Transition, Transposition, and the Incommensurability of Caste: Intellectuals and activists such as W.E.B. Du Bois, B. R. Ambedkar, and more recently, journalist Isabel Wilkerson have analogized relationships of caste between South Asia and the United States, with Dalits (outcasts) and Black Americans occupying commensurate positions of oppression. Yet, in the current moment of U.S. migration and racialization, in which the semiotic mediation of “brownness” remains ambiguous, caste status may not transition so simply. Rather than analogize, I argue that understanding caste and its transition in the semiotic complexity of a post-9/11 security state requires a more finely calibrated scale of value and visibility. This paper examines the language materiality of caste and its semiotic mediation across geopolitical and historical contexts through the analytic of “transposition.” I show how, in historically situated instances of transposition—where the South Asian caste system intersects with U.S. white supremacy—the incommensurability of caste categories becomes apparent. In these moments of transposition, ontologies are challenged in ways that give rise to new values, as individuals transition from one geopolitical context to another. Drawing on ethnographic data, I illustrate the intra-ethnic complexities of recent caste-based lawsuits and legislation that seek to enshrine caste as a “civil right” in the United States, to be protected alongside language, race, gender, and religion. Yet, with so little understanding of the South Asian caste system, the piecemeal, localized ways in which such protections are applied create new semiotic values about the meaning of caste categories while also furthering particular types of American racialization. In these ways, the paper considers questions of value and ontology that come to the fore about race and commensurability in the United States. Presenter: Shalini Shankar (Northwestern University)

Signs of Care: Commensurating Domestic Work in Globalizing Mexico : In June of 2020, Mexico joined upwards of thirty member-states to recognize the rights of domestic workers by ratifying the International Labor Organization’s Convention for the Decent Treatment of Domestic Workers (C189). Guaranteeing clear terms of employment and social security for household servants, the law’s passing marked a joint effort by state and non-state actors to abandon remnants of a hacienda past and build a democratic (read market-fundamentalist)

future. In this paper, I explore the public facing discursive work that goes into making the terms of the C189 persuasive, and the future-conditional imaginary of Mexican nationhood – and womanhood --afforded by its logics. Analyzing media circulated by the Latin American member state of the International Domestic Workers Federation, I sketch a semiotics of commensuration and reevaluation (Carruthers 2017), whereby signs indexical of diverse scales—like “private” and “public,” “Global South” and “Global North,”— person-types, and labor, are made to appear in an equivalent relation of contrast. Once brought into a contrastive relationship, otherwise disparate national histories, persons, and domestic relations can seem equivalent, deserving of universal recognition and value (Povinelli 2002); yet not without remainder. Drawing on ethnographic fieldwork in Mexico, this paper concludes with a discussion of domestic labor’s incommensurabilities, from the positioned perspectives of laborers for whom abiding affective ties with employer families are felt to exceed new task-based labor standards. In so doing, it speculates on what a semiotic anthropology of value and commensuration might lend to theorizing international circulations of feminism and gendered labor in Latin America. Presenter: Alessandra Rosen (CUNY, Hunter College, Department of Anthropology)

The Asset Manager's Voice and the Values of Engagement: Out of the last global financial crisis emerged a new regime of corporate investment and governance: what political economist Benjamin Braun has dubbed “asset manager capitalism.” Led by BlackRock and Vanguard, five mega-firms now manage more than 4 trillion dollars’ worth of assets each, profiting from fees from client-investors rather than rising share prices of portfolio companies. Further distinguishing asset management is an explicit ethos of “stewardship” and “engagement” with investee companies, a (value adding?) stance of social and environmental responsibility rebuked from the right as “woke” and from the left as greenwashing and other kinds of fraud. Drawing from ongoing ethnographic research in the UK among sustainability-conscious financiers and their critics, I consider some semiotic means through which the financial, epistemological, and ethical values of asset manager engagement get promoted and called into question. This paper focuses attention on a panel at Oxford University’s inaugural Sustainable Finance Summit in 2022 during which three executives of asset management firms and one finance scholar offered contrasting evaluations of engagement qua interaction ritual. Reading A.O. Hirschman’s theory

of organizational relationships together with Bakhtin and his anthropological interpreters, I suggest that different construals of engagement's financial materiality and social meaningfulness reflect different semiotic ideologies of voice. In the Oxford scene, I reconstruct how the scholar disentangled asset managers' valorization of effort and naturalization of efficacy in their voicing-interactions with investees. The paper concludes with semiotic implications for evaluating capitalism's green transitions or lack thereof. Presenter: Matt Schneider (University of California, Los Angeles, Department of Anthropology)

Cashmerlon, Cashmilon, and Other Fuzzy Extensions: Commensurability in the Cashmere Commodity Chain: Cashmere fiber combed from goats in the Gobi travels from the hands of herders to brokers, textile factories, runways, and secondhand shops all over the world. Across nodes in this long transnational commodity chain, the material is evaluated by actors with very different stakes—the families of herders who comb goats together each spring, the brokers and buyers who weigh it and feel it to adjudicate it for fashion houses, the advertisers and marketers who decide what is desirable in global markets of end consumers, and so on—who often apply different, even incommensurable criteria. By the end of the chain, where consumers have little experience of the conditions of production, qualia like the sensation of softness and second-order indexicalities like luxury that have accrued to the term “cashmere” can be divorced from the fiber's gritty, stinky origins and capitalized on to market soap or perfume. Valuation in a transnational commodity chain like the cashmere chain depends on both exploiting semiotic gaps in the chain like this and nonetheless meeting a threshold of commensurability, such that everyone can agree they are exchanging more or less the “same thing”—“cashmere.” But aligning perception to make co-participants in a given interaction agree on what counts as “cashmere” and on how it should best be evaluated requires work. This paper examines this semiotic labor through an explicit example, a legal case over the extension of the term “cashmere” to contested textiles. As in any intellectual property case, the lawyers sought to fix both the intension and extension of terms, primarily by appealing to scientific expertise. Ironically, however, key qualia of cashmere were treated as uncapturable, outside the bounds of what could be made commensurate. I draw on ethnographic research across nodes in the commodity chain to show the alternative modes of evaluation that the lawyers systematically excluded but that leaked in around the

edges all the same. Presenter: Kathryn Graber (Indiana University, Bloomington, Department of Anthropology)

Reprovincializing Language: Voices of Modernity 20 Years On

8:00 AM - 9:45 AM TMCC - 718 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Jan David Hauck (University of California - Los Angeles (UCLA), Department of Anthropology)

CHAIR:

Charles Briggs (University of California, Berkeley, Department of Anthropology), Richard Bauman (Indiana University, Bloomington, Department of Anthropology)

PRESENTER:

Susan Gal (University of Chicago, Department of Anthropology), Bruce Mannheim (University of Michigan, Department of Anthropology), Alex Chavez (University of Notre Dame, Department of Anthropology), Kathryn Hardy, Louis Romer (Vassar College), Jan David Hauck (University of California - Los Angeles (UCLA), Department of Anthropology)

DISCUSSANT:

Becky Schulthies (Brigham Young University, Department of Anthropology), Randeep Hothi

DESCRIPTION:

Richard Bauman and Charles Briggs' *Voices of Modernity* was published in 2003. Discussing the making of language in the works of key thinkers of the Western intellectual tradition, the book details how structures of inequality were embedded in seemingly innocuous constructions of language through ideological purification (deprovincializing language as neutral, indexicality-free medium) and indexical hybridization (tying language to the discourse of white, male intellectual elites and national traditions). Thus it provides an analysis of the philosophical foundations of language ideologies that are operating wherever we see language being used as a tool for naturalizing power and social inequalities along the lines of class, gender, race, and ethnicity. Recognized widely as a foundational text in linguistic anthropology, the book won the Edward Sapir Prize in 2006. And yet, there has been little sustained engagement with its core arguments. While

there is no shortage of citations of the work, most of these are references in passing (especially in relation to Herderian nationalist language ideologies), and there has been little uptake of the core themes, such as the mechanisms of purification and hybridization or the broader call for reprovincializing language. One reason may be that the book is seen as providing a historical and philosophical backdrop to issues that critical scholars of language have already been grappling with from different angles. The other, perhaps more important reason, is found in the conclusion of the book itself. Here, the authors explicitly state that as 'two white middle-class North American men' it is not up to them to 'dictate what would constitute an enlightened position on language and tradition' that would avoid reproducing structures of inequality (p. 316). The apparent lack of 'textual success' of their project may have thus been by design. And yet, as part of contemporary efforts at intellectual decolonization, new critical scholarship has emerged in recent years, which is very much in line with the articulated goals of *Voices of Modernity*. Scholars in applied and sociolinguistics have issued calls for 'disinventing and reconstituting' language (Makoni & Pennycook 2007) and for focusing on practices of 'translanguaging' (García & Li 2014). Linguistic anthropologists have advanced scholarship in raciolinguistics to highlight powerful hybrids of language and race (Alim et al. 2016). Others have pushed the boundaries of language into the realm of the nonhuman (Kohn 2013; Pennycook 2018). Yet others have argued for the recognition of ontologies of language from the Global South (Hauck & Heurich 2018; Pennycook & Makoni 2020). In this roundtable, we take the 20th anniversary of the publication of *Voices of Modernity* as an opportunity to critically look at such efforts. Drawing on historical and ethnographic examples from Morocco, India, Siberia, Hungary, Germany, Paraguay, Mexico, and the US, we will discuss topics ranging from raciolinguistic identity-construction to plant-human communication. We will examine the processes of deprovincialization and reprovincialization, purification and hybridization that are exposed by different analytic practices and theoretical approaches, but which these themselves may also be engaged in in different ways.

Revisiting Algonquian Myths and Beyond: New Approaches and New Challenges for Indigenous Mythologies (1)

8:00 AM - 9:45 AM TMCC - 605

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Émile Duchesne (Université de Montréal)

CHAIR:

Laurent JÉRÔME ,Robert Crepeau (University of Montreal)

PRESENTER:

Marie-Pierre Bousquet (Universite de Montreal Bibliotheque LSH),Émile Duchesne (Université de Montréal),Clint Westman (University of Saskatchewan),Philippe Lévesque ,Robert Brightman (Reed College, Department of Anthropology)

DESCRIPTION:

Algonquian myths have been painstakingly collected and scrutinized by generations of anthropologists. Boasian and other culturalist anthropologists left us considerable and consistent description of Algonquian lifeways from the early 20th century, as well as an important corpus of myths. Algonquianist anthropology also gave birth, through Alfred Irving Hallowell's work, to the ontology concepts so present today in the discipline. In francophone anthropology, Lévi-straussian structuralism also left its mark on Algonquianist research through the work of the Laboratoire d'anthropologie amérindienne, which conducted intensive research among the Innu between the 1970s and 1990s. In the past few decades, anthropology of Indigenous cosmologies has again been revitalized by new approaches such as animism, perspectivism, semiotics and the so-called ontological turn. These analytical tools allow us to gain new understandings of the vast and dense cosmology of Algonquian peoples. In the first part, our panel seeks to renew anthropology's long engagement with Algonquian mythologies by addressing new topics and using new approaches. How can we envision perspectivist arrangements, which seem so present in Algonquian mythologies ? What is a good storyteller according to Algonquian standards and how are their speeches performative events ? How does Algonquian mythology engage with contemporary issues such as politics, economics and Christianity ? How do Algonquian mythologies echo other Indigenous mythologies in the Americas or elsewhere? In the second part, our panel will envision these questions under a comparative light by asking specialists of other cultural areas to engage with the Algonquian material presented in the first part. This comparative scope will enable a better understanding of the intertwined

influence of storytelling and experience in Indigenous cosmologies.

Does Being Called “White” Make You a Monster? An Intriguing Anicinape Story: Can the old work of anthropologists shed light on the contemporary understanding of myths? Since the last elders who knew semi-nomadism are no longer alive, and in a context where the meaning of symbols has been disrupted by Christianity and Pan-Indian spirituality, the Anicinabek sometimes go back to the historical social science literature or talk with social scientists to recover forgotten knowledge about their culture. It is in this context that I became aware of a story, found in written form in the archives of an elementary school in the community of Pikogan (Abitibi, Quebec). It is the story of a man who, at birth, is named Wapinesi by an old shaman, a term that means “white as snow”. The shaman soon realizes that she was mistaken and that she should not have called the baby this name because it destined him to become evil. Indeed, as he grows up, the man becomes monstrous, with characteristics that resembles the Windigo: for example, he is very difficult to kill and he has a heart of ice. This story does not seem to have any known variant and would be very old. It is considered by the Pikogan Anicinabek as a true story (tipatcimowin in Anicinabemowin). But since such events no longer occur today, I will explore which elements of the anthropological literature, most often pre-1950, are the most likely to shed light on the meaning of the story. I will thus focus on the elements within our reach, namely the power that was attributed to the naming of people, the meaning and power associated with the colour white, especially when it is abnormal (as in cases of albinism), and the ways of becoming monstrous. While one cannot help but wonder if the narrative makes veiled references to white people, the colonizers who may have behaved monstrously, the analysis will focus primarily on the notion of power and weirdness in order to better understand what the Anicinabek say made their ancestors strong and powerful. Presenter: Marie-Pierre Bousquet (Universite de Montreal Bibliotheque LSH)

The Acquisition of Christian and Shamanic Powers in Innu Myths: The Boy Covered with Lice is a central myth in the mythology of the Innu of Northeastern Quebec and Labrador. A child abandoned by his parents receives help from a benevolent giant whom the child apprehends as a grandfather. This character is none other than Mishtapeu (i.e. the great man), the auxiliary of Innu shamans. In the continuation of the myth, the child is reunited with his parents but is subsequently cut

off from Mishtapeu, who then offers him the power of the shaking tent, a key ritual in Innu shamanism, which will allow the child to communicate with Mishtapeu again. This is why commentaries on this story make it one about power acquisition. Another story in the Innu oral tradition, about the first man to convert to Catholicism, can also be considered to be a story about power acquisition. In this story, an ancestor, while crossing a frozen lake, is said to have met a man who was praying alone and who sprinkled him with holy water. The ancestor then fainted and when he woke up, he understood that he had to dedicate his life to God. A comparison of the structure of these two stories reveals not only an important homology but also that one, the conversion story, represent a strong version of the other. The joint analysis of these two narratives thus allows us to better understand the deep roots of an Innu discourse that makes shamanic powers morally ambiguous and Christian powers morally virtuous, hence the idea that the two narratives relate to each other as strong and weak versions of power acquisition. Presenter: Émile Duchesne (Université de Montréal)

Manitow kâ-matwêhikêt (Where the spirits drum): Ontology, ritual, and toponymy in Cree narrative: I draw on three versions of a story, manitow kâ-matwêhikêt (‘Where the spirits drum’), told by Sarah Whitecalf (1919-1991), a Plains Cree woman, in 1989-1990. The narratives were recorded in Cree (nêhiyawêwin) and appear in her 2021 book, mitoni niya nêhiyaw – nêhiyaw-iskwêw mitoni niya (Cree is who I truly am – me, I am truly a Cree woman), edited by H.C. Wolfart and Freda Ahenakew. Their book makes a significant contribution to Indigenous life history studies and is an outstanding example of its editors’ collective oeuvre, as well as Whitecalf’s skill as a raconteur. Part III of the book, “The spiritual life,” departs from Whitecalf’s life story to focus on mourning practices, the importance of both Roman Catholic and Cree rituals and prayers, as well as accounts of a woman being taken away underground by spirits, at a specific named place on the Sweetgrass reserve. The latter story is reproduced three times in the book based on different recordings that Ahenakew made with Whitecalf. This set of narratives marks an important contribution for scholars of Plains Cree sociolinguistic and ontological concerns. The story highlights the spiritual importance of Cree placenames in the Prairie Provinces incorporating the anthropologically significant term, manitow, as well as the association of spiritual drumming or music with such sacred places. This story is connected to broader ritual life as well as the ontological context of sacred places, dreaming, and spirit guardians. I begin my paper

with a brief review of Whitecalf's life, then provide a general summary of her story, "Where the spirits drum," before exploring the differences between each version. I then focus on specific Cree spiritual terminology in the narratives and the insights that can be derived from a fluent speaker and master storyteller such as Whitecalf. I conclude with a discussion of the Algonquian manitow concept and its importance in Cree placenames.

Presenter: Clint Westman (University of Saskatchewan)

Guardian spirits among the Innu. A literal and structuralist investigation of narratives: Relationships with guardian animal entities are widely attested in the ethnography of the Algonquians and other North America indigenous people. Established during a dream or a ritual fast that is commonly referred to as 'vision quest', these intimate and lasting relationships with a non-human entity grant the human person certain powers related to subsistence and survival. However, the nature of the tutelary entities among the Eastern Crees, Innus and Naskapis of Quebec and Labrador presents significant differences with other Algonquians. In the ethnography of these groups, animal guardian relationships are erased in favor of Mishtapeu, an anthropomorphic entity and master of the ritual of the shaking tent, who seems to reign hegemonically over the world of guardian relationships. The study presented here aims to detect, through certain traditional Innu narratives, clues to the presence of guardian animal entities, which could have played an important role at one time or another in the Innu history, as is the case with other Algonquian groups. The analyses of the narratives are based on two complementary approaches. The first is literalism, which consists in considering the facts recounted as being credible in the lived world. The second approach, syntagmatic structuralism, then allows us to match the chains of events conveyed in the narratives to concrete facts of lived world. We will focus on comparing the structure of Innu narratives of animal relationships with the vision quest experience among the Rock Cree in order to identify their similarities and disparities. A strong similarity would be a likely indication of the current or past presence of a guardian animal complex among the Innu. Presenter: Philippe Lévesque

Performing Perspectivism: The Innu Who Married a Caribou: Nowhere explicitly described in Lévi-Strauss' structural mythology, animist perspectivism is implicit in analysis of animal marriage myths, interpreted as mediations not only of nature/culture but au fond, of being/non-being. Briefly situating Lévi-Strauss' structuralism and later ontological turns relative to each

other, the paper identifies narrative, morpho-syntactic, and lexical means through which narrators communicate the shared anthropic subjectivities which perspectivism finds in members of the same kinds and the differentiated bodies that project from experience of other kinds. The exemplary Sheshatshiu version of Caribou Wife dates from 1967. Crypto-human practices are exemplified by the husband's (H) revelation that the herd lives in its own experience (and now in his) in a warm, Innu-like mitshuap. Canoes and other artifacts are also present. Initially denoted with caribou names, H's new affines are thereafter described as human: Thus reference to wife [W] as ne ishkieu 'that [human] woman' rather than ne ishkieuatiku 'that female caribou.' Most relevant to structural mythology is a qualified binarism exemplified not by perspectival difference between Innu and caribou but differences among the latter. In new animisms, differentiated inter-kind bodies have been signs of Indigenous "nature" and generalized human "souls" compose each kind's intra-kind 'culture. Caribou, have, however, an anthropomorphous physicality (particularized by caribou hexis) to which perhaps paradoxically corresponds as "soul" the theriomorphic caribou body known to Innu. If caribou live covertly like humans, they hunt caribou. Thus ordinarily anthropomorphous WF transiently and reversibly assumes the H. The verb shinakushit.- clarifies that H is killing WF in transiently assumed caribou form. This fantasy of trophic autonomy recalls Viveiros de Castro's observation that "the invisible dimension is the visible one, the soul of the soul is the body." DISCUSSANT:

Jasmin Habib (University of Waterloo)

DESCRIPTION:

Colonial governments have a long history of denying the humanity and the richness of cultural practices and knowledge of the original inhabitants of a respective region in areas such as Africa, North America, South America, Australia or India. Aspects of the local culture such as symbols and rituals were rejected as 'pagan' and 'uncivilized.' Colonial rule and knowledge was used as a means to control and in an effort to assimilate the local people. Knowledge transfer was one directional, from the colonizers to the local people. It should be noted the degree of assimilation and colonial rule was not uniform throughout the globe. When colonial governments expanded into new territories, Christian missionaries followed. The missionaries viewed 'new' territories as sites of opportunity for the spread of their religious ideologies. The missionaries were not only involved in evangelization, but in transforming education and healthcare. They set up schools where Christianity was taught and local cultures/language were suppressed. In some sites, 'local charms' used in prayers to their ancestors were forbidden because they threatened Christian doctrine. In settler colonial societies like Canada, missionaries set up residential schools where children were forced to live in entirely new surroundings away from their families and communities. Despite such enormous external pressures, Indigenous Peoples continued to find ways to practice following their own political, economical, medical, and cultural beliefs. They had their own cultural systems and values and they were neither interested nor in need not of colonizers and missionaries imposing Euro-Christian values on them. We are making here a distinction between the effects of Residential Schools and the imposition of colonial education field from those communities wherein families and communities have chosen to send their children to boarding schools run by, for example, the Roman Catholic Church. In the belief they provide a better education. As we move to a post-colonial period, changes in education systems across the globe are occurring. The changes are uneven across the globe. As we move into a post colonial period and in the Canadian case, following the Truth and Reconciliation Report, a

period marked by reflection and recognition of genocidal practices of the Canadian state, this Roundtable will engage our audience by asking: what are some of the changes in education systems occurring across the globe that highlight the shift away from colonial to Indigenous-led practices? Can these transitions to a post-colonial education system help to restore proper more respectful relationships? What does the decolonization of education look like in practice? What are some of the challenges that communities face? What can we learn when we begin to consider decolonization in comparative terms? A global perspective to these questions about decolonization education and Indigenous practices will be explored with reference to and engagement with scholars with experiences from Brazil, Canada, Cameroon, India and Iran provided.

Scientific Perspectives in Human Transitions

8:00 AM - 9:45 AM TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

Society for Anthropological Sciences

ORGANIZER:

Ian Skoggard

CHAIR:

Ian Skoggard

PRESENTER:

Ian Skoggard ,Samantha King (Yale University, Human Relations Area Files),Cheng Liu (Emory University, Department of Anthropology),Brea McCauley (Simon Fraser University, Department of Archaeology)

DESCRIPTION:

The dialectic of practice and theory is still relevant today and crucial as humans navigate the quotidian transitions of human unfolding in face of unknown futures. Science offers anthropologists important tools in this venture by providing generalizable insights that enable knowledge production to guide effective practice. Science is a language that can speak across cultures, construct transcendent worldviews, enable interdisciplinary dialogue, and a common ground for trans-global connectivity and widespread collective action. In these papers, the authors use the tools of science, empirical observation and analysis, to gain perspective on cultural transitions in the archeological and ethnographic past, and argue its relevancy for the present. The anthropological record is a storehouse of rich

ethnographic data that can allow for the testing of theories, which can render important contributions to understanding and navigating the changing world around us. Topics of individual papers include behavioral and cultural responses to hazards, causes and effects of deference rituals, application of artificial intelligence to searching the ethnographic databases, acquisition and transmission of tool making skills, sustainability of rural livelihoods amidst climate change, and the practice of finger amputation.

Cause and Effects of Deference Rituals across Cultures: Deference ritual and demeanor has been a focus of social science research and theory. Some primate studies find that submissive behavior and rank ordering reduces in-group fighting, allowing larger group size, which may have adaptive advantages for group selection. In Confucian societies, deference ritual plays a vital role mediating social hierarchies. In this paper, we review deference theories in the social science literature. Looking at the ethnographic data, we examine how deference behavior is situated in social practices across different societies and test its relationship with group size and density, in-group violence, environmental stress, warfare, class, and hierarchy. Controlling for these and other factors, we determine to what extent deference influences and is influenced by exogenous and endogenous factors, and determine its overall significance as a principle of social organization. Presenter: Ian Skoggard

Investigating Climate Adaptation and Rural Livelihood Sustainability in the Ethnographic Record: Facilitating the sustainability of rural livelihoods is a growing global challenge within the context of climate change. But the struggle of rural people to achieve sustainable livelihoods is not new. Past societies have also experienced natural hazards and climate variability. This paper utilizes a global cross-cultural sample of nonindustrial societies to (1) understand how societies respond to disasters and (2) investigate the relationship between rural livelihoods and environmental instability. Results demonstrate the power of cross-cultural research to test contemporary assumptions of global development discourse and inform practical and sustainable approaches to support rural well-being and food security in response to growing climate threats. Presenter: Samantha King (Yale University, Human Relations Area Files)

A Cross-Cultural Analysis of Toolmaking Skill Acquisition in Non-Industrial Societies : Toolmaking, together with bipedalism and language, was once regarded as a

defining feature that makes humans distinct from other species. Although this notion of human uniqueness was challenged in the past decades by mounting evidence of toolmaking by non-human primates and corvids, it is undoubtedly still critical to human experience in the sense that a biocultural feedback loop is formed through toolmaking that shapes our minds and bodies. Yet the ability to make tools is not born with us, and we all need to learn either from others or through repeated trials and errors. To understand the diversity and universality in the process of human toolmaking skill acquisition, this ongoing project analyzed 169 non-industrial societies displaying varying subsistence strategies around the world using the eHRAF World Cultures database, with a particular focus on developmental contexts and transmission biases involved. Presenter: Cheng Liu (Emory University, Department of Anthropology)

Finger amputation: A transdisciplinary study: To many people, the idea that finger amputation would be carried out for non-medical reasons is unheard of. However, recent studies suggest that it may have been quite common in the past. The aim of this transdisciplinary study was to shed some light on the prevalence of finger amputation customs. To accomplish this, we examined textual and material evidence of finger amputation practices. We first recorded mentions of finger amputation customs in ethno-historic texts. A total of 181 ethno-historic groups were found to have engaged in such customs. Next, we searched for mentions of finger amputation in folktales. We found that folktales associated with 71 groups featured finger amputation. Thereafter, we reviewed six types of material evidence suggestive of finger amputation from 104 sites. The types of evidence we documented included isolated phalanges in contextually significant deposits, finger necklaces, skeletal individuals with missing phalanges and evidence of healed amputations, impressions of hands with amputated fingers, and incomplete hand images. Overall, we identified 250 cultures with either textual or material evidence for finger amputation. The results of our transdisciplinary study demonstrate that finger amputation has been a surprisingly common practice globally and for thousands of years. Presenter: Brea McCauley (Simon Fraser University, Department of Archaeology)

Social and Biological Reproduction: The Queer Making of Life

8:00 AM - 9:45 AM TMCC - 206 E

Oral Presentation Session

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

SJ Dillon (Emory University)

PRESENTER:

SJ Dillon (Emory University), Sahar Sadjadi, Yuan Wei (Simon Fraser University, Department of Sociology and Anthropology), Taylor Riley (University College London, Department of Anthropology)

DISCUSSANT:

Joshua Liashenko (Chapman University)

DESCRIPTION:

In what ways might we imagine or make visible queer social reproduction? And what is the role of the biological within this reproduction? These are critical questions to queer futurity. The papers on this panel explore the legal, intimate, and epistemological dimensions of queer reproduction (both social and biological) through investigations of anti-trans laws in the U.S. that affect trans youth and their families, children activists involved in the 'women, life, freedom' revolts in Iran, Chinese activist mothers who advocate for their gay children, and queer biosocial readings of the UK's tradition of DNA biobanking.

Threats to Girlhood: Citizens and Criminals in Anti-Trans Laws: This presentation analyzes the gendering implications of two recent bills proposed within the Georgia General Assembly: Senate Bill 435 (2022) and Senate Bill 140 (2023). Both bills seek to curtail the ability of transgender youth to access transition care, or gender affirming care, in the state. In analyzing the texts of these bills and verbal debates in the Georgia General Assembly, it becomes clear that at the center of SB 435 and SB 140 is the belief that gender transition destabilizes womanhood to the point that the category must, in the views of legislators, be legally protected for girls to become proper women along an inevitable path. But whose womanhood is at stake according to these assumptions? By analyzing the racialized nexus of the citizen versus criminal binary which is foundational to most if not all juridical bills passed in 2022 and 2023 in the Georgia legislature, I contend that the safety (SB 435) and the fertility (SB 140) of 'women' under threat from transition related care is that of white women. White women and girls embody near transcendent vulnerability within the category of the citizen and are viewed as requiring protection by mainly white, cis men who also occupy the citizen category as politicians,

lobbyists, and doctors. I ultimately argue that these actors affirm the commonsense-ality of the American gendering system and their own genders by stepping in to protect those they understand as future-women-citizens from trans girl's desires for transition-related care and treatment as well as stepping in to regulate the medical care of non-girls potentially reclaimable as citizens who have desires of their own for transition outside of girlhood and/or womanhood. Presenter: SJ Dillon (Emory University)

Revolutionary Children, Gender and the State of Nature: Children and adolescents have been at the forefront of the 'women, life, freedom' revolt that has erupted in Iran since September 2022, aspiring to overthrow the state through the struggle for gender justice and liberation of ethnic minorities. Youth of all genders and ethnic backgrounds, including immigrants, have risked, and at times lost, their lives protesting on the streets while chanting 'life.' Defiant schoolgirls have taken off their headscarves, as well as desecrating other symbols of the state and even ousted government representatives from their school. Armed forces have raided schools in search of child dissidents. In these times of global rise of authoritarian ethnonationalisms, deeply invested in gender and sexual politics, when the figure of the vulnerable child has become a battleground for gender and sexual politics, from criminalizing medical care for gender transition in the United States to protests against 'gender ideology' in Europe, how could Iranian children's collective revolt against the state for gender justice expand, our 'collective imaginaries around gender and bodies' (Radi 2020)? This paper suggests that the revolutionary temporality that these child dissidents are living, could disrupt the persisting Rousseauian legacy of the child as the State of Nature, as well as the temporality of evolution, development or progress toward anything already existing. Presenter: Sahar Sadjadi

Activist mothering storytelling, maternal ethics, and the "borns as gay" rhetoric in China's gay and lesbian social movements: This paper studies gay and lesbian social movements in contemporary China, specifically focusing on a group of mother activists who aim to promote family and social acceptance of gay and lesbian people by resorting to the method of public storytelling. These mothers' stories usually unfolds as a melodramatic narrative that starts by the intra-family conflicts caused by the coming out of their gay and lesbian children and ends at their eventual parental acceptance of their children's queer sexuality. One pivotal thesis emerges at the end of the acceptance narrative is mothers'

recognition of gayness as something one is 'born into (in Chinese: tian sheng).' Rather than reading this 'born as gay' rhetoric as replicating a western bio-medical essentialist discourse of human sexuality, this paper argues that the persuasive force of the rhetoric should be understood along with the moral argument made in the stories concerning what constitute a 'good mother.' This paper traces the multi-layered meaning of the Chinese word 'tian (which can be translated as heaven, sky, or day)' and analyzes how throughout its different usages in the stories, the term both helps the storyteller to narrate the presence of gay identity in the family as a moral misfortune for the mother, as well as resolving this newly established moral dilemma by re-distributing maternal responsibilities and defining family happiness. The (mis)translation of 'born as gay' as 'tian sheng' thus places gayness within the local moral world of the mothers and meanwhile opens up the maternal subjectivity to new paths of moral career. Presenter: Yuan Wei (Simon Fraser University, Department of Sociology and Anthropology)

Birth cohort studies, hidden lives, and the fallacy of non-biological kinship: Queer perspectives on biosocial research: The UK has an established tradition of birth cohort studies spanning multiple generations. This longitudinal research has contributed to significant strides in DNA biobanking as well as it has been part of the social turn (Meloni 2014) in biomedical research that embraces post-genomic thinking. In the wake of eugenics and other fraught histories which 'birthed' the birth cohort, birth cohort studies and in particular researchers who use birth cohort data today increasingly focus on social-biological transitions (Blane et al 2013). Such studies of how the social becomes biological add to the growing literature on epigenetics, social determinants of health, and contemporary inequities. However, birth cohort studies are also entrenched in certain essentializing discourses of the body, the family, and health that are continually iterated in contemporary biomedical research, though these do not escape critical interrogation and also evolve. As a result, it's probable that queer, trans, and intersex participants in such studies have historically been hidden and disappeared in the data. Utilizing a queer anthropological perspective, this paper discusses how gender norms impact birth cohort research in multiple ways, from the paradigm of maternal blame to pathologizing queer parents. The poignant problem of an everyday fallacy, namely that kinship which is not genetic is essentially non-biological, illuminates some limitations of birth cohort studies that take epistemology for granted. Considering birth cohort

research today as biosocial, it stands to reason that anthropological thinking about the social construction of the body, cultural norms, and kinship has much to offer biosocial birth cohort research. Embracing not only social and cultural variables but social and cultural perspectives requires a deeper rethinking of biology than is often assumed within biomedical research, and arguably than is practiced in longitudinal birth cohort studies today. Presenter: Taylor Riley (University College London, Department of Anthropology)

Teaching and Learning in Transition: Anthropological Pedagogies in the Pandemic Era

8:00 AM - 9:45 AM TMCC - 717 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Angela Jenks

CHAIR:

Angela Jenks

PRESENTER:

Jose Santos (Metropolitan State University), Jennifer Trivedi (University of Delaware, Department of Anthropology), Abby Wightman (Mary Baldwin University, College of Arts and Sciences), Toni Copeland (The University of Alabama)

DESCRIPTION:

In summer 2021, Teaching and Learning Anthropology published a special issue on 'Teaching and Learning Anthropology in the Time of COVID-19.' The volume examined the experiences of instructors, students, and administrators in a variety of institutional contexts during the first year of the pandemic, exploring the rapid shift to remote teaching and learning through the lenses of critical pedagogy, disaster studies, and digital anthropology. At a time when higher education struggles to transition to a 'new normal,' this roundtable brings the special issue's authors and editors together to explore the ongoing, long-term impacts of the pandemic on anthropological teaching and learning. Just as the original volume emphasized that there was no simple 'COVID crisis' in 2020, but rather a pre-existing system of interconnected inequities that the pandemic laid bare and, in some cases, exacerbated, this roundtable suggests that there is no simple transition to a 'post-COVID' world. Presenters invite conversation about how the traumas of the last three

years – including pandemic losses, environmental catastrophe, racial injustice, and rising fascism – have impacted students and faculty and reshaped interactions in anthropology classrooms. What new or revised pedagogical tools and approaches are needed as we navigate these transitions? How might anthropologists in higher education respond to changing working conditions, enrollment declines, cuts and closures in higher education, shifting bureaucratic priorities, political restrictions on teaching and learning, and continuing transformations in students' lives? Through engagement with these and other issues, this roundtable seeks to facilitate ongoing, collaborative dialogue about the challenges and opportunities contemporary transitions present for teachers and learners of anthropology.

4-180

Teaching ethnography in troubled times

8:00 AM - 9:45 AM TMCC - 716 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Andrea Dyrness (University of Colorado, Boulder)

CHAIR:

Reva Jaffe-Walter (Montclair State University)

PRESENTER:

Ariana Mangual Figueroa (CUNY, Graduate Center), Kysa Nygreen, CINDY Cruz (University of Arizona), Andrea Dyrness (University of Colorado, Boulder), Sofia Villenas

DESCRIPTION:

The anthropology of education has a long history of activist and engaged ethnography and, more than many other subfields of anthropology, has embraced traditions of collaborative and participatory research (AEQ 2008; Villenas 2019) and explicitly antiracist and political goals for research (Villenas 2019). The Council on Anthropology & Education advocates for 'research that is responsive to oppressed groups,' and that 'promotes practices that bring anthropologists, scholars from other disciplines, and educators together to promote racial and social justice in all settings where learning takes place.' Many of us were trained in these traditions and optimistic about pursuing change through research. But having entered the academy, we find ourselves inhabiting (structurally, if reluctantly) the role of gatekeepers at a moment of profound political

change, facing challenges to ethnography from both the left and the right. The polarized nature of the times makes it challenging for new scholars/students to confront the complexity of the ethnographic endeavor and the inevitable contradictions of pursuing social justice from within the academy, of conceptualizing a social justice scholarship that is both rigorous and consequential, with limitations that must be described and addressed, but cannot be fully eradicated. This roundtable aims to explore dilemmas of teaching, supporting, and engaging in ethnographic research in education at this historical moment when the urgency of change challenges many of the conventions we have followed in the past. Some examples: How do we respond to claims that we cannot afford the time that careful ethnography requires? That observation and critical analysis of harmful dynamics, written up as critical ethnographies, cannot be justified? Can ethnography be salvaged from its colonial roots? What is lost in the rush to action or in the push for forms of public scholarship (e.g., blogs, Tweets, memoirs, public writing, etc.) without critical ethnographic writing for a scholarly community? How can we support the emancipatory possibilities of working in solidarity with youth, communities, and educators while insisting on conceptual analysis in doctoral work? How do we inhabit the both-and of being in the academy and working to change it? How do we model this duality for our students? Are there parallels/lessons we can draw from our hyphenated roles as participant-observers? The presenters, faculty members at research universities training doctoral students, have all engaged in diverse forms of collaborative, engaged, and/or activist ethnographic research throughout their careers. Each presenter will share a dilemma from their teaching/mentoring practice, followed by discussion of the above cross-cutting questions among the roundtable participants, before opening it up for discussion with the audience members. Our goal is to provide a space for dialogue, collective reflection, and support for educational anthropologists who continue to hold space for justice-oriented ethnographic praxis in the academy.

4-185

The Construction of Race in Educational Policy: A Cross-Contextual Exploration

8:00 AM - 9:45 AM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Rachel Silver (York University)

CHAIR:

Eujin Park (Stanford University)

PRESENTER:

Amelia Herbert (Rutgers University), Krystal Strong (Rutgers University), Casey Wong (Georgia State University), Eujin Park (Stanford University), Rachel Silver (York University)

DISCUSSANT:

Adrienne Lo (University of Waterloo)

DESCRIPTION:

For the past several decades, anthropologists have examined how race is constructed through intersecting social, cultural, and political-economic processes (e.g., Thomas & Clark 2013; Mullings 2005; Harrison 1995). Anthropological investigations of race often focus on the granular discourses and practices that make race (or, that racialize) and make it relevant to social outcomes, while paying less attention to the mediating policies that connect the two. At the same time, the anthropology of policy has not centered racialization processes in policy creation and enactment. This roundtable brings together anthropologists of education to explore new possibilities for applying an anthropology of policy framework to better understand how racial constructions are constituted, circulated, resisted, and transformed in and beyond schools. With roots in practice theory (e.g. Ortner 1995), anthropological approaches to policy conceive of policy as socio-cultural practice, made sense of and acted upon by diverse actors (Bartlett & Vavrus 2017; Levinson et al. 2018). Rather than something official to be instrumentalized and evaluated, policy from this perspective is a technique of governmentality that produces particular subjects and social relations in a field of shifting power (Shore, Wright, & Però 2011). Yet despite these important advances, the anthropology of policy (and/or of institutions) has only recently paid close attention to race and White supremacy, as called for by Beliso de-Jesús and Pierre (2019) (e.g., Herbert 2022; Rosa & Díaz 2019). In contrast, educational anthropologists have long examined how schools reproduce racial hierarchies through micro-processes and interactions (e.g., Lee, 2009; Valenzuela, 1999). More recently, critical ethnographers have investigated how schools racialize youth and maintain White supremacy through pedagogy, curriculum, tracking, assessment strategies, and district policies (e.g., Ewing 2018, Tyson 2011). Much of this work, however, is grounded in sociology.

This roundtable invites anthropologists of education to consider what it means to apply a specifically anthropological lens to understand how race and racial hierarchies are constructed in policy. Our conversation brings together panelists who live and work in diverse contexts including the US, Canada, South Africa, Malawi, and India. We take a comparative, transnational approach in recognition of both the globality of white supremacy (Beliso de-Jesús & Pierre 2019) and of policy borrowing (Steiner-Khamsi 2004). Through their scholarship, panelists address racial formation in policies that range from affirmative action in higher education, school marketization, raciolinguistics, citizenship education, and girl-focused international development interventions. They also explore multiscalar movements for racial justice. Together, panelists draw on their empirical work to consider (1) how racial categories are produced and resisted in and through education policy; (2) how race intersects with factors such as gender, migration, and language to shape educational outcomes; (3) what continuities and distinctions characterize racial formation in policy research across geographies; and (4) how anthropologists can further nuance education policy research and challenge global White supremacy. Through this conversation, we hope to highlight exciting, emerging theoretical developments and empirical knowledge in and beyond CAE.

4-010

The Space(s) Between: Transitioning Toward a Sideways Anthropology of Coevalness

8:00 AM - 9:45 AM TMCC - Hall G - MI

Executive Oral Presentation Session - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Helena Wulff (Stockholm University)

CHAIR:

Deborah Reed-Danahay (SUNY University at Buffalo, Department of Anthropology)

PRESENTER:

Ulf Hannerz (Stockholm University), Deborah Reed-Danahay (SUNY University at Buffalo, Department of Anthropology), Tulasi Srinivas (Emerson College, Institute for Liberal Arts & Interdisciplinary Studies), Helena Wulff (Stockholm University), Cristiana Bastos (University of Lisbon), Dominic Boyer (Rice University, Department of Anthropology)

DISCUSSANT:

Vered Amit (Concordia University, Department of Sociology & Anthropology)

DESCRIPTION:

Anthropology is in transition. This panel interrogates the binaries of we/they, fieldwork at home and away, as well as the tropes of insider vs outsider in order to explore the 'spaces' between anthropologists and their interlocutors. It also addresses the various temporalities at play in ethnographic encounters. Our panel responds to the AAA/CASCA 2023 Executive Committee's call for sessions that 'reflect upon our work as anthropologists' through a 'transition towards modes of knowledge building and exchange'. We reframe understandings of how social, physical, and temporal distances and proximities affect our theoretical and methodological approaches. Inspired by Hannerz's (1998, 2004) concept of 'studying sideways' we focus on ideas of coevalness in research – when we study people who we perceive to be quite similar to ourselves. This builds on Fabian's (1983) argument of coevalness and critique of anthropology for relegating interlocutors to live in a different timeframe than the contemporary one (see also Ramsey 2020). Another key inspiration is Bourdieu's (1984) concept of 'social space,' as we explore the power dynamics in the spatial metaphors of ethnographic research that shape our own positionings in the field as well as our writing styles and genres. We focus on similarities between fieldworker and interlocutor – not to disregard differences of status and power, but to move toward a recognition of coevalness. While some fieldsites are obvious for studying sideways, others may turn out to be just that when the fieldworker discovers having more in common with interlocutors than first expected. As Holmes and Marcus (2005) have suggested: interlocutors can be the anthropologist's colleagues and fellow intellectuals. We can consider their writing and other cultural productions as 'autoethnography' (Reed-Danahay 1997). A sideways anthropology of coevalness includes activities and sensibilities in the worlds of art and performance (Vargas-Cetina 2013; Wulff 2017). What outputs are required for a contemporary sideways anthropology? Academic publishing may not always be enough anymore, and is increasingly complemented with various forms of public anthropology ranging from textual to oral and visual, even aural in the form of podcasts. What happens when well-informed interlocutors read what anthropologists write about them, as discussed by Brettell (1993) some time ago, or listen to them? How is an equal and respectful relationship negotiated in the space(s) between

them? Is there an arc of certain phases that characterizes such relationships? How are conflicts solved? What transitions in our knowledge occur through encounters in the field? How can we develop our tools and techniques in the field to reach an inclusive imagining of this space? A sideways anthropology of coevalness considers relationships with our interlocutors within and beyond specific research contexts, and provokes questions about what constitutes 'the field' (Amit 1999; Coleman and Collins 2006). At stake are issues of equity in a decolonizing approach. Anthropologies of texts, literature and writing, as well as the idea of anthropologists collaborating and co-authoring with interlocutors, are highly relevant. This accentuates how methodological and conceptual transitions associated with a new understanding of studying sideways could help reorient the foundations of anthropology as a discipline.

Studying Sideways: Looking Back: This paper looks back over some of the development of notions of “studying sideways” over the past 25 years – in an article published in 1998, I dwelt on spies, missionaries, and foreign correspondents. Here I also give much attention to these. My own interest was primarily in newsmedia foreign correspondents. I chose field sites where they would be dealing with settings culturally unfamiliar to their home audiences, especially in feature stories. With regard to missionaries, their interests could seem to be in conflict with those of anthropologists – they want to turn the natives away from what we come to study. Yet it turns out that the relationships have often been ambiguous. Some missionaries have created hybrid faiths, others have indeed converted to anthropology. It is difficult to do a field study of real spies, but field working anthropologists easily become suspected of being spies – their research purposes may not be readily understandable to people around them. Then there have also repeatedly been concerns that anthropologists must not allow their research to be used against the people in their fields – turning them in effect into spies. Finally, the idea of being an anthropologist studying sideways can appeal to scholars in other disciplines. In 1973, an economist of Swedish background transplanted in American Academia imagined himself as an ethnographer and published an article titled “Life among the Econ”. This was indeed studying sideways in the mirror, playfully, looking at the economists as a tribe. Presenter: Ulf Hannerz (Stockholm University)

Looking Back to Look Forward: The Non-Linear History of Sideways Anthropology: This paper focuses on three

pioneering female anthropologists of the 20th century – Gladys Reichard, Hortense Powdermaker, and Zora Neale Hurston – to chart their attempts to create an anthropology of coevalness. How did they position themselves vis-à-vis their interlocutors in their writing? Reichard collaborated with her Native American interlocutors, learned to weave, and wrote both fictional and non-fiction works about Navajo life. Powdermaker, most famous for her book *Stranger and Friend*, conducted the first major ethnographic study of Hollywood in addition to her other ethnographic projects. Hurston, the first Black female cultural anthropologist, conducted research among African-Americans in Florida and Georgia (studying “across” rather than up or down), as well as in Haiti, although she is primarily known for her autobiographical and fiction writing. I will discuss the work and legacy of these women, and highlight the lessons we can learn from the changing reception of their work over time. With my attention to these ancestral figures in my discipline, I seek a sideways history of anthropology that looks across (sideways) to other women and also argues that a transition toward a more coeval stance to fieldwork should recognize the antecedents often ignored in histories of anthropology, as Lamphere (2018) has so cogently argued. They are, for example, missing from the discussion of coevalness in Fabian’s (1983) critique of anthropology’s allochronic discourses. Anthropology’s “transitions” regarding more contemporaneous viewpoints must be understood not as linear stories of progress, but of twists and turns that have brought key figures in and out of focus. Presenter: Deborah Reed-Danahay (SUNY University at Buffalo, Department of Anthropology)

Hymns to the Drowning: “Sideways” Anthropology, Repair and Grace in a Climate Apocalypse: Through an exploration of my hometown Bangalore’s riparian marsh ecology, and its destruction in the name of development, I consider the pivotal question that a “sideways anthropology” of co-evalness provokes--what constitutes “the field”? Today, as Bangalorean watery ecologies swing dangerously between drought and flood in a coming climate apocalypse, I ask what it means, not to have solid ground, but rather, a treacherous liquid flow under one’s ethnographic feet? ‘The form of water’ (Strang 2005) has, as Helmreich argues, shifted location in anthropological theorizing from an implicit part of social and cultural worlds to an explicit active element in these worlds (2011) with consequences for how we think about water, both materially and morally. What happens when water, and with it life itself, is at stake? Thinking of life in a post-human world, where Dalit well

builders and runaway water goddesses intertwine in a fluid field, I argue that urgent questions of methodological and conceptual re-formations sediment around repair as an act of grace. Grace as an analytical intervention allows us to think “sideways,” to ask; What transitions in our knowledge can occur through encounters with interlocutors in a doomed and drowning field? How can we develop our tools and techniques as ethnographers to reach interlocutors’ existential imaginings, their hymns to this fluid and ephemeral space? Finally, I suggest that an anthropology of grace allows for a repair of the anthropological field itself. Presenter: Tulasi Srinivas (Emerson College, Institute for Liberal Arts & Interdisciplinary Studies)

The Author as Ethnographer: Sharing Space in a Sideways Study of Migrant Writing in Sweden : Literature has been a source of inspiration for anthropologists almost for as long as the discipline has existed, more recently both as a way to acknowledge writing as a craft – and as ethnography. In this paper, I discuss my sideways study of migrant writing in Sweden where I take the authors as ethnographers seriously. Their work – novels and opinion pieces – have taught me about varieties of integration and prejudice, and what it means not to look traditionally Swedish and be treated like a foreigner in the country where you were born. When it comes to authors’ work practices, they are quite similar to those of anthropologists; long hours writing alternating with periods in public: for authors promotion, for anthropologists lecturing. We share a concern for the writing process, reputation, competition, and negotiations with publishers. Researching authors entails sharing a space where interlocutors are actively taking part not only by providing ethnographic materials but also, importantly, by reading and commenting on my writing which has had a major impact. They are well-informed about methodological and theoretical issues in academia and public debate, and not least political ones that they consider in their work. This is captured in two novels by authors who moved from Iran to Sweden when they were children: Pooneh Rohi’s *The Arab on being homeless in your heart*, and Marjaneh Bakhtiari’s *Infinitely Wonderful* on racist killings in Sweden. This transition toward an anthropology of coevalness can contribute to a commitment to equity and inclusion in the discipline. Presenter: Helena Wulff (Stockholm University)

The Subject that Shaped my Research and Brought me to the Other End of the World: In my work at the

confluence of history and anthropology, “them” generally means people that lived in the past, often over a century ago. Interactions are different from the shared and cherished moments of traditional fieldwork. Still, people materialize in our analytic and narrative work through multiple interactions that are shaped in a collaborative, coeval regime. I address the theme of this panel by exploring one case-study involving one particular character that was shaped in my research while also shaping my research. One birth registry of 1884 found circa 2000 in the Navy Archive in Lisbon plus a grave found in southwestern Angola in 2005 brought me to a speculative life that could illustrate a collective endeavor. Once this existence made it to an article as speculation, it became real through the feedback of actual descendants who contacted me from many corners of the world – South Africa, Brazil, Portugal, etc. Through the descendants I learned that the baby born on a ship traveling with settlers from Madeira to Angola already had two brothers born in Honolulu. Through the family I explored their Hawaiian connections – both the myths and beliefs of a particular branch of the family, and the actual connections of Madeiran migrants to Hawaii’s sugar plantations. After periods of dormancy, interactions resumed as exchanges and co-production of genealogical knowledge that is nothing other than sideways collaboration – with its rewards and challenges, including those of processing documents that dismiss cherished beliefs of what became dear friends and correspondents. Presenter: Cristiana Bastos (University of Lisbon)

Petroculture Sideways: Coeval, Coevil: The anthropological literature on experts and cultures of expertise has paid significant attention to the complex epistemic relations within fieldwork situations, how for example, intellectual partnerships mediated the interpretation of cultures and research partnerships with experts can overturn conventional divisions of labor between “theory” and “data.” This kind of reflexive attention is less common in the anthropological literature on energy, perhaps due to the extraordinarily urgent existential questions wound up in studying phenomena like climate change and energy transition. At times, it seems, energy anthropology does not believe it can afford the indulgence of reflexivity. And yet, fossil energy elicits its own unique epistemic challenges of “studying sideways” (Hannerz 1998), especially in the context of critical anthropological engagements with petroculture (e.g., Coronil 1997, Sawyer 2004, Appel 2019). In addition to the generally heavy carbon footprint of northern academic life—e.g., sprawling campuses and conference life—

anthropological research practice is arguably one of more routinely carbon heavy disciplines because of its pragmatic reliance on extensive translocal transportation and high energy data infrastructures. Critical reflexive attention to energy spotlights the ubiquity of petroculture as coeval socio-material-infrastructure context in which much field research unfolds. In this paper, I discuss what it means to practice critical energy anthropology in the shared sideways context of petroculture. And I ask what strategies exist, what reforms might be necessary, to avoid the coeval becoming coevil in a moral sense. Presenter: Dominic Boyer (Rice University, Department of Anthropology)

Thresholds and age transitions in contemporary European societies // Seuil et passages d'âge dans les sociétés européennes contemporaines

8:00 AM - 9:45 AM Virtual - Room 2

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for the Anthropology of Europe

ORGANIZER:

Nicoletta Diasio (University of Strasbourg)

CHAIR:

Nicoletta Diasio (University of Strasbourg), VINEL Virginie

PRESENTER:

Marie-Pierre JULIEN ,Francesca Zaltron ,Eva Laiacona ,Stefania Fucci ,VERONIKA KUSHTANINA

DESCRIPTION:

The workshop proposes to question the institutions, practices and knowledge that help define, organize and regulate age transitions in contemporary European societies. Is the notion of 'passage' still relevant to describe the shifts from one age to another? How does one 'pass' today? Various analyses argue for a lesser importance of organized, ritualized or collectively signified passages in contemporary societies. At the same time, the 'succeeding' of transitions - between ages or within biographical paths - seems to take on more and more importance: passages are seen as moments of fragility to be controlled as well as social trials whose success validates the subject's experience. Panelists are invited to discuss the relevance of the concept of age transitions and how they have approached it in their own empirical research. ***
L'atelier se propose d'interroger les institutions, les

pratiques et les savoirs qui participent à définir et à encadrer les transitions d'âge dans les sociétés européennes contemporaines. Est-ce que la notion de « passage » est encore pertinente pour définir les moments de bascule d'un âge à l'autre ? Comment « passe-t-on » aujourd'hui ? Différentes analyses plaident pour une moindre importance de passages organisés, ritualisés ou collectivement signifiés dans les sociétés contemporaines. En même temps, le fait de « réussir » les transitions - entre les âges ou sein des parcours biographique - semble prendre de plus en plus d'importance : les passages sont vus tant comme des moments de fragilité à surveiller que comme des épreuves sociales dont la réussite valide l'expérience du sujet. Les panélistes sont invités à discuter la pertinence du concept de passage d'âge et la manière dont ils l'ont abordé dans leurs propres recherches empiriques.

4-785

Transition Studies: Reimagining Socioecological Change in an Uncertain Era

8:00 AM - 9:45 AM Virtual - Room 4

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Anna Willow

CHAIR:

Burge Abiral (Johns Hopkins University, Department of Anthropology)

PRESENTER:

Hilary King (Emory University, Master's in Development Practice), Celina Scott-Buechler (Stanford University), Sarah O'Brien (University of St Andrews), Sourayan Mookerjee

DISCUSSANT:

Anna Willow , Mario Blaser

DESCRIPTION:

We live in a time of uncertainty. The climate is changing rapidly, bringing rising sea levels and extreme weather events. The sixth extinction is underway. With marginalized communities and future generations both disproportionately vulnerable to its effects and disproportionately innocent in its causation, climate/ecological disruption is inseparable from environmental justice and holistic human wellbeing. As the inevitable shift from the current fossil-fueled civilization to its less energy-intensive sequel proceeds,

some observers foresee the emergence of new relocalized cultures that differ dramatically from those dominant throughout the industrialized world. Whether we acknowledge it or not, dramatic changes are happening; it is up to us to create a future we desire rather than accepting one that is thrust upon us.

Transition is both a named movement and an array of independently unfolding processes that seek to cultivate resilient communities in response to climate change and impending energy descent. Arturo Escobar recently proposed the interdisciplinary field of Transition Studies to encompass scholarship and engagement surrounding a diverse array of transition discourses and frameworks. In the global Great Transition, all communities-wealthy and impoverished, privileged and marginalized, North and South-constitute sites from which new ways of existing might emerge. Whether it transpires in conjunction with the UK-based movement established in 2006 or less formally, Transition endeavors to cultivate a courageous new narrative about human trajectories and possibilities. Notably, Transition is not merely an environmental or technical process; it is a profoundly cultural undertaking intended to change the stories people tell about themselves, along with their core values and ways of life. Although the cultural transformations that comprise Transition may be difficult to discern in the moment, it is the job of Transition Studies to illuminate and amplify the future-creation processes that Transition participants hope will lead to a brighter future. This session explores Transition participants' motives and strategies, highlighting the common threads that weave their visions together as well as the elements that make each instantiation unique. Roundtable participants will consider how individuals and groups around the world are intentionally repairing the cultural and material flows that shape their lives as well as the relationships to the beyond-human world that guide them. Transition Studies ponders individuals' and communities' capacity to influence structural transformation, thereby shedding new light on old discussions about structure and agency. As we reflect on how change transpires, we also look to issues of scale, anthropological engagement, and possibilities for proactive future creation. How do invested actors around the world simultaneously recreate and challenge their own cultural and physical realities? How can local innovations be scaled-up and augmented? What roles might anthropologists and other social scientists play in advancing these processes? And how might we forge practical and conceptual connections across geographical distribution and cultural difference? Drawing on ethnographic examples from diverse communities in North and South

America, South Asia, Australia, Europe, and the Middle East, this session seeks to catalyze rich conversations about Transition's multiple possibilities and significance.

Transnational Dynamism of and Intercultural Dialogue on the Pop Culture of East Asia: Toward Constructing the History of the East Asian Region's Pop Culture

8:00 AM - 9:45 AM Virtual - Room 1
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Takayoshi Yamamura (Hokkaido University)

CHAIR:

Kyungjae Jang

PRESENTER:

Ryo Koarai (Hokkaido University),TING WANG ,Qian Jin (Hokkaido University)

DESCRIPTION:

Traditionally, East Asian pop culture has been analyzed in terms of country-specific economic, political, and cultural peculiarities, for example, K-pop, Chinese movies, and Japanese anime. Furthermore, such academic trends have mainly been reinforced as national policies, for example, through Japan's 'Cool Japan' and South Korea's 'Korean Wave' policies. Especially since the 2000s, with the spread of social networking services, economic development of each country and region, and dynamic movement and exchange of people through international tourism, each country's pop culture has developed with a strong mutual influence, transcending the country's political agenda. Thus, the purpose of this panel (roundtable/town hall) meeting is to discuss the dynamic flow of and intercultural dialogue on transnational pop culture, while focusing on the sociocultural history and current state of pop culture in East Asian countries and regions. With researchers from four East Asian countries and regions (Korea, China, Taiwan, and Japan) the panel will focus on multilateral and multilayered exchanges within the region, rather than simple bilateral exchanges. Moreover, the panel aims to construct and develop an academic framework to understand the sociocultural history of East Asian pop culture in terms of its dynamism through a borderless intercultural dialogue. Finally, this panel will attempt to

highlight how the pop cultures of East Asian countries and regions mutually influence each other, thus leading to intercultural dialogue and the creation of new cultures.

4-844

'Where have all the workers gone?' Ideological framings of post-pandemic labor regimes

8:00 AM - 9:45 AM TMCC - 801 A

Late-Breaking Roundtable/Town Hall - In-Person

ORGANIZER:

Agnieszka Pasieka (University of Bayreuth)

CHAIR:

Jelena Tosic, Agnieszka Pasieka (University of Bayreuth)

PRESENTER:

Nellie Chu, Sharryn Kasmir (Hofstra University, Department of Anthropology), Manos Spyridakis, Alena Kamenshchikova (Maastricht University), Marketa Dolezalova (University of Leeds)

DISCUSSANT:

Douglas Holmes (SUNY, Binghamton University, Department of Anthropology), Susana Narotzky

DESCRIPTION:

The title of this roundtable paraphrases a common question ethnographers encounter in the aftermath of the COVID-19 pandemic - a question that is being posed across economies, labor markets, populations and political ideologies. Be it the Austrian Monthly Profil trying to grasp developments in Austria, the US Chamber of Commerce identifying the most impacted industries, or small-scale tourism entrepreneurs at the Montenegrin coast puzzled by the difficulty finding seasonal workers, the post-pandemic labor shortage is urging us to look closer at the entanglement of processes, regimes, actors and ideological groundings of explanatory narratives. The multiscalar, comparative and mobile horizon of ethnographic approaches is best suited to engage with different 'genres' and elements of unfolding explanations of post-pandemic labor shortage and its effects, such as: an essential reassessment of (good) work and living; new labor mobilities; the impact of remote work infrastructures; the rise in early retirements; a turn to 'simply' working less; changes in work practices broadly understood. The aim of this roundtable is to shed light on all these different transitions of and within the labor market. In so doing, the roundtable brings together different anthropological perspectives (anthropology of work, migration, gender,

political anthropology) and scholars across the global North, South and East to exchange experiences from the field and zoom in on a set of interrelated questions. How have imaginaries and practices of work in different sectors and forms of labor changed due the Covid-19 pandemic? What are the cemented or new hierarchies of labor unfolding on regional and global scales? How do new dynamics of (il)liberalization in migration regimes impact novel entangled trajectories of labor mobilities (e.g. Global South to Southeastern Europe)? To what extent can changes of the labor market be indeed linked with the pandemic and when does the pandemic function as a (useful) explanation, overshadowing some long-term patterns? Do recent developments prompt us to imagine a transition to a labor-less/free future? And finally: What kind of implications do these post-pandemic processes and regimes have for anthropological engagements with labor, mobility and political ideology?

Witches, Butchers and Dreamers: Portraits of the Artisan in the Anthropological Imagination

8:00 AM - 9:45 AM TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Society for Humanistic Anthropology

ORGANIZER:

Marko Zivkovic (University of Alberta, Department of Anthropology)

CHAIR:

Jamin Pelkey (Toronto Metropolitan University, Department of Languages, Literatures and Cultures)

PRESENTER:

Steve Coleman (National University of Ireland Maynooth), Sara O'Rourke (National University of Ireland, Maynooth, Department of Anthropology), Lijing Peng (Trinity College Dublin), Mary Scoggin (Cal Poly Humboldt, Department of Anthropology), Marko Zivkovic (University of Alberta, Department of Anthropology)

DISCUSSANT:

John Leavitt (Université de Montréal)

DESCRIPTION:

In this panel we use the tools forged in the workshops of tropologists and linguistic anthropologists in order to highlight the social life of characters both among those we study and in our own anthropological practice. We

move from utterances, plots, and narratives as units of analysis to dramatis personae – the figures and characters, real, and fictional, individualized or general. The panelists see them as imaginative resources for people whose life-worlds we want to understand and for self-understanding. We interrogate them as archetypes in Rodney Needham's rather than Jung's sense, as synthetic images, of which the 'witch' is a paradigm, and as mediators between worlds: of immanence and transcendence, centers and peripheries, past and future, as well as mediating between bifurcated modalities of knowledge. While some of the papers focus on the social life of such charismatic figures as the Irish poet endowed with both craft and supernatural gifts, and the Tibetan Epic Singers taught in dreams by ancient deities, others explore fictional characters such as the awkward female character in a Chinese TV series, witches performed in contemporary Irish performance art, or the enigmatic figure of Zhuangzi's butcher. These characters are interrogated for what they can reveal about situations fraught with tensions and contradictions. In James Fernandez's terms, they are all predications upon a variety of inchoate situations and identities. This is why they tend to be oxymoronic figures, ambivalent and ambiguous, chiasmatic and ironic, even perhaps paradoxical. Engaging with this motley gallery of characters is meant to start us reflecting on the characters that have informed our own, often perplexed (agonizing, uneasy) reflections on our own practices. What are the characters that are good to think what ethnographers do? If what we do is an unspecifiable craft, resistant to premature standardizations of scientific method, are we then artisans? We have studied artisans and we can now use that detailed knowledge of craft to think of ourselves as verbal sculptors and wordsmiths, to ponder where we stand between bricoleurs and engineers, and what kind of skill is required in order to come close to 'cutting nature at its joints' and be mindful of what Sahlins describes as 'disfigurement.'

The Gift / An Bua: This paper investigates the social life of charismatic and enigmatic figures within Irish tradition, such as the poet Cearbhall Ó Dálaigh, whose talents are described as both supernatural "gifts" and as the product of craft and talent, a feature of Sahlins' (2022) cultures of immanence, in which human agency is enabled by cosmic "metapersons" and "enchancements" are part of everyday life. The Irish figures I discuss have the mode of existence of a Peircean symbol, the reality of which manifests in specific instances, which are discovered to be exemplars

of the archetype. Likewise, personal “gifts” are revealed as iconic indexical signs, evidence of Otherworld contact. Although Sahlins suggests that remnants or echoes of immanence are found in European “folk” culture, I would like to suggest that, rather than historical survivals on the margins of Europe, these qualities are aspects of the struggle between immanence and transcendence that Hardt and Negri (2000) identify “at the heart of European modernity” - also demanding a struggle against what Sahlins describes as cultural “disfigurement” on the part of social scientists. I propose to investigate Irish charismatic figures as counters to deritualization, who are animated by, and in turn, animate, performers, empowering them to create temporary spaces of immanence. Presenter: Steve Coleman (National University of Ireland Maynooth)

Witches Crossing: Ritual summoning in contemporary art and performance in Ireland : Ireland, in recent years, has seen a number of contemporary artists, writers and choreographers produce work exploring and defending ‘the witch’. In visual and performance art, work has pointed to ‘histories that hurt’ and cultures of misogyny, while also attempting to reclaim the word, or symbol, for contemporary society. Focusing particularly on multi-media installations and performances that function as ritual, this paper will offer a glimpse into fieldwork conducted as a performer in specific works, and will explore how the witch has become the character, or archetype, through which we both conjure and enter into social relations with newly imagined ancestors, something more than association with an amalgam of political and cultural tropes. In installations where the viewer steps into a dark, alternative world, one is never sure if one has stepped into the past or into an emergent radical futurity. Characters are not merely represented but are summoned through live ritual performance and incantatory scripts. In this placeworld of the installation, which could be ‘betwixt and between’, the uncanny presence of female bodies from the past is felt in the enchanted ritual atmosphere the artist creates. What if Marshall Sahlins and Margaret Alice Murray were in agreement? Do the spells cast by these works resonate with an immanentist tradition of belief in an Other world in Ireland? Is the witch we encounter more than a synthetic historical Hollywood image? Presenter: Sara O'Rourke (National University of Ireland, Maynooth, Department of Anthropology)

Pilgrimage and Epic Singers in Han-Tibetan Borderland in China: The Derge county in Kham Tibet has since the 15th century been a borderland and pilgrimage centre

between imperial China and ancient Tibetan kingdoms. Since the 20th century it remains an important borderland and pilgrimage centre between Han regions and the Tibetan Autonomous Region. Performance of Tibetan Epic Gesar is a UNESCO cultural heritage which features a pervasive system of practices involving the dissemination of religious and cultural knowledge. Besides the chanting of this mythic tale, prayers to King Gesar both as a part of performances and as everyday religious practices are inseparable from this epic tradition. With a study of epic performances, I look into the inner tension of value systems that belong to different authorities and to the individuals who perform the everyday religious practices. Epic singers are taught by ancient deities in dreams and distinguished by their singing skill. My paper specifically features them so as to present the fluid complexity of the intellectual process of epic performances in a complicated socio-political landscape. While people locate their pilgrimage rituals in various morphological units, and accordingly recognise and contest visible and invisible authorities and their relations to places, Epic singers are chanting with the language of gods and to the aesthetics of time. In a broader framework, I want to explore the learning and performance processes of epic singers, and connects these sensual experiences with the semiotic landscape of this pilgrimage centre and cultural borderland. Presenter: Lijing Peng (Trinity College Dublin)

Half baked drama: contortions and grace in Legend Series maintaining Chinese culture: Artistic productions are key to the maintenance of Chinese historical consciousness, which is in turn key to cultural identity as Chinese. Chinese television series have a particularly broad set of materials to mine in the form of histories, legends, and other forms of documentation and explications. The very richness of this body of evidence, and the academic, social and political stakes of interpreting this thick record promote attentiveness, and also challenge and obstruct success, whether considered in commercial, aesthetic or political pursuits. This paper explores the pleasures and problems of popular series through examination of one television series in particular, the Legend of Ban Shu, providing a perspective that highlights gender and ethnic misfitness of the eponymous character Ban Shu, frontier raised daughter of Han Dynasty historian/general Ban Chao. Implications in production, reception and their shared interfaces display struggles between attempts to tie and to build upon the “real,” in terms of cultural text, practice, historical evidence, and emotional

authenticity. Presenter: Mary Scoggin (Cal Poly Humboldt, Department of Anthropology)

Butchers, Carvers, and Other Artisans as Embodiments of Ethnographer's Craft: Michael Herzfeld proposed that ethnographers are artisans, their writing a verbal sculpture, its patches of roughness modelling "the epistemic imprecision of much of social knowledge, whether ethnographer's or of local people." Any systemic inquiry requires delimiting units of analysis. "Nature should be carved at its joints," Plato advised, but such carving is notoriously difficult in practice. That's why we may want to emulate such master carvers as the Fang judges described by James W. Fernandez, admired because they slice rather than break disputes. I will explore what the kindred figures of sculptors, carvers and butchers could teach us about slicing at the joints as a modality of flexible inquiry, or "elastic rigour" of which ethnographers may be exemplary practitioners. To cleave is "to split, especially along the grain." But as a contronym, cleaving also means the opposite, "to adhere firmly and closely or loyally and unwaveringly." It is this chiasmus of splitting while adhering and adhering while splitting that butchers and carvers know through their body and that can be taken as a guide for flexible inquiry. "The carver begins as a god and ends as slave; the carving begins as a slave and ends as a god" – so did the late master carver David Esterly formulate this carving chiasmus. Taking him and Zhuangzi's famous butcher as my main guides, I will explore the "elastic rigour" in all inquiry, but especially in that "militant middle ground" Herzfeld inhabits as an ethnographer. Presenter: Marko Zivkovic (University of Alberta, Department of Anthropology)

Sociology and Anthropology), Deniz Daser, Daniel Miranda, Nanneke Winters

DISCUSSANT:

Amelia Frank-Vitale (Princeton University)

DESCRIPTION:

For the past several decades global north countries have instituted a set of racialized policies aimed at maintaining exploitable pools of labor migrants who originate from the global south and migrate northward while also securitizing that flow (Besteman 2020; De Genova 2012). For many relief-seeking migrants who have arrived in their desired destinations in North America, however, settlement has not equaled legalization of their status. Instead, many migrants remain trapped in a legal limbo, with some access to the low-wage labor market yet without security regarding their status. As political solutions for legalization have failed or stagnated, a potential demographic crisis emerges as the largest group of informally authorized individuals in generations begins to enter middle age and beyond. As of yet an understudied topic in the discipline, in this panel we ask the following: what will happen to the millions of individuals who are approaching old age as they are unable to access the benefits of social security when they retire or support for eldercare after having paid into a public system via taxes? After almost sacrificing life and limb in their northward journeys and low-wage work, how do migrants access care in a system that doesn't recognize them? How do they help elderly parents in a country they can not travel to? Beyond the material effects, what are the affective and emotional repercussions of such protracted insecurity? Drawing on ethnographic and longitudinal research conducted with various migrant communities in North America, the papers in this panel explore how their aging experiences intersect with factors as diverse as intimate partner violence (IPV), vital materialism, cross-border care needs, and the long-term health effects of working in post-disaster reconstruction. We argue here that as researchers who commit long periods of time to their field site, anthropologists are uniquely positioned to examine the issues facing an aging population whose future remains precarious.

Aging into Precarity: Perspectives on Care for Aging Immigrant Survivors of Intimate Partner Violence: In the United States, survivors of Intimate Partner Violence (IPV) have few safety nets. For immigrant survivors with precarious documentation status, there are even fewer. Meanwhile, as survivors age and continue to deal with the effects of violence, precarity and the embodied

effects of violence become more debilitating with time. However, social services for IPV tend to focus on younger women of childbearing age, with less attentiveness to the needs of middle and older age women. As such, the lack of safety nets becomes even more dire and pronounced. Moreover, the population of female immigrants from Latin America with whom I've worked is often engaged in extremely physical forms of care-taking labor—such as cleaning, housekeeping, and childcare—while simultaneously responsible for caretaking of all kinds for their immediate and extended families in the U.S. and countries of origin. As they continue to age and require more care themselves, this combination of caretaking responsibilities, lack of safety nets, and no one to care for them contributes to their debilitation in many chronic forms. In my research with survivors of IPV from Latin America, I explore how this confluence of violence, aging, and lack of care leads to disabilities long before old age sets in, and how our aging population of immigrants in the U.S. necessitates a closer look at what happens to this population, particularly for practitioners of social services.
Presenter: Allison Bloom (Moravian University, Department of Sociology and Anthropology)

Aging while Undocumented: Honduran Migrants in New Orleans since Hurricane Katrina: For many of the undocumented Honduran migrants who worked in post-Hurricane Katrina reconstruction and have remained in the greater New Orleans area since 2005, settlement in the US has brought both some degree of security and even bounded upward mobility. Many of these individuals have started businesses, gotten married, had children and grandchildren, bought houses, and so on. At the same time, their legal status has made them more vulnerable to wage theft, work injury, and potential detainment and deportation by local and federal law enforcement. As recent follow-up research in 2022 highlighted, new forms of insecurity have also arisen. Interlocutors that I have known since I began my fieldwork in 2011 began to articulate new concerns including the dilemma of elderly parents back in Honduras whom they can't visit due to their legal status, worries over health issues long ignored due to lack of access to subsidized care, and concerns about what they will do when they can no longer work. In this paper, I explore how aging into middle age and beyond is presenting new challenges and dilemmas for a population who sacrificed their bodily health to the rebuilding of a city that they now have called home for decades. I argue that as immigration reform has faltered on the federal level and individuals face a precarious future without a feasible path to legalization, the

temporal dimensions of protracted “illegality”, i.e. aging while undocumented, deserve closer scrutiny.
Presenter: Deniz Daser

Coming of (Older) Age: A Vital Materialist Perspective on Aging Non-Citizens: What does it mean to age in the world today, as a noncitizen or unlawful presence? This question, dilemma, and particular experiential horizon has been acknowledged before, the tensions at its surface have been previously encountered. In what follows, we follow suit, only we do so differently, through a vital materialist orientation to attend to the ways in which the truth about others, as a function of power relations, is a means of establishing and concretizing the truth about oneself. The relational dimensions of sociality—in the restraint placed upon so many unviable social relations, in how we come not only to see, but to name, understand, and bestow the privilege of presence upon one another—are a critical space for understanding the nature of matter, as it is figured by social classification, via the production of values and identifiable, shared trajectories in social space. The coming of age is a universal experience, one shared distinctly by all living matter, but like all things human, aging, as a differentially and discriminately produced experience, begs the questions of what it really means to age today in the stranglehold of disciplinary actions that produce illegality or illegalization, and the abject notion or domain of undocumented status. With over 11 million undocumented individuals currently living in the United States, this work seeks to bring attention to the emergence of undocumented older persons as a demographic group deserving the solidarity of those at the forefront of social science research. Presenter: Daniel Miranda

A cross-border care perspective on migrant journeys : Migrant trajectory research has enabled an appreciation of migrant life beyond origin and destination countries, taking into account the weeks, months and even years of journeying that people undertake in order to seek better futures. However, one of the dimensions that often remains obscured in this scholarship, is the care migrants give and receive over time. As their journey unfolds, they require care themselves; they may extend care to those travelling alongside them; and they may expect others to care for their dependents, including children, siblings, and parents elsewhere. These care commitments take shape depending on specific limitations and opportunities as they travel and as they arrive in places they expect to stay more permanently. At the same time, given their complex legal status, their

living conditions may remain precarious and temporary, turning these places into building blocks of an ongoing journey. Yet their care commitments do not decline. Based on fieldwork with African migrants who travelled across Central America to the US and Canada, this paper aims to contribute a cross-border care perspective to migrant trajectory research by asking how care takes shape over time, across distance. How do dependents on migrant support fare during extended journeys when possibilities of communication, remittances or other care are severely limited? How do people on the move address their care needs, especially if their legal situation is not resolved? And how do those who have arrived but remain 'unsettled' view their evolving care commitments to their children and parents growing older elsewhere? Presenter: Nanneke Winters

DESCRIPTION:

What is an animal? What is a human? These perennial questions are increasingly important as anthropology's 'ontological turn' meets the challenges of decolonizing and indigenizing the discipline. So far, most of the debates have been based on ethnographic research done in the Americas, implicitly or explicitly contrasting Indigenous worlding practices with the 'naturalist' modern West. Yet, as China and Japan emerged as expansionist powers from the rule of the Qing Dynasty

Kangxi Emperor to the end of World War II, these two often competing states also seized control of territories and placed populations under their administration. In the post-war state system, these peoples now identify as Indigenous peoples, national minorities, and aspiring nation-states who seek to affirm sovereignty or cultural autonomy in their own ways. States, and even the United Nations with the Declaration on the Rights of Indigenous Peoples (UNDRIP), use legal mechanisms of indigeneity to manage potential Indigenous political claims in ways that do not challenge established state interests and national borders. States sometimes even actively deny claims to Indigenous status. Yet, Indigenous peoples often challenge the ontological premises of the state system through political and cultural movements of Indigenous resurgence. Intimately related to their ancestral lands and the animal lives that inhabit them, they often perceive animals to be important parts of their life-worlds. Their worlding projects sometimes even challenge ontological distinctions between culture and nature, and by extension, between human and animal. In this panel, we bring into dialogue research from different places where Indigenous peoples manage relations with animals in the context of Chinese and Japanese statehood. The Tibetans and the Naxi people of Yunnan are only two examples of peoples who continue to affirm their lifeworlds and particular human-animal relations while faced with assimilationist projects of the People's Republic of China. In the Ryūkyū Archipelago controlled by Japan, Okinawans affirm their sovereign interests against Japanese nationalism and American militarism through their relationship with the dugong. The Indigenous peoples of Taiwan affirm their sovereignty amidst a history of Japanese rule, the imposition of Republic of China law, and Taiwanese national aspirations. This session explores animality, humanity, and indigeneity in the shadows of Chinese and Japanese rule. How are animals, humans, and human-animal relations brought into being through their specific worlding practices? How do the proponents of Indigenous or other forms of cultural and political resurgence incorporate animals and human-animal relations into their projects?

Indigenous literacies of southwest China and the insurgent voice of human/animal relations: Much anthropological research documents how, since P.R. China's economic opening in the 1980s, various "ethnic" cultural revivals have emerged, especially in the southwest, where historically so many Indigenous groups (now deemed ethnic) have lived. But, as has been less examined, many aspects of these revivals are

directly and indirectly state-led, regulated through cultural heritage initiatives and training classes, which instruct Indigenous people on how to reproduce an idea of their culture. Addressing these state-led efforts as a form of metaculture (Urban 2001) that shapes the futures of Indigenous people, this paper considers how, in the Naxi ethnicity county of Sanba, an Indigenous tradition of writing involving the use of visually iconic script in ceremonial books has become a site of conflicting metacultural voices—of the state, and also, I argue, of longstanding human/animal relations. Drawing on ethnographic fieldwork and an apprenticeship to a Sanba ritualist, I show that literacy in this script is structured by negotiations with wild animals that occur as part of herding and hunting practices. For Sanba readers and writers, the visually iconic component of the script strengthens this connection by visually evoking the alpine world. In contrast, state-led research focuses on the script as “pictographic” and (by the logic of common stadial models) “backward,” while eliding its connections to the nonhuman. In Sanba, the ongoing, reflexive linkage across hunting, herding, and writing practices attests to an alternative and insurgent metacultural voice, which continues to shape Indigenous writing, even as state-led cultural “preservation” efforts work against it. Presenter: Katherine Dimmery (University of Michigan, Ann Arbor)

Multispecies Relations in the Ryūkyū Archipelago: The Role of the Dugong in Anti-Base Activism: Dugongs have played an important role for fishing villages around the Ryukyu Archipelago not only as a food resource, but also as an iconic figure featured in myths, tales and songs. In some of them, dugongs are referred to as messengers of the sea deities visiting from the world of the gods situated beyond the sea. Promising youth and longevity, its meat was offered to the court and served to ambassadors from China and Japan. With the incorporation of the Ryukyu Kingdom into the Japanese Empire and the introduction of modern fishing techniques as well as the spread of new conceptualisations of the sea the population dropped significantly. Today the dugong stands on the verge of regional extinction. However, this situation has given new meaning to the animal. As a symbol of protest against the construction of a new military base people not only use it to reconnect with the sea, it also helps them to bring past and present together forming important cultural capital to oppose the base. In my paper, I focus on the (re-)establishment of the dugong as a cultural reference point in Okinawa and how it contributes to a modern Okinawan identity, linked to the past of the Ryukyu Kingdom. I will look at the dugong as a marine mammal conveying new messages

of environmental protection and cultural uniqueness, which are embedded in a continuous struggle against assimilation politics by the Japanese central government and opposition to American militarism on the island. Presenter: Marius Palz (University of Oslo)

Indigenous Rights in the Balance: Contemporary Bunun Hunting and Human-Animal-Land Relations: This project explores contemporary Bunun understandings of human-animal-land relations through the lens of wildlife hunting. Like many Indigenous groups in Taiwan, Bunun people regard nature as a sacred land regulated by the ancestors and based on relations of respect with animals. The cultural meanings carried by hunting include local Indigenous law, knowledge of flora and fauna, natural resources, religious beliefs, social organization, and customary land use. Wildlife hunting is generally prohibited in Taiwan, but Bunun people, like other Indigenous groups, are permitted to hunt in special circumstances. In application, state authorities have used arbitrary and essentialist understandings of culture and tradition to limit the scope of Indigenous hunting rights, which has resulted in curtailing hunting activities and the arrests of hundreds of hunters. Through ethnographic research with Bunun hunters in two communities, Dili and Longquan, this project critically examines recent efforts to preserve customary wildlife hunting while also adapting it to address the ambiguities and inconsistencies of the state’s enforcement of Indigenous hunting rights. It asks: Why are hunting practices significant for the Bunun people? How do they reflect local understandings of human-animal-land relations that draw on the past but also look toward the future? How have hunting practices changed over time and how do Bunun hunters engage in hunting today? More broadly, what does hunting reveal about the state of settler-Indigenous relations in Taiwan and the possibilities for a stronger relationship in the future? Presenter: Chris Upton (Temple University, Department of Anthropology)

Changing Climates and Relations among Salmon and Indigenous Atayal Communities in Taiwan: I examine changing relations between indigenous Atayal communities and the Formosan Landlocked Salmon (*Oncorhynchus masou formosanus*) in Taiwan in the face of habitat loss, potential species extinction, and climate change. Once a major food source for the Atayal, the fish is now faced with extinction and has become a national symbol for conservation while serving as a bellwether for climate change. The salmon became land locked not because it cannot reach the ocean physically, but rather as temperatures warmed

after the last ice age, preventing it from returning to the ocean as downstream sections of rivers became too warm for it to live. Today as global climate change proceeds, the fish has become further threatened with extinction due to habitats shrinking with warming rivers and increasing severity of typhoon events. I proceed by acknowledging the notion in recent scholarship that perhaps the only way forward in a period of rapid human induced global environmental change is through the notion of a more-than-human anthropology and methodology of listening to non-humans in the ecosystems surrounding us. In doing so, herein I highlight historical and ethnographic analyses of indigenous Atayal perspectives regarding the fish. In local practice and belief, Atayal religious leaders today suggest that the fate of their people and the forests and watersheds within which they live is the same as the fish; should the fish disappear, so should the Atayal. This reflects longstanding relationships between Taiwan's indigenous peoples and non-human animals, and how paying attention to these relationships reveals new and important gaps in conservation science. This paper weaves histories together with contemporary ethnography among the Atayal on their perspectives about this aquatic ancestor, as this indigenous group has become involved in habitat restoration, monitoring, and fish recovery, hoping to strengthen and bring back the relations they once maintained with the fish. Presenter: Brendan Galipeau (National Tsing Hua Univ)

Revitalizing Indigenous Tibetan Pastoralists' Land-based Relationships in Eastern Tibet : Critical Indigenous Studies scholars see the revitalization of Indigenous ways of relating to land as essential to the mission of empowering Indigenous communities and unmaking settler colonialisms. However, contemporary definitions of culture as a process tend to overlook, or even dismiss (often in the name of essentialism) Indigenous people's understanding of their cultures and traditions as "something that can be damaged or lost" (Kirsch 2011). Based on long-term ethnographic research, alongside my own participation in land-based educational programs in eastern Tibet for three summers, which brought together Tibetan elders, youth, and college students with the aim of strengthening intergenerational collaborations to revitalize place-based relationships and action, this paper analytically centers Tibetan pastoralists' ways of theorizing and relating to their ancestral land jeopardized by Chinese state's large-scale rangeland fencing and resettlement policies. I argue that contemporary understanding of culture as something that cannot be reified is not a sufficient analytical framework to understand

Indigenous community leaders' efforts to revitalize and safeguard their land-based cultures and traditions in a fraught political context. Presenter: Huatse Gyal (University of Michigan)

DISCUSSANT:

Bjorn Thomassen

DESCRIPTION:

This roundtable seeks to stage a conversation between Anthropology and fields of study focused on the analysis of dynamism, specifically Complexity Theory, Chaos Theory, and Systems Theory. Since the mid-twentieth century, such studies of dynamism have compelled scholarship to acknowledge the relational, interdependent, processual, and unpredictable character of the world. Anthropology has long acknowledged the indeterminacy of socio-cultural life. However, we find that Anthropology and the sciences of dynamism still have more to learn from one another. Though, we are also all cautious about an all-too-easy analogical translation between these fields and Anthropology. How might Anthropology learn from these fields? How might the interdisciplinary encounter help us see old problems anew, call for theorization, and further sensitize us to ethnography? How might such considerations into dynamical processes already figure our inheritance of Anthropology? How might such an interdisciplinary encounter teach us about what we are doing when we do Anthropology, and for that matter, ethnography, fieldwork, and writing? From the early studies of social organisation, culture as a 'complex whole' to disentangling the global flows of capital,

commodities and people, anthropologists have used the ideas of complexity time and again. Yet, while the notions of 'complexity' and its derivatives are now indispensable part of the anthropological toolkit as a mode of problematising (Dan-Cohen 2017), we feel there has been only limited engagement with Complexity Theory proper. With the emerging runaway climatic, political, economic, and social crises worldwide, Complexity Theory and systems thinking are increasingly taking the central stage in underlining the complicated and sometimes unpredictable relations between otherwise intuitively distinct geographic, ecological, social, cultural, and technological domains; the need to think across the humanities and scientific disciplines, and the respective objects of inquiry; and the need to collaborate between theoreticians and practitioners. It would seem that contemporary anthropological theory is primed to engage with these developments. For instance, in locating four axioms of existence -- entanglement, the uneven power distributions, a decentering of the event, and the legacies of racial and colonial histories -- Povinelli (2021) describes an orientation which appears to be conducive to these findings. However, though Complexity Theory intervenes in Newtonianism for the natural sciences, to what extent its intervention can help Anthropology to reconfigure its own legacies of functionalism, structuralism, Marxism, and postmodernism (cf. Mosko 2005)? It is not obvious the degree to which such approaches have revealed structure-as-dynamics rather than more entrenched questions about the dynamics of structure (Handelman). However, as Dan-Cohen (2017) reminds us, complexity science can also become a new 'fantasy frontier' that can serve as an end-in-itself.

In this roundtable, while open to any intervention, we would like to interrogate in particular the ideas of teleology, non-linearity, causation, and emergence and their relevance for Anthropology.

4-210

Anthropology of therapeutic cultures

10:15 AM - 12:00 PM TMCC - 206 A

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Laura Eramian (Dalhousie University, Department of Sociology and Social Anthropology)

CHAIR:

Peter Mallory, Laura Eramian (Dalhousie University, Department of Sociology and Social Anthropology)

PRESENTER:

Meredith Evans (University of Toronto, Department of Anthropology), Susan MacDougall (University of Cambridge), Géraldine Mossière, Laura Eramian (Dalhousie University, Department of Sociology and Social Anthropology), Peter Mallory

DESCRIPTION:

The ideologies, precepts, and practices of therapy culture are increasingly blending into the common sense of contemporary societies and institutions the world over. By therapeutic culture, we mean the primacy of the psychological and the emotional realms in modern ways of choosing courses of action, interpreting what self and others do, and making sense of why the world looks the way it does. The papers in this panel offer critical interventions and ethnographic/qualitative analysis of the place of therapy culture in any social or cultural setting, practice, institution, or set of ideals. They look at how therapeutic precepts (which include but are not limited to open communication, self-knowledge, self-improvement, authenticity, emotional expression, 'self-care,' and 'healthy' rather than 'toxic' relationships), find expression, get contested, reworked, or encounter friction in concrete social worlds. What do therapeutic cultures make possible, and what courses of action do they rule out? How do ordinary people navigate the imperatives of therapeutic precepts directed at producing greater wellbeing, success, or life satisfaction? What do they value about therapeutic culture, and what do they reject? How does therapeutic culture intersect with other, non-therapeutic cultural repertoires, and with what implications? Ultimately, what does it mean that a therapeutic attitude increasingly shapes how people envision good and bad relationships, lives, and societies?

Musical Gift Exchange and Therapeutic Cultures of Care in the Clinic: Drawing from my ethnographic fieldwork with music therapists in Canadian and American hospitals, this paper asks: how do music therapists compose therapeutic cultures of care in biomedical contexts? In the clinic, music therapists struggle to assert their professional legitimacy, finance their programs, and advocate for music therapy as a valuable therapeutic modality for making better and more caring hospitals. Through the analysis of ordinary hospital music therapy sessions alongside interviews with music therapists and patients, I demonstrate how musical gift

exchange as a therapeutic precept affords meaningful moments of connection and affective intimacy in the clinic, especially with patients who are otherwise socially isolated. I argue that music therapists co-compose therapeutic cultures of care with hospital patients by building and sustaining relations of reciprocity through practices of musical gift exchange. Affective connections and attachments are forged and sustained through the exchange of music, facilitating opportunities for building and sustaining relationships, processing complex feelings, experiences, memories, and situations, and recognizing personhood beyond normative liberal subjectivity. At the same time, the complexities of intimate therapeutic relationships and lingering affective attachments across sites of social abandonment also reveal the limits of care in the clinic. I will situate my analysis of musical gift exchange and therapeutic cultures of care in a discussion of how music therapy encounters frictions within the social worlds of hospitals that are overdetermined by biomedical cultures. Presenter: Meredith Evans (University of Toronto, Department of Anthropology)

Coaching: A Mystical Therapeutic, or a Neoliberal One?: This paper reflects on the idea of 'coaching' as it exists in elite professional spaces, positing that it draws together psychology, New Age approaches, and corporate profit-driven reasoning in deeply contradictory and ambivalent ways. It draws on four years of participant observation with a global network of leadership development professionals to offer an emic definition of coaching and juxtaposes this definition with the definitions present in management literature. It points out a contrast between these two perspectives: while management scholarship treats coaching and other leadership development interventions as research-based and empirically verifiable (Spoelstra, Butler, and Delaney 2021), coaches in their practice tread a fine line between encouraging their clients to disregard positivism in favor of cultivating an intuitive and feeling-driven relationship with an inner self in a style reminiscent of the New Age (Heelas 1996) while drawing on claims to research-based effectiveness as a way of justifying their fees. Coaching exists in this triangle, between a belief in expertise, a quasi-religious commitment to self-actualization, and an ultimate obligation to growth and profit. As such, it represents a compelling puzzle that has the potential to shed light on elite subjectivity globally. It is perhaps banal at this point to claim that therapeutic cultures have shaped the way that people who are exposed to them see themselves (Rose 1998; Bondi 2005; Illouz 2019). It is also perhaps banal to

claim that the logics of the market have shaped everyday life in capitalist contexts (Carrier 1999; Rudnykyj and Osella 2017; Silver 1990). Reflecting on coaching, though, can bring to light how these much-analyzed social changes toward therapeutic and neoliberal logics rely on an attendant concept of spirituality, how they have not-unproblematically smuggled magic back in to a context dominated by reason. Presenter: Susan MacDougall (University of Cambridge)

Emotions, energy and awareness as the new virtuous circle for well-being: Core energetics practice: Holistic practices that have invaded the domain of healing and well-being draw on a specific semantics that include the power of emotions, energy and awareness to enhance well-being through personal transformation. This is the case of core energetics, a technique of self-development that was initiated in late 1960s by the psychiatrist Pierrakos as he combined Bioenergetics approach (which he developed himself with A Lowen, a student of the psychologist Reich) and the spiritual framework related to the Pathwork that he came across with as he met Eva Broch in 1971. Based on a fieldwork (observations and interviews) I have conducted among core energetics practitioners since early 2022, I will describe how the principles of this mindful-body technique unfold during the collective and individual sessions. As sensations, emotions and energies intersect to build a sense of personal release and awareness, I examine how these highly emotional and physical shared experiences are driven by embodied relationships to other participants and to the leader. I will then discuss how these experiences articulate spirituality and scientific thought through specific definitions of emotions, needs, energy and awareness. Presenter: Géraldine Mossière

Friendship, friendlessness, and therapy culture: Part 1: This paper focuses on how people who identify as having few or no friends make sense of their condition. Based on research with twenty men and women in an Atlantic Canadian city, our interest is in the range of interpretations people offer of their friendlessness, one of which draws on moral languages and conceptual resources of therapy culture. Interviewees turned to emotional or psychological factors, popular psychological categories like 'introversion'/'extroversion,' and 'love languages,' or negative formative experiences to explain their friendlessness. In so doing, they invoked the broader therapeutic attitude that traces social phenomena to individual childhoods, pathology, or problems with

'communication.' Our interest is how therapeutic ideas and narratives are one of the 'deeper stories' that underly accounts of friendlessness. We argue that as popular culture increasingly treats strong, intimate, supportive friendships as fundamental to a good life, our interviewees were rarely at ease with their relative friendlessness and were doing complex interpretive work to manage the dissonance between the friendship life they had and the one they wanted. Through attention to their interpretations, we show how friendship, far from being an escape from the pressures of relationships with romantic partners, co-workers, or family members, produces deep reflection and carries burdens of its own, including the question of whether friendship is becoming another relationship to scrutinize, optimize, or rationalize. Presenter: Laura Eramian (Dalhousie University, Department of Sociology and Social Anthropology)

Friendship, friendlessness, and therapy culture: Part 2: This presentation builds on part 1 of this paper by focusing on how our research participants in our friendlessness study thought about friendship's virtues and burdens in both therapeutic and non-therapeutic terms. For a long time, people valued friendship for its informality, ease, and escape from relationships that are widely recognized to take 'work,' yet it is increasingly becoming shaped by therapeutic principles and monitoring practices that are features of romantic or familial relationships, like the emphasis on 'open communication' in the pursuit of one's 'best self,' or discerning 'healthy' from 'toxic' relationships. Yet even as therapeutic culture increasingly shapes how people talk about, imagine, wish for, or practice their friendships, non-therapeutic friendship ideals, like practical help, impropriety/humour, or orienting outward to the wider world and its politics have not disappeared and still shape what people feel friendship is or ought to be. Our interest is in how therapeutic and non-therapeutic friendship ideals intersect, align, or encounter friction as people account for, interpret, or lament their friendship experiences. This presentation builds on and extends the rationalization and optimization argument of part 1 of this paper by showing how people's wishes for both therapeutic and non-therapeutic elements of friendship potentially put a lot of pressure on this relationship and may account for some of the difficulties our participants experienced in making or keeping friendships they found valuable. Anthropology, Aesthetics, Politics: New Approaches

10:15 AM - 12:00 PM TMCC - 716 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Kyle Craig (Northwestern University, Department of Anthropology)

CHAIR:

Kyle Craig (Northwestern University, Department of Anthropology), Jessica Winegar

PRESENTER:

Krisztina Fehervary (University of Michigan), LaShandra Sullivan (Northwestern University), Jessica Winegar, Kyle Craig (Northwestern University, Department of Anthropology)

DISCUSSANT:

Nayanika Mookherjee, Natasha Raheja (Cornell University, Department of Anthropology)

DESCRIPTION:

This roundtable brings together interdisciplinary perspectives on how anthropology might fruitfully engage with theories of the aesthetic, in order to better grasp the lived experience of politics today. It assesses the contributions of aesthetic theory to anthropological knowledge production and, conversely, asks what new theoretical openings emerge from ethnographic encounters with the aesthetic, particularly in politically charged settings. Anthropology has long been suspicious of aesthetic theory, often associated with high art, elites, and classical humanities preoccupations with the formal qualities of artworks. At the same time, ethnographic attention to material and visual culture has long been central to challenging Western-centric ideas of the pure aesthetic. Anthropological perspectives helped demonstrate the ways that power in small-scale societies was expressed through aesthetic practices. Anthropology has also examined how the processes of valuation of art objects shape and are shaped by relations of capitalism and colonialism that are inextricably linked to the concept of modernity. This roundtable aims to update these discussions of the connections between the aesthetic and power for our contemporary era. In recent years, there has been an uptick in ethnographic inquiry into the aesthetic that moves beyond visual-centric frameworks, investigating

the aesthetic politics of multisensory perception and experience, as well as the powerful role played by aesthetic judgment in political oppression and resistance. This search for new definitions and locations of the aesthetic as a constituent element of everyday life and politics has been energized in large part by the rise of both global far-right and authoritarian movements and mass mobilizations against racial capitalism, the carceral state, and climate destruction. Rallies for authoritarian strongmen and protests against racialized state violence certainly marshal cultural production in the service of various political aspirations, but at the same time much of the political power in these sites derives from phenomenological, sensory, and affective processes that exceed particular objects, images, slogans. Attending to these processes has helped displace the centrality of pleasure and beauty in discussions of aesthetics. Instead, we now take seriously how judgments that express, for example, disgust are deployed as tools of governmentality and social ordering. This roundtable discussion reflects on what embracing this expansive understanding of the aesthetic allows us as anthropologists to learn about the intimate manifestations of political power.

