheritance, the potato frenzy - which is carried out exclusively by men - may have something to do with their efforts to strengthen their socio-economic position. This presentation will discuss how potato cultivation has reinforced the men's social position, how this process has taken place, and shows that this phenomenon is linked to the strengthening of patriarchy in the region. Stephanie Litka (University of Dayton, Department of Sociology, Anthropology and Social Work)

PRESENTER:

Brent Woodfill (Winthrop University), Crystal Sheedy (University of South Dakota, Department of Anthropology & Sociology), Briggittine French (Grinnell College, Department of Anthropology), Catherine Rhodes (University of New Mexico, Department of Anthropology), Meghan Webb (Albion College, Department of Anthropology and Sociology), Stephanie Litka (University of Dayton, Department of Sociology, Anthropology and Social Work)

DISCUSSANT:

Jennifer Reynolds (University of South Carolina, Department of Anthropology)

DESCRIPTION:

Transition is a well-known concept in anthropological thought. In the early years of anthropology, transition typically marked the loss of Indigenous cultures and languages as Indigenous groups assimilated—either willingly or unwillingly—into the dominant language and culture of their respective regions. Anthropologists' role in this process were to 'salvage' aspects of these groups for the posterity of future generations, which were often generations of non-Indigenous peoples. These practices further cemented the narrative of loss. Indigenous scholars and their allies (e.g., Deloria 1969; Montejo 2022; Vizenor 2008) have criticized this damaging narrative and instead advocate for the evaluation of the agency expressed by Indigenous peoples and their communities. They support the use of anthropological scholarship to highlight the strength, endurance, and survivance of Indigenous communities despite centuries of systematic oppression. Channeling Anzaldúa's concept of a new mestiza consciousness (1987), in this perspective, transition departs from a

point of change as one of inherent loss, as well as a process of change from one constant state to another. Instead, transition is re-imagined as it emphasizes the ambiguity in the creation of new ways of knowing and being that meld together the beauty and pain of the past, present, and future. In Mesoamerica, scholars across disciplines, including anthropology, have widely studied a group often referred to as 'the Maya.' As such, anthropologists forged narratives that bound together linguistically and culturally diverse groups under the identity of Maya by emphasizing the groups' connections to their ancestor's illustrious past—one that is not always claimed by contemporary people themselves. This work also often simultaneously frames ongoing shifts in cultural and linguistic practices toward more politically dominant ones within the framework of loss. This paradox leaves little room for contemporary Mayas to craft their own narratives about their lives, cultures, languages, and communities that underscore the ambiguous and often tenuous relationship between identifying with their Indigenous heritage, while pursuing avenues of modernity—whether that be via ideologies, education, migration, healthcare, or other avenues. The panelists in this session bring to light this ambiguity through their interdisciplinary perspectives to understanding Maya Indigeneity in the context of modernity. They offer a range of perspectives to underscore the ambiguity in these transitional spaces—whether these spaces be configured physically, mentally, or otherwise. The first two presenters, Woodfill and Sheedy, explore the liminality that is encoded in geographic features as Indigenous geographies persist despite colonial cartographies. French offers a linguistic analysis of testimonies from Indigenous survivors of the Guatemala genocide. Rhodes, Dzidz Yam, and Pomol Cahum examine the debate surrounding teaching higher education in the Maya language and whether this affects Maya thought. Webb discusses the impact of translating literature about healthcare into Indigenous languages and the process of vernacularization in these efforts. Litka closes the session with a look toward the future with an examination of shifting language and cultural ideologies among Maya secondary schoolchildren.

The Importance of Nonhuman Persons in Maya History, Conquest, and Resistance in Central Guatemala: One of the enduring aspects of Maya ontology is the presence of important persons on the landscape who manifest as geographic features like mountains, caves, archaeological sites, and springs. These beings go by various names in different time periods; among the contemporary Q'eqchi' they are referred to as

tzuultaq'a—mountain-caves. These beings are active partners of Maya communities from deep in the archaeological record, with humans and tzuultaq'as in a mutually dependent relationship to provide sustenance, protection, and support. This paper focuses on the importance of these beings in larger sociopolitical systems and their role both as sites of conquest by foreign powers and sources of community unity and resistance. Presenter: Brent Woodfill (Winthrop University)

Way Yaano'one' (We are Here): Indigenous Geographies of Valladolid, Yucatán : Walking the streets of Valladolid, Yucatán (Mexico), one is struck by the historical architecture that reflects the city's colonial past. Although there are centuries between colonial and neoliberal authorities, they have consumed the landscape (Córdoba Azcárate 2020). Once perceived as sacred sites by the Indigenous population, several natural features, like cenotes, waterfilled sinkholes, for example, became tourist attractions in the process of this consumption. These predatory practices carve out colonial cartographies that not only erase the Indigenous population from the land through dispossession, but also the Indigenous geographies of the space (Howitt, Muller, and Suchet-Pearson 2009; Sioui 2020). Despite Valladolid's urbanized landscape, the city's Indigenous geographies remain strong in the cultural memory of my Indigenous collaborators, who reside in a small town about twenty minutes away from the city's center. In their perception, Saki', the name of Valladolid in Yucatec Maya, was never fully colonized. Instead, Saki' is in a perpetual state of transition. They view Saki' as a site of ongoing struggle and resistance that is destined to become an Indigenous center once again. As such, powerful narratives affix to certain landmarks in the city—whether those be humanmade or natural features. This paper offers an analysis of a narrative of resistance attached to a natural feature located in the heart of Saki'. This narrative demonstrates the power of place and language in reinforcing an Indigenous identity, as well as the resilience of Indigenous geographies—despite centuries of dispossession. Presenter: Crystal Sheedy (University of South Dakota, Department of Anthropology & Sociology)

How Does a Survivor Speak? Enregistering the “Maya Peasant Voice” in Genocide Testimony: This paper offers an empirical linguistic anthropological analysis of testimonies produced by formal collaborative efforts to collect and circulate Indigenous survivor narratives from the Guatemalan genocide. While such efforts are

explicitly democratic in orientation and standard practice for “post-conflict” transitional justice efforts (Sanford 2003; Hinton 2011), the discourse they produce is more complicated and power-laden than often recognized in the field of human rights (French 2009). It shows how genocide survivor narratives produced by Maya eye witnesses in conversation with researchers from outside the communities, are sites of profound linguistic, cultural, epistemological, and ontological conflict. This argues that the conflict is borne out through the on-going process of enregistering (Agha 2007; Wirtz 2007) the historically constituted voice of the “Indian peasant,” a long-standing persona who is imagined to be an illiterate, dominant speaker of a Mayan language whose command of Spanish is poor at best. At the same time, it shows how the double-voiced discourse of the “Maya peasant” simultaneously may enregister the voice of the Maya survivor from the Indigenous community in resistance. In so doing, it suggests that Maya testimonies create new spaces to enregister more broadly an Indigenous identity that underscores the resiliency of Maya communities in the post-war era that challenge the violence of the genocide as well as that challenge the putative universal logic of the social scientific interview that tacitly imposes as an exclusive Western logic of narration and survivorship. Presenter: Briggittine French (Grinnell College, Department of Anthropology)

U tuukulil maaya: Does Maya thought exist? : On the Yucatan peninsula, the significance of teaching higher education in the Maya language is widely debated. One side argues that higher education is responsible for undermining Maya ways of knowing—it does not matter if Maya is the language of instruction (instead of Spanish); university study de-Mayanizes ‘Maya’ thought. The other side argues that using Maya as the language of instruction changes what can be known about the subject matter. Both believe a Maya way of knowing exists. Their thinking diverges with respect to whether a Maya way of knowing is compatible with higher education and what role language plays in Maya thought. These debates are found in the larger literature on the relationships between language, thought, and behavior (Cole 1990; Lucy 1996; Luria 1976; Vygotsky 1978; Whorf 1940/1956). Maya communities today reflect the kind of society scholars have described as key sites for studying these relationships (Castellanos 2010; Castilla Ramos 2004)—those experiencing transition from more subsistence agricultural to more technological and industrialized labor (Kozulin 2011). Through studying Maya-language-medium higher education, this research enters the debates about the

relationships between language, thought, and behavior and addresses concerns about ethnocentricity in previous research by developing and pilot testing culturally congruent methods. The paper's co-authors (Catherine Rhodes, Edber Dzidz Yam, Irma Pomol Cahum) ask: Do Maya students perceive that participation in school leads them to think about the world differently? If so, what is this shift, how can we document it, and what role does language play in this process? Presenter: Catherine Rhodes (University of New Mexico, Department of Anthropology)

Transitions, Translations, Trepidations: Public and Occupational Health Interventions in Guatemala: Nearly half of Guatemala's citizens are Indigenous and nearly half of the country's population live in poverty. The similarity of these statistics is not coincidental. In Guatemala, Maya peoples are more likely to be poor, rural, and experience poor educational and health outcomes when compared to their ladino counterparts. Despite the resilience of Maya communities, the discourses of public and occupational health often frame rural Indigenous communities as lacking resources and/or knowledge. Increasingly, efforts are being made to transition from a discourse of lack to one of opportunity. Central to these efforts has been cultural and linguistic translation. This paper uses case studies from women's health, COVID-19, and chronic kidney disease programming to explore this discursive shift. It argues that cultural and linguistic translations are essential to creating effective programming. It also suggests that such translations often go through the process of what Merry and Levitt (2017) term vernacularization, or the conversion of universalistic rights discourse into locally relevant social justice discourse. Such has been the case in health programming aimed to serve Maya populations. Examination of the process of vernacularization reveals that it is constantly in flux as members of the community negotiate meaning with governmental, private sector, and civil society actors. This process is one that often results in trepidation as actors have to engage in uncomfortable collaborations (Walsh et al. 2008). Presenter: Meghan Webb (Albion College, Department of Anthropology and Sociology)

Transitional Futures: Language and Cultural Ideologies among Yucatec Maya Schoolchildren: This paper examines transitional shifts in language and cultural ideologies among secondary schoolchildren in Mexico's Yucatan Peninsula. This age level (12-15 year olds) provides a solid context for understanding these shifts since they are just a few years away from either starting

or graduating from high school, entering the workforce, thinking about their future career goals, and possibly developing long-term relationships with significant others. All of these factors could potentially occur in their town of origin or in larger cities throughout the region. Some of these options were not available locally as recently as one generation ago, however. I focus on the town of Coba which is in the Mexican state of Quintana Roo. It is the newest state in the country and only gained this status within the past fifty years. Coba itself is in a notable stage of transition since it is a relatively small Maya village with many indigenous elements yet sees daily developments due to its popularity of visiting ancient Maya ruins and other tourist attractions. Student assessments reflect changes in ideological attitudes against a backdrop of continuous change occurring in Coba and the broader vicinity. I conducted brief interviews with nearly one hundred students in 2019 and 2022. They nearly unanimously believe that it is important to preserve the Yucatec Mayan language and want Coba to grow within reason. Career goals and future living destinations were more varied. Presenter: Stephanie Litka (University of Dayton, Department of Sociology, Anthropology and Social Work)

Transitive Afflictions

4:30 PM - 6:15 PM

TMCC - 716 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Anne-Sophie Guernon (McGill University, Department of Anthropology)

CHAIR:

Anne-Sophie Guernon (McGill University, Department of Anthropology), Cynthia Lazzaroni (McGill University, Department of Anthropology)

PRESENTER:

Ayo Wahlberg (University of Copenhagen), Jessica Robbins-Panko (Wayne State University, Department of Anthropology), Megan Graham (Carleton University, Department of Sociology & Anthropology), Daisy Couture (McGill University, Department of Anthropology), Neda Maki (University of Toronto, Department of Anthropology), Elisa Cardamone (University of Edinburgh)

DISCUSSANT:

Emily Mendenhall (Georgetown University)

DESCRIPTION:

Bodily states and afflictions are highly mutable. Conditions like diabetes, dementia, and chronic illnesses engage lives in an ever-liminal state of being, perpetually 'in-between' well-being and affliction. Chronic illness disrupts everyday lived experience and profoundly transforms existence (e.g. C. Feudtner 2003; E. Mendenhall 2010), as one constantly adapts to and resists the vicissitudes of one's changing blood sugar level or cognitive states. We call these varying states of embodied experience 'transitive afflictions.' By 'transitive', we mean afflictions and illnesses bringing constant changes to one's condition, where symptoms permeate states of relative health. Cognitive changes, metabolic shifts, and chronic disease are generative frameworks of health/illness experiences that embody this constant transformation. As Gammeltoft (2023) reminds us, transformations of daily living with chronic conditions alter existence through dynamics of both adaptation and resistance to change. This roundtable explores these dynamics and how individuals negotiate and live with, changing states of health and illness. Thinking with, rather than about, these experiences and contrasting how they bring change and adaptation may bring forward critical thinking in the anthropology of chronic illness and cognitive anthropology. It also reminds us that these experiences produce knowledge, or epistemological transformations, about the self and others (e.g. H. Carel, I. Kidd and R. Pettigrew 2016). Our roundtable discussion goes beyond transformative experience and engages how chronic living (e.g. A. Wahlberg et al. 2021), metabolic shifts, and cognitive changes reconceptualize beings beyond normative assumptions of continuity, selfhood, and resistance (e.g. M. Silverman and A. Baril 2021; T. Gammeltoft 2023). These states of dis-ease bring paradoxes that we hope to explore comparatively. Panellists in this roundtable will examine ways to rethink these experiences and forge paths forward by engaging in a roundtable discussion centred, comparatively, around the following themes: (Re)Experiencing Cognition and Transitions of the Self [e.g. Dementia, Mental Health, and Autism], Metabolic Shifts [e.g. Diabetes and Metabolism], Chronic Illness and health transformations [e.g. Chronic Conditions and Cardiovascular Issues]. The speakers at our panel respectively work on these different experiences of health conditions and bring forward productive ways of thinking with them to reflect on how bringing various works together can produce innovative approaches. Our comparative discussion, innovative in its genre, can bring new ways of reflecting on what it

might mean to live through shifting states of health and affliction as it becomes a form of chronic existence. Through a collaborative discussion, engaging scholars and graduate students alike, we hope to foster a generative exchange around these questions: What does it mean to have your body be affected and afflicted by changing embodied states? How does cognitive/metabolic/endocrine/cardiovascular change affect one's sense of being in the world, in mind, and in body? How to adapt to transitive afflictions and renegotiations of normalcy? How to cope with these perpetual transitions and reconstruct existence with and beyond transitive afflictions? What does 'living with' mean? How can thinking of these conditions together uncover their mutual and differential understandings?

Society for the Anthropology of Europe

ORGANIZER:

Enkelejda Sula-Raxhimi

CHAIR:

Smoki Musaraj (Ohio University, Department of Sociology & Anthropology)

PRESENTER:

Maya Nadkarni (Swarthmore College), Smoki Musaraj (Ohio University, Department of Sociology & Anthropology), Enkelejda Sula-Raxhimi, Erin Collins, Allison Truitt, Ian Kalman

DESCRIPTION:

This roundtable reflects on the conference theme of 'transitions' by bringing into conversation research insights on thirty years of post-communist transitions and transformations from various cultural contexts—from Eastern Europe to East Asia and beyond. Transition, thought as a shift, change or passage from one state to another, embodies a certain temporality, indicating a process that has a beginning and an end. Some post-communist countries—especially central European countries joining the European Union—have experienced such temporality of transitions. In many others, however—from Eastern Europe, Central and East Asia and beyond—transition remains a rather unfinished business. Over the past thirty years, an extensive anthropological literature has provided invaluable insight into post-

communist transformations, coining them as 'uncertain transitions' (Burawoy and Verdery 1999) or 'permanent transitions' (Pandolfi 2002, 2006), thus describing a continuous state of transformation, a work-in-progress. Other ethnographic works have captured the everyday sense of being 'lost in transition' (Ghodsee 2011). In this roundtable, we approach transitions as neither static nor atemporal, but rather dynamic, continuously changing, context-specific and with their own temporalities. They evolve, transform, slow down, resume, and start again through various processes—social, political, economic—while incorporating new elements along the way. Yet, their transient nature forces us to see transitions as periods during which many parts are still moving and unstable, as processes of instability, imbalance, fragility, and insecurity. This panel explores such post-communist transitions in their different forms and temporalities by addressing the following questions: What are the different temporalities of transition articulated in different cultural contexts? How do these (amorph) transitions translate into specific political, economic, and social processes in different post-communist contexts? How are such processes understood, described, represented, and lived in different post-communist spaces, along the lines of class, race, and gender? More broadly, how does thinking about post-communist transitions give us insight beyond the post-communist world? How does it help us understand late capitalism, nationalisms, race/nativisms, history, environment, and other global issues? **Keynote Address: Truth before Transition:
Reimagining Anthropology as Restorative Justice**

6:30 PM - 8:15 PM

Hall F

Keynote Address

PRESENTER:

Kisha Supernant (University of Alberta)

DESCRIPTION:

Anthropology is a discipline in transition. We must face the difficult truths of our discipline's complicity in settler colonial violence and saviorism, and how they have shaped our theories and methods. In this keynote, I discuss how I turn toward truth-telling as an Indigenous archaeologist, both in terms of critiquing the discipline and using the tools of archaeology to support Indigenous communities locate potential graves of their loved ones who died at Indian Residential Schools. I explore how truth-telling opens space for a more restorative and just practice of anthropology, one that emerges from a commitment to recognize harm, support resurgence, and repair relations with peoples who have long been the subjects of anthropological study. I argue that this is a necessary transition for anthropology to have a future that is ethical, relevant, and restorative.

**“We Are Not Alone”: UFOs and the Future of
Anthropology**

8:00 AM - 9:45 AM

TMCC - 705

Late-Breaking Oral Presentation Session - In Person

ORGANIZER:

Hussein Agrama (University of Chicago)

PRESENTER:

Hussein Agrama (University of Chicago), Shayne Dahl (University of Lethbridge), Meg McLagan (Barnard College), Aaron French, Samantha MacBride

DESCRIPTION:

On July 26, 2023, the United States House Subcommittee on Security, the Border, and Foreign Affairs convened a public hearing titled 'Unidentified Anomalous Phenomena: Implications on National Security, Public Safety, and Government Transparency.' For over two hours, members of Congress probed

retired Navy Commander David Fravor and former Navy fighter pilot Ryan Graves about their direct observations of the bewildering, dangerous, and technically unrivaled flight capabilities of UFOs. Both emphasized the significant risks these phenomena pose to commercial and military aviation, urging the government to help ensure pilot safety and transparency by ending the stigma around UFO reporting. But the most explosive testimony came from a retired Air Force Intelligence officer turned whistleblower named David Grusch. He alleged, based on the sworn testimony of forty intelligence officers with first-hand knowledge, that the US government is in possession of nonhuman 'technical vehicles' and 'biologics' of the operators, acquired through a decades-long, deeply classified, and largely illicit crash retrieval program. He also alleged that the US government has been running a longstanding and widespread disinformation campaign to mask its own efforts to study and harness UFO technologies. Notably, Grusch refused the term 'extraterrestrial' for his descriptions, but otherwise left the question of origins tantalizingly open. These revelations, which are now drawing worldwide attention, sound like science-fiction, seemingly blurring truth with lore. They could be seen as symptoms of our current conspiracy zeitgeist, which even government cannot evade. Yet all three witnesses – Graves, Fravor and Grusch – are widely considered highly credible, and they testified publicly under oath. Politicians speak of further corroborative testimonies from equally reputable whistleblowers, ready to go public. Spurred into rare bipartisan action, Congress has crafted detailed legislation aimed at unveiling these covert programs, the nonhuman technologies they allegedly possess, and any potential illegalities involved. The hearing itself marks the culmination of nearly six years of softer disclosures, starting with the New York Times article 'Glowing Auras and Black Money: The Pentagon's Mysterious U.F.O. Program,' whose publication in late 2017 first awakened the public to the potential reality of UFOs. Since then, many more researchers have begun calling for rigorous, open scientific studies of UFOs, creating organizations and holding conferences for this purpose. Long considered solely a feature of the American and global cultural imagination, UFOs have now acquired a tangible reality whose growing demands for acknowledgement compel us to rethink our deeper assumptions. Against the backdrop of these shifts, we ask: What would it mean for anthropology to approach UFOs not only as a cultural phenomenon but as a hitherto concealed feature of our world? Scientists studying UFOs and their strange effects confess that they break conventional physics; how might they also challenge the

presumptions of social theory? Faced with the prospect of a technologically advanced nonhuman entity historically interacting with us on the Earth, what new vistas of inquiry would open up were anthropologists to acknowledge the reality – and mystery – of UFOs? The recent revelations oblige us to confront such questions. This session takes a first step.

UFOs, Uncanny Science, and Esoteric Technology: On the Grounds of Anthropological Inquiry: The recent UFO revelations by ex-intelligence officer David Grusch highlight the role of 'uncanny science' in driving technological development. Uncanny science arises when cutting-edge research begins to recall past knowledges long disavowed and dismissed, often due to their perceived mystical or religious ties. Typically overlooked by mainstream science for its non-secular associations, this research often becomes drawn into classified projects, covertly funded by government agencies seeking any advantage over adversaries. Thus classified, they become a new form of esoteric knowledge that we glimpse only through what Timothy Melley calls "the covert sphere" – a discursive domain where secret knowledge leaks through literature, film and social media, and where state secrets can be disclosed without official sanction. UFOs have historically been central to uncanny science research, infiltrating major institutions of technological innovation like NASA and, more recently, Silicon Valley, whose interest in 'hacking' UFO technology has peaked. Yet anthropology has yet to explore UFO-related uncanny science, how it inhabits the covert sphere, the technologies it facilitates, and the esoteric sense of reality it creates, partly because it has long avoided the question of UFO reality. But Grusch's revelations, by flipping the covert sphere into acknowledged truth, may highlight for us just how much the presumptive grounds of our explorations and explanations align with official versions of reality. This paper considers such presumptive grounds through a discussion recent UFO uncanny science and the alternative senses of reality it suggests. Hussein Agrama (University of Chicago)

"Welcome, Welcome to the Cosmic Matsuri": Anthropology and Close Encounters in Western Japan: In the 2023 congressional hearings, a whistleblower and former Navy pilots testified under oath about UFOs as evidence of advanced non-human intelligence on Earth. Ethnographers, thus, must examine in potentially new ways anomalous phenomena in the sky and what they mean for the people who experience them. This paper proposes to do just that. On August 13, 2023, at around 9 PM, individuals across Western Japan observed a

glowing object with a trailing tail, flying at an altitude of 1000–2000 m. Despite coinciding with the Perseids meteor shower peak, the object's unique attributes convinced many it was a UFO operated by nonhuman intelligence, not a nagareboshi (“flowing star,” meteor). During this event, I was conducting fieldwork on a sacred mountain in Western Japan. Alongside community members, including a mountain ascetic and a temple head monk, we sat near the 650 m peak to view the Festival of the Dead fireworks. Suddenly, a silent, droplet-shaped luminous object emerged, moving from northwest to southeast, remarkably close to our location. Every community witness I conversed with believed it wasn't a nagareboshi but an unidentified entity. This paper delves into the event's influence on the witnesses and broader community. As word spread, older Japanese UFO tales and even abduction accounts resurfaced. This mass sighting, regardless of its true nature, affected the mountain community's cultural fabric. For those I interviewed, it symbolized potential extraterrestrial existence, sparking dialogues on cosmic personhood within Buddhist and Shinto philosophies and future, hopefully peaceful, contact possibilities. Shayne Dahl (University of Lethbridge)

The Anthropology of High Strangeness: In a recent essay on the discipline's multi-species literature, Mayanthi Fernando argues that the academy has a tendency to be more accepting of microbes and other “actual existing beings and agential actors” than it has in ghosts, jinns, angels, and other immaterial or not-always-material beings.” If so, where does that leave the nonhuman intelligence (NHI) described by whistleblower David Grusch, one of three witnesses who testified recently in the public hearing in the House Committee on Oversight and Accountability on “Unidentified Anomalous Phenomena: Implications on National Security, Public Safety, and Government Transparency.” In this hearing, Grusch, a decorated retired US Air Force officer and former senior intelligence officer in the U.S. National Reconnaissance Office, testified to the existence of a Department of Defense program to recover and reverse engineer crashed non-human craft, which, he confirmed, were accompanied by “biologics.” How might the purported nonhuman intelligence Grusch describes having knowledge of fit into efforts to understand humans and other-than-humans as constituted relationally? The phenomenon, as NHI is often referred to, appears to overflow the crucibles of science, challenging given understandings of organic boundedness and raising epistemological and ontological questions. I consider some of these

questions in the context of what an anthropology of high strangeness might entail. Meg McLagan (Barnard College)

UFOs and Modern Esotericism: A Connection?: In recent years, UFOs have entered mainstream discourse, with the US government actively exploring themes like time travel, advanced states of evolution, and magical technology – themes rooted in the modern currents of alternative spirituality known as esotericism. Modern esotericism, an array of related but differentiated ideas and movements that emerged during Europe's shift to global modernity, is often seen as a response to Enlightenment rationalism. It sought to merge distinct knowledge domains, like religion, magic, and science, and varied ways of comprehension, whether rational, mystical, or scientific. Central to esoteric thinkers was the belief that the cosmos wasn't just scientifically explainable but teemed with spiritual significance. On July 26, 2023, during a congressional UFO hearing, retired Air Force Intelligence officer David Grusch testified that the US military held nonhuman crafts, reverse engineered by private entities, and had found nonhuman 'biologics' – all concealed from the public. This otherworldly revelation prompts the question: Is there a nexus between modern esotericism and the UFO phenomenon? Could they share a modern religiosity, encompassing concepts like evolution, outer space, monism, and engagement with non-human entities? Addressing this question is vital in today's context. This presentation seeks to probe the link between UFOs and modern esotericism. It invites us to enter a liminal state, an esoteric reality, to see the world from an outside perspective, enabling a deeper understanding of disenchantment and secularization theories and their potential challenges. Aaron French

Communications with Non-Human Intelligences - Pragmatic Implications for Anthropogenic Polycrisis: In the 2023 Congressional hearings, the U.S. security state verified anomalous phenomena disrupting military operations and displaying flight impossibilities. Concurrently, climate scientists warn of an irreversible tipping point, with global ecosystemic collapse anticipated by mid 21st century. These unprecedented and alarming developments, discussed since mid 20th century, now seem imminent, with possible interconnections. Messages of concern around environmental protection are in fact a common feature of communication between non-human (or non-conventionally human) intelligences (NHIs) and Western experiencers. NHIs urge collective care for the planet Earth, with concern for pollution, nuclear proliferation,

and other ecological harms. At times, warnings anticipate anthropogenic catastrophe. Drawing from published accounts of several Western contactees, this paper takes as provisionally given that NHI contact is in some way veridical, that communications may be collaboratively produced, and that some NHI are terrestrial. It asks: what are we to make of such messages imparted to a modern, Western audience? Does message content both target, and reflect, the role of Western institutions and practices in organizing and perpetuating ecodestruction? If so, what is useful in the message content for Western responses to anthropogenic polycrisis as they intensify currently? Through a thematic analysis of environmental content of such messages, this paper will pose pragmatic questions on what NHIs have to say to Western experiencers at a time when Western hegemony is failing on all fronts to confront or reverse its organizing role in planetary ecocide. Samantha MacBride

Activist Temporalities: Transitions, Traces, and Trajectories of Contentious Political Action

8:00 AM - 9:45 AM TMCC - 713 B

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Elliott Prasse-Freeman (National University of Singapore)

CHAIR:

Elliott Prasse-Freeman (National University of Singapore)

PRESENTER:

Elliott Prasse-Freeman (National University of Singapore), Teresa Velasquez, Sa'ed Atshan (Swarthmore College), Geoffrey Aung

DESCRIPTION:

A particularly potent and enduring challenge faced by activists and those otherwise committed to transformative social change is to work at multiple temporal scales – they are aware that action in one instant (a protest or a strike or even the opposite: a capitulation or a decision not to engage with the object of repression) must be assessed for what it does both immediately but also what it might produce in the longer term. Rather than fetishizing the event – as performatively enacting 'rupture' and 'destabilization' of the status quo, or, alternatively, producing unequivocal

failure and defeat – political actors seem attentive to varied and often inscrutable potential trajectories and transitions. Following Michel-Rolph Trouillo, given his conceptualization of history, events, and how humans shape narratives, the panel concentrates to how activists manage and manipulate time and temporality: how do they assess the efficacy of their actions? For how long can they maintain certain versions of the future when the material evidence in the present suggests inefficacy? How do they assess whether it can really be said that a 'rupture' has occurred – and how do they render legible the signs that were created by that event, how do they transform these traces into more durable representations (narratives, collective memories, dispositions, manifestos, and so forth) that can be drawn upon in future mobilizations? How do they align their senses of temporal scales with that of those they are trying to mobilize – who may have different assessments of current power dynamics? While considering these questions, the panel also turns to ethnographic renderings of these political struggles. When, can it be said, does ethnography ever end? Meaning, how do we write about events and engagements that, to a certain extent, often remain potentially undecidable?

Burmese state / activist 'absent presence' across indeterminate temporal scales: Burmese social activists navigate a state apparatus that weaponizes a particular mix of absent presence. This means that state institutions are often maddeningly absent – unavailable to receive governance claims from subjects – until security apparatuses emerge to unleash unaccountable violence on the governed. Activists mimic this form, attempting to presence the state through various interventions (protests; cursing rituals; strikes), before dissolving away to evade retribution. In this oscillation between absence and presence, activists find it challenging to ascertain ultimate outcomes, given that in every iterative stage apparent victories might end up suddenly sundered. Consequently, they tend to "refuse rights," seeing in rights discourse a technology of rule that presupposes a temporal durability or fixability that does not reflect their experiences. Hence, Burmese activists perceive their actions (and their own activist lives that enable them) as constellations enacting potential future trajectories. Activists do not immediately enact new and inevitable futures; instead, their bodies and words initiate only potential trajectories, ones that haunt the existing one and that threaten to return later as a revenant. Activists are hence guides to alternative futures, laying down different pathways that people could potentially take—

something rendered in stark terms in the 2021 anti-coup uprising. Earlier actions seeded the ground of the repertoire of contention that enabled anti-coup movements to sprout up without any central organization and play on ludic and transgressive tropes, drawing from that symbolic cultural material. Presenter: Elliott Prasse-Freeman (National University of Singapore)

Settler extractivism: Disputing Indigeneity and temporality in an Ecuador gold mining project: In 2022, Kichwa-Kañari farmers filed a legal injunction to stop construction of the Loma Larga mine project in the Ecuadorian Andes. Upheld by a lower court, the ruling was challenged by the Ministry of Environment, Water, and Energy Transition (MAATE) and Dundee Precious Metals (DPM), a Toronto-based mining company. The legal battle is the culmination of a decades-long dispute among farmers, environmentalists, the state, and the mining company, over the future of the Kimsacocha páramo—a watershed that holds gold and copper deposits. To delay the start of the future mine project, farmers argue that they are Indigenous People whose constitutional right to be consulted was violated by the state and mining company. In their counterarguments, MAATE and DPM represent farmers as modern-day mestizos who lack distinctive cultural characteristics with no continuous links to pre-colonial identities. They echo discourses of mestizaje, a linear narrative in which Indigenous culture is tightly bound and fixed to the past (Blackwell 2023). I draw on critical Indigenous studies to interpret legal arguments and conceptually advance the temporal dimensions of settler extractivism, where the discourses of time—the past, present, and future—are manipulated to expand mining operations in Indigenous territories (see also Awasis 2020). In this case, settler extractivism include tropes of anti-Indigenous racism that undermines Indigenous claims to decide future extractive projects. Contending with the logic of temporal containment, Kichwa-Kañari farmers present their own temporal orientations (Rifkin 2017) that also invoke the past and present, to imagine alternative Indigenous futures. Presenter: Teresa Velasquez

Palestinian Temporality: Humanitarian subjectivity amidst the *longue duree* of dispossession: My paper examines what I call Palestinian temporality, namely the ways that “diagnostic events” (Falk Moore 1987) are understood by residents of the Occupied Palestinian Territories, shaping a particular conceptualization of the past, present, and future. Palestinians challenge such periodization in political terms considering centuries-old legacies and contemporary realities of imperialism and

colonialism in historic Palestine. They deploy cultural commemorations of the Nakba - or “catastrophe” - of Israel’s establishment in Palestine in 1948 and the ongoing displacement, disenfranchisement, and dispossession of native Palestinians. They rethink psychological categories of post-traumatic stress disorder in the context of chronic violence, oppression, and trauma. And all of these frameworks on temporality coalesce with the politics of humanitarianism in the Occupied Territories. Palestinians both embrace- and disavow - being rendered legible, internally and externally, as humanitarian subjects in need of foreign aid and interventions. I trace these discourses on temporality through a form of processual ethnography that captures critical events in Palestinian history over the past 75 years and the ways that the current moment is both a break from - and an extension of - past social and political legacies. The case of Palestine elucidates whether anthropology can truly be described as the history of the present. Presenter: Sa’ed Atshan (Swarthmore College)

Revolution and Re-enchantment: Marxism and Memory in Myanmar’s Radical Tradition, Then and Now: The revolutionary upsurge that followed the 2021 military coup in Myanmar has reignited long-standing debates over theory and practice on Myanmar’s radical left. Armed groups, newly formed left organizations, militant sections of student and trade unions, and an emergent left media ecology have returned to and re-examined concerns that animated leftist discourse at key junctures in Myanmar’s twentieth century, from the anticolonial struggle to decolonization and from Communist insurgency to ethnic rebellion. Questions about the mass strike and peasant insurgency; class structure and political leadership; the national question and communal attachments; and shifts in imperial power have all returned to prominence in an openly revolutionary present. Mapping this resurgent leftist landscape, I argue that it is indebted to—while in tension with—what I conceptualize as the Myanmar radical tradition: an anti-authoritarian leftist tradition in which capitalism, empire, and the militarized state apparatus demand outright abolition. This paper places Myanmar’s revolutionary past and present in conversation with radical traditions elsewhere, from calls for unconditional decolonization in the Philippines to the Marxism of the Black radical tradition. It also reads Myanmar’s ongoing revolution as a temporal provocation. Here, an array of political subjects recombine and rework multiple temporal scales, not least by rethinking historicity and historical memory in relation to Marxism’s past. This (re)making of a revolutionary timescape suggests a need to move

beyond the long shadows of 20th century revolutionary failure, which find their echoes in discourses of disenchantment and melancholia. Presenter: Geoffrey Aung

2-020

Anthropologies of Adiaphora: Ethnographic Experiments Beyond Condemnation and Celebration

8:00 AM - 9:45 AM TMCC - 718 A

Oral Presentation Session

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Knut Myhre (Norwegian University of Science and Technology)

CHAIR:

Knut Myhre (Norwegian University of Science and Technology), Douglas Holmes (SUNY, Binghamton University, Department of Anthropology)

PRESENTER:

Michael Herzfeld, Yael Assor (Hebrew University of Jerusalem), Tess Lea (Macquarie University, School of Social Sciences), Agnieszka Pasiaka (University of Bayreuth), Knut Myhre (Norwegian University of Science and Technology), Summerson Carr (University of Chicago), Michael Lambek (University of Toronto, Department of Anthropology)

DESCRIPTION:

For more than 2000 years, the ancient Greek notion of adiaphora has been used by various schools of thought to designate phenomena and attitudes that are neither good nor bad. As the negation of 'difference', adiaphora variously means 'not different, indistinguishable, indifferent and without discrimination'. It was for instance used by Cynics to mean an indifference to the vicissitudes of life that have no value in themselves, and Stoics to distinguish pursuits and objects that are neither good nor bad but indifferent to the moral agent, while Pyrrhonists and Aristotle used it for things that cannot be or are not differentiated by logical means and distinctions. Adiaphora also features in Christian thought and especially Protestant colonizing missions, where it meant matters not essential to the faith and designated vernacular phenomena that the church neither endorsed nor condemned. It was finally used by Friedrich Nietzsche, and arguably underpins Martin Heidegger's concept of 'letting-be' or *Gelassenheit* and

Michel Foucault's 'making live', and can be linked to recent anthropological interests in detachment and separation (Yarrow et al 2015; Myhre 2013). Against this background, we invite ethnographic experiments that aim to explore the potential value of the notion of adiaphora for the discipline of anthropology, and its endeavour to describe and understand the world. Possible topics for this panel therefore include social situations, where actors adopt attitudes of indifference towards certain phenomena, or engage them as indifferentiable or without discrimination either in linguistic or practical terms. They also encompass ethnographic settings, where interlocutors evade evaluative judgements in favour of disinterest, if not disregard, negligence, and/or nonchalance. We also encourage participants to explore subject positions such attitudes and practices involve and entail, and how these differ from others recognizable from the ethnographic archive. Relatedly, we also welcome contributions that investigate the significance that adiaphora may have for the discipline and the figure of the anthropologist, and how its attendant attitudes differ from longstanding scientific or bureaucratic positions, such as 'value-neutrality', 'objectivity', or 'universality'. At a time when anthropologists increasingly engage with climate change, warfare, financial shocks, populism, and rising inequality, our disciplinary knowledge practices often take the form of condemnatory critiques of capitalism and its exploitations, and/or celebrations of commons, local knowledge, and alternative economic practices. While we do not question these interests, this panel queries whether and how the notion of adiaphora, ironically and paradoxically, may make a difference, and open spaces for other approaches, attitudes, phenomena, and practices beyond familiar figures and forms of established knowledge-making.

ADHIAFORIA: PERFORMING INDIFFERENCE AND THE REALIST PARADIGM: Anthropology is a realist discipline, not an objectivist one. Realism involves accepting that performances are part of the experiential world but recognizing the limits of our ability to interpret the intentions underlying them. Indifference – adhiaforia in modern Greek – is typically how bureaucrats often disguise sympathies for disadvantaged clients (e.g., migrants in Greece) as much as antipathy to favor-seekers; they are ostensibly impartial. While my original model of “the social production of indifference” (1992) has been misconstrued as meaning that bureaucrats are indifferent, rather than that they assume a deliberate pose of indifference, that misconstrual indicates how stereotypes shape interpretation of bureaucratic

actions. A realist paradigm requires taking stereotypical expectations as well as real-time outcomes into account. Apparent bureaucratic indifference emerges as tactical adaptations of locally prevalent ethics to an increasingly universalized – and increasingly disbelieved – concept of impartiality as the ideal stance of public servants. I attend to the “Transitions” theme by acknowledging that skepticism about bureaucratic process now threatens hitherto stable democratic institutions; an anthropological intervention requires immersive ethnography to explore bureaucratic stances of indifference and their current effects. Mary Douglas once noted that “indifference” was interesting as an anthropological concept precisely because it was a negative term – an observation that now highlights the original misreading and illuminates the revealing expectations that generated it. Presenter: Michael Herzfeld

Disentangling Objectivity and Adiaphora: Objectivity and adiaphora are two distinct concepts that sometimes get entangled together. In this talk, I examine how does this entanglement affect the creation of medical and scientific knowledge. While objectivity relates to a lack of bias, adiaphora, relates to a lack of difference. As two concepts orienting towards modalities of avoidance or detachment, they may become interwoven. This is what happened at the Israeli Sal Committee, which determines government subsidies on new medical treatments; a crucial part of the country's public healthcare system that carries life-or-death implications for patients. For the bureaucrats working at the committee and preparing the data upon which it grounds its decisions, a key ethical goal is to create objective knowledge. To these bureaucrats, reaching these goals means that they must themselves work 'objectively.' One of the main interpretations they give to working objectively is addressing the various treatments as if there is no difference between them. This includes avoidance from emotional investment in the medical predicaments or treatments discussed, using a standard writing style, and refraining from any activity that may give away a personal position, such as giving oral presentations about the treatments. The talk describes the ways that Sal Committee bureaucrats engage adiaphora as one sense of being 'objective' and the medical knowledge it generates. Through this ethnographic example I elicit questions about the study of detachment, of which adiaphora is part, as a means of studying the workings of power and knowledge-making practices. Presenter: Yael Assor (Hebrew University of Jerusalem)

Policy adiaphora, or adiaphoric policy?: How might we approach policy ethnography if the heavy moral loading afforded to the concept of policy, in both positive and negative registers, is pushed aside in favour of policy adiaphora? After many rounds of wrangling with the wily figure of policy, as its shape shifts between material artefact, symbolic ideal, rallying point, destructive force, and anonymous dictator, my contribution here is to ask whether policy is an indifferent cultural device into and onto which human ambitions are inscribed and inhabited. At the very least, an anthropological approach to policy should strive for the analytical grace of an adiaphoric perspective, if only to attempt seeing policy as it is in the world as opposed to what we reflexively inscribe into the conceptual invitation called 'policy'. This is not to approach policy bureaucratically, but nor is to replicate conventional anthropological approaches, which tend to reify policy in order to denounce it. Presenter: Tess Lea (Macquarie University, School of Social Sciences)

“Indifferent as a liberal”.: “I hate the indifferent,” an oft-quoted statement by Antonio Gramsci, is one of foundational claims of youth far-right activists I have been studying for several years. In their discourses and activism, they increasingly look for inspirations in the left-wing tradition (broadly understood), while targeting what they consider the indifference and emptiness of the liberal center. Drawing on my research with several far-right movements, in my talk I am going to focus on two issues. First, I shall discuss how militants construe the idea of indifference and how they relate it to their critique of liberalism. Second, I shall use my fieldwork material to reflect on the relationship between anthropology/anthropologists and liberalism, and on what this relationship tells us about the possibility of an anthropology “beyond celebration and condemnation.” Presenter: Agnieszka Pasięka (University of Bayreuth)

Affording Others: Ethnographic Explorations of Lysningen at Utøya.: This presentation explores ethnographically the memorial site entitled Lysningen or ‘The Clearing’ that commemorates the 69 young people that were killed on the island of Utøya in Norway by the right-wing terrorist Anders Behring Breivik on July 22, 2011. Drawing on Martin Heidegger’s cognate and conterminous notion of *Lichtung* or ‘clearing’, I explore how the memorial site constitutes an opening where beings of different kinds may emerge and appear, and that thereby affords the presence and co-existence among a range of others - including the dead and the bereaved. The presentation furthermore explores how the notion of a clearing also entails uncertainty or risk,

as it does not predetermine who or what may appear in or through the opening among those present. On this basis, the presentation argues that The Clearing entails what Heidegger terms *Gelassenheit* or letting-be, and discusses whether and how it also enables a sense and attitude of *adiaphora*. As *Lysningen* affords a range of others, the presentation finally argues that it constitutes a creative mechanism that resonates with ethnography, as well as a mode of being that may respond to a variety of contemporary challenges that extend from terrorist violence to climate change. Presenter: Knut Myhre (Norwegian University of Science and Technology)

Paradox and the Politics of (In)difference: Paradox acts as symbolic twine, binding together otherwise unresolvable oppositions. Sometimes, it's more elastic, allowing the ideas people typically hold apart to orbit each other in practice. Whereas other antinomies insist upon "either/or," paradox answers "both/and" to the question of how two opposing ideas can be true at once. Paradox therefore allows opportunity to reconsider normative distinctions without demanding reconciliation. In this sense, paradox is productive precisely because it allows people to retain valuable ideals while refusing the tired distinctions in which they are usually ensnared. And because paradox accommodates, even entertains, difference, it can also stimulate reflection on any given world of ideas and thereby cultivate indifference. This paper draws on the case of a behavioral therapy that has become professional movement in large part because it has resourced and exploited paradox. The case, however, also demonstrates that despite its arguable merits, the practice of paradox tends toward conservatism, enervating what might otherwise be productive ideological conflict. This includes partisan efforts to prove the supremacy of some ideal relative to another. Furthermore, while paradox affirms difference in the present, it can also disguise difference in the past (Weiner 1993, 10; Žižek 2006) including historical partitions that demand recognition and redress. Thus, the politics of paradox is inherently fraught, demanding that anthropologists track precisely who and what indifference relieves, revives, and leaves in its wake. Weiner, Annette B. 1993. *Inalienable Possessions: The Paradox of Keeping While Giving*. California. Žižek, Slavoj. 2006. *The Parallax View*. MIT. Presenter: Summerson Carr (University of Chicago)

What difference does indifference make? : 'Difference' is a central word and concept in anthropology. We attempt to acknowledge, describe, understand, and speak to it. We see difference underlying meaning from

phonemics through all levels of thought. We tend to contrast difference with sameness – or identity. But what about indifference? What challenge does the concept of indifference pose to anthropology, or to ethics? Does it describe a world devoid of meaning, action, attention, or compassion? Or can indifference be configured as a desired end (equanimity) or a virtue (disinterest)? Presenter: Michael Lambek (University of Toronto, Department of Anthropology)

Atmospheres, Moods, Vibes (Part 1): Structures

8:00 AM - 9:45 AM

TMCC - 717 B

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Malavika Reddy (Harvard University, Department of Anthropology)

CHAIR:

Sarah Muir (CUNY, City College, Department of Anthropology, Gender Studies, and International Studies)

PRESENTER:

Valentina Ramia (Stanford University, Department of Anthropology), Malavika Reddy (Harvard University, Department of Anthropology), Christopher Krupa, Emma Crane (Columbia University), Namita Dharia (Rhode Island School of Design (RISD))

DESCRIPTION:

The atmosphere of an era. The vibe of a place. The mood of a gathering. Taking our cues from the contemporary lexicon of 'vibes,' 'moods,' and 'feels,' this panel explores the atmospheric as a generative concept. How does it differ from or relate to affect, context, discourse, culture or the social? What aspects of life are highlighted when the atmospheric is described and analyzed? In what ways do atmospheres have politics? The atmospheric often lingers in the background of our ethnographic sites and writings, palpably saturating experience yet resisting capture in language. Nevertheless, the duality of atmosphere – as the gaseous layers that surround the planet and as the ambiance of a place – render us all 'students of the air' (Herder, qtd in Sloterdijk 2008, 223). What ethnographic insights and conceptual openings become discernible when we think seriously about what's in the air? Embracing the bivalence of the term, the panel brings together papers that understand the atmospheric as

encompassing a wide range of phenomena, from the ever-more toxic air around us to 'the background noise of ruts and disorientations, intensities and resting points' (Stewart 2011, 446), from 'substances in suspension' (Choy and Zee 2015) to a structure of feeling (Williams 1977). Equally important, the papers explore the ways in which people sense atmospheres, become attuned to their dynamics, attend to their pleasures. This means refusing to reduce the atmospheric into specific objects or subjects, rather delving into its elusiveness, as a mode of theorizing and as an invitation for experimental modes of ethnographic representations. The assembled papers consider how the atmospheric resists ethnographic craft and calls for new methods of observing, describing and writing. In part 1, 'Structures', papers attend to the atmospheric as a mode of generating ethnographically emergent political theory, from reflections on the resonances of atmospheric modalities (Ramia) and political violence (Krupa) to a discussion of the relation of atmospheres, both designed (Reddy) and incidentally resultant from the conditions on construction sites (Dharia), to power. Similar to Crane, in an analysis of the noise of flying fighter jets, and Reddy, in a discussion of a Thai royal festival with extremely high production values, this panel explores how atmospheres can be politically polyvalent, simultaneously meting out attachment and harm.

The Sound of Fear: Micropolyphonic Textures in Asylum Testimonies : Avant-garde composer Gyorgy Ligeti talked about his compositional strategy in "Atmospheres" as a superposition of voices that are impossible to distinguish. The "polyphonic structure," he said in an interview, "remains hidden in a microscopic, under-water world" that is beyond our ability to hear (Ligeti in Varnai, 1984). He called it micropolyphony. In this paper, I argue that Ligeti's musical atmospheric soundscapes are better than linguistic devices when it comes to the analysis of testimonial practices in asylum law. Drawing from ethnographic research on how fear is interpreted in immigration courtrooms in New York, I discuss how the sound of an asylum seeker's narration of fear of persecution is beyond the performative or affective registers of the law; it is rather in an alteration of being, an "oblique self-figuration" (Molloy 2009) that requires us to think of the personal and collective as two that are not replaceable, metaphorical, or metonymical. I illustrate my arguments with the case of an asylum seeker whose experience of fear escaped legal languages and I focus on the elusive textures, the distorted representation and the ethnographic white

noise. By doing so, I hope to shed light on the relationship between emotions, violence, language and personhood. Presenter: Valentina Ramia (Stanford University, Department of Anthropology)

What Love and Warmth Have to Do with the King of Thailand: A Tale of Atmospheric Governance: This essay offers an ethnographic analysis of the "Love and Warmth at the Winter's End" festival, first held in Bangkok in 2018, little more than a year after the death of King Bhumipol Adulyadej. Sponsored by Vajiralongkorn, the unpopular and then un-crowned king-to-be and framed as a gift to the Thai people, the festival hosted 1 million visitors. "Love and Warmth at the Winter's End" drew on a familiar repertoire of nostalgic forms and invented traditions, while mobilizing novel modes, as this paper will show, of enacting that repertoire. Most notably, large numbers of visitors attended in period costume, which event organizers described as Thai royalist dress associated with the hallowed 5th reign of the Chakri Dynasty (1868-1910). The paper details the festival's attention to atmosphere, the emphasis on reconstructed historic buildings and the cultivation of positive interactions, moods, and worlds made in them. If atmospheres are not simply given environments but designed sets of relations of which air is but one (Sloterdijk 2016), the paper presents the festival as a lens onto the ways in which the design and inhabitation of an atmosphere mediates power. It develops a theory of atmospheric governance 1) to discuss the ways in which the festival's production of "love and warmth" relate to the new and largely reviled king's attempts to forge positive identification with his rule and 2) to gesture at the ways in which value, writ large, is increasingly asserted through the management of atmospheres. Presenter: Malavika Reddy (Harvard University, Department of Anthropology)

The Atmospheric Pressures of Necrocapitalist Value Regimes : This paper explores the spectral resonances between changes in the commodity form and modes of political violence in the late 20th century, particularly their shared investment in enhancing the ways value could be generated and captured through modes of atmospheric circulation—value pulled from thin air and from what could be felt in the air, so to speak. Its focus is millennial Ecuador where financial logics of debt and currency speculation combined with plantation modes of territorial occupation and human engineering combined under the brutal magic of terrorist statecraft to construct a network of death economies that came to be felt in the form of what one persecuted guerilla

combatant of the period described as a national mood of “collective psychosis”. As images of dead insurgents circulated generatively in the press, exchanging corpses for military assistance loans and debt relief programs, expanding plantation zones pumped those returns into ecologies of toxic warfare, where the air itself came to be felt as a technology of racialized violence, theorized as another modality of capital’s saturation of potentially agonistic lifeworlds, breath a dangerous encounter with the force of dispossession/possession. These forms of violent and capitalist production arose together and together opened up new possibilities for the ways affect could be harnessed to generative effects, producing a way of feeling that seemed to drift between plantation greenhouse, penitentiary, torture cell, and the disoriented worlds around them. Ultimately, the paper asks about affect’s capacity to mediate the material and the atmospheric in necrocapitalist value regimes.

Presenter: Christopher Krupa

Sounds of war: Martial atmosphere in the suburbs : Noise produces atmosphere and attunes us to the permeability of bodies and built environments (Peterson 2021). In Homestead, just south of Miami, the sounds of F-16 fighter jets saturate the suburb. This intermittent noise produces an atmosphere of war, felt by some as exhilarating and by others as harmful and ominous. Migrant children, detained in a camp adjacent to the military base runway, are exposed to noise from the fighter jets at levels associated with cognitive harm and memory loss. Here, noise exposure is part of a broader colonial atmosphere of confinement (Fanon 1961). Yet beyond the camp, in the suburbs that border the military base, the noise of the jets is lived as a sound of freedom that nurtures durable attachments to war (Terry 2017). This paper tracks martial atmosphere as both noise pollution—studied and contested by migrant movements for environmental justice—and as a sensorial experience of pleasure and power for the paramilitary communities that surround and sustain the base. In Homestead, this noise is both measurably material and differentially felt. What kinds of politics do atmospheres make? And how do we write, record, analyze an atmosphere that resists ethnographic and audio capture? Presenter: Emma Crane (Columbia University)

The Ephemeral Atmospheres of Construction : In her presentation Dharia analyzes the ephemeral atmospheres of the construction industry in India’s National Capital Region (NCR). Atmospheres (created through the transformation of materials and circulations of people) are not epiphenomenal to industrial

operations; rather, they undergird labor politics and operating strategies in construction. The heat of steel, the constant clouds of dust, the electrical sparks on construction sites, are not mere metaphors but affective, material, and sensory sites that link to political subjectivity and laboring strife. Moreover, it is the ephemeral nature of atmospheres—their ability to rapidly transform, circulate, and dissipate—that is site of their power. The temporality and temporariness of ephemeral atmospheres allow them to shape human experience. By studying the working of power in ephemeral atmospheres, Dharia challenges work that romanticizes, otherizes, or renders the ephemeral inconsequential. Dharia makes this case by considering three key forms of life interlinked with the production of atmospheres in construction work: mazdoori, majboori, and jugaad, that is, the politics of labor, necessity, and precarity on construction sites. The presentation is based on fifteen months of ethnographic research in NCR and is part of a cross-class ethnography of architects, planners, contractors, foremen, workers, and developers in NCR. Presenter: Namita Dharia (Rhode Island School of Design (RISD))

DISCUSSANT:

Elena Guzman

DESCRIPTION:

This multimedia panel brings together the written and visual to explore the power of autoethnographic film as a site of self-making and healing. Autoethnography is a critical feminist method that harnesses the power of personal experience as a critical form of knowledge (McClaurin 2001). As Catherine Russell notes in *Experimental Ethnography: The Work of Film in the Age of Video* (1999), the power of autoethnography lies in its ability to not only foreground the personal but also

to combat vectors of oppression. Thus autoethnography, when oriented in this way, can be a powerful tool for reclamation and self-making. This panel brings together four women of color scholars whose autoethnographic films are used as tools to counter narratives of racism, queerphobia, xenophobia, and domestic terror as they seek to reconcile and disrupt their spatiotemporal realities through their own borderlands (Anzaldúa 1989). The process of shooting, editing, and showcasing a film are all rigorous spaces in which the autoethnographic is enacted to (re)create realities and to facilitate healing. In using visual tools of filmmaking, each panelist visualizes feminist futures that become actualized through the process of making and watching their films. When brought together, these films and written reflections offer a nuanced take on the future of autoethnographic film through a feminist filmmaking lens.

How to Use Home Movies as a Rememory Tool: Home movies as a genre of media is evolving, whether you include viral tiktoks & videos “collecting dust” deep in our 21st century phones or not. Artist Essence London believes this is the time to also reconsider the function of home movies regardless of the year or method they are captured. They can be more than historical record, more than an entrance to nostalgia. With attention & intentionality, home movies can be used as rememory tools that facilitate reflection & healing. London details how she does this in her autoethnographic filmmaking process. The accompanying screening is her film *matriline ritual*, which contains footage of her family’s 1999 Kwanzaa celebration & is currently in the post-production phase. Presenter: Essence London

Pole Dancing as Healing: Inspired by Brent Faiyaz’s lyrics “who can I love when they tell me I can’t love myself, how in the hell could I possibly love someone else,” this paper and film explores the harm marginalized identities, especially Black people, experience in the world. By focusing on how a queer multiracial woman explores the art of pole dancing as a site of healing, resilience, empowerment, self-love, and agency within a society that deems her identities unworthy of love we come to see pole dancing as a survival strategy. Presenter: Corryn Anderson

Finding the Self within Displacements: An Autoethnographic Study of Homelands, Memory and Migration : The idea of home has multiple meanings. For some it’s a memory, a longing for a past, for a place of belonging, and for others home is about nation and citizenship. However, Kakali Bhattacharya (2017) in her

essay ‘Coloring Memories and Imaginations of “Home”’: Crafting a De/Colonizing Autoethnography’, argues that such romanticized notions of home represent a colonial and patriarchal notion of home, thereby, concealing experiences of trauma, oppression, and alienation thus, making the idea of returning to a home complicated and unsettling. Building on Bhattacharya’s argument, in this paper, I use an autoethnographic practice-based approach by holding two subjectivities – that of the camera and of the subject of the documentary – to explore how the notion of home becomes both fragmented and entangled in borderlands, immigration laws, spatiotemporal distances, documentation, and nationhood. By using the metaphors of the meeting of land and sea as both a site of a peaceful union and as a site of a violent clash as Gloria Anzaldúa (1987) puts it, I seek to use autoethnography to navigate through the fragmentations of the idea of home. As a result, using a self-reflexive and non-linear approach, for the film, *The Spaces in Between*, I argue that the various temporalities of the memories of past, the spatial dislocation in the present can be negotiated in the imaginary of the future in which the ‘self’ is neither here, nor there, neither an insider, nor an outsider. Instead, the self is a space of belonging that also includes displacement, identity, and transformation. Presenter: NARMEEN IJAZ

Seven Homes of Forgetting: The dichotomy between home and exile has guided much of the discourse around immigration and displacement, but one’s movement across borders is the embodiment of yet another condition, one that cannot be ultimately situated in any of these two poles. When the body is understood as the bearer of existence and placement, home ceases to be an external and intangible quest. Skin, bones, and blood move, rush and pulse in layers of remembrance and forgetting, in a constant struggle against the inherent violence of imposed borders and divides. *Seven Homes of Forgetting* is a visual-archeological autoethnographic experiment to uncover religious discourses against bodily (and personal) autonomy and to explore the fluidity of the borders between living and non-living, human and non-human, remembering and forgetting, home and exile, and between propriety and the grotesque. In this filmic experiment, I reflect on the indelible scars of white Anglo-Saxon Christianity in my understanding of embodied experience of the world: if the body is, at the same time, a site of sin and the temple of the [holy] spirit, refusal, autonomy, and agency can only be activated in a liminal and/or transitional space. Built on conceptualizations of borderlands (Anzaldúa) and third

space (Homi Bhabha), in *Seven Homes of Forgetting* I explore the potential of film in eschewing hegemonic regimes of truth, space, and temporality and aiming at world- and self-[re]making. Presenter: Marian Gabani Gimenez

DESCRIPTION:

Recent seminal work inspires us to mobilize anthropological capacities for noticing with the goal of making intelligible and imaginable the possibilities of life and politics amidst capitalism's seemingly ever-expanding detritus (Gordillo 2014, Tsing 2015, Stoler 2016). Bringing together ethnographic analyses centered on material assemblages, infrastructural remnants and ecologies consolidated in and through industrial intensification, decline, or collapse our panel responds to these concerns, albeit with some important caveats. We take seriously Kim Fortun's cautionary remarks about the 'discursive risks' that emerge when we rely on established idioms and ways of thinking to parse the nested complexity of technical, biophysical, and economic conditions that comprise late industrial problem domains (2012). What else, but ruin, rubble, decay, or corrosion might be generated within industry's durable and expansive footprints? How might we put pressure on the open-endedness of social and political life in late industrial worlds without losing sight of various determining conditions? Some interventions on this panel place the spotlight on the processes of rewilding and more than human late and post-industrial ecologies. Others pay attention to dormant subterranean histories that at once encompass extraction as well as more generative processes of world-building. Still others yet are preoccupied with

questions of labor and justice, which quite often but not always stand at odds with the romantic portrayals of aestheticized post-apocalyptic landscapes (see Bond 2023). Collectively, we seek to better understand the material and political assemblages that emerge in late industrial zones, whether they be forming in place characterized by abandonment, or by novel forms of speculation and experimentation, even hope. We treat such horizons cautiously: rather than celebrating 'the return to nature,' we engage how people grapple with what falls aside such triumphant narratives.

Salvaged ecologies: The making of post-submergence nature : This paper examines the role of environmental salvage practices in making a post-submergence life in northeastern Turkey. Yusufeli Dam is one of ten large dams built on the Çoruh River, a swiftly flowing river through a deep valley, designated as the final frontier for the expansion of large-scale hydropower production in Turkey. Praised as the country's tallest dam, construction of Yusufeli Dam began in 2012 and continued for a decade until its inauguration in November 2022. As the water accumulates forming the reservoir for electricity production, the entire town center and three villages get submerged by the river that long shaped the socio-natural life in the valley. Meanwhile, a new life in the upper elevations above the reservoir is put into practice. In this landscape, resettlement implicates not only the people and the built environment but also more-than-humans. The Municipality and the District Directorate of Agriculture conceive and frame this submergence as a socio-natural process in which environmental sacrifice is inevitable but can be compensated. They suggest that local fruit trees and fertile agricultural soils be salvaged before flooding and relocated to the resettlement site. These salvaged ecologies, they envision, would signal and enact the possibility of life emerging in the midst of ruination. This article pays ethnographic attention to practices of transplanting trees and relocating soils to demonstrate that rather than countering or mitigating destruction, the act of salvage is bound up with ruination as it is rendered inevitable. What emerges from this practice is a post-submergence nature, which is movable and modular, indexing the continuation of not only life but also ruination. Rather than approaching salvage merely as an object of analysis, I argue for the importance of salvage as a concept that reveals a particular relationship between environmental sacrifice and restoration. Presenter: Ekin Kurtic (Northwestern University)

A City of Vineyards: Reparative Ecologies in Times of Ruination: Engaging with forms of human–plant relations in Tbilisi, this paper explores possibilities for reconsidering the reparative potential of urban vineyards in the ruins of socialism and capitalism. Drawing on ethnographic fieldwork and revisiting Georgia’s Russian colonial and Soviet history of decorative gardening, I develop the concept of reparative ecologies and expand it for an anthropological inquiry of broken urban environment. I use reparative ecologies to refer to urban vineyards that grow in and around decaying Soviet mass housing projects: the spaces alongside dilapidated building blocks, courtyards, and balconies. Exploring Tbilisi as a city of vineyards, I direct attention to the often unnoticed ways of repairing and caring for urban spaces through transplanting rural plants to urban areas at a time of increased ecological ruination and destruction. Tracing human–plant relations between city inhabitants and vineyards, the concept of the reparative ecologies directs ethnographic analysis toward the nature as infrastructure in the context of Soviet industrialization, environmental change, post-Soviet deindustrialization, war, and neoliberal urban governance. Attending to reparative ecologies, I argue, requires telling stories that are not easily noticeable but constitute essential aspects of the study of urban space, vernacular plants, and poverty, while also mapping out possibilities for reparation. This framework thus expands a recent anthropological focus on ruins, infrastructure, and urban landscapes by highlighting questions of spatial justice that are at stake in emerging urban ecologies and an era of disturbed environments in post-socialist Georgia. Presenter: Tamta Khalvashi

A Pit Lake Named Zero: Postindustrial Natures and Post-Extractive Futures in Bosnia-Herzegovina: In 2018, an activist campaign in the central-Bosnian town of Vareš successfully challenged the plan of an EU-sponsored ¡Vamos! Program to test underwater mining equipment in a nearby pit-lake “Nula” (transl. 'Zero') which formed on the site of the now-defunct coal mine. Nula is a rewilded postindustrial waterscape made possible by various forms of ruination that accompanied the 1992-95 Bosnian war. Over the last two decades, local residents transformed it into a recreational area for swimmers and fishers, as well as a key site in the hoped-for economic revitalization via ecotourism. Nevertheless, given Vareš’s extensive industrial and mining past, some local residents were willing to tolerate the risks that ¡Vamos! testing represented to the now-settled lake, particularly if such efforts could bring back jobs to this deindustrialized and depopulated

part of Bosnia-Herzegovina. But the project's opponents focused on potential environmental hazards this kind of testing, pointing to the murky ethics of bringing experimental technology to a poor country with weak environmental regulations. This paper, which has resulted from an uncommon student-professor collaboration, takes up this pit lake as a privileged site from which to query possible futures amidst ruins of (post)socialist industrialism. How might we make anthropological sense of zones of anthropogenic resource depletion that are at once potentially toxic and beautiful, and emerge as unlikely sites of affection, communal care, and environmentalist concern? To what political and ethical configurations do such zones give rise? What subterranean histories do they help us excavate, and to which future horizons do they point? Paper co-authored with Yanna Jović, uOttawa alumna

DESCRIPTION:

Recent decades have witnessed a world-shifting transition as a colonial and post-colonial global order dominated by empires originating from Europe and North America has increasingly been turned on its head.

This transition has involved nations and people once considered emblematic of the colonized world and the Global South—such as those of China, India, Brazil, and South Africa—now increasingly occupying positions at the leading edge of global capitalist transformations. Despite this transition, prevailing scholarly work continues to implicitly center the Euro-American West as its central focal point when it comes to topics as varied as transnational migration, racialization and racism, the politics of religious movements, and (neo)colonialism. Despite these provincializing tendencies in Euro-American anthropology, the field often sees itself, and is often seen, as speaking to 'global' problems, whereas other world anthropologies are cast as dealing with a narrower set of 'local' issues and audiences. This roundtable brings together a group of transdisciplinary and international scholars working across the boundaries of anthropology, cultural studies, gender studies, communication studies, sociology, and history to challenge global colonial hierarchies both within and beyond academic knowledge production. To achieve this, our roundtable examines transformations of the 'global' from the vantage point of transnational links between two critical nodes of the Global South: Africa (pop. 1.2 billion), the world's fastest-growing continent by population, and China (pop. 1.4 billion), the world's largest manufacturing economy, trading nation, and exporter of goods. Hailing from and working out of diverse locations in both the Global North and South, including Nigeria, Ghana, (mainland) China, Taiwan, Hong Kong, Mexico, Canada, and the USA, this group of scholars will address questions such as: are critical concepts such as 'race,' 'empire,' and '(neo)colonialism' the best analytic tools for understanding South-South connections today? Is there a danger of Western analytical categories 'concept colonizing' African and Chinese studies? What do such debates say about the varied ethical and political subjectivities of international scholars and our interlocutors? As critical concepts such as race, racial capitalism, and empire 'go South,' we contend that they become dislodged from their more familiar historic and geographic contexts and potentially unanchored from whiteness and the West with provocative and productive implications for the field of anthropology today. We thus ask: how can the study of these processes contribute to a global decolonial vocabulary of 'race' and 'racism,' 'empire' and 'colonialism,' 'capital accumulation' and 'migration'? Taking a palimpsestic perspective to the historical present and an anthropological approach to the study of contemporary global formations, this roundtable explores how knowledge about China in Africa, and Africa in China,

can contribute to alternative and potentially liberatory reimaginings of the world and structures of power within it. Conversely, we simultaneously consider how historical experiences and narratives are put into variation by an attention to the *longue durée* of relations between peoples and nations of the Global South.

Climate Change in Perspective

8:00 AM - 9:45 AM

TMCC - 205 D

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Ajmalkhan Areethala (Harvard University)

PRESENTER:

Matt Gravin ,Erin Scott ,Ajmalkhan Areethala (Harvard University),Nancy Kendall

DESCRIPTION:

This panel explores the various ways in which communities experience, narrate, and navigate the unequal effects of climate change. They attend to the structural inequities that shape human experiences of environmental crises. Papers address ongoing processes of settler colonialism and the inequities of the Anthropocene, the intersections of racism and environmentalism in relation to species management, experiences and understandings of climate change among Adivasi farmers in the Sundarbans, and a cross-cultural look at youth responses to climate crisis.

Enter Anthropocene: Settler-Colonial Anxiety and the Politics of Finitude: The Anthropocene is declared as the age of humans. Centuries of industrial mastery over the environment have culminated in transition to this new epoch. It is an age of 'tipping points,' increasingly lethal biological and weather-related disasters, and paranoia surrounding the end of the World – of which humans are said to be the driving force. Ironically, then, it is this age of humans that so too presents the greatest threats yet perceived to human life, and the ecological structures that support it. Ensuing disorientation, caused by the collapse of modernist frameworks that define 'human' and 'nature' as separate phenomena, is captured in the catastrophic imaginary of popular culture writ large. The end of the World, though, is a contested concept with no singular reality. As the histories of Indigenous Peoples attest, there are indeed many worlds with many possible ends. Having coped

through the experience of colonization, Indigenous Peoples in the Americas have arguably already suffered the end of their worlds on a scale the West has never known. Drawing from recent scholarship in anthropology, postcolonial theory and the environmental humanities, this paper examines the relationship between narratives of extinction and the demand to preserve liberal capitalism as a symptom of the Anthropocene. I argue that despite the apparent concern for a variety of peoples, species and environments, the imagined end of the World is more a reflection of the West's positionality. It is an expression of anxiety – a fear of loss of the very justifications that have given rise to European imperialism and settler-colonial societies. Presenter: Matt Gravlin

Are We The Aliens? Invasive Species, Climate Change, and the Rise of Environmentalism as Racism: Invasive species, climate change, and human migration are increasingly interconnected within political, economic, and environmental circles. As a result, invasive species are being removed from their biological context and becoming tools in a political arsenal to create and solidify ideas of natives and aliens within the human world as well. While the impact of human-caused climate change has only recently been acknowledged in the political sphere, the mobilization of environmental discourse for racist, nativist, and nationalistic movements is far from new. From France to Washington to New Zealand, voices on the far-right – nationalists, populists, protectionists, and people beyond the conventional conservative voice – have been using old environmental tropes and adapting them to the new face of environmental change, charged with fear for the future – environmentally, economically, and racially. In doing so, they are creating powerful new frameworks for a set of issues more typically associated with the left: conservationism. As climate change and environmentalism become more mainstream for political parties to discuss, so does the rise of conservationism as racism, tying care for the environment to specific groups of people and tying the destruction of the environment and species loss to already racialized and marginalized groups, and specifically to immigrants. From Nazi propaganda to Trump's wall, to discourses which tie invasive species to migrants as 'alien' invaders, environmentalism is once more becoming a convenient outlet for violence, racism, and xenophobia to flourish under the guise of caring for the environment. This has created new problems in identifying who exactly are the 'aliens' and has led to questions surrounding how invasive species and environmental issues are to be tackled outside of

politics? In a world increasingly feeling the impact of climate change, how do you separate the biological reality and harm done by invasive species and environmental degradation from the equally damaging impact of the politicization of environmentalism as a tool to further harm and alienate already marginalized groups? How do we, as academics, citizens, and nations, balance the reality of climate change, environmental degradation, and invasive species with the reality that who belongs where is increasingly complex and harmful to determine? Finally, who decides what counts as conservation and who, in the end, is the alien? Presenter: Erin Scott

Doing Anthropology of climate change in South Asia: Reflections from the Sundarbans: Anthropological scholarship on anthropogenic climate change addressed risk perceptions and management, decision making processes, social production of knowledge, and interactions of science, policy, and politics. The rapidly growing body of scholarship in anthropology on climate change (Crate and Nuttall 2009; Dove 2013; Fagan 2010; McIntosh et al. 2013; Rayner) explored the human-associated nature of climate drivers and impacts across societies. The anthropological literature that looked at the indigenous people's knowledge and experience of climate change Lipset (2011) Rudiak-Gould (2011) explored the contrast between scientific knowledge and indigenous knowledge and the experience of the indigenous people among many other areas. However, even though there is a rich tradition of studying Adivasis (Indigenous people) in South Asia, there has not been much anthropological exploration of climate change and the experience of Adivasis. This paper looks at the climate in India considering Adivasi (Indigenous) identity as central socio-ecological category in the Indian sub-continent. Based on the fieldwork conducted among the Adivasi farmers in the world's largest area of mangrove forests in the Bay of Bengal, Sundarbans, this paper highlights the challenges to the existing anthropological tools to study climate change in South Asia. I demonstrate how unique forms of historic and socio-ecological, human, and non-human relations, and their multiple intersections determine and mediate the experience of climate change in the Sundarbans. I then argue that anthropologists in South Asia might need new tools and alternative frameworks to study the Adivasis experience of climate change. This could further help climate change mitigation and adaptation policies in South Asia. Presenter: Ajmalkhan Areethala (Harvard University)

Crisis and Climate Transitions: Youth Livelihoods and Wellbeing in Colombia, Ghana, India, and Malawi: This paper draws from two team ethnographic studies to explore youth livelihoods and wellbeing in economically marginalized rural communities in Colombia, Ghana, India, and Malawi that are experiencing extreme impacts from climate change. The paper explores similarities and differences among youth's narrations and experiences of socio-cultural and political economic transitions, and links these to: 1) the end (Li, 2014) of a wide variety of natural resources on which youth and adults in each ecology have historically depended for survival, thriving, and building capital; 2) very different structures and experiences of socio-economic inequities in each community; and 3) sense-making related to worldviews and religions--and particularly the extent to which people imagined that the current moment represents a transition into Biblical end times. The presentation will also reflect on shared methods used in both studies, particularly the half-day youth walk-around interviews (in which the researchers walked with interviewees to and through key daily activities for 1-8 hours), which provided much richer data on youth transitions--through different spaces, institutions, relationships, and contexts. Lastly, the paper reflects on the particular calls being made by adults in spaces that youth frequented (schools, informal work spaces, churches, etc.) concerning the 'good life' towards which youth should aspire, and reflects on what youth's responses to these narratives about their desired futures can tell us about changing generational norms concerning wellbeing in the anthropocene. This paper is co-authored by Yaa Ampofo, Arpith Isaac, and Nancy Kendall. Presenter: Nancy Kendall

DESCRIPTION:

This roundtable brings together senior scholars and young, emerging scholars to discuss and debate the associations between documenting ethnographic observations and recording the archaeological record. Ethnographers and archaeologists have for generations developed methods of recording observations and measurements in field sites. Each new generation creates new technologies and approaches for documenting field observations in ethnography, and handwritten notes in paper notebooks have been replaced by efieldnotes, spreadsheets, network analysis, photo and audio files, interview recordings, resulting in changes in ethnographic products in response to new methods of collecting data. In archaeology, mapping and photography have become much more sophisticated with drones, Lidar, and visualization techniques. But do these contemporary techniques replace or do they enhance the practices developed generations ago by our earlier colleagues? Do new technologies replace participant observation as a means of data collection, and objectify field experiences? Do they aid, change, enhance the recording of field observations; do they bias or constrain observations in new ways unlike biases occurring through participant observation. Are they more or less inclusive of the interlocutor lens. Do they offer our interlocutors more or less opportunity to enter the ethnographic dialogue. Have archaeologists been able to better "see" and report their data with these new techniques? Or are archaeologists held hostage to new techniques that are delightful to look at but obscure the basic relationships between humans and the environment in which they lived? The scholars in this roundtable represent different generations of ethnographers. They will reflect on, share and critique earlier and current approaches to data collection and the implications of changes for

ethnographic and archaeologic recording, interpretation and results.

Cycles of Capitalism in Atlantic Canada: Spatio-Temporal Returns and Revenants

8:00 AM - 9:45 AM TMCC - 709

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Kassandra Spooner Lockyer

CHAIR:

Donna Young

PRESENTER:

Katie MacLeod (Cape Breton University, Department of L'nu, Political, & Social Studies), Kassandra Spooner Lockyer, Heidi Haering, Hannah Main (Dalhousie University, Department of Sociology and Social Anthropology)

DISCUSSANT:

Sarah King (University of Ottawa)

DESCRIPTION:

Atlantic Canada has experienced an unexpected growth surge between the summer of 2021 and 2022, with population growth, once stagnant, now at double the national rate in Prince Edward Island, New Brunswick and Nova Scotia. This moment of expansion is also met with growing pains, including a severe housing and rental crisis and strains on already overloaded healthcare and education systems (Mills 2023). What feels like the promise of expansion, however, can also be read as part of the larger 'boom-and-bust cycle of the resource economy' of Atlantic Canada (Thompson 2012:105). Capitalism functions in the region as a wave of creative destruction, constantly on a quest for 'new places where production might be cheaper and more 'efficient'', and continuously expanding by rendering people and places in zones of deindustrialization 'instantaneously outdated' (Edensor 2005:315). For those who remain behind when capital has moved on, capitalism gets experienced as a cycle of contraction and expansion (Noys 2016). In Atlantic Canada, this boom-and-bust pattern is layered onto spatial cycles of circular migration, wherein the Eastern provinces serve as a pool of reserve labor for Western expansion (Veltmeyer 1978). Nicknamed contemporarily 'the back-

and-forth' or the '21-and-7' by labor migrants (Ferguson 2011:107), this kind of migration cycle is representative of larger scales of absence and return that characterizes the region (Delisle 2013). Displacement and unsettlement have become 'part of the place' (King 2013:75), a kind of rootedness that demands separation, where many 'ha[ve] to leave ... in order to stay' (Ferguson 2011:113). This panel will explore the relationship between these two cycles of capitalism; the spatial cycles of absence and return and the temporal reversion of contraction and expansion. By examining waning and returning industries, rural abandonment and reclamation, and tenuous land rights, we will ask what kind of temporalities do these cycles of absence and return create? How do returning pasts come to shape our relationship with place? What do these space-time cycles mean for Atlantic Canada's futures? Deconstructing Marginal Rural Landscapes: Exploring Identities through an Acadian Post-Agricultural : Out of use farms can be found throughout the small Acadian village of Pomquet, Nova Scotia. The region was known for subsistence and part-time farming, hitting its peak agricultural production between 1881 and 1891. By the 1920s, farming became very labor-intensive, and the rural economy that was based in subsistence farming began to break down. During this same era, other Acadian committees engaged with Acadian nationalism and the Nova Scotia tourism industry, and a version of Acadian history steeped in myth that significantly

impacted Acadian popular memory. Due to its political economy and rural landscape, Pomquet was on the margins of both nationalist and tourism processes. The second industrial revolution led to small rural industries moving to urban centers leaving many of the farms throughout the county abandoned. The present-day economy in Pomquet is less prosperous than in the height of the agricultural era. With a declining economy positioned near a sizeable Anglophone center, Pomquet relies on outside resources. This paper explores political economy in the village decline to understand how their rurality, language loss, and little connection to Acadian official history presented them with an alternative path to sustaining a sense of ethnic identity and a localized Acadian past. Presenter: Katie MacLeod (Cape Breton University, Department of L'nu, Political, & Social Studies)

Closing Futures: Getting Caught in the Repetitions of Late Stage Capitalism in Cape Breton, NS: Kate Beaton's (2022) *Ducks*, a memoir about leaving Cape Breton for the tar sand of Alberta, opens with a paradox; Cape Bretoners are stuck between "a deep love for home, and the knowledge of how frequently [they] have to leave it". What she terms the "push and pull" of growing up in a boom-and-bust region points to the long history of circular migration that has shaped the island's landscape for the last 100 years (Thornton 1985; Ferguson 2011), creating a population of precarious mobile labourers (Ferguson 2011). The island is a landscape littered with people who have left but returned and who might leave again, creating a strong sense of rootedness and unsettledness. For those who remain, the repetitions created by a capitalist temporality that is "manifestly linear while latently circular" is keenly felt as both a "generalized nostalgia" (Noys 2016:21) for past prosperity and the desire to leave behind the violent and toxic histories of industry. Within these cycles of return, past /present, and here/elsewhere overlap in the social atmospheres of Cape Breton in a way that shuts down possible futures. In this paper, I will explore how my participants in the Sydney Coalfield area feel caught within the "needless repetitions" and "eternal return" (Noys 2016:22) of capitalist realism (Fisher 2014), forcing them to search for potential futures in the past. The Spectre of Absentee Landlordism in Prince Edward Island Land Politics.: Absentee landlords owned what is known as Epekwitk, or Prince Edward Island, for over a century. Britain acquired the Island through the Treaty of Paris, dividing it into 67 lots. High-ranking British citizens won 66 of these lots through a lottery. This period in PEI has been characterized by historians as one of constant unrest and protest between landlords and tenants. This paper explores recent accusations of a resurgence of "absentee landlordism" in the province, as levelled by the PEI chapter of the National Farmers Union (NFU PEI). Over the last five years, NFU PEI representatives have warned that loopholes in PEI Lands Protection Act may see the island return to the state of unrest of the pre-confederation period. This prediction seems at odds with the decrease over the last decade of non-resident land ownership in PEI. At the same time, land is increasingly concentrated under PEI-resident corporate ownership. Drawing on my research and fieldwork in PEI, I will explore how anxiety around current patterns of land ownership is expressed in terms of historical contestations and ask how this use of history may obscure actual inequities in present-day farming and land ownership in the province. Presenter: Heidi Haering

Sanctuary: The symbolism of churches in rural Maritime communities: In the rural Maritime provinces, churches have traditionally provided multiple spiritual and social functions. Churches provide a home for life courses rituals, community events, and local history. The legacy of the Canadian church is fraught, but churches have been an important part of life in rural Canada and are an example of the social relations that are both necessary for, and undermined by, global capitalism. To understand economic patterns in the rural Maritimes, one must understand the non-market livelihood strategies in the region. Following Fraser (2022), I argue that the process of industrialization and urbanization simultaneously requires and destroys non-market forms of livelihoods and care. As these livelihood strategies are destroyed, they become memorialized as folk, absorbing traditional culture into the market economy as a tourist commodity. Folk—and the rural idyll it points to—always includes nostalgia for an unspecified golden age (Short, 2006). Church buildings are powerful images of the folk. A white wooden church conjures up

visions of a bucolic past (Neitz, 2009). But today, many of the rural churches of the Maritimes have been deconsecrated. Now they are abandoned or are homes, businesses, or vacation rentals, but their past use remains recognizable. I use photographs of church buildings in the Maritime provinces to explore rural change. The images of church buildings that have been transformed into private homes or businesses symbolize the encroachment of the market economy on social life and common space. References Fraser, N. Delinking From The Nation-State: Immigrant Education in the Context of Transnational Regions

8:00 AM - 9:45 AM TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Sophia Ángeles (Pennsylvania State University)

CHAIR:

Sophia Ángeles (Pennsylvania State University), Kyle Halle-Erby (University of California, Los Angeles)

PRESENTER:

Kyle Halle-Erby (University of California, Los Angeles), Edmund Hamann (University of Nebraska, Lincoln, Department of Anthropology), Sophia Ángeles (Pennsylvania State University), Hector Palala

DISCUSSANT:

Sarah Gallo (Rutgers University)

DESCRIPTION:

Andrea Dryness and Enrique Sepúlveda write 'it is critical to understand how diaspora young people, whose lives transcend national borders, make sense of and respond to discourses that frame them as outsiders and a threat to the nation' (2020, p. 4). In light of AAA's theme examining how transitions bridge the past and

the future, we offer a symposium that recognizes transnational regions, rather than nation states, as the context for immigrant education. Taking into account the long history of examining migrant youth's trajectories from the viewpoint of the nation-state (Wimmer & Glick Schiller, 2003), we recognize the need to understand the day-to-day experiences of migrant youth as influenced by their membership in transnational communities. Privileging transnational regions over nation-states to understand the challenges and opportunities that immigrant students encounter is especially important at a time when those in power are working to separate families and fortify borders. Despite the impact migration has on young people's relationships, we argue that they remain members of already-existing and ever-changing transnational families and communities. In light of the 'disjunctures' that the legal system has created in the lives of migrant youth, there is a need to move away from further perpetuating the myth that they are divorced from their families and communities. As such, there is a need to center the transnational regions to which they belong in order to make sense of their day-to-day experiences as well as their aspirations for the future. With an interdisciplinary panel of scholars, we present four papers and discussant commentary. The first paper is an examination of emerging partnerships between educators in Los Angeles and Quetzaltenango, Guatemala who have been teachers of the same students at different points in their educational trajectories. The second examines the discourses invoked when a Guatemalan youth and a U.S. based professor debate the how and why of migrating to the U.S. Relatedly, the third paper discusses how communities organize transnationally for Mayan language preservation in U.S. schools. Finally, the fourth paper discusses how newcomer youth form transnational futures given their membership in transnational families. Collectively, our scholarship argues that transborder frameworks are vital for understanding the challenges and realizing the potential in immigrant education. These papers offer ways to move away from 'methodological nationalism' (Wimmer & Glick Schiller, 2003) and toward recognizing how 'transnational experiences and existences conjure up old and new insights on how to live in community with love, dignity, and justice' (Dryness & Sepúlveda, 2020, p. 57). Given the Council on Anthropology and Education's commitment to 'advanc[ing] anti-oppressive, socially equitable, and racially just solutions to educational problems,' this session offers a place to nurture the development of scholarship that considers how we can

collaboratively account for the transitions migrant youth encounter across multiple borders.

“It’s not just a facade”: State Counterinsurgency and International Teacher Solidarity in a Public S: Over the 2021-2023 school years, the Los Angeles Unified School District opened three new high school Academies explicitly tasked with centering recently-arrived immigrant students’ home languages to support their success in school. The students and educators in these Academies are predominantly Latinx and 25% of students reported a Mayan language as their home language. At the opening ceremony for the first program, the principal invoked the legacy of the Chicano Blowouts when students walked out of East Los Angeles schools, including at the Academy. Eighteen months later, the school leader was frustrated at how she saw the school district working against her program. “There are so many things that are in [the district’s] control. I feel like I’m failing...We’re doing band-aids but this is not just a show for me. It’s not just a facade.” How do school districts attempt to neutralize radical political action by laminating demands for change into the facades of existing practice? Grounded in the ethnography of language policy (McCarty, 2011), this paper takes up the idea of state-led counterinsurgency (Rodriguez, 2020; Sojoyner, 2016) to trace the trajectory from Chicano students in 1968 walking out of Cerrejón High School, then led by White educators, to Central American immigrant students walking into the same school fifty-five years led by Latinx educators. The paper concludes with an examination of emerging partnerships between teachers in Los Angeles and Quetzaltenango, Guatemala to propose international solidarity between educators connected by immigrant students as an alternative to globalized educational precarity. Presenter: Kyle Halle-Erby (University of California, Los Angeles)

The Would-Be Migrant and Me: Uncomfortable Discourses of Migration, Opportunity, and Inequality: This paper reflects on a brief (10-minute), recent, and unexpected request by a teenage student in rural Guatemala wondering whether I (a visiting, US-based professor of teacher education) could give her advice or even help related to her desire to migrate to the US so she could work as a nanny. In addition to invoking discourses about the US as a land of opportunity, she invokes discourses of her mother expecting her to work and her father drinking to explain why she wants to leave. In turn, I invoked discourses of hazard and concern related to migration, as well as plead to the limitations in my understanding of ‘how’ to migrate, saying my expertise has much more to do with how

schools should respond to the transnationally mobile than the logistics of moving between countries without authorization. I then find myself urging her to stay in school longer, claiming the further she gets in her education the more attractive she would be as a nanny. The paper considers both the substantial apparent inequalities in our life circumstances and the discourses we invoked to consider why her departure from school and migration would or would not be a good idea. It then zooms out to contrast this particular interaction with the larger more abstract goal for visiting Guatemalan schools—to see if there were students there who had previously been in the US and to gather information that might be useful for US teachers working with students previously in Guatemala. Presenter: Edmund Hamann (University of Nebraska, Lincoln, Department of Anthropology)

'Estar aquí en los Estados Unidos. Y visitar a mi mamá: Newcomer Youth's Transborder Dreams: In the United States, there is a growing population of migrant youth in our schools and communities. As such, their multiple aspects of their lives “transcend national borders” (Dryness & Sepúlveda, 2020, p. 4). For some time, scholars have attended to the transnational experiences of youth migrating from Mexico and the United States throughout their K-16 schooling experiences (Victor, Hamann, Gandara). More recently, scholars like Lauren Heidbrink have examined the transnational experiences of Guatemalan migrant youth and the long legacy of migration on Guatemalan families. But we know little of how the transnational experiences of youth inform the futures they are imagining for themselves and their families. Drawing from a year-long ethnographic study with 75 newcomer youth attending a comprehensive high school in South Los Angeles, this paper focuses on answering the question, how do newcomer youth, as part of already-existing or newly formed transnational families, envision their futures? Utilizing transborder frameworks (Dryness & Sepúlveda, 2020) allows for an analysis that attends to newcomer youth’s transnational experiences and moving past making sense of their experiences through a nation-state lens. The paper will shed light on how newcomer youth adjust their postsecondary goals given their recent migration to the United States and their role as members of transnational families. The paper ends by inviting educators to reimagine school practices so that newcomer youth have greater opportunities to be college and career ready. Presenter: Sophia Ángeles (Pennsylvania State University)

Kematz'ib'-tejiendo letras: A Journey to Mayan Language Preservation and technology: The United Nations General Assembly has designated the years 2022-2032 as the International Decade of Indigenous Languages in response to the lessons learned during the International Year of Indigenous Languages in 2019. This Decade aims to draw attention to the critical loss of indigenous languages and the urgent need to preserve, revitalize, and promote them. This paper explores how a more comprehensive understanding of indigenous language preservation, education, and technologies can lead to a thoughtful approach to implementing indigenous languages through the arts, and how this contributes to remedial and ongoing measures towards language preservation. Specifically, the paper engages transnational frameworks to situate U.S. public schools in the international movement for indigenous language revitalization. This paper comes out of a larger project focused on the aesthetic use of spoken and written poetry in Quiche', Spanish, and English, as well as innovative technologies as tools for social justice to use, revitalize, and transmit indigenous languages. Working with Wakefield Community School, and Fremont Dual-Language Kindergarten the project aims to create curriculum resources for Nebraska teachers who have Mayan students in their classrooms. Presenter: Hector Palala

Feminist Pedagogies: Care, Emotional Landscapes, and Critique

8:00 AM - 9:45 AM TMCC - 713 A
Oral Presentation Session

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Lærke Cecilie Anbert (Aarhus University, Danish School of Education)

PRESENTER:

Lærke Cecilie Anbert (Aarhus University, Danish School of Education), Katherine Cook, Chandreyee Goswami, Pilapa Carroll (SUNY, Brockport, Department of Anthropology)

DESCRIPTION:

Feminist pedagogies are critical sites of knowledge production and praxes underexplored for anthropological inquiry. This panel explores varied forms of feminist pedagogies about emotional and care landscapes. Panelists discuss various topics such as student activism, digital activism, care tactics and

technoscience, and refugee life and care-work. These papers expand our imagination about emotional knowledge production and care practices across different spheres of labor and survival.

Careful Critique – An Ethnographic Exploration of Students' Wishes for a Caring and Critical University: Inspired by global student movements, students in the US rally to question traditions of teaching and knowledge at their universities (Rosa & Bonilla 2017). The students demand attention to be directed to practices of knowledge production by challenging norms currently in place, particularly dominant patriarchal and colonial structures (Fricker 2007). Student activists at UC Berkeley are particularly focused on creating spaces of belonging for all students, through negotiations with staff and faculty over reshaping curricula, denaming buildings and questioning hierarchies. They insist on virtues such as active listening and collective healing. Rather than (only) participating in large demonstrations, they write reports and emails and meet in small groups with management to get their wishes across. Student demands of this kind is often understood as confrontational tactics to undermine the institution of the university. Contrary to this approach, I suggest that student demands at UC Berkeley can be better understood through the analytical lens of 'care'. Within anthropology, there is a growing literature on the concept of care. Though it has grown out of the intersections of scholarship on gender, work, ethnicity, affect and gerontology (Drotbohm and Alber 2015), the term is now also central to studies on climate, social justice and not least, education (Krøijer 2019; Lien 2022; Lynch, Kalaitzake, and Crean 2021). Inspired by these authors, and in particular Keri Fazer (2019) and Maria Puig de la Bellacasa (2012), I approach the students' demands as a form of critical care for the university and for themselves, while staying attentive to the fact that care is not an innocent endeavor (cf. Lautrup 2022; Martin, Myers, and Viseu 2015; Murphy 2015). Building on 5 months of ethnographic fieldwork, this presentation homes in on the student experiences at UC Berkeley. I show that unlike previous student activism advocating for freedom of speech, or minority rights, the student groups at UC Berkeley that I have followed demand care as a vital value in the university. When students point out belonging as a key term to work with, they are also emphasizing that students thrive in spaces where they 'fit', where they are not perceived as 'matter out of place' (Douglas 2003) or as 'space invaders' (Puwar 2004). Furthermore, they are demanding that students thrive and feel safe, and they are not satisfied with merely being admitted to the

institution or gaining a degree. This changes the task of the university. I argue that by demanding that the university cares for its students, students also show care for the university. This care is given from students when they engage in critical and thoughtful negotiations over what role universities and education should play in society, and when they engage in student-led courses, that is not only a way for them to influence curriculum and classroom spaces, but also a free labor provided for the university. Presenter: Lærke Cecilie Anbert (Aarhus University, Danish School of Education)

Critical emotion in the digital archaeology toolkit: Although frequently critiqued as the antithesis of systematic science, this paper situates the value and contributions of emotionally-engaged methodologies and theory in queer and feminist research. This paper will specifically center the relevance of rage in digital anthropology, at the intersections of community-driven projects and creative communication. Case studies in the evolution of digital archaeology, framed within anthropology more broadly, will trace the relationship between experiences of oppression and exclusion, the emotions of rage, joy and fear, and the emergence of inclusive, accessible, and collaborative approaches. Challenging traditional notions of irrational emotions (often leveled at women, queer folk, and BIPOC scholars), it will be argued that critical refusal, activist-driven research, and creative or artistic methodologies are the cornerstones of rigorous, thoughtful and ethical approaches. It will also counterbalance the value of critical emotion with the dangers of burnout, abuse and toxicity. Presenter: Katherine Cook

What university friends have got to do with post-university life? An ethnographic study of women students navigating aspirations and social mobility in the university.: This paper looks at the transitions of women students from pre-university to post-university life in Northeast India. Based on my doctoral fieldwork at Gauhati University, Assam, I argue that these transitions are motivated by the aspirations of these young women to be financially independent irrespective of their socio-economic backgrounds. In this regard, friendships become central in shaping aspirations and practices of social mobility for these post-graduate women students. The inroads of globalisation in India's Northeast have put young people living in the region in two parallel processes. On the one hand, their lifestyles are changing, and their consumption practices, such as choices regarding food, use of gadgets and social media, and clothes, are becoming increasingly aligned with global mass consumption. On the other hand, their aspirations are rooted in stability, security, and

permanency, which they seek to acquire through public sector jobs. As a growing 'borderland city', Guwahati appeals to these women from different ethnicities and localities within the region to explore ways of becoming financially independent and ameliorating their social status. Based on conversations with whom they consider 'friends' in the university, aspiring for government jobs becomes a widely desired way through which they perform middle-classness and seek social mobility. However, those whose aspirations of post-university life deviate from this dominant aspiration seemingly feel lonely due to a lack of understanding from friends. In this context, this paper argues that while friends become central in exploring and learning new consumption practices and lifestyles brought by capitalist ventures in the region, they tend to reinforce the desirability of a 'stable' job providing 'regular' income. For women students, this desirability of a stable job is not only related to notions of social mobility but also iterating themselves as a 'self-reliant' woman, a common aspiration shared by women students. Friendships on campus are informed by this aspiration of women students to be financially independent. Thus, women students form and negotiate their same-gender and cross-gender friendships, even while aspiring for a career other than the commonly desired career routes or lack of firmness with future goals, through their broadly shared aspiration to be economically independent in post-university life. Presenter: Chandreyee Goswami

'I protect them. I'm exhausted.': COVID-19, Care-work and Refugee Well-being: For racial and ethnic populations in the U.S., COVID-19 exacerbated pre-existing structural vulnerabilities along syndemic fault-lines (Karpman et al., 2020; Poteat et al., 2020). The CDC (2020) acknowledges that refugees may be at a greater risk for getting COVID-19 due to their living arrangements, work conditions, limited access to healthcare and underlying medical conditions. Before the pandemic, persons of refugee origins in the U.S., referred to as 'New Americans', generally faced social isolation and economic precarity due to their limited English-language skills, employment in low-wage shift-based jobs and nascent social ties. The economic downturn, state lock-down of Spring 2020 and subsequent periods of sickness and quarantine during the first and second waves of the pandemic posed dramatic and enduring challenges for New American families and their primary caregivers – namely, mothers and daughters. The social science literature acknowledges the gendered nature of carework where women bear a disproportionate burden, and during the

pandemic, this gender disparity increased (Borosso and Horowitz, 2021; Stefanovic et al., 2023; Zivot et al., 2022). For New Americans, whose risk for mental health issues is widely acknowledged, the pandemic increased the stresses and risk of depression for mothers (Al Hirani & Wagner, 2022; Gautham et al., 2021). Community-based ethnographic research conducted from 2021-2022 with the New American-clients of a nonprofit refugee-center in a western New York explores how the pandemic affected the well-being of families and co-ethnic communities. Well-being is examined within the context of affective familial and community relations, in terms of the nature of people's care-needs, their conditions of paid and unpaid work, and the day-to-day scope of their care-giving and care-receiving. How were caregivers in particular affected by changes in their daily lives, in their economic stability and their mobility and access to services? Who did caregivers turn to for support when they experienced health problems or major lifecourse events like the birth of a child or the death of a partner? This case-study highlights the areas where New Americans showed resilience and areas where they could have benefited from additional non-familial supports. As the pandemic shapes our 'new normal', this research provides a refugee-centric contribution to discussions on work-life balance, affective inequalities and the family, as factors which can contribute to the social determinants of mental health. In addition, this research reveals refugee-specific insights to how New American families may respond to the current and inevitable future public health crises, aiding service providers and policy-makers wishing to address this group's structural vulnerabilities. Presenter: Pilapa Carroll (SUNY, Brockport, Department of Anthropology)

Aaron Eldridge (University of Toronto, Department of

Anthropology), Ashwak Hauter (University of California, Berkeley, Department of Anthropology)

DISCUSSANT:

Candace Lukasik (Mississippi State University), Jean-Michel Landry (Carleton University, Department of Sociology & Anthropology)

DESCRIPTION:

The 2003 publication of Talal Asad's *Formations of the Secular: Christianity, Islam, Modernity* was a landmark in contemporary anthropology. An intervention into proliferating late modern debates over secularism, the book subjected triumphalist narratives to critical scrutiny while reworking their fundamental elements. It articulated unregarded questions, reframing the terms of secularist discourse with reference to the powers they harness and disable. And amid the multitude of contemporary secular/religious polemics, it worked 'back from our present to the contingencies that have come together to give us our certainties' (Formations, 16). A landmark is something one refers to in order to situate oneself. It is something one cites. But the emergence of a landmark is also an event that shifts the topography of the field. It makes different distinctions possible. Ten years after its publication, one commentator observed that 'we are still catching up with [its] implications.' The comment placed us in the future anterior: what will have been made possible by the text? Anthropologists and others across the disciplines of the humanities and social sciences have in the last two decades contended with its arguments and method. The book ranges widely, with chapters proposing an anthropology of secularism through its 'shadows', exploring the relationship of agency and pain, considering the overdetermination of cruelty and torture, scrutinizing the redemptive mandate of human rights discourse, tracing the political implications of minoritizing Muslims in contemporary Europe, analyzing the hegemonic formation of secularism, nation-state, and religion, and examining the changing grammar of law and ethics in colonial Egypt. This panel at the 2023 AAA meeting takes the 20-year anniversary of the publication of *Formations of the Secular* as an occasion to revisit these chapters: not to offer an account of their reception or to contextualize their arguments but to reread them in view of our own disparate projects concerned with religion and politics today. Each participant will briefly present a specific reading of a single chapter before opening onto broader discussion of the topics and questions this text still urges us to consider.

DISCUSSANT:

Faye Ginsburg (New York University), Rayna Rapp (New York University)

DESCRIPTION:

Four decades ago, feminist anthropologists argued for bringing reproduction to the center of social theory by foregrounding the social and political forces that shape, and are shaped by, reproduction. Feminist scholars of diverse cultural phenomena and contexts responded robustly to this call, which resulted in influential theories, methods, and vocabularies that have fundamentally transformed anthropological understandings about major global forces animating our worlds. Feminist ethnographers of reproduction in this tradition have laid bare the centrality of reproductive politics to colonialism and capitalism, racism and religion, and beyond. Bringing feminist anthropologists of reproduction into an intergenerational and cross-cultural conversation is a crucial task for understanding the conditions that enabled these critical modes of inquiry and the transitions necessary for supporting future scholarship on the politics of reproduction. This in-person roundtable will feature foundational and junior feminist scholars in the field of reproductive politics to discuss changes and continuities in feminist ethnographic theories, methods, and foci. Panelists on

this roundtable bring expertise on a broad range of reproductive topics (e.g., abortion, assisted reproduction, contraception, obstetrics) examined within diverse settings (e.g., Israel, Mexico, United States, Turkey, transnational movements) that foreground distinct political, religious, economic, ethical, legal, and other social stakes. Drawing on our ethnographic and professional experiences, our intergenerational and cross-cultural dialogue will address the following questions: What conditions supported the emergence of a feminist anthropology of reproductive politics? How have feminist ethnographies of reproduction over the past four decades contributed to disciplinary understandings about culture, politics, and power? What critical perspectives remain missing within this tradition and are necessary for advancing the field? This roundtable will feature short responses from panelists to a series of questions in order to support open discussion and audience participation.