Anti-hero*ines of international political and legal practice

10:15 AM - 12:00 PM Virtual - Room 3

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Jane Cowan (University of Sussex)

CHAIR:

Julie Billaud

PRESENTER:

Agathe Mora (University of Sussex, Department of Anthropology), Jane Cowan (University of Sussex), Julie Billaud , Samuel Shapiro , Umüt Yildirim , Laurie Frederik (University of Washington School of Law)

DESCRIPTION:

The roundtable will consider the figure of the anti-hero/anti-heroine (henceforth, the anti-hero*ine) and the lens of anti-heroism as means to explore issues of power and agency in relation to struggles for justice, rights and recognition. In literature and cinema, the anti-hero*ine is the protagonist of a narrative who,

although notably lacking in conventional heroic qualities such as courage, honesty, and decency, is nonetheless often complex and compelling. Recall the violent yet lovable gangster (Tony Soprano), the alienated misfit (Meursault in *The Stranger*), and the victim of an oppressive system who also victimizes (Racine's *Phèdre*). Taking inspiration from this work, we will explore the anti-heroic as a lens for a more ordinary predicament: in which the individual, operating in complex contexts under constrained conditions, and caught between competing moral and political imperatives, must make difficult choices and assume responsibility for the consequences. For us, the anti-hero*ine is not necessarily a tragic, or tragicomic figure, but rather an unexceptional character whose dilemmas, hesitations, and shortcomings illuminate the difficulties of acting morally amidst the vagaries of power. We will examine these issues as they arise for us as ethnographers as well as among bureaucrats, humanitarians, lawyers, activists and others operating within political and legal organizations that aim to do good in the world. Such actors often oscillate between disillusionment and hope, cynicism and commitment. How might attention to our/their practices help us probe the distinction between shallow self-righteous moralising and the often contingent and fraught making of moral judgements? How does the lens of anti-heroism enable us to see beyond international law as an apparent a/im/moral, instrument and recognise it as a constantly transforming collective moral endeavour? And how can ethnographic research contribute to teasing out these ambiguities and crafting narratives beyond heroic saviourism or cynical dismissal? We also intend to investigate the anti-heroic as a mode of political practice. Against the individualising focus of the inspirational leader or the whistle-blower, the anti-heroic mode involves self-effacement, as seen in leaderless political movements as well as political/legal institutions, and a focus on 'the work', collectively carried out. The notion of the anti-hero*ine helps us capture the pragmatic ways in which ordinary people caught in a bind between a dissatisfying present and an uncertain future 'slog through' disillusionments about the failed promises of modernity and turn to political action. To what extent does this mode of political practice embrace vulnerability, fallibility and partial knowledges? What are its possibilities and limits in enabling us to confront current political, economic, social, and environmental transitions? The roundtable will adopt an inverted form. Speakers will share papers with each other in advance, with each person assigned a commentator. Going round the table, the commentator will summarise and comment on their partner's paper,

after which the author will respond, and be followed by the next pair. Speakers can also draw on papers that have already been presented. This will make the panel a collective reflection, yet remain grounded in each participant's ethnographic material, and the work of theorisation will be further developed collectively.

Boom, Bubble, Bust! The Economy of Plans, Schemes, and 'Fever' in China

10:15 AM - 12:00 PM TMCC - 206 D

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Leksa Lee (Denison University)

CHAIR:

Mengqi Wang (Duke Kunshan University)

PRESENTER:

Nellie Chu, Anna Iskra (University of Copenhagen), Leksa Lee (Denison University), Yichen RAO (University of Michigan), Mengqi Wang (Duke Kunshan University)

DESCRIPTION:

China's economy accommodates a tension between central state planning, such as the ongoing Five-Year Plans, and a series of unruly bubbles, booms, and 'fevers' for particular kinds of consumption and new ventures. The 'housing bubble' is a perennial threat to families' life savings, and real estate speculators' recent defaults may point to a coming crash. 'Self-cultivation fever' redirects people's sense of self while absorbing their money. Even local governments get in on booms, building new kinds of tourism developments and marketing them on social media. How does such frothiness exist in a self-proclaimed market socialist economy? Booms feed on both the promise of economic opportunity and the desperation of those who fear they cannot afford to be left out (Humphrey 2020). They move faster than regulation, leaving extreme winners and losers in their wake (Hetherington 2020). China's contemporary bubbles, fevers, and schemes are creative attempts at value accumulation. At first glance, they seem to be ripples of the capitalist cycle of boom, bubble, and bust. The actors caught in these schemes also seem to be captivated by promises of endless accumulation. However, close ethnographic research reveals that the aspirations animated by such economic imageries only partially follow capitalist logics

(Harms 2019, Musaraj 2020, Zhu 2022). They draw in and rely on diverse life goals that intersect with but go beyond wealth accumulation. Drawing on the feminist substantivist tradition, we pay attention to the 'full range of social relations and productive powers' (Bear et al 2015) that give rise to these economic plans, schemes, and fevers. The papers on this panel examine the communities caught up in these moments of economic anticipation, pleasure, and dread. Chinese people and their state have long shared a tacit understanding that the government will work in and through the market to prevent catastrophe (Chumley & Wang 2013, Kuever 2019), blurring public and private (Rofel & Yanagisako 2019). Against this backdrop, how and why does participation in these bubbles and fevers become attractive, even necessary? And following the recent core-shaking uncertainties of hardline Covid lockdowns, the economic damage they did, and rare public protests, what new booms and busts might be generated? Migrant Labor and the "Bust" Rhythms of Fast Fashion in Guangzhou, China: On the evening of November 14, 2022, hundreds of migrant laborers in Guangzhou's urban villages organized in collective resistance against the lockdowns and other regulations as part of China's zero-COVID policy. The protestors stormed out of their apartments and physically pushed down the water-filled plastic barricades that lined one of the thoroughfares of this garment district. The demonstrators, most of whom were migrants from Wuhan organized the collective

action online via their hometown associations. Before the lockdowns of 2022, the ability of these migrants to sustain the “just in time” delivery of low-cost fast fashions laid precisely in the mobility of people, commodities, and capital, which float in and out of the urban villages. The lockdown mandates that were enforced in the weeks and months prior to the event brought most, if not all, garment manufacturing activities to a standstill, exacerbating the instabilities that were part of the “boom and bust” economy of global fast fashion. Since then, China’s zero-COVID policy has ended abruptly. Yet, its social ramifications continue to reverberate to this day as migrants wait for business to resume, while the pandemic and runaway inflation prolong the “bust” rhythms of global economy. This paper shows that the recent unrest among migrant laborers in Guangzhou’s urban villages lays bare pre-existing social inequalities between migrant laborers and village landlords, upon which the global supply chains for low-cost mass manufacturing depend. More specifically, it reveals the tensions and inequalities between village landlords and migrant laborers, which testify to the fracturing of the peasant classes upon which the “boom and bust” rhythms of fast fashion rely. These contradictions become apparent when the mobility of migrants, commodities, and capital, that are necessary for supply chain capitalism grinds to a halt. Presenter: Nellie Chu

Money Is Love. Cultivating Entrepreneurial Selves in the Chinese Body Mind Spirit Fever: This paper examines the alignment and frictions between Chinese spiritual practitioners' discourses on consumerism and entrepreneurship and the authoritarian state's language of virtuous citizenship. It focuses on the case study of the local psy-spiritual milieu, or the Body-Mind-Spirit milieu (shen xin ling), historically known in the Global North as New Age, to trace how Chinese self-cultivators transform their moral anxieties about wealth into love and enthusiasm. “Money is love!” exclaim seminar participants, highlighting that, just like affect, money should flow smoothly through the individual, unfixated and unanchored. As people purge negativity, they picture their bodies as channels through which wealth flows unobstructed. When practitioners breathe in, they imagine inhaling as earning, as they breathe out, they visualize spending. Unblocking negativity also unlocks entrepreneurial potential. Embodying “spiritual entrepreneurship,” characterized by sincerity, patriotism and creativity, is framed as an intervention into a morally corrupt market. There is, however, an ambiguity there. On one hand, releasing negativity facilitates the embodiment of state-disseminated discourses on the

importance of consumerism, “start-up culture” and innovation as the three pillars of China’s economic growth. On the other hand, unblocking negative affects generates further anxiety. Even though Body Mind Spirit companies assist their clients in dispersing fears related to money, their business models are often based on multilevel marketing and pyramid schemes, which triggers even more anxiety among their followers. Negative affects also get stuck in the bodies of spiritual entrepreneurs who offer New Age seminars, as they are forced to navigate the precarious intersections of business, politics, and religion. Presenter: Anna Iskra (University of Copenhagen)

Boomtime Authenticity: Design and the Rise of New Artifact Supply Chains in China’s Exhibition Fever: For more than a decade, local governments in China have poured money into new museums and development projects centered on history and culture, driving a “museum boom” and an “exhibition fever.” In response, exhibition firms have cropped up to provide the labor of researching, designing, and building these new spaces. The projects start with an idea and money, but rarely with an artifact collection. Everyone in the new industry seems to agree on one thing: there are not enough artifacts available for all the new exhibitions. This paper follows one firm as it designed a new museum for a tourism development project and worked to assemble its collection. In the process, the firm directors encountered others riding the high tide of the boom: state museums monetizing their collections, state-owned companies producing licensed replicas, and academics just trying to do enough side hustle work to buy a house. Through the museum design project, I trace the rise of a new supply chain for legally licensed replicas. I follow the debates in the design studio as researchers and designers negotiated workarounds to make up for the lack of “real” artifacts. Following observations that boom economies are not simply a quintessential form of unregulated capitalism but also draw on other logics beyond capitalist accumulation, I argue that China’s postsocialist state capitalism is driving the boom and its many unintended consequences. One consequence is a new “boomtime authenticity,” a more capacious way of reckoning the realness of artifacts. Yet boomtime authenticity is not a cynical, self-serving relaxation of the rules; it is hotly debated in the design process, in law, and in claims on good taste. Presenter: Leksa Lee (Denison University)

Becoming “Chives”: Ordinary Investors in China's Fintech Bubbles and Digital Ponzi Schemes: This paper focuses on the Chinese investors who self-identify as

“chives” (jiuca) - people who had lost their life savings during the fin-tech bubbles when thousands of digital lending platforms turned out to be Ponzi schemes. The investors were led to believe that these financial platforms were the most secure and profitable wealth management channels that could solve their financial anxieties about their savings depreciating in value. “Chives” is a self-mocking meme that describes the ordinary Chinese who participate in ambitious economic activities but risk being “reaped” (exploited) by manipulative or deceitful schemes. The “reaped chives” ended up losing their capital and became disillusioned about their economic mobility and social position. The term initially referred to the middle-class retail stock investors lured by institutional investors to purchase “promising” stocks so that the institutions could then sell their stocks at a higher price, thus making a huge profit based on the individuals’ losses. In recent years, as more and more middle-class Chinese found themselves caught up by various economic “traps”, the term now refers to almost all exploited and disillusioned financial subjects from overworked and under-compensated white-collar workers to urban dwellers struggling with rising household debt. Based on in-depth interviews with urbanites on their experiences in the digital financial market, this paper unravels the playful and speculative financial spirit, cruel optimisms, and downward economic mobility that constitute the “chives” subjectivities in contemporary China. Presenter: Yichen RAO (University of Michigan)

The Temporalities of Unfinished Homes: Ruination as Dispossession in Contemporary Urban China: This presentation draws on ethnographic and media reports of unfinished apartment buildings (lanweilou), as a form of capitalist ruins following the housing bubble, that have been showing up on the urban landscape in contemporary China. Many of these apartment buildings became unfinished constructions when the developers failed to pay contractors on time. Almost all the homes inside are sold already to middle-class and lower-middle-class families who are still making mortgage payments till this day. I pay particular attention to how developers and homebuyers experience time and act on time throughout the process in which the housing projects started and halted. Developers often describe their work mainly as going after credit through new projects to “fill holes” of past projects. The risk of default, for them, is always present and has to be kept at bay through careful calculations of interests, payment deadlines, and fines. The homebuyers, most of whom invested lifelong savings and have taken on mortgages that would trap them for

decades to come, had made life plans based on the time of the completion of construction. Some made marriage arrangements and some others planned to enroll their children to public schools nearby. The halting of construction hence is disruptive and devastating to these families. Examining the temporalities underscoring these unfinished homes, I show how the halting of construction can function as means of accumulation by dispossession realized through the manipulation and disruption of diverse actors’ temporal expectations. Presenter: Mengqi Wang (Duke Kunshan University)

Capturing the transition 2: anthropological critiques of sustainable finance and impact investing

10:15 AM - 12:00 PM TMCC - 206 C

Oral Presentation Session

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Marc Brightman

CHAIR:

Marc Brightman

PRESENTER:

Asprey Liu (Columbia University, Department of Anthropology), Jamon Halvaksz, Jéssica Malinalli Coyotecatl Contreras (University of California, Santa Barbara, Department of Anthropology), Jenna Randolph (University of Bologna), Chelsie Yount-Andre

DISCUSSANT:

Stefan Voicu (University of Bologna)

DESCRIPTION:

Capitalism has been widely blamed for both the global environmental crisis and widening social and economic inequality, yet the belief that capital can be harnessed to provide innovative solutions remains established in political and business circles, where, instead of the invisible hand of the market, the 'visible hand' of innovative finance is invoked in the name of the common good. Cross-sectoral partnerships increasingly use capital markets to pursue social and environmental goals, in line with an intergovernmental mandate for promoting socially inclusive green growth. If the exploitation of finite natural resources and human labour gave rise to the present predicament, the

narrative goes, then the financial sector should stimulate socially and environmentally responsible enterprise to offer ways out of it. As growing numbers of successful investors and business consultants claim to have experienced 'awakenings' to the possibilities of investing in public, social and environmental goods, leading business schools worldwide have launched impact investment programmes, and top business school graduates are aspiring to work in the growing 'impact' sector. Underscoring this moral turn in finance (Dal Maso, Tripathy and Brightman 2022), religious organizations are openly promoting impact investing, especially since religious leaders have begun to extend their moral concerns to ecological problems. The business-friendly, socially and ecologically progressive moral thrust of 'sustainable' finance appears broadly in line with a liberal mainstream challenged by multiple social movements. Yet it is also an expression of the emerging network economy, of South-South collaboration, and of devolved, decentralized approaches to change. Experts in global social and economic inequality and in environmental studies argue that radical political and material changes are necessary for a global transition to sustainability, such as degrowth, community energy production and the fostering of social and biological diversity. Impact and 'responsible' investing have emerged out of an overwhelming recognition of the unsustainability of today's global economic system, but are only partially or superficially aligned with other social and ecological movements. Are they merely opening new frontiers for financialization and deepening the political crisis of the developed world, or can some of their iterations support radical transitions? We invite papers that explore the human dimensions of sustainable finance and impact investment across the spectrum of relationships between risk and ethical action, and more-than-human ecologies, thus approaching financial instruments as devices for ordering and re-ordering the world. We are interested in establishing a basic picture of the role of private financial capital in addressing social and environmental problems on multiple scales, and in exploring the theoretical problems that it raises. Themes may include (but are not limited to) ecological and financial temporalities, ethics and responsibility, critical accounting and accountability, indicator literacy, value, political ecology, the anthropology of the 'good', elite capture, climate and environmental justice, multispecies, decolonial, feminist and queer ecologies.

Investors as Stewards of the World Order? Political Paradoxes of ESG in Emerging Markets : Abstract: In

spite of the challenges, environmental, social and governance (ESG) investing has maintained its appeal among politically progressive institutional investors as a pragmatic discourse and strategy for spurring sustainability reforms through the financial markets. When it comes to emerging markets (EM), however, the specter of (post)colonial geopolitics haunts investors' efforts to influence the governance of natural and human resources in developing countries. Drawing on two years of work experience (2018-2020), plus five months of ethnographic observation and interviews (spring 2021), at an NGO promoting ESG investing among institutional investors, this paper examines how activist ESG investors in EM attempt to mediate between ostensibly universal goals and particular interests by means of financial levers in their negotiations with sovereign and corporate actors. The idea that ecological, social, and financial "goods" are fully aligned in the long run is shown to play a key role in reconciling the tension between means and ends in EM investor "stewardship," even while it undermines the critique that the global financial architecture needs to change. Presenter: Asprey Liu (Columbia University, Department of Anthropology)

Mining Climate Finance: Gold, Carbon, and Indigenous Labor: Mining companies, such as Harmon Gold (South Africa), have adopted climate change and decarbonization strategies in line with the global and national governance structures in which they operate. Designed to mitigate risk, protect investors, respond to changing regulatory environments, as well as respond to the very real threat of climate change, companies hope to demonstrate their commitments to being good global citizens. But extractive systems ultimately rely on workers whose exposures to risk are not accounted for; in this case, Biangai landowners (Morobe Province, PNG) working at the mine and/or receiving compensation from being landowners and beneficiaries. In this paper, I examine practices of climate finance as they perpetuate and conceal real environmental impacts on marginalized communities in the Global South. The paper is critical of the voluntary self-reporting mechanism allowed within the Task Force on Climate Related Finance as it allows companies to smooth over differences and appear to reduce impact, while increasing overall production of greenhouse gases. Comparing different mechanisms to self-report by mining companies in Papua New Guinea, the paper concludes by considering Biangai landowners as they experience the impact of these slippages in responsibility. Presenter: Jamon Halvaksz

Fighting Financial Extraction in Energy Transition Infrastructure: The Morelos Pipeline in Mexico: In 2021, Enagás and Elecnor, two Spanish energy companies, announced the agreement to sell one of their assets to a Macquarie Infrastructure Partners (MIP) Fund, the Morelos Natural Gas Pipeline in Central Mexico. In turn, MIP has since secured more than 4 billion USD from investors in the US for that fund, leveraging their status as signatory to the Principles of Responsible Investment. Prominently, the investors include several teacher's retirement funds. However, indigenous and peasant communities in the area have opposed the project for over a decade and refer to it as a "Death Project." They denounce it as a threat to their individual and collective lives and have resorted to legal and direct action that keep the project built but inactive. The pipeline is part of an energy transition mega-project designed to partly fulfill the country's international commitments for carbon emissions reduction. In this paper, I argue that indigenous and peasant communities fighting against the Morelos Pipeline in Mexico are challenging a violent transition that includes financial instruments, legal and political harassment, and physical harm; additionally, their actions question even financial concepts like greenfield/brownfield projects. My work grounds the complex financing systems that include Public-Private-Partnerships and Energy Transition through ethnographic, archival, and legal fieldwork carried out in Central Mexico between 2019-2022. Using a feminist political economy and anti-extractivist lens, I recenter the human experience to explore what tensions and potential solidarities are created in the emergent regime of financial extraction in the context of climate change. Presenter: Jéssica Malinalli Coyotecatl Contreras (University of California, Santa Barbara, Department of Anthropology)

The financialization of pandemic risk: The World Bank pandemic bonds and COVID-19 : Emerging disease outbreaks in West Africa including the 2014 Ebola Outbreak and the Lassa fever outbreaks in Nigeria and Sierra Leone pose significant health and economic risks to the region. In the midst of the COVID-19 pandemic, ongoing conversations at the G20 high level meetings regarding the future of pandemic risk urge the need for sustained financing and emphasize that the COVID-19 pandemic was not a 'black swan' event, but rather a pandemic of the Anthropocene. The World Bank Group is a leader in financing projects to combat climate change, disaster risks, and more recently, pandemic risks. The Pandemic Emergency Financing Facility (PEF) was established in 2017 by the World Bank Group in conjunction with the World Health Organization (WHO)

and European reinsurers Swiss Re and Munich Re. The goal of the PEF was to provide "rapid funding to help vulnerable economies halt major pandemic outbreaks" by insuring specific pathogens most likely to cause an epidemic or pandemic outbreak. The mechanism employs catastrophe (cat) bonds, in which purchasers would lose principal if fund flows are triggered by a pandemic outbreak. As the first ever pandemic bond, supporters hoped PEF would generate a new capital market to address pandemic risk. Critics argue that the mechanism paid out too little and too late, particularly in the cases of recurring Ebola epidemics and the COVID-19 pandemic. This paper uses insights from ethnographic fieldwork in Washington D.C. and Senegal to investigate the role of private financial capital in addressing pandemic risk through a case study of the World Bank's pandemic bonds as they were used to address the COVID-19 pandemic response. Presenter: Jenna Randolph (University of Bologna)

Strategies of Scale in Crisis Bonds: Sustainable finance and families in Dakar, Senegal : The market for sustainable (ESG) finance experienced an unprecedented surge during the Covid-19 pandemic. The issuance of bonds sold to fund social causes, in particular, jumped nine-fold to \$164.87 billion in 2020 and the pandemic serving as a catalyst for new Covid-themed social bonds (Denina 2020). With the expansion of crisis-themed social bonds, sustainable finance draws an explicit connection between the global financial system and families' experiences of crisis. Cross scalar imagery provided justification for the creation of Covid-19 themed bonds and their inclusion in ESG portfolios, but in the disbursement and redistribution of the funds raised by this social bond, cross-scalar connections were routinely obscured. This paper examines a Covid-themed social bond issued by the African Development Bank (AfDB), tracing the ways funds moved from the London Stock Exchange to the development bank, then on to national governments, (sometimes) eventually arriving in the households of everyday citizens of Dakar. Drawing on a total of 23 months of ethnographic research in Senegalese households and a 12-month examination of the development and disbursement of the AfDB's "Fight Covid-19" social bond, this paper critically analyzes the economic moralities that mediated the bond's creation relative to the ways the funds have been used on the ground in Dakar, Senegal. Cellular Ambivalences: The Anthropology of Digital Interactions in the US

10:15 AM - 12:00 PM TMCC - 715 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Joshua Bell (Smithsonian Institution (NMNH))

CHAIR:

Alexander Dent (George Washington University, Department of Anthropology)

PRESENTER:

Joshua Bell (Smithsonian Institution (NMNH)), Alexander Dent (George Washington University, Department of Anthropology), Joel Kuipers (George Washington University, Department of Anthropology), Briel Kobak, Nicole Merullo

DESCRIPTION:

Networked, interactive, portable, 'smart,' and deeply personal devices, cell phones are the iconic technology of our age. As ubiquitous elements of our material culture, and crucial technological extenders for our communicative and conceptual lives, they also challenge us to develop an integrated ethnographic approach for understanding them. In this round table, we discuss phones through the lens of ambivalence. We will consider not only the ways we celebrate 'connections' and 'conveniences,' but also 'addictions' and 'inattentions.' We will approach ambivalence by way of 'trouble,' considering breakdowns and repairs by way of hardware, network, software, conversational and social phone difficulties. The round table will consider a longstanding, Smithsonian and NSF funded project. Over ten years and with a team of student assistants, we have examined 3rd-party cellphone repair and the dynamics of cellphone use in two DC public high schools in Washington, D.C. This work has resulted in over 1,000 photographs, 145.5 hours of interviews in five cell phones repair shops, 350 interviews with students, parents and school administrators, 140 student journals, and 80 lunchroom and classroom observations. Collectively this research has helped contribute to an exhibit – Cellphone: Unseen Connections at the Smithsonian's National Museum of Natural History (opening June 23). Reflecting on this long-term project and resulting data, we will analyze how we hold ourselves and each other accountable for social, conversational and even software troubles, hardware

and network breakdowns - often traceable to large corporations. Doing so we will consider Ruha Benjamin's observation: 'tech fixes often hide, speed up, and even deepen discrimination' (Benjamin 2019:26).

Collective Healings from the Global South, Part 1

10:15 AM - 12:00 PM TMCC - 707

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Cesar Abadia (University of Connecticut)

CHAIR:

Carolyn Smith-Morris (U. Texas Southwestern Medical Center, O'Donnell School of Public Health)

PRESENTER:

Laura Meek (University of British Columbia, Okanagan, Department of Community, Culture, and Global Studies), Kristina Baines (Guttman Community College, CUNY), Gloria Young, Cesar Abadia (University of Connecticut), Ivana dos Santos Teixeira (Universidade Federal do Rio Grande do Sul)

DISCUSSANT:

Michael Fischer (Yale University, Human Relations Area Files)

DESCRIPTION:

How do groups heal collective wounds? In this panel (with two sessions), we will discuss the ways in which healing traditions from the global south conceptualize and practice a kind of healing that happens beyond the individual body to include human collectives, inter-species beings, and ecologies. As a difference from the kinds of care that characterize patient-practitioners' relationships in therapeutic settings, healing can be multiple and communal, both in the ways in which it affects multiple bodies and in the recognition of the role that repairing ecological relationships has in healing historical wounds. Furthermore, at times, healing human bodies cannot happen if natural and spiritual beings are not considered. In this panel, we want to unpack what 'collective healing' means and can mean considering different epistemologies of care from the global south (Abadía-Barrero, 2022), and the different wounds, ill-beings, sufferings, and traumas that have resulted from colonial and neocolonial projects. Land grabbing, slavery, environmental devastation, the sexual

exploitation of women's bodies, wars of many sorts, to name a few, are not only ongoing imperial historical products, but are also the core of multiple ruptures in collective and communal bodies. This panel wants to bring attention to forms of healing that take histories and subjectivities of collective oppression at their core. We ask: what are the 'therapeutic actions' that help heal war-related or colonial traumas? What racialized forms of collective healing alleviate systemic racism? How does environmental action/care for nature get ritualized to repair the ecological interconnectedness among the many beings that inhabit the planet? How do feminist and feminized forms of collective healing heal us from patriarchal norms that harm and destroy our everyday interactions. Who are the many actors involved in collective healing and how do they provide collective care while simultaneously healing themselves? We draw inspiration from the study of rituals, spirituality, communalism, and decoloniality to interrogate the kinds of healings and repair that happen collectively and that actively confront the ongoing forces of imperial projects.

“The Network Has Been Cut”: Kin-work, Wake Work, and Women’s Collective Healing in Tanzania: Decades of neoliberal deregulation and privatization have left the Tanzanian healthcare system under-resourced, compounding epidemiological devastation wrought by colonialism and its concomitant efforts to dismantle local healing practices. Postcolonial scholars elaborate on these legacies of empire as the ongoing operationalization of gendered racial capitalism (Bhattacharyya 2018), entailing entwined political, economic, epistemological, and psychic violence (Mbembe 2017). In this talk, I discuss how these intersecting forms of violence become embodied in a condition known as *mawazo*. Swahili for “ideas” or “thoughts,” *mawazo* is the compounding of many stresses; it stems from tangled, disordered, interrupted, and agitated worries triggered by “the inability to move forward.” This condition manifests variously as headaches, eye pain, high blood pressure, ulcers, diabetes, heart attack, and even death. Bringing work from feminist Black studies to bear on the embodied consequences of empire and gendered racial capitalism in contemporary Africa, I show how *mawazo* challenges hegemonic paradigms of embodiment via an understanding of wellbeing as relational, transformative movement in contrast to EuroAmerican understandings of health as an individual, static state (Weheliye 2014). Further, I demonstrate how women in Tanzania engage in embodied forms of kin-work and wake work (di Leonardo 1987, Sharpe 2016) to heal such collective

wounds by literally tying their bodies together with cloth as a way to hold themselves and others. I argue that this vernacular form of healing works to suture fractured selves and makes possible an intergenerational, intercorporeal ontological unity of being. Presenter: Laura Meek (University of British Columbia, Okanagan, Department of Community, Culture, and Global Studies)

Sensory ecologies of therapeutics: community health and heritage intersections among indigenous Belizians: Drawing on ethnographic fieldwork among Belizean Maya and Garifuna communities, this paper forefronts the therapeutics of sensory experience in traditional healing modalities. Exploring the sensory aspects of daily ecological interactions and asking in which ways community heritage practices become constitutive of a healing practices, it engages the author’s embodied ecological heritage (EEH) framework to ask how we might define or measure wellness in this context. Bringing together conversations on definitions of placebo and the anthropology of the body with current ethnographic work around relationships between historical trauma, indigenous land rights and natural resource management, and indigenous identity-making and caring in times of change, the discussion makes a case for a sensory ecology of therapeutics as part of community healing practice among indigenous Belizeans and beyond. Presenter: Kristina Baines (Guttman Community College, CUNY)

The healing benefits of Indigenous land stewardship : Industrial agriculture, one of the legacies of colonialism, is one of the primary causes of climate change, poverty, food-scarcity, and disproportionately adverse health outcomes for Indigenous people. In this paper I follow the success of recent measures to increase Indigenous land stewardship in Australia as it relates to Aboriginal and Torres Strait Islander people. I will examine the benefits of Indigenous land stewardship for these communities with a historical, cultural, and spiritual connection with the land from which they draw subsistence. I will examine numerous advantages of Indigenous land stewardship for both the local and global community. I will explore the sociocultural significance of land stewardship in these communities and how land return promotes health and well-being in those communities as well as the importance of the role that this action plays in the stability of local and global food systems through sustainable land-use models. I use different sources to show how the return of land ownership to Aboriginal and Torres Strait Islander people brings many collective health benefits that

extend beyond their peoples. Furthermore, I argue that the return of lands contributes to the process of political and social reconciliation which will foster greater social and political stability locally and globally. Lastly, I will examine the role of Indigenous stewardship as a significant contribution to developing a more sustainable land-use model which is necessary to adequately address climate change. Presenter: Gloria Young

Artists/victims: healing ecological and war-related wounds through a collective installation.: Authors: César Abadía-Barrero, Vanesa Giraldo-Gartner, and Camilo Ruíz-Sánchez Caquetá, a Department in southwest Colombia is privileged in its unique ecosystem configuration that merges the Andes mountains with native Amazonian forest. At the same time, this territory has suffered the legacies of multiple violent processes in the forms of human rights violations and ecological degradation. Casa Común (Communal House) is a Participatory Action Research project and an art archive in which members of two associations of victims of the armed conflict in Caquetá were invited to tell their histories of survival and hopes for the future. The project eclectically integrated art-therapy, women and men's own skills in embroidery and painting, their love for plants and nature, and their seeking justice collective work. The artists/victims consider that both the final art piece and the process of its creation were therapeutic given the importance of solidarity, recognition, and forms of care in which war-related pains can be explored and expressed. We argue that individual and collective healing are integrated in these forms of collective care, signaling the importance of discussions of the interconnectedness of people's bodies and experiences for healing. Presenter: Cesar Abadia (University of Connecticut)

Asepsis to Ecological Actions: Incorporating Culturally Localized Techniques as Health Protection: This work aims to put into perspective issues related to the health of two groups: a community of Venezuelan immigrants living in Brazilian territory and, reports by Brazilian slaughterhouse workers when facing different diseases. It is intended to put into perspective the self-care, protection, or treatment actions that these two groups implemented. The data shown here were collected from interviews, document analysis, and news. The two groups analyzed have in common that they are considered underprivileged in different social spheres. Venezuelan immigrants resort to health actions that connect their routine with cultivation, food, sociability, language, and customs, to take care of their health; on

the other hand, slaughterhouse workers end up rationalizing their health, marking the naturalistic distance that separates them from nature, in order to protect themselves. Collective solidarity mechanisms, deservingness and post-productivist politics

10:15 AM - 12:00 PM TMCC - 203 A

Oral Presentation Session

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Ieva Snikersproge

CHAIR:

Lindsay DuBois (Dalhousie University, Department of Sociology and Social Anthropology)

PRESENTER:

Kelly McKowen (Southern Methodist University, Department of Anthropology), Lindsay DuBois (Dalhousie University, Department of Sociology and Social Anthropology), Ieva Snikersproge, Kenneth McGill (Southern Connecticut State University, Department of Anthropology), Rundong Ning (University of Hong Kong)

DESCRIPTION:

Since the turn of the millennium, there has been growing interest in (potential) post-productivist socio-economic systems -- systems that, rather than seeking to achieve maximum productivity and a job for all, try to find a level of productivity that provides an acceptable level of wellbeing and enough free time to enhance people's autonomy. Post-productivism is seen as a promising answer to climate change caused by unchecked capitalist development, but also as a solution in the face of the fourth industrial revolution that is expected to destroy skilled jobs, and a remedy for both increasing inequality and frenzied work rhythms. Most commonly, a post-productivist future is imagined to stem from some sort of universal basic income scheme that would be decoupled from work-based forms of entitlement. It turns out that it is challenging to abandon work-based forms of social citizenship and belonging; and this is the case for countries where wage labour was never fully generalized as well as advanced

welfare states that have gone the furthest into de-commodifying welfare benefits from work-based forms of entitlement, as they remain attached to the idea that the welfare state would crumble if people did not return to work. This panel seeks to explore emerging post-productivist moralities in diverse instruments of collective solidarity that cover groups too big to operate through interpersonal acquittance. We invite researchers to explore the contested and emerging moralities of such schemes as prototypical universal basic income programs, conditional cash transfers, but also various social insurance schemes (from unemployment to healthcare and parental leaves) and public services. To tease out emerging and/or constrained post-productivist logics, presenters are invited to explore the following questions: How is the scheme justified and legitimized, and what makes for a deserving subject? For example, a paid maternity leave can be justified by the income lost due to an interrupted work relationship, by a temporal incapacity to work, by the cost of raising children, by the value of children for the society, or it can simply be seen as a personal well-being project that does not justify societal involvement. How are the rationales of entitlement negotiated and contested? Is there a 'morality contamination' from one scheme to another or – on the contrary – what keeps some schemes rights-based and others needs-based within the same society? What implications does this have for a transition to a post-productivist society? How is the specific social solidarity mechanism instituted? Is it protected by the constitution and does it have any real power? What is the relationship between private and public actors in delivering the social solidarity scheme? What role is played by the state, political parties, trade unions and NGOs? How do these schemes structure a sense of collective belonging and individual liberty? Moreover, these collective solidarity mechanisms always hinge on some political community that has its insiders and outsiders, which begs the question: who are systematically excluded? How is the specific scheme made economically sustainable? Is it funded by contributions from salaried labour, the overall state budget, or a specific tax (if so, of what kind)? How does the source of financing affect the rationale of the given solidarity mechanism? Is there performative speech about the (un)sustainability of the scheme?

Welfare Regimes and Post-Productivism : The concept of the welfare state in anthropology is woefully underdeveloped. This is particularly striking given the sophisticated theorizing of sociologists, political scientists, historians, and philosophers who have

embraced the more capacious idea of the “welfare regime”—an institutional architecture in which individual well-being over the life-cycle is dependent on a variable mix of the state, the kin group, the firm, the religious community, the trade union, and so on. Some welfare regime center the state during times of economic distress. Others revolve private firms, mutual aid societies, ecclesiastical organizations, or political sectarian groups. Thinking in terms of welfare regimes allows us to go beyond the simplistic, lineal thinking associated with many discussions of retrenchment, convergence, generosity, neoliberalization, and precarity. It also helps us to understand where and why productivism remains an unperturbed aspect of collective understandings of value and worth, and where post-productivist possibilities are emergent. Drawing on own ethnographic research among the unemployed in Norway, this paper does two things. First, it argues that anthropologists should join the interdisciplinary social science of welfare regimes by embracing a vision of welfare provision that highlights qualitative institutional variation and—in many cases—decenters the state. Second, this paper leverages recent theoretical work associated with the various ‘anthropologies of the good’ to argue that in tackling post-productivism, anthropology should view welfare regimes as dynamic terrains of value and meaning where employment acquires significance according to how it relates to shared conceptions of moral conduct. Presenter: Kelly McKowen (Southern Methodist University, Department of Anthropology)

Virtues and Vices: Conditional cash transfers and productivism in Argentina : Argentina’s conditional cash transfer program, the *Asignación Universal por Hijo para Protección Social (AUH)*, has become an essential mechanism for protecting families from the most extreme forms of poverty and destitution. One might argue that in the 14 years since its introduction the AUH has become entrenched. Introduced under the banner of “social inclusion,” the AUH covers one third of Argentine children. It is probably, to borrow from a different context, too big to fail. Yet the AUH remains hotly contested. At the center of that debate are moral discourses about work, ‘assistance’ and dependence. One of the most striking features of this debate is that the virtuous quality of labour seems to be accepted across the political spectrum. Productivism is never challenged, and a different kind of social order seems almost unthinkable. This problem seems particularly pressing since the AUH, as a large and successful cash transfer program, might be a model for proposals like the Basic Income Guarantee. This paper, based on

ethnographic fieldwork, asks what the AUH can teach us about how such entrenched ideas and experiences about working shape potentials for a post-productivist future. Presenter: Lindsay DuBois (Dalhousie University, Department of Sociology and Social Anthropology)

Minimum welfare benefits, ecological labour and the difficulty to think beyond a 'proper job': Revenu minimum d'insertion (RMI) was introduced in France in 1988 as a measure to respond to increasing mass unemployment and guarantee minimum income that would facilitate people's reinsertion in the job market. Although all French political formations agree on the necessity to have some social protection floor that would shield those who arrive "at the end of rights" of such social insurance mechanisms as unemployment benefits, many are concerned that RMI would create an "inactivity trap" and discourage people from finding a job. The scheme has undergone multiple reforms – now called Revenu de solidarité active (RSA) - to reemphasize that it is a reinsertion measure and requires its recipients to look for employment without really succeeding at distancing the fears that people might misuse this minimum welfare benefit. Among French back-to-the-landers who have moved to the countryside to experiment with environmentally friendly ways of living, RSA is an important source of income that makes their life projects economically viable. Moreover, some of them argue that they deserve it because they do socially useful things: they grow organic food and construct passive housing that involve long hours of economically non-recognized ecological labour, they volunteer in social and cultural associations, and they invent alternative exchange systems. This paper describes how local authorities resist the arrival of these back-to-the-landers whom they see merely as a sub-type of RSA-receivers, i.e., lazy hippies taking advantage of social solidarity mechanisms who do not contribute to them with their work. Presenter: Ieva Snikersproge

"Citizen Money" and the Threshold of Positivity in Germany: It has been noted that basic income programs face certain hurdles to implementation which have little to do with economic efficiency or policy rationality. In an account published in Cultural Anthropology last year, I argued that these have to do with relationships to the body and forms of abjection implicit in the formation of economic value. Here, I update this argument while taking into account certain political developments that were occurring even as I submitted my manuscript. Borrowing from Michel Foucault's notion of a "threshold of positivity," I argue that efforts to implement a kind of pseudo-basic income entitled Bürgergeld, or "Citizen

Money," suggest an evolutionary path in which broadly popular conceptions of value are being qualitatively transformed. While activists have been bitterly disappointed by this program (which in fact changes little from previous unemployment insurance benefits), the implicit claim to govern in the name of basic income signifies an important shift. Here, I examine why we might consider that a certain threshold has been passed, what this means for the future of basic income and, most important, how it should spur us to reconsider the nature of economic value under capitalism. Presenter: Kenneth McGill (Southern Connecticut State University, Department of Anthropology)

Macroeconomic Subjectivity: Solidarity emerging out of macroeconomic categories: Is solidarity among entrepreneurs in precarious economic environments possible? Drawing on my fieldwork from 2019 to 2021 among entrepreneurs in Congo-Brazzaville, I reveal that their experiences and solidarity are based on macroeconomic categories, such as GDP growth. I propose the concept of 'macroeconomic subjectivity' to link individual experiences and solidarity among entrepreneurs in post-productivist societies where stable jobs are few, such as Congo. The concept comprises three components: macroeconomic imaginations, macroeconomic moralities, and macroeconomic solidarities. Macroeconomic imaginations refer to the fact that entrepreneurs formulate and present their projects in macroeconomic terms, such as GDP growth and population sizes. Macroeconomic moralities designate the ways one judges whether a project is a "real or good entrepreneurial one." Macroeconomic solidarities refer to the fact that many entrepreneurs collectively complain about Congo's economy and the lack of governmental support for entrepreneurship using unsatisfactory macroeconomic data. Such solidarity is also reflected from their mutual help in promoting their businesses, especially among women. Macroeconomic solidarities are based on the other two components because the latter form an important framework in which entrepreneurs make sense of their projects and labor. In post-productivist societies, similar employment relationship might no longer be a major basis for solidarities among people. This study reveals one mechanism by which solidarities emerge among entrepreneurs in post-productivist societies, thus contributing to the understanding of solidarity in different social formations. Presenter: Rundong Ning (University of Hong Kong)

Critical Geographies of Microbial Infection in the Age of Antimicrobial Resistance

10:15 AM - 12:00 PM TMCC - 717 A

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Katharina Rynkiewich (Florida Atlantic University, Department of Anthropology)

CHAIR:

Katharina Rynkiewich (Florida Atlantic University, Department of Anthropology)

PRESENTER:

Joyce Lu (Rutgers University, New Brunswick, Department of Anthropology), Katharina Rynkiewich (Florida Atlantic University, Department of Anthropology), Manuel Harms (Technische Universität Dresden)

DISCUSSANT:

Laurie Denyer Willis (McGill University)

DESCRIPTION:

This panel engages anthropological perspectives on epidemiological transitions and global shifts in antimicrobial resistance. The third epidemiological transition (Barrett and Armelagos 2013) theorizes a shift towards new, emerging, and re-emerging infectious diseases in society. Among those infectious diseases, antibiotic-resistant bacteria like *Staphylococcus aureus* represent a defining challenge of our time and demonstrate the basic reality of how humans live in a world of microbes (Brown 2011). Microbial infections are on the rise due to rapidly changing environmental conditions, extractive industries and global depletion of resources, mass migration and conditions of war, animal husbandry and industrial production, and the intense medicalization – including increases in antibiotic utilization – of everyday life. The liminal spaces where person, place, and time intersect create spaces where microbes share genetic material amongst themselves, with humans, and with non-human animals. We propose a panel on the anthropological study of critical geographies of microbial infection defined by state boundaries, geographic climates, and importantly, considering any number of microbes.

Experiments with care: collecting animalitos without antibiotics in Quetzaltenango, Guatemala: In Las

Majadas, animalitos (little animals) are contained within sacks in the body. They are passed from mother to child during childbirth and through breastmilk, as I learned from mothers and healers. Diarrheal illnesses are caused by a disturbance of animalitos (“se alborotan los animalitos”), which can stem from various etiologies such as mal de ojo (evil eye), susto (fright), and the transition from dry to rainy season during the months of April and May. This can be remedied through antibiotic pills, which have the effect of re-containing the little animals (“se embolsan los animalitos”). Located in the steep terrain of the volcanoes surrounding the Palajunoj Valley of Quetzaltenango, access to hospitals and clinics in the urban flatlands of Quetzaltenango is challenging for residents of Las Majadas due to poor road quality and landslides. However, storeowners and traveling pharmaceutical vendors provide supplies of antibiotic pills in peripheral, mountainside communities such as Las Majadas. In recent years, the therapeutic value of antibiotics has been called into question by some residents. For some, they have ceased to work. For others, they cause further harm. Based on a cumulative four months of fieldwork collecting oral histories and participant observation with residents and pharmaceutical vendors throughout the Palajunoj Valley in 2022 and 2023, this paper discusses stories of how residents came to experience and know antibiotics as no longer working as they used to, as well as how the changing therapeutic value of antibiotics and has transformed geographies of care-seeking. Presenter: Joyce Lu (Rutgers University, New Brunswick, Department of Anthropology)

“Bacterial Hotspots”: Escalations of Care and Regional Epidemiology in the United States: As I sat across from her, Andrea lifted her hand and gestured towards her palm. “They dipped my hand in the petri dish to show us all the microbes. There were so many, and I had just washed my hands before the meeting!” In the United States, nurses like Andrea who work at long term care facilities are regularly required to attend programming aimed at conveying the significance of infection control practices. During 18-months of ethnographic fieldwork at healthcare facilities in the Midwestern United States, I have attended educational events, antimicrobial stewardship meetings, and patient consults related to infection. Interventions aimed at reducing the impact of antimicrobial resistance are common and are being promoted in response to a regional epidemiology suggesting free flowing spread of highly resistant bacteria – carried from facility to facility on the backs of patients. Patients seen by the physicians and nurses in my study enter a revolving door of facilities throughout

the recovery process, being escalated and de-escalated in their medical care after complicated medical presentations. While long term care facilities might be a step down from intensive care, towards recovery and home, these facilities also serve as built environments where “bacterial hotspots” arise, prolonging patient stays and complicating recovery. Though the origins of bacterial infection are admittedly hard to pinpoint, educating nurses like Andrea is seen as key to mitigating antibiotic-resistant infections in the region. The “microbial traffic” (Mayer 2000, Morse 1993) that leads to high rates of antibiotic-resistant infections is facilitated by the sharing of patient care among disparate healthcare environments. Looking at the critical geographies of “bacterial hotspots,” we might consider the sprawling expanse of medical networks, with healthcare providers of varied clinical backgrounds, and where severely ill patients spend months in and out of transfer loops. Presenter: Katharina Rynkiewich (Florida Atlantic University, Department of Anthropology)

(Un-)regulatable ecologies: The social life of antibiotics in India: Antimicrobial Resistance (AMR) is a living, mutating assemblage, consisting not only of the enzymes that trigger the actual resistances, but also of all the actors that stimulate and world it within situated ecologies. While India is one of the countries that is framed as an AMR riskscape, the complex path dependencies of local realities tell a more nuanced story. Life is often enmeshed in making things work under precarious conditions, where knowledge on resistances is empirical, indirect and always post emergence, and the use of antimicrobials as a ‘quick fix’ follows several layers of market logics. Instead of directly chasing the elusive AMR multiple, my research traces how its instantiations emerge from the ‘spaces in between’ the stakeholders within various ethnographic contexts: informal medical practitioners, who restore the their patients’ ability to perform labour in a South Indian village and the peri-urban fringe of Delhi; poultry farmers medicating their animals under conditions of epistemic uncertainty in the Karnataka countryside; pharma representatives circumventing regulations, as they roam doctors’ offices in Central Mumbai; and the rocky implementation of a patient management app for drug resistant tuberculosis in an East Mumbai ‘vertical slum’. All these examples revolve around the fact that if the life of antibiotics is to be different, life itself has to be different. This research not only problematizes how (anti)-microbial imaginaries are tied to certain spaces of the ‘Global South’, but also has implications for cross-scalar regulatory attempts and policies. It indicates that

AMR has to be apprehended within a multispecies and planetary framework of health and well-being that takes living and non-living ecologies into consideration. Presenter: Manuel Harms (Technische Universität Dresden)

Education and Mobility: Transitions, Possibilities, and Inequalities- Part 2

10:15 AM - 12:00 PM TMCC - 705

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Jennifer Estes (National University of Singapore)

CHAIR:

Erica Larson (National University of Singapore)

PRESENTER:

Hanna Kim (Adelphi University, Department of Anthropology), Aaron Leo (SUNY, University at Albany, School of Education), Jennifer Estes (National University of Singapore), Jessica Peng (Lehigh University)

DISCUSSANT:

Caitlin Zaloom (New York University)

DESCRIPTION:

This two-part panel examines how education figures into young people's projects of social and spatial mobility across a variety of contexts. Our papers center the perspectives and experiences of students as they transition between institutions, across borders, and through conjunctures in their lives as they pursue aspirations for class mobility, citizenship status, and social recognition via education. Building on scholarship within the anthropology of education on class and on migration, we ask questions such as: How do youth conceptualize mobility as it relates to narratives of educational opportunity? What discourses and resources do they draw on to make sense of and navigate the transitions that occur as they move through education systems? How do they develop and act upon critiques of institutions and policies that reproduce inequalities? How do students' various positionalities differentially shape their trajectories? Educational trajectories are the outcome of complex negotiations that require young people and their families to make various kinds of evaluations about the feasibility of their aspirations and the possibilities to

achieve them. They also require individuals and those supporting them calculate suitable investments to make in education in consideration of potential returns, weighing the worth and value of different credentials, or even figuring their own self-worth. We consider how mobility is intertwined in evaluations about possible futures and their feasibility, and how youth and their families value the potential benefits. In particular, we explore young people's ambivalence about education and mobility. While many of the youth we worked with expressed optimism that education can open up possibilities for them in the future, some of them simultaneously recognized that structural inequalities embedded into education systems can foreclose opportunities to young people based on their class positions, histories of migration, and other intertwined factors. In various ways, our papers examine how students experience this ambivalence in regards to education and mobility. It can elicit feelings of anxiety if they are concerned that their investments into education may not lead to desired results. Yet students may also develop a critical consciousness that encourages them to challenge oppressive structures. In Part 2 of this two-part panel, papers focus on young people's projects of upward social mobility. They examine the narratives of 'success' that young people and their families draw upon and the strategies that they employ in the pursuit of greater economic stability. The papers also explore how youth develop ways to critique the inequalities and disadvantages that shape their educational pathways. Case studies examine the experiences of history students in an Indian school affiliated with a Hindu organization, newcomers attending a community college in the US, rural Cambodian students transitioning into university, and Indonesian youth envisioning their educational and life journeys.

History is Not for "Toppers": Religious Epistemologies in the Management of Aspirational Scripts: Based on recent fieldwork at a private girls school in Gujarat, India, this paper dwells on discourses about aspiration, hard work, and success emerging from an 11th grade class of history students. Coming from a range of caste and class backgrounds, the students' desire to study history is one not welcomed by their parents. "Toppers," or those who have obtained the highest scores on state and government board examinations, also have to manage their family's rejection of the humanities 'stream' for their further education. The narratives of anxiety from students and parents highlight that economic mobility via education is inseparable from the selection of prestige subjects associated with success.

Complicating this equation, particularly in a school run by a Hindu organisation, is the apparent complementarity between practices of self-examination and bodily disciplining to obtain devotional goals and the aspirational scripts that emphasise the same. Looking at this shared emphasis on bodily self-transformation for achieving devotional goals as well as material ideas of success, this paper asks: how is the educational-success narrative tempered by religious epistemologies? The post-liberalising context of education in India shows that the promotion of anticipatory aspiration can result in profound despair when less-advantaged students discover that their efforts for self-improvement through education do not yield results. This paper suggests that progressive educational institutions with a religious infrastructure offer opportunities to critique the limits of aspirational scripts and, in doing so, expose the limits of neoliberal narratives that imagine education-effort-success pathways as attainable by all. Presenter: Hanna Kim (Adelphi University, Department of Anthropology)

Ambivalence and Determination: Newcomers' Postsecondary Pursuits in a "College for All" Landscape: Researchers have long noted the high rates of college enrollment among first-generation immigrants and refugees (newcomers hereafter) (Kim & Díaz, 2013; Suárez-Orozco et al., 2019). Among the factors which have been found to motivate newcomers to seek postsecondary education are optimistic views about the potential for education to provide social mobility in the United States as well as the desire to repay parents for the sacrifices they made in migrating through educational success (Kao & Tienda, 1995; Louie, 2012). Recent work, however, has complicated such notions of "immigrant optimism" by drawing attention to the structural challenges with which newcomers must contend in their educational endeavors (Bartlett et al., 2018; Leo, 2022). Seeking to further the study of newcomers' postsecondary aspirations in a sociopolitical context characterized by a "college for all" discourse (Silva & Snellman, 2018), this paper draws on two narratives of participants from an ongoing ethnographic project conducted among newcomers attending a community college in New York State. Through an analysis of observational and interview data as well as students' written essays, I explore students' ambivalent views towards higher education. In narratives marked by displacement, struggle, and resilience, participants articulated a desire for stability and economic security in the U.S. and questioned whether college would provide them with means to these ends. Despite their concerns, and the many

challenges they encountered in college, participants remained hopeful and determined to make a better life for themselves and their families in the U.S. Presenter: Aaron Leo (SUNY, University at Albany, School of Education)

Investing in Exam Scores for Upward Mobility: Rural Cambodian Students' Transition into University: This paper explores the experiences of rural Cambodian youth who aspire to social and spatial mobility via educational credentials. In a context shaped by neoliberal economic reforms, historical agrarian livelihoods have become increasingly untenable and devalued in recent decades. For young people who are tenuously part of the lower middle class, obtaining a university degree that could lead to an urban, white-collar job seems like the most promising way to secure economic stability for themselves and their families. Drawing on ethnographic fieldwork with secondary school students, I examine the logics they adopt as they attempt to transition into university. While secondary schooling in Cambodia is nominally free, paid private classes that directly supplement what is taught in state school are considered imperative for students to pass the national grade 12 completion exam that determines admission into universities. This system creates conditions under which students conceive of their education in economized terms. With the support of family members, they spend extensive amounts of time and money on private classes in an attempt to achieve higher exam scores, hoping this will eventually pay off in terms of future job earnings. I explore the ambivalence that students express about this process. Many are anxious that if they fail to pass the exam and achieve their aspirations for mobility, they will be unable to justify the investments their families made in their education. Moreover, they recognize that this system reproduces class inequality by privileging those who can afford to spend more on private classes, yet they nevertheless feel that education remains the best option to secure their desired futures. Presenter: Jennifer Estes (National University of Singapore)

"Becoming a Successful Person": Logics and Moralities of Upward Mobility Amongst Indonesian Youth: This paper examines the multiple and overlapping logics and moralities of upward mobility embedded within everyday discussions of "becoming a successful person" (menjadi orang sukses) amongst rural youth in Indonesia. Drawing on ethnographic data of everyday activities of young people's schooling and digital lives, the paper identifies a particular discursive genre that structures how young people envision the process

through which they may obtain success. Promoted as part of the students' labor-oriented education, this genre is marked by students' framings of their lives as "journeys" (perjalanan), on which they must bring their "hopes" (harapan) and "dreams" (mimpi) to reach their rightful "destinations" (tujuan). Further, as part of this task, "targets" (target) must be carefully planned and achieved through relentless "efforts" (usaha) in the face of "hardships" (penderitaan). This mode of envisioning one's life is predicated upon a logic of human capital accumulation (Woronov 2016) and is linked to what Donzelli (2019) identifies as a "new morality of individual aspirations and personal purposes" (7) that has proliferated across Indonesia over the last 20 years amidst neoliberal reforms. Yet, despite the presence of these patterns that point to the development of neoliberal subjectivities amongst Indonesian youth, these young people neither envision traveling their life journeys individually nor autonomously. Rather, they often acknowledge that the journey to become a successful person not only entails the careful planning and management of one's life, but also requires listening to "parental desires" (kemauan orang tua), as well as searching for—and at times accepting—one's "God-given fortunes" (rezeki yang telah terjamin). Taken together, the paper draws attention to the multiple forces that guide rural Indonesian youth's search for the good life and the complicated configuration of the ideal self that such a process requires. Presenter: Jessica Peng (Lehigh University)

Elements in Agriculture (Part II): Material Metaphors

10:15 AM - 12:00 PM TMCC - 206 F

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Janita Van Dyk (University of Toronto, Department of Anthropology)

CHAIR:

Alyssa A. James (Columbia University, Department of Anthropology), Janita Van Dyk (University of Toronto, Department of Anthropology)

PRESENTER:

Ashante Reese (University of Texas at Austin), Andrew Flachs (Purdue University, Department of Anthropology), Ipsita Dey, Joeva Rock

DESCRIPTION:

What is agriculture for? The answers to this question are in transition. From foodstuffs to carbon capture, from biofuels to financial derivatives, elements in agriculture and landscape become a crucible of action and problem-solving. This panel examines the way agricultural elements, chemicals, and matters contribute to the transformations of relationships among people, the state, landscape, and history. We see these elements as matter or forces, simple or foundational substances formally or informally regarded as constituting the material universe. Elements encroach on or are repurposed in agricultural practices and sites, including fire, water, fertilizers, minerals, pesticides, DNA, and many others. Our efforts to think through the elements in agriculture are not in service of theorizing the elemental itself, but rather to imagine how thought in reality spaces itself out into the world (Glissant 1997). The elements may de-familiarize thought associated with agriculture as solely a site of reproducing lively relations-or life itself. Thus, turning to elements means deferring and thinking through the material and meaningful ways that agriculture may not only be in service of life itself, but a myriad of other kinds of social, political, and environmental projects. This panel owes its orientation to the work of Vanessa Agard-Jones (2012), who examines how sand—from its microscopic particles, its composition and mixture, its changes and traces, and its movement through space and time—can be a repository for reading the traces of history on landscapes. We invite authors to engage Agard-Jones' work and consider how grappling with an element in their sites, practices, and histories of agricultural landscapes can crystallize new methodological and theoretical orientations. Such orientations might further commit the work of conceiving the agricultural landscape with Black and Indigenous environmentalisms. This panel queries: How does one write a story through elements? How do such elements link time and place? In what ways do the elements in agriculture allow people to narrate material and social histories and/or struggle? Unpacking the polysemy of the element, this panel will speak not only to the valuable chemical substances that constitute matter, but also how wind, rain, and fire can make and unmake the land, food, sovereignty, and meaning. To explore this further, we invite contributors to explicate an element related to their work. We will ask that authors take inspiration from these elements and explore what we might learn or unlearn about the land, farming, production, cultivation, and food. The authors in this series should follow Agard-Jones' lead and expand on

anthropological and Black feminist efforts to take inspiration from the world, rather than produce reflections about the world. What transformations/transitions for theory or method can we cultivate through the materiality of such agricultural elements? What might our attention to such elements foreclose?

Sweetness and Urban Infrastructure: Sugar's Function as a Carceral Technology: Sugar production has shaped the entire world—geographically, socially, and culturally; and for a single commodity to have that kind of influence means that those who control its production exercise a great amount of power. This paper explores sugar not as a commodity we consume but as something that captures: bodies, land, and our very imaginations. Using the 2018 discovery of 95 prisoners' graves in Sugar Land, Texas, I examine sugar's production and distribution as a technology—a man-made solution to an insatiable appetite for sweetness—that takes on a carceral function in relation to Black lives through established partnerships between 19th and 20th century sugar companies and the Texas penitentiary system. Through examinations of media reports, archaeological evidence, and archival records related to Texas's early sugar industry alongside the history of Texas prisons, this paper interrogates how public-private partnerships in Texas created infrastructures of violence that continue to inform and imperil Black lives in “the city that sugar built.”
Presenter: Ashante Reese (University of Texas at Austin)

Seeds as Elements Transcending Agriculture: Seeds are alive. They carry both an evolutionary legacy born of the environments that nurture them as well as a social legacy from the cultural, political, and material infrastructures through which they grow, bear fruit, and die. As gifts, that promise carries the hopes and labor of past sowers to create value variously defined; as commodities, it carries instead the capitalist hope to be transformed into a surplus profit that renders investment in another future as an externality. In India, cotton seeds are entangled with chemical regimes, whether through their genetically modified context or their explicit refusal to embrace the logics of monoculture production. While small cotton farms are not plantations, the legacies of plantations nonetheless bear down on the more than human potentials of cotton landscapes because the seeds connect farmers through agriculture to global histories of oppression, transformation, and aspiration. The formal networks of seed distribution that effect cotton agriculture may be contrasted to the informal shares, saves, and trades of

postsocialist Bosnia, where seeds stake claims to land and provide nourishing food even as parents hope their children will leave rural villages for more lucrative work abroad. Vanessa Agard-Jones calls sand an element that links yesterday's peaks or submerged coral reefs to the contemporary rainbow of sticky grit at the nexus of land and sea. Like grains of sand, seeds carry a lineage far beyond the human that is nonetheless indexed to human history's injustice, creativity, and care. Presenter: Andrew Flachs (Purdue University, Department of Anthropology)

Sandy Soil and Earthly (Dis)contents: Agro-Forestry Initiatives in Coastal Communities in Fiji: The sandy hills along the Sigatoka coast in Fiji hold a grave paradox: how do these dry grasslands, made barren by years of over-use during Fiji's sugarcane era, hold contemporary promise as sites for agricultural development, biodiversity restoration, and state-community reconciliations? Between 1984 and 1989, several hundred Indo-Fijian agricultural families (descendants of sugarcane workers) were displaced from their homes to the Kulukulu Informal Settlement to make space for the Sigatoka Sand Dunes National Park (SSDNP). Since 1989, Kulukulu has swelled in population, especially with the rural-to-urban migration en masse of Indo-Fijian laborers as the sugarcane industry has declined. The SSDNP has recently launched an agro-forestry initiative on the border of Kulukulu, within Park boundaries, with the long-term goal of increasing soil fertility on stabilized (grassland) sand dunes, restoring endemic fruit tree forests, increasing food security in the local community, and improving community relations with park management. This paper investigates how property regimes, Indo-Fijian displacement traumas, and conservation narratives intersect on sandy soils, and how this "tired" soil holds imaginations and possibilities for new politico-ecological futures. Presenter: Ipsita Dey

Here, There, and Back Again: The Materiality of Genetically Modified Rice: The NEWEST rice project was a multi-institution initiative to genetically modify rice to withstand drought and nitrogen-deficient soils. The project was global in scope: a US-based biotech firm leased its proprietary genetic material, African rice varieties were chosen for modification, and scientists in Ghana, Uganda, and Nigeria oversaw field trials in their respective countries. However, after over a decade of work, the project's core funder decided to withdraw support after field trials resulted in disappointing yields, and as a result, the project was discontinued. Rather than view the NEWEST rice project as an agronomic failure, in this paper I'm instead interested in how

genetic material – leased by the biotech firm – linked people and places while reifying material inequities. Through interviews with scientists and officials involved in the project, and to a lesser extent ethnographic research in Ghana, I show how patented genetic material has allowed scientists to make claims to agricultural futures while also subtly narrating material and social struggle. Emerging From Liminality: Fresh Perspectives from the Next Generation of Activist Anthropologists

10:15 AM - 12:00 PM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

National Association of Student Anthropologists

ORGANIZER:

Tiffany-Ashton Gatsby (University of Washington)

CHAIR:

Christa Craven (The College of Wooster, Department of Sociology & Anthropology), Tiffany-Ashton Gatsby (University of Washington)

PRESENTER:

Yveline Saint Louis, London Chastain, Chu Paing (University of Colorado, Boulder, Department of Anthropology), Cara Jacob (Michigan State University, Department of Anthropology), Alana Walls

DESCRIPTION:

The current period of global pandemic, political upheaval, and environmental crises demands new research methodologies that prioritize transparency and community-based research (Wolgemuth & Kokanovic, 2020). In this context, decolonial and anticolonial approaches to anthropology are essential in challenging the traditional anthropological canon, which often perpetuates colonialist and oppressive practices (Anderson, 2016). As graduate student activists and researchers, we seek to create a more just and equitable anthropology grounded in marginalized communities' experiences and voices and committed to social justice and community empowerment. Our roundtable discussion will explore the possibilities and challenges of activist anthropology in the current period of social, environmental, and political liminality. We aim to create a more just and equitable anthropology that challenges the traditional anthropological canon and centers the voices and needs of marginalized

communities. To achieve this, we must also explore new research methodologies that align with our activist goals, including community-based and emancipatory research methodologies (Barnes, 2002; McNiff, 2013). Through dialogue and discussion, we will explore how community-based and emancipatory research methodologies can help us work towards a more just and people-centric practice, while also addressing the impact of the pandemic on our work and the communities we serve. We will also consider the importance of crippling time in research, recognizing that time is not a universal experience and that we must be mindful of the ways in which time can be oppressive to specific communities (Kafer, 2013; Ljuslinder et al., 2020). Our roundtable will explore the burning questions in activist anthropology today, including how we can promote anti-ableism in higher education and develop interdisciplinary research methodologies that center the voices of marginalized communities (Brown & Leigh, 2020). Drawing on our experiences as graduate students, we will share our visions for challenging the system and mitigating structural violence, drawing on our research and the work of others in the field. By centering marginalized voices and challenging oppressive structures through community-based and emancipatory research methodologies, we can work towards a more just and equitable world, even in times of crisis, transition, and change. Ultimately, our roundtable will provide a platform for graduate students to share their perspectives on the most pressing issues facing activist anthropology today. We believe that by embracing new methodologies and working towards a more transparent and inclusive anthropology, we can challenge the status quo and create a more equitable and just discipline.

DISCUSSANT:

Mary-Lee Mulholland ,Brian Thom (University of Victoria)

DESCRIPTION:

This year's theme asks us to think about the process of transition as a project of connection and a path toward restoring proper relationships. This roundtable, sponsored by the Network for Critical Pedagogy in Canadian Anthropology, is an invitation to think about the potential of Community-Engaged Learning (CEL) for creating alternative spaces of knowledge sharing and making the transition from transactional to transformative teaching. Panelists will share insights about their experiences with Community-Engaged Learning initiatives and their efforts to develop reciprocal and mutually beneficial partnerships. These partnerships include The Indigenous Action Group (IAG), an alliance of solidarity between Indigenous and settler faculty at the University of Toronto Mississauga with the Mississaugas of the Credit First Nation (MCFN); a collaboration between Anthropology professors at the University of Toronto Scarborough (UTSC) and the Curve Lake Cultural Centre; the Commemorating Ye'yumnuts project initiated by Cowichan Tribes in collaboration with UVic's Anthropology department and the Cowichan Valley School District; the UTSC course 'Community-Engaged Fieldwork with Food', which has partnered with Feed Scarborough and the Toronto Ward Museum; and a CEL field school on food sovereignty in Cuba. Panelists will also reflect on the challenges associated with teaching community-engaged courses such as increased workloads due to the time demand associated with developing truly equitable university-community partnerships and assessing students' learning in less traditional ways. Furthermore, panelists will also offer some insights on the difficulty of achieving sustainability in Community-Engaged Learning, for both instructors and community partners, while relying on academic funding models that prioritize efficiency and cost-effectiveness.

Future Forests//Ghost Forests (II)

10:15 AM - 12:00 PM TMCC - 718 B

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Rebecca Zarger (University of South Florida)

CHAIR:

Kevin Burke (University of Pennsylvania)

PRESENTER:

Daniel Renfrew (West Virginia University, Department of Sociology and Anthropology), Adair Steig, Jessie Fredlund (University of Connecticut, Department of Anthropology), Sumin Myung (Johns Hopkins University, Department of Anthropology), Kevin Burke (University of Pennsylvania)

DESCRIPTION:

This panel is about the relationship between the speculative and the spectral in the making, unmaking, and transitions of forest worlds. It asks about the ways that speculative forests of modernist programs of perpetual development coincide with spectral ruination. Attending to future forests and ghost forests requires that we notice the ways that absences shape the present and the ways that dispersed sets of relations are made in and remake particular places. It requires that we attune to the various, nonlinear, and entangled durations of human and more-than-human infrastructures (Mathews 2018), the polyphonies of life cycles (Tsing 2015), and the silences of extinctions (Chao 2022). Tracing the speculative and the spectral in forest worlds foregrounds the simultaneous generation of markets and ghosts and the generations of kin. It demonstrates the ways that the booms and busts of forests industries, the promises of emerging markets, and the limited horizons of financial returns endure in the form and composition of forest landscapes. It also highlights the affective ecologies (Hustak and Myers 2012) of hope that sustain these projects or the dread that follows in their wake. Studying the co-production of futures and ghosts also points to the ways that forest projects are always spaces of cosmopolitical contestation over what forest relations endure (see Stengers 2004). That is, studies of ghosts always entail questions about justice (see Derrida 1993). This panel is in conversation with the growing literature on 'haunted landscapes of the Anthropocene' (Gan, et al. 2017; Toso, et al. 2020) and the 'anthropology of being haunted' (Good, et al. 2022). Drawing on Mathew's (2018) studies of 'ghostly forms' in forest worlds, these papers demonstrate multiple, overlapping Anthropocenes embodied in forests. What is the relationship between the biopolitical and necropolitical in future forests? That is, how does the speculation and accumulation return as the spectral and decay? The forest landscapes discussed in this double session range

from urban forests to industrial timber plantations, from abandoned landscapes to sites of biodiversity conservation. In these panels, we see projects of mapping and counter mapping, movements of trees and people and capital, contestations over land use, memory, and violence.

Green Extractivism and Biodiversity Conservation in Uruguay's Afforested Landscapes: Latin America's post-neoliberal "commodity consensus" intensified agro-industrial expansion, mega-development projects and extractivist enterprises across the region. Within this context, multibillion dollar, multinational corporate investments in new pulp mills stimulated the expansion of tens of thousands of hectares of commercial forestry plantations in Uruguay. The country's rapid afforestation and associated infrastructural development have generated ecological harm, transnational conflicts, and environmentalist backlash. Over a relatively short period, tree plantations have profoundly transformed, ecologically and symbolically, a country of natural prairies and grasslands. For its boosters, the pulp mills and afforested landscapes symbolize the promise of ecological modernity and sustainable development through green certifications, globally traded carbon bonds, and the financing of conservation initiatives, including protected areas, organic honey and beef production, and native forests, species and grasslands protection. This paper examines how Uruguay's turn to plantations' speculative promise and future forests have generated new frontiers of capital and conservation. It analyses how biodiversity conservation has been both threatened and enabled through plantation logics. Through this novel form of "green extractivism," biodiversity is alternately and simultaneously destroyed, financed, sustained and rewilded through, against, or at the interstices of afforested landscapes. Drawing methodologically from ethnographic research and secondary sources, and analytically from recent work on the plantationocene, neoliberal conservation, and multispecies ethnography, this paper explores debates surrounding the destructive and generative processes and potentials of biodiversity conservation within the context of the green extractivism and new forest worlds. Presenter: Daniel Renfrew (West Virginia University, Department of Sociology and Anthropology)

Inevitably Moving Forest: The specter of species extinction engages new technologies to produce forest worlds. This paper examines the way that forest managers and scientists in North America witness and intervene in tree endangerment and migration. Record heat waves, wildfires, and beetle epidemics are the

backdrop to a spectral stage with equal scientific realism: climate models. Models predict the future geography of where different tree species could live, or would die. Using these models, the state and industry have begun replanting logged land with seedlings from elsewhere, to decrease risk of tree death and increase genetic resilience. Thus, the shift of a given tree's geographic range, anticipated by models, is made inevitable by intervention. Forests move, or they die. This paper analyzes data from interviews with forest managers, scientists, and industry staff in British Columbia, Canada, who created, monitor, and are implementing an "assisted migration" policy to eventually change over some 25 million hectares of forest, using the labor and capital of the logging industry. The paper argues that climate science aims to comprehend future landscapes and, in the process, generates them. Climate adaptation, haunted by colonial forestry's ghosts of harm and hope, enrolls witnesses/agents to new catastrophe and renewal. Forest plantations are re-imagined as infrastructures of possibility to stave off otherwise inevitable ecosystem loss. This paper advances conversations in anthropology and science studies on the affective ecology of climate futurity, the biopolitics of species, and the production of environment through disaster. Presenter: Adair Steig

Countermapping Absent Forests: Ghostly Temporalities of Environmental Change in Uluguru, Tanzania: The Uluguru Mountains of Tanzania serve as a critical watershed and biodiversity hotspot. Narratives of the mountains' history often focus on forest loss, which both officials and local farmers believe has led to decreasing flows of freshwater to agricultural and urban areas downstream. Official accounts of this forest loss have seemed remarkably impervious to change, with the same narratives—of a landscape recently richly forested but suddenly nearly barren—repeated nearly verbatim for over a century in technical reports. However, while hydrologists and forestry experts are haunted by the perpetually recent loss of a forest they remember but cannot specify, many local farmers face a haunting of a different sort. Spirits who once occupied sacred trees have been rendered homeless and now wander the mountains causing sickness. This haunting has a geographic and temporal specificity, one which can be used to create a countermap and counterhistory of the mountains. Today, as a new wave of interventions seeks to ensure a supply of fresh water from the mountains in the face of rapid urbanization, these two competing histories flow past one another in disjointed projects to protect and cultivate trees. This paper plots three of these efforts – by an amateur historian with a

sapling business, a Water User Association president, and a forest reserve caretaker. In each case, imagined future forests are made possible through the ghostly absences of trees and the specific histories they encode. Presenter: Jessie Fredlund (University of Connecticut, Department of Anthropology)

"Future Forest" and the Hauntologies of the Korean DMZ: This paper examines a curious space named "Future Forest (Miraeüi Sup)" in the National DMZ Botanical Garden that represents the ecologies of the Korean Demilitarized Zone (DMZ), one of the most militarized borderlands in the world. Since the mid-1960s, the Korean DMZ has attracted widespread scholarly, political, and journalistic attention owing to its paradoxical nature, being both protected and ravaged by the unending Korean War. While the Korean DMZ has been rebranded by the South Korean central and local governments as a transitional space known as the "Peace and Life Zone" for national politics and the tourism industry, the scientific and conservation value of the DMZ ecologies has been contested by differently situated stakeholders including forest scientists, residents of the Civilian Control Zone (CCZ), environmental activists, and politicians. In other words, the DMZ ecologies—while being rejuvenated by plant beings and yet threatened by military and developmental forces—are uneasily haunted by the presences of the unending Korean War, local development, and state-sponsored nationalism. Situated within the haunted landscapes of the Korean DMZ, the National DMZ Botanical Garden is a curated space of more-than-human biopolitics, providing visitors with botanical knowledge and multi-sensory impressions of its plant collections while making some plant species thrive and letting others wither. However, "Future Forest," located at the edge of the National Garden, has neither any informative signs with scientific names, common names, and botanical characteristics of the plants, nor any charismatic plants (either in terms of ecological rarities or aesthetic and cultural values) that might capture the fleeting attention of visitors. Instead, "Future Forest" remains as it is, covered by wildly growing weeds, vines, and trees, as if there were no specters of war, development, and nationalism. Presenter: Sumin Myung (Johns Hopkins University, Department of Anthropology)

TRANSECTING GHOST FORESTS: Speculation, the Spectral, and Histories of the Future in North Carolina : Low-lying forest landscapes are rapidly converting to saltwater marshes and swamps along the eastern seaboard of the United States due to climate change.

This process is producing a particular forest type that biologists refer to as a “ghost forest” (Ury, et al. 2021). These forests, which are characterized by the synchronous mass death of trees, are particularly striking figures of the climate run amok, and they have recently gained widespread attention as dramatic signs of the near climatic future (Camero 2021; Cotter 2021). This paper describes an ethnographic encounter with dead trees in the Albemarle-Pamlico Peninsula (APP) of coastal North Carolina that begins at the coast, moves inland through the ghost forests, then into the industrial pine plantations and massive corporate farms that run across the peninsula. This movement will put the speculative futures of pine plantations and industrial agriculture in the same analytical plane as the spectral futures indexed by vast stands of dead trees. Presenter: Kevin Burke (University of Pennsylvania)

Holding Space: Practices of Accompaniment in the Field

10:15 AM - 12:00 PM TMCC - 205 D

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Sarah Roth (Johns Hopkins University)

CHAIR:

Dwaipayan Banerjee (Massachusetts Institute of Technology)

PRESENTER:

Kunal Joshi, Sarah Roth (Johns Hopkins University), Zeynel Gul (Johns Hopkins University), Mikaela Chase (University of Wisconsin-Madison, East Asian Languages and Literature), Sasha Weiss (Indiana University, Bloomington)

DISCUSSANT:

Dwaipayan Banerjee (Massachusetts Institute of Technology)

DESCRIPTION:

Alfred Gell (1998, 4), in his posthumously published *Art and Agency*, famously declared that 'insofar as anthropology has a specific subject-matter at all...[it] is 'social relationships'.' And indeed, anthropological insights have, before and since, shed much light on the moral, political, and social implications of relatedness, the care that is necessary in such relationships, and the vulnerability that attends experiencing the presence of

others. The anthropological tradition has a rich history of considering the difficulty of 'being with others' in everyday life, and concepts such as intersubjectivity and the dividual self have prompted turns toward imagining the social as a site in which selves are imbricated with others rather than bounded entities. This panel invites reflection on accompaniment as a concept to explore 'being with' others as a mode of anthropological praxis, taking into account the asymmetries built into the ethnographic relationship (Horton 2021) as we reflect on our shared reality as well as the different barriers we face. With particular attention to therapeutic relationships and clinical contexts, we ask: How does accompaniment open up possibilities of collaboration, solidarity, support, intimacy, and advocacy? How do we describe the practices that comprise accompaniment in our field sites, and how might attending to these practices problematize the professional formations-and underlying pictures of care-received by providers? How does our estrangement from one another in the field compromise the efforts we make and witness others making? How does the structural organization of porous boundaries in the practices of writing and conducting research in anthropology influence the dynamics of accompaniment in relationships? In this panel, participants engage critically and creatively with accompaniment in their respective ethnographic projects.

Memory, Genealogy, and the Custodians of Tradition: A Study of Pilgrimage Ledgers in North India: The North Indian city of Allahabad is perhaps best known today for its two religious fairs—the annual Magh fair, and the twelve-yearly Kumbh fair, both of which attract millions of pilgrims to the city (the latter having the distinction of being the largest gathering of humans on earth). The city, however, is home also to a large community of pilgrimage priests (pandās). In addition to facilitating countless everyday rituals, each family of priests is distinguished by its possession of centuries-old pilgrimage ledgers (bahīs), in which they maintain genealogies for the pilgrims to whom they cater. Even though Hindu pandits have received extensive ethnographic attention in their capacity as ritualists, surprisingly little has been written about their role in gathering and preserving genealogical knowledge. Rather than merely securing ascriptive (i.e. caste) identities, these ledgers represent complex processes of memorialization, tethering pilgrims not just to caste, region, and broader kinship networks, but also to particular temporal (ritual, ecological, agricultural) rhythms. In the context of this panel, I use the vantage point of this rich centuries-old genealogical archive to

foreground the ritual milieu in which these ledgers are embedded, highlighting both the way they afford priests the ability to hold space for pilgrims, as well as the effort which goes into preserving pilgrimage circuits across generations (and often across ontological frames). Presenter: Kunal Joshi

Whispers in the Code: Learning to Care in Genetic Counseling : In the final week of “Grief and Loss” class, the genetic counseling trainees were having a debate about empathy. “I believe in my capacity to be empathetic,” one said, but she didn’t know how to stop thinking about patients. This felt like a problem: sandwiched between institutional roles in a system designed to burn her out, she knew she wouldn’t last long if she didn’t acknowledge the limits of her care. The students were learning what it meant to practice as counselors: delivering information about risk and prognosis, facilitating difficult conversations around decision-making, and holding space for families to process entries into the dying space. What did it mean to accompany others through their care journeys? This was being worked out through training, bound up in ephemeral moments of attention to ‘concrete others’ in clinical rotations, supervision, and courses like this. Anthropologists have begun to reckon with the social dimensions of genomic medicine. Yet, little attention has been given to the labors of care that comprise the fields it encompasses. In this paper, I explore care practices in genetics and genomics through the frame of accompaniment practices, which find grounds for action through careful attention to vulnerable individuals’ “concrete bodily and affective situations, albeit from a limited and temporally constrained perspective” (Krauss, 2019). Drawing on ethnographic fieldwork conducted with genetic counselors and trainees in U.S. research hospitals from 2017 to 2023, as well as my own clinical training at the NIH, I explore how genetic counselors negotiate everyday practices of feminist accompaniment through moments of precariousness in medical genetics. I also highlight how, through professional formation, specific pictures of care become embedded in practice, linked to working conditions in concrete ways. Meanwhile, I gesture to the fragility of accompaniment, on which the everyday functioning of ‘durable’ research institutions depends. Presenter: Sarah Roth (Johns Hopkins University)

Files As Proxy Friends: The Aesthetics of Documentation of Occupational Diseases in Turkey: This paper presents findings from an ethnographic research project on the recognition of occupational diseases in Turkey, highlighting the ways in which everyday documentary

practices within the medical field are intertwined with legal processes. Previous studies on the relationship between medical and legal documents often focus on the displacement of bodily knowledge to abstract documents, demonstrating how documents enact scientific, legal, and bureaucratic objects (Hull 2012, Mol 2002, Suresh 2018). However, this perspective fails to fully explore the complex hybridity of paper-body relationships in the production of knowledge. This paper aims to address this gap by examining the relationships between documents and patients at a specialized occupational hospital in Istanbul, revealing their affective, aesthetic, and moral dimensions, as well as their role in shaping institutional relations. In particular, the study focuses on the use of 'scannable barcode labels' and 'occupational diseases certificates' as mediators of various relationships within the hospital, arguing that these 'messy' formations of documents can be understood as “proxy friends” (Demarco et al 2015) that reveal the imbrication of law and medicine long before occupational diseases cases make their way to formal legal and bureaucratic institutions. Presenter: Zeynel Gul (Johns Hopkins University)

Defending Death: Mediated Expansions of Ethical Discourse on the Jain Fast Until Death: Public interest litigation contesting the legality of the Jain fast to death known as *sallekhana* or *santhara* was filed in 2006. In response, the Rajasthan High Court issued a ban of the practice in 2015 that was quickly stayed by the Indian Supreme Court, where the case awaits a final verdict. The rise of the case through the courts and surrounding controversy occurred parallel to a rise in social media and messaging apps, resulting in magnified discourse and activism thrusting Jains into a defensive position that demanded a communal response navigating visibility in a defensive posture by directing and reshaping public ethical discourse about *santhara*. This talk widens the picture of discursive space to explore how technological mediations of Twitter, Facebook, and Instagram form a context-specific multilingual archive indexing Jain sociality around the fast including resistance, anxiety, ambivalence, and dispute. Based on two years of fieldwork in Delhi, Jaipur, and Mumbai, this talk also describes how women have accessed and shaped these new discursive spheres, facilitating and transforming the spread of Jain religiosity and reimagining *santhara* as multimodal following developments in its symbolic and social power. At the same time, this political mode obscures the intimate picture of how families care for their dying kin. How do family members accompany Jain laywomen in their enactment of *santhara*? In what ways do emergent

forms of social and political discourse accompany these women and their families? And how does the anthropologist's presence bring the political into the overlapping domains of the religious and the domestic in the dying space? These reflections call for conceptualization of how the institutions of family and state shadow one another to produce the duality of women's positions as Jain ethical subjects as matriarchs and as citizens, risking a collapse of specificity in how santhara deaths unfold within configurations of community and kinship. Presenter: Mikaela Chase (University of Wisconsin-Madison, East Asian Languages and Literature)

Colonial Violence, Indigeneity, and the Breast Cancer Blogosphere: Breast cancer has a long history as a racialized disease, both in popular narratives and medical ones, and, as has become painfully clear to me since my own prophylactic mastectomy in 2018, genetic research and counseling on cancer prevention are often conceived of in ways that reify ideas of biological inferiority and stigmatize populations, rather than consider why a population seems to be at high risk. This paper will investigate the relative absence of Native narratives of breast cancer from public facing digital breast cancer spaces, considering stories and resources on social media as well as from popular breast cancer blog platforms with an eye to the racial, ethnic and cultural dynamics of breast cancer narratives and the complex relationship between genetics research and conquest violence given the relevance of genetics to many conversations around cancer prevention and care. The primary archive is comprised of individual twitter and instagram blogs as well as community blogs - like Young Survivors Coalition and Living Beyond Breast Cancer - and digital Indigenous cancer resources, such as Kwe Brave and the American Indian Cancer Foundation. Secondary sources range from news stories about cancer, disparities and genetics to Indigenous studies, science and technology studies, and scientific articles. I'm interested in the conversations taking place (and not taking place) on these blogs and how they reflect the intersection of breast cancer community advocacy, medical racism, genetics, and settler narratives of extraction, possession and appropriation. Presenter: Sasha Weiss (Indiana University, Bloomington)

DISCUSSANT:

Harlan Weaver (Kansas State University)

DESCRIPTION:

What transitions are involved in the pursuit of multispecies justice? What transformations promote liberation projects that resist pitting human and nonhuman interests against one another? Which promote solidarity? There are multiple 'species of justice,' as anthropologists Sophie Chao and Eben Kirksey point out, meaning that there are many definitions and frameworks of justice that emphasize different commitments, social obligations, and political actions (2022). There are, for example, calls for 'climate justice,' 'justice for animals,' 'racial justice,' 'rectificatory justice,' 'social justice,' and so on. These projects are not necessarily oppositional, but conflicts and competition can emerge in the pursuit of justice. In a world where some humans continue to disproportionately suffer under inequitable conditions, the choice to prioritize animal liberation, for example, can feel like a choice to value the lives of animals over fellow humans. Justice begins to feel like a zero-sum game: Shouldn't anthropologists focus on redressing histories of anti-Black racism and Indigenous dispossession in North America, for example, before protecting nonhuman animals and plants? Shouldn't we focus on advocating for the rights of migrants and climate refugees before insisting on animal rights? In conversation with these crucial concerns, scholars in Black studies, disability studies, labor studies, Indigenous studies, queer studies, and animal studies have argued that members of human and nonhuman groups can actually amplify one another's voices, reflect shared forms of oppression, and contribute to a greater multispecies solidarity (Tsing 2015; Boisseron 2018; Taylor 2017; Gumbs 2020; Blanchette 2020; Weaver 2022; Todd 2022). This panel draws on anthropological and archival research methods to examine conflicts over multispecies justice in North America and ask if there

are other ways to view these conflicts. What to transitions promote multispecies solidarity? When are the voices of different groups amplified, and when do the pursuits of one group effectively silence another? Charismatic Images as Environmental Actors: Legacies of harm in the Canadian seal hunt: International environmental non-governmental organizations (IENGOs), such as Greenpeace, rely upon images of elephants, whales, and other “charismatic” animals to fundraise for their conservation campaigns. In this paper, I investigate charisma as an auratic quality that permits some ecological narratives to circulate more smoothly than others, especially through visual media, creating a kind of life of their own. Focusing on 1970s IENGO image-based anti-sealing campaigns in the Canadian north, particularly as they harmed rural Indigenous and non-Indigenous communities of Newfoundland and Labrador, I argue that the genre of imagistic charisma deployed by international conservation groups hinges on an image’s ability to independently produce an outside viewer’s sense of injustice—i.e. visual “proof” of differently situated subjects that are either in conflict or in peril and therefore seeming to require external (IENGO “watch dog”) intervention. In Newfoundland and Labrador, Greenpeace used visuals of the seal hunt to produce the appearance of a zero-sum game between of humans

and harp seals in a traditional hunt that is ethical and ecologically sustainable. The IENGO images of red blood on white ice that seemed to “speak for themselves” while circulating in publics unfamiliar with northern life, enacted and enabled an external adjudication of humanness and justice (championed by anti-sealing celebrity activists such as Paul McCartney and Pamala Anderson) which continues to reverberate harm throughout the Canadian north. I conclude by discussing charismatic images and colonialism, citing their use by external actors to accrue power and resources that impact local access to land and multispecies community. Presenter: Katherine McNally (Yale University)

Maize seeds, alder trees, and climate justice for Mayan migrants: Throughout five centuries of exploitation and state violence, the Mam Mayans of Guatemala have sustained an ecologically diverse system of subsistence maize agriculture on the marginal mountainsides of the Cuchumatán highlands. Migration has shaped this human ecology: with scarce land, Mam Mayans have historically sought exploitative seasonal wage labor on the lowland plantations of the Guatemalan elite. In recent decades seasonal migration has been supplanted by migration to the US, a “new and better plantation” from the perspective of Mayan migrants. The Mayan view of US-bound migration as an evolution of plantation labor contrasts with that of the US media, government, and academy, which centers poverty, violence, and climate change as drivers of migration, informing Biden’s “Don’t Come” messaging to Guatemala, backed by millions in aid aiming to reduce US-bound migration through climate adaptation. A more appropriate, accurate understanding of climate change and migration is that of a cybernetic human ecology, as conceptualized by Bateson and Rappaport. Mayan migrants seek the aid of “coyotes”, or smugglers, to successfully pass through the desert and evade ICE, while transitioning their maize fields to stands of alder trees (*Alnus firmifolia*) that provide their family with firewood, fix the soil with nitrogen, and secure the mountainsides from landslides and erosion during extreme weather. As people and money move across international borders, sometimes enriching families and sometimes impoverishing them under the impersonal hand of US immigration policy, heirloom maize seeds remain a safeguarded access to traditional livelihood with the idiom that they must be planted on the hillside from which they came. These connections between international mobility and local ecology demonstrate the co-productive potential of climate adaptation and US immigration. For the Mam Mayans of the Cuchumatanes, immigrant justice is inseparable from

climate justice. Presenter: Christian Espinosa Schatz (Yale University, Department of Anthropology)

Sage Grouse Conservation and the Remaking of Landscapes for the Settler Anthropocene: This paper traces stories of multispecies placemaking on landscapes of the Great Basin in California and Nevada through an ethnographic analysis of sage grouse conservation in the California-Nevada bi-state region. Through looking at how government agencies, wildlife scientists, Tribal Nations, ranchers, and environmental groups are jockeying over the place of sage grouse on the landscape, I show how land use and management practices are being reformed to support resilient populations of the birds amidst a long-term decline and the threat of extirpation. This work of “saving” a threatened species is formulated through a process I refer to as cultivated belonging, where threatened species are made into icons of landscapes and figures of decline and redemption to serve settler visions for repair of landscapes transformed by settler colonization itself. Practices used to conserve the bird, including clear cutting and poisoning predators, are predicated on killing other species to preference the one being “saved.” Other species become suspect, occluding the role of climate change-induced droughts, infrastructure such as roads and power lines, and the conversion of riparian areas through livestock pasturage. In this paper, I consider how Paiute communities contest the emphasis on single-species conservation projects predicated on a zero-sum view of life and challenge the colonial foundations of conservation in this moment of transformation: the settler Anthropocene. This paper investigates the capacity of humans and animals to make a home and express a preference to inhabit particular places, and how these pursuits are also enmeshed in the work of repairing landscapes degraded by settlement and extraction. DESCRIPTION:

The temporality of the COVID-19 pandemic-never very definite or clear in its plot arc or narrative sequencing-is currently becoming further complicated by a host of social and policy decisions to treat this disease event as finished and conclusively in the past. Despite the ongoing incidence of infections and the steady accumulation of deaths and disability, in the US the Biden administration has moved to 'take the win over COVID'; here and in other global locations, diverse COVID mitigations have been wound down, suspended, or struck down legislatively. This panel asks how politics, socialities, and intimacies are being reformulated, deformed, frayed, and reasserted in the context of this phase of the COVID-19 pandemic. How are different clusters of people, in isolation or in community (or both) pushing back against the supposed 'end' of the pandemic? What mechanisms have been deployed to socially and politically 'end' the pandemic, and how have these decisions been articulated and justified? And how have diverse groups responded to the invisibilized risks that remain, navigating questions of disability, chronicity, rest/resistance, work, and labor?

Covid-ing, still: In the US and the UK (among other places), the covid pandemic is apparently “over” by fiat. We are now encouraged/expected (and need, in so many ways) to participate bodily in projects of labor, pleasure, consumption, and collective life. But with the near-total abandonment of mitigation efforts (including but not limited to mask requirements, even in health care settings), the often joyful and life-sustaining return to the crowded pulses of “normal life” is pushing countless people out of collective spaces and public life. The result is described by those who declare themselves to be “still covid-ing” (and members of the disability community who saw this coming from 2020) as profound political and social loneliness (Holdren 2023), as abandonment, and, where left organizing is concerned, as an untenable failure of solidarity and collective care. This “phase” of the pandemic is seeping into and fraying conditions for collective life in ways that may be new for many people, but familiar to still others

long “accustomed” to the invisibility and isolation that can accompany the experiences of chronic illness, disability, or challenged immunity. This paper explores some of the counter-projects currently taking shape in the SF Bay Area and in the UK, as a wide range of people find their way into new configurations of community, accessibility, and collectivity precisely by refusing this “end” of the pandemic. Presenter: Cori Hayden (University of California, Berkeley, Department of Anthropology)

Beyond Tragedy/Farce: Frustrated Closure and the Construction of Authority in Pandemic Commentary: Why have so many degreed experts and elite commentators attempted to anticipate the “end” of the COVID-19 pandemic, or declared the pandemic as being “over”? The indeterminate timescale of this epidemiological event has frustrated efforts to bound its temporality, challenging efforts to narrate the pandemic in a coherent tense. Over multiple waves of cases, the pandemic has exceeded familiar narrative parameters—going beyond Marx’s (1852) helpful maxim that “History repeats itself, the first time as tragedy, the second time as farce” as well as Rosenberg’s (1989) dramaturgical schema of epidemics as plays in three acts. But this excess and indeterminacy also—I suggest—establish opportunities for the discursive construction of credibility and authority, as reflected in the flourishing genre of expert commentaries and think pieces in US media prematurely qualifying the pandemic as finished. In this discussion, I reflect on how the anticipation of pandemic futures and ends is both indexical—imagining and speculating about social and scientific ontologies—and pragmatic, furnishing a means for speakers to assert rhetorical authority and articulate political alignments. Presenter: Martha Lincoln (San Francisco State University)

Chronic illness, long covid, and the unending emergency (draft title) : Long Covid has burst open public and scholarly work on contested, complex, and chronic illnesses. The anthropology of Chronic Lyme, Chronic Fatigue Syndrome, Multiple Sclerosis, and others provide a stepping stone for thinking about how the COVID-19 pandemic has become a watershed moment for people living with unexplained somatic and psychological symptoms that for so many years have been dismissed, contested, or rejected by the medical community. Drawing on research on COVID-19 politics and belief in rural Iowa and a new project on Long Covid, with research in the US and Kenya, I discuss how the Long Covid self has been scripted, embodied, and empowered through the neverending emergency of

COVID-19. In this case, Long Covid provides a window into the emotional and social intimacies and exclusions that remind the public that the pandemic persists through people’s symptoms, bodies, and suffering (even if they often remain hidden from public view and buried in internet chatrooms or contested medical exams). Not unlike the Chronic Lyme story, many long-haulers seek care beyond allopathic medicine to find healers who can address systemic problems. The failure of American medicine to care for people whose conditions transverse systems provides a bigger critique of pandemic preparedness: not only did we fail to respond to early days of the COVID-19 crisis because of a failure of system-wide public health service but also, we cannot care for patients whose nervous, endocrine, muscular, and immune systems are stressed, underperforming, and causing unexplained persistent social, emotional, and physical loss. This case is an example of where allopathic medicine can learn from innovations in diagnosis, care, and healing from other countries and cultures. Presenter: Emily Mendenhall (Georgetown University)

Distressed Work Without End: Covid-19 and the Overwhelmed Hospital: his paper reflects on the fantasies and realities of the overwhelmed hospital during Covid-19. It draws on more than two years of ethnographic fieldwork inside an American academic hospital medical intensive care unit and relays accounts of clinical labor under pandemic conditions. Despite affirmations of the pandemic’s end, hospitals have repeatedly met their limits in terms of supplies and workforce. Whether from waves of Covid-19 or other viral illness outbreaks such as RSV, the limit of the hospital continues to characterize medicine in the same moment as catastrophe conditions are framed as over. How might ethnography account for this limit, in this moment? To answer this question, the paper considers overwhelmingness in two related frames. First, it analyzes pandemic work in relation to the ICU’s spaces of care. It narrates the intimate labors that healthcare workers undertook in the face of a chronically strained system, and how their adaptations remade the experiential space of the hospital. Second, it rethinks appeals to “burnout” and “moral distress” in light of institutional overload. As overwhelm spills out of individuals and permeates systems, at stake are the very limits of the clinic itself. Presenter: Harris Solomon (Duke University)

Precursors to Pandemic Normalization: COVID-19, Reopening Policy, and Scalar Politics in the US: The COVID-19 pandemic has produced a diverse array of

public health responses which have highlighted an uneven incorporation of epidemiological data to policy interventions and the emergence of differential local response to the pandemic based on a similar repository of heterodox conceptions of COVID-19 prevention and treatment options. Focusing on the response to COVID-19 in the U.S. state of Iowa, this paper highlights how the development and implementation of re-opening policy unfolded as a social process. The state's adoption of re-opening policies at a comparatively early point in the pandemic grew out of substantive right-leaning grassroots organizing and lobbying. Based on comparative public health research with other midwestern states, Iowa's early reopening policies produces significantly higher mortality rates. This example raises questions about that the emergence of policy norms in a white majoritarian political formation at the state level, particularly given the turn towards national pandemic normalization under the Biden administration. To what extent have re-opening policies developed and implemented in white majoritarian sub-national political formations in the US served as a basis for the normalization of an ongoing pandemic at the national level? Can the scalar policy pathways highlighted by COVID-19 re-opening policy be used to analyze other examples of state-level policy development influencing national policy? And what can be learned from state-level reopening policies about the processes through which the norms and ethics of white nationalism are iteratively re-instantiated in American society, given the white majoritarian demographic dynamics in Iowa and other midwestern states?

On Voids, Ruins, and Other Spaces of Absence: Part 2

10:15 AM - 12:00 PM TMCC - 604

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Melanie Ford (Rice University)

CHAIR:

Pablo Aguilera Del Castillo (University of Pennsylvania, Department of Anthropology)

PRESENTER:

Pablo Aguilera Del Castillo (University of Pennsylvania,

Department of Anthropology), Dean Chahim (University of Texas at El Paso), Jerome Whittington (New York University), Shoko Yamada, Khando Langri (Stanford University)

DESCRIPTION:

Reexamining negative space as heterogeneous spaces (Foucault 1986), this two-part panel foregrounds ethnographic research that frames voids, ruins, and other spaces of absence as explicitly produced locations with incomplete or hidden histories, and seeks papers that will ethnographically sharpen the analysis of these spaces as strategies for political elucidation. Voids are often characterized in ambiguous spatial contexts, as negative space, whose boundaries remain unclear and location uncertain. Yet, voids are common spatial forms, whose emergence can be traced to contemporary practices of territoriality and to particular political projects (Gordillo 2014). Similarly, ruins (Stoetzer 2018) bring various types of decay to the center of our analysis, forcing us to reexamine how different processes of destruction are capable of producing unique spatial formations with historic particularity. The spatial components of voids, ruins, and other patterns are produced in juxtaposition to their own material non appearance. They materialize in metaphors and atmospheres that indirectly transcend absences through quotidian and common spectors of space (Schwenkel 2017). Both voids and ruins signal a shift toward the development of 'negative methodologies' with which to interrogate the aftermath of violence (Navaro 2020). As pretended absence, they exist in spite of total accounts of a place and as evidence and traces of history that are to be expected in the aftermath of violence and destruction (Weizman 2017). This session invites papers that present accounts of voids, ruins, and other spaces of absence by analyzing the histories, politics, and the design of their constitutive elements to reconsider the possibility of undoing the silences of the past (Trouillot 1995). Together, this submission of essays examines voids, ruins, and other spaces of absence as a way of interrogating the practices that make these spaces materially possible, discursively potent, and politically significant. Collectively we ask: What kind of designs, patterns, or logics do we encounter in these spaces of absence? How do particular aesthetics and politics animate each other? In what ways does absence determine the boundaries or edges of a given site? How do these places resist fixation, delimitation and even erasure, expanding into their own kinds of excess? And finally, what histories emerge when absences are encountered and resignified through 'negative methodologies of research'? What

theoretical affordances does the space of absence offer us?

Subterranean Traces: Interpreting Archives as Spaces of Absence: The Yucatec aquifer—the largest one in Mexico—has recently become an object of much concern and political mobilization due to new infrastructural and agroindustrial projects that threaten to destroy it. But the relationships of Yucatecans with the aquifer today stands in stark contrast with historical accounts which depict it as a space of absence, liminality, and danger. Building on archival research in the region, I examine a series of government letters, old photographs, and historical maps to reconsider the ways in which Yucatecans first made sense of the aquifer as an environmental site in the early 20th Century. In this paper, I focus on the cartographic transformation of the subterranean as a space of absence and ruination. I offer three case studies to interrogate how the space of the subterranean was initially inscribed in maps and consecutively turned into a zone of: a) disease, b) liminality between regimes of property, and c) technical intervention. Based on these cases, I offer an account of the historical construction and transformation of the aquifer as a space of absence and technical intervention, whose material traces can be read through new “negative methodologies” (Navaro 2020) as possible means to interrogate the erasures and violences that turned the local aquifer into a site of forgetfulness and decay. Presenter: Pablo Aguilera Del Castillo (University of Pennsylvania, Department of Anthropology)

Absent Waters: Flooding and Negativity in Mexico City: How can ethnography interrogate environmental disasters whose immediate material manifestations have long since disappeared by the time of research? In this paper, I present a reflection on the kinds of forensic approaches to ethnography and hydrology needed to investigate flash floods - often a form of engineered state violence - which leave few material traces but cause lasting, yet largely invisible, forms of dispossession and trauma. I develop this 'negative methodology' through the case of Mexico City, where the work of both the city's flood control engineers and the lives of flood victims are shaped as much by the absence of floodwaters as by their presence. I focus on how the absence of floodwaters - in homes, infrastructures, and paperwork - is not only produced through engineering labor but also itself productive, undermining victims' attempts to collectively organize and seek reparations from the state. Presenter: Dean Chahim (University of Texas at El Paso)

Creative Void: Reworking the Anthracite Underground in NE Pennsylvania: The anthracite coal region of NE Pennsylvania has long been home to a popular and creative relation to its underground geology. Coal mining for high quality anthracite dominated the local economy from the mid-1800s until the late-1950s, when the combination of a spectacular mine disaster and the mounting expenses of pumping groundwater from the mines increasingly made them untenable. But during the early 20th century, mining companies made extensive underground maps of the coal seams that took the form of 20-30 foot long rolls of paper or linen, a yard wide, that follow the length of the seam through the undulating topography. These included detailed surveys of the room-and-pillar layout of the areas that had been mined, those areas where all the pillars had been removed, and the locations of vertical shafts, boreholes and other features of the underground. Thus they documented the honeycombed cavities left as an absent-presence of this constitutive practice of the anthropogenic earth. Decades later, community watershed organizations have positioned themselves as keepers of the underground, with special attention to the voided space of the convoluted catacombs, now collapsed and filled with water, of an inaccessible but ever-present legacy. This paper thinks the creative void of this archive and its stewards through Elizabeth Grosz's notion of geopower, with special attention to the creative appropriation of powerful earth relations. The creative void, however, functions as both possibility and limit, since the absent-presence of an underground inheritance continues to dominate the region's possibilities for thinking the earth. Presenter: Jerome Whittington (New York University)

Repaired Ruins: Living through Toxicity, Remediation, and Land Transformations in Japan: In the aftermath of farmland contamination and mass heavy metal poisoning throughout the 20th century, the Toyama region of northern central Japan undertook state-orchestrated remediation from 1979 to 2012 to clean up toxic cadmium in the soil and recover agriculture. Yet the region concurrently saw rapid urbanization, farmland sales, and a growing exit from agriculture that together have profoundly unsettled the initial vision of agrarian recovery. Based on fieldwork with current and former farmers in the remediated region, this paper explores the afterlife of an effort to repair a ruin, in this case one created by toxic exposure. In tracing the residents' engagements with land after decades of remediation, I show how the repaired landscape has animated new anxieties over the possibility of ruining it

yet again under the present political economy of land—through poorly regulated real estate development, agricultural land abandonment, etc. amid urbanization. Even as remediation sought to overcome (and perhaps thereby silence) the state of destruction, the reparative attempt has generated a space that carries the histories of both the original injury and the prolonged effort to repair its scars. By centering repair's durationality and attendant politico-economic dynamics, the paper ultimately considers the intricate interplay of ruination and repair that shapes the politics of living on after an environmental injury. Presenter: Shoko Yamada

Where the earth healed unevenly: Tibetan refugee built roads in Northern India: How does one make life possible within conditions of structural impossibility, when one's very movement has been mortgaged by the nation-state? This paper draws on oral histories, photographs, poems, songs and folk sayings to examine Tibetan refugee built roads in northern India. Building from Sara Ahmed's notion of orientation - wherein the ways in which we inhabit the world is shaped by the objects that are with/in reach of us - (Ahmed 2008) I posit that the landscape of the roads on which Tibetans laboured in the 1960s and 70s altered what objects could be reached, the materiality of the rocks existing in contrast to the immateriality of the items and the homeland lost. I foreground the roads as a spaces where the presence and absence of Tibetan refugees within the young nation state of India were negotiated, a movement which continues to affect the pathways available to Tibetan refugees. I also attend to new Tibetan ways of being in the world which were imagined and enacted within road construction camps which have since vanished from the space of the road, paying particular attention to ephemeral aesthetic interventions within the Indian landscapes such as work songs, circle dances, gardens and altars. In pointing to the ways in which Tibetans made life within road construction beautiful amidst the dust and death, I attend to the ways in which beauty might rework landscapes by creating counter-topographies which facilitate the re-emergence and return of life braced against an impossible world. Presenter: Khando Langri (Stanford University)

Political Discourses and Imaginaries of the State

10:15 AM - 12:00 PM TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Isaac Friesen (University of Cambridge)

PRESENTER:

Isaac Friesen (University of Cambridge),Volha Biziukova ,Olena Leipnik ,Luis Meléndez Guerrero (Western University),Johanna Römer

DESCRIPTION:

This panel invites a critical engagement with the ways citizens relate to, imagine, critique, and lay claim to political discourses about and of the state- from authoritarian regimes to everyday right wing inscriptions, secularism to masculinist iconography.

The Pragmatism of Power: Rethinking Secularism, the State, and Empire in Contemporary Egypt: In recent decades, secularism has emerged as one of the most studied concepts in sociocultural anthropology. Prominent theorizations of secularism hinge on the state's regulation of religion (Asad 2003; Agrama 2012), while others critique these works for overstating the power and consistency of secularism across different contexts (Das 2006; Schielke 2019). My paper builds on these debates by examining how members of a provincial Egyptian civil society organization (called *il-munazama*) describe manifestations of religious, state, and imperial power in their everyday lives. This organization was created by a local activist in 2005 to give adults a forum to discuss sociopolitical issues. Employing participant observation collected over four years (between 2011 and 2018), I first analyze how politics, the state, and state violence were discussed at formal *il-munazama* events. Next, I use data from semi-structured interviews to illuminate how members privately narrated state power, religion, secularism, and empire in their everyday lives. Exploring interlocutors' descriptions of state violence in contemporary history, I elucidate how, rather than describing a narrowly secular state, my interlocutors consistently portrayed Egyptian politics as being driven by a pragmatic and flexible *realpolitik*. This ethnographic analysis is supported by my extensive engagement with secondary sources in order to clarify how the modern Egyptian state--in a context of neocolonialism--has embraced both secular and religious principles in a highly inconsistent and opportunistic manner. Together, these perspectives suggest that the anthropological literature's frequent emphasis on state secularism ultimately obfuscates the manner in which state and, especially, imperial actors continue to pragmatically dictate politics in Egypt and beyond. Presenter: Isaac Friesen (University of Cambridge)

The State of dis-belief: imagining and enacting citizen-state relations in contemporary Russia.: The paper explores how the developments in today's Russia, especially with the launch of a full-scale war against Ukraine and the reaction of Russian society to it, invite us to revisit our understanding of the ways citizens relate to and identify with the state and the articulations of these relations within contemporary authoritarian governance. In the case of Russia, these issues are often implicitly rendered as questions about the sincerity and intensity of support for the regime or citizens' susceptibility to imposed ideologies, which, as the paper suggests, do not offer the most productive frameworks to tackle the developments at hand. While the dominant strands of explanation emphasize the impact of fear, cynicism, and 'atomization,' or, alternatively, concentrate on the role of post-Soviet societal dislocation and state propaganda in fueling imperial resentment and nostalgia, the analysis goes beyond these viewpoints that do not sit comfortably with each other. By drawing on ethnographic material collected between 2015 and 2019 in Moscow and Smolensk, the paper describes a specific regime of relations between the Russian state and its citizens that has been forged in the context of the country's post-Soviet transformation, including political and socio-economic restructuring. On the one hand, there is a tendency to subjectively disentangle the conditions of individual lives from the broader developments in the country, which is conceptualized as 'strategic autonomy.' On the other hand, rather than causing a complete disconnection, this disentanglement enables other forms of associating with the Russian state and sets different terms of political engagement. This configuration of citizen-state relationships, which are mediated by imaginaries of the Russian state as a reified historical subject, is incorporated into the current imperial political project that is premised on the culturalization of politics. By tracing the specificity of Russia's case, the analysis exposes its broader relevance for uncovering the general tendencies in the ascendancy of authoritarian governance in different regional contexts across the globe. It also offers insights that contribute to the broader theoretical debate on the mechanisms and modalities of forging and sustaining hegemony. Presenter: Volha Biziukova

American vs Russian Presidencies: Culture-Specific Political Imagery: The paper aims to highlight specific strategies the mass media utilize to mythologize political personalities and the overall political process in the USA and Russia. It scrutinizes the media portrayal of American and Russian presidencies as they are

presented in presidential images of Donald Trump and Vladimir Putin. I find that elements of both, myth and fairy tale are present in both presidential media stories, however, the image of Trump contains more features of myth, while the image of Putin is built around the fairy tale core. I find this distinction to be reflective of the cultural characteristics of American and Russian electorates, precisely their specific chronotopes (spatial-temporal modes), perceptual habits, key metaphors, and dominating types of the worldview as reflected in language. Presenter: Olena Leipnik

The formation of hybrid governments in the northern Peruvian Andes: My research project aims to analyze the collaborations between local state actors and informal artisanal miners in a mining village in the northern Peruvian Andes. A 'village municipality' (municipalidad de centro poblado) operates in that place. This type of municipality has the lowest administrative hierarchy in the formal structure of the Peruvian state. Due to this status, the municipality has a limited budget and only assumes functions and receives income as indicated by the higher-ranking municipalities (district and provincial municipalities). On the other hand, the mayor and councillors that make up the municipality are elected through democratic elections, although they do not receive a monthly salary. However, these authorities are the closest to the population and are subject to many complaints and disaffection from the citizens. Therefore, the scarce resources available to these authorities are insufficient to satisfy the demands and expectations of the local population. In that context, the material (money for public works and projects) and social (contacts, political networks) capital provided by artisanal miners are essential and allows this municipality to continue operating under a state figure, but thanks to informal resources alien to its institutional design. Some of these municipal authorities are artisanal miners, which allows for constant and fluid collaboration between both parties. Based on ethnographic work in the area during July 2022 and March 2023, I want to explore to what extent these entanglements between informal miners and state actors constitute an emergent government project that acquires particular attributes little analyzed. For example, the relational perspective of Migdal (2004), and the off-centered approach of Krupa and Nugent (2015), conceive state actors as nodal points in a broader social fabric where power is dispersed and flows at an irregular rhythm. The multicenter lens is the main virtue of these works because it traces the different projects of rule vying in society. However, in both the relational and off-centered approaches, non-

state and state actors are described as potential rivals where the latter can be challenged and replaced by the former. The collaborations between informal miners and state actors in the case study not only seem to escape these dynamics of competition and substitution, but also seem to blur the traditional distinction between the social and the state, between the public and the private. I tentatively argue that the collaborations between these actors constitute a new type of government, the hybrid government, that is, a form of government that rejects conventional distinctions because it is neither entirely state nor entirely social or private, but a tangle of both. Presenter: Luis Meléndez Guerrero (Western University)

Revisiting Racial Neoliberalism: Discourses of the New Right: Despite academic interest in the breakdown of the neoliberal consensus and insurgent political factions discrediting market ideals, US political discourse continues to re-entrench many core neoliberal ideological precepts. Building on a literature in linguistic and political anthropology, it argues that stance-taking and moral alignments with or against racialized subjects within talk are central to the ways in which neoliberal ideologies are often covertly re-inscribed within everyday interaction. By showing that a profound part of the durability of neoliberalism relies on its shifting articulation with processes of racialization, the paper urges further research to pay renewed attention to discourses of race and security as they shape neoliberal ideologies. DESCRIPTION:

There are few transitions as stark as that from life to death. That very starkness has long motivated social, religious, and philosophical practice and thought. How to interpret the existential gap between these two states, and navigate the relations bred by such physiological transition are challenges constitutional to humanity itself. While the decomposition of bodies involves radical changes, anthropologists have long known that personhood doesn't (necessarily) end with the termination of biological existence. However, the specific ways that personhood continues can be not only perplexing but also fraught. How, with and for whom, to what ends, and under what conditions can sociality with the dead be fostered? Set within the context of 2020s Japan, but speaking of issues with resonance far beyond, the papers on this panel seek to trouble and contemplate the transitional threshold of life/death. We do so by considering 'communication' with the dead across a range of circumstances, each of which highlights different practical and political implications of different formations of life, death, and movements between them. The very concept and experience of death varies depending on that which dies and under what conditions they do so. Together, we treat Japan as a particularly apt case study for considering a range of death(s) from one's own and the sociality of remains that go undiscovered, unidentified, or unmourned as well as the mass deaths triggered by war, disaster, or just socio-demographic shifts as by Japan's high aging, high death population today. These different deaths leave different kinds of remains that speak (or do not) in a variety of registers-what we explore in this panel, considering what responses invoke what sorts of responsibilities, and in whom (or whom not). Bones, radiation, and landscapes remain as traces of that which once had a different existential form. Meanwhile, other types of remains – durable histories – such as types of images, statues, and rituals are constructed as media for communication with beings materialized in-and-as those traces. Speaking (or failing to do so) across the transition of life/death has a variety of effects/affects which includes mobilizing, hearkening, or creating forms of relationality and temporality that go beyond the mere living or mere dead. Communication between the living and the dead, in other words, is a complex site of ontological politics. The potential, as we will suggest, is to bring different

sorts of being into relationality, and different kinds of relationality into being.

Communal Rest and Personal Repartee with the Bone Buddhas of Nagoya : Communal Rest and Personal Repartee with the Bone Buddhas of Nagoya How is personhood materially sustained after death? Under what circumstances and in what forms do the dead speak to the living as individuals, kin, citizens of the nation-state, or representatives of a shared humanity? Or, as within certain Buddhist lineages, as part of shared, primordial reality? New infrastructures for the management of human remains have begun to displace patrilineal household graves in contemporary Japan, giving rise to new possibilities for posthumous communication and exchange. In this paper, I explore one such mode of exchange: the making and venerating of kotsubotoke (骨佛). Kotsubotoke are monumental statues of the Amida Buddha made from many thousands of sets of compressed human ash, that has been hand-milled from bone. Displayed at a local temple, the bone buddhas are offered incense, fruit, and flowers, read Buddhist sutras, and receive personal messages via a 'guest book'. While much analysis of the transformation of Japanese death rites has focused on the forces of secularisation and personalisation under conditions of modernity, the popular re-emergence of Bone Buddhas suggests something more complex is happening in the interweaving of the dead's communal and personal afterlives. Quite literally mixed into the body of their community and the body of the buddha, the dead find themselves part of fragile new posthumous collectives, and engaged in a multitude of conversations with the living. Presenter: Hannah Gould (University of Melbourne)

When the Bones Speak: Sacrifice, The Transvaluation of Value, and the Voices of the Dead: For decades, the Okinawan electrician Gushiken Takamatsu and his friends have searched fields, beaches and caverns for the remains of those killed in the Battle of Okinawa. Their determination to return the physical and perhaps spiritual substance of the dead to their families and their native places is intertwined with a hope that the material traces of the Pacific War can be transformed into the basis of a new and just community. In 2009, attentive to their success and to the ideological possibilities of their project, the Japanese State offered to support their work. Unwilling to profit themselves, they turned to Yamauchi Masao, a charismatic Baptist minister whose church already led an outreach program for unhomed and unemployed workers. They were joined by the photographer and critic Higa Toyomitsu,

who has written that he was summoned by the dead themselves to represent their return. Together, they dig in half-forgotten battlefields, searching for the traces of violence, the shattered remains of Imperial Japanese soldiers and Okinawa civilians who were brutalized, killed, and abandoned. State capital enables the Promise Keepers to reconstruct themselves as laborers, once again capable of value-producing activity. It opens the possibility to rejoin social networks from which they had been excluded, or to organize new ones. What are the costs of these aspirations and actions? What does it say for their dreams that they can only imagine themselves to be free through toil? What does it mean for their return to the everyday to be mediated in the spacetime of deep militarization: to labor in sites and temporal durations saturated with colonial discipline, wartime genocide and postwar military domination? Can their work transform the multiple temporalities that they uncover? And what of the dead themselves? How does their return speak return speak to their past actions, their ambivalent and ambiguous sacrifice, their capacity to act in the present. Presenter: Christopher Nelson

The Electric Power Man: Nuclear Shaen and Rebirth from Social Death: "I will deeply remember the responsibility and pride of the electric power man that Mr. Yoshida has demonstrated by taking it upon himself to protect the land and people of Fukushima." Naomi Hirose, then President of Tokyo Electric Power Company Holding (TEPCO), gave the eulogy to Superintendent Yoshida in August 2013. The death of Yoshida, an iconic figure in the remediation of the crippled Fukushima Daiichi Nuclear Power Plant, cemented TEPCO employees' social and corporate responsibility for the recovery of Fukushima. At the same time, it further tainted TEPCO's social image as an evil nuclear company. This paper explores social death/shakaiteki shi experienced by TEPCO employees following the 2011 nuclear accident. Focusing on their untold stories of regaining the sense of pride as "the electric power man" by creating a company archive of the accident or erecting "TEPCO's grave/ohaka," this paper examines the experience of employees as they went through the transitions from life to the death of a corporate body. How did Yoshida's irradiated bones—the symbol of the nuclear accident—afford communication among TEPCO employees about their long-term commitment to both already incurred and anticipated loss in coastal Fukushima? How do a corporate funeral and act of archiving produce shaen (corporate ties) (Nakamaki 2002) despite harsh critiques from the outside? This presentation draws from my fieldwork between 2017-19

and multiple remote interviews with a former TEPCO employee in 2023. Presenter: Ryo Morimoto (Princeton University, Department of Anthropology)

1000 Lights: Guiding the Spirits on Evacuated Land: The dramatic change brought forth by the 2011 earthquake and tsunami in northern Japan encompassed every aspect of survivors' life and beyond. In Arahama, district of Sendai City (Miyagi Prefecture), the wave took the life of 189 people, leaving behind about 1800 evacuees, only one edifice standing, and convinced the local municipality to declare the area a hazard zone, where residency is no longer possible. Inhabitants scattered around the Sendai metropolis, and some relocated elsewhere. However, during the Bon – the festival of the return of the dead – survivors go back to Arahama and visit their family graves. The local cemetery survived the tsunami and remains to this day in Arahama. Its scarred gravestones were recovered, restored, and put back in place. Parallel to this endeavor of physical restoration was an effort to adapt the Bon rituals to post-disaster circumstances. The return home of the dead is articulated through a series of acts of care, crucial among them are those of spatial guidance: the welcome fire, the farewell fire, and the floating lanterns indicate the path to and away from home. Indeed, one common concern among survivors was that of ancestors getting lost in the scarred landscape, looking for their family home where none was left. This article explores how a group of inhabitants creatively restored coherence between a cherished tradition and a present that demanded change; how – in post-tsunami Arahama – lighting the way for the spirits of the dead also means rethinking what and where home is for the living. Presenter: Arianna Tae Cimarosti (Princeton University)

Revitalization and the Politics of Post-death Communication: For many people in the Tōhoku region of Japan, the earthquake and tsunami of 2011 marked a rupture in the social fabric of time and place. While time stopped, places were violently rendered unrecognizable. In some ways, “revitalization” efforts have sought to bridge the gap between the “before” and the “after” of the disasters. In relation to the spatial organization of devastated places, this has not meant a simple return to a prior state of being. After all, with so many people – loved ones, friends, acquaintances – lost, trying to restore a place threatens to dishonor its significance. Rather than restore places, then, this paper argues that attempts to restore connections to the deceased are what counted as “revitalization” to those who lost the most to the earthquake and tsunami. This involved the reorganization of cities and even of the region in ways

that facilitated communication with the dead. Yet such reorganization is always contested and carries different significance for people positioned differently in relation to the disasters. Based primarily on research in and around the city Kamaishi and Iwate Prefecture conducted from 2012-2022, this paper considers ways that reconfigurations of sonic movements, lines of sight, and technological media that facilitated the movement of signs between “this world” and the “other world” became political sites of ontological struggle – a struggle over existence itself – after the disasters. Presenter: Michael Berman (Brown University, Department of Anthropology)

Remaking the Sociality of an (Otherwise) Bad Death: Speaking for One-self : Anticipating that one may die without the kin once relied upon to bury and memorialize the dead has now become commonplace in Japan. With the “demographic crisis” of a high aging/low birthrate population where one-third of households are single and deaths have exceeded births for more than a decade, more and more Japanese are both living and dying alone. Lacking the family grave that was once conventional puts an increasing number of “family-less dead” at risk of becoming “disconnected souls” (muenbotoke) at death. This paper considers alternatives to this existential prospect. By taking on the responsibility of enacting their own ending arrangements while still alive, to-be-deceased are increasingly assuming the voice of speaking of/for their own souls ahead of time. Anticipatory death-making in an era of transitional sociality. Drawing on fieldwork in the new “ending industry” (shūkatsu) in Japan, the paper considers such growing trends as making “grave friends” to be buried next to in alternative burial sites, and registering one’s burial site on an identification card to be carried with one when still alive. Speaking of/for a sociality to be secured ahead of a transitional threshold that would (otherwise) end in a bad death. Presenter: Anne Allison (Duke University, Department of Cultural Anthropology)

Queering the Anthropocene, Animalizing the Anthropocene

10:15 AM - 12:00 PM TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Atalia Israeli-Nevo

CHAIR:

Atalia Israeli-Nevo

PRESENTER:

Veronica Solis Mora (University of California, Santa Cruz, Department of Anthropology), Brent Horning, Ilanit Branchina, Atalia Israeli-Nevo

DESCRIPTION:

Anthropocene, Capitalocene, Cthulucene, Plantationocene; all of these terms mark a disturbance, a way with which various critical actors – such as climate lobbyists, critical scholars, Indigenous activists, animal rights liberators, geologists and environmental scientists, to name a few – come to terms with a planet that is rapidly changing and plagued by apocalyptic potential futures and lingering pasts. As an analytical framework, as a biogeological era, as an impending disaster – the Anthropocene offers a spatiotemporal moment where material and cultural boundaries are becoming undone, and colonial binary oppositions (nature/culture, dry/wet man/woman, human/animal) fall apart. These different kinds of disintegrations and transitions prompt us to think through what Jason Cons calls seepage, being attuned to intermediate states of matter-to-volatile transformations between land and water and to the spaces that emerge in between', to 'emergences, disappearances and oozings' (Cons 2020:206–7). This framework proposes a way of seeing the world through its open holes and oozing fluids, embracing the uncanny unruliness of these terrains. Both queer and nonhuman animal bodies have been – culturally, politically, socially and materially – unruly bodies that have been subjected to and productive of violence, critique, deconstruction and instability. Both queers and animals have been attached to pollution (which, as Max Liboiron reminds us, originates as a concept in the 'perverted' discharge of semen [Liboiron 2021:19]); they have been imbued in toxins and intoxication, whether it is in the hormone industry in animal agribusiness, in the history and present of HIV/AIDS, in chemsex, in the zoonosis generated by eating animals and their products. Examining the Anthropocene through queer and animal analytical and somatic frameworks opens up questions of somatic politics in the age of dampness, begging for different kinds of attachments and interconnectedness. This panel aims to ask what is the meaning of being queer and being animal in the age of the Anthropocene? How can we connect and juxtapose queer and animal somatic perspectives with each other, and with broader climate change politics? Following Michelle Murphy, how can we acknowledge Anthropocentric 'racist,

harmful, even deadly' chemical relations, from a queer destabilizing practice and critique (Murphy 2017:449)? What kind of ethics – decolonial, sexual, nonhuman – arise from these modes of knowledge, thought and practice? And as Karen Barad asks, 'how would we feel if it is by way of the inhuman that we come to feel, to care, to respond?' (Barad 2012:216) References Barad, Karen. 2012. 'On Touching - the Inhuman That Therefore I Am.' *Differences* 23(3):206–23. doi: 10.1215/10407391-1892943. Cons, Jason. 2020. 'Seepage: That Which Oozes.' Pp. 204–16 in *Voluminous States: Sovereignty, Materiality, and the Territorial Imagination*, edited by F. Billé. Durham: Duke University Press. Liboiron, Max. 2021. *Pollution Is Colonialism*. Durham: Duke University Press. Murphy, Michelle. 2017. 'Alterlife and Decolonial Chemical Relations.' *Cultural Anthropology* 32(4):494–503. doi: 10.14506/ca32.4.02.

'Light Harvesters': This paper presents the butterfly scale as a plateau (Deleuze) to draw nodes across species, spaces, and bodies without organs. The scale, as a subject of convergence for deep times, has yet-to-come times, ideas, technology, and humans. The presentation attempts to challenge the anthropocentric notion of knowledge and technology. Instead, it highlights the co-creation and rhizomatic learning through a multiplicity of bodies and reciprocities, reimagining a sustainable future in Anthropocene's times through a million-year-old complex structure, a butterfly's scale. Presenter: Veronica Solis Mora (University of California, Santa Cruz, Department of Anthropology)

Primal Queer Embodiment Through Somatic Trauma Healing: As we inquire what it means to be queer animals in the Anthropocene, it may be helpful to look at some of the other qualities we share with mammals, particularly the involuntary shaking response. Most mammals respond to trauma with involuntary shaking, following the 'freeze' response. Humans have the same instinct, but it is usually suppressed due to social unacceptability. As we examine some ways that queers seek sexual liberation, chemsex provides important insights about how internalized trans or homophobia, guilt, and shame can provide the illusion of freedom and self-acceptance. Within the specific needs of the LGBTQIA community, trauma-informed methodologies can discharge trauma that fuels drug abuse, and help us remember our primal animalistic roots. As healing from trauma happens in the individual, a sense of interconnectedness may naturally emerge, which can inspire climate change politics. Intergenerational and

somatic trauma is a hallmark of colonization, thus healing from trauma is also a form of activism against imperialist power structures. Presenter: Brent Horning

Human-Animal Relations and the Arts of Living on a Damaged Planet at the 'Freedom Farm Sanctuary': In this lecture, I will examine how our relationships with animals from the food industry can provide a window for observing and coping with the damages created during the Anthropocene. I will introduce my research, which deals with human-animal relationships and ethics of care at the 'Freedom Farm' sanctuary, a shelter for the rescue and rehabilitation of animals mostly survivors of the food industry in Israel. The sanctuary serves as a home to over 250 animals and as an educational center that aims to connect humans and animals in deep familiarity, in contrast to the distant and improper conditions in which many people typically encounter these animals. The sanctuary is primarily run by women, including managers, workers, and volunteers. Through multispecies ethnography, I reveal the challenges and moral dilemmas that these women face. These dilemmas arise when resources are limited, and in caring for animals whose bodies and minds bear the marks of the Anthropocene, as well as from the anthropocentric worldview that pervades the sanctuary's relationships with the animals. Drawing inspiration from Anna Tsing's work on the arts of living on a damaged planet, I ask: 'In what ways are these women, together with the animals, trying and even struggling to create a new moral model of human-animal relationship?' A central theme that arises from my research is 'the freedom family', a multispecies family constructed from different kinds of species, including humans. What is the meaning of perspective seeing these animals as family members and kin, rather than merely as a food source, for the women at the sanctuary and for me as an anthropologist? How does the permeation of queer theory about family and kin, contribute to the observation and coping with the Anthropocene damages? These questions and more will be discussed widely in my lecture, as I try to challenge the dominant paradigm that characterizes anthropological research in this age. Presenter: Ilanit Branchina

Towards a Damp Animal Ontology: Kathryn Yusoff's geopolitical intervention into the debates of the Anthropocene is important, because it distances us from historical temporal questions into questions of the body, and the attribution of broken, murdered and pierced bodies to the making of the Anthropocene (Yusoff 2018). It begs the question, what kind of other

marginalized bodies have been inscribed into the story of the Anthropocene? This paper aims to offer a theoretical framework of the ongoing aftermaths of the Anthropocene. Following but also debating Yusoff, I argue that biology (rather than geology) forms the basis of our understanding of this geological era, situating experiences, transformations and alterlives within question of the somatic. I apply Steinberg and Peter's "wet ontologies" (Steinberg and Peters 2015) and Jason Cons' "damp ontology" (Cons 2020) to the body, arguing it aids in breaking down colonial Anthropocentric binaries. Both queer and animal bodies have been subjected to, but also productive for, unruly categorizations, oppressions, toxicities and harm. Thinking through those somatic experiences will aid me in offering a framework of a damp animal ontology. Attuning ourselves to the nonhuman animal and its somatic experiences, we might rethink the anthropocentric/logical other and our relations to it. In Harlan Weaver's terms, it splits open older categories and categorization itself, in order to open up new affective relations and desires (Weaver 2015:358). It begs us to think about our own harm both to other human communities, and to nonhuman animal communities. A damp animal ontology puts animal somatics as the baseline of Anthropocentric thinking, encouraging our bodies to desire and ooze into other bodies, painful experiences and toxic senses. Presenter: Atalia Israeli-Nevo

4-290

Reassessing Matters: Semiotic Approaches to Value and Commensuration, Part 2

10:15 AM - 12:00 PM TMCC - 203 D

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Kathryn Graber (Indiana University, Bloomington, Department of Anthropology)

CHAIR:

Maria Sidorkina (University of Texas at Austin)

PRESENTER:

Steven Black (Georgia State University, Department of Anthropology), Lynda Chubak, Sherina Feliciano-Santos (University of Michigan, Ann Arbor, Department of Anthropology), Montserrat Perez Castro Perez (Dartmouth College)

DISCUSSANT:

Jillian Cavanaugh (CUNY, Brooklyn College, Department of Anthropology)

DESCRIPTION:

Anthropologists have long approached value as fundamentally a question of semiosis, from early Saussurean-structuralist theories of linguistic value to Nancy Munn's Peircean analysis in *The Fame of Gawa* (1986). Recently, semiotic approaches to value have been extended as part of 'new materialism,' a reexamination of work by Munn and by David Graeber (2001), and a resurgence of interest in Peirce. Linguistic anthropologists in particular have focused on evaluation as a kind of semiotic-discursive project, examining the talk used in evaluating a good or a practice (e.g., Cavanaugh 2007; Chumley & Harkness 2013) or focusing on how semiotic mediation shapes circulation, such as by promoting and selecting for some qualities over others (e.g., Calvão 2013; Gal 2017). This double session interrogates what happens to value in transition. What happens when the 'same' stuff--a material good, an image, a practice, or a stretch of discourse--is subjected to different criteria and different regimes of value? How do people reconcile slippages and change criteria to suit new purposes? When one mode or system of evaluation 'wins out,' what are its political dimensions and its implications for power (Elyachar 2005)? Papers in this session consider cases in which 'value' is contested and the ways that people grapple with that apparent incommensurability, or force things to be commensurable. At the intersection of linguistic anthropology and economic anthropology, we consider the different conceptions of value that might be at play in a given ethnographic context, including use value, exchange value, moral value, and others. We ask what is at stake in forcing unlike things and unlike systems of evaluation into a commensurable system, or not, as an ethnographic question. Papers in Part 2 examine the different types of value (ethical, scientific, financial) invoked in global storytelling--some of which are treated as incommensurable by the people who invoke them but nonetheless circulate and are exchanged; how temporary migrant workers in Canada are subjected to competing, potentially incommensurable criteria of economic value to support horticulture industry purposes; how forms of racial-sensorial-perceptual regimentation emerge across scales of interaction ranging from bureaucratic institutions to everyday interpersonal exchanges; the ways that personal stories of trauma are crafted and become a source of economic value among multi-level marketers in the San Francisco Bay Area; and how sustainability is articulated and

argued for in the palm oil industry in Mexico and the Netherlands despite the context of uncertainty and incommensurability associated with complex supply chains and climate change. Emplotment, Imagination, and The Value(s) of Storytelling in Global Health: In this presentation I examine the role of storytelling in value creation, discussing the values constituted in stories told by non-profit organizations (NPOs). Global health's epistemic and ethical values are articulated in the stories that global health professionals tell, but its economic values pertain to the circulation of these stories. In past work, I have explored the epistemic and ethical values of techno-optimism, analyzing how racialized affect associated with techno-optimistic storytelling reinforces and reproduces existing inequities. In this presentation, I focus on the concepts of transparency and successfulness as participant-created metapragmatic theories that shape the circulation of stories in NPO communication. I highlight how these concepts operate in global health as economic values in that they facilitate the transfer of money and medication from donors to NPOs and the lamination of the ethical values found in global health stories onto the public personas of philanthropists. This occurs despite the fact that persons associated with philanthropy do quite a bit of semiotic work to maintain the incommensurability of donations and any gain on the part of donors. My analysis also has implications for anthropological theorizations of value. I argue that storytelling plays a central if under-recognized role in the constitution of value systems, particularly through the intersection of emplotment and imagination amid the constraints of genres and conventions. Emplotment connects past, present, and future in distinct and unique ways, enabling people to understand what has happened and motivate future actions. While stories should not be assumed to be objective, comprehensive, or even

necessarily accurate accounts, through storytelling narrators and their audiences nonetheless imagine value into being. Presenter: Steven Black (Georgia State University, Department of Anthropology)

Re-voicing Value: Agri-food Inscriptions of Migrant Labor Essentiality : Classifications of work are often represented as subcategories of labor when status relative to the law or state is foregrounded (Guyer 2018). “Essential” became a COVID-19 keyword evaluative to rationalize worker exemptions from border crossing closures and work-from-home mandates. Anthropology of labor migration and related disciplines have amply demonstrated that bureaucratic inscriptions of person categories by the state, media or other publics are instrumental in stratifying access to or suppressing substantive human rights (e.g., De Genova 2004; Gonzales & Sigona 2017; Horton & Heyman 2020; Lenard & Straehle 2012; Sharma 2006). Within Canada’s agri-food industry, my larger dissertation project investigates the dialectic between designations of “essential work/er” and hierarchies of labor and citizenship. For this paper, against current and long-standing reports of migrant farm worker maltreatment and calls for policy reforms by advocates and scholars, I analyze a Canadian horticulture industry public relations campaign that seeks to counter recent negative mainstream media on its labor practices. Within a dedicated website and video series, temporary migrant workers are recruited to deliver testimonials regarding the economic and social value of farm labor for themselves, and for home and host communities, echoing industry talking points. I ask how delegated or conscripted constructions of labor essentiality are reconciled as commensurable or not, and what are the political actions and implications of these industry re-voicing efforts. Presenter: Lynda Chubak

Regimenting Perceptions: Regimes of racialized perception and uptake rooted and emergent in and through colonial racial orders are entrenched across scales of interaction ranging from bureaucratic institutions to everyday interpersonal exchanges. Drawing on concepts of racial orders and rights, saliency and visibility, multi-sensoriality, materiality, and embodiment, as well as raciolinguistic and raciosemiotic analytical approaches in linguistic anthropology, I consider the historical emergence of multiple forms of racial-sensorial-perceptual regimentation and the impacts of these different (yet often overlapping) regimented forms of perception within social exchanges. Presenter: Sherina Feliciano-Santos

(University of Michigan, Ann Arbor, Department of Anthropology)

“A Very, Very Strange Market”: Value Production in the Making of Sustainable Palm Oil: As concerns about climate change intensify, so do debates about the food industry’s dependency on palm oil, the world’s most widely produced vegetable oil and one implicated in the destruction of tropical forests and smallholder livelihoods. The food industry has responded to these debates through corporate sustainability [CS] strategies. CS is not considered philanthropy but a strategic part of the business model and indispensable for a company’s long-term survival. However, the transition to CS is not a clear path for the actors working in the industry, especially in a context of much uncertainty, and incommensurability, such as complex supply chains and climate change. In this presentation, I’ll focus on the commodity chain of sustainable palm oil in Mexico, where the “business-case” of sustainability is sometimes enacted as a great potential, and other times, as a senseless enterprise. As a salesperson told me once, “it’s a very, very strange market”. The recognition of the “strangeness” of the market is not exceptional. It is part of the common sense of working in CS. Drawing from my experience working in the industry and fieldwork with different actors of the palm oil value chain in Mexico and the Netherlands, I ask: how do workers in the industry do the “business-case” of sustainability (even when they believe it makes little or no sense)? I suggest the categories of labor and desire to center value production on the practices and affects of doing CS. I focus on the labor of translation across different modes of value and knowledge to make sustainable palm oil. Similarly, I attend to desire as an affective potential in the experience of translating and valuing sustainable palm oil along the commodity chain. I argue that analytical attention to labor and desire can contribute to broader conversations about value production, capitalism, and the formation of ethical-political relations. Presenter: Montserrat Perez Castro Perez (Dartmouth College)

Resource Frontiers

10:15 AM - 12:00 PM TMCC - 206 B

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Maximilian Viatori (Iowa State University, Department of Anthropology)

PRESENTER:

Lucas Edmond ,Maximilian Viatori (Iowa State University, Department of Anthropology),Ben Bridges (Indiana University, Bloomington, Department of Anthropology),Ulil Amri (Gonzaga University)

DESCRIPTION:

This panel takes us to diverse resource frontiers, a type of space that its participants define capaciously. The papers to be presented here cover the problematic nature of existing standards for toxicity in oil-rich northern Alberta, the very term 'wind resources' as itself a marker and enactment of a new resource frontier in Southeast Asia, the affective dimensions of a mine's effort to cultivate its social license to operate in southern Peru, debates over a new tourism-focused train system in Mexico, the creation of a new marine protected area off Peru's Pacific coast, dilemmas around cedar extraction in southeast Alaska, and nationalist, community-based renewable energy initiatives in Indonesia.

Embodied Futures on the Frontier: Standards, Eco-Risk, and Indigeneity in Alberta's Oil Sands: Resource frontiers are premised on specific forms of futurity. Energy resources are carved out of their raw settings for developmental projects that promise economic benefits (Parlee 2015). In other words, 'zones of opportunity' are etched out of 'zones of sacrifice'; the economic benefits of the 'Alberta advantage' are privileged at the expense of natural landscapes and the Indigenous people occupying them (July 2021). These resource frontiers have historically relied on the expropriation of resources through colonial legal infrastructures (Poireir and Westman 2020) and the dispossession of Indigenous bodies through the pollution of the land, air, water, and animals (Huseman and Short 2012). In Canada, almost all toxic pollution regulations revolve around the concept of threshold limits. Thresholds mark the legal quantity of toxicants that industry can release relative to the assimilative capacity of ecosystems and its associated bodies (Liboiron 2021). In other words, threshold standards are marked by the assumption that ecosystems can absorb a certain amount of toxicants before they become harmful. The impacts of environmental pollution on human health and well-being in northern Alberta are often ambiguous and embedded in sometimes contradictory knowledge systems that are split between Indigenous lived experience with industrial pollution and officials who

insist this waste is either harmless or contained (Westman and July 2019). The stakes of these conflicts are high: safety and risk management legitimize oil sands extraction (Graham et al 2021). Low standards for the health of ecosystems and humans encourages the health of Alberta's economy (Murphy 2008). In this way, nonhumans not only embody evidence that can help predict future risks for people, but nonhuman bodies are also a site where settler-colonial futures are justified at the expense of Indigenous relational livelihoods. Biological life is evacuated from its cultural meaning, history, and agency when it is reduced to a sink for pollution (Gross 2020). This erasure effectively creates a canvas that governments use to inscribe settler futures. In response to poor environmental and health regulations, Indigenous-led environmental monitoring programs have sprung up around northern Alberta to find literal 'bodies of evidence' (Shapiro 2015) that trace toxic exposures from extraction zones and challenge settler science, standards, and futures. I ask: How do communities attune to nonhumans as they reorder themselves based on a shared future with toxicants? How do universal threshold standards enable the reordering of time and space in local settings? What futures do communities envision in light of ontological and epistemological frictions with these regulations?
Presenter: Lucas Edmond

Zoning the Ocean: Conservation, Extraction, and the Politics of Depth in a Peruvian Marine Protected Area: This paper examines the creation of Peru's first large-scale, open-ocean marine protected area (MPA), the Reserva Nacional Dorsal de Nasca (RNDN). It explores the institution of provisional depth zones within the RNDN to regulate activity in the water column. In the 'Zone of Direct Use' all fishing, including large-scale industrial extraction, is permitted to a depth of 1,000 meters, while in the 'Zone of Strict Protection' extractive activity is prohibited between 1,000 and 4,000 meters. An exception has been allowed for long-line fishing for Patagonian toothfish (*Dissostichus eleginoides*) to 1,800 meters. The implementation of these zones and the political, technical, and scientific debates surrounding them provide insight into new forms of ocean space-making and governance. MPAs have emerged as a critical means for achieving global conservation targets for the world's oceans as well as the development of a 'blue economy.' This concept frames oceans as engines for economic growth if conservation and extraction are effectively coordinated through planning. Institutions such as the World Bank have promoted marine spatial planning as a tool for managing the needs of different industries, communities, and species through the

designation of three-dimensional zones for extraction, transportation, development, and protection. An analysis of ocean zoning in the RNDN reveals a far messier reality and problematizes the idea that marine spatial planning is a technical fix for ensuring 'healthy' oceans. The zones in the RNDN emerged from multi-party negotiations and conflicts and, as novel legal spaces, have brought into being new political imaginaries and governance practices. These aqua-territories have represented an opportunity for the fishing industry to reassert its claims to ocean spaces as their fishing rights were reimagined as ocean volumes instead of surface areas. In the RNDN extraction literally has been layered upon conservation in a way that has ignored the dynamism of the ocean. Water, nutrients, fish and other creatures, and lost fishing equipment circulate in ways that transgress ocean zones and undermine the watery limits of ocean zoning, thus collapsing meaningful distinctions between extraction and conservation. Presenter: Maximilian Viatori (Iowa State University, Department of Anthropology)

Seeing the Tongass for the Trees: Negotiating Cedar Value in Southeast Alaska: While driving over the paved logging roads of the Tongass National Forest, Quinn Aboudara, a leader of the Klawock Indigenous Stewards Forestry Partnership, reflected on ways to make the cedar timber industry more sustainable and profitable for Southeast Alaska residents: 'We need to actually control the market... where we are selling that gorgeous yellow cedar.' I inch the recorder closer as he insists, 'The cultural use of those trees should double the value of that tree.' Quinn astutely observes that the cultural significance of cedar for Alaska Natives regrettably does not match the price of a log on the global market, making for an inequitable logging industry in the region. Quinn and other Alaska Natives constantly encounter incongruities such as these between the economic and cultural values of cedar: a weaver decides whether to gift her cedar-bark basket at a naming ceremony or to sell it to cruise ship tourists; a carver evaluates a museum contract against his community's request for a totem pole; a Native conservation activist reconciles with the logging industry's ability to make cedar logs more readily accessible for art. This paper examines how Tlingit and Haida artists and foresters, in their efforts to resolve these value incongruities, materially modify the surrounding landscape, often collaborating with Alaska Native corporations and heritage institutions to do so. Western red cedar (*Thuja plicata*) and yellow cedar (*Callitropsis nootkatensis*) function as cultural keystone species in Southeast Alaska, serving as primary materials for art, ceremony, dress, architecture,

medicine, and transportation across millennia. Despite cedar's centrality in historical and contemporary Tlingit and Haida expressive culture, the ramifications of clearcutting, climate change-induced species disappearance, and restrictive and bureaucratic land management policies pose challenges to weavers and carvers alike who require quality cedar for their craft. Accordingly, the cedar dilemma intertwines issues of forest ownership and resource extraction with artistic production and circulation. Stripping bark from the trunk or felling an old-growth tree are art-motivated modifications to the landscape, modifications inevitably wrapped in series of complex rules and regulations pertaining to both harvesting and artmaking. This research is based on fourteen months of ethnographic fieldwork conducted in Southeast Alaska from 2021 to 2023 between the capital city of Juneau—a primary market for artistic products—and Prince of Wales Island, a location known for its historically robust cedar stands. Using oral histories and participant observation with Alaska Native artists and foresters to describe the landscape and the relationships humans have with and within it, this paper evokes work in political ecology set in colonialist contexts, including Clint Carroll's (2015) resource- v. relationship-based approaches to land management and Beth Rose Middleton's (2015) framework for an Indigenous political ecology that prioritizes self-determination and governance. The focus on land sovereignty is bolstered by a discussion of how cedar art products and economies can function as bids to sovereignty in and of themselves, as they index stewardship of specific territories and resources while simultaneously carving space for artists' financial independence. Presenter: Ben Bridges (Indiana University, Bloomington, Department of Anthropology)

Kemiri Sunan (*Reutealis trisperma*/candlenut) biodiesel and awkward energy nationalism in Indonesia: Many Indonesians imagine having an energy independent country in the future. They are working on producing various renewable energy initiatives. In this paper, I depict how a Kemiri Sunan biodiesel (a community based renewable energy project) has turned to be an energy nationalism project. This new form of nationalism is built upon a belief that local communities have capacity to transform and support Indonesia's social and economic development. Here I ask some questions: Why do Indonesian local communities get involved into the making of renewable energy? What are the forces that turn this initiative to become an energy nationalism project? How do they negotiate their ideas and interests to advocate for energy independence? Furthermore, how can this social

practice tell us about the unique relationship among anthropology, political ecology, and nationalism? This study portrays the way local communities in Indonesia look for various incentives economically (neoliberal profit), ecologically (sustainable future), and politically (national and decolonial prides). Drawing on an ethnographic fieldwork between 2014 and 2022 in Indonesia, this study aims to shed new light on the intricacies of anthropology, community-based renewable energy making, and nationalism today. Rethinking Gender through the Lens of Sport

10:15 AM - 12:00 PM TMCC - 803 A

Oral Presentation Session

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Niko Besnier (La Trobe University)

CHAIR:

Julie Soleil Archambault

PRESENTER:

Sarah Hillewaert (University of Toronto, Department of Anthropology), Dario Nardini, Josselin Mattont (National Centre for Scientific Research (CNRS)), Hannah Borenstein (Duke University, Department of Cultural Anthropology), Julie Soleil Archambault

DESCRIPTION:

In few aspects of human life does gender play as important a role as in sport. Since their invention in the mid-19th century, modern sports have been ideologically associated with men. In the Global North at least, progress toward parity in sport has been as slow as in society in general. One of the contributions of anthropologists who have focused on sport has been to deconstruct the inevitability of sport's association with men and masculinity. This panel is concerned with how gender is constituted by sport and how sport constitutes gender in a political, cultural, and economic context. The contributors show how gender analysis in sport can provide new insights into the role that gender plays in society, culture, and politics, and shed light on much broader issues of concern to anthropologists, including the workings of power, the effects of globalization, the persistence of local and global inequalities, and the power of history in shaping the world today. The panel considers the relationship between sport and gender in

a way that benefits from the developments of the last thirty years, both in terms of the role of gender in society at large and anthropological approaches to gender. Today, gender is no longer a matter of dyadic opposition between two categories, but a complex system intersected by other dimensions of social differentiation, including, but not limited to, race and ethnicity, age and generation, global South and global North, and religious and political affiliation. The rise of LBGTQI+ movements and new generations refusing to conform to traditional ways of understanding gendered identities has posed thorny questions for an activity like sport that is traditionally based on dyadic opposition. But these developments have also been met with a political backlash that sees them as new forms of geopolitical conflict (e.g., the 'West' imposing its gender politics), as well as a scientific backlash, particularly in sports, that attempts to ground gender in biology (e.g., by measuring the amount of testosterone produced by the body to determine who is a 'real' woman). After the civil rights era, the emerging prominence of non-white athletes in a field that had been defined as white privilege has raised new questions about race, gender, and politics. Anthropology's engagement with gender has also changed. The discipline has moved away from the study of gender as the study of women and placed men masculinity under analytic scrutiny. The imbrication of sport in systems of social class, a theme that Pierre Bourdieu's early sociology placed on the social scientific agenda, was complicated by the articulation of social class with other social dimensions like gender and race. In parallel with masculinity, whiteness and its relationship to sport needed deconstruction, as did the transnational circulation of professional athletes that emerged with globalization on the one hand and the rise of neoliberalism on the other hand. Sport practices themselves have always circulated transnationally, and now do so more than ever, reconfiguring images of gender in many societies. The contributions to this thematic issue address some of these questions, exploring how an intimate ethnographic engagement help us shed light on sport practices, as well as how an ethnography of sport opens new questions that are central to contemporary anthropology.

Gendered bodies and the idea of Africa in the promotion of Kenya's yoga tourism: Long a popular safari destination, Kenya is currently rebranding itself as the wellness destination of Africa. This new tourism strategy is to create high-quality luxury facilities while promoting a culture of African-inspired wellness strategies that appear to blend organically with a lifestyle of yoga and meditation. Promotions for yoga

retreats, for example, portray meditating white women looking out over a virgin landscape, accompanied by photos of luxury resorts, images of giraffes, and depictions of participants practicing yoga with traditionally dressed Maasai. Program descriptions clarify this is not just any Maasai; rather, it is the Maasai warrior from whom tourists will learn about ancient healing rituals, with whom they too will practice yoga, and to whose community development the tourist will contribute. This paper analyzes promotional materials of, and interviews with organizers of and participants to Kenya's yoga retreats to understand how gender features centrally in this new industry. In particular, I examine whether and how the "idea of Africa" is both challenged and reproduced through representations of, and discourses about gender, the body, and health in promotions of "yoga in Africa." Presenter: Sarah Hillewaert (University of Toronto, Department of Anthropology)

Risk-taking and Australian surfing as a predominantly male-oriented activity: Stephanie Gilmore, the seven-time world surfing champion born and raised on the Gold Coast, is referred to by most (male) local experts as an incredible surfer because "she surfs like a man." However, apparently surfing is not an activity that rests on physical qualities that are usually ascribed to masculinity such as strength, muscularity, aggressiveness and physical dominance. It is, instead, an aesthetic practice that also revolves around "style", grace, and dancing. Therefore, why are surfing representations still inextricably linked with masculinity (and a post-colonial idea of white Australian-ness), despite the recent, significant participation of women and other relatively "new" devotees such as Aboriginal surfers? Through an ethnographic analysis of "surfing culture(s)" on the Gold Coast, I argue that risk-taking, and, more broadly, the social construction of risk in surfing are relevant explanations of this process. In fact, surfing epitomises some of the cultural traits that symbolically define Australian national identity such as the relation with nature, the beach, fitness and "larrikism". Among these qualities, bravery and risk-taking represent the cornerstone of an exclusive and mainly manly, and white, sporting culture. As a seductive echo of the Romantic hero, surfers embody the ideal appeal of "fun" and freedom, as well as the competitive, aggressive attitude of sport; with no contradictions, they also exemplify the individualism of the "neoliberalist ethos," a virile kind of brotherhood and the discriminating dynamics which have characterized the history of sport in Australia. Presenter: Dario Nardini

Stratégies identitaires des combattants migrants africains de mixed martial arts en Afrique du Sud : Créé en 2009, l'Extreme Fighting Championship (EFC) est un promoteur professionnel de combats de mixed martial arts (MMA), basé à Johannesburg. L'EFC compte de nombreux combattants, dont des combattants migrants africains issus principalement du Congo, du Nigéria, du Zimbabwe et d'Angola. Ceux-ci font face en Afrique du Sud à la précarité économique, un statut administratif incertain ou inexistant, des difficultés sociales marquées notamment par la marginalisation et la xénophobie. Ces difficultés résonnent sur leur carrière sportive, généralement stagnante voire avortée pour certains. Cette configuration porte atteinte aux autoreprésentations de soi et notamment à celles de la masculinité hégémonique portée par ces migrants, représentations renforcées par la pratique du MMA, véhiculant le culte de l'héroïsme, de la virilité et de la violence subie et donnée. Comment, dans le cadre de la fragilisation sociale et psychique de ces migrants, les masculinités se reconfigurent-elles ? Quelles stratégies utilisent ces migrants pour se réinventer et maintenir une masculinité hégémonique ? À l'aide d'une étude ethnographique menée dans plusieurs salles de MMA à Johannesburg et à Pretoria ainsi que de 61 entretiens conduits avec 35 combattants migrants de l'EFC, nous cherchons à comprendre comment les combattants migrants performant les masculinités et comment celles-ci sont reconfigurées dans un sport impliquant la prise de risque, la brutalité, la compétitivité et la domination. Presenter: Josselin Mattont (National Centre for Scientific Research (CNRS))

Transformative Thought Amid Transphobic Policy: Following her victory at the 2009 World Championships, South African runner, Caster Semenya, was made to undergo sex testing in a public and demeaning way and World Athletics opened up a task force to explore unfair advantages regarding testosterone. In a 2019 ruling, World Athletics prevented women with levels of a certain testosterone level from competing in middle distance events unless they suppressed their testosterone levels with medication. Semenya refused to take medication and failed in switching to a longer distance event, while Burundian Francine Niyonsaba moved to the 5,000 meter distance and qualified for the 2021 Tokyo Olympics. Then, in March 2023, WA extended testosterone-based bans across all disciplines, and decided to also ban transgender women who were once biologically male in all competitions, contributing to a congruous global attack on trans rights. For this paper, I think about how these debates have shifted

ideas about gender, sexuality, and policy making among Ethiopian women runners. Although it would be reductive to situate all of Ethiopian society as homophobic and transphobic, general custom and law makes it very taboo to be gender non-conforming and/or trans. However, the pervasive awareness of white dominance and supremacy in the transnational running world yielded surprising conversations with women athletes about sexuality more generally, and fairness in sport. Drawing on ethnographic research I think about the connections women make with Western hegemony (this occurred amid an anti U.S. backlash surrounding a genocide in the country, a support for Russia in their war with Ukraine, and ban of Russian athletes by the same governing body, World Athletics) that reflect a more general distrust of these decision-making powers. Presenter: Hannah Borenstein (Duke University, Department of Cultural Anthropology)

“Exercising for real”: the unexpected impacts of a photoshoot in Mozambique : The growing popularity of fitness across urban Mozambique, an activity that many carry out outdoors, puts into relief some of the challenges women face in their everyday lives, particularly regarding competing efforts to control their bodies. In this paper, I focus on the circulation of a series of images depicting the activities of a community fitness organization composed of women in their 40s, 50s, and 60s, highlighting the unexpected and transformative repercussions this had on how the women see themselves and are seen by the rest of the community. Locating the event within local politics of visibility and invisibility, I reflect on how images participate in the construction of the “real” and on the part aesthetics play in these processes to qualify understandings of the transformative potential of sport. The paper is based on ethnographic research that I have carried out with the organization in the Mozambican city of Inhambane over a five-year period. Presenter: Julie Soleil Archambault

Revisiting Algonquian Myths and Beyond: New Approaches and New Challenges for Indigenous Mythologies (2)

10:15 AM - 12:00 PM TMCC - 605

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Émile Duchesne (Université de Montréal)

CHAIR:

Laurent JÉRÔME ,Émile Duchesne (Université de Montréal)

PRESENTER:

Adrian Tanner (Memorial University),Robert Crepeau (University of Montreal),frederic laugrand

DESCRIPTION:

Algonquian myths have been painstakingly collected and scrutinized by generations of anthropologists. Boasian and other culturalist anthropologists left us considerable and consistent description of Algonquian lifeways from the early 20th century, as well as an important corpus of myths. Algonquianist anthropology also gave birth, through Alfred Irving Hallowell's work, to the ontology concepts so present today in the discipline. In francophone anthropology, Lévi-straussian structuralism also left its mark on Algonquianist research through the work of the Laboratoire d'anthropologie amérindienne, which conducted intensive research among the Innu between the 1970s and 1990s. In the past few decades, anthropology of Indigenous cosmologies has again been revitalized by new approaches such as animism, perspectivism, semiotics and the so-called ontological turn. These analytical tools allow us to gain new understandings of the vast and dense cosmology of Algonquian peoples. In the first part, our panel seeks to renew anthropology's long engagement with Algonquian mythologies by addressing new topics and using new approaches. How can we envision perspectivist arrangements, which seem so present in Algonquian mythologies ? What is a good storyteller according to Algonquian standards and how are their speeches performative events ? How does Algonquian mythology engage with contemporary issues such as politics, economics and Christianity ? How do Algonquian mythologies echo other Indigenous mythologies in the Americas or elsewhere? In the second part, our panel will envision these questions under a comparative light by asking specialists of other cultural areas to engage with the Algonquian material presented in the first part. This comparative scope will enable a better understanding of the intertwined influence of storytelling and experience in Indigenous cosmologies.

The Intertwining of Myth with History. The Kaunitoni Legend and Fijian Land Tenure.: There is a well-known myth in Fiji that tells of the first arrival of people. While parts of the story appear to date from after Fiji became

a British colony in 1874, other parts are more ancient, and tell of the original location of all Fijians at Nakauvudra, in the mountains of the largest Fijian island, Viti Levu. Starting from this myth, there are hundreds of stories in different parts of Fiji, each about the migrations by a god-like ancestor of a lineage group, starting out from Nakauvudra. These stories effectively transition from myth to oral history. They account for the group's final arrival at the land they came to occupy at the time of colonial rule. When the British formally recognized the land ownership to these lineage groups, their early ethnographic style of investigation in the field failed to find agreement on land ownership among local people. However, after years of failure, the Native Land Commission began taking these stories seriously. It was this combination of myth and the oral histories that allowed the Commission to finally succeed in registering the land ownership of each lineage group. In Fiji land has two very different aspects - one pragmatic, for growing crops, and the other spiritual, representing the ancestors. These aspects involve different attitudes towards land, and land use and occupancy. It was the mythic and spiritual aspect that became the basis of land ownership, even though this is at odds with how land is actually used. Presenter: Adrian Tanner (Memorial University)

Algonquian Flood Narratives: South American Perspectives : A vast literature is dedicated to the study of flood narratives in anthropology. The motif of flooding or great inundation is associated with the destruction of a previous world followed by its re-institution by ancestral cultural heroes. Algonquian oral literature includes several flood stories associated with the trickster Mesh, Meshu or Maasu . For instance, in 1634, the Jesuit Paul Le Jeune mentioned the figure of 'Messou' and wrote that he is said to have 'restored the world, which was lost by the flood of water'. Le Jeune added that Messou 'is the elder brother of all the animals'. In this communication, I will be focusing on a few ancient and more recent versions of this Algonquian flood story that I propose to compare with South American narratives collected in collaboration with the Achuar of the Peruvian Amazon and the Kaingang of southern Brazil. One of the objectives of this comparison will be to verify to what extent one can generalize the hypothesis that the catastrophic destruction of an earlier world is a prelude for the transformation of mere oppositions into a system of complementarities. Presenter: Robert Crepeau (University of Montreal)

Do the Inuit and the Ibaloi believe in their myths and their non-humans beings?: In Canada as elsewhere, the history of indigenous peoples shows that these groups have been transformed by contact with exogenous traditions. These changes are expressed in myths, rituals, gestures, values, images and many other areas. Echoing Paul Veyne's famous essay, *Les Grecs ont-ils crû à leurs mythes*, this paper examines the relationship between humans and non-humans in two contrasting cosmologies. We defend three propositions. 1) First, these relationships often remain among the most stable in cosmological transformations. Thus, the irruption of Christianity did not make many non-humans disappear but made others emerge and updated myths. These experiences with non-human beings continue to be key moments in intersubjective relationships: the opportunity for Youth or Elders to see a deceased person again, to communicate with a spirit or an ancestral figure, to heal, etc. 2) Encounters with non-humans remain multiple. They occur in dreams, in art or in everyday life, but are always fed by contradictory testimonies: some do not adhere to them or wonder about them, others see in them the tangible proof of an autochthonous connection. These contradictions reinforce the dynamism of myths and non-human beings 3) If many Indigenous peoples have been dispossessed from their territories, the generative action of their non-human beings maintain the power of their cosmologies. Irving Hallowell was able to point this out a century ago, and this reading sheds light on the Algonquin world as well as many others. Presenter: frederic laugrand

CHAIR:

Erica Williams (Spelman College, Department of Sociology & Anthropology)

PRESENTER:

Johnnetta Cole

DESCRIPTION:

This session will celebrate the September 2023 publication of *Speechifying: The Words and Legacy of Johnnetta Betsch Cole*. It will bring together the co-editors of this volume to discuss the significance and implications of the book. Dr. Cole has made a significant contribution to Women's and Gender Studies and related fields, as the only person to serve as President of the nation's only two HBCUs for women (Spelman College and Bennett College), as a Black feminist anthropologist, as Director Emerita of the Smithsonian Institute's National Museum of African Art, and formerly Chair and President of the National Council of Negro Women. A powerful and eloquent orator, Dr. Johnnetta Betsch Cole demonstrates her commitment to the success of HBCUs, her ideas about the importance of diversity and inclusion in higher education, the impact of growing up in the South on her life and activism, and her belief in public service. Dr. Cole's speeches give voice to urgent and polarizing issues of our time, while inspiring transformational leadership and change. This book also includes interviews with Dr. Cole that highlight her perspective as a Black feminist, and explore the impact that her leadership and mentorship have had on generations of Black feminist scholars.

Strange Interfaces: Catholic transformations of cosmos, crisis, and continuity

10:15 AM - 12:00 PM TMCC - 205 A

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Maya Mayblin

CHAIR:

Valentina Napolitano (University of Toronto, Department of Anthropology)

PRESENTER:

Camille Lardy (University of Cambridge), Maya Mayblin, Frank Ngo, Marc Loustau (College of the Holy Cross), Adriano Godoy

DESCRIPTION:

In recent years major events - social, political, climatic, and institutional - have reverberated across Catholic life-worlds, invariably impacting on how Catholics imagine and negotiate their 'common home', their global Church, and forms of faith. In view of this, there is a

need for scholars to look afresh at Catholicism as an infrastructure, an assemblage, a *complexio oppositorum* (Schmitt 1996), and object of theoretical debate. This panel seeks to showcase some of Catholicism's emerging folds and boundaries; the 'strange interfaces' it creates in diverse contexts; from the political and artistic to the bureaucratic and scientific. The subheading of the panel 'cosmos, continuity, and crisis' invites anthropological reflections on Catholicism at different temporalities and scales. It calls for investigation of the way intensifying trends may be transforming Catholicism's traditional power bases and reconfiguring the way the Church articulates with secular domains. Above all, this panel invites thinking with and through Catholicism as an enduring puzzle for social theory. What is it? Where is it? How should we reflect on its oft-noted capacity to blend and translate across different structures of power? Underlying this are two enduring problems for theory: the first is how Catholicism as a global religion does continuity in the face of crisis. That is, how, and by what mechanisms does it conserve, abandon, return to, or reproduce itself? The second concerns how Catholicism reconfigures itself in the face of change and multiplicity. What is to be gained by thinking with or against emerging Catholic imaginaries of home, church, nation, ecology, and cosmos?

Catholic Commons: Scaling Homes and the Good with the Church Social Teaching : While the anthropology of Christianity has long been adept at analysing Christian senses of time, including the ruptures and continuities which inhere in notions of conversion and eschatology, I suggest in this paper that it is to the anthropology of Catholicism, more specifically, that we might turn for insight concerning Christian senses of space—and their connection with Christian political and environmental praxis. Drawing on ethnographic fieldwork among French Catholic intellectuals whose ecological activism is founded on a political reading of the Social Teaching of the Catholic Church, I examine the ways in which notions of the 'Common Good' and of 'Our Common Home' enable Catholics to negotiate spatial ruptures and continuities. Far from being self-evident matters of doctrine, Catholic 'Commons' are found and resisted, built and discarded: in this paper, I suggest that investigating them as spatial and scalar processes opens the door to broader explorations of Catholic notions of community, identity, and responsibility. This approach encompasses, but is not limited to, discussions of Catholics' party-political allegiances in the space of nation-states—it aims to enrich anthropological accounts of the multiscale interfaces between the

Catholic Church and local, national, and global politics.

Presenter: Camille Lardy (University of Cambridge)

Sex and sovereignty in “Beloved Amazonia”: on the biopolitics of Catholic global environmentalism: The Synod for the Amazon was one in a series of global synods which has taken place under Pope Francis’s office, but as synods go, it was somewhat unusual: firstly, in its focus on a particular geographic territory, and secondly, in the level of church-state tension it generated. As an attempt to reposition the Church within the world, and the nation-state in relation to the Church, this was a synod unusually grounded in the materiality of race and ethnicity, place, and gender. But Catholic concern with the Amazon as a geographic territory of special exception traces back to the earliest colonial encounters. Concern for the region’s fecundity (and potential sterility) can be read throughout the Jesuits first contact with indigenous people: from their obsession with the ‘sensuality’, ‘laziness’, and (re)productivity of native bodies; to their interest in the forest itself as a place of rich theological potential and natural resources. How do Catholic histories of concern for the Amazon, theological discourses about fecundity and sterility, understandings of gender, and struggles for Amazonian sovereignty fold into one another? This paper situates the Amazon synod within a longer history of Church interference in and struggle over the Amazon as one of the world’s most important (and threatened) biomes, and asks how the biopolitics and gender tensions of contemporary Catholic eco-theology call us to re-think the very nature of the church-state separation. Presenter: Maya Mayblin

Sovereignty and Being – Opus Dei, the Personal Prelature : Anthropologists, philosophers, and political theorists of political theology and theo-politics have illuminated the relationship between movements within religious institutions, such as the Catholic Church, and broader issues and concepts like sovereignty. In this talk, I address how the Roman Catholic group, Opus Dei reacted to Ad charisma tuendum, a change to the group’s canonical category published by Pope Francis in 2022. While Escriva and early followers fully believed in the force of (Canon) Law to affirm Opus Dei’s nature, the very system now threatens to redefine them. Many members officially state that the papal decree is of no worry, but some of their private reflections betray the composure of their public response. Some turn their attention to Pope Francis, which places them in ethical conflict with their commitment to the Papal Office. Others express approval and see Ad charisma tuendum as a great boon to Opus Dei’s standing in the Catholic

Church and wider society. I argue that the heart of the issue is an anxiety caused by the overlap of sovereignty and being within and beyond the Catholic Church. Opus Dei’s distress over Ad charisma tuendum can resonate with more general concerns of sovereign powers to identify and regulate forms of life, processes that determine whether life undergoes “crisis” or “continuity.” Presenter: Frank Ngo

“The Means of Grace’: toward a Weberian Social Anthropology of Catholic Bureaucracy: By reconsidering Max Weber’s sociology of religion, in which Weber defines the Catholic Church as an institution for the rationalized dispensation of grace, I argue that anthropologists might move toward a new study of contemporary Catholic bureaucracy. In this paper, I will examine Weber’s analysis of domination, bureaucracy, and charisma in *Economy & Society*, and then pay special attention to his application of these concepts to the European Catholic Church. I will ask how anthropologists should consider the claim that Catholicism’s distinctive type of social domination is a hybrid form, “office charisma,” defined as the belief in the specific state of grace of a social institution. Is there a generative difference to be traced between characterizing apostolic succession as a theological principle and Weber’s argument that episcopal ordination is like the aristocracy’s attempt to make ancestral status into a scarce value? What to make of the claim that office charisma weakens morality’s demands on the individual, and that it maximizes the performance of obedience to the Church? Was Weber simply reifying nineteenth century European Catholic bureaucratic practice, or is there a way to recover these claims’ ethnographic value in light of Catholics’ ongoing public debates about notions of clerical authority? Presenter: Marc Loustau (College of the Holy Cross)

Ethnoecological Catholicism in contemporary Brazil: In this paper, I examine the processes of conception and formulation of the Church of Our Lady of Lourdes, also known as the “Indigenous Cathedral”, carried out by the Salesian Mission in the community of Maturacá (Amazonas, Brazil). With the hypothesis that from this temple an “ethnoecological religion” is made, my presentation will look into the articulations between ecology and ethnicity that guide the Catholic Church’s socio-environmental policies in the Amazon region. In doing so, I seek to elucidate some of the ways in which the Catholic Church repositions itself in the competition for the Brazilian civic-political space as an ‘ecological subject’; one that is able to support new socio-environmental policies through a religious repertoire of

“social justice” which brings newer ideas of 'ecological imagination' into conversation with older theologies of 'inculturation'. Thus, in the present research, the architecture of the “Indigenous Cathedral” provides a material focus for my investigation of this somewhat contradictory process, insofar as it proposes to give the same religious form to contemporary Catholic conceptions of ethnicity and ecology. By addressing the ideas and practices behind the construction of this unique Cathedral, this paper interweaves debates from three distinct fields of study within the anthropology of religion: ecological spiritualities, Christian missions and religious monuments. Presenter: Adriano Godoy

DISCUSSANT:

Thomas McIlwraith

DESCRIPTION:

In this session, sponsored by the Society for Anthropology in Community Colleges, presenters across the subfields discuss their approaches or ideas for engaging students in the learning environments of today. This year's theme of 'Transitions' speaks directly to the practice of anthropological pedagogy/andragogy over the tumultuous last few years. The COVID-19 pandemic disrupted all facets of society, with profound implications for higher education as we have come to know it. Students today have different experiences and expectations of education than before, and many are still processing collective trauma. In addition to the pandemic, we are

increasingly seeing the effects of global climate change as well as international and domestic political challenges. As our world transitions in these ways, so must our approaches to teaching amid them. As we address these issues, we must remember that we face stiff competition in the battle for attention in an ever-increasing divisive climate. Already existing political divisiveness and media misinformation has only increased over the last few years. We propose that with engaging presentation and delivery of our material, we can achieve a broader appeal than we tend to get. In an era of constricted media consumption and related oversimplification of complex issues relevant to matters long central to anthropology, it is crucial the messages we deliver are accessible to as wide a range of students as possible. Presenters in this session describe various practices they have employed to engage students in the classroom and beyond as we continue to transition into a future marked by these challenging circumstances.

Anthropology, Online Teaching, and General Education : Ahead of the pandemic, there seemed to be a push for more online class offerings. Then, no one had the choice, and we all had to shift our classes online. As we strive for normalcy in current times, there now seems to be a push to get back into the classroom. However, many students introduced to online learning for the first time appreciated the benefits of this flexible learning style, and online classes continue to fill. As instructors, we need to learn how to support our students where they are and make our online classes as engaging as we have always known our classrooms to be. This engagement is especially important for general education anthropology classes taken primarily by non-majors. These classes are not only important for recruiting majors to our programs but also for broadcasting the knowledge of our discipline, and an appreciation for human variation, to members of a society struggling to heal from countless traumas over recent years. Presenter: Julie Lesnik

Public Scholarship as a Tool for Engaged Pedagogy: This presentation focuses on public scholarship as a tool for engaged pedagogy: one that works to destabilize traditional hierarchies of knowledge within the academy and that envisions education and knowledge production as part of the praxis of social change. I propose the use of public scholarship (including op-eds, podcasts, TED talks, and even Twitter threads) in cultural anthropology courses to replace or supplement traditional assigned materials like textbooks and journal articles. At a basic level, a recent op-ed or a lively TED talk is often more engaging and feels more relevant to students' lives than

traditional academic texts, but the choice to prioritize public scholarship also calls attention to much deeper issues about who knowledge is for and what ends it is meant to serve. I propose pairing this change in course materials with a shift in student assessment, tasking students with creating the very sorts of public scholarship they have been reading, listening to, and watching. These kinds of student projects have the potential to be truly transformative; they empower students with the skills and confidence to share their knowledge with a broad audience (rather than just writing a paper for their professor), and they invite students to devise possibilities for positive social change. Presenter: Meghan Donnelly (University of San Diego, Department of Anthropology)

Progressive Pedagogy in Biological Anthropology: Teaching has always been hard, but these days it might be even harder. A common refrain from college professors is that students don't read, don't come to class, don't study, and don't care. While it often seems that way, as anthropologists who have devoted our professional lives to understanding what it means to be human, we are well suited to consider not only if this is true, but why it seems this way. The science of teaching and learning suggests that everyone likes to learn, but many are socialized to loathe formal learning in school. How can we make our classrooms open to all learners (both the ones who 'need' all As and the ones who are just taking it to fulfill their check sheets and happy with a C). We need to recognize that our time in, and success at, academia has allowed a certain type of person to succeed. These contexts have shifted over time and become exacerbated by the pandemic. I discuss ideas from the world of progressive pedagogy that can help us think deeply on divisive topics such as technology in the classroom, class participation, syllabuses, and grades. Progressive pedagogy allows professors to co-create a more inclusive, and equitable, classroom. Presenter: Marc Kissel (Appalachian State University)

Reconnecting Students and Reengaging the Community with Visual Anthropology: This presentation describes a collaborative visual anthropology project designed to re-engage the University of Delaware's Associate in Arts Program students with each other, their education, and their community after years of pandemic stress and social isolation. The project, titled Capturing the AAP, received a grant from UD's Interdisciplinary Humanities Research Center in spring 2023. For this project, students enrolled in a course called Visualizing Humanity followed the approach of Brandon Stanton's photography project Humans of New York by taking

photo portraits of each other, as well as of UD's community partners in Wilmington, DE. Students also learned ethnographic interviewing techniques and interviewed each other and community members about their lives, hopes, accomplishments and struggles, which they turned into intimate personal bios. Together, the class built a website featuring these portraits and stories. Printed portraits were displayed in a photo gallery on our campus, and community members were invited to a reception to celebrate the gallery opening. The project served as a successful community-building exercise among socially awkward students and as a first step towards revitalizing UD Wilmington's community engagement initiative by bridging the disconnect that pandemic online education created between our institution and the city in which we are housed. The project also contributed to the normalization and reframing of the anxiety, depression and other mental health challenges our students experienced, as these were made discussable during student interviews and reframed as stories of resilience. Presenter: Neri de Kramer (University of Delaware)

Broadening Research Impact: Partnering with Community Colleges in Federally Funded Projects: Most federally funded research programs stress engagement with stakeholder communities in the US as part of the Broader Impacts section in any grant application. Community College (CC) students represent a vast yet untapped pool of potential talent in scientific research, primarily as their main function is to get their students into four-year college programs. In this talk, I will discuss ways to unlock these potentialities through partnerships between research universities and CCs, primarily aimed at bringing CC students into federally funded research projects located in research universities with the objectives of a) creating networks between CC students and research university faculty, students, and post-docs, b) transferring analytical and writing skills to CC students through research accompaniment and workshops, and c) enhancing the likelihood of transferring to four-year college programs. Beyond the obvious benefits of such interactions to CC students and faculty, I argue that such engagements established as long-term partnerships will increase the Broader Impacts of federally funded projects AND also help CC administrators to report increases in their primary metric of success: the number of students transferring to four-year colleges. Presenter: Rahul Oka (University of Notre Dame)

Technologies of Social Production

10:15 AM - 12:00 PM TMCC - 203 C

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Andrew McGrath (University of California, Irvine, Department of Anthropology)

PRESENTER:

Andrew McGrath (University of California, Irvine, Department of Anthropology), Ario Seto (Memorial University), Jennifer Heung (Saint Mary's College of California, Anthropology Department), Zeynep Sertbulut (Haverford College, Department of Anthropology), Atinc Gurcay (University of Wisconsin, Milwaukee, Department of Anthropology), Kathleen Mah

DESCRIPTION:

From digital placemaking in Southern California to Islamist buzzers in Indonesia to online gaming in China to Turkish dizi media world to the aftermath of the earthquake in Turkey to the far-right Canadian Freedom Movement, this panel explores technologies of social production.

Sign, Structure, and Meaning in the Worlds and Worldviews of Viral Capitalism: Anthropologists in digital fields have become familiar with contesting false oppositions between the virtual and the real. Following this, I want to consider the onto-epistemological forms digital versus in-the-flesh realities take in the lives of my informants as one modality both represents and circumscribes the other. Based on thirteen months of ethnographic fieldwork and structural analysis with relatively affluent suburban individuals and families, in this paper, I consider the effects of digital placemaking in shaping how meaning is signified and structured in the lives of upper-middle-class Southern Californians. While noting the role of digital practice in situ for affording people and their commensurate relations the agency to define who they are in virtual spaces, my intent here is to consider the viral circulation of sign value as constitutive of a fluctuating but coded digital real. While much digital ethnography has stressed the potentiality of digital social relations for imagining worlds otherwise, I want to consider how capitalism continues to revolutionize itself to foreclose radical alterity in favor of a prolific difference it can otherwise accommodate in the feedback of code-based network

relationalities. Focusing on the experiences of my informants, I consider the role that strengthened social media aesthetics and the pandemic era's virtual acceleration play in the way people are building social relations amidst the strictures of algorithms and machine learning; fields of capital encouraging viral engagement as much as neoliberalism once stressed endless growth. Considering historical structures related to class and status, such as those associated with American consumer culture, I attempt to understand how my informants and others interpret signs within the viral logic and non-linear affordances of digital identity construction. I argue that the peri-pandemic digital acceleration experienced during the months of my fieldwork could be understood as a watershed moment in the emergence of novel logics of self, structure, and capital; connoting a dark onto-epistemic shift in how Americans such as my informants conceptualize being online, and what is valuable and meaningful within their online social worlds. Finally, I attend to the connection between Southern California as a pre-digital simulacrum and the compressed space and time of virtual reality, considering the ramifications of one for the other in the imaginations of my informants. Presenter: Andrew McGrath (University of California, Irvine, Department of Anthropology)

Online Buzzers: Message Flooding, Offline Outreach, and Astroturfing: Based on ethnographic research on Islamist buzzers – social media political operators tasked with making particular online conversation subjects trend – in Indonesia, this article details how the proliferation of insensitive messages in both the online and offline realms plays a role in transitioning fundamentalism between political spaces. As this research shows, the interviewed buzzers were one of the driving forces behind the massive success of the fundamentalist Islamic Defenders Front (Front Pembela Islam, FPI) as they mobilized masses to participate in the organization's political rallies. Driven by altruistic volunteerism and a sense of community, these actors go beyond their duty as click-farmers. They maintain regular contact with sympathizers, convincing them to revive broken weblinks, hang banners on streets as part of astroturfing campaigns, and gather masses to attend offline events. Detailing the activity and spatiality of buzzers in crafting new online and offline spaces as part of their innovative bottom-up propaganda management, this research concludes that right-wing political mobilization and radicalization are not simply the product of an ideology but are catalyzed by technically and socially tedious, which normalizes tensions and violence through rigorous community

building. As part of the economics of attentions, buzzers are diligent viral marketers seeking to influence conversational spaces. Their pseudo-conversation with the public and efforts to keep the related online visual material afloat could be regarded as classical agenda-setting strategies. In such formations, buzzers should no longer be viewed simply as digital mercenaries, but as actors who craft the community's reference group in maintaining fundamentalists' online sociability by soliciting the public's attention through their regular chats and code-switching. Accordingly, this paper details the role of buzzers as social media influencers who established the ecology of hate and transitioned anti-social tendencies from online chats to offline mobilization. Presenter: Ario Seto (Memorial University)

Great Expectations: Social Engineering, Cultural Transformation and Identity in Urban China: China's continued efforts to establish itself as a significant world power on the international stage has also resulted in fascinating cultural and social engineering efforts in urban China. Not only does China desire a particular global presence, there is also a specific expectation of its citizens and how they should fulfill their role in the Chinese dream. Drawing from a number of government policy such limiting access to online gaming for minors to only an hour a day and only Friday, weekends, and public holidays, the almost overnight ban on hiring foreign instructors who were based outside of China, to the banning of reality talent shows on TV and 'sissy' men, this paper seeks to examine motivations and expectations of these policies as well as how local Chinese have responded to them. How do these types of cultural bans offer insights into what it means to be a Chinese citizen today? The cultural and national questioning of Chinese 'citizenship' and who they represent, nationally, culturally, and globally gives us a window into the flexible nature of citizenship. The making and unmaking of certain types of citizens points to how 'Chinese' is a floating signifier at a moment when the Chinese nation-state is engaged in reconfiguring its place on the global stage. Understanding the expectations of 'proper' or 'good' citizens offers an alternative entry point into discussions of personhood and cultural belonging. Presenter: Jennifer Heung (Saint Mary's College of California, Anthropology Department)

Contentious Stories of Culture: Censorship in the Turkish Dizi Industry: Based on twenty-one months of ethnographic research in the Turkish dizi (serialized television melodrama) media world, this presentation examines how dizi makers create televisual

representations of national values within the context of state censorship, as Islamic values are displacing secular ones under President Erdoğan's leadership. On and off the sets, dizi makers frequently complain about the increasing censorship in the industry over the last decade. They highlight how they can no longer produce certain scenes that appeared in dizis a decade ago, such as scenes that depict intimacy, extra-marital relationships, and alcohol consumption. I argue that RTÜK –the state agency for monitoring, regulating, and sanctioning radio and television broadcasts – despite not officially enshrined by law to sanction dizis before they air on television, serves as a major disciplining mechanism in the production process. RTÜK frequently uses audience complaints as its legitimating device to interfere in broadcasts after they air and exercises differential treatment of television channels based on a channel's political stance. Focusing on interview data and ethnographic moments where dizi makers regulate content in anticipation of RTÜK censorship, I illustrate how these mechanisms of control affect dizi makers' work: they constantly vacillate between the already-punished and the yet-to-be-punished to predict what might get sanctioned by RTÜK, and this repeated uncertainty constitutes dizi makers as disciplined subjects. Presenter: Zeynep Sertbulut (Haverford College, Department of Anthropology)

The Aftermath of the Earthquakes: Understanding Institutions in Transition in Turkey: Two major earthquakes heavily impacted Southeast Turkey in February 2023. Turkish people overwhelmingly thought that the AKP government and state instruments needed to react faster to the tragedy that took more than 50,000 lives. Their belief was that the search and rescue efforts needed to be coordinated faster. Aid, in general, couldn't come to those who needed it the most. Some cities, like Hatay or Kahramanmaraş, were almost entirely left alone, on their own. The aftermath of the earthquakes, due to these reasons, deepened the existing discord between the large section of youth in Turkey and social institutions of Turkey like conventional media, governmental bodies, and politics. While conventional media covered the earthquakes as the tragedy of the century and rescue efforts as 'miracles,' Turkey's youth have coordinated their own search and rescue efforts and aid distribution through digital media platforms like Twitter, Instagram, and TikTok. Many young people did not trust their donations to the government, and government-backed NGOs, like Kızılay. They preferred to donate to another NGO, Ahbap (Friend in English), through a powerful coordination on Twitter. This move was tactical as Turkish people wanted

to avoid seeing more corruption or some groups wasting their money, which focuses my attention on the possibility of social change in Turkey. The youth's perception of failure on government and state fronts has become a larger issue. All these moments of crisis are happening as Turkey is headed to the 2023 general elections. After 10 months of ethnographic research with Turkey's youth, I propose that many youths in Turkey perceive governmental and social institutions as corrupt, unreliable, and failing. Due to that existing perception and mentioned moments of crisis, Turkey's youth becomes more and more alienated. This study approaches the estranged youth in Turkey to understand how digital media platforms like TikTok, Instagram, and Twitter become a place for social action and change and digital media becomes the new social institution where young people earn money, create safe spaces, participate in politics and create political spaces for themselves, and more importantly, have fun. We should be aware that global, national, and local institutional actors like Meta, Twitter, Amazon, and Google; AKP-lead government and other political parties; financial and cultural investors all have a stake in the game. It is crucial to know that this digital transition, or institutionalization of power through digital technologies, is not unique to the Turkish context, as capitalism is having a global crisis. However, the Turkish case is worthy of our attention as people experience economic hardships and political struggles, and they push for change in the political system along with the political environment. This study proposes that Turkish youth has been disproportionately affected by economic, social, and political failures. It is crucial to recognize the ways in which young women, Kurdish and Syrian youth, and young queers are now even more marginalized by systems of power. In addition to the country's ongoing crises, the earthquake is another diagnostic event where the distrust of the AKP government reveals itself. The solidarity around the aftermath of the earthquakes shows us that young people are pushing for change. Presenter: Atinc Gurcay (University of Wisconsin, Milwaukee, Department of Anthropology)

Transforming Contradiction in the Far-Right: the Canadian Freedom Movement: In early 2020 Canada reported its first confirmed case of COVID-19. Since this case was reported the Canadian government and citizens have grappled with how to cope. Some have chosen to express their stress by protesting the usage of masks and other health mandates. Anti-maskers, or as they refer to themselves 'Freedom Fighters' (FF), are a vocal far-right social movement prevalent in Canada,

most commonly associated with the Freedom Convoy that occupied the core of Ottawa for three weeks in February of 2022. This paper argues that FF occupy a particular intersectional position of privilege entangled with precarity that allows for the transformation of contradictory discourses into a process of sense-making that stabilizes the movement. The mobilization of contradiction allows for FF to hold a liminal position of privileged (dis)enfranchisement which confirms white, masculine, able-bodied, heterosexual, cis-gendered supremacy and the de-facto state of Canadian life. Based on past and on-going fieldwork this paper will seek to engage with contradiction as it transforms the right wing in Canada. It will begin with a short introduction to the Western arm of the FF focusing on the translation of online contradictory rhetoric into offline structural and systemic violence. It will then situate the FF within the current necropolitical social fold, articulating the consequences of the way the right transforms contradictory discourses into meaningful dialogue. FF are deeply embedded within structures of white nationalism and white supremacy. Their unique position poises them to greatly impact the future of Canadian democracy and politics of 'freedom', making them an important movement to critically engage. Presenter: Kathleen Mah

The Demystifying Language Project: Public Linguistic Anthropology for Social Justice

10:15 AM - 12:00 PM TMCC - 716 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Lynette Arnold (University of Massachusetts, Amherst, Department of Anthropology)

CHAIR:

Britta Ingebretson (Fordham University Libraries), Shalini Shankar (Northwestern University)

PRESENTER:

Ayala Fader (Fordham University), Miriam Urizar-Ávila, Lynette Arnold (University of Massachusetts, Amherst, Department of Anthropology), Krystal Smalls (University of Illinois, Urbana-Champaign), Danna Rojas (Fordham University), Penny Joseph

DISCUSSANT:

Donna Auston (Wenner-Gren Foundation)

DESCRIPTION:

The Demystifying Language Project (DLP), established in 2018 by Ayala Fader, is an inter-institutional collaboration between Fordham University UMass Amherst and New York City public high schools. The project aims to transform high school students' experiences with language, which are too often prescriptive and stigmatize the diverse linguistic repertoires of multilingual and multidialectal students of color. Building on similar efforts such as the SKILLS program (Bucholtz, Casillas, and Lee 2018), the DLP aims to introduce students to research on language and power, and encourage them to use those ideas to think through the role of language in their lives and communities. However, a 2019 Fordham pilot program revealed a dearth of reading material in the field that is accessible to high school students. To address this issue, the DLP organizers created an innovative writing workshop supported by grants from Wenner-Gren, Spencer, and Fordham University. The workshop, held in summer 2023, involved structured collaborations and mutual mentoring among scholars of language and social life, undergraduate students from our two institutions, and New York City high school students. Small teams of scholars, undergraduates, and high school students, worked together to 'transpose' (Mena 2022) published academic articles into a series of short and accessible readings. This curated series will be published online as an open-access resource co-hosted by the Society for Linguistic Anthropology section of the American Anthropological Association and Fordham's New York Center for Public Anthropology. This roundtable provides an ethnographic account of the philosophy, design, and implementation of the DLP writing workshop, bringing together participants with different roles in the project to talk about their experiences and share lessons learned. Ayala Fader and Miriam Urizar-Ávila will discuss the history of the DLP and the organization and goals of the writing workshop. Lynnette Arnold will discuss the Central American social change model of *acompañamiento* (accompaniment) that was used to structure collaboration among high school students, undergraduates, and academics (Arnold 2019). Mike Mena will speak about his approach to teaching non-specialist audiences using what he calls 'transposition pedagogy' (Mena 2022). As both method and creative mindset, transposition pedagogy is a way of translating academic content for general audiences that leans into nuance by using familiar metaphors in unfamiliar ways, producing academic content that is simple, but never simplified. Participating scholar Krystal Smalls and Fordham undergraduate students Penny Joseph and Danna Rojas will discuss their experiences in

the writing workshop. To conclude the session, Donna Auston of the Wenner Gren Foundation will discuss the Wenner Gren Workshop Grant that funded the writing workshop and the importance of public anthropology.