DISCUSSANT:

Helen Vallianatos (University of Alberta)

DESCRIPTION:

Interembodiment, defined 'as the sharing of embodied experiences across and among biological bodies' (Bunkley 2022), has the potential to shape new discussions around the sociality of health and disease experiences. While originally written about Senegalese mother-daughter dyads experiencing metabolic disorders, interembodiment can be expanded to

encompass new ways of thinking about how disease (or health) is shared or transmitted as well as deeply embodied ways of expressing empathy, care, and caregiving. This panel pulls together work on embodiment (biological and cultural) that emphasizes the porosity of care to show how anthropology can contribute to understandings of what the human body is and means in contemporary time. This panel draws together work from the rich bodies of literature on embodiment and intercorporeality (Csordas 2008, 2011; Husserl 1989; Merleau-Ponty 1962), local biologies (Lock 1993) and situated biologies (Niewöhner and Lock 2018) as well as notions such as para-communicability (Moran-Thomas 2019), and shared biologies (Wentzell 2019, 2021). Papers on Interembodiment Part 2 explore care within a gendered microbiome through infant formula; care of and with neurodivergent children in North America; the exploration of self and other in anexos along the US-Mexico borderlands; shared grief, uncertainty, and friendship among elderly women in Lisbon through *maldisposta*; process-oriented hope among spinal cord injury patients and their caregivers; and the experience of grief and loss among TBI survivors and their social networks. Making gendered care between porous and partible bodies: Co-author: Megan Tracy (James Madison University) This paper considers the possibilities of care within a gendered microbiome that entangles human and microbial bodies such that care for self and infant are entangled with care for microbes. This comes out of a paradigm shift in reimagining health as interembodied and entangled with microbial bodies that recognizes microbes as facilitating or mediating care, even while needing their own care practices. Here we trace several nodes of “making with” the gendered microbiome to examine the implications of venture capital’s interest in emergent microbial science and the productivity of these relations. We primarily focus on companies promising to leverage the dynamism of microbial intra-action to address long standing gendered health gaps and consider both the gap between promise and current technology and the consequences of their accomplishment. For example, companies promise “humanized formula” to not only replicate the nutritional function of breast milk but also its dynamism. If what makes breast milk more optimal than formula is the intra-action between breast, infant, and microbes, can extracted maternal microbes carry that care outside the breast to feed infant microbes when bodies do not meet? Such ventures attempt to leverage the porosity of the maternal-infant dyad while questions remain about the outcomes of such partibility. Looking toward their horizon of possibility illustrates how questions about the limits of a reimagined and intercorporeal humanness have been sidestepped within considerations of making new care under the premise of equity and empowerment. Presenter: Rebecca Howes-Mischel (James Madison University)

'He'd be buzzing with energy': embodied states and relational care in U.S. neurodivergent childhood: This paper draws on an ethnography of care for social-emotional differences in North American childhood to propose that the forms of care that parents of neurodivergent, or neuro-atypical, children provide entails deep imagining of another's state, and also forms of bodily and emotional connection that, in turn, generate partially shared feeling across bodies. Drawing on a maternal narration of deep engagement with, and attempts to understand and care for, her child's development, discomfort, and acute emotional distress prior to, during, and after pandemic shut-down of

ordinary life, I highlight how care acts enable shared embodiment across bodies, and, in turn, authentic insight into a child's embodied experience that shifts practice and ethics of care. In so doing, I focus on a section of the care narrative describing a perceptual shift from an individualized evaluation of a child's "sensory issues," a discourse and mode of understanding shaped by popularized neuroscience and therapeutic contexts, to a relational understanding of "anxiety" as a collaboratively engendered embodied emotional state that can be altered, felt, shared, and alleviated through non-verbal tactile communication. Presenter: Elsa Davidson

Mirroring Addiction: Disciplining the Drug Addict's Lived Body in Anexos: In the US-Mexico borderlands, drug addicts from both sides of the border are sent, often against their will, to residential rehabilitation centers (known as anexos) for "another opportunity at life." In these anexos, mutual aid is essential for the rehab center's daily workings but it also manifests as a therapeutic practice. Some of these rehab centers are established under material and precarious conditions, and they are directly influenced by 12-steps Anonymous Alcoholics (AA) and Narcotics Anonymous (NA) self-help programs. This notion of mutual aid, *ayuda de adicto a adicto*, is also talked about in terms of occupational therapy. *Servicios*, or service roles, within these institutions are therapeutic. This presentation explores the embodied semiotic process of self and other during drug recovery (Csordas 2011), focusing on how *servicios* within anexos function as a therapeutic space and practice. Drawing from 15 months of field research conducted in three anexos in Tijuana, Mexico, I analyze the idea and practice of *espejear* (mirroring). Once the lived body has been "disciplined" (Foucault 1977; Csordas 2011), drug addicts identify with or mirror themselves with and in others, only to work on their embodied selves. Through identity and difference, drug users find space to reflect upon themselves and their moral life. How can intercorporeality allow us to understand the complex process of drug recovery in a mutual aid rehabilitation program? As the material body is coded as an addicted body and bridges mutual experiences, however, the body's interiority is always difficult to access. Presenter: Zaith Lopez (Stanford University)

"Maldisposta: Feeling Unwell in Pandemic Times": *Maldisposta*. Feeling unwell, a kind of general not-feeling-so-good, mostly associated with indigestion, fatigue, sometimes aches and other symptoms. Many of my elderly interlocutors complained of this affliction on

an almost daily basis at the Santo António Social Senior Center, one of my fieldsites in Lisbon, both a Catholic parochial day center and "night center" (a sort-of temporary recuperation or nursing home). Amélia, a resident of the Night Center since 2021, often rubbed her belly, frowned, and said under her breath, "estou maldisposta" – "I'm not feeling well." She would try to relieve this feeling by drinking sparkling water, sometimes crackers or digestive cookies. Other elderly residents and Day Center members would cite the same issue, though predominately women. Liliana, another resident whom Amélia despised, often would say the same thing, around the same timing throughout the day. Whether or not the Center's kitchen was involved, it seemed as if it was a communicable unwellness that permeated bodies of elderly women, sometimes seeming empathetic, sometimes not. In this paper, I will analyze this common phenomenon in my fieldsite through the lens of interembodiment produced through emotional, affective, and physical proximity. It would sometimes bond or increase bonds between women, appearing as a symptom of shared grief, uncertainty, and even friendship in the daily life of the Center. Because of its temporary care status, the Night Center was always changing – residents and illnesses came and went. Yet *maldisposta* always remained. This manifestation of interembodied uncertainty proliferated, even and perhaps especially, throughout the simultaneous Covid-19 pandemic at the Santo António Social Senior Center. I will show the situated context and depth of this generic affliction in my paper. Presenter: Veronica Sousa

The Interembodiment of Hope: Ontological Transformations in Paralysis Care and Rehabilitation: While disability literature has largely moved away from rehabilitation settings, critiquing its philosophy as reifying normative ableism, "some communities are actually yearning for not only care but treatment and cure" (Bailey and Izetta Mobley 2019, 28). Paralysis patients with spinal cord injury (SCI) are especially surrounded by constant messaging centered on hopes of a cure, with activity-based therapy (a relatively new therapy modality) being situated as providing maximum hope for patients and clients. This paper draws on 10 months of ethnographic research with SCI patients, their caregivers, and rehabilitation professionals, finding that many tensions between SCI patients and their recovery processes emerge from an object-oriented ontology of hope (where hope is defined in terms of optimistic and pessimistic recovery outcomes), and that patient well-being seems to be highly modified by a transition to a process-oriented ontology of hope (where hope is

defined in terms of an open, undetermined future). Drawing on case studies, this paper illustrates situations of interembodiment where rehabilitation professionals and caregivers provide spatial, temporal, and financial opportunities to assist SCI patients and clients in their affective transitions from an object- to a process-oriented ontology of hope, which confers some benefits to well-being and life satisfaction. Rather than seeing SCI as an individual state, this work suggests a method for understanding how immanent (and social) affects can create a web of sentiments, standards, and care practices that transfer both disease and healing across bodies. Presenter: William Lucas (California State University Dominguez Hills, Department of Anthropology)

Presence in absence: grief, loss, and the continuing shared embodiment of TBI: Loss and grief are inescapable elements human life. But what does grief mean for those who share in the embodiment of chronic injuries and disabilities? To explore this question, I draw on my research on moderate-severe traumatic brain injury (TBI), a common and frequently fatal injury. TBIs result in a broad and shifting set of impairments glossed under the same name through a process Disability Studies terms “complex embodiment” (Seibers 2017, Duncan 2022) and rehabilitative literature speaks of as “happening to the whole family” (Lorenz 2010). In keeping with foundational phenomenological principles (e.g. Merleau-Ponty 1962), TBIs inaugurate entirely new social relationships and interactions for survivors and those closest to them, giving rise to disability of TBI across each of their lives. In this paper, I present practical and theoretical implications of grief and loss for TBI survivors, as their parents, friends, and other significant others die or otherwise depart from their lives. Drawing on ethnographic fieldwork with survivors and my own story as a severe TBI survivor whose partner recently passed away, I show how loss renders already complex shared embodiments even more so, transitioning to a new state but not removing interembodiment (Bunkley 2022) altogether. Just as contemporary literature on grief suggests (e.g. Silverman 2021), these relationships and their bodily consequences continue outside of corporeal presence. This perspective has clear overlaps with other disabilities and chronic illnesses, as well as biomedical rehabilitation and social policies for those with similar conditions. DISCUSSANT:

Joyce Dalsheim (University of North Carolina, Charlotte)

DESCRIPTION:

This panel brings together new ethnographies that investigate how land features in the social organisation and imaginaries of conflict. The study of conflicts around land use, possession, and dispossession, has been a locus classicus of socio-cultural anthropology interested in 'transitions' to capitalism. Ethnographers exploring rural and urban frontiers of capitalism have documented the violence necessary to 'separate land from man' (as Karl Polanyi put it), and turn it into an object of exclusive ownership, exchange, or speculation. The ethnographic record is rich in description and analysis of material interests, ways of understanding and being in the world, and forms of social order that are brought into conflict by land relations across the world. Building upon this scholarship, this panel shifts attention from conflicts around land transactions, to the role of land in the systems of power, transactions, extraction, and ideological contestation that underpin (post-)conflict dynamics. In doing so, it brings ethnographies taking a long-term, cross-scale perspective on land and conflict into comparative dialogue around two themes. The first theme is that of political and moral economy of land in the shadow of conflict: from disputes between families, factions, or political blocs that centre on land; to agrarian class struggles intensified by climate change; land governance

in context marked by wars, imperialism, and illegality; to consequences of land warfare in Europe. For instance, how is land used to launder proceeds of transnational drug economies; what happens to agricultural land littered with military waste; and how do emissaries of occupying powers assert their rule and extract value by controlling land transactions in occupied territories?

The second theme is the role of land in imaginaries of conflicts, past, present, or future. How do memories of land dispossession reverberate through generations, and inform on-going conflicts? How do expectations of social change – e.g. the environmental, demographic, and economic fallout of climate change – structure present conflicts involving land? And what is the place of 'national soil' or territory as a symbol of collective identity in imaginaries of war & peace?

Taking a broad interpretation of conflict, this panel reflects on the social life of land - as symbol, territory, environment, commodity, a thing of value - in networks of political, economic, and ideological power spawned or transformed by disputes, struggles, and wars.

A suspect inheritance: property in the shadows of dispossession and success: For those who grew up and became middle class in post-1945 Philippines, land was, and continues to be, a morally-suspect inheritance. Associated with state-sanctioned dispossession during the Spanish and American colonial regimes, and the excesses of the propertied elite, land was not the ideal bequest in the post-war years. In its place, new forms of inheritance proliferated: schooling, occupational lineages, religious devotions, among others. Decades later, however, many of the post-1945 middle classes have become property owners themselves. In later life, they confront the tensions among land's ability to materialise intergenerational success, its increased economic value (itself due to the expansion of the middle classes, including through transnational labour migration), and new and ongoing forms of dispossession. They confront, too, the heightened possibility of family conflicts, particularly among siblings. Disputes regarding property build on animosities that have accumulated over time as a consequence of successful upward mobility. Such disputes likewise exert pressure on their self-understanding as virtuous exemplars of success. Focussing on an extended Filipino family, I consider how land's embeddedness in colonial and postcolonial processes of dispossession and class formation shapes it as a vector of connection and disconnection among kin – one that allows these larger events to be absorbed

into personal biographies and family histories.
Presenter: Resto Cruz (University of Edinburgh)

The ELN Guerrilla Movement: Between Moral Economies of Subsistence, Cooperation, and Co-Dependence: The National Liberation Army (ELN) is the most prominent Marxist-Leninist guerrilla movement in Colombia. One of the regions where this movement has the most significant influence is the Pacific basin, a region rich in natural resources and inhabited predominantly by Black and indigenous ethnic groups. In this space, the guerrillas of the Western War Front move, for the most, young people originally from local communities. Based on extensive ethnographic fieldwork, my presentation explains the functioning of this war front, the supporting ideologies and practices behind it, and the reasons why young Afro-descendent and indigenous people become a part of it. Above all, my research explores the complex relationships that bind the guerrilla movement and local inhabitants. Intersectionality is the analytical framework of my work since, in the Colombian Pacific, considering race, class, gender, and relationships with the environment allows for an in-depth analysis of this reality on the margins of the state. My research shows how a clear line of demarcation cannot draw the boundaries between ELN and ethnic communities and how economic relationships, kinship, or affection, prevail over ideological commitments or adherence to armed struggle. Finally, should a peace process with the ELN be reopened, my study indicates how lasting peace in Colombia can only be achieved through the active and leading participation of the groups that inhabit the territories affected by the internal armed conflict – the only ones who have a deep knowledge of these spaces.
Presenter: Attilio Bernasconi (Yale University, Department of Anthropology)

The land-conflict nexus: a stratified political economy of land grabs in war-time Ukraine: The separatist war in Donbas (2014-2022) set off complex political dynamics that made war veterans central to agrarian elites' strategies of illicit acquisition of land in Ukraine. Until 2021, the Ukrainian state prohibited sales of agricultural land, but an informal economy emerged around illegal purchases of state-allocated land and hostile takeovers ('raiding') of leased land. Access to patronage and violent force were crucial for turning a profit in this economy. Drawing on court records, interviews, and open-source data, this paper offers a mid-level analysis of the effect of the war in Donbas on illicit operations with land in this economy. In particular, I focus on the role of war veterans, whose operations were legitimated

by their status as defenders of Ukrainian soil in Donbas, as proxies and violent enforcers of land transactions. As pro-government combatants demobilized after the Minsk II peace accords in 2015, some joined security companies or created veteran fraternities that acted as 'violent entrepreneurs' selling force and protection to farmers. At the same time, state policies made veterans eligible for free agricultural or construction land; agrarian and real estate elites arranged for groups of veterans to obtain adjacent lots that were later consolidated by one owner. I analyze disputes surrounding such land transfers to argue that this land-conflict nexus emerged only at the lower tier of the Ukrainian land economy. War veterans' involvement in corruption and violence characterized strategies of small and medium farmers who were threatened by the rapid expansion of large agricultural holding companies that could more effectively rely on deals with central and regional state, rather than local land schemes and violent entrepreneurs. Presenter: Taras Fedirko (University of Glasgow)

Remaining war: material traces and temporal dimensions of violence in northwest Bosnia and Herzegovina: Thirty years after the war in Bosnia and Herzegovina, its effects remain painfully present in the Bosnian landscape. Empty fields, abandoned houses, orchards, and entire villages are tangible remainders of the war. Many who fled never returned. Yet despite their absence they remain present. These "never-returnees" still own the land that now serves as an opportunity for occasional visits and negotiations with those who remained and are using it. For those who have remained, life in postwar Bosnia is marked by a high degree of precarity and uncertainty directly stemming from the war and its aftermath. This, in turn, has resulted in many people leaving their homes and the land in search of a more promising future elsewhere, leading to another layer of land abandonment. In this paper, I will examine the enduring effects of war in "peacetime". I will focus on the landscape, and in particular on the material remainders of the past conflicts and violence and their persistent presence in the present. By observing the vacant lands in the Bosnian north-western borderlands, I will engage with the challenges of navigating and determining the post-war period and non-linear temporal dimensions that shape the region's landscape. Finally, by exploring the post war condition and what may come after it, I interrogate how the extensive stretch of abandoned land shows the presence or absence of a past life in the wake of war. Presenter: Ivana Ljuština

Land conflicts in the shadow of the long 'drug war' in California: In the wake of cannabis legalization, land has become a key vehicle for the integration of the plant into capitalist markets. A dizzying, bureaucratic maze of environmental, spatial, and aesthetic conditions confronts those who attempt to 'comply,' a maze that buries latent struggles over who, how, and where cannabis can be grown and how it will transition to legal property regimes. For those who do not comply, cannabis' legal status activates new capacities of the state to surveil and police this civil activity on private landed property. Finally, the power to 'ban' cannabis as a land use has led to cascading effects that reinscribe the drug war's conflictual dynamics in an ostensibly 'legal' jurisdiction. This paper explores this triple movement: from prohibition to bans, enforcement to surveillance, and overt struggle to bureaucratic sublimation. The results suggest the multiple ways land is harnessed to enact 'legalization,' propel enduring power relations, and facilitate both dispossession and repossession in the emerging political economy of a shifting 'drug war.' Presenter: Michael Polson (University of California, Berkeley)

Land, conflict, and political economy as analytical practice in Nepal: This paper follows converging and diverging strands of the intellectual history of feudalism in Nepal, in order to examine intersecting, both revolutionary and counterrevolutionary forms of political economy analysis that enroll land in theories of history and (counter)revolutionary action. The archival and ethnographic material it considers span analyses developed by American consultants supporting a "land to the tiller" land reform program in the early 1960s, songs and poetry written by rural communist activists in the 1970s/80s, analysis by Maoist leaders based on which they launched the 1996-2006 "people's war" and accounts by people in rural southern Nepal of changes in land and labor relations resulting both from the conflict and from migration and remittances. Through this fragmentary history, which is far from comprehensive, this paper thinks about the dynamics through which political economy thought as a form of analytical practice has variously gained and lost resonance and traction. Presenter: Jacob Rinck (George Washington University, Department of Anthropology)

The will to settle: Some economic and ecological anthropologists have shown renewed interest in land tenure aided, in part, by what others have termed the "global land grab" of the late 2000s. More recent work in critical agrarian studies encourages us to go "beyond the global land grab" to think about how farmers

struggle with the restructuring of the agricultural industry. In this ethnographic case study, I suggest going beyond by tracking what happens in the political and ethical dimensions of social life once land is grabbed. While much ethnographic attention has been paid to dispossession, there have been few opportunities to track what happens if and when a dispossessed community acquires (or “grabs”) its own land. The North Indian village of Nagda was settled in 1973. The buyers were a nomadic tribal community whose goat herding circuit had become limited to a claustrophobic region slated for urban development. The sellers were a wealthy upper-caste community who wished to move their village across their fields and into a better irrigated area. As a low-caste tribal community who was once criminalized by the British and forced away from traditional grazing lands, these families were hoping for a path out of the difficulties of pastoral life. However, in this paper, I show that close connections between citizenship and land cast people into new moral and political economies that were previously irrelevant. Focusing on the idea of willfulness, I show how nomadism was one categorized by the British as a willful defiance of authority. However, despite being settled today, the Indian state’s relationship to land ensures that the Nagda community cannot evade its defiant reputation, represented now in a new vocabulary. The implications are that, in addition to dispossession, the possession of land also holds under-explored power to alter political subjectivities in unanticipated ways. Migration and Survival Strategies in Everyday Life in East Asia

8:00 AM - 9:45 AM TMCC - 203 D

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Racquel Lee (University of Washington, Department of Anthropology)

PRESENTER:

Rinko Arai (Osaka University), Haeun Shin (University of Hawaii, Manoa, Department of Anthropology), Dongkun Lyu, Racquel Lee (University of Washington, Department of Anthropology), Hanna Pickwell (University of Chicago, Department of Anthropology)

DESCRIPTION:

This panel explores complex negotiations of identities at margins and intersections in East Asia. Chinese students in Japan negotiate their liminal status while temporarily escaping workplace, educational and familial pressures from home. North Korean migrants in South Korea working as YouTube creators craft a new South Korean cultural and national identity for themselves, while also hoping to be heard in North Korea. Migrant workers from rural Anhui Province in China and working as art exhibition workers in Shanghai live in a 'state of suspension' with "one foot in the metropolis and the other in the countryside." But they also develop new subjectivities as they work in the urban art world. Joint venture universities in China create another type of liminality. They bring together 'aesthetics, traditions, bodies, and pedagogies from multiple national contexts,' and decisions about their spatial arrangements impact campus experiences. Finally, senior citizens in Beijing save old objects considered outmoded, from tools to old items of décor, and they display these in a community center, which in turn helps 'flavor' their modes of sociality, affect and memories.

“We Gotta Run”: How Chinese Students in Japan Navigate Pressures in Life: This paper explores how Chinese young adults in Japan navigate state controls and social pressures while trying to find 'a way to live' amidst the geographical and educational transitions they undergo. China has seen significant changes in many aspects, including education where anthropologists investigated the educational desire of Chinese people, as demonstrated in competitive entrance exams and the inflation of educational credentials. The state's response to COVID-19 has also transformed people's lifestyles. This paper shows how Chinese students in Japan negotiate their relationships with states, society, and families while pursuing a way to survive a highly competitive society and uncertainties in a state of liminality. I conducted focus groups with 26 Chinese postgraduate students at a university in Western Japan, followed by extended individual interviews using life history approach. The participants came from various regions in China, with some from large cities and others from rural villages or minority autonomous areas, but all ended up studying at the same university in Japan. During the interviews, our conversations kept drifting towards topics of hardship in various aspects of their lives, including competitions in education and the workplace, parents demanding marriage and childbearing, gender disparities, and state controls over mobility such as passport and visa restrictions during the COVID-19 pandemic and under

international political tensions, as well as the household registration. Participants also mentioned criticism from patriotic friends and family members for leaving the country. They described these as 'pressures for survival (生存压力).' They said, 'Competitions in China are too severe. Pressures in life are overwhelming. We gotta 'run' with 'run' (润) being Chinese internet slang to describe escaping from something, such as stressful situations or the state's strict countermeasures against COVID-19. Anthropologists have found roots of the educational desire in culture, history, social structures, and state ideologies. It has also been suggested that individual developments are paralleled with contributions to national development under the ideology of developmentalism. I argue that transnational young Chinese regard studying abroad as a means to find 'a way to live' in the increasingly competitive and pressuring society while they are entangled with social ties and state controls. These students move back and forth between China and Japan. Geographical distance allows them to temporarily escape from social and family pressures and strive for an independent self. However, their social and family ties, as well as the effects of both home and host states, persist, as many anticipate eventually returning to China. Their pathway to educational achievements is a rite of passage to become citizens of the globalized and marketized world. In their liminal state of educational transition, they seek 'a way out,' a life that allows them to survive in a society imposing competition and self-development. The participants demonstrate their state of transition through temporary escape and the prospect of eventual return, trying to direct their paths of the present and the future. Overall, this paper sheds light on the complex experiences of Chinese students studying abroad and their navigation under various pressures in life while seeking 'a way to live.' Presenter: Rinko Arai (Osaka University)

Cries for North and South Korea: Negotiating National Identity and Social Belonging of North Korean Migrant YouTube Creators: This paper shows how and in what way North Korean migrants living in South Korea have turned unpredictable transitions into a productive opportunity to express and negotiate their national identities as belonging to and connected with both South and North Korea. My research focuses on North Korean migrant (T'albuk) YouTubers who operate their channels in South Korea. Since 2020, the number of T'albuk YouTube channels has increased drastically. Many North Korean migrants have been engaged with and pursued professions as YouTube content creators,

especially during and after the height of the pandemic when they experienced an increased rate of unemployment and were challenged to sustain themselves as emergent migrant citizens. For these North Korean migrants, the YouTube platform has been a liminal space where they could express their national and cultural identity as living in South Korea while at the same time negotiating their identity through interacting and responding to South Korean viewers who leave comments on their YouTube videos. In this study, I pay particular attention to how T'albuk YouTubers strategically utilize nationalistic narratives to make their online productions more relatable to South Korean viewers. On the one hand, by producing kukppong (Koreaphilia) videos that praise South Korea with a patriotic attitude, as many South Korean nationalists do, T'albuk YouTubers highlight that they hold the same political stance as that of their South Korean viewers. While doing so, the T'albuk YouTubers also intend for their videos to be heard and viewed by North Koreans with the hope that their message would reach the people and places in the North even without knowing that the North Korean government and the people would watch their videos. T'albuk YouTubers identify themselves as a North Korean vanguard who managed to escape from the North and thus have a mission to help fellow North Koreans see the political hardships and social deprivation they experience in the North. Based on my ethnographic research conducted in South Korea between May 2021 and April 2022, I demonstrate how North Korean migrants have accessed and deployed their multiple national identities to produce their videos and to make them accessible and heard by audiences in both South and North Korea. As they do, they not only express who they are but also assert their social stance and belonging as new politically transiting members of South Korea. Presenter: Haeun Shin (University of Hawaii, Manoa, Department of Anthropology)

From Anhui's Villages to Shanghai Art Museums: Migrant Workers Involved in Setting Up Exhibitions, Shanghai Exhibitions, and Contemporary Art.: Hovering on the border between urban and rural areas, art exhibition workers, like most of China's trans-provincial migrant workers, have entered the city from the countryside, and crossed from the primary industry to another industry. They started from Anhui Province to search for job opportunities, and happened to step into the art industry because of the large demand for labor generated by the rapidly developing art industry in Shanghai. They enter the art field as a low-end labor force, and experience the triple transitions of skills, cognition and identity in the process of art training,

interaction with artists, arranging exhibitions, and completing installation art projects. Their filling of vacancies in the art industry has also changed the structure of Shanghai's exhibition industry and extended the possibility of artists' creation. However, their double marginal position keeps them in a state of suspension at all times. On the one hand, as migrant workers, they 'have one foot in the metropolis and the other in the countryside' ('一只脚在城市, 一只脚在乡村'). Urban-rural mobility, inter-industry mobility and inter-provincial mobility are the norm in their lives. As intruders in the art field, they are a neglected part, a group that lacks 'subjectivity' in the art field. However, the life and production of art produced irreversible changes for some of them. At the same time, they have transformed into links between the art world and migrant workers, Shanghai urban exhibitions and developing rural laborers, creating an 'agency' relationship that reshapes the face of contemporary art. Presenter: Dongkun Lyu

Innovation Power: Designing Global Chinese Higher Education: What can the architectural design of new university construction tell us of the inherited presumptions of authority in the production of knowledge? While some campus planners choose nostalgic reiterations of stoic neoclassical and collegiate gothic motifs that evoke the historical reservoirs of European empires, others elect for the sleek indeterminate minimalism of global corporate office parks with multi-use, modular configurations of conference rooms, rendering classrooms indistinguishable from contemporary global capitalist workspaces. As collages of aesthetics, traditions, bodies, and pedagogies from multiple national contexts, joint venture universities (JVs) emerge as prototypes of broader transitions in the industrial production of higher education, and offer material spaces of experimentation in negotiating the blurring of borders, boundaries, and belongings of the current era fixated on continual innovation. Based on 18 months of ethnographic research at three joint venture universities in mainland China, this paper examines the aspirations and assumptions for academic innovation through the comparison of different strategies in designing each campus-expanding entrepreneurial empires, creating agile startup cultures, and borrowing floating signifiers of the natural environment detached from specificities of place or tradition. By tracking how the spatial themes of each university reciprocally shape social organization and experiences of campus members, this research combines anthropological methods with architectural

attention to document a history of the present in transnational education. Presenter: Racquel Lee (University of Washington, Department of Anthropology)

The Flavor of Human Feeling: Affectivities of Outmoded Everyday Things in Beijing: Old tools, toys, décor, and electronics no longer have a use or fit the value or aesthetic regimes of today's Beijing, and yet my interlocutors – senior citizens in Beijing's old city – are not planning to dispose of them. These outmoded everyday things, between possession and junk, accumulate in physically liminal spaces around their people's homes – in corners, stairwells, and courtyards and evoke ambiguous feelings. Aging residents of one Beijing neighborhood have donated many such objects to a collection in a community center, which has wide appeal beyond the neighborhood is essential to the center's warm atmosphere and shared sense of belonging. This ethnographic paper explores the ways in which the materiality of this place and its collection of everyday objects shape the sociality that unfolds there, and the role these old things play in the production of a particular atmosphere. It argues that material things and spaces act as durable loci, anchors for the for the accretion of experience and affect that can be activated through memory and imagination and experienced as, in the words of my interlocutors, 'flavor.' Shaping these material and affective aspects of place are the ongoing dynamics of urban development and class, culturally and historically inflected notions of the efficaciousness of material things, and the politics of history and memory in contemporary Beijing. PRESENTER:

**Marie-Francoise Guedon ,Idoia Arana-Beobide
(University of Ottawa),Tatiana Frederickson**

DESCRIPTION:

This session explores the intersections and interactions between women and various aspects of shamanism, including ritual life, mytho-religious contexts, and practical functions, as seen through a matricultural lens. In other words, the presentations take as primary the cultural context of a given society as lived, constructed, and perceived by its women.

The body as a shamanic visionary bridge: The case of Ahtna divination practices : The Ahtna people who used to live from hunting and fishing in the Copper River valley in Alaska, share or used to share with the other Northern Athapaskan people a particular acquaintance with what ethnographers define as shamanic space, an expression that loosely translate what the Ahtna call “dream world” or dreamed side of things. In the same intellectual shortcut that allowed outsiders to speak of “animal spirits” instead of “the animal of which you dream”, the “dream world” is often interpreted as the other side of the world of the living. The resulting popular understanding of the transition between one side and the other, relies on a false opposition that is not sustainable in Athapaskan thought (though encouraged by Christian teachings and a generalized use of English). The other side, which encompasses animals, is in myth as in daily experience, a continuation of this side. Using testimonies collected by Frederica de Laguna and others between 1954 and 1966, we retrace the imbrications of the dream space and the domestic space that sustain human life. In these matrilineal societies, defined by strong matricultural systems that grant women minds of their own, freedom of movement, and intimate contacts with the environment, women stand in semi-permanent contact with powers emanating from the non-human world, a world where gender as such does not matter as much as the ability to communicate with others, which entails paradoxically a great deal of attention paid to one’s body as a bridge to other minds. Presenter: Marie-Francoise Guedon

The Challenge of the Serora in the Basque Country: Pierre de Lancre, a judge from Bordeaux, will be remembered as the man who terrorized Lapurdi (Iparralde - Northern Basque Country) and burned 70 people as witches in the summer of 1610. He found the independence of Basque women highly problematic, and particularly shocking to him was the figure of the Serora in the Church of Donibane Lohitzune (St. Jean de Luz). The Serora was an independent woman employed

by ecclesiastical authorities to manage Church services. She was the woman who “runs the church” and her power and influence were so important that she could even challenge the authority of priests. As an example, it was the Seroras of Zumaia (Gipuzkoa, Egoalde - Southern Basque Country) who made sure in 1594 that the male Order of the Trinitarians did not take over the old hospital and chapel that supported pilgrims in the Camino of Compostela. Spanish bishops that had jurisdiction over the Basque Country constantly challenged the traditional position of the Serora. Her role was critical for the Basque Church since she organized and even officiated traditional rituals for the community. Like the character of the ‘witch,’ the persona of the Serora was deeply altered and denigrated by ecclesiastical authorities. New research questions whether the Serora was a remnant of an older pagan religious ministry that continued in the Catholic Church in a diminished role. While research is evolving, there is no doubt that the Serora is a fascinating historical figure “defining boundaries between worlds.” Presenter: Idoia Arana-Beobide (University of Ottawa)

Naming Practices: The role of women in strengthening ancestral ties in Arctic shamanic cultures.: There is no culture known to anthropologists or ethnographers that does not use personal names for their people. There are many unique naming practices in the world. Some cultures pay more attention to naming practices than others and those practices also reflect their spirituality and unique belief systems. And for some cultures naming children becomes a sacred act, connecting them with their ancestors and the world of spirits. The ethnographic approach to understanding the practices of naming children in Inuvialuit and Gwich’in cultures of the Canadian Arctic region introduces us to the traditional feminine powers that keep the culture very strong. These naming practices provide an insight into the religious identities and spiritual practices of the people within these cultures and help us better understand the syncretism in the North by connecting traditional belief systems, Christian spirituality, and modern multiculturalism. The role of women in naming traditions in the north allows us to learn about the ritual and shamanic practices, some of which take a new shape in the light of modern Canadian society. Through the lenses of observations and personal experience, as my daughter is half Inuvialuit, I will introduce my audience to the naming practices connected with reincarnation of the ancestors, and show how the women strengthen ancestral bonds in this unique way. Presenter: Tatiana Frederickson

On the Seductiveness of Seemingly Unimaginative Futures: Exploring Transitions to Net Zero

8:00 AM - 9:45 AM **Virtual - Room 3**

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Chima Michael Anyadike-Danes (Durham University, Department of Anthropology)

CHAIR:

Simone Abram

PRESENTER:

Sean Field (University of St Andrews), Chima Michael Anyadike-Danes (Durham University, Department of Anthropology), Nathalie Ortar, Simone Abram

DISCUSSANT:

Cymene Howe (Rice University)

DESCRIPTION:

Across the globe there is an increasing awareness amongst national governments and various publics of the pace at which anthropogenic climate change is affecting the biosphere. A variety of countries and companies are championing technofixes which they imagine as solutions to the complex problem of transitioning to Net Zero. These include the replacement of ICE vehicles with ones powered by electricity, the capturing of renewable energy sources like sunlight through photo-voltaic cells, and the financialization of carbon. The most fiercely championed of these technofixes are those that seem to require minimal changes to the social practices that have produced climate change. The participants in this roundtable explore the role that imagination has played in creating and implementing such seemingly homogenized and universalized technological solutions for transitioning to Net Zero. What kinds of imagination, they ask, are involved in the creation of similitude and the perpetuation of growth? The anthropological study of the entanglement of imagination and technology is far from novel. Leading anthropologists of the mid-twentieth century, like Hortense Powdermaker ('Hollywood: The Dream Factory'), and William Lloyd Warner ('Structure of American Life'), took imagination as an object of examination as they sought to explain the post-second world war rise of consumerism in the United States. Since the end of the twentieth century,

the anthropological focus on imagination has undergone a resurgence with considerable attention directed at the emergence of simulation as a mode of governance, vital to the imagining and management of undesirable futures, like the release of nuclear waste, pandemics, or terrorist attacks. For the participants in this session, who have conducted fieldwork on efforts to decarbonise and transition to Net Zero in nations as varied as the United States, India, Wales, and France, the role of imagination in projecting solutions to the issue of anthropogenic climate change is readily apparent. Our roundtable discusses the specific qualities of the imagination that are deployed when imagining techno-fixed futures and the perpetuation of unlimited growth. We bring attention to the unimaginative as a social process playing a significant role in the formulation and implementation of responses to anthropogenic climate change. Ultimately, we ask, is there something about Net Zero itself as a response to anthropogenic climate change that engenders such unimaginative responses?

Bilge Firat (University of Texas, El Paso, Department of Sociology & Anthropology)

PRESENTER:

Naoki Asada, Irene Ketonen-Keating (Monroe Community College), Gorda Stan, Bård Kårtveit

DESCRIPTION:

Whether they report from latest fieldwork among the internally colonized in the North of Ireland; the Romanian people who reassess their post-1989 'European-ness' after 16 years of EU membership; the Polish migrant workers who are only integrated in the neoliberal economies of the North as racialized others; and many an asylum seeker (after the civil war in Syria, the pandemic and Russia's war in the Ukraine) in the Irish 'accommodation centers', the first part of this panel brings together papers that query the postcolonial future of Europe through various examinations of (re)making of alterity in the wider region. Through a comparative examination of the Chinese, Russian and local Serbian parents' constructions of 'successful future' from their children in Belgrade; conflicting

attitudes by the locals from a Norwegian-Russian border town after the Ukrainian invasion; and the re-indigenization of decolonization debate in the Ukraine, the second part of the panel opens a new front in the conversation on Europe's postcoloniality with a discussion of various ethnographic cases of everyday geo-politics.

Transiting Identity of Romanian: An Anthropological Study of Absent Presence of Socialism: This study examines the effect of the socialist past in Romanian identity formation, and argues whether postsocialism is still beneficial as an analytical framework in anthropology. Post socialism study, to some extent, began as the Western desire to realize why it appeared and what happened in the Second World. For example, Emmanuel Todd (2008) attributed the origin of the socialism as a political system to the indigenous family structure, and, as a case of Romania, Katherine Verdery (1991) perceives it as an ideology embedded to the historical discourse of ambiguous national identity among Romanian intellectuals. However, such Western attitudes and gazes toward the former socialist countries provoked, from the Eastern anthropologists and sociologists, criticism that they worked as another form of orientalism (Celvinkova 2012). Buchowski (2004) revealed how academic works from the East was treated just as ethnographic data rather than theory, and called such intellectual structure between the West and the East 'Hierarchies of Knowledge.' What Sharad Chari and Katharine Verdery (2009) called 'the post-Cold War' could be a response toward such criticisms from the East. They proposed to merge postcolonialist and postsocialist thinking to single analytical framework to understand the contemporary world. In their work, Chari and Verdery emphasized that the post-Cold War study was built 'upon work by 'natives'' (Chari and Verdery 2009: 29). Nonetheless, they introduced the concept as a methodology to relativize the capitalist imperialism, in this sense, the overall structure that the East is consumed for the West, more or less, seems to remain. Following previous works, this study investigates how socialism, or communism in local vocabulary, works, and insists that postsocialist thinking is favorable to realize people in Romania and their identity. Romanian national identity has been a negotiation between the indigenous and the foreign. It has appeared as discourses of Latinism, Dacianism, and Daco-Romanism at the beginning of the modern era, and such coexistence of the native and the foreign was also valid during the socialist time as a dichotomy of Daco-Latin Romanian and socialist identity from the Soviet (Verdery 1991). Even though the Socialist

Republic of Romania collapsed in 1989, my fieldwork from 2019 to 2021 shows that the socialist past and its knowledge provided Romanian people their distinctiveness from the Western European counterparts. It is typically expressed when a Romanian interlocutor in his fiftieth talks about governmental interference to family by law in the name of human rights in the Western Europe. He calls it 'neo-Marxism' and describes the situation that 'people in the Occident do not know what happens by Marxism. So, they do it.' This narrative indicates how the socialism in the past still has power to the contemporary Romanian identity. In other words, the socialism (the communist party and regime) itself is absent, but its agency is present. Indeed, it is the agency in Latour's sense, that is, what makes people do something (Latour 2005). Once postsocialism study departs from the realm of political economy, it seems possible to find out the present effect of absent socialism. It is not sure whether the absent presence of socialism continues to exist longer, nonetheless, postsocialist thinking can contribute to anthropological study further. Presenter: Naoki Asada

Transitions: From Post-Conflict to Peace in Northern Ireland: Relationships between Irish Catholic and British Protestant farmers in Northern Ireland are culturally constructed in a variety of ways, and in many places outside of bureaucratic offices, inspections, or farms. Individuals bring these other experiences with them, when deciding on how to behave morally within farming, inspection, or non-governmental organization (NGO) settings. This paper examines one incident as a case study of cultural intimacy (Herzfeld 2005) among Northern Ireland farmers. During my dissertation fieldwork in 2014, I had an opportunity to conduct participant-observation with Irish Catholic key interlocutors as they went on a pilgrimage to Slemish, a local mountain associated with St. Patrick. The event included friendly yet tense interactions with British Protestants at the Protestant churches which provided parking for the Catholic pilgrimage and used their shared facilities as an opportunity to proselytize. In a more sinister incident, we also encountered anti-Catholic graffiti on the road up to the holy mountain. The example of the graffiti especially serves as a form of Northern Ireland cultural intimacy (Herzfeld 2005). Although most Northern Ireland research participants, both Catholic and Protestant, denied that sectarianism still exists today (preferring to locate it in the past Troubles era), privately they acknowledged that it does linger, albeit more often through symbolic violence and subtle discrimination, rather than armed conflict. Because it is a negative 'shared secret' among

Protestants and Catholics it creates Northern Ireland cultural intimacy among the two ethnoreligious groups. I argue that the transition from absence of violence to genuine peace has not yet taken place. Presenter: Irene Ketonen-Keating (Monroe Community College)

Shadow futures: The role of post-socialist political economies in the process of being and becoming European: With the collapse of the socialist block, the Chinese neo-colonial project in Majority World/Global South is reshaping post-colonial Europe. The waning of neoliberal ideologies in non-EU countries operates on shadow economies that recuperate socialist/capitalist discourse in post-colonial Europe. This paper analyses how post-socialist host and migrant families use capitalist market-driven reforms, socialist fee-free mainstream education and shadow economy to construct successful children's futures from European margins. Two parallel processes have been changing the long-standing socialist legacies of tuition-free education since the fall of Yugoslavia - the steady migration of Chinese and Russian families and a proliferation of private international schools. Because educational policymakers across the region have ignored these phenomena, shadow education or private tutoring as a social formation aids Serbian Chinese/Russian children's socioeconomic adjustment. Based on a mixed-methods comparative study in Belgrade, this paper underlines conflicting notions of the 'progress' in the host country and migrant families. Chinese/Tiger parenting manifests two patterns, preserving cultural values by sending children back to China at primary school age - instilling strong work ethics, and the second - capitalists - neoliberal values when children join their parents in the host country as teenagers and attend international (English speaking) private schools supplemented with shadow education in their host countries (Serbia). On the contrary Serbian parents have adopted a laid-back strategy in response to the social status and the rapidly changing risk economy. Shadow education evokes capitalist, extra-curriculum activity wealthy children attend twice a week - while private tutoring is attached to the socialist era supplemental education that exists to ensure higher grades or passing exams. I theorize shadow education in shadow political economy challenges the process of being European and recuperates the socialist conception of the self as a salient critique of neoliberal economic practices. Presenter: Gorda Stan

Re-imagining cross-border relations in the High North. Adjusting to new realities on the Norwegian - Russian border.: Kirkenes, a small Norwegian border town in the

High North, have a history of extensive contact with its neighbours in Russia, even throughout the Cold War. Since the collapse of the Soviet Union, local authorities, voluntary organizations and individuals have established close relations with their Russian neighbors, and invested in dreams of a near-borderless world that might once include a free, democratic Russia. Following Russia's invasion of Ukraine, these dreams have been shattered, and members of this border community adjust to the new reality in different ways. Based on extensive fieldwork in Kirkenes, and centered around the concept of convivial aspirations, this paper will examine evolving strategies of engagement/disengagement with Russia, the ways in which people imagine their relations with Russians, or with specific groups of Russians, and how this connects with conflicting narratives and visions of Kirkenes as a border community. Finally, the paper will reflect on the case of Kirkenes and its relevance to the experience of other European communities that share a border with Russia. Presenter: Bård Kårtveit

Practices of and movements for labor transformation

8:00 AM - 9:45 AM

TMCC - 205 A

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Susana Narotzky

CHAIR:

Sharryn Kasmir (Hofstra University, Department of Anthropology)

PRESENTER:

Sharryn Kasmir (Hofstra University, Department of Anthropology), Jane Collins (University of Wisconsin, Madison), Natalia Buier, Stephen Campbell, Ayse Caglar (University of Vienna), Susana Narotzky

DESCRIPTION:

We ask: is the world of labor in transition? Is the work and care needed to reproduce life changing? Where is it headed? What power geometries make a difference in designing the effort it takes to live and the available expectations and imaginaries of a better life in the present? Which interdependent relations of human and non-human nature are created, transformed and disposed of in contemporary processes of systemic reproduction? Can we understand labor as an

instrument of capital without addressing its intimate connection with care work and nature's capacities to provide? Exploitation, extraction, dispossession have been used at different moments to address these connections and their transformations. New concepts such as 'plantationocene' have pointed to the links between colonial power and racialization in the emergence and consolidation of capitalism, while renewed emphasis on social reproduction as a complex, contradictory and scalar process help us address contemporary worlds of labor. We wish to explore in this panel whether new theoretical tools enable us to capture transitional aspects of labor in the wake of multiple ecosocial crises. The anthropologists in this session conceptualize labor broadly, encompassing paid work and the many livelihood activities involved in social reproduction. We also consider that the ways those labors are named and divided are political processes. The papers place individual case studies within larger matrices of power, understanding that 'the distribution of capitals and labor markets, and the resulting differentiation of the labor force locally, regionally, and nationally and internationally, are never fixed and stable.' (Wolf 1982.) They examine the power-laden processes that categorize, differentiate, or unify those laborers as well as the nature and spaces they engage with continuously. The papers also highlight the conflicts, protests and accommodations, organizational forms, and cultural understandings that reflect engagements with capital, nature, the state and workers in different positions and places. They explore a range of livelihood activities and resources, and ask: Whose labor (what resource) is recognized (and valued) and whose (which) is made illegible? How are lines of differentiation challenged? Are the livelihood practices under study 'outside' of capitalist relations or are circuits of capitalist value obscured? What demands are working people making on the state, capital, and nature? How are they articulating those claims? What solidarities and divisions are they creating in the process?

Introduction: Practices of and movements for labor transformation: We ask: is the world of labor in transition? Is the work and care needed to reproduce life changing? Where is it headed? What power geometries make a difference in designing the effort it takes to live and the available expectations and imaginaries of a better life in the present? Which interdependent relations of human and non-human nature are created, transformed and disposed of in contemporary processes of systemic reproduction? Can we understand labor as an instrument of capital without

addressing its intimate connection with care work and nature's capacities to provide? Exploitation, extraction, dispossession have been used at different moments to address these connections and their transformations. New concepts such as 'plantationocene' have pointed to the links between colonial power and racialization in the emergence and consolidation of capitalism, while renewed emphasis on social reproduction as a complex, contradictory and scalar process help us address contemporary worlds of labor. We wish to explore in this panel whether new theoretical tools enable us to capture transitional aspects of labor in the wake of multiple ecosocial crises. Presenter: Sharryn Kasmir (Hofstra University, Department of Anthropology)

The Semi-Proletarian Lifestyle in the 21st Century: COVID-19, Precarity, and Anti-work: Since 1980, but especially since the 2008 economic crisis, wage workers have experienced growing precarity and risk in the labor market. Neoliberal cultural formulations have encouraged an "entrepreneurship of the self" where independent contracting and side hustles cushion the inadequacy and uncertainty of jobs. In its early days, the COVID-19 pandemic put massive numbers of workers out of jobs. The government of the U.S. and many other industrialized nations responded with a range of supports that temporarily and partially decommodified labor. This paper explores the "great resignation" of 2021-22 and continuing low levels of labor force participation in light of these events. It asks whether the COVID moment, coming after years of exposure to the austere and treacherous labor markets of financial capitalism, has fostered the growth of a form of anti-work livelihood strategy in which a waged job has become—not the guarantee of economic security—but part of a "semi-proletarian lifestyle" that draws together strands of self-employment, self-provisioning, and government support to reduce dependence on wages. It explores whether this strategy represents a deepening of the precarity workers were already experiencing or is a way of gaining economic autonomy that improves the ability to bargain. It asks what the class politics of such an emergent strategy might be. Presenter: Jane Collins (University of Wisconsin, Madison)

Robust anachronisms and the socioecological relations of groundwater depletion: the case of Doñana: For more than thirty years, the agricultural production process in the Spanish region of Doñana (home to a UNESCO Biosphere Reserve) has been marked by the alienation of the farmer from it through two different paths: one the one hand, increasing technological

transformation and dependence on external inputs; on the other, a division of labor in which the increasing intensity of production has been made possible by the super-exploitation of racialized migrant workers. Yet, in spite of the profundity of the real subsumption of the productive process by capital, the ruling categories of agricultural politics remain backward looking: family farming, the farmer and the local community are still central to agricultural policy as well as agrarian politics. The dominance of these categories is key to creating an image of agrarian crisis that privileges its economic dimension and renders invisible its social and ecological unsustainability. Through a historical ethnographic analysis of groundwater conflicts in the region of Doñana, this presentation addresses the way in which the categories of farmer and local farming community are essential for preventing the articulation of a truly transformative agricultural politics. I focus on how these categories are instrumental for the defense of the contemporary agricultural model, as well as for its conservationist opponents, whose repertoire of solutions is rendered distinctly ineffective by reliance on them. The radical transformation of the agrarian model as a lasting solution for environmental justice requires a true confrontation with the robust anachronisms that dominate agrarian politics and imaginaries. Presenter: Natalia Buier

Worker organising under military rule: Labour struggles in post-coup Myanmar: A large body of scholarly work since the 1980s has conceptualised the social formations regulating labour in particular times and places as factory regimes, labour regimes, labour control regimes, dormitory labour regimes, and the like. Among the insights of this scholarship has been that specific regulatory ensembles are conducive to, and even stimulate, particular forms of worker organising and struggle. That is, the very regulatory arrangements that curtail certain labour organising tactics simultaneously enable and motivate alternative forms of struggle. This insight is important for grasping the social dynamics of, and potential for, worker mobilising in highly restrictive situations. To explore this relationship between labour regimes and workers' struggles under repressive conditions, I turn to the struggles of workers in Myanmar following the country's 2021 military coup. Following the coup, military authorities declared a nationwide state of emergency, violently cracked down on worker-led anti-coup protests, and increased police surveillance of suburban industrial zones. By early 2023, military authorities had killed some 3,000 civilians and arrested almost 20,000 others in response to what began as street protests, but

which has since expanded into a nationwide anti-military uprising. Throughout this time, workers in Myanmar have continued to organise in their workplaces for improved wages and working conditions, while many have also actively supported the armed revolution against military rule. The case of worker organising in post-coup Myanmar thus illuminates the limits and contradictions of highly repressive labour regimes. Presenter: Stephen Campbell

Extractivism expanded and forms of (im)mobile labor in city-making: Through archival and empirical material of a former industrial city in Austria and its aftermath as a hub for cultural/creative industries, this paper explores the dynamics between varying forms of extractivism, confinement of labor, capitalism and its racialized logics. This is a city where the variegated forms of (im)mobile labor - first as coerced (war prisoners and concentration camp), and later as spatially and temporally confined migrant (guest worker) and refugee labor - were pivotal in structuring the processes of production, exploitation, subjectification and social reproduction. These forms of extraction and spaces of confinement introduced a radical interruption to the care of generations. "Planting" people in places to work and crafting their disposability, reordering and hierarchizing difference have been crucial in making segments of populations unworthy for extraction, creation and the reproduction of social relations of accumulation. This paper aims to scrutinize the making and remaking of a city's social, political, and affective fabrics through the lens of expanded extractivism in relation to managed (im)mobilities (un)paid labor and the moral regimes since WW II. In the contemporary world of the city, the logic of extraction has been expanded into new frontiers of cultural industries, real estate, data mining and finance with different forms of labor and care necessity. Rather than compartmentalizing different periods and labor worlds of the city, this paper calls for developing an analytical vocabulary to unearth the continuities and discontinuities of containment practices of (im)mobile labor, care, and their moral tropes in the making of this city. Presenter: Ayse Caglar (University of Vienna)

Living through and beyond covid19 in the pork meat-producing environment of Lorca (Murcia): Spain is the largest producer and exporter of pig meat in Europe, with a third of it going to China. Lorca is an agricultural region with an exponential growth of pig producing farms, ranging from small family ventures to "macro-farms". Pig farms are vertically integrated with the largest meat processing plant in Spain also located in Murcia which employs more than 5,000 laborers in a

single facility. The firm presents itself as a focus of rural development, sustainable and environmentally friendly, but other national and local agents voice their opposition to the sprawl of pig macro-farms, the pollution and depletion of aquifers, and the proximity of pig farms to villages. The farms produce methane and ammonia emissions and a fetid stench that impedes other economic ventures tied to tourism. The conflict has generated legal and political confrontations at different scales, some of them violent. Within this multi-scalar reality, the paper addresses the period leading to the COVID19 pandemic and the lockdown, analyzing the transformations of the labor process that resulted and the changes that were normalized. Defining food-chain labor as “essential” benefitted the industry in an environment of fear about health and job loss. I will underscore how selective interpretation of the regulations for the prevention of contagion during COVID19 on the grounds of essential food provisioning mandates enabled productivity increase, and how these normalized and “legitimized” illegalities in the food chain mirror the general practices of intensive farming as regards extraction, exploitation and depletion of natural and human value. Oral Presentation Session

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Yuda Rasyadian (University of Oregon, Department of Anthropology)

PRESENTER:

Gayatri Reddy (University of Illinois, Chicago, Department of Anthropology), Yuda Rasyadian (University of Oregon, Department of Anthropology), Christina Kefala

DESCRIPTION:

These papers offer historical and ethnographic insights into the production of modern subjects. They illustrate how race, ethnicity, economy, and gender are deployed in the project of subject-making. Drawing on phenomena such as Hindu religious festivals, artificial intelligence in China, NGOs in Indonesia, and military conscription they document the processes through which states, corporations, and other institutions manufacture specific types of human beings. Collectively, they demonstrate the power of

anthropology in understanding how identity, subjectivity, and personhood are configured today.

Siddi Chronicles: A Historical Ethnography of a 'Racial' Category in Hyderabad, India: I am chaoosh, I am habshi, I am bin...And my father was siddi, a soldier in the African Cavalry Guard. That is my history,' stated Zafar, good naturedly, referring to several fraught, if fluid and shifting terms of racialized identification for descendants of 'African' and 'Arab' migrants in contemporary Hyderabad. Each of these terms of identification - habshis, designating people of Abyssinian/Ethiopian heritage, siddi, designating a larger swath of East African peoples, chaoosh, indicating military personnel or soldiers, and bin or Arab, and more specifically, hadrami migrants from present-day Yemen - have a long history in Hyderabad, with groups migrating from these various regions in East Africa and settling in Hyderabad from at least the 15th century, if not earlier. However, it was events in the 19th century – largely imperial, but also local and regional – that significantly impacted, indeed transformed, these migrations and the meanings attached to these geopolitical and racialized categories. Drawing on ethnographic fieldwork with Zafar and other descendants of these communities in contemporary Hyderabad, as well as archival material speaking to military and migration history in 19th c. Hyderabad, this paper will tease out these contexts and explore their impact on the ongoing, shifting, allegiances of these communities and the terms that signify them. Specifically, it will explore the shifting signifiers of 'Africanness' and 'Arabness' in claims of belonging on the part of habshis/siddis in Hyderabad from the 19th century up to the present, arguing, ultimately, both for the long afterlives of these 19th c. events, as well as the fact that these shifting globally-inflected meanings need to be located in local and regional histories if we are to better understand their impacts on individuals such as Zafar and others. Presenter: Gayatri Reddy (University of Illinois, Chicago, Department of Anthropology)

Reversing “the Other:” Rethinking Anthropologist Subject Position and Indigenous Agency in Fieldwork: Tension between anthropologists preferred self-image and anthropologists' subject position that is attributed and politically designated by the people whom they worked with is still unsettled. During my research and development work with the Indigenous people of Mollo in eastern Indonesia, I was 'assigned' with three different roles over a span of five years (from 2016 to 2021). First as a university lecturer, then as a nongovernmental organization (NGO) worker, and finally

as a 'child' of a Mollonese elder. This transition over naming the subject position had a crucial impact in my later work as anthropologist-in-training. Framing the tension as contingent, multidirectional, and embodied, this paper acknowledges the agency of the local community in designating roles to anthropologists for the goal of more equal and democratic knowledge production. This paper offers decoloniality (Harrison 1997, Mignolo and Walsh 2018) as a framework and praxis that treats the conflicting and transitional roles as sites of collaboration and power diversion, reckoning the historicity of each position with its distinct power dynamics. I suggest viewing the children–parent's subject position (which is commonly experienced by ethnographers in Indonesia) as a practice of 'reversing the Other' which makes anthropologists legible to Indigenous sociality, tempering and diverting power imbalances. This paper thus argues that anthropologists shall open to negotiate themselves as 'the Other,' giving the community we studied the rights to engage in our positionality and acknowledge the complex and shifting social and political dynamics of ethnographic encounters, especially in marginalized communities.

Presenter: Yuda Rasyadian (University of Oregon, Department of Anthropology)

The Racialized Artificial Female Body in China's Business Sector: This research examines an understudied labor force behind China's production of an Artificial Intelligence (AI) industry - when constructing racialized female robots and tech systems, they are often marked as distinctly 'white' by their appearance and embodied characteristics. Studies have drawn attention to the racialization of AI in western societies, arguing that Whiteness is not seen as merely being an AI assistant with a stereotypically white voice or a robot with white features but as the absence of colour, the treatment of white as the default setting. However, no such studies exist in Asian contexts on the racialization of AI.

Responding to the growing prominence of AI in China, various business fields such as the tech, fashion, sex and education industry, have supplanted human interaction with AI, further enhancing economic growth, innovation and tech development. This study provides an ethnographic account of this phenomenon by showing how AI and robots challenge the labor force structuring of Whiteness and gendered performances. I argue that this racialization of artificial female tech systems reflects and illuminates the particularities of whiteness and femininity in China's tech development sector.

Provenance, Provenience, and Relational Recuperation in Museum Collections

8:00 AM - 9:45 AM

TMCC - 606

Oral Presentation Session

REVIEWED BY:

Council for Museum Anthropology

ORGANIZER:

Paul Mitchell (University of Amsterdam)

PRESENTER:

Paul Mitchell (University of Amsterdam), Sara Ann Knutson (University of British Columbia), Christina Hodge (Brown University, Haffenreffer Museum of Anthropology), Elizabeth Walsh (University of Cambridge)

DESCRIPTION:

Papers gathered in this session recuperate the social lives of collections-and people-through considerations of provenance (histories of possession and control), provenience (descriptions of collection site), and materiality (interdependencies of people and things). Contributors apply anthropological and archaeological methods to make sense of how museums shape personhood and objecthood, including object and personal biography, feminist theory, documentary and trace ethnography, and close physical study of collections. The paper 'Museum Taphonomies' uses innovative methods to trace some of the transformational forces anthropological museum can inflict on human ancestral remains. Silver objects from Morocco are an entry into 'Silversmithing Traditions' nurturing the aesthetic desires of early collectors and the needs of artisans and communities today to access traditional creative knowledge. New 'Narratives of Arctic Indigeneity' emerge from histories of naval imperialism and the British colonial imaginary. A consideration of 'Women in Provenance' genders anthropological collecting to reveal the hidden impacts of women on the discipline anthropology. By changing narratives of museum knowledge, papers also suggest ways to transform stewardship.

Museum Taphonomies: Attending to Loss in the Shelf Lives of Human Ancestral Remains in Museum Collections: In this paper, I engage pressing matters concerning human ancestral remains in museums and the figuring of 'shelf lives' – histories after accession – into the evidentiary work of proveniencing necessary for repatriation. Acknowledging that museums are simultaneously sites of transition and loss as well as of

preservation and conservation, and recognizing that human ancestral remains are both lively and subjected to specific forms of attention, neglect, and material alteration in museum collections, this paper considers a series of cases of human ancestral remains from colonial contexts in historical anthropological-ethnographic museum collections in Europe and North America. From these cases, I outline the concept of 'museum taphonomy' to trace entangled material-semiotic transformations through which human ancestral remains move and change in museum spaces, probing how these movements and transitions can at once explain and obscure histories relevant for the return of ancestral remains to descendant communities. Museum taphonomy's point of departure is the field of taphonomy in paleontology, archaeology, and forensics, set by its inaugural formulation as 'the study of the transition...' from biosphere to environment (Efremov 1940), attending to postmortem processes impinging upon bodies. Taphonomy concerns material change following biological death, but it is entangled in lively processes, particularly the material (re)inscription of remains with forensically legible traces. Museum taphonomy as conceptual intervention considers not just material transformations of human ancestral remains, but how these transitions register as semiotic transitions, such as in structures of museum categorization, affective recognition of personhood by varied actors, and the evidentiary demands made in the process of repatriation. A museum taphonomic trajectory traces, for example, how the loss of mummified soft tissue or decorations over years in museum spaces prompts the shift of ancestral remains from the category of 'ethnographic' to that of 'physical anthropological' in museological categorization, with differences in the treatment of remains in these categories, or how the loss or destruction after accession of bodies and bones, in whole or in part, confounds and complicates the possibility and process of return to descendant communities. Museum taphonomy is attentive to both what is added to human ancestral remains in museum spaces, like inscriptions and labels, but also to losses: not only of materiality, whether that be pieces of skin, hair, or bone tissue, or of tags and labels documenting provenience, but also of the histories, identities, meanings, and relationships manifest or obscured by material traces. Museums have lately been forced to rethink the ethics of human remains collections and are now launching or scaling programs for repatriation. What I want to reflect on with the concept of museum taphonomy is not only an account of the conceptual and material movements and modifications of human ancestral remains in museum

spaces, but also on museum taphonomy as a particular 'forensic art of paying attention' (M'charek 2022) to loss and its possible appearances, on what these losses reveal about the objectification of ancestors and the obscuring of their histories in museum collections, and on what openings an accounting of these losses may offer toward more ethical futures and return to descendant communities. Presenter: Paul Mitchell (University of Amsterdam)

Stories of Silver: Examining Silversmithing Traditions and Heritages among Amazigh communities of Morocco: Silversmithing and the creation of intricate, traditional jewelry has been a vibrant part of community practices and complex processes of meaning-making among the Imazighen, indigenous communities in North Africa, for many generations. The impressive aesthetic value of Amazigh jewelry and other materials gained the attention of international collectors in the nineteenth and early twentieth centuries and led to the collection of Amazigh materials, including for Euro-western museums such as the Smithsonian Museums of Natural History and -African Art and the Harvard Peabody Museum. While in academic circles, the craftsmanship of Amazigh communities has predominantly attracted the attention of art historians, this presentation alternatively takes an anthropological approach to understand evolving traditions of silversmithing as part of the Imazighen's ongoing construction of heritage. Associated with specific values and meanings, silver materials are deliberate sites of intergenerational interaction within many Amazigh communities. Therefore, rather than relying only on museum-based materials as snapshots of nineteenth and twentieth century Amazigh culture in Morocco, I interpret these materials as pointers to the ancestors of living communities, who themselves continue to engage and perpetuate the specific knowledge and meanings associated with silverwork. In part, this project aims to reposition storytelling as an important process in ethnographic work, one that maintains Amazigh practitioners as the experts of their cultural traditions and the researcher as the learner in these conversations. Presenter: Sara Ann Knutson (University of British Columbia)

Women in Provenance: Gender and the Formation of Anthropological Knowledge: This talk introduces the author's Women in Provenance Project, part of the Gendering Collections initiative she started at Stanford University and is continuing at Brown University. This collaborative, interdisciplinary project integrates critical historical, archival, and museological research with

digital humanities methods to surface women's foundational--and ongoing--impacts on the creation of anthropological knowledge through museums and their collections. *Women in Provenance* investigates the ways identified women are, and are not, represented within provenance data from the author's home institutions, as well as the ways anthropological collecting informed/was informed by their lives and historical contexts. Methods include prosopography, personal biography, and object biography, as well as geographic and other visualizations. Findings to date suggest authorized anthropological knowledge has been meaningfully shaped by (mostly white, often well-traveled and -educated, not always independent) women's most personal experiences, as well as by global forces of conflict and empire. The *Women in Provenance* project is a mode of critical provenance practice based in reexamination and augmentation, reforming more accurate and inclusive discourse by re-making museum archives (sensu Michel-Rolph Trouillot). Indigenous and Black Feminist perspectives also inform this work. *Women in Provenance* focuses on recorded collectors and donors. The wider work of *Gendering Collections* lies outside its scope but informs its goals. Presenter: Christina Hodge (Brown University, Haffenreffer Museum of Anthropology)

Assembling the Arctic: The Barrow Collection and Nineteenth Century Narratives of Arctic Indigeneity: This paper will explore the collection by Naval personnel of 'ethnographic' objects from across the North American Arctic in the mid-19th century. By reconstructing object histories with reference to supporting archival materials, I will show how these items, removed from their original contexts by colonial desire and used to prop up imperial narratives, serve as records of connection and commerce. Further, by focusing attention on the personal networks of one figure, John Barrow the younger, I will demonstrate how British colonial imaginings of the Arctic at a distance directly produced its representation in the metropolitan museum. Starting in the late 1840s, British Naval vessels were sent to scour the Arctic for signs of the missing John Franklin. Many of those recruited to these searches maintained a correspondence with John Barrow, the son of the former Second Secretary to the Admiralty of the same name. At his request, they gathered things of interest that he had listed for them: geological and animal specimens; models of their own equipment; and a variety of Inuit-made objects. These disparate materials would be donated to and displayed in the British Museum alongside 'relics' of Franklin's lost ships collected by Inuit and acquired from them, heroic

portraits of the lost men and searchers, and medals awarded to the members of earlier Arctic expeditions. I argue that the objects of material culture in this collection, displayed to demonstrate the 'primitive' ways of life of Inuit and the harsh environment the lost men might face, should be understood as documentation of the reach of Inuit trade networks and the skillful intercultural negotiations of their original owners. Sharing preliminary findings of work in the archives held at the British Museum, British Library, and Royal Geographical Society, I will show how the collection and its documentation capture the power of the British Arctic imagination in the mid-19th century. I will also suggest that the ethnographic objects be considered alongside the letters of Barrow's correspondents, the Inuit-curated collection of Franklin relics, and the records of their interpretation and display through to the present day. Working from the understanding that these objects of Indigenous patrimony index multiple meanings and values, I will detail how the motives that inspired their collection, their movements through complex trade networks, and the Indigenous/non-Indigenous interactions that led to their acquisition were and are forgotten (or ignored) in both their original and their contemporary display contexts. Oral Presentation Session

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Grayson Peel

PRESENTER:

Grayson Peel, Marielle Aithamon, John Donahue

DISCUSSANT:

Mary Gray (Microsoft Research New England)

DESCRIPTION:

Queer politics intricately involve questions of space, place, as well as power. The papers on this panel explore the ways in which identity, senses of community and belonging, and considerations regarding well-being are shaped by space, place and the social capital derived from space and place. Papers are invested in particular spaces - the spaces of queer choruses, queer 'communities,' and those produced through crip temporalities - located in particular places such as

Montreal, Baltimore, and Boone, North Carolina. Together, these papers offer critical perspectives on how political forms of being, becoming, and acting are also always questions of space and place (and time!).

Place and Queer Visibility in a Southern Appalachian Town: This paper investigates the processes by which young queer residents of a small but rapidly developing college town in the Appalachian Mountains both shape and are shaped by aspects of place. Through illuminating the capacity of queer residents of Boone, North Carolina to transform their physical and cultural surroundings and contest dominant understandings of gender and sexuality, I consider the positive and negative consequences of queer visibility in a Southern Appalachian cultural context. In order to address my central research question, 'how does place shape queer ways of being, and how do queer people transform and make place, in Boone?', I conducted participant observation and interviewed young queer and trans residents over the course of a six-month period. My subsequent analysis interrogates the utility of a liberal politics of visibility amid a political climate of increasing hostility towards queer and trans people that transcends regional boundaries. Perhaps most critically, this paper undermines the hegemonic narrative that queer people living in rural areas in the South are relegated to a life of hiding and suffering. As they navigate and interact with others across shifting landscapes of acceptance, my interlocutors develop sophisticated senses of self, space, and safety. In articulating the ways in which they publicly express their queerness— from doing drag to shopping at Walmart— I reveal the dynamic nature of queer existence beyond coastal metropolises. Presenter: Grayson Peel

Queer undefined. Narrative journeys and reinvented solidarities in the LGBTQ+ community of Montréal.: This communication proposal is based on my doctoral thesis in sociocultural anthropology. Through an analysis of the Montréal queer community, I explore new ways of constructing the Self and establishing communities by dwelling in-between social spaces. My analysis is based on individual interviews and focus groups I carried out from September 2021 to November 2022 with members of the queer community (of which I'm a member too). It shows that queer culture in Montréal has gone beyond the dynamics of reappropriation and resistance to fully embrace dwelling in spaces of in-between, that is: in non-definition, and perpetual incompleteness. My thesis shows that members of the queer community in Montréal tend to be depoliticized, exhausted by the neoliberal injunctions to realize the Self through

consumable archetypes. However, stories of personal journeys suggest identities are not as crucial as relations and belongings, nor as experimentation and collective plays of re-imagination. If freed of injunctions to be someone for certain and to perform given identities with accuracy, queer people are in a constant state of becoming. This implies we are also in a constant state of grieving. As a participant to this research stated, 'there is inherent grief and sadness to North American queerness,' but those are joyful mournings: as we shed our dead skin in order to become other, we carry within us a multitude of biographical possibilities. Then, being queer does not so much means we are in a perpetual in-between, it means we constitute the in-between. In this sense, queerness and the sociocultural multitude it entails allow – on the condition we dwell in the unfamiliar – to open and hold spaces of reinvention. Thus, by straying from the idea of 'queer as an identity' towards 'queer as a relation,' my thesis aims to understand the use of this transformative word as a narrative technology to suspend meaning and create doubt. In doing so, queerness opens spaces of transition within which it becomes possible to reinscribe meaning, restore relationships and create new solidarities. Indeed, it is precisely the inaccuracy of queerness, as it is fundamentally incomplete between assured obsolescence and possible reinvention, that propels sociocultural becoming. As it shows in Montréal, it becomes anthropologically relevant to tarry in the spaces we hold for us and for others. We might not be born queer, but we won't become queer either: on the contrary, dwelling in perpetual incompleteness, we always fail to be. This raises a burning question in our current society: wouldn't we be able to create and maintain safer and inspiring relationships if we allowed ourselves to simply not be sure of who we are constantly becoming? Presenter: Marielle Aithamon

Side by Side by Side: Social and Linking Capital in a Queer Men's Chorus during the COVID Pandemic: Due to the unique dangers presented with groups of people singing together in closed spaces, community and other choruses were especially constricted during the COVID pandemic. The need to shut down affected Queer and LGBTQIA+ choruses in unique ways, with choral singing ('musicking') being an important mode of community building. In this presentation, I explore some of the challenges facing Queer choruses in the Baltimore, Maryland, region, and the ways in which building social capital helped these choruses, their leadership, and their membership to get through the pandemic. Presenter: John Donahue

Race, Labor, Migration, Discourse: A roundtable on new books and new directions

8:00 AM - 9:45 AM TMCC - 714 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Lyndsey Beutin (McMaster University)

CHAIR:

Cal Biruk (McMaster University, Department of Anthropology)

PRESENTER:

Elena Shih ,Lyndsey Beutin (McMaster University),Alana Seldon ,Amanda De Lisio

DISCUSSANT:

Jemima Pierre (University of California, Los Angeles, Department of Anthropology),Celina de Sá (University of Texas, Austin, Department of Anthropology)

DESCRIPTION:

This roundtable celebrates two new books released in 2023 by bringing together scholars who are forging new directions in the study of how racial logics and discourses underpin experiences, policies, and imaginaries related to migration, human rights, sex work, precarious labor, and diaspora. Together our work spans Asia, North America, West Africa, and Latin America, and mobilizes a range of ethnographic modalities including multi-sited, multisensorial, historical, visual, dance, discursive, and abolitionist approaches to anthropology. *Manufacturing Freedom* (Shih 2023) is a transnational ethnography of US NGOs in China and Thailand that try to 'rescue' sex workers but end up shuttling them into moralized low wage jewelry making schemes, which Shih describes as 'the racial wages of rescue.' *Trafficking in Antiracism* (Beutin 2023) is a media ethnography of the visual culture of anti-trafficking discourse that analyzes the racial politics of how the memory and metaphor of transatlantic slavery is used paradoxically in campaigns to 'end modern-day slavery.' Both books explicate how interventions that are assumed to be helpful to marginalized communities end up harming them, and ultimately reassert the status quo of dominant power relations. To upend such formations, the authors draw on and hold up other forms of solidarity found in transnational mutual aid projects and subaltern theoretical formations to resist legal and philanthropic

framings of care, suffering, and saving. By putting the books in conversation with established and emerging scholars in related areas, we aim to bring a diversity of perspectives to bear on what future directions across subfields might look like. Alana Seldon's research combines the theoretical frameworks offered by Shih and Beutin to illuminate what media ethnography can help us better understand about sex worker organizing in Cambodia and how it is tied to global formations of race and power. Amanda De Lisio explores the political, economic, and discursive impacts of mega-sporting events on informal and precarious workers in Brazil, connecting discourses of development to displacement. Celina de Sá brings together analytics of race, migration, diaspora, and memory through her work theorizing capoeira as a window into the contemporary dynamics of racial self-making and coloniality in Dakar, Senegal. Both de Sá and Beutin build on Jemima Pierre's pathbreaking contributions at the intersection of Black studies and the anthropology of race in Africa. Pierre, as co-discussant, will engage the roundtable in thinking through how anthropology of migration and work can be more attentive to the racial vernaculars and logics of human rights and development discourse. Across a variety of topics and vantage points, all participants ask important questions about how histories and structures of oppression, including transatlantic slavery and colonialism, affect the present. By organizing the roundtable through a series of thematic and reflective prompts, we hope to engender a rich conversation about the state of various literatures in anthropology and how, through cross-fertilization, we might push our scholarship in new directions.

Racialization and Racism in Health Care Part 1

8:00 AM - 9:45 AM TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Megan Muller da Silva (University of British Columbia)

CHAIR:

David Ansari (University of Illinois, Chicago)

PRESENTER:

Alana Glaser ,Amna Iqbal ,Megan Muller da Silva (University of British Columbia),Tali Ziv (Johns Hopkins University)

DISCUSSANT:

Aaron Su (Princeton University)

DESCRIPTION:

The present global uncertainty of ecological and political turmoil has foregrounded questions of inclusion, equity, and justice in the areas of access to health services and the uneven distribution of disease and determinants of health. Through recent climate crisis and pandemics, race has proven to be a central factor influencing how health care resources are made available. The imbrication of care and the politics of race in clinical spaces has long been a focus of critical medical anthropology. Building upon this antecedent, an important area for disciplinary reflexivity is to consider how ethnographic methods can be harnessed within clinical spaces by shaping medical education and practice. Building upon a long history of articulating a sharply critical stance towards biomedicine, how might the discipline of anthropology transition towards a site of advocacy within and alongside clinical practice? This panel, Part 1 of *Racialization and Racism in Health Care*, considers the roles and experiences of health care professionals and interventions designed to address racism in health care, as presented by medical anthropologists and health care professionals working in diverse settings including; home care, health promotion, primary care, mental health and emergency care. The included papers contemplate how processes of racialization affect both patients and/or care providers and what can or has recently been done to address the resultant social suffering. For instance, what kinds of policies, interventions, or hospital-community partnerships have successfully addressed racism as a cause of health disparity? Have there been unintended consequences of recent interventions in health care delivery and/or education and how might these be addressed? Importantly, how might anthropologists position themselves as allies and intermediaries between patients, racialized publics, care providers, policy and health care institutions? An underlying theme uniting these papers considers how ethnographic insights can be translated into clinical spaces as a site of social action.

Care Workers' Adverse Health Outcomes: Racial Disparities, Exploitation, and the Extraction of Labor: This paper draws on a decade of ethnographic fieldwork with immigrant women of color working as home healthcare providers in New York City to illustrate how their working conditions tax their wellbeing, leading to both chronic and acute medical conditions for which they infrequently receive adequate medical treatment. In New York City, home healthcare workers are overwhelming immigrant women from Caribbean, African, and Central American countries. Thus, their

adverse health outcomes offer insight into the role that employment niche may play as a significant social determinant of health. Through ethnographic accounts of women healthcare workers' medical crises—including repeated miscarriages, kidney failure, and joint pain—I emphasize the extractive aspects of care. I argue that socially reproductive labor, such as paid home healthcare, supports some lives while depleting others. In the United States, these depleted lives overwhelmingly belong to impoverished, immigrant women of color. While it is well known that care labor is physically draining and often hazardous work supporting the health and dignity of aging Americans, these deleterious effects are rarely addressed through the lens of racial health disparities or social determinants of health. I hope to use ethnographic detail to bridge literatures on care workers' working conditions with research on the racial determinants of health to add nuance to debates about the utility and political implications of 'disparity framing' for racial justice movements. I conclude by demonstrating how care workers' activism refuses the vitiating aspects of social reproduction, contributing broadly to anthropological understandings of care. Presenter: Alana Glaser

TAIBU Community Health Centre's Proportionate Response to a Disproportionate Pandemic: Data from the City of Toronto indicate that the majority of COVID-19 cases and hospitalizations as of December 2021 were among individuals who identified with a racialized group. In this paper, we summarize how TAIBU Community Health Centre, an organization mandated to serve the Black and Francophone communities in the Greater Toronto Area, prioritized and embedded race-based data collection in order to highlight the specific experiences of Black and racialized communities during the COVID-19 pandemic. Lessons learned from this work can be used to help support race-based data collection. In addition to this we continuously engaged with the community over the course of the pandemic through focus groups, interviews, surveys, town halls, 1-on-1 conversations, and community conversations to understand the experience of those we serve as they experienced the pandemic. This allowed us to better represent their interests, their voice, and their stories in clinical settings, community work, government tables, and advocate for their needs in a proactive and dynamic way. Authors: Sara Bhatti, Josephine Pham, Amna Iqbal and Liben Gebremikael Presenter: Amna Iqbal

Racism, implicit bias, and the moral economy of scarce resources in Canadian healthcare: Recent research and public investigations have increasingly unveiled the

pervasiveness in which Indigenous patients are subjected to racialized stereotypes affecting the quality of care they receive within the Canadian health system (Turpel Lafond, 2020). In confronting this issue, there is a dire need to better understand how racism is perpetuated systemically in order to rectify the policies, practices, attitudes, and structural barriers that enable it. This paper outlines four interrelated discourses which were adopted by doctors as a way of rationalizing complaints from Indigenous patients about experiencing racism in the health care system. These discourses were identified while conducting collaborative ethnographic fieldwork with Indigenous nurses and participatory action research with Indigenous patients and health care providers on the west coast of British Columbia, Canada. While these discourses are rooted in and respond to the everyday realities of working in hospital settings and are shaped by the particular context of the hospitals considered in this study, the ways in which patient cases are framed and interpreted works to disadvantage marginalized peoples. This is because they mask the ways implicit bias and moral assessments infuse clinical decision-making. Indigenous peoples are subjected to a moral economy of “deserving” and “undeserving” patients which informs their care trajectory. Furthermore, the experiences of discrimination and exclusion from health services are masked behind a colonial imaginary invested within Canadian national myths of tolerance and equality. Additionally, individualizing systemic failings of the healthcare system thereby deflects accountability away from the policies and practices that perpetuate exclusionary care. Presenter: Megan Muller da Silva (University of British Columbia)

“Some force comes after ‘em”: Medicaid Managed Care, Racialization, and Dispossession in Philadelphia: Medical anthropologists have long examined managed care as “managed inequality” (Rylko-Bauer and Farmer 2002), a financialized health care system that reformulates care as a commodity (Manelin 2020), has transformed the health and social safety net (Horton et. al 2001; Willging 2005), and has deepened social and economic inequality (Cook 2007). Yet few have examined Medicaid managed care from the vantage point of racialized, community-based providers, in other words, from the perspective of the owners and directors of small, nonprofit clinics who see health care provision as a form of upward mobility, property ownership, and governing care of their own communities. Based on over three years of ethnographic research in Philadelphia in a network of Black owned Medicaid-funded drug treatment centers, this paper argues that the shifting

landscape of Medicaid politics and legislation are dispossessing racialized community-based providers who seek to care for their own communities in Philadelphia. Engaging the history of Medicaid managed care in Philadelphia and the current shift to value based purchasing, this paper explores the racializing effects of contemporary Medicaid policy on community-based care. Presenter: Tali Ziv (Johns Hopkins University)

Remembering, re-enacting, and voicing the past: The ethics and politics of mnemonic narrative practices

8:00 AM - 9:45 AM

TMCC - 203 C

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Michael Zukosky (Eastern Washington University, Department of History, Anthropology, and Modern Languages & Literatures)

CHAIR:

Michael Zukosky (Eastern Washington University, Department of History, Anthropology, and Modern Languages & Literatures)

PRESENTER:

Michael Zukosky (Eastern Washington University, Department of History, Anthropology, and Modern Languages & Literatures), Monika Palmberger, Cheryl Yin (Carleton College, Department of Sociology & Anthropology), Dillon Ludemann (University of South Carolina, Department of Anthropology), Ana Mariella Bacigalupo (SUNY University at Buffalo, Department of Anthropology)

DISCUSSANT:

Karen Stocker (California State University, Fullerton, Division of Anthropology)

DESCRIPTION:

This panel explores the ethical and political dimensions of mnemonic narrative practices in a range of media including interviews and oral histories, witness testimony and archival text, and digital formats and performance. Beyond their aid in remembering past facts and truths, these narratives are ways that human actors are discursively negotiating a variety of contemporary social and ecological problems and opportunities, violence, painful histories, and contested memories as well as care, creativity, and renewal.

Rather than only utilizing these artifacts as indexes of the past, the panel seeks to understand the ethical and political dimensions of their conservative and progressive potential for humans and non-humans with different voices, capacities, statuses and identities today. In this sense, these narratives of the past are important because, as Hanna Meretoja has noted, they are sites in which the space of our future possibilities for action, thought, and imagination can be both ethically and politically diminished as well as enlarged.

Reading, ideology, & narration: The example of the Kazakh novel *White Eagle*: This paper explores one Kazakh lineage's historical narrative of the transition from Imperial China to the modern People's Republic. Drawing on oral histories and archival materials of an elite Kazakh lineage of intellectuals, the paper explores changing Kazakh understandings of the past. *White Eagle* explores the life of an ethnic Kazakh trader named Bek Mamur in 1930's Xinjiang Province, China. Bek Mamur lived from approximately 1900-1941; his son collected oral traditions about his father and then worked as a journalist-writer to publish a historical novel based on his father's life experiences. Under the current president Xi Jinping's broad initiatives against ethnic separatism and terrorism in the region, the journalist-writer was detained for political re-education and the novel disappeared from bookstores and libraries. Among other aspects of Kazakh ethnic tradition, the historical novel depicts Kazakh pre-revolutionary legal proceedings for both domestic and international conflict. These memories are important because they preserve tribal legal procedure for lineage memory, but they also interpret those legal proceedings through a Chinese hegemonic lens. This paper argues that the novel and its reading today among lineage members is an important component of Kazakh heritage preservation because it reflects: 1) cultural traditions and alternative ways of being that Chinese governance has negatively impacted, 2) the complex and nuanced internalization by Kazakh of how those traditions were seen by the Chinese state, and 3) why reading, remembering, and dialoging about these historical narratives allows for Kazakh to re-imagine the past and create new stories about themselves. Presenter: Michael Zukosky (Eastern Washington University, Department of History, Anthropology, and Modern Languages & Literatures)

Narrative practices across online and offline environments and the mobility of memories: As communication increasingly takes place in digital spaces, so narrative practices are situated in and across

online and offline environments (De Fina and Perrino 2017; Kaufmann and Palmberger 2022). This also holds for mnemonic narrative practices. This paper examines refugees' memories that are narrated and mediated in various ways – in person and digitally. It focuses on memories of refugees who fled from Syria to Austria between 2014 and 2017 and draws on a digital ethnographic approach and on narrative interviews and "digital diaries". This paper examines how caring relationships and friendships are maintained and negotiated across geographic distances through memories of a shared past and corresponding narrative practices. Finally, this paper argues that methodological considerations for exploring narrative practices across online and offline environments require special attention and that these narrative practices deserve to be studied in their interconnectedness. This ties in with discussions on how to think about memories and narrative practices beyond a sedentarist bias (Malkki 1996; Palmberger and Tošić 2016). Increasingly digitalized lifeworlds and new information and communication technologies add another dimension to the mobility of narratives and this calls for creative and innovative methodological thinking and adaptations. Presenter: Monika Palmberger

Voicing the Khmer Rouge: Communist revolutionary or cruel torturer? : Traditionally, Cambodian society is hierarchical, and the Khmer (Cambodian) language reflects this hierarchy through its honorific register system, language levels that indicate status and social difference between interactants. From 1975-1979, the communist Khmer Rouge (KR) linguistically engineered Khmer to be more equal because the language was contradictory to the KR's desire for an egalitarian, agrarian society. By selecting lexical variants from the middle registers—language that is not elitist but also language that is not condescending—the KR created one language level Cambodians could use with everyone, regardless of age, gender, and socioeconomic status. All Cambodians were equal under the KR regime; they were now peasant farmers. When the regime fell after four years, the KR language policy largely disappeared. More than four decades later, Cambodians continue to talk about their experiences under the KR through plays, films, personal narratives, and courtroom witness testimonies. In these discussions, KR survivors often re-animate voices of KR soldiers to tell their stories, mimicking how the KR spoke to and treated them. In addition to the communist voice, survivors frequently re-animate their KR captors with Khmer's non-honorific register, the lowest register level that is often associated with anger and condescension.

Because such language-use goes against the KR period's language policy of equality, I analyze instances in which Cambodians enact KR voices to examine their collective memories about KR language-use. What do these re-enactments and performances tell us about how Cambodians remember the KR? Were KR cadres communist revolutionaries, cruel torturers, or both?
Presenter: Cheryl Yin (Carleton College, Department of Sociology & Anthropology)

>trad wife, nice house, healthy kids: Discursive violence, narrative and memory on 4chan's /pol/: The figure of the "trad wife," or "traditional wife" is a recurring topic of discussion on the "politically incorrect" subforum of the infamous website 4chan, an anonymous imageboard forum. Though definitions vary, a "trad wife" typically encompasses expectations or desires for an adherence by women to "traditional" expectations of passiveness, femininity, and sexual subservience. Engaging with research data from 2020, and supplemented with current examples on 4chan, this paper explores the discursive violence (Nast 1997) embedded within the "trad wife" narrative that is in constant, longstanding circulation on 4chan's /pol/ or "politically incorrect" board. Further, I argue that the circulation of the "trad wife" discourse creates a narrative memory of nostalgia, which is mobilized to justify and perpetuate far-right cultural and political ideologies. While this term has been in circulation (and strong criticism) on other social and digital media platforms such as TikTok, I focus on the construction of this role through the users of a self-consciously aggressive website, which constructs its own specific brand of anonymous masculinity. Through these, I unpack the way in which "locker room" brands of masculinity, which is in combination with both the chaos embedded within /pol/'s collective memory and a continually negotiated far-right cultural narrative circulated in this space, contributes to a collected, narrated desire and self on 4chan. Presenter: Dillon Ludemann (University of South Carolina, Department of Anthropology)

Embodied shamanic narratives of eco-catastrophic visions in northern Peru: Sentient landscapes in Northern Peru, seen to have the capacity to feel and act, can experience the end of the world, and help forge views of a post-apocalyptic utopian future as a re-emergence of an indigenous past. I analyze how this takes place through the narratives of ecocatastrophic visions experienced by two shamans (curanderos) possessed simultaneously by Shimbe (the queen of the Huarungas, Andean enchanted lakes (encantos), and by

Cuculicote, a coastal mountain ancestor-healer (apu). The embodied dialogical narratives between these two shamans illustrate how apus, encantos and the curanderos who embody them feel that modern society's project of indefinite growth and progress is coming to an end, that the breakdown of relations is irreparable, and humanity should be destroyed. In these narratives, the end of humanity indicates a new beginning, a turn toward a better, more equitable world without humans. Curanderos predict a millenarian, cyclical Andean Pachacuti, the return of a space-time of the past ruled by sentient places that would overturn the space-time of modern industrial civilization creating a new world order where the future is ruled by the indigenous past. Christophe Bonneuil describes this eco-catastrophic narrative as one that calls for a radical change in dominant ways of living, consuming, and producing. But, for the apus an encantos who voice their concerns through the shamans, the effects of changing modern industrial ways of living and reengaging in social relations with apus and encantos will be felt in the postapocalyptic era without humans. Risk and Extraction: New Discussions of Labor Precarity

8:00 AM - 9:45 AM

TMCC - 206 D

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Chia Yu Lien (Washington University in St. Louis)

PRESENTER:

Christian Zlolniski (University of Texas, Arlington, Department of Sociology & Anthropology), Chia Yu Lien (Washington University in St. Louis), Jaehoon Bae (University of Pittsburgh, Department of Anthropology), chengwei chen

DESCRIPTION:

Papers in this session explore and reimagine the idea of precarity in contemporary work through a range of global examples. The ethnographic examples invite a comparative look at the use of the precarity in new anthropological research on work, and its complex relationship to other timely and emergent issues like new technologies, climate change, labor rights and unionization, and healthcare. Examples in this session include: app-based on-demand care work in the US;

identity and union membership among South Korean food delivery drivers; the relationship between environmental exploitation and labor precarity as seen through beach pebbles gathered in Mexico and sold the US; and the challenges and opportunities of highly skilled Chinese immigrants settling in California's Silicon Valley.

Pillaging the Commons: Extraction and Commodification of Mexican Beach Pebbles for US Markets in the Age of Climate Change: This paper discusses the extraction of beach pebbles from Mexico exported to the United States driven by the demand for environmentally friendly materials and 'aesthetic' landscapes. Extractivist projects that exploit natural resources for commercial purposes embody what has been called 'the logic of plunder.' This analytical approach focuses on the private appropriation of public goods for profit in the private sector, and the socio-environmental consequences of extractive projects across international borders. From this perspective, the exploitation of natural resources for export markets amount to 'transnational appropriations' that take advantage of access to such resources, the exploitation of labor, and lax environmental regulations in the regions of extraction. In Baja California, the extraction of beach pebbles is the main source of income for many Indigenous workers, who constitute an army of invisible workers employed in the informal economy in rather precarious conditions along the coast. Marketed as 'Mexican beach pebbles' in the United States, they are sold in large specialty stores and in smaller retail businesses for residential landscape projects in metropolitan areas. I argue that the importation of natural resources from Mexico to face water scarcity and arid landscapes in the United States has fostered new forms of labor precarity associated with extractive 'green industries'. By examining the extraction and commercialization of Mexican beach pebbles as a transnational commodity, I delve into the relationship between environmental exploitation and labor precarity in the commodification of natural resources for the green economy. Presenter: Christian Zolniski (University of Texas, Arlington, Department of Sociology & Anthropology)

Uberized nursing: the political and legal construction of app-based on-demand care work in Missouri, USA: This article examines the regulatory process for app-based on-demand care work in Missouri, USA. In April 2022, the Missouri Senate held a hearing on two bills concerning gig nurse (de)regulations: Bill 1011, proposed by long-term care resident advocacy groups and nursing home trade associations; and Bill 909,

proposed by gig care companies. The former mandated that gig care companies supplying nurses to long-term care facilities should report to and be supervised by the Department of Health and Senior Services. It also stated that nurses working via these platform companies should be reclassified as employees, not independent contractors. In contrast, the latter proposed that these nurses should continue to be classified as independent contractors. Notably, unlike other gig workers, such as drivers or taskers, gig nurses and their union representatives were absent from this particular hearing and the entire legislative process. Drawing on legal and anthropological scholarship on gig work classification and contingent nurse regulations, this article addresses the following questions: Are gig nurses employed? By whom are they employed? To whom does it matter? The analysis is based on archival data collected from legislative bills, legal cases, and gig companies' terms of service and ethnographic data gathered from meetings held by and interviews conducted with stakeholders, including but not limited to gig nurses and their managers, union organizers, gig company representatives, and patient advocacy groups. The article argues that gig care should be conceptualized differently from other app-based on-demand work due to three distinctive features. Firstly, the end consumers of gig nursing services are not only nursing home residents who receive the service but also long-term care facilities, which are required by the federal government to maintain a certain nurse-to-resident ratio. Secondly, most nursing home residents fall outside the realm of rational consumers who are able to rate the services they receive. As a result, long-term care facilities are responsible for overseeing the quality of care. Thirdly, the payers of gig nursing services are not the residents but long-term care facilities that receive most of their funding from federal and state governments. These three features-unforeseen in other gig work-generate unique risks, liabilities, and regulatory requirements involving care recipients, care providers, nursing facilities, and the state. By examining the legislative process and the interests of different stakeholders, this article contributes to the interrogation of the politics of gig work regulations by challenging the current framework built from non-care gig work. Presenter: Chia Yu Lien (Washington University in St. Louis)

Everyday Struggle of South Korean Food Delivery Worker: This paper explores the precarious life and the agency of South Korean food delivery workers who rely mostly on food delivery platforms for their livelihood. When it comes to labor rights and life insecurity, full-

time food delivery workers embody the characteristics of the 'precariat,' the growing mass class globally positioned below the old proletariat according to former ILO economist Guy Standing. Beyond this objective description of 'precariat,' my analysis focuses on the narratives of individual workers who, despite their awareness of the exploitative nature of food delivery work, identify themselves as full-time delivery workers. Using Bourdieu's concepts of habitus and field, I examine the experiences of food delivery workers largely by focusing on their reflections on pursuing this line of work and their everyday struggles in the face of the adverse working conditions of food delivery platforms. I argue that these unionized workers express a sense of pride in their food delivery work, and in their union membership. Their goal is to achieve recognition as respectable citizen-workers in society. Presenter: Jaehoon Bae (University of Pittsburgh, Department of Anthropology)

Phd Student: Transnational Precarity: Identity, Adaption, and Intersectionality among Highly Skilled Chinese Tech Workers in California's Silicon Valley Chengwei Chen, Anthropology, The Ohio State University This project, based on preliminary dissertation research with highly skilled Chinese immigrants settling in California's Silicon Valley, explores their experiences and asks how they navigate their successes as well as they the challenges they face. I develop the concept of transnational precarity to capture this dynamic and the transience that emerges as they negotiate identity, labor and gender while becoming a part of the American Middle Class. Transnational precarity encompasses intersecting marginalizing conditions that heighten insecurity, inequalities, and vulnerability and emerges from the contests that surround first, their immigration status and interactions with employers, migration agents, and US immigration regulations; second, the labor market and assumptions concerning their dedication as well as loyalty to the US; and third, gender identity and competing intersectionalities that emphasize both Chinese and North American mythologies and are informed by the contradictory expectations of family support on the one hand and independence on the other. Recapitulate historical inequalities that harken to the 19th century and the Chinese exclusionary act, my paper reveals the challenges and opportunities faced by highly skilled Chinese tech workers beyond their coding careers. By engaging with community leaders, hometown groups, outdoor groups, and other interests, this project delves into the experiences of these workers and the dynamics of transnational precarity. Simulation as Method: Rethinking Participant-Observation in Anthropology

8:00 AM - 9:45 AM

TMCC - 712

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Paige Edmiston (University of Colorado, Boulder, Department of Anthropology)

CHAIR:

Danya Glabau ,Kenneth MacLeish (Vanderbilt University)

PRESENTER:

Lauren Barrett (University of Colorado, Boulder, Department of Anthropology),Georgia Butcher (University of Colorado, Boulder),Paige Edmiston (University of Colorado, Boulder, Department of Anthropology),Arielle Milkman (University of Colorado, Boulder, Department of Anthropology),Grant Otsuki (Victoria University of Wellington),Tom Ozden-Schilling

DISCUSSANT:

Andrea Ballestero (University of Southern California, Department of Anthropology),Lisa Messeri (Yale University, Department of Anthropology)

DESCRIPTION:

Our world today is increasingly a world of simulations. Surgeons hone their craft using virtual-reality systems (Prentice 2012). Soldiers participate in training simulations to prepare for war (Stone 2019). Earth dwellers attempt to experience human existence on Mars (Black 2018; Messeri 2017). For anthropologists in the field, simulations present a potentially new form of participant-observation, a way to access what it might be like to 'do' when the (non-simulated) doing is - for a variety of reasons - inaccessible to the anthropologist (Butcher 2022; Gusterson 1997). Simulation-as-method undoubtedly harbors limitations: Like other forms of participant-observation, it does not generate pure 'representations' but invents 'partial truths,' and the stakes of participating (or simulating) are rarely, if ever, equivalent between observers and the observed (Behar 1996; Clifford 1986). So, what can anthropologists learn from participating in simulation-observation? How might it differ (or not) from other kinds of participation, and how might simulation complicate divisions between doing, knowing, and empathizing, and the virtual and

the real? How might reflecting on simulation-as-method shed new light on the place of participant-observation in anthropological knowledge-making? Drawing on encounters with simulation and modeling across a variety of field sites, from environmental and planetary science to virtual reality, digital health, and military drones, this roundtable will present flash ethnographies (McGranahan 2022; McGranahan and Stone 2020) to invite audience members 'into the simulation' followed by a discussion of the potentialities and pitfalls of simulation-observation in anthropology (Ballestero and Ross Winthereik 2021).

Storying Otherwise: On the Possibilities of Creative Ethnographic Writing. Session 1 of 4.

8:00 AM - 9:45 AM TMCC - 707

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Humanistic Anthropology

ORGANIZER:

Susan Frohlick (University of British Columbia, Okanagan, Department of Community, Culture and Global Studies)

CHAIR:

Laura Meek (University of British Columbia, Okanagan, Department of Community, Culture, and Global Studies), Susan Frohlick (University of British Columbia, Okanagan, Department of Community, Culture and Global Studies)

PRESENTER:

Kimberley McKinson (Vanderbilt University, Department of Anthropology), Chantal Croteau (University of Michigan, Ann Arbor, Department of Anthropology), Alexandra Diana Hanae Sastrawati (Princeton University, Department of Anthropology), Ana Dragojlovic (University of Melbourne), Lauren Griffith (Texas Tech University)

DISCUSSANT:

May Joseph (Pratt Institute), Lisa Hardy (Northern Arizona University, Department of Anthropology)

DESCRIPTION:

This roundtable will explore the burgeoning genre of creative ethnographic writing with a focus on storying otherwise. We take inspiration from McKittrick's (2021) insistence that stories are themselves interventions with world-making potential, prompting us to inquire if storying otherwise might create possibilities for telling

different stories and thus for potentiating and enacting different worlds. This question requires us to first recognize the ways in which disciplinary norms around knowledge-making and dissemination are entangled with anthropology's colonial histories and presents; the academy's neoliberal orientation; the imperial impetus behind state investment and funding; racialized, gendered, and heteronormative department cultures; differential distributions of risks and harms; and the non-innocent ways in which all these inhere in our body-minds. It also means that the choice of which stories we tell and of how we tell them matters, with stakes that are at once political, epistemic, ethical, and ontological (Hunt 2014, Meek and Morales Fontanilla 2022). Through storying otherwise there lies the potential to disrupt long-guarded boundaries including those between scholarship, politics, and creative writing. Reworking disciplinary practices around writing, this roundtable will explore storytelling as a form of speculative thinking-with-care (Puig de la Bellacasa 2012) that is committed to feminist, anti-racist, queer, and anticolonial worldmaking. In today's neoliberal academy, we face increasing demands for 'data,' in the form of objectified, rationalized, disciplined facts (Harvey and Moten 2013). Yet the work we do-- as fieldworkers, activists, teacher-scholars, community collaborators, and co-thinkers with myriad others--often unfolds in ways that resist and refuse the dictates of data-making (Tuck and Yang 2014). Such excesses may reside as ellipses, questions, disconcertments, or half-thoughts that populate our fieldnotes but never make it into the structuring form of journal articles (Frohlick 2022). A story, on the other hand, can remain open, unresolved, and unsettling. This roundtable thus experiments with storying otherwise to disrupt enclosure and to harness the creativity, willfulness, and possibilities of stories that, through their refusal of reductive and instrumentalizing logics, 'do' other things. This roundtable will engage with these possibilities in a wide variety of ways. Panelists will reflect upon excesses in our fieldwork and fieldnotes to ask what storying these moments might potentiate. We will offer a critique of writing conventions that is performed through storying otherwise-- such as reading a partially 'cooked' poem or a narrative that has been stitched across/between 'raw' fieldnotes. Our roundtable will also consider how storytelling reworks prevailing epistemological frameworks, ontological certainties, and disciplinary norms; how telling certain stories in certain ways (and perhaps, opting not to tell others) facilitates ethical, interpersonal, and community obligations; and the possibilities and limitations of deploying stories in various registers-- as knowledge making, public

engagement, or worlding practices, to name a few. Together we explore how storying otherwise brings knowledge, entities, relations, worlds into being through its enactment and how this endeavor might move anthropological 'work' into public audiences and spheres beyond the academy.

Tax transformations: Fiscal technologies of transfer, categorization, and conversion

8:00 AM - 9:45 AM TMCC - 717 A

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Miranda Sheild Johansson (University College London)

CHAIR:

Horacio Ortiz

PRESENTER:

Matti Erasaari ,Erica Bornstein (University of Oregon),Gustav Kalm ,Miranda Sheild Johansson (University College London),Charles Dolph ,Maximilien Zahnd (University College London, Department of Anthropology)

DISCUSSANT:

Justin Richland (University of California, Irvine, Department of Anthropology)

DESCRIPTION:

Taxation is a transfer of resources and a way to assign meaning and value, as well as to categorize. Fiscal systems convert both the value and essence of that which is transferred along with the parties involved in the transfers. For instance, surplus value of labour may be transformed into infrastructural investment, or public revenues into debt repayment, while taxpaying citizens may become benefit recipients, auditors of government expenditure, or subjects of fiscal austerity. Likewise, fiscal systems produce legal and social categories that have ramifications throughout society, such as property, residency, and legal labour. Building on analyses of the fiscal politics of converting state debts into objects of financial speculation (Bear 2015; Roitman 2005); transformations of class and citizenship via fiscal technologies (Sheild Johansson 2022); transparency projects enabled by taxation and attendant value transfers (Dotson 2014; Willmott 2020), and moral debates over practices and imaginaries of tax systems (Makovicky and Smith 2020; Willmott 2022), this panel aims to bring together ethnographic data and analytical

insights of taxation to ask: how do fiscal technologies enable or disable transformation of people, values, and societies? And how are fiscal systems implicated in historical, present, and potential political shifts and matters of justice? The papers in the panel explicitly deal with these questions by exploring, for instance, the way that tax categories of charitable status shape political dissent in India; or how taxpayer subjectivity allows for regional and racialised grievances in Bolivia, and produces individualised relations of care in Sweden; the practices through which tax arbitrage produces national and international notions of redistributive justice; and how colonial tax impositions in Fiji produced and converted measures of value, while in Alaska they transformed rurality and indigeneity through fiscal categorisation. In line with this year's theme of 'transitions' and the productive in-betweenness conjured by the prefix 'trans,' our panel engages with taxation, and fiscal flows more broadly, as generative of imaginaries and practices of transformation, through transfers, categorization, and conversion. Tax Units as World-Making (Fiji): As stated in the panel abstract, taxation is a transfer of resources and a way to assign value. But it is also an exceptionally authoritative regime for the measure of value. My talk seeks to outline why the selection of measuring units or standards also constitutes a significant transformation. The issue has been widely discussed in the context of state moneys (from the Bohannans to Graeber, and beyond), but less so with regard to the rest of the potential and/or historical media available for taxation

purposes. In my talk, I will present a brief history of taxes in Fiji to illustrate some of the ways in which the medium of tax collecting has been at the root of large-scale transformations that are perhaps best described as “world-making”. Although my talk covers a range of pre-colonial and colonial-era shifts in the collection of public revenue, it seeks to shed light on the possibilities of a unit-centred approach to value quantification more generally. Phenomena such as financialisation, datafication, or carbon trading reveal that we are undergoing a rapid expansion in the range of potential vehicles of valuation at our disposal. It is imperative that we also develop an understanding of the consequentiality of such transformations. Presenter: Matti Erasaari

Charitable Purpose as a Political, Regulatory Frame in India: Charitable purpose is a tax category, a regulatory frame, and a space of civil society activism in India. It is also a legal category through which nonprofits and philanthropy are regulated. This is the story of a tax category and its transformation. It begins in the colonial era when Societies and Trusts were introduced to delineate public institutions from private companies. During struggles for independence, charitable purpose and its public utility became relevant to nationalist reformers as they formed hybrid political-charitable institutions. In the Emergency, the Foreign Contributions Regulation Act (FCRA) restricted political influence through the regulation of foreign philanthropy. As India globalized, international NGOs agitated for rights-based laws in collaboration with state actors, and then through economic liberalization the government tasked the corporate sector with social development via corporate social responsibility subsidies. Today, a proposed tax overhaul lies on the horizon, heralding once again to reconfigure relationships between nonprofits, corporations, and the state. In each of these eras, civil society and the state have vied for legitimacy via control over charitable institutions, and in the process philanthropy for nonprofit work has shifted, from supporting rights-based engagement to service provision, from endorsing activist agendas to subsidizing corporate foundations. In a quiet revolution of rules, charitable purpose has become a key tenet of nonprofit regulatory policy and a technique for controlling dissent. Presenter: Erica Bornstein (University of Oregon)

Tax Arbitrage and Planetary Justice: Political Visions of State Territory in Guinean Mining Agreement: Jurisdiction has many radically different roles in world economy. For the most part, state territory and jurisdiction are naturalized as the normative scale of political action. For

multinational corporations and very wealthy individuals, however, jurisdictions can be laced together in myriad ways in complex legal structures to increase profits, decrease liability, hide beneficial ownership, strengthen shareholders vis-à-vis management, etc. Whilst most individuals and smaller companies have no choice but to accept the tax regime of the country in which they are located, big corporations and very wealthy individuals spread their real or fictional activities across multiple jurisdictions with techniques like transfer pricing, base erosion and profit shifting to decrease their tax burden in any single country. Tax consultants in couple European cities and British Crown Dependencies and Overseas Territories help them do so. Of all the regions in the world, countries in Africa have the lowest ratios of government budget to GDP. They therefore suffer the most from international tax fight. In this presentation, I examine how the territorial bounds of political belonging are viewed in international taxation. I compare how Guinean officials have viewed the tax protocols in their investment agreements with how international mining companies and their lawyers in Paris describe those same legal structures. I contrast the Lego constructor like vision of the legal infrastructure of business held by Parisian project finance and tax lawyers with the Guinean officials’ deontic vision of functionaries’ duty to the nation. Both have implicit unarticulated visions of international distributive justice. Presenter: Gustav Kalm

Transforming care and debt through taxes: The individualization of fiscal subjectivity in Sweden : Heralded for its ability to redistribute wealth, the Swedish fiscal system is arguably also characterised by its creation of a highly individualised fiscal citizens whose relationship with the state avoids mediation through kin relations. Based on ethnographic work with taxpayers in suburban Stockholm who belong to the so-called sandwich generation, that is adults who have caring responsibilities for children under 18 years old and parents over 65 years old, this paper explores the relationship between kin-based care and the perspective of the unitary taxpayer over a lifetime. Specifically, the paper looks at how the universal benefits of student loans and grants, parental leave, childcare, and adult social care are awarded based on the notion that the individual beneficiary will pay this back during their time as a taxpayer, in effect the taxpayer can be understood to care for themselves. For instance, parental leave is not a benefit awarded to the person on parental leave, but to the child who is cared for, and student loans and adult care are not means tested nor is any assumption made about a student’s

ability to receive support from a family member, or the capital held by an individual or family that can contribute towards adult social care. In exploring the fiscal technologies involved in the careful configuration of the individualised benefit recipient and taxpayer, and any person's continuous internal transformation between the positions of debtor and creditor, this paper examines the impact of this on inter-generational notions of care and debt. Presenter: Miranda Sheild Johansson (University College London)

Fiscal grievances: taxes, education, and race in the forging of Bolivian regionalism: A common intellectual and political discourse about taxation in Bolivia decries its myriad perceived injustices: urban professionals in the "formal" economy supposedly dutifully pay taxes while coca growers, mining cooperatives, and others operating in the "informal" economy do not, or that tax collection allegedly merely finances government corruption. Drawing on ethnographic fieldwork in the lowland Bolivian city of Santa Cruz, this paper instead explores how taxation provides a platform for local elites to articulate a regionalist political-economic project in terms of racialized grievances about education. Beginning in 2015 and intensified by the Covid-19 pandemic, Bolivia's central government, with its capital in the Andean highlands of La Paz and helmed by the Movement Towards Socialism (MAS), has undertaken to transform the national tax service, modernizing and digitalizing its administrative operations to increase the state's fiscal capacity in ways which make the tax structure more progressive. Tax talk about these initiatives with Santa Cruz business and political leaders, meanwhile, repeatedly turned to themes of education in which transnationally circulating racial imaginaries are mobilized and reformulated. This paper thus develops the notion of "fiscal grievances" to capture taxation as a key site in the forging of a translocal form of racialized grievance politics. In doing so, it suggests that rather than a clear claim by "taxpayer citizens" on the nation and its collective representative in the central state, the articulation of such grievances delineates a particular political imaginary of regionalist autonomy. Presenter: Charles Dolph

Remote Yet Colonized: Rurality, Indigeneity, and the Evolving Functions of the Alaska Net Income Tax: To what extent can a tax impact rurality in a settler colonial context? And, more generally, how do tax laws colonize remote Indigenous spaces? To answer these questions, the paper focuses on the history of the Alaska net income tax. I posit that the tax, throughout its life,

served two successive functions. First, it was one of Alaska's most efficient fiscal instruments, helping the territory become the forty-ninth US state. The tax then lost its revenue-raising importance and political dimension once statehood was secured and oil was later found on the Alaska North Slope, thus paving the way for more effective taxes. Yet the evolving role of the tax affected Alaska Natives who lived in rural Alaska and relied on subsistence activities. While the tax initially ignored them as taxpayers, changing economic and sociocultural conditions across rural Alaska made the presence of the tax in Alaska Native villages more ubiquitous. The paper argues that the tax—a colonizing legal instrument—helped transform rurality and indigeneity. It first did so through spatial exclusion and later through control at a distance. The history of the tax thus highlights Alaska's settler colonial history, which was not marked by displacement but rather by assimilation and spatial isolation from mainstream society. Presenter: Maximilien Zahnd (University College London, Department of Anthropology)

2-120

Temporalities of Conversion: Pace, Directions, and Contexts

8:00 AM - 9:45 AM

TMCC - 206 F

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Abdul Ottakandathil Puthen Peedikayil (McGill University, Department of Anthropology)

CHAIR:

Géraldine Mossière

PRESENTER:

Abdul Ottakandathil Puthen Peedikayil (McGill University, Department of Anthropology), Charles A. McDonald (Pace University), Mara Leichtman (Michigan State University, Department of Anthropology)

DESCRIPTION:

People move from one religion to another in response to quests and events of different scales and scopes, ranging from sudden encounters with the divine to marital alliances to social justice movements, to name a few. As (future) converts respond to and engage with these quests, events, and encounters and adopt a new faith, they (re)orient themselves in relation to other people: colleagues, family members, and communities, as well as in relation to time, space, clothes, body, and

politics. The panel examines chronologies entailed by these conversion-triggering experiences, the formal processes of change of faith, and reorientations of selves as a result. The panel also investigates temporalities implied by converts' re-construction of their past inspired by their relationship with their new faith and re-evaluation of their place in the world in relation to theological dimensions of the time in the new religion. In examining these temporalities articulated at different levels, the panel is interested in exploring continuities, discontinuities, reversals, returns, and gradual shifts that characterize and are entailed by conversion. The papers in the panel analyze how the pace and directions of the process of conversion are shaped in response to geopolitical conditions, the flow of capital, and inter-religious and racial relations in national contexts. Exploring the temporalities of conversion and the contexts that shape them invites our attention to the morphology of a form of transition that characterizes our increasingly mobile world: religious conversion. The papers in the panel demonstrate that people who experience transition weave together the past, present, and future in ways that a linear conception of change cannot adequately understand.

Prefiguration of the present and reappearance of the past in the lives of converts to Islam in India: This paper examines how the past and present inflect each other in the lives of converts to Islam in South India. Drawing on my interviews and informal conversations with converts to Islam in Kerala, I explore how converts identify certain dispositions, forms of abstinence, inclinations to perform some good deeds, and dreams during their life before Islam as having prefigured their acceptance of Islam. Converts attribute the emergence of such attitudes and encounters to the divine will to guide them to Islam, to the intervention of friends and colleagues, and to the actions they have undertaken themselves. Whereas in this retrospective reading of their life, the past is understood to have foreshadowed the present, they also highlight how sinful desires and tendencies from the past reappear or persist in life after conversion to Islam. Such remnants of their past are at times labeled disapprovingly as traces of jahiliyyah (literally, ignorance), as survival from the morally reprehensible sinful life in the past, which needs to be progressively contained and overcome. At other times, they are seen as natural to human beings, as creatures made of 'flesh and blood', revealing the limits of the human capacity to transform themselves. In attending to these ways in which the past and present inflect each other and in foregrounding the recognition of innate propensities of human beings to commit sin, I aim to

complicate conceptualizations of conversion as either rupture from or continuity of the past. Presenter: Abdul Ottakandathil Puthen Peedikayil (McGill University, Department of Anthropology)

Queer Returns: Conversion and Kinship in Jewish Spain: What does it take to convert in cases where conversion is conceived as the return to a people, a place, a way of being in the world? Based on more than a decade of fieldwork with converts to Judaism in Spain, this talk attends to the temporal qualities of remaking oneself and one's relation to others. Historicizing and diverging from anthropological analyses that have prioritized belief, speech, and the Pauline model of conversion, it investigates how Jewishness is learned and taught in Reform Judaism. Offering an ethnographic counterexample to studies of conversion rooted in Christianity and Islam, it shows how "returnees"—many of them queer—experience Reform Judaism as a distinct ethical approach to subjectivity and modernity. By hewing close to the ways that conversion is narrated and enacted by my interlocutors, the talk exposes the limits of conventional anthropological approaches to conversion, which until quite recently have tended to ignore Judaism altogether. Weaving together several conversion narratives, I propose a more nuanced theorization of the matrix of freedom and constraint that Jewish converts and religious authorities face in their pursuit of "returns." In particular, I explore forms of temporal reckoning aimed at resolving tension between "religious" and "racial" definitions of Jewish personhood. The talk concludes by arguing that Jewish converts—and the liberal congregations that have welcomed them—are transforming Jewish life in Spain in ways that complicate standard narratives of "return" and "revival." Presenter: Charles A. McDonald (Pace University)

Transnational Kuwaiti Giving and Shi'a Conversions in East and West Africa: What is the cultural and religious impact of Gulf funding in Africa? Whereas there is growing scholarship on Sunni Islamic NGOs on the continent, little is known about their Shi'i counterparts. This paper examines the transnational influence of Kuwaiti Shi'i Islamic charitable donations in Tanzania and Senegal. Unlike Gulf Salafi NGOs in Africa, which are managed from Middle Eastern headquarters, the two Shi'i NGOs presented here have become indigenous African organizations. In comparing the origins, objectives, and networks to Kuwait of Ahl al-Bayt Centre (ABC) in Tanzania and Institute Mozdahir International (IMI) in Senegal, this paper demonstrates Iran is not the only Shi'i player in town. Through international giving,

Kuwaiti charities as well as individual businessmen help shape the proliferation of Shi'i identity in Africa, yet perhaps unwittingly also contribute to local power politics. As a minority within a minority, ABC works within the context of the marginalization of Muslims in religiously-mixed Tanzania, positioning its turn towards the Middle East within a history of ethnic and racial tensions. In Muslim-majority Senegal, IMI competes for followers with the local Sufi orders. Shi'i converts in both national contexts tap into global ties that lead to opportunities for their community's empowerment. This analysis highlights the interconnection of diverse local, national, and transnational actors in social welfare provision in two understudied contexts with distinct laws and divergent histories of the spread of Shi'i Islam. As such, Tanzanian Shi'a are more connected to the marja'iyya, the clerical establishment in the Gulf, than are Senegalese Shi'a. Presenter: Mara Leichtman (Michigan State University, Department of Anthropology)

The Mediators of marginalization: Relaying and re-interpreting culturally reductionist discourse, part 1

8:00 AM - 9:45 AM TMCC - 802 B

Oral Presentation Session

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Greg Feldman (University of Windsor)

CHAIR:

Kalyani Menon (DePaul University)

PRESENTER:

Raghuraman Trichur (California State University, Sacramento, Department of Anthropology), Nancy Ries (Colgate University), Darren Byler (Simon Fraser University), Lynda Dematteo (CNRS), Hugh Gusterson (University of British Columbia)

DESCRIPTION:

This two-part panel examines the role of people who relay and re-interpret the messages, agenda, and priorities of culturally reductionist politics that enable what is variously called populism, fascism, authoritarianism, or even totalitarianism. While the so-called 'charismatic leader', perched at the top, seems to operate as a singularly galvanizing force, a wide variety of other players transmit, interpret, and interpolate messages between such leaders and their various

publics. These mediators could be found in elected offices, governmental bureaucracies, places of worship, the media, local grassroots organizations, the arts, and business among other places. Somewhat similar to Gramsci's 'organic intellectual', they serve to consolidate broader structures of socio-political power representing those claiming to be marginalized by the mainstream media, traditional governing institutions, and national and global elitism, although their politics are more likely today to serve right-wing causes. This panel will investigate specific mediators living, working, and operating in places as different as India, the US, Cambodia, Russia, Hungary, India, and China among others. On the one hand, papers will highlight the variety of local historical contexts in which reductionist politics foment. They will address such questions as what endows mediators with particular kinds of authority and powers of persuasion that they use to consolidate unidimensional views of citizenship and belonging. On the other, they will consider the family resemblances between seemingly disparate ethnographic cases. These cases require us to explain the global proliferation of culturally reductionist politics in a historical trajectory accounting for the rise of the nation-state, the expansion of colonialism, and the spread of capitalism. For example, the colonial introduction of categories of race, tribe, or ethnicity prepared the ground for post-colonial conflict, but these developments mirrored processes of nation-state building in Europe and the Americas that similarly enabled xenophobia, racism, and segregation. Similarly, underlying culturally reductionist politics is a skepticism toward globalization, which often gets framed as the dilution of the race, nation, or religion by predatory financial interests from abroad. Viewing mediators in this dual context allows us to gain a richer perspective of political extremism worldwide. It prepares us to ask, for example: how their networks integrate across national boundaries creating global alliances for defensively nationalistic politics; how they borrow and learn from each other despite national contexts; and how they unite powerful business interests with people living in poverty. A double panel allows us to grasp the global scale of culturally reductionist politics and better understand how it has become the fulcrum of an early twenty-first politics that aims to silence political opposition, normalize cultural reductionism, and centralize executive authority. The panels support the mission of Today's Totalitarianism, an anthropological project that aims to provide commentary on these trends that is accessible to activists and policymakers alike.

BJP's 'India First' agenda: Weaponizing bureaucracy to service ethnic majoritarian politics: Authoritarian regimes often present a unified project. However, a closer look suggests that these regimes are ineffective without their ability to collaborate or co-opt entities that operate beyond the immediate purview of their authoritarian ideology. In other words, the thin veneer of ideological unity of the regime hides a careful articulation of entities with diverse objectives and agendas. The Bharatiya Jantha Party (BJP) under the leadership of Narendra Modi, came back to power in India in 2014. Re-elected for another term in 2019 Modi surprised observers by nominating Jaishankar Subrahmanyam, a highly successful career diplomat who was close to retirement, to be the new Minister for External Affairs. Since then, the BJP has adopted an 'India first' approach to international affairs and successfully navigated multiple international crisis, including COVID-19 and more recently the ongoing sanctions imposed by the West on Russia in response to its invasion of Ukraine. Approaching the 'India first' agenda as a discursive formation, I will illustrate how BJP articulates with the broadly defined bureaucratic community, especially those segments within international diplomatic circles and their effort to move away from Nehruvian moralpolitik to realpolitik mode of thinking. I hope to analyze how these diplomatic inroads translate into BJP's efforts: 1) to legitimize and broaden its appeal to a wider audience; and 2) to transition from being a political party driven by concerns of the ethnic majority to one that represents broader concerns of a contemporary nation-state. Presenter: Raghuraman Trichur (California State University, Sacramento, Department of Anthropology)

Spokeswomen of Hate: Genocidal Propaganda in Russia's War on Ukraine: Night after night, Russian television "agitainment" stars – many of the top ones female – joke about the suffering the Russian military inflicts on Ukraine. Official state propagandists exhort soldiers to escalate violence, exterminate Ukrainians, and even initiate global nuclear war, because, as lead propagandist Margarita Simonyan said in April 2022, "we all have to die sometime anyway." Elite propagandists celebrate military atrocities with performative glee in carefully orchestrated television, radio, and online journalism campaigns, carried further via coordinated and spontaneous social media communications. The synchronized activity of state propagandists and their many sidekicks – pro-war scholars, scientists, musical artists, poets, and other public figures – helps normalize the Kremlin's exterminist project. The mediation of the war through

televised rhetorics of violence is not incidental; it is a core element of the power created through the celebration of injury (in the sense that Elaine Scarry theorizes injury in *The Body in Pain*). The mocking, disinformational, sadistic rhetorics of violence shift the polarities of social morality and enlist a portion of the public in the sacrifice of sons and the acceptance of apocalyptic scenarios. In today's Russia, mediated extremism systematically creates cognitive and affective change in mass publics. How might anthropologists interrogate the structures of rhetorical violence in Russian official media campaigns, and analyze them in globally comparative and gendered perspectives? By what means can digital ethnography trace and analyze the regime loyalty these elite female propagandists generate? Presenter: Nancy Ries (Colgate University) Free Form Box-ticking: Interfaces of Bureaucratic Power in China's Internment Camp Zone: This paper describes an intensive shift in information-driven civil policing of Muslims in contemporary Northwest China. Drawing on three state-published volumes of exemplary essays and other documents written by non-Muslim surveillance workers in 2017-2019, it examines the practices and narratives of bureaucrats as hundreds of thousands of such workers entered Uyghur and Kazakh villages. Focusing particular attention on evaluative forms used to calculate trustworthiness and discussions of surveillance platform interface navigation, the paper shows how forms of knowledge were shaped by the structuring narratives embedded in surveillance operation tools. Thinking in parallel with scholarship on institutional power from Alan Feldman, David Graeber, Akhil Gupta, Alberto Toscano, Karen Ho and others the paper demonstrates how institutions and states build the capacity to dominate and colonize. Ultimately it argues that digital interfaces and paper forms meant to streamline and simplify at scale the mass evaluation of Muslim populations, shaped the political subjectivities of both the surveilled and state workers. These media forms shape what life stories can be told. As they are digitized and abstracted, the violence they produce is intensified down the chain of knowledge production. The lives of the surveilled becomes data, the measure of local officials is found in numbers achieved. All of this produces a perverse freedom within the forms and interfaces that results in a tyrannical competition to be perceived as a model of bureaucratic innovation in state violence. Presenter: Darren Byler (Simon Fraser University)

Local Populist Radio as Unnoticed Extremist Mediators in Quebec City and Montana: Local radio stations are key mediators for the dissemination of extreme right-

wing ideas in many cultural contexts. They are often neglected as an object of study, especially since social media has become the focus of political concerns. However, they play an important role in broadcasting and consolidating extremist worldviews, as observed in all my fieldwork (Lombardy, Quebec and Mon-tana). Starting from an analysis of the rhetoric used, I will show how protest speeches feed the right-wing reaction in the two North American contexts. "Residual media" constitutes a very fruitful object of investigation for anthropologists because it allows them to bring to light the frustrations feeding populist resentment. It builds a loyal audience of localist and anti-government voters. It is also often an outlet for fake news and conspiracy theories. The voices of populist radio hosts are characterized by their cultural idiosyncrasy. Through daily broadcasting, they create a strong feeling of identification and end up cementing real social bodies on a local scale. Their talk shows carry all the dubious passions that lurk beneath the normal appearances of the mainstream media. By doing so, they reinforce the circle of sexism and racism of the common man in a mirror of self-indulgence. Listeners love them precisely because they break with political correctness and give them a sense of freedom. Local radio stations can also serve as springboards for political careers. Presenter: Lynda Dematteo (CNRS)

Populist Oligarchy in the U.S.: More a populist oligarchy than a properly functioning democracy, the U.S. is increasingly characterized by widening income inequality, political polarization and paralysis, and a massive regulatory apparatus that has failed to protect the citizenry from opiate addiction, environmental disaster, gun violence, and financial insecurity. The hollowed out apparatus of the democratic state is now worked by an oligarchy of financial, energy, industrial, military and social media elites who jostle for control of the spoils while distracting those below with incitements to discourse about cancel culture, wokeness, transgender politics and celebrity gossip. The role of oligarchical money, posing as the currency of democracy, in the U.S. system makes systemic change difficult. Meanwhile, compared to other oligarchies, the blanketing of US society with social media offers elites new tools of distraction, misdirection and disinformation that shields them from an informed public. While U.S. politics is full of lively debate, in a classic example of Foucault's "incitement to discourse," very little of this debate is about the unprecedented concentration of wealth and power and the mechanics of oligarchical rule itself. These remain concealed in plain sight. This is explored through the case study of

U.S. policy on opiates. The U.S. has the worst opiate addiction and overdose rate in the world because the pharmaceutical industry used its influence to weaken regulatory agencies and laws. Meanwhile politicians who did nothing to prevent the crisis exploited it as a talking point in their election campaigns. Presenter: Hugh Gusterson (University of British Columbia)

The Political Event in Anthropology: A Roundtable

8:00 AM - 9:45 AM

TMCC - 715 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Francis Cody

CHAIR:

Amahl Bishara (Tufts University, Department of Anthropology)

PRESENTER:

Francis Cody, Yasmeen Arif, Nusrat Chowdhury (Amherst College), Julie Chu, Lisa Mitchell (University of Pennsylvania), Veena Das (Johns Hopkins University, Department of Anthropology)

DISCUSSANT:

William Mazzarella (University of Chicago, Department of Anthropology)

DESCRIPTION:

In the time since Veena Das gifted anthropology with the concept of the 'critical event' to understand how traditional categories of anthropological analysis are transformed when 'new modes of action come into being,' the discipline has posed difficult questions about 'where' and 'when' the study of events takes place. More recently, Elizabeth Povinelli has argued that we must rethink the 'multiplicity and collapse of forms of the event' insofar as the concept has been grounded in the violent roots of Western liberal epistemologies and ontologies. The political event's claim to universality has been questioned by many in our discipline, but it is not for that reason that events have no place in critical theories of social life and transformation. This roundtable asks what a contemporary anthropology of the political event might look like in an age defined by environmental approaches to media, infrastructural techno-politics, resurgent authoritarian populisms, the

politics of 'the planetary,' and renewed interrogations of the scale and quality of colonial domination.

Tracing the Historical Trajectories of Black Activism

8:00 AM - 9:45 AM **TMCC - 203 A**

Oral Presentation Session

REVIEWED BY:

Association of Black Anthropologists

ORGANIZER:

Kenneth Williamson (Kennesaw State University, Department of Geography & Anthropology)

PRESENTER:

Allyson Ganster (CUNY, The Graduate Center), Kenneth Williamson (Kennesaw State University, Department of Geography & Anthropology), Katie Hardin

DESCRIPTION:

This panel probes the many ways that Blackness is being made and re-made historically and in the present. Situating Blackness and Black nationalism, they explore the use of digital heritage as an approach to Africana archaeological research; the repression of Black subjectivity; alternative forms of education and the preservation of Black history; Participatory Action Research with Black Brazilian Activists; and the ways that radical Black feminist community work is halted.

Immanent Threats: On Surveillance, Black Sociality, and the Expansion of the Carceral State: In this paper, I examine New York Police Department surveillance documents of Black Panther Party activities in the 1960s and 70s, and provide an ethnographic analysis of New York's 'hip-hop police.' I argue that the trajectory toward the surveillance of gang activity and hip-hop artists in the present is part of a historical continuum regarding the repression of Black subjectivity in general, and Black sociality in particular. This continuum reflects state efforts to quell the potentiality of Black liberation movements in the mid-twentieth century- movements which remain antagonistic to the US nation-state and global capitalism. In other words, it was paramount that the broader carceral apparatus and militarism expand to match the looming specter of Black freedom in the US and African independence abroad. The ultimate goal of these efforts-from infiltration to assassination- functions to contain and control Black capacity. Put differently, these strategies neutralize the simultaneous immanent and imminent threat to the state and civil society's imagined futurity. As such, it becomes an imperative for

the carceral state and its agents to discipline and manage Black social life insofar as it upholds social death and anti-Black, capitalist logics. In tracing the ways in which counterinsurgent strategies of 'domestic warfare' (Burton 2021) justify the expansion of the carceral state and its resonances, we glean a better understanding of how forms of Black gathering, whether for creative self-expression or political ends, constitute an existential threat in the eyes of the state. Presenter: Allyson Ganster (CUNY, The Graduate Center) Long-term engagement with Black Brazilian Activists: This paper reflects on long term research and engagement with Black Brazilian Activists in Salvador, Bahia. The initial research included Participatory Action Research, data collection on the life histories of Black activists, and participation and action in ongoing activities such as meetings and marches to raise awareness about structural racism in Brazil and challenge governmental policies, political campaigns to influence policy, and efforts to strengthen Black organizations. Over two decades, the extension of Participatory Action Research included advocacy, fundraising, scholarly exchanges, and support for new Black organizations and NGOs. Presenter: Kenneth Williamson (Kennesaw State University, Department of Geography & Anthropology)

Translucent Overlappings: The Palimpsestic and Archival Black Feminist Geographies of the Noire House: Black feminist geographies tend to be swept into the spatially mundane-rendered ungeographic under the pretense that space 'just is' (McKittrick 2006; x, xi). Such acts of flattening foster a dimension in which innumerable possibilities are deemed impossible. Ethnographers and multi-disciplined Black feminist scholars have been working to destabilize this view of the natural, neutral, space through centering the people, remnants, and memory which intertwine to materialize multi-dimensional geographies. In this ethnographic study, I center the Noire House-the main hub of the Black, femme, queer led Rochester, NY non-profit, Flower City Noire Collective (FCNC). FCNC works to build Black joy spaces through initiatives of gardening/environmental justice, literacy, housing, and mentorship, all encapsulated in the deindustrialized, highly segregated landscape of Rochester, NY. By engaging in collaborative participant observation alongside co-locutors within the non-profit, and though employing the palimpsest and the archive as analytics, I work to untether and complicate the functionings of the Noire House away from its physical stature. Instead, I inquire on how the layers, histories, contents, and imagination held in space contribute towards the nurturing, as well as the halting,

of radical Black feminist community work. How do the spatial palimpsest and archive intertwine to instruct how space functions and is felt? In addition to this, I theorize the palimpsest both in its traditional retrospective format, and as a tool which may provide insight into the future—what is surfacing, what is coming to be under the present—rather than what past material is being written over. The Noire House as a future looking palimpsest, functions as a chrysalis—the transformation of those who enter can be imagined by what can be seen under the textures and translucent wrappings of the protective envelopment. The un-remnants of what is coming to be can be seen as a subtext to what already is. The settling of the house, the condition of the space, the artifacts within the house not only act as tendrils from which a past can be braided together—but they also act as a handbook instructing inhabitants how to move forward. The Noire House harbors next lives and preserves the past lives from which they are derived. Presenter: Katie Hardin

Transitioning Anthropology Beyond the Classroom: Emerging Scholarship from University of Toronto Undergraduates

8:00 AM - 9:45 AM TMCC - 206 C
Oral Presentation Session

REVIEWED BY:

National Association of Student Anthropologists

ORGANIZER:

Edward Sammons (University of Toronto, Department of Anthropology)

CHAIR:

Edward Sammons (University of Toronto, Department of Anthropology)

PRESENTER:

Natasha Aust (University of Toronto, Department of Anthropology), Nadia Gericke, Alex McLean (University of Toronto, Department of Anthropology), Adrian Wojnowski, Kiera Quinlivan, Yuki Wu

DISCUSSANT:

Edward Sammons (University of Toronto, Department of Anthropology)

DESCRIPTION:

This panel spotlights recent and original work in anthropology generated by University of Toronto undergraduate students. Gathering scholarship that crosses subfield and disciplinary boundaries, it features

a variety of topics and methods of study including ethnographic research into language policy governing access to Danish citizenship; conflict and commoning in the greenwashed neoliberal university; the need for wide-scale adoption of transdisciplinary research methods; the pedagogical implications of generative AI; and the meaning and methods of Black doula care in relation to medical racism. The panel is rounded out by an archaeological investigation into prehistoric funerary practices in the Arabian Peninsula.

Language and Belonging: Linguistic Discrimination in the Danish Citizenship Process: Beginning in the early 2000s, the Government of Denmark further restricted requirements for Danish citizenship application, including through the addition of a Danish language test component. While restrictions claimed to aid in the integration of migrants into broader Danish society, the policies were also heavily rooted in anti-migrant rhetoric. By pushing the exclusive use of the Danish language, particularly for non-Western migrants and refugees, the Government of Denmark not only rejects multilingualism, but also legitimizes linguistic racism within the public sphere through the enforcement of standard language ideology. However, one must note that anti-migrant discourses and the desire for uniformity are not new concepts in Danish society but have remained a social feature since the establishment of Jante law, a set of ten fictional laws advocating for social uniformity across Denmark. Building on an interest in exploring the intersection of language and political society, this paper seeks to answer the question: what social and linguistic factors contribute to the reinforcement of discrimination within the Danish citizenship application process? Following autoethnographic research and ethnographic interviews, I argue that the promotion of standard language ideology, the rejection of multilingualism, and the socially embedded nature of Jante law contribute to the reinforcement of both racial and linguistic discrimination within the Danish citizenship application process. Due to continued increases in net migration, including record-high immigration in 2022, discrimination within the citizenship application process and broader Danish society remains a critical issue, requiring both further study and potential policy change. [keywords: autoethnography; immigration; language policy; raciolinguistics; Scandinavia] Presenter: Natasha Aust (University of Toronto, Department of Anthropology)

Learning from the Weeds: Resilience and Complexity Regarding the Politics of Growing on Campus: The

University of Toronto (U of T) is a world-renowned university that enjoys and seeks to maintain the fruits of notoriety. However, it is also continually under pressure to reckon with long-term oppressive institutional dynamics as well as those newly in development. It attempts to change (or create the illusion of change) without losing its position of power. I argue that this requires the university to appropriate collective struggle from students and staff into neoliberal narratives about sustainability and equity, adapting its image to remain a global player. Thus, genuine structural change is often thwarted by the very nature of what it means to be a top academic institution. I want to examine how those resisting on the ground deal with this reality, and what their resistance can lead towards. As a member of these spaces, I do this through ethnographic research with U of T's campus community gardens, focusing on U of T's relationship to land and geographical expansion, as well as sustainability narratives. Resistance is always at risk of appropriation and thus there is a need for increased scrutiny on what the impacts of universities are, through their efforts to maintain power, on communities within or around them. Campus gardens are just one, relatively undiscussed locality that helps elucidate these themes but also shows that spaces of resistance regardless foster revolutionary potential through the solidarity we build together, the way we connect to the land, and the dreams we develop of a different way academic institutions could be. [keywords: food systems; neoliberal university; commons] Presenter: Nadia Gericke

The Craft of Writing: An Anthropology of Generative AI in the Classroom: How are educators adapting to the expansion of generative artificial intelligence (AI), such as ChatGPT, one of several thousand AI tools, in academia? Are they resisting these tools or actively integrating them into course curricula? I anticipate the inevitability of AI writing tools in classrooms, and thus the development of new and innovative approaches to learning. My research explores the relationship between the production and commercialization of AI writing tools, consumerism in academia, and reflexivity to these technologies. As primary research, I conduct one-on-one interviews in secondary school settings to understand how educators adapt classroom learning in the face of technological transformation. With the vast number of industries realizing the profitable potential of AI, these writing tools will undoubtedly become more prominent in everyday life. Considering implications for academic integrity, navigating AI in classroom settings may require innovative approaches to learning. Nonetheless, educators have adapted to technological

change since time immemorial, and my interviews conclude that the rapid expansion of AI writing tools is nothing we should view as a threat. The power of AI writing lies not in its ability to emulate human intelligence but rather in our responsiveness or lack thereof to its capabilities. Thus, recognizing AI as a productive rather than a repressive tool can shape future discourse in academia. I end with a discussion of the opportunities for artificial intelligence in the field of anthropology. Drawing on my research in secondary schools, I ask: how might anthropologists utilize AI to enhance ethnographic research? [keywords: Generative AI (Artificial Intelligence); adaptation; Education; Technological Development; Social Change] Presenter: Alex McLean (University of Toronto, Department of Anthropology)

A Transdisciplinary Way Forward: Anthropology's Tremendous Untapped Potential: Scholars can face the challenge of creating, handling, and disseminating their research and knowledge in much more impactful ways across local, national, and transnational jurisdictions. In light of this year's conference theme of transitions, I posit that anthropologists can best bridge the intellectual chasm by considering a disciplinary shift toward a new methodology. This project aims to put forth a consideration for scholars and the discipline of Anthropology to more wholeheartedly adopt a transdisciplinary method involving stakeholders from policy, civil society and potentially many other areas outside of academia. The research methods pursued in this autoethnographic study were reviews of recommended literature and lectures from various anthropology courses, in-class discussions, and casual conversations with students and professors at the University of Toronto from September 2019 through April 2023. The autoethnographic research shows that a preponderance of outputs created by anthropologists is sequestered between the layers of disciplinary and multidisciplinary methodologies and activities, resulting in a lack of meaningful knowledge production outside academia. A persistent shortage of external knowledge penetration constitutes lost opportunities for this discipline's multitude of exemplary academics and works. Adopting a transdisciplinary methodological practice could help springboard the discipline's keen research and scholarly observations to have much more tangible impacts on the non-academic world. The transdisciplinary method can enhance awareness of anthropology's almost unlimited potential by better highlighting important matters and springboarding knowledge production beyond academia. Adopting this method can aid the discipline in more effectively

impacting the local, national, and transnational.

Presenter: Adrian Wojnowski

The Birth of the Black Mother: Transformative Empowerment Within Black Doula Care: Despite the sombre state of the post-Roe landscape, Black doulas persist in their mission to empower themselves and Black mothers. Building upon Dana Ain-Davis' argument that doulas of colour are advocates against obstetric racism, I apply Castañeda and Searcy's concept of intimate doula care to explore how racialized doulas contest obstetric racism through their intimate relations with clients. To do so, I conducted research among a collective of doulas with Black and Afrolatina heritage predominantly caring for Black women in a historically underserved region in the northeast United States. From this, I argue that doulas of colour intimately challenge obstetric racism because they use their knowledge, body, and identities to transform the Black experience into a source of empowerment. Educating Black mothers on informed consent, racialized doulas transform knowledge into a source of empowerment. Engaging their bodies to teach birthing exercises, Black doulas construct themselves and their clients as embodiments of agency. Subsequently, non-white doulas undermine obstetric care's appropriation of racialized women's bodies. Moreover, doulas invoke their racial subjectivity to affirm women's Blackness, asserting racial identity as a space of community rather than marginality. Thus, doulas of colour use their knowledge, bodies, and identities to empower themselves and the Black women they care for. Through this intimate connection, Black doulas and mothers transform Black knowledge, the Black female body, and Blackness from forces of disempowerment into mechanisms for resilience, fundamentally undermining obstetric racism. Keywords: African American, Care, Race and Racism Presenter: Kiera Quinlivan

Funerary Practices in the Arabian Peninsula: Territoriality from the 6th to 3rd millennium BCE: From the sixth millennium to the third millennium BCE, the Arabian Peninsula witnessed significant changes in its climate, which impacted the archaeological record of the region. However, there is little archaeological research on the mortuary landscape of the Arabian peninsula at this time when compared to its neighbours in the region. Using the existing literature on this subject, I argue that funerary evidence reveals that climatic changes in the Arabian Peninsula during this period caused increasing territoriality among social

groups. The paper begins by providing contextual information on the climatic changes the Arabian Peninsula experienced during this period. It then examines the mortuary evidence from funerary sites from this time period and provide interpretations of such sites from the existing literature. And the paper then concludes that, as the climate of the peninsula became increasingly arid, funerary monuments become increasingly visible within the landscape and suggest evidence of long-term re-use, which suggests communities may have become increasingly territorial. This is also accompanied by a possible increase in the importance of lineage-based claims to such resources. These findings are important because they provide insight into the pre-history of the Arabian Peninsula, which has implications for the archaeological understanding of the wider region, as well as illuminates the need for further research. CHAIR:

Susan Vincent

PRESENTER:

Kirk Dombrowski (University of Vermont), Charles Menzies (University of British Columbia, Department of Anthropology), Unnur Dis Skaptadottir, Gerald Sider, Elizabeth Ten Dyke, L Jane McMillan

DESCRIPTION:

Think about this... How can we develop a more grounded, useful anthropology? What are the tools we need for anthropology to be effective in the struggles of the oppressed, exploited, dispossessed and disposable? What do we learn from vulnerable people living with and against history? Over half a century Gerald Sider's body of work documenting and analysing history, class, capital, violence, and change has influenced generations of anthropologists worldwide compelling

reconsiderations of the social constructions and lived experiences of race and conceptualizations of culture. In rethinking power, Sider is 'particularly concerned with the transition from yesterday to tomorrow in the often unavoidable struggles that occur in the everyday lives of ordinary people. The transition from yesterday to tomorrow often is, or seems deeply chaotic. People all too frequently must be concerned with the 'what-ifs' that impinge on their lives' (Race Becomes Tomorrow, 2015: 9). For this roundtable we assemble a collection of the Professor Emeritus' (City University New York) anthropological family, his students, his students' students, comrades and disrupters from across the globe to share stories with and against the vast, provocative, and often profound interrogative observations of Professor Sider. With Gerry we contemplate the what-ifs and then whats of how we build better tomorrows. Everyone is welcome.

Transnational Aesthetics and Placemaking: Latinx Ethnography in the U.S.

8:00 AM - 9:45 AM **TMCC - 716 B**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association of Latina/o and Latinx Anthropologists

ORGANIZER:

Syd Gonzalez (Northwestern University)

CHAIR:

Syd Gonzalez (Northwestern University), Julio Garcia Solares (Northwestern University)

PRESENTER:

Syd Gonzalez (Northwestern University), Julio Garcia Solares (Northwestern University), Fernando Martinez (University of California, Berkeley), Elena Peeples (Teachers College, Columbia University), Kristian Rodriguez (Northwestern University)

DISCUSSANT:

Alex Chavez (University of Notre Dame, Department of Anthropology), Richard Rodriguez

DESCRIPTION:

'The circulation of iconographies, aesthetics, and typologies of Latinx urban life and culture can be read as a specter, a reminder of a history of social dispersal that has occurred over decades of (im)migration, displacement, gentrification...' This quote from Johana Londoño's *Abstract Barrios* (2020) underlies the central themes and questions we explore in this panel: How do Latinx transform lived and built environments in the

United States during processes of placemaking through aesthetic and material practices and productions? This roundtable engages with scholars in anthropology and interdisciplinary fields who conceptualize Latinx aesthetics as material and sonic strategies of placemaking through transformations of lived and built environments. Our roundtable is in discussion with anthropologists and interdisciplinary scholars who provide important and alternative perspectives on Latinx placemaking. We consider studies that demonstrate how Latinx in the U.S. Southwest modify the body, customize the mechanics, and alter the interior of vehicles to mobilize aesthetics and engage in physical space-making (Chappell 2012); how youth activist-artists and musicians sustain political movements through 'rebel aesthetics' as strategies to create counterspaces and contest oppressive governmental regimes (Magaña 2020); how Latinxs have historically co-opted and transformed aesthetics and sounds from 'dominant' cultures through the intimacies of cultural and media exchange (Rodriguez 2021); and how Latinx utilize an 'excess' of self-adornments as a method of hyper-visualizing their own ethnic and cultural embodiments outside of efforts to gain legibility or legitimacy (Hernandez 2020). This roundtable is also in conversation with contemporary Latinx ethnographers who 'refuse anthropology' as a way of 'dismantling the norms expected of field research and mode of anthropological knowledge production, as a way of generating necessary and alternative perspectives' (Chavez & Perez 2022). Our roundtable spans various strategies for placemaking by examining Latinx materialities, aesthetics, sound, and space-making in the United States. We present developing work that explores how Latina/o/x/es engage in music scene-making through DIY cultural productions within hardcore punk and metal music scenes in the San Fernando Valley, CA; how customized car groups and street races in Houston, TX become spaces of placemaking and affective performance; how Latines engage in self-making by mapping Queer spaces and their live and nontraditional soundscapes in Chicago; how public transportation can become systems of resistance for Central American Migrants in Los Angeles, CA; and how Latin American immigrant and Latinx communities manage entanglements between local and state governments to claim space in Trenton, NJ. Our work spans various multi-modal ethnographic methods that accompany our goal to provide alternative perspectives on Latina/o/x/e communities but also develop inclusive and accessible knowledge productions for the communities we work with.

2-800

Trans-Otherness: Anthropological Knowledge and Historical Transitions in East Asia

8:00 AM - 9:45 AM Virtual - Room 4

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Youjoung Kim (Johns Hopkins University, Department of Anthropology)

CHAIR:

Robert Oppenheim (University of Texas at Austin)

PRESENTER:

Youjoung Kim (Johns Hopkins University, Department of Anthropology), Ying Zhou, Ji Yea Hong, Shuting Zhuang

DISCUSSANT:

Neena Mahadev (Yale-NUS College)

DESCRIPTION:

Anthropological studies of East Asia have developed as a part of colonial knowledge and have been largely conducted by anthropologists at/from 'home' within the geo-political dynamics of neo-imperial metropolises (C. Kim 2002; Oppenheim 2016; Yamashita et al. 2004). The discussion of knowledge-making has been oriented toward learning about the past to shed light on the future of the discipline (Chun 1999; K. Kim 2004). While acknowledging this tradition, this roundtable seeks to stimulate intellectual conversations around the construction of others in anthropological research situated in the milieu of intimacy as a neighbor and a quasi-stranger during historical transitions of the region. How is anthropological knowledge centered in East Asia imprinted by the history of spectacular events such as WWII and the Cold War? What are the multiple ways in which the 'others' were constructed in these processes of anthropological knowledge production when such events descended into ordinary interactions (Das 2016) between anthropologists and their neighbors? By drawing upon the discussion of 'multi-sitedness' in the Journal of Korean Studies' special issue, The Multi-Sited History of the Anthropology of Korea, published in 2016, this roundtable seeks to examine how East Asia, as a site of configurations and itineraries, has converged in the development of anthropological knowledge production. In specific, the panelists will respond to the following questions by reflecting on their field research: How does the anthropological knowledge produced and deployed

in the Japanese colonial project show a paradoxical problem of deep intimacy and strangeness through a gaze already positioned internally to the oneness of Japanese and Korean national cultures? How did Japanese national anthropologists reconceptualize Japan, and how was the matter of civilization revived in the post-war period? How was a multilingual encounter between a Korean anthropologist and the ethnic people of Southwest China shaped by the historical production of objects of knowledge and subjects of relationships since the early 20th century? How do cross-culture translation practices to produce 'scientific' ecological knowledge challenge the concept of 'indigenous' against the contexts of imperial and nationalist histories of Sino-Tibetan relations? By discussing these questions, participants will explore transnational connections and movements of anthropological knowledge, which unsettle the territorial boundaries of East Asia. Furthermore, they will examine the ways in which anthropological knowledge shaped colonial policies. In accordance with the 2023 AAA/CASCA Annual Meeting theme, 'Transitions,' this roundtable encourages anthropologists to unravel their discussions on multiple anthropological gazes of knowledge-making. It also invites scholars to contemplate their own roles as anthropologists at/from home and abroad.

2-145

Visions of the Popular Alliance: The Emergence of New Coalitions in Response to Neoliberal Decline and Neo-facism?

8:00 AM - 9:45 AM

TMCC - 206 E

Oral Presentation Session

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Don Nonini (University of North Carolina, Chapel Hill, Department of Anthropology)

CHAIR:

Ida Susser (CUNY, Hunter College, Department of Anthropology)

PRESENTER:

Don Nonini (University of North Carolina, Chapel Hill, Department of Anthropology), Ida Susser (CUNY, Hunter College, Department of Anthropology), Bruce Kapferer, Hilary Cunningham, Bela Feldman-Bianco

DISCUSSANT:

Charles Price (Temple University)

DESCRIPTION:

This panel examines whether new popular alliances of resistance are emerging within the U.S., the European Union and in the global South to confront the recent massively scaled-up assaults by conservative and racist forces on a variety of previously taken-for-granted economic and political rights by democratic organizations (political parties, human rights groups, trade unions) within a declining neoliberal order. Do the alliances formed between people of color, white professionals and others during the Moral Monday 'fusion' movement during 2013-2014 in North Carolina; the Black Lives Matter multiracial and multi-class coalition of many urban-based organizations of people of color and leftwing largely white political groups and organizations; or the solidarities between white environmental activists and American Indian tribes at Standing Rock constitute new grounds for popular alliances? Are similar processes of realignment occurring in Europe (e.g., the mass protests in France around pensions) and in the global South in solidarity in reaction to xenophobic corporate attacks against social benefits in the current mean post-neoliberal moment? What are the organizational, cultural and political-economic bases around which groups with ostensibly widely different values and commitments are finding 'common ground' in such struggles? Are new alliances being formed that may involve 'ally-ship' but are shifting beyond it to greater solidarities? What are the class and racial formation processes that make such new alliances feasible, and where are they headed? The papers for this panel draw on a variety of examples and ethnographic settings to address these questions. This panel is interested in comparative analysis of visions of popular alliance not only in North America and Europe, but also in the global South, e.g., South Africa, Argentina, and Chile.

Conjunctural Crises and A Polanyian "Double Movement"? Popular Alliances of the 'Counter-Movement': The paper considers the heterogeneous Black Lives Matter movement, and the alliances of white environmentalist and indigenous rights movements against extreme energy extraction projects, given the current conjuncture. Neoliberalism and liberal nation-states are in crisis. In the U.S., finance capitalist domination threatens millions with precarity. Revanchist white supremacist forces jeopardize previous victories of the Civil Rights era. The power of fossil-fuel corporations to undertake extreme energy extraction projects (tar sands oil, shale fracking, deep sea drilling) is on full display, making it increasingly certain that the IPCC goal of limiting global temperature increase to 1.5

deg. C. above premodern era will not be met. Climate change is being experienced as an existential threat to survival by increasing numbers of people. Karl Polanyi's Great Transformation (1944) reconstructed the prior era of finance capitalism of the late-19th – mid-20th centuries as a "double movement" – first, the "disembedding" of markets from "society," followed by heterogeneous "counter-movements" emerging to protect living labor, nature, and social wealth from markets' abuses. Some counter-movements were regressive and violent – fascism and Stalinism -- while others were progressive – the U.S. New Deal. This paper poses the questions: does the current moment of finance capitalism and its conjunctural crises – post-2008 neoliberal decline, climate change, and retrenchment in political rights in the U.S. -- represent the emergence of a new double movement? If so, are we finding evidence for a progressive counter-movement in the coalitions being formed between environmentalist and racial/ indigenous justice movements to protect people and their spaces for life? Presenter: Don Nonini (University of North Carolina, Chapel Hill, Department of Anthropology)

A Popular Alliance in the streets of France? Political Parties, Unions and Pensions: Taking a comparative approach, with France as one model, this paper considers the ways in which new forms of protest against increasing inequality and privatization are emerging under financial capitalism. Changes and confrontations do not take place evenly or simultaneously. In the French presidential elections of 2022, the different progressive parties kept their separate identities and the socialists, ecologists and communists suffered humiliating losses. A month later, for the Assembly elections, these groups formed a coalition (NUPES) under the leadership of the new political party France Insoumise. Similarly, when President Macron first proposed his new pension plans, in 2019, the unions were not able to unite in opposition. However, in 2023, all the unions across France joined in opposition to the proposed changes in pensions. As of this writing, the government forced new pension regulations through the Assembly without a vote, as they lacked majority support., based on long-term fieldwork with respect to political mobilization, this paper examines the fragmentation of progressive movements and the context in which they may unite, as in the Assembly elections and later in the battle of pensions in France. Presenter: Ida Susser (CUNY, Hunter College, Department of Anthropology)

Is the Current Chaos A New Axial Age?: The current forms of populist discontent across the globe have reached a particular intensity in the western hemisphere especially in the coincidental conjunctive circumstances of the Covid pandemic, digitalization, the Ukraine war, and climate change. These events and their transforming and threatening processes have accelerated socio-economic and political crises that have been brewing for some time and are often connected to Capital. The situation is in excess of such dynamic and is approaching the kind of chaotic proportions that may indicate the onset of what Karl Jaspers defined as an Axial Age. That is a moment of widespread civilizational collapse and the emergence of novel civilizational directions. This discussion will consider such a possibility through the examination of comparative materials from across the globe. The aim is to place current patterns of disruption and populist protest protection in the West into large perspective. Presenter: Bruce Kapferer

Lifeway as Activism: Reflections on An Interspecies Emancipatory Politics : Co-author with Hilary Cunningham: Stephen Scharper. Scholarship in the (post) humanities and social sciences has deeply troubled the metaphysical privileging of “the-human” in all aspects of knowledge production, offering instead a diverse array of alternative approaches for engaging with nonhuman animals, landscapes, plant-life, and object-others. Yet both human and nonhuman-lifeworlds are increasingly lived out in conditions of unprecedented exploitation and destruction, including the structural and ecological violence rendered by anthropogenic climate chaos. This suggests that posthuman ethnography has strong resonances with traditions of “engaged,” “activist” and “radical” anthropologies. This paper builds upon the following questions: First, how do posthumanist approaches both engage with and yet challenge these traditions? Second, in what ways does an interspecies emancipatory politics ask us to re-conceptualize notions of “alliance,” “coalitions,” “allyship” and “common ground”—especially in light of the conservative and alt-right assaults outlined in the abstract for this session? Lastly, which popular-alliances-of-resistance are embracing the challenges of a more-than-human politics? Presenter: Hilary Cunningham

Neofascism, Social Movements and the Struggle for Democracy in Brazil: In this presentation, I examine the polarized battlefields at the institutional level between Bolsonaro's neo-fascist policies (2019-2022) that eroded constitutional guarantees and the defense of

democracy in Brazil. I devote attention to the roles played by progressive social movements targeted by these policies, such as Blacks, indigenous peoples, feminists and LGBTQIA+ people, migrants and refugees, academia, and those mobilized in urban peripheries and slums, all with long experience of fighting for their rights. I argue that these movements put continuous pressure on state institutions (such as the Federal Court of Justice, Public Defender Office etc.) while activating their alliances and international networks from their specific fields of action. As these mobilizations strengthened and women gained prominence during the Covid pandemic, state necropolitics and the worsening of socio-economic conditions brought to light escalating social inequalities and dispossession, criminalization of the racialized poor, and growing attacks on “gender ideology” and “cultural Marxism.” In addition to replacing the State by providing social solidarity, social movements turned to campaigns involving local, national and transnational alliances -- whether to denounce structural racism, working conditions analogous to slavery, genocide of Indigenous populations and deforestation, femicide and violence against LGBTQIA+ people, or migrants’ “regularization.” The indigenous and Black movements whose younger generations had access to the quota system have become stronger and independent. In the current still polarized re-democratization process, their demands have led to the creation of the Ministry of Native Peoples and the Ministry of Racial Equality, both led not by chance by women. Presenter: Bela Feldman-Bianco

2-850

War in Sudan: An Anthropological Perspective

8:00 AM - 9:45 AM

TMCC - 801 B

Late-Breaking Conversation/Debate - In-Person

ORGANIZER:

Noah Salomon (University of Virginia)

CHAIR:

nisrin elamin, Noah Salomon (University of Virginia)

PRESENTER:

Rogaia Abusharaf, Munzoul Assal, Mai Azzam (University of Bayreuth), Azza Mustafa (University of Cape Town)

DESCRIPTION:

On the heels of revolution, counter-revolution and then military coup, all in a span of 3 years, the outbreak of war between two factions of the military (regular and irregular forces) on April 15, 2023 has transformed Sudan nearly overnight. A country all-too-accustomed

to war in its provinces, this latest round of violence is nonetheless unprecedented, at least in part since the country has not experienced sustained military violence in its capital since the 19th century British bombardments. In a matter of mere weeks, the majority of the 11 million citizens of Khartoum have been displaced, both in and outside the country, emptying the nation's largest city and leaving its provincial cities (as well as once small villages), overflowing with people. Unimaginable sacrifice has been required for those who have left as well as for those who, by force or by choice, have remained behind. Vicious clashes have consumed parts of Darfur, as well. Indeed, if models of center and periphery that have framed Sudan studies for decades seemed too simple before, they seem utterly incoherent now, demanding a different analysis. In recent weeks, military, policy, economic and even humanitarian analysis of the conflict in Sudan has begun to emerge. However, little discussion has been had regarding the massive disruption of individual lives, lifeways, livelihoods, and of the human geography of Sudan itself, which the war has occasioned: the multiple kinds of casualties that such studies relegate to facts and figures. We propose this panel starting from the contention that anthropology is particularly well-situated to surface the narratives of loss and resilience that the war has produced, stories crucial to understanding both the nature of the violence Sudan is experiencing, as well as a life beyond. We propose a round table made up of anthropologists based in (or recently displaced from) Sudan, or who are from Sudan and based elsewhere, and so who are uniquely able to bring a first-hand perspective of the conflict in all its multiple iterations, its micro and macrocosms. Sudan, a country plundered by early Social Anthropology to lay its very founding stones, deserves new analyses, ones that reveal the multiple modes of violence that have shaped it, as well as the creative techniques of resistance to them that cannot be contained.

Who owns the archive? Ethnohistorical and anthropological practice

8:00 AM - 9:45 AM TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Daniel Tubb (University of New Brunswick, Department of Anthropology)

CHAIR:

Daniel Tubb (University of New Brunswick, Department of Anthropology)

PRESENTER:

Christine Jean (University of New Brunswick, Department of Anthropology), Harrison Dressler (Queen's University), Kirsten Leclaire-Mazerolle, Dallas Tomah (University of New Brunswick, Department of Anthropology), Ashleigh Everett, Mark Robinson (University of New Brunswick, Department of Anthropology), Julia Chebott

DISCUSSANT:

Noah Pleshet (University of New Brunswick)

DESCRIPTION:

Archives matter to scholars, researchers, and communities seeking self-representation in diverse contexts of cultural recognition. Long-standing archival erasures disempower many groups-Indigenous communities, racialized communities, among others. The panel aims to share disciplinary and interdisciplinary perspectives emerging from the 'archival turn' in the social sciences, which understands archives as tools of representational power. One problem is that researchers and archivists who seek to undo such erasures through oral history, ethnography, and other methods, often inadvertently reproduce archival silences because their research fails to include community-oriented archival plans. This is a data management problem with important implications for anthropological and historical research, where persistent power asymmetries can be seen as the academic equivalent of imperialism. This panel aims to stimulate exchange and critical perspectives on archives, data management, and ownership. It brings together students, grassroots curators, historians, anthropologists, and community members, sometimes one and the same, to engage in peer learning and to synthesize best practices for contributing to, building, and maintaining community archives. By bringing together participants whose experience includes oral history, digital archives, archaeology, museum studies, and cultural resource management, our conversation hopes to reflect on and sketch paths to navigate the difficulties involved of designing research projects that make valuable materials accessible. It aims to promote ways of avoiding the problem of extracting materials with only a short-term sense of the value they hold as data for a given project. It considers an awareness of the afterlives of collected materials, but does not pretend to offer easy answers. After all, archives-as sites of power-often compound existing, intersecting inequalities.

Questions to consider include: how might community-oriented archives differ from traditional research projects? What are the different disciplinary challenges faced by historians, anthropologists, ethnographers, and archaeologists?

Preserving Rural Heritage: The Challenge of Archival Management in Underfunded Museums: Archives are essential to preserving cultural heritage and research efforts. Despite its importance, rural museums face multiple challenges in prioritizing archive projects due to financial constraints and a lack of trained personnel. Archival projects require a well-planned strategy, trained personnel, equipment, and funding, often unavailable to rural museums. These museums typically have limited formally educated staff who juggle multiple responsibilities, including collection and archival care. Archives in rural museums lack proper handling, making them inaccessible to staff, researchers, and the public. To prioritize archival projects, investments must be made in rural museums. Connections with other museums and staff, free resources, training seminars, and workshops are invaluable. This paper presents a case study of a flood and theft at a rural museum, to show the importance of archival projects, digitization, despite limits of available funding. The paper considers how rural museums might contribute to preserving cultural heritage and research efforts, while calling for urgent action to be taken to prioritize archival storage and digitization. Presenter: Christine Jean (University of New Brunswick, Department of Anthropology)

“A destroyer rather than a developer”: The State, Archives, and the Ontario Education of the Blind: In recent years, histories of blind and deaf education have proliferated in Canada and the United States. By drawing from annual reports, newspapers, and professional conferences, these studies tend to argue that educators pursued institutionalization as a means of promoting human rights. Yet, this rights-based narrative, formulated using the state’s official record, often fails to account for the structural and subjective factors that influenced students’ aversion to institutionalization. In this paper, by analyzing student testimony from the Ontario Institution for the Education of the Blind, I examine why potential students were reluctant to attend residential schools for the blind in the late 19th century. While highlighting the marked discrepancies that exist between student testimony and official government documents, I urge academics to consider the ways in which archives and state institutions—as a form of police or policing—assemble and organize an array of written traces which

marginalize insurrectionary knowledge(s). Presenter: Harrison Dressler (Queen's University)

Learning from Indigenous-led Cultural Preservation Initiatives in Eastern Canada: This paper explores the increasing importance of Indigenous cultural preservation practice in the context of museums and repatriation efforts. Often, repatriation of Indigenous cultural property has been done on a case-by-case basis, frequently via bilateral arrangements between museums and, in some cases, First Nations governments. As a Mi’kmaq person and more recently MA student in anthropology, I am looking at the potential of utilizing community-based participation in research and policy design for Canadian cultural resource management. I draw on preliminary research focused on First Nations Cultural Institutes in Eastern Canada to discuss how Indigenous-led cultural preservation efforts form partnerships so that all stakeholders—within communities and beyond them to connections with mainstream museums and institutions—have their values properly represented within cultural preservation, as a basis for improved frameworks for policy and practice. Presenter: Kirsten Leclaire-Mazerolle

Prescribing the Indigenous lens: Remedies for our Colonial Institutions: Western lenses have brought scientific methodology, facilitated discussions of justice and morality, and have fundamentally shaped our institutions. There is much to be said about the insights that Western science has brought to the understanding of the physical world, though it has often played a role in defining what constitutes knowledge and understanding. This has functionally removed indigenous ways of knowing as a relevant approach to understanding and affected the ways in which cultural resources are managed. Archives have enshrined information in ways which make access for indigenous communities extremely difficult. Archeological materials for instance, find themselves concealed from their ancestral ties and susceptible to being lost in the overwhelming backup of artifacts from test pitting for cultural resource management. Disproportionately non-indigenous Academics find themselves as privileged gatekeepers that engage with indigenous cultural resources with little consultation with respective communities after materials are obtained. This has been a point of contention in the role of scholars in the appropriation of indigenous knowledge and has further alienated them from their culture. This has led to much concern from communities about how cultural information is being protected. While repatriation is an

honest effort to ameliorate this relationship, the remedy is to invest in programs that allow indigenous lenses to facilitate cultural resource management. In addition to this, funding should be allocated to indigenous communities to invest in their own archive programs to produce the means for access to cultural resources. This is a concrete move toward the acknowledgment of the role that archives have played in the erasure of indigenous culture. Presenter: Dallas Tomah (University of New Brunswick, Department of Anthropology)

Archives within archives: Making small museums from historic houses in rural Nova Scotia: This paper will discuss the use of historical residential infrastructure as museums the Annapolis Valley, Nova Scotia: the Sinclair Inn Museum (circa 1710 and 1713), O'Dell House Museum (circa 1869), North Hills Museum (circa 1764). The repurposing of such structures—containing more than half of their original features, including floorboards, single pane glass windows, and frames, art, floorplan, electrical, and plumbing—as museums and archives presents unique challenges in the care, maintenance, and preservation of artifacts and other materials. The storage facilities for artifacts within these historical buildings and adjacent structures increases the likelihood of damage to artifacts due to the constraints of minimal space, potential for water damage, mould, pests, and compromised structural integrity. Over time, these conditions potentially reduce the number of artifacts available for display in exhibits and increases cost of conservation work required to mitigate damage. Drawing on three main non-for-profit museums familiar from my work as an interpreter and curatorial assistant, as well as interviews with museum directors and construction contractors involved in stabilization, reconstruction, and rehabilitation of these historical structures, I reflect on these challenges, using idea from museum studies and the anthropology of infrastructure. Presenter: Ashleigh Everett

Reimagining museums as archives through visitor experience: This paper reflects on my experience as a graduate student investigating visitor experience and engagement at a mid-size regional museum. Engagements with source communities in curating collections and exhibits occurs within the constraints of space, often in historic structures not built as museums, and always in the context of tight funding and scarce human resources, mostly volunteers. This research draws on qualitative methods, including interviews and participant observation, as well as insights from the fields of user experience and human-centered design. I argue that understanding museum visitors and their

unique, situated experiences, may offer insights for curators, directors, and other stakeholders as they seek to reimagine the role of museums as archives articulating shared and often fraught regional histories in the Maritimes. Presenter: Mark Robinson (University of New Brunswick, Department of Anthropology)

A Call to Action: Examining Colonial Practices in Canadian Archival Institutions: Since the Truth and Reconciliation Commission of Canada (TRC) released their findings in 2015, some archivists have pointed towards underfunding as a roadblock to responding to the Calls to Action. However, in my experience working as a student archivist at a provincial archival institution, I observed that the problem lies not only within the amount of funding received, but also in the allocation of existing resources. I argue that this dissonance is due to a bureaucratic framework in Canadian Archives which still favours colonial interests such as genealogy, the protection of colonial institutions, and the management of record donations from settler-descendent populations. This framework does not allow for the necessary restructuring of archival collections in order to shed light on Indigenous records and make them accessible to the public. After the TRC report, the provincial archives saw a turnover in staffing, as some archivists were apprehensive to work in an institution they characterized as colonial. We can begin decolonizing Canadian archives only when those who work within them and those who seek information from them see their structure, policies, and procedures as representing the reconciliation and decolonization the TRC seeks to accomplish. This paper will draw upon ethnographic experience to highlight discrepancies between the dissemination of Indigenous and settler-colonial knowledge in Canadian archives. Presenter: Julia Chebott

[You can take the anthropologist out of the university, but you can't take the university out of the anthropologist: a discussion reflecting current trends in business and consulting from the perspective of applied practitioners](#)

8:00 AM - 9:45 AM

TMCC - Hall G - MI

Conversation/Debate - In-Person

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Michelle Switzer (Scotiabank)

CHAIR:

Paul Hartley

PRESENTER:

Chloé Roubert (Sonder Collective), Maya Shapiro, Michelle Switzer (Scotiabank), Paul Hartley

DESCRIPTION:

As we hear more about trained anthropologists entering the business and consulting worlds, it is useful to discuss not only what they do in their work, but also how they think and reflect on anthropological concepts within those environments. This conversation will provide critical analyses of business ethics as well as a window onto applied anthropology, through a discussion of three current corporate trends. The practices of land acknowledgements, self/pronoun identifications, and inclusive research will be explored through the lens of classic and contemporary anthropology. This will allow us - four applied anthropologists working in corporate environments - to share our perspectives on this work and the ways in which we draw on anthropological training to make sense of cultures of business.

2-725

A collaborative approach to anthropological ethics: revising the current 2012 AAA "Principles of Professional Responsibility."

10:15 AM - 12:00 PM TMCC - 801 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association of Senior Anthropologists

ORGANIZER:

Stephen Schensul (University of Connecticut School of Medicine)

CHAIR:

Stephen Schensul (University of Connecticut School of Medicine), Elizabeth Crocker (American Association for the Advancement of Science)

PRESENTER:

David Stephenson, Margaret LeCompte (University of Colorado, Boulder), Jean Schensul (Institute for Community Research, Inc), Stephen Schensul (University of Connecticut School of Medicine), Elizabeth Crocker (American Association for the Advancement of Science)

DESCRIPTION:

The 2012 'Principles of Professional Responsibility'

(<https://ethics.americananthro.org/category/statement>) represent the most current statement of the ethical principles of the American Anthropological Association. These ethical guidelines center on the anthropologist as ethical decision maker, identifying 'the possible ways that the research might cause harm,' '...what is in the best interests of others,' 'unintended consequences and long-term impacts,' the '...potential impact of ... [the] research and ...dissemination of the results,' 'competing ethical obligations, and 'asymmetries of power.' Based on this ethical statement, the anthropologist has full, complete, and independent agency to determine all ethical aspects of the research endeavor, modified only by an institutional IRB with little knowledge of the specific field situation and investigation. The organizers of this session see field research, conducted by any four-fields, basic or applied anthropologist, as a complex negotiation in which ethical agency must be shared between the researcher and the people under study or the populations that are impacted by a study. The 2012 Principles of Professional Responsibility do not address these issues, nor the challenges of ethical autonomy, leading to the need to revise our ethics statement to address a more proactive relationship with the individuals, communities and populations that have previously been our 'objects/subjects' of study. The goal of the session is to develop guidelines and suggestions for modification and expansion of the 2012 AAA Ethics statement to facilitate collaborative research engagement. The session will begin with analysis of the current ethics statement and examples of challenges anthropologists face that require more ethical guidance than the current principles offer. Each small group roundtable will be organized on one of the following themes: • Negotiating entry and positionality • Determining research questions • Rapport, relationships, and reciprocity • Collaboration in the research process • Dissemination and voice • Ownership and control of data. Roundtable facilitators will briefly introduce the theme and a case example to facilitate discussion of appropriate changes to the current ethical guidelines. Using examples presented and their own experience, participants will draft principles or sub-principles related to these topics that reflect more specific concerns for the welfare, needs and perspectives of the people studied and/or potentially impacted by anthropological research. Each roundtable will report out. Organizers will collate the proposed additions and modifications and present them to the AAA and appropriate committees.

2-320

A Roundtable in Honor of Carolyn Sargent

10:15 AM - 12:00 PM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Richard Powis

CHAIR:

Adrienne Strong (University of Florida), Stéphanie Larchanché

PRESENTER:

Doug Henry (University of North Texas, Department of Anthropology), Linda Whiteford (University of South Florida, Department of Anthropology), Paul Stoller, Josephine Caldwell-Ryan (Southern Methodist University)

DESCRIPTION:

For over four decades, Carolyn Sargent has served the field of Medical Anthropology as a prolific writer and editor, beloved mentor and teacher, and tireless leader. Her work on obstetrical choices among the Bariba of Benin was foundational to her career-long interest in reproductive health and in our understanding of how women's decisions are negotiated at the intersection of power relations and cultural influences. Moving her focus to maternal health in Jamaica and to reproductive strategies among West African migrants in Paris, France, Carolyn Sargent's work significantly contributed to our theorization of gender not only from a cross-cultural perspective, but also through the lens of globalization and State discourse. She has edited and co-authored several textbooks and thematic volumes in medical anthropology, gender and African studies that are reference works. Carolyn Sargent is the only person to serve as the President of the Society for Medical Anthropology twice (and consecutively!), a demonstration of her indefatigable generosity. She is a member of several editorial boards for the most prestigious journals in our subdiscipline. She was engaged in public health services by serving on ethics committees, relentlessly bridging academic knowledge and clinical practice. This roundtable session brings together colleagues, collaborators, and students of Carolyn Sargent to speak to and celebrate her tremendous impact on the field of Medical Anthropology, Anthropology of Reproduction, and African Studies.

2-325

Aesthetics of Place: Investigating Colonialist, Capitalist, and Apocalyptic Fantasies of 'Nature'

10:15 AM - 12:00 PM TMCC - 714 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Hannah Bradley (University of Virginia)

CHAIR:

Ipsita Dey, Lauren Harding

PRESENTER:

Kamal Kariem (Williams College), Leo Stillinger (McGill University, Department of Anthropology), Leah Nugent, Ian Puppe

DISCUSSANT:

Camille Frazier (Clarkson University, Department of Humanities and Social Sciences)

DESCRIPTION:

What does it mean to appreciate the scenery in a 'world on fire'? What does nature-based leisure look like in a time of rapid socio-ecological change? How are natural disasters, climate change, and biodiversity loss creating shifts in the way scenic landscapes are framed by those invested in producing and consuming beautiful places? Attention to aesthetics of place can highlight sensory relationships to dynamic ecosystems, where landscape-scale framings of places as views and vistas can dehistoricize places and obscure colonialist and capitalists power structures (Mitchell 2002). How does the idea of nature-based tourism as inherently 'disaster' tourism, derivative of disaster capitalism (Fletcher and Neves 2012, Fletcher 2019), compare to lived experiences of local communities? This roundtable will invite discussion of how intersecting timescales of accelerating Anthropocene change, the static atemporality of idealized 'wilderness', and lived realities interact to produce landscape aesthetics of tourism and recreation. By speaking across anthropologies of ecotourism, recreation, agriculture, and visual arts, this roundtable will critically examine how the political aesthetics of nature are operationalized by and entangled with particular ways of seeing and experiencing more-than-human spaces. This roundtable will bring together ethnographers working across diverse regions marked by rapid social-ecological shifts, from Fiji to Nunavut. Through discussion of cross-cutting issues across fieldsites, this roundtable will work toward

developing models of ethnographic attention to aesthetic relationships to—and idealizations of—more-than-human spaces. During the roundtable, the co-chairs will present the roundtable topic and initial discussion questions, to which the roundtable presenters will respond and discuss. Co-chairs will facilitate visual 'mind-mapping' of group discussion, and closing discussion of future collaboration. Works Cited: Fletcher, Robert. DESCRIPTION:

The atmosphere of an era. The vibe of a place. The mood of a gathering. Taking our cues from the contemporary lexicon of 'vibes,' 'moods,' and 'feels,' this panel explores the atmospheric as a generative concept. How does it differ from or relate to affect, context, discourse, culture or the social? What aspects of life are highlighted when the atmospheric is described and

analyzed? In what ways do atmospheres have politics? The atmospheric often lingers in the background of our ethnographic sites and writings, palpably saturating experience yet resisting capture in language. Nevertheless, the duality of atmosphere – as the gaseous layers that surround the planet and as the ambiance of a place – render us all 'students of the air' (Herder, qtd in Sloterdijk 2008, 223). What ethnographic insights and conceptual openings become discernible when we think seriously about what's in the air? Embracing the bivalence of the term, the panel brings together papers that understand the atmospheric as encompassing a wide range of phenomena, from the ever-more toxic air around us to 'the background noise of ruts and disorientations, intensities and resting points' (Stewart 2011, 446), from 'substances in suspension' (Choy and Zee 2015) to a structure of feeling (Williams 1977). Equally important, the papers explore the ways in which people sense atmospheres, become attuned to their dynamics, attend to their pleasures. This means refusing to reduce the atmospheric into specific objects or subjects, rather delving into its elusiveness, as a mode of theorizing and as an invitation for experimental modes of ethnographic representations. The assembled papers consider how the atmospheric resists ethnographic craft and calls for new methods of observing, describing and writing. In part 2, 'Sensoriums', papers are concerned with the ways in which atmospheres calibrate 'collective sensoriums' (Romero) that, among other things, exceed received cultural and historical modes of analysis. Similar to Bajalia who considers al-barzakh as a tense of waiting in Tangier, these papers foreground tenses and (in)intensities generated by the slippage from collective effervescence to their embodied articulations. These papers imagine various modalities of atmospheres as crystallizing habits of attention, like hypervigilance (Romero); as generating unease that can estrange one's home (Fitoussi); and as channeling affect into images (Djanegara) as much as organs (Amri).

In the Mood for Leaving: "We were like sheep," my seventy-something distant cousin said offhand while telling me about his and his family's departure from Tunisia six decades prior. How do people understand the mood that set the scene for their emigration? Moods are elusive and forceful. Moods encouraged the feeling that Tunisia was no longer home. Unlike elsewhere in the Arab world, there were no official discriminatory laws towards Jews in post-independent Tunisia but small words, small gestures, small acts that piled up to create an atmosphere of unease and uncertainty. So much so that the Jewish population, which had been present in

this land for two millennia, left within the span of two decades. Individual experiences of an ethnic slur, a discriminatory job practice, a rock thrown at a window constellated into a collective mood; however, not everyone experienced this mood in the same way because while most Jews left, not everyone did. Usually, History, with a capital H, is invoked to explain this departure: French colonialism, Arab nationalism, Israeli Zionism. Maybe mood is what matters most in the play of political, economic, religious, and social forces that led to the Jewish exile and emigration from Tunisia in the mid-twentieth century. Presenter: Margaux Fitoussi (Columbia University, Department of Anthropology)

Barzakh as a Paradigm for Life: In the middle of the Strait of Gibraltar lies an underwater isthmus known as the Camarinal Sill. This sill separates the high salinity water of the Mediterranean Sea from the less saline-dense Atlantic Ocean and allows these waters to flow in two different directions at two different underwater altitudes. This threshold between seas is known as al-barzakh in Tangier. In Islamic eschatology, al-barzakh is the separation between life and the Hereafter. In the Quran, this time is likened to the productive firmament that separates salt and sweet water, two types of seas, just as the Camarinal Sill does. This is not a space as much as it is a time, a mood and tense, of being that inflects the subjective experience spent within it. In the borderlands of northern Morocco, West African im/migrants use phrases like “doing al-barzakh” to describe the temporal stance of waiting in Tangier before continuing their journeys to Europe. This intervention explores the atmosphere of waiting in Tangier, Morocco, with a particular focus on the social worlds forged while “doing barzakh.” How is this notion viable as a paradigm for ongoing life, and not just an ephemeral in-between limited to liminal period between border crossings? This intervention builds from this concept to ask: how do these invocations of al-barzakh – as water to be crossed, a temporal location, and a particular tense of being – offer alternatives to what is normally considered liminal and parenthetical waiting time, both in anthropological discourses on migration as well as more broadly? Presenter: A. George Bajalia (Wesleyan University, Anthropology Department)

Moody images, heavy silences, and the afterlife of visa photos: A moodboard is a digital collage that juxtaposes images, colors, and textures to produce an aesthetic experience. Originally used in design education, these collections of visual references “aim to represent emotion, feelings or ‘mood’ in a way that “transcend[s] linguistic restrictions” (Garner and McDonagh-Philp

2002: 58). More recently, Pinterest and Instagram have taken the moodboard out of the design studio and onto our social media feeds. This presentation takes moodboards as a starting point for theorizing how meaning is created through unspoken associations between images. In particular, I explore a dataset of images used to evaluate facial recognition models and analyze the mood that is evoked when these photos are amassed in a database. This is particularly relevant when considering the FRVT dataset, which contains more than 6.2 million photos extracted from U.S. visa applications. Due to the standardization of visa photos, the people in these images look straight toward the camera with little or no facial expression. On an individual level, the images appear to be stripped of any mood or emotion. In aggregate, however, this collection of images is imbued with a mood of a deeper sort. Considering the FRVT dataset as a moodboard brings other concerns to the forefront — the asymmetry of visa regimes, the emotional investments of people who aspire to cross international borders and those who are impeded by them, and the expropriation of personal data by tech companies — all of which quietly saturate the images held therein. Presenter: Nina Toft Djanegara (Stanford University, Department of Anthropology)

Economic Crises from a Throat to the Atmosphere: Choking, gasping for air, the feeling of being strangled, the closing of one’s throat. These terms take the throat as the site from which people make sense of everyday economies of crisis and dispossession. For more than a decade, economic crisis and failed revolutionary promises have marked quotidian life in Tunisia. This paper takes the discourses, affects and talk that bring one’s body in close intimacy with the machine of economic instruments: continuous inflation, unemployment rates, currency devaluation. I locate the modes of talking, feeling, and inhabiting that occur when the crisis becomes all-encompassing, mediating both how people make sense of the “national economy” as much as how they navigate the exhaustion of their bodies. This paper takes the passage from the depiction of one’s economic world to its slippage into one’s throat. I consider how the throat, a tube through which the outside, the air, makes its way inside, into the body, operates as a scalar device. The throat entangles atmosphere to body, linking the atmospheric of an economy to the bodily dispositions of surviving under late capitalism. Through the accounts of factory workers in the suburbs of Tunis, and contraband traffickers at Tunisia’s borders, I follow from Sarah Muir’s (2021) attention to discourses of exhaustion in times of crisis and Hamza Meddeb’s (2012) coining of economic

survival as a “run for bread” to locate how running for, scraping by, and surviving in, engages the air one breathes and its lack thereof. In doing so, I take seriously that economic crises, ever-lasting and enduring, deprive people of air not only metaphorically but quite literally. Presenter: Myriam Amri (Harvard University, Department of Anthropology)

Campaneando: Cultivating vigilance as a ‘lookout’ in the drug-markets of Bogotá: This paper thinks with the undulating intensities of place. With the atmospheric violence that accrues in places of serialized injury and insecurity, like the drug-markets of Bogotá, Colombia. Controlled by organized crime bands, the ollas, or drug-markets of Bogotá, are places with regulated yet porous boundaries where the aim is to keep the police and other special forces at bay while reeling traffic in. To keep such place-worlds insulated from police raids yet open to traffic requires concerted effort between people. The campaneros, the “bell ringers” or lookouts, are tasked with this seemingly impossible duty of assessing traffic for potential threats from without. To do so requires cultivating an ethos of vigilance (Desjarlais and Habrih 2021), to attuning one’s body to the rhythms of place, and to the shifting tides of feeling and intuition. This narrative-driven presentation thinks with the lives of campaneros and with violence as the “atmospheric state of things” (Pine 2012). With how campaneros synchronize their modes of perception to one another’s bodies from afar, as much as to the ephemeral forces that radiate out of tenuous boundaries. It aims to think with how the atmospheric fosters a collective sensorium undergirded as much by people as by the affective density of place; as much by divination and the phantasmatic as by the rigor of militarized alertness. DESCRIPTION:

This panel interrogates old and new modulations of citizenship, space, and activism taking shape at the fringes of Brazilian cities. The existent interdisciplinary scholarship weaving together these themes has shown them to be formative of 20th-century Brazilian history and politics. Through critical attention to archival records, cultural and political practice, and long-term institutional building, historians, anthropologists, and sociologists have told the story of how advancements in rights coverage walked together with entrenched urban destitution, widespread informality, and a myriad of everyday bureaucratic and clientelistic hindrances to full entitlement. These studies also documented how starting during Brazil's re-democratization, the urban poor in favelas, cortiços, and other informal settlements resisted multidimensional exclusion through insurgent democratic action, reconfiguring the terms of access to housing, land, and various other forms of state provision and urban infrastructure, and remaking themselves as political subjects in the process. In the past two decades, a rollercoaster of sentiments and political attitudes intensified the experiences of exclusion and partial belonging of these demographics ranging from hope to satisfaction, from cynicism to despair, and from repugnancy to estrangement. Palpable reductions in socioeconomic inequality rubbed shoulders with mounting political polarization and the reversal of redistributive public policies and power structures, reshaping poor people's expectations of statal intervention, social mobility, and citizenship rights in unforeseen ways. The papers in this panel draw on this robust hands-on critique of processes of urbanization, democratization, and citizenship by asking how space, action, and belonging figure in Brazil's 21st-century political-economic climate. How are new social claims and processes of political subjectivation being staked on the state, and what other actors, technologies, and practices have come to mediate the citizenship nexus? Through in-depth ethnographic and sociohistorical work, the papers examine the value systems, institutional designs, uneven interventions, and grassroots strategies through which experiences, struggles, and tactics gain traction and acquire visibility. By chronicling what it means to be a datafied favela

resident, a middle-class subject, a 'mulher periférica,' or a 'nordestino,' they foreground the turning points where technologies of citizenship and governance remake intimate asymmetries and remap them onto the fabric of the city. We are interested in probing the legacies of these encounters, the ways inequality finds to endure through them, and the tinkles of hope and change they spur against all odds.

The Disparate Meanings of 'Middle Class': Emergent Subjectivities among Brazil's Once-Rising Poor: This paper investigates the impact of the past two decades—one known for poverty reduction, the other for spiraling economic, political, and cultural crisis—on the class and citizen subjectivities of Brazil's "once rising poor," that is, poor and working-class households who experienced socioeconomic mobility during the years of governance under the leftist Workers Party (PT). While this demographic sector had initially been celebrated as Brazil's "new middle class," this identificatory moniker lost whatever purchase it had with the economic contraction that set in around 2013. And yet, poverty reduction under the PT was inextricably tied to images of middle-classness, often glosses as the aspiration for a good job, one's own house, and a college education. This paper examines the meanings of "middle class"—as an identificatory label and as a lifestyle marker—for once-rising poor Brazilians in the northeastern city of Recife. Drawing from survey and ethnographic data conducted in 2016-17, I examine the relationships between middle-classness and consumerism, education, online social media, urban geography, employment, and leisure practices. I also consider the question, what citizenship ethos was produced among Brazil's once-rising poor? Did poverty reduction under the PT engender politically active and engaged citizens or, instead, render citizen subjectivity more individualistic, more consumerist and, ultimately, more neoliberal? The paper's broad argument is that neither conceptual avenue adequately captures the disparate and uneven class subjectivities of Brazil's once-rising poor. Presenter: Benjamin Junge (SUNY, New Paltz, Anthropology Department)

The History of a Household: Reconfiguring Family, Home and Belonging in a Northeastern Periferia: This paper traces the composition of one extended household from the years 1998 through 2022 in an urban peripheral neighborhood in Fortaleza, Ceará. By tracing the relationships and lives of those who lived in the house over two decades as well as material renovations the space underwent, I explore how individual household members were able to reconfigure ideas of family, care,

ownership, and obligation even in the context of unstable work patterns, illness, and pervasive economic indebtedness. In documenting the history of a household, I also illustrate how some residents of peripheral communities in Fortaleza have responded to the increasing economic costs associated with their rapidly gentrifying neighborhoods by expanding the category of family and how women in particular use this expansion to resist the gendered expectations of householding. The paper thus adds intimate spaces and processes such as the internal dynamics of a household, to the broader conversation about belonging and urban citizenship in 21st century Brazil. Presenter: Jessica Jerome (DePaul University)

Education, Intergenerational Knowledge, and Civic Engagement among Youth in Urban Northeast Brazil: This paper investigates the impact of structural changes in Brazil such as poverty reduction measures, increased access to higher education for populations historically marginalized but also the inadequate investment in public infrastructure (healthcare and K12 education) and the spread of drug-gangs (locally known as *facções*) on perceptions about community problems and civic engagement among youth (aged 18 - 35). I take as example the experiences of youth from the city of Fortaleza, in Northeast Brazil, who reside in a neighborhood with very high homicide and poverty rates. This research documents how youth with access to formal and informal education about the past of the neighborhood (particularly its popular struggles between 1970 and 1990s) were more inclined to understand current local problems as caused by structural causes, as opposed to the mere absence of infrastructure; they also want to remain in the neighborhood and be engaged in its improvement. The core of these reflections consists of the different attitudes and interpretations that youth give to the presence of a new actor in their neighborhood: the *facções*. While the *facções* brought a decline in homicide rates, this "peace" is perceived as fragile and temporary ("*segurança insegura*" or unsafe safety) and, according to some youth, comes at a high price: it is offered by a parallel State. This paper contributes to an emerging literature on the political engagement among youth in the past years in Brazil (Pinheiro-Machado and Mury Scalco 2014; Pinheiro-Machado and Mury Scalco 2018; Klein 2019). Presenter: Luminita-Anda Mandache

Informational Citizenship: Living with Data at the Fringes of Citizenship: Data is extolled as the new antidote against poverty and inequality. In Rio de Janeiro's Complexo da Maré, a grassroots technology mobilizes

favela citizens and researchers to collect bottom-up census data to improve access to rights and public policies for over 140,000 residents. Conversely, Brazil's National Statistics Bureau has incorporated the demands of ethnoracial minorities into the design of their latest population census to circumvent widespread mistrust in conventional public statistics. Drawing together recent bottom-up and top-down experiments with data, this paper develops the concept of informational citizenship to shed light on a new form of social membership that emerges from the ground up as people negotiate their terms of inclusion via the production, circulation, and contestation of public numbers. What does producing, engaging, and living with data feel like for those at the fringes of citizenship? I argue that for Brazilian favela residents and many other marginalized communities across the global South, rather than splintering or prying, big data—through its capacity to yield “better,” “faster,” and “more reliable” public and private statistics—is experienced as culturally transformative, politically enfranchising, and economically auspicious. By exploring how experts and citizens remake their identities through the lens of data, informational citizenship opens new theoretical venues to probe the multidimensionality and interoperability of data ecosystems. In the process, I critically interrogate the value systems and materialities, alternative paths for trust in science, and spaces for radical democratic action woven together through informational citizenship today. DISCUSSANT:

Julia O'Connell Davidson (University of Bristol),Kamala Kempadoo (York University)

DESCRIPTION:

Since the United Nations' adoption of the Protocol to Prevent, Suppress and Punish Trafficking in Persons, Especially Women and Children (aka the Palermo Protocol) in 2000, the concept of human trafficking has increasingly colonized global discourse. Conceived of as a reworking and updating of sexist and racist concepts of human trafficking (which were originally anchored in the white slavery panics of the late 19th and early 20th centuries), the Palermo Protocol sought to criminalize and repress all forms of coerced migration for labor in situations analogous to slavery. In its almost quarter century of existence, however, the concept of human trafficking popularized in the name of the international implementation of the Protocol has been appropriated and adapted in myriad ways, erasing and/or creating social and political actors on global stages, and transforming issues that once were the focus of grassroots and mass-based social movements into targets for top-down law enforcement and outsider-based charity initiatives. The result has been that a series of sociopolitical actors that seemed to be poised to create massive cultural change at the dawn of the millennium – sex worker, migrants, domestic laborer, peasant, and youth rights groups (to name just a few) – have found their agendas marginalized, transformed, or even entirely eliminated by trafficking discourses and the neo-colonial, neo-liberal agendas that often employ them. This town hall brings together a wide spectrum of multi-sited ethnographers, labor and sex worker rights activists with two goals. First, to historically situate the moralities surrounding the sex-work-care-migration nexus within the development of capitalism, Marxist thought, and the expansion of the coloniality of gender (Lugones 2010). Long before trafficking emerged on the international landscape as a category for mobilizing moral panics and colonial projects, the relationship between sex and work was heavily policed and stigmatized, often with the support of civil society and politicians on all sides of the political spectrum. Understanding the historical layers and complexities of the relationship between the categories of 'sex', 'work', and 'care' is a necessary step to lay the groundwork to open up horizons for new practical moralities within anthropology which transcend the individualizing victim-victimizer dynamic of modern trafficking discourses. Such a step is also necessary in order for anthropologists to ethically engage with and reinforce grassroots, bottom-up political mobilizations of the populations (often erroneously) labeled as being particularly 'vulnerable to traffic'. This Town Hall has two sessions: an in-presence session for those scholars and activists who have the privilege to attend the

Toronto meeting in person; a virtual session focused on colleagues who work in Latin America and Europe that cannot be physically present at the event. Our discussants will be maintained in both sessions to give continuity to the discussions across platforms.

Bringing Past into Present: Transitions, Truth, and Reckoning with Unmarked Residential School Graves

10:15 AM - 12:00 PM **TMCC - Hall G - MI**
Executive Roundtable/Townhall - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Clint Westman (University of Saskatchewan)

CHAIR:

Clint Westman (University of Saskatchewan)

PRESENTER:

Terence Clark ,Micaela Champagne ,Scott Hamilton ,Lindsay Montgomery (The Archaeology Centre, University of Toronto),Andrew Martindale ,Nicholas Laluk (University of California, Berkeley, Department of Anthropology)

DESCRIPTION:

Since 2019, Canadian and international media have reported on several 'discoveries' of unmarked burials and/or potential remains of children found on the grounds where genocidal institutions known as 'residential schools' were previously situated. The first reports announced that the potential graves of 215 children had been found by using ground-penetrating radar at a site in Kamloops, BC. After worldwide reporting, countless ceremonies followed, often featuring makeshift memorials in which 215 pairs of children's shoes were placed alongside flags declaring that 'Every Child Matters' (Chaque enfant compte). The stories only proceeded from there, with the number of potential graves expanding, as Indigenous communities across the country seek to bring forth the truth about what happened to children who never came home. While the fact that thousands of children never returned after being taken into residential schools had previously been well-documented, including through the work of the Truth and Reconciliation Commission, the reality of the findings was not fully felt among the general, non-Indigenous public – and certainly, not in the vision of Canada held by those outside of the country – until after these revelations. The work of the

Institute of Prairie and Indigenous Archaeology, led by Dr. Kisha Supernant, has been central to these efforts, drawing on the technology of ground-penetrating radar alongside careful consultation with communities and review of oral accounts and archival documents to help frame the search for these burial sites, as well as the stories behind the lives and deaths they may help to reveal. As more and more potential graves have been found, however, a predictable backlash around the implications of this work has developed, with many commentators working to dismiss or downplay its significance. Our roundtable discussion will build on Dr. Supernant's keynote address and allow an opportunity for more extended engagement with the implications of this ongoing conversation for both anthropology as a discipline and Canadian society. We will ask participants to consider the 'discoveries' in relation to the conference theme, including:

- Transitions between past, present, and future: How do these discoveries bring stories from the past into the present and into our imagining of the future?
- Transformations: What forms of change and reckoning does this work encourage or enable?
- Transparency: What does it mean to bring these truths to light, both for members of Indigenous communities who have long sought to know more about the whereabouts of their children, and for non-Indigenous Canadians who have until recently failed to engage with such losses?
- Translations: What are the challenges of communicating these understandings to the public? How can we counter the ways in which disinformation and bad faith are used to contest these truths? Why did it take the use of technology for many non-Indigenous Canadians to recognize the thousands of children who never came home? What are the limitations of these technologies and their deployment?
- Transboundary implications: How do such findings relate to similar developments in the USA and elsewhere?

Transdisciplinary conversations: What does our work as anthropologists across the four fields have to contribute to this work? Following the panelists' remarks, Dr. Supernant will act as discussant, connecting the conversation back to her keynote.

PRESENTER:

Katrina Thompson (University of Wisconsin, Madison), Catherine Tebaldi (University of Luxembourg), Maxwell Pin (University of Maryland, College Park), Elise Kramer (University of Illinois, Urbana-Champaign, Department of Anthropology)

DISCUSSANT:

Susan Gal (University of Chicago, Department of Anthropology)

DESCRIPTION:

A chronotope (Bakhtin 1981) is an ideological assemblage that, as Agha (2007: 321) puts it, 'formulates a sketch of personhood in time and place.' The concept of the chronotope draws our attention to the fact that in discourse, time and space do not proceed in regular, linear increments but rather figure as densely interwoven clumps: bracketed-off sociopolitical landscapes populated by particular types of people with particular narrative possibilities. These chronotopes are discursively useful, perhaps even cognitively essential, but they are also limiting. Anthropologists such as Kristina Wirtz (2011) and Jonathan Rosa (2016) have written about chronotopes of race, exploring the ways that racializing discourses are often linked to notions of pastness or futurity and particular 'heres' and 'theres.' Drawing on this rich body of work, this panel considers the intersecting topic of gendered chronotopes: as these five presenters demonstrate, chronotopes' 'sketches of personhood' are often highly gendered, and that (implicit or explicit) gendering in turn shapes both how gender is performed and how chronotopes are mobilized in discourse. The presenters on this panel suggest that gender itself becomes meaningful through chronotopic formulations. Gender ideals are rooted in particular times and places. This has important consequences for gender performances, which must therefore be chronotopically anchored. As these papers compellingly demonstrate, one is not just a gendered subject, one is a particular type of gendered subject, and those types are embedded in imagined times and places: the 1950s American housewife (Tebaldi); the cosmopolitan Korean mother who socializes her daughter in the ways of skincare (Yoo); the tough, healthy caveman (Kramer); the pious husband or wife of Muhammad's time

(Thompson); the 'traditional' Kiowa mother (Yamane). Gender performances, then, invoke entire sociopolitical landscapes - this is part of the reason why gender cannot be fully extricated from other forms of social differentiation such as race, ethnicity, and social class. The panel also explores how gendered chronotopes are strategically mobilized in discourse to accomplish goals. Those goals may be primarily economic, such as selling skincare products (Yoo) or diet and exercise programs (Kramer), or social, such as maintaining marital harmony (Thompson) or honoring fallen family members (Yamane). The goals can be explicitly political, such as anti-feminist 'tradwife' influencers (Tebaldi), but even those that do not deal overtly with politics still inevitably grapple with issues of inequality and social change. Gendered chronotopes past and future are often invoked in comparison to what is framed as the static 'here-and-now.' But as this panel shows, the 'here-and-now' is a dynamic, scalar category that is actively being constructed through the very discourses that presuppose its existence. The papers on this panel, then, explore yet another way in which gender is performative: it does not just constitute itself; it serves as a vehicle for the constitution of the sociopolitical landscape itself. Agha, Asif. 2007. 'Recombinant selves in mass mediated spacetime.' Bakhtin, Mikhail. 1981. *The Dialogic Imagination*. Rosa, Jonathan. 2016. 'Racializing language, regimenting Latinas/os.' Wirtz, Kristina. 2011. 'Cuban Performances of Blackness as the Timeless Past Still Among Us.'

Swahili-Language Islamic Marital Advice: Chronotopes for Enacting Gender Norms: In this paper, I explore Swahili-language Islamic marital advice, both oral and written, focusing on how the advice-givers signal how that advice should be enacted in different times and places, such as in public or private settings. I also examine how the advice is influenced by marital norms from other times and places, particularly that of the Prophet Muhammad, which is highly valued, and the modern West, which is often criticized. Furthermore, I investigate the explicit and implicit prophecies contained in the advice, predicting the future effects of the advice's enactment: successful marriages will result in pleasing God, while non-compliance with the advice will lead to suffering, particularly for women. My research draws on a range of sources, including Islamic marriage manuals aimed at men and oral advice shared by Swahili women, demonstrating the ways in which Islamic marital guidance intersects with gender roles, cultural norms, and varied chronotopes in East Africa. Presenter: Katrina Thompson (University of Wisconsin, Madison)

Tradwives: Femininity and Chronotopes of White Nationalism: In this paper I explore how highly online anti-feminist influencers known as “tradwives” engage in chronotopic identity work (Blommaert & Da Fina 2017) to reproduce and circulate (Gal 2018) multiple, distinct yet overlapping versions of tradition as desirable femininity, white nationalism as a domestic idyll. Each of the 4 tradwives whose videos I analyze encodes a different chronotope in order to produce distinction through forms of embodiment and discourse, a register clasp (Gal 2018) which distinguishes her from both the ‘ugly feminist’ and her peers online: Lacey Lynn, a 1950’s suburb, Blonde in the belly of the beast, a 1980’s big city, Ayla Stewart, an 1850’s homestead, and Alena Pettit, a 1940’s England. While each produces a different stylization of the past, taken together these varied times and places in fact strengthen the white nationalist vision of woman as atavistic tradition. Her role as mother of the white nation linking biology to “a naturalized history” representing an ideal national and indexical order (Inoue 2004). Rather than evoking a particular place, tradition means a woman returned to hers. Blommaert, Jan, and Anna De Fina. 'Chronotopic identities: On the spacetime organization of who we are.' “Songs to Soothe a Mother”: Chronotopes in Kiowa War Mother Songs: During World War II, Kiowa singer and prolific composer Lewis Toyebo initiated a new tradition when he started to compose songs for the women of the Kiowa War Mothers Chapter 18 organization. These songs provided encouragement for Kiowa servicemen deploying overseas as well as their mothers. Soon afterwards, the members of the War Mothers organization adopted this new genre of Kiowa music and began performing these songs to honor returning veterans and those killed in action in ways similar to practices before the 20th century. In this paper, which is based on fieldwork conducted with Kiowa elders, speakers, and singers, including the daughter of Lewis Toyebo, I show that War Mother songs draw from multiple pre-reservation female martial traditions (War Journey, Scalp, and Victory) that simultaneously connect pre-reservation Kiowa martial life with post-reservation

realities in World War II through musical and linguistic means. The War Mothers song tradition thus not only reflects the Kiowa people's changing circumstances in the post-reservation era, but also reveals how new forms of Native American musical expression creatively index older gendered traditions. Given the dearth of anthropological and ethnomusicological scholarship on Kiowa War Mother songs, this paper seeks to contribute towards anthropological discourses on chronotopes of gender by showing how gender ideologies tied with time and place are expressed through dynamic forms of musical and dance performance. Presenter: Maxwell Pin (University of Maryland, College Park)

The Caveman in the Mirror: Masculinity and Paleofantasy: In the early 2000s, mainstream U.S. wellness culture started to develop something of an obsession with the distant past. It began with barefoot running and the Paleo or “caveman” diet, and has only expanded since then, with dozens of spin-off diets and exercise programs that claim to replicate the behaviors of our prehistoric ancestors, and further claim that this return to the past is the only true path to optimal health. These “paleofantasies,” as evolutionary biologist Marlene Zuk termed them, are (unsurprisingly) not based in scientific evidence about prehistoric human behavior or accurate understandings of evolutionary theory. Why, then, do so many people find them compelling? And, more specifically, why do so many men find them compelling? In this paper, I argue that the “stone age” chronotope is implicitly masculine and in fact tends to exclude women altogether. Women are largely absent from imaginings of prehistory, whether those imaginings are car insurance commercials, diet and exercise programs, or even anthropological texts. For the most part, the stories we tell about “prehistoric man” are, in fact, about prehistoric men. Looking at various popular discourses about the stone age chronotope, I consider how women are effectively rendered invisible, leaving behind what is perceived as a distilled masculine essence. I suggest that, when it comes to paleofantasy’s appeal, the erasure of women is a feature, not a bug, and that the proliferation of paleofantasy in the past two decades has been part of a broader cultural backlash against feminist progress. DISCUSSANT:

Britt Halvorson (Colby College)

DESCRIPTION:

Normative understandings of secularism position it as racially neutral, blind or indistinct. However, as scholars working on marginalized religious communities have variously demonstrated, neither the notion nor the practice of secularism can be understood apart from conceptualizations of race or practices of racialization. If historically the emergence of secularism was closely entwined with concerns over establishing the very limits of recognizable religion on racial lines, this historical co-constitution of 'race' and 'religion' as objects of secular governance continues to organize the practice of secularism across the postcolonial world. From former slave societies and colonies to former colonial powers, the secular governance of religion continues to reflect and reproduce the racialized imaginaries of religion and non-religion that have informed the emergence and development of secularism as a political regime since the 18th and 19th centuries. This panel explores the racialized construction and reconstruction of secularism through analyses of raced understandings of time, space, social process and social personae that imaginaries of secularism and the secular rely on and make available. Building on Mikhail Bakhtin's (1981) theorization of the 'chronotope' or 'time-space' as a semiotic envelope that structures imaginaries of the social and the political, the papers in this panel ask how secularism and the secular are constructed and experienced as raced 'time-spaces' i.e.. chronotopes, and how they operate as 'event horizons' that condition the kinds of raced narratives, actions, and forms of personhood that can be produced across different secular contexts. This panel thus explores how 'race' as a social, political, and legal category is produced by

and/or within chronotopic constructions of secularism and the secular. Through ethnographic analyses of the racialized constitution of secular spacetime envelopes panel papers interrogate how imaginaries of secularism and the secular rely on as well as reproduce particular constructions of raced time, space, and social personae, and how individuals and institutions work to manipulate and refigure these constructions to forward their own social and political projects.

Race, Religious violence, and State Secularism:

Chronotopic Constructions of the Nation in Brazil: In Brazil, claims to commitment to state secularism (laicismo) have come to operate as a key authorizing device for arguments across the politico-religious field. From Evangelical Christian critics of "gender ideology" to atheists who protest the display of crucifixes in court rooms, political actors have grounded their demands in arguments for the Brazilian state's secular character. The imaginaries of secularism that these arguments project, however, rely on markedly different chronotopic configurations of Brazil as a religious and raced nation. This paper examines the dialogic constitution of such different imaginaries of secularism through the analysis of a debate on whether the Parliamentary Commission of Inquiry into Religious Intolerance of the Legislative Assembly of Rio de Janeiro – a special commission that was founded in May 2021 in response to soaring rates of Evangelical Christian attacks on African origin religions in the state – should use the term "religious intolerance" or "religious racism" to describe its object of inquiry. The first term, while seemingly more neutral, had in recent years come to increasingly be associated with Evangelical Christian claims to growing "christophobia." The latter term had been introduced by practitioners of African origin religions who claimed that the violence they experienced was not only religiously but also racially motivated. To understand the stakes of the debate I examine how arguments for each term worked to construct and in so doing anchor the commission and its purpose within different religious and racial chronotopic constructions of the nation and its social problems. Presenter: Elina I. Hartikainen (University of Oslo, Department of Social Anthropology)

The Heterogenous Time of the Islamic Nation in Pakistan: Pakistani Tablighis, practitioners of the transnational Islamic piety movement, the Tablighi Jamaat, claim that Muslims have abandoned "religion" for the temptations of "the world," which has created a state of moral chaos (fitna) evident in the breakdown of relationships in the family, nation, and global Islamic community. Tablighis insist that this dire situation can

only be remedied through their own distinct, ritualized form of face-to-face preaching (dawat), which is modeled on Prophetic example and thus the sacred means for spreading Islamic virtue and creating an Islamic community. In this paper, I show that as a “return” to the sacred past of the Prophet’s time, dawat creates an alternative chronotopic imaginary (Bakhtin 1981) to the genealogical hierarchies that structure Pakistani social and political life. I show that the policies of colonial secularism and specifically the effort to divide custom and religion created the divide between Islamic piety and genealogy as means of mediating the sacred past. The enduring tension between these temporalities, I argue, demonstrates how the secular time of the Pakistani nation remains “heterogeneous” (Chatterjee 2005; cf. Anderson 1983) and a site of contested visions of national community. Presenter: Arsalan Khan (Union College)

Conversion and Abolition: Catholicism and Racial Capitalism in Martinique: Walter Benjamin sketched out the “empty, homogenous time” secular nations inhabit nearly a century ago. Since then, considerable nuance has been added to his account. From the “radical rupture” of Pentecostal conversion (Robbins) or the “revolutionary event” (Sewell) to “continuity thinking” (Lester) or the “time of the gods” produced among subaltern peasants (Chakrabarty), it is clear that numerous temporalities disrupt this empty, homogenous realm. I turn to the abolitionary period in the French Caribbean to explore a moment when two distinct chronotopes came into conflict. In the 1830s and 40s, as the revolts of enslaved people fractured the plantation economy and spurred the end of chattel slavery in the French Caribbean, French Catholic missionaries offered up their services to the French state. Arguing that enslaved people were insufficiently civilized to “merit” their freedom, the missionaries argued that only full Catholicization could effectively transform these actors into “free” laborers. Through this extended moment of conversion, the Church worked to expand the space of the plantation into the workings of racial capitalism, powerfully reducing the radical rupture of abolition to a system that allowed for forms of exploitation to be maintained. In contrast, formerly enslaved people and their descendants today demanded and continue to demand full abolition in ways that would fundamentally alter the chronotopes of global, racial capitalism. Relying on archival and ethnographic data, I will address the tensions and alternative visions produced when chronotopes aimed at reproducing exploitation are refused in favor of more

radical configurations of space and time. Presenter: Elayne Oliphant (New York University)

Association of Latina/o and Latinx Anthropologists

ORGANIZER:

Cecilia Vasquez (University of California, Riverside)

CHAIR:

Cecilia Vasquez (University of California, Riverside), Ulla Berg (Rutgers University)

PRESENTER:

Ulla Berg (Rutgers University), Ruth Gomberg-Munoz (Loyola University Chicago), Gina Perez (Oberlin College), Almita Miranda (University of Wisconsin, Madison), Cecilia Vasquez (University of California, Riverside)

DISCUSSANT:

Aimee Villarreal (Texas State University, Department of Anthropology)

DESCRIPTION:

This roundtable brings together activist-engaged scholars working within immigrant justice and the sanctuary movement. Whether it is through grassroots organizing, direct services, or program development scholars are exploring ways to utilize their research to serve community partners. This roundtable is a reflection and dialogue of how scholars conduct research. Questioning the ethics of activist-engaged research and methods that contribute to immigrant justice. The roundtable will explore themes such as the praxis of accompaniment, abolition, and critical perspectives on the role and challenges of activist-engaged research.

DESCRIPTION:

In the past decade, legal and political anthropology has increasingly studied democracy in its most authoritarian forms (Musaraj and Canfield 2022), as a facilitator of political change (Ellison 2018, Paley 2001, Witsoe 2011), and the process of creating state governance (Appadurai 2001, Coles 2007, Spencer 2007). Since so much emphasis has been placed on documenting transitions of democracies, there is still much to be learned about how the procedures and technicalities of democratic practice factor into our studies. Emerging engagements with nationalism, rights, polarization, and state action have made studies of democracy ever timelier and more urgent to anthropology's mission today. This panel poses the question of where democracy fits in anthropology today? How does emphasizing democracy create new frameworks for legal and political anthropology? Or is the anthropology of democracy something different? How do we contend with democracy as the ethnographic subject itself? Using current research examples, this panel considers the future of democracy within anthropology and the transitions of the subject within the discipline.

DESCRIPTION:

Critical and ethnographic studies of resource extraction, infrastructure, and natural resource management have highlighted both the disturbance of terrestrial spaces and the creation of new forms of emplacement. This panel aims to explore the spaces and entities, both determinate and indeterminate, that are being opened up as earth is moved to extract ores, to build roads and other infrastructure, and to embark on variously scaled enterprises of terraforming. How is the movement and displacement of earth and underground entities, including but not limited to water bodies and the very stratigraphic structure of the crust, experienced in different cultural and geographic contexts? What are the implications of such movements for economies, livelihoods, and systems of meaning? What frameworks have been suggested for uniting conceptual and theoretical accounts of these movements with urgent actions in a time of planetary crisis? We aim to bring together voices from scholars of mining, infrastructures, impact assessment, agroecosystems, and hydraulic resources and politics, in an effort to consider deep cultural and material questions of earth moving, its emplacements and displacements, and the actions that may stem from such fields of practice.

Moving earth and making roads on Indigenous lands in central Australia: This paper draws on applied ethnographic research as part of impact assessments for road infrastructure projects on indigenous lands in central Australia. Whereas the vocabularies of road building are often dictated by the language of engineering, design, construction processes, and project governance frameworks, I reflect on experience of articulating the technical details of roadwork—from consultation, to material sourcing and processing, to corridor design, to construction machinery and process—in the traditional language of Pitjantjatjara, a dialect of the Western Desert Language spoken by

people who call themselves Anangu. These conversations were often a collaborative exercise in translation which resulted in new framings of key concepts held by agents of settler bureaucracies and Anangu alike. They went to the heart of questions regarding the practical and moral basis of colonial orders and forms of development and disturbance they have and continue to entail. What do such rearticulations of frameworks for linear infrastructures tell us about broader questions of how infrastructures sit within cultural landscapes, or how such frameworks might draw on notions of labor and value that do not derive from the modernist promise of infrastructure development? How do conversations about space and time in different vocabularies lead to new understandings of the process and products of infrastructure building? My aim is to consider these questions in ways that may be of interest to those engaged in planning or building linear infrastructures, as much as those with an interest in the anthropology of infrastructures and design. Presenter: Noah Pleshet (University of New Brunswick)

Earth moving, mounding, community archaeology: precontact archaeology and community-based heritage : In landscapes that accumulate sediments, earth moving can be a central component of archaeological exploration. While archaeological methods are framed by an academic discipline with roots and histories firmly grounded in Western epistemologies, the process of engaging with earth moving, including through shifting archaeological deposits, creating mounds and earthenworks, and through such activities, engaging with place and community memory has deep histories in southern and eastern North America that extend beyond contact with Europeans. While conventional archaeology generally seeks to disambiguate these processes, integrating the meaning and broad understandings of earth moving can be consistent with deeply embedded place-making in Indigenous communities. I explore the potential for such integration through an examination of several community-based archaeological projects in the Canadian Maritime Provinces. Presenter: Susan Blair

The core of the matter: excavating colonial environmental consultation: With so much digging going on, how can we effectively survey, monitor and protect cultural landscapes and meaningfully engage with the people who use them across time and space? How do we remain accountable to the places and people that are the true and enduring bearers of the impacts of these developments? Approaches to environmental

monitoring and analysis related to development need to improve, but so too do our social consultation practices. This paper reflects on two professional contexts where I engage with digging: firstly on my academic work on as master of science in environmental management (MScEM) at the University of New Brunswick, relying on the novel monitoring technique of soil core environmental DNA analysis combined with indigenous knowledge to map plant communities, their distributions, and traditional uses. Secondly, on my professional work as an ethnobotanist and species at risk manager for Wolastoqey Nation in New Brunswick (WNNB), an indigenous consultation organization in New Brunswick, Canada that represents the six Wolastoqey (Maliseet) communities in Duty to Consult processes in Environmental Impact Assessments. My research and professional work provide technical and scientific advice, based on field work and monitoring for Indigenous Land Use (ILU) and cultural studies. When the goal as stated by colonial institutions is to improve consultation processes, to build meaningful relationships with indigenous peoples, why are we doing this work from the bottom up? What are the avenues to improving our relationship with cultural landscapes and the people who use them past, present, and future? With so little movement from decision makers above, indigenous communities have taken charge in protecting cultural landscapes and resources. My work within and among indigenous communities, proponents, and educational institutions has highlighted the need for a consultation processes that support this bottom up work, and increases accountability above. Presenter: Dakota Tomah

Large-scale Projects as drivers of new settlement areas—Are we capturing these effects in the EIA?: Projects that require large-scale earth movements such as those in the mining and linear corridor development sectors (roads, pipelines, and other linear features) often open up previously inaccessible areas. In the mining sector, ancillary developments such as work camps may be created with the view to facilitating rotating workers' lodging during work rotations. These types of developments can, over time, transform into settlements and worker families may move to the work site (or nearby) permanently creating businesses, but often lacking appropriate infrastructure to support the settlement, and with no supporting policy or other social organisational structure. Should we be better assessing the possibility of these "settlements" in traditional project EIA? Presenter: Janet Blackadar (University of New Brunswick)

The Artisanal Underground: Gold, Subsistence, and Subsurface Materiality in Colombia: This presentation focuses on subsurface materiality to explore how small-scale gold miners in Colombia navigate trenchant legal politics. Critical studies often characterize the subsoil as a space of domination, whose resources are catalysts for corporate and statist expansion. Here I take a slightly different route, as I demonstrate that subterranean matter make possible ways of knowing and working that are explicitly anathema to an exclusionary legal regime. Drawing on fifteen months of fieldwork in Colombia (2016-2023), predominantly in Chocó, I argue that small-scale gold miners appreciate the freedom and dignity of their work through the mediation of the underground. To be more precise, I maintain that miners experience the subsoil as invisible and unruly matter, and I show that this experience allows them to frustrate state governance and criticize hegemonic understandings of the subsoil as knowable and inert. Presenter: Jesse Jonkman (VU University Amsterdam)

Digging the jungle, the mine, the field, the swamp: Everyday practices of earth moving in Colombia: This paper explores the everyday and bottom-up practices of digging in the lowlands of Colombia's Chocó and Caribbean, and considers the ways in which earth moving both creates and destroys worlds. By examining various forms of earth moving, including diggings for gardens, tree agriculture, artisanal mines, wells, fence posts, waterholes, trenches, and ditches, this paper highlights the skilled work of Afro-descendant peoples in Colombia and the cultural and political implications of this work. On the one hand, theirs is a labour that is too often dismissed as unskilled. On the other, digging destroys forests, creates livelihoods, enable agriculture, and encloses property. The paper aims to consider towards the experiences of earth moving and reflects on the deep cultural and material questions and its implications for economies and livelihoods. Digging becomes a kind of writing in the landscape that creates property, plantation, cattle ranches, and mines. Methodologically, this paper draws on an ethnographic and literature review. Presenter: Daniel Tubb (University of New Brunswick, Department of Anthropology)

2-220

Ecologies of Care in Transition: Theorizing Relational Ethics and Politics

10:15 AM - 12:00 PM

TMCC - 718 B

Oral Presentation Session

REVIEWED BY:

Society for Psychological Anthropology

ORGANIZER:

Merav Shohet (Boston University)

CHAIR:

Allen Tran (Bucknell University, Department of Sociology & Anthropology)

PRESENTER:

Elana Buch (University of Iowa), Merav Shohet (Boston University), Allen Tran (Bucknell University, Department of Sociology & Anthropology), Sylvia Tidey (University of Virginia, Department of Anthropology), Nofit Itzhak

DISCUSSANT:

Jason Throop (University of California - Los Angeles (UCLA), Department of Anthropology)

DESCRIPTION:

This panel centers care and relationality in the construction and experience of the self, by examining the ecologies and affective politics of relational ethics in contexts of transition and change. While anthropological debates on subjectivity, empathy, and ontology productively analyze the discursive construction of psychic processes to connect the personal to the political in times of political-economic transformation or personal crises, much of the work on political subjectivities remains premised on binaries such as self and society or state and citizens. Conversely, recent anthropological theories of care highlight how care is achieved through intersubjective practices. Care, we suggest, highlights the liminality and contingency of being-in-the-world, since social relations, even when ritualized, structured, or overdetermined, often depend on practices of care to produce them. Individually and collectively, the papers ask: How does care transform relations between individuals and collectives? How might perspectives on the state shift if relations of care were the starting point of critical analysis, cultural politics, and cultural phenomenology? How do families and communities mediate political projects to discipline individuals? How can frameworks of the state-citizen dynamic be expanded to foreground the intersubjective entanglements that challenge state, solidarity, and medico-scientific discourses of progress? Together, the panel's participants outline how relational ethics emerge from existential threats to identities (Tran, Itzhak), bodies (Shohet, Tidey), and communities (Buch) by analyzing the affordances of care that are structured across interpersonal relationships (Itzhak), families

(Tran, Tidey), and communities (Buch, Shohet). Doing so challenges teleological narratives of progress or treatment (Shohet, Tran), and of life, death, and extinction (Tidey, Buch). We suggest that transformative crises do not just threaten ways of living but also cultivate the ways of relating that sustain individual and collective life (Tidey, Shohet). Here, affects such as hope and love, as well as anger and fear become both a form of ethics and a way of being with others (Itzhak, Shohet, Tidey).