4-385

The Soundscape as Feminist Homework

10:15 AM - 12:00 PM TMCC - Hall F

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Nat Nesvaderani (Universite Laval)

CHAIR:

Emiko Stock (American University in Cairo, Department of Sociology, Egyptology and Anthropology)

PRESENTER:

Elise Ferrer (American University, Department of Anthropology), Walid Zarrad (American University in Cairo, Department of Sociology, Egyptology and Anthropology), Rashmi Kumar (Indian Institute of Technology, Delhi), Mariangela Mihai (Western Washington University, Department of Anthropology)

DISCUSSANT:

Roshanak Kheshti, Laura Menchaca Ruiz (Bard College)

DESCRIPTION:

This roundtable explores the ethnographic soundscape as a form of homework imperative to feminist epistemology. Our works are in conversation with feminist anthropologists and theorists who have long called for an integration of ethnography, feminist practice and knowledge production within our academic home disciplines, and beyond. We take as our points of engagement Kamala Visweswaran's notion of fieldwork/homework as an 'anthropology in reverse' anchored in the places where we are located (1994), while embracing Lynn Bolles call for 'casting a critical eye' into the offices, meetings, and classrooms of habitual academic practice (2013). We take up Sara Ahmed's method for doing 'feminist homework,' as work and practice of the everyday (2017). Here, our exploration of sonic ethnography is a practice of feminist multimodal anthropology. Anchored in the multi-positionalities of the anthropologists, activists and artists participating in this roundtable, we foreground an attentive and immersive listening to ethnographic soundscapes. Feminism, homework and fieldwork are not discrete projects. This roundtable presents sonic

ethnography rooted in the multifaceted spaces and places through which artists and scholars move. Soundscapes showcased in this roundtable are in various stages of production—from works in progress to finalized pieces—in order to resist, on one hand, the content driven distraction economy and, on the other hand, the linearity of academic writing that foregrounds fieldwork as a distinct practice from homework. Our collaborative engagement in this event is, in itself, a piece of feminist homework in progress. Works Cited: Ahmed, Sara. *Living a Feminist Life*. Duke University Press, 2017. Bolles, Lynn. 2013. 'Telling the Story Straight: Black Feminist Intellectual Thought in Anthropology.' *Transforming Anthropology* 21 (1): 57–71. Thermal Transitions: Towards an Anthropology of the Thermal Future

10:15 AM - 12:00 PM TMCC - 717 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Alex Nading (Cornell University, Department of Anthropology)

CHAIR:

Jamie Cross (University of Edinburgh), Ann H. Kelly (King's College London)

PRESENTER:

Jamie Cross (University of Edinburgh), Sarah Besky (Cornell University), Ashawari Chaudhuri (Cornell University), Marwa Koheji (University of North Carolina, Chapel Hill)

DISCUSSANT:

Ashley Carse (Vanderbilt University, Department of Anthropology), Alex Nading (Cornell University, Department of Anthropology)

DESCRIPTION:

From the impact of net zero targets on energy systems to the impact of acute heat waves on health, climate change is driving innovations in thermal technologies and infrastructures, as well as innovations in the thermal properties of materials and built environments. While social scientists have identified the uneven effects of global warming on populations across the world, the

rapid rollout of new heating and cooling technologies has raised new questions, from the possibilities for labor organization in transnational thermal supply chains to the equity of 'smart' design in built environments. To date, there has been limited anthropological engagement with the question of how the thermal future is actually made, and the social and economic trade-offs that it might require. Collaborations between anthropologists and the designers, architects, engineers, and mathematicians who work on thermal innovations remain rare. This panel invites scholars whose work engages questions of the thermal future from any subdiscipline or geographical area. Together, we ask: What kinds of social, economic and ecological value is being created in this emerging thermal economy, and for whom? How is a push for thermal efficiency balanced with an ethical commitment to climate justice? How do designers, policymakers, and practitioners reconcile differing disciplinary and cultural understandings of heating and cooling in their interventions? The objective of the panel is to identify linkages and disjunctures between key sites in the making of the thermal future. These include: locations where the effects of global warming threaten health and well being (e.g. fast-growing cities; intensive agricultural operations); sites where solutions are designed and tested (e.g. academic and industrial engineering; architecture and planning); and the mechanisms by which new technologies are implemented (e.g. building and labor codes; housing policies). Our collaboration aims to extend current engagements with thermal life in anthropology, adjacent social sciences (sociology, geography, science and technology studies, development studies), and beyond. A premise of our approach is that such engagements must begin by framing heating and cooling as culturally situated phenomena, rather than as physiological universals. The framework we plan to develop will connect situated experiences across multiple locations - spanning sites of industrial design, infrastructure planning, and manufacturing - to establish how ideas about thermal comfort, and the capacity of human bodies to live with or withstand volatile environments, are shaping technological solutions to future heating and cooling needs.

4-800

Thinking Power, Autonomy and Counter-Colonial Action through Relationships

10:15 AM - 12:00 PM Virtual - Room 4

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Colin Scott

CHAIR:

Jasmin Habib (University of Waterloo), Colin Scott

PRESENTER:

Harvey Feit (McMaster University, Department of Anthropology), Richard Preston, Mario Blaser, Wendy Russell, Marie Roue, William Simeone

DISCUSSANT:

Steve Langdon (University of Alaska, Anchorage, Department of Anthropology)

DESCRIPTION:

The themes of the title will be explored with particular reference to Indigenous peoples and other communities who embody a radical diversity of ontological, epistemological and institutional alternatives to relations of modernity, expressed in creative negotiations with corporate and state power. Contributions to this session engage with everyday lives and practices, as well as focused strategies for resisting colonialism, dispossession, treaty abrogation, and neglect of collective rights. Perspectives on territory and community, with attendant political stakes and modalities, will include human to other-than-human relationality. How do people sustain lands, worlds and ways of living in meaning-giving socio-ecological community? Contributors will address various elements of land-based livelihoods, territorial rights, governance practices and inter-peoples' alliances that help to answer this question. We examine the proposition that paradigms and judicious practices of reciprocity and respect, alongside opposition and confrontation, might transform the conduct of non-Indigenous governments and corporations in litigation, treaty negotiations, economic transactions, public mobilization, development agreements, and co-governance regimes, even as state agencies and corporate projects aim to subvert Indigenous self-governance, land tenures, knowledges, and autonomies. Presentations and discussion at this roundtable will form the basis for a festschrift volume honouring the work of Harvey Feit, which is closely aligned with session themes.

4-195

Transfixed between anthropological care and harm

10:15 AM - 12:00 PM TMCC - Hall G - MI

Executive Roundtable/Townhall - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Mai See Thao

CHAIR:

Mai See Thao

PRESENTER:

Rine Vieth, Girish Daswani, Zoe Todd, Holly Walters (Wellesley College, Department of Anthropology)

DESCRIPTION:

News of harm within the discipline of anthropology—as well as harm anthropologists have caused to communities of study—has, at times, made international headlines and been a major topic of discussion across the US and Canada. Harm in anthropology occurs from sexual violence, physical abuse, exploitation, theft and continual use of ancestral remains, to the uplifting of harmful scholarship and scholars themselves at the cost of students and community members. At the same time, anthropology espouses itself as a caring discipline. With the ethic to 'do no harm,' anthropologists write and teach to center the marginalized and vulnerable. The discipline asks others to take on different perspectives to unsettle hegemonic worldviews and open new ways of being. And yet, this contradiction, harm and care, is not a contradiction at all; it is an intersection we must all cautiously cross. This roundtable grapples with this uncomfortable transition in order to consider the hopeful, asking: How might a humanistic discipline also be inhuman? How might we grapple with our potential to harm as well as our potential to care? What are the transformative possibilities we can uncover by moving through such uneasy juxtapositions? We ground our answers and our field's fixation with knowledge production as always tied to power, settler colonialism, anti-Blackness, and imperialism. Ultimately, transitions should not erase its legacies, and this roundtable serves as that reminder.

4-395

Transitional Objects: Creating and Using Anthropological Archives

10:15 AM - 12:00 PM TMCC - 713 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Visual Anthropology

ORGANIZER:

Nancy Lutkehaus (University of Southern California, Department of Anthropology)

CHAIR:

Nancy Lutkehaus (University of Southern California, Department of Anthropology)

PRESENTER:

Jennifer Cool (University of Southern California), Alice Apley (Documentary Educational Resources, Inc.), Nancy Lutkehaus (University of Southern California, Department of Anthropology), Xilin Liu, El Whittingham

DISCUSSANT:

Joshua Bell (Smithsonian Institution (NMNH))

DESCRIPTION:

To what extent, and in what ways-literal or metaphorical- might an archive be considered a 'transitional object' in the Winnicottian psychological sense of the term? This roundtable will discuss the various implications of archives as transitional objects through a focus on the creation of an anthropological archives at the University of Southern California based on visual and textual materials from the Center for Visual Anthropology. This archives, which began with anthropologist Barbara Myerhoff's material from her Academy Award winning film, 'Number Our Days' about elderly Jewish holocaust survivors in Venice, California. It spans a 46-year period of ethnographic filmmaking at USC and includes the visual materials of Timothy Asch, Paul Bohannon, Lucien Castaing-Taylor and Ilisa Barbash. The Center for Visual Anthropology is currently at a point of inflection and has been reenvisioned as the Center for Ethnographic Media Arts, which will support advanced works of interdisciplinary media art in moving image and sound. This transition is the catalyst for discussions about how ethnographic archives can become 'living archives' used by a variety of individuals including students, scholars, artists, and community members concerned with the present rather than simply as historical documentation of the past. The roundtable discussion will expand upon this question with comparative information from individuals associated with visual archives at the USC Center for Visual Anthropology, Anthropology Film Archives at the Smithsonian, the non-profit Documentary Educational Resources, and a local

community archives in Los Angeles associated with the Heart and Soul Center, a non-profit video/media studio located in South Central Los Angeles. The roundtable will also address the timely issue of the decolonization of archives as well as questions about the future of the genre of ethnographic film, taking up Anna Grimshaw's recent 2022 query about its status today's world of multimodality. To what extent are earlier ethnographic films a historical resources for new forms of multimedia creations? What are new directions that experimental and ethnographic media is taking today and what role might anthropological archives play in their creation in the future?

4-400

Transitions after the Science Wars: Can we build a big tent for research methods in anthropology?

10:15 AM - 12:00 PM TMCC - 715 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Anthropological Sciences

ORGANIZER:

DESCRIPTION:

Hostile debates over research methods have impeded four-field advances in anthropology for decades. From the science wars of the 1990s to more recent calls to let the conventional methods of anthropology 'burn,' these active divides in our discipline often seem irreconcilable. New programs and agendas are emerging, however, that propose to critically re-imagine our discipline as a 'big tent' under which a diverse range of methods, practices, and epistemologies can co-exist and even complement and strengthen one another. The NSF-

funded Cultural Anthropology Methods Program (CAMP) is a community of 400+ anthropologists advocating for this big tent approach. Yet, as we experiment with new ways to bridge these methodological divides we need to know: what challenges, barriers, or problems impede a big tent approach? How can we navigate or mitigate these challenges as we transition to the future? This round table brings together CAMP affiliated anthropologists who work from cultural, biological, evolutionary, Indigenous, linguistic, participatory, and other perspectives to discuss these questions and outline new and productive paths for research methods training and practice in our discipline.

DESCRIPTION:

The anthropology of aging, in many ways, develops out of the anthropological study of transitions across the life course, through which people transform from one kind of personhood and social identity to another, although that literature often focused on the transitions of children to youth to adulthood (e.g., Mead 1930, Read 1987). These pathways may be culturally patterned, but they are accomplished through engaged human action and often with considerable personal and social reflection. People come to these moments of transition for the first time within their own lives (Cole 2013), even

if they have watched others go through them before. Failure is possible (Stucki 1995); and the effort to ensure that the transition happens may be fraught, anxiety-producing, and agonistic. These transitions can thus compel narration and symbolic ordering. This panel examines how transitions in later life are understood and interpreted by persons and shaped by institutions. Focusing on representations of transitions in later life and the social practices generated in the sites of these transitions, we ask: How do representations and practices make meaning for individuals and reflect the significance and roles of aging persons in a wider society? What kinds of emotions are associated with these transitions, and how are they reflected in these representations and practices? How are these representations and practices pedagogical, allowing for the sharing of experiences and preparing people to undergo these transitions? The papers concern a range of transitions, drawing on a variety of culturally relevant information: the staples of anthropological research like interviews and participant observation, as well as chart notes and website images from home care agencies. Some transitions are well marked and welcome, leading to clear roles and a sense of personhood located within one's family and society (Gamburd). In other cases, people have not been able to attain the social and biological markers of transition to an aged status, because of disruptions across the life course connected to violence and social upheaval, and find themselves reconfiguring the meaning of older adulthood as a result (Sadrudin). Other transitions are associated with aging but are difficult and unwanted, like requiring assistance at home or receiving a diagnosis of dementia. These transitions can be shaped by institutions, like long-term care facilities (Badone), home care agencies (Coe), and biomedical protocols (Taylor). All the papers show that transitions in later life are accomplished not only by the person undergoing the transition, but also are a social process involving the actions of many interconnected actors. Cole, Jennifer. 2013. 'On Generations and Aging: 'Fresh Contact' of a Different Sort.' In *Transitions and Transformations: Cultural Perspectives on Aging and the Life Course*, edited by Caitrin Lynch and Jason Danelly, 218-230. New York: Berghahn. Mead, Margaret. 1930. *Growing Up in New Guinea: A Comparative Study of Primitive Education* New York: William Morrow and Company. Read, Margaret. 1987 [1968]. *Children of Their Fathers: Growing Up Among the Ngoni of Malawi*. Prospect Heights: Waveland Press. Stucki, Barbara. 1995. 'Managing the Social Clock: The Negotiation of Elderhood among Rural Asante of Ghana.' Ph.D. dissertation, Northwestern University.

Familial Transitions: Transfers of Property, Merit, and Care in Rural Sri Lanka: Women's transitions through the life course in rural Sri Lanka are marked by the exchange of property, merit, and unpaid care work. Many women in the sandwich generation care for children and frail elders. As those same women age, they eventually need and receive care themselves from their younger kin. In this paper, I explore women's "unpaid" care work not as unwaged labor but as a contribution toward the generalized reciprocity that makes families work – a reciprocity in which no accounts are kept, but everyone contributes to the social reproduction of the family. In the Sinhala Buddhist village of Naeaagama, people say that "Children are debtors" and assert that the care they give their parents in old age can never balance out the care that their parents gave them when they were young. At the same time, elders do reciprocate care, first by making significant transfers of assets, such as the ownership of the house and land, and second by blessing their caregivers with gifts of merit. When elders pass away, the younger generation in turn reciprocates the gift of merit by offering alms to local Buddhist temples in exchange for merit for themselves and for their deceased elders. Transfers of property, merit, and care thus mark life cycle transitions and grease the wheels for the social reproduction of the family beyond aging and death, into future rebirths. Presenter: Michele Gamburd (Portland State University, Department of Anthropology)

Agency Images of Care: Partiality and Pedagogy about Aging Transitions: Home care agency staff reported that in their initial communication with potential clients, they had to do considerable education about the services they offered. Clients' lack of awareness about home care seems connected to research in the anthropology of aging suggesting that North Americans do not prepare for future transitions to debility, because it threatens their social personhood, constructed around independence and autonomy. In fact, the primary clients of home care agencies are adult children seeking care for their aging parents, rather than older persons themselves. This paper argues that images of care on agency websites in Canada and the United States reflect a complex balancing act that mixes attracting clients and educating them about paid care with defusing the ambivalence that potential clients may have toward the idea of receiving care. Care is most commonly symbolically represented through physically touching or holding an older person, rather than the core care worker activities of toileting, lifting, dressing, and bathing, which might degrade an older person's personhood. Only a few represent an older person's

disablement through a walker or wheelchair. In a small number of images, the care worker is not even represented, but instead the adult child is visible as the primary caregiver. In general, the images present a partial and rosy perspective of the transition to needing care, in which paid care is a form of love and care workers' primary tasks are veiled to retain the dignity and independence of older adults. Paper by Cati Coe and Sheridan Conty. Presenter: Cati Coe (Carleton University)

Transitioning into Long-Term Care: Based on interviews conducted by phone or Zoom during the COVID-19 lockdown with family members of residents in long-term care homes in Ontario, this paper explores the transitions encountered when older adults move to congregate care institutions, viewed from the perspective of family caregivers. By paying close attention to caregiver narratives, I demonstrate that there is a double transition that takes place when older adults move into long-term care: one for the older adult and one for the caregiver. For both parties, this process involves negotiating changes in living situations, dealing with physical and mental health transformations, adapting to shifts in caregiving roles and responsibilities, and adjusting to alterations in personal autonomy. For many caregivers, moving a family member to long-term care does not mean the end of caregiving commitments. Rather, caregivers transition to providing support within the long-term care residence, helping family members in activities of daily living and providing social stimulation. In addition, family caregivers must navigate the bureaucratic and logistical challenges involved in accessing long-term care in Ontario. I argue that staffing shortages in Ontario's long-term care system impede institutional care that recognizes the personhood of older adults, leading many caregivers to feel responsible for providing supplemental care in the attempt to ease the transition for their family member to institutional living. Presenter: Ellen Badone (McMaster University, Department of Anthropology)

Clinical Encounters with Difficult Transitions: Reading Dementia Care from Chart Notes : Anthropologists have long taken an interest in the ways that transitions through the ages and stages of the life course are socially organized and culturally marked. Today, aging itself is undergoing a historical transition, in that horizons of a human lifetime have come to seem elastic, on both individual and societal levels. People in North America and other well-resourced parts of the world, may often expect additional years or even decades of late life. As more people reach advanced ages, many will

live some of these additional years with dementia, and many will turn to health care professionals for help. Given that medicine at present has no effective treatments for dementia, how do clinicians help patients aging with dementia manage complex and often distressing transitions that may include not only cognitive difficulties, but also changing relations with family members, unaccustomed reliance on paid caregivers, or the necessity to move house? How does the presence or absence of family caregivers shape or constrain what can be done? In this paper, we address these questions by drawing on an unusual primary source: the clinical chart notes of older adult participants who had received a diagnosis of dementia in the Adult Changes in Thought (ACT) Study, a long running, prospective cohort study of incident dementia, set within Kaiser Permanente of Washington, an integrated health system based in Seattle, Washington (USA). The paper concludes by reflecting on the value and limitations of clinical notes as a source for examining transitions in later life. Paper by Janelle Taylor and Marlaine S. Figueroa Gray. Presenter: Janelle Taylor (University of Toronto, Department of Anthropology)

Agency Images of Care: Partiality and Pedagogy about Aging Transitions : Home care agency staff reported that in their initial communication with potential clients, they had to do considerable education about the services they offered. Clients' lack of awareness about home care seems connected to research in the anthropology of aging suggesting that North Americans do not prepare for future transitions to debility, because it threatens their social personhood, constructed around independence and autonomy. In fact, the primary clients of home care agencies are adult children seeking care for their aging parents, rather than older persons themselves. This paper argues that images of care on agency websites in Canada and the United States reflect a complex balancing act that mixes attracting clients and educating them about paid care with defusing the ambivalence that potential clients may have toward the idea of receiving care. Care is most commonly symbolically represented through physically touching or holding an older person, rather than the core care worker activities of toileting, lifting, dressing, and bathing, which might degrade an older person's personhood. Only a few represent an older person's disablement through a walker or wheelchair. Hemangini Gupta (Middlebury College, Department of Anthropology), Kristin Bright (Middlebury College, Department of Anthropology)

PRESENTER:

Asiya Islam, Kenmore Thompson (Simon Fraser University, Department of Sociology and Anthropology), Margaret Morley (Appalachian State University, Department of Anthropology), Doyeon Shin, Hemangini Gupta (Middlebury College, Department of Anthropology), Kristin Bright (Middlebury College, Department of Anthropology)

DESCRIPTION:

New conditions of labor under digital capitalism require us to rethink how we imagine and practice ethnography. As precarious digital homeworkers span geographies (Dubal 2020), platform workers interact with racist algorithms (Amrute 2019), and digital content producers craft new vernaculars (Coleman 2010, Kaur-Gill 2023), what are the methods that will allow anthropologists to keep labor in sight? Responding to the blurring of work with home, and labor with life, under contemporary capitalism (Freeman 2015), this session grapples with the meaning of sited research and participant methods by asking about the transitions entailed in getting to and from work, across platforms, and from one labor to another. Drawing on research with digital homeworkers, online gamers, belly dancers, taxi drivers, platform workers, and healthcare activists, session participants consider the challenge of accounting for embodied lives in transitory spaces and times. Questions about where work happens, who is doing the work, and what is

recognized as work, require a reconsideration of ethnographic sites, methods, and theory. In the 1990s, multi-sited ethnography emerged as a means to adapt long-standing modes of research to what was increasingly understood as a complexly interconnected world (Marcus 1995). Likewise, digital ethnography is by now a well-established tradition in the study of online worlds (Boellstorff et al. 2012). But fewer precedents exist for looking at the myriad contemporary ways in which the digital and 'IRL' are inextricably intertwined and equally 'real.' What kinds of labor and care are done in the transitory moments of chats and queues, and how do ethnographers account for those? How are digital forms of voluntarism and activism accounted for or compensated as labor? Post-Fordist economies compel us to consider how we categorize and classify practices as labor within an economy that exhorts us all to Do What You Love (Tokumitsu 2015, Weeks 2017). How do we account for labor and make it count? Collectively, the papers aim to do a kind of labor of their own-to ethnographically characterize digital capitalism expansively as those forms of work that are driven by technology, loosely categorized as startup capitalism, and broadly informalized or entrepreneurial, while also attending to the forms and forces of social transformation that digital capitalism obscures and deploys. Working the Night Shift from Home: The night shift is a key feature of outsourced call centre work. In the Global South, it offers global belonging premised on communication via information technology with the Global North, and additionally for women a visage of

freedom. What are the geopolitical and gender dimensions of night shifts when they are transposed to the space of home, as has happened due to the Covid19 pandemic? This paper draws on recent fieldwork with young women in Delhi, working for global corporates, offering services (such as, customer support and data maintenance) using digital technology to overseas customers/clients. As the women navigated the rhythm of working the night shift from home as a result of lockdowns, they expressed a preference for phone conversations over in-person meetings. In this paper, I will discuss the method of phone interviews that, to a certain extent, mirrored the women's working practices. While, in theory, these phone interviews could be conducted from anywhere in the world, sharing time and space with the women enabled access. I will, further elaborate upon women's accounts of spatial and temporal challenges of working the night shift from home, including having to minimise domestic sounds (the whirring of a fan, food preparation, watching TV) that contradict their reiteration of the corporate language of 'flexibility' and 'work life balance'. Together, these reflections on ethnographic labour and digital corporate labour during and after the Covid-19 pandemic will highlight the discrepancy between labour narratives and labour practices, and the limits to flexibility, under digital capitalism. Presenter: Asiya Islam

Space Guerrillas: Digital Reproductive Labor in an Online Game: Research on digital culture is often focused on the exploited, un-compensated, or under-compensated labor that either workers or users (or both) contribute. Even in ethnographies which focus on the players of online games, player groups are often examined for the way that they help players to participate in the game; these social connections keep players returning to the game and paying for new installments or monthly subscription fees. But as feminist critiques of labor underscore, the production and extraction of surplus value can occur only after the laboring individual is reproduced bodily and spiritually in processes that are essential to but not completely captured by the capitalist mode of production. This is no less true in the digital sphere than it is in physical space, and as more of our lives occur online more of that reproductive work happens there as well. Focusing specifically on the reproductive labor that go into creating and continuing player groups can help us to better understand the digital landscape from the perspective of those who live and play there. Drawing on a year of observation, participation, and interviews with a player group in the online PC game *Star Citizen*, this paper provides a clear

example of how an ethnographic approach that remains informed of feminist critiques continue to drive valuable insight into individuals' experience of games, the internet, and online communities. Presenter: Kenmore Thompson (Simon Fraser University, Department of Sociology and Anthropology)

Egyptian Belly Dance in Transition: Digital Capitalism and the Concealment of Aesthetic Labor: As the logics of digital capitalism become more central to the changing Egyptian belly dance industry, new kinds and intensities of labor as well as their concealment are required of dancers in order to be successful. As it has in American society, the erasure of aesthetic labor, whether digital or corporeal, is coming to be a governing principle in hierarchies of class and worth. Based on four years of digital and physical participant-observation in the Cairo belly dance industry, this paper explores how the transition towards digital capitalism, sped by pandemic restrictions on live entertainment, is changing expectations and practices of different kinds of labor for performers. Egyptian dancers tend to favor an aesthetic that does not conceal the labor of its production, using both obvious filters on social media and makeup visible as makeup. Conversely, the foreign (mostly Eastern European and Latin American) dancers coming to dominate the industry, particularly the segment visible to the public on social media, use a variety of technologies to achieve the face and body expected of a dancer in ways that erase the traces of their own labor. The absence of visible labor afforded by photo altering technologies, cosmetic surgery, and certain makeup and skin care routines comes to be seen as a marker of class and "taking care of" self that glorifies foreign dancers and further stacks the market against Egyptian dancers. Presenter: Margaret Morley (Appalachian State University, Department of Anthropology)

One Push Away: Shifts in Labor in the Korean Taxi Industry: Since 2015, many of the hailing or call-based taxi requests in Korea have shifted to gig-based jobs, adding another site to their numerous workplaces: the platform. As Srnicek (2017) argued, platform capitalism has turned into the fundamental basis of the contemporary capitalist system, and in the Korean taxi industry, using platforms to recruit passengers has become an inevitable practice, where the number of the monthly average user (MAU) of the biggest hailing platform reached 11 million. Platforms, which congregate disseminated information into crucial data, can be easily dismissed as a uniform intermediary to provide services to the user and the service provider. However, in the digital capitalist economy, platforms

and its' interface serve as a critical part of the economy and they need to be understood with the notion that although the design of the platform may be universal, every user's interaction with the platform varies. Within this context, I ask, "is there a single, stationary field site?" to those who conduct anthropological research on mobile interlocutors and field sites. To answer this question, I propose rethinking the interface as a field site where the designer's imagination and each individual user's different needs and realities collide (Suchman 2007). Furthermore, I explore the definition of workplace and platforms for taxi drivers, whose majority consists of middleaged and elderly taxi drivers, who are required to adjust to fast-changing user interfaces. Presenter: Doyeon Shin

"Labor as Method" for an Anthropology of the Present: Platform workers move around the city at different times, logging in and out of their apps. Startup workers traffic in the ethos of Do What You Love work. Neoliberal entrepreneurialism demands the blurring of life and work, extracting value from the promise of flexible work. How does anthropology capture the mobility of labor across space and time under startup capitalism? Keeping with commitments of border as method, my paper explores "labor as method" to explore the indeterminacy of contemporary forms of labor. Rather than categorizing relations of capital and labor in terms of agency or resistance, labor as method allows for an appreciation of the vital infrastructures of care that startup workers inhabit and that enable experiments in technocapitalism to unfold. It is also a political commitment to naming and following labor as a set of apparently discrete practices to show their inter-relatedness and simultaneity. This insistence on labor is especially significant within a public discourse insistently promising work as love and creativity. As startup capitalism generates value from the disintegration of productive and reproductive labor, immaterial and embodied labor, and technical and affective labor, and continues to collapse the distinctions between formal work and everyday labor, I offer a methodological approach that centers these movements and multiplicities and renders them discernible in the present. Presenter: Hemangini Gupta (Middlebury College, Department of Anthropology)

The Third Shift: Visible and Invisible Labor in Digital Healthcare Activism: In this paper I draw on ethnographic work with patient activists to consider how they perform a "third shift" (e.g., fundraising, blogging, policy guidance) in the transitory time between formal career work (first shift) and their labor

as patients (second shift). I focus on patient activism as a site of dissolving screens, where separations of physical/digital, medicine/home, and paid/unpaid are increasingly erased. Voluntarism is an area where labor is already assumed to be willingly donated or uncompensated. Yet, in the zone of online blogs, posts, and shares, how are activists called to do more, in an increasingly opaque way. The gymnastics required to make sense of cancer genomics and translate complex science to broader publics requires a kind of anticipatory labor (attending research events, immersing in literature, retooling media skills) before one is able to hit the keyboard and start blogging. Once the writing starts, what efforts are required to make otherwise abstract mutations, molecules, and numbers legible. Online activism offers expansive possibilities for solidarity and mobilization, but individual activists' efforts are rarely compensated—even as their products (writing, fundraising, messaging) are material to the success of oncology research, patient engagement, and drug availability. Uncompensated labor has consequences not only for what kinds of labor are counted but how long activists are willing to stick with the trouble. Additionally, what are the modes of ethnographic labor needed to work alongside and make online activism legible? In conversation with critical appraisals of technoscience and care (Puig de la Bellacasa 2011) and biofinancialization (Lilley & Papadopoulos 2014), I consider some of the critical ways anthropologists might assist with how activist labor is counted and accounted for. Presenter: Kristin Bright (Middlebury College, Department of Anthropology)

Translations on the Move in Contemporary Africa

10:15 AM - 12:00 PM TMCC - 712

Oral Presentation Session

REVIEWED BY:

Association for Africanist Anthropology

ORGANIZER:

Amanda Kaminsky

PRESENTER:

Amanda Kaminsky, Nikolas Sweet (University of Wyoming, Department of Anthropology), Julian Murchison (Eastern Michigan University, Department of Sociology, Anthropology & Criminology), TJ Espino McGurran

DESCRIPTION:

This panel critically investigates social movement and mobility in Africa through the lens of translation. The papers provide a dynamic snapshot of contemporary Africanist anthropology's theorizations of the movement of commodities, people, cultural practices, spiritual economies, names, food, and media through various regimes of value, transnational commodity and migration circuits, and spiritual and linguistic economies.

The Micropolitics of a Chinese Deli in Nairobi: This paper examines the multicultural politics of conviviality in Nairobi's Chinese food industry. As a central node of China's 21st-century expansionist policies across the Global South, Nairobi is home to a vibrant Chinese community of approximately 50,000 people. The epicenter of this community is in Nairobi's Kilimani neighborhood, where a restaurant complex called 'Chinatown' has come to epitomize the growing Chinese presence in Kenya. Based on a year of ethnographic fieldwork in Kenya in 2021-2022, this paper investigates how the geopolitical rhetoric of Africa-China relations is structured at the level of interpersonal interactions. By presenting an ethnographic case study of a takeaway deli inside Chinatown, I examine how Kenyan employees of Chinese eateries navigate complex linguistic and cultural barriers to make a living. I analyze how employees assert power and agency despite the precarity of their positions as low-paid workers with a high turnover rate, navigating the complexity of their workplace through creative code-switching, joking, and banter with Chinese customers, bosses, and each other. Throughout these encounters, food functions not only as the constant background, but also as a key site of conviviality, contestation, and resentment between the Kenyan employees and their Chinese customers and bosses. Presenter: Amanda Kaminsky

Rites of passage revisited: negotiating Senegalese coming of age transitions in a transnational world: Rites of passage offer a classic object of Africanist anthropology whose study often rested upon the assumption of bounded ethnic societies. In common understandings, these were secretive, often intense rituals performed in a sacred forest. This paper reexamines the role of rites of passage in Senegalese communities through two new perspectives. Firstly, it draws on more recent literature that has examined rites of passage within a transnational frame in which dispersed members of the community often travel back and participate in rites of passage from afar. Secondly, it poses the question of what participation in a rite of

passage looks like. This paper draws on ethnographic work that shows the borders between ritual space and broader community actors to be much more porous. Adopting such a perspective shows how a more diverse range of individuals participate in and negotiate meanings through these rituals. While scholars have largely focused on the rite of passage as a social transition, this paper reexamines this site of social action through the lens of translation, transparency, and transnationalism. Presenter: Nikolas Sweet (University of Wyoming, Department of Anthropology)

Majimaji in Name and Memory: How the Historical Rebellion Gets Invoked and Reimagined: Majimaji refers to a regional movement of rebellion across the southern half of what is today mainland Tanzania in the first decade of the twentieth century. The movement was supported by the use of a medicine (maji) that protected against the Germans and their bullets. The Majimaji name and its associated historical memory are ubiquitous in and around the city of Songea in southern Tanzania. Majimaji remains a key piece of national history for many, and there have been multiple moves to invoke the name in recent years, including efforts of which I have been a part (Majimaji Selebuka festival). This paper seeks to expand the frame beyond academic historiography and the formal spaces of memorialization/remembering to consider the 'lives' (or 'afterlives' if you will) of Majimaji in broader spaces of public consciousness. It aims to bring together rather disparate threads. The primary geographic focus is the city of Songea and the Ruvuma region, but the paper will also ask questions of the idea of Majimaji in national and international spheres, including social media. Majimaji appears in each of these spaces as an idea, a symbol, a ghost, and potentially a commodity. Taking into consideration legitimate questions of ownership (of the idea/memory/history), the paper is especially interested in examining the ways that the ideas, memories, and histories travel and translate across these spheres (or do not in some cases). This paper employs overlapping lenses of commodification and vivification to analyze the (after)lives of the movement over one hundred years later. Presenter: Julian Murchison (Eastern Michigan University, Department of Sociology, Anthropology & Criminology)

Indigeneity, Modernity, and Regimes of Naming among Bakiga Christians in Western Uganda: In Western Uganda, as in other parts of sub-Saharan Africa, many Christians have personal names from indigenous languages as well as personal names in English. In the past century of Christian history of Western Uganda,

Bakiga Christians often took or were given new personal names, typically in English, upon baptism – these names were and are usually labeled as 'Christian' names. Yet, there have always been a minority of people who only use Rukiga/indigenous names and those who using 'Christian' names that were not English, but in Rukiga (i.e. names from the Rukiga Bible). However, over time, many Bakiga have started to emphasize using their English names over their Rukiga name as well as constructing and giving names in the forms common among British or Euro-American naming systems. This has continued to marginalize the use of indigenous names and alternative naming systems into the present. Building on ethnographic evidence from southwestern Uganda, I seek to delineate the particular cultural logics of the various historical naming regimes and describe conflicting notions of value at place in how the naming systems are used. From this, we can see how contemporary Bakiga Christians craft their belonging as Christians, modern subjects, and/or ethnic group members. I argue that in order to describe the interrelations and conflicts of these various belongings and subjectivities in western Uganda, we need discuss how names are used and the norms and policies that have grown around naming in contemporary Uganda. Through recognizing, and documenting, conflicting naming regimes we gain new insights into how concepts of the good life, belonging, modernity, and ethno-patriotism are at play in Western Uganda as well as similar communities across the continent. Presenter: TJ Espino McGurran

Transnationalism and climate change: envisioning ecological futures across borders and “from below”

10:15 AM - 12:00 PM TMCC - 802 A

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Daniel Thompson (University of California, Merced, Anthropology & Heritage Studies Department)

CHAIR:

Daniel Thompson (University of California, Merced, Anthropology & Heritage Studies Department)

PRESENTER:

Tannya Islas ,Peter Habib (Emory University, Department of Anthropology),Liza Buchbinder

(University of California, Los Angeles), Daniel Thompson (University of California, Merced, Anthropology & Heritage Studies Department)

DISCUSSANT:

Rebecca Galemba (University of Denver), Peter Little

DESCRIPTION:

This panel explores how the multi-sited lives and long-distance networks of transnational migrants shape how they think about and respond to climate change. It focuses on two broad questions. First, in what ways does transnationalism shape the circulation of information, knowledge, and discourse about ecological futures across the global landscape? How do transnational migrants' and other border-spanning populations' connections shape how they conceptualize climate change as a phenomenon that is simultaneously global and localized? How do indigenous ways of thinking about climate change travel across borders, and how do they relate to, intertwine with, or diverge from discourses that dominate today's discussions? In this regard, the panel deals with transnational and multi-sited climate epistemologies. Timothy Morton (2013) describes climate change as a hyperobject: something so expansive and slow-moving that humans have a difficult time understanding it. Anthropologists have explored aspects of how scientific climate knowledge is produced and how networks of actors mobilize it in world-making projects (McElwee 2016; O'Reilly 2017). For many transnational populations, it is likely that understandings of climate change are shaped by a combination of science communication and the networked experience of environmental change that affects friends and family members who are spread across multiple landscapes (Hillmann et al. 2020). Extended social networks provide access to forms of mediated knowledge about a range of socio-ecological contexts. Across these networks, scientific knowledge is likely to blend and intersect with indigenous knowledge systems (e.g. Ingold 2000). The panel invites submissions that reflect on what transnationalism can tell us about how humans think about, anticipate, and interact with the 'hyperobject' of climate change. Second, how does transnationalism shape the practical capacity (or incapacity) of migrants and cross-border populations to respond to climate change as a multi-sited phenomenon that affects them in their multiple sites of life? Among what transnational populations, and to what extent, does climate change adaptation appear as a priority in their daily lives and economic strategies? This second focus of the panel addresses issues of everyday transnational actors' understandings and enactments of agency vis-à-vis climate change. While

environmental change has long prompted human movement, the global specter of climate change has more recently generated specific situated discourses about mobility and agency, such as the notion of 'climate refugees.' Anthropologists have shown how such notions are contested by alternative understandings of agency and ecology (Farbotko and Lazrus 2012). Yet more in-depth ethnographic understandings of the varying ways that transnational populations conceptualize and enact ecological agency across borders and in relation to disparate political-economic regimes remains to be developed. This panel opens space for interventions in this regard. It foregrounds how discourses and experiences of climate change shape not only understandings and enactments of agency vis-à-vis climate change itself (T. A. Morton et al. 2011), but also relative to experiences of borders and inequalities that mark the global landscape (cf. Cons 2018). The panel invites submissions that explore transnational actors' perceptions of agency as they move and work across this landscape.

Borderfields: Agriculture and Migrant Experiences of Climate Change Across the US and Mexico: In this paper, I illustrate how climate change, through circular migration, has become a collective experience that constitutes bordered spaces and conditions beyond geographic proximity to national boundaries. Currently, dozens of ejidatarios migrate back and forth between agrarian communities like Coamiles—in Nayarit, Mexico—and Mecca, California to participate in Southern California's grape economy between March and October. These seasonal movements are made possible by past and present U.S. immigration policies that allow ejidatarios to work in the US as either a US resident or a guest worker. On one hand, these policies have allowed ejidatarios to work in the US, providing them the financial means to maintain ownership of their lands in Mexico and to continue planting crops there despite undesirable farming conditions produced by climate change. On the other hand, by working in California's agrarian sector—where both temperatures and immigration policies are becoming increasingly more hostile—ejidatarios are also exposed to changing labor conditions in the US, which in turn impacts their ability to continue with their planting seasons in Mexico. My analysis of this process reveals that climate change is not just a planetary phenomenon; it is also a "bordered" one, embedded in relationships with agricultural lands on both sides of the US-Mexico border. I use the term "borderfields" to capture how land, climate change, and daily life amalgamate through

a bordered nexus that I argue is also a climatological one. Presenter: Tannya Islas

Excess of Crises: Water Education, Humanitarianism, and Climate Change in Lebanon's Bekaa Valley: Lebanon is the most water-rich country in the Middle East; it also holds the most refugees per capita globally. The perceived excess of water and human populations in Lebanon converge in humanitarian efforts of servicing displaced Syrians and assisting needy Lebanese, particularly in the Bekaa Valley—Lebanon's country-long border region with Syria. With government agencies drowning in debt and vacancies due to Lebanon's unprecedented economic inflation, a vast coordinated network of transnational humanitarian NGOs constitutes a "Water Sector" which manages and implements water policies in the country. The Water Sector has become a surrogate governing body which mediates the global and the local, adapting and implementing international standards set by NGOs' parent organizations for Lebanon. Despite its abundance, concerns of misuse, pollution, and leaky infrastructure constitute a water crisis in Lebanon—a potent discourse generated by the Water Sector which interprets Lebanon's waterscape in light of a global water crisis, intimately linked to climate change. The specificities of ecology and displacement in Lebanon therefore become transnational and globalized through the governing of water. Several NGOs teach the realities of the water crisis, and its global scope, to Lebanese and Syrian residents through workshops and conferences, aimed at cultivating a consciousness toward climate change and water use. This paper explores the goals and limits of such efforts. Considering compounding crises within Lebanon, including rampant inflation and nationalist rhetoric targeting refugee populations, how does the management of water and the mitigation of climate change become a priority? Presenter: Peter Habib (Emory University, Department of Anthropology)

Ethnography at the Intersection of Deforestation and Ritual: Since the 1970s, forest transformation to cropland and unregulated logging have radically altered the West African landscape. For the Upper Guinean Forest that runs from southern Guinea to southwestern Togo, 84% of the original ecosystem has been lost since 1975, transforming it into a fragmented system of remnant forest. Within this biodiversity hotspot, the political ties to forest conservation have been particularly stark for the nation of Togo. After the death of its autocratic president Gnassingbe Eyadema, Togo's rate of deforestation accelerated with the dissolution of state-sponsored conservation programs. India and China

are the largest buyers of Togolese timber, and the timber industry now accounts for 16% of the country's GDP. Despite the urgency of large-scale corrections to the current pace of deforestation, this paper argues for attending to the on-the-ground cultural effects of habitat destruction and local understandings of conservation for community's that interface with remnant forests. The author has a twenty-year relationship with a rural community in eastern Togo and presents preliminary ethnographic findings on the impact to religious practices of sacred grove destruction. These groves were planted during the French colonial era and are infused with religious and spiritual significance. This study supplements ongoing conservation efforts by asking, "What happens to ritual when the trees are gone?" In addition to gaining a deeper understanding of local moral worlds driving deforestation and conservation efforts, this engagement fosters collaboration by eliciting the evolving natural resource needs of communities on the frontlines of our changing climate. Presenter: Liza Buchbinder (University of California, Los Angeles)

Uncertainty and ecological agency among Ethiopia's refugee diasporas: This paper examines anticipations about climate change and strategies for climate adaptation among former refugees from eastern Ethiopia who are now conducting transnational investment and non-profit work in their regions of origin. International development agencies and academics have repeatedly raised the alarm that climate change is expected to intensify alternating drought and flood events in the Horn of Africa, manifest most recently in the drought that accompanied the 2021-2023 La Niña phase of the El Niño-Southern Oscillation (ENSO). Former refugees from Ethiopia and Somalia have played key roles in supporting drought-affected populations through remittances as well as funding and implementing community-based adaptation projects and business investments geared toward new agriculture and water storage technologies. However, little is known about these transnational actors' perspectives on climate change and experiences of uncertainty with regard to ecological futures. To address this gap in knowledge, this paper addresses three basic questions. First, what beliefs and concepts about climate change are prevalent among Somali and Oromo diaspora populations from eastern Ethiopia, and where does climate change fall on their list of concerns? Second, how do discourses and vernacular understandings of climate change circulate across the US-Ethiopia connection? Third, how do these populations think about their agency vis-à-vis climate

change, and how have these understandings of agency been affected by the shared history of forced migration? Through these questions, the paper explores how human responses to anticipated crisis are shaped by past experiences of catastrophe and mobility as well as enduring transnational relationships among extended networks of family, friends, and business collaborators. Presenter: Daniel Thompson (University of California, Merced, Anthropology & Heritage Studies Department)

Troubling Tender Transmutations: Speculative Ethnography as Fugitive Planning and Transmigrant Study

10:15 AM - 12:00 PM Virtual - Room 1
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Yamuna Sangarasivam (Nazareth College, Department of Sociology and Anthropology)

CHAIR:

Hortense Gerardo

PRESENTER:

May Joseph (Pratt Institute), Yamuna Sangarasivam (Nazareth College, Department of Sociology and Anthropology), Kristin Prevallet

DISCUSSANT:

Hortense Gerardo

DESCRIPTION:

Our roundtable invites participants to join our laboratory of experimental methodologies, through which we stir up diverse performance practices that rehearse and enact pedagogies of refusal, unlearning, and resurgence as a form of fugitive planning and transmigrant study. We are a gathering of chthonic ones (Haraway, 2016); braided together by our practices of transpoetics, speculative ethnology, playwriting, environmental dance and theater installations, multispecies collaborations, and panatheneic walking traditions, unruly in our willful practices of fermentation, care, and response to our troubling times of ongoing global pandemics of racialized, gendered, sexual wars and forced migrations. We draw on performance as generative of transformative pedagogical methodologies for 'developing practices of multispecies environmental justice' (Haraway 2016:8).

We enter into the practice of speculative ethnography as a space of continuous rehearsal, transition, and transmutation where we willfully disrupt the normative realism of citizenship and national belonging, sovereignty and responsibility, freedom and democracy coupled with neoliberalism's affective infrastructures of diversity, equity, and inclusion. Speculative ethnography is a willful methodology that makes common cause with the conditions of displacement and dispossession. We also draw on the works of Lauren Berlant (2011, 2022), Octavia Butler (1993), Stefano Harney and Fred Moten (2013), Janet Cardiff (2005) among others to advance speculative ethnography as a transmutational methodology through which we trouble conventional ethnographic methods of transplanting local ways of knowing and being while experimenting with divergent forms of collecting and curating cultural narratives and artifacts. This roundtable is a space of speculative fabulations.

Writing COVID: Pandemic and Ethnographic Transitions

10:15 AM - 12:00 PM TMCC - 606
Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Charles Briggs (University of California, Berkeley, Department of Anthropology)

CHAIR:

Charles Briggs (University of California, Berkeley, Department of Anthropology)

PRESENTER:

Lawrence Cohen (University of California, Berkeley, Department of Anthropology), Clara Han (Johns Hopkins University, Department of Anthropology), Warwick Anderson (University of Sydney), Adia Benton (Northwestern University, Department of Anthropology), Charles Briggs (University of California, Berkeley, Department of Anthropology)

DESCRIPTION:

Writing COVID: Pandemic and Ethnographic Transitions
Representations of the COVID-19 pandemic are saturated with projections of transitions. Everyone can recite a litany of transitions: from 'normal' to pandemic life, transitions from one variety of mitigation measure (such as 'lockdowns' and 'mandates') to less stringent

measures, and so forth. Anthropologists have devised a wide range of ethnographic approaches to viewing how people reacted to the pandemic and how it affected their lives, relations, and work. Having conducted pandemic research in the United States and other countries, the panelists address dilemmas that emerge as anthropologists write about a phenomena that has saturated nearly every communicative channel, even as many audiences cite 'pandemic fatigue.' This session explores through multiple sites and lenses how anthropologists can productively write within, about, and against these apparent transitions. Several panelists examine the complexities that anthropologists face in researching COVID-19. Clara Han draws on a multi-country study of the pandemic and her fine-grained, remote ethnography with Chilean families with whom she has conducted research for decades. She examines forms of fluctuations of domestic triaging in households in questioning narratives of wholesale pandemic transitions affecting the lives of the poor. Lawrence Cohen examines how COVID-19 is assimilated into narratives of demographic transitions in the United States, viewing how deaths of the elderly and racialized populations become part of demands to reinvigorate a virile White masculine body. He also looks at how the pandemic in India came to be situated vis-à-vis migratory transitions to urban life and the mediatization of health. Several panelists explore challenges that anthropologists encounter as they face writing within narratives of pandemic transitions even as they counter or at least find ways of working around them. Warwick Anderson argues that philosophers, social theorists, and medical historians have largely failed to become attuned to the particular features of the pandemic. Their narratives rather twist it to provide proof of their long-standing formulations or cast it as a new variant on received pandemic narratives. Adia Benton draws on work on long COVID in the United States and Ebola in Sierra Leone to find ways of refusing the dramaturgical forms elaborated by historians of medicine, epidemiological projections of viral shifts between peaks and valleys, and other narrative models that project both linear and cyclic transitions. She pushes toward novel ways of writing that foreground relations of power, intersubjectivity, and temporalities that go beyond conventional epidemic plots. Charles Briggs draws on interviews with people projected as occupying diametrically opposed sides of a pandemic transition into political intolerance. He explores how anthropologists might write for both of these audiences in ways that move laterally within the effects of pandemic transitions to see how lives were upended by challenges—some similar and some discrepant—that

undermined communicable control, that is, ways of managing the circulation of viruses and discourse. Nancy Scheper-Hughes thinks through the complex ways that Taos Pueblo protected elderly residents, writing in a setting where talk about COVID-19, ethnographic research, and anthropological writing are all carefully controlled.

Pandemic Returns: This talk brings together three problem-spaces of research over the years of pandemic, as a provocation for anthropological analysis and writing: (1) rationalities and affects of triage in the United States, through a study of entwined claims of “gerontocide” (the scandal of the mass death of older persons) and “culling the weak” (the popularization of eugenic imaginaries of pandemic as enactments of whiteness); (2) rationalities and affects of the migrant versus the spatially proper body in India, through a study of lockdown policy, official contact tracing apps, the political theater of a collective and united national voice, and the verticality of the new urban order; and (3) pandemic co-morbidities in India, with a focus on mucormycosis death, as these raise bio-communicable questions in contexts of new media and mass abandonment. In bringing these projects—each undertaken in a protracted moment of lockdown—into relation, and extending their concerns forward into this time of late pandemic, the talk wrestles with questions of the place of uncertainty, the involution of the ethnographic, and the returns of fascism. Presenter: Lawrence Cohen (University of California, Berkeley, Department of Anthropology)

Domestic triaging, household decision-making and Covid-19: modalities of description: What are the stakes of different renderings of domestic triaging in contexts of economic precarity? The anthropological archive is replete with multiple descriptions of triaging. While an impulse may be to group such descriptions under a master concept, the descriptions themselves present both subtle as well as marked differences in terms of the texture of decision-making, the particular ways the presence of the state is felt and experienced, and how the wider neighborhood milieu permeates domestics. Such descriptions encompass a wide range, including subtle pathways of neglect (Scheper-Hughes), the abandonment of sick and economically 'unproductive' kin (Biehl), and the thresholds of the pathological and the critical (Das). In this paper, I explore modalities of description in relation to a longitudinal multi-country Covid-19 study that involved bi-weekly household illness and financial surveys and amplificatory interviews during the initial months of the pandemic when

lockdowns and other movement restrictions were being applied by states. I draw from the fine-grained ethnography with families whom I have known for over twenty years in La Pincoya, a low-income neighborhood in Santiago, Chile, and whom I met remotely every week for a period of five months. Through this mode of fieldwork under pandemic, I attempt to describe the fluctuations of domestic triaging within households who have long lived with persistent mental illness and addictions. How might household survey data paired with shifting internal hierarchies and intensifications of disease offer a description of the flux of triaging? What did the Covid-19 pandemic reveal with regard to everyday life in this neighborhood? Setting aside the easy discussions of 'new normal' and catastrophe, does a description of this flux of triaging - that was already ongoing within households - reveal that the structure of everyday life for the urban poor was not 'broken' during the Covid-19 pandemic? Presenter: Clara Han (Johns Hopkins University, Department of Anthropology)

Curating Covid Crisis: Since the beginning of the Covid-19 pandemic, philosophers, social theorists, and historians have sought to narrate the “crisis,” to confer meaning on our predicament. Generally, philosophers and social theorists—including Agamben, di Cesare, Žižek, and even Latour—have related the pandemic to their previous inquiries, attempting to make contemporary epidemiology congruent with older speculations. Historians usually have resorted to tracing the “lessons of history,” looking for similarities with past epidemics, taking what may loosely be called a nomothetic approach. Elsewhere, I have criticized both the rehashing of old theory and the facile recourse to analogic reasoning in these explanations of Covid-19. Here, I want to touch on two other issues. To what extent does conceiving Covid-19 as crisis shape (or deform) these writings? And how do these writings, so unresponsive to the forms the pandemic is taking, actually reframe our understanding of the event—making it conform to inapt theory and history? Presenter: Warwick Anderson (University of Sydney)

Writing on and reckoning with the outbreak narrative: Amidst rising Covid-19 cases and deaths in North America, poet Dionne Brand questioned the political tendency “to manage the pandemic as narrative, as calculus, but not yet as reckoning.” Brand provokes us to imagine mass disease events, and the crises preceding and proliferating in their wake-- outside the dramaturgical forms elaborated by historians of medicine, and beyond epidemic curves that (eerily, but not coincidentally) resemble conventional narrative

curves we were taught in primary school. Thinking with cases of long Covid in the US and Ebola survivorship in Sierra Leone, I ask what do narrative and calculative perspectives presume, prefigure and prioritize -- particularly as they relate to temporal and experiential dimensions of disease events and public health crises, and how we write about them? I argue that moving beyond the dramaturgical and narrative explanations (and towards reckoning) requires foregrounding relations of power, intersubjectivity, and temporalities that exceed conventional epidemic plot. Presenter: Adia Benton (Northwestern University, Department of Anthropology)

Incommunicability and the Staging of Impossible COVID Conversations : Perhaps the most widely accepted understanding of the COVID-19 pandemic is that forms of knowledge and corporeal practices reflected fundamentally distinct assumptions and moved along largely non-overlapping circuits. Many read the pandemic as providing a transition into a United States irreversibly characterized by paralyzing and uncrossable social and political divides. This paper explores the possibilities and obstacles that emerge in writing texts designed to cross these boundaries. Publishing in anthropology journals and university presses largely confines writing to communities of readers with relatively similar epistemological and political commitments. Part of an effort to write for general audiences, this presentation creates experimental juxtapositions of what would be construed as incommensurable, conflicting perspectives. Excerpts from interviews with Trump-supporting “anti-vaxxers,” an infectious-disease physician, and an artist/long COVID activist intersect through explorations of COVID experiences and extrapolations of what they could teach one another, should this staged dialogue actually take place. Rather than projecting anthropological clairvoyance, the move here is to see how the pandemic produced incommunicability, as embodied in being denigrated by others as irrational, inconsistent, and lacking knowledge, as well as in coming to experience bewildering senses of uncertainty, confusion, and a loss of reflexivity and agency. The writing explores how discrepant actors might come to view the pandemic experiences of Others as emerging from similar and contrastive transitions, accordingly similarly facing varieties of a descent into incommunicability. Presenter: Charles Briggs (University of California, Berkeley, Department of Anthropology)

Young People and the Transit of Values: A Dialogue Between Anthropology and Childhood Studies

10:15 AM - 12:00 PM TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Anthony Wright (Rutgers University)

CHAIR:

Anthony Wright (Rutgers University)

PRESENTER:

Anthony Wright (Rutgers University), Diana Carolina García Gómez, Smruthi Bala Kannan (University of Chicago), Anna Perry, LaTiana Ridgell (Rutgers University)

DESCRIPTION:

Scholars in the anthropology of childhood and the adjacent field of childhood studies have explored relations between children, childhoods, and the (re)production, transformation, and transit of values, broadly defined. These include studies of child laborers as producers of economic value (Balagopalan 2022; Nieuwenhuys 1996); children and childhood as sites of economic, political, and emotional investment (Scheper-Hughes and Sargent 1998; Stephens 1995; Zelizer 1985); children as subjects of humanitarian rhetoric and policy frameworks (Malkki 2010); children as negotiators of values surrounding health and wellbeing (Spray 2020; Clemente 2015); children as producers of moral values (Toren 1993); and children as consumers of value-charged media and commodities (Chin 2001; Cook 2004; Tobin and Henward 2011). This work has raised a number of vital questions about the role that children and youth, as both actual, flesh-and-blood beings and as figures constructed in discourse, play in the (re)production and transit of multiple forms of value. Most importantly, this work has drawn attention to the complicated ways that children and childhoods, in all their manifestations, are subjects and agents of diverse forms of value, which we conceptualize not as stable objects or possessions, but as entangled processes that always involve movement, transition, and transformation. In this panel, we draw on a mix of online and in-person ethnographic studies to explore how young people participate in and are affected by processes of value (re)production, transformation, and

transit. We raise questions about how young people's embodied experiences, memories, self-images, and everyday practices shape and are shaped by the (re)production, movement, and entanglement of political, economic, social, moral, medical, and emotional values. We explore these questions in a number of different contexts and among diverse populations, including among teens who are undergoing cancer treatment in a children's hospital in the United States; among young people negotiating memories of armed conflict in Colombia; among African American women and girls assessing the moral and political value of the viral social media hashtag #BlackGirlMagic; among disabled college students in the United States who are navigating systems of disability accommodation; and among students in Tamil Nadu who inhabit school infrastructures shaped by development discourses of sanitation and hygiene. We explore how young people (re)produce, negotiate, and embody the various forms of value that constitute their lives and worlds, and we show how these processes produce a complex mix of emotions and experiences that destabilize reductive understandings of young people's subjectivities. This is an Anthropology of Children and Youth Interest Group invited session.

Teen Cancer Patients and the Omnipresent Child and Family in the Pediatric Cancer Ward: Despite major advances in the treatment of pediatric cancer, it is still a leading cause of death among children and teens in the United States, and its incidence has steadily increased in recent decades (National Cancer Institute 2021). The majority of young people who are diagnosed with cancer in the U.S. are treated in children's hospitals, which, as the name implies, are designed in accordance with value-charged constructions of children and childhood. In this presentation, I draw on 18 months of ethnographic fieldwork at a children's hospital in California to explore how a diverse group of teen cancer patients inhabited a "child- and family-centered" cancer ward. I show how everyday life in the ward was organized around the value of "child appropriateness," which reproduces sanitized, Western constructions of childhood as a time of innocence and play (Cook 2020; Lancy 2014; Zelizer 1985). Building on medical anthropological literature on experiences of medically-induced harm, or iatrogenesis (Varley and Varma 2021; Illich 1982), I argue that this arrangement regularly produced moral iatrogenesis for teen patients who did not see themselves reflected in the child- and family-centered values that governed life in the hospital. These patients often chose not to participate in group activities, such as art workshops and music therapy

sessions, instead spending most of their time in their rooms. I argue that this was partly because they were alienated by the child- and family-centered design and decoration of the common spaces where group sessions occurred, but also because the psychosocial professionals who designed and carried out these sessions tended to draw on cultural repertoires that teens viewed as outdated and out of touch with current trends, while the cultural repertoires that these teens did find inspiring and engaging were not viewed as appropriate for the child- and family-centered space of the hospital. Presenter: Anthony Wright (Rutgers University)

“I felt as if I was overflowing”: Transitioning to Adulthood amid Memories of Armed Conflict: Morally charged constructions of children and youth as subjects in transition and as guardians of a better and more hopeful future have been critiqued by scholars in childhood studies and the anthropology of childhood (Kraftl 2008, Spyrou 2020). This work counteracts teleological and reductive views of childhood by bringing to the forefront children’s and youth’s lived experiences and asking how they provide alternatives to normative discourses about young people. Building on this work, a number of scholars have begun to explore children’s and youth’s political subjectivities, which have been predominantly characterized as guided by outrage and hope for the continuation of globalized democratic societies (Castells 2015; Jenkins et al. 2016; Kelly 2018). While this work raises important questions about young people’s own perspectives and conceptualizations of politics and political activism, I argue that it does not adequately attend to the complex moral conundrums and emotional experiences that youth activists often navigate. In this paper, I discuss the emotional tensions articulated by a group of youth activists as they navigated working at a collective museum that centers the victims of the Colombian armed conflict vis-à-vis their everyday experiences as young people. Abrasive relationships with parents and siblings, failed relationships and heartbreak, or feelings of “living in waithood” (Honwana 2019) were judged as in “mundane” opposition to the testimonies of resilience and resistance of the victims of the armed conflict. The paper shows how a group of fourteen museum workers, all of whom were undergraduate students between the ages of 16-26, navigated transitions to adulthood in a context in which ongoing violence, the collective violent past, and continuous impunity take center stage and create a diminished sense of the importance of living out “normal” futures. Presenter: Diana Carolina García Gómez

Caring Infrastructures and Careful Selves: Experiences of Schooling and Cleanliness in Tamil Nadu: Schools and water, sanitation, and hygiene (WASH) infrastructure in schools are described within developmental literature and policy discourses as infrastructures that care for young people’s health and well-being. Historically considered an infrastructural ‘object lesson’ on moral and physical hygiene, the school provides a scaffold and guidance for young people to transition to responsibilities preventing injury and diseases in adulthood. This paper complicates the discursive transition from cared-for childhood to careful adulthood by presenting how curricular and campaign material on sanitation builds on children’s lived experiences of relational forms of care. Drawing from seven months of fieldwork in 2019 in urbanizing regions in northern Tamil Nadu, India, and related archival and media analysis that took place between 2018 and 2022, this paper centers on 10-15-year-old young people’s accounts of traveling to school and navigating their bodily and sensorial experiences within the schools. I juxtapose children’s everyday embodied narratives with an environmental cleanliness campaign’s discourses on flows of plastics and personal hygiene regulations within the school regarding bodily presentation and the use of toilets, and I explore the spatial and temporal tensions involved. Building on understandings of care as a complex, situated, and non-innocent way of being and relating (Puig de la Bellacasa 2017; Balagopalan 2023), I situate children’s relational care work with each other and their material environments as negotiations with the call to be ‘careful’ both within and outside the school, wherein the discourse of ‘careful’ individualizes the responsibility to care for oneself in a system that is designed with limited accountability to the young people’s lived context and bodily concerns in mind. Simultaneously, the young people’s lived experience situates the schools in the larger localities’ flows of movement, consumption, and wastage. Presenter: Smruthi Bala Kannan (University of Chicago)

“I just felt like a kid again”: Infantilization, Disability Disclosure, and Higher Education: Despite rising acceptance rates of disabled students in higher education, these students continue to demonstrate lower retention and graduation rates than their nondisabled peers (Evans et al., 2017; Dolmage, 2017). Research on the utilization of disability accommodations suggests that only about one-third (37%) of students with reported disabilities choose to disclose their disability to their universities (Adam & Warner-Griffin, 2022). Scholars within Disability Studies have

documented the inadequacies of university accommodations and services for disabled faculty, staff, and students, highlighting reoccurring experiences of discrimination and exclusion. However, few studies have explored the ways in which childhood memories and anxieties about being infantilized influence how students navigate the accommodation process. The ableist cultural tendency to devalue the bodily, intellectual, and behavioral capacities of disabled people by constructing them as childlike has created significant barriers to the well-being and self-image of all disabled people, regardless of age (Stevenson et al., 2011). This presentation draws on ethnographic research with undergraduate students in the United States to better understand the attitudinal, affective, and material costs of the disability accommodation process. I show how processes of infantilization are integral to understanding how students navigate accommodations in the past and present, and I argue that interrogation of these processes is crucial to developing a more nuanced understanding of disabled students' diverse decisions to disclose disabilities within academia. Presenter: Anna Perry

#BlackGirlMagic: The Digital Reproduction of Neoliberal Values: As Black girls transition to adulthood, it is essential to interrogate value-charged messages—intentional and unintentional—that condition them into neoliberal, racialized subjects. Despite the violence of racial capitalism, Black people have found ways to continue to survive and dream, which is demonstrated by adages such as “making a way out of no way.” In 2013, social media activist and entrepreneur CaShawn Thompson translated this adage into the hashtag #BlackGirlMagic to celebrate the efforts of Black women and girls to survive and thrive against all odds. In this presentation, I examine the connection between the notion of #BlackGirlMagic and ideologies of racial capitalism. Using a mix of digital ethnography and critical discourse analysis, I explore how #BlackGirlMagic circulates on social media, and I consider the range of values produced in the process. I critically analyze academic literature and Twitter posts, arguing that #BlackGirlMagic became an untouchable discursive construction that many Black social media users and academics defended from critiques (Chavers, 2016; Williams, 2022). I argue that this response was fostered by the celebratory rhetoric of Black girlhood/womanhood that the hashtag embodies, which provides a “perfect alibi” for the ideological work of racial capitalism, thus hindering critiques or counternarratives (Bernstein, 2011, p. 8). This has important implications for studies that examine how

adherence to the Strong Black Woman schema can result in disordered eating, anxiety, depression, and other physical and mental health challenges (Donovan & West, 2015; Harrington et al., 2010; Jones et al., 2021). Presenter: LaTiana Ridgell (Rutgers University)

POSTER SESSION: Affinity, ambush, and the co-agentive consolation of dancing Kali Ammon in pre-war and post-war Batticaloa, Sri Lanka.

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of Religion

PRESENTER:

Mark Whitaker (University of Kentucky, Department of Anthropology)

DESCRIPTION:

In the 1980s in the Batticaloa district's Hindu temples God-dancing, kalaiyatuta (sometimes called pēy āTuttal/tēvam āTuttal) generally occurred at Āmon temples during temple festivals, as well as at less formal ceremonies (caTangku) often arranged to address more practical problems. In either case, the purpose was to contact the power, or cakti, of the gods, and bring it into human beings and, though them, into the wider world of people. In this paper, prepared in conversation with a local cultural historian, Dr. S. Tillainathan, I will present an account of one such event in pre-war, 1982, Batticalo: the God-dancing of a grieving, male, postal clerk with an affinity for the female Goddess, Kali Ammon. His unwilling transition from grieving father to angry Goddess illustrates the underlying affective technology and spiritual logic of such occasions. A logic, that is, based on the invocation of an inherent affinity (or vālāyam) between a person and a god, and its use to forge a conduit of power to a human being for the benefit, in festival circumstances, of the community at large. But I will also discuss how Sri Lanka's inter-ethnic civil war, and the challengingly liminal post-conflict circumstances this occasioned, were met by this practice of vālāyam -- most recently by an increasing fashion for dancing as 'the good snake'(the God nulla pompu) – to negotiate between the anxieties of the postwar present and Batticaloa Tamil 'culture' (paNpāTu/pārampaTiya).

**POSTER SESSION: Agents of Transformation:
Teachers' Roles in Rural Communities**

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Council on Anthropology and Education

PRESENTER:

Holly Marcolina

DESCRIPTION:

Public high schools and their associated extracurricular activities are a standard component of life in rural America and a key to rural revitalization. The qualities, skills, and knowledge required for an educator to contribute to a rural school community in the form of extracurricular events is undocumented. Framed by the four elements central to a sense of community (McMillan, 1996; McMillan and Chavis, 1986), this multi-site critical ethnography seeks to capture how extracurricular activities foster a sense of community among teachers, students, and the greater public in rural contexts. Interviews with rural teachers throughout the northeastern United States explore the 'remarkable complexities' (van Manen, 2017, p. 779) of teachers' work outside of the classroom. By situating teachers at the nexus of the school and local community, this study discovers the extent to which rural teachers are changing the world by their extracurricular work (Freire, 2003) by creating a sense of community for their students and the greater community, and, in the process, finding a place for themselves to belong. Rural educational research is often sacrificed for urban or suburban studies. While research indicates that school-community partnerships are important, there are few examples of actual community connections that elucidate how a sense of community is created for a teacher, extended to their students, and, finally, is realized by the greater public. Teacher preparation programs currently do not prepare their students for the multitude of responsibilities teachers will assume outside of their classroom, especially if they teach in rural settings.

**POSTER SESSION: Artists and Identity: Spaces in
Toronto through the lens of Photography**

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Visual Anthropology

PRESENTER:

Alina Farrukh

DESCRIPTION:

My interest is in the people, places, and productions of art in Toronto. Working with student photographers at the Hart House Camera Club at the University of Toronto, this independent sociocultural anthropology research hones in on what it means to be a photographer in an artistic community by focusing on identity and placemaking. It looks at how photographers adapt, embrace, or reject 'Toronto'. By asking about hobbies, the city, and the club, I argue that there is more detail discovered through a creative technique rather than only 'classic' anthropological methods. Parallel to the conference theme, the project highlights transitioning from common forms of knowledge and methodology. Students' work-life balance and the relation between photography and community is analyzed. The diverse backgrounds of students, which affect their transition and placemaking in Toronto, are seen through an intersectional approach, especially in factors such as finances, accessibility, and privilege. This gives suggestions into student life organization, representation, community, and the role of institutions. Methods consist of ethnographic interviews, photovoice, and participant observation. The final results and photos will illustrate photographers' lives in an online showcase and a descriptive poster. Such kind of anthropological knowledge is not widely accessible beyond academia. This not only shows insights of the research, but also gives a glimpse into the creative process of photographers, as audience can discover how to see through photos. The project merges learning with visual anthropology and showcases the importance of having creative approaches in research.

**POSTER SESSION: BEYOND SACRED SPACE: THE
STRUGGLE FOR AL-AQSA AND THE ISLAMIC
MOVEMENT IN ISRAEL**

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

PRESENTER:

Kristen Miller

DESCRIPTION:

The Temple Mount/al-Haram al-Sharif in Jerusalem, also

known as al-Aqsa, has been a site of continuous conflict between Palestinian Muslims and Israeli security forces in the past several decades. Violent flareups and tense relations have made it one of the most analyzed sites to understand conflict at religious space. Many studies either argue that religions are inherently destined to clash at sites of deep spiritual significance or that political and nationalist agendas have commandeered religious sites and amplified conflict for their own gains. A close study of the rhetoric and initiatives of the Islamic Movement in Israel, one of the most vocal defenders of al-Aqsa, reveals a more nuanced relationship between religious actors and sites of shared religious significance. The Islamic Movement in Israel, founded in the 1980s, is a movement of Palestinian Citizens of Israel who promote Islamic revitalization with a strong emphasis on the protection of al-Aqsa as an Islamic site. The group was banned in Israel in 2015 and its leaders have been repeatedly imprisoned for incitement to violence, even though the group is not affiliated with other Islamic groups, such as the Muslim Brotherhood, and does not partake in armed resistance. The movement is expressly resistant to secular and interfaith efforts to reduce hostilities at Al-Aqsa and they reject initiatives aimed at cooperative sharing. The cause for the movement's resistance is often attributed to the group's inherent religious intolerance or its political exploitation of the space to advance pro-Palestinian objectives. However, the leaders of the movement rarely use Palestinian rhetoric or reference broader political struggles. I examine the journal articles, interviews, and speeches of Islamic Movement leaders to conclude that their motivations are rooted in a commitment to Islam. Their resistance to cooperative sharing is not born out of intolerance but the threat of occupation and continued erosion of Islam by the Israeli state and international actors. They argue against initiatives such as interfaith conferences to promote dialogue or rotating schedules for shared use of the space. While these initiatives seem benign to a liberal audience, the Islamic Movement's opposition to them reveals the loaded power configurations behind them. These initiatives preference de-spatialized forms of religious belief that do not account for or enable the affective capacity of Islamic practices at Islamic spaces. Therefore, the Islamic Movement resists efforts to strip away the embodied nature of engagement with al-Aqsa.

POSTER SESSION: Doing Time: Entertainment and Exploitation at Decommissioned Prison Museums in the United States

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Council for Museum Anthropology

PRESENTER:

Jessi Robbins

DESCRIPTION:

Museums are widely regarded as institutions of education and entertainment. Such is the case for prison museums which, in the United States, often purport to educate visitors on the history of the US carceral system. However, these sites also function as spaces of entertainment that thrill tourists with stories of infamous prisoners, violent and destructive riots, and whatever ghosts are said to remain. This poster presentation examines how converting spaces of punishment and pain into places of entertainment and pleasure can affect societal attitudes and policy regarding the carceral system in the United States. I present ethnographic and archival data collected at two prison museums located in the heart of Appalachia-Brushy Mountain State Penitentiary in Petros, Tennessee, and Alcatraz East in Pigeon Forge, Tennessee-that examines the connection between curated objects and narratives within a space of trauma and the social attitudes cultivated by them. As a secondary focus, I explore the economic transition from prison 'town' to prison 'tourism' in the broader regional-cultural context of middle Appalachia. While the scholarship on 'dark tourism' in anthropology offers useful insight that examines why people are fascinated with traveling to historical spaces of trauma and grief, few studies have examined how these tourist destinations can inform social attitudes by transforming those historical spaces of trauma into spaces of entertainment. Here, I bridge this conceptual gap by illustrating how decommissioned prison museums perpetuate the illusion of punishment and retribution while shadowing the dark and racist history of the United States carceral system.

POSTER SESSION: Effects of Digital Violence Consumption on Children

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Psychological Anthropology

PRESENTER:

serge koblik

DESCRIPTION:

Presenters: Serge V. Koblik M.A., Porfirio Loeza Ph.D.

Title: Effects of digital violence consumption on children.

Abstract: This poster will explore the impact of consumption of violent content on children's education and academic success. Effective protective factors and prevention strategies will be explored and shared for implementation by parents, community partners and school staff. In light of the current war in Ukraine, and widespread coverage of this tightly-covered conflict involving numerous other countries, this poster seeks to explore and share the effects of violence consumption on children. We will seek to explore appropriate strategies and interventions on how to talk to children regarding violence displayed via social media, online sources or news outlets. With the advent of social media and quickly progressing technology, trauma-related mental health difficulties become a common risk factor to take effect on children's wellbeing and mental health. Over the last couple of decades overwhelming amount of data has been derived from research pertaining to PTSD and other trauma-related mental health struggles in consumers of this sort of content. Letiecq, B. L., & Koblinsky, S. A. (2004). Parenting in violent neighborhoods: African American fathers share strategies for keeping children safe. *Journal of Family Issues*, 25(6), 715-734.

POSTER SESSION: Exploring caring through story: Relationships between young children and people living with dementia in long-term care

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Melanie Lalani

DESCRIPTION:

Exploring caring through story: Relationships between young children and people living with dementia in long-

term care Melanie Lalani PhD student Dalla Lana School of Public Health University of Toronto Canada melanie.lalani@utoronto.ca The COVID-19 pandemic brought strict visitation protocols to long-term care (LTC) homes as part of infection prevention and control policies. In Ontario, Canada, such protocols continue to evolve, but remain restrictive to children under the age of sixteen during outbreak conditions. Entering the third year of visiting restrictions, outbreaks of COVID-19, acute respiratory infections and influenza have formed a 'triple-demic', resulting in prolonged periods when children are unable to visit loved ones in LTC, many of whom live with dementia. The perspectives that may underlie the rationales for the restrictions that constrain relationships between our oldest and youngest members of society have yet to be explored.

Additionally, the rendering of these intergenerational relationships as invisible has resulted in extraordinarily limited understandings of their possibilities. In this paper, I propose relational caring and lived childhoods theories as a way to explore and challenge assumptions underlying visitation restrictions affecting loved ones living with dementia in LTC and young children.

Providing insights from narrative inquiry, I then explore opportunities for intergenerational relationships to flourish when visits are permitted. Stories drawn from this approach enable us to see a complexity and richness of caring that challenge taken-for-granted assumptions about people living with dementia in LTC and young children. To this end, exploring experiences of intergenerational caring through stories offers a powerful resource to challenge prevalent perspectives, potentially transform the dominant culture of LTC, and contribute new understandings of the very nature of caring. Keywords: people living with dementia, long-term care, intergenerational caring, narrative inquiry, relational caring, lived childhoods, visitation protocols

4-846

POSTER SESSION: Inclusive teaching in the anthropology classroom at a time of transition in U.S. higher education

12:15 PM - 1:45 PM TMCC - 800 Level

Late-Breaking Poster - In Person

PRESENTER:

John Millhauser, (North Carolina State University, Department of Sociology & Anthropology)

DESCRIPTION:

This poster presents the results of a survey of anthropology majors and instructors at North Carolina State University (NCSU) conducted in the summer of

2023. Participants reflected upon inclusive teaching based on their own identities and their experiences in anthropology classrooms. At one level, the experiences and opinions of anthropology students and faculty will help our anthropology program identify the most effective teaching methods to help our students in our diverse community achieve their learning goals. At another level, this study is of timely and direct relevance to anthropologists and anthropology programs as the landscape of higher education transforms under attacks on diversity and other standards of inclusivity. In February, the University of North Carolina System's Board of Governors banned compelled speech from prospective students and employees, which was, in part, a response to a question on NCSU's undergraduate application that asked for affirmation of a commitment to 'building a just and inclusive community.' A few months later, the U.S. Supreme Court struck down affirmative action in college admissions and the North Carolina state legislature passed Senate Bill 364, which prohibits compelled speech in state and community college employment. Some see the new laws as targeting efforts to improve diversity, equity, and inclusion. In light of these recent events, we use the results of our survey to reflect on the opportunities and responsibilities that anthropologists have to promote inclusivity.

POSTER SESSION: Integration and Belonging in German Textbooks for Refugees

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of Europe

PRESENTER:

Jason James (University of Mary Washington, Sociology and Anthropology Department)

DESCRIPTION:

This presentation takes a critical perspective on the official textbooks used in orientation courses for refugees in Germany. My analysis focuses on the following questions: How is the society into which migrants are expected to integrate depicted? How are Germanness and national belonging portrayed? What understandings of immigration and immigrants, cultural differences, and integration do these texts promote? I conclude that the ways the textbooks refer to Germans and German culture still tend to treat what I refer to as 'ethnic Germans' and their culture as the norm, making

those categories less accessible to immigrants. In addition, the textbooks work against the goal of integration by downplaying Germany's history of immigration, excluding tensions and violence related to belonging and difference. The texts present instead a historical narrative focused on German crimes and redemption, in which exclusive notions of Germanness as well as prejudices about 'foreigners' and anxieties about integration appear as things of the past. The National Socialist regime continues to serve as a foil for a Germany that today claims to embrace democratic values and diversity, while integration remains a task for migrants alone.

4-824

POSTER SESSION: Interviewing in Closed Environments: Practitioner Experience's Impact on Participant Comfortability

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Council on Anthropology and Education

PRESENTER:

Philip White (University of Nebraska Lincoln Library)

DESCRIPTION:

Conducting research in closed, restrictive, or otherwise sensitive environments can prove difficult for researchers to elicit responses to better understand the contexts of which participants find themselves in. In this study I have been researching programs for students expelled from traditional school known as Disciplinary Alternative Programs (or DAPs), specifically the teachers and their perspective of the role such programs play in the broader educational context and in the lives of the students they are assigned. Little is known about such programs in part due to the concern that teachers at DAPs would have about what would be written regarding their practice and position in educating students whose enrollment is sensitive by nature of circumstance. The few researchers whom I situate my research in all had either previously taught in such a program (DAP) or became a teacher in the program through their research. I am no exception to this. What I have found is that during my semi-structured interviews I initially received more public-facing responses from participants. Only after I shared an anecdote, and generally a venerable one connecting with the teacher about the difficulties of their job and position, would the participants give a response that would reflect this vulnerability and begin to share about the challenges

that happen in such a position. This is critical in understanding how to better engage with this type of research in sensitive contexts with careful consideration to contextual factors. Examples are shown of responses elicited prior to me sharing my own experience in teaching in a DAP and then the responses after sharing of my experience, a time in the interview I call simply the experience shift.

4-825

**POSTER SESSION: Language and Ethnic Identity
Education in the Inner-Mongolian Public School**

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Council on Anthropology and Education

PRESENTER:

skylar hou

DESCRIPTION:

The People's Republic of China's (PRC) New National Program for Child Development (2021-2030 edition) no longer guarantees the right of ethnic minority students to receive an education in their native languages, as they recently designated Mandarin Chinese as the formal language of instruction in schools. My research focus is situated in this political context. It is concerned with the way the PRC attempts to produce social order in ethnic minority schools by way of language practices. As well, my interest lies in how ethnic minority Mongolian students respond to this effort. I also endeavor to explore the dynamic interplay between linguistic practices and broader ideologies, such as ethnic minority identity and national identity. My nine-week ethnographic fieldwork takes place in an Inner-Mongolian public middle funded by the PRC department of education and is obligated to adhere to the PRC's curriculum guidelines and policies, including the previously introduced Mandatory Mandarin policy. I examine the linguistic practices of Mongolian-identifying students, teachers, and administrators in the school setting, taking into account their situated use of Mongolian, the ethnic minority language, and Mandarin Chinese, the national official language. I conduct nine weeks of participant observation, where I sit among the students as one of them and attend classes to look at the language in formal and structured educational settings. I follow the students during their extracurricular activities, recess, and school gatherings to gain insights into the informal language use at school. I also conduct a series of ethnographic conversations

with the students, teachers, and administrators at the school to explore attitudes towards Mongolian and Mandarin, as well as to investigate how individuals understand their own language practices. Finally, I adopt content analysis to examine the diverse forms of communication at the school. This involves close analyses of formal instructions given at school meetings and class instructions regarding language use. I also analyze the banners, policies, and other official printings that make up the linguistic landscape of the school. My research challenges the state-centered, Mandarin-first stance approach adopted by the Sinophone academic discourse and seeks to move beyond the assimilationist perspective that has dominated existing ethnographic work in the ethnic minority regions of the PRC. My research addresses the dearth of ethnic minority standpoint research (Harding 2004) by leveraging my personal positionality as an ethnic minority-identifying individual who grew up under the PRC's colonial regime. With my fluency in Mandarin and working proficiency in Mongolian, I provide a more well-rounded analysis of communicative practices, which is often missing in prior studies conducted by Han Chinese researchers who only speak Mandarin (e.g., Yao 2012). My research contextualizes the crucial link between ethnic minority languages and more abstract concepts, such as coloniality (Roche 2019) and ethnic minority in relation to the nation-state (Yang 2014) in the current political climate of the PRC. It fills in the lack of ethnographic research in the recent decade, despite the intensified policies to infuse Han culture and language into ethnic minority regions, making my research a critical contribution to the field.

4-826

**POSTER SESSION: Maintaining a Broader Fiction:
How Cosplay Animates the Imaginary**

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Nona Moskowitz (Wittenberg University, Department of Sociology)

DESCRIPTION:

In his article, 'The Work of Art in the Age of Reproduction,' Benjamin (2003) theorizes the changes art undergoes when subject to mass production. With infinite replication a possibility, the uniqueness and authority of the singular art object is lost. The mass-

produced entity additionally has the possibility of being independent from the original and allows for a change in viewpoint. It may also create effects that are contingent on the technology. Cosplay is the inverse of this process. The practice of dressing up as a fictional character, cosplay reproduces the mass produced in individual form through manual labor. Through their craft, cosplayers imbue fiction with a living 3-dimensional form. They challenge the borders between the real and the imaginary by giving a fictional character a body and voice that exist in the real world, on the one hand, and by giving the cosplaying human a fictional subjectivity on the other. Such 'animation' (Silvio 2010) or 'characterization' (Nozawa 2013) brings to life the imaginary, but in what way? In this paper, I examine cosplayers' thoughts on getting creative or staying true to the characters they reproduce. Both are forms of animating the imaginary. But they differ in their goals of being independent from or staying true to the original.

4-848

POSTER SESSION: Meeting at the Crossroad: Talks of Transition into Sustainable Spaces for Living and Working Between Government Officials and a Displaced Vanlife Community

12:15 PM - 1:45 PM TMCC - 800 Level

Late-Breaking Poster - In Person

PRESENTER:

Cody Rodriguez (University of Melbourne)

DESCRIPTION:

On June 24, 2023, a discussion panel was held titled, 'Sustainability of Nomadic & Local Relationships,' at a small concert festival in Salida, Colorado. Consisting of city and federal government officials, town residents, and full-time nomads, the group addressed growing strife between the parties involved and welcomed constructive dialogue on the possibility of creating a sustainable future for vanlife nomads and residential communities. Attendees sought to address the issue of nomads transitioning to Salida for seasonal work, but due to the rental crisis are unable to obtain temporary housing. Instead, they resort to occupying nearby national forests that raises concerns on the environmental impact this has on the land. For over a decade the number of people living out of their vehicles has grown amongst high-income nations, creating a population of alienated nomads facing regulations that displace them further from mainstream societal normalcy. At a time when housing, cost of living, and climate crises are conflated and impacting the lives of

millions, evidence for such nomadic displacement can be seen with the rise of ordinances against vehicular inhabitation in places across the nation where nomads frequent. The discussion in Salida represents a meeting at the crossroads for cultures both traditional and emerging, creating the possibility of a new path forward for the vanlife community. Grounded in empirical data collected through a year-long multimodal ethnography of full-time vanlife nomads throughout the United States, this paper shares insights about the intersection of migration, displacement, climate change, and labor politics for the full-time vanlife community in their continual struggle in transitioning toward a sustainable safe space to thrive and not merely survive.

4-828

POSTER SESSION: Perspectivism and the Communicative Capacities of Face Paint for Amazonian Runa

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Linguistic Anthropology

PRESENTER:

Ashley Lundquist

DESCRIPTION:

Life for the Runa (Ecuador), as for people around the world, is full of experiences of hardship, illness, stress, sadness, tragedy, loss, etc. Yet the Runa highly value conviviality and are expected to avoid expressions of negative emotions that might follow from these experiences. One major exception to this is face painting which provides a work-around for expressing negative emotions. Pastasa Quichua speaking Runa have traditionally used two plants, *Genipa americana* and *Bixa orellana*—wituk and manduru in the Quichua language—for face paint. The designs are temporary, lasting up to a month. The semi-permanent modification of the body allows for Runa to convey to others that they aren't themselves. Instead, Runa are in the midst of transition and see the world through a new perspective; the perspective of the plant, animal, or landscape feature inscribed on their face. It is important to note that the designs still allow the wearer to be recognized and consequently they combine their perspective with that of the inscribed character. I question the semiotics behind Runa face paint practice and its designs as well as the broader impact of those semiotics. This paper explores the significance of

various designs and suggests how this practice might facilitate communication among the Pastasa Runa.

4-850

POSTER SESSION: Platformization and Infrastructuralization: Understanding WeChat's Transformations in China's Internet Ecosystem

12:15 PM - 1:45 PM TMCC - 800 Level

Late-Breaking Poster - In Person

PRESENTER:

Jie WU

DESCRIPTION:

In today's dynamic digital landscape, Internet platforms evolving into vital infrastructures intrigue anthropologists. This study centers on WeChat's journey from platform to infrastructure, exemplifying technology's interplay with culture and society. A recent incident vividly illustrates this transition: Tencent's WeChat payment, aiming to intricately manage campus transactions, implemented measures effective July 1st. Several esteemed Chinese universities suspended WeChat code scanning payment services in response. WeChat Pay's subsequent policy reversal underlines the fluid and dynamic nature of such transformative shifts. Amidst a global context, Internet platforms harness network effects, intertwining social, political, economic, and cultural facets into their fabric. Paradoxically, the allocation of public resources to these platforms is met with limited social responsibility. Striving to evolve from commercial to infrastructural entities, platforms grapple with the dichotomy between profit-driven agendas and the public nature of infrastructures. This study employs a dual-integration framework, uniting 'platform infrastructuralization' and 'infrastructure platformization.' Utilizing WeChat as a case study, we establish a theoretical framework to elucidate the journey from platform to infrastructure. Examining key processes such as platform transition, gateway establishment, power shifts, and governance dynamics, we unravel the intricate interplay between WeChat and technology, politics, economy, and society. Critical inquiries encompass WeChat's historical transition, societal sectors influenced, altered infrastructure nature, and its societal implications. WeChat's significance transcends communication, symbolizing China's technological stride and underscoring the balance between commercial pursuits and public value. Amidst platform-to-infrastructure shifts, governance, accountability, and inclusivity arise as paramount concerns. This study intertwines technology and anthropology, revealing power dynamics, cultural

influence, and socio-political implications. As technology redefines society, anthropological insights offer a holistic perspective. As digital landscapes evolve, delving deeper into these transformations and their societal impacts is essential. This exploration sheds light on the intricate interplay between technology, culture, and society, offering a fresh lens on the fusion of digital and human realms.

4-830

POSTER SESSION: Re-Feminizing The Divine: Understanding the Cultural Constructs of Gender and Sexuality in a Church-Based Christian Community

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Cameron Thomas

DESCRIPTION:

Historically, Christianity has sought to maintain rigid separation between men and women. Particularly in relation to Jesus Christ and authority in the church, where often women are seen as secondary. These ideals have led to the ostracization of individuals who do not adhere to strictly defined gendered roles. Through participant observation and interviews, this study delves into how members of BarbWire Baptist use doctrine and scripture beyond ideal worship, and how gendered religious ideals spill over into their secular life. Using an anthropological lens, this study shows how members of a spiritual community perform and reinforce gendered norms.

4-832

POSTER SESSION: Religion in a Time of Crisis

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

General Anthropology Division

PRESENTER:

Maddi Tolmie

DESCRIPTION:

The initial days of the Covid-19 pandemic was a period of suspended social norms across the world. Governments instructed citizens not to socialize with

people outside of their 'bubble', and to keep a social distance of 6 feet away from those not included in their immediate home. People began working from home, socializing online, and attending school on virtual platforms. Symbols of masks, gloves, and hand sanitizer became synonymous with daily routines. The world was bonded through a period of isolation, anti-structure, disaster; and shared in the experience of a prolonged period of *communitas*. Accompanied by this extended period of *communitas*, Covid-19 placed all humans into a liminal period of existence, of existing between mask mandates, vaccines, and a new sense of 'normal'. The echoed messages across the globe of the wish to return to structure as previously experienced before the year 2020 marks the pandemic as a period of intense social change for the world. In this honour's thesis I view Covid-19 as a social crisis, a form of Victor Turner's concept of anti-structure, within which practising religious groups operated. Through ethnographic accounts of group meetings and interviews with Pagan practitioners, this research examines the impacts of the Covid-19 pandemic on religious practitioners and communities during a time of crisis. This project is ethnographic and comparative, drawing on anthropological theory and other ethnographic research to understand the instances of anti-structure and *communitas* created during a global pandemic.