Last Woman Standing: Care Workers and/at the Limits of Care : In fieldwork conducted more than a decade before the COVID-19 pandemic popularized the term “essential workers,” home care workers in Chicago regularly described how economic, social, and familial conditions left them as the last person preventing the abandonment of those who depended on them. In their narratives, they describe how they were socialized into the forms of attunement and embodied practice that constitute care in this setting. They argued that their commitments to care exceeded those of the communities and institutions of which they were a part, such that both individuals and systems consumed rather than reciprocated their world-sustaining labor. In exploring the intersubjective underpinnings of care workers’ narrations of themselves as the last woman standing, I highlight the ways that these narratives positioned care workers as deserving, moral citizens justified in their scathing social critiques and in their claims for greater support. I extend their critiques to consider the expanding role that the notion of care has taken in more recent efforts to reform state practices and systems of justice and education. Following their example, I suggest that without broader consideration of the material underpinnings of care, attempts to address structural violence through care are likely to deepen existing inequities and regenerate gendered, racialized, and colonial forms of exploitation rather than remediate them. Presenter: Elana Buch (University of Iowa)

Towards an Ethics of Survival: Living with and Caring for Renal Failure in the Shadow of COVID-19: This paper draws on ethnographic interviews with twenty poor and racialized Boston Medical Center end-stage kidney disease (ESKD) patients and five nephrology clinicians enrolled in a study designed to research the syndemic effects of the pandemic and stigmas associated with patients’ marginalized status and chronic terminal illness. I show how unlike clinicians, who use a “grammar of crisis” (Giordano 2020) to characterize patients’ worsened situations, patients underscored the

chronic dimensions of their lives. They framed COVID-19 as “just one more thing,” adding to the long litany of troubles in their lives. Haunted by the anger and hurt they felt in response to White racism, some patients articulated a political etiology of their illness (Hamdy 2012). At other times, however, these same patients affiliated with biomedical accounts that privilege individual agency and control over one’s life in the short term, while also narrating faith, prayer, or a church community not as a numbing salve, in Marx’s or Freud’s terms, but as a source for coping and perduring in life, with the possible hope of flourishing even with the pain, rather than giving in to the despair of disenfranchisement or simply calling it quits. Conversely, clinicians, who only expressed faith in science, articulated deep distress over both our nation’s broken healthcare system and ordinary medicine’s (Kauffman 2015) initial inability to prevail over COVID-19. I propose that we understand these ostensibly opposed orientations in terms of a relational ethics of survival where care may involve shared goals but not necessarily a unified politics. Presenter: Merav Shohet (Boston University)

Family Caregivers, Medication Adherence, and Biopolitics in Ho Chi Minh City, Vietnam : This paper examines the role of family caregivers (người thân or người nhà) in psychiatric hospitals in Ho Chi Minh City, Vietnam. In biopolitical approaches to the treatment of chronic diseases, patients are framed as individuated selves who undertake neoliberal projects of self care. Psychopharmaceuticals are framed as a technology of a deinstitutionalized and individuated self (Rose 2003), and medication adherence has become a means for patients to manage themselves in the wake of decreased state welfare programs (Buus 2014, Brijnath and Antoniadis 2016, D’Arcy 2019). In Vietnam, however, psychiatrists stress the importance of adherence without the expected calls for self care. Rather, these injunctions are directed at the family caregivers in attendance at the patient’s consultations. That is, adherence is framed as a project of familial care. I argue that families, not individual patients, are responsabilized for medical care. Challenging the state-citizen binaries that characterize anthropological frameworks of biopolitics, the manner in which Vietnamese families become enrolled in and, in turn, negotiate medicine taking is not simply a dilution of biopolitical projects but an extension of them into the family. Presenter: Allen Tran (Bucknell University, Department of Sociology & Anthropology)

Transitioning from Life to Death: Transgender Family Care and Relational Dying in Bali, Indonesia : For Balinese Hindus, death marks both the end of one's bodily existence and a transition into a spiritual journey towards one's next existence: reincarnation or, ultimately, the achievement of eternity. As elsewhere, this process requires significant care from family in the form of preparing the body, collecting funds, and conducting rites (cf. Desjarlais 2016; Pogue Harrison 2003; Ruin 2018). However, not everyone is assured such care: many transgender women (waria) in Bali, often burdened with the double stigma of gender-nonconformity and a positive HIV status, fear their families' reluctance to ensure proper care in death. This makes the question of how to live a worthwhile life without risking the alienation of family care deadly serious for them. Drawing on participant observation with a now deceased waria and in-depth interviews with her family, I address the necessity of care, understood as an attuned relationality towards intimate others, in ensuring a good death and afterlife. In contrast to phenomenologists such as Martin Heidegger (2008 [1962]), who view death as the definitive marker of our finitude as well as the ultimate event that individuates us, I instead emphasize the importance of the relational context of death. In doing so, I draw on Anne O'Byrne's (2010) reminder that birth, besides death, ought to be viewed as a marker of our living finitude and, moreover, as one that shows us to be in relation. Bringing O'Byrne's insights to bear on the phenomenological insistence on the individuating character of death, I suggest that death too, like birth, can be viewed as such a marker disclosing our relationality. This claim is especially pertinent in the Balinese context, where death is not the ending of one's existence per se but a transition into an afterlife in which one can no longer pursue one's own possibilities and needs to rely on others to do so. Presenter: Sylvia Tidey (University of Virginia, Department of Anthropology)

Love: What's It Good For Anyway? : This paper brings into dialogue Catholic iterations of love as an ethics or way of being in the world with others, with feminist ethics of care, especially the work of Carol Gilligan. Drawing on fieldwork conducted in France and in Rwanda with Catholic charismatic development NGOs, the paper considers the models of agency and of action implicit in both Catholic and feminist relational ethics. It then argues for the ways in which thinking through these two ethical perspectives in tandem opens interesting avenues for investigating what love is or isn't good for – politically, socially, and as a concept through

which anthropologists make sense of human sociality, particularly so at a time of social flux and turmoil. Presenter: Nofit Itzhak

Entanglements of Harm, Disease, Knowledge and Expertise in Global Health and in Ethnography

10:15 AM - 12:00 PM

TMCC - 206 E

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Erin McConkey

PRESENTER:

Wren Wilson ,Megan Schmidt-Sane (University of Sussex),Andra le Roux-Kemp ,Eden Blackwell (University of Alabama),Giorgia Kerr ,Erin McConkey

DESCRIPTION:

Taken together the presentations in this session undermine hegemonic rigid distinctions between objects and subjects of intervention and the 'experts' who produce knowledge about and for them. Based on ethnographic research in a range of geopolitical and cultural contexts, the presentations also raise important questions about harm, precarity, panic, value, policy, disease transmission, and therapeutics. This includes variable attention to the humans and non-humans involved with their production and use, and the importance of precarity, risk, and advocacy in knowledge production and therapeutics. These ethnographic studies also engender compelling questions about what connects and bifurcates people, policy, and knowledge in global health arenas

Transitioning to Zero Transmission - HIV Care in Scotland: Ending HIV transmission by 2030 was proposed by Scotland officially on World AIDS Day 2021. This ambitious and energising announcement marks a direct public health engagement goal that builds upon years of previous political and medical initiatives. Even within this nation where access to 'reproductive health services [and] access to HIV specialist treatment and care is excellent,' there is lacking a full understanding of the experience of people living with HIV (PLHIV) (Eliminating HIV transmission by 2030 2021). This paper observes the ways that long term social and targeted political engagement, and the ebbs and flows wherein, impact the biomedical and biosocial existence. Researched and explored exhaustively for decades, HIV

still is a considerable public health factor for many nations including Scotland. PLHIV are often referred to as such, but little is known about what the term implicates, meaning how they experience living with HIV. The shift in terminology marks a biomedical shift too, as there is no longer an inherent death sentence implied in contemporary Scotland. If living with HIV requires the indefinite and consistent access to the drugs that make life possible, then the politics of biomedical care are part of governing the existence for PLHIV. Following the lives of PLHIV in contemporary Scotland will lead to a deeper understanding of how individuals' lives are embedded, at the sake of or in conflict with the political, social and biomedical spheres. HIV scholarship engages with the biomedical and pharmacological body, with more recent forays into the medical anthropological spheres of HIV inquiry, such as space. The connections with concepts such as stigma, responsibility, expertise, and hope can be followed and linked to the spaces and spheres that PLHIV encounter. Living with HIV can be more than crafting an inextricable tie between other individuals living with HIV but also demands consistent and long-term ties to specific people, places and politics that become part of a necessitated network of healthcare. In addition to classical ethnographic methods of participant observation and storytelling, the application of arts-based methods such as ethnographic cartography can bring attention to the ways in which living with HIV is navigated for extended lifetimes in the current era of transitioning HIV care and initiatives. Introducing ethnographic cartography will show how networks are incorporated into everyday experiences of care in the context of movement to zero transmission by 2030. These experiences will seek to 'resuscitate critique as contributing to and not simply working against, a better politics of care' for those living with HIV (Murphy 2015). This paper will expand upon the ways in which social, physical and/or political space impact the experience of seeking care in the transition to zero transmission by 2030. I will take 'care' as an epistemological setting for both communications of morality/ethics and care as an embodied social performance and exchange as understood by both those who receive care as well as those who offer it- moving beyond simply a biomedical interaction or management. Presenter: Wren Wilson

Exploring uncertainties in mpox spread in southwestern Nigeria: Evidence from ethnographic fieldwork: Authors: Megan Schmidt-Sane, Hayley MacGregor, Olufunke Adegoke, Syed Abbas, Akanni Lawanson, Ayodele Jegede In 2022, there were almost 84,000 cases of mpox (formerly known as monkeypox) in 103 new

countries and it was declared a public health emergency of international concern (PHEIC). Long before this, Nigerian scientists and public health officials had been sounding the alarm about mpox, the need to understand its epidemiology and newly atypical spread, and the need for better public health strategies. Since 2017, Nigerian scientists had documented increasing and unclear spread amongst human populations in more urban areas. Mpox was once a disease primarily limited to spillover in rural areas from animals to humans. With more recent cases in Nigeria, there has been uncertainty around disease context and dynamics. Anthropological work on 'uncertainty' in epidemic preparedness and response has underscored different forms of uncertainty, including uncertainty that arises in terms of how a disease is spread, which populations are more affected, and how people might respond (MacGregor et al., 2020). One area of uncertainty is the difference between the multi-country outbreak and spread in Nigeria. In the United States and Europe primarily, cases were seen amongst gay, bisexual, and other men who have sex with men. The burden in Nigeria is unclear, with repressive laws likely contributing to lower health care seeking and case under-reporting. At the same time, cases are much more widespread amongst the general population. Uncertainty is often framed as a challenge and one that requires urgent research to answer questions or epidemic response approaches to manage and reduce risk. As anthropologists, we are often called upon to unpack or shed light on these uncertainties as 'social context' and recommend ways to 'manage' or overcome it. This technocratic management of uncertainty also stands out from more everyday experiences of uncertainty 'from below.' In this paper, I will present findings from our team's ethnographic fieldwork in southwestern Nigeria, where we explored the dynamics of mpox, primarily in urban areas in metropolitan Lagos and Ibadan. Using the anthropological framework of 'uncertainty' in disease surveillance and response, I will explore different perspectives on and ontologies of uncertainty and what implications this may have for public health efforts to manage it. Presenter: Megan Schmidt-Sane (University of Sussex)

Medical Nationalism and Emerging Infectious Disease: "The Pandemic of Nationalism and the Nationalism of Pandemics": Medical nationalism discourse, exemplifies a nation-centric understanding of health and healthcare. Such discourse can be observed in collective narratives, political claims, and symbolic representations. During times of major disease outbreaks - like that of Covid-19 - medical nationalism discourse is particularly acute and

serve either to promote health rights and health security, or impede and obstruct national and international efforts in this regard. In reflecting on the current and ongoing Covid-19 pandemic, and with reference to Benedict Anderson's notion of 'imagined communities,' this paper will elucidate the role and extent of English medical nationalism discourse and its impact on health rights and health security. Presenter: Andra le Roux-Kemp

Sidama models of health and disease: Cross-cultural differences in perception around disease transmission and treatment have direct relevance to efforts intended to prevent spread of infections. This study investigates Sidama models of health and disease via semi-structured group (n=5) and individual interviews (n=20) among Sidama adults and adolescents living in Loqqe, a peri-urban village near Hawassa, Ethiopia. Participants were asked to define a healthy person and the factors that positively or negatively affect health as well as to identify which diseases are present in the area and how these are spread. Absence of disease and cleanliness were associated with healthy individuals as was living a comfortable life; poverty is explicitly linked with ill health. On average, participants mentioned 5.7 diseases present in the area (range 2-16). Results indicate that there is salience among diseases of concern and their routes of transmission. Malaria, common cold, and typhoid were the illnesses most often mentioned first or second; overall, these were referenced in 19, 17, and 14 of the 25 interviews, respectively. Biomedical explanations were frequently (but not always) provided for malaria and the common cold whereas greater variation (e.g., hunger, malnutrition, and weather) was associated with transmission routes for diseases such as typhoid and typhus. The associations noted between poverty, malnutrition, and disease suggest that our participants have identified multiple syndemics in the area, complicated by rising urbanization and climate change, as well as their attendant consequences. Presenter: Eden Blackwell (University of Alabama)

Value in open science pharmaceutical innovation: The collective development of novel treatments for Huntington's disease: In this paper, I examine the ways in which researchers involved in the development of novel treatments for Huntington's disease (HD) construct, communicate, and negotiate value. The HD research community is small and highly socially and professionally interconnected. This paper is based on 12 months of ethnographic research with biomedical and biotechnological researchers in Huntingtons's disease labs in the United Kingdom and Canada. Working

around COVID-19 restrictions, this included informal interviews, walk-through interviews at laboratories, and extended visits to laboratories; it also includes analysis of interactions among researchers in online conferences and seminars, in the public forums of Twitter and Reddit, and on news and personal and professional blogging platforms. Following this, I discuss the various ways in which HD researchers in this community use the rhetorical device of 'open science' to perform resistance to current market logics of medical innovation. Overall, this paper presents an ethnographic account of a value-laden knowledge control regime in a small biomedical research community. I aim to problematise the practice and concept of 'open science', particularly following its increased use during the COVID-19 pandemic. Presenter: Giorgia Kerr

Serpentine Livelihoods: Care, Harm, and Human-Snake Intimacy in a Venom Laboratory: Snake antivenom immunoglobulins, or 'antivenoms,' are an essential global medicine. Without access to antivenom to neutralize the toxins which comprise a particular venom, people bitten by venomous snakes may die or experience permanent disability. Yet, the production of antivenom is itself a precarious endeavor. Snake bodies face harm as humans forcibly handle and manipulate snakes, and snake handlers similarly put their own bodies at risk to care for snakes and collect venom. Through twelve months of multi-sited research on snakebite treatment and antivenom production in Thailand, I worked alongside snake handlers and veterinarians to understand what it means to know and care for snakes. In this paper, I explore how snakes reshape labor and intimacy in a venom laboratory. I find that unlike the affective relationships maintained by their mammalian laboratory counterparts, venomous snakes find their place within the laboratory hierarchy through classifications of worth, demanding husbandry, and mutual risk of bodily harm. Human handlers navigate risk by knowing snakes as both numbered commodities and as sentient individuals capable of agency and emotion. In contemplating human-snake intimacies, I posit a non-mammalian, non-domesticated counterpoint to scholarship on human-nonhuman laboratory relationships. This paper re-examines multispecies care and offers new insight into the bodily labor and commodification involved in the production of biological pharmaceuticals. Presenter: Erin McConkey

2-230

Foodscapes in Transition

10:15 AM - 12:00 PM

TMCC - 603

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Food and Nutrition

ORGANIZER:

Andrew Mitchel (Ohio State University, Department of Anthropology)

PRESENTER:

Nicholas Clarizio ,Andrew Mitchel (Ohio State University, Department of Anthropology),Amanda Green (Eastern Kentucky University, Anthropology Program),Md Mahfuzar Rahman ,Ana Maria Ulloa (Universidad de los Andes)

DESCRIPTION:

The increased global movement of people, cuisines, and ingredients, introduces food habits to new settings. While scholars have long examined tradition and change as oppositional forces, this session considers the way both interact in ways that tradition, relocation, consumption, and sensory perception mutually transform the value, experience, and meaning of food. African migrants, Oaxacan chefs, Sami entrepreneurs, Bangladeshi consumers, and Colombian aroma researchers actively engage with food practices, traditions, and value-formations in new settings or conditions.

Swallowing Change: African Immigrants' Food-based Identity Formation in South Bend, Indiana, and Rome, Italy: In discussions of migration, especially of migrant identity, food is often relegated to the back burner. Although Anthropology and Food Studies have begun to investigate the connections between food and identity among migrants, there's always gaps in the literature concerning specific groups, since migration is, by definition, always in motion. I probed this aspect through a multisited ethnography of West Africans in Rome, Italy, and Southern African immigrants in South Bend, Indiana, paralleling the two to uncover commonalities and differences. Neither of these groups had yet been studied in these locations. Employing participant observation and semi-structured interviews, I discovered that the two groups 'simulate' home through similar means - namely, frequenting African restaurants and ethnic markets or food importers, as well as by engaging in traditional foodways and food habits at home and community events. However, the groups varied in how their 'simulations' were influenced by the host culture. In Rome, the West African 'simulations' of home were inflected by cultural pressures, whereas in South Bend, Southern African 'simulations' of home were influenced by cultural

contrasts. Migration will likely continue to Rome due to a multitude of environmental, social, economic, and political factors. If these migrants continue to be pushed to the cultural periphery as West Africans have been, it will worsen the migrant-host divide to the detriment of social cohesion and stability. As for the findings regarding South Bend, they point to the continued failure of American society in accommodating cultural differences and social 'others'. Presenter: Nicholas Clarizio

Taste, Décor and Business Acumen: How Oaxacan Chefs Meet and Reshape Consumer Expectations in Columbus, Ohio: Culinary violence emerges as chefs balance cooking what they know against conforming to consumer expectations. Chefs filter their actions along a continuum that allows innovative cookery at one end and simplified versions of their foods at the other. Following fieldwork with the Oaxacan community in Columbus, Ohio, I show how chefs must alter the foods they produce, imagery they utilize and business strategies they employ in ways that match what is expected while suiting consumer assumptions of good Mexican food. I use this presentation to argue culinary violence is a form of symbolic violence shaped by broader taste and presumed hierarchies shaping what is seen as exceptional cooking and global cuisine. Within the confines of recognizable ingredients, cooking techniques and flavors, successful chefs must constantly negotiate what consumers want and package their creativity in a manner which does not refute these demands. Chefs can teach consumers the nuances of their cuisine (in this case Oaxacan cuisine) as they innovate and bring their flavors to new audiences and establishing new ways of eating. Innovation only comes with care, and, in my second example, I show how in restaurants, culinary violence emerges as restaurateurs make use of known icons of Latinidad to create an authentic eating experience. In my example, I divide eateries into three typologies: [i]cantina[/i] imagery, borderlands debauchery, and, finally, the commodification of death via Día de Los Muertos motifs (Martínez-Cruz 2019). These cliché iconographies, based largely on the décor used, index a semiotic system that meets expectations, welcome clientele but, paradoxically, can limit what chefs cook. In conclusion, I argue that chefs exercise agency as they run businesses which meet and challenge consumer demands. Success comes for chefs who meet these challenges and match what consumers want, and some are able to introduce Oaxaca flavors and sensibilities over time. This dynamic is tied to broader societal discourse about the valorization of ethnic cuisine, including Mexican food.

Presenter: Andrew Mitchel (Ohio State University, Department of Anthropology)

Food, Social Entrepreneurship, and Transitioning Sámi Economies: This paper engages with anthropological understandings of food and social entrepreneurship using ethnographic description and analysis of contemporary Sámi food producers and production. Using vignettes of individual food producers and organizations, this paper explores how they experience the tensions of engaging with family businesses, neoliberal drives to increase entrepreneurship, historic practices in the Arctic mixed economy (where residents strive to earn cash in order to continue participating in subsistence harvesting), as well as calls for sovereignty, including cultural, linguistic, economic, and land sovereignty. Based on this ethnographic research conducted in the region of Jokkmokk, Sweden, from 2010-2016, this study offers a nuanced perspective on food and social entrepreneurship as driven by and generating multiple effects including sustaining familial and community land-based practices. Presenter: Amanda Green (Eastern Kentucky University, Anthropology Program)

Reconciling quality and affordability: tackling the dual challenge of price escalation and quality assurance in dried fish for enhanced nutrition security in Bangladesh: Drying and processing fish is an ancient practice in Bangladesh and a way of life for many associated with it (Doe et al., 1977; Jamil et al., 2017; Sultana & Islam, 2017). A quarter of Bangladesh's total fish catch is transformed and consumed in dried form (Belton et al., 2018). The high nutritional value, low price, and year-round availability of dried fish make it a key animal protein source for many of the most marginalized people in Bangladesh (DoF, 2016; Fernandes et al., 2016). The dried fish sector is particularly crucial for Bangladesh, where one in four people live below the national poverty line (Hossain, 2020; Grebmer et al., 2019; Chowdhury, 2020), and thirty-five percent of the population suffers some form of food and nutrition insecurity (NIPORT et al., 2016). However, the increased dried fish cost and availability of low-quality, chemical-mixed dried fish fill the demand for low-cost dried fish, threatening the sector's sustainability. With the increase in prices of inputs required for dried fish production and limited bargaining capacity in the wholesale market, the dried fish producers always insist on reducing dried fish's production cost primarily for two reasons. Firstly, lower production costs reduce the risk of loss, and the lower the price, the faster the product is sold. Secondly, higher production costs result

in a long time to sell the products, which sometimes increases the chances of loss instead of a profit by holding the capital for a longer time and making it prone to insect infestations. Two options are left to the producers to reduce the production cost in the context of increasing inputs cost. First, labour exploitation – exploiting oneself, household members and labourers is one of the ways to reduce production costs. The second way to reduce production costs is by compromising raw fish quality. The dwindling supply of local fish is one of the prime reasons for this raw fish price hike. Due to this price hike, the tendency to use rotten or low-quality raw fish increased among the producers, especially the small and medium producers who cannot afford fresh quality fish. These efforts of reducing dried fish production cost critically affect the products and the wellbeing of the labourers and consumers. Dried fish made from rotten or low-quality fish is often infected with insects. To get rid of this, pesticides are used at different stages of production, storage and trading, turning dried fish from a nutritious food into a poisonous food and putting its consumers' lives at risk. The demand for safe or organic dried fish in Bangladesh has increased significantly in the past decade. Although the number of producers and production of safe dried fish is minimal compared to the country's total production, it is promising. Although the development of safe dried fish production and trading is a good sign for the overall dried fish sector, its high cost has put it beyond the reach of poor and low-income people. Historically, dried fish has contributed significantly to the nutritional security of Bangladesh's poor and low-income people. However, most of them currently cannot afford safe dried fish at this high cost, and the dried fish they eat are increasing their health risks rather than their nutritional security. Thus, the dried fish sector in Bangladesh is currently facing the challenge of achieving the opposite goal of producing safe dried fish and making it accessible to all levels of consumers. Presenter: Md Mahfuzar Rahman

Exploring Colombia's odor-diversity: The role of chemistry in the study and fabrication of tropical fruits' aromas: Aroma chemistry is a small field with large industrial effects. Throughout the 20th and 21st centuries, its research and development has come primarily from Europe, North America, and Japan. In Colombia, aroma chemistry only began in the 1980s, when a small research group led by women chemists from the largest public national university started investigating the aroma of Colombian tropical fruits. Their group has steadily consolidated since then and had a major industrial breakthrough by contributing to

the making of a highly successful local blackberry aroma in the national food market. This talk will present my ongoing fieldwork amongst these women, as I research their role in translating chemical knowledge into manufacturing processes and consumer products, as well as the conditions under which their research has been carried out in a context where science is conducted with scant resources. Through interviews, life stories, and ethnography of the laboratory, this research also seeks to elucidate the role of the senses and sensory knowledge in technical and analytical practice in chemistry, as well as women's alleged higher sensibility towards aromas. Presenter: Ana Maria Ulloa (Universidad de los Andes)

DISCUSSANT:

Mindy Morgan

DESCRIPTION:

The past decade has seen a series of critical and thoroughgoing engagements with the history of 20th c. anthropology and its current representation in the discipline, from the work of Ryan Cecil Jobson and Jafari Sinclair Allen to the 2020 AAA Presidential Address by Akhil Gupta with Jessie Stoolman. These readings demonstrated both the ongoing relevance of historical

understandings of the discipline and its representations and the ongoing frustration of each emerging generation with earlier approaches. Often parsed/presented as a concern with the decolonial and liberatory impulses of previously subject peoples and populations, these recent critical analyses also display a deep commitment to the discipline and optimism about its potential contributions to justice in its myriad forms in the 21st century. Sharing these concerns, the papers in the first of two George Stocking Symposium sessions engage with the theme of 'transitions' by reflecting on historical moments of change, crisis, and emergence within the discipline and their implications for the field's politics and methods in the present. From a variety of perspectives, they contribute to a process of writing new histories of anthropology that embody a transition from ahistorical critique and narratives of discontinuity to ones that engage past approaches and/or their representations as foundational both for future research in the history of anthropology and for the training of future anthropologists.

A 'Too Hasty Effort': The 1954 Wenner-Gren Supper Conference, Termination, and Decolonization: Recent meditations on the history of American anthropology suggest that the discipline failed to reconstitute itself as a decolonizing project in the mid-20th century despite being a field built on the study of colonized subjects. This paper challenges this narrative by examining American anthropology's relationship with the infamous period of federal Indian policy known as Termination. Using the 1954 Wenner-Gren Foundation Supper Conference: The American Indian in Transition as a node of analysis, I argue that American anthropologists drew upon their training in acculturation studies and applied anthropology to question the assimilatory logic of Termination and advocate for a dual set of rights for Indigenous peoples. Contextualized within a broader history of decolonial transitions and transformations beyond the US, I contend that American anthropologists and their allies in Indigenous rights organizations were of a piece with other anticolonial movements that had yet to equate self-determination with absolute sovereignty. These movements were not passive rearticulations of imperial power but pragmatic acknowledgments of the disjuncture between the theoretical equality of sovereign states and their actual inequality in the post-WWII period. Ultimately, the case of the Supper Conference invites scholars to "rethink" and, when necessary, "unthink" contemporary categories and paradigms that obstruct our ability to draw lessons from prior decolonizing projects.

Presenter: Nicholas Barron (University of Nevada, Las Vegas, Department of Anthropology)

“Why is it always described as ill-fated?”: Wendell Phillips and legitimacy in Arabian archaeology: In his 1955 bestseller *Qataban and Sheba*, American explorer-turned-oil magnate Wendell Phillips relates an account of his archaeological campaigns between 1950 and 1952. These projects encompassed the Kingdom of Yemen, the Aden Protectorate, and Dhofar Province of Oman, and according to Phillips’ own telling, were made possible by his singular talent for capitalizing on his commercial, political, and intellectual networks. However, beyond his own writings and contemporary popular media coverage, the work of Phillips and his American Foundation for the Study of Man (AFSM) expeditions are not considered in the history of Arabian Peninsula archaeology. This paper interrogates that silence and invites discussion of professional legitimacy and the construction of scholarly identity in Arabian archaeology as performed by global-northern actors through an examination of archival material from the AFSM expedition’s chief archaeologist William Foxwell Albright, longtime collaborator Gus Van Beek, those who encountered him within the US government and British colonial administration, and others in the field. In doing so, we gain insightful glimpses into how Phillips was viewed as both asset and impediment to individuals hoping to access the archaeological record of southern Arabia and what that meant for the discipline as it coalesced in the mid-twentieth century. Presenter: Amber Zambelli

We’ll no longer be as before: Jorge Dias transitions from the Portuguese colonial field (1950s-60s): The context after the Second World War provided a change in politics, society, and in the production of knowledge. Anthropology was also influenced by this change especially with regard to studies based on the criterion of race and in the colonial context. Those studies, often based mainly on physical criteria and anthropometric measurements, turned out to be racist and discriminatory, as their conclusions indicated that the colonized populations were at a lower civilizational level than the colonizer, thus contributing to the justification and maintenance of colonization. One of the examples of change and transition emerged with the anthropologist Jorge Dias (1907-1973), who was sent to the colonial field through a mission, financed by the government (between 1956 and 1960), whose objective was to study the Makonde in northern Mozambique. The results were published, but Jorge Dias also wrote confidential reports where he exposed the fragilities of

the colonial system. This paper argues that although anthropology participated, at a certain point, in the process of colonial domination, in the context of a turning point, provided by the Second World War, it was anthropology and its agents – anthropologists – who were at the forefront of colonial criticism and who contributed to a change in the studies that started to be made based on the culture element and not on the “race” factor, which started to be banned. This paper will be also a tribute to Rui Mateus Pereira, author of the posthumous book *Anthropology at the service of Portuguese colonial policy in Mozambique*. Presenter: Patricia Ferraz de Matos (Universidade de Lisboa)

Inconvenient Ethnography: Anthropologists and Canadian Inuit Administration in the Cold War: In recent decades it has become common for political leaders to disparage the knowledge claims of ethnography as too anecdotal, too trivial, or too esoteric to be of use to policymakers. While it might be expedient to blame neoliberalism or postmodern and post-structural theory for the hostile reception of our research, recent political attacks on critical race theory reveal something else: The issue is that many of our interpretations of lives and lived experiences are politically inconvenient. In this paper, I review an episode in the history of Canada and Canadian anthropology when government officials stated that anthropological research was essential to their project to administer Inuit communities and promote development on Inuit lands. From the mid-1950s to the mid-1970s, the federal government employed dozens of anthropologists to document cultural practices and attitudes of Canadian Inuit, of which little was known. Immersed in Cold War paradigms of development and acculturation, most northern ethnographers believed their applied research would allow the state to improve the lives of Inuit. Most produced reports that echoed government expectations. Here, I look at the few ethnographers who, believing in the underlying good intentions of the state, flagged unjust and racist administrative practices, only to be told to remove these inconvenient findings from their reports. Curiously perhaps, most did not speak publicly or publish critical assessments of Canadian government activities, and the injustices they documented rarely came to public, or even wider academic, attention. Presenter: Pamela Stern (Simon Fraser University, Department of Sociology and Anthropology)

Archiving Anthropology’s Crisis at the American Philosophical Society: This paper uses the growth of the American Philosophical Society’s anthropological

archives during the second half of the 20th century to highlight connections between the field's documentary impulse and its disciplinary reckoning in the 1960s. Founded by Benjamin Franklin in 1743, the Society's collections range in scope from documents chronicling the nation's founding to the papers of scientists working during the 18th through the 21st centuries. Its archives likewise serve as a central repository for documents related to the languages and cultures of Indigenous peoples from across the Americas—many of which were gathered and assembled following the salvage impulse championed by Franz Boas and his students in the late-19th and early 20th centuries. These historic connections also made the APS an ideal site for a new generation of anthropologists to reflect on the function of archives for preserving and delineating the history of their field. Focusing on discussions led by APS Librarian Richard Shryock and anthropologists Irving Hallowell, Carl Voegelin, and Dell Hymes (among others), I situate the consolidation of the APS's Native American collections during the 1960s alongside the designation of history of anthropology as an academic subfield to argue for their co-construction in reaction to anthropology's mid-century moment of crisis and disciplinary transformation. In doing so, this paper seeks to transition beyond narratives rooted in salvage towards ones that proactively engage anthropology's history as a tool for identifying culturally-sensitive and ethical uses of archival materials that better serve researchers and Indigenous communities in the present. Presenter: Adrianna Link

Indigenous Anthropologists and the Emergence of Indigenous Studies in the 1960s and 1970s : As a discipline, Indigenous Studies is still relatively young. Considerations of its origins and emergence have focused on the roles played by historians and literary scholars; less well-known, however, is the impact of scholars trained in and engaged with anthropology, specifically the approach known as Action Anthropology associated with Sol Tax. While researchers have explored the link between the Red Power movement and the rise of Indigenous Studies, and between the Red Power movement and Action Anthropology, there has not yet been sustained work examining the connection between Action Anthropology and Indigenous studies. Key to this latter connection were four Indigenous scholars who came into close contact with Tax: the anthropologists Robert K. Thomas (Cherokee), Bea Medicine (Lakota), and D'Arcy McNickle (Metis/Salish Kootenai), and the legal scholar, theologian, and critic of anthropology Vine Deloria, Jr. (Lakota). While only Thomas was a student of Tax, all

four engaged significantly with projects, committees, and meetings associated with him or that reflected the values and intentions of Action Anthropology, most notably the Carnegie Project on Cross-Cultural Education, the Workshops on American Indian Affairs, and conferences focused on higher education for Indigenous students. This paper will explore the significant resonances and connections between Action Anthropology and Indigenous Studies, including the centering of community-led educational programming in support of self-determination and the rejection of distorted or damaging representations of Indigenous people, communities, and nations, in order to deepen understandings of the histories and genealogies of, and connections between, Indigenous Studies and anthropology. Presenter: Robert Hancock (University of Victoria, Department of Anthropology)

CHAIR:

Carla Jones

PRESENTER:

Rachel Hall-Clifford (Emory University), Elizabeth Wirtz, Elizabeth Chin, Alex Petit-Thorne (York University, Department of Anthropology), M. Gabriela Torres (Wheaton College, Anthropology Department)

DISCUSSANT:

Carla Jones

DESCRIPTION:

The #MeToo movement and other social movements have helped bring mainstream attention to gender-based violence. Culture change is often slow and non-linear, but we have seen important shifts in recognition and accountability for sexual harassment and sexual assault over the past decade. There is still so much work to do. The AAA established a sexual harassment and sexual assault policy in 2018 in order to create safe, equitable, and welcoming environments for all within our discipline. Important challenges remain in achieving

this goal, particularly as AAA members are from and work in countries with diverse legal structures and a host of working environments across the academy, government, and industry. As we work to build a culture of gender equity throughout our discipline, we want to ensure that AAA spaces reflect a commitment to equity. This roundtable will bring together members of the working group assembled on behalf of MPAAC to revisit and revise the 2018 guidelines for members and leaders of the Association regarding sexual harassment and assault. The working group has held listening sessions over 2022, and will provide recommendations to the Executive Board. The roundtable will be an important opportunity to apprise members of the process the group followed, the recommendations, and the steps the Association will take in implementing the revised guidelines.

2-805

Hunger Strikes in Comparative Perspective

10:15 AM - 12:00 PM

Virtual - Room 1

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Özge Serin

CHAIR:

Özge Serin

PRESENTER:

Özge Serin ,Ashjan Ajour (Goldsmiths, University of London),Angelica Camacho (San Francisco State University),Berivan Sarikaya (Trent University),Ethan Madarieta (Syracuse University)

DISCUSSANT:

Allen Feldman

DESCRIPTION:

From indefinite solitary confinement in 'Special Housing Units' in the United States to life without parole in supermax cells around the world; from preventive detention at Guantánamo Bay to immigrant detention sites; from administrative detention in colonial prisons to unceded indigenous territories, the hunger strike has emerged as a radical form of refusal in a carceral landscape where colony operates as prison, prison as war camp, and war camp as immigration jail. Resisting univocal translations where both the direction and the codes of translation are pre-established, the roundtable will forge alternative languages to speak of the hunger strike and to speak starting from actual practices in

Palestine, Kurdistan, Turkey, Chile, and the United States. Using and problematizing Foucault's technologies of the self, Ashan Ajour will theorize the specific formation of subjectivity in the Palestinian hunger strike in Israeli settler colonial prisons. She will show that the hunger strike not only is a political strategy for liberation, but also performs a spiritualization of the struggle. Nazan Üstündag will address Kurdish political prisoners' hunger strikes for the freedom of the leader of the Kurdistan Workers Party PKK's leader Abdullah Öcalan. More specifically, she will explore the ways in which individual and national sovereignty are understood and practiced by the Kurdish movement through metaphors and allegories of the body. Centering on the stories of Kurdish women who were incarcerated in Diyarbakir Military Prison following the 1980 military coup in Turkey, Berivan Sarikaya will describe the prison as a space of resistance against the colonial Turkish state fostering decolonial education and knowledge production for the Kurdish Women Movement. Angelica Camacho will analyze the multiracial hunger strike in Pelican Bay's Security Housing Units that disrupted the California Department of Corrections and Rehabilitation's highly developed forms of surveillance and psychological torture. Michelle Velasquez-Potts will place force-feeding practices at Guantánamo Bay within a larger history of medicalized punishment, tracking how the functions of the feeding tube are altered and reimagined by the US military. Ethan Madarieta will analyze the ongoing Mapuche hunger strikes as performances of re-membling, what Ngũgĩ wa Thiong'o theorizes as the repeated reconnecting of cultural memory through embodied practices and language. They will argue that these hunger strikers' memorial performances disclose ongoing Chilean state violence simultaneous to asserting Mapuche corporeal presence as precedence for the restitution of their unceded territories. Anchored in her long-term ethnographic work on the 2,286-day hunger strike-cum-death fast among political prisoners affiliated with outlawed Marxist-Leninist organizations contesting the regime of isolation in Turkey's newly instituted F-type, high-security prisons, Özge Serin will argue that there are at least two hungers, two deaths, two refusals which function according to different rhythms, different temporalities, and different logics on the hunger strike. While one hunger pushes the body towards its limit where the organic time of possibility that is determined and ordered in advance by death dissipates itself into vegetative state; the other--at the same limit--opens to the contremeps of potentiality when the past and the future become indeterminate.

Imagining 'Green' Energy: Frictions in the Global Energy Transition

10:15 AM - 12:00 PM

TMCC - 206 C

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Alice Chen

CHAIR:

Alice Chen ,Ina Kim

PRESENTER:

Alice Chen ,Ina Kim ,Erin Consiglio ,Fernando Lopez Vega (Johns Hopkins University)

DISCUSSANT:

James Blair (Cal Poly Pomona, Department Geography and Anthropology)

DESCRIPTION:

What is green energy? As scientists, politicians, and the public are searching for climate technologies to mitigate climate change, the term 'green' energy has become a ubiquitous buzzword found in media, political campaigns, activist organizing, and even the academic landscape. Anthropologists have long studied the social construction of energy, arguing that energy does not become important on its own, but that imaginations of energy are politically and socially mobilized (White 1943, Nader 2010, Mitchell 2009). While fossil fuels are heavily critiqued within anthropology, green energy has not yet undergone such thorough disciplinary analysis. But previous work has shown that green energy, too, is a production of social and political power dynamics and can be just as violent and extractive as carbon fuels (Boyer 2019, Günel 2019, Howe 2019). We intentionally selected the term 'green' energy to demonstrate how the discourse of non-carbon energy is a place in which constructive analysis can take place. The transition to 'green' energy is filled with frictions (Tsing 2004) of all kinds: the intensification of neoliberal markets, infrastructural exploitation and colonization, and the failures of a new technology to deliver on its promises. This panel will have papers exploring the following topics: the relationship between capitalism, investment, and fusion energy research in the US; green energy development projects and colonialism in Norway; neoliberal pro-nuclear policies mobilizing the 'green' energy discourse in Japan; the role of educational programs in imagining post-extractivist futures and

energy decarbonization transitions in Colombia; and climate justice and resource colonialism in marine ecosystems. Through these presentations, this panel de-centers current discourse on 'green' energy and challenges idealistic expectations of the energy transition.

Fusion, finance, and futures: Techno-optimism and capitalist utopia in the energy transition: Can investment into clean energy be both ethical and profitable? Many of the investors in fusion energy, including oil conglomerates, banks, billionaires, philanthropies, and venture capital firms, seem to think that both are possible. Fusion energy, the most powerful and cleanest form of energy known to humans, is at the center of changing investment dynamics within financial capitalism. Many of the funds investing in fusion focus on technologies that promise not only profit, but also impact by tackling global challenges. Investments are increasingly prioritizing the public good. This pursuit for an ethical capitalism is reflected in the almost \$5 billion now invested into fusion energy, and this number is expected to exponentially increase over the next few years. This paper addresses what many scholars have long deemed to be an improbable and contradictory practice— forgoing profit-making as the singular motivation for investment and instead tailoring investment practices to simultaneously address growing ethical concerns over climate change. This paper argues that fusion's theorized ability to provide limitless energy becomes a point of negotiation through which dreams and hopes of a future uninhibited by climate change and resource limitations serve to structure the movement of capital between the physicists and investors. Rather than assume that capitalism is at odds with climate change mitigation and the global energy transition, this paper shows how the frictions between non-carbon energies and capitalism can actually generate alternative and sometimes, increasingly more dystopic economic formations. Presenter: Alice Chen

Questioning 'Green': Discourse and Data Practices in the Time of Post-Fukushima and Climate Change : In the wake of climate change, many countries are looking for non-carbon alternative energy sources. Despite the Fukushima nuclear disaster, the Japanese government has gradually shifted to pro-nuclear policy and publicizes that nuclear energy is eco-friendly, if not renewable or sustainable energy. For example, the government recently decided to maximize the use of nuclear energy by extending the duration of the operation of nuclear power plants from 40 years to 60

years. This research analyzes the discourse of the Japanese government that bolsters nuclear energy and how environmental civil groups including citizen radiation detection labs and traditional/citizen scientists rebut the myth of nuclear energy with their alternative data. Since the government changed their nuclear energy policy in the name of resolving climate change, the anti-nuclear movement in Japan has faced challenges to secure socio-political support. However, anti-nuclear civil organizations argue that nuclear energy not only has contaminated the environment with radiation but also accelerated climate change. They reveal the danger of neoliberal energy turns and claim that we can have another nuclear disaster as long as we have the imperfect nuclear energy technology and management systems. What are the socio-political connotations of the term “green” in the intersected time of climate change and nuclear crises? This paper explores how the discourse of “green” energy is mobilized by the government and what data practices of civil groups dismantle the myth of nuclear energy as “green” energy that the nation-state supports.
Presenter: Ina Kim

Green Power and Climate Justice: Bringing Fishing Communities into Offshore Renewable Energy Plans: The shift to renewable energy sources provides an opportunity to do things differently; rather than perpetuating the colonial power imbalances associated with traditional fossil fuel projects, we can shift our energy system to one that is not only clean and affordable but also equitable and just. In the case of offshore energy development, previous work has explored the economic impacts of wind farms on large-scale commercial fisheries, yet a just transition also calls for consideration of the cultural or social needs of small-scale and subsistence fisheries. This paper will reflect on the intersection between marine ecosystems, local fishing communities, and global climate goals in coastal areas with proposed renewable energy projects. For those whose livelihoods depend on the ocean, there is a special relationship to place, forming “communities at sea” (Haggett et al 2020). How do these “communities at sea” place value on marine ecosystems? What factors determine the well-being of coastal communities? How does the concept of *mare nullius* (Mulrennan & Scott 2000) continue to influence development planning for offshore resources? In thinking through these questions, we must take into account the colonial histories of resource extraction, and how communities are included in, or excluded from, development planning processes. A better understanding of the needs of fishing communities in

offshore energy development could support not only the transition from fossil fuels to renewable energy, but also a transition from resource colonialism to climate justice. Presenter: Erin Consiglio

Youth Dreamworlds in the Orinoco River: 'Green Energy', Plantations, And Education In Rural Colombia: This paper seeks to understand how the transition to green energy changes the nature of work and education on the Orinoquia border between Venezuela and Colombia. This region offers a unique window to understand how riverine communities navigate the transitions related to the global commitment to reduce fossil fuels while living in the top oil and gas-producing area in both countries and above the largest oil reserves in the world. I focus on the first and only Technical Education Program in Renewable Energies aimed at high school students in Colombia. This vocational program was established in 2019 in Vichada's capital, Puerto Carreño, and relies on Colombia's first biomass power generator. However, the “clean and just” model promoted with the generator emerged with a drive to combat a power grid vulnerable to attacks by armed actors and geopolitical fluctuations (particularly with Venezuela), as well as to continue expanding the socio-environmentally destructive Australian eucalyptus plantations. In this milieu, I inquiry the current structure of renewable energy production historically and ethnographically, as well as the openings and constraints that this new educational offer foster in the youth and families living on the banks of the Orinoco. Based on interviews, and participant observation with plantation and generator workers, as well as members of the school communities (particularly young students, among whom are descendants of indigenous communities, peasants, displaced families, and Venezuelan refugees), I finish discussing schooling as a setting where post-extractivist futures and energy decarbonization transitions are produced, negotiated, and contested. Interembodiment Part 3

10:15 AM - 12:00 PM

TMCC - 605

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Emma Bunkley (University of Colorado Denver | Anschutz Medical Campus)

CHAIR:

Emma Bunkley (University of Colorado Denver | Anschutz Medical Campus)

PRESENTER:

Elana Resnick (University of California, Santa Barbara, Department of Anthropology), Jieun Cho (Duke University), Randall Burson (University of Pennsylvania, Department of Anthropology), Aaron Parkhurst (University College London), Tanya Zivkovic, Jean Scandlyn (University of Colorado, Denver, Department of Anthropology), Jasmijn Rana (Leiden University)

DISCUSSANT:

Emma Bunkley (University of Colorado Denver | Anschutz Medical Campus)

DESCRIPTION:

Interembodiment, defined 'as the sharing of embodied experiences across and among biological bodies' (Bunkley 2022), has the potential to shape new discussions around the sociality of health and disease experiences. While originally written about Senegalese mother-daughter dyads experiencing metabolic disorders, interembodiment can be expanded to encompass new ways of thinking about how disease (or health) is shared or transmitted as well as deeply embodied ways of expressing empathy, care, and caregiving. This panel pulls together work on embodiment (biological and cultural) that emphasizes the porosity of care to show how anthropology can contribute to understandings of what the human body is and means in contemporary time. This panel draws together work from the rich bodies of literature on embodiment and intercorporeality (Csordas 2008, 2011; Husserl 1989; Merleau-Ponty 1962), local biologies (Lock 1993) and situated biologies (Niewöhner and Lock 2018) as well as notions such as para-communicability (Moran-Thomas 2019), and shared biologies (Wentzell 2019, 2021). Papers on Interembodiment Part 3 examine the ways Romani women waste workers in Bulgaria find pleasure in friendship and play; the shared joy of running experienced together by Muslim women; Japanese parent-child irradiated relationships in the wake of the Fukushima disaster; human and more-than-human ecologies in occupied Mapuche territory in Chile, the rhythms of the human heart and by extension social orders and governances through parabolic flight on the International Space Station; the porosity of bodies, relations, and care in organ donation and transplantation in Australia; and the importance of skin-to-skin contact for human social life. The Shared Pleasures of “Anything Else”: This paper addresses how pleasure emerges among and between people in conditions of environmental degradation and decay. What does it mean to collectively cultivate and share pleasure when living amidst and using the materials that might also be killing you? Drawing on ethnographic fieldwork with both Romani women waste workers in Sofia, Bulgaria and residents near the Kozloduy Nuclear Power Plant located on the banks of the Danube River, this paper focuses on what people do within environments of potential toxicity, risk, and deterioration in order to cultivate new kinds of joy, pleasure, and life. Rooted in the temporality of what so many people called, in Bulgarian, “neshto drugo” (anything else), this kind of world-making is about something that runs alongside but is not the here-and-now of slow death or body-breaking labor. Instead, through analyses of friendship, play and the affective dimensions of interembodiment, this paper questions how we might engage what it entails to live through

climate change and the fraught realities of the present. In doing so, it explores the contours, temporalities, and contradictions of what I call an anthropology of pleasure. Presenter: Elana Resnick (University of California, Santa Barbara, Department of Anthropology)

Balancing Life: Family in the Ruins of Nuclear Risk: The 2011 Fukushima nuclear disaster has created at-risk children by relegating risk into the responsibility of individual households. This paper examines an ethics of “balancing” which is emerging among parents who struggle to conceive of livable measures of health for the sake of their children while raising them in irradiated environments. While the stakes of domestic care work are complicated by an increasing attention to the pathological risks of radioactive iodine-induced childhood thyroid cancer in “Fukushima children,” parents struggle with both their own ideas of parenthood and notions of radiological health with concerns over their children’s growth and well-being. Theorizing these struggles as an ethical labor of “balancing,” the paper discusses how the caretakers of children grapple with scientific models of internal and external exposure and negotiate these in social, physical, and embodied terms in their children’s everyday. Presenter: Jieun Cho (Duke University)

“Diseases of the Land” and the Clinical Negotiations of Human-Environment Relations in Chile: Across Southern Chile and Argentina, extractive resource industries like forestry, agriculture, and pisciculture continue to degrade native ecologies and propel longstanding Mapuche Indigenous movements for territorial control. This paper aims to examine the impacts of these extractive industries and environmental change through Mapuche peoples’ experiences of mapu kutran, or medico-spiritual “diseases of the land” characterized by fatigue, negative thoughts, insomnia, and nightmares. These illnesses occur when people transgress or improperly intervene upon natural sites like bodies of water or native forests and provoke the ngen, or the spiritual “owners” who inhabit these areas. Drawing on ethnographic fieldwork with Mapuche and biomedical health practitioners and patients, I explore the onto-epistemological and practical challenges associated with diagnosing and treating mapu kutran in Southern Chile’s intercultural clinics. In state-run clinics where Mapuche medicine and biomedicine are practiced under one roof, these different medical paradigms are situated in wider Indigenous-Chilean state relations and territorial conflicts. Thus, clinical negotiations about the origins, etiologies, and nature of patients’ illness become critical moments that define

the responsibilities for illness and the relationality between people and more-than-human ecologies in occupied Mapuche territory. Drawing on frameworks of interembodiment (Bunkley 2022) and the cosmopolitics of health (Stavig forthcoming), I consider how these clinical efforts to (re)negotiate the relationships between environmental interventions, the volition of spiritual beings, and human illness become a means to narrate the human and more-than-human impacts of ongoing colonial capitalist disruptions salient and actionable. Presenter: Randall Burson (University of Pennsylvania, Department of Anthropology)

A Light Heart Lives Long: Embodiment and Gravity in Parabolic Flights: This short talk is about the human heart - in as much as the heart, as it is presented here, is the scientific protagonist - in zero-gravity, in life support systems, and in health monitoring aboard the ISS. Its rhythms and flows, studied for medical knowledge to hone systems for travelling through space and living off-world, are orchestrated through rhythms of gravities. The ethnography presented here, then, is of flying, and falling, and flying and falling again, and again and again and again, until the heart, and its shared embodiment, reveals itself - for the ESA scientists, with whom I work, who test heart monitoring technologies for future crewed missions to the moon, and for the anthropologist as well, interested in, addressing Stefan Helmreich’s call, the rhythms and arrhythmias of human biology, and by extension, social orders and governances. Following Merleau-Ponty, the heart of the human, as a synechdoche of the corpus, is the heart of the world, and other worlds, too. These worlds (of which the Earth, the Moon, and Mars are but three), or more directly, the world of perception, of which the physical world flows, “does not come to birth just anywhere, [it] emerges in the recess of a body.” (Merleau-Ponty, 1968; 9). In flying and falling in above the Bay of Biscay, the analysis is also about worlding, the exhilaration of falling, the biosociality of emotion, and the worlds of perception constructed as the body is uprooted from gravity. Presenter: Aaron Parkhurst (University College London)

Porous bodies and ‘promiscuous care’: The making of transplant kin: This paper examines the porosity of bodies, relations and care in the context of organ donation and transplantation in Australia. Drawing on fieldwork and interviews with families and clinicians involved in deceased organ donation, I describe how interembodiment emerges and is enacted in the interfaces of life and death for organ donors and their families. In doing so, I extend the work of

anthropologists who have investigated diverse intercorporealities made possible through organ donation and transplantation. Reorienting boundaries of bodies and family relations through the category of 'transplant kin', I apply critical care scholarship to the literature on interembodiment vis-à-vis Chatzidakis and colleagues (2020) relational ethics of 'promiscuous care'. This is a care that is expansive and indiscriminate – it 'proliferates outwards to redefine caring relations from the most intimate to the most distant' (Chatzidakis 2020). Viewing promiscuous care in relation to organ donation offers a radical interdependence that troubles imaginings and materialities of bodily singularity and containment. In extending 'promiscuity' to bodies and organs, I suggest 'transplant kin' may offer new ways for thinking about our relations with others and the world we live in. Presenter: Tanya Zivkovic

Touch, Care, and Healing: Embodiment in Nursing Care: Human touch, intentional skin-to-skin contact, is an essential feature of human social life. As one of our five senses, it is embodied in our earliest perceptions of and reactions to the world around us. In most human societies touch is viewed as essential to well-being; its rejection a sign of illness; its absence a threat to health. Drawing from nursing literature and theories of embodiment I analyze my experiences and observations as a nurse delivering care during the early days of the HIV epidemic in the US and in other healthcare settings, I explore touch as a core element of nursing care in the contemporary US. When and how is touch used to assess another's bodily condition, to provide therapeutic treatments, to promote healing, and to provide physical and emotional comfort? How do cultural and social relations of power and institutional structures affect the use of touch and its meaning and symbolism, the ability of touch to promote health and provide comfort, but also its ability to wound? What does it mean when touch must be withheld to protect the patient or others from infection or further injury? Presenter: Jean Scandlyn (University of Colorado, Denver, Department of Anthropology)

The (inter)embodiment of joy: 'non-belonging', affinity groups and the pleasures of running: Despite increased scholarly attention towards embodied experiences of joy and happiness in sports and physical activity, and more particularly in running (i.e., Caudwell 2015, Jackman 2022), scholars typically portray the joy of running as a singular, individual experience. Muslim recreational runners in Muslim-minority settings that take up the sport, however, indicate that to navigate a sense of exclusion and non-belonging when running in

the green outdoors, they build on the interlaced (Merleau-Ponty 1982) or interembodied (Bunkley 2022) sharing of joy. In my research among Muslim recreational runners in the Netherlands and the San Francisco Bay Area, runners explicitly reflect on the process of being 'othered' and how it affects the (im)possibilities of joy and pleasure in running in the green outdoors. The embodiment of racialization and other forms of othering are everything but an individual experience. But while a group of visibly Muslim and/or Arab and South Asian runners might draw more intention than an individual runner, the shared experience of 'the look' (Fanon 2008) and a double consciousness (DuBois 1903), materialize as the premise of (the possibility of) joy. In this paper I show how in navigating new environments and new movement together, a playfulness and joy is co-created that was experienced as unavailable in individual endeavors. Affinity groups engage with a world that has shaped them as subjects through oppression and/or marginalisation, through an active and conscious intertwining that results in a shared experience of joy, happiness and other pleasures of running in the green outdoors. Labor and the Manipulation of Mobility

10:15 AM - 12:00 PM

TMCC - 501 A

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Sydney Pullen

CHAIR:

Allison Stuewe (University of Arizona, School of Anthropology)

PRESENTER:

Sydney Pullen, Allison Stuewe (University of Arizona, School of Anthropology), Jill Koyama, Ke Ma, Raviv Litman

DESCRIPTION:

The manipulation of mobility is both a means by which value is extracted from laborers and, in theory, if too rarely in practice, a means by which laborers can challenge exploitation. Anthropologists have explored labor and mobility in terms of citizenship, climate change, displacement, and labor markets that shape migration and unfree labor (de Genova 2012; Griffith 2021; Guevarra 2009; Kingsolver 2001; Smith and

Castañeda 2021). Labor and mobility are also informed by heteropatriarchy and racial capitalism (Appel 2019; Ugarte 2022; Wolf 2022). Labor and mobility is a timely topic given current labor markets and movements in the United States and attention to the role of labor in citizenship bids by im/migrant and refugee laborers in Europe. By investigating mobility at different geographic scales, these papers explore the state's role in encouraging or stifling mobility and the interplay between work and dynamics like racialization, nationality, citizenship, and kinship. We look at the experiences of mini-bus taxi drivers in Nigeria, manufacturing workers in the rural U.S. South, refugees in Germany and the United States, and models and teachers in China to engage with this annual meeting's theme of transitions, putting in conversation papers that explore spatial and socioeconomic transitions as workers manipulate mobility to build lives for themselves and others.

Everybody Cut Footloose: Dependency Narratives and Manufacturing in the Rural U.S. South: Economic developers in rural South Carolina engage in aggressive campaigns to bring industry to the impoverished region, making promises of cheap, non-union labor. Developers and newly recruited employers promise jobs and the possibility of economic mobility to local residents. Yet these manufacturers can leave at any moment to pursue cheaper production elsewhere, leaving residents flailing as they try to craft a livelihood. Employers and developers attribute the movements of manufacturers to a deficient work ethic about the primarily Black workforce. As evidence of this deficiency, they cite welfare dependency and also point to employee turnover at manufacturing plants. Workers do sometimes leave one manufacturing job for another, driving up to an hour to get to work as they pursue economic mobility. This paper uses the pursuit of geographic and economic mobility as an entry point to investigate differing scales of dependency: the supposed dependency of potential workers' on government support and the real dependency of manufacturers on low-wage labor. Presenter: Sydney Pullen

Work Arounds: The Navigation of Residency Requirements by Iraqi Yezidi Refugees living in Germany: Recently arrived asylum seekers, refugees, and "tolerated" migrants in Germany generally face years of residency restrictions preventing them from living wherever they choose. Proponents of these rules argue that they facilitate assimilation, prevent the emergence of areas with high concentrations of particular ethnic groups, and help to spread the costs and work of

refugee resettlement across states. Critics have demonstrated, however, that these rules often do not have the desired effects (Bäuerle and Bandau 2022; Landsberger 2022). One of the few means by which people can overcome these mobility restrictions is by finding a job in their desired location that will give them sufficient income to be "self-sufficient". I argue that these policies are informed by both a morality politics (Fassin 2007; Ticktin 2006) that imagines these policies are good for refugees and a belief that "real, deserving" refugees (Holmes and Castañeda 2016) should be grateful for residency anywhere. Based on 23 months of ethnographic research with Iraqi Yezidi refugees living in Germany, I explore mobility restrictions and the employment exception as examples of the many mechanisms used by the German state to discipline refugees into minimum-wage working subjects. Presenter: Allison Stuewe (University of Arizona, School of Anthropology)

(Im)mobile (Im)migrants: Refugees and the United States' Labor Market: Drawing on data—including survey responses, interviews, documents, and participant observation—collected during a nearly three-year ethnography of refugees in the Southwest United States, I examine how recently arrived refugees create and access new employment opportunities—and how they are denied others. I utilize actor-network theory (ANT) to empirically trace the drawing together of, and interaction among, individual refugees, formal organizations, new cultural ideas, public discourses, and a variety of material objects. I examine the connections between the uncertainties about actors, action, and agency that undergird and reflect the experiences of refugees entering the paid workforce in the United States. I am guided by broad questions: In what ways are refugees able to find, access, participate in, or create networks through their labor? And do these networks alter the refugee's mobility? The findings indicate that not only are opportunities limited, but that they are intentionally so due, in part, to the enactment of several (im)migrant/refugee policies. And yet, some refugees do find and create ways to reclaim the labor that has been extracted from them and set new paths. Presenter: Jill Koyama

Trading Beauty, Making Race: Whiteness in China's Fashion Modelling Industry: While racial politics in the fashion industry has been the subject of anthropological studies, the role of transnational mobility in such politics has thus far not received much scholarly attention. This article investigates the social enactments of race in China's fashion industry, where an increased

demand for white-looking fashion models has created a thriving job market for white-looking foreigners to migrate to China as short-term laborers. Drawing on my ethnographic fieldwork conducted between 2021 and 2022 in Shanghai's modelling agencies, this article examines modeling agents' practices, such as selecting foreign models, facilitating models' migration to China, and selling their looks to local clients. I demonstrate that while a global racial hierarchy of beauty remains in its place in the China's modelling industry, this racialized labor is shaped by more than ideas about models' looks. The Chinese state's classist and racist border control during the COVID-19 pandemic and the changing popular perceptions of the Chinese Self vis-à-vis differentiated foreign Others also play indispensable roles in upholding and contesting white superiority within this context. Finally, the article also proposes to move away from an essentialist approach to race by focusing on how race achieves its significance through various forms of relationships. Presenter: Ke Ma

Teaching English in China: What Makes a "Foreign Teacher" Foreign?: From the 1990s-2010s China saw a tremendous growth in private companies offering English- language programs that featured "foreign" teachers. This growth was due in part to the demands of wealthy parents who wanted their kids to be able to attend North American and European universities and thereby advance their careers. This paper, which examines how in some contexts "foreign teachers" are conceptualized as White English speakers, is based on data collected through participant observation at a large Beijing private education company between 2018-2020, where I worked as a foreign English teacher, and follow-up interviews conducted between 2020-2022. The company I studied vigorously promoted "foreign teacher classes" (wajijiao ke) to assuage parental anxieties. Teachers who appeared to their employers to be Chinese, whether due to their perceived physical features or their Chinese-language fluency, became seen and heard as not really foreign and therefore unable to elevate the company's status; they were then assigned behind-the-scenes work rather than interacting with students. I argue that both parental anxieties and corporate efforts to corner the market on high-end English-language education together reinforced co-constructions of Whiteness and English. This paper contributes to a growing literature on racial capitalism in Asia by examining how racialized ideas of who is or is not a foreigner play out in educational contexts, and how private companies seek to capitalize on popular notions of Whiteness. Presenter: Raviv Litman

Landscapes of Liberation: Black Women Unmaking Global Souths, Mobilizing (Alter)Native Futures, and Mapping Transnational Affective Economies

10:15 AM - 12:00 PM **TMCC - 709**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association of Black Anthropologists

ORGANIZER:

Naakoshie Mills

PRESENTER:

Marwa Ghazali (University of Houston, Department of Comparative Cultural Studies), Amber M. Henry (University of Virginia), Naakoshie Mills, Masonya Bennett (Southern Illinois University, Edwardsville, Department of Anthropology)

DESCRIPTION:

'The master's tools will never dismantle the master's house' (Lorde 1984). This poignant statement by Audre Lorde reflects the sociopolitical and economic theories and approaches that underscore Pan-Africanist and Black Feminist thought in mobilizing intercommunalism, 'geographies of liberation,' and transnational coalitions of resistance (Taylor 2017 [Combahee River Collective 1977]; Lubin 2014; Rodney 1972; Walters 1993). These political imaginaries geographically and phenomenologically link suffering and liberation movements among Afro-descendent communities in Africa, Latin America, the United States, and beyond. The spatial configuration and imagination of 'Souths' and 'Norths' are intrinsically embedded in processes of racialization and conceptualizations of Blackness. More specifically, these associations adhere to established tropes that conjoin 'Norths' with Whiteness, affluence, modernity, and progress while 'Souths' signal Blackness, underdevelopment, precarity, and violence. Within these global constellations, Black women in particular are compelled to "see out of their Blackness, out of their womannes, often out of their poverty, and sometimes out of their privilege" in order to innovate strategies of sustainability and alterity within capitalist patriarchal structures (Cole 2010; Harrison 2010, 90). This roundtable reconceptualizes the placement and imagination of Souths within geopolitical-economic frameworks by highlighting and linking assemblages of Black women's agency across the Diaspora, specifically in Colombia, Egypt, and the United States. Masonya

Bennett makes critical connections between past research that posits Black women as 'mothers' who foster economic sustainability and spatial belonging among African, Caribbean, and Afro-Latinx immigrants in the U.S. South to new explorations of transnational exchanges of Blackness through tourism, expatriation, and social entrepreneurship as resistance in Afro-Colombia. Marwa Ghazali's research with informal residents in Cairo, Egypt's 'City of the Dead' examines women's collaborative work to transform tombs into homes and cemeteries into societies. Amber Henry explores how Palenquera women street vendors engage in sovereign labor practices and form women's associations in which they mobilize the concept of intangible heritage to affirm tap resources and structures of power outside of the nation-state. Finally, NaaKoshie Mills studies the affective networks Black American women co-create on social media platforms as U.S. diplomats dispersed across Africa and Latin America and their efforts to occupy digital space in traditionally White patriarchal diplomatic forums and international institutions. Our discussions explore how Black women reclaim space in agentive ways in response to on-going state-sponsored violence, neoliberal policies, displacement, and other forms of racialized, gendered, socioeconomic, and spatial marginalization through the creation of local informal economies and transnational sociopolitical networks. By emphasizing these processes, we illustrate the ways in which Black women actively remap and reshape oppressive landscapes, historically etched and engraved by white supremacy, to foster and enact alternative futures of resistance, visibility, and prosperity (Clarke and Thomas 2010; Hartman 1997; McKittrick 2011; Wynter 2001, 2003).

Language and Nationalism: Celebrating the Work of Joseph Errington

10:15 AM - 12:00 PM **Virtual - Room 4**
Roundtable/Town Hall - Virtual Live

REVIEWED BY:
Society for Linguistic Anthropology

ORGANIZER:
Andrew Carruthers (University of Pennsylvania)

CHAIR:
Maria Sidorkina (University of Texas at Austin)

PRESENTER:
Zane Goebel (The University of Queensland), Miki Makihara, Kathryn Woolard (University of California,

San Diego), Greg Urban (University of Pennsylvania), Kristian Tamtomo

DISCUSSANT:
J Joseph Errington (Yale University), Jack Sidnell (University of Toronto, Department of Anthropology)

DESCRIPTION:
Spanning several decades, several monographs, and several islands in the Indonesian archipelago, Joseph Errington's ethnographic work has long anticipated and animated transitioning concerns in global anthropology. Former president of the Society of Linguistic Anthropology and one of the first doctoral advisees of the late Michael Silverstein, Errington's initial research centered on the semiotics of linguistic etiquette in Javanese, analyzing in fine-grained detail the famous structural complexity of courtly priyayi registers and register usage. He would later move beyond the exemplary centers of Javanese royal etiquette to consider wider and rapidly shifting patterns of everyday talk in Suharto's New Order regime. An advocate for centering postcolonial concerns in American linguistic anthropology, he described how the work of colonial linguists was instrumental to colonial projects of knowledge production and subjugation, while touching on the reverberations of colonial linguistics in contemporary sociolinguistic life. Most recently, amid renewed and resurging interest in the problem of nationalism, he has written on the paradox of 'Indonesian,' a language spoken by two hundred forty million citizens in the world's fourth most populous nation, yet 'native' to no one. In this roundtable discussion, we -- his students and colleagues -- gather to discuss and celebrate his body of work, and the ways in which its shifting foci highlight transitioning concerns in American, Indonesian, and global anthropology.

Latinx Voices and Belonging in the New South: Moving Multilingual Learners from the Margins to the Center of the Table

10:15 AM - 12:00 PM **TMCC - 802 A**
Oral Presentation Session

REVIEWED BY:
Association of Latina/o and Latinx Anthropologists

ORGANIZER:
Paula Mellom (University of Georgia)

CHAIR:
Rebecca Hixon, Nancy Resendiz Chavez

PRESENTER:

Shannon Rodriguez ,Rebecca Hixon ,Jodi Weber ,dominique la barrie ,Frank Granados

DISCUSSANT:

Paula Mellom (University of Georgia)

DESCRIPTION:

Some might say that Georgia is situated right in the heart of the 'New South', and exemplifies the ethnic, cultural, linguistic, and sociopolitical shifts that are the driving forces behind this transition to 'New South' (Smith & Furuseth, 2006). This is even more apparent in the Metro-Atlanta area where there are large populations of first, second, and third generations of immigrants, resulting in a continual renewal of heritage culture alongside the process of becoming local and rooted. The number and percentage of multilingual learners in Georgia has grown exponentially in the last 25 years, such that now nearly 8% of all public school students in the state are 'served' English learners (GADOE, 2021). Many more are growing up in multilingual homes, but have been tested as having a level of proficiency in English high enough that they do not qualify for ESOL services. Furthermore, a fair number of these students speak only English, never using or becoming literate in their home language (Faught, 2000). Nearly 60% of these students' home language is Spanish (MPI, 2022). However, the vast majority of these students were born in Georgia or have called Georgia their home for most of their lives (MPI, 2018); many have never visited the countries of origin of their forebears. As a result, these students often struggle to negotiate highly intersectional linguistic, ethno/racial and cultural identities within the complex landscape of the rapidly changing sociopolitical context of the so-called 'New South.' This panel of papers examines both the personal and systemic/structural factors that impact this identity negotiation within P-12 schools in Georgia. The first uses a critical discourse analysis framework to interrogate the tension between multilingualism and privilege by exploring the socio-political and systemic framing of Dual Language Immersion (DLI) vs. other English for Speakers of Other Languages (ESOL) instructional approaches designed to support multilingual learners. The second draws on a sociolinguistic analysis of the speech of young Latinx adults who grew up in Georgia as they discuss their hyphenated Latinidad/Southernness. The third describes ethnographic and sociolinguistic pilot data from a project where multilingual youth are led through an iterative biographical story-telling process that lifts their voices while valuing and centering their linguistic and cultural experiences. The fourth and final paper in the

session uses thematic and discourse analysis to examine how four racially and ethnically diverse students describe how their interaction in collaborative conversation-based small group instruction impacts their sense of isolation and belonging in the New South.

Growing up Latinx in the New South: a Constant State of "In-Between": While varieties of Latino English have been studied in traditional destination communities (TDCs) (Zúñiga & Hernández-León 2005, 2009) like Texas (e.g. Galindo 1987; Bayley 1994; Bayley 1997; Thomas 2019), California (e.g. Santa Ana 1991; Fought 2003; Mendoza-Denton 2008), or the Mid-Atlantic (e.g. Labov et al. 1968; Poplack 1978; Wolfram 1972, 1974), where the Latino populations are multigenerational, the ethnolect is largely undocumented in new destination communities (NDCs) like the Southeastern and Midwestern regions of the US, including Georgia. With this emerging ethnolect comes the emergence of ethnic identities, which are not homogeneous. This paper, as part of a larger mixed-methods sociolinguistic study, explores the transitional identities of one group of Latinx speakers growing up in the New South, where being Latino and Southern are juxtaposed and incompatible identities. These speakers described themselves as having "hyphenated" identities, existing "in-between" Latinidad and Southernness/Americanness. Here, they straddle the complex racial and ethnic lines drawn for them, both living in the South and the US in general. I discuss how their proximity to typically White spaces, like higher education and higher socio-economic status, may also be reinforcing their "not quite" feelings. Presenter: Shannon Rodriguez

Instructional Conversations and Multilingual Learners: Moving from Isolation to Belonging: A recent CDC study (Jones SE, Ethier KA, Hertz M, et al. 2022) found that feeling close to adults and peers at school was linked to a 33% drop in sadness/hopelessness and a 51% drop in suicide attempts. However, students often lack the skills or the opportunities to build meaningful relationships within the classroom environment (Le, Janssen & Wubbels, 2018). This has only been exacerbated by the pandemic (Cain Miller & Pallaro, 2022). Research has shown the power of collaborative interactions in supporting the cognitive, linguistic, and social development of students (Bunch, Kibler, & Pimentel, 2012; Walqui, 2006). One such collaborative pedagogical model-- is Instructional Conversation (IC)--, an evidence--based approach that positively impacts the academic achievement of multilingual learners and other students by fostering small group collaboration

and dialogue (Portes et al., 2018). In addition to their impact on academic achievement, collaborative interactions promote social-emotional learning (SEL) in the classroom (CASEL, 2022). SEL is imperative to youths' emotional development, and has implications for youths' academic, emotional, and behavioral success (Taylor et al., 2017). Building on the work begun through a five year, \$2.9 million, IES-funded grant that examined the effects of the IC model on improving the academic development of multilingual learners, the purpose of this study is to use a mixed methods approach of thematic analysis (Braun and Clarke, 2006) and discourse analysis (Johnstone, 2000; Gee, 2014) to investigate the impact of this collaborative, conversation-based instructional approach (Mellom, Hixon & Weber, 2019) on student SEL. In this presentation, we unpack the impact of ICs on four ethnically, linguistically and racially diverse students from a high school honors literature class, as they discuss the various ways interacting with one another in class through Instructional Conversations impacts their sense of isolation and belonging Presenter: Rebecca Hixon

Multilingual Voices from the margin to the Center; Biography-Driven Story-telling in the "New South": Fully 24% of the students in the study district in northeast metro Atlanta qualify to receive federally mandated ESOL services (Georgia Department of Education, 2021). Ninety-eight home languages are represented among the district student population and these students' families come from 191 countries. The new voices of these multilingual learners have not necessarily been included in the majority conversation of the "Old South" but represent important shifts in the linguistic and cultural landscape of the "New South." However, the narratives of multilingual learners are often erased or told by other people, frequently in highly racialized ways (Presiado & Frieson 2021). This paper describes a research and outreach project that opens spaces to lift the voices of these multilingual speakers. We discuss the three phases study design: Pre-Writing & Storytelling, Mentorship, biographies; Community Products. We detail the ethnographic and sociolinguistic data collection where students are guided to record and reflect on their linguistic and cultural formation and the socio-political factors that impact it. We describe the mentoring and literacy brokerage that lead to the final iterative products. We enter this process as reciprocal learners and regard the participants' benefits (seeing themselves represented in oral and written histories) as having equal or higher value than our research benefits (Hudley, 2013). We present pilot data and discuss the

process of transition, transnational identity, and translanguaging exemplified therein. While reporting on the stories these multilingual students craft about themselves, this paper also interrogates how we as researchers can move intentionally into a true research practice partnership that responds to the self-identified needs of the district partners (Lopez-Gopar, 2023) and aims create a space of responsive action and reciprocal benefit (Sato, 2023) that helps to reframe the narrative around multilingual speakers. Presenter: Jodi Weber

DLI vs. ESOL – Who Gets Privilege for Being Multilingual? : The recent proliferation of Dual Language Immersion (DLI) programs across the country has been precipitated by increased numbers of "English learners" as well as the desire of "Native English speakers" to capitalize on the benefits of bilingualism in an increasingly global society (Rand, 2017). However, although DLI programs are designated by federal programs as an ESOL delivery model, they are often positioned very differently (in school policy, curricula and structure) from ESOL programs designed only to serve students identified as eligible for ESOL ("English learners"). By contrast to push in and pull out ESOL models, DLI programs are bilingual instructional programs that offer content instruction in two languages to both "native speakers of English" and "English learners" and are designed as reciprocally beneficial programs that value equally the linguistic capital that each student brings to bear. These programs are shown to be highly successful, however, there is growing concern that many of these programs do not offer equitable educational opportunities to the "English learners" enrolled in them (Palmer, Cervantes-Soon, & Dornier-Heiman, 2020). In this paper, we will discuss the differences between the prescribed identities of DLI and 'regular' ESOL students both in policy discourse and instructional practice in Georgia. Specifically, we explore the ways that bilingualism is a process of transition, linguistically and ethno-racially, and therefore reflects identities in transition as students take ownership of new languages. Utilizing critical approaches to discourse analysis (Fairclough, 2013) that acknowledge that language teaching and learning are not neutral, but political acts situated within sociopolitical contexts (Pennycook, 2021), we examine the "ideological contradictions" (Menard and Palmer, 2023) evident in the individual and institutional discourse around the question of who is afforded the privilege of being multilingual. Presenter: dominique la barrie

Metabolic (in)justice: nutrition and nourishment in the teeth of racial colonial capitalism

10:15 AM - 12:00 PM Virtual - Room 3

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for the Anthropology of Food and Nutrition

ORGANIZER:

Sophie Chao

CHAIR:

Jessica Hardin (Rochester Institute of Technology)

PRESENTER:

Hanna Garth (Princeton University), Megan Carney (University of Arizona, School of Anthropology), Ariana Avila (University of North Carolina, Chapel Hill), Sarah Elton, Pallavi Laxmikanth, Terese Gagnon (University of Copenhagen), Amy Moran-Thomas (Massachusetts Institute of Technology, Department of Anthropology)

DISCUSSANT:

Emily Yates-Doerr (University of Amsterdam)

DESCRIPTION:

This roundtable interrogates the relationship between nutrition and nourishment in the teeth of 'colonial racial capitalism' (Koshy et al. 2022)—a regime that naturalizes both the exploitation of natural resources and the subjection of humans to racialized hierarchies of worth. The panel examines this relationship through the lens of metabolism and metabolic (in)justice. This framing helps draw attention to the uneven intersections and interactions of biopolitical and social life, the human and more-than-human, and the material and metaphorical, as these are mediated by differentially positioned and privileged guts. It points to metabolism and metabolic (in)justice as embodied, transformative processes, distributed across variably situated yet interconnected foods, environments, and bodies that are themselves historically constituted, politically charged, socially produced, symbolically charged, and affectively mediated. Set against the backdrop of ever-expanding agroindustrial food systems and planetary unraveling, the panel engages with the interface between bodies and worlds across multiple scales, as these shape life, living, and livability across diverse domains and degrees of metabolic exposure, absorption, and porosity. This includes food sovereignty's relationship to Indigenous continuance (Whyte 2018), racialized geographies (McKittrick and Woods 2007), and histories of gastrocolonialism (Santos Perez 2013) that perpetuate the violence of empire as a process of 'eating the other' (hooks, 2014, 21). Thinking with states of transition, transmutation and in-betweenness, we ask: how do contemporary struggles for social, environmental, racial, and multispecies justice intersect with the pursuit of nutritional wellbeing and the (potentially more capacious) promise of nourishment? In what ways do different foods and associated metabolic processes serve different transformative purposes? How are these processes dependent upon, and diagnostic of, the intersubjective entanglements of consumer and consumed? What lessons can be learned from food sovereignty movements, activism and protest in forging pathways to metabolic justice that are not reliant on relentlessly

consuming each other up, but rather on willingly carrying each other on towards more nourishing futures and relations of feeding and being fed? DISCUSSANT:

Columba Gonzalez-Duarte (University of Toronto, Department of Anthropology), Michelle Cameron (University of Toronto, Department of Anthropology)

DESCRIPTION:

Anthropologists have long espoused interpretive approaches that illuminate the agency of human actors through time. This session aims to deconstruct the centrality of humans within our narratives by

considering the ways that other-than-human beings were integral in shaping practice and ideology across the world. Multispecies anthropology has recently become an important way of re-orienting approaches to subsistence practices, herding lifeways, landscape transformations, mobility, immigration, settlement histories, and interregional interaction. By examining the interactions and entanglements of different, possibly multiple species that form parts of foodways, modes of transportation, and ways of being on a landscape, we hope to explore how diverse species that may hold distinct value for past and contemporary societies impact and transform daily and long-term activities. Participants in this session are encouraged to consider plants, animals, and other beings including the broader environment as agentive forces that constrain, afford, and shape human lifeways and beliefs. Multispecies frameworks contend that the primacy of human agency obscures heterarchical relationships within ecologies and the world at large. Therefore, by exploring human-nonhuman engagements we can more fully understand the nature of human lifeways and worldviews. Case studies with attention to the possibilities and pitfalls of a multispecies framework are welcomed. Both theoretical and methodological perspectives are encouraged in each contribution that may include: posthumanism, osteobiography, hybrid communities, kincentric ecologies, ethnography, paleoethnobotany, zooarchaeology, landscapes, and biomolecular approaches, among many others.

DESCRIPTION:

As anthropologists we have been grappling with many transitions in the way that we approach fieldwork. In light of the pandemic, the way we have been engaging with ethnography has been rapidly changing, prompting new ethical procedures and considerations for how we conduct fieldwork. In our work we address these challenges not only from a sense of fatigue and uncertainty, but we hope to respond to these provocations with experimentation, joy, imagination, and curiosity. This roundtable offers such an invitation, to explore anew the ways in which multisensorial ethnographic fieldwork draws on the five senses and the ways in which we (de)emphasize certain senses depending on the context in which we perform this work (Gonzalez 2021; Lippman, 2018). In our work on migration, climate change, justice, class, and community expression, our goal is to rethink, through the vehicle of multi-sensory ethnography, how we can pay attention to what finds manifestation beyond the strictly visual, what potentiality exists in the liminal spaces of transition. Informed by critical disability studies and the anthropology of disability, we have been inspired to further explore the enmeshed and entangled sensorial experiences of anthropologists over the past three years of the COVID-19 pandemic. Particularly, when the ability to use all five senses has been altered by the mediums through which we were able to conduct fieldwork, such as shifting interviews with our interlocutors into online spaces (Gold, 2003). These experiences challenged us to rapidly transition the ways in which we conduct research and to grapple with the experiences of multisensorial fieldwork in new ways. When ethics boards dictated that we could not perform participatory ethnography in person, due to the risk of spreading or contracting COVID-19, we moved online. In other cases, this transition inspired us to explore and engage with non-human interlocutors, embodied by the environments we had access to during periods of lockdown. This prompted us to re-conceptualize how we approach our research using the other senses, while acknowledging the spaces that are created beyond the lens of the strictly visual. In particular, it drew our attention to how space and place, identity and agency, can themselves become our primary interlocutors (Rethmann, 2022). Inspired by our collective work, we explore the ways in which sensorial experiences or the lack thereof impact our methods and the ethnographic narratives we create. Thus we ask the questions: 1. When we can no longer meet directly with our human interlocutors, how might nature, the environment, place, or other non-human beings come to act as our

interlocutors and how does this change the type of ethnography we write? 2. How do people create spaces of existence that go beyond the strictly visible, and what types of attentiveness are required by researchers to be able to do them justice? 3. Lastly, we explore the impact of altered sensorial experiences within our fieldwork, where the five senses are considered our most fundamental tools in the field; what happens when we are no longer able to use them fully? DESCRIPTION:

The 'ethical turn,' which carved out a space for recognizing individual freedom and moral experiences, has recently been critiqued for analytically separating ethics from the realm of the political and thus for overlooking 'how political possibilities and moral worlds generatively intertwine' (Mattingly & Throop, 2018, p. 485). This panel focuses on the question of how political possibilities and moral worlds co-constitute each other during periods of abrupt and relatively more gentle transition. When faced with challenging circumstances such as a pandemic, dire economic crisis, erupting political violence, or restrictions on mobility, how do

individuals and communities rethink their ethical and political commitments in ways that generate conversations for new ways of being and acting? How do diverse local, national, and transnational actors construct narratives that depict certain people, practices, and social formations as (un) ethical and (non) political? What makes certain bodily, affective, visual, and aesthetic practices, performances, and images come to be understood as inherently (un) ethical and (non) political? How do concepts such as freedom, justice, belonging, piety, and revolution, which carry both moral and political valences, get entangled in sentiments of uncertainty, fear, and confusion and characterize experiences of transitioning? The contexts studied by the panel presenters have witnessed dramatic and banal transitions in the past years, leading their interlocutors to question their allegiances, commitments, and aspirations. As the 'normal' began to be shaken, transitions called various ethical and political aspects of everyday lives into question-generating fear and precarity as well as new forms of sociality and agency. Transitions have also incited experimentation and playfulness as people desperately looked for alternative ways to reach their dreams or imagine new ones. We draw on the idea of becoming, which emphasizes the 'unfinished' nature of experiences and the storytelling of lifeworlds and collective efforts (Biehl and Locke, 2017) during transitions. The concept of becoming helps us make sense of how ethical and political imaginations continue to shape each other as future horizons simultaneously open up and narrow down during times of transition. It emphasizes that navigating transitions for many was not a linear process; it involved dialectical processes of disruption and reconstruction, disenchantment and reenchantment. Ethical and political are not stable categories; they are subject to continual evaluation and imagination. As we approach individual and collective efforts for becoming ethical and political as an indeterminate process, we situate political and ethical engagements in a continually shifting terrain of complex affects and temporalities. By asking how ethical and political values and positions are imagined alongside other forms of social difference, such as social class, race, gender, religiosity, and generation, we also seek to expand broader anthropological debates on subjectivity, belonging, and agency.

On Betrayal and Ethical Action: Long-term Asylum-seekers' Organizing in Hong Kong: This paper examines the transition at different scales that make and unmake the fragile togetherness of a group of asylum-seekers in Hong Kong in the early 2020s. Since late 2010s, a small

group of asylum-seekers managed to work together independent of NGOs to explore ways of exiting their immigration limbo. In 2022, however, the group fell apart right after they launched a fund-raising campaign for their overseas resettlement, leaving each member nursing wounds of betrayal and indignation. How did this "moral breakdown" (Zigon 2007) magnify pre-existing differences, current difficulties, and future troubles? Is reconciliation possible – and if so, what ethical and political bargains are necessary? Based on participant-observation as a facilitator for the group, I situate the group's interactions in the early 2020s in relation to the aftermath of the 2019 anti-extradition protests, the beginning of the COVID-pandemic, and an immigration bill amendment in 2021 that promised "better handling" of asylum-seekers. Examining the key moments and major disputes between group members, the analysis raises questions about how ethical and political agency intertwines within a complex web of personal biographies, social and political upheaval, and a tightening border regime. It asks how the power of sociality and interdependence is in constant flux with the precarity and divisiveness on the margins, and what political possibilities of the impossible may look like. Presenter: Sealing Cheng (The Chinese University of Hong Kong)

Ethics as Politics by Other Means: Since the 11th century, Islamic Shi'i seminaries have prepared pious young men to guide the faithful on the divinely ordained path called the shari'a. This paper considers different concerns, practices, and aspirations described as "ethical," and through which cohorts of seminarians have learned to navigate the transition period that followed the passing of their religious reference [marja'] and mentor, the Lebanese cleric Mohammed Hussein Fadlallah (1924-2010). I pay particular attention to the ethical practices and aspirations that transcend the realm of the self, and aim to accomplish the kind of work we associate with the political—e.g., addressing growing wealth disparities, confronting sectarian incidents and ensuring social tensions. Reflecting on these ethical endeavors in the context marked by a transition in patterns of authority helps us understand how the ethical and the political intersect. But as I argue, such endeavors also enable us to rethink the relationship of ethics to politics from an ethnographic standpoint where the very distinction between these categories seems contested or inoperative. This attempt at rethinking ethics and politics after the "ethical turn" builds on eighteen months of fieldwork in Lebanon (2013-2014), during which I attended the daily classes offered in the oldest of country's contemporaries

Shi'ī seminaries. It also draws on what political theorists Sheldon Wolin and Antonio Vasquez-Arroyo call the “tradition of political ethics” in philosophy as well as on Marcel Mauss’s *Écrits Politiques* (1997), a collection of political writing that remains untranslated in English to this day. Presenter: Jean-Michel Landry (Carleton University, Department of Sociology & Anthropology)

Ethical and Political Affects: Becoming “Positive” in Lebanon: Since 2011, the war in neighboring Syria has paralyzed Lebanon’s already fragile politics and economy, leaving many Lebanese feeling stuck in recurrent crises. My paper will discuss how civil society activists in Lebanon sought to spearhead a multi-scalar transformation—e.g., political, social, and individual, amidst what they viewed as the country’s dramatic transition to a state of war and chaos. Activists articulated being “positive” (*ijabī*) as essential to asserting “life” and new future horizons against the precarious situation of the country, which was described as “killing” its citizens. Drawing on ethnographic research (2012-2015), I analyze how everyday activist practices sought to transform both individual moralities and affects and political and social structures to manage Lebanon’s dramatic transitions. Through fostering what I call “ethico-political dispositions”—embodied capacities that were believed to generate empowerment and agency—activists sought to manage “negative” (*selbī*) affects such as stuntedness and fear of war. Similar to protesting or volunteering, many mundane practices, such as doing yoga and spending time with friends, were viewed as activism if they helped cultivate the “right” dispositions for “good” citizens of the imagined nation. Drawing on critical studies of affect management (e.g., Berlant 2011; Mazzarella 2017), I analyze how cultivating ethico-political dispositions enabled both new exchanges between neoliberal market agendas and civil society as well as emergent forms of “biopower from below” (Rutherford 2016). My work shows entanglements between ethics, politics, affect, and temporality by examining activists’ affect management as a process of ethical cultivation with political motivations and consequences. Presenter: Yasemin Ipek (George Mason University)

Practicing justice, becoming neoliberal: An ethnographic exploration of student activism in the US: This paper examines how activist-oriented college students practice visions of justice at an elite, predominantly White institution (PWI). In the wake of recent political transitions such as the racial injustice embedded in George Floyd’s murder, the structural inequalities exposed by the pandemic, and the reversal of *Roe v.*

Wade, many elite college students participate in self-organized activism. These activities are critical sites that young people formulate, articulate, and practice their ethical and political visions. However, student activism in elite PWIs is inherently paradoxical: elite activist-identifying students are structurally located in institutions that entrench the very inequalities that these students ameliorate. College students are also inundated with an education that enables neoliberal subjectivity (Handler, 2013; Urciuoli, 2022). How does the neoliberal educational environment shape elite college students’ ethical and political work for justice? Drawing from fieldwork with self-identified activist students in an elite PWI in upstate New York, this paper reveals how student activists practice their visions of justice through a neoliberal form of agency. First, I show how college coursework enables elite students to “do” critique without having to confront their own positionality. Then, I examine two moments of student-led activism: a campaign regarding student-directed resources and a teach-in aiming to confront marginalization on a PWI campus. Responding to the ethical demands of the PWI situation (c.f., Zigon, 2017), student activists articulate an ethical vision of a “good” student, while inadvertently drawing from a neoliberal form of political action (Gershon, 2011), becoming further entangled in the contradictions of their positionality. Presenter: Chenyu Wang (Hamilton College)

Newcomers in the Association: Student Representatives and Engagement with Anthropological Societies

10:15 AM - 12:00 PM TMCC - 714 B
Roundtable/Town Hall - In-Person

REVIEWED BY:

National Association of Student Anthropologists

ORGANIZER:

Lawrence Ramirez (University of California, Riverside)

CHAIR:

Abby Vidmar (National Association for the Practice of Anthropology)

PRESENTER:

Hanadi Alhalabi (California State University, Northridge), Dana Burton (New York University), Cydney Seigerman (University of Georgia, Department of Anthropology)

DISCUSSANT:

Yookyong Im (Indiana University), Yesmar Oyarzun (Rice University, Department of Anthropology)

DESCRIPTION:

What are the roles and responsibilities of student board members in an anthropological association? How do students join section practices of governance, communication, and administration? What opportunities do student representatives have to build community, promote mentorship opportunities, or address concerns within anthropological societies? In this roundtable discussion, participants will share their own experiences within association service, including event planning, committee leadership, and coordinating society communications. An anthropological society's network presents student members with many potential chances to experience mentorship beyond that which they receive in their graduate program, providing a new source to find research opportunities or applied practice. Additionally, student representatives can influence the approachability and relevance of an association to other students, fostering a welcoming place of mentorship and opportunity. However, the role of student representative is unclear for many student members. Presenters will explore how students may enter association service. We will consider activities in event management, ranging from managing a topical subcommittee to organizing a mentorship workshop. Presenters will discuss the responsibilities of student representatives in developing an association's student membership and engagement. Furthermore, we will consider how student members may take on communications roles that will help them forge generative connections within a society's membership. We hope to inform students about association service by sharing our experiences as student board members within a variety of AAA sections.

No Path to Citizenship: Transitions in Immigrant Activist Imaginaries

10:15 AM - 12:00 PM **TMCC - 713 A**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for the Anthropology of North America

ORGANIZER:

Amelia Frank-Vitale (Princeton University)

CHAIR:

Rebecca Galemba (University of Denver), Deniz Daser

PRESENTER:

Amelia Frank-Vitale (Princeton University), Deniz Daser, Miranda Hallett (University of Dayton, Department of Sociology, Anthropology and Social Work)

DISCUSSANT:

John Doering-White (University of South Carolina, Department of Anthropology), William Lopez

DESCRIPTION:

In this roundtable, we discuss how migration justice advocates are responding to an increasingly anti-immigrant, nativist tendency in the US and the world (borders hardening, visa and citizenship access becoming more restrictive, the system of international protection under fire, etc) by transitioning away from the pursuit of citizenship status in a liberal framework. We bring together anthropologists and anthropology-adjacent scholars of immigration from different career stages to talk about this trend. Our conversation includes discussions of how these alternative imaginaries emerge in the context of immigrant workplace justice, raids and their aftermath, resistance to the violences of humanitarian programs, migrant caravans demanding freedom of movement, and the creation of immigrant mutual aid projects. We depart from the conviction that these reconfigurations of the most fundamental assumptions about what constitutes justice for immigrants is not just a necessary pre-figuring of future worlds, but also the only practical way forward. Scholars of migration and citizenship have recognized that inclusion often implies violence; processes of state inclusion are co-constitutive of processes of more overtly violent exclusion. When it comes to the expansion of access to status and full or contingent citizenship, the inclusion of the few is always predicated on the exclusion of many, making the former an inherently violent trade-off. Even so, the last three decades of immigrant justice work in the United States have been decisively oriented towards comprehensive immigration reform and calls for pathways to citizenship. This has become the unquestioned, almost teleological terrain of immigration activism; so much so that it has become nearly impossible to speak of immigrant justice outside this framework. Despite years of organizing, however, what had become the self-evident goal, whose achievement was felt to be squarely in the realm of future possibility, is now more elusive than it was twenty years ago. Indeed, as political conditions make the goals of many progressive-to-leftist movements seem increasingly out of reach, and the mainstreaming of abolitionist thought brings activists to question the once taken-for-granted liberatory nature of those goals, movements must transition towards

alternative visions of the future. In our discussion, we also recognize the heterogeneous nature of immigrant communities, immigrant activism, and immigrant imaginaries. While we see phenomena that require an abolitionist framework, we also recognize a problematic tendency to overdetermine migration movements as projects imbued with vanguard social justice ethics and politics, extending beyond the realm of migration policy and migrants' rights. This is to say that we do not romanticize abolitionist or transborder mobilizations but, rather, we explore the ways in which this is an eminently practical political transition.

Christine Schreyer (University of British Columbia, Okanagan), Martha Radice (Dalhousie University, Department of Sociology and Social Anthropology), Daniel Salas-Gonzalez (Dalhousie University, Department of Sociology and Social Anthropology), Zabeen Khamisa, Zachary Mondesire (Boston University), Jason Ellsworth (Dalhousie University, Department of Sociology and Social Anthropology)

DISCUSSANT:

Jennifer Long (MacEwan University, Department of Anthropology)

DESCRIPTION:

Objects are continuously in transition through creation, circulation, consumption, and/or destruction. Their value and meaning are subject to the shifting perspectives of the social, political, and economic contexts they are enmeshed. In line with the AAA & CASCA theme of transition, participants consider how objects are being made and unmade in new ways by the humans that organize them. Our panelists will show-and-tell the ethnographic stories of the objects we

encounter in our research. Objects include woven wraps, miniature carnival throws, mix tapes, a family painting, currency, shapewear, turbans and not milk. Each speaker will take on their object of choice for only 7 minutes! These short form presentations will be unpacked in a discussion and allow time for the audience to share their own stories.

2-380

Poetics of Struggle: Local Resistance to State Violence in the Americas

10:15 AM - 12:00 PM TMCC - 716 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association of Black Anthropologists

PRESENTER:

Maryam Kashani (University of Illinois, Urbana-Champaign), Courtney Desiree Morris (University of California, Berkeley), Christopher Loperena

DESCRIPTION:

In the contemporary Americas discourses of multicultural belonging, from mestizo nationalism and racial democracy to official anti-racism, purport to make state-sanctioned space for multiracial polities but in fact often extend longer histories of state violence in the region that are defined by white supremacy, coloniality, and gendered racialization. Black and Indigenous territories become frontiers of progress, masking or relegating to history the violent dispossessions of colonial theft, genocide, and enslavement in pursuit of national projects that reconcile contemporary violence and dispossession as national projects of multiculturalism and capitalist development. Paradoxically, while this state-making aims to make marginal or invisible the histories and contemporary realities of Black and Indigenous peoples, these communities continue to be central to how the state validates itself. Critically, these state machinations have never gone uncontested; while the state consistently adapts to resistance, these communities recalibrate ways of being, forms of activism, and modes of critique, drawing on grounded knowledges and traditions. This roundtable engages three authors whose recent books explore historical and contemporary struggles for autonomy and justice on the lands and at the waters of Tela Bay in Honduras, Bluefields on the Caribbean coast of Nicaragua, and the San Francisco Bay Area. Courtney Morris' text *Defend the Sunrise* (2023) examines the long history of Black women's resistance to violence, exclusion and dispossession in Nicaragua. It tracks the

ways Black women challenge forms of 'multicultural dispossession,' a concept Morris develops to describe how state actors and institutions drain multiculturalism of its radical, transformative potential by espousing the rhetoric of democratic recognition while simultaneously supporting illiberal practices and policies. In *Medina by The Bay* (2023), Maryam Kashani weaves expansive histories, peoples, and geographies together in an ethnographic screenplay to demonstrate how sociopolitical forces and geopolitical agendas shape Muslim ways of knowing and being in the San Francisco Bay Area. From the Black Power movement and state surveillance to Silicon Valley and gentrification, Kashani examines how multiracial Muslim communities in the San Francisco Bay Area survive and flourish within and against racial capitalist, carceral, and imperial logics. In *The Ends of Paradise* (2022), Christopher A. Loperena examines the Garifuna struggle for life and collective autonomy, and demonstrates how this struggle challenges concerted efforts by the state and multilateral institutions, such as the World Bank, to render both their lands and their culture into fungible tourism products. Loperena's work reveals how purportedly inclusive tourism projects form part of a larger neoliberal, extractive development regime, which remakes Black and Indigenous territories into frontiers of progress for the mestizo majority. Drawing on her critical work on Blackness, gender and violence in Brazil, Christen Smith joins the roundtable to think with these authors on the throughlines of local resistance and state violence in the hemisphere, as well as questions of anthropological craft and activist anthropology as each work engages diverse methods including the ethnocinematic, courtroom ethnography, archival research, and oral history and each author is committed to doing anthropological work that matters.

Psychedelics as Transformation and Healing on the Margins (4)

10:15 AM - 12:00 PM

TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Anthropology of Consciousness

ORGANIZER:

Lisa Gezon (University of Alabama at Birmingham, Department of Anthropology)

PRESENTER:

Gabrielle Lehigh (University of South Florida, Department of Anthropology), Graham St John

(University of Huddersfield), Lisa Gezon (University of Alabama at Birmingham, Department of Anthropology), Nicole Torres (Western Washington University, Department of Anthropology)

DISCUSSANT:

Rachel Corr

DESCRIPTION:

The use of psychedelics for self-actualization and mental health therapy, whether in lay or professional mental health contexts, has grown increasingly popular in North America. This panel focuses on ethnographies of psychedelic use and related altered states of consciousness in non-medical contexts, tracing language surrounding their use as well as emerging biocultural practices and wisdom traditions that reduce harm and elevate transformative experiences. Transformation is a common theme, invoking conversations about generational, colonial BIPOC, religious, and other forms of trauma. Healing and other embodied experiences occur in localized multisensory contexts, sometimes including music, dance, art, lights, and other times in intentional conversations, meditations or other integrative spaces.

Transformative Psychedelic Experiences at Music Events: Exploring Chemosocial Relationships for Enhancing Psychedelic Healing: Clinical interest in psychedelic treatments in the United States started in the 1950s, but anti-drug policy and anti-social sentiments quickly thwarted future research. The last decade has renewed clinical interest in using psychedelics to treat a diversity of mental health ailments. While these studies provide essential protocols, treatments, and therapy models for patients, they are limited in understanding the role of the contextual elements that influence psychedelic experiences and outcomes. This project examines how people use psychedelic substances outside medical settings by studying transformative psychedelic experiences at music events. This inquiry into psychedelic use utilizes an integrated framework of chemoethnography from environmental studies with classic drug use literature and anthropological studies on indigenous and pharmaceutical healing practices to consider the assemblages, entanglements, and mechanisms that contribute to meaningful experiences. Additionally, this study addresses the need for information on how people use psychedelics outside medical settings and how these uses can be therapeutic. As clinical settings individualize treatment, music festivals provide a contrasting environment to identify additional contextual factors and how they contribute to creating these experiences. The results of this study

stem from 18 months of fieldwork consisting of 38 interviews, 523 survey responses, and over 650 hours of participant observation. This research finds that the carefully crafted spaces of music festivals featuring art, music, and community vibe are essential to initiating liminal experiences and allowing festival goers to fully embody the pleasure of the psychedelic experience. The entanglements of the music festival and the psychedelic experience give way to complex and supportive social lives that function as therapy management groups through conversations of support and care before, during, and after the experience. This unique environment has the potential to support therapy, healing, and transformation. Participants report the value of these experiences through long-term changes in their internal process of self-reflection and changes in everyday life. This research sits on the cutting edge of anthropological theory by pushing the field towards an 'anthropology of the good.' It investigates these experiences to inform future treatment opportunities in addressing the needs of the suffering subject while bringing attention to the diversity of modalities in therapy and healing. Presenter: Gabrielle Lehigh (University of South Florida, Department of Anthropology)

Of Mirrorballs and Meta-Liminality: A Rough Guide to the Vibe in Global Dance Culture: This presentation explores event sites possessing a unique signature in longitudinal research on a spectrum of event-cultures dubbed 'transfesteive.' Drawing on multi-sited transnational ethnography of electronic music and dance cultures over the past three decades and into the present, I make a critical exploration of the transformative pretensions of the socio-sonic aesthetic commonly understood as 'the vibe.' From outdoor 'bush doofs' in Melbourne to 'trance dance' at Portugal's Boom Festival, to 'burns' within the Burning Man diaspora, 'transition' / 'transformation' is a persistent leitmotif. Experts on ritual and pilgrimage have long known that liminality is pivotal to transition, and researchers of techno dance movements recognise that the vibe is archetypically liminal. But the vexatious vicissitudes and conflicts of the conditions of liminality within these scenes, and at these sites, are often neglected. This presentation demonstrates that, in a multitude of dance culture milieus the world over, the vibe evolved as an optimal meta-liminal collision of pleasure and the sacred. It will show that, from early seventies sites like New York's The Loft, to Australia's Rainbow Serpent Festival, to Black Rock City, Nevada (i.e. Burning Man), the mirror ball evolved into a powerful sign of unity amid difference. Compounding

the self and other, fantasy and reality, the one and the many, the mirrored ball became a pervasive symbol of the vibe. But as recent research has indicated, the mirrorball is a glittering threshold, a 'heterotopic' device (see *Disco Heterotopias*, Pitrolo & Zubak 2022) mirroring the prolific efflorescence of othered positions refracting a cornucopia of race, ethnicity, gender, sexuality, class, ability, and other identifications. As I outline, if the resilient mirrored globe is an icon of freedom and otherness, then it is a complex symbol, a glittering mosaic of the riot of passage contextualized by 'transfesteive' sites: a symbol of the hyperliminal contours of transformation. At the same time, and in a more recent development shaping transfesteive events and their communities, pandemicity and the era of 'social distancing' has pushed the boundaries of event design. In a new era of crisis, public health and safety became a feature integral to the transformative exegesis. With examples from world electronica, from psytrance to techno, from Paradise Garage to Kyiv's club Ж, from Hungary's Ozora Festival to Burning Man, this presentation forges a rough guide to the vibe, with attention to its nuanced proliferation in a world of risk and uncertainty. Presenter: Graham St John (University of Huddersfield)

Liminality and Integration in Psychedelic Discussion Groups: The use of psychedelics for self-actualization and mental health therapy, whether in lay or professional mental health contexts, has grown increasingly popular in the United States. This 'psychedelic renaissance' has been supported by actual or anticipated legalization of psychedelics, increasing numbers of clinical trials using psychedelics therapeutically, as well as by growing business interests in marketing these substances and processes of taking them. Research has revealed the importance of ritual frames for interpreting the meaning of psychedelic experiences (in the use of ayahuasca by Western tourists in Fotiou 2020, for example). A rite of passage is a particular kind of ritual frame that helps explain the sometimes-dramatic personal transformations that people experience as a result of liminal experiences under the influence of these substances. This research, located in an urban setting in the South of the United States, focuses on semi-public discussion groups that provide settings for sharing and making sense of psychedelic experiences or simply for exploring curiosity about these substances. Participants often refer to these as 'integration groups,' highlighting the final stage in the rite of passage: reintegration into society with a new phenomenological and cognitive subject position. Rituals and social movements take place within political

and economic contexts affecting identity and opportunities for collective responses to social and political pressures. To this end, the Southeastern United States provides a unique context for psychedelic exploration, considering political hesitance to legalize psychoactive substances for recreational use and overall religious and social conservatism. Many participants come from white evangelical religious backgrounds and currently inhabit social contexts where using these substances is considered transgressive. These integration groups provide a context for generating and affirming what Devenot et al. (2022) referred to as 'counterculture wisdoms' that are, similar to Indigenous wisdoms, 'never 'fringe,' but always foundational' to providing context-appropriate support and care to psychedelic users. The lens of 'rite of passage' helps conceptualize the legitimacy of this emerging counterculture wisdom tradition for helping people experience transformation and then learn to frame it within challenging ideological, political, and economic contexts. Presenter: Lisa Gezon (University of Alabama at Birmingham, Department of Anthropology)

Psychedelic Usage as a form of Decolonial Healing among BIPOC Individuals: While the 'Psychedelic Renaissance' has become increasingly popularized in the United States and psychedelics are currently in various stages of decriminalization in various cities and states, its usage among BIPOC (Black, Indigenous, and People of Color) is becoming increasingly popular as a tool for 'healing and liberation.' My research interests are focused on one central question: how do BIPOC individuals situate themselves in a social and cultural phenomenon that is part of a capitalist project of mainstreaming, professionalization, and possibly appropriation? Through the use of 2-3 ethnographic case studies, I will examine how BIPOC psychedelic users in the United States contextualize and understand their use of psychedelics as a 'decolonial' tool of healing amidst a larger capitalist project. Presenter: Nicole Torres (Western Washington University, Department of Anthropology)

P'urhépecha Culture and Identity in Michoacán and the United States: Gender, Sexuality, Traditions, and Migrations

10:15 AM - 12:00 PM

TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Association of Indigenous Anthropologists

ORGANIZER:

Vanessa Moreno (University of Arizona)

CHAIR:

Mario Gomez Zamora (University of California, Santa Cruz)

PRESENTER:

Mintzi Martinez-Rivera ,María Rosario Niniz Silva ,Vanessa Moreno (University of Arizona),Mario Gomez Zamora (University of California, Santa Cruz)

DESCRIPTION:

This panel is presented by scholars who are all ancestrally rooted to Michoacán, Mexico and conduct academic research about their ancestral communities. Our panel will provide a collective analysis of transnational P'urhépecha culture and identity, including perspectives that analyze and compare cultural practices and identities in Michoacán and in the numerous communities where P'urhépecha people reside in diaspora in the United States. Transitions such as changes to traditional culture, altered ancestral practices, and distinct identity claims from those historically characterized by the P'urhépecha people, will be explored to understand the various adaptations the traditional Indigenous culture of the P'urhépecha people has experienced centuries ago and in current times. Whether these transitions can be traced back to surviving genocide during Spanish colonization, or the recent devastation of the COVID-19 pandemic, the P'urhépecha communities of Michoacán featured in this panel presentation have navigated countless transformations due to multiple outside imposing forces, including locally, nationally, and internationally. The multitude of social, economic, political, and cultural climates these communities are currently experiencing and have historically adapted to illustrate their approach to transitions, with the ability to remain connected to their traditional P'urhépecha culture and transform in new, unfamiliar environments or situations with resiliency.

Tembuchakuecha during COVID: Transforming Wedding Practices in a P'urhépecha Community in Michoacán: In the last 20 years, in the P'urhépecha community of Santo Santiago de Angahuan, different cultural practices have gone through multiple cultural and structural transformations. Between 2009-2010 the effects of the U.S.-Mexico Economic Recession, the War on Drugs that began in 2006, and the mass deportations of migrant workers in the United States, followed by the H1N1 epidemic in 2009, and the Covid-19 epidemic of 2020-2023, were greatly felt in Angahuan. As a result, cultural practices were transformed to adapt to the current

political, economic, and social climate. In this presentation I will focus on the tembuchakua, wedding rituals in Angahuan, as the tembuchakua serves as a cultural template that influences the way other rituals are organized and performed in the community. While the wedding in Angahuan does have a structure that people may follow, families carefully negotiate and organize the wedding based on their preferences and/or economic situation. Therefore, in this presentation I will specifically focus on how people in Angahuan had to transform their wedding practices in order to contend with the reality of the COVID-19 pandemic, as families had to negotiate which rituals they were going to perform during the three days that the wedding lasts. Those transformations are and were done in a P'urhépecha/Angahuan distinct way, following the cultural logic of the community. Presenter: Mintzi Martinez-Rivera

Participation of P'urhépecha Migrant Women in the Provision of Care for People with Disabilities: The study of the migrations and living conditions of Mexican migrants to the United States has revealed a series of problems faced by this population, one of them related to health disorders. It has been shown that among the concentration of Hispanic migrants (mainly Mexican) in low or unskilled occupations that demand physically demanding tasks and risky environments, the adoption of unhealthy practices and behaviors (sedentary lifestyle, bad eating habits) and suffering from chronic diseases, are the main factors that contribute to the deterioration of health, which can materialize in the acquisition of some type of disability. Therefore, this study aims to analyze the participation of P'urhépecha women and the tasks they perform as informal care providers with migrants with acquired disabilities in their destination locations. Addressing the experiences of informal caregivers will demonstrate the conditions under which such assigned responsibilities are exercised, according to gender, and how these tasks allow the family and social reproduction of the migrant Indigenous community in the context of transnational migration. Presenter: María Rosario Niniz Silva

The Transnational Community of Aguililla-Redwood City: Rooted in Michoacán and Silicon Valley: The people of Aguililla, Michoacán have been in a constant state of transition for generations. From surviving genocide during Spanish colonization, attempting to assimilate into the Mexican nation-state, and recently becoming a transnational community now primarily based in the Silicon Valley of Northern California, Aguilillenses have remained strongly rooted to their pueblo and

maintained this connection even while in diaspora. Aguilillenses trace their heritage to the P'urhépecha people, though their Indigeneity has been impacted by historical trauma from colonization and the pressure to transform into a mestizo pueblo to become incorporated into the Mexican nation-state. The pueblo began experiencing outward migration in the 1940s during the Bracero Program and soon established a transnational community based in the unincorporated area of North Fair Oaks in Redwood City, California, where a majority of Aguilillenses now reside. The harsh living conditions in the surrounding region of Tierra Caliente in Michoacán have altered this community's practices of transnationalism, as Aguilillenses experience restricted mobility back to their ancestral pueblo and intensified feelings of in-betweenness while living in North Fair Oaks. Here, Aguilillenses are facing displacement once again, as gentrification in wealthy Silicon Valley has spread to this historically Mexican community, also known as "Little Michoacán." This presentation will analyze the various transitions the transnational community of Aguililla-Redwood City has experienced due to historical trauma, de-Indianization, and intergenerational displacement, with an emphasis on the community's current resistance to further displacement and fight to protect their roots both in Aguililla and North Fair Oaks. Presenter: Vanessa Moreno (University of Arizona)

P'urhépecha Gendercide in Michoacán: An Archival and Testimonial Approach: In this presentation, I analyze a historical document from the 17th century about thirteen Indigenous P'urhépecha men who were criminalized for sodomy in Michoacán. Five of these men were publicly tortured, and four were sentenced to death by the Spanish government and the Catholic church in Michoacán. I demonstrate how the public extermination of queer Indigenous people in colonial Michoacán influenced the assimilation of Indigenous gender and sexualities into the Spanish colonial project. I also study the connection of these historical events with the ongoing violence and murder against queer people in Michoacán and the rest of the Américas. To inform the current complexities of queerness in Michoacán, I analyze testimonies of queer P'urhépechas, where I focus on the avenues queer P'urhépechas find in Michoacán to not repress their sexual preferences and gender expressions while still being accepted by the pueblo. Although, in some cases they might be accepted at some level by the community, we see queer P'urhépechas not always fitting in with local expectations, and who are targets of

community violence. Presenter: Mario Gomez Zamora (University of California, Santa Cruz)

2-275

Racialization and Racism in Health Care Part 2

10:15 AM - 12:00 PM

TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Megan Muller da Silva (University of British Columbia)

CHAIR:

David Ansari (University of Illinois, Chicago)

PRESENTER:

Heather Howard (Michigan State University, Department of Anthropology), Courtney Johns Rejano (University of South Florida), Sarah Rubin (Ohio University), Annie Preaux (Tulane University), Chand Mia (Memorial University of Newfoundland, Department of Anthropology)

DESCRIPTION:

The present global uncertainty of ecological and political turmoil has foregrounded questions of inclusion, equity, and justice in the areas of access to health services and the uneven distribution of disease and determinants of health. Through recent climate crisis and pandemics, race has proven to be a central factor influencing how health care resources are made available. The imbrication of care and the politics of race in clinical spaces has long been a focus of critical medical anthropology. Building upon this antecedent, an important area for disciplinary reflexivity is to consider how ethnographic methods can be harnessed within clinical spaces by shaping medical education and practice. Building upon a long history of articulating a sharply critical stance towards biomedicine, how might the discipline of anthropology transition towards a site of advocacy within and alongside clinical practice?

This panel, Part 2 of Racialization and Racism in Health Care, considers the themes of categories, labels, misrecognition, and social suffering. This panel assembles medical anthropologists, health researchers, and health care professionals confronting the social and material consequences of racism, whether in health care delivery or biomedical research. The presenters consider the implications of socio-cultural and biological profiling of patients and populations, in diverse settings including within biomedical research and minority groups in the United States, the Dominican Republic and

Bangladesh. The first three papers consider how (mis)racialization influences how the social determinants of health, health outcomes, and health equity are understood in biomedical research and health policy. The final three papers investigate the implications of violence and social suffering in child and maternal health. In keeping with the overarching theme of the sessions on racialization and racism in health care, these papers contribute to the conversation on how anthropologists might position themselves as allies and intermediaries between patients, racialized publics, care providers, policy and health care institutions.

Misracialization of Indigenous people in population health and mortality studies: Indigenous people are often misracialized or misclassified as other racial or ethnic identities in population health research in the United States. This misclassification leads to underestimation of Indigenous-specific mortality and health metrics, and subsequently, inadequate resource allocation. When Indigenous communities identify research needs to support their delivery of programs and services, the issues caused by misracialization in population health data adds a burden to communities who often need to devise creative ways to gather information that counts. In recognition of this problem, investigators around the world have devised analytic methods to address racial misclassification of Indigenous people. We carried out a scoping review of empirical studies that include Indigenous-specific estimates of health or mortality and that take analytic steps to rectify racial misclassification of Indigenous people. While we found useful practices, there remain several limitations. Of the most promising practices we identified, community-engaged approaches improve registry data and surveillance, build capacity, contribute to Indigenous data-sovereignty goals, highlight how increased ownership of the research process produces richer results and ultimately more appropriately targeted resource investment. These approaches draw attention to the need to center Indigenous methodologies and apply mixed methods, which thus have implications for ethnographic research design. All of these factors will be considered through reflections on a study of e-cigarette use in Indigenous communities in the US carried out by one of the authors. Authors: Heather Howard-Bobiwash, Danielle Gartner, Madeline Nash, Ceco Maples. Presenter: Heather Howard (Michigan State University, Department of Anthropology)

Public discourse as an interface between medical education and culture war politics: Medical

anthropologists are uniquely positioned to interface between medical education, policy, and the public. In an increasingly polarized political climate, it is imperative that medical bias and health inequities not fall to the wayside of competing priorities or be removed from the mission completely. Diversity, equity, and inclusion (DEI) programs at state universities are under attack in Florida, driven by the governor's agenda to "Stop Woke." His imminent run as a presidential candidate will soon take these issues to a national stage. Medical anthropologists have a responsibility to advocate for students having a critical stance, especially in medical education. With our expertise, we can use tools such as opinion editorials to shed light on health, culture, and power for the American public. This type of mainstream media engagement can effectively communicate the importance of DEI to a broader audience and highlight the consequences of policies seeking to limit student access to evidence-based education about health equity. In this paper, I will demonstrate how I draw on my knowledge as a medical education coordinator and my understanding of uneven textbook image representation, structural competency, differential medical device effectiveness, implicit bias, and the importance of patient advocacy by physicians to inform the public about the dangers of ignoring these issues. Engaging in public discourse through mainstream media is particularly urgent now to contribute to public debate and influence policy outcomes. Presenter: Courtney Johns Rejano (University of South Florida)

Critical examination of interventions in racial disparities of infant mortality: The US infant mortality rate has steadily declined for decades, but the disparity between Black and White infants has remained nearly constant. Reducing the infant mortality rate and the racial disparity therein requires multidisciplinary, multisectoral efforts with stakeholders from the social and biological sciences, public health, healthcare, and community, among others. Human genomics research and related biotechnologies hold promise for moving the needle by providing new approaches to preventing and managing the myriad causes of infant mortality. Still, genomics research should be approached critically, especially if these methods aim to address or mitigate racial disparities in infant mortality, for several reasons: 1) The allure of biological reductionism may usurp limited public health resources; 2) fraught collaborations between sectors already exist; and 3) technocratic solutions hold the potential to exacerbate instead of reduce of disparities. Recent developments in the genetics of sudden infant death syndrome (SIDS) present an opportunity to explore the emergent

challenges of integrating genomics into multidisciplinary and multisectoral work in infant mortality reduction and to illuminate these integrations' effects specifically on racial disparities in SIDS. This ethnographic project positions itself to critically examine the emerging tensions and collaborations between and within different sectors in SIDS reduction--traditionally dealt with upstream as a public health social-behavioral issue and downstream as a clinical problem--and grapple with the emergence of a "genetic solution" to racial disparities in infant death. Authors: Sarah Rubin, Amanda Zabala, Michelle McGowan, Marsha Michie. Presenter: Sarah Rubin (Ohio University)

The intersection of racism and obstetric violence in the Dominican Republic: Despite universal access to hospitals and skilled birth attendants in the Dominican Republic, maternal mortality remains high. Two critical issues that impact the provision of maternity care are discrimination against Haitians and, relatedly, obstetric violence, a form of institutionalized gender-based violence that is perpetuated against women because of their triple condition of being female, dark skinned, and living in poverty. Obstetric violence includes verbal abuse, poor rapport with women, sociocultural discrimination, physical abuse, failure to meet professional standards of care, and poor health system conditions (Castro and Savage, 2019). In the Dominican Republic, healthcare professionals are trained and work within contexts that condone and perpetuate racism and obstetric violence, and structural aspects of the healthcare system and discriminatory social beliefs become embedded in how healthcare providers think and act. In 2019, Preaux and Castro conducted ethnographic research in 3 public maternity wards in the Dominican Republic to understand hospital personnel's perspectives on obstetric violence and their justification of it. The interviews provided a space for clinicians and hospital staff to recognize and engage with issues in the health system and in their own actions. Using the concepts of humanization and habitus, the researchers examine how healthcare providers have been shaped by flawed systems and societies and what that means for their relationships with the women they care for. We argue that ethnographic research can support consciousness-raising processes and clinicians in engaging in self-critique and reimagination of their practice. Authors: Annie Preaux and Arachu Castro. Presenter: Annie Preaux (Tulane University)

Maternal care, risks, and violence: Toward an analysis of health inequalities in Bangladesh: Critical medical

anthropology often frames how health inequalities are produced in specific institutional, social, and political-economic contexts. This analysis explores the narratives of health inequalities in a tea plantation community in Bangladesh. Tea plantations in Bangladesh are linked to the complex history of the colonial plantation economy and community. As a post-colonial and post-civil war state, with modern nation-building efforts, Bangladesh has achieved tremendous success in its social and economic growth and in improving its citizens' lives in many areas; however, tea plantation communities have not seen the positive impacts of these improvements. Certain conditions are historically persistent in their everyday lives, including low wages, poverty, uncertain labor rights and laws, and a lack of healthcare and social welfare. Particularly, reproductive health risks and maternal mortality are higher among them compared to other parts of the country. Drawing on an anthropology of structural violence, this analysis examines the narratives of maternal care, risks, and violence among women workers who are intergenerationally involved in the tea plantation economy. The data from in-depth interviews and participant observation shows that unequal access to health education and resource distribution shapes ambiguous healthcare practices associated with maternal risks and obstetric fatality. It scrutinizes that historically endured social vulnerabilities affect healthcare affordability and opting for better healthcare options depends on structural limits underlying access to resources, infrastructure, and distant commuting. This analysis depicts everyday forms of health inequalities that are the indictment of structural violence and the political economy of tea plantations in Bangladesh. Rethinking Film From Flaherty to Future

10:15 AM - 12:00 PM

TMCC - 206 B

Oral Presentation Session

REVIEWED BY:

Society for Visual Anthropology

ORGANIZER:

Zehra Husain (CUNY, The Graduate Center)

PRESENTER:

Anna Elin Linder ,Ian Kuijt ,Zehra Husain (CUNY, The Graduate Center)

DESCRIPTION:

This session explores the history of early ethnographic film to new and emerging discussions around filmmaking techniques and documentaries to the political implications of ethnographic film. From drone capturing film to multimodal knowledge this session seeks to bring ethnographic film to the forefront of current and emerging anthropology

Making Creative Transitions through Droned Mode of Engagement: Making Creative Transitions through Droned Mode of Engagements Ethnographic endeavors feature a long history of creative modes of engagements, and anthropology an equally long critique of its disciplinary attention to worded representations of beyond worded experiences (Hastrup and Hervik 1994; Marcus 2012; Mead 1974). Curious and critical as our research comes about, takes place, unfolds, and develops, processes of documenting, exploring, experiencing, and producing knowledge commonly evolve as intrinsic parts of our situated wishes to make sense of the worlds we study. We may imagine to do one thing and to use a specific mode of fieldnoting, only to end up doing something else, such as to capture dynamics and dimensions otherwise not attentively engaged or even lost (Mathews 2018; Tsing 2015). This paper builds on such an experience, and it acts window to open the conversation for doing and representing ethnographic work as creatively as it was undertaken (Elliott and Culhane 2017). Expressively and actively undertaken by means of sensuous scholarship (Pink 2015; Stoller 1997), my fieldwork in the world of olivicoltura in Apulia intriguingly advanced into resourcefully embodied research using a drone. While the drone first and foremost allowed perspectives that I as a human am largely and physically incapable of exploring, it rapidly emerged into a mode of engagement that had me critical question how I had learnt how to see that which I watch, listen to that which I hear, smell that which I scent, feel that which I touch, and gather that which I experience (van Ede 2009). This paper develops how the drone incorporated a transition of my ethnographic sense of attention, all while visualizing how imaginative conceptualizations enable unexpected modes of multimodal knowing in much multisensorial worlds of being. Presenter: Anna Elin Linder

Voices from Lviv, Ukraine: Visual Anthropology, Resilience and Resistance: Film, photography, and other kinds of multimodal work plays a critical role in anthropological knowledge production, and provides insights into daily acts of Resilience and Resistance in

post Feb. 24, 2022, Ukraine. Drawing upon films and pictures collecting during March 2023 and October 2023 in western and central Ukraine, this presentation explores how practices of resilience, resistance and hope are materially and symbolically woven into daily life. We argue that the Russian invasion of Ukraine highlights how cultural heritage exists as a contested and targeted landscape, including the Russian destruction of public buildings, monuments, and a broad range of cultural and historical places. In this collaborative work we employ interviews with Ukrainian university faculty members, graduate students, and undergraduate students, to understand how private and public acts, such as public memorialization of deceased military and the symbolic use of national colors and flags at home. Consideration of these materials underlines the importance and value of engaging in daily practices, and the importance of the normal, in a time that is anything but normal. Presenter: Ian Kuijt

Digital Films and Racial Aesthetics in an Arabian Sea Port Town: The Baluchi telefilm, *Doda*, we see long shots of the Arabian Sea. An aspiring boxer from the Baluch ethnic group, stands on a cargo ships, runs along the coastline and trains at the beach along the Makran coast. In the film, *Lyari: A Prison Without Borders*, we see the inverse of these open landscape shots of the sea. The Baluchi telefilm, also released on YouTube, we are taken into the inner-city neighborhood of Lyari in Pakistan's port city Karachi. The shots are drenched in sepia tones, signifying dust a decay. We see an aspiring footballer who practices in the neighborhood playground, in old tattered shoes. He is shown to be an excellent athlete, but urban strife and poverty keep him from progressing. In the Baluchi short film, *Garr Garr*, resembles a public sphere, where young men deliberate their future and talk about migrating to countries in the Middle East to secure livelihoods. This presentation is about coastal screen cultures from South Asia, particularly digital 'telefilms' in Baluchi language produced by film makers from Karachi and the Makran Coast in Southern Baluchistan. It draws on the interviews conducted with three Baluch filmmakers. Two of these telefilms are sports film and one is a short film. It asks the following questions: 1) What are the aesthetic practices embedded in such films that are often not of the highest production quality? 2) What histories of unfreedom and migratory memories do these films archive?; What modes of racialization and racial aesthetics are visualized and expressed in these telefilms? The paper takes these films and the accompanying interviews with the directors to argue for a 'racial aesthetics' that archive the historical mobilities

across the Arabian Sea and Persian Gulf on digital media – itself a mobile medium. The Baluchi 'telefilms,' are uploaded on YouTube and other social media platforms, and often are not of the highest quality, only to be consumed on individual cellular screens. Moreover, being exclusively in Baluchi, their audience were the Baluch in Pakistan and in the diaspora spread across the western Indian Ocean. Baluch diasporic histories, otherwise absent from official historical discourse, are archived and aestheticized in these digital films. A study of digital cultures and racial aesthetics is an opportunity to understand history through media as well as a history of media flows from the Global South. By focusing on sports as a mediated practice rather than just a rule-oriented, ritualistic instantiation of nationalism and global capitalist expansion, this paper takes sports as an intermedial technology that weaves together visuality, embodiment and sound in its aesthetic and political form. DISCUSSANT:

Archie Crowley (Elon University)

DESCRIPTION:

This panel features the work of early career researchers interested in questions of authenticity, legitimacy and language. Cavanaugh and Shankar (2014) describe the 'heightened value of authenticity within global capitalism, especially how producers link cultural production to particular times and places as a way to evidence authenticity' (52). Processes of authentication and legitimation are dialogic, 'blur[ring] the line between object and commodity,' facilitated by linguistic and metalinguistic resources (53); these concepts interrelate with Bucholtz and Hall's (2005) description of

'authentication' and 'denaturalization' as processes which make claims to realness or artifice. Claims to authenticity are intrinsically political, as the construction of authenticity is itself an act of distinction with salient consequences, in which actors position themselves within dichotomies of real-fake/center-peripheral/insider-outsider/brand-surfeit for material or political gain (Bourdieu 1984; Nakassis 2013). The research presented in this panel covers a range of contexts, with 'authenticity' as the core theme.

McCullough draws upon his fieldwork in Charleston, South Carolina (USA), working with Gullah tour guides. As Lau (2010) argues, discourses of tourism heavily rely on 'authenticity' to market certain locales; for instance, marketing materials for the Gullah Heritage of Hilton Head Island repeatedly emphasize the 'authentic' and 'unique' Gullah culture, linking Gullah language and practices to African linguistic and cultural heritage. In this presentation, McCullough analyzes tour guide discourses which commodify Gullah language to meet tourist demands for linguistic 'authenticity'. Kuester analyzes moments across twelve wine-selling events in South Carolina (USA), in which wine representatives construct themselves and their products as elite and authentic. Representatives navigate complicated positionalities, authenticating their product by positioning themselves as the mediator between the lay customer and the distant, elite regions in which the wines are produced. Licata examines the intertwined ideologies of white supremacy, 'native speakerism' and 'language authenticity' in the context of rising political support for neofascism in Northern Italy. Licata's interdisciplinary approach integrates cognitive and sociocultural linguistics to demonstrate the semiotic links between 'native'/'authentic' speakers of standardized Italian and broader patterns of raciolinguistic enregisterment (Kang & Rubin 2009; Rosa & Flores 2017). Like Licata, Kosse brings linguistic anthropology into conversation with cognitive linguistics. Cognitive linguistics, with some exceptions, has largely been unconcerned with matters of social semiosis; yet as a discipline it has much to learn from linguistic anthropological theory and approaches (and, perhaps, has some useful insight to bear for linguistic anthropology). This presentation demonstrates the potential benefits of such an approach by integrating cognitive theories of center-periphery relations with the body of work on authenticity in linguistic anthropology (e.g. Cavanaugh & Shankar 2014).

How can Cognitive Linguistics support semiotic theory? 'Authenticity' as a case study: While anthropology was a founding discipline of cognitive science, the two fields

are often posited as fundamentally at odds with one another (Boster 2012; Beller, Bender & Medin 2012). Despite rarely being in dialogue, linguistic anthropology and cognitive linguistics have independently incorporated similar theoretical constructs; for instance, both disciplines prioritize construction of meaning over formalisms, while conceptualizing language as fundamentally social, cognitive, and embodied (e.g. Croft 1995; Croft & Cruse 2004; Bucholtz & Hall 2016). This presentation demonstrates the potential benefits of a social semiotic-cognitive approach by integrating cognitive theories of center-periphery relations with the body of work on authenticity in linguistic anthropology (e.g. Johnson 1987; Cavanaugh & Shankar 2014). This analysis applies cognitive linguistic theories on 'construal operations' in language (image schemas, frame semantics, metaphor, center-periphery relations, attention and salience) to linguistic anthropological approaches which highlight the intersubjective construction of authenticity and legitimacy (e.g. Nakassis 2013). Using examples from my research on US-based online white supremacist discourse, I demonstrate how cognitive linguistic theories provide linguistic anthropology with tools for fine-grained semiotic analysis. Presenter: Maureen Kosse

Using measures of social cognition to explore the 'authentic' and 'native' Italian speaker: With neofascism once again on the rise in Italian political parties and society, Northern Italy has become the national epicenter for right-wing populist and racist rhetoric, which "transcends immigration and citizenship status... [shedding light on how] questions of 'difference' are framed institutionally in Italy" (Hawthorne, 2017; Calamai, 2015). Despite the vast regional, cultural, ethnic differences between 'ethnic' Italians, as well as the rise of standardized Italian (hereby SI, a variety originating in Tuscany) as a public language, the rise of immigration in Italy has visibilized how structural raciolinguistic ideologies (Rosa & Flores, 2017) that targeted Southern Italians are now directed at non-white groups (cf. Guerini, 2011). Highly underexamined are how linguistic ideologies of native speakerism and language authenticity are entrenched in white supremacy to elevate the white Italians. The present study demonstrates how multiple models of social cognition can be used to reveal varying layers of bias to gauge how social information, like gender and race, are used in the process of meaning making (see Kang & Rubin, 2009) to (re)iterate ideologies of the native and authentic speaker. Examining bias helps us to understand how language and nonlinguistic social constructs are co-naturalized (Rose & Flores, 2017), creating invisibilized benchmarks of the 'native' and

'authentic' speaker that are institutionally upheld in societies wherein the use of a public or official language becomes inaccessible for those othered through policy. Presenter: Gabriella Licata

"We represent real wine here": Ideologies of Language, Authenticity, and Place in South: Wine representatives are linguistic and economic intermediaries that circulate wine talk (Silverstein 2003; 2006; 2016; Lehrer 2009) between producers and consumers. South Carolina representatives in this in-between role often focus on wines from established and distant regions, using terminology that presupposes ideological links between place and value, working to construct the wine as "authentic." Authenticity is not inherent to objects (Bucholtz 2003), but constructed to sell commodities to audiences on regional and global scales (Cavanaugh & Shankar 2014; Heller 2014). The creation of a locale is important for the construction of authenticity so that consumers feel directly connected to the product's place of origin. In order to determine how representatives use language to authenticate wines non-local, I analyze moments across twelve wine selling events in wine shops and restaurants recorded from Fall 2021-Spring 2023 where representatives discursively construct ideas of authenticity, localness, and positionality. I argue that though representatives do pick up ideas of "elite authenticity" (Mapes 2018; 2020; 2021) by bolstering their own elite reputations when presenting wine to sell, they also work to appeal to those who may not identify as "elite." Authentication by wine representatives involves not only connecting the perceived past to the current consumer (Pratt 2007), but also involves the representatives positioning themselves closer to these so-called elite regions; for example, by highlighting their own visits to the vineyard. Negotiation of place and positionality through language by representatives construct the actual and perceived value of these wines and the authenticity of consumers and sellers. Presenter: Paige Kuester

Linguistic souvenirs & Charleston markets: discourses of authenticity in Gullah Geechee tourism: While often conceptualized as salient and distinct types of linguistic and sociocultural capital, perceptions of authenticity and processes of legitimation represent incredibly complex interweavings between access, agency, awareness, and belonging. Gullah Geechee, a English-based creole language spoken along the coastal southeastern United States, continues to be a site of tension between intra- and intercommunity perspectives concerning the construction and maintenance of 'authenticated' Gullah Geechee identity,

and the consequences of who gets to make those distinctions. In the tourism industry, Gullah Geechee language acts as a commodifiable resource by native guides, personalities, and entrepreneurs; however, a history of linguistic appropriation and exploitation by outsiders has also shaped the linguistic landscape of what constitutes 'authentic' Gullah Geechee. The current study draws from contemporary linguistic anthropological research with the Gullah Geechee tour guide community located in Charleston, S.C. and asks the following questions: What forms do 'souvenirized' and 'commoditized' Gullah Geechee language practices take in the Charleston and Lowcountry tourism industry? and What do processes of language commodification in tourism tell us about authenticity and legitimation? Participant observation of tours, interviews with tour guides, and analyses of touristic multimedia artifacts reveal tensions for intracommunity members between the curating and navigating of outsider language ideologies and positioning of self and others with an idealized construction of localized belonging. Legitimation of Gullah Geechee personhood and language at the intercommunity touristic site becomes a (re-)mediation of outsider perceptions and discourses; tour guides act as metalinguistically-aware intermediaries that negotiate perceptions of authenticity through strategic stylistic language practices. Presenter: John McCullough (University of South Carolina)

Rumors: Making Sense In Times of Transition

10:15 AM - 12:00 PM

TMCC - 203 A

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Emy Lindberg (Uppsala University)

CHAIR:

Signe Askersjö (University of Gothenburg)

PRESENTER:

Qing Shen (Uppsala University), Signe Askersjö (University of Gothenburg), Emy Lindberg (Uppsala University), Alexander Sallstedt (Uppsala University), Anders Norge Lauridsen (University of Gothenburg)

DESCRIPTION:

What might rumors teach us about the everyday experiences related to social and economic transitions

across local and global scales? This panel looks at the transitional power of rumors in everyday life. Drawing on anthropologist Julien Bonhomme (2016), we understand rumors not only as a social-linguistic practice to make sense of everyday life but as important 'flipsides to everyday social interactions'. That is, rumors are ways of making sense of everyday life while also turning the mundane upside down and creatively questioning manifested truths. While rumor has long been an important concept in anthropology, it is particularly timely to examine rumor critically because of its intimate relationship to emerging global issues such as post-truth and the spread of misinformation (Mair 2017). Yet, this panel seeks to think deeply about rumor not necessarily as a problem, but as something that may hold great social potential in an era of transition. Should we understand rumors as meaningful weapons of the weak or as methods for reading against the grain? (Scott 1985; Stoler 2008). What is the role of rumor in mobilizing social and political action and fostering social bonds and communities? How does rumor expose and distort existing social hierarchies and inequalities? How does rumor illuminate novel forms of being and relating? In other words, how does rumor represent a central component of social transition?

Rumors as Queer Archives and Identity Politics among the Older Gay Men in Shanghai: The majority of the queer history among the older gay men I worked with in Shanghai like elsewhere in China remains largely undocumented. However, these histories are passed on by word of mouth in the community, specifically via rumors. In this paper I analyze how rumors function as an archive of queer experience or a way of engaging with queer past that resists recognition and institutionalization as well as a normative mechanism that reproduces normative queer subjectivities or how these rumors speak back to modern identity politics. I examine three rumors. The first is about an older gay man who is widely believed to have brought up his son gay, the second is another older gay man who is believed to have spent seven years in prison during the Cultural Revolution (1966-1976) when homosexuality was criminalized. The third concerns a few informants' efforts to undo my identity as a researcher by fabricating stories about my sexual liaison in the field. These rumors reproduce three types of failed and stereotypical queer subjects and rekindle "backward" (Love 2009) queer imaginations which remain anchored in a highly stigmatized queer history. In the meantime, these queer rumors open up possibilities of enacting politics of gay identity from the vantage point of the older gay generation which doesn't necessarily

completely align with the mainstream identity politics agenda that defines the younger queer generation in contemporary China. Presenter: Qing Shen (Uppsala University)

Rumours: The Seeds of Conflicts and Convivialities: Few spaces in everyday life thrive with rumours as the workplace. It is a space that requires constant negotiations with people you meet up to eight hours a day, which you sometimes struggle to get along with or perhaps do not even like. At the same time, for many people, the workplace is a space that offers the possibility to fall in love, create valuable networks and establish long-term friendships. But it is also a space with structured and manifested hierarchies of power and these power dimensions can be difficult to negotiate as they may be perceived as rigid and cemented; there is most often a boss that demands specific forms of behaviour, tasks to be completed and goals to be met. All these characteristics of a workplace make for a space where rumours and gossip flourish and become fundamental aspects of most social interactions. In this paper, I argue that rumours are both the seeds of conflicts and convivialities in social life. Building on in-depth ethnographic fieldwork amongst employees at a department store in Sweden, this paper explores the double-sidedness of rumours in how rumours are used to build trust amongst colleagues by critiquing (and at times diminishing) the power of the managers at the store. By looking closely at the practice of rumour-making, I illustrate how rumours have transitory effects in how rumours can transform most social relationships as well as how rumours can destabilize and transition power dimensions in everyday life. Presenter: Signe Askersjö (University of Gothenburg)

Rumors in Transition: The Production and Destruction of a Professional footballer: Professional footballers are global performers. They embody the dreams of people all over the world. Because of their career in the limelight, footballers are subject to both public praise and scrutiny, pending their performance on and off the field. Furthermore, many are invested in their success. Drawing on long-term, ethnographic fieldwork with Ghanaian footballers who migrate to Sweden for work and their networks, the paper examines the case of a footballer (anonymized and with consent), whose international professional career went from shooting to the stars to a full-blown crash. It focuses on the quick rise and fall, identified as a period of liminal transition, where everything was up in the air. The paper analyzes the rumors and interpretations that the people

surrounding the footballer, who to some extent were stakeholders in the career, including family, friends and team representatives, but also those further away like fans and journalists, engaged in. It argues that rumoring is a way to make sense of, but also steer an unfolding chain of events. As such, this paper explores rumor as a way to interpret and create meaning in periods of transition. It shows how rumors are spread and negotiated on individual, societal and global level in relation to the production and destruction of a professional footballer. It finally looks at what it means to be subject to rumors, succeeding and failing as a public figure and why the fall is so hard. What is going on? What actually happened? Do we need to know? Presenter: Emy Lindberg (Uppsala University)

Ironic Gossip Among Young Artist Men: Gossip is often conveyed through (aesthetic) taste and judgement, which, in turn, are attached to stereotypes of the other. To pass such judgements—especially about other people—belonged to the humdrum of everyday life amongst the young artist men I conducted ethnographic fieldwork with in Reykjavik, Iceland, between 2019 and 2021. Yet particular about the artist men's gossip was their tendency to imbue it in ironic sentiment, which rendered the moral content of said gossip ambiguous. I suggest that their tendency to be ironic—even when gossiping—reflected a sociocultural context wherein everything and anything had the propensity to become a matter of self-representation. Though not always a successful tactic, to gossip ironically was therefore a means with which the artist men made sure not to be judged (and thusly be gossiped about) in turn by others. Drawing from ethnographic examples, I illustrate that there was a transitory logic to the irony that the artist men imbued in their gossipy practice. This logic, I argue, reflected their mastery of self-representation in a time marked by social media and in an artistic context marked by the socially differentiating means (and individuality) of aesthetic taste and judgement. Presenter: Alexander Sallstedt (Uppsala University)

Ambalavelona: Rumors of Madness, Hysteria, and Possession in Madagascar: Rumors of a frightening kind of sorcery have spread from the Sihanaka region to the rest of Madagascar since the late 1950s. 'Ambalavelona', as it is called, renders its victims completely beside themselves with sudden outbursts of screaming, shaking and other aberrant behavior. It appears to emerge chiefly in periods of societal transition like the years around Malagasy independence (1960). The suggestive name 'ambalavelona' translates as 'enclosed alive' referring to the helpless state of being at the

mercy of the sorcery. However, what this "sorcery" remains unclear and shrouded in all sorts of rumors. Some ascribe it to spirit possession or a type of nefarious love magic, others see it as the work of the devil, while still others treat it as a psychiatric disorder. Indeed, ambalavelona is among the most rumored phenomena in Madagascar. In my fieldworks, I have pursued the rumors of ambalavelona back to their alleged place of origin among the Sihanaka, a people notorious throughout Madagascar for their "sorcery" – especially ambalavelona. I heuristically approach ambalavelona as a culture-bound syndrome, that is, an assemblage of psychiatric and somatic symptoms endemic to a specific culture. Instances of ambalavelona continue to feature in everyday gossip as well as national media in Madagascar. Yet despite having been noticed by several anthropologists, a focused and thorough ethnographic study of how ambalavelona is practiced and experienced remains to be carried out. That is what this presentation, an offshoot from my PhD work on Sihanaka cosmology, aims towards. Presenter: Anders Norge Lauridsen (University of Gothenburg)

Situating religious actors in climate change transitions in Sub-Saharan Africa

10:15 AM - 12:00 PM TMCC - 705

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Timo Kallinen

CHAIR:

Timo Kallinen

PRESENTER:

Jenni M^ölkänen ,Tea Virtanen ,Timo Kallinen

DISCUSSANT:

Andrew Walsh (Western University, Department of Anthropology)

DESCRIPTION:

Sub-Saharan Africa is among the world's regions hardest hit by anthropogenic climate change. Consequently, African societies are under an increasing pressure to make a transition from the current era of deepening environmental crisis to a more sustainable future and ways of living. Religious actors, groups, and institutions are involved in this transition in multiple ways. Accordingly, our panel asks how different religious

actors situate themselves in the undetermined and unexpected context of current crisis, as well as the measures for alleviating or solving the crises. Along with the heightened level of uncertainty created by climate crisis, Sub-Saharan Africa is undergoing major religious transformations. Presently, both Pentecostal-Charismatic Churches and Salafi- and Sufi-inspired Islamic revival movements are growing, while indigenous and older Islamic and Christian movements are adopting multiple survival strategies to respond to competition for followers. They all perceive and react to the climate calamity differently. The monotheistic scriptural religions' view of a hierarchical relationship between humans and nature has often been identified as the root cause of the modern environmental crisis, while indigenous peoples' spiritual attachment to land is seen as exemplary from an ecological perspective. Yet, ecotheologians and activists of different world religions have advocated for seeing the environment as divine creation with intrinsic value, and various faith communities have advocated 'greener' ways of life. Simultaneously, other strands of these religions have embraced climate skepticism, or insisted that environmental disasters are a part of divinely ordained destiny over which humans have no power. Furthermore, we emphasize that religious practices and institutions are politically and materially embedded in their social environments. Hence, how religious actors respond to environmental problems and participate in efforts to solve them is influenced by and has an effect on far broader dynamics than strictly the religious realm. Each specific location exhibits its own unique set of relations between religious, political, economic, and civil society actors. Each locality, obviously, is also intertwined in webs of relations on national, regional, and global levels. The presentations in the panel address the following questions and themes: • What broader sociocultural, political and economic dynamics influence religious responses (or non-responses) to climate change, and how are these altered in the process? • How does the climate crisis and responses to it, as well as struggles over shrinking resources, affect relations among religious actors; within particular communities and also between them? • Does the climate crisis affect the policies and actions of local religious institutions and/or people's everyday religious practices? • How are discourses and imaginations related to climate change transitions enacted and mobilized by religious actors? The panel gathers presentations based on data collected by ethnographic methods on four locations: Ghana (West Africa), Cameroon (Central Africa), Uganda, and Madagascar

(East Africa). It involves all the major religious groups on the continent (Christianity, Islam, Indigenous religions).

Changing weather, shrinking resources, and Christian social relations in northeastern Madagascar: Sub-Saharan Africa is experiencing simultaneously effects of anthropogenic climate change and major religious transformations. In rural northeastern Madagascar, rice and vanilla farmers, belonging mainly to Tsimihety ethnicity and practicing different forms of Christianity and ancestral customs, live in the vicinity of Marojejy National Park known for its rare endemic species. The Tsimihety environments, undergoing biodiversity and forest loss, have been in an intensive focus of the Madagascar state and bilateral and transnational organizations' efforts of reforestation and conservation of natural resources. The rural farmers themselves are concerned about changing weather influencing people's subsistence and export crop farming. In the context of shrinking resources and changing weather, I examine how the Christian Tsimihety situate themselves in different social orders of the Malagasy state and foreign projects, ancestral customs as well as Christianity, and relations among and between them. Elsewhere in Africa, Christians have engaged with ecologically sensitive practices and theologians and faith communities have advocated 'greener' ways of life. However, Christian churches in Madagascar are mainly involved with social issues, such as taking care of the poorest, health, education and humanitarian aid. In northeastern Madagascar, Christians are busy to build better churches to attract and maintain followers. These practices of building and attracting people resonate with values of the Tsimihety ancestral customs. Indeed, people navigate between demands and expectations of village and kinship sociality and respect towards God. Finally, the Christian Tsimihety interpret weather changes as God's signs asking people better behavior assigning weather into a social and moral question. Presenter: Jenni Mõlkänen

Making sense of climate change in Muslim Cameroon : For long, the humid savanna area of the Adamawa Region of Cameroon has provided the local Muslim Mbororo (Fulani) with ideal conditions for raising their Zebu cattle. Recently, however, the area has witnessed the deteriorating effects of climate change on fertile land. Besides furthering the tension between the Mbororo and local farmers, the gloomy prospects caused by exacerbating resource scarcity has driven many Mbororo youngsters to crime. While a body of research exists on indigenous strategies of climate change adaptation among Sub-Saharan pastoralists,

people's own understanding of the phenomenon has been overlooked. My paper aims to fill this gap by exploring how the Mbororo conceptualise climate change. What kinds of factors or agents they conceive as its root causes? What is their understanding of the possible connections that climate change has with other phenomena affecting their lives? The paper examines the interplay between three coexisting ways of reasoning that instruct the Mbororo while facing the climate crisis: 1) the Islamic doctrine that guides the Mbororo as devoted Muslims, 2) their indigenous socio-cosmic value order aiming at the fecundity of humans and cattle, and 3) the modern reason-based mindset that the Mbororo development association (MBOSCUDA) tries to root in its people. I look at the synergies and contradictions that these coexistent religious and secular outlooks generate when the Mbororo try to understand their everyday experiences of climate change, and adjust their mundane and spiritual practices to cope with their precarious situation. Presenter: Tea Virtanen

Traditional religion in transition: ecotourism at sacred sites in the forest belt of Ghana: This paper looks at a recent revival of traditional religion in Ghana, which is closely connected to a new awareness about the climate and environmental crisis. The Christian missionaries operating in the area of present-day Ghana during the late nineteenth and early twentieth century encouraged African converts to abandon their spiritual beliefs concerning the environment so that more effective extraction of natural resources could take place. Consequently, taboos concerning nature could be transgressed without fear of spiritual punishment. In some localities this led to conflicts between converts and traditionalists. In recent decades, however, certain ideas about the environment linked to traditional cosmology have been revived as a part of a conservationist ideology. Government agencies, NGOs, and local communities have launched ecotourism projects, where the sacredness of places and natural formations (e.g., lakes, forests, caves) or animals (e.g., monkeys, bats, fish) has a central role. Thus, traditional religion has been able to assume an "ecologically friendly" modern identity and the protection of the environment has become profitable. The paper will explore how this has affected positions and relations of local religious groups, and how people perceive the relationship between religion and economic development. A particular focus is placed on questions arising from the commodification of sacred sites. The ethnographic context is the Bono East Region of Ghana,

where research has been carried out since 2000.

DISCUSSANT:

Emily Sekine (SAPIENS), Megan Raschig

DESCRIPTION:

This roundtable will explore the burgeoning genre of creative ethnographic writing with a focus on storying otherwise. We take inspiration from McKittrick's (2021) insistence that stories are themselves interventions with world-making potential, prompting us to inquire if storying otherwise might create possibilities for telling different stories and thus for potentiating and enacting different worlds. This question requires us to first recognize the ways in which disciplinary norms around knowledge-making and dissemination are entangled with anthropology's colonial histories and presents; the academy's neoliberal orientation; the imperial impetus behind state investment and funding; racialized, gendered, and heteronormative department cultures; differential distributions of risks and harms; and the non-innocent ways in which all these inhere in our body-minds. It also means that the choice of which

stories we tell and of how we tell them matters, with stakes that are at once political, epistemic, ethical, and ontological (Hunt 2014, Meek and Morales Fontanilla 2022). Through storying otherwise there lies the potential to disrupt long-guarded boundaries including those between scholarship, politics, and creative writing. Reworking disciplinary practices around writing, this roundtable will explore storytelling as a form of speculative thinking-with-care (Puig de la Bellacasa 2012) that is committed to feminist, anti-racist, queer, and anticolonial worldmaking. In today's neoliberal academy, we face increasing demands for 'data,' in the form of objectified, rationalized, disciplined facts (Harvey and Moten 2013). Yet the work we do-- as fieldworkers, activists, teacher-scholars, community collaborators, and co-thinkers with myriad others--often unfolds in ways that resist and refuse the dictates of data-making (Tuck and Yang 2014). Such excesses may reside as ellipses, questions, disconcertments, or half-thoughts that populate our fieldnotes but never make it into the structuring form of journal articles (Frohlick 2022). A story, on the other hand, can remain open, unresolved, and unsettling. This roundtable thus experiments with storying otherwise to disrupt enclosure and to harness the creativity, willfulness, and possibilities of stories that, through their refusal of reductive and instrumentalizing logics, 'do' other things. This roundtable will engage with these possibilities in a wide variety of ways. Panelists will reflect upon excesses in our fieldwork and fieldnotes to ask what storying these moments might potentiate. We will offer a critique of writing conventions that is performed through storying otherwise-- such as reading a partially 'cooked' poem or a narrative that has been stitched across/between 'raw' fieldnotes. Our roundtable will also consider how storytelling reworks prevailing epistemological frameworks, ontological certainties, and disciplinary norms; how telling certain stories in certain ways (and perhaps, opting not to tell others) facilitates ethical, interpersonal, and community obligations; and the possibilities and limitations of deploying stories in various registers-- as knowledge making, public engagement, or worlding practices, to name a few. Together we explore how storying otherwise brings knowledge, entities, relations, worlds into being through its enactment and how this endeavor might move anthropological 'work' into public audiences and spheres beyond the academy.

Rachel Watkins (American University, Department of Anthropology), L. Chardé Reid, Michael Blakey (College of William & Mary), Elizabeth D. Meade, Delande Justinvil (American University), Druonna Collier

DISCUSSANT:

Chip Colwell (Wenner-Gren Foundation)

DESCRIPTION:

The enslavement and oppression of African descended peoples in the United States has led to significant damage to and destruction of Black heritage sites, including burial grounds. The African American Burial Grounds Preservation Act was signed into law with bipartisan support as part of the \$1.7 trillion 2023 Omnibus Appropriations bill. For the next five fiscal years, \$3 million will be set aside for the Act, which authorizes the National Park Service 'to coordinate and facilitate Federal activities and non-Federal activities to identify, interpret, research, preserve, and record unmarked, previously abandoned, underserved, and other African-American burial grounds.' This Act is an important start, but it leaves much to be desired. As of yet, the National Park Service has not developed a program to administer the annual \$3 million in grants, which amount to only a fraction of a percent of the total spending bill. Additionally, the Act does not prevent the further disturbance and destruction of burials or allow the National Park Service to develop requirements that apply to private property. Another glaring omission is that unlike the Native American Graves Protection and Repatriation Act, there is no requirement for institutions to repatriate human remains. Here, we consider what this Act means for Black heritage and ways we as archaeologists and anthropologists can advocate for broader legislation to protect significant sites and encourage the repatriation of Black Ancestors.

General Anthropology Division

ORGANIZER:

Christa Mylin (SUNY, University at Albany, Department of Anthropology)

CHAIR:

Christa Mylin (SUNY, University at Albany, Department of Anthropology)

PRESENTER:

Christa Mylin (SUNY, University at Albany, Department of Anthropology), Kaori Chen (SUNY, University at Albany, Department of Anthropology), Marie Peterson (SUNY, University at Albany, Department of Anthropology), Heungtae Yang, Nadia Marin-Guadarrama (Skidmore College, Department of Anthropology)

DESCRIPTION:

After focusing outward under the pretense of being objective observers, ethnographers shifted their gaze inward through reflexivity, but it is time to stand between those perspectives and consider how anthropological inquiry transforms both the researcher and the community of study. Not all anthropologists agree that they are transformed by their research. Some prefer to claim detachment from the people and places they study. However, by entering into a particular setting for research, the anthropologist enters into a new state, taking on the identity of one who is neither fully part of the community nor completely apart. Therefore, it is important to consider the impact anthropologists have upon local communities as a result of their intellectual pursuits, but it is equally important to recognize that anthropologists themselves undergo transformation as a result of their work.

Anthropologists can take on new identities as mentors, collaborators, friends, advocates, and allies. These new roles come about because of the personal connections anthropologists form during their research endeavors. Anthropologists have been transformed into advocates and public policy consultants as a result of their specialized knowledge (Loperena et al. 2016; Low and Merry 2010). Often, these roles challenge

anthropologists to become allies for marginalized groups of people. In addition, entering a new culture or environment may force anthropologists to think differently about their own experiences. Lastly, anthropologists may form friendships through their work, which provides personal and emotional support (Diphorn and van Roekel 2019), but these relationships also raise challenges as anthropologists navigate between their identities as friends and researchers. Through each connection, ethnographers continue to learn about themselves while they engage with others, thus becoming subjects of the research themselves. The connections ethnographers make through their work and research can become mutually transformative, impacting not only the people and places they encounter, but changing the anthropologists themselves. Anthropologists contribute new knowledge, enhance skills in a particular area, and form a new network of people when they do their research. What they give to others changes that community's understanding of itself, its history, and its value. In return, anthropologists receive knowledge, enhance their own skills, and form personal connections. Just as the ethnographic data is variable, the transformation the ethnographer experiences varies. The interactions may be positive or negative, sometime challenging the anthropologist to change the trajectory of the research or opening up avenues for the anthropologist to take on other identities, such as mentor, ally, and friend. Living With(in) Community: Navigating the Space Between Researcher and Neighbor: By living within a particular community, ethnographers interact with people involved in their research outside of an explicit research setting, which can create challenges for the ethnographer in knowing how to navigate various identities as researcher, neighbor, and friend. I faced this challenge of knowing which role to employ during and after fieldwork, which was conducted in the region where I lived and worked in southern Pennsylvania. I interviewed Mennonite pastors and lay church

attendees, and many of them were referrals from friends or others with some personal connection. As I continue to interact with some of the people who were part of my data collection, I have adopted several strategies for relating to people because I want to maintain the association and also uphold the confidentiality I promised. First, if we meet one-on-one, and I know the individual recognizes me, I will openly talk about our research-related interaction. However, if we are in a group setting, I will talk generally about my research but never mention an individual connection. I use the same strategy of general conversation for people who may not recognize me. Lastly, I am exploring new ways to facilitate connections between individuals with similar experiences. In each instance, my identity as a researcher initiated the association, but my role expanded as I formed friendships with some people and assisted others in uniting with people who understand their life and church experiences. Presenter: Christa Mylin (SUNY, University at Albany, Department of Anthropology)

Methodological Considerations: Toward Humanistic Ethnographic Research Practices: Anthropology continually questions and investigates relational interactions between anthropologists and the people that they study. Powerful ethnographies often involve emotional bonds between the anthropologists and their research participants. However, it remains uncertain how to transform the intimate relationships with our research participants and deep connections to our work into our greatest strengths to make ethnographies powerful. Combining ethnographic and visual arts research methods, I have been conducting fieldwork with local weavers in upstate New York since 2018. The study explores the intersection of women's creative labor (weaving), modes of learning, and everyday storytelling in relation to the processes of aging. The weavers in this study are predominantly women in their 70s, 80s, and 90s. In older age, the weavers continue to learn new skills and knowledge, generate deeper understandings, and refine their weaving expertise. These weavers have opened their space of intimacy to me. In this presentation, I share experienced intimacy and closeness as well as the pain and confusions that can evolve during ethnographic fieldwork. I reflect upon the potential power of ethnography to transform our disciplinary practices based upon relationships formed both within the group and through the impact on my life. This presentation invites us to envision ways in which we can transform anthropology into a more empathetic and respectful discipline. Through much attention to developing relationships with research

participants, their lives, and hearing their voices, ethnographers can experience pain and confusion, and therefore discover paths to humanizing our discipline through our ethnographic practices. Presenter: Kaori Chen (SUNY, University at Albany, Department of Anthropology)

Beaded, Painted, and Carved Scholarship: Toward Becoming a Research Ally with Haudenosaunee Artists: This presentation critically explores the term "ally" as both a contemporary form of activism through expressions of support and an action-based process of allying oneself to a political effort or struggle. I will demonstrate how opportunities to be a research ally have developed during my project and how allyship has impacted my data collection. My dissertation research project, "Symbols of Sovereignty and How they Speak to Us: Reading Contemporary Wampum Artwork in New York State Museums", explores the relationship between Haudenosaunee peoples and museums of New York State through focusing on contemporary Haudenosaunee artwork. My research process involves speaking with museum professionals and Haudenosaunee artists who work together to bring Haudenosaunee culture to the public; archival exploration into museum research and collection practices of the salvage anthropology era; and centering on artworks as research subjects by examining their presence, meaning, and voice in museum spaces. During fieldwork I have met Haudenosaunee artists that are researchers as well and discovered that the differences we might have in training, access, and methods create spaces to help one another work on our individual projects. As the history between Indigenous subjects and anthropologists (as well as Indigenous creators and museum collections) is fraught with unequal power dynamics and contestations over authority, representation, and colonizing frameworks, structuring research relations through allyship is one way to readdress ethnographic subjectivity. For example, I will demonstrate how creating space to learn together in museum collections has enabled information gathering that is generative rather than simply extractive. Presenter: Marie Peterson (SUNY, University at Albany, Department of Anthropology)

How Three Civilizations Impact an Anthropologist: Through my study on the Mexica (Aztec) Empire and Nahuatl language and Mayan writing system, I encountered ancient and contemporary circumstances of Mexico which contrasted to my experiences as a native Korean. Those are ethnic and linguistic diversity and segmented political structure of the Mexica empire

and later colonial Mexico society, multi-ethnic interactions which produced important achievements like the Florentine Codex, racism and social caste issue of Mexico up to this day, and the importance of Nahuatl language preservations. These features are a strong contrast to my cultural background as a native Korean, such as, the long dynastic tradition of Korea, the invisible influence of Confucianism through all sectors of society, ethnic and linguistic unities and centralization of Korean society for multiple centuries, prevailing social class conflicts, and Koreans' ignorance of all of Mesoamerica. This contrast causes a huge impact on myself, getting stronger through my self-notion due to my study through the education system of the United States, the intensive use of digital technology like SNS and digitalized databases, and my interaction with Nahuatl speakers including Dr. Abelardo de la Cruz de la Cruz and the IDEAZ program. Consequently, this strong contrast of my research and cultural background shapes my research agendas. While the contrast of Korea, Mexico, and the United States shapes my first agenda of formation of the state, my study on the Mexicas and Mesoamerican writings addresses my participation into Nahuatl language promotion. Finally, my research experience with digital technology addresses two research agendas: human interactions with technologies and how technology promotes global transmission of colonial ideologies. Presenter: Heungtae Yang

Transformed by Them: (M)others and Children Shaping the Life of an Anthropologist: The recorder stopped, and after I finished transcribing the last words of my research participants, I experienced a sentiment of sadness, as if I did not want to stop listening to her voice that gave me not data, but memories, love, knowledge, and a unique experience that I just wanted to be eternal. However, I quieted those mother voices and went to study the past because, according to me, the past does not hurt, and the voices are less painful to "hear." Years later, while searching for indigenous documents in the archives that could speak about motherhood and childhood in colonial central Mexico, the contact with community members from the towns that I was getting information from made the past feel more realistic. Those voices were not silenced any more. The voices intertwined with the present through archivists and current community members who were vividly reporting the myths and legends of a Christian document written in Nahuatl showing traces of colonial Christian childhoods. The lady who was telling me about the religious devotion of her town reported a detailed description of devotional sentiments. When I shared with her the existence of an old document narrating the

same story she was describing, her joy engrained my desire to continue exploring the way people appropriated the colonial religious impositions in their own terms. I was, again, transformed. In this paper, I explore how an anthropologist can create bridges between the past and the present, and how this relationship can transform her ethnographic and ethnohistoric experience. Davis and Craven (2023) propose to consider autoethnography as a methodological strategy to construct knowledge from feminism. Thus, by embracing such methodology, I question how contact with (m)others and children in the present and in the past, have helped me shape my experience as a feminist anthropologist. Transitions in the Wake of War in Colombia

10:15 AM - 12:00 PM

TMCC - 604

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Gwen Burnyeat (University of Oxford)

CHAIR:

Gwen Burnyeat (University of Oxford)

PRESENTER:

Anna Wherry ,Sebastian Ramirez (Princeton University, Department of Anthropology),Angela Lederach (Chapman University),Gwen Burnyeat (University of Oxford),Felipe Fernández

DESCRIPTION:

Transitions from war to peace are wrought by indeterminacy, uncertainty and tension. Nordstrom (2004) introduced the concept of 'not-war-not-peace' through her work in the Angolan context on the everyday lived ambiguities of ostensible 'post' conflict periods, to describe situations in which a peace deal has been reached, but violence continues, indicating the epistemological uncertainty of such violence. Scholars across disciplines have since built on Nordstrom's and similar framings to elaborate on how peace processes can fail to address the root causes of conflict and, as a result, produce foundations for future violence(s), including the possibility of a full-fledged return to war. It is well established now by anthropology and critical peace studies literatures that the 'ends' of wars are experienced diversely as imperfectly bounded epochs of claims-making, identity formation, and justice-seeking.

But these ways of grappling with the indeterminacies of ending a war define it by what it is not: not a utopian peace, nor a return to an idealized pre-war past. Such framings can get stuck in critiquing macro-narratives of liberal peace. This panel draws on the case of Colombia to push past the negative definitions of such framings to interrogate how transitions from war to peace can be characterized, in terms of what they are and what they do. Peace processes, conceived broadly as the signing of peace accords, ceasefires, disarmament agreements, and reparation policies, are interventions – whether they improve conditions for some people while worsening conditions for others, something has happened. We conceptualize these periods as the wakes of wars - drawing on Sharpe's (2016) work, which uses the metaphor of the 'wake' to analyze the way multiple temporalities of violence can be felt simultaneously, rather than linearly structured across past, present, and future planes. Thinking with the metaphor of the 'wake' of war to conceptualize transitions after war more comprehensively, this panel explores the myriad ways that people experience, perceive and narrate the temporalities of such transitions, in the context of the 2016 Colombian peace process between the government and the FARC-EP guerrilla group. The papers interrogate how the macro dimensions of such transitions - the reconfigurations of patterns of violence, demobilization of combatants, polarization and political conflicts, the enactment of transitional justice laws, reparations policies, the mourning of the dead, and post-conflict state-building projects - intertwine with the myriad micro-level transitions that shape communal and individual lived experience. Nordstrom, C. (2004). *Shadows of War: Violence, Power, and International Profiteering in the Twenty-First Century*. University of California Press. Sharpe, C. (2016). *In the Wake: On Blackness and Being*. Duke University Press.

Law's Reverberations After War: Former FARC-EP Militants' Legal Lives in Colombia's Courts : How might the ways in which law is mobilized as a tactic of war in Colombia reverberate after a peace accord? Following former guerrilla militants' legal cases in Colombia, this paper examines this question by considering how post-Peace Accord courts distinguish political crimes of war from ordinary, non-political crimes. Beginning in 2017, after the Colombian government signed the Peace Accords with the Revolutionary Armed Forces of Colombia-People's Army (FARC-EP), it instituted the Special Jurisdiction for Peace (JEP) to adjudicate "political" crimes committed during the conflict. Consequently, Colombia now has a parallel legal system: the JEP serves as a restorative court for political crimes

of war, while criminal courts are a penal system for non-political crimes. Yet, the boundary between the two systems is highly contested, and former militants or collaborators often have active cases in both legal systems. The JEP's adjudications unfold against an extant criminal legal system with a shifting history of prosecuting FARC members for political crimes of rebellion and, later, as ordinary criminals—which crimes and individuals are eligible for amnesty is therefore far from clear. Drawing on twelve months of ethnographic research, this paper thus examines how are boundaries between ordinary and political crimes worked out in individual former militants' cases, focusing on jurisdictional disputes between the two legal systems. At stake in defining crimes as political or ordinary are not only the kinds of sentences meted out by either court—whether a person will be incarcerated or not—but also how former combatants are cast as either ordinary delinquents or political combatants. Presenter: Anna Wherry

What is Buried in a Mass Grave? Earthen Transmutations and Capitalist Flows in Colombia: In 2008, a group of women in Soacha, Colombia, revealed that thousands of reported guerrillas' deaths were in fact civilians who had been kidnapped and murdered by army personnel who then claimed these deaths as products of military operations. The practice, known as the False Positives, was bolstered by the economic and professional incentives offered to soldiers who killed enemy combatants. This paper investigates the role of mass graves in the context of the False Positives. While mass graves are often symbols of concealment and fixity, I argue that they are vehicles of transformation, accumulation, and movement. I follow the accounts of the mothers of those killed, tracing how the young men were chosen for death and how, in death, they were imbued with a different sort of value than what was afforded to them in life. This transformation was made possible by the mass grave as an assemblage of forensic, bureaucratic, military, and market practices. By delving into how victims of the false positives were chosen, how histories of exclusion and extraction are buried, how forensic bureaucracies account for the dead, changing them into objects of excess and accumulation, I advance a view of mass graves as stages of necropolitical transmutation. I wager that the wakes of Colombia's war and neoliberal history find their nexus in the mass graves of civilians, that the play of appearance and dissemblance at the heart of the False Positives offers us a roadmap to the broader currents of capitalist becoming and unbecoming. Presenter: Sebastian

Ramirez (Princeton University, Department of Anthropology)

'Reconciliation is Life': Accompaniment and the Contested Temporalities of Postaccord Peacebuilding : Drawing on nearly a decade of participatory and ethnographic research with Sembrandopaz, a grassroots peacebuilding organization in Colombia, this paper examines a dialogue process between community leaders and demobilized FARC (Revolutionary Armed Forces of Colombia) members on the Caribbean coast that has been ongoing since 2017. I argue that the sociopolitical practices of collective care and relationality embedded in Sembrandopaz's approach to accompaniment disrupt the short-term and finite temporalities of "transitional" justice. Instead, by situating justice as a social practice, Sembrandopaz's accompaniment model offers an alternative to technocratic approaches to peace. Rather than understand "postconflict peacebuilding" as a temporally-bounded period of "transition," I argue that Sembrandopaz's commitment to accompany a permanent process of trustbuilding has cultivated conditions for deeper forms of social transformation, rooted in an ethics of relationality. This paper draws on the perspectives of FARC members, campesino social leaders, and youth to analyze the multiple temporalities that shape the contested landscape of postaccord peacebuilding in Colombia. Presenter: Angela Lederach (Chapman University)

Polarization in the Wake of War: Narrating Divided Political Identities : In 2016, Colombia voted "No" in a divisive referendum to a peace agreement that sought to end 50 years of war, by just 50.2%. Subsequently, it has become common to say that Colombia is "polarized". Certainly, the referendum forced society to think in binary terms, and new identity cleavages were created between the 'Yes' and the 'No' votes, which intersected with and extended existing rifts, such as left/right, rural/urban, rich/poor. Political scientists would call this "affective polarization": identification with an in-group, and hostility towards those with the opposite orientation; often more a division over identity than reasoned differences of opinion. Six years on, these divisions remain salient, and have evolved through elections and other political events, acquiring new associations. Yet what is the difference between "polarization" – a concern that resonates far beyond Colombia – and the kinds of disagreements and conflicts present in all politics? Are political clashes always a bad thing? This presentation tells the story of Camilo, a right-wing cattle-rancher from Urabá whose father was

killed by the FARC but who became a peacebuilder trying to build bridges between victims of the Colombian army and the business sector, and get them to work together on the common objective of peace. It uses Camilo's case to explore the ways that after war, battlelines remain over political identity, which trouble peacebuilding initiatives, but also problematizes the use of the term "polarization" to describe these divides, as a narrative which simplifies difference, reinforces the idea of undesirable extremes, and demonizes political conflict. Presenter: Gwen Burnyeat (University of Oxford)

Infrastructure, peace, and violence in the Colombian Pacific: Drawing on wide ethnographic material and several official sources, this paper addresses the Plan Todos Somos PAZcífico (PTSP for its acronyms in Spanish), a centrally designed and executed development project directed to the urban centres of the Colombian Pacific region. Conceived as an effort to fill the inequality gap between the country's regions, the project's main aim is to improve the deficient water and sewage infrastructures of Buenaventura, Tumaco and Guapi by means of maintenance, repair, and expansion. Funded by both the World Bank and the Interamerican Development Bank, the PTSP was framed as part of the peace policy of former president Juan Manuel Santos (2010-2018), understood as a societal and political transition from war to peace. However, the PTSP has not met its stated goals due to institutional weakness, underfunding and a burdensome bureaucracy. Drawing on recent anthropological literature on infrastructures and technocracy, this paper sheds light to the forms of interventions of the Colombian central state and its wider imbrications with structural violence and colonisation. Turning to the concept of 'complying incompliantly', I argue that the PTSP, while promising development, reproduces specific forms of state negligence and violence in the region. DISCUSSANT:

Goncalo Santos

DESCRIPTION:

Dominant paradigms of rural/urban relations in China emphasize spatial, social, economic and cultural boundaries. The hukou system, second-class status of migrants in cities, epidemic controls on migrant workers, disparities between rural and urban educational opportunities all lend to an analysis which centers on frameworks of rural-urban divides and boundary making. However, the popularity of such paradigms may lead us to overstate the significance of the urban and to ignore the more messy blurring of rural and urban spaces in contemporary China. Drawing on recent anthropological scholarship on translocal modes of livelihood in East Asian contexts (Nguyen 2014, Santos 2021), this panel seeks to explore the significance of translocal identities, mobilities, and relationships in China, proposing a more dynamic theoretical framework capable of moving beyond stagnant binary oppositions between a rustic rural China and a cosmopolitan urban one. Focusing on translocal mobilities and identities is a good way to question stereotypical narratives of rural depletion, abandonment and exodus, while making sense of the rise of new frameworks of rural-urban sociality in the age of mass migration and digital connectivity. We invite proposals that explore China's rural transformation from a translocal perspective capable of showing how the new villages of twenty-first-century China have become patched-up formations or assemblages constructed out of increasingly complex rural-urban mobilities and entanglements in the context of new 'power geometries' (Massey 1994) and structures of social and spatial inequality.

Mega-locality: Digital Innovation in Spatial Politics, Case of China: My ethnographic research seeks to ground theoretical debate on factory floors in order to understand how space functions as part of a network of production in China. China's shoe manufacturing network has evolved from the mass production, Just-In-Time, to a data-driven mass customization. As a result of

the repackaging of this shoe production network, its social and spatial values were further extracted. In different spaces throughout the network, the scale and quality of production generated social inequality because of the interest in network flexibility on mass customization. Firstly, I challenged China's current debates on the spatial duality between their urban and rural realms. My research looks at the flow of those spaces and how they extend beyond China's network of cities to further contribute to a cross-regional network of space. Secondly, the local aspects of the place, such as land use, ownership, and community, constructed the uniqueness of the space within the network that could be either formal or informal. Thirdly, the collaboration with the workshops and factories from the urban and rural sectors of the shoe production network showed a non-linear flow within the spaces. Thus, this network became what I called extra-local. The extra-local production extended beyond a decentralized network of production, which was only possible through even tighter connections between each space. Therefore, a new assembly of production was created via the tiers of labor involving relationships, communities, and networks that were constructed together through the concept of extra locality. This method shines a light on not only the spatial collaborations, but also their social dynamics. Presenter: Na Fu (The Watson Institute for International and Public Affairs, Brown University)

Contesting Membership Benefits: Political Economy and Identity Politics in Urban Villages in China: China's rapid urbanization was accompanied by displacement, dispossession, and violence when village communities were turned into urban places. Meanwhile, villagers, who are the native residents of the newly created urban spaces, responded to the urbanization processes in creative ways. Based on ongoing fieldwork in three villages-in-the-city (城中村) in a northern metropolis in China, this paper examines how villagers define and negotiate community membership to allocate benefits and property rights under the constantly changing circumstances caused by the urbanization processes. I argue that while it is common to define the rural in opposition to the urban, the villages-in-the-city under study are themselves constitutive sites of volatile urbanity and a contesting arena of identity politics. These villages lost most of their agricultural land to the government's land acquisition; at the meantime, they strived to accumulate economic wealth through various urban businesses set up on their collectively-owned land. In each village, as more and more young people left the villages for urban employment, or after all villagers had moved into high-rise apartment

complexes, people have actively engaged in debating and setting up rules for defining village membership and maintaining the collective property and wealth, which invariably resulted in trans-local communities that are based on urban entrepreneurial activities and encompass members residing both in and outside their native communities. New structures of inequality were also created during the processes. Such supra-villages complicate concepts of city and village and call for an alternative frame that doesn't simply treat the rural as a static and backward space that will eventually be overcome by the urban. Presenter: Yi Wu (Clemson University)

Eggs like Gold: Food and Rural Value(s) in China : In China's largest cities, the safety and reliability of the food supply have been repeatedly called into question through persistent food safety scandals, and during the draconian lockdowns of the pandemic years. In the anxious urban present, fresh, safe food appears as both highly desirable and highly threatened. Drawing on field research at a farm-to-table restaurant in Hangzhou, Zhejiang Province, I argue that changing valorizations of rural products index ongoing shifts in the ideological mapping of value across rural and urban landscapes in China. "Safe," "natural," seasonal food is precious on urban tables; but it is also the material of easy, everyday rural hospitality. Good food – as one affordance of rural life – stands in for other possibilities that are lacking for city residents. At the same time, the specificities of food procurement practices at the Hangzhou restaurant shed light on theories of China's "rural divide" or "dual system" more broadly. "Rural" and "urban" were never satisfying tools of analysis for China's variegated landscapes and social identities; now more than ever, these terms obscure how individuals' positions within chains of capital and regimes of land and labor are far more significant than hukou status alone. In this paper, I track both food and people as they move through a patchwork terrain of terraced fields, mountain roads, scrubby interstices, clustered farmhouses, waterways, noodle shops, hardware shops, malls, train stations, and residential complexes – not "urban" or "rural" space, but a networked and relationally-defined region. Presenter: Caroline Merrifield (New York University)

Carving Out Translocal Spaces. Chinese Migrant Workers' Access to Institutional Provision of Welfare: Based on ten-month fieldwork in Central China and sixty in-depth interviews, I explore in this paper how migrant factory workers arrange institutional provision of welfare at urban fringes. Previous research on translocal arrangement of care challenges the static assumption of

rural-urban divide by documenting strategies migrant households deploy to reduce livelihood costs and maintain closeness among family members. However, the analysis is based on inter-city movement, namely migrants travelling far from inland to coastal regions for work, and scholars did not foresee recent developments in metropolitanizing spaces through land for welfare policies, in-migration of capital and industrial rezoning. This paper is built on these new movements and considers their influence on translocal arrangement of care. Due to state-led land expropriation, villagers living at the urban edges gained urban hukou and are gradually replacing the rural land with cash compensation, resettlement housing, residence-based social insurances and factory employment to secure their well-being. As the factory is located in the neighborhood, former peasants' trajectories of travel oscillate more frequently between work and home. This creates a new mix of care wherein thin social protection provided by the state allows deeper penetration of market actors such as labor agencies, private schools, and commercial insurance companies. I argue that deepening commodification of land is thus entangled with the changing welfare landscape and increases a sense of insecurity among peasants-turned-urbanites. This paper, focusing on the institutional provision of care, therefore contributes to the current debates on translocal mobility by moving our analysis beyond familial boundaries. Presenter: Yueran Tian

Translocal Nexus among Rural Landholders, Cadres, and Technicians in National Database Construction: This paper examines the intricate translocal interplay between basic-level civil servants and rural landholders in the construction of national databases through quotidian bureaucratic practices. The majority of the cadres, staff, and technicians in this Hakka rural area commute between their urban homes and rural workplaces. Concentrating on the Land Right Authorization (2016-2019), China's most extensive land survey, this paper scrutinizes the manner in which rural cadres, technicians, and inhabitants maneuver their identities, properties, and geographies amidst the web of rural-urban mobilities and entanglements. By examining the intellectual labor of rural residents who partake in enumerative and measurement activities, this paper accentuates their cooperative endeavors with governmental cadres and technicians in both state projects and the everyday numerical governance. The data production process is imbued with empathy and misunderstanding, arising from the juxtaposition of local/non-local, rural/urban, and professional/non-professional hierarchies. The study traces the

trajectories to the Socialist Collectivization movement and Planned Economy, positing that the synergy between data collection and socialist ideologies transcends the epoch of big data, unveiling a long-established pattern of moralizing calculations for the Socialist state. How can a translocal perspective on rural bureaucratic practices contribute to a more nuanced understanding of the confluence of rural and urban spaces in contemporary China? By analyzing the interactions among rural inhabitants, cadres, and technicians in the technoscientific projects and routine governance, the paper aims to illuminate the complexities of rural-urban disparity and connectivity during the rural exodus and data production. Presenter: Sheng Long (Columbia University)

What is growth? Projects and possibilities for anthropological thought

10:15 AM - 12:00 PM TMCC - 606

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Eric Hirsch (Franklin & Marshall College)

CHAIR:

Eric Hirsch (Franklin & Marshall College), Finn West (Cornell University)

PRESENTER:

Caroline Schuster (Australian National University, School of Archaeology & Anthropology), Eric Hirsch (Franklin & Marshall College), Paula Dias, Sean Mitchell (Rutgers University, Newark, Department of Sociology & Anthropology), Finn West (Cornell University), Alder Keleman Saxena (Northern Arizona University, Department of Anthropology)

DESCRIPTION:

An important thread in the recent critique of capitalism has consisted of efforts to understand capitalism as an active creation. For example, as Hannah Appel memorably argued in her book *The Licit Life of Capitalism*, 'Capitalism is not a context; it is a project' (2019, 2). This panel for the 2023 AAA/CASCA meeting assembles new anthropological work that proposes that economic growth requires similar ethnographic elaboration as a condition actively generated and made real. Growth is frequently represented as the statistical abstraction of expanding exchange and consumption.

Across anthropological research, growth has long been taken for granted as a reality: anthropologists tend to assume that something called 'growth' exists, rather than interrogating the projects that cause growth to recede into the background. Anthropologists often identify growth as part of a context, as something either present or absent, either laudable for its promises of prosperity or lamentable for its toxic externalities and destructive impacts. In other words, growth frequently enters ethnography as a fact we acknowledge--and never define. But what is economic growth? Economists themselves debate the topic hotly, as demonstrated by the ongoing argument over modifications to the methodology for measuring GDP. In this conversation, anthropologists can contribute an attention to the nuance of economic situation, community struggle, and ecological change. And anthropology can inquire into the genesis of the growth concept itself: the acts of persuasion, synopsis, and exhortation through which people try to convince each other that growth is taking place. Ironically, some of the fiercest critics of growth may assume too quickly that growth exists and has unstoppable power. Certain critical approaches to growth risk foreclosing an opportunity to discover the contingencies that lend (temporary) credibility to one or another growth story. We aim to stop this foreclosure. This panel invites ethnographic interventions that center moments, scenes, representations, feelings, interactions, material arrangements, and ecologies where growth projects are actualized. What is economic growth? How do people know--or convince themselves, and others--that their economies, communities, and nations are growing? What kinds of political projects, environmental manipulations, and social actions are necessary for growth to feel real?

Reclaiming Husbandry: From Growth to Cultivation in Climate Finance : While anthropology has heaped scorn on the universalising assumption of 'economic man' in classical and neoclassical models of capitalist markets, less attention has been paid to alternative figurations that have been pushed into the background. Feminist economists such as J. A. Nelson (2016) have sought to recuperate prior pastoral practices of husbandry and recentre careful cultivation, tending and management. As Nelson posits, "this rich iconic image of masculine-associated attentiveness in productive activities is in stark contrast to the stripped-down images of Homo economicus and the 'incentivised' CEO – images that have arisen...from a deleterious financialisation of masculinity" (2016, 2). Following Nelson's reclaiming of husbandry, this paper explores idioms of cultivation

(cultivar, cultivos) in Paraguayan commercial sesame farms that are experimenting with novel weather-based financial derivatives to hedge against climate risks such as a drought. By tracking the contradictions between insurance markets that centre simplified individual risk-based decision-making on the one hand, and the interdependence of farmers with wider collectivities of human and more-than-human relations on the other hand, anthropology can uncover alternative economies of gender within the growth stories of climate finance. At stake are new and emerging masculine definitions of 'carefulness,' with the potential to radically undermine the apparent naturalness and inevitability of economic growth. Presenter: Caroline Schuster (Australian National University, School of Archaeology & Anthropology)

Masculinity as Economic Growth: The Resource Logics of Personal Development: At twenty-one, guinea pig breeder Rogelio Taco was the star participant in a development project in rural Peru that invested in young entrepreneurs, with the aim to grow the rural economy enough to entice young people to stay. At thirty-one, real estate agent Rogelio Taco posts daily videos to his Instagram and Facebook accounts promoting immaculately curated properties throughout urban Arequipa. The intervening years saw Rogelio involved in various municipal projects, bids for political office, and private ventures. This talk, to be presented with Rogelio's blessing and collaboration, tracks a decade of my conversations with this close interlocutor, in which he narrated his young adulthood to me as a story of economic growth through a series of entrepreneurial episodes. Our conversations illuminate Rogelio's shifting engagement with a development ethic explicitly promoted by initiatives active throughout southern Peru: that personal growth is essential to becoming an agent of economic growth. These conversations also suggest three more tacit regional development ethics. First, maturing into proper masculinity is a function of the ability to grow a business, provide for a family, and behave as a fully adult citizen. Second, promoting entrepreneurship means mobilizing economic growth to tame a stereotyped toxic Andean masculinity. And third, policies and projects that pitch individualized rural growth as sustainable and empowering are modeled on Peru's recent experience of spectacular resource abundance. I argue that Rogelio's autobiography positions growth as a simultaneous project of identifying extractable resources, mediating interactional performances, mobilizing collective affect, and navigating gender panic. Growth, I emphasize, is

rooted as much in politicized embodiments, representations, and feelings as it is in material accumulations and an expanding scope of exchange. Presenter: Eric Hirsch (Franklin & Marshall College)

Contradictions of Inclusive "Growth" during Brazil's Commodity Boom: This paper reflects on the narratives and encounters enabled by the project of "inclusive" growth propelled by Brazil's center-left Workers Party from the early 2000s to the mid-2010s, during a period of economic growth driven by the global commodity boom. This period of growth went hand-in-hand with a drop in inequality, as a result of social policies implemented by the Workers Party. However, this period also intensified resource extraction and ethnic territorial conflicts, making environmental licensing a key arena for interrogating the contradictions of the inclusive growth model. Based on ethnographic fieldwork in the Campos Basin, Brazil's primary offshore oil-producing region, this paper traces narratives of growth and development that underpinned the environmental licensing of oil and structured interactions between state agencies, oil companies, and communities. I examine state-mandated environmental education projects implemented by oil companies and overseen by Brazil's federal environmental agency (IBAMA), which were influenced by the critical pedagogy of Paulo Freire and designed to promote civic engagement of oil-affected communities. The paper traces the bureaucratic activism of IBAMA officials who promoted environmental education and explores the encounters made possible by this policy. Focusing on the engagement between quilombos (Afro-descendant communities claiming land rights) and Shell Oil, I demonstrate how oil-sponsored environmental education promoted engagement in state-sanctioned spaces of participation even as it offered opportunities for contestation and reimagining of ethnic politics. In so doing, the paper highlights the contradictory ways in which the political project of inclusive growth was actualized for communities in Brazil's zones of extraction. Presenter: Paula Dias

The Rise and Fall of Brazil's 'New Middle Class' and the Meanings of 'Growth': This paper analyses the meanings of "growth" during a period of precipitous economic and political change in Brazil. 'Growth' has perhaps become the dominant metaphor for conceptualizing collective human wellbeing and purpose. Almost everywhere, one finds this teleology—this insatiable expansion of the monetary value of goods and services—presented as a necessary condition for and sometimes the content of mass flourishing. Yet, growth

is used in flexible ways, and its pursuit frequently depletes and ignores the life-sustaining biosphere. Still, Piketty has shown that the connection between growth and wellbeing is not only metaphor. The rare historical cases of inequality reduction under capitalism have occurred when the rate of economic growth exceeded that of return to capital. Notable among those cases was Latin America during this century's first decade and a half, with economic expansion spurred by Chinese commodity demand. In Brazil, as GDP expansion exceeded the gains captured by the country's top 10%, a left-wing government used the proceeds to craft policies that improved the fortunes of Brazil's poor. This paper is based on ethnographic research and interviews with members of what, for a time, was called Brazil's 'new middle class'—the some 40 million who rose out of poverty during this period, largely as a result of those policies—in addition to textual analysis of government, corporate, and news reports. I examine uses and conceptions of “growth” at different scales, in order to understand how “growth” shapes politics, culture, and understanding of individual and collective wellbeing and purpose. Presenter: Sean Mitchell (Rutgers University, Newark, Department of Sociology & Anthropology)

Buying Space and Buying Time: The Expansion of Emission Offset Markets in California: The atmosphere has become an object of economic intervention and the backbone for a new kind of market. Designed to commodify the reduction of heat-inducing greenhouse gases, carbon credits and emission offset schemes are meant to harness the invisible hand of the market to mitigate the catastrophic effects of the fossil-fuel economy. They make it possible, according to their proponents, for polluting companies to “buy time” in the transition to net-zero economy while still encouraging economic growth. In a word, carbon markets are designed to disappear as the economy transitions. This presentation attends to the processes of spatial and temporal translation that underpin emission offsets. Both space (atmosphere) and time (net-zero transition), I argue, are conscripted into the commodity form of emission offsets, producing a fundamental tension as a market designed to disappear is pushed to grow. I draw on a series of public workgroup meetings that track the development new kind of emission offset, termed “Avoided Wildfire Emissions” (AWE), which monetizes active forest management in the context of inevitable wildfires in California. I analyze moments during the workgroup discussions in which the AWE designers struggled to communicate the criteria for turning forest management into offset commodities. These moments

of communication breakdown, I contend, reveal the intellectual labor and logical acrobatics that become necessary to sustain the growth of a market whose founding purpose is to eventually disappear. Presenter: Finn West (Cornell University)

“At Home in the Pines”: Two Crises of Growth in Northern Arizona: This paper considers the convergence of two crises in Flagstaff, Arizona. The first of these is the climate crisis, manifested in this region through the combination of wildfire risk and extreme weather. In recent years, the City of Flagstaff has experienced a series of wildfires, destroying homes and other structures, and damaging sensitive ecological areas on the public lands that surround the city. With reduced vegetation to absorb heavy seasonal precipitation, monsoon rains and heavy snow years have produced flooding, washing fire debris down city streets, and causing additional risks to property and life. Yet these increasingly dangerous ecological conditions have not driven a mass exodus from the region; to the contrary, they have driven a second crisis. Despite clear and ongoing climate risk, Flagstaff real estate remains a “good investment,” with remote workers moving to the area for the recreation opportunities provided by public lands, and distant buyers purchasing second homes, rental units, or AirBnB’s as investment properties. In the year 2021 alone, during the pandemic-driven “Zoom boom,” real estate values in Flagstaff experienced a 21% increase. The rise in housing costs has outpaced local salaries to such a degree that the municipal government has declared a housing emergency. This paper considers how these two human-made crises articulate with each other. In particular, it examines how they both hinge on forms of growth: the over-growth of Ponderosa pine forests, exacerbating wildfire risk; and the prioritization of growth in private capital as a value above all others. Presenter: Alder Keleman Saxena (Northern Arizona University, Department of Anthropology)

[Journey to my Anthropological Career](#)

11:00 AM - 12:00 PM TMCC - 202 D

Professional Development Session

ORGANIZER:

Caitlyn Kolhoff (American Anthropological Association)

PRESENTER:

William Lucas, PhD, MPH, CPH (California State University Dominguez Hills), Jessica Katzenstein, PhD (Harvard University), Anya Meave, MSc (Downtown San Diego Partnership)

DESCRIPTION:

Interested in hearing from anthropologists about how they landed their job? Then this session is for you! In this session, you'll hear from three early-career anthropologists as they discuss starting their careers. You will learn about the career paths they took and the ways in which they've applied their anthropological skills and theory.

2-802

POSTER SESSION: "We Invite You to have Lunch with Us": Post/Colonial Subjectivities and Performances of Tourism in Puducherry, India

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

General Anthropology Division

PRESENTER:

Aindrila Chakraborty

DESCRIPTION:

Tourism is contested, as suggested by Edward Bruner. The contests may not always take the form of overt conflicts between actors and /or institutions but may operate in silent pauses and gaps and performances of the actors. In my research, I focus on the postcolonial town of Puducherry, India. French Pondichèry, was ceded to India in 1962. The treaty of cession signed between India and France marks a continued cultural-linguistic, economic and albeit marginal, political presence of France in the region, through a proportion of Franco-Pondicherrians who are French citizens but ethnic Tamils, residing in Puducherry and dispersed between France and its former colonies. Today, it is marketed as one of the top tourist destinations in India, drawing large number of domestic and international tourists, supported by the state's reproduction of the region's selective 'Frenchness'. One example of this reproduction is the maintenance of the colonial spatial segregation of the town into 'white town' and 'black town', which is internalized for tourist consumption. The town is an exemplar of what Pratt (2007) terms as a contact zone, with a colonially constructed and post colonially reproduced touristic borderzone (Bruner 2005) that are both physically visible and socially embodied. In the process of transition of the region from colonial to postcolonial, the redrawing of geo-political and emotional cartographies has produced an ambiguous subject, who are simultaneously the tourists and the toured. They are, at once, both the inauthentic Other and gatekeepers of authenticity. By positioning

myself as both the tourist and the ethnographer, I delve into the complexities of meaning-making and authenticity in postcolonial Puducherry with a focus on the Franco-Pondicherrian community. I explore how the Franco-Pondicherrian community are involved in constructing and reproducing the site for tourist consumption, and in the process, staging, performing and negotiating their multiple identity claims. Through my study, I aim to decenter the reading of tourist sites from tourist/local binaries toward a processual reading of multiply positioned and articulated transitions.

2-804

POSTER SESSION: A Nightmare Dressed Like a Daydream: How Popular Female Singers Inform Perceptions of Western Culture in Japan

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Society for East Asian Anthropology

PRESENTER:

Robin Giles

DESCRIPTION:

As noted by other anthropologists (Condry 2006; Novak 2013; Stevens 2017), the globalization of Euro-American pop music has profoundly affected Japanese pop culture and music styles (Mitsui 2014), yet these music genres' role in engendering youth in Japan has primarily gone underappreciated. While there is a broad acknowledgment of how American consumerism has often shaped new values around the individuation of Japanese youth culture, I argue in this paper that the role of American female pop idols plays a vital role in how Japanese women think of themselves and their changing roles in society. Based on two months of recent fieldwork in a Tokyo suburb, I argue that the era of significant Covid-19 restrictions only intensified this idolization of Western pop stars like Taylor Swift. However, this idolization is not mere copying, as young middle-class Japanese women have chosen to make their engagement with Western pop music a metapragmatic commentary or referendum on what they believe are the unfair gender norms still expected of them in a traditionally patriarchal society. I argue that this identification of western pop music with liberalized femininity is not to say these Japanese women are uninterested in being Japanese. Instead, they understand the utility of these music genres and idols as an organizing tool for local concerns about gender inequities in their society.

2-806

POSTER SESSION: A psychohistory of the Apartheid ghetto and the contemporary 'global apartheid': Placing race, religion, gender, and sexuality in South African settler multiculturalism

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Association of Black Anthropologists

PRESENTER:

Sadiq Toffa (University of Cape Town)

DESCRIPTION:

Catherine Besteman's ' Militarized Global Apartheid' (2020) resituates South African Apartheid from an historical methodological nationalism to a vitalized contemporary and global geopolitical paradigm. It describes the militarized regulation and punitive containments of the global South in the maintenance of capital accumulations and mobilities of the global North within a racialized world order. This paper extends the geopolitical apartheid paradigm of racial capitalism by returning to occluded analyses within the formative apartheid paradigm itself, not exclusively as North-South geopolitical economy, but as revealing the interiority of social and psychological processes of massification, industrialization, and modernization of a colonial matrix of power relations especially with regard to ethnicity, religion, gender, and sexuality, which have produced 'race' as a stable organizing category within multicultural settler state formation. A historical urban ethnography follows the transformation of an inner city black labour reserve in colonial Cape Town, the 'Bo-Kaap', transformed under Apartheid as a 'colored' Race Group Area, and the only extant black urban ghetto to have survived Apartheid forced removals. Under Apartheid, the Bo-Kaap became further segregated into black Christian and Muslim spatial fragments within the Apartheid race theology of Anglo-Dutch settler Protestantism. The paper is an interdisciplinary project tracing a psychoanalysis of the genealogy of the racial complex through the architecture of the ghetto industrial complex, whose spatial containments and mobilities both co-constitute and mirror psychical formations of self-other splittings and resolutions that effect the tribalization of black associational life within monoethnic socio-spatial fragments and the attendant globalization and deterritorialization of whiteness and 'Englishness' within a liberal international bourgeoisie. My frame of psychohistory brings object-relations and

relational canons within psychoanalysis in service to the Fanonian racial unconscious and Foucauldian historical method. In particular, I will provide an ethnographic articulation of (preoedipal) colonial motherhood as primal attachment schema producing together maternal domesticity as cultivation of settler nationhood with the malevolent abandonment of the black slave-child, and the (oedipal) castration anxiety and racial homoerotics within colonial masculinities producing possessive libidinal investments in regulating phantasmatic black hypervirility. The paper concludes with two interactive theoretical formulations. 'The spiritual erotic' clarifies the moral project of libidinal purification through socio-spatial boundary maintenance and ideological enclosure, while 'liberal aesthetics' refigures colonial management as multicultural carework. Liberal multiculturalism can thus partially be seen to reflect the narcissistic injuries of a psychoanalytically unmastered past forcefully intruding upon the material present foreclosing alternatives for psychic integration or political reconciliation. POSTER SESSION: Depathologizing (More Than) Transgender: Critical Psychiatry as a Liberatory Paradigm for Mad, Transgender Activisms.

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Association for Queer Anthropology

PRESENTER:

Wren Gould

DESCRIPTION:

Over the past year, 8 U.S. states have passed laws restricting gender affirming care to the age of majority (age 18), excluding transgender youth. In response, nation-wide advocacy groups have emphasized that transgender youth require medically necessary care for their underlying medical condition (Gender Dysphoria). This medicalized framework derives from transgender advocates who often explicitly state that transgender subjectivities do not constitute psychiatric illness.

However, these same advocates argue that the continued inclusion of Gender Dysphoria in major nosologies of mental illness is an unfortunate exigency of contemporary healthcare structures that supports access to medical interventions associated with gender transition. In this way, the inclusion of Gender Dysphoria constitutes a 'soft depathologization' that is continuous with broader calls to depathologize transgender subjectivities (similar to homosexuality as a clinical category in the 1970's) in order to reconstitute 'transgender' as within a 'normal' spectrum of human diversity. Missing from this discourse, though, are individuals who continue to be pathologized via psychiatric institutions. I argue that the depathologization of transgender subjectivities merely reconstitutes neurotypicality to include transgender individuals while colluding with state and structural-level violences toward neurodiverse, mad peoples (often also diagnosed with an underlying psychiatric condition). Ironically, these violences disproportionately affect transgender people, as they are more likely than cisgender peers to be diagnosed with (other) psychiatric conditions. Instead, critical psychiatry may offer sharper tools to oppose sanist violences directed toward neurodiverse and/or mad, trans individuals. Drawing from Deleuze and Guattari, Foucault, and other critical psychiatric theorists, I advance a critical psychiatric/trans analytic as one method to deter state/structural violences directed simultaneously toward transgender individuals and the 'mentally ill.'

POSTER SESSION: *Empire's Garden: Anthropology and the Racialization of Vision in fin-de-siècle Paris.*

12:15 PM - 1:45 PM TMCC - 800 Level
Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of Europe

PRESENTER:

Andrew Newman (Wayne State University)

DESCRIPTION:

During the 1860s, as part of Haussmann's modernization of Paris, a new type of urban space called the Jardin d'Acclimatation (Acclimatization Garden) was developed, which was at once a landscape garden, public attraction, a zoo, and infrastructure for scientific research. Starting in 1877, the Jardin began a regular series of human exhibitions featuring indigenous people from around the world. These ethnographic

expositions ran for thirty years and proved immensely popular (total attendance figures often exceeded 100,000 for exhibitions and guests included scientific celebrities such as Charles Darwin). Paul Broca, Adolphe Bloch, and other members of the Société d'Anthropologie de Paris (SAP) played a crucial role in providing the scientific justification for these dehumanizing exhibits while also mediating their anthropological meaning for a curious public. The anthropologists, who were racial polygenists, saw the displays as an opportunity to teach the Parisian public to see humanity through the lens of racial differences. They lectured and wrote prolifically about the expositions, making the displays an important site of race-making, while bolstering the public reputation of the young discipline in the process. This paper foregrounds the stories of several people who were featured in the exhibitions, including John Pilcher, Ahivi, and the Ulrikab family. I will also describe the global logistical networks that made the exhibitions possible, as well as the power relations underlying travel and the performative labor of the participants. If many exhibition studies have analyzed World's Fairs and similar examples as spectacles, this presentation focuses on the embodied and material aspects of the exhibitions on the stage (and back-stage) as part of the routinized business of ethnographic displays and race-making in fin-de-siècle Paris. This view behind the spectacle exposes the networks, labor, and violence associated with human exhibitions and, by extension, the emergence of anthropology as a discipline.

POSTER SESSION: *FatTok: Everyday Resistance in an Virtual Space*

12:15 PM - 1:45 PM TMCC - 800 Level
Poster – In-Person Live

REVIEWED BY:

General Anthropology Division

PRESENTER:

Mary Reush (California State University, Long Beach, Department of Anthropology)

DESCRIPTION:

Western attitudes about fatness, often articulated through medical discourse and 'healthism,' or the idea that health is something we each have the power to control and a moral duty to pursue, positions the fat body as a vessel of ill-health and self-imposed degradation. To live in a fat body, particularly in a fat female body, in the West, is always to be 'other,' perpetually violating the social contract of thinness,

subject to the repercussions of this violation. Consequences include high rates of discrimination in jobs and housing, medical disparities and higher mortality, and harassment in various settings. My research explores resistance to this position in online spaces, which represent a brave new world to explore social action and cultural movements because of the way they collapse temporal and geographic distances. Starting from the position that inhabiting a fat female body is by its very nature a transgressive state of being, this poster documents the experiences of unruly fat women (coining Roxanne Gay's 2017 term) on the social media platform TikTok who refuse to comply with the oppression that they experience across a variety of cultural, economic, medical, political, and social fields.

POSTER SESSION: Food Sovereignty, Identity, and Personal Networks among Indigenous Residents of Parque das Tribos, Manaus, Brazil

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Association of Indigenous Anthropologists

PRESENTER:

Harold Wright

DESCRIPTION:

Abstract Much of traditional food security research has focused on either rural or urban populations using standardized instruments such as the Household Food Security Survey Module (HFSSM) that frequently focus on financial resources as means of access. In recent years this field of research has expanded to include focus on both peri-urban communities and cultural considerations of populations where such standardized instruments may not necessarily be applicable. This project examines food insecurity strategies and the appropriateness of standardized instruments in Parque das Tribos, a peri-urban, multi-ethnic community in Manaus in the Brazilian Amazon, home to individuals representing approximately 30 indigenous ethnicities.

2-813

POSTER SESSION: From Convicts to Ancestors: Resurrecting the Humanity of the Sugar Land 95

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of North America

PRESENTER:

Naomi Reed (Southwestern University, Department of Sociology and Anthropology)

DESCRIPTION:

This presentation is a paper talk where I will explore how 'white redemption' (Roman 1995) eclipses the humanity of Black people in historical commemoration and cultural heritage in the American South. My paper will focus specifically on the treatment of the Sugar Land 95 by the Fort Bend Independent School District in Sugar Land, Texas and the response of the Black community to this treatment. Issues of the 'possessive investment in whiteness' (Lipsitz 1998) and 'the great replacement theory' (Camus 2012; Raspail 1973) will be engaged.

2-814

POSTER SESSION: Indigenous Sign Languages: Preservation and Revitalization of Inuit Sign Language

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Society for Linguistic Anthropology

PRESENTER:

Paige MacDougall (Canadian Deafness Research and Training Institute)

DESCRIPTION:

Inuit Sign Language (ISL) is a rich language with a long and proud cultural history which deserves recognition, promotion and revitalization in the same way as spoken Inuit languages. The Inuit Societal Values (Inuit Qaujimagatuqangit) surrounding the importance of being welcoming and non-judgmental are enacted through the use of communication in sign language by many hearing Nunavummiut, a phenomenon which revitalizing ISL supports and encourages for future generations. While spoken Inuit languages are clearly important, Inuit culture also holds communication in sign language as a highly esteemed value. The Canadian Deafness Research and Training Institute (CDRTI) works collaboratively with the Nunavut Deaf Society (NDS) to record and revitalize the Inuit Sign Language, and to identify deaf Nunavummiut and their families across Nunavut. Our work involves the direct participation of deaf Nunavummiut and their families and friends, illustrating a high degree of acceptance of deaf persons into community life and relatively widespread use of sign language among hearing persons. This situation

reflects the Inuit Societal Value of being welcoming and inclusive (Tunnganarniq), and provides a more inclusive social model than is present in many other circumstances. The notable inclusion of both hearing and deaf persons by virtue of widespread use of ISL within family and community networks provides a positive model for deaf and disabled persons worldwide. Our work in recording the Inuit Sign Language is carried out through on-going community consultations in various communities and regions across Nunavut. With support from the Government of Nunavut (Culture and Heritage) and from Canadian Heritage (the Indigenous Languages Component) we have generated 64 illustrated ISL vocabulary sign cards which include representations of Inuktitut/Inuinnaqtun, finger spelling, ISL, English and French. Fourteen Inuit Deaf Life Story videos have been recorded, enabling deaf community members the opportunity to explain customary Inuit relationships with the land, as well as the hardships of being disconnected from their families when they were sent down south to residential schools. Inuit Sign Language booklets based on these videos, as well as language learning games, provide an important step for having ISL incorporated into early education programs. The production of Inuit Sign Language materials such as graphically designed Inuit Deaf Life Story videos, booklets, ISL vocabulary flash cards, posters, and language learning games comprise an important part of the history of language and culture in Nunavut. Based on community consultations, most recently, the concentration of activities has shifted to the production of ISL learning videos and booklets, and there are currently four ISL learning videos and booklets available. This poster will provide brief summaries of project activities, as well as graphically designed Inuit Sign Language materials which provide insight into Inuit culture and customs. Hard copy posters and ISL language learning games will also be available.

2-816

POSTER SESSION: Insidious Battles: Has Putin's Ukraine Invasion Reversed Europe's Growing Transition to Authoritarianism?

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of Europe

ORGANIZER:

Patricia Heck (University of the South, Sewanee)

PRESENTER:

Katherine Donahue (Plymouth State University, Social Science Department)

DESCRIPTION:

Evidence suggests that Russia's multi-year investment and influence in several European right-wing parties and groups had borne fruit: A substantial increase in membership, impressive electoral successes, and leadership roles in numerous and extensive protest demonstrations against immigration, Covid-19 restrictions, and other issues raised serious concerns throughout Europe for the future of democracy. With the Russian invasion of Ukraine, European and NATO leaders, as well as much of the general population, overwhelmingly supported Ukraine, rekindling a European unity long absent. The war has also affected the extreme right, though reactions and strategies have varied regionally and/or nationally. What accounts for such variance? Are we seeing a permanent transition away from authoritarianism or simply a temporary halt leading much of Europe to a post-Democratic world? This poster will address these and related questions based on research and analysis conducted in France and Germany.

2-817

POSTER SESSION: Kū a Puni ka Honua: Tracing Hawaiian-ness around the World

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Association of Indigenous Anthropologists

PRESENTER:

Travis Chai Andrade

DESCRIPTION:

The Journey of Kū is a story of transitions and transformation. Coming to Hawai'i with roots in Tahiti, Tonga, and Sāmoa, Kū becomes one of the four major traditional Hawaiian gods. The god of war and politics, Kū is a masculine figure who once demanded human sacrifice. He is understood to be an elemental force. Today, only three grand Kū images survive: one in Hawai'i at the Bishop Museum, one in Massachusetts at the Peabody Essex Museum, and the third in London at the British Museum. Kū's transitions and contemporary presence show how geographically distant landscapes gather and Kanaka 'Ōiwi (Native Hawaiian) identity persists. This presentation examines the production of Indigeneity in exodus as mediated by museums—the physical space they occupy, the social space they create,

and the Hawai'i space they (do or do not) represent--through blending a cartographic mapping of Kū's travel with an experimental approach to ethnography that prefaces the tangible and intangible life of an elemental force. I argue that mapping the journey of Kū throughout Oceania and the museum space becomes a metonym for understanding 'Ōiwi-ness (Hawaiianess) across space and time. I situate this work within an ongoing movement for Hawaiian sovereignty, breath, and life--what Kanaka 'Ōiwi know and embody as ea. As a powerful figure in Hawai'i, his-story allows for the excavation of contemporary and historic power relations that influence Indigeneity itself.

2-818

POSTER SESSION: Legal Deservingness: Crafting Safe Spaces in the DC Area.

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Association for Political and Legal Anthropology

PRESENTER:

Silvana Montanola

DESCRIPTION:

For Latinx populations living in the DC region, immigrant rights nonprofit organizations are oftentimes their only direct, mediated, and safe encounter with the state and its bureaucracy. However, nonprofit employees must operate within deservingness frameworks as street-level bureaucrats in order to provide legal services. Through autoethnography, interviews, and participant observation with one immigrant advocacy organization, I underscore the entanglements that force nonprofits to execute forms of 'legal deservingness' in direct contrast to their own moral economies. How, then, can these advocates craft safe spaces within hostile immigration policies that constrict their agency?