4-833

POSTER SESSION: Resistance, Self-governance, and Collective Struggle for the Preservation of Memory

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Council for Museum Anthropology

PRESENTER:

Andrea Maranon

DESCRIPTION:

Community museums are physical spaces and social organizations that exhibit the heritage and patrimony of a given social group to strengthen their collective identity via a bottom-up process. My research explores how communities in Oaxaca, Mexico redefine the relationship between museums and the public to provide a new understanding of the concepts of heritage and patrimony as a form of self-determination, as reappropriation, and as collective constructions of historical memory. My investigation aims to answer how community museums function on the ground in Mexico

and how these institutions can -through knowledge sharing- lead to the creation and sustainability of others in different states despite their distinct social organizations, cultural properties, forms of preservation, and ideas of what they wish to present. This ethnographic project focuses on two types of museums: regional and community-based to learn about their roles in the preservation and promotion of cultural patrimony of the people inhabiting the state of Oaxaca, and to understand how these spaces can (or fail to) promote participation and foster representations of local culture in the face of extractive tourism and government 'development' initiatives. Through this initial ethnographic project, I intend to shed light on how anthropologists can collaborate with the creators of community museums as they contest hegemonic discourses, reclaim agency over how they present their culture and heritage to national and international audiences, and fulfill different social needs.

4-834

POSTER SESSION: Rituals of Retirement in American Culture

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of Work

PRESENTER:

James Deutsch (Smithsonian Institution - Center for Folklife & Cultural Heritage)

DESCRIPTION:

One of the most significant cultural transitions occurs when individuals stop working, usually upon reaching a certain age or condition that allows them to receive a pension. Known as retirement (originally from the French [i]retirer[/i], meaning to recede or withdraw), this transition is often accompanied by folkloric rites of passage. In North America, the most common traditions are parties that may be both celebratory and irreverent, symbolic gifts for the retiree (for many years, a gold watch), and performative rituals that reinforce notions of rebirth and reintegration in contrast to the retiree's receding or withdrawing. However, in spite of its significance as a life marker, the transition to retirement has received relatively little scholarly attention from a folkloristic perspective. Much of the research to date has come from departments of gerontology and sociology-sometimes with the aim of providing 'scarce information on retirement rituals, the factors that shape them, and the influence they have on well-being' (Levin

van den Bogaard, 'Leaving Quietly? A Quantitative Study of Retirement Rituals and How They Affect Life Satisfaction,' [i]Work, Aging and Retirement[/i], v. 3, 2017, 64). Accordingly, this poster session will explore the meanings of retirement rituals from a folkloric perspective. It will pay particular attention to rituals of retirement as sociocultural interactions, in which cultural ideals are challenged and mocked in order to alleviate some of the tensions present in the transition from work to leisure. The rituals often become what cultural anthropologist Victor Turner has termed social dramas, which may liberate the participants 'from normative demands' and provide a liminality or 'gap between ordered worlds [in which] almost anything may happen' (Victor Turner, [i]Dramas, Fields, and Metaphors: Symbolic Action in Human Society[/i], 1974). In these ways, the rituals of retirement provide ways of looking back at one's past, while also looking ahead to one's future.

4-835

POSTER SESSION: The caring state and the value of political-care work in rural Cuba

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Daniel Salas-Gonzalez (Dalhousie University, Department of Sociology and Social Anthropology)

DESCRIPTION:

Based on ethnographic fieldwork among 'political-care' workers embedded in Cuban agricultural cooperatives, I explore the tensions that emerge from how the state has devolved public care functions to local cooperatives that are at the same time more proximate to people's actual needs and more exposed to the instrumental logic of financial opportunity-cost compared to government agencies. Dialoguing with social reproduction theory (Bhattacharya, 2017) and emergent theorizations of Cuba's value architecture, I unpack women workers' embodied experiences of reward and devaluation as they 'throw themselves into the breach' of community depletion to produce what is arguably the focal point of accumulation in Cuba's state socialism--gratitude to revolution (Holbraad, 2021).

4-836

POSTER SESSION: The Impact of COVID-19 on the College Experience: A Service-learning Project

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Anthropological Sciences

PRESENTER:

Douglas Hume (Northern Kentucky University, Department of Sociology, Anthropology, & Philosophy)

DESCRIPTION:

This poster summarizes the findings of a four-year service-learning project on the impacts of COVID-19 on students' college experience and the process by which students were taught basic ethnographic methods in a sophomore-level linguistic anthropology course. In addition to content introducing students to linguistic anthropology, students learned about human subject protection, ethnographic interviewing, free listing, pile sorting, and attribute analysis. During the semester, students applied these methods by interviewing other students about their college experiences during the COVID-19 pandemic. Interviews initially collected data on how students experienced a socially distant education. In the second year, the data collection focused on how students experienced college through a blend of socially distant and face-to-face modalities. In the third year, the project focused on the pandemic's emotional toll on the students. The project's final year involves exploring students' preferences for course content delivery modalities and extra-curricular activities. In addition to presenting the findings of this project and methods by which students were taught basic ethnographic methods, this poster includes recommendations for adapting course content delivery to meet current student preferences that the COVID-19 pandemic has shaped.

4-838

POSTER SESSION: Tó éi iiná: Water is Life, The Dakota Access Pipeline, Navajo National Sovereignty, and Pipelines as Kin

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Association of Indigenous Anthropologists

PRESENTER:

Keely Toledo

DESCRIPTION:

In the midst of a climate crisis, global pandemic, and an ever growing demand on water accessibility, many Native and Indigenous communities find themselves in a place of action and transition brought on by an unsustainable settler-colonial (infra)structure that seeks to destroy Native and Indigenous livelihoods. Weaving together crucial Indigenous frameworks of belonging, personhood, and futurity, I examine the role of kinship and resistance as a means of interrogating pipeline infrastructure in Native and Indigenous communities. From the fierce protests of the Dakota Access Pipeline at Standing Rock in 2016 to the construction of the Navajo Gallup Water Supply Project implemented by the Navajo Nation, this presentation grapples with our role in protecting and reinforcing our connections to our other-than-human relations and the intended impacts of infrastructure. By understanding both the socio-symbolic context of water as a relative and inanimate resources as living beings, I first argue that kinship and concern for the wellbeing of both human and other-than-human relations, serves as the primary motive and foundation of the Indigenous Resistance observed at the Standing Rock protests. I also argue that not all pipelines are inherently invasive and genocidal; that for the Navajo Nation, water as well as infrastructure could become essential parts of the kinship network.

4-839

POSTER SESSION: Toddlers as Active Authors in the Classroom in New York City

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Council on Anthropology and Education

PRESENTER:

Mako Miura (Teachers College, Columbia University)

DESCRIPTION:

Language is an essential tool for children to gain sociocultural knowledge through the concept of language socialization (Ochs and Schieffelin, 1986). Mothers of two-year-old children similarly express that adults actively teaching language to their children contributes to language learning, rather than just speaking to children (Miller, 2011). However, extraverbal language and the use of bodies can be more expressive than verbal language (Byers and Byers, 1972), as

toddlers between 12 and 18 months old express their feelings and needs with adults and their peers through conventional gestures, even before word acquisition (Fogel, 2009). Furthermore, children are active agents in social practices, who are not just mimicking social practices in the adult's world, but rather they take, appropriate, and interpret knowledge from adult's society, and creatively reproduce it with their improvisations, which fit and address the concerns of children and their peers in the group (Corsaro 2018). Research in infant and toddler classrooms in early childhood education and care settings shows that toddlers are not just passive receivers of care and education, but rather active authors who can mobilize adults to achieve their needs and goals strategically (Stratigos 2015; Salmon, Sumison, and Harrison 2017), exhibit variety of complex social actions (Løkken 2000; Løkken 2004) and have the ability to construct rituals and create their own unique peer culture (Mortlock 2015). Caregivers and teachers of infants and toddlers consider focused looking by children as intentional and fundamental in the formation of peer culture (Sumison and Goodfellow 2012; Devis and Degotardi 2015). In this study, I conducted participant observation of seven toddlers and their caregivers at the Lulu Silver Early Childhood Center in New York City, from April to June 2022. I took ethnographic fieldnotes along with video recordings, individual interviews, and focus group interviews using the video-cued ethnographic method (Tobin 2009). Through conducting ethnographic fieldwork in Lulu Silver Center, I observed one-year-old children's process of communication with each other through their bodies and gazes. I argue that one-year-old toddlers in Lulu Silver Center actively author their motions by making eye contact and gestures, or motions of the body, in ongoing conversations with those around them in the classroom. In doing so, they are not passive actors. This presentation will focus on a 90-second clip taken during my fieldwork which includes moments of two children exchanging their comfort objects alongside the three other toddlers. I analyzed this video by slowing the speed to 0.67x, watching it repeatedly including frame-by-frame, and following everyone one by one to transcribe their verbal language. Then I looked at the children's bodies such as the direction of their body, their eyes, and hand movements, and incorporated them into my transcript by making arrows to the lines where the movement began accompanied with an explanation of the movement, similar to the way that Goodwin used arrows to describe human body movements in his transcription (Goodwin and Goodwin 2005). Frame-by-frame analysis of the video shows that the two toddlers

exchanging their stuffed animals are not the only ones in conversation with each other. The other three toddlers participate in the conversation by way of their gazes and gestures.

POSTER SESSION: Transitions of Traditions for the Love and Legacy of Making Olive Oil

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Visual Anthropology

PRESENTER:

Anna Elin Linder

DESCRIPTION:

An ancient practice, ecologically apt and culturally vital, the heritage of olive cultivation in Puglia, the heel of Italy, occurs widely rooted in the vibrancy and tradition of the people and the landscape. With its 60 million olive plants, renowned for its half one million monumental trunks and piquant olive oils, Puglia represents one of the most important regions for olive cultivation in Italy. Meanwhile, the presence of the vector transmitted plant bacterium *Xylella fastidiosa*, which since its first detection in the region has caused over 21 million olive plants to dessicate, materializes as an unprecedented phenomena of transitioning powers. Devastated by experiencing their history and tradition - their beloved legacy - of olive culture rapidly changing from the die back of acres and acres of olive groves currently taking place, olive producers take action. By means of European funding, they uproot the dessicated plants to replant either of the two resistant varieties of Leccino or Favolosa. This poster presentation visualizes through still picture, droned shootings, and video the critical work undertaken to transition traditions from generations back moving into the future. It is based on over three years of fieldwork with olive growers and olive oil producers in the region, and it uses QR-codes to enable multimodal engagement beyond still photography. While the main aim of the poster is to critically narrate happenings from the perspective of the producers through multimodal means, an equally important aim is to embody particular values of transitioning anthropology from a discipline of words (Mead 1974) into one of sensuous and multimodal attachments.

POSTER SESSION: 'Uri' in Korean Gugak Music Traditions: Transitioning into Modernity

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

National Association of Student Anthropologists

PRESENTER:

Sarah Palmer

DESCRIPTION:

My research, conducted in Seoul, Korea, over the course of 10 weeks, analyzes aspects of social experience among musicians whose focus is traditional gugak music. In my research, I show how two key aspects of Korean music, han (한) and heung (흥) are elaborated upon in these practices of traditional Korean music and serve as binding agents among musicians. In addition, I consider how the Korean cultural concepts of jeong (정), nunchi, (눈치) and uri (우리) are present in these musical performances. These highly connected terms are reflected in many aspects of Korean Culture, even down to the typical musical structures evident in gugak. For example, uri, or a sense of we-ness implying a decentralization of the self, is evident in the marked use of musical heterophony. This directly prioritizes the performance of the group over a single individual's success or talent. Contrasting Korean gugak's heterophony against western classical music's use of homophony and polyphony, reveals an aspect of uri that saturated deep into Korean musical culture. The result of this is a musical culture that champions the restraint of the individual in order to achieve the end sound of gugak. In this paper I show how this ethic is reflected in the musical scores, gugak performances, and the methodologies of teaching gugak music.

POSTER SESSION: Waiting in the Line: An Ethnographic Account of Experiencing Economic Transition in Post-socialist Cuba

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

PRESENTER:

Sharon Qiu (George Mason University)

DESCRIPTION:

Since Castro proposed tourism as one of the pillar programs to counter resource shortage during the Special Period in the 1990s, policies were made to alleviate poverty and solve economic dilemmas. New approaches in tourism enhanced people's rights in the private sector, while the old policies like the ration system (*libreta*) continued to shape Cubans' everyday life in the official sector, as it had since the initial stage of a socialist economy in the 1960s. Based on the ethnographic data collected from intermittent fieldwork in Havana and Santiago de Cuba from 2018 to 2022, my work examines different groups of Cubans' experience of time in waiting and the political and market consequences of waiting. I divide the waiting into three sections: 1) the formal sector with government-controlled enterprises like the telecommunication office (ETECSA), 2) the private sector with small businesses, such as private guesthouses (*casas particulares*), private restaurants (*paladares*), and street work, 3) the roaming in the public sphere where local Cubans intersected the sense of aimlessness and otherness. Participant observation and interviews showed that Cuba's socialist market principles nourished a black market that benefited from the informal interactions between the formal and private sectors, while politically, limited access to goods created practices of 'strategic waiting,' which disciplined people into docile bodies in the line and catalyzed a pervasive sense of 'craziness' among the mass population who struggled for survival.

POSTER SESSION: When housing provokes a scandal: Of Indigenous aspirations and donor expectations in times of transition

12:15 PM - 1:45 PM TMCC - 800 Level

*Poster – In-Person Live***REVIEWED BY:****Association for Political and Legal Anthropology****PRESENTER:****Esther Leemann****DESCRIPTION:**

In the highlands of Cambodia, the Indigenous Bunong communities are experiencing a transition marked by the government opening their forest land to large-scale rubber plantations and settlers in the name of modernization. Confronted with the loss of the major part of their land, the swidden cultivators changed their forest based livelihoods to permanent agriculture, and

adapted their way of life to the new exigencies. While many families struggle to make a decent living, some have acquired considerable wealth through the successful cultivation of coffee, pepper and rubber. A few of them build massive modernist mansions, which in no way resemble the long-predominant thatched Bunong long-houses, except in that they regroup multiple households, who pool their agricultural revenues. This transformation accelerated during the pandemic, when Bunong villagers were forced to stay in the fields and at home and invested in enhanced housing. Donor and NGO staff from Europe and Cambodia were stunned when they returned to Bunong communities after almost two years and got sight of the massive houses and construction sites. Among outside observers, these buildings fueled fears of misappropriation and mistrust, raised questions about proper role models, paternalism and lack of understanding while within the village, they provoked envy and frustration. This poster centers on the story of Indigenous aspirations (Stolz and Tappe 2021) and the disenchantment of European and Khmer NGO staff in times of transition, when the homes of their partners' do not conform to the imaginaries about Indigenous communities they wish to support. It is the result of a reflection that is a byproduct of long-term research with Bunong communities and interactions with European and national donors and NGOs. The inquiry is informed by the critique of the politics of recognition that confines Indigenous peoples and their rights to specific essentialized and discernable forms of cultural difference (Simpson 2014, Povinelli 2002, Cattellino 2008) and by the anthropology of development (Escobar 1995, Ferguson 2005, Li 2009).

DESCRIPTION:

An increasing interest in affect in anthropology has given rise to new theoretical frameworks that enunciate and investigate subjective and intersubjective states. This 'affective' turn has highlighted the power of feelings, intimacies, emotion, and sentimentality in the public domain (Skoggard and Waterston 2015). This panel joins the growing corpus of scholarship that posits affect as an instrument of sociopolitical control and popular mobilization, and examines the work of affect in building, managing, and (in)validating social relationships, such as at the times of death, when a group's sociality and identity is in its weakest position. Through ethnographic studies of Taiwan and the People's Republic of China, this panel draws attention to three clusters of issues. First, in addition to examining the political function of affects in forging political hierarchies and intimacies, which often assumes an outsized presence in conversations about authoritarian regimes (e.g., China), our papers portray the work of affect in mediating myriad kin, socioeconomic, and even transhuman relationships. Second, while affective circulations are often assumed to be processes that connect and bind, our papers question whether affective experiences of, for example, frustration and disillusionment can also sever ties and create distance. Third, our analytical focus on disruptions and the accidental foregrounds the unruly and shapeshifting nature of affect, which renders any attempt to tame or manipulate it incomplete. This panel includes four papers. Sum's paper, 'Thank you, Poverty': Gratitude and the Making of a Spiritual Crisis in Rural China,' examines the affective work of gratitude in creating a spiritual crisis in rural China, which expunged the political state from its responsibility in managing the material crisis of rural poverty, resituating individuals in webs of familial and social relations in the process.' Liu's paper, 'Fragility and Market Subjectivity: Private Funeral Brokers in the Shanghai Funeral Industry,' describes who Chinese funeral brokers are, what they do, and their vulnerability. It illustrates how fragility is the key condition to constructing market subjectivity under an authoritarian market economy and how funeral brokers became self-managing entrepreneurs despite the state's

attempt to curb their entrepreneurship. Weller and Wu's paper, 'Intimacy, Frustration and Madness: Changing Transhuman Kinship in Suzhou Industrial Park, China,' documents the kinship ties that unite people and deities in Suzhou Industrial Park, and show how urbanization has undercut those ties of care and filial piety, leading to affect of frustration, and occasionally to madness. Lee's paper, 'The Affect of Haunting: Gender, Industrial Work, and Postindustrial Memory in Taiwan,' interrogates how the affect associated with an industrial structure of feeling was mobilized to create subjects and practices commensurable with capital accumulation during Taiwan's industrialization and the way this affect was attached to the renovation of a collective burial of 25 factory women who died young and unmarried in a ferry accident in Taiwan's postindustrial era.

“Thank you, Poverty”: Gratitude and the Making of a Spiritual Crisis in Rural China: During my visits to mountainous villages in southwestern China, I encountered many grateful people: Ethnic villagers expressed gratitude for state-led poverty alleviation initiatives, which had significantly improved their living conditions; Young people were grateful about new opportunities of outmigration and new hopes for social mobility; Children expressed gratitude for the sacrifices that their parents made and the work that their teachers did while their migrant-worker parents were away from home. This paper examines how the affective circulation of gratitude recast the problem of structural poverty into a spiritual crisis caused by individuals' failure to practice emotional endurance. The sociopolitical imperative to be grateful and complacent, in spite (or because) of poverty, expunged the political state from its unfulfilled promise of alleviating urban-rural inequality and shifted the burden of economic and spiritual empowerment to rural individuals. As opposed to recent accounts that document how gratitude promotes citizens' affective dependence on the Chinese state, this paper examines how the political project of making grateful subjects can also create distance from the state and re-channel people's affective attachment to an imagined future that is yet to be built. Here, shifting the analytical focus from expressive gestures or articulations of gratitude to the affective experience and circulation of such helps to sidestep the rationally driven questions of whether villagers' gratitude was warranted or genuine. What matters in this story is how gratitude, as it mediates intimate moments of disillusionment and madness, resituates individuals in webs of kin and sociopolitical relations. Presenter: Chun-Yi Sum (Boston University)

Fragility and Market Subjectivity: Private Funeral Brokers in the Shanghai Funeral Industry: One of the most significant changes in death matters that has occurred since China adopted a socialist market economy has been the marketization of death. Against this change in political economy, this paper describes a newly emergent group of funeral professionals—private funeral brokers—in Shanghai. Funeral brokers are self-employed individuals. During my fieldwork, bereaved families could hire them to make funeral arrangements at funeral parlors which were all state-owned. While brokers had to work with state funeral parlors, they were also business competitors with the same parlors over certain services and products. Funeral brokers were not entirely legal in China. These brokers often transgressed, pushed, and expanded the legal and moral boundaries of the business of death so they could carve out a space for themselves within the state’s monopolization of death. The state often described funeral brokers as immoral profiteers. Ironically, it was them with their amoral conduct who created spaces for religious and relational morality to return to the urban Chinese way of death. By describing who funeral brokers are, what they do, and their vulnerability, this paper illustrates how funeral brokers became self-managing entrepreneurs despite the state’s attempt to curb their entrepreneurship. The paper demonstrates how fragility is the key condition to constructing market subjectivity under such an authoritarian market economy.
Presenter: Huwy-min Liu (George Mason University, Department of Sociology & Anthropology)

Intimacy, Frustration and Madness: Changing Transhuman Kinship in Suzhou Industrial Park, China : (Co-author with Robert P. Weller) Gods and humans are intimately connected in the part of Suzhou we study. Ties to spirits are not just metaphors or projections of human kinship, but literal parts of a kinship system that invoke actual responsibilities of care and filial piety, based on links of both affect and blood. Such intimacy is not always pleasant, and the closest relationships to gods often begin with sickness and suffering, and in some cases with death leading to deification. The first part of the paper demonstrates these intimacies, including Auntie Lin’s painful calling to be a spirit medium (and thus a god’s daughter) and her niece Xiangling’s death and deification as the concubine of the god who took her. The second part turns to frustrations from the interruptions of responsibilities of care and filial piety, caused by the rapid urbanization of the area over the past two decades. Parallel to the affect of “irritability” that Navaro-Yashin connects to the mismatch between the haunted ruins of conflict in

Cyprus and the “make-believe” Turkish state, the mismatch between a modernizing, state-sanctioned urban vision and the practice of village temple religion – in a place that suddenly no longer has villages or their temples – creates an affect of frustration in the daughters of gods. In Xiangling’s mother’s case, the frustration spiraled into madness after the urbanization process destroyed the statue of her deified daughter. The mad woman’s alternate chanting and screaming marked how kinship ties of both blood and affect had been severed by force. Presenter: Keping Wu

Intimacy, Frustration and Madness: Changing Transhuman Kinship in Suzhou Industrial Park, China : (Co-author with Keping Wu) Gods and humans are intimately connected in the part of Suzhou we study. Ties to spirits are not just metaphors or projections of human kinship, but literal parts of a kinship system that invoke actual responsibilities of care and filial piety, based on links of both affect and blood. Such intimacy is not always pleasant, and the closest relationships to gods often begin with sickness and suffering, and in some cases with death leading to deification. The first part of the paper demonstrates these intimacies, including Auntie Lin’s painful calling to be a spirit medium (and thus a god’s daughter) and her niece Xiangling’s death and deification as the concubine of the god who took her. The Affect of Haunting: Gender, Industrial Work, and Postindustrial Memory in Taiwan: The Twenty-five Maiden Ladies Tomb was a collective burial of twenty-five unwed female industrial workers who, in 1973, drowned in a ferry accident on their way to work in the Kaohsiung Export Processing Zone. Taiwanese patrilineal culture shuns unwed female ghosts who do

not have a husband's ancestral altar in which to rest in peace. This rendered the dead women homeless – and potentially vengeful – ghosts. This idea made the Maiden Ladies Tomb a slightly sinister-seeming place, one Taiwanese tended to avoid. In 2008, thirty-five years after the ferry incident, with the endorsement of the deceased's families, the Kaohsiung City government revamped the burial site and renovated the Maiden Ladies Tomb into the Memorial Park for Women Laborers. The desire of the deceased's families to change the nature of the Maiden Ladies Tomb does not simply derive from their concern over the ghostly status of their maiden daughters and the ensuing consequences for living descendants prescribed in Taiwanese kinship and popular religion. This paper interrogates how the affect associated with an industrial structure of feeling was mobilized to create subjects and practices commensurable with capital accumulation at the time of these women's death when Taiwan was at the peak of its export industrial economy. Subsequently, it is this structure of feeling that led to the complex emotion of fright and sorrow among the deceased's families and their urge to do something respectable for their daughters who died untimely deaths and were thus not given a chance to live a fulfilled life. And Yet: Troubling Hope in Troubling Times

2:00 PM - 3:45 PM TMCC - 203 A

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Ray Qu (University of Virginia, Department of Anthropology)

CHAIR:

China Scherz ,Abigail Mack (University of Virginia, Department of Anthropology)

PRESENTER:

China Scherz ,Cheryl Mattingly (University of Southern California), Jason Throop (University of California - Los Angeles (UCLA), Department of Anthropology), Enkhe-Tuyaa Montgomery ,Jorge Gamarra (McGill University), Ray Qu (University of Virginia, Department of Anthropology)

DESCRIPTION:

Navigating the wakes of so many global and local upheavals (viral, climactic, political, economic, etc.) this panel engages hope as a key to understanding the lived experience of uncertainty and change. In the recent anthropological and philosophical literature, 'hope' operates as both a passive and active attitude toward not only the future but the very act of living; of continuing on even when the odds are stacked against us. Together, we attend to moments when hope seems to falter, when ambivalence about the future emerges, and when people are tasked with carrying on anyway as critical spaces through which we can better understand the potentiality and limits of human being and being-with.

Hopesick (co-author: Abigail Mack): For many Christians, the belief that God can and does act directly in the world can be a tremendous source of hope, even in the face of seemingly insurmountable challenges. Against all evidence, there is a sense that [new life might lie just around the next bend in the road] [something new is possible] [events hold within them promises worked by divine hands]. This might just be the time, and we must keep faith and act accordingly. And yet, things don't always work out. In this paper, we explore this dynamic of hope and disappointment through the life of a young woman recovering from polysubstance use disorder, considering the theological and interpersonal stakes of hope and despair over the course of three years of longitudinal fieldwork in Virginia and Tennessee. We explore how theological understandings of God's omnipotence and boundary keeping trouble easy distinctions between care and abandonment and allow people to keep hope along roads which suggest forms of love and the miraculous that require an ability to live within complex temporal horizons. Presenter: China Scherz

Time's Uncertainty: A Critical Phenomenology of Hope and Despair in an Unsettled World: Hope is a time word, a paradox, the waking dream of an imagined future that may never come to pass. It is poised for disappointment. And yet, it may be held in precious regard. I consider how African American parents practice hope when confronted with illness and disability, financial precarity and race-based stigma. In the face of these threats, hope emerges as a spiritual gift even when it burdens, a moral obligation that cannot be rejected. I consider practices of hope as spaces of cultivated potentiality, turning to the contemporary interdisciplinary area of critical phenomenology as a theoretical platform.

Phenomenological philosophers (especially Waldenfels, Fanon and Alcoff) and scholars in the Black radical tradition (especially Moten and Glissant) suggest ways to explore hope and despair, trauma and natality, as paired registers of experience. Stated ethnographically, I ask: How do African American mothers (and grandmothers) nourish personal and familial moments of potentiality that disturb normative expectations? How do they try to combat despair by preserving these moments, offering elsewhere worlds that live alongside, even within, ordinary life? My focus is on small domestic landscapes that interrupt the dominant sociopolitical order and its stigmatizing gaze. Presenter: Cheryl Mattingly (University of Southern California)

On Abiding and Bearing: This paper will examine two existentially foundational forms of the “yet still” that remain below the threshold of hope: abiding and bearing. As foundational attunements to the world, abiding and bearing are modes of being that disclose possibilities to keep going, even in the face of upheavals and crises that may tear our otherwise hoped for future projects and plans to the ground. Protentional, not yet fully expectational, these two modes of worldly attunement lie between the radical passivity of pathos and the effortful enactment of endurance. With etymological roots that link abiding to continuing, remaining, waiting, dwelling, and tolerating, and bearing to carrying on, bringing forth, birthing, producing, and sustaining, these two modes of attunement afford and disclose an ongoing perpetuation of being, even in the context of situations where hope in its various, and varying, manifestations is simply not possible. Presenter: Jason Throop (University of California - Los Angeles (UCLA), Department of Anthropology)

Hope and the Institution: The Temporal Constraints of Institutionalized Harm Reduction Work: Over the last several decades, harm reduction interventions in North America have shifted from “outlaw” health work to a tenet of mainstream approaches to substance use, championed by institutions like public health departments. While this evolution has been criticized by organizers who see the more transformative elements of harm reduction work jettisoned by institutions that conform to dominant political ideologies, I further argue that the rigid temporal forms and compression produced by institutions specifically work to negate the temporal multiplicity necessitated by harm reduction work, and can stifle the sense of “hope” that often drives radical work, a gesture towards a better future that makes a careful account of living and working

through the present. Drawing from my own experiences as a harm reduction worker within a public health department, I ask how we might examine the constraints of institutional temporality when doing harm reduction work, and how these constraints are mediated by overarching political paradigms? How does institutional memory—how we relate to the past and the work that has been done—differ when working in an institution versus grassroots groups? How is the future conceptualized or imagined within institutionalized harm reduction work, and what is the role of “hope” in moving towards the future through rigid temporal forms? Presenter: Enkhe-Tuyaa Montgomery

On “Learning How to Live” at the Margins of Hope in Neoliberal Peru : Since 2009, protests over the construction of an open-pit mining project in the Tambo Valley (Arequipa, Peru) have given rise to three police and military occupations in riverside communities. Unfortunately, for valley residents, militarized repression is but the most recent experience in a layered history of violence, which also includes environmental damage and economic precarity. Based on fieldwork with farmers, market workers, and activists pushed to the margins of the state by the rise of neoliberal statecraft in Arequipa, this paper attends to a texture of optimism, which is not quite hope. It focuses on a valley resident’s efforts to contend with the pressure of catastrophic events and ordinary crises as both undermine the relations that give life form in her community. By lending an ear to her use of the phrase “learning how to live,” I approach an ethical mode, which decouples the process of acknowledging a complex problem from the project of pursuing a solution. This mode, I observe, enables acts of mournful listening to underwrite an open-ended transformation as multiple attachments come to matter in contradictory ways. Consequently, it prompts a reflection on what becomes of optimism when the piecemeal unravelling of a social world challenges the possibility of hoping for a recognizable outcome. Here, I draw inspiration from scholarship that considers how experiences of pain, uncertainty, and chronic affliction trace the limits of our life in language. Presenter: Jorge Gamarra (McGill University)

A Good Life Foretold: Incense Seeing, Hopeful Actions, and Everyday Authoritarianism in North China: In North China’s Shandong Province, millions of local people visit fee-charging religious specialists called “incense seers” to consult with supernatural forces and seek guidance on troubling personal problems that impede their

struggles to build a good life. After a public consultation in which the seer (and the audience of fellow clients) learns the nature of a client's problems and offers advice, the seer lights incense sticks and divines the client's future. The article examines the ways in which "hopeful moments" are negotiated, refused, and produced in seers' advice and divination, and to what extent these hopeful moments carry forward into everyday lives. In exploring what happens to these hopes after customers depart from seers' headquarters, I unpack how spiritual experiences influence people's hopeful dispositions and inspire them to act and make changes in contexts of stringent social policies (i.e., China's zero-COVID and family-planning policies). The lived experiences of my Chinese interlocutors offer a window into the cultural capacities to aspire and bring the interdependence and contingency of hope into sharper focus, revealing how hopes are dependent upon constant interactions with both other humans and spiritual forces. Presenter: Ray Qu (University of Virginia, Department of Anthropology)

Anticipatory Action: Imagining humanitarian futures

2:00 PM - 3:45 PM TMCC - 713 B
Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Clare Herrick (King's College London)

PRESENTER:

Hanna Kienzler (King's College London), Clare Herrick (King's College London), Mary Wiktorowicz (York University)

DISCUSSANT:

Ann H. Kelly (King's College London)

DESCRIPTION:

The language of crisis or disaster suggests exceptionality. However, most crises are habitual, patterned and, increasingly, predictable. The modus operandi of humanitarianism has always been to intervene upon a disaster as it unfolds or after an event. But increasingly, attention is turning to the possibility of predicting and then intervening in advance of disaster. At the UN High-Level humanitarian Event on Anticipatory Action held in New York in late 2021, this new modality gained formal articulation in the humanitarian lexicon. The event was hailed as a major

'turning point' for humanitarianism, a moment where Anticipatory Action, it was hoped, could morph from niche endeavour to mainstream approach. This emerging mode of humanitarian praxis is not about what is 'known', but what is instead 'knowable'. While Anticipatory Action has been hailed as a significant break from the conventions of humanitarian processes and principles, there are many significant continuities with historical humanitarian practice. This juncture presents a critical opportunity to reconceptualise how crises are configured, defined and intervened upon. The rationales for Anticipatory Action are multiple but, in brief, encompass cost-effectiveness at a time of shrinking funds, the increased frequency of crises due to climate change, a means of achieving better 'localisation' and a recognition that data-driven forecasting tools could and should be deployed in the sector to much greater effect. But with only a tiny proportion of total humanitarian funding currently devoted to Anticipatory Action, considerable barriers to its implementation remain: translating limited evidence of efficacy into mainstream methods; problems with data quality and consistency; political scepticism-to say nothing of the morality of acting in advance of crisis being certain. Anticipatory Action represents a moment of innovation in a sector often singled out for its innate inertia. But a transformation of the humanitarian tempo demands questions even as clear answers remain scarce. This panel discussion thus uses the following points as cues for discussion: 1. What does the logic of Anticipatory Action by non-state humanitarian actors imply for nation state responsibilities toward domestic and global public goods (like access to health care) in stable and unstable contexts? 2. What does evidence look like in the context of Anticipatory Action? What are the technical and legal frameworks that justify intervention? 3. What are the historical antecedents of Anticipatory Action and why are these important? 4. What new forms of uncertainty-moral, technical and political-might anticipatory techniques like risk monitoring, forecast-based triggers and early warning tools introduce into humanitarian interventions? 5. What particular 'geographies of intervention' might Anticipatory Action produce? In what ways does anticipation reconfigure the organization of humanitarian logistics and supply chain management. 6. What can Anticipatory Action learn from preventative practices deployed by other disciplines and within other contexts of intervention? 7. What does Anticipatory Action mean for global health norms, policy and practice, and how might it erode, or alternatively, bolster the boundaries it shares with

humanitarianism? 8. How could a gendered lens to Anticipatory Action foster equity and protect women's rights?

4-420

Armenianness in Flux: Identities in Transition or Transitions in Identities?

2:00 PM - 3:45 PM TMCC - 709

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Anatolii Tokmantcev

CHAIR:

Anatolii Tokmantcev

PRESENTER:

Anatolii Tokmantcev ,Sarkis Tricha ,Shushan Karapetian ,Gayane Shagoyan

DISCUSSANT:

Tamar Shirinian (University of Tennessee, Knoxville, Department of Anthropology)

DESCRIPTION:

Is there ever an end to transition? What is carried along and lost in transitions without expiry? What of layered and intersectional transitions for a people who have been framed historically as liminal subjects and go-betweens (Aslanian, 2014)? What of a contemporary transnational experience artificially bifurcated into unitary nation-state and monolithic diaspora? Situated at the junction of various religious, linguistic, and political systems often clashing with one another, be it the Greco-Roman world vis-à-vis Persia, Christian Byzantium vis-à-vis the Islamic Caliphate, or the Russian/Soviet state vis-à-vis the West and/or Middle East, Armenians have functioned against a backdrop of permanent military and/or cultural tension. Being in constant flux, narratives of preservation and continuity have been central in national and transnational discourse, but often in contrast to a lived practice of constant fluidity, layering, and hybridity. Suspended in the ideological and lived hyphens between past and present, war and peace, authoritarianism and democracy, homeland and diaspora, majority and minority, dominant and peripheral, national and transnational, 'Armenian' and 'other,' each paper in the panel will unpack the impact of its particular transitions on identity, and manifestations of identity on transition. Situated in the post-genocide, post-earthquake, post-

socialist, post-independence, post-war, post-diaspora contexts, and with interdisciplinary lenses spanning Armenian studies, linguistic anthropology and anthropology of religion, this panel will explore 'proper' compartments and performances of what it means to be Armenian on multiple, and often, intertwined axes - gender, linguistic, ethnic, national, and religious - and the tensions between continuity and disruption at different moments of transition in the Armenian world. As a continuation of the tradition established last year, the papers presented in this panel will be sponsored by the Armenian Studies Association. Aslanian, S. D. (2014). *From the Indian Ocean to the Mediterranean: The Global Trade Networks of Armenian Merchants from New Julfa*. United States: University of California Press

Female Jehovah's Witnesses in post-Soviet Armenia and Resistance to Patriarchy: In the course of Armenia's transition to democracy and market economy, women are often most detrimentally affected by the radical social transformations. For many women in Armenia, family has served as a primary source of social capital, which is vital for normal functioning in Armenian society. Not only do social networks provide economic resources but they also serve as a source of social respect, validation, and self-realization. Main sponsors of social connections for women are often their male partners and other male family members. The continuous war in Nagorny Karabagh, malnutrition, alcoholism, and smoking, as well as the poor living conditions in Armenia made male life expectancy shorter than that of women. Thus, women are generally more exposed to the risk of losing vital social connections, and in the case of partner's labor immigration, divorce, or death, women often remain without support. Women who face the loss of social capital often seek refuge in religious communities. In this paper, I focus on the community of Jehovah's Witnesses (JWs) in post-Soviet Armenia and analyze why it has been particularly attractive for women with damaged social networks. In the dense social milieu of JW community, women whose familial and social networks have weakened or failed to form in the first place find new sources of social capital. In addition, mastering the nuances of religious teachings and participating in public ministry instills in them a special sense of self-worth, which is often unattainable for them in the wider Armenian society. Often, JWs' teaching boosts the development of women's agency in relationships with their husbands, which gives them moral authority to resist the negative influence of the rigid patriarchal family system. Female JWs are

emboldened to accept more assertive and independent position vis-à-vis their “worldly” fathers or husbands as being a servant of Jehovah gives them moral authority to resist patriarchy. Presenter: Anatolii Tokmantcev

Transcultural Language Brokering: Negotiating Armenian and American Value Systems : In the wake of the collapse of the Soviet Union, residents of the newly formed Republic of Armenia found themselves amidst a number of economic, political and social upheavals. In response, a very large number of Armenians fled to Los Angeles, where the pre-existing diasporic community provided a foundation for their new lives. This presentation examines a cohort of young teenage boys who arrived in this immigration wave and became so-called 1.5 generation immigrants—having experienced the linguistic and social formation of childhood in Armenia but coming of age in the United States. Across a series of interviews, these men describe their roles as linguistic and cultural brokers—not only for their parents, who oftentimes have difficulty adapting to life and norms in America—but also within their various social situations at school, among peers, and as individuals. Protection from bullying at school, making money, and even mundane favors of everyday life depended on a highly interconnected network of Armenian men, and so performing this role was essential to survival. To some extent, despite societal pressures and the culturally heterogeneous environment of LA, this subversive network survived its transition to the US. This study expands the established concept of language brokering by elaborating on the performative social elements of language. Our cohort both performs the linguistic alternation between Armenian and English and the social alternation between their Armenian and American value system and cultural norms. This idea of cultural brokering is a form of transcultural performance and identity and challenges the linear perspective of cultural assimilation as a transition from one culture to another—from other to same or from immigrant to citizen. Presenter: Sarkis Tricha

Imposed Armenianness in the Process of Becoming American : In the contemporary Armenian diasporic mosaic, Los Angeles serves as a unique focal point because of its status as both the current epicenter and microcosm of the larger diasporic experience. The critical mass of Armenians present makes it the most populous and dense diasporic center, and the diversity of diasporic threads makes it the most heterogeneous, including elements of traditional diasporas (descendants of genocide survivors), second or third

diasporas (descendants of genocide survivors who settled in the Middle East/Europe/the Americas and then migrated to LA often through multiple transit posts), non-genocide related second or third diasporas (Iranian-Armenians or Russian-Armenians), and those from Armenia who are new to the diasporization project (those coming from Soviet or post-Soviet independent Armenia). This paper will look at this last cohort, the only group transitioning from majority to minority status, through the lens of a cohort of men who were born in Armenia but came of age in LA right around and after Independence (1990s). Through close analysis of life-story interviews, this paper examines the layered mechanisms of various transitions - majority to minority, native to diaspora, local to other, man to “Armenian” man - and their dialogic and multidirectional nature. Interview data demonstrate that transitions are not time-bound or limited in scope but in constant flux. In the unpacking of how their various social roles are constructed and negotiated, the role of imposed identities and the power dynamics at play both within and outside of the Armenian community/ies in LA will be highlighted. This presentation will demonstrate that the process of becoming American actually pushes these men to perform and adopt hyper Armenian identities under the force of American majority narratives of racialization and masculinity in concert with Armenian diasporic narratives of preservation and insularity. Presenter: Shushan Karapetian

Gender of Second Cities in Transition (the case of Gyumri): The Soviet city of Leninakan (currently, Gyumri), the second largest city in Soviet Armenia, never became a capital of Armenia, and the local discourses primarily drew parallels with Leningrad, the “exemplary Soviet second,” rather than with the capital of Armenia, Yerevan. The concept of “second city” has been studied from various perspectives, and in this presentation, I focus on one of its aspects, namely “pragmatic pluralism” first pioneered in Blair Ruble’s scholarship. It emphasizes the principles of control and management of the second city rather than its perceived sense of “inferiority” to the capital (Ruble 2001). The idea of “pragmatic pluralism” is equally insightful when applied to the analysis of urban self-organization and to the exploration of urban modernization from above. In the latter case, the principles of patriarchal management undergo significant transformation. This paper will examine how the ideologized management system of the Soviet city introduced a new gender dimension, which defined the position of women as a necessary “second.” For example, Vera Mukhina’s famous sculpture “Worker and

the Collective Farm Woman” symbolized the union of workers and collective farmers, where the man represented the “advanced” worker and the woman stood for a less “class-conscious” collective farmer. The idea of women being the valuable “second” was often practically implemented when they were appointed as administrative leaders of the “second” cities. Using the case of Gyumri, I focus on two aspects of “urban gender.” First, I emphasize gender pluralism in the management system, which manifested itself in the dominance of women in the city administration of Soviet Leninakan in the 1970-80s, as well as in women’s relative visibility in the urban space of post-Soviet Gyumri. Second, I consider local discourses on the “gender representation” of the city image using city names, sculptures, and urban folklore. Presenter: Gayane Shagoyan

Erika Hoffmann-Dilloway (Oberlin College and Conservatory, Department of Anthropology), Bernard Perley (University of British Columbia)

PRESENTER:

Steven Van Wolputte ,Nayanika Mookherjee ,Erika Hoffmann-Dilloway (Oberlin College and Conservatory, Department of Anthropology),Jennifer Dickinson (University of Vermont, Department of Anthropology),Carli Hansen (University of Toronto Press),Alisse Waterston (CUNY, John Jay College, Department of Anthropology)

DISCUSSANT:

Stacy Leigh Pigg (Simon Fraser University),Bernard Perley (University of British Columbia)

DESCRIPTION:

The long life of an ethnographic moment can go through multiple transitions from event to representation. The strategies of entextualizing an event start during the event as neural tracings of our experiential sensory and

cognitive mappings. Our recollections of those tracings continue the transition to more tangible forms or artefacts of the event. The conditions and circumstances of those events will prompt myriad forms and modes of 'capture' and representation. The participants in this roundtable have identified cartooning as an efficient and effective mode of representation that more fully utilizes the broad semiotic potential for animating semantic awareness and understanding than text alone. Some graphic novel pioneers refer to cartooning as sequential art, signaling a commitment to read/interpret multiple 'frames' as segments of a larger aesthetic work. Similarly, sequential graphic ethnographic representation brings aesthetic dimensions to bear on best approaches to augment the reader's sense of 'being there' at the unfolding of the event. Our roundtable participants bring diverse graphic, textual, and formatting strategies to communicate the broader implications and social concerns our ethnographic work seeks to animate. Drawing on fieldwork in northern Namibia, Steven Van Wolputte asks: how can graphic ethnography shed light on the affective dimensions of the ancestral realm? Can graphics do more than storytelling? And how can it make us think and feel differently? Nayanika Mookherjee examines the role of graphic ethnography in mapping the objects and feelings of fear through the silence of images, through the aurality of this silence. By aurality, she refers to the sounds and feelings felt by the reader when seeing these images in their colours, visuality and contexts which are not brought out by words and texts alone. Erika Hoffmann-Dilloway will discuss processes of transduction back and forth between video and sequential drawings that can be entailed in capturing nuanced representations of movement in ethnographic settings. In her work with deaf signers in Nepal, such processes are not only a way of capturing ethnographic moments, but also a subject of ethnographic inquiry, in which representation and interpretation emerge from complex interactions between the affordances of video and sequential art. Jennifer Dickinson will focus on her use of cartoons to capture field moments and narratives in her Ukrainian research. She focuses on cartoons as part of a process for returning to data and layering in richer interpretations over time. Natalie Konopinski describes how ideas turn into spontaneous quick sketches that capture complexities of concepts/events that are later transformed into cartoons for reflection, engagement, and transformation as represented in Anthropology News. Examples will focus on how cartoons lend themselves to the detailed and sensuous conveying of experience, argument, and social commentary-including

gender, obstetric racism, workers' struggles, and how to change a bicycle tire. Alisse Waterston and Carli Hansen will provide insights into the partnership between the author, artist, and the university press in realizing the potential of cartooning to promote positive change in a period of uncertainty and melancholy. Discussants Bernard Perley and Stacy Pigg will reflect on how these papers illuminate complexity of 'cartoon capture' that communicates both ethnographic moment and theory.

DISCUSSANT:

Beth Semel (Princeton University, Department of Anthropology)

DESCRIPTION:

With the November 2022 release of ChatGPT, a free-to-use sophisticated chatbot running Artificial Intelligence developer OpenAI's GPT natural language generation machine learning tool, ongoing conversations around the ethics, utility, and possibilities of this powerful text-generation software have escalated towards a fever pitch. As a lightning rod of technosocial ideologies- from breathless proclamations about its transformative potential to moral panic over its supposed damage to learning, 'originality,' and the craft of writing- GPT is fascinating. Its design and use also raise issues of enduring concern within linguistic anthropology, including the nature of language generation, use, and

change; situated literacies and their socialization, assessment, and transformation; tensions around competing understandings of 'cheating,' authorship, collaboration, creativity, and knowledge production; the mediated reproduction and subversion of inequalities; and even the limits of the self. Given GPT's potential to transform and challenge core linguistic anthropological issues, our roundtable will explore such questions as:

- In light of widespread concern around GPT's 'inevitable' use for student 'cheating,' what does ethnographic comparison around the very notion of what constitutes 'cheating' (Blum 2010) help us understand about the supposedly universal legibility of the concept? How might a comparative ling anth perspective help us move from knee-jerk carceral reactions to this tool in pedagogical spaces towards an examination of situated assumptions around the relationship of 'original' work to assessment strategies in different contexts, and even a cautious reimagining of ways to engage students?
- How do other shifts in cultural and material conceptions of literacies and knowledge production (e.g., the increasing recognition of remix authorship in intellectual property law (Deeb 2004) or missionaries' violent reshaping of local conceptions of knowledge production, literacies, and the self (Schieffelin 2000, 2007; Hanks 2010) inform our ethical and practical responses to GPT's emergence? What lessons might we glean from other transition points across contexts and time?
- What might a digital literacy of GPT look like? If this is indeed 'the new calculator' forcing writers and educators to rethink the nature of their work (as the authors of numerous think pieces have opined), then what are the emergent communicative competencies and 'regimes of participation' (Flamenbaum and George 2023) around its use?
- Relatedly, how should the structural, material, and economic considerations of GPT's design, training, corporate deployment, and so on, inform our response to GPT as engaged scholars and educators of language-in-interaction? How do these materialities intersect with existing concerns around the algorithmic reproduction and deepening of inequalities (Benjamin 2019, among many others)?
- What does linguistic anthropology's understanding of language as social action offer in response to competing claims of GPT's textual output as being 'sophisticated' vs. 'not real'? What challenge might this pose to the very claims of 'natural'-ness of the programming concept of 'natural language processing' which underlies GPT's functioning itself?

DISCUSSANT:

Seth M. Holmes (University of California, Berkeley)

DESCRIPTION:

How do groups heal collective wounds? In this panel (with two sessions), we will discuss the ways in which healing traditions from the global south conceptualize and practice a kind of healing that happens beyond the individual body to include human collectives, inter-species beings, and ecologies. As a difference from the kinds of care that characterize patient-practitioners' relationships in therapeutic settings, healing can be multiple and communal, both in the ways in which it affects multiple bodies and in the recognition of the role that repairing ecological relationships has in healing historical wounds. Furthermore, at times, healing human bodies cannot happen if natural and spiritual beings are not considered. In this panel, we want to unpack what 'collective healing' means and can mean considering different epistemologies of care from the global south (Abadía-Barrero, 2022), and the different wounds, ill-beings, sufferings, and traumas that have resulted from colonial and neocolonial projects. Land grabbing, slavery, environmental devastation, the sexual exploitation of women's bodies, wars of many sorts, to name a few, are not only ongoing imperial historical products, but are also the core of multiple ruptures in collective and communal bodies. This panel wants to bring attention to forms of healing that take histories and subjectivities of collective oppression at their core. We ask: what are the 'therapeutic actions' that help heal

war-related or colonial traumas? What racialized forms of collective healing alleviate systemic racism? How does environmental action/care for nature get ritualized to repair the ecological interconnectedness among the many beings that inhabit the planet? How do feminist and feminized forms of collective healing heal us from patriarchal norms that harm and destroy our everyday interactions. Who are the many actors involved in collective healing and how do they provide collective care while simultaneously healing themselves? We draw inspiration from the study of rituals, spirituality, communalism, and decoloniality to interrogate the kinds of healings and repair that happen collectively and that actively confront the ongoing forces of imperial projects.

Quechua Women Healing from Forced Sterilization in the Andes: From Soul Loss to Communal Futures: From 1996 to 2000, 314,000 people were sterilized under Perú's National Program of Reproductive Health and Family Planning, the vast majority Indigenous women. Affected Runa (Quechua) women continue to be beset by psychosocial illnesses that preclude them from reproducing family and community materially, socially, and spiritually. Where biomedical doctors and psychologists are baffled by or dismiss women's illnesses, their constellations of symptoms are deeply meaningful within Runa "worlds of health," identifiable as mancharisqa (susto, fright, soul loss), for example. The symptoms of this illness overlap with PTSD, depression, and anxiety. However, the clinical and legal definitions of trauma preclude a deeper Runa-centered understanding of this "illnesses of the land," experienced as the breakdown of the intimate sociality of ayllu: the more-than-human Runa community of people, plants, animals, ancestors, and earth beings (such as mountains) held together by reciprocal care or ayni. Though the Peruvian state has conceded responsibility for the forced sterilizations, it has yet to take effective action towards justice and reparations. In the state's recalcitrance, affected Runa women have started a healing center to address their illnesses using culturally meaningful modalities. Alongside Western psychology, women pull from a larger repertoire of Runa "health artisanship," which includes talking circles, herbal treatments, body work, and ceremony. Though focused on women, the process of healing involves the entire ayllu, fueling the intergenerational transfer of traditional knowledges and the cultivation of radically resurgent Runa futures. Presenter: Lucía Stavig (University of Pennsylvania)

“Communicating the Collective to Heal the Community”: Authors: Carolyn Smith-Morris and Andrés Tapia. (U. Texas Southwestern Medical Center, O’Donnell School of Public Health) Radio communications, long used as a “colonial tool” to broadcast information and entertainment mainly in colonial languages, are now said to be creating new types of indigenous leaders, promoting the use of indigenous languages, and encouraging new forms of organization and mobilization. As Indigenous radio communications have expanded, they have reached larger, multi-community audiences, representing and addressing many shared priorities across diverse Indigenous Peoples. During this growth, limited attention has been paid to the precise impact of these informational changes on local, communal forms of communication and decision-making. While Indigenous radio supports cultural and linguistic preservation by transmitting this content to larger groups, little more is known about its impact on community cohesion, values, and health. Do mass communication strategies unavoidably and subtly inject local communities with certain ideals, priorities, and meanings of dominant society? What is the relationship between communal priorities that can be witnessed in communities and the values expressed or conveyed over mass media? And do these communication bridges help strengthen, or heal, Indigenous communities? This discussion will offer perspectives from the Central Amazon of Ecuador, and considers whether radio can contribute to collective healing and future resiliency in resistance of the hyper-individualism of global, capitalist, and representational society. Presenter: Carolyn Smith-Morris (U. Texas Southwestern Medical Center, O’Donnell School of Public Health)

Hugging for Warmth: Collective Grieving and Healing among Chinese Bereaved Parents: In 2015 when China ended its one-child policy, one unintended consequence of the policy became even more apparent; a large number of parents lost their only child born under the policy to illness, accidents, or suicide. Due to advanced age, the majority of these parents were unable to have another child. Grieving over the loss of an only child presents severe challenges to Chinese parents, as they rebuild their lives in a society with limited grief literacy and professional grief counseling. Moreover, as Chinese society is becoming increasingly child-centered, losing an only child often leads to a strong sense of estrangement and a profound loss of meaning in life among these parents. Bonded by shared loss and claimed victimhood of the one-child policy, bereaved Chinese parents have formed communities for collective grieving and healing, referring to this practice as

“hugging for warmth” (baotuan qunuan). Based on field research with over 100 bereaved parents between 2016 and 2020 in China, this paper explores the therapeutic power of collective healing among these communities. It reveals the ways in which bereaved parents share their experiential knowledge of grief and healing to help each other cope with child loss. It also discusses how communities of bereaved parents have become space for socialization and friendship as they often feel alienated by those who do not share their loss. Grieving and healing together, bereaved Chinese parents have created alternative ways to heal a grieving heart. Presenter: Lihong Shi (Case Western Reserve University, Department of Anthropology)

Restoration of the Land and the Flesh: Colonial-imperial violences have profoundly fragmented relations between mutually co-creating human, animal, plant, and spirit worlds, disturbing Natural Laws that maintain balance and continuity, interconnectedness and reciprocity of humans and the natural world. Grounded in an engagement of the Zapatista caracoles and their knowledges, cosmologies, and practices, we can theorize a multinodal rehumanizing and restorative project of damaged flesh and ecologies that looks to rethink, unravel, and decouple from hegemonic worldviews of life and healing, by reinventing ideas of humanity, personhood and the restoration of the mutual relationships between humans, spirituality, and many ecologies to heal the fractures of life. Consider the multiplicity of a decolonial healing praxis as rehumanizing, and embracing multiple dimensions of spirituality, ceremony, topography, Indigenous Mayan knowledges, and the centrality of the maíz/tierra narratives to restore and reimagine our conception of health as tied to everyday communal, ritual, labor acts of love, reclamation, reciprocity, regeneration and liberation from systems of oppression. Furthermore, incorporating the dialectic nature of mutual meaning creation between land and human; the balance of the human, plant, animal, and spirit worlds helps create therapeutic landscapes and epistemologies that allow for fulfilling regenerative and healthy communities. Presenter: Enrique Iglesias (University of Texas at San Antonio)

Community-Based Conservation in East Africa: Toward Territories of Life

2:00 PM - 3:45 PM TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Justin Raycraft (University of Lethbridge, Department of Anthropology)

CHAIR:

Justin Raycraft (University of Lethbridge, Department of Anthropology)

PRESENTER:

John Galaty (McGill University, Department of Anthropology), Vinay Kamat (University of British Columbia, Department of Anthropology), Justin Raycraft (University of Lethbridge, Department of Anthropology), Kariuki Kirigia (University of Toronto)

DISCUSSANT:

Colin Scott

DESCRIPTION:

Indigenous and Community Conserved Areas (ICCAs), or 'territories of life,' represent promising models of conservation that simultaneously safeguard local and Indigenous livelihoods and the ecosystems upon which they depend. Territories of life are characterized by deep relational connections between community and place, the presence of local governance institutions for establishing rules, and on-the-ground management practices that promote conservation outcomes and support human wellbeing [1]. They are further classified by the ICCA Consortium as 'defined' (currently functional), 'disrupted' (partially functional due to macro political and economic influences), or 'desired' (not yet implemented) [2]. In East Africa, conservation is entangled with state politics and international 'safari' tourism. Though a variety of community-based conservation initiatives exist, the rhetoric of community inclusion, participation, and ownership often does not translate into practice. This panel comprises a series of papers focusing on the social, political, and economic complexities of community-based conservation in East Africa. While maintaining the anthropological tradition of contextualized research, the holistic objective of the panel is to compare and synthesize regional ethnographic insights and foster collective understanding of community-based conservation across East Africa. The paper presentations are based on long-term ethnographic field research in Tanzania and Kenya. The selected cases encompass a diversity of local livelihood practices including pastoralism, crop

cultivation and coral reef fishing. They are unified by their thematic consideration of whether territories of life are feasible in East Africa, and under what conditions they are likely to prosper. The papers unfold whether current models of community-based conservation are empowering for local communities and whether they fulfil the ICCA Consortium's criteria for relationality, governance, and effectiveness. Taken together, the panel will flesh out the regional particularities of community-based conservation in East Africa and generate valuable insights on the anthropology of conservation. Dr. Colin Scott, this year's winner of the Weaver-Tremblay Award, will then discuss these findings in relation to his far-reaching work with the Centre for Indigenous Conservation and Development Alternatives (CICADA), and reflect on the future prospects of Indigenous-led territories of life in East Africa. Footnotes: 1.

The Complexity of Community Linkages to Conservancies and Why it Matters: A narrowly economic view of the costs and benefits to communities of dedicating land to create conservancies weighs the returns on pastoral or agricultural forms of land use compared to revenue flows from tourism, conservation grants and subsidies. Whether an entire community or a more select group of land users is considered is critical. But more important may be the more complex outcomes of a community entertaining the protection of wildlife on some part of its territory, and how the governance of the conservancy within a larger area is arranged. This paper will examine some of the complex ways that conservancy structure affect a community in a number of cases from northern and southern Kenya and Tanzania that were examined by a team of researchers operating within the 'Institutional Canopy of Conservation' project. We find that the protection of core conservation areas during wet seasons is both appreciated and valued if those areas are opened up to managed pastoral grazing in dry season periods; in effect, the 'loss' of the land is discounted if it is regained at the most crucial time of the year. Where grazing territories are subject to incursion by farmers, whose cultivation establishes longer-term claims to land, dedicating the areas to conservation can serve as a deterrent to competitive land claims, making the lands available when needed. More generally, conservancies often provide institutional structures for a community of influence far beyond the conservation of biodiversity, especially where other forms of organization have been

undermined. Presenter: John Galaty (McGill University, Department of Anthropology)

The Rhetoric and Reality of Community-Based Conservation in Southeastern Tanzania: Policymakers and social scientists worldwide have repeatedly been asking questions about the steps needed to ensure the successful conservation of marine biodiversity, while safeguarding the livelihoods and well-being of humans who depend on coastal ecosystems for their survival. Their central message has been that if the ultimate goal is to conserve nature and minimize biodiversity loss, then paying attention to the needs of humans in conservation contexts is as important as focusing on non-humans in ecological contexts. Drawing on research conducted over a decade in a marine park in the Mtwara region of southeastern Tanzania, this paper examines the rhetoric and reality of community-based conservation—a model of conservation that was promoted in the park’s general management plan as key to the project’s acceptability and success. A central objective of the plan was to ensure community participation in conservation governance through the establishment of Village Environment Management Committees and Village Liaison Committees. These committees were meant to fulfil a statutory requirement, but have ended up being meaningless and non-functioning. In this paper, I show how, despite initial consultations with community stakeholders, the actual implementation of the marine park in the Mtwara region has proceeded in a top-down manner, i.e., with minimal proactive collaboration and engagement with the local residents. Presenter: Vinay Kamat (University of British Columbia, Department of Anthropology)

From Customary to Formal: Conservation Areas and Institutional Change in Northern Tanzania: The Maasai Steppe is a semi-arid savanna ecosystem in northern Tanzania that supports a variety of wildlife species of global significance. It spans approximately 40,000 square kilometres, encompassing two national parks and several community-based conservation areas. This paper draws from a year of ethnographic field research with local Maasai pastoralists (2019-2020) and two months of follow-up fieldwork in 2022. It discusses ongoing changes in range management strategies taken up by local pastoralists in the context of sedentarization, villagization, and community-based conservation. The core question addressed is ‘do community-based conservation areas compound Tanzania’s history of pastoral land alienation, or do they offer institutional mechanisms for securing local access to pasture in the

face of agricultural encroachment, rangeland development, and green grabbing?’ It is argued that despite warranted concerns by social scientists, wildlife management areas in Tanzania can offer valuable tools for local pastoralists to articulate their land claims and support the livestock economy, though they represent governance models that are not fully devolved to the community level. Decentralization of Tanzania’s wildlife sector has paradoxically strengthened centralized control of resources, but also generated new opportunities for communities to establish and manage pastoral territories of life through a combination of formal and informal institutional arrangements. Community-based conservation is presented here as a viable middle ground between preservationist policies and pastoral livelihoods that could break trend from the state’s lasting legacy of fortress conservation. Presenter: Justin Raycraft (University of Lethbridge, Department of Anthropology)

Expectations, Exclusion, and Erasure: African Indigenous Communities in Biodiversity Conservation: The gravity of our planetary challenges today has reinvigorated earlier invocations of “Our Common Future”, which has impelled calls for the 30x30 global biodiversity conservation initiative. However, with 80% of biodiversity-rich areas under the custodianship of Indigenous communities around the world, it begs the question about which mechanisms are in place to protect and enhance Indigenous rights to territories of life and knowledge systems. This question is especially pertinent to the African context where conservation initiatives are increasingly being influenced by global capital flows laden with promises and expectations of improved quality of life while, at the same time, Indigenous communities are displaced from areas rich in biodiversity by African postcolonial states and conservation organizations. I build on my research in the rangelands of Kenya to unveil how the exclusion of Indigenous communities from biodiversity conservation decimates human and other-than-human life. I situate this research within the tenets of environmental and climate justice, racial capitalism, and African existential and feminist philosophies to conceptualize conservation sites as spaces where environmental and climate injustices against African Indigenous communities are made logical, legitimate, and spectacular. This study in turn addresses these violent and exclusionary regimes of conservation by proposing radical participation, ownership, and stewardship of biodiversity conservation processes and spaces by African Indigenous communities as key to attaining convivial conservation

in the African context. Presenter: Kariuki Kirigia (University of Toronto)

Critical Genealogies: History, Policy, and Methods in Africanist Anthropology

2:00 PM - 3:45 PM TMCC - 203 D

Oral Presentation Session

REVIEWED BY:

Association for Africanist Anthropology

ORGANIZER:

Francis Semwaza (University of Florida, Department of Anthropology)

PRESENTER:

Monica Udvardy (University of Kentucky, Department of Anthropology), Francis Semwaza (University of Florida, Department of Anthropology), Dmitry Bondarenko (Russian State University for the Humanities)

DESCRIPTION:

This panel revisits key theoretical debates in Africanist anthropology, ranging from the revisiting of early 1900s ethnography, reanalysis of sacred objects, and postcolonial nationalism, to the role of the body, gender, and sexuality in African social worlds.

The Fecundity of Absence in the Kenyan Hinterland: Mijikenda Memorial Statues (Vigango): In 1991, David Parkin, long time ethnographer of the Giriama people of the Kenyan coastal hinterland, published *The Sacred Void. Spatial Images of Work and Ritual among the Giriama of Kenya*. He astutely observed that kayafungo, the most sacred site for this people, had long been abandoned and few of the circa half million Giriama had ever visited this locus of a formerly fortified village located in the center of their most revered forest. Yet this sacred void was still very actively used as a site for blessings by Giriama elders for potential political candidates, for occasional, group wide ceremonies, and for sanctification of their ethnic identity during times of threat from outside the group. Despite its absence of past content, kayafungo still acted as an icon of the consolidated ethnic identity of the Giriama people that was turned to in times of need. For two decades, with my collaborators, I have researched the unethical trafficking of tall, wooden, memorial statues, called vigango, erected by the Giriama and neighboring coastal hinterland ethnic groups, collectively called the Mijikenda (e.g., Udvardy, Giles & Mitsanze 2003; Giles, Udvardy & Mitsanze 2014). Erected for men who during

their lives were members of a particular secret society, and believed to incarnate the spirit of the deceased, we have documented the trafficking of these statues, through a series of immoral actors, to the United States, where they ultimately ended up in U.S. museums. We have located more than 400 vigango in about 22 U.S. museums and we have actively facilitated the return to the Giriama and Mijikenda of more than 100 statues so far. So many statues have been stolen that Mijikenda are now afraid to erect them for fear of their theft, or else are erecting them in large cement foundations. Our work has received much global, public media attention (see, e.g., pp. 67-68 of this month's issue of *National Geographic Magazine*). I argue that due to Mijikenda outrage concerning the global trafficking of vigango, heightened through global public media exposure, the statues have become the new icons of Giriama and Mijikenda ethnic identity. Their very absence, through their wrenching from the ground by thieves in the dead of night, and deposit in museums thousands of miles away in the global North are today common knowledge among Mijikenda elders. In this way, their trafficking has made them what Annette Weiner (1992) calls 'inalienable objects,' or what Igor Kopytoff calls 'singular' objects, i.e., objects that more than others stand for the central concepts and core values of a peoples, region or nation. By their very absence, vigango have come to stand not only for the elders they resemble, but as sacred emblems of the fortitude of coastal peoples who are otherwise geographically, economically and politically peripheral to Nairobi, the very vibrant political, economic and multicultural hub of Kenya. Presenter: Monica Udvardy (University of Kentucky, Department of Anthropology)

Perceptions on Albinism: Othering the Body and Its Policy Implications in Tanzania: In light of the ongoing violence targeting persons with albinism (PWAs) in Tanzania, this paper explores how perceptions of individual persons on the 'albino body' affect institutions and consequently influence policy processes seeking to protect and promote the welfare of PWAs in the country. I argue that in highly politicized settings like Tanzania, the formulation and implementation of such policies largely depend on the desires of the individuals in power, which makes the processes and their outcome top-down in character and compromise their sustainability. Among other challenges, the discrepancies between policies and their implementation would happen irrespective of the good will of the state in formulating the respective policies. Investing in efforts to raise people's awareness on albinism and other disabilities will help dissolve the

stigma and empower individuals and institutions and result in more inclusive and effective policy processes for better protection and promotion of the welfare of PWAs in the eastern African nation. Presenter: Francis Semwaza (University of Florida, Department of Anthropology)

Nation building in post-colonial states: historical past, present-day realities, and possible future. The cases of Tanzania, Zambia, and Uganda compared: In the present paper, we attempt at discussing nation building in post-colonial countries in world historical and cultural process. We argue that in the post-colonial period of world history that began after World War II, the fundamental characteristic of the nation as a culturally integral, homogeneous (monocultural) community is changing. This feature became a cornerstone of the concept of nation at its formation in the West by the last decades of the 18th century, but provoked by decolonization migration flows from the Global South to the Global North change nations as realities, as well as the concept of nation in the countries of the North making them multicultural. Liberated states of Asia and Africa are multicultural from the very beginning, because they inherited the colonial borders in which, as a rule, many peoples were united. The author raises the question if their initial multiculturalism can become not an obstacle in the path of their development but their advantage in the present-day world if they stop trying to build nations on the outdated Western model of the late 18th – mid-20th centuries and go to building nations as multicultural communities. The paper is based on a combination of historical analysis with analysis of field anthropological evidence collected by the author in the post-colonial African states of Tanzania, Zambia, and Uganda between 2003 and 2018. The analysis has shown that today, due to better historical prerequisites, Tanzania is closer than Zambia and Uganda to the formation of a nation as a community of fellow citizens committed to the same basic values and having a single culture and identity over local and private – tribal, ethnic, regional or religious – cultures and identities with their value systems, for whom loyalty to one nation-state, common for all of them, is primary in relation to the differences caused by them. In Zambia and Uganda, local identities are more significant than in Tanzania. However, considering the global trend of multiculturalization, the situation in Zambia, Uganda, and most similar post-colonial countries, perhaps, may become no less promising. DISCUSSANT:

A.J. Faas (San Jose State University)

DESCRIPTION:

Since 2020 the world has been engulfed in a number of profound disasters happening all at once. Climate change, no longer creeping, is now severely affecting countless regions. As of winter 2022/3, it is as if the globe is under siege. Seemingly endless storms have bequeathed meters of snow and rain. Life-threatening temperatures have soared and plummeted in all regions endangering lives. Meanwhile, the world is recovering from a global pandemic that called for unheard sequestration measures, profound circumstances, and supply chain upheaval. Conflicts thought over have erupted; others remain protracted, apparently irresolvable. Forced migration has burgeoned, but there are fewer protections for people on the move. Displacement is everywhere: people, processes, and habitats all exhibit warning bells. Food systems, as we've known them, are in deep jeopardy, and food-price inflation has reached all-time highs. All this is happening on the back of a global economic slowdown, punctured by zones of hyperinflation, while big capital thrives to new heights. Unsurprisingly, calls to address the harm of colonial legacies and the deleterious effects of neocolonial policies are growing from local Land Back movements to global governance reform. The upshot is an interplay of not singular but compound crises - transboundary crises upending livability conditions. The 'emergency imaginary,' formerly more localized and circumscribable, is now diffracted, mobilizing multiple

scales and sites – including the areas of anthropological practice and reflection. Precisely: how are our sites doing? How are they coping and transforming? What new combinations and excesses travail them? Or, conversely, is it a sense of depletion or emptying that more aptly describes them? These questions for anthropology and anthropologists are critical because grasping these issues ethnographically is methodologically challenging. This roundtable explores how to capture uncertainty and transition, at once destructive and potentially promising, in particular sites and through methodological and/or conceptual contributions. Canceled last year due to its very topic, this roundtable features a set of diverse anthropologists addressing the miasma facing the world both personally and from their scholarship.

DESCRIPTION:

Anthropology is grappling with a breath-taking transition to a world where climate change and environmental degradation are part of daily life. Ethnographers are investigating how scientists, public policy planners, and victims of global catastrophes are making sense of a transformed reality in which 'nature' has become an interested party in 'social' and 'political' issues. This renewed interest in the social lives of other-than-human actors is part of anthropology's long-standing discussion of how humans socialize and

politicize nature --a conversation in which ethnographies of lowland South America have figured prominently (eg. Descola 1994, Fausto 2008,). This panel seeks to situate these emerging interests in conversation with lowland South American materials by bringing into relief how ethnographers working in the region and their interlocutors narrate socioecological transformation across ontological divides. Lowland South America is one of the most rapidly warming regions on Earth. Indigenous peoples, ribeirinhos (riverside inhabitants), and quilombolas (descendants of marooned slaves), are confronting compounded effects, such as reduced rains caused by rapid deforestation, as well as the impact of dams, roads and other infrastructure on health and wellbeing. A view of this reality from within siloed subdisciplines struggles to explain how these 'environmental' issues are simultaneously issues of justice, public health, metaphysical concerns, historical change and more. In this panel, we focus on alternative symbolic representations of these processes as they have been narrated through the language of 'environmental crisis.' How might affected peoples' narratives of transformation help to break open taken-for-granted concepts like 'climate change' and 'environmental justice'? We are particularly interested in how local narratives draw on vocabularies of disease, eschatology, ancestry, autonomy, and the breakdown of social relations, as well as images of healing and repair. What does such language or imagery reveal about how responsibilities for ongoing transformations are attributed? How might emerging political idioms challenge common modes of diagnosing and responding to identified problems? When might different parties be using the same terms, or drawing on the same images, to refer to drastically different things as these conversations unfold? Pushing against nature/culture and human/other binaries as we pursue these questions, what can we learn about where bodies begin and end?

Climate change, crisis, and the end of the world: "As a young man, I heard a prophecy that the world would end burning up in flames and accompanied by a loud roar. I didn't understand it back then, but it's become true. The temperature keeps rising, soon everyone will burn, and we are slowly being surrounded by the roar of fast boats and chainsaws..." The elder riverside resident of the Xingu who said this to me was fond of rhyme, verses, and poetry. He narrated the end of his world mixing references to higher temperatures, longer dry seasons, encroaching deforestation and a sense that time was speeding up to a pace unimaginable in his

youth. Above all, he pointed to the breakdown of exchange relations based on trust and credit (between a patron and a client, an Amazonian exchange system known as *aviamento*) as a sign that the usual order of things were disarranged. In this presentation, I will follow the lead that climate change is a moral problem connected to historical events in the *beiradão*, the great Amazonian riverside. I show that local accounts of history connects changes in the environment, infrastructure and sociality in a narrative that is remarkably similar to how theories of climate change connect the environmental crisis to the problem of capitalist greed. However, emergent local solutions to the problem do not take the form of individual action or technological reform, rather than an openness to rebuilding relations and a radical commitment to egalitarianism that stands in tension with the hierarchy of patronage. Presenter: Vinicius de Aguiar Furuie (University of Toronto, Department of Anthropology)

Food, disease, and sorcery among the Tupinambá of the Lower Tapajós River: The Tupinambá people of Lower Tapajós River, in the Brazilian Amazon, conceptualize the impact of the increasing consumption of industrialized food on their bodies in a very particular way. Seu João, a member of the community, notes that the ancient people ('os antigos') were very strong, and lived until their 100, 120, or even 150 years because they only ate game meat. However, with the introduction of industrialized food from the city and the destruction of their territory through the operation of the timber company Santa Izabel, the Tupinambá began to experience weakened states of the body and health problems. They also live less than they claim the ancient ones used to. This presentation will focus on Tupinambá's perception of the effects of how the incorporation of processed food from the city into their diet throughout the years has affected their health. I will examine how the destruction of their territory has contributed to this bodily weakening and created new diseases. I will also discuss a specific kind of sorcery named 'quebranto', which has analogous bodily weakening effects to industrial food. In the Tupinambá world, where bodies and the territories are mutually constituted, the violent and traumatizing changes they experience overtime with forest loss and food shortage are felt similar to being ensorcelled; that's to say, as a negative inversion of the exchanges and commensality that creates kinship relations and the healthy indigenous bodies. Presenter: Fabio Zuker (Princeton University, Department of Anthropology)

Between manioc and oil: subterranean conversations in the Ecuadorian Amazon: Drawing on partial connections with the Kichwa People of Sarayaku (Ecuadorian Amazon), I propose an ethnographic reflection on *uku pacha*'s underground world cosmopolitics and two 'substances', so to speak, that emerge from it: manioc (*lumu*), intended for beer production, and oil. Considering that the Ecuadorian State retains the rights over the subsoil, and that the extraction of so-called 'natural resources' continues to be celebrated as a source of economic growth, I stay with the non-trivial stories about how Sarayaku chose to reject extractive exploitation in their territory. This leads us to formulations where oil extraction is not 'only' a cause of environmental damage, conceived from the modern-Western separation between nature and culture, life and non-life, but also a politics of rupture of relations, extinction and forced migration of human, plant, mineral and water existences, among others, that cannot be repaired or restored. On a second level, I turn to feminine creativity – especially, manioc chakras, beer and ceramics where this drink is invariably offered. From daily relations of caring for the earth (*allpa*), Runa women introduce us to a subterranean world very different from the one conceived by the State and multinationals. Their theories present complex connections between the perishing of crops, the anti-oil struggle and the ways in which these inform people's engagement with concepts such as contamination, reparation, climate change and the end of the world - connecting with them, but also exceeding them. DESCRIPTION:

How do spirituality and faith shape individual and communal relationships to drugs, as well as addiction and rehabilitation? Is spirituality just a tool for recovery from addiction or might it also shape alternative trajectories and pragmatics of life on/after drugs? How do drugs and faith intersect to arrange political, ethical, and economic relations anew? Drawing on ethnographic case studies from the United States, Canada, Indonesia, India and Burma, we build on an expanding corpus of scholarship that examines the relationship between drugs and religion. We take neither the category of 'religion' nor 'drug' for granted. As such, we seek to understand how these categories create each other in contexts where addiction is widespread and where spirituality creates the conditions of possibility for a life lived otherwise. We also seek to understand the interplay between institutionalized religion and institutions of violence and care, as well as alternative paths to recovery that escape these institutions. This conversation emerges from our research in diverse religious traditions and social worlds: Islam, Pentecostalism, and Indigenous knowledge traditions, as well as harm reduction, militarism, and illicit economies. Drugs and religions hold enormous potential to be productive of new forms of life. Yet they are also inseparable from the violence, inequalities, and injustices of their social worlds. Extending ethnographic work in contexts of rehab, rehabilitation, and recovery, we open a conversation that grounds these emergent tensions in everyday life.

Illicit Theologies: Faith through Drugs in Burma's Narco Economy : Faith and addiction stand opposed in work by anthropologists who study Christianity and drug rehabilitation. Yet based on fieldwork in Burma with drug users who moved in and out of Christian rehabilitation as well as work in an illicit narco economy, I found that faith and drug use were not always incompatible. In fact, "meth," as one drug user described it, could even be described as a "medicine from God"— a modern day palliative like "wine in the Bible." Of course, not everyone agreed with this Christian drug user. Many in Burma did see drugs as antithetical to both faith and recovery. Yet even in this opposition a faith was constructed. The illicit economy and drugs, it seems, prompted debates, problematics, and questions of a theological nature. Entangled understandings and pragmatics of illicit drug economies and evangelical missions intersected to create what I call "illicit theologies." In this paper, I describe the

emergence of these illicit theologies in Burma and ask how these theologies forward new lines of inquiry around the relationship between illicit economies, drugs, and religion. Presenter: Joshua Mitchell

From Meth to Marijuana: Religious Discourse and Drugs in Aceh, Indonesia : In August 2022, the government of Aceh, Indonesia, announced a plan to legalize medical marijuana, a controversial decision that has nevertheless received support from the local religious establishment. My paper will trace the changing religious discourse around narcotics in Aceh, Indonesia, from the early 21st century to today, comparing marijuana with methamphetamine (otherwise known as meth or sabu) to understand discourse surrounding the religious governance of drugs. Scholars have noted the prevalence of both marijuana and meth in Aceh (Vignato, 2020), yet few have attempted to understand the local connotations of these drugs or changing perspectives on their social permissibility (Humas, 2022), especially given Aceh's status as an autonomous region within the Republic of Indonesia, the only one that implements Sharia law. I will consider media reports from 2005 to 2023 to trace the shifting discourses around meth and marijuana since the time of the Aceh-Indonesia peace agreement until the present day. I take religious publications – from fatwas to facebook posts – as a distinct "register" of speech (Agha, 2007) that simultaneously creates its own object of study (drugs) and that forms an ethical discourse around drugs' social permissibility. Thus, I examine the interplay between religious authority and language ideology. Specifically, I examine how marijuana has been differentiated from meth over the past two decades, crossing the discursive and ethical border from haram to halal. By mapping the emergent semantic field of marijuana, I aim to show the process through which permissibility and illegality is constructed, and the role of religious discourse in forming an ethics of drug consumption. Presenter: Louis Plottel

"The Goddess will take care of me": Competing Faiths of Drug recovery in Jammu and Kashmir, India: Young men in Jammu City recovering from injecting heroin use often nodded in the sky and said, "Mata rani sab dekh legi, Babe wali mata mera dhyam rakhti hai, jab ma ki ichha hogi main apne aap thek ho jaunga" (Goddess will oversee everything; Goddess will take care of me; whenever the Goddess wishes - I will get better). These were some of the statements I heard when conducting long-term fieldwork at the Opioid Substitution Treatment Center, a sole, state-sponsored facility providing Buprenorphine on daily basis to hundreds of

young men living in Jammu City, Jammu and Kashmir (J&K), India. As the region grappled with long-term militarization and political instability, the youth of Jammu expressed neglect of their futures in J&K region. Instead of having faith in state actors, they expressed faith in the deity Mata Vaishno whose shrine was located in Jammu City and whose pictures adorned every house and every shop in Jammu. Mata Vaishno was considered as the guardian angel of not only Jammu but several young men in recovery. One individual even left Buprenorphine during the 9 days of Navratri festival where Goddess and her many avatars are worshiped and celebrated. He was fasting for the goddess during those days and didn't want to malign his body with medicine. He was confident that he won't relapse because the goddess will take care of him, after all he was doing this for the Goddess. In this paper, I describe such ethnographic encounters to reflect on the entanglements of faith, addiction, and care as young men seek to control and manage their recovery. Presenter: Sugandh Gupta (University of North Carolina, Chapel Hill, Department of Anthropology)

Actively Creating an Otherwise: Making Plans while in Recovery from Opiate Addiction: Anthropologists have documented the large extent to which North American efforts to address women's addiction exclude focus on women's goals, desires, and hopes for a good life (Boyd 2001; Boyd 2017; Campbell 1999; Ettore 1992; Kohler-Hausmann 2010). In the American West, the hardships faced by women are underscored by ethnographers who focused on high rates of heroin addiction, incarceration and death (Garcia 2010) and on mining communities (Smith 2014). In Nevada, a state known for its mining industry, cattle farming, gambling businesses, and legalized sex-work, recidivism rates among women addicts are steady (Corrections 2020), suggesting that interventions and treatments are far less effective than expected by law makers and medical professionals. This paper focuses on the intersection between women's happiness/well-being and addiction to opiates in the American West. It explores Northern Nevadan women's efforts to create good lives (Robbins, 2013), their relationships with their addiction while receiving care for opioid addiction from a non-governmental organization I call Life. I focus on how recovering addicts build their hopes for possible and enjoyable futures and what they have faith in during the process of recovery. I argue that recovery from opiate addiction means different things to different people. Presenter: Madalina Alama

Inside Somali Rehab and Community Initiatives: In recent years, Somalis in North America have grown concerned about the rise of opioid-related overdoses and deaths among Somali youth (Glover, 2010). Somali community organizations, youth programs, and rehab facilities have emerged to confront the growing pressures of the fentanyl epidemic. My ethnography in Toronto and Minnesota follows the influence of these community initiatives. In particular, I document how these community resources turn to Indigenous-religious frameworks to conceptualize drugs, drug usage, addiction, and youth futures. By examining how Somali youth access these resources, I consider how the Somali diaspora re-embodies traditional epistemologies of health in the face of the fentanyl epidemic. More specifically, my project investigates how Somalis expand the parameters of traditional healing as they construct the social reality of addiction within indigenous-care economies of friendship, community, and Islam. At large, my project attends to the ways these traditional frameworks of drug use decolonize harm-reduction constructions of recovery and risk. Contrary to harm-reduction mandates, Somali communities and rehab centres foreground Somalis' histories with systematic racism to shape risk and community health beyond individual encounters with fentanyl. On this account, my project diversifies religious-based recovery models by showing how Somalis' use of Islam and tradition develops "non-Western approaches to... drug use, addiction, and treatment" (Meng et al., 2021, p.6). Finding Love in Violent States

2:00 PM - 3:45 PM TMCC - 715 A
Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Sarah Luna (Tufts University)

CHAIR:

LaShandra Sullivan (Northwestern University), Amahl Bishara (Tufts University, Department of Anthropology)

PRESENTER:

Sarah Luna (Tufts University), Sarah Ihmoud (College of the Holy Cross, Department of Sociology and Anthropology), Mariana Mora (Center for Research and Higher Studies in Social Anthropology (CIESAS)), Sarah Pinto (Tufts University)

DISCUSSANT:

Andrea Bolivar (University of Michigan), Brian A. Horton (Brandeis University, Department of Anthropology)

DESCRIPTION:

As queer and feminist ethnographers engaged in life affirming research in spaces of colonial, gendered, and racialized violence, we consider collective and collaborative methods of getting by, making sense of, and struggling to change the world. This is especially challenging and urgent as we live, work, and write in contexts of multiple ongoing crises and disciplinary theoretical pessimism. We frame our interventions around practices of collective love, care, and erotic intimacies that open alternative paths to liberatory worldmaking and social change. This roundtable includes discussions of feminist artists and organizers in Palestine, dyke transfeminist sexual pedagogues in Mexico, Black lesbian activists in Brazil, artists in India, collectives of Indigenous, Afro-Mexican, and mestiza women in Mexico, and transgender sexworking Latinas in Chicago. Bringing these sites into conversation allows us to think across geographies about the multiplicity of ways in which state violence shapes social life. It allows us to investigate the intimate and embodied as primary sites of feminist rebellion. In each of these sites, we learn about the embodied social, spatial, and affective ways that people imagine and create new possibilities in the face of gender violence, imprisonment, and other forms of state sanctioned death and removal. How can we think about love and violence in relation across these multiple sites? Considering love beyond (but not excluding) kinship, state sanctioned relationships, and the couple-form, some panelists explore emic or etic conceptions of love while others propose ethnographic praxis as a form of love. We interrogate the ethical and political imperatives for anthropological practices to be aligned with the forms of collective care, love and worldmaking that we write about. How do different temporalities of anthropology that intersect with professional and other timelines for anthropologists shape possibilities for supporting those we write about? How might anthropologists harness the revolutionary potential of the social sciences to support the radical and life-affirming worldmaking of our interlocutors?

Health in Transition: Digital Technologies and Data Shaping the Future of Healthcare

2:00 PM - 3:45 PM TMCC - Hall G - MI

Executive Oral Presentation Session - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Tanja Ahlin (University of Amsterdam)

PRESENTER:

Sandra Bärnreuther, Claudia Lang, Tanja Ahlin (University of Amsterdam), Roanne van Voorst (University of Amsterdam), Tom Neumark

DISCUSSANT:

Nafis Hasan (University of Pennsylvania)

DESCRIPTION:

Over the last decade, discussions around digital health have seen a massive upsurge in scientific, corporate and media attention. Accelerated by the Covid-19 pandemic, digital healthcare solutions such as telemedicine, virtual care, artificial intelligence (AI), smart wearables, platforms, or digital contact tracking are hailed by many to transform health, nationally and globally. Digital technologies in health are the target of multiple debates about their potential effects on the lives and governance of those they aim to affect. Their critics argue that digital technologies cannot solve broader problems of inequity and structural violence. For them, digital or robotic care are technological fixes, band-aids or magic bullets that obscure decayed health infrastructures and larger structural and environmental precarity. Critics also worry about surveillance, dehumanization and robotization of care, or algorithmic violence. Proponents see digital health technologies as possible bridges of gaps in the health system and celebrate their emergent potentials for access, equity, agency, and business. Many attribute hopes for better access, greater effectiveness of medical interventions, and for cost savings to artificial intelligence (AI), machine learning algorithms and telemedicine. These new technologies not only aspirationally expand access to care, diagnosis and medicine; they also widen and expand the clinical gaze through datafication and new spatial connectivities and provide new forms of surveillance and tracking. With this panel, we aim to go beyond the polarizing debates to inquire how to 'do healthcare better' now that it is becoming decidedly shaped by digital technologies. The question is thus not anymore whether technologies are here (in healthcare) to stay or not, or whether they are having solely positive or negative impacts on healthcare organization and provision. Rather, the question is how to collaborate with digital technologies to achieve 'good healthcare' in the current circumstances of decreasing numbers of healthcare professionals in the face of, for example,

increasingly aged populations or crises and uncertainties that lead more and more people to experience mental health issues. Growing numbers of people also live in transnational contexts in which (health)care occurs with the support of digital technologies. Nurses, doctors and other healthcare staff have to deal with digitalization of care on a daily basis within the institutions in which they work. Healthcare is clearly in a transition towards digital healthcare, often coming with a promise of more equitable opportunities to pursue health and wellbeing but also create new inequalities and exclusions. How is this transition imagined, practiced, and negotiated? What kind of interactions between people, different technologies and big data are shaping it, and in what ways? How does the transition affect knowledge, experience and intervention in health? In this panel, these questions are approached in a transdisciplinary way by scholars working across anthropology, science and technology studies, and computer science.

Where there is no patient: non-usage of digital health technologies in rural India: Digital technologies in healthcare are often described as changing the face of healthcare delivery and public health. Particularly in the primary care sector, digital technologies are seen as enabling access to doctors in remote areas, thereby building a bridge between urban doctors and rural patients. This seems particularly promising in a country like India where the majority of people live in rural areas while most biomedical doctors reside and practice in urban spaces. Various actors are currently trying to mediate this “lack” by introducing digital consultations to areas where there is no doctor. When examining the implementation of digital programs, particularly in the Global South, it is noteworthy, however, that many do not survive a pilot phase and are often abandoned. In this paper, I deal with questions of usage and non-usage by describing the healthcare landscape in a village in West Bengal, a state in Eastern India. Two digital consultation systems have been implemented in this village: one by the state government and one by a social enterprise. But both face the challenge of absent patients. Describing how villagers do not engage with digital technologies, I discuss how notions of “good healthcare” are perceived in different ways by project designers and users. Presenter: Sandra Bärnreuther

Mental health care in transition: Automated therapy and designing from the South A growing market of : A growing market of mental health apps addresses a mounting mental health crisis through technology. These apps are characterized by techno-utopian

imaginaries to transform global mental health. Interventionists and entrepreneurs celebrate them as innovative and cost-effective technologies that bridge a treatment gap, ‘leapfrog’ infrastructural constraints, circumvent stigma, and intervene in cases in which face-to-face interaction fails. Critics worry about techno-fixes and band-aids that obscure decaying mental health systems and broader economic, political, and environmental precarity. Going beyond these polarized debates and taking ‘techno-fixers’ seriously, I use the case of the Indian-developed app Wysa to offer a more nuanced picture. Designed by a team of software engineers, psychologists and conversation designers in Bengaluru, outside the usual centers of digital excellence, Wysa is a chatbot, designed to be a “digital couch” or “AI friend” built into your smartphone. Using natural language processing, it aims to help users in reducing distress, get in touch with emotions and thought patterns, deal with distressing situations, and develop resilience. Anonymous, available around the clock, and fits in your pocket, the app relocates the therapeutic relationship into a digital encounter with a machine and bridges temporal and spatial obstacles. Which forms of care emerge in automated therapy and which new inequalities are produced? Which assumptions about self and wellbeing are encoded, and how? Based on fieldwork and conversations with Wysa’s designers and psychologists, I explore how they imagine automated therapy, encode situated assumptions of wellbeing and everyday working on the self, and build networks with governments, insurers and hospitals. Presenter: Claudia Lang

Transnational Care Collectives: Digital technologies in remote elder care : How do digital technologies shape how people care for each other and, through that, who they are? This is a particularly pertinent question today, as technological innovation is on the rise while increasing migration is introducing vast distances among family members. The situation has been additionally complicated by the Covid-19 pandemic and the requirements of physical distancing, especially for the most vulnerable – older adults. Based on ethnographic fieldwork with families of migrating nurses from Kerala, India, I explore how digital technologies shape elder care when adult children and their aging parents live far apart. Transnational life is relatively recent so there are no established rules about what remote care could be and how it should be done to be considered good. Families, then, are in a period of transition as they work to establish new norms and expectations of elder care. Coming from a country in which appropriate elder care is closely associated with co-residence, these families

tinker with smartphones and social media to establish what remote care could be and how it should be done to be considered good. In the process, technologies impact family power dynamics. Through the notion of transnational care collectives, I uncover the subtle workings of digital technologies on care across countries and continents when being physically together is not feasible. Presenter: Tanja Ahlin (University of Amsterdam)

'The future of health - cooperation between medical experts and algorithms': This paper presents the first stage of a 5-year, multi-sited research project, studying an ethnography of a currently evolving revolution in global health: the increasingly common collaboration between medical experts and algorithms. The research is funded by the European Research Committee, and takes place worldwide, with six country case studies. With health data being considered countries' 'future oil', public and scholarly concerns about 'algorithmic ethics' rise. Research has long shown that algorithmic datasets (re)produce social biases, discriminate and limit personal autonomy. At the same time, it is also clear that algorithms are able to improve public health. The presentation of this paper signifies the beginning of an urgent experiment between researchers, future-foresighters, medical experts and programmers, with an innovative 'future-in-the-now' methodology. Medical experts are asked to share the opportunities and challenges they see ahead when it comes to human-nonhuman collaboration. With this input, visualizations and games will be built that will help the medical and social community to forestall likely ethical and professional dilemmas. Eventually, this data will be shared widely, and without restrictions to access. Presenter: Roanne van Voorst (University of Amsterdam)

Hypeful worlds, machine learning and healthcare in Tanzania: Digital and machine learning technologies within the domains of health and medicine are frequently described by critical scholars and journalists – and even industry insiders – as capitalist hype. The promises made for these technologies are viewed as exaggerated, or in excess of what they will or can deliver, and are understood to be more about corporate interests than as a basis for fairer healthcare systems. This perspective is understandable given medical technologies' historic entanglement in political and economic relations that have perpetuated inequality and myriad forms of violence. At the same time, many scholars are urging us not to shy away, politically, from the things that are important to us even if they have

been captured by 'power and hype' (Puig de la Bellacasa 2017). We should, they argue, 'stay with the trouble' (Haraway 2016) or 'love our monsters' (Latour 2012). This paper draws on material from research on the design of digital health technologies by Tanzanian machine learning experts, to consider these suggestions more closely. It argues that imagining and negotiating a digital health transition in a country with a healthcare system in which human expertise and technological capacity are extremely limited, involves reckoning both with the technologies themselves and the apparently exaggerated promises that accompany them. Therefore, rather than dismiss technologies as hype, it draws upon sociology's and anthropology's interest in the future to approach hype ethnographically. Doing so raises questions about the political implications of caring for, and dwelling within, 'hypeful' worlds of digital health. Presenter: Tom Neumark

High School Anthropology Showcase

2:00 PM - 3:45 PM Room 1 -

ORGANIZER:

Caitlyn Kolhoff (American Anthropological Association)

PRESENTER:

Dani Halperin (Horace Greeley High School), Talia Udelman (Xavier College Preparatory), Sidhartha Basu (Deep Run High School), Marco Gori (Oakton High School), Adrienne Fung (Milton Academy), Eva Jia (Appleby College)

DISCUSSANT:

Sonia Chinn (University of Texas at Austin)

DESCRIPTION:

Join us for a special presentation of anthropological research completed by high school students. In this session, we will hear from students who have delved in the world of anthropology, researching issues related to education, art, identity, mobility, and the environment. Though the showcase, these future anthropologists will demonstrate their critical thinking, cross-cultural understanding, and curiosity in tackling complex anthropological questions. Not only will presenters discuss their research, but we will also hear how they became interested in anthropology and what it is like to pursue this research while in high school. Woodstock's Immediate Media Coverage: How and Why the Media's Perspective on the Festival Changed - Dani Halperin, Hamilton and History: A Sentiment Analysis of Public Opinion on Alexander Hamilton - Talia Udelman,

Cultural Anthropology In Educating Congolese Refugee Children - Sidhartha Basu, TikTok Influence on Attitudes Towards Plants - Marco Gori, Pure American: The Progressive Era Transformation of Immigrant Cuisine - Adrienne Fung, The Forgotten People: Analyzing the Invisible, Intersectional Discrimination Against Métis Women and Future Possibilities - Eva Jia

Anthropology and Environment Society

ORGANIZER:

Joshua Fisher (Western Washington University, Department of Anthropology)

CHAIR:

Joshua Fisher (Western Washington University, Department of Anthropology), Rebeca Ibañez-Martin

PRESENTER:

Heather Paxson (Massachusetts Institute of Technology, Department of Anthropology), François Thoreau, Else Vogel (University of Amsterdam), Rebeca Ibañez-Martin

DESCRIPTION:

'Metabolism is the central question of life,' writes Hannah Landecker. More than a circular process of eating and being eaten, the term speaks to those emergent processes by which organisms are continually displaced from equilibrium in order to stay alive. Metabolism asks how energy, nutrients, waste, and toxins circulate, how they feed transitions in chemical, biological, ecological, as well as social and economic states. Taking the ultimate stakes of politics as the ability to define life and shape forms of living, this panel seeks to extend these insights by exploring questions of 'metabolic politics' – the open and entangled systems that extend well beyond individual bodies and trouble distinctions between figure and ground. Participants draw upon a diverse set of theoretical/epistemological positions from STS, political ecology, and environmental/medical anthropology, but they are united by their inclination to register a critical reconfiguration of this important concept. On the one hand, metabolic politics extends the scope of contemporary conversations about metabolism by pushing beyond organismal functions and into the circulatory flows of urban, industrial, and agricultural

space. On the other, it challenges longstanding metaphorical usages of the term in Marxist thought that rest upon simple dialectics of nature/society. These frameworks have provided compelling accounts of everything from socio-economic transitions within urban systems, the material and socio-spatial transformations of nature, and the separation, or 'metabolic rift,' between human production and nature induced by capitalism. But they remain largely disconnected from the particularity of material flows and the complex and indeterminate ways they are bound up with specific social, political, and economic processes. Metabolic politics traces this entwinement of materiality, semiosis, and power. Thematic foci include the 'capture' of metabolic processes by industrial agriculture, energy production, pharmaceuticals, infrastructure, and other capitalist systems that depend upon the intensification of (already anthropogenic) nonhuman vitalities to exceed human inputs and produce a surplus. They also address the disruptions produced by metabolic excess and their consequences for health, ecology, economy, and climate. Still others examine erasure of metabolic waste and other chemical inputs. While metabolic thinking often encourages what Landecker refers to as 'the chemical gaze,' a final through-line concerns vernacular considerations of metabolic relations, small and large, including those that challenge modern dualisms of nature/society. These ruminations sketch a method for drawing attention to interlinked processes rather than individuated bodies or things. They illustrate the power of thinking-in-place - a keystone of decolonial thought - as well as the prospects for theorizing by other means, including from the gut. Metabolic politics thus registers a challenge to biopolitical concerns with life, reproduction, and death, foregrounding those somatic processes of eating, growing, and excreting in the governance of their endless becoming that Turnbull and Oliver call 'metabo-politics.' Given the pressing need for a civilizational transition in ways of living, this panel also poses a central political-ethical question: What forms of metabolism should we cultivate, and how can metabolic politics help us envision that transition?