2-819

POSTER SESSION: 'More of a kind of a follower based kind of movement': Entangled discourses of gender, role, and movement in West Coast Swing dance

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Society for Linguistic Anthropology

PRESENTER:

Brittney O'Neill

DESCRIPTION:

Language reform has played a significant role in anti-(cis)-sexist movements (e.g. Ehrlich & King 1992, Moulton et al 1978, Zimman 2017). However, even where language reforms have been implemented, gendered associations often still cling to social roles (e.g. Lassonde & O'Brien 2013, Lupton 2000). While these gendered associations have largely been investigated through language, the pervasive gendering of posture and movement means that the physical embodiment of such social roles is likely also affected by gendered associations. This intersection of social change, language reform, and movement practice is exemplified in social partner dance communities such as West Coast Swing (WCS) which are transitioning from traditional, heteronormative partnership structures, toward 'degendered' models of participation. This shift has been accompanied by changes in linguistic norms, privileging degendered terms like 'leaders' and 'followers' and avoiding gendered language when describing the dance. While this language and the potential for dancers of any gender to learn either role is increasingly taken for granted, it is not yet clear how these changes have affected movement norms, which have traditionally been rigidly constrained by gender. Thus, WCS provides a unique context for exploring both linguistic and physical meaning making practices in the context of changing gender paradigms. Situated at the nexus of embodied linguistics (Bucholtz & Hall 2016) and the anthropology of movement (Farnell 1999), this study investigates verbal discourses found in interviews and participant observation of dance classes, using (multimodal) discourse analysis (Blommaert 2005, Mondada 2016), alongside physical discourses found in WCS dance recordings. To prevent the imposition of outside understandings of gendered movement, analysis of the verbal discourses was used to establish a (kin)emic (Kaeppeler 1967) understanding of WCS movement semiosis that was then applied to the analysis of dancers' movements. While the dominant verbal discourse is one that rejects the gendering of roles, instead attributing movement differences to the mechanics of the roles or dancer personality, gender nonetheless persists. Some dancers explicitly link the roles to gendered movement, while others, perhaps unconsciously, describe the roles using heteronormatively gendered metaphors and adjectives. Preliminary findings from the movement analysis show a partial fit, whereby some dancers retain a consistent style across roles--often with limited gendered stylization--in accordance with personality-based

discourses of movement quality. Others adjust their movement in accordance with role thus aligning with role-based accounts, however, they also engage in heteronormatively gendered styling (e.g. more feminized while following) mirroring discourses which retain gendered associations with the roles. Thus, as is seen in other gendered language reforms (e.g. Lassonde & O'Brien), gender neutral role nouns, while potentially helpful, can also obscure the persistence of highly gendered models of embodied action. The continued entanglement of role and gender in both linguistic and movement discourses offers insight into the complexity of reforming systems with histories of gendered structure. However, dancers' resistances speak to the potential for gender to emerge as an expressive resource, rather than a constraint on ways of moving and being in the world.

2-821

POSTER SESSION: Narratives of Resilience: How Immigrant Hispanic Mothers Craft their Communities and Identity

12:15 PM - 1:45 PM **TMCC - 800 Level**
Poster – In-Person Live

REVIEWED BY:
Association of Latina/o and Latinx Anthropologists

PRESENTER:
Vanessa Lozano

DESCRIPTION:
According to the Center for Immigration Studies, 'the total foreign-born or immigrant population in the U.S. hit 47.9 million in September 2022- a record high in American history. When non-English-speaking immigrant families arrive in the United States they face the challenges of new customs, rights, and practices in their new home. While current research focuses on immigrant children with phenomena such as the immigrant paradox and language brokering, fewer studies have been done to highlight the stories of immigrant parents and their development and perception of identity in a new culture. We believe there is a gap in current academic discussion, thus our research focuses on shedding light on the behind-the-scenes of children's success through Hispanic mothers' efforts in navigating their everyday lives and creating communities to provide opportunities for their children to thrive. How do women balance their desire to help their children stay connected to their raices or roots while wanting a 'better life' for their children? And how does this balance shape their identity? How do Hispanic

mothers' common goals lead them to create and participate in spaces that empower them? This study presents answers to these questions by highlighting Hispanic mothers' narratives of resilience, empowerment, and identity through oral and material histories.

2-822

POSTER SESSION: Navigating Irregularity: Immigration Bureaucracy and Surveillance During COVID-19 in Chile

12:15 PM - 1:45 PM **TMCC - 800 Level**
Poster – In-Person Live

REVIEWED BY:
Society for Latin American and Caribbean Anthropology

PRESENTER:
Danielle Frinton

DESCRIPTION:
Due to a variety of structural and bureaucratic obstacles including Chile's restrictive immigration system, many Latin American migrants in Chile live their lives between two spheres: being documented and being in-between visas. Being in-between visas for an extended period is an unfortunate but inevitable step in the current Chilean immigration process. It is a unique political space caused by simultaneous open border policies and restrictive bureaucracy. Migrants in this space are irregular. In migration studies, irregular migrants are people who have moved across borders outside the laws and regulations of their destination country. However, in Chile, irregular migrants are specifically people who are waiting for their visas. Irregular migrants in Chile are legally in the country but face political and social obstacles that are particular to people in-between visas; their irregularity has been perpetuated and increased with the pandemic. They are over surveilled and simultaneously neglected by the state, and are in a constant state of ambiguity and waiting. Drawing upon interviews and participant observation carried out between 2021-2022 in Santiago, Chile, I will shed light both on the many obstacles that irregular migrants in Chile face as they transition through various documentation statuses, as well as the ways that migrants navigate irregularity through carefully developed community strategies such as dog sharing programs, freelancing, and strategic housing arrangements. I make an intentional effort to emphasize the development and use of these strategies as a means to survive, particularly during the COVID-19 pandemic,

and argue that despite being in precarious situations and living in a constant state of waiting and ambiguity, irregular migrants use these strategies to create agency and survive.

POSTER SESSION: PRIDE and Resistance in the Rio Grande Valley

12:15 PM - 1:45 PM **TMCC - 800 Level**
Poster – In-Person Live

REVIEWED BY:

Association for Queer Anthropology

PRESENTER:

Sara Becker (Southern Methodist University)

DESCRIPTION:

The Texas state legislature has joined several other states in the United States in one clear mission: that 'transgenderism must be eradicated from public life entirely' as stated by Michael Knowles at CPAC. The 2023 legislative session has seen a torrent of bills introduced that together amount to no less than trans genocide, making it illegal for a trans person to exist as themselves in public. However, transgender and queer people are not taking the elimination of their rights without resistance. They use explicit protests and the defiant continuation of events like Drag Queen Story Time to fight back against the erasure of trans and gender nonconforming folk from public life. Pride celebrations are no exception. Through observation and participation, this project examines the 2023 Pride festival in the Rio Grande Valley as a site of resistance to anti-trans laws and of queer placemaking. This project highlights the nature and power of queer joy in Pride celebrations for united a community to activism motivated by queer rage, remembering that while modern Pride celebrations are commercialized, the first Pride was a riot.

POSTER SESSION: Re-inventing the Day of the Dead: An exploration of Hispanic catholic migrant life in Denmark.

12:15 PM - 1:45 PM **TMCC - 800 Level**
Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of Religion

PRESENTER:

Maja Balle (Roskilde University Center)

DESCRIPTION:

In this poster presentation I discuss how Spanish-speaking migrants with a Catholic background who move to Denmark create new narratives and cultural repertoires in the transition from their homeland into a new Danish context. These transitional dynamics include the emergence of new practices of ritual and religion, moving from private homes and migrant contexts into Danish institutions such as churches, schools, libraries, and cultural centers. As an example, I visualize how the celebration of Dia de los Muertos (of Mexican origin) becomes a stage for the unfolding of traditions that bind migrants to the homeland, while at the same time mediating transnational connections and boosting a flow of objects brought from their native land, leading to new rituals that paradoxically become adopted even by the Lutheran church. Based on personal testimonies this illustrates the creative powers of migrants to find flexible solutions to material needs and expresses how new global changes and challenges are handled. Thus, the paper gives voice to a largely unnoticed minority group in a Danish context, namely Catholics from the Global South. The paper aims to offer new insights into the varied types of paradoxes that must be navigated when religious and non-religious worldviews are negotiated in the light of transnational movements, in an otherwise predominantly secular society. In a broader context I situate my case with reference to multifaceted reflections on post-colonial conditions, narratives of conversion, evidence of racism, sexual oppression and liberation, and views of shame, death, and love. At the theoretical level, the study contributes to debates surrounding the transitions between sacred and secular, and between institutionalized religion and 'Catholic' popular practices adopted in a secular and/or Protestant context.

2-856

POSTER SESSION: Rural Idaho School and Mexican Im/Migrant Newcomer Students

12:15 PM - 1:45 PM **TMCC - 800 Level**
Late-Breaking Poster - In Person

PRESENTER:

Eulalia Gallegos Buitron (University of Idaho)

DESCRIPTION:

Over the years, Idaho schools have faced numerous complaints and charges for failing to fulfill state and federal mandates to meet the needs of students of culturally and linguistically diverse backgrounds (Jones, 2014). For example, a July 2023 report by the American Civil Rights Union (ACLU) of Idaho described how

policies of exclusionary discipline in Idaho schools disproportionately target Latinx students, negatively impacting students' access to equitable K-12 schooling (Rodarte, 2023). Further, conventional metrics, including standardized testing and graduation rates, evidence the disparities in the schooling experience of Mexican im/migrant students. This study aims to document and understand how two Spanish-speaking newcomer students who im/migrated from Mexico experienced the first year of schooling in rural Idaho. Using ethnographic tools, through a Latinx Critical Race Theory lens (Solorzano & Yosso, 2001; Solórzano, 1998) and a cultural-historical approach (Gutierrez and Rogoff, 2003), Carlos and Thelma's testimonios illuminate how newcomer students participate and negotiate school success. Findings illuminated the systemic structures in place that prevented Carlos and Thelma, the two participants, from experiencing access to equitable schooling. Three years after the beginning of the Covid-19 pandemic, it is imperative to consider how the educational policies, across national borders, impacted the schooling experience of im/migrant students and their families. Understanding how Carlos' and Thelma's experienced a time of transition illuminates how the Covid-19 pandemic impacted borders, migration, and displacement, across metaphorical and physical boundaries and the long-term impact on the students and their family's trajectory of schooling.

2-831

POSTER SESSION: That Black Garden: An Archival Sanctuary for Undoing 'the Human'

12:15 PM - 1:45 PM **TMCC - 800 Level**

Poster – In-Person Live

REVIEWED BY:

Association of Black Anthropologists

PRESENTER:

Kianna Dieudonne (University of Arizona, School of Anthropology)

DESCRIPTION:

The late bell hooks' body of Black feminist work shows us how Black places emerge as sites for building loving relationships even in the context of dispossession and racial trauma. The cultivation of Black home gardens exemplifies this tradition and demonstrate for us the importance of establishing connection to land in geographies structured by racial terror, especially in the context of transitions or migrations. The ethnographic clippings gathered during my study demonstrate how the garden engages in a more-than-human care

practices, asserting Black ways of being that subvert the violence of antiblackness in the United States. I draw on Black geographies and critiques of Western (post)humanisms to ground my analysis of the Black home garden as a site made capable of archiving memories and theorizing life beyond antiblack erasure through these acts of care. Based on research with Black-identifying Americans in Tucson, Arizona, I have come to understand the Black garden as an archive, holding onto historical strategies of – and creating sanctuary for – continuously unsettling the antiblack construction of 'the human' in ways that bring alternative visions of the future into everyday practice. As exhibited by ethnographic interviews conducted for this study, Black land-based placemaking strategies draw on a radical understanding of relational connectivity, an understanding that goes beyond considering the human as above and distinct from other forms of life on earth. Rather than accepting Western configurations of 'the human,' which hierarchically racializes bodies as discrete individual subjects, the Black garden facilitates these research participants' understandings of their own health and the health of their environment by unsettling this very distinction.

POSTER SESSION: The Great Bounce Back: Transitions in Perugia's Tourism and Nightlife Following COVID-19

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

National Association of Student Anthropologists

PRESENTER:

Sadie Patterson (West Chester University)

DESCRIPTION:

Perugia, the capital of Umbria, Italy, is a town known for its jazz and chocolate festivals. Over the past couple of decades, it has become increasingly popular with tourists, both Italian and international. This rise was, of course, affected by the COVID-19 pandemic. During the month of June, 2022, I conducted a series of ethnographic interviews with Perugian locals, including restaurant, hotel, and bar employees. I also completed research through participant observation in settings that garner tourism. Using these qualitative research methods, I found that tourism and nightlife in Perugia suffered greatly during the COVID-19 pandemic; now that lockdowns are over, both are doing better with a special focus on catering towards the local interests.

However, some businesses, like mid-star hotels, have not recovered. I also found links between the tourism industry's sustainability and economic efficiency efforts. As time goes on, it will be important for local businesses to understand the changing demographics and interests of Perugian tourists and locals, as well as where those interests may align with or contest each other. The conjunction of sustainable and economic interests may also be applied to the tourism industry in the United States.

2-833

POSTER SESSION: The language of daydreaming and the grammar of (in)visibility: A look into the Tourism Narratives in Indian Occupied Kashmir

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

General Anthropology Division

PRESENTER:

Subhajit Pal (SUNY, University at Albany, Department of Anthropology)

DESCRIPTION:

Bruner suggests that concepts and views of the present are often projected on the past as authoritative voices to fix meanings and stabilize order thereby control the master narrative, which narrates the past and controls the future (Bruner, 2005: 155-169). This paper focusing on the Indian Occupied region of Kashmir, attempts to deconstruct the Indian master narrative of Kashmir as the 'Paradise on Earth' for tourists. Following Bruner and subsequent scholars of anthropology of tourism, I seek to explore the unequal but dialogic relationship of the Indian master narrative that progressively transitions into a settler colonial project. Which seeks to contain Kashmir within an ethno-national idea of an ancient mythic Hindu (thereby Indian) landscape, suppressing the popular Kashmiri demand for the right to self-determination. Preceding the full-scale settler colonial invasion of 2019, the military occupation of the region for more than seven decades has resulted in a trail of destruction and decimation. All of which remains invisible within the tourist itineraries. Here, I attempt to place the Indian state backed and surveilled tourism industry's performances and narratives in relation to the settler colonial political power-India. Through my ethnographic notes and a critical discourse analysis of tourist vlogs, I seek to explore how actors within the tourism industry imagine the space of Kashmir, gaze at

that space and with what ethics. Do these activities hostile or not reiterate and reinscribes ideas of settler sovereignty in Kashmir? In this exploratory paper, I aim to understand tourism as a structural tool for the Indian settler colonial power. Although tourism research in Kashmir has seldom been posited within the tumultuous and volatile socio-political backdrop, I intend to extend the tourism discourse in Kashmir in relation to settler colonialism, which can later lead us to understand how the emerging space contains both the settler ambitions and the native resistance in the everyday.

2-834

POSTER SESSION: The Preservation of Cultural Identity among Migrant Workers in South Korea

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Abby Webster

DESCRIPTION:

In a country known for strong ethnonationalism, African migrant workers confront cultural and social adjustments throughout their sojourn in South Korea. Extensive research has been conducted surrounding multinationalism in a globalizing Korea but posit that its hesitation towards embracing inclusion holds back further progress. Through an ethnographic study conducted by being immersed in the African community in Seoul, I seek to understand the experience of African migrant workers in Korea, with attention specifically paid to the development and preservation of their own cultural identity. I hope to identify trends that will showcase the resiliency of culture and the power of a community creating a place for belonging in a distant, ethnically homogenous land.

2-836

POSTER SESSION: Transborder trajectories of the Aymara nation: a long history of reshaping the Andean frontier

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Association of Latina/o and Latinx Anthropologists

PRESENTER:

Daniella Jofre

DESCRIPTION:

Anthropologists working with native communities today face various challenges regarding research practices, especially when present at indigenous territories. The caring of heritage, which can be understood as 'valued embodiments of the past' (Jones and Yarrow 2022), embraces a complex array of historical demands, legal rights and academic transformations that have changed the former approach to material culture and oral memory. A necessary dialogue is needed between different interlocutors in order to achieve a shared understanding of what is valued and how, rather than an accumulation of objects/subjects for exhibition purposes. This poster is based on the results of the ongoing project UI-016/20, funded by the Department of Anthropology, Universidad de Chile, that engages with the Aymara Carangas indigenous populations in the border space of the Andean highlands of Bolivia, Peru and Chile, through the study of material culture, archival documentation and oral memory. It focuses on the formation of the Peruvian and Bolivian republics until the Chilean occupation, that is, in the bulk of the 19th century (1820-1890). The research is positioned from historical archeology and public archeology to address the institutionalization of national borders and its impact on the Aymara Carangas indigenous populations of the Andean highlands. A historical-critical perspective allows for the study of these 'marginal' populations and contrast the experiences coming from the Aymara communities that inhabit the triple border (Peru-Bolivia-Chile). The study focuses mainly on the Carangas groups, without being exclusive of the Pacajes and Lupacas, in order to delve into the historical, political and social process that gave rise to the territory we know today. The comparison of contemporary processes and their link with indigenous perspectives is related to the social and political use of the past in the present.

2-837

POSTER SESSION: Transfronterizo families' language policies at the U.S.-México border.

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Association of Latina/o and Latinx Anthropologists

PRESENTER:

Alejandra Sanmiguel-Lopez (University of Texas at El Paso)

DESCRIPTION:

The present study examines the family language policies (FLP) of transfronterizo parents. FLP encompasses parents' ideologies about language, what they consider proper language use, and the motivations for language management and practices (Spolsky, 2004). Using in-depth, phenomenological interviews, I document the perceptions transfronterizo parents have regarding their FLP in relation to their elementary-aged children who attend school in the U.S.-México border. The theoretical frameworks I apply challenge deficit views regarding Hispanic and transfronterizo families and provide affordances for viewing expanded dimensions of FLP. For example, pedagogies of the Home (Delgado Bernal, 2001) compliments FLP by analyzing the learning that happens at home and other spaces and Borderlands Theory (Anzaldúa, 1987) provides a perspective of the experiences of living in between two countries, social systems, languages, and cultures. I use phenomenological in-depth interviews (Seidman, 2006) as methodology to document transfronterizo family's perspectives on their FLP happening. This involves conducting three interviews with each participant, to explore the participants' experiences, put them into context, and reflect on their meaning (Seidman, 2006). My findings assert the value families place on their children's bicultural and bilingual development as they make concerted efforts in developing their children's linguistic repertoire and ties to the family and their homeland. The FLP of transfronterizo families are further influenced by the expectations they have for their children as well as by their own upbringing. Lastly, families take a strong interest in their children's schooling as they believe success in school is tantamount to maintaining cultural practices in terms of their children achieving the future, they hope for them. This research can inform schools and education policy so that curriculum, school policies and teaching practices are better aligned with families' cultural practices and goals for their children's development. As well, the findings challenge the narrative that minoritized parents create barriers in their own children's educational paths (Baquedano-López et al., 2013).

2-858

POSTER SESSION: Transitions in forced displacement: the cases of Colombian and Ukrainian women

12:15 PM - 1:45 PM TMCC - 800 Level

Late-Breaking Poster - In Person

ORGANIZER:

Anastasiia Mykolenko

PRESENTER:

Laura Maria Lopera Realpe

DESCRIPTION:

We would like to present the preliminary findings of our comparative research on the forced displacement lived experiences of women in two different contexts. These are the cases of the Colombian conflict (1964-2023) and the full-scale Ukrainian war (2022-ongoing). Both the armed conflict and a full-scale war force people to move in order to save their lives. The majority of the most affected individuals in both cases are women with children. For example, in the Ukrainian case, men are not allowed to leave the country, so up to 80% of displaced people are women. In both cases, we would like to focus on the experiences of 'being in transit' from the moment these displaced people leave their homes and the moment they finally settle. These transitions are usually traumatic and are happening in a liminal place where the future is largely uncertain, and long-term planning is impossible. During our fieldwork in the summer of 2023 in Ukraine and Colombia we noticed that, regardless of differences in cultural, social, and political contexts, we could spot the striking similarities of women's experiences in the first phases of the forced displacement. Being in the places of transit, they described similar emotions - temporary relief and fear before future uncertainties. Thus, in this project, we want to compare the trajectories and emotional experiences of people in movement in 2 parts of the world. We focus on the ways the experience of women in these 2 places are similar and how they are different.

2-590

“Transitions”: Indigenization, Decolonization, and Revitalization in Anthropology

2:00 PM - 3:45 PM

TMCC - 714 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Joseph Marks (University of Arizona)

CHAIR:

Joseph Marks (University of Arizona)

PRESENTER:

Joseph Marks (University of Arizona), Brittney Alexander (CUNY, Graduate Center, Department of

Anthropology), Christina Newhall (University of Arizona), Maura Sullivan (Tulane University, Department of Anthropology)

DESCRIPTION:

'Transitions' invoke images of where we have been, where we are now, and where we may be going, but more importantly, how we are in a state of in-betweenness, neither at our origins nor our destination. The graduate school experience can be challenging and rewarding for students of all backgrounds. Featuring students from Indigenous nations, specifically working on linguistic anthropology and linguistics, participants in this roundtable reflect on lessons learned and experiences in the transition beyond graduate school. As all panelists are Indigenous graduate students, we will center, utilize, and rely on Indigenous ways of knowing, storying ourselves into how we grapple with terms such as Indigenization, decolonization, and revitalization in anthropology. Such terms require some kind of re-orientation, but those of us who work with our communities to whom we answer and whom we represent must act in multiple ways. These actions, both in the academy and in our communities, demand that we split our identities. Here, at this roundtable, we deny this split and embrace and center our Indigenous identities. When Indigenous students center community and traditions within the academic experience, it can often come at a cost. This roundtable highlights the experiences of students who have struggled at the intersection of the pressures of academia and working with their own or other tribes and still maintain integrity in community protocols. Participants will explore how they have mobilized concepts like decolonization and activism in their research, as well as challenges they have faced as Indigenous scholars. There have been numerous panels, papers and Indigenous scholars who have presented valid and serious critiques of the disciplines of anthropology, linguistic anthropology, and linguistics over the years without meaningful movement on the recursive and ingrained colonial practices and principles that these schools of thought continue to be entrenched in. We hope to take up space for our own experiences as well as make space for other Indigenous graduate students to hear their own experiences reflected on a roundtable at AAA. We also hope to give insight to advanced and career academics or administrators of universities in creating and maintaining sustainable spaces for Indigenous graduate students to not only survive but thrive. This is a critical time for us as early career scholars, who have considerable knowledge to share about our work and

relationship to academia. As panelist Christina Newhall has stated, 'Academia should not be the newest politically correct site to practice the drudgery of the White Man's Burden. We, Native scholars, are sources of knowledge, creativity, and indigeneity, and we do not need to be edified into the white scholarly world for our own good.' We are asked often to become conduits between academia and our communities, however, by our field's reflexive nature, we argue that a transition and pivot in anthropology, where our identities do not need to be compromised, is here in our work.

Absence and the Archive: Categories, Occlusion, and Recovery in Knowledge Production I

2:00 PM - 3:45 PM TMCC - 803 A

Oral Presentation Session

REVIEWED BY:

Council for Museum Anthropology

ORGANIZER:

Sowparnika Balaswaminathan (Concordia University, Department of Sociology & Anthropology)

CHAIR:

Hannah Turner

PRESENTER:

David Gasset (Bard Graduate Center), Sowparnika Balaswaminathan (Concordia University, Department of Sociology & Anthropology), Ethan Karnes (George Washington University, Department of Anthropology), Ida Jones, Bradley Clements (University of Toronto Faculty of Information), Aarzo Singh

DISCUSSANT:

Kate Hennessy

DESCRIPTION:

Institutions such as archives and museums are not only repositories of historical and cultural collections, but are also sites of knowledge production. But what does this mean when our world - and our institutions are being both literally and figuratively deconstructed? Many scholars and disciplines have problematized how these institutions present themselves as scientific, objective, and authoritative, while obfuscating the structures of power that make selective discernment possible. This panel examines how epistemic categories in museums and archives create conditions of occlusion resulting in loss, forgetting, and gaps in historical memory, and why it is important to examine these processes now. We are especially concerned with how to understand absence in a time of change, as physical materials are

deteriorating, climate catastrophes create unstable conditions, and the political structures that uphold these institutions crumble. How do we access that which is not present in the archive, especially as these institutions are radically transformed? What are the tools and strategies available to us to identify, demarcate, and potentially recover that which is lost? How can disciplines that center knowledge as presence recognize the epistemes that have been occluded, and communities that have been invisibilized in this unstable, shifting world? Thinking with concepts such as spectrality, fugitivity, and others, this panel brings together papers that contend with such present-absences from diverse contexts and regions. This is Part I of a double panel.

HIDDEN AGENCIES: Recovering Historical Indigenous Makers from Museum Documentation: Object EL81, a painted muslin in the National Museum of Natural History (NMMNH), is a captivating item obscured by archival inaccuracy. The original record was a confusing morass of missing names, vague dates, and conflicting locations and cultural affiliations. This paper details the process of disentangling the knowledge production of museum documentation to reveal other knowledges that can recover the historical agency of the muslin's indigenous maker. Following the reflexive turn in museum anthropology, I examine museum documentation as a system of colonialist knowledge. I trace back through catalog records, museum archives, and US military reports to illustrate how Euro-American conflation of indigenous identity and the stubbornness of legacy data created and maintained a system that alters and silences indigenous identities that don't conform to its predetermined museological episteme. I then apply recent art historical and stylistic attribution to link the muslin to the prolific Yankton/Hunkpapa indigenous artist Siyosapa, allowing us to better understand the historical and cultural information that is visually present in the muslin. This knowledge lets us recognize the muslin as a carefully constructed item of commoditized art that Siyosapa used to negotiate his own identity and the wider representation of Native Plains society. Ultimately, this case study of reattributing NMMNH object EL81 demonstrates techniques to decolonize and improve museum research on and recover historical forms of indigenous agency. Presenter: David Gasset (Bard Graduate Center)

Affecting the Archive: Absent Narratives, the Cold War, & Ethnographic Museum Collections: Ethnographic collections at natural history museums are assemblages of awkward objects (Lehrer & Sendyka 2019).

Embodying the scientific intention of their collectors, the imperialistic context of their translocation, and the colonial racism underlying the concept of cultural exhibiting, these objects tend to be narrativized with brevity. When the nation state of Tibet was invaded and occupied by the People's Republic of China in 1950, the millions of refugees who found asylum in India had to find creative and grim ways to survive. In this, they were assisted by philanthropic organizations that provided monetary assistance and infrastructural aid to Tibetan refugees by brokering the transfer of their heritage and religious possessions to museums and collectors. The Smithsonian was one of the institutions that acquired a collection, which is labeled in its catalogues as representing "Tibetan culture and religion". However, in this paper I argue that the objects of this collection, when read with their associated archival materials, are also representative of the invasion and occupation of Tibet, a political act wrought with violence, and the distress of a fleeing people, an affective context mediating between the refugees and the world (Cifor 2016:8). Through an exploration of the correspondences between well-meaning members of the Godown Society, academically curious curators of the Smithsonian, and the consequent documentations in the National Anthropological Archives, I illustrate how an analysis of the affective components of such negotiations reveal the underlying political valences and relations emblematic of the Cold war era neoliberalism. Presenter: Sowparnika Balaswaminathan (Concordia University, Department of Sociology & Anthropology)

The Land will tell the Story: Coal in the Archive: This project examines the objects in the archive of the West Virginia Mine Wars Museum (WVMWM) in relation to the coal housed within the Anthropology Collections of the Smithsonian National Museum of Natural History (NMNH) to investigate the absences generated, in the archive and landscape, by resource extraction. In its movement, coal breaks down leaving traces, establishing material connections with people and places that can be organized as physical and metaphoric constellations. These networks expand a singular piece of coal to incorporate a widening geographic area, absorbing local forms of labor into a global material presence. The title of this presentation is inspired by a WV resident who said 'The land will tell the story; you follow the land to find the history.' In following the land, specifically, the coal extracted from the Appalachian Mountains, this project addresses gaps in historical memory to decenter narratives of production and consumerism that work in tandem with industries of resource extraction to erase the textures of local

geographies. This reveals the role of coal as well as the previously anonymous labor of miners and Indigenous coal passers in the establishment of archives, influencing the routes and practices of scholars who traveled by steamship. In focusing on absence, it becomes possible to think with the constellations of embodied practice that make present the labor and knowledge of communities in archives that have remained invisible as the material absences caused by resource extraction continue to shift the world beneath their feet. Presenter: Ethan Karnes (George Washington University, Department of Anthropology)

It's your bounden duty, to continue: The complex silence and boisterous voice of Dr. Irene Diggs: As the principal investigator and University Archivist the Diggs papers situates the intellectual rigor, innate brilliance and administrative frustration of gender as instructional faculty on an HBCU campus. While concurrently, battling racialized gender norms throughout Central and South America. Toward this end, sharing the long silent voice of Dr. Diggs with the global community – she investigated moves her from the shadows to center-stage as a scholar whose complex silence was imposed and at times maintained – yet her archival records are boisterous with course/departmental innovations, travel diaries and myriad manuscripts. Dr. Diggs' voice and observations provide context and blueprints for scholars of the African diaspora through a gendered lens. Presenter: Ida Jones

Presents, Presence, and the Present: Representing and Absencing Great Lakes Treaties in Museums: Indigenous treaty diplomacy has been made absent from the very places in which some of its most explicit evidence is present: museums and historical sites. The storage and display of materials in museums has generally been surrounded by an imposed negative space, implicitly working – and sometimes failing – to silence and disappear the actions, orations, and provocations that diplomatic materials are designed to inspire (Bruchac 2019; Singh 2021). That Indigenous peoples are disproportionately excluded from institutions full of Indigenous materials is not a lost irony (Danyluk & MacKenzie 2022; Doxtator 1996). The presence of diplomatic items in museums – quiet spaces of cultural refinement – is a result of their absence from animated spaces of political negotiation (Bennett 1995; Corbiere 2022). However, the rallying cry that "Museums Are Not Neutral" (Autry & Murawski 2017) has been increasingly disrupting these quiet places. Indeed, considering that the items in museums remind them that their governing polities are already in alliance with Indigenous nations,

“neutrality” in those nations’ cultural struggles constitutes betrayal. This is the context in which I ask how the presence of diplomatic materials in museums can be matched with the presence of relational, responsible action? Treaty relations must not only be represented in these institutions, they must be re-presented: recognized and enacted in the present, in the here and now, not made absent, segregated to a museumified past (Azoulay 2019). Presenter: Bradley Clements (University of Toronto Faculty of Information)

Affective Encounters: Unpacking Colonial Archives, Museums, and the Captured Displayed Object : Colonial archives and national museums operate on modes of knowing and understanding history that are epistemologically bound up a rational discourse that allows us to forget that their “facts” are also manufactured through the discarding of “difficult content” (Georgis 2006). With a focus on the British Museum in London (United Kingdom), the Museum of Anthropology in Madrid (Spain), and the Museum of the Orient in Lisbon (Portugal), I question the ways in which retellings of colonial histories within these archives work to bolster national narratives that rid themselves of lasting legacies of violence on former colonies—feeding collective memories that are made up of acts of forgetting or disposing lived experiences. From this I turn to displayed museum objects, possessed from former colonies, and the ways their affective currencies carry the potential for recovery from their lost origins if read from an alternative epistemological perspective. I ask: what do the silences and gaps in colonial archives and museums tell us about the postcolonial experience? What new memories, different accounts, stories, and experiences can be revealed in reading displayed objects affectively? How can the materiality of the displayed object embody spectral residues of their origins physically and psychically? Thinking through the tension between what is presented (place) and what is present (space) within colonial archives (Abbey 2018; De Angelis et al 2016), and the state of suspension this creates for postcolonial subjectivities, results in forms of ambivalence that enters affective realms that are laden with potential for knowing colonial narratives differently. Presenter: Aarzo Singh

Agriculture in/of Transition: Temporalities of Labor within and beyond Capitalism

2:00 PM - 3:45 PM

TMCC - 205 A

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Cameron Butler (York University, Department of Anthropology)

CHAIR:

Gerardo Rodriguez Solis (University of California, Santa Barbara, Department of Anthropology)

PRESENTER:

Gerardo Rodriguez Solis (University of California, Santa Barbara, Department of Anthropology), Sophie D'Anieri (Johns Hopkins University, Department of Anthropology), China Sajadian (Vassar College, Department of Anthropology), Anne Galvin, Miriam Hird-Younger (Carleton University, Department of Sociology & Anthropology)

DISCUSSANT:

Amiel Bize (Cornell University)

DESCRIPTION:

Agriculture is rife with transitions and change: the turn of the seasons, the growth of seed to plant, the adoption of new tools and techniques, the passing of land tenure, the shift in labor practices. Yet those transitions do not necessarily go smoothly or completely. This session focuses on transition in the context of agricultural labor to consider the tensions and frictions that arise as transitions are negotiated, pursued, and resisted. We explore the possibilities of agricultural labor in (re)producing or contesting ongoing realities of capitalism. We seek to open up a space to ask: through what processes do agricultural practices transition into or out of capitalist modes of production? What values inform shifts in agricultural labor regimes? What does it mean to live within, through, or against agricultural transitions? In particular, this panel aims to wrestle with the temporality of transition: how do transitions extend or compress moments? How do they delay or speed up work and life rhythms? What pasts, presents, and futures are created through or by transition or the calls for transition? The papers included in the session touch on questions of temporality, embodiment, value, race, and household labor. They consider: transition as an embodied practice of attunement to bodily toxicity; the cascading impacts on household and life stage transitions by labor regimes based on credit and debt; the deployment of agribusiness surveillance technologies to extend corporate control over farmworkers; the impacts of transnational ethical certification programs on small-

scale cocoa farmers; and the concealment of histories of slavery and environmental destruction in the transformation of rum as a luxury commodity. Altogether, these papers sit within the messy incompleteness of transition, to highlight how transition plays out in starts and stops with distinct and often conflicting stakes for those involved. While anthropologists are positioned today to think in potentially emancipatory ways about the value of transitions, these papers foreground labor to explore what the framework of 'transition' opens up, reveals, obscures, or forecloses in the study of contemporary agrarian life. The session interrogates the transition of not only agricultural labor but also the labor of agricultural transition. This panel asks: what forms of labor are driving the transition to sustainable agriculture? What are the impacts and implications of those transitions for small-scale farmers or those working in industrial agricultural contexts? What do discourses of transitions to sustainable or ethical practices obscure or leave unchanged? Who is able to make claims of transition, and how do people respond to claims of or calls for transition?

Mexican-US Corporations' Agricultural Transition: Agribusiness Fantasies in Capitalist Labor Camps: Mexican-US agricultural corporations celebrate their transition toward sustainable, organic, and socially responsible practices. At the same time, Mexican government agencies cheer on the new ethic and openness of the "fresh generation" of agribusiness management. In contrast, migrant farmworkers daily face and confront hypersurveillance, confinement, racial hostility, criminalization, and policing and military harassment. Furthermore, corporations justify the seeking of total control of farmworkers' everyday movements and decisions in the agrarian camps to transit to a "more humane and orderly production" and to accomplish national and international trade agreements, "good practices" certifications, and health norms. In this paper, I discuss these disputes for present and future labor control regimes in agrarian capitalist enclaves of Northwestern Mexico. In particular, I analyze the production of visual technologies and specialist discourses by corporations, state agencies, and regional intellectuals, arguing that they create new agribusiness fantasies about these segregated carcel work camps. The paper is a result of my studying-up ethnography about social policies—corporative and state—toward racialized migrant farmworkers in the Rural District of Hermosillo, Sonora. In addition, I intervene in the ongoing discussions about how the violence of racial capitalism, carceral geographies, and farm fascism is

located, legitimized, and resisted. Presenter: Gerardo Rodriguez Solis (University of California, Santa Barbara, Department of Anthropology)

Sensing and Conjuring Transition: Toxic Food and the Labor of Care in El Salto, Mexico: This paper considers transition as a bodily indicator of toxicity and as a political conjuring of environmental accountability not yet made real. El Salto, Jalisco lies at the end of one of Mexico's most polluted watersheds. The city itself is home to over 700 corporations and receives the effluent from over 10,000 manufacturing corporations, oil refineries, and industrial agricultural projects. In response to the high levels of respiratory illness and cancer alongside minimal environmental regulation and enforcement, activists are pushing for transitions to a system of corporate accountability and environmental regulation. In this paper, I explore the perceptions and conjurings of transition in the political, household, and bodily realms. I consider the labor of environmental activists to conjure imaginings of transition to mobilize residents, NGOs, and policy-makers in hopes of making alternative worlds of safety and well-being possible, as well as the labor of women household gardeners to sense and perceive toxicity in food and bodies. I explore how women sense and perceive transitions in their own bodies and in the bodies of those around them, and make adjustments to their strategies of food cultivation and procurement. Lastly, I consider how transition can be obscured—particularly when corporations and state powers circulate their own conjurings of transition—or become a dangerous indicator of illness. As such, I consider how activists and household gardeners negotiate transition in acts of community, household, and bodily care. Presenter: Sophie D'Anieri (Johns Hopkins University, Department of Anthropology)

Beyond Agrarian "Transition": Temporalities of Debt among Syrian Refugee Farmworkers in Lebanon: Drawing on eighteen months of ethnographic research at the Lebanese-Syrian border, this paper revisits classic Marxian debates on "transition" through the lens of agrarian debt. Charting how Syrian farmworkers in Lebanon became increasingly dependent upon credit throughout the ongoing war in Syria (2011-present), the paper traces the multiple temporal scales of debt within the shawish camp system, which collectively sustains the largest and lowest-paid agricultural workforce in Lebanon. For the Syrian farmworkers residing in these camps, "transition" was not a wholesale shift from one epoch, property relation, or class position to another, but a multitemporal process of coming to terms with the contradictory demands of debt in their everyday

lives. These processes were inextricable from how labor was valued across different domains of agrarian life, from the rhythms of seasonal production and contract farming to the daily valuation of waged labor according to shifts and piece-rates, to the feminized labors of stealthy gleaning and seasonal food preservation, to economies of bridewealth, to the fraught deferral of future plans and life transitions (marriage, child-rearing) under the pressure to maintain household liquidity. Thinking with and beyond the “transitions” implied by Marxist accounts of primitive accumulation and proletarianization, I show how agrarian debt is not only a linear process of expropriation whereby producers are divorced from their means of production and forced to sell their labor, but also a distinctly gendered, multidirectional struggle over the shifting value of (re)productive labor within rural families. Presenter: China Sajadian (Vassar College, Department of Anthropology)

“Pristine” Nature and Cane that Cuts Itself: Agricultural Transitions Concealed in Jamaican Rum: Jamaican rum has been produced through tangible transitions of agricultural labor, ecological intervention, and economic policy since the 1700s. Contemporary marketing curates these transitions for consumers. The concealment of racialized, exploitative, agricultural practices necessitates reimagining rum making for increasingly diverse luxury consumers. Ethnographic research in St. Elizabeth, “Jamaica’s breadbasket”, explores the tangible transitions and labor temporalities concealed by luxury rum marketing. This paper explores three key concealed transitions. The first concealment is of the transition between colonial and neoliberal plantation labor practices. The physical labor, time, and bodies, of laborers that make cane cultivation possible are systematically erased. The second is the physical transformations of natural environments concealed to recast historically dynamic landscapes as pristine natural “terroir”. The third concealment is of transitions in global geographies of rum distribution in which multinational corporations masquerade as local businesses. This third concealment includes changes to labor, compensation, and sustainability practices for cane crops and necessitates emphasis on lavishly Jamaican branding. History is curated, creating a consumable sense of place and identity fermented in the rum. The physicality, temporality, and destructiveness of agricultural labor regimes comprising the cane harvest are carefully concealed by images of verdant (but never reaped) cane fields and sumptuous blending rooms rich with local expertise, depictions of an environmentally and socially progressive enterprise.

Cultivated place subverts plantation history, supplanting the ecological and human violence of sugar cane cropping, and enslaved labor, while simultaneously concealing contemporary neoliberal forms of ecological and labor exploitation within the industry. Presenter: Anne Galvin

Transitions to ethical cocoa: Impacts of fair-trade certification for cocoa farmers in Ghana: Ethical and sustainable certification is an increasingly important mechanism in agriculture value chains meant to mitigate rising global inequalities and “give farmers a better deal.” While remaining within existing market models, fair-trade certification aims to move towards “ethical” standards that assist smallholder farmers with greater stability, environmental protections, and economic security. Globally, fair-trade production has experienced significant growth across sectors. Within the transition to “ethical” cocoa production, this paper examines the impacts, or lack thereof, of certification on the everyday lives, choices, and opportunities for smallholder farmers who produce cocoa in southern Ghana. Given the strong uptake of fair-trade globally, it is perhaps surprising that fair-trade organisations admit that most of their cocoa farmers in West Africa make well below a living wage and existing research has shown that fair-trade does not have a significant impact on the livelihoods and welfare of cocoa farmers in Ghana. Yet, fair-trade continues to grow in Ghana, the second largest producer of cocoa in the world, where an eighth of cocoa farmers are fair-trade certified. Drawing on ethnographic research with both fair-trade and non-fair-trade smallholder cocoa farmers, this research argues that narratives of a “better deal” obscure the complex reasons why farmers choose to participate in fair trade production, reasons that are rooted in the reproduction of social relations and variable material benefits. This paper seeks to better understand how farmers experience the shift to “ethical” production, offering insights into the allure, contestations, and potential of interventions that pursue transitions to 'fair' market systems. DISCUSSANT:

Melinda Gonzalez (Rutgers University), Monica Barra (University of South Carolina)

DESCRIPTION:

Climate change is one of the most significant problems facing humanity. It is a threat multiplier that exacerbates already existing problems for interrelated social, cultural, political, economic, and ecological systems across the globe. The compounding effects of sea level rise, drought, increased frequency and intensity of storms, and rising temperatures, as well as the maladaptive adaptation and mitigation strategies meant to address those issues, disrupt and transform our everyday lives in myriad, unequal ways. As the AAA Climate Change Task Force (Fiske et al., 2014) highlights, anthropologists are at the forefront of climate-related research with their contributions to contextualizing local place-based and global investigations of humans and human behavior (e.g. Barnes and Dove 2015; Crate and Nuttall 2016; Hoffman, Erikson, and Mendes 2022). In this roundtable, we continue discussions regarding the ways in which anthropologists engage in the human (and non-human) -- climate nexus, and address how our work can effectively contribute to just, equitable, resilient, and adaptive transitions. By transitions, we refer to the various drivers of social, political, and ecological changes, including factors that inform consumption, values, and governance. These transitions may be a part of or lead to more profound, radical systemic and structural transformations across scales and geographies (Morrison et al 2022). Scholars and practitioners share their insights by addressing the following questions: What interventions have anthropologists made in studying and/or informing climate change responses and related transitions on local and global scales? How can we contribute to just and equitable transitional processes, taking into consideration the diversity of place-based social-ecological conditions? During these transitions, how can anthropologists advance the goals of climate justice?

What role do/should anthropologists have in informing larger scale transformations? References Barnes, Jessica and Michael Dove (eds). 2015. *Anthropological Perspectives on Climate Change*. DISCUSSANT:

Michael Ralph (Howard University), Ilana Gershon (Rice University)

DESCRIPTION:

This roundtable seeks to address the transitions in American anthropology's long and complex relationship with liberalism and to elicit reflection on the discipline's present and future engagement with it. According to prevailing origin stories, the discipline was justified in part on its critique of the illiberal racial hierarchies of the early 20th century. Its international, fieldwork-

based focus took flight after WWII under the wing of American empire, proffering muted critiques that refrained from calling the leviathan of Pax Americana into question until the 1970s. At the turn of the millennium, the discipline was marked by two primary engagements with liberalism. On the one hand, anthropologists sought critical purchase on liberalism through critique of its universalist pretensions, often through engagement with religious or indigenous 'others.' On the other hand, other anthropologists engaged critically with neoliberalism, understood as the extension of market logics to domains not previously conceived of or represented in economic terms. In recent years, however, the status of both liberalism and neoliberalism appear to have shifted, both in the overseas settings where many anthropologists conduct fieldwork and in the United States itself. Neither liberalism nor neoliberalism seem assured of the once hegemonic positions that they once occupied. On the one hand, they have been assailed by those seeking to reassert racialized and/or ethno-nationalist identities aligned with political authoritarianism. On the other hand, they have been critiqued for their inability to comprehend their own racial and gender premises. This roundtable seeks to bring together a range of scholars to critically reflect on the relationship between anthropology and (neo)liberalism today. The central question posed for response, how have recent historical events transformed anthropology's relationship with liberalism, neoliberalism, and what comes next?

DISCUSSANT:

Laura Ogden (Dartmouth College, Department of Anthropology)

DESCRIPTION:

The archives are lively material assemblages. In contending with the materiality of archives, scholars are pointing to a multiplicity of shifting forms, relations, and ecologies. Of particular interest for us are human bodies in/as/with the archives, as bodies are materialized and dematerialized as sources, analytics, and sites of theory. This session therefore reflects on what it might mean to archive bodies and to body archives. Through (bio)archaeology, (historical) anthropology, history, and various forms of critical theory, we find a generative resonance with Battaglia et al. (2020). This session thus furthers conversations at, and pertinent to, variegated (sub)disciplinary crossroads about the politics that transform bodies in/as/with archives and vice-versa. Indeed, we seek an alertness to archiving bodies as something that involves producing and arranging archives so that they generate a corpus of historical records of the past as well as of the present. We also mean to invoke various bodies in their presence, absence, and hauntings. We direct attention to how and why bodies (at times literal, physical bodies) have been used to populate and (dis)order 'the pulse of the archive' (Stoler 2010). At the same time, bodying archives engages those who transform and are transformed by the archives. Put differently, bodying archives calls forth past bodies, the embodied researcher, and other living entities, in their bodily practices, techniques, habits, durabilities, and affects. And so, we probe the ways such thinking transfigures the ontological character of 'the body' and 'the archive.' How can various traces be brought into relation with one another to narrate what was obscured or foreclosed? Can such work imagine different possibilities, conditions, and futures? How does it afford bodies and archives variegated contingencies, materialities, politics, and ethics? And does working both in and with archives destabilize boundaries between archived bodies and bodied archives (e.g., bodily tissues, artifacts, texts, photographs, oral histories, and ethnography), across time and space, and between and within disciplines? In rearranging what makes 'the body' and 'the archive,' participants may also consider the positionalities and lived realities of the embodied researcher who encounters archive bodies and contends with bodying the archive. The session cultivates discussion across methods and subdisciplines and invites participants working with ethnographic, (bio)archaeological, and historical methods to examine

these questions through an engagement with archival methods, broadly conceived.

On Diasporic Archives and Bodily Durabilities: My involvement as a bioarchaeologist with the remains of a cemetery in the Middle East enfolded me into spontaneous interactions and unplanned oral stories, especially with Middle Easterners in my own social circles. Such interactions and stories were seemingly unrelated to the cemetery. And yet they hailed histories and relations that were profoundly relevant. The histories and relations at stake are not linear. Instead, they are simultaneously dispersed and imbricated; they are, that is, “diasporic” (Thomas 2011; Hage 2021). Called forth were generational histories of violence, estrangement, and belonging that transformed and subtly adhered in diverse bodily techniques, states, and affects, across spaces and times. Such bodily durabilities are dispersed and imbricated archives, living through, in, and with sentiments of love and care. Bodily durabilities, in other words, are diasporic archives with and of diasporic relations. This paper focuses on a selection of such archives and my very intimate place in them and in their relations. In so doing, it attends to embodied worlds whose presence coendures with the cemetery and its bodies. Presenter: Tony Chamoun (Syracuse University)

Archival Shapeshifting: Wandering and Wondering With, and Beyond, the Page: In 1923, on a sugar plantation in British Guiana, 23-year-old overseer Leslie H.C. Phillips witnessed an elaborate ritual performed by hundreds of previously indentured laborers from India. The event propitiated the goddess Kali in variable shapes and forms. If the “Kali-Mai Puja” was mysterious and in need of interpretation, so was Phillips himself. Born in the Guyanese capital, Georgetown, he would write a recollection of the puja three decades later at his home in Vancouver, Canada. Here I reconsider Phillips’s account as refracted through his own ontological shifts in identity and bodily form during the migration process from the Caribbean to North America. Such shapeshifting is performed in immigration documents: upon arriving in New York City (1923), Phillips declared, according to ship ledgers, his ‘Race or people’ to be “African.” When crossing the Niagara border into Canada (1928), this entry changed to “Scotch.” These transformations trouble lingering assumptions, even in the postcolonial literature, of any sharp opposition between Western and non-Western selves. But rather than replicate biocentric categories of colonialism and empire, I draw on McKittrick’s (2021) use of “remix” and “mashup” to animate Black life and the radical

possibilities of diaspora. By plucking these same historical facts and figures, and letting them resonate in undisciplined ways, alternative paths for living and telling new kinds of stories emerge with, and beyond, static lists on the page. Presenter: Shannon Novak (Syracuse University)

Indentured Movements through the Accumulated Archive and Embodied Archaeology: In this paper I discuss the methodological and interpretive challenges I confronted when tacking between documentary archives and an archaeological site as I traced nineteenth-century Indian and Chinese indentured migrants’ movements from their homes to voyages across the Indian Ocean, within colonial Mauritius, and inside plantation domestic and industrial spaces. Through the accumulation of bureaucratic records, migrant bodies were racialized, gendered, caste-d, regionalized, photographed, and aged. Their labor on the plantation was quantified and compared. Bodies also took up space on plantations, areas that were measured and appraised. The archaeology of domestic spaces on the Bras d’Eau Plantation (c. 1835-1868) brings forward the embodied experiences of indentured laborers, however individualized and unique experiences are synthesized within discrete houses and over the domestic area’s short occupational history. Can we avoid reifying colonial modes quantifying laboring migrant bodies through specific western modes of identity when we take such labor statistics at face value, while also knowing that the diversity of laborers and distinct cultural practices, may not be apparent in the archaeological record? Presenter: Julia Haines (Cornell University, Department of Anthropology)

Making Claim: Grievability in the “Huntington” Archive: The Huntington Anatomical Collection (1893-1921) is comprised of immigrants and U.S.-born persons who died in New York City. The common narrative is that decedents were dissected and curated because they lacked next of kin to claim them, a social impoverishment that justified their postmortem treatment. In reality, legislation, market forces, and funeral costs worked to render these persons legally “unclaimed,” with the categorization dissolving prior histories, social relations, and identities. I have proposed integrating archival and skeletal remains to re-articulate kinship relations and render persons previously anatomized and anonymous “grievable.” However, this research on the “unclaimed” and grievability has been recently (re)shaped by personal experiences looking for a missing family member. Examining death records and almshouse ledgers now

intersects and permeates my reading of court case summaries in the present, and vice versa. The contours of absence in public court records inform how I “read” the silences and distortions in nineteenth-century institutional archives. Importantly, the speculative labor required to recognize a family member in legal archives challenges the extent to which I can read almshouse archives to highlight personhood and interrupt anatomization and anonymization. Drawing upon bell hooks’ “ethic of love” and Judith Butler’s notion of “grievability,” I ask: what is the terrain of care that makes lives grievable? What do we do after lives are made “grievable”? And how do we love and make claim with people now absent? Presenter: Alanna Warner-Smith (Smithsonian Institution (NMNH))

In the Context of Settler Colonialism, What Counts as Archaeological/Historical Archive?: Despite a rise in “archive fever” in the humanities and social sciences at the turn of the century, the theoretical underpinnings of the concept of archive, as a political organizing principle, are discussed only rarely in archaeological writings. In *Archive Fever*, Derrida distinguished between archive as (a) the relationships involved in memory, the writing of history, and the political authority to identify, classify and interpret and, (b) archive as “shelter”: relegating, reserving, and forgetting - “to burn the archive and to incite amnesia ...aiming to ruin the archive as accumulation and capitalisation of memory on some substrate and in an exterior place” (Derrida 1996). With this in mind, this contribution considers the roles of archive in the continuing injuries of colonialism and settler colonialism in Palestine. Discussion focuses on two current archaeology/museum anthropology projects in the Jordan Valley and the West Bank. I initially follow Achille Mbembe’s notion of archive as both architecture and document, but will then move to counter the prevalent nostalgia that regards archive as a kind of sepulchre, a place to bury stories, memory, people, and lifeworlds. In other words, as a ruin. Instead, I argue that archive should be seen not as a desire, nostalgia, wreckage or ruin, but as a container of fragmentary records that allow unresolved histories to be written. Those histories may sometimes be stories of the colonial order of things, but equally they can tell of unfinished projects, missed opportunities, dead ends, and concepts for future developments. In other words, archives remain alive as stories wanting and waiting to be told. Presenter: Brian Boyd (Columbia University, Department of Anthropology)

Keeping Receipts: Decolonizing the Archive at Mohenjo-Daro: It has been over a century since excavations at Mohenjo-Daro took place. This UNESCO World Heritage Site, dated to the 3rd millennium BCE, is located in Sindh, Pakistan, and was first documented in 1922. For a hundred years this site has lived within Sindhi cultural memory through song, poetry, literature, and internationally through archaeological work. First reported by Sir John Marshall in the *Illustrated London News* in 1924, Mohenjo-Daro became part of the international public, specifically part of the British public. Everyday living at Mohenjo-Daro during field seasons can be seen through the archival record. Bureaucratic colonial control is exemplified through the keeping and reporting of receipts through this time. This paper will provide an analysis of five years of colonial reporting at Mohenjo-Daro, explicitly interrogating the many ways brown laboring bodies were disciplined and kept in place. This paper addresses the multiple ways by which the documentation of colonial work at this archaeological site violates ethical sensibilities around information, data management, and accessibility. As a way to decolonize this practice, I will present ways by which data visualization can undo some of that violence by making the archaeological archival data accessible to local populations, linking elders’ stories to the experience of a history of working at Mohenjo-Daro. Presenter: Uzma Rizvi (Pratt Institute)

Art, Spatial Politics, and Rights to the City

2:00 PM - 3:45 PM

TMCC - 713 A

Oral Presentation Session

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Jake Nussbaum

PRESENTER:

Colin McLaughlin-Alcock (Carleton College, Department of Sociology & Anthropology), Jake Nussbaum, Steve Moog (Bennington College), Leo Coucaud (University of Sydney)

DESCRIPTION:

This session considers how public expressive arts, the politics of memory and representation, and spatial practices are intimately intertwined in claims by subaltern groups to rights to the city in a variety of urban settings in the U.S., the Czech Republic, Indonesia and Mauritius. Groups’ control and claims over city spaces and their spatial practices around movement and

occupation, are connected to public expressive cultures (music, posters, etc.) and group, neighborhood and/or city identities manifested in the arts of commemoration and representation within these spaces.

Racial Geographies and Public Memory in Post Uprising Minneapolis: Memorialize the Movement is a Black feminist activist organization which preserves protest art from the George Floyd and Daunte Wright uprisings in Minneapolis. As the municipality moves to wipe the city clean of the memory of the uprisings in order to pave the way for real estate development and growth, this group stages popup displays of this artwork at events around the city, in an effort to keep the revolutionary spirit of the uprising alive. This paper traces how, as this group traverses the city to collect and display this artwork, they encounter an uneven geography of race and memory. Particularly as they negotiate with white allies and work to display in majority white areas, their encounter with white space highlights wider evacuations of memory and the differential experience of the uprising across racial lines. Presenter: Colin McLaughlin-Alcock (Carleton College, Department of Sociology & Anthropology)

Fugitive Temporalities: Sun Ra, Human Remains, and the Abolition of the Penn Museum: In April 2021, news of the Penn Museum of Anthropology's non-consensual holding of the remains of Black victims of police murder, and their use as teaching props in a classroom and online, triggered yet another 'crisis' for our discipline. The litany of public condemnations that followed rightfully placed this horrific behavior on a continuum of long standing anthropological practices that present Black people as objects of intellectual curiosity and exploitation, and ethnographic museums as key sites for the justification of white supremacy (ABA 2021). But this 'troubled history' was also invoked by the institutions involved to rationalize their own complicity, disavow responsibility, and in the words Krystal Strong, 'reproduce white supremacist moves to innocence' (2021). While the Penn Museum touts its subsequent commitments to change-hiring a diversity officer, creating a permanent exhibit, and funding scholarships for West Philadelphians-as evidence of progress, the anthropologists involved face no direct sanctions, and as of yet no financial reparations to the families of the victims have been publicly made. In short, the museum's behavior is a cipher for liberalism itself, evincing a temporality of progressive reform, yet unable to shake its carceral foundations in the perpetual dispossession and dehumanization of Black people. In this presentation I reflect on three years of

ethnographic, archival, and multimodal research in Philadelphia in order to offer a counternarrative to the Penn Museum's timeline of reform, one which locates change in the temporal practices of abolitionist activists and experimental performers. I interpret three experimental performances held at the Penn Museum-pianist Sun Ra's filmed interventions in the Egypt exhibit in 1982, Charlyn Griffith/Oro's ceremony protesting the Morton Cranial Collection in April 2021, and Krystal Strong and Mike Africa Jr.'s live remembrance of Delisha Africa and Katricia Africa in April 2021- that target liberalism's foundational principles of person-as-property, individualism, and linear time, and thus the very basis of anthropological knowledge-making. Instead, I suggest that these affective, spiritual, and political performances create 'fugitive temporalities' in which possibilities emerge for solidarity, care, and reparations that are illegible to the ethnographic gaze. I argue that the material work of institutional decolonization begins in the creative labors of those who refuse the museum's linear temporality. I conclude that in order for the discipline of anthropology to truly decolonize, it must similarly abandon its own temporality of liberal progress and embrace Shange's call for an 'abolitionist anthropology' (2019), one which develops in solidarity with communities directly impacted by anti-Blackness and embraces multimodal and experimental strategies of knowledge-production that risk being illegible to institutional power-centers. Association of Black Anthropologists (ABA). 2021. 'Collective Statement Concerning the Possession and Unethical Use of Remains.'

Pandemic Punks: Anarcho-punk in Indonesia and the Prospects of Resilience through 'Punk Worlding': The Covid-19 pandemic devastated music communities around the world. Punk scenes were not immune, and many never recovered from the loss of beloved venues and spaces unable to reopen after government-mandated lockdowns. The losses were particularly notable in Indonesia, home to some of the world's largest punk scenes. Rumah Pirata, an anarchist punk collective in Bandung, Indonesia, was one of the do-it-yourself (DIY) spaces that managed to survive. Why did this particular group endure while so many others were

unable? In this paper, I argue that the collective's survival stems from its connections to global punk networks and from 'worlding from below.' Indeed, Rumah Pirata has purposefully constructed worlds extending beyond the 'local' and rooted in anarchist and DIY principles to counter the precariousness of contemporary urban living. When precariousness came in the form of a global pandemic, the purposeful and calculated act of what I call 'punk worlding' served as a mechanism of resilience and helped sustain a highly vulnerable cultural enclave. Scholarship on punk in Indonesia has noted scenes' international connections but often positions them at the margins of the global punk cultural economy. Based on recent ethnographic research, the punk worlding framework repositions punk in Indonesia at the forefront of the global scene. The framework privileges insider epistemologies and ethics to theorize the implications of translocal punk networking in more depth. Presenter: Steve Moog (Bennington College)

The transformative effects of large shopping centres on human consciousness, social relations and bodily dispositions in the Indian Ocean island of Mauritius: Large shopping centres are a relatively new phenomenon to the Indian Ocean island of Mauritius, being first introduced in the late 1990s. Prior to their introduction, Mauritians relied (and still do to a large degree) on traditional shopping precincts such as market fairs, corner stores and urban arcades. The latter are intimate, socially-embedded spaces, where credit may be offered and shopkeepers and clients often know each other, but also tend to be cramped, dark, unhygienic, and lack sufficient space for periods of durable interaction. Whereas the island's newer shopping centres are cleaner, better-lit, offer wide-open spaces for extended periods of social interaction, but also tend to be disconnected from populous residential areas and promote anonymous forms of sociality. Mauritians have taken quickly to the newer, larger shopping centres, which are fast becoming a pervasive feature of the landscape, and given how recently they were introduced and the freshness of memories people have of their experiences in them relative to the island's traditional shopping precincts, makes Mauritius an ideal research site for investigating the transformative effects they are having on human consciousness, social relations and bodily dispositions. As such, I am more interested in thinking about the transformative effects shopping centres are having in Mauritius in terms of space than I am with consumption per se. Like Victor Gruen, the so-called 'Father of the Shopping Centre', who envisaged the social benefits shopping centres

could bring to the newly created suburbs of post-war America, I view the introduction of large shopping centres to Mauritius as providing new public spaces that historically have been lacking in this rapidly urbanizing but formerly agrarian society. The most obvious benefit to stem from the provision of these new public spaces is that in encouraging Mauritians to socialize more widely, it enables them to transcend existing cultural boundaries and may go some way towards reducing the racial and ethnic segregation that is evident in many parts of the society. However, there is also evidence that Mauritians are experimenting with alternate ways of expressing themselves in these new public spaces, largely as a result of being freed from the constraints of the socially-embedded spaces they are more familiar with. Anonymity has a part to do with this, but any attempt to make sense of these social and cultural changes must first come to terms with the architecture of shopping centres and their transformative effects on human consciousness. The findings of my research are illustrated with reference to a social survey I conducted in five of the island's largest shopping centres, consisting of both qualitative and quantitative questions. Presenter: Leo Couacaud (University of Sydney)

DISCUSSANT:

Casey Golomski (University of New Hampshire, Department of Anthropology)

DESCRIPTION:

The prominence of scholarship on Abrahamic traditions within the anthropology of religion has resulted in an overwhelming assumption that non-conforming gender/sexuality is in opposition to religious experience, identity, or practice. With the exception of religious groups that hold critical ritual roles for those with transgressive genders and sexualities – and which thus legitimize and even romanticize queer/trans experience (Morgensen 2011) – the overwhelming narrative within both the anthropology of religion and queer anthropology has long been that religiosity and queer/trans experience are objects-in-tension. Papers in this panel emerge from ethnographic research conducted in a range of cultural and geographic environs and contribute to the rapidly expanding body of literature that challenges the assumed antagonistic relationship between queer/trans studies and the anthropology of religion. Critically, within the U.S. academy, Black feminist and queer theorists have highlighted the role of the sacred in moving scholars of queer/trans and religiosity away from the logic of incompatibility (Alexander 2005; Crawley 2017). Building upon this tradition, novel anthropological scholarship suggests that when brought into conversation, these fields may emerge as productive interlocutors, providing an opportunity for surprising ethnographic encounters. As a result, queer anthropology and the anthropology of religion experience their own disciplinary transitions as a result of their intercourse (Kasmani 2022; Decena 2023). These productive (if, for some, surprising) bedfellows offer space for the in-between-ness of thinking queer/trans/religion and the potential insights offered therein (Wilcox 2020; Seitz 2017). Ethnographic writing at this intersection provides a new window into the lived acrobatics of queer and trans life, including the messy ethical quandaries and affective attachments that rise in the face of lingering animosity and social stigma towards transgressive genders/sexualities and queerphobic institutional policies. While a slow broad shift towards LGBTQ+ acceptance has manifested in certain contexts (e.g., instances of queer religious institutional participation), this shift has been neither inevitable nor global in scope. Queer communities are beset by continued discrimination and prejudice, stoked by populist political movements in recent years. As we witness the latest round of anti-trans legislation in Florida, Tennessee, and several other U.S. states, the passage of an 'Anti-Homosexuality Bill' by Uganda's parliament, and anti-LGBTQ education legislation in Hungary, we are starkly reminded of the fragility of a

claim to progress. Papers in this panel consider how interlocutors reimagine the role of queer/trans life and embodiment in this uncertain time and place, both within and outside of religious institutions which may be more or less heteronormative and more or less bureaucratic, depending on the context. The result is an illustration of the imaginative ways in which queer/trans interlocutors undertake creative, self-affirming, life-giving projects for themselves and their loved ones, including artistic enterprises, diasporic journeys, novel exegetical labor, activist engagements, and kinship-work.

Rethinking Bodily Publics and Public Bodies at the Fanompoambe in Mahajanga, Madagascar: During the annual "Great Service" (fanompoambe), residents of Mahajanga – the main port city in northwestern Madagascar – are reminded of the expansive, cosmopolitan public that is dedicated to the veneration of the autochthonous Sakalava monarchy and its relics as mediums, supplicants, royals, journalists, tourists, and students all converge at the shrine of Ndramisara. Whereas most scholarship has attended to the labyrinthine ritual complex that composes the Great Service, and its role within the greater Sakalava monarchical political system, this paper considers those intimate bodily publics and public bodies that both converge at the gathering, but also extend well beyond the ephemerality of its occurrence. This ethnographic reflection draws upon interlocutors' lived experiences to examine the central role that private intimacies play in this public event. In so doing, the paper interrogates the multiscale body politics at work during the fanompoambe and, in particular, the religiosity of those commitments, orientations, and interventions embedded in public health projects and lively sexual publics situated within this carnivalesque ritual return in the western Indian Ocean. Presenter: Seth Palmer

"Queerly Beloved, We Have Assembled..." Queer Religious Knowledge in U.S. Mainline Protestantism: As a growing number of U.S. states legislatively curtail or eliminate queer (and particularly transgender) civil rights and institutional access, mainline Protestants have frequently voiced opposition to legislative homophobia and transphobia and have instead advocated for greater levels of queer inclusion. Increasingly, queer parishioners have found spaces in mainline congregations to explore the intersection of religious and queer identity. Their participation has also affected mainline institutions, resulting in changing approaches to theology, public engagement, activism, and the kinds of prayers, sermons, readings and music

used in weekly worship (the first part of this paper's title is a lyric from a series of queer sacred hymns by artist Amanda Udis-Kessler). In keeping with Gayle Rubin's (2012:347) reminder of "the continuing need to build stable institutional forms that can insure the ongoing development, preservation, and transmission of [queer] knowledge," which is so often ephemeral, this paper argues that mainline Protestant institutions in the U.S. are critical sites in which queer participants find faith and community. Ministers and queer congregants negotiate a politics of welcoming and in so doing generate distinctly queer religious knowledge that they weave into the fabric of church's life and ministry. Drawing on my own fieldwork in affirming mainline congregations, this paper considers the ramifications of conceptualizing the local congregation as an institutional site of queer knowledge production, maintenance, and dissemination for anthropologists of religion generally and of Christianity specifically. Presenter: Benjamin Hollenbach (University of Michigan, Ann Arbor, Department of Anthropology)

Creative Attachments: Thirunangai Poetics of Relationality in Southern India: Trans studies scholars have recently cautioned that ignoring religion can unwittingly contribute to the constitution of trans as always already secular. This critique does not apply without qualifications to studies of trans lifeworlds in the South Asian context, which have indeed engaged with devotional practices and non-secular articulations of trans, especially transfeminine, identities. However, this engagement with religion has primarily shown how accounts of ethical personhood shaped by embodied devotional practices contribute to a sacred legitimation of trans identity. In other words, religious accounts and ethical practices of the self are often instrumentalized towards a discussion of trans identity, its delineation and contestation. This paper attempts an analytical move that attends to Tamil thirunangai trans women's devotion to goddess Angalamman as not only to do with identity, but also as an important domain in which unsettled ethical questions are being worked through: thirunangais' changing relationship to natal families, trans kin, neighbors, strangers, and concerns about aging, illness, and forms of care. It focuses particularly on how thirunangai devotion to Angalamman transforms dominant rubrics of kinship, attachments to place, and notions of agency. It shows that the thirunangai-goddess attachment rests on a poetics of relational agency, articulates a non-dualist gender ontology, and emphasizes a logic of kinship that is not premised on caste and its social reproduction. In drawing attention to thirunangais' creative formulation

of new models of kinship, place-making, and selfhood through their devotion to the goddess, this paper highlights the importance for trans studies to engage with religion not only for its role in shaping identity but also for what its affordances for trans ethical becoming. Presenter: Aniruddhan Vasudevan (Princeton University, Department of Anthropology)

Queering the Sacred in South African theatre: This paper explores performance art in South Africa as a site for queering the sacred. I adopt the term 'sacred' to foreground 'wild', dynamic, hybrid and unruly manifestations of religion in post-apartheid South African theatre. I focus on the work of comedian, Marc Lottering who uses his Pentecostal upbringing as well as his gay sexuality to inspire the characters in his plays and analyse how the sacred manifests in his performances. In doing this, I position Lottering as a producer of knowledge about religion and sexuality while centring his art as significant in its representation and production of the sacred. Existing anthropological research on themes of religion, sexuality and arts in Africa are often motivated to explore queer art as a site of resistance and activism. This scholarship, however, is often infused with queer rights discourses developed out of Euro-American contexts, which has traditionally equated secularised queer agency with queer resistance. Apart from a few exceptions, religion is thus framed in relation to conservative politics, rather than explored as a concept requiring serious examination for its queer possibilities. On the other hand, queer religious scholarship in Africa has gained momentum in recent years as it has begun to describe various ways people navigate seemingly contradictory religious identities and queer sexuality. This has been motivated by an aim to nuance narratives that suggest 'African-ness' and 'Blackness' are inextricably linked with conservative religious and cultural beliefs and discourses. Out of this body of work we see an emergence of work on queering religion in Africa most often through subversive and transformative theologies, hermeneutics and religious practice. This paper builds on this work by bringing the idea of queering as developed in studies of religion in Africa, to bear on the anthropological project of conceptualising queer activism and agency in the arts. Presenter: Megan Robertson (University of Leeds)

Somewhere Else: Un-belonging and Queer Pentecostal Self-Making in Brazil: This paper registers the self-making strategies of three Black queer Pentecostals in the production of what I call "queer Pentecostal Elsewheres." Much work on queer Pentecostalism

centers on the queer church as the space through which sexuality, gender, and religiosity may be reconciled (Natividade and Oliveira 2015, Lewen 2019). This paper decenters the church to examine queer Pentecostalism as a lived religion in the everyday. In understanding exclusion as constituting the politics of the “inclusive” church, queer Pentecostals often produce “queer religion” and queer religious selves in other spaces. Through experiences of disaffection for—and sense of unbelonging to—Brazil, and an ambivalence toward the igreja inclusiva, I track how these interlocutors imagine an “elsewhere” for queer Pentecostalism. I attend to the production of three “elsewheres” as practices of queer religion: queer intergenerational friendship, the living of a Black divine diaspora, and Pentecostal drag. Presenter: Joe Coyle

DISCUSSANT:

Asli Zengin (Rutgers University)

DESCRIPTION:

Raise your voice! Be vocal! Speak up! These refrains keep echoing through contemporary lifeworlds, enjoining the silenced to take up voice and make themselves heard. They promise participation, healing, and agency in one fell swoop, imbuing the voice with emancipatory promise, political and ethical value. Yet, as a growing body of anthropological scholarship has outlined, notions of voice come conjoined with particular ideas about political subjects and their capacities. Analogizing voice with power and voicelessness with silence relies on specific assumptions about speech as the primary form of expression by the liberal subject, as the source of its individuality and self-worth (Inoue 2003, Kramer 2015, Kunreuther 2014,

Weidman 2006). This is a 'romance of voice' where voices indicate unique, authentic subjects, where speech anchors their political presence, and where voices come to matter primarily for the selves they represent (Chadwick 2021, Fisher 2016, Harkness 2013). But what are the limits of this liberal subject and the model of political voice it relies upon? What forms of transition, shift, and disruption might allow for different constellations of voices and selves? What forms of speech, expression, and voicing become possible when voice and self no longer align? Anthropologists have also pointed to the historical and political situatedness of contemporary understandings of voice. Where liberal notions of voice emphasized individual will, intention, and interiority, they have noted that neoliberal configurations emphasize voice as a means of sincerity, transparency, and authenticity (Kunreuther 2010, Weidman 2014). This panel seeks to map how emerging forms of politics and mediation might reproduce, question, and disrupt these (neo)liberal alignments. It calls for attention to novel politics of voice that deploy voice and speech in ways that question their belonging to singular bodies and subjects or, on the contrary, might seek to counteract any such rifts. What happens in moments where voices are borrowed, lent, and transferred between bodies; where they emerge as contradictory, shifting, even complicit? What kind of politically effective speech is possible under these circumstances? What forms of play and enjoyment may vocal shifts and transitions enable, but how do they also foster social control and practices of domination? We invite contributions that address questions including but not limited to how emerging forms of algorithmic imagination, digital networking, and AI-driven speech generation shape voicing and speech in the contemporary world; how voices and the bodies pronouncing them may be queered in processes of transitioning (broadly understood); how identitarian, populist, and authoritarian movements tie voices to bodies in new ways; how practices of voice may challenge or reproduce politics of race; what implications changing notions of voice may have for our methods as anthropologists and ethnographers.

Voice, Self, and Pain: Shifts in Kurdish Women's Self-expression: In contemporary Turkey, Kurdish women find themselves urged to raise their voices in the name of emancipation, inclusion, and healing by a plethora of actors, from political and women's rights campaigners to state authorities and mental health counselors. Drawing on twenty months of ethnographic fieldwork in northern Kurdistan with female singers and poets, this paper examines how this systematic incitement to voice

has profound impacts on how Kurdish women use and relate to their voices. Long-standing Kurdish oral repertoires, the paper argues, point to a vocal aesthetics in which voices are not necessarily bound to the interiority of those who pronounce them. Here, female voices often serve to express the pain not of the self but that of another. But as Kurdish women are increasingly encouraged to approach their voices as vehicles of self-expression and individual agency, this vocal aesthetics is rapidly changing. Focusing on the life and work of two modern Kurdish women singers, the paper traces the emergence of a novel vocal aesthetics in which the voice increasingly becomes the means to express women's own, personal suffering. These changes in vocal form, I argue, mirror the demands of contemporary representational politics, where voices can only become politically consequential if they accurately represent the self of those who enunciate them. Instead of reading these transformations as a long overdue form of female empowerment through self-expression, the paper delineates the vulnerabilities, fears, and anxieties that these transformations entail. Presenter: Marlene Schäfers (Utrecht University)

Queer Dengbêji: Autonomy and Respectability in Kurdish Sung Narratives: In a time when the emergent right-wing cis-heteronormative anxieties intensively reinscribe queer respectability and relationality, and while queer politics continually single out the sexual difference at the expense of furthering racial homonormativity, studying affective negotiations of respectability and identity is crucial to understand struggles for alternative futurities laid on the present realities. The lives of queer and trans Kurds in Turkey, heavily securitized for degenerating moral values and national integrity, demonstrate how such negotiations may become means for rewriting these gendered and patriarchal sociopolitical scripts. Drawing on an ethnographic study of the Kurdish queer soundscapes, by which I refer to the production of, and engagement with, various musical genres, including Kurdish pop songs, guerilla marches, and electronic music, as well as experimentations of vocal and acoustic sounds, this article focuses on the life, performances, and kilams (sung narratives) of Kenan, a young queer dengbêj (Kurdish bard), to explore how he communicates his identity and respectability with the queer community and the Kurdish society. Kenan's voice, songs, and performances present a powerful example of the Kurdish queer affective negotiations, disrupting the heteronormative present. Recognizing how Kurdish dengbêji culture has recently become a subject of various contesting (and gendered) political projects, I

show the concern for a queer dengbêj becomes a matter of respectability and autonomy, voiced in ways that queerness is negotiated through shared sentiments, feelings, fantasies, and touch. Presenter: Emrah Karakus (Brandeis University)

Authentic Digital Voice, Algorithms, and Neoliberalism: Content Creation Workshops in Turkey: What shape does gendered voice take on increasingly neoliberal digital platforms? During my digital ethnography with woman Instagram users in Turkey, I observed a series of content creation workshops organized by two influencers teaching other women how to expand their Instagram presence. Named as "A Content Creation Workshop of One's Own," after Virginia Wolf's "A Room of One's Own," the workshops advise participants to form their authentic digital voice that will help them develop trust with their followers. Such trust will then allow them to sell their products—be it reading groups, yoga lessons, or advice about motherhood. What marks digital voice as authentic is its capacity to render algorithms irrelevant. Authentic voice "beats" Instagram's always-changing algorithms; even if the new algorithms decrease visibility, the trust built with an authentic voice will maintain the existing followership. Drawing on the workshop participants' quest for forming their authentic digital voice, I suggest that voice in digitized world is not only transindividual (Chadwick 2021). It also emerges in response to non-individual, digital entities such as algorithms. As women construe their authentic voice, they also form a certain feminist and feminine subjectivity who, through a dialogue with algorithms, define values such as authenticity and trust in relation to the marketability of their social skills and relationships, which become their products on digital platforms. Feminist subjectivity here, however, cannot only be defined as "post-feminist" because women imagine their followers as not only buyers but also female comrades who share similar grievances and wishes in life. DISCUSSANT:

Kajri Jain (University of Toronto)

DESCRIPTION:

Organisers: Hanna Kim (Adelphi University) and David Geary (University of British Columbia) In recent years there has been growing theoretical and ethnographic interest in the social lives of Asian infrastructure and how life-worlds become imbricated in large-scale material assemblages that shape wider political-economic systems (Anand, et al., 2018). This attention to infrastructure in South Asia has mainly focused on material expressions, such as electricity networks, roads, water supply systems, oil pipelines, ports, and highways. Surprisingly, the role of religion is often absent from the analyses of the contingencies of infrastructural design and planning. Given the more visible and highly public uses of pilgrimage sites, festivals, and built structures and spaces in South Asia, tracing the emergence and entanglements of these to the political and historical, can add to our understanding of 'why now,' by whom, and for what reasons is the religious so openly connected with the political in today's South Asia. As Kajri Jain has argued (2017, 2021), it is not enough to connect the emergence of monumental religious expressions or, as she calls it, 'the infrastructure of the sensible' to economic liberalization or the rise of religious nationalism and its ideologue bandleaders. What is needed is a contextualisation of those material practices and their interface with the devotional and political. This session looks at Hindu and Buddhist built environments and spaces that are connected to development projects, heritage regimes, and soft power initiatives. These are places in various kinds of transitions, material, discursive, and even topographical. Through significant domestic and multi-lateral funding initiatives, major economic transformations have occurred around sacred sites, festival grounds, and pilgrimage circuits, such as new airports, rail lines, and significant city infrastructural development. Some cities and monumental spaces have also received global designations, such as UNESCO World Heritage, bringing religious, state and

development trajectories together to boost large-scale tourism and national interests. The papers in this panel examine the relationship between longstanding and emergent tropes of development, built environments, and heritage in order to explore how religious spaces are 'put to work' in ways that bring them in alignment with postcolonial statecraft and political technologies of rule aimed at generating wider economic influence and strengthening domestic and intra-regional mobilities. Who are the actors in these projects and what are their motivations? Rather than seeing the outcome of these efforts as a triumph of late capitalism over the virtuous and devotional, we are interested in the possibilities and promise of the re-enchantment of built spaces as well as the active role of religious communities in fostering an ethics of care for sacred properties. We are also interested in ethnographic examples where the decisions to align the religious with the political is an act of contestation of the dominant structures, including caste, class, and religious authority, even as these same groups benefit from a tightening of these identity categories in order to substantiate their understandings of living in the world, in South Asia, and especially in a time of economic and social unsettlement and transition.

The Statue of Unity: A Multifaceted Symbol of Development, Nationalism, and Identity in India: The Statue of Unity, located in Gujarat, India, stands at an impressive height of 182 meters and currently holds the title of the tallest statue in the world. This grand structure serves as a tribute to Sardar Vallabhbhai Patel, the first deputy prime minister of India, also known as the "Iron Man of India." Despite being celebrated as a remarkable engineering accomplishment, the statue also serves as a symbol of the Indian government's dedication to both development and a unified nation. In this paper, drawing from ongoing ethnographic research conducted in Ekta Nagar, I explore the affective and emotional experiences of visitors and the meanings attached to the statue and its surrounding attractions. These include a valley of flowers, a museum, a light and sound show, Narmada ghat (stairway to the river) and its associated arati (worship), a river cruise, and other tourist activities. While acknowledging the presence of Hindu nationalism or Hindutva at this site, I elucidate the multifarious interpretations of the tallest statue in the world and what they tell us about the social and political imaginaries of a "New India." It is evident that the construction of monumental structures and their accompanying infrastructure are not solely technical or economic projects, but also complex cultural and

political endeavors that both reflect and shape a nation's identity. Presenter: Rutika Gandhi

“Made in India”: Heritage Diplomacy and the Infrastructure of Buddhist Memory: In recent decades Buddhist sacred sites in India have become entangled in various soft power initiatives that have important religious and geopolitical implications in the early twenty-first century. Through transnational financing and significant World Bank funding, major economic transformations have occurred around Buddhist pilgrimage and archaeological sites, such as new airports, rail lines, and significant city infrastructural development, especially through their designation as UNESCO World Heritage sites that brings Buddhism in line with wider development trajectories and goals to boost large-scale tourism (Geary 2017). These infrastructures of memory have also taken place alongside growing region-wide economic integration through parts of Asia that is fueling inter-Asian connections and mobilities. Drawing on the concept of heritage diplomacy this paper examines the geopolitics of the Buddhist homeland in contemporary India and how the infrastructure of Buddhist memory is central to wider struggles and forms of contestation around the re-conceptualization of Asia as an interlinked historical and geographic formation. In particular, it will propose a model for examining three spheres of heritage influence and how they figure into state ideological interests and existing regional diplomatic ties, that includes trade networks, technology transfer, financial aid, and other strategic alliances designed to strengthen India's image and standing in the region. This paper will also examine how these bilateral and multilateral investments align and conflict with Buddhist social activities on the ground, as well as wider geopolitical influences, such as the Chinese Belt Road initiative. Presenter: David Geary (University of British Columbia, Okanagan, Department of Community, Culture and Global Studies)

Restructuring Religiosity: Conflict, Disaster, and the Transformation of Sacred Space in Nepal: This talk draws upon one chapter of a book manuscript in progress to explore the relationships between religious, social, and political transformation through the intertwined (infra)structural biographies of several local temples and the newly emergent National Thami Museum in Dolakha, Nepal. Building upon twenty-five years of ethnographic engagement in the region, I explore how various nodes within this network of Indigenous and Hindu religious sites have developed—and undeveloped—in relation to political and environmental upheaval, and concomitant paradigms shifts for

recognition and funding from both the Nepali state and international donors. I track how ever-evolving tropes of Indigeneity, secularism, marginality, vulnerability, risk, locality, and domestic tourism have shaped the built environment of religious and cultural practice over time, in relation to the shifting landscapes and forms of governance within which such structures are embedded. I argue that since 2015, the intersection of Nepal's twin processes of post-conflict state restructuring (punar samrachana) and post-earthquake reconstruction (punar nirman) have led to the transformation of sacred space at several scales. These spatial transformations are in turn restructuring discourses and practices of religiosity for people whose lives move through these built forms. I tell the stories of both Hindu and Indigenous religious practitioners who have sought to make these spaces their own, reflecting upon their changing conceptualizations of religion, ethnicity, identity, and the state, in relation to the infrastructure of secularism and the divinities that animate their environment. DISCUSSANT:

Marina Peterson (University of Texas at Austin)

DESCRIPTION:

How can attention to publication design and collaborative work in print expand conversations about the transformational potential of multimodal and public

anthropologies? This session draws inspiration from the zine 'What Problems Can Artist Publishers Solve?' There, seventeen independent publishers reflect on the differences in tempo, scale, audience, urgency, autonomy, process, distribution, and form that separate them from their for-profit industrial counterparts and how their unique 'knowledge, skills, and resources' (1) can address pressing socio-political, economic, and ecological problems. Contributors encourage readers to approach publishing as 'less noun, more verb' (22), publications as 'artifact[s] of a loving, process-driven ethos' (18), and for individuals and small groups to embody the role of 'author-editor-artist-designer-printer-publisher' (4) simultaneously to 'create unprofessional, yet plausible economies, alliances and systems of support and friendship' (22). As anthropologists with similar multi-hyphenate roles, relationships, and collaborative self-publishing print practices, we ask: (1) How can taking the intellectual contributions of print layout, design, composition, and craft seriously affect not only the shape and scope of our work, but also how we work with others? (2) Amidst ongoing crises both in the world and within scholarly communication itself, how can alternative print traditions provide insights for change? Focusing on questions of labor, value, and infrastructure, panelists will describe their experiences creating, editing, designing, and self-publishing zines, artist books, and chapbooks, emphasizing how their print practice informs their broader work and enables new kinds of collective politics. As panelists discuss editorial collectives and interdisciplinary collaborations; the crisis of peer review and promise of peer critique; credits and costs of collaboration; and how to cultivate audiences, networks, and other means of distribution and future collaboration, they will also invite audience participants to contribute to a rapid publication about these same topics to be produced and distributed at the meetings and online 24 hours later. Maya Nadkarni (Swarthmore College)

DESCRIPTION:

Post-socialism as an academic optic has become somewhat of a staple in studies of formerly (and even currently) socialist states. Emerging first in the aftermath of the Chinese Economic Reforms in the 1970s and then solidified around the dissolution of the Soviet Union in 1991, the term has marshaled a great deal of scholarship attempting to make sense of people's experience of an effectively absent state socialism, and how that experience bears on new conjunctures overdetermined by an onslaught of capitalist institutions and ways of living. As such, much scholarship on people's relationship to socialism has employed the meta-concept of (personal) memory in order to substantiate a connection to a socialist past. This approach has been eminently productive with the added bonus of abstracting the socialist experience towards connection with Jewish studies, postcolonial theory, African diaspora studies. Of course, this formulation comes with a natural time limit, as the number of people who meaningfully lived in a socialist state become outnumbered by newer generations. To be sure, memory has been expanded in this context by conceptualizing it intergenerationally, collectively, institutionally; however, a focus on the experiential nature of post-socialist memory has also led to calls to retire post-socialism (Müller, 2019). Attempting to sidestep this underlying problem with memory as a grounds for post-socialism, we offer up in this panel discussion the concept of 'history-work' as a way to focus on an active and embodied labor of engaging with a socialist history. Taking as our case studies the practice of land reclamation in the far east of Russia, the legal struggle to keep a Bishkek planetarium from being transferred to private hands, a Bishkek-based artist collective's art historiographical practice, and the leftist interrogation of the socialist project at the Subversive Festival in Zagreb, the panelists take ethnographic approaches to actors who by various means-working the land, art practice, activism, scholarship-see not only to

remember the past, but to render it for themselves a living and accessible resource for various struggles in the present. Critically, this approach is not meant to glorify or demonize the socialist state as a project. In fact, the recent mobilization of Soviet Imperial rhetoric by the Russian state towards legitimizing its expansionist vision and establishing itself as a global superpower is precisely the hegemonic deployment of history that makes it urgent to look at a diversity of history-workers in order to understand how history operates in the present. Ultimately, we are interested in exploring the discontinuous continuities of history and missed future potentials that are obscured when the state hegemonizes the historical narrative.

Digging the Land, Digging up History: The Practice of Land Reclamation in the Far East of Russia: My paper examines the Russian concept of *osvoenie* -- translated as expansion and land reclamation -- that is central to the representation and operation of the Far Eastern hectare, a government-run land grant program in Russia. Specifically, it investigates a dynamic relationship between the state discourse of *osvoenie* that presents the Far East as an untamed frontier waiting to be developed and the practice of *osvoenie* that reveals multiple layers of forgotten and often undesirable history. It focuses on the story of the Silent Cape Nature Park that a group of environmental scientists and activists established on Sakhalin and demonstrates the changing nature of their relationship to this land. Through the course of the land's *osvoenie* the grantees uncover a long history of human presence -- Ainu, Japanese, and Soviet -- in a place originally thought of as wilderness. Their experience testifies to the profound transformative power of *osvoenie* that affects both its object (land) and subject (land grantees). By featuring the Far East as an empty wilderness, the state presents the region as a land of unlimited, open potential. However, as this paper convincingly demonstrates, the embodied and material labor of recovering history involved in *osvoenie* -- that this panel terms as history-work -- qualifies this potential by tying it to very specific pasts and futures. Presenter: Rusana Cieply (University of California, Berkeley, Department of Anthropology)

History-Work in Bishkek: The ShTAB and the Problem of Socialist (Art) History in the Present: Euro-American contemporary art historical discourses on 'post-socialism' tend to frame positive engagements with historical socialisms (both its political project and its art) as either a reflection of lingering nostalgia (Boym, 2001; Torodova & Gille, 2010), the effect of the socialist facet of global coloniality (Tlostanova, 2015), or a post-

modern semiotic play with no-longer active political signifiers (Joselit, 2020). Although recent scholarship in feminist studies, history, and anthropology has begun to conceptualize socialist histories as a resource for struggles in the present (Atanasoski & Vora, 2018; Kurtovic & Sargsyan, 2019), socialist art practice has by-and-large remained a cul-de-sac of (art) history. However, during my fieldwork in Bishkek, Kyrgyzstan, art practice and art history emerged as privileged fields for working through the legacy and future of socialism in Central Asia. This essay presents my preliminary oral historical, archival, and ethnographic work with ShTAB (the School of Theory and Activism in Bishkek), a Bishkek-based artist collective, whose art historical scholarship, lecture-performances, and para-fictions constitute what I am provisionally terming "history-work." This paper sketches out the function of art in ShTAB not as a speculative mode of presenting history for contemplation, but rather as the labor itself of cultivating a "sense of history" wherein a communist past and future feels closer at hand and thus accessible as a resource for their queer communist activism. Ultimately, thinking art historically about ShTAB's history-work while also taking serious its commitment to communism calls into question the neoliberal universal present as both the temporal grounding for global art history, as well as a regime of historicity that discourses of global art history help substantiate. Presenter: Marcos Cisneros (University of California, Berkeley)

The Subversive Festival: Socialist Legacies and New Postsocialist Political Imaginaries: This paper explores the resonances between historical socialist projects and the contemporary political movements invested in countering privatizations and dispossessions of common property resources in the post-Yugoslav spaces. More specifically, I chart the emergence of the Subversive Festival, founded in 2008 in Zagreb, Croatia, as it became one of the pivotal sites of encounter for activists, cultural workers, and leftist intellectuals from both the Balkans and the globe. A wave of protests traversed the region in the wake of the 2008 financial crisis. From student protests and workers' factory occupations to "right to the city" movements, these uprisings came to signal a rise of new political hope after the two-decade period shaped by devastating wars, the rise of nationalism, and widescale implementation of neoliberal policies. Each edition of the festival was dedicated to one theme (e.g., 'Homage to 1968', 'China 1949-2009', 'Socialism,' 'Decolonization'), offering in such a manner a platform for critical interrogation of the historical experiences of

socialism. What function did this re-legitimization of leftist socialist perspectives play and what can it tell us about valence of socialism(s) today? In answering this question, I rely on the field work I conducted during the 2017 and 2018 editions of the festival, as well as interviews I conducted with activists who participated in both the organization of the festival and the simultaneous student protests. I interpret the Subversive Festival's programming conception as a form of history-work oriented towards creating a new political imaginary crucial for the new generation of political actors. Charles Briggs (University of California, Berkeley, Department of Anthropology)

PRESENTER:

Mauricio Najarro (University of California, Berkeley, Department of Anthropology), Shagufta Bhangu (King's College London), Jorge Molina Aguilar (Universidad Luterana Salvadoreña), Sujit Thomas (New York University), Bernardo Moreno Peniche (University of California, Berkeley, Department of Anthropology)

DISCUSSANT:

Charles Briggs (University of California, Berkeley, Department of Anthropology)

DESCRIPTION:

Medical anthropologists have long been invested in questions of biomedical and phenomenological knowledges, often exploring articulations of disease and illness between these registers as well as the boundary work involved in keeping them distinct or navigating them together. Central to understanding the entanglements of the phenomenological and biomedical, as well as that which exceeds either register, are notions of temporality and time. This panel brings together scholars invested in thinking about time and temporalities of disease, illness experience, medical knowledge systems, ecologies and landscapes, healing and medical futures and pasts. The panel brings together conceptions of disease, illness, being and time

as epistemic, ontological, semiotic, and political categories. With a strong commitment to ethnographic research, the presenters draw on a range of social milieus and locations to think about constructions of disease and how these intersect with time. The papers on pain and lupus demonstrate how continued participation in therapeutic processes is often considered success while abstention can be deemed a failure in treatment, marking bodies and subjects as 'defaulters' and/or 'uncooperative.' Alongside these transformations, temporalities feature in phenomenological experiences of disease shaping how lives are lived and reshaped in homes, families, communities, how these alter forms of attention, practices and care, play a role in the organization of spaces, as invocations of the eternal and as fleeting presences. The paper on brain damage reflects on reorderings of time as both a consequence of the condition and aim of therapeutics within and through psychopharmacology and psychiatry. As with the papers on substance use disorders and infectious diseases, the neuroplasticity and cargo system papers draw on genealogies and trajectories of thought which continue to inflect the present in particular ways including interrogating the material and spatialized constructions of time. All the papers reflect upon the unevenly distributed violence of disease, suffering and biomedical projects in disparate locations. Temporality also features in the transitions between normal and pathological forms, in diagnostics of disease, in creating distinctions between symptom and illness, as well as in shifting configurations of healing, therapeutics and cure. Therapeutic responses can be seen as now occupying a spectrum of possibilities each infused with their own temporal logics-as cure, care, and the management of hope and expectation. With increased pharmaceuticalization of life, healing itself can be understood as either deferred indefinitely or displaced onto the atemporal or eternal, ecstatic or recurrent, persistent or terminal, established or emergent. By situating our analyses among these corporeal, social, and transnational levels, the papers demonstrate the rhythms, recurrences, and interplays of illness and time. The papers deepen the conversation around disease, materiality, and time through a series of juxtapositions and analytical frames. This diverse richness is seen as an opportunity to interrogate the relationship of time and disease while mapping the myriad ways in which these two conceptual terrains are fused together.

Temporal Therapeutics: Marking Time among Current and Former Drug Users in Northern India: In this paper, I situate therapeutic chronotopes within the broader

context of temporality as the grounds of ethnographic encounter in South Asia. Among current and former drug users in Chandigarh, multiple temporalities are marked by the milestones (celebrations, conventions, recovery birthdays) that are critical for navigating the corporeal, institutional, and familial rhythms of everyday experience, particularly in de-addiction and recovery (Knight 2015), including the reduced meditative temporal horizons of slogans such as “just for today (sirf aaj lai/sirf aaj ke din)” and “good morning” messages that circulate among members of recovery groups on WhatsApp. Drawing on recent scholarship on premodern accounts of South Asian difference, and in particular the work of al-Bīrūnī (Kozah 2016) and specifically Sikh historiography (Oberoi 2021), I orient readers to the textures of time operating in the various narratives and imaginaries of therapeutic recovery that occur against a backdrop of both middle class sober productivity and “timepass” (Jeffrey 2010). I trace the importance of COVID time (kaal) as a specific kind of performative dispensation (Mazzarella 2013) and state of exception to develop reflections on temporal therapeutics among mutual aid groups (such as Narcotics Anonymous and Alcoholics Anonymous) operating in Chandigarh. I address how the incorporation of eternity as something more than a “static” conception time and through a careful engagement with Kierkegaard and Guru Nanak, enables new ways of thinking about orientations, affective engagements, and therapeutic practices in the devotional vernacular idiom of my interlocutor. Presenter: Mauricio Najarro (University of California, Berkeley, Department of Anthropology)

Pain, Chronicity and Desire in Biomedical Frames: Is pain desirable? – appears as a counterintuitive question, out of place in therapeutic settings which claim to be motivated by a commitment to alleviate suffering and ‘to do no harm.’ But the posing of this question in clinical settings demonstrates a frame of analysis of pain in which it is linked with the role pain plays and the functions it serves? Situated within this configuration of desire and utilitarian logics, chronic pains (cancer and non-cancer) challenge imaginations of therapeutic futures. The paper develops and contrasts two ethnographic scenes: of pain specialists working with chronic pain among industrial labour force workers at a pain management clinic and oncologists treating cancer at a cancer care institute in eastern India. In their framings of pain lie questions of futurity and potentiality. In the first – the pain management clinic, the central problem is addressing recurring pains which are undesired and yet signify a certain return of patients against all biomedical efforts. In the second – the cancer

institute, pain appears as the object of desire that brings patients into the fold of cancer therapeutics, an aide in treating a disease in which progression and prognosis are tied together. The paper concludes with reflections on the projected returns of patient bodies, and the biomedical desires and fears invested therein. Presenter: Shagufta Bhangu (King’s College London)

Gendered Career of Lupus in El Salvador: Despite increasing prevalence, lupus in the Salvadoran context continues to be rendered invisible—occurring in the shadow of other more prominent autoimmune diseases such as cancer and HIV/AIDS. In El Salvador, there are two patient advocacy foundations dedicated to lupus, and it is not uncommon to hear members complain that lupus is considered ‘the cancer of the poor’ and a “woman’s disease.” Drawing on and substantially revising Goffman’s concept of ‘moral career,’ I argue that the gendered trajectory of the lupus patient in El Salvador, characterized primarily by diagnostic and prognostic ambiguity, is particularly useful for understanding the labor involved in the individual management of lupus, which in turn has the potential to guide the bureaucratic and biomedical diagnosis and provision of care in both institutional settings and domestic environments or *la casa*, understood not only as physical space, but also as a place where networks of care operate and challenge biomedical imperatives. I examine the feminized trajectory of the disease as something that impacts the experience of the male lupus patient, who in the case of El Salvador is associated with a high mortality rate that comes from a late diagnosis. Attending to lupus in terms of structures and norms that impact the experience of patients with lupus in their daily life, I examine practices of self-medication, self-diagnosis and self-care that foment disruptive and tense relationships between those diagnosed with lupus and those who provide medical care. Presenter: Jorge Molina Aguilar (Universidad Luterana Salvadoreña)

“Optimal Brain Damage”: (Neuro)technics and Time: Presented with the inadequacy of established diagnostic categories and therapeutic modalities in the treatment of mental disorders, psychiatric researchers in the UK are besotted with the promises of neuroimaging studies. The neuroscientific turn has not, however, renovated the prevailing biomedical paradigm in Western psychiatry (Rose 2018). Instead, the constitution of a mental health crisis has produced a temporal difference, implicating the brain scanner in the phenomenological, moral and epistemic critique of mental illness by reanimating marginalized technologies

in psychiatry — psychedelics and cybernetics (Roitman 2013). Both technologies rely on the opening of a neuroscientific kairos through which the phenomenological dimensions of psychic injury and healing are admitted into laboratory and clinical practice as ‘plasticity’ (or synaptic change). Drawing on fieldwork in two British labs specializing in neurofeedback and psychedelics research, this paper investigates the resolution, through the concept of plasticity, of tensions between embodied and technoscientific registers of time in experimental settings. Cerebral damage is critical in the ways scientists and research participants learn to act with and upon their brains, crafting an altered existence based on the cultivation of new skills, habits and relationships. Juxtaposing the neurological journeys of patients recovering from strokes and depression, I show how an ethic of temporal attunement and greater ‘connectedness’ in the everyday rests uneasily alongside fantasies of radical transformation in a ‘critical window’, opened through shocks and perturbations. ‘Plastic’ time — ecstatic, disordered and rhythmic — is recuperated from the brain and deployed as a means for remaking subjects and psychiatric practice. Presenter: Sujit Thomas (New York University)

Neglected futures, emerging pasts. Chagas disease in the US as epidemiological reckoning with time : Place, time, and population are epidemiology’s main axes of analysis. In this sense, the categories of emerging infectious diseases (EIDs) and neglected tropical diseases (NTDs) constitute distinct arrangements of the three axes. While EIDs represent a novel occurrence, NTDs signal a protracted permanence. One draws attention to a break in underlying expectations of geographic and demographic normality. The other denounces the continuation of normality in certain places and population. Drawing from work that deals with the temporalities of epidemics (Wald, Briggs, Collier and Lakoff, Caduff, Fearnly) as well as with intricacies of neglect (Van der Slott, Ticktin, Puig De la Bellacasa), I examine the occurrence of Chagas disease in the United States. A vector-borne parasitic disease Chagas is considered endemic in Latin America but not in the US, a country with a long history of “local” and so-called “imported” cases. Through a narrative review of epidemiological, biomedical, veterinarian, and disease ecology literature, this paper shows how Chagas, at the intersection of emergence and neglect, brings scientists to question histories of epidemiological pasts all the while engaging in a speculative practices that deny alternative futures. DISCUSSANT:

Kessie Alexandre (University of Washington)

DESCRIPTION:

This panel explores how collective practices of remembering bear upon the contemporary pursuit of just and sustainable land-and-waterscapes in North American places. Scholars and activists have long emphasized how contemporary scenarios of environmental and social injustice have been delivered by historical currents of never-only-human violence, often centuries in the making. Such accounts of the past often diverge from prevailing, typically state-supported narratives that venerate regional histories and landscape traditions. As materialized in mainstream practices of preserving historical sites and landscapes, forms of public memory that obscure the enduring historical momentums set in motion by racial slavery, settler colonialism, and other forms of generative violence normalize forms of human and more-than-human injustice and enable their perpetuation. This panel asks how forms of public memory are enacted, sustained, and contested and how particular practices of remembering undermine or advance the realization of what might be called environmental justice (understood here in the most expansive sense). How, for instance, do those working through dissident political traditions and onto-epistemological practices remember and make places otherwise, opening up subjunctive futures through the invocation of pasts that depart from

official accounts? From politics of sea-level rise in the South Carolina lowcountry to the work of collective memory in Alaska Native communities, this panel engages the annual meeting's theme of transition by exploring how the stories we tell about time, place, and change beckon certain futures and foreclose others.

Coastal Straits Revisited: Remembering and Reimagining Marine Space in the Salish Sea: In the coastal straits of what is now British Columbia, Canada, the practice of salmon aquaculture has become a catalyst for competing claims to territory and jurisdiction within maritime waters. In this paper, I use salmon aquaculture as a lens through which to explore three overlapping ways of remembering and reimagining the coastal straits of the Salish Sea. Firstly, I position the coastal straits as sites of colonial history and state-making. By tracing settler histories that transform coastal waterways from *mare nullius* ("empty seas") into a marine commons under state control, I describe how contemporary practices of aquaculture are enveloped within broader histories that attempt to build Canada through the increasing appropriation of marine space. Secondly, I explore coastal waterways as places of industrialization and extractive violence. From salmon canneries and pulp mills to the fashioning of coastal straits as conduits for trade and transportation, I explore how the straits have been made and remade in negotiation with the changing tides of industries and national development programs. Finally, I discuss contemporary campaigns to evict salmon farms from coastal waters as a way to reimagine potential futures of the Salish Sea beyond state-centric narratives of industrialization. In traveling to salmon farms and serving aquaculture companies with eviction notices, I suggest that Indigenous-led attempts to reclaim marine space cultivate new collective practices of remembering in ways that center survivable futures for many entangled forms of life. Presenter: Darcey Evans (University of California, Santa Cruz, Department of Anthropology)

Place Names and Collective Memory in the Arctic: Co-Creating Multimedia Web-Based Atlases: Indigenous peoples gather to share knowledge, document, and disseminate their place names and stories. This work reasserts toponyms, reclaims space, and simultaneously expands and contests public memory, offering alternative lenses to understanding places and peoples' interaction with ecologies and possibilities for repairing relationships with place. Endonyms documentation includes Indigenous interactions with places and other-than-human-beings, further challenging settler colonial

politics of memory with deeply-rooted in-place observations and stories. These experiences and perspectives unsettle settler public memory projects and narratives. This paper considers examples of place name documentation and sharing projects supported by the Exchange for Local Observation and Knowledge of the Arctic (ELOKA). Numerous Indigenous communities are remapping and reasserting place names; discussion draws attention to multiyear co-creations of Indigenous communities' web-based atlas projects within Alaska, Canada, and Siberia. Working with Alaska Native corporations, Indigenous non-profits, and researchers, ELOKA developed online tools and atlases to support multimodal knowledge sharing over a decade. These atlases document history, place names, climate, land, and waterscape changes. They detail traditional and evolving Indigenous knowledge, social and ecological changes, stories, and wellness. These projects co-evolve and co-produce knowledges that Indigenous communities employ in forging public memories. Indigenous place naming and story sharing advance environmental justice by foregrounding past realities, subsequent changes, and expanded contemplations of futures infused with a sustainability ethos. This paper elucidates the projects' public memory and environmental justice contributions by examining these collaborative atlases' evolutions. Presenter: Joshua Brown

Hydrology of the Preservation Regime : In Charleston, a small coastal city in the South Carolina Lowcountry, BLM protesters and neo-confederates face off around a statue memorializing the "Confederate Defenders of Charleston." It is the summer of 2020, and this is a weekly event. The statue sits at the water's edge in the wealthiest neighborhood in the city, its centered neoclassical soldier holding a shield and gazing beyond the 12-foot seawall protecting the monument from storm surge—out towards the harbor where Confederate troops fired the first shots of the Civil War. Though my focus was on the neo-confederate protesters that day, as sea-level rise accelerates, this seawall performs an even more central role in the preservation of confederate iconography. Recently this seawall protected the statue and the neighborhood behind it from five tropical storms in a row. In this paper, I explore the relationship between this statue and the seawall it stands behind to better understand how white supremacist heritage movements have shaped the form and function of coastal infrastructure in the Lowcountry, racializing the flow of water in the city. How are racist landscape imaginaries translated into hydrological infrastructure, and what horizons for environmental

justice are opened and closed as these technopolitical systems are pressured by rising seas? To answer this question, I will explore water infrastructure across various sites where it is a central element of preserving antebellum heritage: the seawall around a wealthy “historic” neighborhood, the stormwater system draining a confederate monument, and the earthen dikes wrapping around a preserved rice plantation. Lastly, focusing on my engaged work in a current struggle to protect the remnants of a historic Black creekside community, I will share how Black Charlestonians draw from political traditions such as abolition and Black ecology to enact emancipatory coastal futures outside of the logics of Charleston’s “preservation regime.” Presenter: Brian Walter (University of California, Santa Cruz, Department of Anthropology)

Environmental Justice and the Work of History: Contesting Time and Place in the Hudson Valley: What are the historical and historiographical practices, both lay and professional, that help to secure white control in the contemporary U.S.? Drawn from ethnographic research in the Hudson Valley countryside of New York state—an overwhelmingly white region with a deep history of racial segregation and exclusion—this presentation explores how histories of racial and colonial violence are acknowledged but contained in public historical spaces and how this bears upon movements for environmental justice. After decades of pressure from Black and Indigenous social movements, mainstream white accounts of the regional past now recognize the foundational role of racial slavery and Indigenous dispossession to the creation of the colonial society but nonetheless seek to confine these entangled violences to a prior period. Black and Indigenous residents, by insisting on the connections between their contemporary experiences and those of their forebearers, refuse the imposition of these “historical lids” that seek to deny how historical violence surges into the present. In doing so, I argue, these residents engage in practices of history- and memory-making that call forth the possibility of other landscapes and that center the imperative of environmental justice.
Presenter: Daniel Schniedewind (Dickinson College)

Imperial Nostalgia: Divergent Visions of Mitigating Toxic Threat in California’s Salton Sea Region: California’s Salton Sea, an enormous desert lake located in the Imperial Valley region three hours east of Los Angeles, is on the brink of disaster: its smooth, glittering surface belies the pesticides, raw sewage, and industrial chemicals that lurk at its bottom as a result of runoff

from the surrounding agricultural fields. The Sea is now evaporating and exposing the toxic sediment in its lakebed to the Valley’s high winds, threatening a public health catastrophe. While the state seems to want to allow the Sea to evaporate, planning to suppress the toxic dust on its former lakebed with a network of shallow, interconnected pools, many locals remain fiercely attached to a plan that would pipe in water from Mexico to maintain the Sea’s current water level. These residents treat the state’s embrace of evaporation as a betrayal. These competing visions of what environmental justice might look like in Imperial Valley, I argue, are based on a split in collective memory. California state officials, many without personal experience of the Sea, seem committed to the textbook version of its history: it arose from an engineering mistake in 1905, and was thus a human-made disaster from the start and might as well be eliminated. Conversely, many locals remember it as a mid-century vacation destination where some of their most important childhood memories were formed, and their relationship to it today is imbued with nostalgia. But these differential memories are only possible because of the region’s racialized history: while white families frolicked on the Sea in the 1950s, Latinx farmworkers labored in the surrounding fields. And unlike their white counterparts, most Latinx residents do not seem to object to the state’s plan. Thus, I argue that the sentiment that accompanies the collective memories in question is racialized, and ask how racialized memories of the past shape imaginaries of future environmental justice. Julia E. Rodriguez (University of New Hampshire)

CHAIR:

Julia E. Rodriguez (University of New Hampshire)

PRESENTER:

Robert Launay (Northwestern University, Department

of Anthropology), Amy Cox Hall, Christopher Heaney, Charlotte Williams

DISCUSSANT:

Julia E. Rodriguez (University of New Hampshire)

DESCRIPTION:

This, the second panel in the George Stocking Jr. Symposium, addresses the conference theme of 'transitions' in that it showcases new perspectives and a new generation of research in the History of Anthropology. Together the two panels contribute to efforts to decolonize methods in the history of anthropology, including a thoughtful consideration of the debate over the backlash to decolonial efforts in the scholarship. The Symposium aims to point towards recent scholarship that simultaneously recognizes the constructive parts of 20th Century anthropology while still being committed to critiquing and moving beyond European and colonial (and patriarchal) perspectives. Panel 2, 'Anthropology Beyond Anthropologists: 'Other' Actors and Structures in the History of Anthropology,' brings together panelists with creative scholarship that decenters anthropologists as the sole, or central, figures of knowledge production. This work is part of a new conversation about previously unacknowledged actors and material had agency were crucial to the outcomes claimed by anthropologists (e.g. Bruchac; Wilner). The panelists' research encompasses both non-anthropologist actors (such as Indigenous peoples and texts; government officials) and structural factors (e.g. colonialism, laws, racism, land) as sources of insight for the history of anthropology.

THE TURKISH SPY AND THE PERUVIAN PRINCESS: VIEWS FROM AFAR?: The view (or gaze?) from afar is a common, arguably tired, trope for ethnographic research, suggesting that outsiders have privileged insights into another culture. While it can be used to legitimize European analyses of non-Europeans, it can conceivably be reversed to suggest that non-Europeans may have significant insights about European society. Such a reverse perspective inspired two different literary genres in the Enlightenment. Dialogues confronted "savages" against Europeans, "natural" as opposed to "corrupted" humanity. Epistolary novels featuring the imagined reactions of non-Europeans in Europe were more complex and ambivalent, a juxtaposition of alternate versions of "civility". Montesquieu's Persian Letters is the best known example, but the first was Giovanni Paolo Marana's Letters Writ by a Turkish Spy, serialized in eight volumes from 1684-1694. Mahmut, a Turkish spy disguised as a Moldovan, writes to Constantinople about French politics, religion, and

society. The novel plays on difference, as the protagonist simultaneously asserts national difference and conceals religious difference. Fifty years later, Françoise de Graigny's Letters of a Peruvian Woman, supposedly written by an Inca princess abducted on a Spanish ship and recaptured by a French privateer, raises issues about colonial but also gender domination. Unlike the dialogues, the epistolary novels can explore the ways that perspectives change over time, and grapple with the ways in which an outsider can gradually learn (or fail to learn) another culture. Such decentered perspectives obviously remained imaginary, but nonetheless opened a window through which the gaze might be reversed. Presenter: Robert Launay (Northwestern University, Department of Anthropology)

Uncirculated: The Limits of the Sentimental in Expeditionary Science : Photography has been inextricably linked with Machu Picchu since Hiram Bingham first brought his Kodak to the site in 1911. Initially the cameras included on the three Yale Peruvian Expeditions (1911, 1912, 1914-15) were used to picture Machu Picchu as a monumental discovery, to survey the landscape, and to mark sight lines for the expeditions' topographers. Later, photography was enlisted to document local maladies and as part of the team's larger anthropometric project. Returning from the field, expeditionary photographs were subsequently translated as illustrations for newspaper and magazine articles, as art for display in galleries and exhibitions, and as evidence of a nation's imagined glorious and noble Incan past. Although Bingham and his team made over 9,000 photographs, only a small fraction of them made their way into the public domain. Consequently, National Geographic and the handful of scientific publications that used a narrow subset of photographs have had an outsized influence over our understanding of expeditionary science as it was practiced in Latin America during the early twentieth century. In this paper I examine a few of the uncirculated photographs cataloged in twenty-three albums created by Kodak at Bingham's request. I ask what it means to be uncirculated and what that lack of circulation tells us about the limits of the sentimental and the role of indigenous actors in an expeditionary science reliant on heroic masculinity. Presenter: Amy Cox Hall

Scientific Ancestors: Andean Mummies and the Peruvian Foundations of American Anthropology : In 1687, a "Spanish Indian" fisherman told a Welsh buccaneer that the mummified bodies emerging from the coastal sands of Peru were "Indians" who had killed themselves rather

than submit to the invading Spanish. This paper recasts the fisherman's claim as a widespread subaltern forensic knowledge critiquing colonial rule. It argues that European-led interment-based anthropology developed in the 18th century Andes to debunk that fisherman's claim, insisting that mummified Andeans died "of natural causes" in a shallow "antiquity," and what their bodies instead evidenced was "ancient Peruvian" and Inca skill at "embalming." In the 19th century, these competing narratives traveled with Peruvian independence, inspiring the Philadelphian skull scientist Samuel George Morton to make "ancient Peruvians" an "ideal" pre-colonial population to compare to other Indigenous bodies from throughout the Americas—an early anthropological attention to the Andean dead that explains their large numbers in museums worldwide, as well as the shift from studies of individual human "types" to statistically significant series. This focus on American anthropology's understudied Peruvian foundation sheds light on the field's wider contingency upon sacred relationships and knowledges in the Global South. In particular, local understandings of Andean ancestors as anti-colonial and agential beings—capable of caring for the climate, but also dangerous—helps to explain how they have affected those early Peruvian and North American grave-robbers, anthropologists, museums, and societies that took them up, and leads us to more complicated questions regarding the imagined decolonization of museum remains in general.
Presenter: Christopher Heaney

Re-storying the past: United Fruit, Maya archaeological extraction, and infrastructures of knowledge:
Throughout the 20th century, the United Fruit Company (UFC) accrued so much territory within their banana plantations that they grew to be one of the largest landholders in Central America. Among the territories and parcels of land that they controlled included Maya archaeological sites, through which purchases and investments became effectively run by the UFC. From the outright purchase of Quiriguá, Guatemala, to their involvement in the conservation efforts at Zaculeu, Guatemala, and Bonampak, Mexico, the company contracted local laborers, Indigenous archaeologists, and technicians to preserve the sites for largely North American audiences. They did so under the guise of restoring history for the countries that they politically relied upon to protect their land holdings. The knowledge of the sites and their tales of discovery were largely accredited to American explorers working on behalf or within the company, yet most of the labor of archaeology, from site discovery, to excavation, to conservation and stabilization efforts, were conducted

by Indigenous experts, who themselves worked in a variety of industries, from chicle extraction to agricultural work. This paper interrogates the archaeological site as one of sterility, and seeks to contextualize the archaeological projects amidst the capitalist and extractivist enterprises within which they were embedded. Using records of the United Fruit Company's involvement with research from the National Anthropological Archives, the Carnegie Institute Archives, and the Middle American Research Institute Archives, this research seeks to understand how competing interests over plantation dynamics, labor movements, and conservation drastically affected the extraction and interpretation of Maya archaeology.

Maurice Rafael Magaña (University of Arizona)

DESCRIPTION:

This is Part I of a two-part panel on 'Horizons of Autonomy.' The historical eclipse of the worker's movement and the fall of the Berlin Wall created an impasse for emancipatory politics, a loss of a shared horizon or collective orientation for struggles that seek to overcome this world, as well as reenergized possibilities for anti-colonial and anti-racist struggles. The past few decades have been filled with tentative experiments – from uprisings to neighborhood assemblies, plaza occupations to clandestine networks

of logistics and collective care-work. One emancipatory idiom that links struggles from Rojava to Chiapas, the Valle de Sousa to the Weelaunee forest, is that of autonomy, struggles that seek not to seize state power, but construct or recuperate of a shared potential that allows people to once again inhabit territories on their own terms. Autonomy is a transitional concept for transitional times, a concept that always suggests a double movement: a breaking away from , and the accumulation of means to collectively determine life without reliance. In this sense, autonomy always operates as a horizon, a utopian impulse that is, in the words of Galeano, 'good for walking'. As anthropologists, we are particularly called to the emphasis that autonomous movements place on everyday life, lived relations, place, identity, and culture in the struggle for a new world. This panel builds on the growing scholarship on autonomy in anthropology and across other disciplines to create space for collective thought (Gutierrez Aguilar 2014, Hartman 2019, Mora 2017, Rabasa 2020, Simpson 2021). Drawing together anthropologists working in and through registers of autonomy, we will discuss autonomy, the practices of translation that make it legible as a global idiom of struggle, and the forms of transition it enables out of this world.

Autogestión: Punk and the Popularization of Anarchist Ethics in Mexico City: There was a boom in the popularity of the political principle autogestión in the first decades of the 21st Century in Mexico City, and with distinct meanings from the term's boom in Argentina at the same time. In Mexico City, the term is generally connected to art, music, and book-making collectives who pair the term with *autonomía* to mean an ethico-political sense of horizontal, nonhierarchical, anticapitalist collective practice. Elsewhere throughout the world, the term is associated with anarcho-syndicalism. However, Mexico City collectives reject any suggestion that the term has any anarchist connotations. Instead, it has a sense of generating culture, government, or economic subsistence from within an autonomous group. Most groups have strong affinities to Zapatismo. However, the term is almost exclusively used in Mexico City and is not used by the EZLN and the autonomous communities themselves. This paper asks: How did the principle come to such popularity? Why only in Mexico City? and How did it come to have such different meanings in Mexico City than elsewhere in the world? Based in interviews with Mexico City autogestive collectives, self-identified anarchists, and extensive archival research in informal archives, this paper argues that the popularization of

autogestión as a political principle in Mexico City has everything to do with punk. The term was adopted in anarcho-punk groups in the 1980's in Mexico City and was popularized and detached from anarcho-punk in the 1990's through rock concerts held to raise money for the Zapatista communities. The principle then rose to prominence in the wake of the violent repression of a year-long student strike in 2000. Running through this history is the consistent articulation of the term with an anarcho-punk sensibility of production (rather than an anarcho-syndicalist sense of production) through Mexico City's weekly rock market and Mexico City's anarchist library. Presenter: Livia Stone (Illinois State University, Department of Sociology and Anthropology)

The Intercultural Practices of Indigenous Autonomy in Peri-urban Santiago de Chile : This paper explores what new notions of Indigenous autonomy emerge amongst groups working across racial lines to establish viable communities. It does so by examining the cultural revitalization programs hosted in Indigenous (Mapuche and Aymaran) cultural centers in Santiago's poblaciones, the neighborhoods were formed through the poblador movements between 1950-1972. The pobladores were their own urban planners, agreeing on the neighborhoods' layout and assigning land plots to each family before moving onto the land, and formed committees to carry out public works. Connected to the practices which established their neighborhoods, Indigenous and non-Indigenous neighbors co-manage these Indigenous cultural centers which serve as a venue for broader community events and activities. In many parts of the world, the framework of Indigenous autonomy has often been grounded in a nation-to-nation model of Indigenous and non-Indigenous relations tied to notions of territorial sovereignty and plurinational state governance. This paper examines how histories of neighborhood co-management have led to notions of intercultural political life which contrast with the nation-to-nation model of Indigenous and non-Indigenous relations. Understanding the new intercultural dialogues and practices within community-developed projects can illuminate how communities seek to bridge the historic divides between class and citizenship-based politics of redistribution and the Indigenous politics of restitution. Presenter: Nikola Johnson (Emory University, Department of Anthropology)

Urban Autonomy and the Art of Living Otherwise: Autonomy is a lived idiom of political emancipation, more of an ethical practice than a political program. By ethnographically attending to the autonomous

communities of the Organización Popular Francisco Villa de Izqueirda Independiente, this paper will explore the ethics of autonomy, how it emerges as a practical activity that allows people to inhabit the city otherwise through horizontal decision making, collective labor, solidarity and mutual aid. By offering possibilities of a communal form of life beyond the precarity of metropolitan existence, autonomy is a reparative practice whose revolutionary potential lies not in its destructive powers of critique or contestation but in its capacity to generate habitable worlds. Focusing on this paradigmatic case of urban autonomy, this paper shows how autonomy praxis is limited to neither rural or indigenous peoples, but instead can emerge wherever people choose to face the world together. Presenter: Sam Law (University of Texas, Austin, Department of Anthropology)

DESCRIPTION:

From silkworm cultivation in India to Indian diaspora to agricultural sciences in British Malaya to interspecies entanglement of vocality in Costa Rica, this panel explores interspecies interactions and entanglement.

Towards a Banyan of Practice: Local Embodiments and Transnational Cultural Policy in India's Public Diplomacy: From the central trunk of the Banyan tree, branches travel up, over, and down into another part of the soil – again taking root. Several scholars have built on Rabindranath Tagore's metaphor of the Banyan tree (also India's national tree) to discuss the widespread Indian diaspora. In this paper, I extend the metaphor of the banyan tree to discuss the productive interactions between locally specific manifestations of Indian cultural movement practices (such as dance and yoga) and the definitions of such practices as communicated

in India's public diplomacy programs. Drawing from my transnational and multi-sited ethnographic research on India's international public diplomacy programs, and with the dance and yoga practitioners who participate in them, I propose theorizing a 'Banyan of Practice'. My use of the banyan metaphor includes diasporic and non-diasporic participation in Indian cultural embodied practices, using the metaphor of the banyan to represent embodied knowledge of and participation in South Asian cultural embodied practices that India claims as its own. This metaphorical banyan tree encompasses specific local variations and meanings while also 'rooting' specific movement practices in national cultural policy. As a case study, I discuss specific relationships with yoga among practitioners outside of India with whom I did research, and the incorporation of each approach into India's transnational image branding and international public diplomacy. I show how branches of dominant narratives and local specifications weave together, overlay one another, creating an umbrella connecting people around the world to India. This simultaneously gives agency to practitioners to make their own meaning and movement variations, and subsumes local intents into transnational strategies of foreign relations and nation branding. Presenter: Nicole Cox (University of Illinois, Urbana-Champaign, Department of Anthropology)

Living on a Silk Frontier: Silkworms, Seasonality, and Ecology in Northeast India: This presentation investigates how silkworm cultivation shapes material, ecological, and political struggles of a peasant community residing along the north banks of the Brahmaputra River in rural Assam, in northeast India. It examines what happens when a nationally inflected commodity revitalization agenda transforms a small-scale industry in a frontier region through an interplay of hegemonic business mechanisms, ethnolinguistic belonging, and rapidly shifting ecologies. Farmers and rearers who continue to struggle to maintain traditional methods of silkworm production find themselves facing a different set of issues each season: there are six seasons for silkworm rearing in the region. Each season vastly changes every year owing to climate change (erratic rain, extreme heat, and unexpected hailstorms) thereby resulting in fluctuating production patterns that ultimately affect the everyday lives of farmers and rearers. Seasonality, then, is deemed crucial in rural Assam as sociocultural and ecological relations are constantly made and unmade by both spatial and temporal factors but equally, by shifting social hierarchies. Thus, the presentation will explore the underpinnings of such a seasonality in which subaltern

communities make possible as well as impede capitalist enterprises as they create networks with the state, entrepreneurs, and their own local affiliations, while being fully aware of the uncertainties that come their way each silkworm season (pollur maah). Foregrounding this year's theme of transition, the presentation hopes to explore the alignments and incongruities between a community of silkworm rearers, patronizing state officials, and elite entrepreneurs where new conceptions of identity, rights, and aspirations emerge for such communities in an increasingly precarious landscape. Presenter: Radhika Moral (Brown University, Department of Anthropology)

Configuring Whistling: Tracing Entanglements of Vocality and Interspecies Knowledge in the Imitative Practices of Costa Rican Naturalist Guides: The entanglement of culture and nature in human-environmental relations has been widely researched in indigenous knowledge systems and in Western scientific practice. However, the relational dynamics of local naturalists' vocal correspondence with other species through imitative practices have yet to be the subject of intensive ethnographic research. In this paper, based on 11 months of original fieldwork, I trace the knotting-together of an emplaced, interspecies vocality within the 'acoustemology' (Feld 2015) of local naturalist guides based at La Selva Biological Station in northeastern Costa Rica. With my interlocutors, I understand vocal imitating as a striving to *hacer el canto*--to do/make another species' singing--or more specifically, *hacerle el canto igual al pájaro*--to do/make a bird's singing equally to the bird. I aim to articulate the relationality of *hacer el canto* as an interspecies doing/making that is performed across or in between human and bird 'formas'--or 'ways'--of vocalizing. In this way, I approach imitating as an interspecies 'enskillment' (Ingold 2011) of vocal 'responsiveness' situated in vocal entanglements--'correspondences' which inhere in relationally configured vocal modalities. My conception of relational modality acknowledges the importance of where and how guides locate the making/doing of cantos in and across bodies--both human and bird--and avoids reducing practitioners' understanding of vocal imitation to a priori strictly 'humanly' body locations and techniques. Here, I focus on the example of whistling to elucidate the indeterminacy of 'human' vocal techniques and registers within relational modalities of *hacer el canto*. I show how naturalists' vocal imitating configures whistling relationally between humans and other species, rendering imitative whistling more than human. In cases where a naturalist, through their 'own' whistling,

imitates a certain species' whistle, there is an explicit correspondence of relational vocal modality in whistling: the canto coming out of the person is whistling as such in both human and bird senses. In this 'equal' relation, the ambiguity lies in whose whistle is coming out. In contrast, in cases of species that are not understood to make whistles, but which still are often imitated through whistling, the imitative whistling takes on a certain ambiguity in relation to the bird's 'way of singing'--its 'forma de cantar.' In those cases, the understanding of the *forma de cantar* of the species as something other than whistling marks a guide's whistling of the canto, in correspondence, as something more than, or even other than, whistling. In conclusion, I demonstrate how local naturalists' performance of whistling in practices of imitating constitutes their acoustemological entanglements with other species. In being able to *hacer el canto*, naturalists have come to know the bird's own way of doing/making that canto, and not merely what that canto sounds like. Accordingly, drawing on Barad's (2007) posthumanist performative critique, I argue that this interspecies correspondence of ways of vocally doing/making resists the figuring of vocal imitation as a primarily representational phenomenon that would essentialize a canto as a sound object. Rather, as I conclude, the very ability to make/do a canto equally to a certain bird species is itself embodied and envoiced knowledge of another species' way of singing--knowledge that exists indeterminately as human/bird vocality. DESCRIPTION:

The 21st century is a time of existential challenges including but not limited to the climate crisis, racism, sexism, ableism, ageism and the need to find global solutions to these and other problems. Increasingly, anthropology and storytelling are being recognized as providing ways to address these complex issues (1). Specifically, the tools of anthropology and the performing arts are becoming viable means to explore some of these issues in context with innovative forms of technology. Moreover, anthropologists and artists are honing these tools and technologies to develop collaborative projects which seek to solve societal problems through research, experimentation, performance, and engagement. But little work within anthropology considers the ethics, methods, and impact in such collaborations. The proposed 2023 AAA Roundtable builds on the 2022 AAA Roundtable which initiated a discussion on the intersection between anthropology and theater making in the form of methods, ethics, and inspiration. This follow-up session will strive to arrive at a set of ethically-based Best Practices for applying the anthropological gaze to performance practice and action. We hope by this discussion to further delineate the rules of engagement, address issues of privacy when utilizing ethnographic interviews for the purpose of creating an artistic work, and how to create collaborative performative works with the social engagement honed by anthropological research. We will continue to explore the ethics and boundaries involved in the anthropological and creative processes. In doing so we hope to further elucidate the relevance of an anthropological perspective and its concerns in researching and utilizing source material for the creation of original artistic works for communities at the local, national and global levels. DESCRIPTION:

The past few years have witnessed a rise in mass shootings, a global pandemic, as well as various forms of structural and linguistic violence across multiple geographies. But while violence is a persistent and ordinary (Das 2006) part of everyday life, experiences of violence and its effects break unevenly along the intersecting axes of race, class, gender, sexuality, and other social categories. As Black feminist theorists (Collins 2019; McClaurin 2001) have taught us, the 'urgency of intersectionality' (Crenshaw 2016) is palpable, now more than ever, if we are to understand how interlocking systems of power are created, maintained, and reproduced under violent conditions. This panel, composed of scholars from the subdisciplines of cultural, linguistic, and biological anthropology, seeks to address the intersections of violence in its many iterations. Drawing on fieldwork in the United States and Latin America, panelists ask: What does an intersectional approach to an anthropology of violence look like? What is the role of the state in sanctioning violence with respect to race, ethnicity, sexuality, gender, and class? How does white supremacy perpetuate and maintain violence? What do testimonies/testimonios of violence reveal about survival and resistance? And in keeping with this year's conference theme of 'transitions,' how can we begin to imagine a shift towards a future free of violence?

The New Lloronx: On Ethnographic Fabulation in the wake of violence: 'The New Lloronx,' is what I call an ethnographic fabulation, inspired by the work of Saidya Hartman, that draws on a prominent border and Latin American folklore to delve into the effects of family separation. "La Llorona" is a haunting figure in a story that border and Latino parents use to discipline their children, which has been transposed into an archetype of colonization. She is a mother figure who lost her

children. In some variants of the tale, she kills them in a fit of jealousy at her husband's betrayal. The new Lloronx is a non-binary gender reformulation of it, where I depict the practices and effects of family separation, delving into other episodes of family separation in United States history and now how fathers and other caregivers have become central players in such horrendous scenes. Presenter: Gilberto Rosas (University of Illinois, Urbana-Champaign, Department of Anthropology)

Speak English!: Anti Spanish violence in the USA: Hate crimes in the USA increased 11.6% from 2020 to 2021, totaling 10,840 incidents and 12,411 related offenses. The FBI found that 64.5% "of victims were targeted because of the offenders' race/ethnicity/ancestry bias." Language is not singled out, but many instances of violence against those who dare to speak a language other than English have been recorded across the country, reflecting a basic tenet of U.S. linguistic ideology, that speaking [preferably standard] English only is indispensable to the US nation and legitimate identity. Individuals are expected to control the languages they know and how they use them or be subjected to controls. Linguistic anthropologists have explained how and why race has been remapped onto language since public racist comments about the body were discouraged. Because races as well as languages are socially constructed and are evaluated hierarchically according to superior and inferior varieties which must be kept separate to avoid contamination, comments about languages are a stand-in for racist comments, but not publicly condemned. An anthro-political linguistic analysis of the attacks against Spanish speakers underscores the increase in violence as the numbers of Latinus threaten the dominant white majority, and the role of dialectal and class differences within Spanish speaking communities. Moreover, as Bourdieu (1991) reminds us, "the language of authority never governs without the collaboration of those it governs, so we must address our own complicity in order to confront the personal attitudes and national policies that foment violence, and which must be dismantled. Presenter: Ana Celia Zentella (University of California, San Diego)

Violence Against Human Rights: Indigenous Issues in Brazil: Approximately 22% of the global land area is owned by indigenous peoples in all regions of the world. There are at least 370–500 million people in the world who speak nearly 700 languages. Most indigenous peoples continue to face marginalization, extreme poverty, low education, and little access to their fundamental rights, which makes their social, health,

and economic status invisible from that of majority groups. In Brazil, indigenous peoples are no different from other groups; there are 305 ethnic groups and approximately 900,000 indigenous people. 274 languages are spoken by them. Most of them live in the Amazon region. When COVID-19 reached the Indigenous Territories, nobody was aware of what it meant. More than 160,000 Indigenous Peoples were in a situation of critical vulnerability, meaning they were at high risk of dying. The focus of this paper is on the Indigenous Peoples of Mato Grosso do Sul, where fieldwork with indigenous peoples has been going on since 1999. I declare that the times of the pandemic were marked by strong violence against the rights of the indigenous peoples in Brazil. These communities are extremely vulnerable and only account for 0.44% of the national population. The lack of relief from agencies responsible for indigenous health and data from disaggregated sources are important to reveal racial inequalities, specific to indigenous peoples during a pandemic, when indigenous peoples are especially vulnerable to the disease. Raising the suspicion that this non-verbalized violence was leading to a type of racial genocide. Presenter: Maria Lourdes Beldi Alcantara (Medical Faculty at University of Sao Paulo)

Unseeing Our Worth: What is and is not Black Queer Reproduction: This paper contemplates Black queer reproduction as a framework for addressing the injustices upon Black queer reproductive lives across the African Diaspora. Through the lens of ethnographic research in Brazil, I first examine Brazilian Black lesbians' unseen negative affective, emotional, and corporeal experiences caused by entrenched prejudice and what is seen by my participants as interlocking social violence within gynecology in Salvador, Bahia. I discuss what I coin as 'unseen flesh' to expand a conversation on human value through an anthropology of worth tied to how knowledge production and praxes mobilizes healing and social change. I apply the concept of unseen flesh to reimagine research and interventions in the Caribbean that move Black queer reproduction as an alternative framework for reproductive justice at all intersections. Presenter: Nesselte Falu (University of Texas at Austin)

The Language of Crisis: Silences, Resistance, and Mass Violence: There have been more than 100 mass shootings in 2023 alone. While gun violence is increasing in frequency, so are the effects of gun violence on communities of color and other historically marginalized groups. For instance, on June 12, 2016, a gunman opened fire at Pulse, a gay nightclub in

Orlando, Florida, killing 49 and injuring 53 others. Early media reports neglected to mention that it also happened to be Latin Night. Eighty percent of the victims were Latinx and nearly half, 23 of the 49, were Puerto Rican. Drawing on ethnographic fieldwork in Central Florida, this paper follows the efforts of a group of Puerto Rican women who mobilized to combat the erasure of queer Brown and Black individuals following the tragedy. I argue that the 'language of crisis,' what I refer to as the silences surrounding moments of violence and disorder, generates public refusals that speak to the ways that those at the margins contest intersecting forms of oppression. The paper is also in conversation with more recent events, such as the November 2022 shooting at Club Q, an LGBTQ+ nightclub in Colorado Springs, Colorado. The shooting, which triggered memories of Pulse, is a reminder that these violent acts should not be viewed as one-time tragedies or exceptional events, but rather as part of a larger matrix of power that cannot be separated from increasing white nationalism and anti-LGBTQ+ rhetoric. Presenter: Julie Torres (University of Colorado, Colorado Springs)

“No pregnant person deserves to experience violence”: Experiences with obstetric violence in Mexico: Activists in Latin America have used the term “obstetric violence” to highlight the patterns of violence faced by birthing and pregnancy-capable people throughout all stages of their reproductive period. Patterns of obstetric violence vary in relation to racism, misogynistic, and classist dimensions that exist within the broader social context. The aim of this study was to examine the experiences of birthing parents and healthcare providers with obstetric violence within the context of Veracruz, Mexico. Methods: Qualitative study in which participants were purposely selected birthing parents (n=22) and healthcare providers (n=33). Semi-structured interviews were conducted on topics related to their experiences with obstetric violence. Interviews were analyzed using thematic analysis to identify the varying experiences of participants with obstetric violence. Results: Public healthcare institutions have developed tools to detect the violence that pregnant patients may face, but there appear to be almost no resources available to people reporting violence. Additionally, the experiences of people with obstetric violence appear to vary in relation to their age, last year of education completed, and access to either public or private healthcare services. Conclusion: These findings add to the literature interested in identifying the pathways through which obstetric violence is perpetuated and therefore the space to imagine interventions to facilitate transitions

towards futures free of obstetric violence. Presenter: Nerli Paredes Ruvalcaba (Michigan State University, Department of Anthropology)

Morgan's Holmes

DESCRIPTION:

Although their stories are often overlooked or obscured, intersex individuals exist in, and play a critical role in understanding, all cultures. Intersex bodies inherently highlight the diversity of human sex and embodiment across time and space. At the same time, intersex categories have historically been leveraged to shift categories of sex in alignment with political, social, and cultural values. Intersex voices therefore reveal how medicalized frameworks of sex and gender come to shape embodiment and identity for us all. Despite the potential of intersex to enrich cross-cultural understandings of sex as a material of social—and, by extension, human—legibility, intersex experiences have been relatively absent from anthropological inquiry and from the social sciences more broadly. Our panel suggests that intersex interlocutors and ethnographic investigations of intersex communities hold immense potential for the future of the discipline, especially in a period marked by various forms of 'trans-ness'—not only for gender and sex but also, as this year's conference theme suggests, in other human experiences. Our panel therefore centers the experiences of intersex individuals and their traces across time and cultures to explore the evolutionary, historical, linguistic, and sociocultural dimensions of the simultaneously contested and steadfast terrain of intersexuality. With contributions from cultural anthropology, linguistic

anthropology, medical anthropology, biological anthropology, and archeology, our panel demonstrates the centrality of sexing bodies in cultural and medical processes that give rise to meaning—both for those who identify as intersex or as having a disorder of sex development, and for those who do not. We therefore prioritize a space for intersex stories, which are often relegated to activist narratives of medical interventions in sex, to contribute rich understanding of lived experiences of embodying not simply a 'trans-ness,' but an 'in-between-ness.' In turn, we expand the ways in which intersex gives meaning to categories of the human while instead centering the lived experiences of those subject to such categorization in our ethnographic and anthropological work. Drawing from research across the discipline, our panel considers the following: What unique insights can intersex experiences offer anthropology? Conversely, what unique insights can anthropology offer understandings of intersex? What other spaces of liminality does the inherent 'in-between-ness' of intersex reveal? How does 'in-between-ness' complicate understandings of 'trans-ness' for the discipline and for our interlocutors? How do the shifting categories of hermaphroditism, intersex, and disorder of sex development reflect sociocultural dimensions of selfhood and power? How do these same categories figure into notions of activism and political identity for intersex individuals? What are everyday experiences of intersex across time and across cultures? How might we best work with and share the stories of intersex interlocutors? In sum, we invite the beginnings of a robust conversation about intersex within anthropology.

All Individuals with a 45,X Cell Line: Shifting Paradigms of Intersex in Turner Syndrome Communities: This paper explores the malleability of sex categorization, and its subsequent impacts on individual subjectivity, community identity, and disabling imaginaries of the “other,” through examples from ethnographic research on Turner Syndrome. The result of a partially or entirely missing X chromosome, Turner Syndrome is estimated to impact one in 2,000 of those assigned as female at birth. Nonprofit resources have historically contextualized the condition within the feminized language of “girls,” “women,” and “females.” In response, intersex scholars, activists, and individuals with the condition advocate for more inclusive language around Turner Syndrome for those who are trans, nonbinary, intersex, and—with recent changes in medical understandings of its manifestation—genetically male. In July 2022, one national nonprofit released a statement acknowledging “all individuals

with a 45, X cell line” and asking for input on how to best improve their resources accordingly. Considering these contentious shifts, I explore how my interlocutors and nonprofits leverage abstract notions of intersex to distance the condition from identities they imagine to be more severely “other” than Turner Syndrome. Ironically, much of the advocacy around Turner Syndrome awareness supports the natural diversity of bodies and, with it, intersex experiences. At the same time these identities supposedly threaten the stability of Turner Syndrome diagnoses, I show, embracing them could strengthen the very claims to gender, sex, and sexuality that those with Turner Syndrome often find they must “prove” or “perform.” In sum, this paper highlights the “in between” places Turner Syndrome occupies, and how these experiences of liminality highlight how we all differentially identify with and against culturally sanctioned “norms” to construct our identities. This powerfully mundane process, I argue, is at the core of contemporary American understandings of selfhood and diversity. Presenter: Audrey Jones

Embodied Communities: The Linguistic Construction of Community in Brazilian Intersex Support Groups: This paper examines the role of the intersex body in the linguistic construction of community among women in Brazil with an intersex chromosomal condition known as Turner Syndrome (TS). Communities are an integral component of linguistic and anthropological theory, yet the physical body is often absent from these frameworks. Drawing on recent research that has expanded theoretical understandings of community to include biomedically defined characteristics, such as “bio-speech communities”, and work that has examined linguistic practices among transgender and non-binary groups, I show how the physical intersex body is implicated in personal and group identity formation. Little work, however, within linguistics has examined the interaction between biological sex and linguistic practice, despite the theoretical cornerstone that intersex communities occupy, directly or indirectly, for understanding linguistic variation. Presenting data collected over 20 months of fieldwork in Rio de Janeiro, I analyze the role of the body in community formation, engaging with theories of “speech communities” and “communities of practice” to examine what it means to be a woman. I show how the body is implicated in the construction of fictive kinship and what I term the global Turner bioscape. While categories such as “intersex” or “Turner Syndrome” initially appear to be based in objective, scientific definitions, these data show that the idea of “community” are underlined by understandings of “embodiment” that go beyond gesture. Within the

global TS bioscape, membership is based on embodied realities more than praxis. Although non-TS group members may participate in communities, they are excluded by TS participants and denied full access to the community by virtue of their lack of a shared embodiment. Understanding communities involves a deeper consideration of the way intersex bodies play a role in negotiating membership and group identity for anthropological theory. Presenter: Ashlee Dauphinais (University of Nebraska, Omaha)

Mapping the Silence: The shifting medical paradigm of intersex bodies in Hong Kong: Intersex experiences are largely obscured in Hong Kong. Intersexuality is neither legally recognized nor commonly featured in school curriculums, and there is only one intersex activist who openly advocates against medical intervention and organizes the sole public-accessible peer support group. As a result, medical professionals have overwhelming power in categorizing and managing non-binary bodies without public knowledge. In this urbanized city where gender assignment is largely medicalized, intersex individuals' experiences are inevitably shaped by the diagnosis (or lack of) that they are subjected to since birth. The need to understand how these procedures have been taking place is immense. Through interviewing working and retired clinicians and analyzing historical and contemporary local medical literature, I reveal the ideologies that inform clinicians' decisions in 'correcting' certain bodies to fit an assigned gender, and the negotiation that takes place between medical professionals and family members. The meaning of "appropriate treatment" varies vastly across time, deeply situated within the multi-layer context of local healthcare system development, sociocultural processes, and global-local activism. What prompts doctors to embrace the United States' introduction of DSD terminology as humanitarian progress while using Chinese racial difference to justify "conservative" binary-gender assignment? Situated in Hong Kong, a post-colonial Chinese city, this paper will demonstrate a timeline of local intersex treatment that reveals the negotiation between biomedical knowledge and socio-cultural ideologies. I propose that by navigating this silence where intersex stories are overlooked, our understanding of gender, race, progress, and the very meaning of being human, could be expanded. Presenter: Wing Tong LAM

Standing your ground: Intersex terminology in the performance of substantive citizenship in Hong Kong: Intersex activists have found voice in Asia in recent years, standing up to affirm the existence here of people

whose innate sex characteristics fall outside of social expectation – that is, intersex people. Joining an international fight for their human rights, they have been working to promote the right to bodily integrity and autonomy of intersex children in particular (Carpenter 2016; 2022). For intersex citizenship to thrive, there must be legal reform and resource distribution so that citizenship even at the state level can be advanced (Monro, Crocetti & Yeadon-Lee 2019), but dominant citizenship practices, citizenship performances learned through experience, require a different kind of resistance if there is to be a shift that makes room for intersex bodies and identities (King 2021). It is through acts of dissidence that substantive citizenship beyond state control will emerge. This talk focuses on an interview with intersex activist Small Luk in Hong Kong, using discourse analysis to examine her words about the importance of terminology in the struggle for public awareness. She tells of numerous acts of citizenship in which stigma and invisibility are resisted, and these dissident acts of citizenship have led to changes in public discourse. We see that intersex people in Asia, like Small Luk, have begun to create disorder, breaking the silence and becoming political subjects with the right to claim rights by standing their ground and asserting their own bodies and identities. Presenter: Brian King (University of Hong Kong)

Beyond binaries: human sexual polymorphism in biological anthropology and evolutionary biology: Sexual dimorphism in humans, fossil hominins, and non-human primates has long been a subject of research interest in biological anthropology. The term "dimorphism" denotes the concept of the sex binary as accurate, but substantial variation exists in human sex traits, including chromosomes, alleles, hormone levels, gonads, gametes, and a variety of secondary sex traits. Intersex individuals, who possess a combination of traits traditionally considered male, female, and/or traits atypical for either, have largely been perceived by biological anthropologists as rare exceptions to sex binary rule and/or as people with medical disorders that do not challenge the sex binary. However, viewing sex variation from an evolutionary perspective shows that intersex is not rare in population genetics terms, and in fact, some intersex variations in humans are the rule in some vertebrate species. From a bioanthropological perspective, how to identify intersex individuals from skeletal remains mirrors the paleoanthropology literature discussing if, and how, human-Neanderthal hybrids could be identified in the fossil record. Existing evolutionary and bioanthropological theory, such as species concepts and the osteological paradox, provide

useful lenses through which to understand intersex variation and critique current systems of biological classification. Finally, common anthropological techniques used to estimate sex using skeletal or molecular techniques require new frameworks to encompass the variation found in intersex people. Presenter: Claudia Astorino (*)

Beyond the Chromosomes: Bioarchaeology and the Biomolecular Search for Intersex in the Past: The identification of intersex individuals in the archaeological record has historically been a complex and challenging task for bioarchaeologists. Despite these difficulties, there is growing interest in understanding the significance of being intersex in the past. Traditional bioarchaeological methods of sex estimation rely on morphological analyses, which are not always adequate for identifying intersex individuals in the past. Researchers are increasingly turning to aDNA and proteomic methods for identifying the sex of individuals in the past, including the identification of intersex individuals. These biochemical data are often presented as immutable and objective interpretations of sex, independent of socio-cultural constructs of modern definitions of sex and gender. However, the interpretation of even biochemical evidence requires careful consideration of the socio-cultural context in which they are produced, and the ways in which intersex individuals may have been perceived (in terms of both self and society) and treated in different historical and cultural contexts. There are also important ethical implications in how we, as bioarchaeologists, study, interpret, and disseminate studies of intersex individuals. History has taught us that our work has the potential to be used in harmful ways, which is why it is important to make room for more nuanced and theoretically informed approaches to the interpretation of biomolecular evidence for sex. Given the complexities of intersex identification, interpretation, and identity in the past, how do we as bioarchaeologists address the realities of intersex existence in the past in a meaningful and non-harmful way, especially with the increasing reliance on biochemical analyses to identify the 'truth' of a person's 'real' sex? This presentation aims to offer a thoughtful discussion of the strengths and limitations of biochemical methods in the identification and interpretation of intersex existence in the in the past. PRESENTER:

Joseph Wilson (University of Toronto, Department of Anthropology), Brian Thom (University of Victoria), Keziah Wallis, Matthew Resendes Medeiros

DESCRIPTION:

This panel brings together Indigenous perspectives on the land and Indigenous legal orders alongside an example of a grassroots disability rights and justice advocacy struggle in Brazil. Papers examine how 'differentiated citizenship' is incorporated in modern legal structures in the Brazilian context, while for Indigenous peoples in other contexts, ontological, more-than-human understandings of land, Indigenous knowledge as 'intellectual property' and other forms of legal pluralism are questioned in light of Indigenous legal orders.

We Just Need to Run This By the Lawyers: Corporate Ethnography and the Reification of 'Intellectual Property': The concept of 'intellectual property' has long been a topic of interest for legal and economic anthropologists (Omari 2018). Scholarship spans the exploration of the appropriateness of modern intellectual property laws in protecting 'traditional knowledge' (Brown 2003, Wright 2020) to tracing how intellectual property circulates as discrete semiotic agents (Chapman and Coombe 2020). Disputes over the scope of intellectual property laws have been the subject of anthropological critique on topics such as biodiversity (Strathern 1999, Bamford 2002), technology (Birch 2020, Darch 2004), linguistics (Gregory 2021), university research (Hoffman 2011, Read 2009), and music (Greene 2008). What is less discussed in the literature is the asymmetry in access to the 'traditional knowledge' of Indigenous communities as compared to the fiercely protected intellectual property of technology corporations. The very fact that knowledge produced by corporate or academic entities is protected by robust legal frameworks suggests a hierarchy of

cultural knowledge based on the logic of the capitalist production of surplus value (Fochler 2016). As such, institutions tasked with producing scientific and technological knowledge have often been reticent to collaborate with ethnographers who are not beholden to the same restrictions of publication and critique that their employees are (Seaver 2022, Forsythe 2001, Smith 2005). Furthermore, this asymmetry is obscured by a belief amongst many who work in fields of science and technology that theirs is a field devoid of cultural interest, a workplace best described as 'acultural' (Gershon and Taylor 2008). If ethnographers can work their way into such a company, through an internship or advisory role, they are often the source of suspicion or anxiety: 'will our intellectual property be comprised?' ask employees. Despite the common practice of signing non-disclosure-agreements (NDAs) with corporate entities and offers of 'first-right-of-refusal' or 'final edit' on publishable research, anthropologists are often thrust into a defensive position regarding the potential harm their research could do to a corporation's bottom line. Intellectual property, in such contexts, is reified as a natural and scarce resource, something not contingent on social or historical processes (May 2006), but something with inherent worth that deserves protection as a driver of economic growth. Executives or front-line scientists who might be interested in the perspective of an embedded social scientist, whether for help with communications and marketing, or with navigating issues of equity and ethics (Suchman 2011), often concede that their interests are subservient to the binding decision of the legal department with regards to access. Adding to the imbalance of power and access is the fact that securing fieldwork placement in corporate environments often occurs through personal contacts or professional networking, avenues that are not open to many researchers. In a world where intellectual property rights are starting to be extended to algorithms and code (Petersen 2022), ethnographers must undergo sensitive negotiations to gain access to the corporate laboratory and the production of knowledge therein. If anthropologists are to remain devoted to 'studying up' (Nader 1972), it remains an open question as to how access can be negotiated without alienating the very subject of analysis by compromising intellectual property rights. Presenter: Joseph Wilson (University of Toronto, Department of Anthropology)

Drawing out Law from the Land: Indigenous Legal Orders and Collaborative Ethnographic Practice in Canada: In settler states like Canada, to transform into a socially just, equitable, healthy and sustainable society,

we collectively need fundamental insights about living in Indigenous peoples' lands and territories. Transformation is a major theme of Island Coast Salish peoples' *sxwiem'* (true oral narratives). In these narratives, transformative change comes through powerfully deploying insights about how to behave, to conduct oneself, to follow *snuw'u'yulh* (the Teachings), and to live consistent with Indigenous legal orders. Transformation is not only the work of shamans and powerful beings, but also of everyday people who attend to the nuance of local Indigenous languages, to the stories, experiences, histories and lessons attached to the particular cultural places around us. The roots of what we need to transform society is in Indigenous lands, languages, and laws. As part of this move towards a just and equitable society, the law in Canada is undergoing a transformation in its foundational narratives, structures and relationships. Long dominated by Common and Civil Law traditions, Indigenous legal orders are emerging as a foundational part of Canadian legal pluralism. Lawyers, scholars, policy-makers and thought-leaders have renewed attention to Indigenous legal orders. At the University of Victoria (UVic) Faculty of Law, law students are enrolled in a four-year program what gives them a dual-degree: a Juris Doctor (JD) and a Juris Indigenarum Doctor (JID) gaining expertise in both the Common Law and Indigenous legal orders and grappling with the complex interplay between them. In this transformative work, Indigenous legal orders are not centrally encountered through codified texts of Indigenous law-makers or jurisprudence. Nor are they wrestled out of frozen old ethnographic accounts of societies in a timeless past. Legal scholars like John Borrows and Val Napoleon have offered a framework for closely understanding the local implications of sacred, deliberative, custom, positive and natural laws of Indigenous communities (Borrows 2010:23), and to attend as practitioners of Indigenous law to the ways people interact and treat each other over time (Napoleon 2012). These are productive spaces for an interdisciplinary practice of modern-day ethnography, founded on relationships of trust, respect and collaboration. Our paper offers insights for how such interdisciplinary, intercultural, ethnographic practice can be a vital part of these powerful conversations. Since 2021 Thom (a non-Indigenous anthropologist) and Morales (a member of Cowichan Tribes and professor of law) have taught one of the required intensive field school courses for UVic's JD/JID program. In these field schools, law students grapple with Indigenous legal orders grounded through their experiences at a Cowichan cultural site called *Ye'yumnuts* (www.yeyumnuts.ca). Students encounter Island Coast

Salish peoples' lands, languages, and laws through their extended stay at this ancient cultural site, visiting Elders and knowledge holders, attending to the powerful stories, experiences, histories and lessons attached to this and nearby cultural places. Our paper reflects on these potential for the connections between ethnographic practice and Indigenous legal orders. We argue that ethnographic practice can be a transformative force in the law, drawing out land-based cultural experiences and knowledge to inform nuanced insights into Island Coast Salish legal orders. Presenter: Brian Thom (University of Victoria)

Land as participant: bridging the gap between Indigenous and anthropological epistemologies: Significant discussions (and debates) have been held recently around the need to decolonise anthropology. A key component of this has been considerations of ways that we can transition into new ways of thinking and doing ethnographic research that recognise the ways that ethnocentric notions of reality continue to permeate the discipline. These conversations have long been active within experiential anthropology which has been largely inspired by the immersive participant observation advocated by Edith Turner (1996, 2003, 2011). Numerous scholars have focused on the importance of taking spirits as ontologically real when conducting research in communities who view them as such. Nils Bubandt (2009) makes a persuasive case for extending this to considering spirits as methodologically real. In this paper I bring these strands of experiential anthropology into conversation with similar conversations occurring in geography around the more-than-human geographical self. Drawing on research conducted in New Zealand around the memories and silences that permeate colonial histories, I make a case for the need to consider the land as a potential participant in ethnographic research. By this I mean to take seriously (both ontologically and methodologically) Indigenous understandings of the land as an active and agential being. Presenter: Keziah Wallis

Discourses of Disablement and "Inclusion" in Southern Brazil: A Crosspoint between Rights and Justice: How do biomedical and social-model discourses of disability tie into discussions of 'Rights'/'Justice'? How are these discussions tied to discourses of 'inclusion', citizenship, and democracy? Within Brazil, citizenship has been framed by some as a reflection not of equality, but rather distinction between individuals. Brazil's Differentiated Citizenship structures which grant 'special group-based legal or constitutional rights' (Mintz, Tossutti and Dunn 2013, 89), have remained entrenched

in modern legal structures, and thus within Brazil it is often the case that 'Justice consists in treating the equal equally and the unequal unequally according to the measure of their inequality' (Holston 2008, 28). Emerging disability 'Justice' narratives within Brazil, which in many ways challenge Rights-based approaches that rely on biopolitical systems that act to mark, record, and organize particular bodies/minds into homogenized categories of Other, seem to challenge the foundations upon which these citizenship structures were founded, and in turn the systems through which Rights-based advocates seek resources. Despite, or possibly in light of this, some 'advocacy' organizations have begun to employ features of 'Justice'-based discourse while simultaneously drawing upon biomedical discourses as a means of seeking Rights-based resources. From the growth of external global-north prominent terms and ideas such as those of 'neurodiversity' associated with disability-justice literature, to the emergence of locally coined terms such as 'defiça' (arguably meant to reflect the notion of 'crip' prominent within Critical Disability Studies literature) discussions surrounding not only how one should speak of disability, but so too how one should conceptualize disability have grown increasingly strong in Brazil. As these changes have begun to occur within academic and disability-activist circles in Brazil, so too have many other groups begun to co-opt and signal the language of disability-justice narratives while continuing to engage in and promote biomedical models and frameworks of disability that seek to eliminate and/or minimize the 'disability' in the disabled individual. In this paper I present preliminary ethnographic and Critical Discourse Analysis findings from my 12 months of ethnographic dissertation research in Florianopolis, Brazil, in which I examined how Latin-Americas largest disability advocacy organization signals 'grassroots' and revolutionary schemas associated with Justice perspectives, all while maintaining and increasingly promoting controversial biomedical discourses in the name of 'inclusion'. I seek to explore how the notion of 'inclusion' has often been used in various conflicting and counterintuitive ways. Presenter: Matthew Resendes Medeiros

Medical Anthropology in Times of Transition: Casca's Medical Anthropology Network Roundtable

2:00 PM - 3:45 PM

TMCC - 716 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Pamela Downe (University of Saskatchewan)

CHAIR:

Sylvia Abonyi (University of Saskatchewan), Pamela Downe (University of Saskatchewan)

PRESENTER:

Pamela Downe (University of Saskatchewan), Madeleine Mant (University of Toronto, Department of Anthropology), Robert Lorway, Sylvia Abonyi (University of Saskatchewan)

DISCUSSANT:

Christopher Fletcher (Laval University)

DESCRIPTION:

This is the roundtable panel for CASCA's Medical Anthropology Network. Global events and societal transformations prompt reflection and innovation including in scholarship that seeks to understand quotidian and exceptional experiences of human health and illness. Medical anthropologists are especially active in these times of broader transition, grappling within and between numerous domains of importance to advance our work, the discipline, and contributions to society. Participants in this panel discussion will draw on experiences throughout their careers to consider how they have navigated and innovated ontological, epistemological, institutional, structural, or substantive transitions in medical anthropology. Our discussion will engage transitions in theory, fieldwork, methods, technology, data, ethics, accountability, career, and/or public relevance in the production and application of anthropological knowledge. Collectively, as a panel and with our audience, we will take stock of past and current transitions in our disciplinary experiences with implications for where we go next.

Mirko Pasquini (Uppsala University)

PRESENTER:

Johanna Richlin (University of Maine), Ari Gandsman (University of Ottawa), Precious Adejumobi (University of Oregon, Department of Anthropology), L. Noel Marsh (University of Pittsburgh, Department of Anthropology), Sarah Smith (SUNY, Old Westbury)

DISCUSSANT:

Emma Varley (Brandon University, Department of Anthropology)

DESCRIPTION:

In recent years, medical anthropologists have focused significant attention on iatrogenesis-Ivan Illich's term (1982) for acute harm resulting from medical encounters. According to Illich, the physical and psychic injury, illness, and death that results from clinical encounters, and the entire enterprise of for-profit, professionalized, and industrialized medicine, is not incidental. Instead, such harm flows inevitably from a system of 'care' that prioritizes profit over patients, and in so doing, perverts industrialized healthcare's stated mission. As such, institutionalized medicine itself has become a significant source of social suffering (Kleinman 2012; Kleinman, Das, and Lock 1997). Recent work on iatrogenesis considers the frequency with which clinical encounters lead to negligence, demoralization, abuse, and violence throughout the world, and especially for vulnerable and historically marginalized populations, including women, BIPOC communities, LGBTQ+ and gender non-conforming individuals, the disabled, and the elderly (e.g. Varley and Varma 2021; Williamson 2021; Sobo 2021). Large scale studies on medical error substantiate such ethnographic findings, proving iatrogenesis to be a significant driver of morbidity and mortality throughout the world. In the U.S. alone, scholars suggest that medical error constitutes the third-leading cause of death (Makary and Daniel 2016; Anderson and Abrahamson 2017). While scholars have noted the many 'reverberating effects' of iatrogenesis 'into patients' life-worlds and subjectivities beyond the clinic' (Varley and Varma 2021, 143), such work has not yet occurred in sustained cross-cultural perspective. This panel aims to redress this gap in the literature by bringing together ethnographic and theoretical works investigating how iatrogenesis impacts daily experience beyond the clinic, and in doing so, significantly impacts the affects, beliefs, and subjectivities of individuals and communities. Papers may consider how adverse

healthcare encounters (including clinical, bureaucratic, systematic etc.) 'spillover' into the everyday worlds of research subjects. For instance, how do such encounters shape, or interact with, the various religious, existential, cosmological, and/or political commitments and orientations of diverse actors and communities? This panel promises to illuminate diverse forms of iatrogenesis cross-culturally and to underscore the pervasive and widespread consequences of institutionalized medicine. Iatrogenic After-Effects: Medical Mistrust, Far Right Activism, and Evangelical Christianity : This paper explores the cascading and “far-reaching” (Varley and Varma 2021) effects of iatrogenesis (Illich 1982) among predominantly white and middle-income mothers living in Oregon, a U.S. state long-defined by governmental distrust and entrenched political divisiveness. Based on 12-months of virtual research conducted between 2020-2021, my findings underscore the affective, political, and religious iatrogenic spillover from these mothers’ adverse clinical encounters with U.S. healthcare providers and the healthcare system writ large. I present the case-studies of two mothers, Teresa and Paula, whose experiences of iatrogenesis from childhood through childbirth promoted specific affective, political, and religious configurations. In addition to contributing to broad vaccine skepticism and medical mistrust, these mothers’ experiences of iatrogenesis led them to become involved in movements which pronounce mainstream medicine and public health entities to be nefarious. This paper delves into three of these landscapes in the U.S., including the alternative wellness industry, far-right political activism, and evangelical Christianity. Rather than dismiss these mothers—or their incursions into these movements—as wrong-headed, conspiratorial, or zealous—this paper considers

how the U.S. healthcare system itself promotes and generates such dispositions through routine harm meted out against patients, especially women and mothers. Towards this end, the paper explores vaccine skepticism, far-right activism, and Christian Nationalism as potential after-effects of iatrogenesis. Presenter: Johanna Richlin (University of Maine)

Towards a public health iatrogenesis: school closures in the context of crisis and uncertainty : Iatrogenesis is an idiosyncratic, perhaps dangerous, concept to apply to understanding the consequences of COVID-19 public health interventions. Critics have long accused Ivan Illich’s hostility towards the medical establishment as naïve or misguided, assertions intensified by the pandemic. The longstanding paradox of intervention in contexts of unknown risk, however, is simultaneously going too far and not far enough. Need for urgent action in the face of statistical risk and uncertainty provides the driving force of all medical interventions. Exploring these tensions, this paper will show how the concept of iatrogenesis can help elucidate controversies over pandemic measures. In doing so, the notion of “public health iatrogenesis” provides a prism to discuss broader social consequences, side effects, and unintended harms caused by pandemic interventions while, like the classic example of iatrogenesis of radiation therapy and chemotherapy for cancer, still acknowledging the benefits of intervention, especially to vulnerable populations. It will explore this through a case study on how the potential harms and benefits were conceptualized in administrative and bureaucratic decision-making processes in relation to debates about school closings and the mandating of vaccination and nonpharmaceutical interventions. Presenter: Ari Gandsman (University of Ottawa)

Medicine on-the-bus: Alternative Healthcare for Women on Transportation Routes in Lagos, Nigeria : On-the-bus medication advertising and sales in Lagos, Nigeria, differs greatly from mainstream healthcare. It is a readily accessible, affordable, public, customer-centric, emotive and often spiritual model that confers on ‘patients’ the power to choose their treatment options. While biomedical-themed research tags such healthcare interventions as medical quackery, self medication, and as threats to public health, the industry continues to cater for the health needs of Lagos’ urban population, including women’s health issues like fibroids, dysmenorrhea, amenorrhea, cysts, infertility, etc. This contextual research among non-medical medication vendors on Lagos buses and their female patrons aims to highlight this industry as a consequence of women’s

physical and emotional iatrogenic experiences in the biomedical space, through medical practitioners' actions and inactions while they treat women and as a result of treatment side effects. The structural failures in the mainstream healthcare sector may leave women disinterested in accessing biomedical care, without healthcare access and/or prompt women to opt for unregulated complements or alternatives which may harm their health. The work analyzes the framework of on-the-bus medication vending for its uniqueness from biomedical healthcare and how it fills healthcare gaps for women, rather than placing the industry on trial. This paper will discuss preliminary findings from a gendered pilot ethnographic study scheduled to come up in Summer 2023, ahead of a broader PhD research on this form of healthcare for urban dwellers in Nigeria. Presenter: Precious Adejumobi (University of Oregon, Department of Anthropology)

Witnessing carceral birth: the secondary impacts of systemic and individual iatrogenesis on prison d: In this paper I describe the secondary impacts of iatrogenesis on jail/prison doulas, caused by witnessing the medico-judicial apparatus of carceral pregnancy and birth in the United States. An estimated 3-4% of incarcerated women are pregnant in U.S. jails and prisons each year, with many giving birth while in custody. Recently, a growing number of birth doulas are attempting to provide emotional, informational, and physical support to incarcerated pregnant people during the perinatal period. Not only do jail/prison doulas sometimes witness inadequate care, obstetric racism, and obstetric violences against their clients, but they perceive the very condition of giving birth in a medical institution while incarcerated – and clients' subsequent separation from their newborns – as intrinsically iatrogenic. I focus on how such encounters with the entangled medical and carceral systems and the harms they perpetuate spillover into doulas' everyday experiences, shaping their affects and political commitments. My analysis is based on 19 months of ethnographic fieldwork between 2021 and 2022, involving participant observation with one jail and three prison doula programs across the mid-Atlantic and southeastern U.S., as well as 40 in-depth interviews with jail/prison doulas across the country. Here the experiences of jail/prison doulas as witnesses to adverse healthcare encounters illuminate the ways in which iatrogenesis is both an individual and a systemic phenomenon. Additionally, my research documents iatrogenic effects on witnesses of carceral birth, in the form of secondary trauma, even as witnessing both animates doulas' political engagements and shapes the affective dynamics they bring to client

encounters Presenter: L. Noel Marsh (University of Pittsburgh, Department of Anthropology)

The circulation of suffering: community iatrogenesis in US imperial spaces: "The place you go to die" is one of the most common descriptors of Guam Memorial Hospital (GMH) in the Chuukese migrant community. Hosting the only public biomedical hospital in this US colony, GMH is plagued by all the same issues as public hospitals in states, but with even less power or resources because of its territorial status. The entire Guam community suffers, but as the most marginalized, those indigenous to nearby Chuuk, Federated States of Micronesia, endure the worst outcomes, a common manifestation of biomedicine's grounding in and perpetuation of inequities. Racialized iatrogenesis (Varley and Varma 2021) manifests in the hospital, and the narratives of such medical violence circulate in the community. Everyone from Chuuk knows stories of iatrogenesis: people feeling ignored, being turned away, provided the wrong medicine, forced to pay up front before services, and treated with disdain. The stories of suffering that circulate lead to medical avoidance even in acute moments; this community spillover is another form of iatrogenic harm. So, despite considering the US a place to get better care, many migrate to receive it and then learn to avoid seeking it. These feelings exacerbated the effects of COVID-19 in the community, as families kept acutely ill loved ones at home. This paper will consider the circulation of suffering narratives as a form of community iatrogenesis. I will contemplate the ways in which the spillover effects of such narratives manifest outside of biomedical spaces, with profound health consequences in communities. Presenter: Sarah Smith (SUNY, Old Westbury)

On Being the Change: Current Developments and Trends in North American Indigenous Language Work and Practice

2:00 PM - 3:45 PM

TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Patrick Moore (University of British Columbia, Department of Anthropology)

CHAIR:

Patrick Moore (University of British Columbia, Department of Anthropology)

PRESENTER:

Patrick Moore (University of British Columbia, Department of Anthropology), Mindy Morgan, Martina Volfova, Victoria Sear (University of British Columbia, Department of Anthropology), Will Norton, Heather Dawn Burge (University of British Columbia, Department of Anthropology)

DISCUSSANT:

Jenny Davis (University of Illinois, Urbana-Champaign, Department of Anthropology)

DESCRIPTION:

The papers in this session contemplate and report on diverse contemporary Indigenous practices that aim to facilitate and encourage language use, bringing about positive changes, while working to alter linguistic trajectories, facilitating a gradual transition from decline to vitality. Many Indigenous communities are seeing a resurgence of interest in language and cultural learning, and for the first time in decades are reporting emerging fluencies among learners. Against a backdrop of language shift and change, this panel attends to felt experiences, social and kinship relations, communities, identities, including nuanced conceptualizations of language and its function. Recent and foundational works (Baldwin and Olds 2007, Boltokova 2017, Davis 2018, 2020, Dauenhauer and Dauenhauer 1998, Hinton 2010, Hinton and Carpenter 2013, Kroskrity 2016, Leonard 2008, 2010, Leonard and Shoemaker 2008, McCarty et al 2006, Moore and Hennessy 2006, Morgan 2005, Nevins 2004, 2013, Perley 2011, Volfová 2022, Webster 2015) have described the many innovative ways in which contemporary language practices, including the work of reclamation and revitalization, have countered ongoing Indigenous cultural and language marginalization and suppression, while promoting individual and community well-being through re-securing traditional domains of language use and developing new genres. The papers in this session draw on these studies, as well as other theoretical and lived community perspectives, in presenting detailed accounts of the varied approaches and responses to common challenges in language work. These approaches often reconceptualize social relations and language itself to create and enhance a safe and inclusive space to encourage individuals who have historically not been actively involved in these efforts, such as residential school survivors who are slowly reawakening their languages and finding their voices, those who were adopted away from their home communities, and with the help of technology, even those living in distant and urban centres. In the process,

contemporary fluent and emerging speakers reinterpret language structures, usage, ideologies, and their interrelationships, what Silverstein (1985) called 'the total linguistic fact'. Contemporary developments include the prioritization of language use by young adults in ways that subsume language structure, as well as new/reclaimed ideologies of the power of language, including both everyday uses and prayers, to achieve wider social change. This session seeks to convey the significance and sophistication of contemporary Indigenous language practices in North America in countering historic and contemporary social, economic, and linguistic displacement, erasure, marginalization, and oppression.

Transitions in Language Use, Structure, and Ideology: Kaska Language Practices and Programs : Emeral Poppe, Liard First Nation Patrick Moore, University of British Columbia This co-presentation deploys Michael Silverstein's well-known formulation of the "total linguistic fact" to explore advances in Kaska language reclamation. We specifically examine how language use is privileged, and comes to both encompass and go beyond what is usually considered language structure. The focus of recent Kaska language initiatives by Liard First Nation, aligned with the priorities of the Yukon Native Language Centre, has been the creation of a new generation of speakers with advanced competency, which led to daily use of Kaska in classes, activities, workshops, and mentor-apprentice learning with fluent speakers. Language documentation and analysis continue, but in a directly supportive role to language learning and use. We describe how advanced learners explore appropriate usage with fluent speakers, going well beyond the usual understandings of linguistic structure to build the knowledge needed to use the language competently in everyday situations. At the same time, young adult Kaska language learners and teachers strive to develop safe positive spaces for language use and learning. Their language ideologies and practices reflect a marked contrast to the historical and ongoing traumas that marginalized Kaska and other Indigenous languages. This can be seen as a reaction to pervasive social conflicts, as an effective pedagogy for language reclamation, and as a performative action plan creating and enacting a desirable harmonious future. Presenter: Patrick Moore (University of British Columbia, Department of Anthropology)

The Future of the Linguistic Archive : Mindy Morgan Department of Anthropology Michigan State University This paper looks back at twenty years of Indigenous language reclamation work and asks questions

regarding the use of linguistic archival materials and their role in linguistic pedagogical innovations. I interrogate the concept of “documentation” as both a process and as a product as textual materials are inscribed and reinscribed by various generations of language activists and ‘experts.’ In particular, I am interested in the practices of early 20th century American anthropologists, and how Indigenous communities use the historical linguistic materials they produced. Central to this concern is access, and the ways in which Indigenous language material is shared with communities. Following along work inspired by Atalay (2019) and Indigenous perspectives on repatriation, I consider the problematic issues that surround the incorporation of linguistic materials into contemporary language programs including addressing the history of acquisition and the ways they fit into contemporary ideological constructions of authenticity and appropriateness. I also broaden the scope of the linguistic archive to consider other sources and areas of linguistic production. Ultimately, my question is how these materials, which were designed to document the linguistic past, are being used for Indigenous futures. While my scope is large, I focus primarily on examples drawn from my work with Anishinaabemowin and Nakoda language programs over the course of the past two decades. Presenter: Mindy Morgan

Working Together to Remember Our Ways: Reflections on Community-Based Kaska Language Work: Martina Volfová and Paul Caesar-Jules Liard First Nation Language Department All community-based Indigenous language renewal activities and practices, including speaking in and speaking about language, are a form of place affirming and place making, both physically and emotionally, because it is through these practices the language’s rightful place in people’s lives is acknowledged and affirmed. While undoubtedly informed by the past, these practices and activities are inherently future-oriented, where the language’s future is creatively and collectively imagined, and steps are taken to shape the language’s and in turn the community’s futures. In this paper, we reflect and expand on the importance of multigenerational remembering of ancestral voices and lifeways (Perley 2013) as an essential part of Indigenous language work. We describe the power and potential of remembering to create and foster safe and inclusive spaces where people of different ages, skills, experiences, and abilities come together to remember words, expressions, stories, feelings, sounds, tastes, etc. We suggest that committed language learners and emerging speakers can serve as consequential catalysts for creating and re-

creating multigenerational connections, while shifting the dynamics around language work, including mitigating various ideological tensions and expectations surrounding fluency and language authority, all of which have historically hindered not only language transmission, but also the process of language reawakening and overcoming of trauma due to language loss. We suggest that long-term and consistent investments in language learning and related supports have the potential to greatly benefit the entire community, uncovering “unexpected” language and cultural vitalities, celebrating kinships and shared values, and cultivating hope and optimism about the future. Presenter: Martina Volfova

Responding to COVID-19: Reflections on the Online (Zoom) Northern Tutchone Language Classes: Even though the COVID-19 pandemic introduced many new challenges for people working to support Indigenous languages, it also presented language workers with unanticipated and new opportunities to adopt, adapt and implement alternate language revitalization and reclamation methods and approaches that they may not have considered otherwise. In response to COVID-19 restrictions, Selkirk First Nation (SFN) partnered with the Yukon Native Language Centre (YNLC) to develop and offer online Northern Tutchone (Dän K’i) language classes through Simon Fraser University’s Indigenous Languages Program. This was the first time Northern Tutchone language classes were offered online, and adults of all ages from different Northern Tutchone First Nations living across Yukon and elsewhere enrolled. As an ally researcher, I worked with SFN and YNLC staff and an Elder/Speaker to develop and facilitate these language classes. During students’ final language demonstrations, Elder Lizzie Hall (self-titled “Zoom Grandma”) reflected proudly that in all the decades spent championing her language, this was the farthest students had traveled yet. Her observation counters pervasive and harmful narratives of language decline and loss, instead re-directing us toward narratives of reclamation and success. In this presentation, I reflect on the nuanced ways in which these classes were ‘successful’ in not only how much language students were able to learn, but in how Zoom as a medium created new domains of language use and a safe space for language learning, healing, community strengthening and confidence building that extend beyond a Zoom meeting room or the duration of these classes. Presenter: Victoria Sear (University of British Columbia, Department of Anthropology)

Imagination in Dena'ina Language Reclamation: Will D. Norton, Department of Anthropology, University of Texas Dena'ina writer Peter Kalifornsky said of his ancestors, "they lived life through imagination, the power of the mind" (Kalifornsky and McNamara 2019:154). This notion of imagination still serves as a powerful concept in the contemporary movement to revitalize Dena'ina, a Northern Dene (Athabaskan) language identified as the first language of as few as 10 speakers in Southcentral Alaska. The word *eynik' delnish*, here imperfectly translated as 'imagination,' which Kalifornsky described as a meeting of (extra)human minds comparable to the joining of electrical contacts (and not, importantly, solitary invention *ex nihilo*), allowed generations of Dena'ina to access obscured knowledge and develop understanding of the new and unknown, exemplified in many traditional stories. Although the term *eynik' delnish* is rarely used today, contemporary Dena'ina language activists engage in similarly intersubjective processes of imagination, which find expression through the reconstruction of partially remembered traditions, creative pedagogical techniques, and verbal, visual, and tactile art. The most rewarding moments of revitalization I have witnessed and participated in during my work with Dena'ina language and cultural activists in Kenai, Alaska, have been those that tapped into this spirit of imaginative collaboration. By forming bonds of imagination with one another, Dena'ina speakers and learners find new ways to approach their sometimes dauntingly complex language, producing what Perley (2011) calls "emergent vitalities," and a joyful and confident sense of identity. Such re-imagining can help to bring "the power of the mind" more fully to bear in language reclamation. Presenter: Will Norton

Sháa ka Haa Yoo X'atángi: Women & Our Language: Éedaa Heather Burge, University of British Columbia & University of Alaska Southeast As Indigenous language revitalization movements continue to grow, so too does interest around best practices, as well as challenges, within those movements. Academic reflections on language revitalization work have focused on topics such as ideologies, identities, semiotics and affect to name just a few. Missing from many discussions however, seems to be an explicit focus on gender (though see Ahlers ed. 2012 for a notable exception). This talk then raises the question around gender identity and the roles they play within Indigenous language revitalization. As a Lingít language learner and instructor I'm particularly interested in how our understandings around gender support or hinder female language learners' growth within the language. In the midst of

active discriminatory policies at the state level in the US, and the continuation of systemic misogyny, how are language revitalization movements sites for decolonial healing? How are they also sites that have the potential to perpetuate harm? As conversations around safety and equity in all spaces continue to grow, how is language work growing with them? And as a new generation of language learners work to connect not just to language but culture within our programs, how do "traditional" (Leonard 2012) and contemporary understandings of gender inform those connections? Presenter: Heather Dawn Burge (University of British Columbia, Department of Anthropology)

Perspectives, Explorations, and Traces: Lessons Learned in the Development of Anthropology OER Textbooks

2:00 PM - 3:45 PM

Virtual - Room 2

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Anthropology in Community Colleges

ORGANIZER:

Jennifer Zovar (Whatcom Community College, Department of Social Sciences)

CHAIR:

Ian Ray

PRESENTER:

Jennifer Zovar (Whatcom Community College, Department of Social Sciences), Isabel Scarborough (Parkland College), John Norvell, Patrick Staib (Colorado Mountain College), Beth Shook (California State University, Chico, Anthropology Department), Ian Ray

DESCRIPTION:

Open Educational Resources (OERs) are an increasingly important vehicle for expanding equity in education, both within community colleges and in the broader anthropological community. In this roundtable discussion, we bring together editors from three of the current OER textbooks produced by the Society for Anthropology in Community Colleges (SACC) to discuss recent advancements, lessons learned, and future directions for the OER initiatives within AAA broadly and SACC specifically. Discussants will represent the following: Perspectives - An Open Invitation to Cultural Anthropology; Explorations - An Open Invitation to Biological Anthropology; Traces - An Open Invitation to Archaeology; and the coordination of SACC/AAA's OER

initiative. OERs are vital for addressing educational inequity by lowering economic marginalization, democratizing and decolonizing academic texts, and providing (dis)ability accommodations across courses. By providing free digital copies of all materials (and print materials at-cost), SACC/AAA has allowed students from around the world, including the global south, incarcerated individuals, and the general public, to learn about anthropological concepts from ethnocentrism to ethnobotany, race and racism to repatriation, social justice to sustainability, and beyond. Specifically, panelists will discuss: 1) the history of the OER initiatives within AAA/SACC, 2) the process of beginning their OER volumes, 3) challenges and roadblocks to OER production, 4) strategies and solutions to successful publication, 5) ancillaries and associated products beyond the text itself, 6) representation and decolonization of the writing process, and 7) future directions for OERs, including future editions, volumes, and products. Audience participation, including suggestions, will be solicited as SACC/AAA transitions to a sustainable, systematic approach to our OER work.

2-390

Rethinking the Bones of Binary Gender in Archaeology, Biological Anthropology, and Language

2:00 PM - 3:45 PM **TMCC - Hall G - MI**
Executive Roundtable/Townhall - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Svati Shah

CHAIR:

Svati Shah

PRESENTER:

Pamela Geller ,Lal Zimman (University of California, Santa Barbara),Shakthi Nataraj (University of California, Berkeley, Department of Anthropology),Gabby Omoni Hartemann

DESCRIPTION:

This roundtable considers Anthropology's contributions to unsettling the discursive stability of binary gender, while also criticizing the ways in which it has contributed to 'biological' and ahistorical perspectives on binary gender, particularly within explanatory frameworks for human evolution and sociality. Drawing from the emphasis in this year's conference theme on transitions, in-betweenness, inclusion and justice in a

time of anthropocenic uncertainty, the roundtable assembles critical perspectives on gender identity in biological anthropology, archaeology and linguistics that offer new interpretive paradigms on long-held assumptions within the discipline. Human societies have been shown to be extremely dynamic with respect to the ways in which kin groups and gender identity are produced and organized, with numerous examples of multiple genders and sexualities located within a single social group, as well as examples of societies which do not use 'gender' or 'sexuality' as reified categories. At the same time, archaeology and biological anthropology have persisted in using an untroubled and ahistorical notion of binary gender to interpret human remains, grave goods, and archaeological artefacts. This session intervenes in this hermeneutic by highlighting work in three anthropological subfields that makes no assumptions about the 'gender' of subjectivation or of certain finds. Roundtable participants draw from research that builds on the injunction that gender is produced in language, in an ongoing process of iteration that is conceived via enmeshment, rather than being an a priori fact of human phenotypes. Inspired by interventions being made within Indigenous and Black archaeologies, the roundtable includes perspectives from scholars working in Scandinavia, Brazil, India, and North America who collectively draw from queer, transgender and feminist perspectives on the production of binary gender.

DISCUSSANT:

Eli Elinoff (Victoria University of Wellington)

DESCRIPTION:

What is sand? On the one hand, limestone formations and stockpiles suggest an inert material waiting to be used in neoliberal earthworks (Stewart 2018). Waves, cyclones, and tectonics, that disperse sandbanks and disrupt sedimented landscapes, on the other hand, are evidence of unruliness and non-fixity. It is sand's granular features that produce both episodes of stillness and spatiotemporal indeterminacy. Granulates can be stored and poured, while also acting as liquefiers (in fracking) or hardening agent (in concrete). As Simonetti and Ingold (2022:7) write, 'a particle of sand may be solid with regard to its crystalline structure, but sand en masse, as in a desert, in dunes, or even pouring through the waist of an hourglass, behaves very much as a fluid as it is sculpted into forms of movement such as whirls, waves and swellings.' Legal and historical studies (Bhattacharyya 2018, Bennett, forthcoming), which trace the difficulty of knowing, measuring, and mapping granular materials, have further shown how the material contours of aggregate emerge as contested properties that can change over time. Over the last ten years, sand has become the subject of a growing body of literature in geography and development studies (Lamb et al. 2019; Jamieson 2021; Arnez 2021) that centers on the epistemic and material practices through which sand becomes a resource that enters global markets and geopolitical schemes (Adriansen 2009). This scholarship has shown how sand comes to matter as a resource in territorial and biopolitical projects but left little space for exploring the experimental and paradoxical aspects of sand appropriation. Building on feminist (Alaimo & Hekman 2008), new materialist (Bennett 2010), and/or decolonial scholarship (Cadena 2015; Stewart 2018), this panel purposively leaves open what sand is to let such meanings emerge from specific historical and social situations in which the vibrancy of sand is manifested. Papers may consider sand as atmosphere, device, or substrate. Thinking through the tensions between solidity and fluidity and reflecting on the in-betweenness of sand seems to be a promising avenue for theorizing the role of matter in producing continuity as well as 'latent futures' (Collins 2018). In particular, the papers in this session will produce ethnographic accounts of the indeterminate nature of geological features (King 2019; Povinelli 2016) and infrastructures to think about the unpredictability of imperial and other dominant projects. Dwelling in phase transitions as sites of uncertainty about material states of being that produce new relationalities and sociotechnical fixes, panelists aim at considering 'earthly

and social becoming together' (Clark and Yusoff 2017). If there is nothing inherently conservative or emancipatory about sand, how does it 'gather specific histories and imaginations of life into itself' (Boon et al. 2018), and how does this material indeterminacy also affect the practice and outcomes of ethnographic research? This panel encourages lyrical, sensorial, visual, or other non-conventional ethnographic engagement with sandy transitions. The session program reflects a strong commitment to diversity on multiple levels: academic standing, gender, ethnic and socioeconomic background, and disciplinary affiliation.

The Malacca Dilemma: Reclaiming Futures Built on Sand: Taking Malacca's silted grounds as a starting point, this contribution suggests reading land reclamation — a practice aimed at consolidating sand into land mass — alongside the matter's vibrancy. A former trading hub in Southeast Asia, Malacca today is partly a ghost town, developing land and real estate in anticipation of a brighter future. Malacca's actuality forecloses the complex relationships between national and transnational interests, land reclamation, and its unintended side effects. It highlights that the state of sand, and by extension the symbolic, economic, and political meanings attached to it, are ever-shifting. Foregrounded by "failed" reclamation projects, local fishermen gain political agency and mudfish start to flourish. Here, sand can be seen as the substrate for capital, human, and non-human entanglements. My contribution is based on fieldwork conducted in Malacca, Malaysia in 2020 and analyzes how sand is rendered operational as an economic and political medium. At the same time, I draw attention to its granular physics to show how this perspective creates opportunities for rethinking material transformation beyond extractivism. The presentation will feature excerpts from my film work *White Elephant* (2022). The two-channel video installation explores the relationship between architectural models, promotional digital renders, and the actual sites. Malacca's deserted coastline stands in for the disjunction between future promises, their material premises, and repercussions. Amidst the ruins, the silty plots of land start to form a life of their own. Presenter: Michaela Büsse (RIFS - Research Institute for Sustainability Helmholtz Centre Potsdam)

Examining river sand work across mechanization levels: Insights from Cambodia, China and Indonesia: Labour scandals in the sand industry have emerged in relation to criminal gangs, elite capture and peonage labour. While such scandals have been important to expose,

there has been limited analysis of sand work outside the media spotlight, particularly in terms of the everyday working conditions that sand workers endure across varying sites of extraction. We draw on the concept of precarity to understand how different levels of mechanization intersect with changing ecological conditions to produce particular sand labour regimes, using insights from riverine sites of extraction in Cambodia, Indonesia and China. Our results highlight how riverine-based sand livelihoods are generally precarious, although such livelihoods may be perceived by sand workers to be safer and less intense than other low paid jobs workers would otherwise engage in. Even so, certain aspects of the sand labour process are far riskier than others. Levels of labour precarity are further differentiated by mechanization level, where a worker fits in a particular sand labour hierarchy, and worker length of time in the sand industry. We further argue that a more integrative approach to labour precarity, that takes into account how ecological decline can further drive precarity, is useful for understanding commodity-based livelihoods including sand work. Presenter: Melissa Marschke (University of Ottawa)

Sand in 'emergent space': On the infrastructural illogic of beach renourishment: To save its eroding beach, the town of Delray Beach, Florida, began a long-term project of beach renourishment, in which sand is dredged offshore and funneled onto the beach. Renourishment is a 'fluid-technology,' straddling natural and socio-technical spheres, blurring the lines between infrastructural engineering and ecosystem restoration (De Laet and Mol 2000). Renourishment is expensive, ecologically violent, and perpetuates the misguided belief that nature can be held still. However, the beach is itself a rejoinder to the infrastructural illogic of renourishment; a beach, in its natural form, does not erode, rather it expands and contracts, absorbing the shock of waves and storms because it can move with them. It has this capacity because of its aggregate composition, of grains of sand in ceaseless transition. In the surf, sand is muddy and moldable in one's palm, when dry it slips through one's fingers; it builds up into peaks and valleys on the beach, only to be deconstructed by the next wave. Sand is useful in understanding geographer Doreen Massey's 'emergent,' 'relational' space (2005). In Massey's view, space is unfixed and porous. Interwoven with time, space is in a constant state of movement, like sand. Massey's space breaks down barriers between the natural and constructed worlds because nothing has a fixed state, things are instead 'processes' in fluid transition, like the transformations of sand on a beach. Viewed through

this lens, Delray Beach is a city 'built on sand,' on unstable ground and logic, attempting to hold the sea at bay and itself in place with unsustainable coastal engineering and development practices, forgetting that the beach, like life itself, is mutable and impermanent. Presenter: Kimberly Schoemaker (University of Oxford)

Sand-in-Waiting: Forebodings of Change and Loss in Shibchar, Bangladesh: This paper examines the ambiguous temporality of sand storage in Shibchar, Bangladesh. The storage of sand marks a moment of relative stillness amidst turbulent, and often illegal, trajectories of extraction. On the one hand, it speaks to processes of solidification, as the sludge – part liquid, part solid – that is dredged up from nearby river beds is sprayed onto land and left to dry. On the other hand, it precedes the cementification and definitive capture of sand as part of new materials. While embodying a material presence that is inherently temporary, the storage of sand does carry a strong sense of foreboding. For instance, in Shibchar, the presence of sand is intimately tied to the newly-constructed Padma Bridge, which connects this riverine part of Bangladesh to the capital city. The bridge has been a catalyst for political dreams and prestigious development plans in the area, such as the construction of an Olympic Village. While local communities can often only speculate about the extent to which these plans will actually be carried out, the presence of sand – which is often deposited illegally on their agricultural fields – is a tangible indication that something is quite literally materializing. Yet, sand storage also speaks to forms of material unraveling as it could be a foreboding of land grabbing, the intensification of river erosion, and lost harvests. Focusing on the ambiguous moment that precludes the fixing of sand as part of new materials and properties, this paper shows how sand-in-waiting produces uncertain and anxious futures. Presenter: Annemiek Prins (Radboud University Nijmegen)

You are Kōsa: Thinking and travelling with the Yellow Sand: Through ethnographic poetry, this paper explores the potentialities of thinking with the Yellow Sand (黄砂 Kōsa in Japanese). As part of my PhD project, I am conducting ethnographic research on meteorological hazards and microclimatic mitigation in Fukuoka, Japan. The description in verses of the composition of the aerosol arriving in Japan from the Gobi Desert (sand, heavy metals, antibiotics, pesticides), combined with stories from the field, allows me to trace how the Yellow Sand entangles the geologic time of sand formation, the capitalo-anthropocenic processes impacting northern-Chinese air and soil, and the toxic intimacy that the

externalities cause in the lungs of Japanese citizens. I dialogue with McCormack (2018) and Peterson (2021) and consider the Yellow Sand as atmospheric, in a meteorological and conceptual sense: affective, enveloping, volumetric, and transcorporeal. In this case, I argue that poetry helps render the formless dimension of the Yellow Sand phenomenon, between human and inhuman, organic and inorganic, existing in the geologic time and the micro-event of a biochemical reaction (Yusoff, 2013). Furthermore, this paper reflects methodologically on poetic ethnography's epistemological and communicative possibilities (and shortcomings) to deal with hyper-objects, the atmospheric and the re-figuration of spaces in the Capitalo-Anthropocene. Social Vulnerabilities and Violence in Cities

2:00 PM - 3:45 PM TMCC - 206 C

Oral Presentation Session

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Ayse Seda Yuksel (University of Vienna)

PRESENTER:

Fethi Keles ,Ram Mohan Chitta (York University, Department of Anthropology),Ayse Seda Yuksel (University of Vienna)

DESCRIPTION:

The papers of this session deal with urban situations of extraordinary group vulnerabilities, individual and group experiences of violence, and their capacities for proactive self-fashioning through recuperative artistic, social and political practices. Among those discussed in these papers are gig drivers seeking power through union organizing in Hyderabad; residents of a poor peripheral area in Sao Paulo, exposed to addiction and street violence, attempting to restructure their lives through capoeira; earthquake and war refugees from Syria and Russia contesting with the state over the 'housing crisis' in a mid-sized city in Turkey; poor residents of Johannesburg confronting everyday hunger in a squatters' settlement where 'the state is all but absent'; and transnational Bosnian Muslim refugees seeking to recuperate their lives in two U.S. cities in New York State yet finding themselves caught between past traumas and dispossession and the vexing economic challenges of resettlement.

The Displacement to Emplacement Nexus: Refugee Transitions: Based on findings of a long-term ethnographic study of the integration and other experiences of Bosnian Muslim refugees resettled to two urban environments in the north of New York State, this paper emphasizes the importance of taking a long-term perspective in studying refugee integration. While the labels 'pre-resettlement' and 'post-resettlement' offer analytical convenience when examining this topic, it is necessary to recognize that the integrating individuals may not necessarily be operating on a logic that divides their lives in a 'before-and-after' manner. Accordingly, the paper will argue that it is useful to attend to the ways in which integration experiences may exhibit a nonlinear or cyclical character captured by the idea of a nexus or continuum. The nexus is threaded by factors such as difficulties of exit from the origin country and transit through subsequent countries later on impacting individual or collective decision-making in areas of, for instance, home buying in the permanent resettlement country, or the availability of transferable pre-migration soft & hard skills and capital leading to variations in the pace of integration in the new abode. Presenter: Fethi Keles

Driving as an Urban Vocation: reflections from platform-based 'driver-partners' in Hyderabad, India: As one of the earliest entrants in the platform economy, ride-hailing companies in India have rapidly scaled up by integrating pre-existing traditional transport service providers into a more organised and professional fold of the platform. Transport workers who pursue driving as a career increasingly depend on ride-hailing and food delivery platforms for getting income and sustaining rising input costs in the profession such as a vehicle loan. Workers are allured to join the app-based platforms as drivers and food delivery workers through promises of monetary incentives, independent working hours and lucrative earning opportunities. However, a gradual decline in income and lack of social security, exacerbated further by the COVID-19 pandemic, has led platform workers to unionise outside the company fold. Protests across major cities like Bangalore, Hyderabad and Delhi were witnessed since the start of the pandemic where gig workers raised demands for improved working conditions, better pay, curb on unfair penalties and protection from harassment by loan financiers. This paper argues that the novelty manifested in the nature of the driving work and the complex modus operandi of the app-based platforms together unsettle the notion of a 'driver' as a worker. This paper attempts to explore the everyday

experiences of driving as a 'profession' by drawing from interviews and focus group discussions with two platform unions and platform workers, and interviews with state officials in Hyderabad city, India. By documenting the aspirational make-up of their struggles to become a part of the urban life, it argues for a reformulation of platform-based driving work as a 'vocational' enterprise in an urban setting. Further, by critically examining the concept of a 'vocation', the paper would suggest that use of native categories can engender new ways of understanding labour in the era of digitally-enabled capitalism. Presenter: Ram Mohan Chitta (York University, Department of Anthropology)

Scales of Justice on the Edge of Catastrophes: Insights on Housing Vulnerability from an Earthquake Zone: Since the outbreak of the pandemic, various international organizations have increasingly drawn attention to the pressing issue of a 'new housing crisis' in the Mediterranean region (EuroStat 2021, OECD 2021). This crisis, as these organizations argue, is exacerbating pre-existing problems of housing vulnerability, including households struggling to keep up with mortgage, rent, and utility payments, as well as high rates of evictions, foreclosures, and homelessness. Using city governance as a vantage point, this paper examines whether a politics of scale plays a fundamental role in articulating justice demands in response to the housing crisis, which is accompanied by forced recentralization, successive migration waves, and recent catastrophic shifts in the southern cities of Turkey. Revisiting Annelise Riles' and Nancy Fraser's seminal works on the politics of scale and representation, the paper suggests re-coupling the right to housing with the scholarship on anthropology of human rights as an attempt to critically engage with the newly emerging discourses on vulnerability, exclusion, dispossession, and injustice. The empirical template of this paper is a mid-sized tourism city in southern Turkey that has undergone hyper-commodification of housing in the early 2000s, followed by a surge in housing prices and rents in the past five years. The city, situated in a seismic zone, has experienced radical changes due to war-driven migration from Syria and Russia and a recent influx of earthquake refugees. Focusing on the discourses of newly founded Housing Rights Movements and Initiatives, NGOs responding to the recent catastrophic earthquakes, migrant initiatives in the city on the current 'housing crisis,' as well as municipalities and the central government approaching this crisis with conflicting aims, the paper specifically examines the operation and the effects of various definitions of the right to housing in defining a new political global

language and agenda. Presenter: Ayse Seda Yuksel (University of Vienna)

Melissa Wrapp (University of California, Irvine), Miguel Perez, Mariana Irby (University of Pennsylvania), Xinyu Guan (Cornell University, Department of Anthropology), Indivar Jonnalagadda (Miami University)

DISCUSSANT:

Erik Harms (Yale University, Department of Anthropology)

DESCRIPTION:

Public housing or state-constructed housing simultaneously brings into focus projects of social engineering, politics of social stratification, and processes of social reproduction. Public housing sites have recurrently appeared as the subjects of scholarly inquiry for various projects in urban and political anthropology ranging from the United States to Eastern Europe to Latin America to South and Southeast Asia. While each different regional context has yielded different approaches to the study of housing--for example the narrative of insurgent citizenship in Latin America, or displacement and domination in South Asia, or welfarism and dependency in the US--in this panel we gather ethnographers working in distinct global regions to examine public housing in their field sites in terms of 'housing regimes'. Through the analytic of housing regimes, we ask three inter-related questions: first, what forms of citizenship and what relations of ethnic/national/racial belonging are instantiated by the regionally specific mode of public housing? Second, how does the state-backed regime of housing relate to the globalized and financialized real estate market? Third, what kinds of social transformations are catalyzed or alternatively precluded by state constructed housing? The papers in this panel focus on a range of transitional

dynamics occurring in and through the socio-material assemblages of public housing, drawing attention to the tensions between housing as infrastructures of social regulation on the one hand, and housing as platform for inhabitation and flourishing in the city on the other hand. By developing the idea of housing regimes, we invite an explicitly comparative analysis about urban sociality and politics. What might be gained by treating distinct landscapes and timescapes of public housing as variable instances of similar technologies of rule? What are different kinds of state regimes trying to accomplish through public housing projects? What are different kinds of social organization fostered by public housing under different conditions? What are the contours of the state-citizen relationships materialized by public housing, and what occurs at the limits of established norms? Public housing remains a vital and intersectional site for anthropological theory, and by bringing together papers from five distinct global regions and state regimes we will begin to unpack big questions about the intersections of economy, ecology, and everyday politics. Each of the papers is ethnographically situated in durations of political, economic and historical transition. Perhaps not an intensive or rapid transformation, but the slowly unfolding afterlife of transitions – post-socialist, post-marketization, post-apartheid, etc. We interrogate this gradual and graduated space-time of transition which is acutely experienced in sites of public housing; indexed by terms like projects, schemes, developments, plans, and so on. Our papers put our analytic of housing regimes in conversation with current anthropological discussions on race, development, neoliberalism, gender and sexuality.

The Curious Case of the Stolen Shack: Prototyping South African Public Housing: Since South Africa's democratic transition in 1994, a slew of public-private partnership models have cropped up to tackle the housing crisis. Through the lens of one such partnership gone awry, I question the nature of the relationships that are fostered—at once social, material, political, and economic—when squatters in Cape Town are compelled to collaborate. In tracing the importation of “design thinking” into new regimes for housing development, this paper critically reflects on one purported future of postcolonial urban life and property. Presenter: Melissa Wrapp (University of California, Irvine)

Autoconstructed Citizenships: Immigrants' Right to Indifference in a Squatter Settlement in Santiago: Migrant populations globally are often subjected to explicit forms of housing discrimination on the basis of

their race, nationality, migration status, and social class. In Chile, due to the dramatic increase in rent prices and a worsening housing crisis, migrants have turned to autoconstructing their own houses in campamentos (informal squatter settlements) in recent years. Drawing on 13 months of ethnographic fieldwork, I show that the campamentos autoconstructed by immigrants have turned into new spaces of sociality, inclusion, and the emergence of new forms of citizenship. In contrast to research in the Global South that have linked citizen autoconstruction processes to politicized housing movements, I show that immigrants' aspirations for inclusion account for emerging claims for their “right to indifference,” which allows them to imagine forms of incorporation as equal citizens based on an ethics of civility and individual accommodation. Understanding immigrants' perspective on a right to indifference enable us examine the historical transformation of squatter settlements in a metropolis in the Global South. At the same time, it permits us to analyze how immigrants imagine forms of belonging as equal citizens in a country in which neoliberalism has been solidly embedded for more than forty years. Presenter: Miguel Perez

Colonial or Socialist Development? Housing & Politics of Sovereignty on the Former Soviet Periphery: Colonial projects—as well as anti-colonial and postcolonial states in their aftermath—have sought to secure rule over their subjects through the guarantee of welfare services, including the provision of housing. In the USSR, housing constituted a crucial component of state legitimacy and, in turn, a major nexus of state-citizen relations. Universal Soviet housing also exposed the tensions between aims of universal development and the difficulties of forging a path towards modernization separate from European imperialism. In the case of Central Asia, were socialist housing projects simply a means to secure political control and implicitly 'civilize' the USSR's Muslim periphery, or was state-provisioned housing successful in establishing forms of citizenry that understood housing as a basic right, thus providing the tools to challenge contemporary post-socialist states that have retreated from the provision of welfare? I address these questions by investigating the contemporary dynamics of state housing in Dushanbe, the capital of Tajikistan. As the poorest SSR and the only republic whose capital city was entirely constructed in the Soviet period, Tajikistan served as a model and testing ground for Soviet-led housing and development for the “Third World”. Drawing from ethnographic material conducted from 2017-2022, I demonstrate how current state-led projects to demolish Soviet-

constructed housing—often justified on nationalist or even “anti-colonial” grounds—have met with significant resistance on the part of city locals who oppose the disruptions and displacement of these new developments. Thus, I illustrate how enduring remains of socialist state-citizen relations function as tools to challenge contemporary politics of marketization and dispossession. Presenter: Mariana Irby (University of Pennsylvania)

State-Constructed Housing and the Queer Temporalities of Citizenship in Singapore: Eighty percent of Singapore’s population lives in apartment blocks constructed by the state-run Housing Development Board (HDB). My paper analyzes how HDB housing interpellates Singapore citizens through its temporalities: the rise and fall in property values and the imbrication of housing in heteronormative reproductive time. The vast majority of HDB apartments are bought by the residents, whereby apartment owners can sell their apartments off for profit after some years, as property values rise. However, one’s access to HDB housing and its possibilities for profit-making is differential: in most cases one has to be in a heterosexual marriage to purchase HDB housing ; single (often queer) people can only purchase HDB apartments later in life, and even then face various restrictions. I situate this graduated access to HDB housing in the neoliberal transition in Singapore in the 1990s, where changing economic and cultural imperatives set the stage for new queer subjects to be differentially incorporated into Singaporean citizenship. I consider how queerness in Singapore can be conceptualized not just as exclusion, but also as a differential insertion in the temporalities of state-constructed housing and the possibilities for profit-making, kin-making and world-making. While some of my single/queer interlocutors strive to “catch up” in the race for upward mobility, others inaugurate alternative and fugitive ways of participating in HDB temporalities, thereby destabilizing the norms of citizenship in Singapore. Through the prism of HDB housing, I theorize how temporality functions as a productive analytic in conceptualizing citizenship in Singapore and other contexts. Presenter: Xinyu Guan (Cornell University, Department of Anthropology)

Rightful Invasions: Public Housing Projects and the Politics of Occupancy in South India: The rightfulness of demanding a place on public property has a long history in Andhra Pradesh and has been of immense strategic value for the politics of the urban poor. Building on ethnographic fieldwork in Visakhapatnam and Vijayawada, I reveal how the connection between

‘publicness’ and ‘rightfulness’ is politically constructed by grassroots activists, and how this politics catalyzes a strident politics around state-constructed or public housing. In both Visakhapatnam and Vijayawada, I track people’s struggles to access public housing constructions that are vacant due to misallocation and political mishandling. How do we understand this large magnitude of vacant state-constructed houses, given the many challenges of providing adequate and affordable housing? I theorize public housing construction in postcolonial South India as a symbolic populist maneuver, where the buildings operate as monuments to populist projects, rather than being essential housing infrastructure. However, I argue that through collective assembly and through strategic performative moves of occupation or invasion, groups of houseless people wrestle with the populist state to claim the public infrastructures as being rightfully theirs. I present two cases where organized groups of people occupied vacant public housing structures. From these cases, I build my theoretical framework for thinking about urban citizenship through the act of “invading” public property. This insurgent politics around public housing challenges attempts to expropriate public property towards both populist and neoliberal ends. Presenter: Indivar Jonnalagadda (Miami University)

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Andrea Vazquez (University of California, Santa Cruz)

CHAIR:

Theresa Burruel Stone (Sonoma State University)

PRESENTER:

Theresa Burruel Stone (Sonoma State University), Andrea Vazquez (University of California, Santa Cruz), Silvia Solis

DESCRIPTION:

In her (1987) book *Pilmigrages*, Maria Lugones writes of an active subjectivity. Inspired by the consciousness of racialized, immigrant women, Lugones explains that an active subjectivity is a derivation from agency. For many resistance scholars of education, agency is the ability to break from one's predetermined condition in order to

establish autonomy (see, for example, Aronowitz and Giroux, 1985). However, Lugones understands this framing of agency as an illusion of liberation formulated by dominant groups and structures that allow certain individuals to accomplish their emancipatory aims. Therefore, Lugones introduces an active subjectivity, where one becomes conscious by moving with people, and 'by the difficulties as well as the concrete possibilities of such movings' (p. 6). However, currently our global racial-capitalist-colonial world is in a crisis. Beyond post-Covid reconstruction, our society is bearing witness to school mass shootings, unpredictable environmental disasters that displaced the most vulnerable, and developing surveillance technology that has blurred boundaries and borders of global and local territories. At the heart of struggles against these forces, lie the place-base embodied lived experiences poor, gendered, and racialized people whose sociality produced geographical imperatives of active subjectivities (Gilmore,XX). Following this year's theme of Transitions, our collective work seeks to interrogate what it means to produce an active subjectivity with the land. By dwelling in the process of transition as a project of connection and mobility, we attend to the interdependence on the multiplicities of others that help us to make meaning of oppression and domination. As such, our roundtable examines the potential of 'active subjectivity' with land. The first paper in this roundtable does so by considering how different postsecondary options support the continuance of the U.S. nation-state as a white supremacist and settler colonial project by making the children and grandchildren of demonized immigrant populations useful for nation state. This work illustrates how youth are positioned to be included within the nation-state in ways that are productive for the state, shoring up white supremacy and settler colonialism rather than dismantling them with their presence. The second paper explores how racial capitalism plays out in the between moments of environmental crisis in an agricultural community in California. In particular this paper examines the ways a school district and its community, managed devastation brought about by storm floods, and how the history of land itself gives insight into the ways that crisis could be alleviated as climate change becomes inevitable. The third paper utilizes border thought to theorize spiritual activism and healing in a community garden. By understanding healing as a process of tearing yourself apart and putting yourself back together, this paper highlights the role of school-based gardens as essential in the process of dismemberment and fragmentation and collective space making. The last paper draws on women of color

theorizing to examine how memory work is critical for racialized people's mutual recognition. Drawing from a multi-year ethnography, this paper highlights how memories that reference the earth are essential to the healing of colonial wounds and intergenerational trauma.

The Import and Impact of Documentary Work: Filmmaking, Community Building, and Afro-Diasporic Celebrations

2:00 PM - 3:45 PM

TMCC - 717 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association of Black Anthropologists

ORGANIZER:

Alexis Holloway (Duke University, Department of Cultural Anthropology)

CHAIR:

Sheila Walker ,Jemima Pierre (University of California, Los Angeles, Department of Anthropology)

PRESENTER:

Alexis Holloway (Duke University, Department of Cultural Anthropology),Sheila Walker ,Lee D Baker (Duke University, Department of Cultural Anthropology)

DISCUSSANT:

Jasmine Blanks Jones (Johns Hopkins University)

DESCRIPTION:

How can film be used alongside traditional ethnography to reach broader audiences and communicate ideas that are difficult to translate through the written word? What qualities of film make it a useful tool for representing scattered communities and diasporic relationships? What can anthropology bring to filmic approaches to produce contextualized, ethical, and audio-visually stunning works that help to bridge the perceived gap between scholarship and the arts? Dr. Sheila Walker, a prolific anthropologist, feminist scholar, and filmmaker has been producing works, both written and visual, that function to tell the oft obscured stories from the incredibly diverse and widespread African diaspora. Throughout her career, Dr. Walker has been committed to both understanding and teaching others about the African diaspora, as she has travelled to much of Africa and the Diaspora, participating in cultural events and lecturing to a wide array of audiences. When asked about the themes of her varied forms of

scholarship, Dr. Walker has described her work as 'a cultural continuum from Africa to the Americas, diasporic creations of new forms based on African knowledge, and commonalities that challenge colonial boundaries and definitions.' This roundtable will center on the work of Dr. Walker, specifically highlighting her most recent film, *Familiar Faces/Unexpected Places: A Global African Diaspora* (2018) which underscores the many ways that Africans and Afrodescendants imported their own cultural, environmental, and technological expertise to these new worlds to which they were forcibly brought. In our discussion of *Familiar Faces/Unexpected Places*, we will analyze the visual motifs that signal a history of resilience and innovation, rather than subjection and persecution. As Dr. Walker's films assert, creativity and triumph are important and critical forms of resistance. We will also underscore the significance of Black participation in documentary film production, both in front of and behind the camera. Lee Baker's deep involvement in the successful 2023 film, *Zora Neale Hurston: Claiming a Space*; Saudi Garcia's use of raw footage to examine the often incongruous paces of activism, academia, and the filmmaking industry; and Alexis Holloway's mobilization of film to challenge the obfuscating forces of the racial imaginary in classical music performance, all speak to the potential of media as a form of solidarity work and public-facing educational opportunities. Jasmine Blanks Jones understands ethnographic film as 'a powerful pedagogical tool for working with Black World youth to lift their voices, stories and aspirations to wider audiences and crucial as an archival form of the intellectual work being done in communities that is iterative and ever-changing, often resisting written forms.' Furthermore, Jemima Pierre and Krystal Strong have found innovative and creative means by which they incorporate film into their pedagogical approaches and ethnographic praxes. Our roundtable celebrates the diaspora as it simultaneously exemplifies it. Coming from a variety of cultural, ethnic, and national backgrounds, we argue for the import of film into the anthropological canon, and emphasize the impact that film from the diaspora has, and continues to influence the field of anthropology.

The Many (After)Lives of Benjamin Lee Whorf

2:00 PM - 3:45 PM

TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Hannah McElgunn (Queen's University)

CHAIR:

Anthony Webster (University of Texas at Austin)

PRESENTER:

John Leavitt (Université de Montréal), Hannah McElgunn (Queen's University), Sean O'Neill (University of Oklahoma), Anthony Webster (University of Texas at Austin)

DISCUSSANT:

Regna Darnell (Western University Libraries - Serial)

DESCRIPTION:

Benjamin Lee Whorf (1897-1941) is both a charismatic and enigmatic presence within the field of linguistic anthropology. He is perhaps most well-known for his theorization of temporality in Hopi versus 'Standard Average European' (SAE) languages. His comparison between Hopi and English, and between other Indigenous languages and SAE, has captured both popular and scholarly imaginations, leading to debates over the validity of 'Whorfianism'. This label refers to a stance on the relationship between language and thought that is inspired by and attributed to Whorf. Yet, ironically, an interest in Whorfianism has overtaken careful consideration of Whorf himself, often moving us further from the questions he was asking, his methodologies, and the kinds of data he sought to create (see Darnell 2006; Lee 1996, 2021; Lucy 1992; Silverstein 2000 for critique). This panel revisits Whorf's life and work, focusing especially on the kinds of questions that Whorfianism tends to overlook. We ask: what kinds of cultural, aesthetic, and intellectual influences shaped Whorf's conceptualization of language? How did he approach fieldwork, and what kind of working relationships did he develop with research partners? What types of description and analysis did he experiment with? How did Whorf approach pedagogy and how can we best teach Whorf's work today? In reconsidering Whorf in this manner, we expose some of the key assumptions and motivations of contemporary linguistic anthropology, while illuminating the methodological, pedagogical, and conceptual paths that our discipline might yet follow. Darnell, Regna. 2006. 'Benjamin Lee Whorf and the Boasian Foundations of Contemporary Ethnolinguistics.' Kroskrity, 1st ed., 85–138. Santa Fe, N.M.: School of American Research Press.