The Metabolic (Microbio)Politics of U.S. Food Import Safety Regulation: A "paradigm shift" is underway in U.S. government oversight of food safety and biosecurity. Previously, food safety import regulation was premised on keeping contaminants out of the national food supply by securing the border through surveillance and import refusals. However, as the volume of global trade has soared, border control measures turned many U.S. ports of entry into

“chokepoints” where the flow of commerce encountered costly friction. The transformative 2011 Food Safety Modernization Act (FSMA) has shifted “the focus ... from responding to contamination to preventing it.” Today, absorptions of foreign foodstuff into the U.S. body politic are metabolically regulated by twisting the national body inside out. Not only must food producers the world over register with the U.S. Food and Drug Administration (FDA) before their goods can be offered for import, U.S.-based importers must be able to verify that their international suppliers meet safety standards set by U.S. agencies. The metabolic politics of American food safety and biosecurity are enacted less by keeping “bad stuff” out than by extending the threshold of the regulatory zone outwards, such that (as an FDA commissioner said in 2012) “regulated products know no borders.” Thus, what’s metabolically absorbed into the U.S. today is not just sanctioned foodstuff but entire food industries. And border control, employing risk-based analytics, has become a practice of audit, of evaluating information that circulates quite apart from, yet remains essential to, the material goods it indexes. Presenter: Heather Paxson (Massachusetts Institute of Technology, Department of Anthropology)

When the metabolic machine stops: the battle for pastures in Pinzolo, Italy: In this contribution, I will suggest the notion of 'metabolic inadequacies' to examine what we could learn from a deeply situated version of the metabolic rift. Anthropologists of techniques in general and, in particular, Bruno Latour, in his *Inquiry into Modes of Existence* (2012), have shown how relevant are breaks in the course of events, how revealing these can be of the dominant, often naturalized and invisibilized courses of action — with the paradigmatic example of the computer failure. I will address the particular case of the access to the pastures for local farmers in the small town of Pinzolo, in the Italian Alps. I will describe some mismatches between European policies and bureaucratic endeavors, local farmers struggles to access Malghe (traditional mountain pastures) and the unfit opportunism of milk industries from the valley, as well as the deepening gap between claims to heritage and tradition, on the one hand, with workable ways of life on the other. Building on these much situated stories in Pinzolo, I wish to elaborate further the notion of 'metabolic inadequacies' as pointing out to moments of rupture in varied courses of action that can be understood as deliberate operations of 'adequation,' i.e. imposing a certain metabolic order of things over a complex situation, potentially at the expense of putting other beings involved in this situation in an awkward position. That

way of characterizing metabolic politics may help us resisting to assign metabolism either to a metaphoric or realistic ontology, but instead invites us to consider those as entangled processes that engage bodies, practices and forms of life that are not indifferent to the situation, and which might require a totally different sense of 'adequacy.' Presenter: François Thoreau

Dairy Farming’s (In)digestions: the Metabolic Politics of the Dutch Nitrogen Crisis: This presentation considers the dilemmas of eating, feeding and excreting in the ‘age of Flatulence’ (Govindrajan, 2020) from The Netherlands, where bovine metabolism has recently become problematized in new and strikingly public ways. In 2019, the country’s highest administrative court, judged the Dutch approach to curb nitrogen emissions to be in conflict with European directives for nature conservation. Existing permits for industrial expansion and construction projects were withdrawn. The ruling propelled the country into the so-called ‘nitrogen crisis’, a set of legal, economic, ecological, social and regulatory challenges posed by an excess of nitrogen. In the theatre of the Dutch nitrogen crisis, cows take center stage. In this article, drawing on fieldwork with farmers and veterinarians on dairy farms, I explore what emerges as ‘good digestion’ amidst this crisis; and tease out how dietary needs and metabolic capacities of organisms and ecosystems are defined and intervened on. I first situate the nitrogen crisis within historically and nationally specific agricultural practices and metabolic ambitions, involving different arrangements of cow-land relations, or ‘metabolic fits’. I then zoom in on the dairy farm, where I contrast ethnographic narrations of nutritional care practices of farmers and veterinarians with governmental problematizations of cows’ digestive processes. At stake in this metabolic politics, I argue, are different versions of dietary needs, foregrounding different notions of metabolic vulnerability. I conclude by highlighting how metabolic political tactics involve the categorizations, valuation and aligning of different eaters, emphasizing the work of taste in shaping metabolic collectives. Presenter: Else Vogel (University of Amsterdam)

Water, waste water and soil: a material and metabolic politics: Water and waste water management is challenged by the intensification of material flows brought about by urbanization and industrialization. In such relations, biochemical processes carried out by living organisms are crucial to maintain urban environments, aquatic systems, and soils as livable as possible. What are the spatial dynamics that regulate the engagement with such processes? What are the

metabolic and material transformations that those processes interrupt or bring about? Building on our two case studies in the Netherlands and Nicaragua, we contend that infrastructural engagements with water, wastewater and soil are not just technical solutions but metabolic and material ways of composing collectives. Through engagements with soil, water and waste water, what is “real” is recursively and socially produced (Fisher and Nading, 2023). Caring for such metabolic relations recognises that flows of water and soil relations demand a relational, political, and material engagement from people and other beings. Building on diverse strands of metabolic studies from Urban Political Ecology (UPE), Anthropology and Social and Technology Studies (STS) we further elaborate how drawing attention to interlinked processes rather than individuated bodies or things helps to illustrate the ‘the power of thinking-in-place’ — a keystone of decolonial thought — as well as the prospects for theorizing by other means, including from the gut. Presenter: Rebeca Ibañez-Martin

Moral Economies of Representation and The Production of Value in Artisan Food/Drink Markets

2:00 PM - 3:45 PM TMCC - 206 E

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Food and Nutrition

ORGANIZER:

Edward Fischer (Vanderbilt University, Department of Anthropology)

CHAIR:

Edward Fischer (Vanderbilt University, Department of Anthropology)

PRESENTER:

Edward Fischer (Vanderbilt University, Department of Anthropology), Janita Van Dyk (University of Toronto, Department of Anthropology), Rachel Black , Amanda Hilton (University of Arizona, School of Anthropology)

DESCRIPTION:

This panel explores moral economies of representation in Artisan food markets, encouraging a comparative discussion of how moral economies of representation operate in different settings, and with different artisan food, and how these economies relate to the production of value. Representation is a key dimension of artisanal

production: from the decision to label one's industry as 'artisanal' through to the tropes that are used to place artisanal products in the market (these include, but are not limited to: provenance, craftsmanship, sustainability, authenticity etc). This panel departs from the observation that decisions about how to represent a product are rarely a simple matter of maximizing sales and profit but underpinned by complex and often deeply held moral imperatives. The panel draws on ethnographic research from settings as diverse as Sicily, the Northeast of India, Bologna, Central America, and the United States of America to comparatively explore the moralities of representation underpinning the production and consumption of different artisan food. It will examine a variety of approaches to value, for example as generated through acts of translation across boundaries, and alternately as creative claims built upon different moral logics which at times exist in tension, and how values are (re)shaped in periods of extended crisis. The panel will explore how moral economies co-constitutively interact with the social, moral, political contexts of production and consumption, and how the moral imperatives that power artisanal production and consumption are implicated in diverse ethical projects of self and community formation. The panel considers how ethics, morality and representation come together to shape the multifaceted social, economic, and historic relationships and imaginations underlying the production and consumption of Sicilian olive oil, specialty coffee, authentic ethnic foods, and other products. Themes that will be discussed include the claims different moral projects of representation make; their effects; why they are made; what is at stake; the fragility inherent in moral projects of representation and the ways value is created and inscribed onto products; the way moral economies interact with export-based food markets; and how moral economies of representation become enmeshed in projects of self, and community, in situations of structural violence. Broader goals of the panel are to understand how different moral economies of representation co-exist and interact with the nature of the food & drink they stake a claim to represent. What happens when there are instabilities in these moral economies? How do they interact with the rules, regulations, and borders (material, ideational and otherwise) which shape the nature of these artisan markets, and how do these moral projects sustain/speak back to these different borders? How do different moral projects create and structure inter-relationships between spheres of value? How can attention to moral economies of representation speak back to existing theories of value?

'Discovering' Quality: Third Wave Coffee, Artisanal Tastemakers, the Creation of Value: Based on a study of the high-end ('Third Wave') coffee market in the USA and on research conducted with Maya farmers in Guatemala, this paper examines how quality gets created by translating values across symbolic and material worlds. Roasters, baristas, and other tastemakers have developed a new lexicon of coffee quality around certain values that transcend the beverage itself: a dedication to craft, a quest for quality, a veneration of authenticity, and a commitment to building social relationships through the commercial trade. Coffee merchants talk about "discovering" quality, as if it were independently out there in the world, and the specialty coffee industry has built up elaborate scientific protocols to ground their definitions of quality in empirical terms, creating new metrics, standards, and lexicons for taste. The irony is that in looking for quality, these same coffee professionals and enthusiasts are also defining what constitutes quality. Through conversations and competitions, they work out among themselves conventional understandings about which traits should be valued and which should be discounted, the flavors that are in and those that are out, what commands a price premium this season and what does not. In this system, the real power derives from the ability to define what quality is—not in the celebrated labor of finding rare beans and unusual flavor profiles. I conclude by showing how the quest for artisanal quality in the coffee market unintentionally perpetuates classic dependency patterns of global capital accumulation. Presenter: Edward Fischer (Vanderbilt University, Department of Anthropology)

From Gastronome to Artigiano: Creating Artisanal Selves and Values in Northern Italy: Among proponents of the international slow food movement in Northern Italy, taste education functions to produce the identity of the gastronome: someone who values above all pleasure, good food, and convivial consumption experiences. Taste education likewise entangles economic and moral values of foods defined as "artisanal"—produced at non-industrial, small-scale sites with various scales of historical continuity and presence. However, increasingly those central to the movement seek out opportunities not just to eat good food, but also to make it. Translating the voracious appetite of the gastronome to becoming an artigiano, or artisan, is not as easy as it first appears, especially for those new to forms of production predicated on long-term and generational knowledge transmission. This paper unpacks the compromises, translations, and strategies of those who first learned to "eat well" as they learn to

become and represent themselves as artigiani. Drawing from fieldwork on learning spaces at the center of slow food in Bra, as well as a Bolognese bakery initiated and run by alumni of slow food's university, I demonstrate how consumer and producer representations and definitions of artisanship and artisan selves transform in co-constitutive ways the professionalization of the gastronome amidst the changing landscapes of food economies in Northern Italy. Presenter: Janita Van Dyk (University of Toronto, Department of Anthropology)

The changing value of local food during the COVID-19 pandemic: can economies of community survive?: The COVID-19 pandemic highlighted the weaknesses of the U.S. national food system. Fleetingly, Americans turned to local farms to ensure they could access food safely in a time of uncertainty. This paper examines the economies of community that formed around local farms and how direct engagements between consumers and producers in the face of the pandemic deepened these economic structures that often put community well-being above profits. Within a capitalist system that prioritizes efficient mass production, economies of community illustrate that solidarity can improve local food system resilience. However, as the food system recovered and most people's lives returned to a more normal state, consumers went back to shopping in supermarkets, farmers suffered from burnout, and the ties that bound local food producers and consumers began to unravel. Based on qualitative and quantitative research carried out in the summer of 2020 in New London County in southeastern Connecticut, this research draws on ethnographic interviews with small-scale farmers who developed innovative ways to feed some of their community's most vulnerable members. Follow up interviews were conducted in 2023 to better understand why economies of community have faltered in the wake of the pandemic and how the value of local food changed. Presenter: Rachel Black

The Parallel Lifeworlds of Sicilian Olive Oil: Moral Economies of Local vs Export-Oriented Markets: This paper takes the case of a Protected Geographical Indication (PGI) for Sicilian extra-virgin olive oil to explore 1) the moral economy of Sicilian olive growers and olive oil producers' olivicultural livelihood strategies, and 2) the parallel lifeworlds of local versus export-oriented olive oil production. Geographical Indications act as intellectual property tools to protect place/product names from imitation, and at the same time they seek to codify all of the characteristics that make a place and a food what it is—historical,

ecological, economic, and sociocultural. In this bid to define and capture landscape and food value, however, other moral economies or systems of exchange are devalued or overlooked. Sicilian oliviculturalists are positioned and position themselves on the global market utilizing different representational tactics, creating and claiming value for their products based on production practices, provenance, family history, and other narrative and material strategies. Drawing on 14 months of ethnographic research and about 3 years of living in situ, I argue that Sicilian oliviculturalists' production and inscription of value into their oil, their landscapes, and their livelihood draws on a praxis of care and a complex negotiation of global commodity markets—and that the local lifeworld of Sicilian olive oil is based on social relations of trust that color distribution and consumption, a moral economy in tension with export-oriented markets and with legal economic tools such as the PGI. Presenter: Amanda Hilton (University of Arizona, School of Anthropology)

Muslim Death: Mourning, Ethics, Modernity

2:00 PM - 3:45 PM TMCC - 206 C

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Sadaf Ahmed

CHAIR:

Usmon Boron

PRESENTER:

Alaa Attiah (University of Toronto), Sadaf Ahmed, Joud Alkorani (Radboud University Nijmegen), Usmon Boron

DESCRIPTION:

This panel dwells on transitions, conceptual and material, between life and death in Muslim traditions across disparate political formations. Exploring eschatologies alongside mourning and mortuary practices, we approach traditions of death as an ethico-political terrain through which modern states and their Muslim subjects contest and configure the porous boundaries between life and death, the living and the deceased. Accordingly, this panel moves beyond notions of death as a distinct biological or sociocultural phenomenon understood through the trope of liminality. Attending to various Muslim life-forms, we trace how death is not necessarily compartmentalized and demarcated, but can instead suffuse the textures of

everyday life as a means to ethical and political action; retroactively attach a narrative trajectory to the life that came before; act as a focal point through which people contest established conceptions of Muslim interiority and emotional expression; and anchor Muslims in an Islamic tradition amidst fraught socio-political contexts. The first paper traces how the political context of post-Mubarak Egypt creates particular overlaps and distinctions between two registers of death - those of revolutionary martyrs and historical saints. The second paper considers an emerging sociality of Muslim mourning, one formed at the juncture of a North American therapeutic orientation and the dislocation of a diasporic condition in Muslim Canada. A third paper examines how Islamic eschatologies offer the only sense of certitude and finality in the hyper-transitory context of migrant Dubai, shaping the everyday ways Muslims construct relationality and permanence. In contrast, the fourth and final paper treats mortuary rituals as the penultimate tethering of the self to the Islamic tradition under conditions of Soviet secularism in Central Asia, a tethering that comes into relief when a life alienated from tradition contemplates its finitude. Taken together, these ethnographies approach life and death as braided realms and co-constituting ontologies. In doing so, they foreground practices and imaginaries of death as principal modalities through which the Islamic tradition unfolds and transforms.

Between Two Deaths: How to Die before You Die? :

This paper is a reflection on the death of protestors in the squares of the 2011 Egyptian revolution and the death of Sufi figures resting in Egyptian "cities of death." I bring together revolutionary writings and Sufi texts (Al Ghazali, Ibn Arabi) alongside ethnographic fieldwork in Egypt, where I both volunteered to search for the bodies of those who died during the revolution and traveled around the country to locate the shrines of lesser-known saints for their spiritual followers. I reflect on the contrasting and overlapping registers of death that these aspects of my research reveal: the newly dead and the long dead; the political sacred and the religious sacred. Whether after the revolutionary defeat or as part of a spiritual journey, colloquial idioms circulate in contemporary Egypt that render each of these deaths as a mode of life. On the one hand, the revolutionary slogan about the martyrs changed over time from "we will take their revenge, or we will die as they did" to "we are dead as they died, but they are the winners." On the other, the Sufi sayings "die before you die" or "sleep is half death" trace different modes of death while still being alive. In each context lie distinctions between actual death and real death,

between complete death and partial death. Combining ethnographic fieldwork with textual analysis, this paper traces the resonances and differences in how these distinct modes of death are defined in relation to life across an otherwise shared historical moment. Presenter: Alaa Attiah (University of Toronto)

Therapeutic Theologies: Child Loss in Muslim Canada: This paper explores modes of grief and mourning by second-generation bereaved Muslim parents in the context of child loss in contemporary Canada. Drawing on participant observation and life history interviews, I trace how common idiomatic consolations that circulate within Muslim communities (e.g., “God willing, you have a house in Paradise now”) have lost their salience; a born-generation of bereaved Muslims no longer wish to hear such a statement from others, yet neither do they wholly disavow the statement’s religious truth. I parse through this shift in discursive terrain, situating these parents’ experiences of loss in a set of broader social conditions: a low national child mortality rate that renders experiences of child loss to a domain of exceptionality; a therapeutic orientation that characterizes North American contemporary life; sacralized notions of childhood, where children are no longer units of economic production but objects of sentiment; and a lineage of modern reformist Islam, one formed through diasporic dislocation. I show how discursive spaces of child loss in Muslim Canada uncover an emerging sociality of Muslim mourning with its own affects and theologies, one formed at the juncture of reformist modes of Islam and a North American therapeutic register. Presenter: Sadaf Ahmed

Here and After: Relating to Others in Dubai in Light of the Afterlife : This paper explores how divergent imaginations of the afterlife inspire various modes of living with others here and now. Foregrounding the experiences of two migrant Muslim women residing in Dubai, I ask how life and death are valued differently when the reality of a world beyond this one is affirmed, doubted, or rejected. These women’s eschatological positions provide a starting point to tracing how ethical and affective interactions with family and friends are negotiated in relation to an (after)life yet to come. This question is particularly important when these intimate others hold contrasting perspectives on life, death, and what transpires after. It also takes on particular valences when asked in Dubai, a city where migrant lives are marked by a profound precarity and transience emerging from the nation’s migrant sponsorship regime. The narratives of two women offer distinctive accounts of how this instability marks oneself and one’s

exchanges with others. For one woman, everyday anxieties inspire an individual effort towards self-betterment alongside a collective effort with others who are working towards the Hereafter – the only certitude in an otherwise tentative life. For another woman, an uncertainty in the afterlife, combined with the insecurity of daily life in Dubai, encourages a *carpe diem* mode of being which pits her own desires against her father’s expectations for her behavior. In comparing these accounts, I offer one example of how notions of subjectivity and relationality can be analyzed in conjunction with questions of death and eschatology, reflecting also on the implications of such a study. Presenter: Joud Alkorani (Radboud University Nijmegen)

An Ethics of Completion: Islamic Burial Rites in Kyrgyzstan : This paper reflects on Islamic burial rites as a living facet of the Islamic tradition in Kyrgyzstan, a country that experienced over seventy years of Soviet anti-religious politics. The Soviet state alienated the majority of Central Asian Muslims from the basics of Islamic theology and key devotional practices such as the five daily prayers, almsgiving, and veiling, among others. Despite this, most Soviet Muslims continued to believe in God and perform Islamic life-cycle rituals. The Islamic funeral prayer (*janaza*) was of particular significance. As Marriane Kamp has shown, even during Stalin’s Great Terror many Central Asians were adamant about burying their dead Islamically, perceiving *janaza* as a sort of red line that the Soviet state could not cross. Today, *janaza* continues to be one of the most important Islamic rites that non-observant Kyrgyzstani Muslims remain committed to. Even those who are antagonistic towards pietistic forms of Islam, which have been increasingly influential in Kyrgyzstan since the 1990s, remain loyal to *janaza* and aspire to be buried Islamically. Combining ethnographic fieldwork with textual analysis, I reflect on the salience of Islamic burial rites in Kyrgyzstan to flesh out what I call an ethics of completion – a striving towards a form of life’s completion articulated by a tradition, in this case by Islam. Engaging with the anthropology of Islam, I suggest that non-observant Muslims’ aspiration to complete their lives Islamically reveals some of the ways in which the Islamic tradition can operate beyond its theological discourses and major practices of virtue formation. New Directions in the Anthropology of Policy: Critical Developments in the Analysis of Power and Society

2:00 PM - 3:45 PM TMCC - 705

Oral Presentation Session

REVIEWED BY:

Association for the Anthropology of Policy

ORGANIZER:

Susan Hyatt (Indiana University, Purdue University at Indianapolis, Department of Anthropology)

CHAIR:

Theodore Powers (University of Iowa, Department of Anthropology)

PRESENTER:

Janine Wedel (Hertie School of Governance), Sarah Robert (SUNY, University at Buffalo), Susan Hyatt (Indiana University, Purdue University at Indianapolis, Department of Anthropology)

DISCUSSANT:

Noemi Lendvai-Bainton

DESCRIPTION:

Over the past 25 years, the anthropology of policy has grown as a sub-field, emerging as an area of inquiry that has yielded significant insight into the contemporary dynamics of global power dynamics. Central to this approach has been the prioritization of human agency in the exercise of power through policy. Rather than accept 'policy' as 'neutral' signifier, anthropologists of policy have excavated the terrain of negotiation, struggle, and authority, processes through which policies emerge and are deployed, often bringing with them unanticipated social, political, economic, and cultural effects. Engaging with the trajectories of scholarship within the anthropology of policy as its focus, this panel will address core methodological and conceptual tools while exploring new areas of application and innovation developed by scholars within this subfield. Relative to methodological concerns, anthropologists of policy have utilized multiple approaches including following the policy, following the people, and studying through policy processes. How have scholars utilized these approaches to study contemporary socio-cultural phenomena and in what ways have these approaches evolved over time to reflect changing dynamics in historically particular contexts? A central element of the anthropology of policy has been the critical analysis of the exercise of

power in society. How have scholars built upon policy studies to examine the dynamics which inform the emergence of particular state formations and/or their character, for example, studies of audit culture? To what extent has recent literature engaged with the composition of human actors in both state and para-state roles that influence how policies take shape, as with the case of 'shadow elites'? How have recent accounts continued to build on analyses of the ways in which policy actors exert power via acts of translation, whereby transnational policy norms are assembled in particular, localized forms? And, how might analyses of policy reveal an on-going transition from neoliberal forms of rule to more authoritarian modes of governance? A significant area for anthropological research on policy has been to study the influence and roles of people operating on the margins of policy process. How have analyses that center their focus on policy participants from historically marginalized communities engage with processes of invisibilization, racialized violence, and the roles of these dynamics in policy worlds? Furthermore, what role – if any – do policy effects associated with settler colonialism and/or imperial notions of personhood play in informing these dynamics? It is to these questions that this session will turn in mapping out new trajectories of scholarly inquiry among anthropologists of policy.

The Mapping Method: A Guide to Studying Shadow Elites and Influence Processes: As anthropologists we frequently discuss among ourselves – and are asked by representatives of other disciplines – how to systematically investigate elites and often-opaque influencing and policy processes. This paper offers a methodology for studying Shadow Elites, other elite influencers, and the policy processes in which they engage. This Mapping Method (Wedel 2020) seeks to help researchers chart the organization and interaction of influencing actors and activities in and across contexts and guide the progression of inquiry. The approach is grounded in these premises: (1) that new forms of influencing have emerged over the past several decades of privatization, deregulation, post-Cold-War dispersal of global authority, and digital revolution, which have unleashed informal, often transnational, social networks (Cooley, Sharman, Heathershaw 2018) that play a greater role in policy and interact in complex and opaque ways with hierarchies (Wedel 2017); and (2) that today's novel influencers operate amid the most unsteady state of affairs in liberal democracies since the post-World War II era. These premises present new challenges to research. Informed by the "extended case method" (Burawoy, 2009) and "studying through"

(Wright and Reinhold, 2011), the Mapping Method argues that a follow-the-players approach is required to meet these challenges and to model the relations, schemas, and underpinning structures that are evolving in different forms to evade accountability mechanisms and sustain abuses of power. Presenter: Janine Wedel (Hertie School of Governance)

'I don't know policy but...' Teachers' policy protagonism. A global ethnography: Over decades, I have had the privilege of learning about education policy from public school teachers' perspectives throughout the Americas, specifically Argentina, Chile, Costa Rica, and the United States. Often times when I ask about policies, however, teachers have stated the quote in the presentation title before teaching me about policy processes in their nation. They also have shown me how they translate policies into their long workdays and for their classrooms, school communities, and visions of the role of education for the nation. What I have learned is that teachers are policy protagonists. They enact policies and engage in the policy process by: defining what is the problem within education that should be addressed by public policy; seeking resources to address or redress that defined problem; leveraging social categories and symbolic identities; and, lastly, doing so as part of a collective whole, as members of a community or solidarity network that demands seats at the policy making table or that their definitions, their solutions to the problems with(in) education, be inserted into programs. Sharing examples of teachers' policy protagonism across the Americas, I argue that an anthropology of policy for the future will require a policy education that includes learning of and practicing policy protagonism for democratic and justice-centered education for the common good. This is especially true and evident from the examples, which are drawn from national contexts with a history of / recovering from authoritarianism and struggling with its continued emergence. Presenter: Sarah Robert (SUNY, University at Buffalo)

The Privatization of Urban Policy in the 21st Century "Philanthropolis": The slippage between urban projects and anti-Democratic regimes of governance can be seen in the context of urban development programs that seek to reshape urban landscapes by relying on non-state forms of funding. Rather than being driven solely by corporate interests, however, recent urban development initiatives have often been led primarily by private philanthropies and not-for-profits or voluntary sector organizations which, like corporations, are also not directly accountable either to local municipalities or

to the public more broadly. These philanthropic organizations often use technocratic strategies in order to frame their interventions as not just a positive benefit but also a moral imperative to save struggling cities trapped by the resource deprivation that Berglund (2020) has described as "austerity urbanism." In this article, I show how a major infrastructure project constructed in Indianapolis, an extensive walking and biking path known as the "Cultural Trail," was driven almost exclusively by an idea envisioned and funded by a local community foundation. Such projects illustrate how, in a period of about 30 years, the role of the city has been reduced, from being the impetus to community development and the lead partner in such undertakings, to becoming the means for their implementation. I show how such interventions, framed as both an unquestionable moral and economic good, can no longer be understood solely in neoliberal terms; rather, they have become an anti-democratic conduit for channelling mobile capital into neighborhoods in ways that can result in the displacement of the very residents whose interests they claim to be serving. Presenter: Susan Hyatt (Indiana University, Purdue University at Indianapolis, Department of Anthropology)

Oppenheimer Resurrection

2:00 PM - 3:45 PM Virtual - Room 3

Late-Breaking Conversation/Debate - Virtual Live

ORGANIZER:

Saulesh Yessenova (University of Calgary)

CHAIR:

Jessica Madison Piskata (Oberlin College and Conservatory, Department of Anthropology)

PRESENTER:

Jessica Madison Piskata (Oberlin College and Conservatory, Department of Anthropology), Jackie Seidel, Barbara Johnstone

DESCRIPTION:

This summer, the Christopher Nolan biopic of J. Robert Oppenheimer, *Oppenheimer*, was released worldwide to blockbuster success. This release coincided with the 78th anniversary of the atomic bombing of Nagasaki and Hiroshima by the United States military and has brought issues of nuclear militarism back into the public discourse. This roundtable will discuss the role Oppenheimer has played in reopening debates on nuclear weapons, renewing interest in nuclear militarism and colonialism, post-Cold War gender

structures ('Barbenheimer'), environmental risks and benefits of nuclear power, and other topics. Glorification of science and progress – and white male scientists in particular – is nothing new in popular culture. Has the dramatic narrative of Oppenheimer followed the established path of other post-Cold War media in a manner of converged temporalities? How has this production relate to the space-time of the nuclear age? What is new that this cultural production reveals and what does it conceal?

4-470

Pace and Space in Anthropological Practice: Concerns from the Periphery

2:00 PM - 3:45 PM TMCC - 605

Oral Presentation Session

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

ORGANIZER:

Columba Gonzalez-Duarte (University of Toronto, Department of Anthropology)

CHAIR:

Agustin Fuentes (Princeton University, Department of Anthropology)

PRESENTER:

Juan Argüelles San Millan ,Aleksa Alaica (University of British Columbia),Bernardo Yáñez ,Columba Gonzalez-Duarte (University of Toronto, Department of Anthropology)

DESCRIPTION:

By Columba Gonzalez–Duarte (Mount Saint Vincent University) and Bernardo Yáñez (Dirección de antropología física, Instituto Nacional de Antropología e Historia, México) Latin American and Caribbean countries have long been 'sites' of anthropological intervention in ways shaped by the continent's north-south and core-periphery asymmetries (Argüelles et al. 2021). Today, anthropology has moved beyond implementing acculturation projects (such as the Summer Institute of Linguistics) or the thefts of material culture and ancient human remains, justified in terms of the patriarchal 'care' of racialized populations. Yet, colonial dynamics still persist in the four fields of the discipline through helicopter research (Haelewaters et al., 2021; Minasny et al., 2020; Stefanoudis et al., 2021) and other extractive practices. The Covid-19 pandemic prompted interesting shifts in some of the temporal and spatial dynamics that have traditionally sustained the

asymmetries between scholars of distinct geographical and geopolitical positions. On the one hand, the forced deceleration invited scholars to reflect upon meaningful and ethical research and the need to reassess the core's accelerated pace of academic production (Yáñez et al. 2022). On the other, and in a curious friction (Tsing 2005) with the first, new remote work possibilities increased core country researchers' mobilities into peripheral settings. This new wave of 'academics abroad' has found themselves physically near 'new sites,' often seen as terrains of intellectual speculation or experimentation, yet lacking historical proximity to these places. Moreover, engagement with local academic groups and Indigenous and Afro-descendant communities is not always a priority for these scholars. This panel critically interrogates these deceleration and spatial compression dynamics to discuss the uneven power relations between core and peripheral academics, practices, institutions, and geographies. Panelists discuss modalities of these asymmetries in various anthropological practices. They address, among other themes, the unevenness within the growing demand for isotopic archaeological research methods, the ethics and limitations of ethnographic journalism, auto-ethnography and 'short academic stays' carried among present-day Indigenous and descendant communities, the constraints posed by genomic science to advance the understanding of human origins, and the asymmetrical capacity building in bioanthropological practices in the North American context. Together, the panelists and session chair seek alternative perspectives to help advance ethical anthropological research practices within the four fields, across their intersections, and in their engagement with adjacent disciplines. Departing from the idea that the deep compartmentalization of sociocultural, linguistic, bioanthropological, and archeological fields only exacerbates extractivist research, we seek to bridge gaps between scholars and between researchers and researched communities. Proposing a transition to a slower pace and engaged proximity, the panelists speak out against helicopter research practices while discussing more ethical ways to overcome them.

Interdisciplinary tensions for a scientific and comprehensive understanding of prehistory.: Dirección de Antropología Física, Instituto Nacional de Antropología e Historia, México Much of the study of human evolution and prehistory currently focuses on demystifying a speculative narrative loaded with racist and sexist prejudices. Anthropology prefers a more integrative approach to the understanding of human evolutionary processes and development through the

analysis of the interactions between complex interplay across past and present factors. On the contrary, contemporary genomic science counters this effort by focusing on a detailed and reductionist description of the evolution and migration of human populations explained through molecular data and arguments. Although the ideal would be to unite efforts to explain human evolution comprehensively, this differs from ongoing academic practices. The consequence is a conflict of fields and perspectives, giving place to an asymmetrical context that impacts the advancement of our understanding of humanity in a broad and inclusive perspective. This paper argues that individual or group agendas' interests in genomic science significantly hamper efforts to strengthen interdisciplinary studies on human evolution. It also shows how academic journals that favor the hegemonic character of scientific reductionism contribute to the asymmetries between core and peripheral science, giving strength to those researchers that parcel the study of human evolution instead of observing it as an integral process. Presenter: Juan Argüelles San Millan

Community interests and the ivory tower: Extractive processes to study diet and mobility in the past: The expanding use of isotopic methods in archaeological research have created a burgeoning field to study the diet and mobility of humans, animals and plants in the past. This research involves the selection and extraction of sensitive tissues for destructive analysis. Isotopic work is inherently collaborative, where local researchers and other interlocutors select samples for exportation to foreign laboratories under the direction of international specialists. While a powerful methodology, isotopic work contributes to foster "helicopter research" where the community relations imperative for co-creating compelling research projects are often not shaped by direct interactions between isotope specialists and descendant communities and other stakeholders. This distance between local collaborative networks and isotope specialists leads to system of "academic nomads" or scholars that are not embedded into reciprocal relations of mutual responsibility and accountability. In this paper, I posit that for sustainable and ethical isotopic research in archaeology, we must foreground a framework of "slow science". This argument is inspired by more explicit engagement by isotope specialists with the ethical parameters of their work but also their hope to foreground research that can have positive impacts on the present and future. In order for anthropological archaeology to be effectively embedded in archaeological science and archaeometry, we must push back against the capitalist pressures of

rapid production, dissemination without community input and individual isolation from relational networks. Entangling our interests and academic pursuits within community priorities must shape ethical isotopic research in the future. Presenter: Aleksa Alaica (University of British Columbia)

A conceptual framework for a critical analysis of (bio)anthropological practice in North America : Contemporary bioanthropological practice/research is characterized by asymmetric relationships between disciplines, institutions, and countries (Argüelles et al. 2022). These asymmetries are driven through practices that have been described as "parachute" or "helicopter research" (Misany et al. 2020; Stefanoudis et al. 2021; Yáñez et al. 2022). In such a context, I offer a conceptual framework that might be helpful for the assessment of scientific dynamics and interactions among researchers from different backgrounds in North America (United States, Mexico and Canada). I take as a starting point the concepts of 'core-periphery' as suitable categories to characterize and analyze the geopolitics of current practices and relationships in bioanthropological research/practices. Next, I take the concepts of 'pace' and 'space' to describe the problematic and uneven relationships between researchers with contrasting opportunities in funding resources, traveling opportunities, software access and technological infrastructure. I address these issues, primarily focusing on the 'asymmetrical' circumstances for capacity building and the necessity of a more 'horizontal' relationship among core and peripheral contexts. I argue that this set of concepts: core-periphery, pace and space, symmetry and asymmetry, and horizontality are indispensable parts of a critical toolkit with which to engage a more just and ethical praxis in bioanthropological research. My aim is also to bridge the gaps between the other fields of anthropology and share our concerns to fulfill a more integrative perspective of our discipline. Presenter: Bernardo Yáñez

Slower pace and engaged proximity in the era of remote 'stays.' A critique of helicopter ethnography: New remote work possibilities increase core country researchers' mobilities into peripheral settings. This new wave of 'academic nomads' continues, with its modalities, the longstanding anthropological tradition of studying 'other' cultures as a path to understanding humanity. The paper discusses an emergent pattern of anthropologists that have moved from core to peripheral settings, specifically from the United States to Mexico, to work digitally, hold a sabbatical stay, or carry on short research in the country, combining

ethnographic and journalist research with leisure. These academics found themselves physically near 'new sites,' often seen as terrains of intellectual speculation or experimentation, yet lacking historical proximity to these places. Moreover, engagement with local academic groups and Indigenous communities is not always a priority for these scholars leading to misrepresentation and erasure of existing and valuable academic work. The cases discussed in this paper come from the Monarch Butterfly overwinter grounds which, by its geopolitical and touristic circumstances, is attractive to conduct these short yet questionable remote 'stays.' Following the panel's theme of asymmetries across core and peripheric academies, I show how these inequalities and ethos of extraction is still present in contemporary ethnography and its modalities such as auto-ethnography, ethnographic fiction and journalistic ethnography. The paper concludes by proposing a slower pace and engaged proximity, hinting at the need to advance ethical guidelines routed on a practice of thinking-with care and commitment. Presenter: Columba Gonzalez-Duarte (University of Toronto, Department of Anthropology)

Pleasure Toward Death: Within/Beyond the Limits of Biomedical Rationality

2:00 PM - 3:45 PM TMCC - 713 A

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Mauricio Najarro (University of California, Berkeley, Department of Anthropology)

CHAIR:

Naomi Schoenfeld ,Veronica Sousa

PRESENTER:

Maxfield Waterman (University of California, Berkeley, Department of Anthropology),Naomi Schoenfeld ,Jessica Bytautas (University of Toronto)

DISCUSSANT:

Ian Whitmarsh (University of California, San Francisco),Daena Funahashi (University of California, Berkeley)

DESCRIPTION:

Whose pleasures, desires, and fears matter in the clinic and whose are disavowed or made unrecognizable?

Since Foucault (1990), such questions have served to trace the subtle relations between power, pleasures, truth, and authority in various kinds of therapeutic contexts. Taking up the manifold pleasures, different aesthetic sensibilities, and divergent moralities that converge in hospital wards, private clinics, and government facilities, this panel examines biomedical institutions in light of the everyday transformations and translations of pleasures and fixations, affects and motivations, distributed unevenly among the various caregivers, support workers, clients, and family members in clinical spaces. Focusing on the contradictions and ambivalences of pleasures, rather than other forms of affective disposition such as anxiety or exhaustion, can help scholars reckon more closely with honed dispositions, therapeutic trajectories, and asymmetries of power in spaces shaped by biomedical rationalities. Contemporary biomedical practice is shot through with ways of thinking about continence and excess that shape encounters both within and outside the clinic, requiring an understanding of the persistence of religious dispositions (Klassen 2011), pastoral obsessions, and taboos. In the psychic life of the institution, the taboos or norms through which subjects and objects are mutually constituted point to the 'desire and anxiety found in the ambivalence of authority' (Whitmarsh 2014: 860). To think with pleasures, transgressive or otherwise (Phillips 2015), in and through the clinic is to recognize the ways that affect both orients and disorients, unsettling facile confidence in medicalized rationality. Taking up the notions of pleasure in relation to death and reason in the clinic allows us to linger with notions of sacrifice and unreason that constitute negotiations of care, cure, and regimes of adherence. Kane Race (2009) writes, 'Against the blinking incomprehension that confronts unhealthy behavior, then, pointing to pleasure can function as a claim on understanding, an insistence on agency, and a sort of challenge' (ix). Thinking the refusals (or taboos) of death and pleasure that constitute biomedical institutional life not only reveals the volatile heart of biomedical practice, but the ways that such volatility shapes subjects constituted by the transgressions of taboos. Transgressions, seeking at once pleasure and death, or death through pleasure, mark certain subjects-in particular drug users-as being particularly vulnerable to the violence of the biomedical institutions embedded in larger political and economic structures. This panel traces the ways that medical rationality at once avoids, evokes, and is constituted by pleasure and death, as well as specific 'limit-experiences,' such as overdose. We examine ways in which biomedical systems seek to contain unruly pleasures through

mechanisms of regulation and control. Recognizing the racialized and carceral harms of such mechanisms, we invite contributions examining practices of harm as well as sites of resistance and fearsome joy. We seek to better understand the affordances, denials, and regulation of pleasure and death in the clinic. We invite panelists seeking to explore both situated practices as well as broader conceptual inquiry at this intersection of biomedical regulation of pleasure and death.

Substance as Structure: Work, Fun, and the Affective Economies of the Clinic: This paper investigates the affective economies of professionalized care in contemporary Britain, specifically looking at experiences of fun in and around a community drug service providing opioid substitute prescriptions for “problem drug users” in London. Drawing on Lewis Hyde’s writing on the erotics of the gift, I theorize fun as an economy of pleasure that overflows the boundary between self and other. Identifying fun with Hyde’s conception of Eros, I argue that fun contains a radically inclusive, de-structuring potential, which is nonetheless often premised on and sustained by forms of exclusion. Like the spark of a match, fun may be lushly self-sustaining under some circumstances and almost impossibly precarious under others. In clinical settings such as the drug service, the boundaries over which fun struggles to flow are marked both by overdetermining raced, classed, sexed, and gendered social exclusions and by the specific rationalities, anxieties, and work-rhythms of biomedicine. Drawing on ethnographic fieldwork and professional experience, I contrast the affective economy of fun with the zero-sum economies of contract and exchange that govern the prescription of methadone and buprenorphine. Looking first at affective economies within the clinic that cluster around caffeine and sugar, and then turning to after-work rituals of alcohol consumption at pubs and restaurants in the neighborhood surrounding the clinic, I ask how the de-structuring potential of fun is recuperated into the structuring rationalities and exclusions that govern life both inside and outside the clinic. Presenter: Maxfield Waterman (University of California, Berkeley, Department of Anthropology)

Buprenorphine and the Clinical Regulation of Pleasure and Death: An unprecedented overdose epidemic is increasingly recognized as a major global concern, prompting experimental approaches to stem rising mortality. People who use drugs (PWUD) and survive an overdose are now recognized as a special population with a new diagnostic category of concern: history of nonfatal overdose (NFOD). NFOD is emerging as a new

zone for urgent clinical intervention, a critical site of excess constituted through pleasure and death. Buprenorphine, a partial opioid agonist/antagonist, has become the centerpiece of recent interventions, stemming from its looser regulatory position relative to methadone but also, importantly, based on its identity as a drug which can reduce cravings but not produce a high/euphoria. The Post Overdose Engagement Team (POET) is a new program run by the Department of Public Health in San Francisco California, sending clinicians and peer advocates to meet with PWUD who experienced NFOD within 72 hours of the event to offer harm reduction, social support, and medical intervention, with the greatest focus on buprenorphine, outreaching to people experiencing homelessness in streets, SROs, shelters and in the clinic. Drawing on 1.5 years of clinical work with this team, the author considers buprenorphine as a technique of regulation/refusal for “unruly subjects” in pursuit of pleasure-toward-death. She explores this new diagnostic category of NFOD as a special biomedical classification of excess. This paper examines buprenorphine and the NFOD through the lens of regulation of pleasure and death, considering how management, refusal and resistance emerge around these clinical encounters. Presenter: Naomi Schoenfeld

Possibilities for Pleasure in Legacy Projects: A Critique of Biorationality at the End of Life : This paper explores the sociocultural and ethical conditions of “legacy work” among terminally ill patients and their caregivers in Toronto, Canada. In response to calls for an alternative to the medicalization of suffering, legacy activities are increasingly advocated for their relational and creative approach to death and dying. Legacy activities consist of inviting patients and their families to reflect on their lives, what matters most to them, and how they wish to be remembered in the form of DIY albums, books, digital collections, artworks, and landscape activities such as tree planting. Positioned by proponents as an antidote to existential suffering, legacy work is increasingly prevalent in both medical and commercial end-of-life practices. While research suggests that participation in legacy activities may have a strong psychotherapeutic benefit, less attention has been given to questions of pleasure, affect, and access, including who is able to participate and with what resources. Since legacy work entails acts of creative labour, artistic play, symbolism, and even ritual, legacy projects not only riddle biomedical dualisms of pleasure/suffering and dead/alive, they raise questions about cyclicity, temporality, and liveliness in/as death. Drawing on insights from new materialisms theory, we explore the

broader appreciation of (and room for) joy, humour, and art in death. The context for this exploration is an ethnographic study of a volunteer-based hospice palliative care organization. We discuss the potential for participation in legacy activities as a kind of felicity that challenges the medicalization of suffering under neoliberal models of hyper-individualized choice and care. Presenter: Jessica Bytautas (University of Toronto)

Pushing the transitional to reciprocal ends: creating and enlivening reciprocal spaces.

2:00 PM - 3:45 PM TMCC - 718 A

Oral Presentation Session

REVIEWED BY:

Middle East Section

ORGANIZER:

Tessa Farmer (University of Virginia)

CHAIR:

Farha Ghannam (Swarthmore College, Department of Sociology & Anthropology)

PRESENTER:

Deniz Duruiz (Concordia University, Department of Sociology & Anthropology), Noha Fikry (American University in Cairo, Department of Sociology, Egyptology and Anthropology), Tessa Farmer (University of Virginia), Aaron Michka (University of Notre Dame), Karine Aasgaard Jansen

DISCUSSANT:

Farha Ghannam (Swarthmore College, Department of Sociology & Anthropology)

DESCRIPTION:

Inspired by ethnographic research on balconies, doorsteps, rooftops, sitting rooms, and gardens our panel seeks to explore what Ghannam calls 'reciprocal spaces' as sites of social relations, practices of meaning-making, and the negotiation of continuing inequalities (Ghannam Forthcoming). We are interested in spaces that trouble long-standing dichotomies of inside/outside, public/private, home/elsewhere. These spaces are potentially Janus-faced or two-sided: looking inwards and outwards, this-worldly and otherworldly, inside and outside. While the inhabitants of these spaces include humans, they might extend to include animals, plants, occasional visitors, passersby, and unseen beings such as angels or jinns. This wide variety of beings and unique configuration of space allows for relational and reciprocal possibilities that are both

quotidian and potentially transgressive, errant, illicit, playful or utopian. Guided by this year's annual meeting theme 'transitions,' our panel regards transitions and its prefix 'trans' as an invitation to closely engage in-between, betwixt, and the troubling work of understanding and embracing transitions rather than desiring their resolution. We extend this invitation through an engagement with spaces regarded as extensions, liminals, sideways, transitions, or elsewhere (material or virtual). Pushing the transitional to a reciprocal end, our panel thinks about possibilities of exchange, relations, practice, and theorization that these spaces provide our interlocutors and ethnographers. We are interested in the construction of these spaces as reciprocal and in the creative social and theoretical possibilities that this reciprocity might offer. With this thematic focus in mind, our panel pivots around three main axes: 1) Who inhabits these reciprocal spaces and how do they define, refine, and remake these spaces? Here we explore the different beings inhabiting these reciprocal spaces, while giving particular attention to the local grammars that people use to describe these spaces and their inhabitants. By extension, we ask how people not only inhabit these spaces but also continuously demarcate and transform them through, for example, invoking God or unseen beings that are also inhabiting or visiting these spaces, or by engaging in relations or conversations otherwise regarded as leisurely, frivolous, 'illicit' in other spaces. 2) What are the social, cultural, and spiritual practices that take place in these spaces? Here we are interested in understanding how certain spaces become reciprocal spaces through practices such as hosting guests, offering gifts, rearing animals, planting, storing, observing, teasing, joking, or conversing with human and nonhuman others. Here, we also consider the duties, obligations, and expectations that fall on frequenters or inhabitants of these spaces. If we regard these spaces as reciprocal, what are the manifestations and limitations of reciprocity? 3) How do these spaces shape and how are they shaped by social inequalities? On this final axis, we situate these spaces in their broader socioeconomic, political, and historical contexts by considering how (at minimum) gender, class, and sexuality shape and are shaped by these spaces. While social inequalities act as pressures or constraints on these spaces, we also consider the possibilities in these spaces for pushing against these inequalities and/or creating potentially transgressive relations and lively practices.

Family Wage Labor: A Relational Technique of Exploiting Survivors of State Violence: The composition of the agricultural labour force in western Turkey changed in

tandem with the intensification of two wars: once during the peak of the war between the Turkish state and the Kurdish guerillas in Northern Kurdistan in the 1990s, and more recently in response to the Syrian War. The war in Northern Kurdistan transformed the agricultural labor force of Turkey to majority-Turkish to a majority-Kurdish migrant farmworkers, and the Syrian War populated the larger-scale and more precarious positions within this labor force with Syrian worker families. In this paper, I examine this transformation with reference to the organizational form of Family Wage Labor (the practice of recruiting and employing wage workers as an entire family). In doing so, I make two interlinked arguments. First, I posit that we should see this practice not only as an organizational form but also as a technique of capital constructed to super-exploit the labor power of populations dispossessed and/or displaced by war and state violence. And second, I argue that the racialized migrant labor regime, of which Family Wage Labor is only a part, was originally designed to exploit the collective and relational labor of the Kurdish families dispossessed and displaced by war in the 1990s, and now it is being repurposed to exploit the labor power of Syrian refugee families. Presenter: Deniz Duruiz (Concordia University, Department of Sociology & Anthropology)

Rooftop Reciprocities: Extending Kitchens & Feeding Wandering Animals in Egypt: Based on ongoing ethnographic research in rural Egypt, this essay explores rooftops (and courtyards) as reciprocal spaces in which various humans and nonhumans engage with one another. In rural & urban Egypt, in light of suspicions around imported & frozen meat, many lower-middle & working class families rear animals for food on rooftops, in courtyards, or in shared open enclosures. These animals include geese, goats, ducks, rabbits, pigeons, and chickens. But alongside food animals, a host of other non edible animals & nonhumans wander around or visit rooftops & courtyards. By examining rooftops and courtyards as reciprocal spaces, I focus on the various engagements between humans, chickens, ducks, meat, cats, & birds and the possibilities that emerge from these engagements. On the first level, I argue that rooftops & courtyards are extensions of kitchens in which women practice “bread-nurturing”, a process of knowing their food through rearing animals that they later slaughter & serve as meals for their family or guests. In this sense, reciprocity entails an animal eating served meals & homemade immunity boosters, fattening up quickly, and being slaughtered to become meat for the family. On the second level, I argue that rooftops also operate as spaces of hospitality to other

non edible animals and birds. Dogs, cats, and singing birds visit rooftops often, and women usually leave water for these wandering animals, welcome them warmly, & usually regard them as bringing glad tidings, good news, or support from God. In this sense, rooftops also operate as reciprocal spaces with particular classes of nonhumans & from whom reciprocity entails accepting water and/or food, visiting again, and — at most/best — not eating the food animals inhabiting rooftops. Presenter: Noha Fikry (American University in Cairo, Department of Sociology, Egyptology and Anthropology)

Lively reciprocity: Locating connection via water at the doorstep in Cairo: How do people locate the social and material networks that they need to thrive? This paper examines the lively relations of reciprocity at work around the management and gifting of water at the edge of the street in Cairo, Egypt. At thresholds in this urban locality—the doorstep of a home, the steps leading up to an apartment building— an animated set of relations around water unfolds. This is the place where water pipes from state systems meet internal water structures, where sewage from septic tanks (where they exist) has to be handled, and where people situate charitable water fountains, called *sabils*, to proffer water. Associations and disjunctures happen here between neighbors, children, roaming cats and dogs, and passersby in a cadence that waxes and wanes over the course of the day and the change of seasons. Cairenes operate in these reciprocal spaces to build and maintain human ties that are about love, companionship, safety, possibility, as well as danger, irritation and uncertainty. In this paper I look at locating connection first in the sense of identifying or finding, as people “locate” possible social connections and second in the sense of geographical and spatial positioning, for connections are mediated at physical thresholds. Women can locate connections in many ways: by chance, through hard work, by overhearing information, or by making astute guesses about who is doing what and with whom. They also ask questions about forging and mediating these connections once they are located. How do I build affection and mutuality with this person? How do I make sure that connecting here doesn’t create a problem for connecting there? Drawing on my first book on potable water and wastewater systems and building towards my new project on *sabils*, in this paper I show how connections forged in the reciprocal space of the threshold in Cairo index both processes of discovery and processes of instantiation. Presenter: Tessa Farmer (University of Virginia)

Sitting Rooms, Near-Icons, and the Coptic Imagination: While icons are an important aspect of the devotional life and collective history of Coptic Christians in Egypt (Heo 2018), they are not the only religious images that populate Coptic life. Printed and/or painted images of Jesus Christ, the Virgin Mary, and popular saints are frequently displayed in work spaces, tattooed onto bodies, and plastered on the interior walls of the house. Neither sacred nor secular, these “near-icons” occupy a transitional state that allows for religious images to be recapitulated in creative, ambiguous, and sometimes transgressive ways. Moving beyond the tendency to read such images as markers of sectarian identity, this paper examines the production of religious imagery in the large, majority-Christian town of al-’Aziya (pop. 55,000, Asyut Governorate). Focusing on the elaborate paintings Coptic artists create in the sitting rooms of local households, I examine how the peculiar nature of this specific space - designed to host outside guests yet located within an intimate interior - gives way to innovative approaches to reproducing imagery that, in other contexts, would be highly standardized. By thinking of the sitting room as a reciprocal space, we can trouble the dichotomy between sacred and profane space, as well as that between public display and private imagination. Starting with the question of how Copts understand the distinction between icons and art, this paper moves to explore how this production of near-icons makes the house an informal and occasionally provocative reflection of the church - a shift that shapes various (gendered, classed, denominational) aspects of Coptic social life. Presenter: Aaron Michka (University of Notre Dame)

The jardin creole: Transitional homescapes and interspecies mingling in Réunion : In Réunion, a French overseas department in the Western Indian Ocean, the garden (jardin creole) functions as an outdoor extension of the house (kaz creole). The purpose of a jardin creole is not merely decoration or leisure. Instead, it mirrors the spatial layout of a kaz creole and acts as a stage for the unfolding of everyday domestic life in rural and urban, privileged and impoverished neighborhoods. A jardin creole is composed of two compartments: the front yard (kour devant) with an overbuilt terrace (varang) and the backyard (kour derriere). While these spaces have distinct functions in terms of comfort and practicality, a Réunionese household transgresses dichotomous understandings of home as a bounded entity which demarcates the inside from the outside. It is thus not only a space shared with human household members or “companion species” (Haraway 2008), but also with plants and (troublesome) insects. This includes

the Aedes mosquito which is a carrier of diseases such as dengue and chikungunya. The Aedes thrives in artificial reservoirs created by urban spaces, and between 2005 to 2007 around 30 per cent of the island’s total population were infected with chikungunya during an epidemic outbreak. In this paper, based on longitudinal ethnographic fieldwork, I map out the Aedes’s breeding grounds to discuss how interspecies mingling in a jardin creole played a central role in forming local perceptions of chikungunya and resistance against public health interventions. I argue that living with mosquitoes entails more than efforts to get rid of them. Presenter: Karine Aasgaard Jansen

Queer Liberalisms: Promises and Problems.

2:00 PM - 3:45 PM TMCC - Hall F

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Moises Lino e Silva

CHAIR:

George Paul Meiu (Harvard University), David Murray (York University)

PRESENTER:

Elisabeth Engebretsen , Martin Manalansan (Rutgers University), Casey James Miller (Muhlenberg College), Scott Morgensen (Queen’s University), Vaibhav Saria (Simon Fraser University), Margot Weiss (Wesleyan University)

DISCUSSANT:

Moises Lino e Silva , Salvador Vidal-Ortiz

DESCRIPTION:

This roundtable offers a chance to critically examine the promises and problems in advocating for queer modes of liberalism. Normative liberalism has promoted the freedom of privileged subjects, those entitled to rights--usually white, adult, heteronormative, and bourgeois--at the expense of marginalized groups, such as LGBTQ people. However, minorities are not excluded from the liberal project in an absolute sense. Liberalism presupposes the existence of the 'unfree.' What happens when liberalism is challenged by people whose lives are impaired by normative understandings of liberty? What are the non-normative routes to freedom for those seeking liberties against the backdrop of capitalist exploitation, transphobia, racism, and other

patterns of domination? As a political and ethical project, we will debate how to move beyond normative liberalism. This could be done, for example, by denouncing the ontological impossibility of the universal subject of normative freedom (all of us have embodied and located existences), by creating ever more radically mutant modes of freedom, and/or by interrogating established mechanisms of freedom normalization. The work of anthropologists can help to unveil liberalism from the ground up, not just to analyze and reverse the power dynamics between the freed and the oppressed, but to challenge the logic and the stability of normative, elitist policies. 'Minoritarian liberalism'---a term coined by Moisés Lino e Silva in his publication of the same title (Chicago, 2022)---offers a framework for this panel discussion. Wendy Brown (political theorist) affirms that 'the book fulfills its ambition to decolonize the freedom at liberalism's heart' and 'does nothing less than bring liberalism---as theory and practice---into the twenty-first century.'

Reproductive Care in Uncertain Times

2:00 PM - 3:45 PM

TMCC - 603

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Alyssa Basmajian (Columbia University, Department of Sociomedical Sciences)

CHAIR:

Amy Alterman-Paradiso

PRESENTER:

Whitney Arey (University of Texas at Austin), Génesis Luigi, Amy Alterman-Paradiso, Sarah Williams, Alejandra Marks (New Mexico State University), Alyssa Basmajian (Columbia University, Department of Sociomedical Sciences), Kathleen Rice

DISCUSSANT:

Claire Wendland (University of Wisconsin, Madison, Department of Anthropology)

DESCRIPTION:

Despite the formal protocols and institutional policy and codes that shape the practice and provision of healthcare, the practice of caring--both within and outside of institutional structures--is marked by creativity, invention, and resourcefulness. In particular, anthropologists have observed that healthcare contexts

defined by uncertainty in the form of resource scarcity and social and economic inequity are often sites of improvisation and innovation in medical and non-medical care practices (Garcia 2010; Wendland 2010; Livingston 2012; Strong 2020). Healthcare providers, family members, and community members are capable of providing care--and usually do-- in precarious medical contexts despite a scarcity of resources and substantial institutional challenges (Wendland 2010; Livingston 2012). This scholarship demonstrates the emergence of novel approaches to medical and non-medical care practices as well as the stakes of providing care in challenging contexts. Building on this foundation, this panel focuses on those contexts related to reproductive health events and care, contexts increasingly marked by burgeoning legal constraints, resource scarcity, and social and economic inequity. From birth to abortion, this panel addresses these challenges to explore how reproductive health care is shaped by uncertainty and liminality. We ask, how does uncertainty bring about new forms of care? How do reproductive health care providers tinker, innovate, and creatively navigate the challenges of providing care in hostile contexts? In what ways do individuals--providers, family members, and patients-- resist forms of reproductive governance through creative approaches to care (Morgan and Roberts 2012)? By attending to care as 'persistent tinkering in a world full of complex ambivalence and shifting tensions' (Mol, Moser, and Pols 2010, 14), this panel addresses the challenges and opportunities inherent to providing reproductive care in uncertain and/or transitional contexts. Self-managed abortion and fears of criminalization in Texas: Self-managed abortion (SMA) encompasses the

full range of methods by people who seek to end their pregnancies outside of clinic spaces, including the self-sourcing of medication abortion pills - often through the use of telemedicine and online pharmacies, the use of herbs and other substances, and attempts of physical harm to end a pregnancy outside of a clinical setting. People have chosen SMA for a wide variety of reasons, and in recent years the most common of these methods is self-managed medication abortion (SMMA) using the same combination of pills (mifepristone and misoprostol) that are used for medication abortion in clinical settings. Prior to the overturn of Roe seven states had laws criminalizing SMA (Harris & Grossman 2020), and locations with restrictive abortion laws have higher numbers of requests for online telemedicine services (Aiken et al. 2022). Using research from Texas, I examine experiences of SMA in a context of severely limited access to abortion. I discuss patients' fears about legality and safety when engaging in SMA which they know or believe to be illegal, and how these fears of criminalization impact their experiences. I discuss the negative consequences for seeking follow-up care in clinical settings that laws have, as well as the ways that people self-managing and providers engage in practices of participatory fiction around the naming of SMA, in order to protect patient safety and avoid legal culpability. Presenter: Whitney Arey (University of Texas at Austin)

Abortion medication: contesting medical authority and reframing care: Abortion medication has been a tool to transform medicalized notions of abortion care. With publicly available self-management protocols online, the medical authority over abortion care is challenged. The question of who enacts legitimate abortion knowledge and expertise follows a long history of conflict and boundary work (MacDonald 2021; Jordan 2001). This is particularly relevant in Mexico, where doctors, parteras, acompañantes [abortion companions], and even abortion-seekers have had professional contestations over their authority on reproductive healthcare (Belfrage 2021; Singer 2019). Also, in a context where social media is an essential tool for abortion information access, how the role of doctors and physicians in abortion care has changed? How do these contestations in medical authority inform the futures of reproductive healthcare? As part of a larger project on professional trajectories on abortion expertise, during 2021 and 2022, I conducted a content analysis of how Mexican healthcare professionals on social media talk about medication abortion and its self-management. In this presentation, I explore how notions of 'clinical safety,' 'obstetric emergency,' and 'life-saving care' are key

terms to characterize abortion but also serve to assert doctors' expertise and authority over it. This analysis suggests the need to integrate critical approaches to the conceptualization of 'safety' in reproductive healthcare, since this use of language reinforces abortion stigma by fueling the idea of abortion as an exceptional condition that requires exceptional intervention. Presenter: Génesis Luigi

Mandated Lies: How Abortion Providers Negotiate Medically-Inaccurate Informed Consent Scripts in Louisiana: Intended to scare, confuse, and dissuade patients from choosing abortion, informed consent requirements include misleading claims about abortion, including a link between abortion and breast cancer, descriptions of "fetal pain," and claims that abortion causes negative psychological effects. In the US, eighteen states mandate that abortion providers repeat this information despite its inaccuracies. However, many abortion providers communicate their discord by subverting these scripts in their delivery—or what Anthropologist Mara Buchbinder terms "scripting dissent." In Louisiana, providers must complete a Certification of Informed Consent (signed by patients) and distribute a "Women's Right to Know" in-person 24 hours before their patients' procedures. Drawing on ethnographic fieldwork at an abortion clinic in Louisiana, this paper explores their state-mandated informed consent script and the performance strategies abortion providers use to comply with them. I engage in a discourse analysis of the documents and contextualize them with abortion provider interviews, anti-abortion protester literature, and greater abortion (in)access realities of the state. My argument is twofold: (1) I assert that these documents perform themselves—that is, they use medical and legal language to serve the heterosexist patriarchal values of the state, and (2) that providers perform their dissent in creative albeit limited ways. This paper concludes with a reflection on the target population of these materials and their larger connections with the grand narratives of the Crisis Pregnancy Center Movement. Presenter: Amy Alterman-Paradiso

Birthrights: Joy, Pleasure, and Abolition in the Act of Childbirth: Medical anthropologists of birth and midwifery have long recognized the harmful impacts of obstetric violence (Dixon 2015, Smith-Oka 2015) obstetric iatrogenesis (Liese et al. 2021), and obstetric racism (Davis 2019), critically tracing the contexts of their emergence and the barriers to their elimination. This work is a critical tool for chipping away at the institutional structures that enable and cause this violence, and forms a foundation for imagining other

forms of perinatal healthcare.. This presentation builds on this foundation and the praxis of reproductive justice scholars and activists (Ross 2017) by drawing on ethnographic research conducted with midwives, OBGYNs, and birthing people in Texas and Mexico over the past fifteen years to ask: What can we learn when we reject the maternal-fetal conflict paradigm and attend to pleasure, joy, and fulfillment in birth? How does the opening of space for pleasure and agency during childbirth create the conditions for safety from obstetric racism, obstetric violence, and obstetric iatrogenesis? Does holding space for and honoring birthing peoples' affective experiences help create the conditions of possibility for other forms of freedom from oppression? Ultimately, this presentation attends to the valuation of birthing peoples' affective experiences during childbirth as a political project that requires commitment to tinkering and innovation, and highlights the creativity of care providers, family members, and birthing people themselves in imagining and enacting an Otherwise form of perinatal healthcare. Presenter: Sarah Williams

Passports to Care: Improvising Abortion in Salvador da Bahia, Brazil : Though abortion in Brazil is criminalized with few exceptions, half a million women access the procedure illegally each year thanks to the help they receive from activists, and the follow up care they receive from medical practitioners (Lowy and Correia 2021, Malta et al. 2019). In this presentation, I argue that abortion pills purchased illegally, acted as "passports to care" into hospitals where medical professionals provided women with post-abortive procedures and confirmed that they were pregnancy-free. Based on ethnographic interviews with physicians, nurses, and medical residents in two maternity hospitals, with an activist who sold abortion pills, and with women who purchased these pills in Salvador da Bahia, this presentation suggests that abortion care in Brazil is comprised of a patchwork of licit and illicit forms of caregiving. Presenter: Alejandra Marks (New Mexico State University)

"Heartbeat" Bans in Ohio and Resistance to Medical Misinformation: Policies have a life of their own in how they are interpreted, enacted, and resisted. After the Dobbs Supreme Court decision was released in June 2022, Ohio Senate Bill 23 was implemented, banning abortion after a "heartbeat" is detected or around 6 weeks of pregnancy when most people do not know they are pregnant. Three months later, abortion access was restored to 21 weeks and 6 days, but these fluctuations in policy have severe consequences for

patients and providers. "Heartbeat" bans, in particular, promote medical misinformation and shape the language that is used to describe pregnancy stages. Medical misinformation in state legislation shapes clinical care for abortion because physicians must determine whether or not there is a "heartbeat"; yet this is an arbitrary parameter. In fact, at about 6 weeks of pregnancy, the heart has not yet developed and is used to evoke fetal personhood. During my conversations and interviews with healthcare workers, I have been careful to attune myself to the language that they use and have found that some healthcare staff use the terms "fetal heart tones" or "cardiac activity" instead of "heartbeat." Through this paper, I question whether these subtle linguistic changes allow providers to comply with state legal requirements while performing forms of refusal or soft resistance to medical misinformation. Presenter: Alyssa Basmajian (Columbia University, Department of Sociomedical Sciences)

Fences and Laws: Pandemic Reproductive Healthcare Practices in Montreal: The ideas explored in this paper stem from a comment made by an Open Orthodox Rabbi who I interviewed as part of an ethnographic study of COVID-19 pandemic perinatal care in Montreal, Canada. In describing the approach that she took in advising her congregation on navigating the restrictions that pandemic policies and rules placed on their reproductive lives, she explained that many of their regular rules and practices are "not [actually] required; we see it as a fence around a fence around a law." As she explained, the law is essential and must be upheld, but the fences can and should be climbed over or put aside altogether if circumstances demand it. Drawing on research with a diverse cadre of reproductive healthcare professionals based in Montreal, this paper explores what reproductive healthcare care providers situated in clinical and community settings viewed as essential to uphold, as well as what and how they were willing to climb over or put aside in response to pandemic pressures, constraints, and policies. I specifically focus on the forms of care that arose through how they navigated the fences and laws that shaped their work, to explore the implications – both pragmatic and theoretical – of a marked difference between the "fence-building" approaches taken by clinic and hospital-based providers (obstetricians, family physicians, and nurses), and the care practices of situated in non-clinical settings (midwives, doulas, counselors), which focused on improvising good care in and around fences. DISCUSSANT:

Amira Mittermaier (University of Toronto, Department of Anthropology)

DESCRIPTION:

Didier Fassin's seminal work (2012) has shown how global projects of delivering aid are historically driven by Christian values of compassion and charity that reify victimhood and power hierarchies. Since then, scholars working with diverse humanitarian actors on the ground have sought to illustrate that efforts to deliver aid are animated by culturally specific values and practices that complicate the dominant narrative of humanitarian reason (Mittermaier 2019). In light of the conference theme on transitions, this panel looks at how emergent needs shape and reshape Islamic networks of care and relief, whether institutional or diffuse. What relationships of patronage and support emerge at the interstices of large humanitarian mobilizations? What does it mean to engage in charity and aid that does not materialize in a bureaucratic form or leave any visible trace? What alternative networks and relationships take shape in the process of responding to need, and what meaning do these relationships take for the actors involved? Papers explore how funding by pious charitable endowments transforms humanitarian hierarchies in Zanzibar (Bolton), ecologies of care emerging among Syrians and other migrant populations in Istanbul (Ergun, Kaplan), mobilization of volunteer groups in response to natural disasters in Karachi

(Tareen), reliance on Sufi-inspired solidarity logics in Afghanistan (Schmeding) and interethnic solidarities that are fostered through Muslim minority hospitality projects in China (Yusupov). Each of the context-specific endeavors we ethnographically explore unsettles the problematic hierarchies associated with institutionalized interventions and the exclusions that they produce.

Ecologies of Care Among Syrian Migrants in Turkey: Syrian migrants' fluctuating experiences, from being seen as victims and co-religionists deserving of care to strategic baits and 'guests under temporary protection' that could be released into Europe, reveal the Turkish state's inconsistent politics of care. On the other hand, local and international humanitarian aid organizations are applauded for stabilizing fluctuations, preventing social conflicts, and healing traumas, based on a teleological and individualizing understanding of relief and charity. I argue that Syrians' everyday care practices at the community and family levels both mitigate the state's inconsistent policies and trouble humanitarian aid organizations' linear assumptions about trauma and healing. Everyday care among my interlocutors living in the margins of Istanbul does not follow a singular meaning as imagined by the humanitarian aid organizations; rather, it includes relational and entangled experiences of constant adaptation and negotiation of the current conditions, ambivalences, and discrepancies that they face as a community. Investigating care as a complex network of sharing through the lens of religious belongings provides a kaleidoscopic image of care exchanges and challenges the dichotomy of charity and solidarity, guest and host, and giving and receiving. Also, dwelling on Syrian migrants' multilayered care relationships with state institutions, humanitarian aid organizations, and community-level engagements will promise a flexible, intersubjective, and transgressive approach to the ecologies of care. From this relational perspective, everyday care practices embrace incoherent phenomenologies and multilateral understandings of migration while problematizing the teleological perspective on victimhood, subjectivity, and meaning-making. Presenter: Begum Ergun (Boston University, Department of Anthropology)

Reaching Out From Inside: Mosque as a Platform for Interethnic Solidarity in China: In 2008, a small community of Muslims living in a small ethnoreligious town in China's southwest cooperated with the government to fund the construction of a big mosque. A replica of the one in Medina, it towers over the entire town today and stands at the center of communal

religious life. Yet the mosque is also referred to as a “platform” because it attracts non-Muslim tourists who pass by the town on their way to the official touristic sites but are nevertheless curious about the structure. Responding to this casual curiosity, local Muslim volunteers have organized practices of hospitality and guidance. Every national holiday, they welcome tourists into the mosque, introduce them to Islamic ways of living in China, and offer free tea and biscuits. These practices of hospitality occur at a time when the town is officially labeled as a site of ethno-religious radicalism and extremism. This paper explores how interethnic interaction happening during these visits temporarily reverses the majority-minority hierarchies and can sometimes foster precarious networks of friendship and solidarity that transcend ethnic and religious binaries of Chinese multiculturalism. Presenter: Ruslan Yusupov (Harvard University)

Transregional Sufi Support Networks in Afghanistan and Beyond: A focus on practices of support in Sufi groups opens up a view onto networks of solidarity that emerge in the interstices of neoliberal development environments such as Afghanistan’s Republic (2001-2021) and its current Taliban-led Islamic Emirate (2021-). Centering these actors offers the opportunity to read recent history against the grain: Leading NATO member states financed the build-up of an English-speaking, NGO-connected strata of society as civil society, that often also served as local implementers in the aid and development sector or as a force multiplier to humanize the war. Contrary to these understandings, Afghanistan itself has a tradition of informal, resourceful civic engagement that long predates formalized NGOs. These forms of collective organization only come into view when the definition of civility is expanded to include both informally-organized and religion-based civil groups. Informal solidarity groups as well as members of Sufi communities organize themselves as networks of care that extend into domestic communities and beyond to neighboring countries as well as the global Afghan diaspora/migrant communities. The focus on everyday instances of *ashar* (collective projects of local infrastructure improvement) and *khairat* (support of people in need) highlights informal and religious settings that are communicated through social media and supersede the nation state to form bonds of trans-regional solidarity. The paper focuses on various acts of solidarity, support and charity by Muslim actors—from soup kitchens and health care provision, to infrastructure projects and human remains repatriation—and the ways they become meaningful in

creating vertical and horizontal relationships. Presenter: Annika Schmeding (Harvard University)

Care in Relief: Charity and Humanitarianism in the Aftermath of the Pakistan Floods: Following a deadly rainy season in 2022, a third of Pakistan was left submerged. The “monster monsoon” displaced more than 33 million people and destroyed nearly 1 million homes across the provinces of Balochistan, Punjab, and Sindh. International and domestic organizations mobilized to provide food, shelter, and medical facilities to survivors scattered across the country. In Karachi, the capital of Sindh, relief camps sprung up on outside of malls, on roadways, and around intersections soliciting in-kind donations to later be distributed in flood-affected areas. Yet, as the floodwaters refused to recede and government institutions appeared more ill-prepared, criticisms grew among volunteer groups on the efficacy of existing relief and redistribution efforts. This paper considers the shifting terrain of politics and care in the context of the historic floods. Using ethnographic fieldwork conducted in Karachi, I focus on two youth-led, indigenous volunteer groups, Baloch Yakjete Committee (BYC) and Sindh Disaster Relief Campaign (SDRC), who were among the first and longest-running relief camps in Karachi. These individuals contend with nonhumanitarian ethics (Mittermaier 2019), while simultaneously critiquing the existing political system. In doing so, they question the antipolitics of the humanitarian sphere (Ticktin 2011) through material and discursive means. Presenter: Salwa Tareen (Boston University)

Non-Humanitarian Reason, Islamic Giving, and the Waqf Revival between Kuwait and Zanzibar: As a Kuwaiti Islamic charity rebranding its work as “development” under the War on Terror’s suspicion of transnational Islamic giving, Direct Aid rearticulates classical Islamic charitable practices as iterations of the project of global humanitarianism. The waqf, or pious charitable endowment, is radically transformed to fund not mosques but WASH (water, sanitation and hygiene) interventions, and donors are encouraged to diversify their giving by investing in “shares” of multiple waqfs supporting development programs across Africa. But while the waqf is transformed under Kuwait’s self-proclaimed “waqf revival” toward “development,” it also carries within it alternative logics that radically alter the foundational presumptions of humanitarian giving. Rather than profiling the suffering and worthiness of aid recipients, Direct Aid emphasizes how their happiness prompts prayers for the donors, and that investment in a development waqf “remains an ongoing charity for

you,” generating spiritual reward throughout the donor’s life and afterlife. While the donor has the material means, such means are rendered ephemeral compared to the everlasting spiritual reward generated by aid recipient’s prayers—upending the hierarchy so endemic to humanitarian reason. Through ethnographic research within Direct Aid’s office in Zanzibar, this paper profiles how Islamic charitable practices redefine both the portrayal of aid recipients as well as relationships on the ground, but also how the assertion that good deeds are done “for God” can rub against Zanzibari forms of regularized redistribution resting not on divine command but on the moral imperative to share wealth through relationships of patronage. Presenter: Caitlyn Bolton (Boston College)

Expectations of Brotherhood: Everyday Care and Mutual Support in Istanbul: For the last 15 years, a community has formed around a weekly religious discussion (sohbet) in the Istanbul district of Fatih. The men who join each week do not think of themselves as humanitarian actors. Yet, since the group’s inception, the surrounding Fatih district has become the site of multiple, intersecting Muslim migrations, especially Syrian migrants. As the number of foreign Muslims attending the discussion circle has grown, the gathering’s attendees have gradually adapted to informally accommodate their needs—offering access to housing, information, and, at times, direct monetary support. Based on more than 18 months of ethnographic fieldwork with the community and others like it in Istanbul, this paper investigates how interlocutors engage in everyday acts of care and mutual support through a framework of akhuwwa (brotherhood), friendship, and concern for the ummah (global Muslim community). While this study highlights how informal support networks can challenge established humanitarian hierarchies and categories, it also considers how the framework of brotherhood—when matched with discourses of hospitality—reproduces the anti-politics logics of humanitarianism. It explores the latter in light of the current rise in anti-foreigner sentiment in the country and the overarching feeling within the community that the expectations of brotherhood and ummah solidarity have not been fulfilled within the broader nation. Presenter: Michael Kaplan (George Washington University, Department of Anthropology)

DESCRIPTION:

The kinds of sensation we use to encounter the world, their vehicles of mediation, and what these sensations evoke are at the center of this panel.

Autism and Gender Transition: A Case Study Exploring the Intersectionality and Personhood of an Autistic Singer-Songwriter: This paper draws upon a one-year ethnomusicological research with Mary (pseudonym) as a case study. Mary is a 35-year-old, trans female, autistic, musical artist, and humanities professor. This study aims to investigate the life and songwriting of Mary through the lenses of intersectionality and neurodiversity. This study is distinctive in that it addresses the lived experience of an autistic singer-songwriter. In this presentation, I specifically focus on Mary’s journey of gender transition occurred in the summer of 2022. I assess this through two of her songs and our conversations on them. By doing so, I argue that intersectionality is an important and necessary tool for understanding Mary’s life. Beyond that, the communicative mode between Mary and me used to explore these topics showcased that having songs as the starting point for our conversations and using her responses to improvise questions in real-time have sparked meaningful insights and stories. To present this methodological model, I encourage anthropologists and ethnographers to critically reconsider human communication and interaction as culturally informed activities, as individualized modes of behavior and habit, and as determinants that influence the ways we understand the lives of other people, notwithstanding how ‘other’ might be conceptualized in any given framework. Moreover, the approach modeled here suggests the advantages of long-term study in our scholarly engagements with autistic lived experience, and by extension the lived experiences of individuals and groups generally. Presenter: Liya Lin

Branchy expressions of spacetime matter’s trans-formations: Learnings from Hiroshima’s Shukkeien garden’s master pine pruners: This presentation is based on a fieldwork research undertaken in Hiroshima’s

Shukkeien garden (縮景園, 'shrunken-scenery garden') in 2019 on Time and time(s), on discursive, alienating, aestheticized, alternative and materialized temporalities. The project from which this paper stems proposed to re-imagine time(s); to take ambient temporal alienation and the destabilization of uniform and progressive modernist Time as an opportunity to learn sensing temporalities differently. An invitation, thus, to re-conceptualize time(s) through the senses. In this paper, time(s)'s form emerge sensorially –visually– via the framing-through-pruning of Peircean Seconds of 'spacetime-mattering' and of pine trees' branchy transformations. From my fieldwork with the Shukkeien garden's master pine pruners, I learned to make the Firstness of pines –their 'branchness' and spacetime-mattering suchness– apparent by transforming them into 'rhematic iconic signs' (Peirce 1955) through pruning and needle-plucking. Pines' Firstness, their abstract possibility and essence, relates, I argue, to temporality. More precisely, it relates to spacetime-mattering, a notion marking the ontological inseparability of space, time, and matter sustained by theoretical physicist Karen Barad (2017). Inspired by quantum field theory, spacetime-mattering, as a concept-word, implies that dynamics are the result of the 'ongoing materializing of different space-time topologies' (Barad 2006). Spacetime-matter is constantly reconfigured as part of the ongoing dynamism of becoming, and change is but the material differentiation of spacetime-mattering. Spacetime-mattering is the indeterminacy and inseparability of space, time, and matter. It is an ontological field wherein matter is always-already 'caught up' in nothingness, always-already haunted by the indeterminacy of spacetime-being. Interestingly, in spacetime-mattering, like in Peirce's synechism (1998 [1893-1913]), Leibniz's monadism (Burnham 2020), and Imanishi's environmental philosophy (Imanishi and Asquith 2013), everything is continuous, indecomposable, pregnant with the future and laden with the past; one inseparable set. Everything is, in qualitative possibility, One. An indecomposable may-be made up of space, time, and matter; of transformation. A potentiality of spacetime-mattering continuity and indeterminacy, 'which is all that it is positively, in itself, regardless of anything else'; a First (Peirce 1955). Spacetime-mattering is a First of time(s), and, in this paper, I argue that this qualitative suchness can be made phenomenologically available through Seconds such as pruned pines. The specific technique of pine tree pruning I was allowed to learn in the Shukkeien garden aims, like some other Japanese arts, at emphasizing structure and texture; at imitating the

means and processes of nature and harmonizing artefacts with its forms whilst being designed explicitly for humans. I suggest that a tree's Firstness, is form-work as eternal possibility, and Hiroshima's master pine pruners' phenomenological wisdom lies, I believe, in attentively framing this Firstness through pruning and plucking. Trees' growth, conjectures, and speculations are branch-y, and their Firstness, the essence and possibility of their being, is branch-y form-work: spacetime-mattering, nothingness 'pregnant' with the dynamism of becoming, time-space haunted by the potentiality of matter's actualization. Presenter: Lily-Cannelle Mathieu (McGill University, Department of Anthropology)

Space-Making as Religious Practice

2:00 PM - 3:45 PM TMCC - 205 A

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Eben Yonnetti (University of Virginia)

PRESENTER:

Eben Yonnetti (University of Virginia), Paul Melas, Yuanyuan Yu (Yunnan Normal University / UC Berkeley), Jacob Tischler (Boston University)

DESCRIPTION:

This panel features four papers that explore how attachment to and cultivation of place is a defining practice for religious identity and community.

Growing Transnational Roots: The Taiwan International Tibetan Buddhism Study Institute and the Localization of Tibetan Buddhism in Taiwan: Over the past fifty years, Tibetan Buddhism has grown enormously in Taiwan, transforming from a virtually unknown religion to the largest non-Chinese Buddhist tradition with an estimated 600,000 practitioners and over 300 centers. During the two decades following the 14th Dalai Lama's monumental first visit to Taiwan in 1997, several trans-sectarian groups emerged claiming to collectively represent Tibetan Buddhism across Taiwan. During this transitional time when Tibetan Buddhist communities are establishing deeper roots in Taiwan, the Taiwan International Tibetan Buddhism Study Institute (台灣國際藏傳佛教研究會 བོ་མན་རྒྱལ་གླིང་ཐོད་བརྗེད་ནང་བཟུན་ཞིབ་འཇུག་ཚོགས་པ།) or ITB has emerged as by far the largest and most publicly prominent trans-sectarian Tibetan Buddhist

organization in Taiwan with the most diverse representation from across all schools of Tibetan Buddhism. This paper examines the critical role that the ITB has played in localizing and institutionalizing Tibetan Buddhism within contemporary Taiwan. Specifically, I ask how ITB's reimagining of non-sectarianism or rimé (རིམ་མེད།) shapes how they negotiate transmitting Tibetan Buddhism in transnational contexts? Further, I ask how a trans-sectarian religious organization like ITB creates spaces of unity while negotiating religious difference? Using the case of ITB as a basis to address these questions, this paper contends that ITB's commitment to inclusivity of all schools of Tibetan Buddhism has been critical to the widespread support ITB has gained among Tibetan Buddhist monastics and Taiwanese disciples. Based upon fifteen months of ethnographic fieldwork conducted between 2021 and 2023, I argue that ITB's vision, organization, and work as a public face for Tibetan Buddhism, a service provider for Tibetan Buddhist monastics, a chaplaincy organization to Tibetans, and a representative of Tibetan Buddhism in inter-Buddhist dialogue embodies a novel reimagining of non-sectarianism. Rather than responding to the threat of Geluk domination within a context of political conflict as Smith described 19th century Tibetan non-sectarianism, ITB's trans-sectarian leadership seeks to collectively benefit all Tibetan Buddhists in Taiwan through the equal promotion of teachings, practices, and Tibetan Buddhist leaders of all traditions. It is precisely this reimagining of non-sectarianism as an active and representative pursuit of pluralism, I maintain, that has allowed ITB to develop into a body publicly representing Tibetan Buddhism in Taiwanese society. The work of ITB is especially relevant, I contend, to better understand how contemporary Tibetan Buddhist communities take root transnationally in areas beyond the Tibetan cultural sphere. Although trans-sectarian representation and participation is sometimes difficult to maintain, the ITB leadership's commitment to a depoliticized and representative non-sectarianism has been decisive in their successful development into a national-level umbrella organization for Tibetan Buddhism that is localized within the Taiwanese religious landscape. This paper will be of specific interest to scholars researching contemporary Tibetan Buddhism beyond Tibet and the Himalayas, transnational Buddhism(s), and religion in Taiwan. More broadly, this work contributes to discussions around the localization of religious traditions, religion and cities, and transnational religious movements. Presenter: Eben Yonnetti (University of Virginia)

Transitions of the Spirit: Hope and Short-term Work on the Holy Mountain: Mount Athos (or the Holy Mountain) is an all-male Orthodox Christian monastic polity made up of twenty monasteries, and a plethora of smaller monastic enclaves and hermetic huts. It is located on a mountainous and heavily forested peninsula which protrudes into the Aegean Sea in the North-Eastern sector of the Greek mainland. Archival and archeological evidence places the emergence of an organized monastic tradition on Mount Athos in the early to mid 10th century CE with the founding of its first monastery (Μεγάλη Λαύρα). Today, it is home to some eighteen-hundred monks, and is visited every year by tens of thousands of pilgrims. There are also several hundred laborers who live across the peninsula and are employed by and live at one of the twenty monasteries. Monks, pilgrims and many Christian laborers alike report that Mt. Athos is a unique place of spiritual development and rest within the (Orthodox Christian) world. While monks have pointed to the fact that Athos provides a space for asceticism and total commitment to God, lay-men describe how it provides them with a space to 'recharge [their] batteries' and 'regenerate [their] spirit.' The wage labor condition on Mt. Athos is highly fluid and varies between short-term and more permanent work. The majority of laborers on the peninsula come from other parts Greece, neighboring Balkan countries and North Africa (particularly Egypt). Although there is no explicit requirement to participate in the Liturgical life of the monastery many (particularly those on short term work stays) elect to do so citing the 'spiritual benefit of working in such a holy place.' Based on thirteen months of fieldwork on Mt. Athos this person-centered ethnographic paper will specifically attend to the 'spirit' and work of a particular Greek laborer, Giorgos, who spent six consecutive months living and working in an Athonite monastery between 2022 and 2023. Over the course of several interviews, Giorgos described his time in the monastery as an opportunity to overcome and transition out of certain 'spiritual' and 'social' conditions that have afflicted him throughout his entire life. These include a history of familial poverty and illiteracy, the 'irresponsibility' of his younger years, his difficulty with finding steady work or a partner to start a family with, and the marginalization he faces in his home village in Central Greece. Giorgos confidently hopes that the solutions to these problems, whether they be economic, social or religious, are funneled through and emanate out of the relationship his spirit has with God and, importantly, the monastery that employs him. His wages, weekly confessions, attendance in church services, and the professional development he receives all contribute to his hope for

an auspicious transition into a 'new [and better] life in the world.' This paper will thus engage with the ways in which complex social problems (resulting from various historical forces) are dealt with by individuals with reference to their spirit and its relationship to worldly and other-worldly powers. Finally, this case will ultimately speak to a more general understanding of the function of contemporary Orthodox Christian monasticism, as an always transitional space that facilitates, for those who participate in it, one's transitions into better ways of being both in this world and the next. The nexus of this transition is the human 'spirit.' Presenter: Paul Melas

Neoliberalism, Religion, and Heritage: A Study on the Hierarchical Construction of Sacred Spaces in Dalada Maligawa, Sri Lanka: There is a trend that consumerism and neoliberalism combine to converge and erode the traditional boundaries between the religious/secular domains which becomes less clear and more difficult to maintain in our contemporary world. As we all know, Sri Lanka, which advocates neoliberalism, declared bankruptcy during Covid19. As one of the most famous holy temples Buddhism, a world heritage and tourism destination, how does Dalada Maligawa (Temple of the Tooth) maintain its tradition and sanctity under neoliberalism and consumerism after Covid 19? This paper will discuss the inner transition mechanism of the holy space from two perspectives. One is to show the order and power of the sacred space, that is the division mechanism of the sacred space of the Dalada Maligawa. The other one is relating temples to festivals, that is shifting boundaries and the principle of balance between the sacred and the secular. This paper attempts to respond to the problem of economic influences blurring the boundaries between the religious and secular spheres to make a positive case and a new paradigm in which the religious/secular distinction is not completely becoming increasingly impotent. Presenter: Yuanyuan Yu (Yunnan Normal University /UC Berkeley)

Bridging the gap: Pilgrimages and the making of Taiwan across the rural-urban divide: In this presentation, I investigate Mazu pilgrimages as practices that build connections across rural and urban spaces in contemporary Taiwan. Scholars from Taiwan and elsewhere (e.g., Chang 1993, Lu 2005, Lin 2006, Hung 2010) have noted the growing popularity of these week-long events, the largest of which attract tens of thousands of participants each year, among them many young people. What makes going on pilgrimage so attractive to them? My ethnographic fieldwork

consisted of walking six pilgrimages organized by Baishatun Gongtiangong and smaller pilgrimage associations in 2020. Here, I focus on regular pilgrims who are not from small towns but who come from Taiwan's large cities-Taipei, Hsinchu, Kaohsiung, etc.-many of them millennials. Even though they had no prior communal ties with the organizing community, several urban-based pilgrimage veterans I met developed strong affective ties with the temple and community. Often, they referred to the place as their 'second' or 'true' home, coming back whenever they could and going as far as buying property in town. The pilgrimage experience did two things for these millennial spiritual seekers. One, as their journey led them from Taiwan's urban spaces to the countryside, pilgrimages connected them with people from different backgrounds than their own. And two, walking the pilgrimage represented to them an authentic experience of the Taiwanese countryside--indeed, their Taiwanese homeland from which they felt culturally distanced. Walking across the land validated this shared home through personal experience. Pilgrimages thus worked to make and integrate national culture across a growing rural-urban divide. State of the Field: African Diasporic Religious Feminisms for Emergent Justice Transitions

2:00 PM - 3:45 PM Virtual - Room 2

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Nessette Falu (University of Texas at Austin)

CHAIR:

Nessette Falu (University of Texas at Austin), Risa Cromer (Purdue University, Department of Anthropology)

PRESENTER:

Aisha Beliso-DeJesus (Princeton University), Andrea Allen (University of Toronto, Department of Anthropology), Donna Auston (Wenner-Gren Foundation), Nicole Fadeke Castor, Andrea Richardson, Pablo Herrera Veitia

DESCRIPTION:

Anthropologists and religious studies scholars have long documented the richness and complexities of African Diasporic religions, religiosities, and spiritualities, and

the ways religious life is weaved into the social fabric of communities and society. Black feminist scholars continue to teach us about the connections of African Diasporic religions to embodiment, corporality, subjectivities, epistemologies, and social movements (Covington-Ward and Jouili 2021). By reimagining approaches to the study of rituals, deity energies, symbols, sacred practices, and religious geographies of Blackness, African Diasporic religious studies anthropologists and interdisciplinary scholars have taken seriously the intersections of race, ethnicity, gender, sexuality, and nation. Yet, such critically important contributions remain at the margins of both the anthropology and religion studies canons. The AFA 'State of the Field' roundtable themed, 'African Diasporic Religious Feminisms,' explores these debates and practices to prioritize the knowledge production and practices of African Diasporic religious studies scholars and practitioners. This roundtable aims to advance the field of anthropology, and feminist anthropology specifically, by rearticulating new and old knowledge(s) and collaborating with Black feminist anthropologists and interdisciplinary scholars and practitioners engaging the hidden academic inquiries about Afro-religions. This roundtable envisions an interdisciplinary invigorating discussion that spotlights the issues related to research and methods, pedagogies and teaching, religious practice and leadership, transnational knowledge and solidarity, and theoretical visions for future work for Black feminist work in anthropology and across other disciplines. Given this need to look to Black feminists and Black feminists' teachings for future guidance to dismantle patriarchy, white supremacy, neo-colonial and imperialism, this roundtable encourages participants to respond to the following anthropologically driven questions: How does the research elucidate Black feminist thought traditions to deepen our understanding of the intersections within African Diasporic religions? How are fieldwork, writing, and publishing navigated in an academy that undervalues these scholarly inquiries? What is the pedagogical impact or challenge of teaching African Diasporic religion? How may we reimagine transnational coalitions for solidarity with our research communities against religious intolerance? What are the theoretical implications for making the work accessible to practicing communities? How do scholars manage their lives as academics and religious practitioners or activists? This roundtable gathers Black feminist interdisciplinary anthropologists within religious studies fields whose research and expertise cut across the following realms: transnational experience of Santería; Black queer experiences within Candomblé in Brazil; politics of race,

gender, and ethnicity in the mapping of Lucumí; African American Islamic experiences at the intersections of race, ethnicity, and gender; politics of decolonization, spiritual citizenship in Ifa, and Afro-Atlantic religions in Trinidad; practices of midwifery by Afro-Diasporic practitioners. These scholars and practitioners will discuss the state of the field for feminist anthropology and the related stakes of Black feminist religious studies and impact upon anthropological thought and praxes.