What Whorf Read and Who Is Reading Whorf: Borges says that “each writer creates his precursors. His work modifies our conception of the past, as it will modify the future.” In his writings, Benjamin Lee Whorf cites a wide and eclectic set of inspirations—which is to say that he creates, retrospectively, a set of intellectual lineages leading up to him. While some of these are scientifically respectable—quantum mechanics, relativity, colloidal chemistry, non-Euclidean geometry—others, such as psychoanalysis and “unbiased cultural anthropology” are less evident for a chemical engineer, and some, such as his fondness for Jung, for Theosophy, and for the work of the occultist Fabre d’Olivet, have been used to discredit him. If we suspend judgement, can we fairly characterize the full field of Whorf’s retrojected precursors? And can this field as a whole help understand his modification of his future and our present, in Whorf’s current reappearance in some unexpected places in philosophy and literature (e.g., in speculative fiction and fantasy)? Presenter: John Leavitt (Université de Montréal)

Ernest Naquayouma and Benjamin Lee Whorf: Methodology, Representation, and Collaboration(?): Benjamin Lee Whorf first began working with Ernest Naquayouma, a Hopi speaker living in New York City, in Spring 1932. Over the next five years, they met regularly, either in New York or in Connecticut, where Whorf lived. Despite Whorf’s notoriety, Naquayouma’s knowledge of the Hopi language, and especially his ability to convey it to Whorf, have not been adequately acknowledged. Drawing on Whorf’s field notebooks and correspondence between the two men, this presentation investigates their working relationship and contextualizes it within the broader historical period of the early-to-mid 20th century. During this time, members of the Hopi community were increasingly serving as research partners for outside anthropologists, linguists, and botanists. Focusing in particular on methodology, I ask: what role did Naquayouma play in

this working relationship? How were his interests translated – or not – through Whorf’s scholarly and popular interventions? What models of collaboration and ideas about knowledge circulation can be discerned in their work together? Presenter: Hannah McElgunn (Queen's University)

Whorf’s Comparative Method: Science, Mysticism, and Relativism, as a form of Cultural Critique: In the work of Benjamin Lee Whorf (1897-1941), we find a curious synthesis of interests, going far beyond modern anthropology to the deeper roots of the profession—not just in the West, but also in the science and mysticism of ancient India, China, and the Middle East. As is well-known, his central concern was with relativism, or the validity of all perspectives—including all languages, cultures, and religious traditions—with the implication that a larger synthesis could be discovered through comparison, distilling the available wisdom, accumulated over the ages, to the benefit of all humanity. Though he began his career as a chemist, trained at MIT, he soon discovered a deeper passion for mysticism, an interest entertained by many of the greatest scientists, such as Einstein and Newton, as a path to pursuing more compelling models or explanations of life itself—as Malinowski stated in his own defense of religion, as a parallel stream of thought, complementing science. Towards the end of Whorf’s short life, these interests found expression in his deep engagement with Hopi linguistics, as a counterbalance to what he called “Standard Average European” (SAE), as a way of challenging the ontological hegemony of Western science, mysticism, and incipient relativism. Thus, Whorf’s comparative method involved not only triangulating between multiple languages, as a point of departure for exploring deeper layers of truth, but also an engagement with other ways of knowing (or epistemologies) as a dialogue between science, mysticism, and relativism—all in the interest of challenging the dominance of supposed Western culture. Presenter: Sean O’Neill (University of Oklahoma)

Whorf, Navajo Poetry, and Dialogical Ethnopoetics: Benjamin Lee Whorf has been all things to all people. Like Marx, Whorf is more discussed than read, more railed against than engaged with. This paper looks at Whorf as an early—though incomplete—example of dialogical anthropology. A reading of Whorf’s work on Hopi reveals a sustained engagement—a talking across—between Whorf and his Hopi interlocutor. Rather than focusing on language for the sake of language, Whorf’s work reveals a moral world of

language in use. Taking up this insight, I look at my own work with Navajo poets and suggest something of the ways that a dialogical ethnopoetics might be seen as a continuation of Whorf's work. This becomes especially clear as I work through fragments of transcripts of Navajo poets trying to explain to me Navajo poetry and the moral possibilities such work, often through punning, might reveal. Presenter: Anthony Webster (University of Texas at Austin)

The Social Lives of Global Commodities: Africa-China in transition

2:00 PM - 3:45 PM TMCC - 718 A

Oral Presentation Session

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Wei Ye (University of Minnesota, Twin Cities, Department of Anthropology)

CHAIR:

Boyang Ma (Duke University)

PRESENTER:

Boyang Ma (Duke University), Wei Ye (University of Minnesota, Twin Cities, Department of Anthropology)

DISCUSSANT:

Miriam Driessen (SUNY, University at Buffalo)

DESCRIPTION:

This panel investigates the intricate dynamics of Africa-China relations by examining the multifaceted social lives of various global commodities. Drawing on diverse case studies, panelists delve into the complexities of Chinese multi-level marketing companies in Kenya, distant-water fishing in Guinea-Bissau, the donkey slaughter industry in East Africa, infrastructure construction in Rwanda, and China's role in Madagascar's sugar industry. Tracing the production, movement, and transformation of these transnational objects configured in the context of Africa-China engagements, the contributors uncover various 'frictions' that question the universalizing narrative of global capitalism and open up alternative possibilities. Approaching the subject from different disciplinary, methodological, and regional angles, this panel offers insights into how African and Chinese actors interact and navigate local contexts and global markets in their everyday lives. This panel aims to contribute to a more comprehensive understanding of the evolving dynamics between Africa and China, emphasizing the need for

nuanced perspectives that consider the diverse factors shaping the transitions within the global commodities landscape.

Mutual Dependency and Skepticism in Global Supply Chain of Infrastructures in Africa : This article investigates the evolving supply chain dynamics and power relationships within Chinese-contracted infrastructure projects in Africa. In 2019, a Chinese state-owned enterprise CHCG secured a \$20 million contract from the Rwandan state-owned Water and Sanitation Corporation (WASAC) to build and upgrade southwestern Rwanda's water supply network. While the construction is mainly implemented by the Chinese construction team, it highly relies on a Rwandan consultant to facilitate and push forward the project. The presence of the Rwandan consultant significantly challenged the company's existing power dynamics and governance of procurement strategy. The consultant insisted the project should procure more materials from African countries; however, the construction team saw his proposal is driven by his personal interests and increased the general cost. The article highlights the complex interplay of mutual dependence and skepticism between Chinese and Rwandan stakeholders, demonstrating how African agency can influence infrastructure collaboration between China and Africa. Ultimately, this study examines the changing landscape of China-Africa infrastructure partnership and how transnational supply chain of infrastructure projects in Africa is negotiated, structured, and even manipulated by the interactions between Chinese and African actors. Presenter: Boyang Ma (Duke University)

Making Chinese medicine in Africa: ejiao, global donkey hide market, and speculative anticipations : Ejiao is a traditional Chinese medicine, a donkey-hide-made commodity, and also an investment good. The popularity of ejiao and the development of the ejiao industry have reshaped contemporary practices of traditional Chinese medicine and affected the global survival of donkeys. Over the past twenty years, the price of ejiao has increased by more than sixty times as China's donkey population declined from 11 million in 1992 to 2.5 million in 2018, making the production of ejiao heavily dependent on imported donkey hides. This paper investigates the processes by which the mushrooming popularity of ejiao leads to subsequent fluctuations in the global donkey hide market bound up with business marketing strategies and financial speculations. Starting with a Chinese businesswoman's story of searching for cheap donkey hides in Kenya, I show how various actors---state-owned companies,

ejiao distributors, hide traders, brokers, slaughterhouse owners---produce, trade, and hoard, revolving around the speculative anticipation of donkey hide scarcity. Enabling this speculation, the dominant ejiao company, Dong E' E'jiao's "Value Return" plan justifies a continual increase in the ejiao price, which makes ejiao and donkey hides ideal investments, thus leading to a cycle of hoarding and price rise. Unpacking these processes of capitalization and financialization, this paper illuminates the transcontinental production of contemporary 'traditional' Chinese medicines. Presenter: Wei Ye (University of Minnesota, Twin Cities, Department of Anthropology)

Society for Medical Anthropology

ORGANIZER:
William Lopez

CHAIR:
Mariela Nuñez-Janes ,Tobin Hansen (Oregon State University)

PRESENTER:
William Lopez ,Sarah Horton (University of Colorado, Denver, Department of Anthropology),Whitney Duncan (University of Northern Colorado, Department of Anthropology)

DISCUSSANT:
Kristin Yarris (University of Oregon),Nolan Kline

DESCRIPTION:
This roundtable brings together anthropologists and professionals who use anthropological methods whose engaged work with im/migrant communities pushes the boundaries of ethnography towards a mode of engagement inspired by feminist care ethics and decolonial methodologies that we call accompaniment. We will discuss how our forthcoming edited volume, *Towards an Anthropology of Accompaniment: Engaged Ethnography with Im/migrant Communities*, unsettles received ways of doing anthropology and explicitly address issues of power, positionality, inequity, and the broader social purpose of our work. We situate our volume and our roundtable discussion within a longer

trajectory of applied, engaged, and activist anthropological research and within contemporary decolonial and feminist critiques of anthropology, which seek to redress historical inequities within the discipline and beyond. Drawing together an array of anthropologists working with im/migrant communities in various settings who experiment with different modes of doing and writing ethnography, the roundtable will be a collective conversation about the possibilities of accompaniment as a way of imagining possibilities-both epistemic and empirical-for caring, decolonial forms of ethnographic engagement.

PRESENTER:
Nikolina Zenovic (Indiana University, Bloomington, Department of Anthropology),Adriana Abreu (Indiana University, Bloomington, Department of Anthropology),Beatriz Lima Ribeiro

DISCUSSANT:
Sarah Osterhoudt (Indiana University, Bloomington)

DESCRIPTION:
Concerns over climate change have engulfed global and local discussions of future possibilities. Such concerns have led to the creation of sustainability projects and transformations with aims to conserve and transition to renewable resources. This session on sustainable transitions highlights the importance of understanding perspectives and experiences across different scales, including geographic, geopolitical, and socioeconomic scales. The papers discussed in this panel touch on different contexts and perspectives, such as indigenous communities in the Brazilian Amazon, residents of a Greek island, international organizations like the United

Nations, and local communities involved in natural resource management projects. One important theme that emerges from these discussions is the need for inclusive and participatory approaches to sustainable transitions. Top-down approaches that exclude local communities can lead to power imbalances and adverse effects on those communities. The inclusion of gender perspectives is also highlighted as an important aspect of sustainability, as seen in the case of natural resource management projects in Brazil and the inclusion of gender equality as a universal goal in the UN's 2030 Agenda for Sustainable Development. Another important theme is the paradoxical nature of some sustainability projects. For example, transitions to electric vehicles that rely on ecologically destructive lithium extraction can negatively impact local socio-ecological systems. This highlights the need for a holistic approach to sustainability that considers the interconnectedness of social, economic, and environmental factors. Overall, this panel recognizes the complexity and nuances involved in sustainable transitions, particularly regarding power dynamics, socioeconomic factors, and geographical contexts. The panel highlights the importance of involving local communities, particularly marginalized groups such as indigenous people and women, in developing and implementing sustainability projects. It also emphasizes the need to consider the interconnections between different aspects of sustainability, such as environmental preservation, social equity, and economic development. By taking a multi-perspective and interdisciplinary approach, this panel aims to contribute to a more holistic understanding of sustainable transitions and support the development of more effective and equitable sustainability initiatives.

Smart and Sustainable: Language Ideologies in Astypalaia's Transition into a 'Sustainable' Island: Sounds of "sustainability" are percolating through the Astypalaian hills; the hum of electric vehicles now accompanies the island's ecosystem producing a symphony, or for some residents, a cacophony of green energy and daily life. Volkswagen and the Greek government have partnered to turn the Greek island of Astypalaia into a "smart, sustainable island" exemplifying an ideal global transition beyond fossil-fuel powered vehicles. But how do local communities respond to such implementations of "green" or "clean" solutions when they are brought in by large multinational corporations? This sustainability project will transform the island physically by altering its infrastructure in transitioning the island to reliance on electric vehicles, but also linguistically by altering the

way Astypalaian residents and tourists talk about the island and sustainability. The following explores how Astypalaian residents talk about their changing local landscape as well as how the changing sounds of the landscape communicate this transition alongside local perspectives. This paper discusses the role of language in framing responses to sustainable solutions in Astypalaia, Greece. What do the linguistic devices that people employ in articulations of sustainability reveal about people's conceptualizations of sustainable projects and social life? Considering language ideologies that are emerging alongside the implementation of this sustainability project, this paper highlights Astypalaian perspectives on environmental transitions and the conceptualization of "sustainability." This paper comments on the ways in which Astypalaian residents respond to the implementation of this corporate-governmental sustainability project and the linguistic devices they draw on in such responses. By centering local perspectives on a sustainable environmental transition, this paper combines approaches from linguistic and environmental anthropology to discuss the impacts of sustainable solutions. Presenter: Nikolina Zenovic (Indiana University, Bloomington, Department of Anthropology)

Women's Leadership in Community-Based Management in the Amazon: This paper explores the vital role of women's leadership in promoting equity and sustainability in the communities-based management (CBM) of natural resources, focusing on the pirarucu CBM systems in riverine communities in the Amazon. Pirarucu (*Arapaima* spp.) is a fish that can stretch over 2 meters (7 feet) long, weighs 200 kilos (400 pounds), and is a key resource for community-based management (CBM) systems in Amazonia. We examine women's participation in decision-making processes in CBM systems and the social and environmental outcomes of this participation. Through qualitative interviews with women leaders and community members, we analyze the ways in which women's leadership has positively impacted the community's social and ecological well-being. Our analysis reveals that women's leadership is essential to successful community-based management in the Amazon and that gender equality is essential for achieving sustainability goals. However, women leaders face several challenges, including gender-based discrimination, limited access to resources and information, and cultural barriers that hinder their participation. Our study sheds light on women's challenges in assuming leadership roles in male-dominated contexts and the strategies they employ to overcome gender-based discrimination. We argue that

promoting women's participation is a critical step towards achieving a sustainable transition towards more equitable and inclusive management of natural resources. By promoting gender equity, we can create a more just and resilient society that is better equipped to address the complex challenges of environmental sustainability in the Amazon and beyond. Our findings provide valuable insights into the potential of women's leadership for sustainable transitions and highlight the need for greater gender equity in natural resource management. Presenter: Adriana Abreu (Indiana University, Bloomington, Department of Anthropology)

An ethnographic analysis of UN CBD documents: the inclusion of indigenous views in scaled governance: The 15th Conference of the Parties part of the United Nations' Conservation and Biodiversity convention was held between November and December of 2022. The meeting was supposed to happen in 2020, however due to the Covid19 pandemic, it was delayed to 2022, chaired by China but hosted by Canada, in Montreal. During the meeting, the 2030 Agenda for Sustainable Development was approved after two weeks of intense negotiations between member states and discussions held across actors, which include academia, the third sector, activists and indigenous actors. However the elements part of the agreement and the production of the core main text were part of previous negotiations and smaller meetings held in past years, specially around the development of the Post 2020 Global Biodiversity Framework. The Framework aimed to set a supposed new paradigm to sustainability and the temporal goals necessary to its achievement, namely 2030. In this paper, I focus on how indigenous participation and worldviews have been framed in the development of the Framework, and how they were final in the 2030 Agenda. Additionally, I will follow the discussion of indigenous peoples' participation as a global collective action problem, along with the conflictual perspectives on nature and conservation present in the documents. The analysis will go through the comprehension of international treaties as part of a complex net of actors, resources, and values in clash. The paper tries to grasp an initial diagnosis of how these discussions about conservation and participation have been pursued in a multi-leveled and nested set of action situations through an ethnography of documents. Presenter: Beatriz Lima Ribeiro

Trans-disciplinary Research and Practice for Social Change

2:00 PM - 3:45 PM

Virtual - Room 1

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

National Association for the Practice of Anthropology

ORGANIZER:

John Doering-White (University of South Carolina, Department of Anthropology)

CHAIR:

Hannah Obertino Norwood ,John Doering-White (University of South Carolina, Department of Anthropology)

PRESENTER:

Zhiying Ma (University of Chicago),Sara Schwartz (University of Southern California),Katherine Gibson (University of Chicago),Sanooop Valappanandi

DISCUSSANT:

Tam Perry ,John Mathias (Florida State University)

DESCRIPTION:

Though disciplines are understood as offering 'toolkits' for making and unmaking social theories, processes, and institutions (Shange 2022), movements to dismantle and build alternative social systems inevitably call into question the emancipatory possibilities and limits of such tools (Lorde 1981). One way that scholars and professionals respond to such questions is to rummage around the toolboxes of other disciplines in search of additional tools with which to amend social worlds. These are often referred to as 'multi-disciplinary' or 'interdisciplinary' projects. In these instances, researchers collaborate 'across' disciplines, retaining and respecting the distinctions that mark the ideological, discursive, and material boundaries between disciplines or, alternatively, seeking to identify common practices, vocabularies, and knowledge among them. A third approach-trans-disciplinarity-is less reverent or beholden to academic or professional disciplines, allowing for the possibility that other methods, worldviews, and aims might be or become eminent. What kinds of reflexivity, practice, and alliance become possible in the trans-disciplinary mode? And what possibilities does trans-disciplinarity resist or foreclose? This roundtable gathers scholars who work at the intersection of anthropology and social work for a conversation about what draws us into-and becomes possible through-the transitory space between these

two fields. Anthropologists and social workers are both oriented to and by particular 'field sites,' though the nature of this orientation differs (Gulbas et al. 2021). They also have different (though overlapping) kinds of ethical commitments, institutional positions, and methods of analysis and intervention. Social work holds action—the impulse to 'do something'—as imperative, whereas anthropology maintains an uneasy distance from or skepticism toward such demands. Continually moving between these modalities presents unique challenges and opportunities depending on the political projects with which one is engaged. For the scholars participating in this roundtable, the space between these fields prompts questions about the nature of agency and ethical embeddedness in institutions, collaboration in knowledge production, and professional identity. What are our political projects and how did they lead us to the unsettled and unsettling space 'between' anthropology and social work? What 'tools' or modes of theory/world-building have come out of this space? How do the disciplinary and professional roles we inhabit shape our scholarship and our participation in social movements? What happens to these projects when we find ourselves pulled into the orbit of disciplinary or professional allegiance? More broadly, this roundtable will be a space for a conversation among anthropologists who find themselves migrating across disciplinary, activist, and professional spaces, and for thinking with trans-disciplinarity as a mode of alliance with the interstitial and the transitory. Transgressions in Care: The Power & Possibilities of Gossip Within and Beyond the Clinic

2:00 PM - 3:45 PM TMCC - 716 B

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Maxwell Hellmann

CHAIR:

Lauren Textor (Cotsen Institute of Archaeology at UCLA)

PRESENTER:

Maxwell Hellmann ,Matthew Hing ,Emily Jones ,Daniel Kennedy ,Lauren Textor (Cotsen Institute of Archaeology at UCLA)

DISCUSSANT:

Can Aciksoz (University of California, Los Angeles, Department of Anthropology)

DESCRIPTION:

Far from popular conceptions of gossip as trivial, anthropological research across many settings has demonstrated that gossip can function as a tool of social control (Drotbohm 2010, Herskovitz 1937), subversive critique of hegemonic structures (Turner 1993), and as mechanism for community building and creating social cohesion (Gluckman 1963, Paz 2018). In all of these examples, gossip frequently serves as a 'marker for boundaries of power—their emergence, reification, undermining, or crisis' (Atkins 2017, 4), and helps distinguish between in-group members and outsiders (Brisson 1992; Besnier 2009). The role of gossip within clinical spaces, however, remains undertheorized. The clinic represents an intimate, power-laden terrain in which patients and healthcare workers come together to provide, perform, produce, and contest both medical knowledge and forms of care (Waitzkin 1991). Recent work has emphasized the impact of neoliberalism on the structure of health care as well as the conditions that structure health workers' practices and possibilities for care, including the financialization of clinic and hospital systems, administrative surveillance and discipline through electronic medical records systems, and monetized pay-for-performance 'quality' metrics (Anderson & Waitzkin 2018; Maskovsky 2000). This panel inquires into the 'creative potential' of transgression (Hutnyk and Rao 2005) in order to produce liberatory care. Each talk offers an ethnographic examination of how and where spaces of clinical care afford possibilities for transgression, and in particular, the social, political and economic effects of gossip. Collectively, the panel explores the ambivalent capacity of gossip as a specific form of transgression pursued by patients and healthcare workers that can variably enable care and enact harm. The panelists, researching at a diversity of sites within and outside the United States, also reflect on their dual positionality as clinical providers and critical ethnographers, to ask how cultivating a praxis of transgression may offer a way forward for navigating the tensions between these positions.

Therapeutic Transgression?: The Work of Gossip in a Residential Care Facility: As outsiders collecting data on

group social practices, anthropologists have frequently been viewed with suspicion, especially in settings dominated by secrecy (Jones 2014). In this talk, I reflect on my experience conducting fieldwork in an under-resourced long-term care facility in Los Angeles, where I have frequently been perceived as a spy by both staff and residents. I describe the facility as a fractured social space rife with internal tensions, strict hierarchical divisions between patients and staff, and a 'culture of silence,' which enable and maintain its sub-standard social and material conditions. Within this space, I regularly transgress the sharp resident/staff divide and openly partake in taboo discussion about conditions in the facility. I demonstrate that my presence as a clinician-ethnographer interrupts existing dynamics, generating a mix of fear, hope, and relief among my interlocutors. As the recipient of gossip from both residents and staff, I am perceived as a unique source to confide in as well as a potentially dangerous conduit of information, given my liminal and bivalent positioning between the two groups. Drawing on vignettes demonstrating the potential power and pitfalls this presents, I discuss the ethical and methodological challenges of navigating interlocutors' trust, and my own anxieties about unwitting betrayal and unintentional harm (Falcone 2010). Despite these difficulties, I suggest that within a residential care setting veiled in secrecy, ethnographers can offer therapeutic value that other clinicians in the facility do not have time, interest, or ability to provide to residents, and which are not made structurally available to staff. Presenter: Maxwell Hellmann

Gossip as Clinical Transgression & Social Transfixion: Power and Politics in Community Health Work: There is ongoing anthropological inquiry into how community health workers (CHWs) –frontline, largely female health workers who share social location(s) with the patients they serve – experience both increased power and precarity as they carry out their work transferring knowledge, resources, and care bidirectionally between the “clinic” and the “community” (Maes 2016; Zabaliūtė 2021; Closser 2022). One underexplored phenomenon that is constructive of CHWs’ care relationships as much as it can be destructive for their reputations is gossip. This talk takes gossip –understood as loose, productive, evaluative talk emerging from intimate relationships (Adkins 2017) – as a central feature of CHWs’ labor experiences. Drawing on ethnographic fieldwork with CHWs employed by an NGO in Chiapas, Mexico, I analyze instances where CHWs’ and patients’ mutual gossiping about their community’s widely maligned physician pushes CHWs to transgress professional

hierarchies and circumvent the doctor’s authority by titrating medications on their own. I compare this example where gossip appears to bolster CHW-patient solidarity to other moments where CHWs become subjects of gossip (chisme) by other community members, in transfixing critiques that invoke gendered tropes and local norms around material reciprocity. Here, I argue that gossip functions as a gendering and moralizing critique of the perceived selectivity of CHW program benefits within a context of widespread economic precarity and restricted labor opportunities – both a “leveling mechanism” (Besnier 2009) imposed on CHWs’ potential social mobility and a productive practice (Van Vleet 2003) that offers community members space to theorize about the program’s effects on their social worlds. Presenter: Matthew Hing

“This place is like high school”: Gossip and the positionality of the field worker: As an ethnographer on the trauma surgery service of a teaching hospital where I had worked as a medical student—and planned to work at again—I found myself both the subject and participant in the circulation of various forms of gossip. As a fourth-year medical student and future surgical resident, the content of the gossip that circulated both by and about me carried intense emotional and professional stakes. While my intimate relationships with the residents and attendings at this hospital undoubtedly facilitated my access to the site and the investment of my interlocutors in my project, this intimacy likewise implicated me directly in the professional and social world I was studying. This paper considers the role of gossip in locating the ethnographer within a social system and in producing conflict as a result of “studying up” in such an immediate way (Nader 1972). Gossip in this context was used, by both my interlocutors and me, to mark and negotiate my unstable relation of belonging as a medical student and ethnographer. I explore how the relationship between my positionality and the forms of gossip I was implicated in became mutually intertwined and constitutive, with ambiguous effects on both my ethnographic field work and medical career. Presenter: Emily Jones

Gossip as Empathetic Practice: Possibility and Limitation in Contexts of Severe Mental Illness: Drawing from fieldwork on mental health services for unhoused people in the heart of the Midwest, many of whom are experiencing active psychosis, this talk foregrounds ways gossip cultivates (and impedes) empathy for people experiencing social suffering (Kleinman 1997). Phenomenological anthropology has long considered

issues of empathy and ethnography (Hollan and Throop 2008, 2011). Further still, the psychiatric phenomenological tradition has theorized the ontological nature of psychotic realities, seeing reality itself as a product of individual and collective meaning-making (Jaspers 1967). In the context of severe psychiatric illness, Ratcliffe has argued that a phenomenological stance offers the possibility of a “radical empathy,” an empathy based fundamentally on differences of reality rather than similarities (2011). Combining this possibility with the idea of gossip as a practice of shared meaning-making (Van Vleet 2003), I examine ways in which gossip about others serves as a practice for building radical empathy for people experiencing psychosis and other forms of severe mental illness. I ethnographically push beyond an understanding of empathy as one-on-one intersubjective practice towards one of collective practice. More insidiously, I include the limitations on such a collective practice, looking at instances where racialized gossip reproduces the “crushing objecthood” imposed on non-White bodies (Fanon 1967), reducing the possibility of building radical empathy. Presenter: Daniel Kennedy

Rounds of Gossip: Discerning forms of knowledge and transgression in the hospital: This talk examines the relationship between gossip and hospital resources. In the context of both scarcity of quality care and an abundance of spending on health care in the U.S., I ask what role gossip plays in medical resource allocation, the role that forms of scarcity play on gossip, and finally, I inquire into the relationship between gossip and narratives that shape political organization for structural reforms concerning “care.” Using my privileged positionality as a medical student and ethnographer in a public hospital, I describe instances of gossip as told by “Paul”, a hospitalized patient, about his medical team, as well as gossip told about Paul by members of his interdisciplinary medical team. Examining the relationship between different formulations of the electronic medical record, conversations on care team rounds, in hallways, and on the ward near the end of Paul’s life, I inquiry into the contradictions and insights made discernible by investigating the public and hidden transcripts (Scott 1990) of clinical care settings, and the role gossip can play in determining deservingness, segregating patients into and out of care, diffusing responsibility (Goodwin 1990), and resisting hegemonic modalities of care. I describe the betrayal felt by Paul, the subject of chronic and repetitive gossip, when he was both denied pain medications with the logic that they would make his survival less likely, and was also

denied care oriented toward his survival. In response to Paul’s feeling of betrayal, I and others engaged in gossip with and about Paul in an attempt to get more resources allocated to him. Following work that examines gossip to understand hegemony and coercion (Besnier 2009) and building on what James terms “bureaucraft,” the technical practices deployed by experts attempting to assist clients (and their unforeseen consequences), I ask what gossip as transgression can make possible and what it may foreclose in the allocation of medical resources. Presenter: Lauren Textor (Cotsen Institute of Archaeology at UCLA)

Transitions and Illusions- Stepping back from sub-disciplinary approaches in the study of human evolution- Part II

2:00 PM - 3:45 PM

TMCC - 205 D

Oral Presentation Session

REVIEWED BY:

Biological Anthropology Section

ORGANIZER:

Robin Nelson

CHAIR:

Robin Nelson

PRESENTER:

Robin Nelson ,Michelle Cameron (University of Toronto, Department of Anthropology),Kathrine Starkweather (University of Illinois, Chicago, Department of Anthropology),Christopher Schmitt (Boston University, Department of Anthropology),Delaney Glass (University of Washington, Department of Anthropology)

DESCRIPTION:

Similar to other scientific fields, training in and the practice of biological anthropology has moved in the direction of increased specialization. Gone are the days of single session conferences that span the discipline. The nature of the employment market further encourages specialization through graduate and postdoctoral training. However, these external forces do not necessarily change the fundamental shared nature of the questions explored in human evolutionary studies. In part two of a two-part session, scholars will focus on the way in which the compartmentalization by sub-disciplinary expertise has shaped our understanding of time and processes of change in human evolution. How can we better connect our knowledge of anatomy

with expected change over time as studied via genetics, human biology with paleoanthropology, bioarchaeology with human ecology? Scholars in this session will present work that speaks to the points of connection that unite biological anthropology, both theoretical and practical.

How long is long enough? Considering evidence in studies of behavioral change and human evolution: The material evidence marshaled in studies of human evolution are often cordoned off into siloed areas of sub-disciplinary specialty. While this specialization has expanded our understanding of increasingly discrete features, it has hampered analyses across areas of specialization within biological anthropology. Within studies of human behavior, considerable attention has been given to identifying which period of time marks the “moment” when we became behaviorally human. Addressing this query requires consensus about both expectations of change over time and what constitutes appropriate evidence of change as it emerges from various domains within biological anthropology. One prominent school of thought argues that humans are cognitively and thus behaviorally mismatched for our current environment. In this paper, I examine the evidence for claims of slow and stalled behavioral change via material culture, identifying what support we have for ideas of inertia in behavioral evolution and persistence of 'stone age brains.' I also explore what evidence we would need to better capture behavioral change over time, thus potentially expanding our understanding of expected rates of change. Presenter: Robin Nelson

The siloed skeleton: Combatting compartmentalization of skeletal biology research : Research in human skeletal biology reflects the increased specialization and compartmentalization common to biological anthropology today. Projects are often organized around specific bony responses to stimuli or particular skeletal elements. However, the skeleton represents a responsive, dynamic tissue that integrates with other physiological systems and may reflect an array of lived experiences, albeit with limited tissue responses. Our social, cultural, and ecological circumstances may collectively affect our bones, so the study of the human skeleton is strongest when conducted using holistic, biocultural approaches that best account for these interactions. A transition towards greater engagement with colleagues across sub-disciplines within biological anthropology and with those in diverse anatomical, clinical, and healthcare specialities may benefit interpretations of how the human skeleton embodies

the challenges we encounter across our lives. Examples of such approaches may include greater collaboration between researchers investigating the living and the deceased . This may involve partnerships between researchers investigating modern clinical data with biological anthropologists to understand the impacts of lived experiences on skeletal health and variation. Additionally, re-engaging with theoretical approaches from other anthropological disciplines. when designing and undertaking research projects, including embodiment theory and relationality, may provide opportunities for new epistemological insights. Bringing these approaches, among others, back to the forefront may help lift the silo around the skeleton, reintegrating our bones into a broader body of literature about human responses to our worlds and our lives. Presenter: Michelle Cameron (University of Toronto, Department of Anthropology)

Climate Change/Women’s Work: How behavioral adaptations to environmental change impact human biology: Throughout human evolutionary history, people living in subsistence-based and non-industrialized societies have altered their economic practices in response to environmental change, which have resulted in varying effects on human biology. In Shodagor communities in rural Bangladesh, some households shift economic practices seasonally, with women working as traders during the dry season (approximately October – March), and men working as fishers the rainy season (approximately April – September). Women’s trading is associated with positive economic outcomes, like higher income, but also produces higher variance returns than fishing, and children in fishing households grow at a slower rate and experience more illnesses during the dry season when their mothers are trading. Additionally, because fishing produces more reliable returns, families report saving as much of their fishing income as possible during the rainy season to buffer against resource stochasticity during the dry season. Climate data from the last 10 years indicates that dry seasons are becoming longer in Bangladesh, while rainy seasons become shorter. In this talk, I will use longitudinal income and biological data collected between 2017-2022 to determine whether Shodagor economic strategies have shifted in response to climate change and how those shifts have impacted the health and growth of Shodagor children. If women are trading for longer periods of time and men are fishing for shorter periods of time, children’s growth and health should suffer greater insults, which would be harder to recover from. These results may offer insights into the evolutionary impacts of environmental change on

human behavior and biology. Presenter: Kathrine Starkweather (University of Illinois, Chicago, Department of Anthropology)

A multi-omics non-human primate model: Studying the evolution of complex traits...with queer theory: Although they require high expense and high analytical complexity, -omics methods (i.e., genomics, epigenomics, transcriptomics) also bring high potential for integrating inquiry across biological systems important to human evolution. Much -omics work focuses on biomedically-oriented research questions – out of necessity, NIH-funded labs are best-positioned to take advantage of multi-omics approaches – but an increasing number of researchers produce datasets and develop unprecedented resources (for scholars who can access them) to answer evolutionary questions. When situated in highly collaborative liberal arts environments, anthropological -omics scholars are well-situated to bring conceptual theoretical tools across disciplines that can expand the ways in which we think about the use and applicability of these resources to broader inquiries on human evolutionary patterns. Participation in a diverse community of Gender and Sexuality scholars inclusive of biologists, for example, can develop a productive interchange wherein model system-focused biological scholars draw on queer theory concepts like performativity and sexual configurations theory to bolster evolutionary theoretical constructs like developmental plasticity and functional integration. This combination – queer theory that deeply interrogates socio-environmental etiologies of traits and embodiment paired with multi-level -omics perspectives – has potential to clarify evolutionary questions across scales of both time and within the organism. I'll discuss the ways in which this context and perspective has enriched my own research developing model systems for understanding the evolutionary origins of metabolic traits in primates, and, perhaps more importantly, how it has enriched the ways in which I teach evolution to my students. These ideas are not new, of course, but rather can be seen as a return to a more conceptually holistic practice for molecular anthropologists that works to integrate and speak
Presenter: Christopher Schmitt (Boston University, Department of Anthropology)

Longitudinal relationships between cortisol, pubertal energetics, & menarche among Qom females: Puberty encompasses sweeping transitions resulting in reproductive maturation. Trade-offs between physical growth and reproductive effort are in part, mediated by the hypothalamic pituitary adrenal axis (HPA).

Evolutionary theorists suggest downstream products of the HPA and hypothalamic pituitary gonadal axis (HPG) such as cortisol and testosterone co-activate in puberty to meet developmental demands such that they positively couple (associate) during puberty and decouple as an adult phenotype is attained. In our preliminary work among Qom females aged 8-14 ($n = 46$, $n = 92$ samples), we found that relative to cortisol and testosterone levels estimated at age 8, estimated interaction terms between age and testosterone on cortisol were indicative of positive and increasing coupling from ages 9-10 ($b = -0.08 [-0.58, 0.42]$), 10-11 ($b = 0.14 [0.36, 0.63]$) and 11-12 ($b = 0.28 [-0.12, 0.67]$), decoupling at ages 12-13 ($b = -0.18 [-0.78, 0.42]$), and positive coupling again at 13-14 ($b = 0.20 [-0.61, 1.00]$). We contend that increased HPA function may be positively coupled with testosterone and independently increase across the pubertal transition to promote both reproductive and physiological changes in puberty simultaneously perhaps due to cortisol's role in energy mobilisation. However, it is not established whether cortisol increases, decreases, or stays stable across puberty. We explore relationships between pubertal energetic investment (height, BMI, waist circumference, and C-peptide), age at menarche and Peak Height Velocity, and cortisol trajectories among the same Qom females, utilizing longitudinal data spanning >1 year ($n = 800$ urine samples). We discuss evolutionary theoretical and transdisciplinary perspectives on puberty, including attention to statistical modelling choices. Teresa McCarty (University of California, Los Angeles)

CHAIR:

Sheilah Nicholas, Teresa McCarty (University of California, Los Angeles)

PRESENTER:

Sheilah Nicholas, Cynthia Benally (University of

Utah), Teresa McCarty (University of California, Los Angeles)

DISCUSSANT:

K Tsianina Lomawaima

DESCRIPTION:

This session aims a critical Indigenous and ethnographic lens at the changing landscape of Indigenous education in the settler state known as the United States. The anchoring analytical perspective is Lomawaima and McCarty's (2006) Safety Zone Theory, which posits that the federal government has not simply vacillated between tolerance and suppression of Native cultural difference (the 'pendulum' metaphor), but has, in a systematic and empirically discernible way, sought to distinguish 'safe' Indigenous cultural difference from practices deemed so dangerously different as to threaten settler state interests. This pattern can be seen, for example, in education policies that encouraged Native 'arts and crafts' but systematically repressed Native-language use by the thousands of Native children in federal Indian boarding schools. The metaphoric safety zone represents a pedagogical, political, and ideological space of settler state intolerance, discipline, and control. More recently Lomawaima (2014) advanced the notion of Zones of Sovereignty – spaces of Indigenous resistance, resurgence, and self-determination. Complementing this paradigm, the session draws on Indigenous theories of refusal (Simpson 2007), desire (Tuck 2009), and (counter)storytelling (Brayboy 2005; Solórzano and Delgado Bernal 2001), and on distinctive, place-based Indigenous knowledge systems. Indigenous sovereignty, writes Lomawaima, 'enfolds practices of creative self-determination toward goals of equity, justice, tolerance, and mutual well-being' (2014:66). These practices constitute the focus of the papers in this session, and grow out of Indigenous activism in seizing windows of policymaking opportunity within settler institutions – most notably schools. We begin with Hopi, where local schools, historically sites of ongoing struggle between Hopi parents and non-Native educators, are being repurposed as essential resources for Hopi language recovery (Paper 1). These transformations have evolved in response to settler threats to Hopi religious Zones of Sovereignty, echoed in the words of Hopi hereditary chieftains: 'We are still a sovereign nation.' This is followed by an account of sovereignty-building for Lakota language and culture reclamation within K-12 and higher education through the 'wrangling' by the Standing Rock Lakota People of existing public education systems (Paper 2). Paper 3 presents a critical autoethnography of the Diné author's effort to confront

coloniality within a predominantly white university by creating a graduate certificate program, Working with Native Communities (Paper 3). The program speaks back to settler colonial amnesia and extractive research methodologies. Finally, drawing on oral testimony and collaborative ethnographic research, Paper 4 examines the interplay between ground-up language education movements and a larger Indigenous education sovereignty movement, arguing that, more than language or education alone, these movements restore holistic wellbeing and Native Nation-building. The session concludes with discussant commentary by a senior Indigenous scholar, followed by dialogue with the audience. Altogether, our goal in this session is to create a dialogic and educational space in which to explore both the incommensurability (Tuck and Yang 2012) between Safety Zones and Sovereignty Zones, and the transformative possibilities and trajectories these critical ethnographic accounts reflect and create.

'We Are a Still Sovereign Nation': Reconstructing Schools as Essential Resources for Hopi Education: The words in this title, written by Hopi hereditary chieftains in a 1949 letter to U.S. President Truman, assert a position of obedience to a traditional and religious pathway—a Zone of Sovereignty established at the Hopi time of Emergence, within which a duty and responsibility to the past, present, and future is upheld by each generation of Hopi in the face of impending change. This commitment is conceptualized in Hopi thought and expressed in the Hopi words: qatsivaptsiwa, to be born into one's generation with all its responsibilities; and qatsi'ngwa, to see that life goes on. Fifty years later, the Hopi language, the mainstay of the traditional and religious Zone of Sovereignty, was in serious decline, predicting a precarious future such that an elder member of this generation said, "Someone must take responsibility for [language] preservation, and the logical place today is the school" (Author 2005:34). Schools have become essential, with parents looking to the schools to teach the Hopi language and Hopi cultural values. At 76 years out, as a member of my generation—our turn at life to see that life goes on—I draw on the Hopi paradigm that describes how beginning with a call for assistance, the community comes together to bring to fruition cultural ceremony or events in order to conceptualize and articulate an empowering framework for (re-)constructing schools as essential resources for Hopi education and language reclamation. Presenter: Sheilah Nicholas

Opportunities for Zones of Sovereignty: Agentic Interpretations of Performative Gestures in a PWU: In

this critical autoethnography (Boylorn & Orbe, 2014), the author will speak about the genesis and development of an interdisciplinary graduate certificate, Working with Native Communities, at a predominantly white university (PWU). The author is an Indigenous woman who was a first-generation college student and currently holds a tenure-track position at this PWU. The story (Brayboy 2009) describes the author's attempts to understand settler society as a method of contesting the Safety Zone (Lomawaima & McCarty, 2006) at the PWU. Her cultural analysis and agentic interpretations of white settler society allowed her to seize opportunities (such as the performative gestures of land acknowledgements and community-engaged learning/research) as acts to create Zones of Sovereignty (Lomawaima & McCarty, 2014). Drawing on her prior qualitative research in K-12 urban public schools (Author 2019) and personal experiences living in dominant society, she found that most settlers perceived Natives as nonexistent and/or as stereotypes. Settlers also lacked understanding of Native Nations and their unique relationships to federal and state governments. Thus the wants for the Certificate were to transition from ignorance/avoidance of Native issues and Peoples to taking responsibility for the continuation of settler coloniality and apathy toward Natives, and to building respectful and reciprocal relationships with Native Peoples and Nations. The Certificate also transitions from researching about Natives to researching with Native Peoples and Nations. Presenter: Cynthia Benally (University of Utah)

“For the Benefit of My People”: Mobile and Mobilizing Sovereignty Zones in Indigenous Education: Drawing on oral testimony and collaborative critical ethnographic research, this paper offers a retrospective and prospective analysis of a half-century of Indigenous education activism across Native homelands in what is known as the United States. Interweaving ground-up, place-based movements with a genealogy of a larger education and language-and-culture reclamation movement, the paper explores collective efforts to (re)claim Indigenous ways of knowing, being, and speaking displaced by settler occupation, through the repurposing of schools. I write as a non-Indigenous scholar, educator, witness, and collaborator in these movements, a positionality described by Kaomea (2003) as the “allied other.” The movements have a strong communal emphasis – “for the benefit of my People,” in one Native youth's words. The movements are mobile in the social networks they have established over time, and mobilizing in the innovative pedagogies, policies, and social justice activism they have provoked. I begin

with the resurgence of Indigenous community-controlled schooling amidst mid-/late-20th century struggles for civil rights and American Indian self-determination, following these movements and their intertwining with others to the present moment. While a major focus has been the creation of linguistically and culturally revitalizing and sustaining pedagogy, the deeper meaning of these movements is re-membering what has been dis-membered by colonization (wa Thiong'o 2009) and the thriving and wellbeing of individuals, communities, and Native Nations. To the extent that they mobilize and sustain Zones of Sovereignty, these movements hold vital insights for the reclamation of Indigenous lands/waters, languages, and knowledge systems worldwide. Presenter: Teresa McCarty (University of California, Los Angeles)

PRESENTER:

Matthew Thomann (University of Maryland, College Park, Department of Anthropology), Jeffrey Schonberg (San Francisco State University), Carlos Martinez (University of California, Santa Cruz), Andrea Lopez (University of Maryland, College Park)

DISCUSSANT:

Danya Fast (University of British Columbia), Kelly Knight (University of California, San Francisco)

DESCRIPTION:

In the urban landscapes where the deepest forms of bodily inequity and injustice are situated, we are often drawn to understand experiences of marginalization through the lens of exclusion and various biopolitical or necropolitical dynamics. While these frameworks can aptly describe the magnitude of forms of violence that happen here, they can also contribute to new forms of erasure – specifically of the forms of humanity that emerge from the lived spaces of urban social exclusion.

Here, something profoundly deep and creative is always happening in the 'miniscule movements, glimmers of hope, scraps of food, the interrupted dreams of freedom found in those spaces deemed devoid of full human life' (Weheliye 2014). In this panel we draw on ethnography and autoethnography to engage with Weheliye's concepts of the flesh/enfleshment and the connections to potentially subversive discourses of governance that emerge in the real spaces where people negotiate the full humanity of their lives. We ask: what is always beyond bare life? What must we interrogate about ourselves and our methodologies to arrive here, in the spaces beyond? What happens in the inbetweenness as forms of humanity—constituted through oppressive governance and simultaneously constituted through the flesh—are brought into relation?

Flesh in the Excess: HPV, Anal Warts, and the Potentiality of Ad-Hoc Care in Kenya: While the global health community has rushed to normalize the science of human papillomavirus (HPV) prevention for adolescent girls and young women in the name of cervical cancer prevention, the HPV-related prevention and treatment needs of sexual minority men are largely ignored in global public health policy and programs. In Kenya, HPV often manifests among this population as severely advanced anal warts. Presenting with such a condition at a public facility would effectively “out” the patient in a country where homosexuality remains criminalized and clinical homophobia has been well documented. Instead, men regularly progress to extremely late stages of anal disease, when bowel functioning has become obstructed before accessing improvisational services set up by a community-based clinic in Nairobi. In this paper, I present ethnographic findings from my ongoing research with patients receiving these ad-hoc forms of care to illustrate how overlapping layers of neglect, undergirded by homophobia, inscribe biological difference onto the body in the form of excess flesh. This is an odorous and unwanted flesh. It causes pain, produces blood and puss, and leads to social isolation. While this excess of flesh is indeed the result of necropolitical neglect, I draw attention here to the forms of relationality, humanity, and healing it produces between patients, caregivers, and the anthropologist. In doing so, I aim to reorient thinking around the bare life of the abject, fleshy queer body to instead illustrate how emergent forms of care disrupt dominant ways of governing health and healing. Presenter: Matthew Thomann (University of Maryland, College Park, Department of Anthropology)

Iatrogenesis and “State Created Danger”: Fighting sweeps against the unhoused in Oakland, California: With billions invested by the State of California to manage unhoused people, a major focus of those dollars have been in the form of “sweeps” of informal settlement that have emerged throughout the State. One of the largest settlements, in Oakland, occupies a one mile stretch at the furthest-most geographic, social, economic and political fringe of the city in a historically Black, gentrifying neighborhood. These assorted dwellings occupy space at the confluence of various landholders, including the State, the City, the railroad and local private landowners. It has served as a de-facto sanctuary for the unhoused as law-enforcement encouraged others to move there—an exile within exile. Directly targeted for eviction by the Governor in the press and through financial incentives, the residents have been fighting, and losing, their battles to maintain their community. For the past seven months I have been conducting ethnographic research with these residents, volunteer activists, as well as with the attorneys who represent them. Working between the medical term iatrogenic, situated within the public health narrative that is ubiquitous in both political and media representations; and the legal concept of “state created danger,” which fails as strategy but is itself a logic that references (a lack of) intervention that shapes suffering, the residents are fighting for more than inclusivity, but to extricate unworthy notions of the self from their publicized bodies. The justifications for these sweeps, as protections from self-harm, are strongly referenced by the federal judge in his decisions over their fate. Presenter: Jeffrey Schonberg (San Francisco State University)

Estranged S/kin: Deportation, Racial Expulsion, and Fleshy Relations Along the U.S.-Mexico Border: Disposed of in Mexico by the U.S. deportation regime, homeless deportees in the border city of Tijuana are rendered unsympathetic figures in the public imaginary. Though nominally Mexican citizens, they are often estranged from their country of birth. Their expulsion from the U.S. and their frequent association with drug use and criminality in media reports serve as intersecting axes of alienation. Moreover, the debilitated bodies of many homeless deportees in the form of bruises, scabies, abscesses, and amputated limbs further reinscribe their otherness. Because their physical markings are perceived as being associated with criminal behavior, deportees' bodies draw persistent scrutiny and further corporeal punishment from governmental security forces. Thinking with the theorizations of Alexander

Weheliye, Hortense Spillers, and Jasbir K. Puar, I suggest that deportees' debilitated bodies are not merely an outcome of racialized hierarchies, but also serve as vehicles for their racial expulsion from Mexico's national and human community. Through persistent marginalization, deportees' "stigmata of exteriority and impurity" (Balibar, 1991) takes fleshy form, contributing to their continued punitive targeting under Tijuana's "visual regime" (Valencia, 2019). And yet, the hypervisibility of homeless deportees in border city landscapes simultaneously creates a space for unexpected encounters of solidarity and sociality. In this paper, I will describe these fleshy relations by drawing upon fieldwork conducted with the Border Wound Clinic, a harm reduction street clinic working along the "1,950 mile-long open wound" (Anzaldúa, 1987) of the U.S.-Mexico border aimed at attending to the slowly accumulated wounds of those impacted by the deportation regime. Presenter: Carlos Martinez (University of California, Santa Cruz)

In the Flesh, In The Meantime: Overdose Death and Enfleshment : In racialized urban spaces like Washington, DC, overdose disparities are framed as major public health priorities. However, for people negotiating a hierarchical landscape of worthiness within the punitive logics of War on Drugs politics, public health proclamation without commitments to radical change leaves people in a necropolitical landscape of intersecting injustices. In the context of broader public health pronouncements about overdose prevention, people live in the context of a continued mass death event. Death sits squarely in these spaces and people organize to mourn and expose the policy failures that lead to these deaths. In this paper, I engage with what it means to do justice-oriented liberation work in the "in between" spaces of radical change – what I call harm reduction's "in the meantime." "In the meantime" includes the everyday organizing and attempts at healing that come alongside having to routinely experience and reveal the pain, loss, and depths of mourning unjust overdose deaths. Life "in the meantime" requires exposure of the flesh as a site of injustice – an embodied act that is both exploitative in its transactional nature and the basis for healing and the struggle for liberation. As I explore struggle and liberation constructed "in the meantime," I ask how the flesh is complexly activated and what forms of humanity emerge in these spaces? To explore this, I toggle between ethnographic data on the overdose crisis and autoethnography that exposes my own enfleshment and bodily trauma in these spaces in-between violence

and the pursuit of justice. Presenter: Andrea Lopez (University of Maryland, College Park)

Translocal Mobilities. Rethinking Rural-Urban Spaces and Relations in China (Part 2)

2:00 PM - 3:45 PM

TMCC - 203 D

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Goncalo Santos

CHAIR:

Ellen Oxfeld (Middlebury College, Department of Anthropology)

PRESENTER:

Minhua Ling (Geneva Graduate Institute), Hechen Liu (Washington University in St. Louis), Min Lee (University of California, Berkeley), Renee Jin (University of Rochester, Department of Anthropology), Iris Luo (Cornell University, Department of Human-Centered Design), Huiyi Huang

DISCUSSANT:

Goncalo Santos

DESCRIPTION:

Dominant paradigms of rural/urban relations in China emphasize spatial, social, economic and cultural boundaries. The hukou system, second-class status of migrants in cities, epidemic controls on migrant workers, disparities between rural and urban educational opportunities all lend to an analysis which centers on frameworks of rural-urban divides and boundary making. However, the popularity of such paradigms may lead us to overstate the significance of the urban and to ignore the more messy blurring of rural and urban spaces in contemporary China. Drawing on recent anthropological scholarship on translocal modes of livelihood in East Asian contexts (Nguyen 2014, Santos 2021), this panel seeks to explore the significance of translocal identities, mobilities, and relationships in China, proposing a more dynamic theoretical framework capable of moving beyond stagnant binary oppositions between a rustic rural China and a cosmopolitan urban one. Focusing on translocal mobilities and identities is a good way to question stereotypical narratives of rural depletion, abandonment and exodus, while making sense of the rise of new frameworks of rural-urban sociality in the age of mass migration and digital connectivity. We invite

proposals that explore China's rural transformation from a translocal perspective capable of showing how the new villages of twenty-first-century China have become patched-up formations or assemblages constructed out of increasingly complex rural-urban mobilities and entanglements in the context of new 'power geometries' (Massey 1994) and structures of social and spatial inequality.

Mobility, Temporality and Value in Rural China: A Case Study: A large percentage of Chinese internal migrants need to prepare for a presumed yet indeterminate rural-bound return that is institutionally structured by the hukou (household registration) system. This paper explores how such channeled return has been changing the physical, socioeconomic, and ecological landscapes of migrant-sending villages. By zooming in on various aspects of material and social reconfigurations in a migrant-sending village in Anhui, it shows how return as a continuous, translocal process has been integral to household reproduction in China's highly uneven citizenship regime. It also discusses how migrants and their families negotiate in face of truncated mobility and truncated rural-urban disparity the meaning of time and value in everyday practice. Drawing on long-term fieldwork in both rural and urban ends of China's internal migration, this paper seeks to illuminate on the implications of China's semi-proletarianization of migrant workers that not only dismisses the moral panic discourse of "empty nest" in Chinese media but also opens up for reconceptualization of rural-urban relations in China and beyond. Presenter: Minhua Ling (Geneva Graduate Institute)

Moral Economy of Digital Labor: Is Web-Based Platform a Way Out for the Rural Youth?: The early 21st century in China witnessed a nationwide population migration dominated by migrant workers. For migrant workers with no urban household registration, their translocal identity is characterized by a 'suspended' economic status. Over the past decade, their left-behind children have inherited this 'suspended' identity and become a new generation of migrant workers. However, these grownup left-behind children have come to recognize the decline of the rural economy and the limitations of the urban household registration system, facing a sense of 'meaninglessness' in life. The development of short-video platforms has been taken by many rural youth as a shortcut to profit through traffic. Much research has recognized the effects of the platform economy in promoting rural revitalization. However, few studies have pointed out the difficulties faced by returned rural youth who give up urban work to become short-video

producers. For them, harming their bodies and behaving in an embarrassing manner have become their main means of obtaining traffic online. This research proposes the concept of 'rural digital labor' to supplement current research on platform economy. Through interviews with these short-video producers, this study will explore from the perspective of moral economy how the promise of the platform economy has failed to help rural youth overcome the living difficulties caused by economic development. This study will also examine, from the concept of bio-politics, how rural youth, who are alienated and dehumanized, cope with the identity confusion in the post-socialist platform economy environment. Presenter: Hechen Liu (Washington University in St. Louis)

Rural in the Urban, Urban in the Rural: The Case of Lifestyle Migrants in Southwest China: This paper explores the liminal positionality of lifestyle migrants in Southwest China that blurs the boundaries between the rural and the urban. Reversing the previous flow of rural-to-urban migration, the lifestyle migrants that I examine ethnographically are highly educated urbanites born in the 1980s and 1990s who migrate from megacities such as Beijing, Shanghai, Guangzhou, and Shenzhen to a mountainous ethnic Yi village located in the suburb of Kunming, Yunnan Province in Southwest China. The lifestyle migrants or the "new villagers" (xincunmin) are the "outcasts" of the late socialist economic development and urbanization who are exhausted and frustrated by alienation, chronic illnesses, environmental pollution, dramatic shifts in family norms and values, and newly enhanced political censorship under President Xi's digital authoritarian regime. They seek alternative ways of life in "rural in the urban," meaning the suburban periphery of Kunming city, by mainly practicing permaculture (permanent agriculture) in collaboration with strategic local Yi villagers or the "old villagers" (laocunmin). They are also "urban in the rural," in the sense that they are bringing in urban resources that the local Yi villagers often desire, such as educational resources. In the context of recent rural revitalization (xiangcunzhenxing) policies in China that aim for bringing back rural-born youth to their original hometowns by providing business opportunities, I argue that lifestyle migrants are unrecognized political beings that create hybrid forms of life that connect the rural and the urban in the grey area created by the central government's rural development agenda. Presenter: Min Lee (University of California, Berkeley)

Beijing's Urban Villages: Chinese Artists Bridging Translocality: This paper examines how Chinese contemporary artists employ creative practices to interact with the urban village environment, form connections with residents, and contribute to the development of the local economy. Drawing on archives, ethnographic research, and interviews with artists and community members, I argue that Chinese contemporary artists inhabiting the in-between spaces of the urban village apply their artistic practice to bridge the gaps between different social, cultural, and economic groups. By collaborating with community members, artists create new forms of cultural expression and social interaction, challenging traditional labor structures and modes of urban development and becoming an integral part of the formation of urban villages in Beijing. The paper first situates these artistic collaborations within the broader political and economic context of urbanization in Beijing. Although government policies related to urban villages have helped upgrade infrastructure, improve living conditions, and promote economic development, their implementation has remained complex. In particular, it has led to conflicts between residents, artists, developers, and the government. However, this tension creates possibilities for artistic creation and alters the ways of life for local residents. Local creative laborers, whose traditional occupations may include farming, construction, and interior finishing, are hired by artists to produce sculptures and paintings. Meanwhile, artists also provide rental income to landlords by renting local studio space. These collaborative practices generate new economic and employment opportunities within the urban village. Presenter: Renee Jin (University of Rochester, Department of Anthropology)

(De-)Construct? Fanxiangqingnian / Returning Youth and their Artistic Intervention in Rural China: In 2020, the coronavirus outbreak prompted many fanxiangqingnian (returning youth 返乡青年) — students aged 18-25 studying abroad in the Global North—to return to China. They initiated art interventions in rural areas, drawing inspiration from intentional communities and earth art festivals. These social experiments aimed to address aging populations and declining local cultures through village art festivals, co-living practices, and upcycled traditional handicrafts. The artistic practices sought to empower rural economies and revive cultures. However, cultural divisions, rooted in the myth of 'modernity,' created challenges between newcomers and original residents. This research examines returning youth who migrated to rural areas after the pandemic. It investigates the emergence of youth-led movements

connecting cities and villages through art and culture, and their implications for China's future social transformation, particularly the urban-rural divide. Three case studies on a rural arts festival, co-living space, and handicrafts revival explore whether such idealistic artistic practices can generate social impact and contribute to the rural eco-environment or disrupt the original ecology due to utopian life romanticization. The study raises the question: What are the basic guidelines for rural artistic construction practitioners who did not grow up in the countryside and have different cultural backgrounds? How can they establish a trust-based working system to cooperate with local residents? Adopting a decolonized perspective, the research shares the experiences of these young trailblazers and analyzes the challenges they encounter, as well as the broader structural power dilemmas behind them. Presenter: Iris Luo (Cornell University, Department of Human-Centered Design)

Childbirth medicalization and shifting rural-urban relations in China: The views of rural midwives: This research paper examines shifting rural-urban relations in China from the perspective of recent changes in childbirth practices in rural areas. Childbirth in China has long been subject to forces of childbirth medicalization, but it was only in the last two decades that rural areas started to catch up with urban areas in terms of rates of hospital births. This rural transition to a birth system centered on hospitals and highly intrusive obstetric interventions was shaped by public policies supported by international organizations, and it took place in a context of increasing rural-urban movements that exposed rural families to new social, cultural, and economic environments. As more and more rural women started to give birth in urban hospitals, they had to adapt to new models of childbirth management that brought them closer to urban realities. This paper seeks to understand this blurring of rural-urban boundaries drawing on interviews with Chinese rural midwives that focus on the increasing medicalization of childbirth practices. PRESENTER:

Aisha Ghani (University of Minnesota), Arzoo Osanloo (University of Washington), Amira Mittermaier (University of Toronto, Department of Anthropology), Basit Iqbal (McMaster University, Department of Anthropology), Setrag Manoukian (McGill University, Department of Anthropology)

DISCUSSANT:

Seema Golestaneh (Cornell University, Department of Anthropology)

DESCRIPTION:

This roundtable will foster a conversation around anthropologies of the self, hermeneutics, and texts through a discussion of Seema Golestaneh's *Unknowing and the Everyday: Sufism and Knowledge in Iran*. *Unknowing and the Everyday* is an ethnographic analysis of the ways in which the contemporary mystical experience in Iran translates itself into the larger social realm, and vice versa. In particular, it traces the prevalence of a trans-Sufi Order phenomenon: a specific interpretation of mystical epistemologies (*ma'rifat*). Based on an affirmation of the unknowability of God, and the belief that there will always be a limit to the intellectual capacity of humanity, this interpretation of *ma'rifat*, which Golestaneh translates as *unknowing*, operates as an engaged awareness that we know nothing. When *unknowing* is applied to a real-world scenario, it causes the individual to question the subject matter at hand; in other words, *unknowing* does exactly that, it causes one to *unknow* something, whether it be a memory, a place, a text, the senses, or even the self, the application of *ma'rifat* results in an unraveling of boundaries, rendering what was once familiar, unfamiliar. For this reason, the book is, essentially, an ethnography of an idea, with four ethnographic case studies tracing the affective and sensory dimensions of *ma'rifat*. Ultimately, it aims to answer the questions: what epistemic potentialities does Sufism hold in late modernity in Iran, and how might such a question be answered anthropologically? Panelists may consider questions such as: how do interpretations of contemporary Sufism take shape through dialogue with other discourses within twentieth and twenty-first century Iran? What does it mean to consider dissolutions of the self (*fana*) not as metaphor but as actuality, and how does might such forms of subjectivities compare to ideas of a cultivated self?

How does one approach aesthetics first and foremost as an epistemic practice, and what is the role of the body in such endeavors? What does it mean to utilize textual materials as a form of anthropological evidence? How does one operate within a space of legal ambiguity in Iran today, as many of Golestaneh's interlocutors do? By discussing this ethnographic work on the possibilities of unbound selves, texts, memories in conversation with Golestaneh, the roundtable will investigate how 'classical' Sufism continues to inform contemporary life while itself being imbued with new meanings from those who embrace it.

PRESENTER:

Grazia Ting Deng (Brown University), Andrea Flores (Brown University), Jennifer Shaw

DESCRIPTION:

Anthropologists and other social scientists have increasingly used the concept of *conviviality*—or what it means to live together well—to describe interracial and intercultural interactions since the 2010s (Gilroy 2004, Erickson 2011, Hemer et al. 2020). *Conviviality* serves as both an analytical and methodological tool for understanding how people across differences live together, share or co-create space, build relationships, and potentially contest exclusion (Nowicka and Vertovec 2014, Padilla et al. 2015, Berg and Nowicka 2019, Cory 2020). As Taha suggests, *conviviality* can aid in understanding 'what constitutes a 'good' society when that society is diverse' or transitioning toward greater diversity (2022, 2). Employing an ethnographic approach to the study of migration, labor, and race, this panel explores how the workplace—be it a lab, workshop, or home—is central to understanding how people define and negotiate what it means to live and work in convivial ways across race, class, and national identities.

It also examines how these definitions and negotiations may support or disrupt exclusionary social orders and individuals' sense of place within them. Foreign workers—both 'skilled' and 'unskilled'—have not only contributed to national and global economies, but have also reshaped the racial norms of host countries experiencing demographic transition due to low birth rates and immigration. Workplaces thus constitute a central 'contact zone' where international workers, managers, and employers with their own sets of identities and backgrounds converge, meet, and interact with one another (Pratt 1991). These interactions can be highly hierarchical based on the value ascribed to individual difference, nativity, and forms of labor (Stuesse 2016, Rosenbaum 2017). They can also be sites where 'expansion of intellectual and moral horizons' is possible precisely because of the work of shared labor across identities (Fischer 2012, 423). The panel grapples with the following guiding questions: How do workers and/or employers manage social proximity and distance in the everyday intimacies of working together well? Does the experience of a convivial workplace, particularly when workplace and home overlap, translate into broader social solidarity and meaningful inclusion? How might workplace interactions inform broader processes of racialization, belonging, and family formation? By accounting for how workplaces center into how people make meaningful lives and valued selves, we aim to investigate how work figures into definitions of the 'good' and diverse society. Additionally, we aim to bring in a decolonized perspective to anthropological understandings of race and migration that are beyond the binaries of white versus non-white and native versus immigrant. Papers explore the experiences of those both in the 'racial middle' within the Global North and the dynamics of South-South migrations. We also examine how foreign-born populations relate to each other in non-native-owned or managed economies or work environments. With such foci, the panel draws attention to the necessity of focusing on transitions—from immigrant to citizen, from one racial category to another, from worker to manager. We aim to investigate if a convivial workplace, replete with such shifting roles, may itself be a site of transition toward the possibilities of a different, better, world.

Exploitative Conviviality: Chinese Bosses and Their Multiracial Workers in Italy : Chinese migrant entrepreneurs in Italy often provide free board and lodging for their co-national wage workers, oftentimes within their own residences that also doubles as the workplace. This employment arrangement allows

Chinese employers to better deploy highly flexible labor through their kin-based social networks. It also reinforces their exploitative but reciprocal relationships with their workers in the everyday experiences of working and living together. More recently, however, the decline of migration from China to Italy alongside increasing numbers of Chinese workers themselves become self-employed entrepreneurs has created a labor shortage for Chinese employers. Chinese entrepreneurs have thus increasingly transitioned to recruit Italian workers and other foreign labor from diverse ethno-racial and national backgrounds to meet their production needs. Yet, the previous working and living arrangements do not apply to their new hired workers who Chinese employers regard as racialized others and outsiders. Based on my new ethnographic fieldwork starting from October 2022, this article examines how Chinese owners of restaurants, megastores, and manufacturing workshops differently recruit, work, and live among their multinational streams of workers. The recruitment of non-Chinese workers reflects Chinese owners' hierarchical and racialized understandings of each migrant group. Meanwhile, I show how they have constructed new forms of (albeit fragile) conviviality with their "superdiverse" immigrant workers through everyday racial and cultural learning. This ethnographic study therefore provides a novel narrative of racial capitalism which is complicated by South-South encounters within the Global North. Presenter: Grazia Ting Deng (Brown University)

"I Hated Working in the Lab": Immigrant Scientists and Conviviality's Limits in US Life Science : The United States' status as a global leader in life science is dependent on its ability to attract top students, postdocs, and scientists from around the world to work together in its labs. Staffed by international scientists who span ethno-racial categories, labs may appear to be an exemplar of the convivial workplace where differences of race, nativity, language, and gender are effectively negotiated as individuals work together toward the common goal of producing knowledge. However, labs are also highly segregated, stratified workplaces that can trap international knowledge workers through exploitative labor practices and workers' fears regarding their chances of success in more homogenous workplaces. In this paper, I examine how differently-racialized, foreign-born life science professionals from Turkey and East Asia negotiated and transitioned out of the sometimes convivial, sometimes hostile, workplace of US life science labs. First, I demonstrate how academic labs were sites where

individuals saw or experienced discrimination based on nativity and race despite working together well toward shared research aims. Moreover, working together well often meant working alone, socially isolating scientists from each other and potential solidarities. Second, through my interlocutors' work trajectories, I show how despite professional acumen racialized perceptions of accented language limited opportunities out of lab and reinforced racial and social exclusion within it. Finally, by positioning themselves as creators of specialized knowledge, my interlocutors leveraged expertise over linguistic, racial, and national differences in ways that troubled existing hierarchies and made new ones. These findings demonstrate both the limits of scientific workplaces as sites of convivial relations and how migrants within these workspaces seek a more convivial future. Presenter: Andrea Flores (Brown University)

From Temporary Migrant Care Worker to Family Member After Filipinx Family Reunification in Canada: Those who enter Canada as migrant care workers experience disjuncture in residence and family life, migrating away from their children for the sake of caring for another family. From the perspective of these workers' children, their parents' co-residence with an employer is a fraught site of labor and kinship that continues even after family reunification. While permanent residency and family reunification in Canada are considered the ultimate goals of this labor, navigating the transition from temporary migrant worker back to family life can be challenging, socially and economically, for such workers and their recently arrived children. Based on the perspective of Filipinx young-adult children, this paper examines the transition from mothers' roles as temporary migrant care workers co-residing with their employers to family members who co-reside with their own children. Labor and family take on new forms with the shift in residence as it relates to the everyday work of maintaining a household. Further, kinship is reconfigured in this new reunification setting alongside worker identities, with young people finding work life and family life more conflated and troublesome than ever before. I present three ethnographic cases to explore these emergent sites of tension and solidarity: the first of daughter who joins her father at work to spend time together, the second of a young women who takes on the co-parent role alongside her single mother of three, and the third of a daughter who watches her parents leave to work and reside on a rural farm most of the week while she stays in the city. Working together and living apart thus take on new forms in the long course of temporary migrant worker programs, family separation, and family

reunification, especially from the perspectives of those whose lives are punctuated by racialized labor, the promise of migration, and the struggle of kinship. Presenter: Jennifer Shaw

DISCUSSANT:

Nelli Sargsyan (Emerson College, Institute for Liberal Arts & Interdisciplinary Studies)

DESCRIPTION:

In late March of 2023, the president of the American Anthropological Association (AAA) informed members that the AAA Executive Board had received a petition with signatures from 50 members in good standing to put a resolution to boycott Israeli academic institutions to vote. In the months that followed leading up to the day the voting was closed on July 14th, many colleagues shared their position on the resolution on the 'Communities' platform, a feature that allowed for a more horizontal exchange, unlike in 2015, when the Association membership voted on a similar resolution. The, sometimes intense, engagement between those supporting and those opposing the resolution, revealed a range of affect and ideological commitments. Not unlike the political landscape of the U.S from within which most colleagues wrote, and perhaps unsurprisingly, they revealed parallel politics of citation in their perspectives, revealing that AAA members teach

multiple anthropologies, using the same language. Not unlike in the U.S. political discourses, some referenced or used words such as, freedom of speech, human rights, moral posturing, racism, and decolonization to make arguments in support and others in opposition to the resolution. Standing in solidarity seemed a shared position for those supporting and those opposing the resolution, if with different constituencies – Palestinian academics for some, Israeli academics who were critical of the Israeli state for others (by not limiting their freedom of speech). Anthropologists often pride themselves on contributing to deeper understanding of political and socioeconomic realities beyond sound bites permeating public political discourses by carefully analyzing complex power relations and intersecting systems of domination. However, the exchanges on the 'Communities' revealed how they bring their affective ideological commitments shaped by the U.S. political landscape, among others, to bear on their academic voices. What do the discussions on the boycott resolution reveal about the state of our discipline? What does this mean in cultivating anthropological inquiry? What do we, as anthropologists, make of the parallel politics of citation and potential hollowing of political discourse? What are the affective and material consequences of these parallel bibliographies and worldviews they shape? What does this parallelism look like in conference, peer review, and journal editorial decision-making? How do they affect the ways anthropologists engage with the world around them and the knowledges they generate? How can we, self-reflective of our various complicities, analyze power relations and systems of domination in our scholarship and teaching to refuse becoming tools in service of unequal power relations and, indeed, deepen our understanding of these power relations and stay committed to dismantling rather than perpetuating them? How do we move beyond manufactured binaries and the 'what aboutism' we critique more easily in some instances than others? What does scholarship and teaching toward livability look like? What does the result of the resolution vote make possible? In light of the passing of the resolution to boycott Israeli academic institutions, the participants of this roundtable draw on their anthropological scholarship and teaching to reflect on these questions that emerged from the 'Communities' discussions on the resolution.

DISCUSSANT:

Hannah Turner

DESCRIPTION:

Institutions such as archives and museums are not only repositories of historical and cultural collections, but are also sites of knowledge production. But what does this mean when our world - and our institutions are being both literally and figuratively deconstructed? Many scholars and disciplines have problematized how these institutions present themselves as scientific, objective, and authoritative, while obfuscating the structures of power that make selective discernment possible. This panel examines how epistemic categories in museums and archives create conditions of occlusion resulting in loss, forgetting, and gaps in historical memory, and why it is important to examine these processes now. We are especially concerned with how to understand absence in a time of change, as physical materials are deteriorating, climate catastrophes create unstable conditions, and the political structures that uphold these institutions crumble. How do we access that which is not present in the archive, especially as these institutions are radically transformed? What are the tools and strategies available to us to identify, demarcate, and potentially recover that which is lost? How can disciplines that center knowledge as presence recognize the epistemes that have been occluded, and communities that have been invisibilized in this unstable, shifting world? Thinking with concepts such as spectrality, fugitivity, and others, this panel brings together papers that contend with such present-absences from diverse contexts and regions. (This is Part 2 of a double panel).

BIPOC Producers and Farmworkers Co-Constructing Knowledges, Data Collection, and Property Rights: Potential futures for ecologically and equitably sustainable agriculture based in indigenous knowledge, tribal rights, and pluricultural democracy are excluded by design, but don't have to and must not be. This paper draws together voices and insights from communities, academic partners, CBO's, federal government allies, and congressional champions to look at data equity as a civil rights issue. Working at the grassroots level for policy development, participatory research, and democratic governance that includes and is driven by farmers, ranchers, farmworkers, as well as tribal, rural, and urban communities with a 45-years long coalition of agriculture and civil rights CBOs, this presentation surveys projects interrogating exclusionary property rights and insisting on public engagement in decision making from the ground up. Proprietary data occludes the techniques of an elite planter-class bloc project such as the bundling of property rights, channelling of bureaucratic knowledge and technical assistance by federal employees to elite landowners, and the privatisation of public data. Synchronous with debates and struggles in museology about loss, forgetting and gaps, we argue that the occlusion of data (e.g., databases of USDA, conservation easements, EPA, real estate, and private investments and pension funds) hides hegemonic knowledges, reproduces white property privilege in public narratives, and is codified in law. Presenter: A.L. Anderson-Lazo (University of California, San Diego)

“The archive always works against itself” – The Art of Disappearance as Archivological Impulse : The talk will present results of the project Dismantling the Archive – The Art of Disappearance at the University of Vienna (Roland Innerhofer) and at the Music and Arts University of the City of Vienna (Rosemarie Brucher). In its provocative approach, this artistic project irritates archival orders as well as it works on archival practices that focus on the abandonment of objects. Those exemplary artistic interventions are performed by the Agency for Indispensability Justifications (AGFU) and take place in the non-intentional collection of the former artist collective Fritzpunkt that was dedicated to the work of Austrian avant-garde writer Marianne Fritz. The multiples as hypostasis of disappearance are a very palpable example of the AGFU's crafting: Working notes cast in epoxy resin are preserved and at the same time forever withdrawn from us. Presenter: Lukas Schmutzer (University of Vienna)

Museum Work as (Art)Work: Archiving Puerto Rican Contemporary Art Practice: What is the relationship between historical memory, archival silences, and contemporary art? How can art reimagine our understandings on history and democratize the role of knowledge producer? Narrating the author's recent experiences as a critic, collaborator and curator of Puerto Rican conceptual installation art, this paper asserts the capacity of creative practice as a tool to not only grapple with but also subvert difficult legacies of Puerto Rican museum and popular portrayals through the lens of lived, local experience and an explicit critique of the erasures of normative historical narration. Grounded in the artistic collection and the display of a category of found objects not typically acquired or exhibited as part of North American stateside museum practice, its material confrontation of the past not only makes visible structural power differentials in recurring, ongoing problematic tropes of depiction but also powerfully shifts the viewer's gaze back towards the museum institution or other entity of cultural making as an object of scrutiny. The resulting alternative space of representation decenters the positionality of traditional curatorial authority in a singular institutional body and challenges the identity of cultural otherness usually prescribed to both Puerto Rican objects and to Puerto Ricans themselves through an intentional narrative emphasis on the dignity and agency of marginalized, often unnamed historical subjects. The artistic reappropriation of museum work resists dominant, privileged ways of knowing and enables an opportunity for new material presences in its disruption of what has been previously described in Caribbean Studies as the second moment of historical production or the making of archives. Presenter: Amanda Guzman (Trinity College, Department of Anthropology)

Remembering Hissing Swan: the global entanglements and institutional erasure of Aboriginal histories: Over the last twenty years, the work of contemporary Aboriginal artists in Southeastern Australia has been critical to the revitalization of cultural knowledge and practices that have been “sleeping” in 19th-century museum and archival collections. The objects encountered in the stores of ethnographic museums, however, are often objects “without a story,” in the words of Melbourne-based Aboriginal artist Maree Clarke. This erasure of Indigenous histories and subjectivities is especially pronounced with respect to cultural materials held in overseas collecting institutions, marked by over 100 years of “spatiotemporal disjunction” (Morphy 2015) from the

communities of their Indigenous makers or previous owners. Our paper examines these processes in a collection of Aboriginal objects and images held at the Ethnographic Museum in Berlin. Bearing witness to extensive colonial entanglements between Germany and Australia, the collection has taken on further significance as a focal point of the global research and creative projects of Aboriginal artists and scholars, who actualize a continued connection through collection visits and digital repatriation. Focusing on the collection's 140-year "institutional biography," we reconstruct how Indigenous names and histories were omitted through an interplay of the objects' inscription within the "cataloguing culture" (Turner 2021) of a colonial institution and their exposure to subsequent ruptures in German history. By offering a detailed account of such institutional forgetting, our paper sheds new light on creative practices that reclaim an affective presence for the "Ancestral memories" that collection objects embody by rearticulating them with the lives and historical experience of Aboriginal people. Presenter: Anna Weinreich (New York University, Department of Anthropology)

Recovering Romani Heritage: Decolonizing European Archives and Museums via Epistemic Activism: This paper investigates the occlusion of Roma in European history and explores the strategies of identifying and recovering Romani voices and material culture in archives and museum collections. Roma are Europe's largest minority (12 million) but have faced prejudice, discrimination, and marginalization since their arrival in the Balkans around 1000. In most archives, they are "absent," but not quite: the objects and cultural processes they have produced may be present, but not attributed to them. I will illustrate with several examples (using slides and videos) such the archival history of Romanian monasteries omitting the Romani slave workers who ran their craft industries for 500 years; and the metal objects (such as for looms, cookery, and horses) in ethnographic museums that are displayed but never attributed to Roma. In addition, Roma have been omitted from East European official historical museums that emphasize monoethnic nationalism. Virtually no Roma have taken part in formal archiving until the 2019 formation of RomArchive.eu, a pan-European digital project that centers Romani knowledge. I detail how RomArchive.eu has endeavored to recover and document the history and intangible and tangible cultural heritage of Roma, and the major problems that we faced, such as identifying Romani curators, selecting genres and life histories to feature, as well negotiating restrictive copyright laws and collaborating between

Roma and non-Romani allies such as me. I am a music curator for RomArchive.eu, and have also worked with the European Institute of Roma Arts and Culture on heritage projects. Presenter: Carol Silverman (University of Oregon)

Anthropological Perspectives and Transitions to Degrowth

4:15 PM - 6:00 PM

TMCC - 203 C

Late-Breaking Conversation/Debate - In-Person

ORGANIZER:

Ritu Verma

CHAIR:

Lisa Gezon (University of Alabama at Birmingham, Department of Anthropology), Eric Hirsch (Franklin & Marshall College)

PRESENTER:

David Lewis (London School of Economics), Ritu Verma, Peter Sutoris (University of York)

DESCRIPTION:

As atmospheric and ocean temperatures recently shattered world records over a disaster-filled summer, multiple climate shocks were experienced across the globe as moments of devastation. World leaders termed the sharp escalation in the climate emergency as a transition from global 'warming' to global 'boiling.' Many parts of the earth are in danger of becoming inhabitable, as greenhouse gasses emitted into its atmosphere caused unprecedented climate crisis and chaos. The climate emergency, resulting mostly from the incessant burning of fossil fuels, is laid upon and exacerbates other crises, including the extreme widening of socio-economic inequalities, elite capture of resources and wealth in the hands of a few, labor politics of unpaid work, grabbing of indigenous land, and continued unequal North-South relations. On August 2nd, the world reached earth overshoot day, when humanity's demand for resources exceeded what our planet can regenerate in a year. These multiple crises are a symptom of a deeper and more insidious root cause: an entrenched yet broken economic system predicated on GDP, which externalizes environmental, cultural, social and other costs. Yet, 'progress' and 'development' continue to be synonymous with endless economic growth, which advantages relations of extraction, exploitation and extreme concentration of wealth. In response to the urgent need for action, degrowth scholars have proposed path-breaking responses and theoretical innovations. These debates

raise critical questions about GDP-centric globalization and green-washing, and generate fundamental questions about hegemonic neoclassical economics that render invisible the fragility of planetary ecosystems – and the need to reimagine alternative, decolonial pathways to secure human wellbeing. Despite anthropology's robust critical traditions and its capacity to generate fine-grained ethnographic accounts of grassroots struggles, the discipline itself has arguably struggled to forge productive activist and transdisciplinary engagements. It has not yet adequately engaged with degrowth debates, with some notable exceptions. The late-breaking session has two aims. First, it brings together newly emerging work available in the months leading to the AAAs that explores and reflects on anthropological engagement with multiple crises in relation to degrowth. Galvanized by the critical transition to an era of compounded crises, anthropologists are presented with challenges and opportunities that speak to the heart of the question of anthropology's relationship with the world. It provides critical space for reflection on how the discipline can rise, or fall short, in facing the current crises and find pathways to restore planetary balance. Second, it reflects on the need to build transdisciplinary alliances in and out of academia, including with degrowth and decolonial movements, wellbeing alternative campaigns, and with respect to transhuman relationships, in the tradition of public and engaged anthropology. In this critical era of transition, the panel will serve as a timely provocation, helping to fuel debate about how our discipline can remain relevant on a boiling planet. Resisting the current growth model will involve moving beyond our traditions of deconstruction and critique, towards an emancipatory politics that engages anthropological knowledge and methodology in actively envisioning, anticipating, negotiating and forging alternative futures.

DESCRIPTION:

In archaeological analyses of colonization, enslavement, and racial discrimination, scholars are increasingly turning to the concept of persistence to consider the myriad small and large ways that marginalized people resist oppression and insist on survival and the cultivation of lives worth living. The late nineteenth and early twentieth century was a period of major social, political, and economic transition all over the world. The period saw increasing industrialization, geopolitical shifts, solidification of racialized and class-based social formations, migration and associated restrictive immigration policies, and global movements of materials, capital, bodies, and ideas. Though the conditions and specifics of this 20th century transition certainly varied by context, similarities emerge where marginalized people encounter and navigate these changing systems. This session is inspired by the growing literature of archaeological persistence in Indigenous and African Diasporic archaeologies and considers broadly and across diverse geographic and social contexts, what a materiality of persistence looks at the turn of the century. Indigenous archaeology offers profound examples of persistence and resistance to colonization, especially in the face of attempted erasure and epistemic violence (Panich 2013; Silliman 2009). African Diaspora archaeologies also reveal the ways that enslaved and free African descended people persisted in the face of enslavement and ongoing racial discrimination (Morris 2017; Mullins 2008). Persistence insists on agency and the survival of a people on their own terms, rather than as reactive responses to colonization, domination, and forced assimilation. It acknowledges strength, creativity and adaptability of people, rather than accepting change (or lack thereof) as an end or possible annihilation. Drawing on theories of persistence amongst Indigenous and African Diasporic populations across the Americas, this session considers the materiality, archives, and oral histories of late nineteenth and early twentieth century communities faced with profound obstacles ranging from dispossession of land, forced assimilation, legal racial discrimination, and expansions of empire. How might we, as anthropological archaeologists, consider the meaning of persistence in the context of such

encompassing structures of daily life? How do individuals, households, and communities find ways to survive and build meaningful lives in these contexts? Can we read against the grain of both the archival and archaeological record to better account for persistence and resistance? How do collaborative approaches to archaeological research open doors for effective readings of historical persistence and its continued relevance today? Finally, this session also asks how places, materials, and intangible stories persist in ways that compress time and resist the temporal divisions so often used to distinguish historical eras from the present (Taylor & Sesma 2022). The present is haunted by histories of violence and oppression (Surface-Evans, Garrison & Supernant 2020), making our understandings of survival, resistance, and persistence all the more impactful today. If we focus on persistence in the past, how can we also address the realities of continued oppression and contemporary inequalities which are often legacies to those we study historically?

Buttons, Bullets, & Bottles: Homeplace and Freedom in rural Kentucky at the turn of the 20th century: In 1880, the Rice family of Nicholas County, KY purchased a 4-acre parcel of land outside the county seat of Carlisle. The Rices were born into slavery in neighboring Bourbon County just a few decades earlier but their family, including their 10 children, would come to know a new life of freedom and land ownership in the late nineteenth and early twentieth century. The family relocated from their rural homestead in the first decade of the twentieth century to the predominantly Black town of Henryville on the periphery of Carlisle before finally resettling in industrializing Springfield, Ohio. Previous interpretations of the site focused on the family's perceived low socio-economic status. New analyses of the material assemblage of the Rice's lives at the turn of the century instead offer a glimpse of a free Black landowning and entrepreneurial family, who was connected to a wide network of social support and community relations. The material, archival, and oral historical record suggests that the Rice family – no matter their financial standing – was self-sufficient, contributed to community networks of care and local economies, and persisted in the face of certain post-emancipation and early Jim Crow racial discrimination. Artifacts recovered at the site reveal multiple sources of household income; specifically, women's labor in laundry and sewing repairs. This paper considers the materiality of postbellum African-American persistence (Morris 2017) in rural eastern Kentucky, and how the making of a rural homeplace (hooks 1990; Battle-Baptiste 2011) created a space of refuge, comfort, and

strength for this family at a time of major social and political-economic transition. Additionally, the paper draws on new insights from collaboration with descendants in considering the profound legacy of the family's persistence in maintaining the rural homestead and the choice to relocate and create a new home in the industrial north. Presenter: Elena Sesma (University of Kentucky, Department of Anthropology)

Keep Digging: Persistent Archaeology within the Archaeologies of Persistence : This paper argues that without persistent questioning – digging into the past and present – archaeology remains complacent in prioritizing the violence of erasure of African Diasporic communities at the turn of the century. The case study of family of George White and his descendants, a freed family in Madison County, Kentucky whose lives were rendered, and until recently remained, invisible due to dominant and celebrated stories of abolitionist work on integration and equality during the Antebellum and Post-bellum frames this argument: to work within an archaeology of persistence we must be persistent archaeologists. To understand the family's materiality of persistence we, of course, ask how did they survive in the midst of changing racialized political and social change in rural Madison County and what did that look like – to them, to their community – black and white? How do we see the material traces of the White family within an archival record where they appear in documents required by the white community to surveil the Black – and little archaeological evidence left in the ground due to dispossession and development? However, in many ways our questions are around what is not present in the material record, not what is present. Querying what is not there requires a persistent line of questioning about our practice, our theories, and our methods if we are to see the resistance and survival of families, like the Whites, whose stories continue to be erased. Presenter: C Broughton Anderson

An Archaeology of Belonging: Dispossession and home-making in late Ottoman Palestine and today: The turn of the twentieth century in late Ottoman Palestine was marked by deep integration into global capitalism, intensifying European intervention, urbanization, and Zionist colonization. In Palestine, the Ottoman governmental reforms known as the Tanzimat commoditized state lands, creating an urban class of elite absentee landowners that stripped rural Palestinians of their long-standing cultivation-based right to land. By the end of the twentieth century, many Palestinians had moved their households into new and

existing villages where home and labor was now tied to a plantation landscape. Shared experiences of dispossession throughout the villages of Palestine nonetheless animated Palestinian nationalism and later resistance to British rule and Zionist settlement (Allweil 2016; Khalidi 2013). This paper approaches belonging as an active practice of persistence and home-making that creates material traces in architecture, cityscapes, and land use. I examine the material dimensions of dispossession and home-making in late Ottoman Palestine and today, with specific reference to the city of 'Akka (Acre), formerly the seat of the Ottoman sanjak (district) of 'Akka. Today, the Old City of Acre is a UNESCO World Heritage Site within the larger Israeli municipality of Akko. The Old City is home to several thousand Palestinian citizens of Israel whose families' found refuge there during the Nakba (catastrophe) of 1948, and who trace their pre-1948 ancestry to now-destroyed villages throughout rural northern Palestine. Carrying histories of repeated dispossession, residents now face renewed threat to home and community from developers eager to expand short-term vacation rentals as the city is gentrified for tourism. I explore the relationship between contemporary and historic practices of belonging through photographic surface survey, ethnography, critical archival research, and review of archaeological materials relating to late Ottoman 'Akka. DESCRIPTION:

The roundtable's title indicates a position in the gap between two well-established fields: the Anthropology of Art (featuring ancestors like Boas, Levi-Strauss, Firth, Forge) and our neighbor in the Humanities, Art History. Better termed a 'transition' than a 'gap,' this position acknowledges art practice and forms that, while fitting neither of the imperially founded disciplines precisely, mobilize 'undisciplined' ontologies whose intelligibility demands a different kind of thinking for holistically unmapping our predicaments. One could argue, as Alfred Gell (1998) did, that the 'anthropology of art' follows a standard method and epistemology: it differs only in taking the topic of art. Applying anthropology to art, as it does to economy, medicine, religion, and kinship, or any other topic, the project asserts its loyalty to a hard-earned so discipline. But what might art teach anthropologists about their methods, politics, and ontological assumptions? 'Art Anthropology' reverses the terms. It does so to appreciate ethnographic and theoretical engagement with a cluster of Arab cases (Sudan, Lebanon, Palestine, Syria, Iraq, and Kuwait) to focus on the kind of paths, projects, and politics 'art anthropology' might engage in particular contexts. This is not to exclude other areas but to gain some density towards foregrounding peer cases that compel new exchanges between coeval peoples-in-becoming across a Southern swathe of a 'global' art world. Could Art Anthropology spotlight their otherwise obscured ontologies? Focusing on this year's annual meeting theme, 'transitions,' the roundtable will work in the spirit of lamina, with a nod to Victor Turner's subjunctive thinking (1969), and to Yawf Nave's (2009) insistence on 'both-and.' Our project will consider the extensions, revisions, and subjectivity that 'Art Anthropology' could build with both anthropology and art history, both affect studies and materiality studies, both discursive and formalist analyses, in markets, ateliers, battlegrounds, online networks, institutions, and audiences. The roundtable format allows each participant to think out loud or from a set of bullet points of methodological and theoretical transitions they have made in their own ethnographic and/or archival practices, or in response to the histories they've encountered. Round-table participants will discuss their inspirations from recent ethnographies that have demonstrated learning methods and episode from art. In particular, participants may reflect on the 'Art and anthropology: Twenty-five years of The Traffic in Culture' dossier from the Journal of Material Culture (Zitzewitz and Ciotti 2022) ways anthropology learns from art in parallel with the changing practices and economies of

the so-called 'global' art world today. Equally, participants will share instances of art objects/practices (from the field, literature, or archive) informing their anthropological episode. They will track artistic practices' cues to ethics (Bateson 1972), lifeworlds (George 2010), local art histories (Myers 2002), problem-spaces (Mathur 2019) and indeed, cosmologies (H. Geertz 1994). In sum, they will explore aloud how art helps anthropologists think about space, time, crisis, economies, ecologies, multispecies relations, the unfinished, becomings, uprisings, and imaginations.

DESCRIPTION:

Since the onset of the pandemic, digital media spaces have become increasingly salient in everyday interactive practices, often substituting in for an interactive space that otherwise would have happened in-person. Even with the return to 'normal', digital spaces continue to occupy this enlarged role in mediating social relationships. Papers in this panel see how different kinds of social actors negotiate and improvise the role and place of digital media in framing their social relationships. Highlighted across these papers is the centrality of language in shifting conversations about the kinds of semiotic affordances provided by each kind of digital medium and space.

Deaf culture in digital spaces: between language and technology: This paper will present first results of an ongoing video-ethnographic multimodal study examining the formation and identity of a specific community within the virtual reality (VR) platform VRChat. VR is a unique medium that offers a fundamentally interpersonal experience, giving rise to what psychologists call 'social presence.' This study explores the subcultures that form around the use of 3D

headsets, with technical knowledge and experiences circulating among users. While socio-anthropological studies of virtual worlds by now have a rich pedigree in the field of digital anthropology (see Gershon 2010; Nardi 2010; Boellstorff 2015), VR is arguably the first truly embodied mediated experience, creating deep engagement with virtual worlds and their inhabitants. This embodiment, although distinct from face-to-face interaction, transforms the interactional repertoire available to users, fostering new opportunities for action, relationships, and meaning-making. The Helping Hands community in VRChat, dedicated to supporting Deaf and hard-of-hearing individuals and creating a space where anyone can learn about Deaf culture, exemplifies this transformative potential. Due to the technical limitations of VR equipment, such as the lack of finger or facial expression tracking, the community has had to recreate aspects of sign language. Over time, participants have developed specific signing modalities compatible with popular VR controllers. Moreover, the culture of the Deaf intersects with the culture of VRChat, influencing the resulting language, such as the word 'world' taking the shape of a portal, a common means of traveling between different worlds in VRChat. Furthermore, many users are not deaf and can speak English simultaneously with American Sign Language (ASL), creating a unique temporality of talk wherein one speaker can utter two phrases at once. Specifically, we will discuss the mutual shaping of the technologically mediated environment of VR and its inhabitants. We are interested in how habitual communication modalities, such as sign languages, are transformed and how they further intertwine with other technologically-enabled resources to create new symbols, meanings, and identities. Our previous research (Klowait, Erofeeva 2023) explored the use of virtual pens as a communication tool for Deaf persons in VRChat, demonstrating that they not only substituted for spoken language but also provided a more durable and spatially-oriented form of interaction. In this follow-up study, we combined multimodal videography (Goodwin 2000) with participant observation in VR and interviewing community members to gain further insight into how the organization of particular community activities (such as ASL-teaching) are embedded in (re)creating the structure of Helping Hands. As they transition between different communication modalities and virtual environments, members of the Helping Hands community actively engage in developing a more inclusive infrastructure for its members, fostering a strong sense of identity. Our findings offer a critical examination of the notion of affordances frequently used to conceptualize the impact

of technologies on human communication, and question the possibility of interdisciplinary dialogue for the study of environments where culture, technology, and social behavior intersects. With the specific focus on one particular VR community, we invite the broader discussion relating to embodiment, temporality
Presenter: Maria Erofeeva

A Critical Discourse Analysis of the Haitian Other in Dominican Online Spaces: Recent events on the island of Hispaniola have intensified relations between Haitians and Dominicans. This relationship, grounded in settler colonial ideas of race and Blackness (García Peña, 2022), has been fraught with tensions around the issues of migration, citizenship, and national identity. Online social media sites have provided spaces for commentary that advance negative ideas of Haitians and Dominicans of Haitian decent, or what has been termed the Haitian Other. This is defined as 'the socially constructed idea of a binary representation of Haitian identity compared to Dominican identity' (Wigginton & Middleton, 2019, p. 2). Metanarratives, or cultural tropes, about the Haitian Other are widespread in Dominican discourse. Indeed, Wigginton and Middleton (2019) found how such a body of narratives permeated Dominican textbooks. Focusing on online Dominican spaces, the current study analyzes how metanarratives about the Haitian Other are constructed and circulate in discourse. Specifically, I analyze over 500 Facebook comments to two posts by two major Dominican newspapers, *Listín Diario* and *Diario Libre*, about Haitian immigration to the Dominican Republic. In the study, identity is understood not as a fixed social category but as emergent and constructed in interaction (Bucholtz & Hall, 2005). Similarly, race is a social construction, 'not a fixed, static category rooted in some notion of innate biological difference' (Omi & Winnant, 2014, p. 12). Essential to the analysis are the processes of racialization which mark individuals against the socially unmarked -whiteness or hispanidad - (Urcuioli, 2011; Trechter and Bucholtz, 2001) and as 'exemplars of racial imaginaries' (Dick & Wirtz, 2011, pp. 3-4). This study is grounded in the raciolinguistics understanding of the relationship between race and language as a co-constitutive process in which race 'comes to be imagined, produced, and reified through language practices' (Lo & Chun, 2020, p.220). This analysis builds on existing studies that explore how immigrant Others get marked in discourse by focusing on new contexts. In order to reveal the political and ideological investments behind the commentary, a Critical Discourse Analysis (CDA) is carried out (Machin, 2012). When carrying out the analysis, I rely on Gee's (2014) conceptions of conversation, intertextuality, and

small 'd' and big 'D' discourse. The preliminary findings indicate the emergence of patterns of Haitian identity tropes, which are: (1) Haitians are invading the country, (2) Haitian women are crowding Dominican hospitals to give birth and using up all the resources, and (3) Haitians are 'illegal' and threatening the sovereignty of the country. The interdiscursive connections found throughout the commentary show the mutually reinforcing relationship between big 'D' Discourse and conversation: broader metanarratives of the Haitian Other not only appear in online conversations, but it is where they emerge and gain traction. Presenter: Benjamin Puterbaugh

Valuing Views and Viewers' Values : transnational audiences, digital platforms, and pious content: Pakistani television has experienced rapid transformation over the past two decades, first via state-led media liberalization and then through processes of digitalisation that reorganize production, distribution, and viewing practices. The paper examines the intersection of crossmedial forms (TV on digital platforms) and religiously-salient entertainment content (the spiritual drama genre) through the lens of 'production of distribution' (Deleuze and Guattari 1983; Lamarre 2015). This focus helps attend to new regimes of value that emerge to surveillance capitalist (Zuboff 2019) digital practice and seemingly incommensurability of creating content for diverse audiences' religious values. As viewing is enacted, audiences are 'targeted' by audience measurement companies and harvested for data. With revenues from global views on streaming platforms now eclipsing domestic viewers' value, production horizons are in flux. A focus on incommensurable commercial and religious values, articulated within the industry and by viewers, illustrates how data, visual medial forms, embodied viewing, and a semiotics of pious televisuality come together to animate social life. Secular logics privileging economic empiricism appear to abrogate this assemblage, but they also participate in a politics of attention (Pedersen, Albris, and Seaver 2021) that mobilizes affordances (Seaver 2019; Manning 2012), fame (Munn 1986; Abidin 2016), and qualia of experience (Chumley and Harkness 2013; Harkness 2015; Gal 2017). The paper investigates the subjective qualia of drama viewership, platforms, and distribution economies to address how differential engagements produce a culture industry. The paper bridges conversations in linguistic anthropology and an emerging anthropology of data (Douglas-Jones, Walford, and Seaver 2021) by emphasizing interactional design of

mass media. Presenter: Elliot Montpellier (University of Pennsylvania)

Hay Que Hablar, Pero en Equipo: Broadcasting, Documenting, and Mediating Testimonio for Anti-Racist Organizing: This paper forms part of a broader multi-sited ethnographic study of the complex efforts of a primarily Mexican immigrant community to advocate for immigrant rights in a rural Minnesotan town I call Westplain (all pseudonyms). It presents data collected within two interconnected field sites: a Spanish-language community radio program that began as a response to the Trump presidential campaign in 2016, La Gran Comunidad Latina (LGCL), and an antiracist coalition that was formed in response to the murder of George Floyd in 2020, Westplain Striving Toward Antiracism (WOTA). This paper seeks to answer the following two questions: first, how do undocumented women socialize each other into collective community organizing through the genre of testimonio (Beverley 2004; Stephen 2012)? Second, how are these testimonios leveraged within the public sphere to advance a social justice agenda that is rooted in institutional transformation? I examine the complexity in testimonial speech acts that are delivered by undocumented women in Spanish and then made legible to a wider audience via interpretation and documentation in English. I comparatively analyze how the participants perform testimonio in Spanish on LGCL and the process through which testimonios are documented and mediated in WOTA's meetings by me and others. I present four examples of testimonial speech acts - two from LGCL's weekly broadcast and two from my fieldwork in WOTA - to support two key findings of this research: (1) that undocumented immigrant women in Westplain manage the potential dangers of visibility in the US via mediated and unmediated collective testimonio; and (2) that the layers of interpretation and mediation of testimonio in Westplain highlight both the potential for these speech acts to restructure power while, at the same time, point to the ways in which this dynamic reinforces raciolinguistic hierarchies (Rosa and Flores 2017; Rosa 2019) through which Westplain's Latinxs' voices are rendered invisible in the public sphere. I conclude with the impact testimonios like these have had in advocating for linguistic justice in Westplain and in the New Latino Diaspora more broadly (Wortham, Murillo & Hamman 2000), and a reflection on how my role as a researcher is deeply implicated in these raciolinguistic polemics. Presenter: Anthony Harb (University of California, San Diego)

Talking 'Like Nastya': Investigating the Prevalence of Russian Language YouTube Content for Children in Post-Soviet Kyrgyzstan and Potential Effects on Language Shift: So-called 'new media' is optimistically hailed as a resource for language revitalization efforts (Dale, Basumatary, Iqbal, Khullar, & Shaikh 2022; Moshnikov 2022; Wang, Bahry, & An 2022). However, in post-Soviet Kyrgyzstan, adults lament that bloggers on YouTube are causing their children to speak and prefer Russian over their heritage language of Kyrgyz. Given this prevalent ideology, and the serious implications of new media as a resource for language revitalization or catalyst of shift, it is essential to investigate the content promoted to children. In the present paper, we ask: does YouTube prioritize Russian-language content for Kyrgyz child users? And would Kyrgyz children's interactions with YouTube result in their encountering more content in Russian? To answer these questions, we perform an algorithmic audit of YouTube, using synthetic Kyrgyz user profiles to determine the proportion and rank priority of Russian content presented in response to popular children's search queries. We then use eight months of ethnographic data consisting of participant observation and recordings with Kyrgyz children to contextualize these results and examine quotidian examples of children's YouTube usage, their linguistic practices, and language ideologies. After exploring whether children in Kyrgyzstan do encounter more Russian-language content, we can begin to contemplate the potential effect of promoted videos on children's linguistic practices and language ideologies, and the implications for language shift. Beyond the effect of exposure to the majority language on YouTube on acquisition, it is likely that repeated viewing of beloved bloggers speaking Russian influences how children perceive the status of the language and those who use it, further encouraging shift. As research in situations of language contact demonstrate, the patterns of language use to which children are exposed often lead them to different understandings than adults and they use language according to their own language ideologies and linguistic patterns, which sometimes leads to shift (Garrett 2005; Meek 2007; Ochs & Schieffelin 1984; Paugh 2014; Reynolds 2009). Data from participant observation demonstrates how certain semiotic elements from the bloggers' videos, such as images of Belorussian group 'A-4,' 'Kissy Missy' dolls from Indy horror game 'Poppy Playtime' or clothing resembling Wednesday Addams coupled with Russian speech, come to index some children as 'modniy'-stylish, trendy, and cool. The children are not seeking to imitate their favorite YouTube personages, but rather utilize features of bloggers' registers to construct their social identities and

negotiate their status in schools (c.f. Nakassis 2010; Bucholtz 2009; Ochs 1993). In contrast to 'Blogger Russian' as 'modniy', speaking only Kyrgyz, or speaking Russian with marked Kyrgyz phonological features and lexicon, is associated with conservatism, rurality, lack of education, and lack of culture. Ultimately, the semiotic resources the children have access to is in part determined by the content suggested by YouTube's algorithm, yet also determined by children's interpretations, choices, and habits as they interact with the platform. We argue that it is essential to explore the ways children's lives are intertwined with technology through mixed methodological approaches to understand the complex influence of internet language use on situations of language endangerment and shift. DISCUSSANT:

Daniel Fisher (University of California, Berkeley)

DESCRIPTION:

Raise your voice! Be vocal! Speak up! These refrains keep echoing through contemporary lifeworlds, enjoining the silenced to take up voice and make themselves heard. They promise participation, healing, and agency in one fell swoop, imbuing the voice with emancipatory promise, political and ethical value. Yet, as a growing body of anthropological scholarship has outlined, notions of voice come conjoined with particular ideas about political subjects and their capacities. Analogizing voice with power and voicelessness with silence relies on specific assumptions

about speech as the primary form of expression by the liberal subject, as the source of its individuality and self-worth (Inoue 2003, Kramer 2015, Kunreuther 2014, Weidman 2006). This is a 'romance of voice' where voices indicate unique, authentic subjects, where speech anchors their political presence, and where voices come to matter primarily for the selves they represent (Chadwick 2021, Fisher 2016, Harkness 2013). But what are the limits of this liberal subject and the model of political voice it relies upon? What forms of transition, shift, and disruption might allow for different constellations of voices and selves? What forms of speech, expression, and voicing become possible when voice and self no longer align? Anthropologists have also pointed to the historical and political situatedness of contemporary understandings of voice. Where liberal notions of voice emphasized individual will, intention, and interiority, they have noted that neoliberal configurations emphasize voice as a means of sincerity, transparency, and authenticity (Kunreuther 2010, Weidman 2014). This panel seeks to map how emerging forms of politics and mediation might reproduce, question, and disrupt these (neo)liberal alignments. It calls for attention to novel politics of voice that deploy voice and speech in ways that question their belonging to singular bodies and subjects or, on the contrary, might seek to counteract any such rifts. What happens in moments where voices are borrowed, lent, and transferred between bodies; where they emerge as contradictory, shifting, even complicit? What kind of politically effective speech is possible under these circumstances? What forms of play and enjoyment may vocal shifts and transitions enable, but how do they also foster social control and practices of domination? We invite contributions that address questions including but not limited to how emerging forms of algorithmic imagination, digital networking, and AI-driven speech generation shape voicing and speech in the contemporary world; how voices and the bodies pronouncing them may be queered in processes of transitioning (broadly understood); how identitarian, populist, and authoritarian movements tie voices to bodies in new ways; how practices of voice may challenge or reproduce politics of race; what implications changing notions of voice may have for our methods as anthropologists and ethnographers.

Sensing Others: Voicing Batek Ethical Life Beyond Inclusion: Based on ethnography with Indigenous Batek people in Peninsular Malaysia, this paper considers how voice might be theorized beyond 'giving voice'. Batek were theorized by colonial era anthropologists as 'silent', as moving through the forest 'silently', without