DESCRIPTION:

The summer of 2023 was characterized by a dramatic acceleration of the climate crisis. Global wildfires, widespread heat waves, crop failures, catastrophic flooding events, pervasive coral bleaching, and the unprecedented loss of sea ice have led many to believe that we are transitioning into the next (hotter, wetter, and more dangerous) phase of climate change. How should anthropologists – whose traditional mode of ethnographic research takes years to produce fruit, but who excel at collecting and telling stories – respond? How do our interlocutors grapple with the acceleration of calamity and uncertainty? What purchase does anthropological or environmental storytelling (McGranahan, 2020; Bubandt et al., 2022; Schneider-Mayerson et al., 2023) have for our present moment? And how might our research aid in the process of either 'learning to die' or engaging in more radical action? This conversation brings together participants in the inaugural Environmental Storytelling Studio at Brown University and environmental anthropologists working in diverse climates and regions to explore the art of telling stories on a burning planet. Conversation participants will trade vignettes from current projects that engage in the arts of storytelling, lend insights from the field and from the writer's table, and discuss methodologies for collecting and telling stories in a time of crisis and uncertainty. DISCUSSANT:

Adia Benton (Northwestern University, Department of Anthropology), Tricia Redeker-Hepner (Arizona State University, School of Social and Behavioral Sciences)

DESCRIPTION:

The police killing of George Floyd in 2020 restaged conversations about structural racism and white supremacy as problems not just situated in American history but global in scope and import. The humanitarian sector was no exception to this moment, with practitioners renewing calls to decolonize the sector and rebalance power differentials between local and international aid organizations (Majumdar 2020; The New Humanitarian 2020). Since the emergence of humanitarianism as a distinct field of study, scholars have drawn attention to how the institution is

imbricated in colonial taxonomies of social difference and positional privilege, which structure encounters between aid workers and aid recipients (Cole 2012; Harrell-Bond 2002; Fassin 2007, 2012). What remains under-explored, however, are the ways in which these taxonomies produce humanitarian practice itself, its guiding principles and moral dispositions, its internal economies and institutional processes, the symbologies of humanitarian representation and the ecologies of spectatorship for which they are designed. Part of the problem, as a growing body of scholarship has noted (Benton 2016; De Genova 2017; Pallister-Wilkins 2021), is with humanitarianism's underlying concept of the human itself, whose normative universalism often occludes questions of difference from being posed, and specifically elides race as a central organizing logic through which the human is cognized, persecuted, abandoned or saved. This panel features papers that unsettle humanitarian genealogies of the human by exploring how taxonomies of difference operate in humanitarian ethics, imaginaries and praxis globally. It engages with questions such as: 1) How are taxonomies of difference invoked and deployed in humanitarian principles, policymaking and programming? 2) How does race undergird norms of professionalism and discursive claims to expert authority in humanitarian organizations? 3) What role does global antiracism specifically, rather than white saviorism alone, play in the determination of humanitarian rights and entitlements?

“Faking it” and “worse than dogs”: antiracism of humanitarian responses in Haiti: Eight minutes and 46 seconds, the chokehold felt round the world, inspired proliferating statements and institutional self-interrogation of racial practice. In Haiti, whose independence followed a revolution asserting Black Lives Matter, humanitarian agencies vowed to do better after their failed response to the January 12, 2010, earthquake. The \$16 billion international effort led by the Clintons, the “King and Queen of Haiti,” represented “Fatal Assistance” (Peck 2013) or “humanitarian aftershocks” (Schuller 2016). Antiracism was manifested in humanitarian agencies’ rejection of supposedly universal humanitarian standards and belief in Haitian people’s – as Black people more generally – greater ‘resilience’ (Ulysse 2011). Foreign humanitarian groups also deployed racialized discourses about poor families in displacement camps ‘faking it’ or being ‘better off’ than before. Haitian people denounced their being treated ‘like animals’ or ‘worse than dogs.’ In 2016, Hurricane Matthew provided an opportunity to demonstrate and apply “lessons learned” and apply the

Grand Bargain that promised empowering local actors. During COVID and what ABA called a “pandemic of anti-black racism,” Haiti has confronted a series of disaster events. 2021 saw a constitutional crisis, presidential assassination, an earthquake more powerful than 2010’s, and deporting more Haitian asylum seekers in one year than the previous 20 combined, symbolized by a viral photo of an ICE agent on horseback whipping Mirard Joseph. This paper, using historical and mixed-method international collaborative ethnography, disentangles on-the-ground humanitarian praxis from promises. Haiti represents a “bête noir” (Trouillot 1990, Ulysse 2010), exceptionalized by humanitarians and media outlets, rendering it vulnerable to further foreign intervention. Presenter: Mark Schuller (Northern Illinois University, Department of Anthropology)

“Cultural Problems” as Global Humanitarianism’s Anti-Blackness: In 2010, then-Secretary-General of the UN, Ban Ki-Moon, declared the conflict in the Democratic Republic of Congo (DRC) to be beyond the scope of humanitarian intervention. “The international community must engage more fully with Congolese society to address cultural and political issues that contribute to this horrific pattern of abuse,” he said. While announcing the withdrawal of the UN Peacekeeping Forces in the DRC, Ban Ki-moon also blamed Congolese culture for the sexual violence that he warned might destroy the social fabric of the country. My research is based on more than two years of participant observation and interviews in UN refugee camps, aid compounds, and government offices across Tanzania, and ethnographic research on war, reconciliation, and everyday life in South Kivu, DRC. I also interviewed UN Refugee Agency representatives in Nairobi, Kenya, and in Geneva, Switzerland. This notion that Congo and its people are plagued by “cultural problems” was echoed by aid workers at all levels of the humanitarian apparatus. Such statements are not only indicative of the limits of global humanitarianism but also emblematic of its anti-blackness. I argue that these racist narratives have become so deeply engrained in the humanitarian system that they are the only ones that aid workers can hear, even when Congolese refugees speak of political instability, loss, and the violence of displacement. This means that the narratives that justify the international humanitarian regime’s neglect of Congo have become the only way for Congolese refugees to receive international protection for themselves and their families. Presenter: Marnie Thomson (Fort Lewis College, Department of Anthropology)

“Africa” as Metaphor: The Ethno-Racial Geographies of Humanitarian Aid: Humanitarian actors in the Middle East have advocated for a “resilience-based” approach to aid, defined as a holistic response that strengthens the ability of refugees to sustain themselves. While this approach is often sanctioned in the interests of promoting refugee agency, my paper explores the ethno-racial imaginaries of humanitarianism which map distinct refugee groups according to their capacity for labor and will for independence. In particular, I argue that the “Arab entrepreneurialism” of Syrian refugees is rendered legible within a horizon of structured antiblackness, which draws on European aid workers’ invocations of “Africa” as both synonymous with bare life and yet less entitled to aid. Drawing on 20 months of ethnographic fieldwork in Jordan and Lebanon, I interrogate this antiblackness as emblematic of the latent hierarchies embedded within universalist prescriptions of human rights. I further relate this argument to the humanitarian abandonment of “minority refugees” such as the Sudanese in Jordan, demonstrating how aid programs can rehabilitate one people at the expense of another. In so doing, I recast the classic dilemma of triage as not simply the optimization of limited resources, but the crystallization of a racially inflected moral geography which accords some refugees more value than others. Presenter: Malay Firoz (Arizona State University, School of Social and Behavioral Sciences)

The racialization of expertise and professional non-equivalence in the humanitarian workplace: This paper aims to explore the ways which expertise is covertly racialized in the contemporary humanitarian aid sector. While there are considerable discussions on the expat-local divide among aid professionals, such dichotomization is still inherently nationality-based, which may be an over-simplified explanation of the group dimensions within aid organizations. This study seeks to uncover that professional categorizations of “expatriate” and “local” are not race-neutral and, instead, colorblind. The contemporary humanitarian apparatus has always subscribed to the narratives of diversity, inclusion, and equality that rendered overtly racist remarks in the workplace inappropriate. The problem, however, is that it often obfuscated all discussions regarding race, even those that sought to reasonably address legitimate non-equivalences between expatriate and local professionals within organizations founded upon racial prejudices at the structural level. Within this dynamic, it is visible that an acute form of colorblindness has long legitimized the perception that “any hints of race consciousness are

tainted by racism; hence, most anti-racist gesture, policy or practice is to simply ignore race (Omi and Winant 2012).” Organizations within the contemporary humanitarian aid apparatus have come to appeal to a discourse of racial inequality that does not require explicit references to race in order to be perpetuated, as racial subordination has been reconfigured to rely on implicit references to race woven within the everyday social fabrics of the humanitarian profession. The research suggests that embedded under the contemporary professional structure of the liberal humanitarian space is a covert power hierarchy fueled by perceptions of expertise and competency along racial lines—particularly around one’s whiteness. Presenter: Junru Bian (University of Ottawa)

The Raced Subject of Humanitarianism: This paper analyses what Maurizio Albahari refers to as the policing humanitarian nexus (2017) in Italy with respects to the politics of long-term refugee and migrant integration in Italy and Europe more widely. Based on 15 months of fieldwork in Bologna, Italy and sister cities, I argue that policies around *accoglienza*, or migrant welcoming and reception veil the political economy of unauthorized migration: a regime heavily indebted to racialized and deportable labor. Further, *accoglienza* is underpinned by logics of charity, paternalism and Catholic witnessing which work to maintain categorical distinctions between racialized migrants who are rendered objects of charity and care and humanitarian workers (Muehlebach 2018; Albahari 2017). I contrast migrant reception with its emphasis on the temporal logics of emergency and securitization with a novel understanding of integration as the right of migrants to make place and meaningful homes in countries of settlement. Here I proffer a definition of integration that is at odds with EU wide prescriptive models which underscore the racially stratified nature of integration—those groups most closely aligned to notions of Europeaness as exemplified by adherence to liberal social values like gender equality and secularized Christianity (Mahmoud 2012, 2016) are considered easiest to integrate. While integration has civilizationalist overtones, it nevertheless counters the logics of emergency and transitoriness implicit within Italian discourses of welcoming that hold many racialized migrants within a state of suspension or permanent liminality. Technologies from the South as Method and Challenge

2:00 PM - 3:45 PM TMCC - 714 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Liliana Gil (National University of Singapore)

CHAIR:

Veronica Uribe-del-Aguila ,Sareeta Amrute (The New School)

PRESENTER:

Ambar Reyes ,ayodamola okunseinde ,Kim Fernandes (University of Pennsylvania),Liliana Gil (National University of Singapore),Veronica Uribe-del-Aguila

DISCUSSANT:

Hector Beltran ,Luis Felipe Murillo

DESCRIPTION:

This panel is an open space to reflect on what it means to study technologies 'in and from the South' at the United States academy. Amrute and Murillo (2020) use 'in/from the South' to describe the South as a power relation and a method to change dominant frames about the past, present, and future of technology. Continuing this and other conversations at the intersection of post/decolonial and feminist studies of technology (Beltrán 2022; Law and Lin 2017; Lyons et al. 2017; Philip et al. 2012), the panel pushes beyond traditional frames of exploitation versus resistance for the study of the so-called peripheries, and it rather emphasizes the transitions, transmutations, and translations the globalization of both knowledge and technologies has generated. Work discussed in this panel pays particular attention to the relational, political, and affective undercurrents these transmutations and translations produce between North and South. Besides reflecting on the work that anthropologists do, this panel opens up questions about the work that 'the South' does in social thought, and the specific challenges that studying tech from the South poses to researchers, such as the invisible labor of addressing different audiences and keeping ethical commitments with different communities. Acknowledging that much of this work is conducted by international and hyphenated scholars based in US academia or in close dialogue with it, this panel asks: - What is 'the South' in our research? - How can we strategically reflect on the commonalities between different Souths, near and far, and foster solidarity without erasing their specificities and the uneven hierarchies that operate within and across them? E.g., unequal infrastructures of care; global flows of

extractivism; different genealogies of informal gig work; situated political struggles around tech access, labor, representation, etc. - How do these studies and reflections provincialize and transform hegemonic tech narratives? Can this provincialization decolonize dominant perspectives towards the making of better worlds? - What are some of the pitfalls of this intellectual project (Tuck and Yang 2012; Silva 2023)? - And, more reflexively, in what ways does conducting 'anthropology with an accent' (Caldeira 2000) pose challenges to tech researchers and how do we negotiate between different audiences, languages, and ethical commitments? E.g., pressures to publish in English and the desire to write for other communities. Presenters in this panel speak to and with the center - albeit not quite from it - hopefully to remake it in ways that make visible how lived experiences with tech are inextricably linked across geographies. We embrace a capacious definition of technology and welcome experimental and multimodal contributions on how studying tech 'in and from the South' unsettles/de-centers/diffracts dominant imaginaries of technological production, creativity, and development.

DISCUSSANT:

Andrea Petitt (Southasia Institute of Advanced Studies)

DESCRIPTION:

Other-than-human animals comprise a large part of the social and ecological fabric of our lives in ways that are

often unexpected or unnoticed. Humans encounter other-than-human animals as pets, pests, food, medical devices, entertainment, bastions of 'wild' nature, and more. While many animal species may be found in many countries and range across national borders, we ask, what makes an 'American' animal? How are Americans and other-than-human animals transformed through their entanglements, and how do we understand and translate these engagements within the urban, suburban, or rural United States? We draw on the call by Donna Haraway (2016) to 'stay with the trouble' and the suggestion that human lives and futures are intimately tied to the lives and futures of others. This session explores ways in which animals enter into the American imagination and are defined by and co-constitute American identities. Taking a transdisciplinary approach to human/animal encounters, we will consider what it means to be 'animal' in the United States and how our practices with other-than-human animals challenge sociohistorical boundaries between human/animal, subject/object, wild/domestic, life/technology, and kin/other. Contributors will consider the ways that animals are transformed and defined through American idioms and how American lives are shaped by the many relationships they share with other animals within the diverse contexts of climate change in Hawaii, cattle grazing and ranching in the Alaskan 'frontier' and the 'American West', the production of endangered species within pop culture and zoos, American encounters with the 'wild', conflicting perspectives on what it means to be native, and taxidermy.

(Re)Producing the American Gorilla: From King Kong to Koko, gorillas hold a unique place in American imaginations and are intimately tied to our perceptions of nature, conservation, and our relationships with the environment. From their first introduction to Western science by American naturalists in 1848, Americans have encountered gorillas in a variety of contexts, including film, comics, news articles, and natural history museums. But the most visible and visceral encounters occur within zoological institutions, where the North American gorilla population is (re)produced and managed across 51 institutions for the public consumption. In these diverse contexts, gorillas have been embedded within specific cultural and conservation ideologies, which have changed dramatically over time. In large part, these shifts have been driven by the environmental and conservation movement, first influenced by the work of conservationists like Dian Fossey and led today by a network of gorilla experts working across zoological

institutions and their in situ conservation partners. Gorillas, as a captive species and wild animal, emerge from and are produced by this close-knit professional network, made legible to the American in the virtual and physical encounters with gorillas mediated by these professionals. This paper traces how the American gorilla has changed from monster to gentle giant and explores how endangered species become embedded within and emblematic of specific understandings of nature, wild, and conservation. Presenter: Jennifer Torpie-Sweterlitsch

Making Pigs Dirty: Conflicting Perspectives on Javelinas and Hogs in Texas: Javelinas, also known as collared peccaries, are a common sight in the arid regions of South and West Texas. They serve as tourist attractions in Big Bend National Park, neighbors in the Texas Hill Country, and minor annoyances on ranches. Despite the many textures of human-javelina relations, their status as native Texans is a common theme. Feral hogs, a species introduced by European colonists, have a reputation for environmental destruction causing economic and ecological losses in the state. Feral hogs are seen as non-native interlopers and are labeled a killable invasive menace. While javelinas are considered native and feral hogs as non-native, zooarchaeological evidence indicates that both species show up in Texas around the same time. Hogs were introduced to Texas initially by Hernando de Soto in the 16th century as food for his invading army. While peccary species like javelinas are native to the Americas, there is little evidence of significant populations in the United States prior to European colonization. I pose the question: why are javelinas native and feral hogs non-native? In this paper, I use Mary Douglas' (1966) concept of "dirt" as "matter out of place" to analyze these conflicting sentiments. I argue that feral hogs disrupt social and environmental order resulting in their relegation as undesirable actors in Texas landscapes. This paper contributes to broader conversations about the ways humans interact with the more-than-human world and the implications of these interactions for both wildlife and society. Presenter: Adam Johnson (University of Texas, San Antonio, Department of Anthropology)

The Monk Seal in an Archipelago of Carbon Colonization : Hawaiian monk seals are one of only two mammal species endemic to Hawai'i, having thrived in the subtropical waters surrounding the archipelago (Ko Hawai'i Pae 'Aina) long before the arrival of humans. Currently, Hawaiian monk seals are among the rarest species on earth and one of the most endangered seal

species in the world. Climate change is exacerbating threats to their survival as the monk seal's beach habitats are lost to rising seas and coastal erosion. By 2050, sea levels along the Hawaiian coastline are projected to rise an average of 6 to 8 inches. As one marine biologist with the National Oceanic and Atmospheric Agency (NOAA) described it, "We have one truly existential threat from climate, [for the monk seal] which is loss of terrestrial habitat." In this paper, I consider the mounting precarity faced by Hawaiian monk seals as an analog for the uneasy ascription of "American" for the peoples, lands and waters of the Hawaiian Islands, whose incorporation into the U.S. nation state has often been refused and where imperial dispossession is forcefully recognized in quotidian lives and politics. This paper draws inspiration from Hi'ilei Julia Hobart's rendering of the "diasporic" and Max Liboiron's recognition that pollution is colonialism; it is also in conversation with anthropologists who center attention on the relationships between more-than-human biographies and colonial cartographies (eg. Bonifacio, Dave, Govindrajan, Haraway, Hartigan and Tsing, among others). As anthropogenic impacts upon climate exacerbate the threat to animals like the Hawaiian monk seal, I argue that what I call the "carbon colonization" of the atmosphere can be read as parallel to settler colonial disruptions, indicating a co-constitution of human/more-than-human relationalities where climate disruption and colonial dispossession converge in the long Anthropocene. Presenter: Cymene Howe (Rice University)

Cattle on Kachemak Bay: Reifying the Last Frontier: The paper will describe free-range cattle culture and land use in the Fox River Flats, a simultaneously Critical Habitat Area, cattle grazing lease, and trail corridor in coastal, South-Central Alaska. I focus on how the presence and management of the cattle produces the identity of the Last Frontier as such. Here, cattle graze tidal flats along and between two glacial rivers: a rather unexpected sight in rural Alaska, but part of transplanted cultural touchstones of the American West into Alaska by midcentury homesteaders, continued by later arrivals coming North to the Future, and carried into today. The presence of the highly independent cattle in the landscape confirms the allure of open spaces and masculine frontier ideals, though contradicting more conservationist ideals of pristine wilderness. That the cattle inscribe the landscape with their own trails and habits confirms how the cattle co-produce their own niche in the landscape. The cattle's survival on an "open range" fits into the enduring aesthetic ideal of the American West, while also

troubling definitions of freedom and control of bureaucrats who seek to “manage” the landscape in various ways. Presenter: Hannah Bradley (University of Virginia)

A Perceived Wild: American's Interactions with Innately Wild Animals: Americans have a relationship with wilderness, nature and wild animals uncommon to other locales. The typical interface with wild animals is highly dependent on human control and the ability to individually determine the purpose of the interaction. Wild animals in zoological facilities are often considered wild and dangerous, caged creatures but in the same breath perceived as easily touched, held and kept as pets. Wildlife in parks is commonly counted as a part of the entertainment value and are often perceived to be approachable, pet and captured. Wild animals ranging from ferrets to tigers are kept as pets in households by Americans, claiming most any animal can be a domesticated version of its wild nature. The relationships Americans often have with wild animals conflict with themselves and with the nature of the animals. These interactions occur with wild animals on a daily basis, but why? What makes Americans perceive animals in these ways? Why is this the engagement Americans have with wildlife? What could be done to impact and improve human-wildlife relationships? I dive into the possible foundations of where these perceptions about wildlife may be derived and how they could be altered for better outcomes for both human and animal actors. Personal experiences with American interfaces are shared with a context of change. I glance at the history of wildlife relations in America, the continued connections we have with wild animals and possibilities for the future. Presenter: Kaelyn Dobson (Texas State University, Department of Anthropology)

Taxidermy as Multispecies Feminist Care: How do we live with and care for dead animals? In an era of troubled human-animal-environment entanglements, what is the role of care in animal death and post-death preservation? Is it possible to understand taxidermy—a process that necessitates animal death—as a care-full practice? In an effort to rethink how humans and others live and die with one another, this paper develops a framework for understanding American taxidermy—especially rogue taxidermy and ethical taxidermy carried out by women taxidermists—as a practice of multispecies feminist care. This paper brings together scholarship on multispecies care and feminist care ethics. Recent work in anthropology has revealed the messy, violent, and disruptive relations of care, while also highlighting multispecies care a practice of world-

making with the possibility of bringing about shared futures. Relatedly, feminist philosophers call attention to our responsibilities to others, both human and otherwise. Scholarship on feminist care ethics challenges a masculinist bias in ethics that prioritizes justice as independence and a disconnection from others. Instead, feminist philosophers propose a set of ethics that forefronts responsibility to, relationships with, and caring for others. Bringing these bodies of work together with a focus on taxidermy, this paper considers feminist multispecies care as wordling. Taxidermy as multispecies feminist care, then, challenges an idea of taxidermy as a traditional masculine practice and epistemology which seeks to display animals as trophies of human excursion into nature or as triumphs of scientific understanding. Instead, taxidermy as multispecies feminist care is a way of caring for dead animals and creating a world that attends to death brought about in the Anthropocene. Presenter: Amanda Cortez

The Organization of Care in Cities of the Global South

2:00 PM - 3:45 PM TMCC - 604

Oral Presentation Session

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Friederike Fleischer

CHAIR:

Cati Coe (Carleton University)

PRESENTER:

Friederike Fleischer ,Maureen O'Dougherty (Metropolitan State University),Dinah Hannaford (University of Houston, Department of Comparative Cultural Studies),Yajie Chen (Indiana University, Bloomington, Department of Anthropology)

DISCUSSANT:

Tarini Bedi

DESCRIPTION:

Around the world, care is organized according to local notions, distribution, and arrangements of households, gender, and labor; it can involve multiple agents, as well as private and public institutions, and especially women continue to be primarily responsible for the organization and provision of care in the household and beyond. The organization of care presents particular challenges in

cities of the Global South, which tend to lack adequate infrastructure, and are marked by high levels of socio-economic segregation, as well unplanned, under-serviced neighborhoods located in more hazardous parts of cities. Here, state neglect leaves citizens responsible for providing their own services and safety nets in ways that reinforce their social and economic vulnerability (Davis 2016). While recent scholarship in urban humanities and social sciences has begun to examine these issues, in this panel we seek deeper understandings of the affordances and constraints on care in cities of the Global South, exploring questions such as: Confronted with high level of informality, socioeconomic and spatial segregation, and lack of infrastructure, how are care responsibilities organized? What is the role of public and private actors and institutions? How do private and public institutions try to ameliorate structural deficiencies and intersectional inequalities? And, how can multiple forms of care in the city be mobilized to enhance capacities and more equally distribute care responsibilities? Reference: Davis, Diane E. 2016. The Production of Space and Violence in Cities of the Global South: Evidence from Latin America. *Nóesis. Revista de Ciencias Sociales y Humanidades* 25, pp. 1-15.

Care Blocks: The potentials and risks of a new feminist urban policy in Bogotá: In the early months of 2019, confronted with a yet unknown rapidly spreading infectious disease, the world went into panic mode. Offices sent employees to work from home, schools and other social institutions were closed, and people were increasingly isolated in their homes. Care work became the center of households' daily concerns, and especially women spent even more time and unpaid labor on related tasks. This was the moment when the Bogotá Mayor's Office introduced a new policy in the city's neglected and impoverished urban peripheries that aims at fostering class and gender equality. In this talk, we present the initial findings of our research project about the innovative program "Mananzas de Cuidado" (Neighborhood Care Centers), which offers a variety of services to "carers" in an effort of alleviate their burden and improving women's lives. We begin by describing the policy and services in detail, and focus on what has made this politics work. Besides political willingness, we argue that it is especially the care block coordinators' personal dedication that pushes this project forward. De-bureaucratizing official procedures, reducing clients' waiting times, and building trust with disadvantaged populations, these women are bridges between civil society and the state. At the same time, their limited labor contracts and strenuous daily shifts put them at

high risk for burnout and job desertion, and with that endanger the care centers' future itself. Presenter: Friederike Fleischer

Forging Equity and Inclusion: Community Care in a Working-Class Neighborhood of Porto Alegre, Brazil: For decades, anthropologists conducting fieldwork in South America have observed both the failure on the part of local governments to provide basic infrastructure and services to low-income communities of metropolitan regions and the efforts of community members to respond to needs and provide for themselves. This enduring problem warrants our attention and contributions. This presentation, based on ongoing fieldwork in Porto Alegre, Brazil, uses the concept of care to characterize the work of members of an NGO (Coletivo Autônomo Morro da Cruz). Such care is led by the collaborations of the cofounders: a grassroots neighborhood activist who became an elected official and a local anthropologist, whose support includes media-savvy fund-raising. These two women have enlisted a large network of committed NGO members from within and outside the community to create an impressive range of community centers and programs: before and after school program for elementary aged children, after school program for teenaged youth, young mothers' group, a skill-building, revenue generating computer reconditioning center. The list goes on: with the advice of architects consulted, the NGO activists assisted community members repair homes and pathways endangered by rain; the organization contracted to distribute "basic basket" goods during covid. Their work extends to putting on festivities for local children and organizing a black women writers' workshop. As I witness and document the remarkable productions, one conclusion seems clear: the concept of care is aptly applied to these community member efforts. One question arises: what can nonlocal anthropologists do to be of use? Presenter: Maureen O'Dougherty (Metropolitan State University)

Brokering Care in the Post-Colonial African City : Women in Dakar, Senegal face tremendous, gendered expectations of domestic and care labor. As is the case across the globe, in Senegal, women's increased participation in the wage-earning workforce and a reduction in the number of multigenerational households have intensified the demand for caregiving services. The Senegalese state does not provide infrastructure to meet the needs of family care and therefore caring labor is privatized, and families must make arrangements for themselves. In Senegal, this privatization has very different consequences for

women separated by class, citizenship, and race. In this paper, I draw on my ethnographic research on domestic service in urban Senegal to explore care arrangements between urban and rural Senegalese working women, as well as expatriate women. Care has historically been a nexus in which women meet across racial and class lines in Africa, and these informal employment relationships have consequences for urban infrastructure, migration flows, and the racialization of power. This paper argues that an examination of how families in Dakar purchase and provide paid care provides a window into the limitations of urban and rural development projects and their potential to enact meaningful, sustainable change for Senegalese citizens. Presenter: Dinah Hannaford (University of Houston, Department of Comparative Cultural Studies)

Reimagining Sisterhood and Care among Migrant Women in “Redeveloping” Urban Villages in South China: How do migrant women understand and organize care in South China’s factory hubs? The institutionalization of population control - the hukou system – has long barred rural migrants from employment security and health benefits, essentially conditions to socially reproduce, in the cities. That said, migrant workers in South China, especially women, have long found ways to organize and provide services in urban villages near industrial parks. In these unplanned urban spaces, party-sponsored service centers, land-owning village collectives, nonprofit community centers, shop owners, and migrant workers constitute a complex local system of care. Instead of utter state neglect, the Chinese state actively shapes how care responsibilities are distributed here and interacts with migrant women’s self-organized care work. The paper analyzes how migrant women reimagine and reorganize care in the face of precarious employment, potential eviction, and an intensified population management regime. The paper draws from my ethnographic research in two urban villages in Guangzhou and Shenzhen in 2019 and 2023 respectively. I examine how migrant women actively negotiate their familial obligations and employment status as they participate in clubs and workshops to foster a sense of belonging and togetherness with one another. Faced with imminent forced displacement from precarious urban communities, migrant women struggle to preserve social relationships and communal care spaces, simultaneously challenging and capitalizing on state regimes designed to manage their floating, laboring, and presumably fertile bodies. Lastly, I examine the possibilities for more equitable and empowering organization of care by/for migrant women in late

socialist urban China. Presenter: Yajie Chen (Indiana University, Bloomington, Department of Anthropology)

The Productive Impossibilities of Containment- Part I

2:00 PM - 3:45 PM TMCC - 206 F

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Adam Liebman (Depauw University, Department of Sociology and Anthropology)

CHAIR:

Goeun Lee

PRESENTER:

Julia Morris (University of North Carolina, Wilmington), Goeun Lee, Elizabeth Durham (Princeton University, Department of Anthropology), Michelle Ho (National University of Singapore)

DISCUSSANT:

Ralph Litzinger (Duke University)

DESCRIPTION:

Viruses/air, toxicity/bodies, and capital/value. All subject to industrial and imperial dreams of control and containment. All have propensities to leak. The Covid-defined second decade of the 21st century has thus far been a massive test to enduring modernist delusions that politically deployed technologies and mobilizations of containment, separation, and isolation can prevent inevitable leakages: viruses spreading across the arbitrary borders that separate polities; air entering contained spaces and the breathing bodies that reside within; toxic solid and liquid wastes leaking out of waste streams; humans refusing to stay within the pods and bubbles that they and others construct; the state's and other institutional walls and borders incompletely confining human mobility; and the always unstable circulations of capital that only ever temporarily keep all that is solid from melting into air. In this panel we aim to interrogate the persistence of projects of containment, conceived as productive impossibilities that provoke, mobilize, and terrify. As Sloterdijk suggests in *Terror From the Air* (2009), an early historical step towards the principle of air conditioning—'disconnecting a defined volume of space from surrounding air'—was the emergence of atmospheric warfare in the second world war. This set off an arms race that involved

protective gas masks and the deployment of new chemical agents that could penetrate them. Over three years after COVID-19 emerged and mass masking mandates and new restrictions on mobility spread across the world, we check in on this arms race of containment. We widen our lens to capture how projects of extraction, subjugation, expendability, and racialization infuse contemporary containment discourses and practices. And, we strive to generate a better understanding of the intertwined ways that containment simultaneously shapes the movements of bodies (human and non-human), waste (living and non-living), and value (concrete, fictitious, and non-economic). Drawing on Schoot and Mather (2021), we focus not so much on what containment promises to hold inside, but rather on the broader regimes, structures, and logics that containment 'holds together,' and how containment ambitions structure novel forms of (cosmo-)politics that at times align coalitions of diverse actors. Containment is thus not only subtly productive but also at times overtly subversive and violent. The papers in Part I of this two-part session grapple with regimes aimed to confine bodies along with self-organized regimes of bodily containment for risk avoidance. Julia Morris uncovers continuities between past and present extractive industries on the island nation of Nauru to show how the refugee industry enacts environmental racism on migrant bodies; Goeun Lee highlights how anxieties over keeping food waste flowing out of the city and not back into circulation facilitates technocratic visions of urban sustainability in Shanghai; Elizabeth Durham shows how the prospect of escaping from confinement in a psychiatric ward in the Republic of Cameroon played out through pentecostalism and a secessionist movement; and, Michelle Ho theorizes the reliance on food couriers among the privileged in Singapore amid the covid pandemic, illustrating the disjuncture between bubbles of protection and the dangerous realities of food courier work underlying 'convenience.'

Racialized Extractivism and Containment: Outsourcing Asylum to the Republic of Nauru: This paper advances a resource extractive framework for understanding the expansion of extraction and capitalist activity into the governance of human mobility. It draws on my research on the post/colonial overlaps of extractive industries around mineral and migrant resource sectors in the Republic of Nauru. Nauru, the world's smallest island state, was almost entirely economically dependent on the phosphate industry in the twentieth century. After the wealth it derived from phosphate extraction was depleted in the 1990s, the sovereign state resurged on

the back of the refugee industry by importing Australia's maritime asylum-seeking populations. By drawing continuities between past and present extractive industries, this paper emphasizes that environmental racism plays a crucial part in where containment industries are located: all too often in minority and low-income communities. These uneven placements have important resonances with the racialized geographies of containment that are taking shape across the Global South, and the racial biases that structure how people move across borders. I argue that the disproportionate exposures of hypercriminalization, violence, and precarity that BIPOC migrants are subject to, as part of a differential access to mobility, is a form of environmental racism that is enacted on migrants' bodies. An extractivist lens broadens our analytical and critical capacity to not only understand but also combat the growth in migrant containment regimes worldwide. Placing emphasis on the significance of livable futures for migrant, Indigenous, and citizen populations alike can challenge prevailing hierarchies and push back against the boundaries carved out by the state. Presenter: Julia Morris (University of North Carolina, Wilmington)

Anxiety Over Food Waste Leakage Feeding Shanghai's Technocratic Visions of Urban Sustainability: In Chinese cities throughout the first decade of the 21st century, a major public health scandal emerged involving "gutter oil" (di gou you), which refers to the illegal practice of restaurants reusing cooking oil that has been previously used for longer than safety regulations allow. Food waste was being acquired from restaurant waste receptacles in the city, transferred to sites outside the city, and then utilized as swine feed or, more infamously, to extract cooking oil for reselling on the market by unauthorized businesses. Focusing on the case of Shanghai, this paper argues that the gutter oil scandal and the subsequent measures were more than just food safety concerns. They also affected public conversation regarding the ideal direction of waste flows, the city's boundaries, and a renewal of the urban-rural hierarchy with the modernist language of hygiene in China. In other words, food waste was permitted to move from the interior to the exterior of the city, but not vice versa. The gutter oil was viewed as a leakage from the legitimate food waste flows that should have been contained within the one-way circuit. People involved in the gutter oil business were stigmatized as outsiders and threats to urban civility. By showing the parallel between the public fears of food waste leakage and China's technocratic visions of urban sustainability, the paper concludes that urban residents' anxieties over

food waste containment in the 2000s set the stage for Shanghai's ambitious and strict waste management policy to be implemented in the 2010s. Presenter: Goeun Lee

State Psychiatry, Patient Mental Health, and Anti/Escapist Ethics in a Country at War with Itself: This paper analyzes "containment" through the lens of public psychiatric confinement and out-patient treatment. Specifically, I focus on the flagship state psychiatric institution of the Republic of Cameroon. Drawing on 26 months of fieldwork (2016-2023) with a cohort of 30 patients, I discuss how clinicians offered patients an understanding of mental health as made by crafting and inhabiting an everyday life from which patients did not want to escape, as well as an ethics of personal responsibility for staying in the timeframe of "the everyday" itself. From there, I discuss how this clinical vision of everyday mental health was provocatively complicated by patients' possibilities and practices of escape on two fronts. The first is many patients' incorporation of their Pentecostal faith into their therapeutic trajectories, including the possibility and timing of healing miracles as a permanent escape from precarity and suffering. The second is the 2016 militarization of a longstanding conflict between the Republic and secessionists in western Cameroon. I take secessionism as both a refusal to be contained by a particular regime of governance, and an escape to an envisioned homeland, one that many Pentecostal secessionists contend is divinely favored, even miraculous. Moving with patients from the clinic to their churches and home(land)s, I trace how they came to discern when their mental health was supported by leaning into the intimacies and structures of everyday life, and when by resisting or escaping this, even as the emancipatory potential of "escape" itself often remained elusive, unrealized, or incomplete. Presenter: Elizabeth Durham (Princeton University, Department of Anthropology)

Being Productively Inconvenient: Food Couriers, Accidents, and Tropical Weather in Singapore: Food couriers have become essential workers amidst ongoing COVID-19 realities, providing sustenance to other human beings who are often more privileged in terms of class, ability, race/ethnicity, and citizenship. This arrangement centers on a fantasy of containment, presented as "convenience." While the privileged can stay within bubbles of protection, the bodies of couriers would have to brave encounters with rain, humidity, heat, and security to deliver food. Drawing on preliminary data from interviews and digital

ethnography of Facebook groups, we argue that the porosity of courier bodies reflects on how occupational inequalities are productive (if tragic) inconvenient objects of containment. To lean on Lauren Berlant, inconvenience marks the revelation of friction that is always embedded but often suppressed in social relations. Our paper investigates both ordinary attritions (tan lines, illegally parked bikes, quarrels) and potentially fatal accidents (a crushed bike, mauled body) to illustrate the disjuncture between the promise of platforms and the realities of food courier work. In fact, leaks and seepages (sweat, blood, rain, heat) are not side effects of courier work but intrinsic to it. The forced reckoning with inconvenience unveils the productive potential of alternate latent social relationalities. The most tragic instance—bloodied bodies on the road—makes evident this impossibility of containment. Now inconveniently holding up traffic, bloodied bodies force onlookers to witness the costs of occupational inequality. Left there, bleeding and mixing with gravel and rainwater, they also attract solidarity and recognition, allowing for the leakage to become the site for mourning and protest. Presenter: Michelle Ho (National University of Singapore)

DISCUSSANT:

Constantine Nakassis

DESCRIPTION:

As we gather to discuss the theme of 'Transitions' and the array of meanings evoked by the prefix 'trans-' (e.g., metamorphosis, in-betweenness, movement across theoretical categories, forms of life, and physical spaces), this panel turns to the notion of 'translation' to examine the role of language and semiosis within contemporary capitalism. Capitalism is an ever-changing dynamic system characterized by the continuous search for new ways to generate value. As scholars in linguistic anthropology and allied disciplines have shown, semiotic ideologies and activities are key in structuring contemporary 'semiocapitalism' (Berardi 2009), that is, the increased use of signs and information as main infrastructures of valorization (Agha 2011, 2015; Cavanaugh & Shankar 2014; Duchêne & Heller 2012; Manning 2010; Moore 2003; Gal 2015; Nakassis 2013). Translation is essential for capitalist value projects. Ideologies of translatability pivoting on the arbitrariness of signs (Keane 2007) have enabled the spread of capitalism, which, in turn, has been boosted by the use of standardized pecuniary media to create transactional equivalences (Agha 2017). Our panel explores how translation across modalities, registers, genres, and codes operates under semiocapitalism. Going beyond conventional notions of translation as the carrying over of meaning across self-contained codes, we view translation as a metasemiotic infrastructure for speeding up and scaling up production and for crafting forms of sociality and subjectivity conducive to capitalist valorization. As Tsing (2013) suggests, capitalism is incapable of producing most of what it needs to function, translation is thus a powerful technology for transforming non-capitalist social relations, natural resources, and objects into capitalist commodities and transactions. Translation across modalities from the spoken word into various graphic and textual artifacts (architectural renderings, checklists, QR codes, etc.) engenders entextualized templates capable of traveling across contexts to discipline people and their modes of interaction. The pragmatic standardization of genres typical of contemporary audit cultures is a core technology of scalability: it operates by translating centrifugal discursive practices into highly regimented protocols to enable the serial reproduction of templates that can be extended to greater scales, but also sabotaged or resisted. Donzelli discusses how supply chains entail the conversion of vernacular codes into global languages to optimize agribusiness production and looks at how the sensuous materiality of regional products may obstruct denotational translatability. By contrast, Luvaas & Chio analyze how somatic experiences, produced through Eco-Cities renderings,

are deployed as virtual translational technologies for the commodification of sustainability. Exploring translational governmentality, Hull focuses on the semiotics of corporate governance, whereby juridico-political translational arrangements produce strategic forms of incorporation and partitioning. Del Percio and Vigouroux examine how quantitative and statistical data translate social facts into political propaganda. Finally, Perrino's analysis of 'Made in Italy' focuses on the narrative production of authenticity to ask: what is considered untranslatable and when are the semiotic metamarks of translation disguised or highlighted to produce unique prototypes, faithful copies, or fraudulent imitation?

Translations interrupted: Italian neorural revivals and the neodialectal poetics of unscalability : Far from being limited to a simple process of interlingual transfer, translation is a key dispositive of scale making and value production within our late capitalist world. This paper discusses the political economy of translation in contemporary Italy against the backdrop of a series of interconnected processes: the post-World War II rural exodus and fast-paced industrialization, the parallel displacement, by standard Italian, of local linguistic varieties, and the current revival of the rural through the increasing participation in "back-to-the-land" experiences and indigenous food activism. My analysis focuses on the unexplored convergence between contemporary neorural revivalists and mid twentieth century neodialectal poets to show how specific ideologies and practices of translation may be used to craft poetic-cum-political alternatives both to intensive agribusiness scalability and centripetal linguistic standardization. Combining linguistic anthropological fieldwork among contemporary Italian neoruralists with the analysis of poems and metalinguistic theories developed by neodialectal poets during the second half of the twentieth century, I identify shared strategies to sabotage the collusion between linguistic standardization and the expansionist rationality of scalable production. My goal is twofold. First, I show how linguistic standardization entails a metapragmatics of translational encompassment whereby regional varieties are seen as subsumable within the national language. Second, I discuss how translation may be resisted through literary and interactional gestures such as the poetic use of vernacular botanical terms to evoke indigenous agro-linguistic ecologies, or the silent and impromptu offering, during service encounters, of food samples and gifts in kind to deny denotational translatability and pecuniary equivalence. Presenter: Aurora Donzelli (University of Bologna)

Translating Sustainability into Somatic Experience: Renderings of Eco-Cities in Southeast Asia: Touted by real estate developers, city planners, and state governments alike, the “eco-city” is emerging as an increasingly common design response to the complex ecological challenges associated with urbanization and climate change. Private utopias that fuse the aesthetics of futurity with the lush beauty of the natural world, planned eco-city developments like Forest City and Penang South Islands, both in Malaysia, promise luxury enclaves against the environmental stressors of existing cities. This paper analyzes CGI architectural renderings used to promote and sell eco-city projects in Southeast Asia as a translational technology of commodification. Produced by renowned international design firms, these renderings, we demonstrate, are designed to simulate in their audience the feeling of “being there,” where “there” is an imagined near future, full of sleek, self-contained, high-rise developments, seeming to emerge right out of the forest. Designed with AutoCAD, SketchUp, and similar software, and circulated through websites, brochures, and promotional videos, renderings translate the familiar, transnational concepts of “green,” “eco-friendly,” and “sustainable” into something far more inchoate, as qualia, or the sensuous aspects of lived experience. Eco-city renderings, we argue, produce value within semicapitalism by engaging aesthetic-sensory modalities that transform sustainability into literal property. By selling “green” as a feeling, CGI renderings capitalize on present-day anxieties over urban decay and commodify “the ecological” as a rich resource of pleasing qualitative experiences. In doing so, we contend, renderings reinforce a neoliberal mode of subjectivity that equates consumption with somatics and reduces climate responsibility to individual consumer decisions. Presenter: Brent Luvaas (Drexel University)

ONE FROM MANY AND MANY FROM ONE: THE UNITY AND MULTIPLICITY OF INCORPORATIONS: *E pluribus unum*. One from many. This early motto of the United States originally referred to the union of thirteen separate colonies. But it also captures the fundamental metaphysical, political, and legal act of incorporation, a translation that creates one unified legal actor from many individuals. At the same time, corporations multiply themselves into independent legal actors, translating themselves into the form of incorporated subsidiaries that are governed like branches of themselves. Unlike human offspring, these corporate offspring are easily created, may take up citizenship in almost any jurisdiction, and always obey their parents.

Corporate governance arrangements counter the problematic legal construction of unity and multiplicity in each case. The differences between natural persons and corporations that are created through these complementary semiotic processes are key to the global economy. Empirically, the paper will discuss these issues with respect to tort liability, international trade, property, and taxation. Presenter: Matthew Hull (University of Michigan)

Brand Valuation and Audit Cultures, or the Translation of Public Perception for Liberal Government : In his review article *Governing by numbers*, Rose (1991) argues that there is a constitutive relationship between processes of quantification and liberal governmentality. He explains that the organization of political life in the form of the modern, Western state has been intrinsically linked to the composition of networks of numbers that connect those exercising political power with the processes, persons and problems that they seek to govern. Numbers, Rose explains, are integral to the problematizations that shape what is to be governed, and to the programs that seek to give effect to government. In her review of the politics of translation, Gal (2015) notes that translation is a key semiotic process through which the links and the constitutive effects that Rose documents in his genealogy of the modern state are created and organized. In this paper, I draw on Gal (2015) and Rose (1991) to explore processes of nation brand valuation and their incorporation into a practice of government; processes which, as I will argue, are constituted by several moments of translation that are metapragmatically regimented by economic genres (Prentice & Gershon, 2022) typical of contemporary audit cultures (Strathern, 2000). Based on my ethnographic and historiographic work on Switzerland’s politics of propaganda and nation branding, I explore how translation processes have allowed to create relations of equivalence and organize connections between public perception, finance, branding and the administration of people, territories, including security, with effects on what constitutes government and on how government is practiced. Gal, S. (2015). *The Politics of Translation*. *Annual Review of Anthropology*, Vol 44, 225–40. Prentice, M. & I, Gershon (2022). Introduction: genre work and the new economy. *Journal of Cultural Economy* 15(6), pp. 725-734. Rose, N. (1991). *Governing by Numbers: Figuring out Democracy*. *Accounting Organizations and Society*, Vol. 16, pp. 673-692. Presenter: Alfonso Del Percio

Governing bodies or the Art of Counting : In this paper I discuss the activities of enumerating homeless people

in Paris, initiated by the city council of France's capital city a few years ago. I document the discursive process of transforming/translating individual experiences of people living on the street into statistical 'data'. I focus on the appeal of measurements on which such counting rests, including the supposition that it helps generate accurate social profiles based on neat categories such as age, gender, types of homelessness (e.g., under a tent) and that it can inform straightforward policies. One of the questions I want to address is the way in which the City Council constructs its counting as a performing political act of attending to homeless social issues in France. That is, whether counting is part of doing work for homeless people. I show how the counting is resemiotized into a self-promoting political discourse performed at a well-mediatized public event where initial analyses of data are released, and wine is sipped afterwards, in the historical salons of the Mairie de Paris. In a second part of the paper, I examine the role played by different social actors in the process of the counting. For instance, experts on homelessness – such as demographers, sociologists, political scientists whose role is to design the questionnaire survey used for the counting – are an important part of the legitimation process of the City Council's counting enterprise. Volunteers who enlisted to count are part of a strategy of governance from below. Finally, I follow the trajectory of the survey-questionnaire and document how it shapes the training session that volunteers attend before being sent off to the streets of Paris, aside from mediating their relationship with those enumerated. Presenter: Cécile Vigouroux

Translating Made in Italy across Time and Space: Often referred to as the crib of the Renaissance, Italy promotes art and history as centerpieces of Italian culture and identity. The numerous medieval churches, Renaissance palaces, and ancient Roman ruins in the Italian landscape often create an "aura" that infuses a high regard for Italy's rich artistic history. This aura is believed to emerge from other aspects of Italian sociocultural life, thus becoming – as many of my interviewees emphasized – part of Italy's "cultural DNA" (Perrino 2020). These artistic and historical values have been also translated into Italy's business sector, often through ideological associations with the "Made in Italy" brand. Through a linguistic anthropological analysis of a corpus of offline and online narratives that have emerged from interviews that I conducted with Northern Italian executives (2011-2022), I examine how collective, Made-in-Italy brand identities are (co)constructed and translated through the scalar chronotopic stances that these executives take vis-à-vis

both the historicity and the contemporary, artistic uniqueness of their companies. More specifically, I examine how executives in small Venetan family-owned firms (Blim 1990; Yanagisako 2002) use their corporations' histories to associate particular moral discourses of cultural values, responsibility, and authenticity with the Made in Italy brand. These links render Made in Italy a national brand that allegedly represents all goods produced in Italy. In particular, I focus on the ways Northern Italian executives construct and solidify their Made in Italy brand identity and how they translate it into Italy's contemporary, capitalist-driven society. Presenter: Sabina Perrino (SUNY, Binghamton University, Department of Anthropology)

The 'X' Factor: #AnthroTwitter, academic labour, and anthropological community in a time of technological transition

2:00 PM - 3:45 PM TMCC - 803 A

Late-Breaking Roundtable/Town Hall - In-Person

ORGANIZER:

Adam Fleischmann (McGill University, Department of Anthropology)

CHAIR:

Lachlan Summers (Max Planck Institute)

PRESENTER:

Hannah Quinn (University of Toronto, Department of Anthropology), Breanna Escamilla, Scott Ross (George Washington University), Jimil Ataman (University of Pennsylvania, Department of Anthropology)

DESCRIPTION:

For years now, contemporary anthropology, and academia more broadly, have been shaped in and by the commons of social media. Can this same social media help anthropology to reimagine community and collaboration, knowledge production and citation, labor and a more just future for higher education? This roundtable featuring members of the Society for Cultural Anthropology (SCA) Social Media Team builds upon a forthcoming (October 2023) deeply collaborative essay series to address the place of social media activity in the future of academic labor, open-access publishing and community building. With some 48,000 followers, the SCA's Twitter account, @CulAnth, is the second largest anthropology social media presence in the world, behind only the American Anthropological Association on Facebook. Since 2010, the SCA has been sharing SCA online publications and Cultural

Anthropology journal content on Facebook and Twitter, channeling a large portion of its total readership—and, arguably, some of its cutting edge reputation—from social media posts. By developing an engaged online presence, promoting anthropological ideas and fostering online community, it has become one of the discipline's largest megaphones: a central means through which anthropology gets both out of individual departments and out into the public. This work is managed by a group of volunteer graduate students as part of the Society's Contributing Editor Program. Unpaid, but not necessarily uncompensated, this collective work provides for a unique perspective on the role of social media in contemporary anthropology and academia more broadly. In this roundtable, outgoing and incoming members of the SCA's Social Media Team draw from the transformative experiences of working together to reflect on how academic work on social media can be a space from which to reimagine the politics and ethics of academic community and knowledge production. Following Jobson (2020) and Tuck (2022), we look toward a future that understands and values its contemporary conditions of possibility, not as external to the discipline but as essential to its continued relevance, institutionally and intellectually. Along the way, we endeavor to make sense of the place of precarious labor within the yet-unwritten future of our academic community. Approaching the one-year anniversary of a tech billionaire's purchase of Twitter, and following on the heels of its rechristening as X, academics have been wondering what new platforms might exist for building community and practicing public scholarship. Drawing on our lived experience and collaborative labor as SCA's Social Media Team, in this roundtable we explore the challenges and possibilities of making a place for anthropology online. We ask: Where will anthropology's online community (such as "#AnthroTwitter") go as these infrastructures become unusable, morally and technologically? How do these transitions in online academic community offer an opportunity to rethink anthropology's future(s)?

4-530

Transformations in Black Educational Experiences (Across Time and Space)

2:00 PM - 3:45 PM TMCC - 801 B

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Angela Crumdy (University of Pennsylvania)

CHAIR:

Angela Crumdy (University of Pennsylvania)

PRESENTER:

Keisha Wiel ,Samiha Rahman (California State University, Long Beach),Amanda Concha-Holmes (University of Florida),Holly Okonkwo (University of California, San Diego),Deneia Fairweather (Galen University)

DISCUSSANT:

Jasmine Blanks Jones (Johns Hopkins University)

DESCRIPTION:

This two-part panel series considers transitions as a 'project of connection and mobility' across the African diaspora, centering transcendence as a framework for embracing 'blackness across borders' (Thomas, 2007) and resisting imperial and colonial fragmentation across linguistic and cultural lines (Torres-Saillant, 2016). We propose education in school and community contexts as a gathering space for bridging past, present, and future configurations of Black students, educators, and community members as they address and transform the crises of everyday life. In alignment with Yomaira Figueroa-Vásquez's (2020) perspective on relationality, we highlight shared subjective experiences across contexts while also acknowledging sites of incommensurability. By highlighting Black intellectual, educational, and political projects in defiance of national boundaries (Kelley, 2020), we share anthropological theory and praxis to 'allo[w] a new history of freedom to be written' (Johnson, 2019). Our first panel advances understandings of education as the practice of freedom (hooks, 1994) by thinking expansively about what learning looks like and where it happens. Panelists do so by: 1) engaging school sites in Aruba and Curaçao, to consider how students and teachers use their full linguistic repertoire, especially the Creole language Papiamentu/o, to subvert educational policy of using the colonial language of Dutch; 2) conducting a longitudinal study on the possibilities and foreclosures of sustained African-diasporic Islamic education exchange based on three groups of Black American Muslim youth who once studied in Medina Baye Senegal; 3) co-creating SAAADHI-Sankofa African American Arts & Digital Humanities Initiative, to offer a transition to decolonial futures that heralds empowering content, arts-integrated practices, and positive results for K-12 educators in Florida; 4) Using research and teaching experiences from Bahia, Brazil, Belize City an New York City to produce an Anthropology in Motion 2.0 (AIM

2.0) toolkit where youth and young adults will use problem and project based learning (PBL) techniques to move toward a data driven investigation into why we need reparations; 5) analyzing interviews with African American women cosmetologists who collaborated in designing and implementing a series of community-centered science, technology, engineering, and mathematics (STEM) education programs to support broadening the participation of Black children in those fields.

Resistance, Language Use, and Identity in Aruban and Curaçaoan Schools: Papiamentu/o, one of two official Caribbean Creole languages, is the language of Aruba and Curaçao alongside Dutch and English. Although Papiamentu/o is regarded as an important identity marker among its speakers, many consider it less suitable than Dutch for use in formal education. Dutch is considered the official language of education in most schools on the islands. Yet many teachers resort to translanguaging between Papiamentu/o and English to teach their students. For many students, Dutch is a language that they mostly encounter in a school setting often not coming across Dutch outside of the classroom. This presents an issue that while many students can speak Dutch, their comprehension of the language for academic purposes is minimal. Through the ethnographic methods of participant observation and participatory action research, I investigated how teachers employed the use of their full linguistic repertoire to ensure their students' academic success through language use socialization. I suggest that the iconization of Papiamentu/o as a nurturing language allows students and teachers to effortlessly translanguage through Papiamentu/o, Dutch, and English and subvert behavioral classrooms norms. My research question asked: How were students socialized into ideas about language use in educational settings, specifically about the use of Papiamentu/o in relation to Dutch, English, and other languages? Through the frameworks of translanguaging (García and Wei 2015,) and language socialization (Garrett 2012), data was analyzed to discern how students and teachers use language as resistance to negotiate classroom demeanor and academic success. Findings suggested that not only did teachers and students use their linguistic repertoire as resistance to the hegemonic language policies in education, but teachers also used their linguistic repertoire to create innovative teaching methods in order to educate their students. Presenter: Keisha Wiel

Time to Work: Bringing Islamic Education and Diasporic Exchange Back Home: This presentation examines the long-term trajectories of Black American Muslim youth who studied in Medina Baye, Senegal from the 1980s to the present. Bringing together the stories of students and alumni over four decades, this presentation chronicles their aspirations and journeys after they completed their education abroad and as they moved into the next phases of and places in their lives. Once young people left Medina Baye, how did they take up the religio-racial imperative to do service for and in their community? How did they balance this religio-racial imperative with the need for forms of employment or schooling that would allow them to economically sustain themselves and their families within the system of racial capitalism in the U.S.? To answer these questions, I focus on three categories of young people. Each category envisioned and enacted different academic and occupational pathways once they finished their studies. The first was young people who were committed to becoming religious leaders, authorities, and teachers in the U.S. The second was young people who leveraged their educational experiences abroad as a sociopolitical and moral compass that anchored their subsequent academic, professional, and community-engaged/based activities. The third was young people who briefly attended school or were employed in the U.S. but ultimately decided to return to Medina Baye with hopes of rebuilding their lives there. These three groups reflect the varied ways in which the educational experience in Medina Baye shaped Black American Muslim youths' ways of being, becoming, and belonging they transitioned into social adulthood and engaged in their work in the world. These groups' trajectories demonstrate the possibilities and foreclosures of sustained African-diasporic Islamic education exchange in offering Black American Muslims greater resources for transforming themselves and their communities, and for withstanding racial capitalism and anti-Blackness. Presenter: Samiha Rahman (California State University, Long Beach)

Transitions to a Decolonial Curriculum through Evoking the Complexity of Black Lives in Florida: Florida has a deep connection to Black history (and people of non-European ancestry) that is often left at the margins of school curricula. A fundamental problem of integrating Black history into K-12 classrooms is that the teachers do not have the content knowledge, in part because of the colonial, Eurocentric curriculums, but also because when Black people are introduced it is often through slavery and oppression. To counter this trend and offer a transition to decolonial futures that heralds

empowering content, arts-integrated practices, and positive results that inspire Black scholars to continue with higher education and entrepreneurship, we created SAAADHI—Sankofa African American Arts & Digital Humanities Initiative. Based on evocative ethnography, a feminist theoretical and methodological intervention, our mission is to decolonize representations in the curriculum through making critical-art and digital humanities products that highlight underrepresented stories of people, places and ideas with an Afrofuturist lens. To accomplish this goal, we bring together university scholars, artists, the local media station, community leaders, along with teachers and students to collaborate on crafting digital humanities productions to evoke the complexity of Black lives in Florida. The presentation will offer rich examples of audio, video and multimedia that include the first-hand experience of some of the Eastside students involved in the production of the podcast *Unsung Heroes in Alachua County*. Presenter: Amanda Concha-Holmes (University of Florida)

Styling STEM: How African American Women Cosmetologists Reimagine STEM Education : This paper analyzes interviews with African American women cosmetologists who collaborated in designing and implementing a series of community-centered science, technology, engineering, and mathematics (STEM) education programs to support broadening the participation of Black children in those fields. These collaborations used technologies and media as bridges between STEM knowledge as it appears in schools and STEM knowledge as it has been and is communicated, produced, and used by Black haircare experts. We discuss how exploring the knowledge practices of these experts not only provides new ways for reimagining STEM fields for Black children, but also helps to acknowledge STEM's existing and generative presence in Black communities. Our findings reveal three ways that this group of cosmetologists helped reimagine STEM education: 1) STEM as personal and situated; 2) STEM as a blend of formal and informal knowledge; and 3) STEM as community. Presenter: Holly Okonkwo (University of California, San Diego)

Stepping Forward to Reparations: Using Anthropology to build A Postcolonial Global Digital Classroom: How do we build a more inclusive educational system in a post colonial era? How do we build a more supportive educational system in a post colonial era? How do we address youth empowerment in a post colonial era? These are the guiding questions that serve as a foundation for a global digital classroom curriculum

called Anthropology in Motion (AIM) 2.0. AIM 2.0 is an inquiry based toolkit that focuses on how to repair the injustices of the past through sustainable development. In this curriculum, youth and young adults (aged 16-24) use problem and project based learning (PBL) techniques to move beyond decolonization toward a data driven investigation into why we need reparations. Reparations, often considered a divisive term, is associated with either compensated emancipation and a path toward reconciliation or an unrealistic solution that could bankrupt a nation. Aim 2.0 emphasizes postcolonial epistemologies, emancipatory voices and practice theory and shows how youth and young adults understood the intention of reparations while realizing, appreciating and understanding the value of seventeen sustainable development goals introduced by the United Nations in 2015. Using the United Nations Sustainable Development Goal (UNSDG) and Caricom's Ten Point Plan for Reparations as a guide and foundation for applying anthropology, and primary data collected about the diverse cultures and communities of African Diaspora, this paper advocates for a vision of democratizing education and creating global communities of practice that will empower youth and young adults to be active, uplifting and consistent participants in their communities. Presenter: Deneia Fairweather (Galen University)

Transitioning to a More Critical Engagement between Anthropologists of the Circum-Caribbean

2:00 PM - 3:45 PM TMCC - 714 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

ORGANIZER:

Adriana Garriga-Lopez (Florida Atlantic University)

CHAIR:

Deniz Daser ,Sarah Vaughn (University of California, Berkeley)

PRESENTER:

Melinda Gonzalez (Rutgers University), Steven Gonzalez (Massachusetts Institute of Technology), Adriana Garriga-Lopez (Florida Atlantic University), Anais Roque (Arizona State University, School of Human Evolution and Social Change)

DESCRIPTION:

Anthropologists of the circum-Caribbean have long thought of our field sites as 'locations' (Trouillot 2003), that is, as places constructed through the historical circuitry of global capital and labor that links modern societies in complex webs of inequality. As climate change in the Capitalocene gains urgency as both a lived reality and as a topic of study, scholars of the circum-Caribbean have emphasized the ways that disasters and post-disaster processes reflect forms of accumulation structured by imperialism and racial capitalism that maintain and reproduce vulnerability for marginalized communities. Yet, contrary to the transborder considerations of much of that work, the ethnographers themselves have often remained isolated as researchers. This roundtable aims to correct that by bringing together scholars examining post-disaster contexts in diverse locations like Puerto Rico, Singapore, New Orleans, Guyana, the Bahamas, and New York. As scholars studying a broad range of topics ranging from data infrastructures, to post-disaster displacement, to the short- and long-term physical and mental health effects of compounding disasters. We propose to discuss the following questions, among others: What areas of overlap emerge from comparing research findings across Caribbean and diasporic contexts? How can scholars of the circum-Caribbean collaborate on post-disaster research, not only to strengthen findings on post-disaster political economy and cultural change, but also to create more robust methodological and theoretical approaches for a highly transnational region? How do individual researchers embody the effects of disaster and post-disaster settings? What is the relationship between cultural anthropology and disaster studies currently like and how can we change it? In what ways do people resist the logic and power of disaster and disaster response discourses and apparatuses in the Caribbean?

Transitioning Toward Humanizing Higher Education: An Anthropological Perspective on Possibilities in Postsecondary Institutions

2:00 PM - 3:45 PM TMCC - 717 B*Roundtable/Town Hall - In-Person***REVIEWED BY:****Council on Anthropology and Education****ORGANIZER:****Jennifer Stacy****CHAIR:****Jessica Sierk****PRESENTER:****Jessica Sierk ,Wesley Shumar (Drexel University),Amy Somchanhmavong ,Jennifer Stacy****DISCUSSANT:****Sarah Appelhans (Lafayette College),Corinne Kentor****DESCRIPTION:**

Institutions of higher education can be understood as spaces of transition from multifarious and overlapping perspectives. The twenty-first century university has commonly been dubbed as a liminal space between adolescence and adulthood and, more and more, as the genesis of careers - the transition from academic to professional life (Newman & Turner, 1996; Carnevale et al., 2022; Arthur, Khapova & Wilderom, 2005;). Postsecondary institutions have also been configured as spaces to cultivate justice and social change (Brayboy, 2005), regardless of their simultaneously exclusionary practices. Despite the prevalence of these tropes, anthropological research has illuminated that dominant rhetoric about the function of college is, at best, incomplete and, more likely, obscuring much about people's realities within the institution and the institution's role in sustaining the hegemonic status quo (Urciuoli, 2009). This has become increasingly concerning as the U.S. undergraduate student body becomes more diverse across intersecting social identities, including ethnicity, race, socioeconomic status, language, immigration status, and age (NCES, 2022). Transitioning toward humanizing practices in higher education requires ethnographically researching the lived experiences of stakeholders, capturing the cultural material and patterns of the existing world so that the possible world might be pursued. As anthropologists dedicated to equity, we come together to identify promising praxis and to deliberate the elements that facilitate or hinder the transition toward humanizing higher education. In this round table, we explore initiatives that, first and foremost, understand university stakeholders as humans, that center their identities, resist technocratic tendencies, and cultivate an authentic sense of belonging. Corinne Kentor contemplates humanizing institutional support systems, such as financial aid, as a practice of caregiving. Wes Shumar considers a return to Humboldt, prioritizing teaching for meaningful learning in higher education and the power of professional development with Polish, Danish, and American Faculty. Amy Somchanhmavong takes up place-based, ecosystem approach to community engagement in higher education and looks

at public community-based pedagogies as a driving force. Kristine Sudbeck highlights faculty efforts to decolonize/indigenize teaching and learning at a tribal college to reclaim indigenous languages, histories, and cultures while also fostering healing and identity development. Helene Demers embraces decolonizing pedagogies by asking postsecondary students to sit with water and to use contemplative practice in post-secondary to deepen their understanding of connection to place. Sarah Appelhans explores the capabilities approach as a vessel through which to humanize education for engineering students, while Jessica Sierk ethnographically analyzes students' metacognition as they engage in a mindful labor approach that questions and transforms traditional grading practices. Jen Stacy and coauthors document a unique approach to professional development for bilingual educators that cultivates ideological clarity, emboldens teachers' of color praxis, and reimagines typical 'takeaways'. Together, this purview of research not only captures a transition toward humanizing practices in higher education, but also illuminates how the people involved in these initiatives navigate, subvert, and resist oppressive forces.

Transmutable Practices of Care in Museums

2:00 PM - 3:45 PM TMCC - 205 D

Oral Presentation Session

REVIEWED BY:

Council for Museum Anthropology

ORGANIZER:

Cara Krmpotich

CHAIR:

Alice Stevenson (University College London, Institute of Archaeology)

PRESENTER:

Maureen Matthews ,Cara Krmpotich ,Alice Stevenson (University College London, Institute of Archaeology),Ricardo Punzalan (University of Michigan),Nicole Anderson

DESCRIPTION:

This panel attends to the transitions happening within museums regarding the care of collections and cultural belongings. We approach the practices of care from the perspectives of collections managers, registrars, curators, and descendent communities. The papers within this panel challenge prevailing notions in the cultural sector that there are universal 'best practices,'

and instead seek to develop plural expressions of care that are attuned to both local cultural expressions and global expectations surrounding cultural heritage (Anderson and Geismar 2017; Silverman 2015). As Woodham and Kelleher (2020) observe, the ways museums demonstrate care makes legible to other parties whether and how they, in turn, should care for and value collections. Museum anthropology has played an important role in expanding demonstrations of care, spurred on by Indigenous activism, community collaboration, and a deep interrogation of the values espoused and enacted by museums (Clavir 2002; Conaty 2015; Krmpotich and Peers 2014; Peers and Brown 2015; Shannon 2021; Spears and Thompson 2022; Turner 2020; Walsh 2017). This panel will demonstrate a need to see best practices of care not as 'immutable' but as imminently transmutable by offering contemporary case studies of museum anthropologists and archivists that continually transform-if not also transgress-the work of museums and cultural institutions. The cases presented here imagine, experiment with and enact additional means of care that resist isolating and insulating museums. Instead, each paper looks at how values and actions of care transit into and out of museums, involving government, diplomacy, health care, communities, artists and archives.

Minwaabaji'idizowin: Making Oneself Useful: This paper addresses the changes in museum caring practices which derive from an approach to Indigenous museum collections which privileges the Anishinaabe/ Ininiw/ Dakota view that ceremonial artefacts such as pipes are kinds of other-than-human persons with active social relationships (Viveiros de Casto, Bird-David, Matthews). It follows from this perspective that the collection itself imposes obligations on the museum and its persons to provide care, not from a professional asset-based ownership and heritage performance perspective, but with the purpose of renewing old Indigenous relationships through visitation, repatriation, and reconciliation and encouraging new Indigenous relationships by bringing Indigenous community members and scholars into the collection and taking Indigenous artefacts out into the communities while substantially renegotiating interpretive and administrative authority. This paper reflects on changes in practices and protocols which have been initiated by twelve pipes now on exhibit at the Manitoba Museum (Matthews 2021). In local Indigenous languages, these pipes are spoken of as if they can make things happen. They have in fact made things happen. They have changed the museum's approach to "care" from a social,

ceremonial, and institutional perspective. These pipes were asked to act as diplomats and teachers on behalf of First Nations people, educating the public about First Nations perspectives on treaty making. This very overt role has brought into being new ways of caring for Indigenous objects and new ways of articulating relationships within and outside the museum, transforming museum practice and challenging the museum's interpretive authority. Presenter: Maureen Matthews

Healthy Aging as an Alternative Ethics and Model for Collections Care: The World Health Organization recently declared 2020-30 as the Decade of Healthy Aging, seeking to catalyze a global collaboration that will improve the lives of older people, their families, and the communities in which they live. Aging is positioned as positive, albeit accompanied by significant shifts in social roles and close relationships. This paper takes up the WHO's notion of Healthy Aging and re-imagines it in the context of museum collections, treating artefacts as seniors with needs and desires that need to be met if they are to age well. The paper proposes an alternative framework for collections care that deprioritizes physical stasis as the primary goal, and instead articulates a new framework for artefact health and well-being that encourages mobility, relationships, meeting basic needs, and the ability for artefacts to contribute, learn and grow. Using precedents from existing museum practices and values--including museum anthropology, Indigenous museology and care of musical instruments--I illustrate how 'Healthy Aging' can be enacted by collections staff and provide an alternative philosophy to collections care that is particularly fruitful for small and medium-sized institutions. Presenter: Cara Krmpotich

Bane and Boon: Critical Care around Object Marking: Physically applying or marking an object with a registration, inventory, or accession number is integral to its transition from cultural belonging or artefact into a museum object. The procedure of assigning a unique number or providing a contextual label is also identified as being an essential aspect of care in order to avoid one of the ten agents of deterioration that affect collections – dissociation – the accession number or markings often extending into and tethering an object within an ecosystem of related historical documentation. In collections management and care, whether or not to employ a particular marking technique is usually informed by the material properties of an object, but this talk reviews some of the cultural, religious, political, moral and ethical conditions that are

equally important to consider. The significance of inscribing and re-inscribing numbers or other such marks is highlighted in moments where source communities are confronted with labels, particularly obtrusive ones, which may cause grief, anger, or confusion, but possibly also feelings of relief that the markings ensure that remains are identifiable as specific ancestors or items as sacred belongings. Markings can therefore be both bane and boon (something that is both a benefit and an affliction) as artefacts and cultural belongings transition from institution to institution, or from public museum back to community. Care thus needs to be extended to even those more taken for granted aspects of collections practice. Presenter: Alice Stevenson (University College London, Institute of Archaeology)

Enacting Reparative Approaches to Philippine Collections at the University of Michigan: This paper reflects on current efforts to develop a set of culturally-responsive and historically-minded decolonial approaches to Philippine collections at the University of Michigan. The University's role in U.S. colonial expansion resulted in the accumulation of one of the largest Philippine cultural and scientific collections in North America. Addressing the University's colonial complicity requires acknowledgement of the harms resulting from the formation of these collections and to develop decolonial practices that aim to provide reciprocal and reparative access built on the context of Philippine colonial realities. But what would constitute these reparative stewardship approaches in a colonial University? This question prompts us to be cognizant of the dangers of misappropriating reciprocity, reparation, and repatriation protocols developed for Native American collections. The issue of "decolonizing" the Philippine collections requires separate contexts and considerations. Despite its large accumulation of Indigenous materials, the University lacks culturally appropriate frameworks and policies for navigating access, building community relations, and instituting reparative actions. This paper will outline three interrelated pursuits that intervene in contemporary scholarship and curation by shifting focus towards reparative actions: reparative curation, reparative connections to community, and reparative scholarship. These slow paths of reparative actions mitigate or repair the harm of traditional curation and scholarship that largely ignored community voices and perspectives, glorified colonial actors, and almost exclusively catered to academic researchers. The case of decolonizing Philippine collections in the U.S. demands navigating our stewardship responsibilities to former, and current,

occupied territories and the larger international Indigenous communities. Presenter: Ricardo Punzalan (University of Michigan)

Rehumanising Museum Documentation: Proactive Reparative Work in Edinburgh's Anatomy Museum: This paper reflects on the ongoing process of affiliating First Nations and Inuit ancestors in Edinburgh University's Anatomical Museum with contemporary descendent communities. I examine the museum's transition in adopting new care practices through dialogues with communities, who were unaware that their ancestors were taken to Edinburgh. This transition marked the museum's first attempt at proactive outreach, thereby transforming its traditionally reactive process. Drawing on archival research and ethnographic data, I reflect on the preparation needed to bring this "difficult knowledge" (Britzmann, 2000) into visibility. This work challenged a team of ethnographers and museum professionals to present provenance data without reproducing colonial logics and perpetuating further harm. I reflect on the process of 'humanising' this museum documentation and individualising the ancestors' identities, particularly when the provenance is partial, conflicting or missing, and often uses racist and dehumanising language. 'Humanising' these archival fragments required conversations on appropriate formats to share this knowledge, ensuring it was accessible and clear, yet still presented in a sensitive and careful manner. I argue these conversations constructed a "methodology of discomfort" that calls on institutions to seek new ways to address their colonial collections. By confronting the fear of making mistakes, I show that transmutable practices of care are possible in the spite of institutional anxieties. This process challenges the pedagogical distinction between 'learning about' difficult colonial collections, and 'learning from' them, allowing institutions to address their historic and present-day accountabilities to ancestors in their care. Presenter: Nicole Anderson

Emma Pask (University of Chicago), Andrea Ballestero (University of Southern California, Department of Anthropology)

PRESENTER:

Townsend Middleton, Dace Dzenovska (University of Oxford), Elizabeth Dunn, Livnat Konopny Declve (Hebrew University of Jerusalem)

DISCUSSANT:

Jacqueline Fewkes (Florida Atlantic University), Franck Bille (University of California, Berkeley)

DESCRIPTION:

Too often, the term topology is used as a synonym for 'network' and as a result tends to remain abstract and disembodied. Yet a topological space can offer much theoretical mileage when mobilized as originally conceptualized in mathematics on account of its unique spatial characteristics—notably those it 'maintains in the process of distortion and transformation (bending, stretching, squeezing, but not breaking)' (Blum and Secor 2011). In foregrounding the physicality of space, this view of topology brings it into conversation with the growing literature on materiality and three-dimensionality and can illuminate the tension between the physical, political, and cultural realms. In this session, we are particularly interested in holes, knots, folds, and other irregularities in the fabric of political space, and how these are produced and maintained. We invite ethnographic and conceptual contributions on all forms of spatial interruptions. This may include exclusion zones, breakaway states, anthropogenic subsurface structures, enclaves, gated communities, buffer zones, and no-go zones, to name only a few potential topological configurations.

Abolition and Pathways to Reproductive Liberation

4:15 PM - 6:00 PM TMCC - 803 A

Late-Breaking Roundtable/Town Hall - In-Person

ORGANIZER:

Hanna Amanuel

CHAIR:

Adeola Oni-Orisan

PRESENTER:

Siri Suh (Brandeis University), Risa Cromer (Purdue University, Department of Anthropology), Ugo Edu (University of California, Los Angeles), Joy James

(Williams College), Hanna Amanuel, Adeola Oni-Orisan, Annabel Sowemimo

DESCRIPTION:

While Roe v. Wade did not secure abortion access for all, its overruling in June 2022 has enabled bans and worsening restrictions across the United States. In the wake of shifting legal and social landscapes after Dobbs, we seek to explore paths to reproductive liberation. We ask: as abortion and other reproductive health restrictions intensify, what modes of caregiving and coalition building emerge and persist through these transitions? And what kinds of solidarities and efforts have emerged globally, across national boundaries? We seek to ground this discussion in longer histories of chattel slavery and colonialism, and to make visible the logics of carcerality that shape reproductive restrictions. We also hope to be in conversation with movements for abolition and reproductive justice, while maintaining a critical perspective on how and when these terms are employed. Lastly, we aim to situate paths to reproductive liberation within larger contexts of bans on education, access to gender affirming care, voting rights, immigration restrictions, among other moves to further marginalize poor, Black and brown communities. This roundtable brings together an international, transdisciplinary group of reproductive health advocates, doulas, physicians, political theorists, and anthropologists who have studied the politics of abortion, reproduction, contraception, and sterilization in Brazil, Ethiopia, Nigeria, Senegal, England, and the United States. Panelists will draw from research and theorizing on the Captive Maternal and abolitionist organizing in the US (James), post-abortion care, reproductive health data, and the politics of misoprostol in Francophone West Africa (Suh), Black women's experiences with contraception and abortion care in the UK (Sowemimo), informal birth workers and maternal health in Nigeria and the US (Oni-Orisan), racial politics of family planning and sterilization in Brazil (Edu), reproductive surveillance and abortion care in the US (Amanuel), and the politics of frozen human embryos and far-right movements in the United States (Cromer). They also pull insights from experiences in clinical practice as medical trainees and physicians (Amanuel, Oni-Orisan, Sowemimo), as well as doulas (Cromer, Edu).

Alcohol in Transition: Conflict and Encounter in our Social Worlds – Part 2

4:15 PM - 6:00 PM TMCC - 712

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Europe

ORGANIZER:

Brandon Lundy (Kennesaw State University, Department of Geography & Anthropology)

CHAIR:

Christina Collins (Indiana University, Bloomington, Department of Anthropology), Brandon Lundy (Kennesaw State University, Department of Geography & Anthropology)

PRESENTER:

Michelle Johnson (Bucknell University, Department of Sociology & Anthropology), Verena La Mela (University of Zurich), Brandon Lundy (Kennesaw State University, Department of Geography & Anthropology), Jean Michaud, Sarah Turner, Edmund Searles (Bucknell University, Department of Sociology & Anthropology)

DISCUSSANT:

Paul Christensen

DESCRIPTION:

Alcohol, as a special class of food-drug, is a rich ethnographic object for the study of both unity and discord. Alcohol as a social lubricant, facilitator, and binder brings people and communities together around life events. However, drinking also often acts as a catalyst in the moments leading up to dispute and discord. Attitudes and actions surrounding the production, distribution, sale, and consumption of alcohol are sites of social, cultural, political, economic, religious, medical, and environmental tension. This panel explores how alcohol serves as a useful lens for exploring the socio-cultural processes of conflict and its reconciliation. Specifically, in line with this year's theme, Transitions, we examine how conflict emerges through encounter-not in a causal, but liminal sense-the build-up, the bubbling, and the brewing before the bonding or blowout. What story does alcohol tell us about conflict, as a social process, in transition? The anthropological literature on alcohol either examines drinking as a cultural act that gives insight into our social worlds (Douglas 1987; Heath 2000) or emphasizes a public health perspective through research on intoxication, addiction, and other harmful drinking practices (Babor et al. 2023; Singer 2012). Hunt and Barker (2001) call for scholars to conceptually bridge this divide-arguably, a divide that arises from alcohol's status as an embodied material culture that is simultaneously food and drug-or 'food with difference' (Dietler 2006; Dietler and Herbich 2006, 398). As a food,

alcohol indexes the richness of social life as a marker of cultural, linguistic, racial/ethnic, religious, political, gender, generational, and class identities; but, as a drug, alcohol's psychoactive and intoxicating properties makes it a potent and paradoxical agent of social tradition, transformation, transgression, and trauma. Over the last two decades, several scholars have addressed this divide through the study of alcoholism and Alcohol Anonymous (AA) globally (Borovoy 2005; Christensen 2015, Raikhel 2016). However, how might an approach that more broadly interrogates the relationship between alcohol and conflict, in transition, further bridge such divergent conversations? From compulsion to addiction; conviviality to belligerence; legality to illegality; and indigenous production to commercialization, we invite papers that explore the relationship between alcohol and conflict. This may include research that examines transitional states of being (e.g., soberness to intoxication); mediations between material-spiritual realms (i.e., alcohol in religious ritual); regional, national, and/or global rivalries (e.g., corporate versus craft alcohol production); prohibition and resistance (e.g., informal brewing/distilling versus state regulation); alcohol as a symbol of repression or resistance; and the many other tensions arising from our everyday encounters with alcohol. Overall, we ask, in what ways does alcohol challenge our conception of conflict, in transition, or even transition, in conflict, to better understand our ever-changing, turbulent, social realities in an increasingly globalized world.

Falling from Islam by the Bottle: Debating Alcohol and Religious Identity among Guineans in Portugal: For Muslims in Guinea-Bissau, alcohol is a marker of religious identity. Ethnically Fula and Mandinga peoples, for example, express their adherence to Islam by declaring they do not drink alcohol. In explaining how non-Muslims differ from them, Guinean Muslims often state that non-Muslims drink alcohol. The presence or absence of alcohol, such as palm wine or imported beer, is an important feature distinguishing Muslim from non-Muslim rituals. For those who have emigrated from Guinea-Bissau to Portugal, alcohol continues to serve as a marker, separating Muslim from non-Muslim immigrants and shaping ethno-religious identities. But this taboo and its relationship to identity have become more complicated in Lisbon and are currently the subject of discourse and conflict. Like Muslims in Guinea-Bissau, Guinean Muslim immigrants in Portugal are increasingly looking to the Middle East for a model to emulate in their practice of Islam. Many are surprised to learn, however, that some Arab Muslims drink, which

has led some Guineans to question this taboo. The physical exhaustion of manual labor, nostalgia for homeland, and the stress of life in Europe have also led some Guinean Muslims, especially youth, to experiment with alcohol, much to their parents' dismay. Muslim-healer diviners are attempting to address this crisis with innovations in their craft, which some Guinean Muslims embrace and others deplore. In this paper, I examine the contours of this spirited debate as different groups of Guinean immigrants—elders and youth, reformist and traditionalists, men and women—remake their identities and ritual practices in Lisbon as they live among non-Muslims and encounter increased racism and anti-Islamic sentiment. I argue that a new category of ethno-religious identity, children of Muslims, is emerging as Guinean Muslims “fall from Islam” by engaging in forbidden behaviors, such as drinking alcohol. I draw on multi-sited, multi-temporal fieldwork spanning two decades. Presenter: Michelle Johnson (Bucknell University, Department of Sociology & Anthropology)

Women, Trust, and Vodka: Polarization in the Sino-Kazakh Borderlands: Self-referential jokes about alcohol are popular among people who were born in the former Soviet Union. Vodka is the proverbial embodiment of life. However, after the Soviet Union collapsed, the emergent independent Central Asian states returned to pre-existing, Muslim values, which forbid alcohol. The “Soviet” Uyghurs of Kazakhstan are, in addition confronted with religious ideas and values from their Muslim co-ethnics in the neighbouring Xinjiang Uyghur Autonomous Region in China. Uyghurs in Kazakhstan subsequently claim to become “more religious”. A tolerance of alcohol consumption during the Soviet Union, its easy accessibility and a perceived increasing religiosity in the past years places Uyghurs in Kazakhstan in an ambivalent situation. While some condemn the consumption of alcohol, others find it essential for building and maintaining sociality. Alcohol is a key component of *chay*, literally tea, a social institution, where Uyghur women meet in groups, save money collectively and spend time together chatting, eating, and dancing. The changing values towards alcohol led to discussions and polarization within and among *chay* groups. In the course of 18 months of ethnographic field research in a border town in south-eastern Kazakhstan I studied over a period of seven years *chay* groups and their social dynamics. I argue that alcohol is a key element in building and maintaining trust among *chay* group members and that its rejection may result in the disintegration of *chay* as social institution. This paper makes three contributions: First, empirically it illustrates the tradeoffs of alcohol consumption and

renunciation among Muslim women in the Sino-Kazakh borderlands; Second, methodologically it probes the concept of the border as a catalyzer for alcohol consumption/renunciation; Third, theoretically it brings together institutional analysis and alcohol in order to show how conflict emerges and eventually threatens the existence of a social institution. Presenter: Verena La Mela (University of Zurich)

Cana in Conflict: The Valorization, Regulation, and Transformation of Grogue in Cabo Verde: In Cabo Verde, rum known colloquially as grogue is a contested cultural artefact: heritage commodity, taste of the islands, and harmful drug. Europeans introduced sugarcane to the arid archipelago in the sixteenth century in a doomed effort to establish proto-plantations. Looking to add value to the limited sugar supply, commercial attempts to produce aguardente distilled from fermented sugarcane juice soon followed. There is a long colonial and post-colonial history of tensions playing out between alcohol producers and state regulators. It is often something discussed in the past, but what does regulatory power look like in “neo-colonial” moments? And what forms of agentive resistance emerge? This paper evaluates the valorization, regulation, and transformation of grogue since the implementation of a national alcohol policy and action plan in 2016 (decree-law No. 11/2015). The General Inspectorate of Economic Activities (IGAE) now inspect and certify stills and their output throughout the country. Combatting unsanitary production conditions and amelioration efforts (such as adding refined sugar to increase alcohol by volume), thousands of liters of fermented mash and grogue are labeled “counterfeit” or “illegal,” seized, and destroyed annually. Efforts focused on legal commercialization, trademark registration, and public health are underway by the state. These initiatives directly challenge small-scale artisanal producers with limited means. They funnel production into larger cooperative sites and benefit more expensive industrialization efforts, described by some local producers under threat as “neo-colonial,” especially as foreign markets and capital investments expand. How do artisanal producers of grogue weather this latest storm, and what does the future of crafting grogue in Cabo Verde look like? Presenter: Brandon Lundy (Kennesaw State University, Department of Geography & Anthropology)

Good spirits? The persistence of distilling alcohol among upland communities in northern Vietnam: In Vietnam’s mountainous borderlands with China, Hmong and Yao ethnic minority households and communities have been

distilling rice, corn, and cassava alcohol for generations. These upland distillers have their own ideas regarding the best ways to perfect alcohol production and regarding its important social and cultural consumption roles. However, these are not easily aligning with the Vietnamese state’s frontier ‘development’ goals. Moreover, despite the crucial functions that home-distilled alcohol have long played in Hmong and Yao rituals and social interactions, there have been limited investigations into how these communities are upholding, adapting, and at times foregoing domestic alcohol production in the current context of state ‘selective cultural preservation’ policies and modernization goals. We focus first on how the practice of Hmong and Yao alcohol distillation has been impacted by successive political regimes, from the imperial era when little control was applied, to French colonial occupation when alcohol production became a state monopoly, to the collective period that simply carried on with the colonial policy, and now, a free-market era with both the deregulation of alcohol and a massive surge in outsider interest. Meanwhile, locally, alcohol still constitutes an important part of non-monetized exchanges between kin and neighbors, acting as an effective cement in local social structures, as much as a social lubricant. Second, we investigate how customary distilling knowledge is now being preserved, transformed, or even forgotten at the same time as the local alcohol trade gradually pushes beyond the boundaries of lineage and village exchange networks to enter regional and global commodity chains. We tease out some of the unexpected consequences of these changing dynamics in Vietnam’s northern borderlands and what they mean for upland communities, newly involved lowland actors, and the styles of alcohols being distilled. Presenter: Jean Michaud

Another round or no more ever: The ambiguity of alcohol in Nunavut: While conducting fieldwork in the Canadian Arctic, I learned about the myriad ways that alcohol impacts the lives of Inuit and their families, including how confronting--or failing to confront-- an alcohol addiction leads to significant life transitions. For example, I learned that the Kuyait Outpost Camp my partner and I joined in 1994, a small settlement 200 miles from the nearest town, was founded as a last-ditch treatment option for the community's founder and leader, an Inuit man who had lost part of his nose in a drunken brawl in Iqaluit, the largest town on Baffin Island. The man later moved with his wife and 10 children to their new home, and he never drank a drop of alcohol again. I also learned about another Inuit man, who after learning he was a father, spent his entire summer paycheck in one evening at a local bar by buying multiple rounds for other patrons. An Inuit friend described to me how alcohol use marks ethnic categories. Whereas Qallunaat ("white people") alcoholics are careful to save a little of their supply for the future, Inuit ones simply drink everything they have until it's gone. In this presentation, I examine how alcohol marks transitions in the lives of Inuit individuals, their families, and their communities by considering its many different meanings. In some contexts, alcohol is a powerful adversary that wreaks havoc on the lives of alcoholics and their families. The only way to beat it is

by moving to a new place--an outpost camp--where alcohol is prohibited. In other contexts, alcohol forms the basis of social capital for the person who can buy large quantities of it for others, an act that emulates the free flow of resources--food, labor and equipment--between and among Inuit households that remains a key symbol of Inuit culture and identity. Because they lead to many different kinds of transitions, Inuit interactions with alcohol are ambiguous and therefore worthy of greater analytical and ethnographic attention. Anthropological Sciences in Context: Body Ideals, Land, Language, and Cross-Cultural Research

4:15 PM - 6:00 PM TMCC - 206 A

Oral Presentation Session

REVIEWED BY:

Society for Anthropological Sciences

PRESENTER:

Daniel Hruschka (Arizona State University, School of Human Evolution and Social Change), Stephen Lyon (Aga Khan University), Vera Da Silva Sinha

DESCRIPTION:

This session explores anthropological scientific methods in a variety of contexts. This includes papers that (1) address cognitive anthropological methods to model how young South Korean men's internalization of multiple male body ideals predicts disordered eating, (2) explore key functions of SocioMap and long-term goals for the platform in comparative analyses, (3) examine the continuities and ruptures of narratives and behavior of old and new landed elites in Pakistan, and (4) assess cultural and linguistic practices of quantifying and time-keeping in Amazonian languages.

SocioMap: Tools for integrating data across datasets for large-scale cross-cultural analysis: A key challenge in conducting comparative analyses across cultures or ethnicities is that data on these units is often encoded in distinct and incompatible formats across diverse datasets. This can involve simple differences in the variables and values used to encode these units (e.g., Yoruba is Q79 = 342 and V131 = 8 in two different datasets) or differences in the resolution at which units are encoded (Maya vs. Kaqchikel Maya). These disparate encodings can create substantial challenges for the efficiency and transparency of data syntheses across

diverse datasets. We introduce SocioMap (catmapper.org/sociomap), a user-friendly set of tools to help users translate four kinds of categories (ethnicity, religion, language, and subdistrict) across multiple, external datasets. SocioMap's key functions include: (1) explore contextual information about specific categories, (2) translate new sets of categories from existing datasets and published studies, (3) identify and integrate novel combinations of datasets for researchers' custom needs, including automatically generated syntax (e.g., R, Stata) to merge datasets of interest, and (4) publish and share merging templates for public re-use and open science. We outline SocioMap's key functions, current progress in SocioMap's development, and long-range goals for the platform. Presenter: Daniel Hruschka (Arizona State University, School of Human Evolution and Social Change)

Old and New Patrons: Changes in Narrative and Practice Among Pakistan's Land-Owning Elite: Control of land has long been one way to establish wealth and power in Pakistan. Prior to independence, both the Mughals and the British strategically used land grants to reward groups loyal to them during conflicts. In the post independence era, the Pakistan military has operated a similar system of reward to expand their influence and control. With the inflationary rise in land prices in recent decades, however, the new Land Mafias have introduced a novel twist to the patterns of patronage. Whereas in the past, the benefits of land ownership have been indelibly linked to food production, including pastoralism, modern land patrons cater to an elite consumption that produces nothing. Recreating Dubai in South Asia produces jobs and creates wealth, but it does not generate the tangible products essential for human life. This paper examines the continuities and ruptures of narratives and behavior of old and new landed elites in Pakistan. Presenter: Stephen Lyon (Aga Khan University)

Number in transition from event-based time to metric time in Amazonian languages: Human groups are known to have used for millennia words, visual symbols and artefacts to represent numbers. Painted marks on cave walls, linear wood markings and bone inscriptions are examples of symbolic cognitive artefacts that are believed to have been used by people to support numerical reckoning. From artefacts to verbal systems and written annotations, debate on number cognition has focused on how counting interplays with numerical thinking, how numbers are represented and processed, and the role that language and symbolic systems play in

conceptualising numbers, especially large exact numbers. In this debate, less attention has been paid to embodied number systems and to counting practices that are indexed to body parts. Body part counting, especially finger counting, is widely used, but many past studies of number cognition have considered it a 'simple' way to count in comparison to mental operations (Bender and Beller 2012:156-7). Finger counting influences the structure of abstract mental number representations, and abstract cognition is itself grounded rooted in our bodily experiences. Body part counting systems vary across cultures and languages: fingers, hands, feet, toes and other body parts are mapped, in many cases, to words, forming complex number systems. This presentation addresses practices coordinating number and time in the Kamaiurá and Awetý communities of the Xingu National Park, Brazil. Timekeeping in both communities is not based on metric (clock and calendar) time systems, but exclusively employs event-based time systems (Silva Sinha 2019). Kamaiurá and Awetý languages have quantifying terms that are similar, but not exactly equivalent to, numbers in English. Like in most Amazonian languages (Silva Sinha et al., 2017), there are a finite number of quantifying terms. This presentation focuses on the role of numbers in event-based timekeeping and the relationship between time, number and space. I will first describe these communities' cultural and linguistic number and event-based time systems. I will then demonstrate how time, number and space are interrelated in everyday cultural practices (e.g. working in the fields, fishing, house-building); the structure and use of artefacts and the use of body parts to index quantification. Hands, feet, fingers and toes are fundamental for the Awetý and Kamaiurá number systems. For example, the word for one is hand. Body parts in this system are used to measure as well as to quantify. This does not mean that counting is absent from cultural practices in these communities; on the contrary, there is a Kamaiurá word for it, *pararawaw*. The notion of 'completion' is key both to quantification practices in Kamaiurá and Awetý and to the conceptualization of time intervals This presentation will show how these cultural and linguistic practices of quantifying and time-keeping are used in everyday life, demonstrating that the embodied co-ordination of temporal and numerical concepts does not depend upon the existence of strictly metric time concepts, but may be a transitional pathway to the construction of metric time. Presenter: Vera Da Silva Sinha

Book Panel—Congo's Dancers: Women and Work in Kinshasa

4:15 PM - 6:00 PM TMCC - 707

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

CHAIR:

Ines Escobar Gonzalez (Harvard University), George Paul Meiu (Harvard University)

PRESENTER:

Helene Neveu Kringelbach (University College London, Department of Anthropology), Bob White (University of Montreal), Lisa Gilman (George Mason University)

DISCUSSANT:

Erin Moore (Ohio State University, Department of Anthropology), Jennifer Cole (University of Chicago)

DESCRIPTION:

In Congo's Dancers (2023) Lesley Nicole Braun uses the prism of the Congolese danseuse to examine the ways in which notions of visibility, virtue, and socio-economic opportunity are interlinked in this urban African context. Dance music plays a central role in the cultural, social, religious, and family lives of the people in Kinshasa, capital of the DRC. The work of the professional danseuse highlights the fact that public visibility is necessary to build the social networks required for economic independence, even if this visibility invites social opprobrium for women. The concert dancer exemplifies many of the challenges that women face in Kinshasa as they navigate the public sphere, and she reveals the gendered differences of local patronage politics that are integral to one's livelihood while also shaping public morality. In many ways, the adaptability necessary for working in the city - where precarity requires resourcefulness and strategy - is most saliently expressed by the dancer. Through its exploration of the forces of power, pleasure, and work, Braun explores how dancers are as much constrained by global empowerment messages as they are liberated by them. In an author-meets-critics format, this round table brings together anthropologists who have done extensive work on performance, gender and sexuality, memory, as well as transnational feminisms, mobility, and new media practices. In offering a wide range of anthropological perspectives, participants will discuss Braun's book in regards to their own research on the transmutation of gendered politics in diverse and fast-changing urban African settings.

DISCUSSANT:

Elif Babul (Mount Holyoke College, Department of Sociology & Anthropology)

DESCRIPTION:

Anthropological work has for some time considered bureaucracy as a form of statecraft which exceeds the domain of secular rationality. The semiotics of bureaucracy, rather than stable or under the control of the state, move across media and are open to reworking and alternate claims to recognition. Technological transformations facilitate the establishment of new systems of identification, with implications for those whose belonging is not assured. Populist political configurations wield bureaucracy to exclusionary ends. Rather than reflecting a smooth-functioning system, ethnographic accounts of bureaucracy reveal how such processes invoke what Begoña Aretxaga has called 'maddening states.' Bureaucratic systems work not only by inscribing individuals' lives in documents and archives but through harnessing personal histories to collective memories. This panel comprises ethnographic research which reconsiders the assumption that bureaucracy is a form of governance that works by disciplining individual subjects. In centering affect, each paper instead analyzes bureaucracy as it works as and through relations. The papers introduce ethnographic accounts of the affective charge of bureaucracy, revealing how the state and its agents grapple with ambiguity and transformation across domains of gender, sexuality, kinship, religion, and death. Bureaucracy's affects may be public, arising

as performances by citizens and officials in offices and on the street. In rural India, affective responses of anticipation and apprehension emerge in encounters with state bureaucrats (McLaughlin). Queer activists in urban India file paperwork to the police to hold public pride marches (Horton). As idiom and infrastructure, kinship is central to the operation of bureaucratic recognition, generating both ambivalence and anger. In Pakistan, techno-bureaucratic processes remain tied to affective bonds of kinship that can be fractured, fragile, and broken (Hashmi). The liminality of old age may lead to the rupture, transformation, or demise of kinship, challenging the stability of bureaucratic documents in Indonesia (Hegarty). Following the 2023 earthquakes in Turkey and Syria, overwhelmed bureaucrats struggled to issue death documents, denying many of the deceased the status of an official death (Zengin). Each of these accounts demonstrates how bureaucratic documents and systems generate unruly responses and affects under certain ethnographic and historical conditions, revealing their fragility and power. In centering ethnographic accounts of the affective charge of bureaucracy across the domains in which it takes hold on people (the office, the household, the street, the neighborhood etc.), the panel addresses three key questions. How do bureaucracy's affects consolidate or revoke access to citizenship claims? In light of the rise of various necropolitical categories of non-citizen globally, what happens when the bureaucratic recognition gives rise to unruly or unpredictable affects? Through what relations does bureaucracy's power take form? A theoretical focus on affect allows us to answer these questions by interpreting how bureaucracy mediates between the public and private spheres. The panel will in turn contribute a better understanding of bureaucracy's affects and how ethnographic methods might interpret their power.

Moral claims in the Indian bureaucracy: Affect, Ethics, and Ethnography: In this paper, I explore conceptual continuities between the affective and the ethical through an ethnographic focus on bureaucratic claims in a rural north Indian town. Engagements with the rural administration in this context often elicit potent affective responses. As citizens navigate the bureaucracy to secure necessary documentation and material support in the form of food rations or subsidized housing, they engage in rituals of petitioning and endure long waits charged with anticipation and apprehension. Importantly, affective responses to the ups and downs of bureaucratic process often reveal the values and aspirations that undergird claims on the state. Feelings of disappointment or relief index, for

example, the relationship between reality and expectation— between what bureaucratic judgements actually deliver and what could or should be. In such contexts, an understanding of bureaucracy's affects also demands a consideration of bureaucracy's ethics: the notions of obligation, parity, and justice that inform citizens' expectations for the state and for their community. Drawing upon anthropological work which has considered the role of sentiment and emotion in understanding social norms, I suggest that the ethical stakes of bureaucratic engagements are constructively illuminated through affective expressions such as hope, sadness, or compassion. Bringing discussions of moral sentiments and subjectivities together with a growing literature on affect and the state, this paper seeks to understand how emotion and ethics are entangled in both ethnographic practice and analysis. Presenter: Meredith McLaughlin

Permission to Protest: Policing Queer Dissent at Mumbai Pride: Each year, a group of community volunteers organizes together under the name of Queer Azaadi Mumbai (QAM) to plan and organize the annual pride march, schedule and promote events for the month-long pride celebration, and seek out police permissions. This organization is a collective of individual citizens who represent queer organizations as well as a range of community groups and interests. As organizers, they stand in for the community, ostensibly representing their interests and interacting with law enforcement to help secure permissions for the march. Permissions as physical documents, authorize parades to happen, but they also offer organizers the sign of state sanction and the promise that the state might continue to work with activists, organizers, and stakeholders in the future. Accessing police permissions is a complicated process that hinges on clarity around the aims of the pride events as well as promises that anti-national or controversial slogans will not be raised. However, this promise of future possibilities also compels organizers to police what participants do and say. Thus, pride's undertakers have also become middlemen for the interests of the state. From bans on "flamboyance" to recent efforts to curtail signs critiquing Hindu nationalism and caste supremacy, pride has become a space of regulation as much as one for imagining modes of queer liberation. This paper considers the performances of patrons at pride parades in Mumbai as well as the organizers' efforts and desires to seek out and maintain state support by policing what participants do and say. I ask: Who and what are pride parades for? Who gets to decide how participants at pride ought to conduct themselves? And how do

permissions as documents work to simultaneously authorize and undermine pride parades? In examining recent incidents involving community policing at pride, this paper considers the increasing bureaucratization of pride parades (and dissent more broadly) in India. Presenter: Brian A. Horton (Brandeis University, Department of Anthropology)

Evidentiary Affects: Vital Individuals, Vital Events: Pakistan's National Database and Registration Authority (NADRA) runs a biometric-based identity database that collects information from both individuals and kin units to establish unique individual identity. This paper will examine how this identification regime instrumentalizes kinship to make the individual in Pakistan, and in particular, how it deploys the affective domain to produce "datafied kinship" through techno-bureaucratic processes. Concretizing kinship into the record brings into relief how kin ties are not always stable or durable but often fractured and fragile—if not altogether broken. The bureaucratic space of the identity registration center can bring out heightened sentiments surrounding the dynamics of making and breaking kin. Focusing on the identity registration process, this paper explores the intersection of vital events—birth, marriage, divorce, and death—and vital relations for the purpose of creating an identifiable citizen. In turn, the process of capturing vital relations relies on NADRA officials to test the truth or falsity of kin relations using both evidentiary and affective claims. This paper will explore the implications of the affectively charged world of the identity registration center on the resulting identified individual, who must be produced through its relations. Presenter: Zehra Hashmi

Siblingship and the fragility of kinship in Indonesian bureaucracy: In Indonesia, the state-issued identity card and family card are tied closely to a person's place of residence. In practice, these documents operate as residency permits, with registration in the city or district where a person lives a prerequisite for accessing various services. Without a correctly registered identity card a person is resident, a person occupies a certain legal grey zone. In Indonesia's bureaucratic processes, a key relationship between residency and bureaucratic meaning is forged through kinship. The family card is commonly understood as the document that lists members of a household who reside together. In practice, however, as I travelled between district and provincial state bureaucratic offices and met with local neighborhood officials, I found that kinship obligations on paper and in practice both fragile and creatively deployed. They stretched to various connections across

generations and neighborhoods. Marie was one poor but fiercely independent waria (one Indonesian transgender population) who I met in the early 2010s when she was 70 years old. In 2022, on a regular trip to Indonesia, she had moved in with her younger sister after a series of health problems. Despite having lived in one poor neighborhood in the city of Yogyakarta their entire life, both were at risk of being evicted. I introduce on Marie's experience of old age to understand kinship an affectively charged space that doubles as a form of social organization. The affective bonds of siblingship offer an analytic which helps to approach the problem of gender/kinship (and related exclusions) at the heart of bureaucratic recognition in Indonesia sideways. Presenter: Benjamin Hegarty (The University of New South Wales)

Death Document: The state bureaucracy in Turkey requires local health authorities to produce a document of death upon the passing of a person in order this person to be officially recognized as dead. Then, family members of the deceased are responsible for submitting this document to the Population Administration Office along with the deceased's identity card in maximum ten days following the day of demise. This way the deceased is deleted from the records of the living population. This bureaucracy of death complicated the boundary between life and death in the aftermath of the earthquakes in Turkey and Syria on February 6, 2023. In days after this devastation with a death toll of more than 40,000 people, many people could not even rescue the dead bodies of their loved ones from under the rubble. They could not organize funerals or bury their dead. Nor could they produce a death document in the absence of the dead body. This bureaucratic rationale resulted in a series of impediments through which the deceased were denied the status of official death even when they were actually dead. This paper focuses on this haunting limbo space between life and death, and explores answers for the following questions: How do multiple accounts and proofs of death speak to each other in the aftermath of a disaster? What are the social, political, economic and affective ramifications of dying a death that can neither be officially recognized nor registered? How does the lack of a single document shape the space of grief and mourning? Presenter: Asli Zengin (Rutgers University)

4-610

Contemporary Rural Transitions: Food, education, and aging

4:15 PM - 6:00 PM TMCC - 604

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Ario Seto (Memorial University)

PRESENTER:

Ario Seto (Memorial University),Olivia Roy-Malo ,Christina Holmes

DESCRIPTION:

This session explores changing socio-political-economic conditions and agency in rural settings. Themes include food sovereignty and increased autonomy and resistance in Ghana rice-cultivation; rethinking rural education in Quebec under the threat of school closures; narratives of elder home care in rural Nova Scotia; and elder engagement in community revitalization in coastal Newfoundland. A range of rural resistances, innovations, and engagements are discussed.

Immobilizing Coastal Community: Aging population, organic intellectuals, and rural monument-making in Newfoundland.: This paper examines the role of senior citizens in advocating the right to be rural in Newfoundland's coastal communities. The discourse on senior citizens often considers the aging demographic population as individuals with declining capabilities. Public policies focused on aging individuals depict them as recipients of care who are less active or less capable than younger people. Such views have sparked widespread public debate about the economic and social implications of aging populations, including concerns about the associated costs of healthcare and social services and a general trend to move services to urban centers where young people are. With improved medical care, medical advancements, and public health in recent decades, the WHO, on the other hand, reported that seniors are healthier than ever. The research conducted for this paper found that many seniors in Newfoundland, Canada, viewed the after-retirement age as another productive life stage in which they can turn to self-actualization activities and social activism to revitalize their community. Such attitude seems particularly prevalent in rural/coastal communities because their communities are at risk of disappearing due to rapid urbanization and rural population relocation. The senior citizens join together to establish social enterprises to fund their community hubs center where they can propose community

initiatives and promote local cultures. These spaces become monuments to the presence of rural/coastal communities that resist the precariousness of rural lives. This paper thus touches on various aspects of transitions and uncertainty, including the precarity of rural/coastal life, senior citizens' social role transition, and the ambivalence of business-generated community development. Drawing on an example from the Livyer's Lot Economuseum in Newfoundland, Canada, this paper discusses the role of seniors, who become the community's organic intellectuals and often play a role as the backbone of community activities and projects. Not only that they have more time to dedicate to such actions, but also, because of their previous work experiences, they have the necessary skills to carry out community development projects, such as proposal writing, fundraising, creating community-relevant narratives of the importance of the projects, mobilizing other community members, and generating locally-sourced businesses. Supported by the revenue from their community-based businesses, senior citizens also become more involved in activism and volunteerism that seeks to combat rural/coastal communities' challenges. Such engagement is a democratic method that invites deeper participation, including from the state, through proper policy assessment to support seniors' activities, as it is the state's responsibility to fully support communities experimenting with what works for them based on their collective aspirations. As a pool of local knowledge, senior citizens are thus the community's stewards who provide valuable services to the community. Their community activism is the avenue to strengthen their agency in tackling rural/coastal issues and engage in self-actualization when they are often silenced as the non-workforce age group.
Presenter: Ario Seto (Memorial University)

Les petites écoles rurales en transition? Ethnographie d'innovations scolaires au Québec.: En août 2019, l'école Fièrè, située dans un petit village de la région du Bas-Saint-Laurent au Québec, inaugurait une nouvelle initiative pédagogique, essentiellement axée sur une pédagogie par projet. À portée communautaire, les élèves allaient être invités tout au long de l'année à réaliser divers projets à leur choix et à travers lesquels ils consolideraient leurs apprentissages. Cette initiative est survenue alors que l'école était menacée de fermeture n'accueillant que douze élèves en 2018. En 2019, ce nombre grimpeait à dix-huit et, en 2020, au-dessus de vingt. Les acteurs scolaires semblent être en voie de gagner leur pari, celui de revitaliser l'école. Les acteurs municipaux, eux, continuent d'espérer que cette initiative devienne un levier d'attractivité pour attirer de

nouvelles familles dans leur milieu. Dix ans plus tôt, dans une petite municipalité de la Haute-Mauricie, un groupe de parents s'est réuni pour pallier la fermeture de l'école primaire. Ils ont finalement mis en place une formule d'éducation à domicile, mais soutenue par la municipalité. Ils ont eu accès à des locaux, à un fonds pour bâtir un parc-école, à la bibliothèque et au gymnase communautaire. Rapidement, une enseignante bénévole s'est impliquée dans la gestion de classe. Quelques années plus tard, les administrateurs scolaires leur ont octroyé un statut de projet-pilote les rattachant alors à un établissement scolaire de la ville voisine. Cela leur a permis de recevoir à temps partiel une enseignante du réseau scolaire et ainsi procurer une certaine pérennité à leur initiative. Dans ce cas-ci aussi, les acteurs municipaux se sont grandement investis dans le déploiement de ce projet pédagogique. Comment convaincre, sinon, des familles d'y emménager si les enfants d'âge primaire, entre 5 et 12 ans, devraient parcourir plus de 100 km quotidiennement? Le thème de cette conférence, « Transitions », nous invite à analyser ces initiatives non pas comme l'aboutissement d'une mobilisation, mais comme faisant partie d'un processus plus large. Les paysages ruraux québécois changent depuis quelques années que ce soit sur le plan démographique, social, économique, environnemental (Doyon et al. 2020; Guimond et al. 2020). Comment ces projets s'intriquent-ils à ce nouveau rural? Comment la trajectoire de ces écoles s'intriquent-elles à l'histoire de ces régions? Comment des événements qui ont marqué ces milieux ont-ils également influencé la vie scolaire? Enfin, ce nouveau rural est-il, lui aussi, la manifestation d'une autre transition qui se jouerait à plus grande échelle? Cette présentation s'appuie sur ma recherche doctorale qui porte sur la mise en œuvre d'innovations scolaires au sein d'écoles rurales au Québec. À l'intersection d'une anthropologie de l'école, des services publiques et d'une anthropologie politique, j'y analyse à la fois la forme scolaire (Vincent 1980; Olivier et Perrenoud 2005), les aspirations et espoirs (Jansen 2016; Narotzky et Besnier 2014) depuis une perspective d'économie politique. Presenter: Olivia Roy-Malo

'Much better at home than in the hospital': Successes of rural home care nursing in challenging conditions: Home nursing care plays an important role in reducing hospital stays in the Canadian health care system and needs are expected to increase with an ageing population. Contracting out of home nursing care by provincial health bodies to private or not for profit organizations, signifies several important changes in how and where care is given. For instance, in shifting from nursing care

in a hospital to nursing care in the home, an individual shifts from 'patient' to 'client'. Interviews with clients receiving home nursing care in rural Nova Scotia in August and September of 2022 suggest that clients receiving care greatly appreciate nurses visiting their homes because of the quality of the nurse-client relationships and control over the home environment. Their narratives were almost universally positive about the care received and interactions with individual nurses, despite being visited by a variety of nurses, with scheduling practices that often left it uncertain when during a particular day they would see the nurse. Glowing accounts of nursing care, despite structural factors that could disrupt continuity of care or create inconvenience for the client, could suggest health care providers overcome structural difficulties with the quality of one-on-one care. However, these narratives could also be read within the wider cultural context of a pandemic experience that has highlighted the difficulties of front line health professionals and resulted in community-generated shows of support for those professionals. Melissa Fisher (New York University)

DESCRIPTION:

Cultures change. Anthropologists have written about this topic from a broad perspective: invention, cultural loss, diffusion, and acculturation. However, they have been far less interested in cultural change that is

planned and implemented. This session brings together anthropologists whose roles in industry, non-profits, and government involves planned cultural change. Their problem-solving capabilities, at a minimum, involve listening to the project sponsor's perspective on what the 'problem' is, conducting research to diagnose the current state, and working with organizational leaders to implement cultural change. It is essential to tap into the perspectives of a cross-section of the organization- by role and demographics- and often methods from other disciplines (e.g., business, design). Many elements affect the propensity and likelihood for an organizational culture, or linked group of organizational cultures, to change. Among them are aspects of the external environment (e.g., stakeholder views, regulatory and legal considerations), the internal cultural context (e.g., awareness of the potential value of a change effort, availability of resources, leadership priorities), and interactions among the external and internal spheres (e.g., customer/user responses, organizational reputation). Anthropologists engaged in organizational research and consulting projects find creative ways to learn about the cultural context(s) quickly. Their methods build on theory and the classic ethnographic techniques (e.g., participant observation, interviews), taking them in fascinating new directions, while their approaches (e.g., holistic, comparative) for understanding the current and future states are routinely in play. Participants in this session highlight distinctive methods for assessing and implementing cultural change. We believe that these methods can be adapted for use in anthropological fieldwork generally. Choices of methods are typically constrained by aspects of the organizational setting, constraints that are not usually found in most fieldwork settings. First, these anthropologists usually have a sponsor or client, and that client has a problem necessitating a solution. Right away, the anthropologists are thrust into a relationship with their sponsors, a relationship that must be 'managed' over the course of the project. Resources, access to people, access to documents/records, time to project completion, and much more must be negotiated. Second, they lead the problem-focused project which requires a research design, sample, data collection and analysis strategies, all of which must be approved. A third difference is the validation and implementation processes. Clients are eager to find out what the anthropologists learned, what they propose for solutions, and how those suggested solutions might be implemented. Clients compare their own organizational experiences with what the anthropologists found and point out inconsistencies. They have perspectives on whether the proposed

changes will work in their organizations or with their organizational partners and stakeholders. Clients also want to play some role in the implementation plan for organizational change. While often an advantage since leadership participation signals leadership support for it as well as a change in organizational strategy, negotiation between the leaders and anthropologists is crucial for the implementation to be successful.

Data Storytelling: Unlocking insights to create change:
As an anthropologist working in a systems transformation firm, I bring together transdisciplinary teams to collectively explore and chart a future path. We are often hired because the organization – nonprofit, government, health system, philanthropy, or collective – is seeking external support to lead a design process. They recognize their current state, whatever it may be, is unsustainable or is not resulting in the impact they hope to achieve. Ultimately, they are seeking structural and cultural changes to their strategy and operations. I specialize in partnering with organizations to (re)design their systems and implement a culture of learning – designing both the technical and cultural requirements to make the organization more democratic and equitable. I utilize classic and creative methods to build trust, share power, and facilitate a process that moves an organization from transactional to transformational systems. We build a process so engagement with the intended beneficiaries of the service or system is not a one-time thing, but is something that is continually built into the organization's practice and way of being. This often includes designing or adopting nimble, digital systems to support real humans and their relationships with one another. It also includes establishing processes for continual reflection, information gathering, and (re)designing that are owned by and embedded within the organization. Although this method can have different names, for the purposes of this presentation I will discuss it as "data storytelling," provide an overview of the process, and provide specific project examples where I have used this method with varying degrees of success. With data storytelling, I coach our clients to recognize the quantitative data they often rely on are only one aspect of the complete data story and that real insights can only be unlocked by bringing the data into conversation with the lived experience of historically marginalized population

Repairing Disconnects at a Time When Organizational Anthropology's Popularity Presents Exciting Oppo: This paper examines my previous experience of being hired

as a lone anthropology subject matter expert at a Fortune 500 CPG company as a lens through which to explore some of the challenges anthropology faces with its increased popularity in corporate culture. The first half of the paper outlines some of the challenges that can emerge as organizations profess an interest in hiring anthropological expertise with limited understanding of how to incorporate this expertise into existing organizational practice. The explicit brief of my role could be summarized as influencing the output, skillsbase, and culture of a twenty-person global insights team in order to help the team fulfill the company-wide professed goal of breeding a people-led culture. As I was to discover, the hidden brief was what I call “non-disruptive disruption” – the paradoxical desire for anthropological expertise to provide a pathway for ‘people-led culture’ that was disruptive to the market without ever disrupting organizational culture. The second half of the paper examines my relationship to this role. I summarize some of the strategies I employed to successfully navigate the role, such as couching discussions of organizational culture within consumer-focused discussions. I end by discussing my own positionality at the time as a way to think about how to better prepare the next generation of organizational anthropologists – of particular importance as we see more applied anthropology roles and more interest from anthropologists as the academic job market continues to suffer. Presenter: Dawn Wells-Macapia (Rutgers University, New Brunswick, Department of Anthropology)

The “Cultural Inventory” as a Tool for Change: Digital Transformation in a Major Metropolitan Credit: In the spring of 2023, the leadership of an organization I refer to as Major Metropolitan Credit Union (MMCU) approached my consulting partner and me. The leadership was concerned that the managers held different perspectives on the organization’s culture and expressed confusion about whether the culture and its stated values were synonymous. We adopted a “cultural toolkit” approach to managing change. Rejecting Weberian ideas about organizational “values” as the drivers of change, sociologist Ann Swidler argued that social groups leverage repertoires of culturally shaped skills, habits, and styles—what she called “strategies of action”—in responding to life (or in our case, organizational) challenges. In organizational contexts, Howard-Grenville and colleagues propose developing “cultural inventories” through which people accomplished things in organization life (2020:32). To develop these inventories, they suggest that researchers ask questions like: How do people tackle problems in

this organization? What practices do they resort to when facing significant challenges? How do people get ahead in the organization? What habits or skills brought from outside of the organization are used to expand the cultural toolkit? This paper will explore the benefits of the cultural repertoire approach in the context of a regional credit union undergoing intense competitive threats arising from regulatory pressures, new financial technologies, and credit union consolidation. To what extent can taking stock of cultural inventories in an organization help to facilitate change? How can reflection on an organization’s cultural practices, among its members, lead to new ways of doing things that encourage innovation? How can it support MMCU’s ongoing digital transformation initiatives by creating a shared toolkit for collective action? Presenter: Matthew Hill (Matthew J Hill Consulting)

A Long View of Planning and Implementing Organizational Change: Co-authors Julia Gluesing and Ken Riopelle: Planned cultural change in organizations generally involves research to obtain an assessment of the current state, including organizational structures, both formal and informal, work practices, and opinions and attitudes of organizational members at multiple levels to create and execute a plan. As anthropologists, we include observation and interviews as baseline methods in conducting the assessment; however, methods are often mixed and can include surveys, network analysis, and the gathering of secondary data, including big data, to be as comprehensive and holistic as possible. Gathering data and planning how to accomplish change effectively once the results of the assessment are determined, involves collaboration and managing relationships with multiple stakeholders. This paper provides examples from projects with companies such as Robert Bosch and Ford Motor Company, and research funded by the National Science Foundation to illustrate the triangulation of these multiple methods for managing planned change from an anthropological approach. The presenters have engaged in planning and implementing organizational change initiatives for more than 40 years and draw on this experience to share what they have learned over their years of practice. Presenter: Julia Gluesing

Envisioning Cultural Futures: Engaging Organizational Change through Time Travel: The unpredictable future comes upon us in waves of disruption, as events constantly remind us. In both relatively stable and more turbulent times, organizations must grapple with multiple and challenging shifts in the world that have the potential to shock our work and, the cultures that

underly our work. And while anthropologists have taken steps into the future as a domain of research, scholarship, and intervention, we have not fully embraced future thinking in our methods and approaches, and more specifically around culture change for organizations. This presentation will consider frameworks and methods for engaging the future across different kinds of organizations in different sectors – not for profit and for profit -- and across multiple time horizons – short-term and longer. Integrating tools from both anthropology (Appadurai's imaginaries, for instance, and Pandian's possible anthropology) and from organizational disciplines (i.e., Amy Webb's cones of uncertainty, CFAR's Histories of the Future) we will explore how time travel can be a resource for engaging organizations in important conversations about the cultures that cultivate and value today, the formative cultural histories they carry forward, and the culture they aspire to in the future. Once organizations (whether leaders or across the system more broadly) can envision the cultural future they want to move towards, they can consider the work needed to advance change in that direction. This comes from the perspective of an anthropologist working as an organizational consultant who uses these futuring methodologies more and more in my work on culture and has found resonance in these methods for creating alignment and momentum for change. Ultimately the future can be a source of disciplined hope and unleash productively focused creativity at times of change, uncertainty, and challenge. Presenter: Barry Dornfeld (CFAR)

Society for Linguistic Anthropology

PRESENTER:

Marcela Aros

DESCRIPTION:

In our digital era, designers should seek to develop products and services that can be used by the broadest possible audience, considering aspects such as age,

culture, language, level of education, connectivity, and other factors. For example, a mobile application's more straightforward and intuitive means more people can use it. When we design to benefit disadvantaged groups, like children and indigenous people, we end up helping society as a whole; that is the goal of Inclusive Design. The project focused on developing a mobile application of a visual dictionary whose pedagogical objective is to increase vocabulary in children. Visual dictionaries use images to illustrate the meaning of words and allow an accessible introduction to a new language. This kind of dictionary is widely used for children to learn their first words. There is a vast offer of mobile applications to learn the Indigenous language of the Mapuche people. However, they are not aimed at early childhood education. Therefore, the work was focused on designing a mobile application using the User Experience as a research methodology. The User Experience methodology aims to create digital products focused on the user. In this way, it implies considering the need and expectations of the target audience for whom a web page or mobile application is focused. Therefore, research is vital at the beginning of any design project, in the stages before the development of a product, and different qualitative and quantitative data collection techniques are used. The User Experience, also known as UX, has been associated with careers such as Graphic Design and Industrial Design. However, professionals dedicated to the UX process come from various fields, such as psychology, sociology, and anthropology. The User Experience is where the design and social sciences disciplines meet directly. Knowing the user is a task for which anthropology is suitable since it produces knowledge from a qualitative method as important as ethnography. Although used in other disciplines, ethnography has its origins and foundations in social anthropology. Unlike traditional anthropological ethnography, which tends to include a very long process of immersion and interpretation, an ethnography applied to the field of design is a study of people or groups during a determined period, taking into account their cultural and social context of the daily life, using participant observation and in-depth interviews to understand their behavior as users.

Flash Presentation Session: Land, learning, and dreams: Examining the development of place-based and community-oriented educational infrastructure among an afrodescendent indigenous community in Karnataka, India

4:15 PM - 6:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Council on Anthropology and Education

PRESENTER:

Arjun Krishna (University of California, Los Angeles)

DESCRIPTION:

The Indian Forest Rights Act of 2006 grants indigenous people exclusive access to protected public lands across India. The development of educational infrastructure in indigenous communities promises liberal equality and economic growth. Yet, the process through which infrastructures are actually made reveals the underbelly of progress and democratic liberalism. Schools themselves are infrastructural projects, many of them being greatly underresourced in the Siddi community, an afrodescendent indigenous community in India. Although education development in the global south is often equated to infrastructure, the Siddi community – like many indigenous communities – has historically benefited the least from infrastructure growth while being the most affected by its environmental impacts. Yet, the development of educational infrastructure itself is a violent process, predicated on the theft of indigenous land and its subsequent privatization by non-governmental educational agencies in the name of the community's own economic development. This process also renders Siddi people as encroachers on their own land, ironically and tragically, barring them from accessing infrastructure such as running water and electricity. Critique, while useful, offers only a naming of the issue. Reimagining, on the other hand, what educational spaces and learning infrastructure can be requires understanding the historical relationships that indigenous communities have with their lands and waters, and centering, remembering, and re-membering these relationships. Additionally, phenotypic and outward differences between the Siddi community and the majority of the Indian population means that they are subject to colorist and anti-Black treatment even by fellow members of other marginalized groups who may see themselves as being more 'Indian,' complicated by a history of caste-based violence. Despite the fact that

Siddi people trace their ancestry to the Bantu and Luhya peoples of southeastern Africa, they are as strongly woven into the South Asian story as any indigenous community and represent a strong challenge to dominant ideas of a racialized and ethnocentric national identity and of indigeneity itself. Adopting a microethnographic approach to understanding how learning occurs in the natural world initiates the act of taking seriously the forms of knowledge and learning that are present in the Siddi community, outside of institutional educational spaces. While this type of work may typically belong in a learning sciences conference, I maintain that relationships to land and water and their association with learning tells us something about what it means to experience the natural and non-human world as a human, thus very much contributing to an anthropological conversation about international development, indigenous knowledge systems, and learning environments. Recognizing the community's sense of collective agency as people whose histories and practices can inform their own developmental goals resists deficit narratives about indigenous people and their ways of life. Making development a more participatory and action-oriented process means transferring ownership of these infrastructural projects into the community's hands and taking seriously their longstanding forms of learning, knowledge, and visions for the future, and ethnography gives us a vibrant way to affirm and reaffirm these forms.

Flash Presentation Session: Libraries of Political Imaginations

4:15 PM - 6:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

General Anthropology Division

PRESENTER:

Nayantara Premakumar

DESCRIPTION:

Libraries are sites of imagination – for what could be or for who we could be, imaginings of different worlds and people and states of being. Under colonialism, British colonizers implemented literature education in Sri Lanka intended to remove the natives from their own sense of imagination. Instead, this education nurtured the idea that Sri Lankans were equal to their British counterparts – full of the same dreams, imaginings, agency, and future-building. After independence, the Sri Lankan state built through imagination instead continued to

utilize the failed systems of imagination oppression – the most visible of which was the burning of Jaffna Library, a symbol of Tamil history and classical literature through the region. In April of 2022, after months of inflation, power cuts, fuel, and food shortages, protests began in Colombo to oust the authoritarian government led by Gotabaya Rajapakse. As the protests attracted people from all over the island, drawing families, the elderly, and college students alike, a small village of tarpaulin tents popped up in front of the government buildings. Called Gota Go Gama (Gota Go Village), the keystone structures were a set of community libraries representing the three languages of Sri Lanka – Tamil, Sinhala, and English. The libraries contained books on economics, liberation ideology from around the world, and even kids' books. As the protest movement grew, the libraries became places of ideological imagining and future fostering. Libraries became a safeguard against the government's media campaign of protester violence. The regime attempted to garner public sympathy when Ranil Wickremesinghe's house was set on fire. Media stories focused on the loss of his private library and the value of the knowledge lost in the fire. When protestors stormed the Presidential residence, they moved their public libraries into the newly minted 'People's House,' attempting to create a publicly owned and accessible space of imagining. The history and current status of Sri Lankan narrative building is tied to the space and place held by libraries – who gets access to narratives, who gets to build and destroy narratives, and what those processes say about transition can be mapped out through the physical structures of libraries in Sri Lanka. This is the jumping-off point for a larger piece of work that is expected to be multi-disciplinary.

Flash Presentation Session: **Notes on Literary Ecology: Environmental Modes of Relation in the Oral Literatures of the Amazon Basin and Contemporary North American Eco-Narratives**

4:15 PM - 6:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Jacopo Aldrighetti (Louisiana State University)

DESCRIPTION:

Studies on the socio-economic characteristics of indigenous communities in the Amazon basin generally agree that these communities rely on practices that are

environmentally sustainable (Bandura et al. 2020; Plotkin, 1993; Rudel et al., 2021; Runde, 2020; Stetson, 2014). Compared to the practices of industrial societies in North America that have caused (and are currently causing) dramatic climatic changes, the examples provided by these communities invite us to reconsider environmental knowledge and environmental modes of relation in the so-called Global North. From a literary perspective, the differences concerning environmental perception among indigenous communities in the Amazon and North American countries are apparent when we consider the most popular and successful trend in contemporary North American environmental literature: apocalypse eco-narratives (Gorin, 2023). Indigenous communities such as the Kokama of the Peruvian Amazon, however, have a rich tradition of oral literature that has been passed down through generations and does not conform to environmental literary portrayals in the Global North. Their oral literature suggests an intimate and spiritual connection to various elements of the environment, such as the Amazon River's waters, which are believed to host the souls of the deceased. These stories embody the ecological knowledge that informs the Kokama's overall behavior towards their environment. Since environmental oral literature in Amazonian indigenous communities has been hitherto understudied, this project seeks to answer two key questions. Firstly, how does the oral literature of the Kokama and other indigenous communities in the Amazon basin compare to contemporary climate change eco-narratives in North America? Secondly, what can such a comparative investigation tell us in terms of the sustainability (or lack thereof) of the respective environmental modes of relation that these narratives suggest?

Flash Presentation Session: **Perceptions and practices of menstrual regulation and abortion among traditional medicine providers in Peru**

4:15 PM - 6:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

PRESENTER:

Alicia Diaz

DESCRIPTION:

Globally, women and people who can get pregnant seek traditional medicine methods and providers for

menstrual regulation and pregnancy termination. In Peru, where abortion is legally penalized except for therapeutic reasons, the use of traditional medicine is widespread but scarcely documented. This qualitative study sought to explore the perspectives and practices of traditional providers in northern Peru in relation to abortion and menstrual regulation. We conducted in-depth interviews with 20 traditional medicine providers in northern Peru. All interviews were transcribed and thematically analyzed utilizing Dedoose software. Field notes were used to further contextualize the findings. Participants recognized that women in their communities require menstrual regulation services due to delayed menses, or 'retenciones,' and acknowledged that pregnancy might or might not be the cause of menstrual delays. While most participants reported treating menstrual delay mainly with herbs, most denied performing abortions. The majority of participants described abortion as immoral, and illegal, and associated it with irresponsible behavior on the part of women. However, some participants who had previously received training on sexual and reproductive rights spoke openly about their abortion practice and described their protocols for medication abortion utilizing misoprostol and herbs. This study evidences the key role that traditional medicine providers play in sexual and reproductive health care in their communities. The findings of this study describe some notable dynamics: the coexistence of traditional practices that help women regulate their menstruation and the disapproval of abortion due to stigma and misinformation. Moreover, the study highlights the nexus between natural medicine and biomedicine among providers who shared they provide abortions with medication. These findings shed light on the importance of honoring and respecting traditional knowledge and practices as a valued resource in many communities while also promoting knowledge of safe, respectful, and non-discriminatory abortion care.

[Flash Presentation Session: Population and Development Up Close and Personal: Gender, Family, and a Generation of Change in Nigeria](#)

4:15 PM - 6:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Association for Africanist Anthropology

PRESENTER:

Daniel Smith (Brown University, Department of Anthropology)

DESCRIPTION:

Over the last several decades, Nigeria has experienced profound challenges as well as promising transformations, many of them bound up with fundamental population processes such as fertility, mortality, migration, and urbanization. Indeed, when Nigerians discuss and assess the nature and consequences of 'development' and its disappointments, they typically talk about topics like the obstacles to getting married, the expenses related to educating children, the conflicts and cooperation between rural-to-urban migrants and their village-based kin, and who will pay for the care of aging parents and the exorbitant costs of their funerals. Demographic processes are an engine behind, an outcome of, and an idiom for understanding development-related social changes, to which Nigerians aspire and about which they are often frustrated and ambivalent. This flash talk presents the early work on a new project examining changes in the most intimate arenas of everyday life, particularly in the domains of gender and family, as they unfold in the context of wider processes of social transformation, widely glossed as development. The research design takes advantage of individual interviews conducted with 153 husband and wife pairs during my dissertation research in the mid 1990s. Although many of the respondents from those interviews have died, most are still alive. I will be able to reinterview them, as well as locate and interview many of their now-adult children, helping me to track changes over a generation, both historically and by cohort from a life-course perspective, with unusual detail and contextualization.

4-770

[Flash Presentation Session: Storied Mapping Practices; Countermapping the Urban Sphere with Abundance](#)

4:15 PM - 6:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Deanna Bogaski

DESCRIPTION:

In many North American cities, lives are increasingly disengaged from the ecological realities of the world around them. In Winnipeg, Manitoba, the more-than-human and human often meet in odd spaces-deer on

the road in a downtown neighbourhood, birds in the Home Depot, the weeds that creep into gardens, or the grasses that take over abandoned parking lots. In some spaces, these interactions are unwelcome, considered transgressions, and subjected to strict control. Yet, in other spaces, these more-than-human urban interlocutors go unnoticed and often prove useful-even desirable. Mapping the practices surrounding urban residents' relationships with the more-than-human helps illuminate the value and potential of spaces outside of strict regulatory controls, and also helps envision an alternative urban future. What future might be imagined if we focus on creating an urban environment that widens and appreciates the cracks in the concrete? There is abundance in our urban environments-in sharing the ways that the more-than-human supports urban residents, alternative and more sustainable urban futures may enter into the popular urban imaginary, in turn serving to question current urban designs.

Flash Presentation Session: Women Muralists and Their Gendered Access to Public Space

4:15 PM - 6:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Association for Feminist Anthropology

PRESENTER:

Victoria Castillo (Yukon University)

DESCRIPTION:

In many parts of the world, murals have become ubiquitous parts of the urban landscape. Muralists have been celebrated for their ability to democratize access to art and for beautifying the urban landscape, creating conversations between the community and the artwork produced, both in private and public spaces (Bates 2014, Biedarieva 2016). Recently, there has been a perceived rise in female muralists, specifically in Canada, through group exhibitions such as the 2017 Womxn Paint jam and the 2018 Uplifting Each Other mural festivals in Toronto (LeBlanc 2018), as well as an increase in women participants in mural festivals such as the Vancouver Mural Festival (see Vancouver Mural Festival 2022). These events have led to questions about the socially constructed gender roles of female artists, their identity as women muralists, their access to gallery versus public space (see Cooley et al 2015 for Canadian statistics on women's gallery access), and whether they can freely bring gender or feminist sensibilities to their

work. However, there is limited academic research on women making sanctioned murals. One example comes from Alix Maria Beattie whose research focuses on Australian female street artists that produce both sanctioned and unsanctioned murals (2016). A review of academic research on Canadian muralists demonstrates a gap in more recent academic research on women artists in this field (Waclawek 2008; Anderson 2002). Through the use of an online survey tool, this preliminary study, currently running, explores the perceived increase of women muralists (also known as public or street artists) in different localities. In this presentation, particular attention will be given to women muralists' own impressions of their participation in public art both within a decorative context and as a form of gender expression with a focus on their access to public space. A further objective is to identify if women muralists think their work is informed by their gender, and subsequently, whether their gender has influenced their ability to produce the street art they want to create.

Steffan Igor Ayora Diaz (Universidad Autónoma de Yucatán), Miguel Díaz Barriga (University of Richmond, Department of Sociology and Anthropology), Margaret Dorsey (University of Richmond, Department of Sociology and Anthropology), Guillermina Nunez (San Diego State University), Ramona Perez (San Diego State University, Department of Anthropology)

DISCUSSANT:

Gabriela Vargas-Cetina

DESCRIPTION:

Food is an essential component in the production of ethnographic knowledge. Multiple studies have shown the importance of food in the re/creation of social dialogue, the building of trust, and the imagination of futures, such as those of the family, of ethnic national, regional, and gender identities, religious, ecological, and economic practices, but also, of food itself – a material

construct subject to transformation and, hence, a vehicle to envision possible culinary and commensality futures. Many scholars have highlighted the material conditions of the fieldwork experience through the examination of how sharing meals becomes a central practice of sociability, commensality, community building, social justice, and hope. Yet, these same experiences may contain the political marks of postcolonial, neocolonial, colonial, and decolonial processes and interactions. Arguments about decolonization, and the focus on the politics of knowledge production (including subject positioning, listening, refusals, and resistance) translates into cooking and commensality practices that have implications in diverse fields of identity politics. An elementary component of fieldwork is the sharing meals as a means for establishing relationships, producing ethnographic knowledge, and negotiating future visions. This panel will address the many different parts that food plays within the context of anthropological fieldwork, both in different settings and across national borders. Food allows us to dine and engage in the exchange of ideas, philosophies, and ways of life. Thus, food cannot be reduced to its social reproductive 'function,' nor to an exchange of material goods. Food is a platform for negotiating interpretations of cultural life and for reflecting about the consequences of the different positions that anthropologists and interlocutors adopt during fieldwork. Food must transcend the constraints of its definition as 'nourishment,' as it also involves food sharing as hospitality, care, and social obligations that sustain networks of knowledge, the political play of the senses, identities and friendships, as well as the mutual understanding of the reciprocal ties that transform our notion of foodscapes, countering the 'dark' sides of anthropology by emphasizing how food brings empathic interactions.

Negotiating Difference in Restaurant Commensality in Seville, Spain.: Globally, the contemporary foodscape is driven by values which although divergent in appearance, they are supplementary. The styles of cooking these values sustain are often placed into dichotomous oppositions: "haute" versus "low", "modern" / "traditional," "creative/innovative" / "conservative," "fast" / "slow" food, "authentic" / "inauthentic," and "globally" / "locally." Thus, local, ethnic, fusion, molecular, and other cooking styles, are fitted into these categorizations in newspaper and magazine articles, and in internet sites specialized in travel and/or in food. Late capitalist consumption of food in restaurants, but also at home, is partly shaped

by the expansion and fragmentation of the foodscape into multiple niches. Today, in local (including farmers') markets, in retail stores, super and hypermarket chains, department stores and specialized establishments, professional chefs and the cook/s within the family can purchase a diversity of cooking technologies and ingredients. Additionally, the restaurant industry is growing increasingly diversified and those eating out can choose their evening venue inspired by the predominant value of the occasion. In this paper I examine the sociability practices among friends in Seville, Spain, analyzing how through commensality actors veil social differences, and how their celebration (or dismissal) of different cuisines can contribute to structure the future shapes of the foodscape. Friends and acquaintances must negotiate the type of restaurant they favor for their outing. In their choice they may ascertain matching narratives between chefs and customers whereby the food offered, sought, and consumed allows friends and restaurateurs to affirm their self-representation and identity. Presenter: Steffan Igor Ayora Diaz (Universidad Autónoma de Yucatán)

Fieldwork and Food: Borders, Walls and Vegan Tamales: This paper explores how anthropologists materialize social relations, break boundaries, and create community through food. We look at two examples of anthropologists cooking: the first as part of a protest against the border wall and the second the Border Study Archives' organization of a cooking contest as a form of community engagement. We ponder the possibilities of reimagining fieldwork not simply as exchanges of ideas (anthropologists and interlocutors) but as a material relationship in which culture is coproduced. In this sense, we play with the trope of "the raw and the cooked" as an underlying binary to explore social practices based on "the cooked and the cooked" in which food preparation breaks binaries and becomes an expression of anthropological activism. Keywords: food, community, anthropologists cooking, US-Mexico border Presenter: Miguel Díaz Barriga (University of Richmond, Department of Sociology and Anthropology)

Fieldwork and Food: Borders, Walls and Vegan Tamales: This paper explores how anthropologists materialize social relations, break boundaries, and create community through food. Networks of Care via Food Sharing practices on the US-Mexico border: The exchange of food during ethnographic fieldwork sessions involves creating trust through mutual exchanges of stories, shared life experiences, and interactions. Food often becomes the central figure of anthropological inquiry, and at other times, food exchanges are part of an intricate number of interactions that take place prior to, during, or after an interview as a way of building relationships and reciprocal ties. Through the theoretical lenses of Marcel Mauss (1925) and Wall Kimmerer (2015), this study contributes to the documentation of border foodways on the U.S.-Mexico border. The exchanges and distributions of food involve a display of cultural practices, gendered expectations, social class, and cultural values. This paper examines oral histories of people who provided meals to friends, neighbors, and “others,” while creating networks of care and social solidarity in the El Paso del Norte border region via food distribution practices and strategies that took place between 2018-2022. In 2017-2019, residents in El Paso, TX provided meals for thousands of migrants and refugees released from detention centers. During the COVID pandemic (2020-2022), food deliveries and exchanges took place among friends and neighbors as a way for people to show care, compassion, and social solidarity at a time when most people transitioned to sheltering at home, social distancing, and limiting social interactions with others to avoid the transmission of the virus. Rather than meeting in groups to exchange meals, people engaged in delivering meals during times of crisis while creating networks of care and resilience. Presenter: Guillermina Nunez (San Diego State University)

Let’s not do another dietary intervention: collaborative dietary strategies : The elevation of Oaxacan cuisine to international recognition of its complexity and relationship to the terroir of its environmental niches is well established. Yet, intervention programs by public health professionals rarely reflect the importance and significance of local taste, practice, and accessibility when implementing intervention programs. Instead, standards of nutritional minimums and maximums,

quantities of consumption, and degrees of industrial processing function as the basis for interventions with most of these standards developed by professionals of the global north. Local household food preparers are solicited for participation in educational programs that focus on nonlocal foodstuffs and preparation patterns that adhere to these external standards with the promise that doing so will rid them of whatever malady has been determined as significant for them. The association of these interventions with the history of colonial education programs stands out in their neocolonial practice. Despite the evidence that these programs rarely endure past the period of grant funding, they continue to be administered. In this presentation, I discuss my 30 years of work in Oaxaca to address the maladies of lead poisoning and the importance of having prepared and shared meals and mealtime stories with families, foraged or shopped with the cocineras for the necessary ingredients that make the recipe their own, and labored alongside the women who invoke these recipes when preparing food for hundreds at fiestas, to collaboratively develop dietary strategies, rather than an intervention, to combat the maladies from lead that are based in their knowledge, recipes, resources, and practices. Presenter: Ramona Perez (San Diego State University, Department of Anthropology)

DISCUSSANT:

Burge Abiral (Johns Hopkins University, Department of Anthropology)

DESCRIPTION:

This panel queries affective and material qualities of disappointment in moments of political closure. So much of our contemporary political discourse is folded into a sense of disappointment and recourse to the status quo [Zigon 2018]. Disappointment seems to govern the affective mood that traces the violent ebbs and flows of possible futures [Borneman and Ghassem-Fachandi 2017] and becomes a foil for an often cynical pragmatism, an ethically thin account of a tragic self which has fallen into nothing but the guardianship of neoliberalism, racism, and late capitalism. It bedevils nationalist, post-colonial and utopian aspirations [Scott 2004; Buch Segal 2016; Razsa 2015], and indexes embodied symptoms of distress, stuckness, nihilism, and deep yearning for an otherwise that often resists enunciation. Often deeply and crassly questioning the arresting narratives of history, appointments and appellations of ideology, disappointed subjects can express a withdrawal from the world, but also can use disappointment as a re-grounding for alternative politics and social connections. What are the genres and forms of expression through which people express disappointment publicly? How do people contend with their own deep sentiments of disappointment, and to whom might these sentiments be communicable? How does disappointment reshape individual and collective responsibility? How might disappointed subjects perform the denial of their world, or construct fetish-objects through which they continue to disavow the failure of political imaginations, fantasies and utopias? The papers in this panel look at endemic routinization of late-capitalist and ecological collapse, political failure of utopias and nationalist aspiration, materialities of occupation that give rise to individuals that fail their kin and loved ones, as well as the muscular reassertion of popular politics that take up a cynical sense of disappointment as its grounding.

The disappointment of return: the qualities of the possible in Indian-occupied Kashmir: This paper considers the interplay between ephemeral sojourns and the inhabitation of an everyday marked by overwhelming violence in Indian-occupied Kashmir. In the face of militarized blockages to fulfilling their social and familial roles, young Kashmiri men would embark on daytrips during my fieldwork to get away from home for a time in the company of friends. While they cultivated a subjunctive, as-if mood on the travel “away,” their return journeys were marked by a

spreading sense of disappointment. This paper traces the textures of this disappointment along one of these return journeys – a return imbued with the sense of turning away from a possible self; the felt gap between the possible and the inevitable; and the growing insufficiency and failure which come to color the possible in this context. Ultimately, I consider how disappointment attunes these young men to sensing particular qualities of the possible in the everyday. Presenter: Marios Falaris (John Hopkins University)

Vagaries of a Failed World: Disappointment and Sovereign Waste in an Iraqi Kurdish Town: In November 2021, when a sudden migrant crisis emerged at the Belarussian-Lithuanian border, journalists and human rights observers were surprised that almost all of the illegal migrants trying to cross over to Europe were Iraqi Kurds. Was this mass departure an expression of disappointment or, as the Iraqi Kurdish politicians tried to frame it, an epidemic of manipulation of naïve citizens by opportunist human traffickers? In this paper, I discuss the ethical possibilities of a social world in which collective disappointment in the promises of affluence, self-determination and sovereignty can be made visible. I draw on my ethnographic work in an Iraqi Kurdish border-town called Chamchamal. Here, a group of young men that belong to the so-called Golden Generation [youth born under Kurdish rule after 1991] increasingly withdraw from social life and adopt a highly performative nihilism through which they complain about a ‘failed world’. Faced with meagre employment opportunities either as small-scale shopkeepers or private militias, they prefer to withdraw themselves from the labour market and idle around. I put these shared sentiments of failure and disappointment in conversation with an anthropology of post-authoritarian and post-colonial disenchantment, nostalgia and disappointment ‘after freedom’ [Bonilla 2015, Hansen 2012, Kurtovic & Sargsyan 2019, Greenberg 2014, Scott 2004]. However, rather than disclosing agonistic democratic possibility or collectivizing grievance, I show how failure can be tied to luxuriously wasting away time, resources and the self [Bataille 1991] – and conceal a pleasure of de-classing of Others; in this case, displaced, dispossessed Iraqi Arabs living in the same area who cannot afford the luxuries of idolatry. Presenter: Kerem Ussakli (Stanford University, Department of Anthropology)

Big Men Disappoint, but the Biggest Man shall Deliver!: Pakistan's Anti-Blasphemy Movement: This paper explores how the Tehrik-e-Labaik Pakistan (TLP), a working-class anti-blasphemy movement in Pakistan,

uses disappointment toward “big men”—especially religious patrons and influential politicians—to mobilize young men to the cause of “defending the Prophet’s honor.” Many TLP activists believe that their previous religious and political patrons have consistently failed to deliver on the promise of ensuring them a life of dignity. The TLP narrative frames the loss of dignity of ordinary people as a consequence of blasphemy against sacred beings. By protecting the honor of the Prophet Muhammad, the ultimate patron of mankind, the TLP promises to restore dignity to ‘the ordinary man.’ In practice, the TLP empowers its followers with blasphemy accusations, engaging in physical and symbolic violence against those deemed blasphemers. In doing so, the TLP exploits the new climate of accusation to not only target vulnerable groups but also challenge social and religious superiors. Presenter: Saad Lakhani (Stanford University, Department of Anthropology)

The Brides of Disaster and Disappointment: The figure of “the bride” was born in the aftermath of the Soma mine disaster, which took the lives of 301 coal miners on May 13, 2014, in the Soma coal basin of Aegean Turkey. “The bride” is a figure (or fetish-figure) and a social phenomenon whereby, the widows of 301 miners are named as “the brides,” and accused—profusely, and without any expression of a need to provide evidence—of immorally spending the disaster relief compensations they received. According to townspeople, this means they have been disloyal to their dead husbands, their in-laws, and by extension, to the people of the Soma basin. The category of the bride in Turkish is different from its counterpart in the English-speaking world: one becomes the bride of the entire nuclear and extended family of her husband from the day of marriage until the end of the couple’s days together. Based on eighteen months of ethnographic fieldwork in the Soma basin, this paper focuses on the cultural and political economy of the townspeople’s disappointment in the widowed wives of 301 miners. The naming of, the misogynist panic around, and the disappointment in the so-called brides are affectively undergirded by the widespread resentment towards the families of 301 miners who received cash and other forms of disaster compensation, and “blood money”—as it is called in Turkey and other Muslim-majority contexts. I consider this excessively expressed disappointment and resentment to be an effect of the disaster: the fetish-figure of the bride has since become an expression of—and at times, a form of disavowing—the failure of socioeconomic and political imaginaries created and fostered by Erdoğan’s Justice and Development Party

[AKP] through neoliberal developmentalism, authoritarian populism, and gradually intensifying extractivism. Presenter: Elif Irem Az (Columbia University, Department of Anthropology)

Discipline and Disciplining: On Anthropology Today

4:15 PM - 6:00 PM TMCC - 203 D

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Andra le Roux-Kemp

PRESENTER:

Andra le Roux-Kemp ,Donovan Adams ,Jennifer Grubbs (Antioch College, Social Sciences Division),Paul Ngo

DESCRIPTION:

Anthropological encounters with contemporary worlds demand that we encounter and rethink our anthropological identities. These papers help us do so.

Back to the Future: Rethinking Notions of Ethics and Legality for Anthropology in a Digital Age: Anthropology is undergoing a digital turn that is informed by the changing landscape of social interactions, radically altered perceptions of time, scale, and space, as well as new-found sources of (digital) knowledge, power, and control. Society, it seems, has undergone a digital transformation, and so too have our subject discipline. The focus of this paper is on the various challenges and opportunities the digital turn in anthropology present, and specifically on the ethical and legal boundaries of which anthropologists should be aware. By looking to the future, this paper will also retrace anthropology’s rather difficult past. Presenter: Andra le Roux-Kemp

The Relationship Between Anthropology and Extremist TikTok: Anthropological thought, research, and practice has a history of once contributing directly to oppressive structures and actions and continues to be used by extremists in the justification of harmful ideologies and practices. Such extremists have also long capitalized on internet spaces as tools of recruitment, community maintenance, and action. It is important that, as a discipline, we are aware of how anthropology continues to be utilized, whether as a tool in the justification of ideologies and/or as a token of a 'woke' enemy, by extremists and how modern social media spaces are

used by these groups. The present research seeks to understand how racial (e.g., the alt-right, Neo-Nazis, etc.) and gender extremists (e.g., the Manosphere [Incels, Men Going Their Own Way, etc.] and Trans-Exclusionary Radical Feminists) and the alt-lite engage with anthropological ideas in constructing senses of identity and community boundary maintenance. The current project presents preliminary findings based on a study of racial and gender extremism on the platform, TikTok. Hashtags for collection of TikToks were gathered from curated lists of extremist terminology and then expanded upon using a snowball sampling strategy for popularly associated hashtags. Data were collected for nearly 600,000 TikToks. These TikTok videos and comments are analyzed for social networks, goals and strategies, what aspects of anthropology were used and how, and how extremists created a sense of personal and community identity using anthropological concepts as tools for boundary maintenance. These analyses are situated within broader critical theories and assesses social media engagement of these topics in the context of prior work regarding identity, community, and purpose in the far-right. Presenter: Donovan Adams

Was Graeber right? Is an Anarchist Anthropology Impossible?: The critical engagement with power has been at the forefront of anthropological inquiry over the last thirty years. Feminist anthropology takes seriously the culturally specific ways in which the construction and privilege of masculinity is embedded in social relations. Queer anthropology, similarly, locate and destabilize hetero-cis privilege. Importantly, Black anthropology has changed the discourse surrounding racism as a lived experience and made space for Black epistemologies in a persistently white discipline. The following paper weaves the thread of anti-authoritarian, multisectionality, and anti-capitalist through this trajectory of critical anthropology while also pointing to distinct departures anarchist anthropology can offer. While engaging with Graeber's small but mighty book, 'Fragments of an Anarchist Anthropology,' the paper wrestles with the existential question we are left with. Is an anarchist anthropology even possible? Social movements such as the anti-globalization movement and animal and earth liberation movement are predicated on the understanding and dismantling of interconnected systems of power. The concept of an activist anthropologist itself prioritizes the ways in which we are always already engaged in resistance work. Nancy Scheper-Hughes takes this paradigm seriously in her work as an insurgent anthropologist. Yet, anarchism as an ideological framework is oftentimes absent in anthropological theories,

methodologies, and research sites. In this paper, I engage with my own fieldwork in anarchist spaces as an example of how the political imaginary makes an anarchist anthropology possible. Presenter: Jennifer Grubbs (Antioch College, Social Sciences Division)

Transitions and Identity across Time and Space: In this paper, we discuss the impact of transitions on identity, and how appreciating one's bounded agency within a broader sociocultural milieu can help people navigate more harmonious and satisfying life courses. We begin with a brief overview of factors that influence our identity, such as (a) the direct and indirect role of others and (b) our lived experiences. With respect to the former, significant others can affect who we are, but our identity is also affected by how we see ourselves relative to others in general. Germane to this discussion is how sociocultural context modulates the salience of different facets of our identity. Regarding the latter, our lived experiences also influence our self-concept, as success can beget further success. Furthermore, losing our ability to remember these lived experiences can have a deleterious effect on our identity. We then address how life transitions across time (e.g., retirement) and space (e.g., relocation) change our experiences, affecting how we interact with the world and consequently our future circumstances. These transitions, which need not be mutually exclusive, influence how the self evolves, in an ongoing cycle of past experiences informing present interactions (i.e., increasing the probability of a certain subset of possible interactions), present interactions affecting subsequent experiences, and so on. We will then discuss how integrating the consequences of these changed experiences with those from our past alters our sense of personhood. Included in this discussion is how that which is part of one's identity affects that which can be added, because that which seems insignificant is less likely to be incorporated. We next examine how myriad factors, both internal and external to an individual, can constrain the range of interactions available to a person at a given point in time. Internal factors like one's cognitions and emotions limit how one interprets situations, and external factors such as physical and sociocultural structures can restrict one's behavioral responses. In essence, a person must exercise agency within a realm of constraints. This is where one's identity can reduce the challenge of structural constraints and alleviate the stressfulness of life transitions. One's past experiences, and what one has acquired from those experiences, can make the new roles and places associated with transitions (e.g., going to college) less 'new' if they effectively reduce the cultural distance between where one is and where one

wishes to be. We will conclude by discussing how (a) being more familiar with the sometimes unspoken 'rules' that govern different situations and (b) being able to leverage appropriate amounts and kinds of capital (e.g., economic, social, etc.) where and when needed can increase the likelihood of favorable outcomes, which in turn affect one's overall well-being and how well one adapts to the future. Presenter: Paul Ngo

Environmental and ritual pollution in South Asia

4:15 PM - 6:00 PM TMCC - 205 D

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Julia Perczel (University of Cambridge)

PRESENTER:

Ishani Saraf (University of California, Davis), Waqas Butt (University of Toronto, Department of Anthropology), Syantani Chatterjee (Columbia University, Department of Anthropology), Kanthi Swaroop, Aparna Agarwal, Julia Perczel (University of Cambridge)

DESCRIPTION:

Organisers: Julia Perczel (The University of Manchester), Joel Lee (Williams College) Research on environmental pollution and ritual pollution have tended to chart different trajectories in the anthropology of South Asia. On the one hand, a surge of recent studies of waste work, recycling networks, ecological degradation and the politics of toxicity are throwing light on South Asian responses to the global crisis of waste. On the other, the role of ritual pollution in the theory and practice of social hierarchy has for decades animated anthropological debates over caste. Environmental anthropologists may have kept distance from questions of ritual pollution out of a desire not to reify contingent and stereotyped links between stigmatized communities and wasted substances. In caste studies, textual understandings of difference-making and paradigms centered on political mobilization may have directed attention away from the environmental life of hierarchy. But how might the insights of these subfields mutually illuminate one another? If new forms of industrial and electronic waste have no place in the cosmology of ritual pollution, do they alter the grounds for caste discrimination, as some have argued? What happens to caste-based labor hierarchies as the content of waste

streams transforms? How do patterns of ecological devastation relate to geographies of untouchability, and in what ways do the judgments of practitioners of 'bourgeois environmentalism' (Baviskar 2020) about who and what is polluted mobilize or resituate tropes of caste difference? Building on scholarship on the modernity of caste (Mosse 2020), this panel intends to bring together current work that examines how ecological and ritual pollution converge, diverge, and influence one another, toward developing a robust anthropology of caste and the environment. We welcome contributions that explore any aspect of environmental degradation, more specifically spatial and material politics of toxicity, pollution, and waste work, etc. and their relation to South Asian notions of ritual pollution.

Material Transformation and the Materiality of Pollution: Knowledge, Hierarchy, and the Environment: Scrap metal challenges any easy correlations between ritual and ecological pollution pointing to the significance of taking seriously the specific materialities of discards and wastes and their relations to notions of pollution. In Delhi's Leela Market workers and dealers dismantle, disassemble, sort, pile, refashion, buy, store, sell, and variously transform discarded machines and their parts and elements. In scholarly and lay discourses the various forms of work done in waste markets like Leela Market have often been referred to and valorized as "jugaad" broadly understood as innovation and inventiveness in a milieu of scarce resources. While often celebratory, this discourse of "making do" often suppresses the technical expertise and knowledges that emerge, are learned, and crystallize in the markets in practice. Further, recent attempts to regulate and formalize scrapping and scrap trade characterize the work done in places like Leela Market as ignorant, polluting, and harmful. In this paper, I take up Kanha Ilaiah Shephard's theorization of the relation between material transformation and pollution in the everyday productive activities of laboring castes and their systematic denigration by parasitical castes to explore what notions of knowledge, ritual pollution, and hierarchy may inhere in the characterization of work done in places like Leela Market and what this entails in contemporary concerns about environmental governance and notions of livelihood and un/belonging in Delhi. Presenter: Ishani Saraf (University of California, Davis)

Framing the Environmental in South Asia: Ecology, Capitalism, and Caste: The current moment of Anthropogenic climate change has been described

recently “as the apotheosis of waste” (Hecht 2018). It is undeniable that those processes at the bedrock of global capitalism—consumption of disposable commodities and the extraction of resources—are the same ones distressing geophysical processes sustaining all kinds of life—human or otherwise—on our planet today. Put slightly differently, our contemporary ecological crisis has emerged out of and alongside worlds of waste, in which an intensifying form of global capitalism has been constitutive. In urban Pakistan, like much of South Asia, the labour of taking away of waste materials, or what is usually glossed as waste work, has been historically performed by low- or noncaste (Dalit) groups. By presenting ethnographic materials on how such labour organizes material, affective, and economic relations across urban Pakistan, this paper argues that narrating our contemporary historical crises—in which the ecological and economic are entangled—requires narrative dexterity. Such dexterity reveals current ecological and economic crises as ones where historical dynamics of caste-based relations, and the subsequent forms of life built upon them, have reproduced themselves. In other words, this paper thematizes the environmental as a site for critically assessing the connections between ecology, capitalism, and caste in urban South Asia. Presenter: Waqas Butt (University of Toronto, Department of Anthropology)

A very good Muslim: In this presentation, I will focus on how particular local notions of *shahīd/shāhid* (martyr/one who bears witness), and *harām/ halāl* (sacred, set apart, unlawful, not permitted/ profane, lawful, permitted) shift understandings of toxicity and Muslim selfhood, and in turn, produce a revised set of ethical imperatives in a Mumbai neighborhood located between one of Asia’s largest garbage dumps and the city’s largest slaughterhouse. Performing hazardous tasks for a living, many residents understand themselves as both the receptacle of poisons, as well as their remedy, reinforcing the *shāhid/shahīd* imaginary. How do economies of intoxication (narcotics, alcohol, pharmaceuticals recycled from the dump), and toxicity destabilize conceptions of *halāl* and *harām*? How do residents’ understanding of ritual and religious ethics shift from within these economies? Presenter: Syantani Chatterjee (Columbia University, Department of Anthropology)

Caste and Labor: the restructuring of everyday sewage work in Hyderabad, India: The aim of this article is to examine continuity and change in the experience of labor of sewage workers in Hyderabad, India. The focus is on everyday sewage work in Hyderabad, which is a

site where bureaucratic power, state policy, labor regimes, society and urbanism converge. Since 2017, Hyderabad, the first city in India to radically restructure the sewage work from manual scavenging to deployment of machines has also been a place of experimentation for a variety of policy initiatives, practices, infrastructural designs, and technology choices, which have been implemented, evaluated, and contested. Drawing on fieldwork in Hyderabad with sewage workers and bureaucrats governing everyday human waste, I explore how the transformation of everyday sewage work in Hyderabad constantly clashes with the enduring conditions of caste-based labor. The transformation of everyday sewage work in Hyderabad is borne out of tension between the requirements of state policy and the desire for what I argue is in the interest of particular environmental standards, made possible in the age of the market economy. The article describes how the key underlying factors such as informality in a large labor force with rural roots, bureaucratic discretionary powers, and the increased contractualization of government jobs in Hyderabad differentially provide a reading of waste work which under the guise of modernity effaces the relevance of caste. The article concludes by suggesting that everyday sewage work in Hyderabad constitutes a politics of separation that marks a distinction between waste and waste work. Presenter: Kanthi Swaroop

Value-making and Dependence at the Bhalswa Landfill in Delhi: On Anthropocene and Waste Crisis: Delhi is currently reeling under the burden of an excessive increase in discarded materials—the city’s trash. Growing urbanisation and consumption patterns have disrupted the city’s waste management processes and ecosystem. Decades of waste dumping, lack of formal recycling facilities and ecologically sustainable infrastructure (both human and technological) has led to visible socio-ecological and anthropocentric crises around the landfills—in our case the Bhalswa landfill, located on the north-west periphery of the city. The increase in fires and respiratory diseases, declining water quality, and oozing leachate in the surrounding water body is a result of the above-mentioned processes and practices. The harmful effects of this are borne by marginalised human and non-human entities. Human entities such as waste pickers and scrap dealers, mostly lower-caste communities, and non-human entities (mostly animals) such as cows, pigs, and dogs around the landfill site bear the burden of the city’s detritus, while clearing the city’s waste. Through a study of human and non-human relations around the landfill site, this project will examine multiple forms of

dependence and recycling/repair-work (converting waste into value) and processes that sustain and reproduce liveable city spaces in the time of the Anthropocene. In doing so, I examine the relations that humans and animals forge with discarded materials and the landfill site, and how the nature of these relations varies depending on caste, gender, class and human-animal relations. Presenter: Aparna Agarwal

“There is no pollution in our gaon”: permeable bodies and toxicants in metropolitan Delhi: Recent empirical work in India on contemporary society’s detritus of technoscientific materiality had provided the ground for arguments against the caste implications of handling such substances. Yet, my year-long ethnography with e-waste dealers in Northeastern Delhi markets reveals that decades of media attention to backyard processing sites and informal operations had in fact produced a stigmatising narrative of people inhabiting and labouring in such spaces. During my research I had noticed that e-waste dealers avidly deny the toxic implications of their work on the environment, which is striking in the face of ubiquitous toxic presence everywhere. At the same time, environmental professionals working to shift e-waste processing into official and responsible recycling channels talked of the e-waste markets’ pollution and their own bodily reactions to it with certainty. One way to understand this contradiction is by attending to modes of denial and expressions of environmental sensibility among e-waste dealers themselves. What I found was that the necessity to deny was in fact formed in the face of widespread awareness of how the media has portrayed e-waste markets not only as toxic hellscapes, but as places of widespread moral breakdown where women and children are made to work in terrible conditions. My paper asks, how can we make sense of e-waste dealers’ denial of the toxic effects of their labour? How can we think of the stigma of environmentally polluting labour in the context of shifting categories of hierarchy in the city? This paper proposes that while environmental pollution does not directly translate to the ritual pollution, it settles in similar patterns on people and places. Presenter: Julia Perczel (University of Cambridge)

Caste, Place and the Valmikis in Contemporary Mumbai: Historically, across South Asia, the residential areas of Dalit communities (ex-untouchables) have long been located in places deemed peripheral, waste, or non-usable. In other words, Dalits were not only ‘out-caste’ but, importantly, were ‘out-placed’ too. Drawing on ethnography that traces a Dalit community’s spatial history in a suburb of Mumbai, I argue that Dalits in

contemporary city spaces, too, are often forced to choose pieces of land for settlements that are geographically violent places. I show how Valmikis in Mumbai were forced to choose a crematory ground to begin their urban career. It documents the trauma of living in such an environmentally polluted/dangerous place for decades before it was transformed into a habitable environment by a place-making strategy. The Valmikis experienced resistance to spatial proximity with non-Dalits due to caste ideologies, and choosing an ecologically dangerous site was thus a caste compulsion. The case study illuminates how environmental and ritual pollution (caste ideologies) converge to produce a sociality for Dalits in city spaces that is not a radical departure from their rural experiences of living in spaces that are pregnant with nausea from the larger caste society, resulting in what Lee (2017) calls “environmental casteism.” Raju Chalwadi:

Fieldwork Technologies: Transitional Histories of Ethnographic Mediation

4:15 PM - 6:00 PM TMCC - 206 D

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Matthew Watson (Mount Holyoke College)

CHAIR:

Jennifer Hsieh (University of Michigan), Anna Weichselbraun (University of Vienna)

PRESENTER:

Jennifer Hsieh (University of Michigan), Nick Seaver (Tufts University), Matthew Watson (Mount Holyoke College), Robyn Taylor-Neu (University of California, Berkeley, Department of Anthropology)

DISCUSSANT:

Stefan Helmreich (Massachusetts Institute of Technology, Department of Anthropology)

DESCRIPTION:

Mythologies of ethnographic research – past and present – often construct fieldwork as a series of unmediated intersubjective encounters. But particular tools routinely enable, shape, and frame ethnographers’ field experiences. This panel rethinks the mediation of anthropologists’ embodied sensory, technical, and epistemic labors through fine-grained attention to historically-specific fieldwork technologies. The panel

threads together research on past and present fieldwork technologies in order to reframe constructions of the field's past and rethink the contemporary technopolitics of extended ethnographic embodiment. How might attention to technologies aid us to recompose histories of fieldwork and reimagine the technical, ethical, and epistemic contours of ethnography today? How have anthropologists and their technologies uniquely constructed ethnographic fieldwork in specific times and places? We address these questions by tracking how technologies affect the sensorial, political, and ethical shapes of ethnographic labor across fieldwork, interpretation, and exposition. Panelists examine how tool-enabled recording and textualization are not just objects for researchers' use. Rather, they produce ethnographic insights and modes of theorization – in cases when tools are deployed as intended, and in cases when they aren't. Panelists ask: how capricious, surprising captures of audio field recordings interrupt and redirect constructions of data and ethnography; how our material and digital filing practices condition what counts as felicitous conceptualization, theory-building, and argumentation; how the emergence of social scientific mainframe computer programming complicated the laboratory-field distinction in modernist ethnography's anxious epistemic culture; and how filmic animation technologies in contemporary Berlin reattune our ethnographic senses of sitedness. This assemblage of papers reimagines ethnography's practical, aesthetic, and epistemic forms – from the mid-twentieth century to the present – as 'transitional histories' of mediation. Taking up the conference theme, we offer a collective meditation on these histories as an act of 'tarrying in [technological] transition.' We suggest that reading ethnography as a complex of transitional histories hones our collective sense of the field's historicity and inspires intricate works of play with the shapes of our ethnographic techne.

Theorizing Ethnographic Singularity: Field Recordings of Past and Present: Fieldwork traditions have long been attuned to parsing out the general from the particular, and to disentangling rituals and customs from singular events. In line with the discipline's early formation as a social science, audio recorders were tools of objectivity intended to concretize archetypal, or paradigmatic, renderings of social life through a mode of salvage anthropology (Brady 1999; Polunin 1970). The pivot to digital recording in contemporary anthropology has produced new forms of ethnographic analysis, among them the question of how to theorize the specificity of singular events. Spontaneous spurts of sound that

interrupt a recorded interview, the spatial disorientation resulting from tracking down a sound, the fatigue of waiting to record sounds that never reemerge, are some examples in which the technologically-inflected ear attunes to the capriciousness of sound that materially shuffles everyday life into discrete moments. In both analog and digital forms of data collection, however, the audio recorder's relationship to loss has been an enduring feature, described in terms of a "second-order endangerment" by Judith Kaplan and Rebecca Lemov (2019) and the "existential discontent of data keeping" by Natasha Schüll (2018). Drawing on personal reflections of "doing anthropology of sound" in Taipei, Taiwan (Feld and Brenneis 2004), this paper grafts the historicity of loss in traditions of ethnographic field recordings into rethinking the where, when, and how of ethnographic data. It argues that anthropology's long-standing engagement with audio recordings produces technologically mediated distillations of social life that lead to new conceptualizations of field research. Presenter: Jennifer Hsieh (University of Michigan)

Filing Culture: The Management of Anthropological Materials: For the last 50 years, it has been clear that anthropologists are writers, producing field notes, analytical memos, articles, and books. But for just as long, if not longer, anthropologists have been file managers, organizing writing and materials that they amass before, during, and after ethnographic fieldwork. Like much of anthropology's "hidden curriculum," how we organize files is often a source of anxiety for anthropologists from graduate school to retirement, but techniques for managing materials are relegated to the margins of graduate education – the stuff of informal advice, social media discussions, and idiosyncratic invention. In recent decades, anthropologists have brought critical attention to mundane components of anthropological techne – from fieldnotes to ethnographic logistics – showing that these are not merely matters of tooling, but essential to how we develop concepts, build theory, and make arguments. The emergence of new digital tools, along with the retirement of the last generation of anthropologists professionally socialized before personal computing, presents us with a fruitful moment for considering the anthropological file system. This paper, co-authored by Nick Seaver and Anna Weichselbraun, presents preliminary work from a project on anthropological filing practice, drawing on interviews with anthropologists trained before, during, and after the ascendance of personal computing as a central element of ethnographic technique. It asks: What is lost and what is gained through the affordances of new digital

tools? How do anthropologists organize files today, and how might we do so in the future? What are we supposed to do with all of these PDFs? Presenter: Nick Seaver (Tufts University)

Programming Fieldwork: Computations of Kinship and Humor in the Harvard Chiapas Project, 1961-1973: Drawing on extensive archival research, this paper asks how the midcentury emergence of social scientific computer programs shaped constructions of ethnographic fieldwork in formative, enduring ways. In the early 1960s, a few U.S. anthropologists started to use mainframe computers to process and analyze ethnographic data. Some of the earliest efforts adapted an IBM 7090 program developed by Harvard psychologists to subject large corpuses of recorded texts to pattern-recognition studies. In 1965, graduate student George Collier designed a distinctively-anthropological program to process kinship and land tenure data generated by the Harvard Chiapas Project, a large-scale collaborative research program and field school in southern Mexico. The program coded kinship data and yielded text-based maps of residence patterns. Collier also encouraged fellow graduate students to make use of the IBM. Taking up this encouragement, Victoria Reifler Bricker worked to deduce the structural logic of ritual humor in indigenous Chiapas through the psychologists' General Inquirer program. While in the field, Bricker actively corresponded with Harvard Laboratory of Social Relations staff who computerized her data. In a 1966 conference paper, she characterized this exchange as a process of "feed-back" between laboratory and field. Through a critical reading of these linked cases, this paper argues that the IBM 7090 effected a system of distributed cognition that helped reshape the geographic site and epistemic culture of fieldwork. This argument, then, prompts more careful consideration of how early computers conditioned understandings of the "field" across cognitive, structural, and symbolic anthropologies. Presenter: Matthew Watson (Mount Holyoke College)

Berlin Is (Not) Berlin: Reanimations of the City as Ethnographic "Site": This paper proposes that closer engagement with filmic animation technologies – both as objects of study and as modes of theorization and exposition – can precipitate new forms of ethnographic attunement. My analysis draws upon 18+ months of field research with auteur animation filmmakers in Berlin, yet the "site" of this inquiry both is and is not Berlin: even as films inscribe and thematize elements of their surrounding world, they disrupt static notions of spatial and temporal situatedness. Here, I focus on

works by two Berlin-based artists – Jalal Maghout's *metavitrina* (in progress) and Malte Stein's *Flut* (2018) – both of which figure the city as riddled with other spaces and other times. Such filmic (re)animations speak to a spectral genealogy of surrealism-inflected ethnography (Rouch 1988; Taussig 1987, 2021) and ethnographic surrealism (Clifford 1981), in which "the city" and its sequestered interiors have been key nodes of observation and aesthetic experimentation (Schwanhäußer & Wellgraf 2019). Through close analysis of these artworks and conversations with their creators, I explore filmic animation's capacity to render elusive aspects of experience (including dream, memory, atmosphere, and affect) and to blend, stretch, compress, and otherwise unsettle spatio-temporal "sites." In so doing, I gesture to the ways anthropological engagement with filmic animation technologies can enrich and extend ethnographic modes of attunement, inscription, and expression, while contributing to recent elaborations of the complexity of "sited-ness" (Hage 2021, Hirschkind 2020). DISCUSSANT:

Sarah Green (University of Helsinki)

DESCRIPTION:

The advent of modern nation-states set in motion desires and practices for incorporating indeterminate frontier zones into national territory, fixing borders, and seeking value in their inhabitants as subjects. Yet

'frontiers' continue to trouble nation, state, and territory as exclusive frames of reference for societies, despite people dwelling in these spaces being compelled to adopt these frames for claiming entitlement and recognition. Simultaneously, people who inhabit places figured as frontiers have competing and multiple allegiances, connections, and identities that transcend legal membership to states and reach beyond the range and limits of national boundaries. States have often responded by creating alternative categories of citizenship to blur and regulate forms of belonging and re-assert control. Frontiers remain contested spaces, in which colonial and postcolonial trajectories of state formation continue to craft distinctive vocabularies of political sensitivities, attachments, and resistance. Frontier geopolitics turns attention to place-making and inter-community relations from the vantage of frontiers. Studying contradictory histories of extraction and investment, neglect and scrutiny, violence and protection, this panel centers frontiers as emergent spaces that generate distinctive transversal attachments and belongings, that may or may not depend on external recognition for legitimacy. We invite papers that explore the complexities and contingencies of place-making, sovereignty, and citizenship practices that push beyond formal-legal frameworks, seeking conversation on new forms of spatial and political imagination that are produced within written archives, infrastructural projects, and exchange networks.

Micropolitics, Kinship, and Othering in a Frontier Market
: For several decades, Afghans have constituted the largest refugee population in Pakistan, with many choosing to settle in Peshawar, the largest urban area near the Afghanistan-Pakistan border. The protracted war in Afghanistan has made the borderland region an enduring site of conflict and mobility. In the gem-trading center of the region known as Namak Mandi, displacement has allowed people to simultaneously participate in relations of reciprocal assistance in trade and highlight new geographies of identification and state belonging. This paper discusses the changing dynamics of intercommunity kinship at the scale of this local market for colored gemstones. Starting in the early 1980s, savvy Afghan gem merchants made Peshawar a base in circuits of multidirectional trade and movement. In so doing, they conferred kinship metaphorically onto Pakistanis involved in different aspects of the trade and engendered new political subjectivities. What affective bearings have colonial and postcolonial territorialization created for belonging—both citizens and refugees? Drawing on two years of ethnographic research

conducted between 2017-2019, I examine the ways in which market relations produce affection and familiarity at one end, while at the other, engendering everyday notions of ethnic and national othering. Presenter: Pinghsiu Lin (.)

“Caravan Republics”: Writing spatial orders: In the 19th century, imperial fascination with central Asia drew from the colonial expeditionary travelogue. Written both by officers of the East India Company and their natives scribes and translators (munshis) who accompanied them, these texts described the mountainous and putatively “blank space” of the Himalayan, Karakoram and Pamir knot. Combining the investigative modalities of the survey (itself bound up in the rise of geography as an imperial science), and stylistic requirement of entertaining a metropolitan reading public, these accounts are a key form through which highland frontiers are written into history.

In this paper, I examine the genre of the colonial expeditionary travelogue by comparing two accounts of the same voyage made in 1834 from Punjab to Bukhara (in present day Uzbekistan) – one by the colonial officer Alexander Burnes and the other by the Kashmiri Hindu Munshi Mohan Lal – focusing on the tensions and overlaps between colonial and vernacular forms of spatial order and access. I address how the figure of the overland trade caravan appears as a self-contained “republic”: a metaphor for spatial order without a sovereign. These forms of order, evolved in response to raids, avalanches, floods, the guarantees of protection of passage and its removal, serve as a granular archive for patterns of spatiality and jurisdiction that shaped movement and exchange in the trans-Himalayas. Simultaneously the “caravan-republic” metaphor congealed colonial fantasies regarding the promise of wealth and territorial access through the control of trans Himalayan trade. Reading along and against the grain, I analyze how “trade” acquired oversized symbolic importance for past and present colonial wars, while continuing to forge templates for imagining future political communities in contested ‘frontiers’. Presenter: Aditi Saraf

The Problem of Shifting Rivers: Citizenship, Territory, and Sovereignty at the Nepal-India Border: Rivers, like mountain ranges, are geographic features along which state boundaries are often drawn. However, rivers have the tendency to challenge what Agnew (1994) has termed the “territorial trap,” the flawed assumption of national borders as fixed and static containers of society. The settlement of Susta in southern Nepal is one such place, where the transformation of a river troubles

perspectives in which bodies of water act as timeless barriers that divide states and regions. Susta was long perched on the west bank of the Narayani River, which according to the Sugauli Treaty of 1816 is considered the border between Nepal and India. Because of a warming climate, changing monsoon patterns, and recent floods, the river has shifted course, cutting into Nepali territory and leaving Susta on its east bank from 1977 onwards. India insists the new river direction is the international boundary, while Nepal contends otherwise. Stranded in disputed territory, the residents of Susta identify as Nepali, although very few hold official citizenship. For local residents, this poses the essential question, should a change in the course of a river also change the nationality of a people? Following Krause (2016), I argue that an awareness of landscape movements is essential for a critical understanding of contemporary borders. Based on ethnographic fieldwork conducted with Nepali photographer Prasiit Sthapit, this presentation interrogates how the creation and maintenance of a disputed territory along the Narayani River is deeply entangled with politics of citizenship and sovereignty in a former frontier region. Presenter: Nadine Plachta (University of Toronto)

Empires turned inside out: Borderland Biographies in Azerbaijan : The question of how people inhabit the past in the wake of a historical rupture has been central to studies of post-socialism as well as to a broader anthropological corpus on the “post-”. In Azerbaijan, a small country in the Caucasus with a Sunni-Shia-mixed Muslim population conversant with Orthodox Christian and Soviet cultures, the question of inhabiting the past after seventy years of Soviet rule implies a puzzle with pieces spread out. The rediscovery of historical bonds with half-familiar-half-foreign neighbors in Turkey, Iran and the Caucuses revived a genre of history writing known as biographical dictionary. A capacious genre with a double lineage in Azerbaijan, one extending from the Soviet tradition of biography writing rooted in 19th-century Russia and another one in the Islamic tradition of *tezkirah* writing stretching back over a millennium, biographical dictionaries offer an unusual perspective on how a borderland society reckons with its diverse roots after a historic transformation. In this paper, I consider the historical contents of biographical dictionaries, the material and textual forms in which they are presented, and the sensibilities by which they are produced and received. By tracking this discursive field with its participants—writers, readers, and travelers—I uncover a historical practice whereby the former citizens of a Soviet state remold themselves into a larger society that bears different pasts in different

countries, the seventy years of communist rule being just one. I use these texts to illustrate how a borderland society can lay a stake in the imperial histories of their ‘bigger’ neighbors, absorbing those outside roots into their vision of who they are, or once were, and could be again. Presenter: Serkan Yolaçan (Stanford University, Department of Anthropology)

Sovereign Material Traces in a Captive Frontier in South Asia: India’s far northwestern frontier in Ladakh has gradually and rapidly been entrapped and infiltrated by the practices of state security. In stark contrast to other South Asian borderlands it is a captive frontier marked by the absence of physical cross-border mobility. In their desire to belong to India, the people of this region have metaphorically positioned themselves as the crest of the nation. Their performances of patriotism and on-stage conformity to state-endorsed formats of representation might give the impression that the region has surrendered its sovereign self. Yet there persists a frontier sensibility within captivity. Focusing on the Shia Muslim majority district of Kargil, this paper will explore this sensibility through material traces of connections that traverse geopolitical borders. I suggest that these material traces constitute ‘moral barricades’ that compel us to think about sovereignty beyond the exercise of state violence. Presenter: Radhika Gupta (Leiden University)

The Absent/Present State in Balochistan: Sovereignty Brokers and Violence Workers: Over the past twenty years, Pakistan’s province Balochistan has become a site of enforced disappearances, extrajudicial killings, and army operations. Collectives resisting this violence – from missing persons movements consisting of families of the disappeared to human rights activists, journalists, ethnonationalist politicians, and others – have pointed the finger squarely on ‘the state’ in the form of the Pakistan Army, intelligence agencies, the Counter Terrorism Department, paramilitary outfits like the Frontier Corps, and state-supported proxy militias known as ‘death squads.’ Through articles, street protests, political speeches, social media and elsewhere, they have argued that the state concentrates violence on Balochistan’s border populations, in particular its Baloch and Pashtun communities. Yet, this felt presence of state violence co-exists with the material absence of state institutions in Balochistan. Outside of urbanizing centers like Quetta, Turbat, and Gwadar, and beyond key transport routes like the Makran Coastal Highway or the RCD Highway, one can drive for hours and not come across a single public school or hospital—or military checkpoint, cantonment, or soldier. This seeming

absence of the state sits side by side with stories of violent state presence, as homes in seemingly isolated hamlets tell stories of middle of the night raids, abductions, helicopter bombings, and other kinds of violence meted out by 'the state.' How does 'the state' establish such a violent presence on a frontier where it is formally absent? In the paper, I think about two recurring figures accused of acting as brokers and workers of state sovereignty and its accompanying violence in Balochistan: the establishment sardar (tribal leader) and the mukhbir (informant). I explore how they work to establish – often in confusing and opaque but nevertheless lethal ways – state power in places where formal state institutions are absent. Global Aging: Identity, Intimacy, and Care during Demographic Transitions

4:15 PM - 6:00 PM TMCC - 718 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Claudia Huang (California State University, Long Beach)

CHAIR:

Mara Buchbinder (University of North Carolina, Chapel Hill)

PRESENTER:

Sarah Lamb (Brandeis University, Department of Anthropology), Claudia Huang (California State University, Long Beach), MUKTA SHARANGPANI, Iza Kavedzija (University of Cambridge)

DISCUSSANT:

Janelle Taylor (University of Toronto, Department of Anthropology), Cati Coe (Carleton University)

DESCRIPTION:

We are living in a rapidly aging world. According to the WHO, the number of people aged 60 and above will double to 2.1 billion by 2050, and the number of people over 80 will triple to 426 million in that same time frame. Already, the macro-level economic and social ramifications of this demographic transition are playing out around the globe: from broad protests against retirement age reform in France to shrinking economic growth due to the declining working-age population in China, aging populations present a myriad of challenges and opportunities for societies on every continent. As

governments and institutions attempt to grapple with demographic-driven social turbulence, anthropologists have unique vantage points from which to witness how people experience these broad changes in their everyday lives. Ethnographic inquiry can reveal previously unnoticed patterns and provide insights into the ways in which demographic transitions bring about profound transformations in social networks, intimate relationships, and personal understandings about it means to grow older. This roundtable brings together a group of scholars who examine aging and the life course from different geographical and epistemological starting points. The two discussants will guide the conversation by drawing from their expertise in the field: Cati Coe has studied aging in Ghana through a larger exploration of kin relations and intergenerational exchanges. Janelle Taylor is researching dementia and caregiving in North America, with a focus on the growing numbers of 'kinless' older adults with dementia. Throughout the conversation, presenters Sarah Lamb, Iza Kavedzija, Claudia Huang, and Mukta Sharangpani will share reflections from new and ongoing research conducted among older adults in India, China, Japan, and the United States. We will be joined by Mara Buchbinder, who has studied medically assisted death in the United States with a particular interest in how this new end-of-life practice creates new forms of sociality and dependency among aging adults, in the role of roundtable chair. Together, we will tackle questions including: How have perceptions and experiences of the aging process shifted? In what ways do novel practices of aging intersect with other axes of identity like gender, race, and class? What new family dynamics have emerged or in the process of emerging? In what ways are caregiving practices changing? What is the role of technology in mediating those changes? What are some potential policy shifts that have so far been overlooked? By putting our findings and ideas into critical conversation with one another, we aim to further clarify anthropology's role in identifying challenges brought about by population aging and proposing human-centered solutions to those challenges.

DISCUSSANT:

Winnie Lem (Trent University)

DESCRIPTION:

This panel brings together a collection of presentations looking at migrant labour and labour activism. In this, we direct our attentions to the intersections of what Etienne Balibar has referred to as 'ultra-subjective' and 'ultra-objective' forms of violence—in other words, to the relationship between the kinds of structural violence that create mass unemployment and 'surplus populations,' and to the forms of exclusions (racism and nationalism, etc.) that are both constituted and constitutive of global capitalism today. For example, there is a commonplace assumption that regimes of migrant labour tend to skew for power imbalances which favour employers at the expense of workers. As migrants have less rights and legal protections than citizens in their host countries, their precarious legal status is often seen to functionally disincentivize workers from pursuing labour activism/organizing as a means of redressing wage theft or poor working conditions. Likewise, migrant labour regimes are also often understood to afford for the accumulation of super-profits as foreign workers may be paid below the rate of social reproduction within their host countries. Consequently, scholarship has previously traced the relationship between migrant labour and ways in which race becomes reinscribed as essential to the fabric of social life—here, South Africa and the United States have served as key examples. And yet, despite these obstacles, migrant workers do often also engage in forms of activism, making claims to forms of social citizenship in a context whereby they do not have the legal rights associated with formal citizenship. Likewise, it is also the case that migrant workers will sometimes find ways to make alliances and working relationships

with the institutional and organizational expression of local working-class politics. This considered, this panel will explore a variety of case studies that attend to both these forms of 'ultra-objective/subjective' violence and the ways in which these violences are negotiated, resisted, and mediated at the local level. Nicholas Abrams's presentation explores activism against migrant labour regimes by construction and industrial manufacturing workers in South Africa. His research considers how local workers sought to find ways of making an economy preferential to them—sometimes, this came at the expense of migrant workers. Likewise, Morganne Blais-McPherson considers activism by migrant labourers in Italy's fashion industry, attending to the ways in which their activism shapes their political subjectivities and to how this challenges the ways that dominant media discourses frame these workers as subjects. Conversely, Ferda Demirci's research looks at patterns of internal migrant labour in Türkiye; here, Ferda explores how migration and debt shape both social solidarities and conflicts within mining communities. Research by Catherine Bryan, Liz Fitting, and Stephanie Mayell take us to consider migrant agricultural workers in Canada from Latin American and the Caribbean. In this, Liz Fitting and Catherine Bryan consider the sphere of social reproduction in the global chains of value created by migrant labour. By contrast, Stephanie Mayell focuses on the ways in which the legal environment for migrant labour in Canada produces necropolitical modes of governance and regimes of 'unfree' labour.

Gangster capitalism and non-union labour activism in South Africa's construction industry: As high unemployment rates have forced private sector unions to retreat South Africa's construction industry, most of the artisan labour that is now conducted in construction is undertaken according to short-term, precarious, and casualized contracts. At the same time, in the past five years, the vacuum left by the decline of unions has also given an opportunity for organized crime groups—known in South Africa as “construction mafias”—to fulfill many of the political roles that had, in a previous era, been the purview of the trade union movement. For this reason, construction workers describe how their livelihoods are structured by a need to “chase the shut” [chase short-term work contracts] across the entirety of southern Africa—that is, that they rely upon these mafia groups to become as mobile as capital itself, moving every few months from province to province, from country to country in search of work. This presentation tracks how the spontaneous and grassroots activism of workers in south Durban—workers who were initially

organized into the workplace by these construction mafias—sought to split from these mafia groups to create a new organizational form of working class politics. In so doing, these workers began making demands that the many industries that surround the townships in south Durban exclude migrant labourers and only hire labour from the local community. This considered, this presentation explores the shifting terrains of class struggle in South Africa, following the ways in which migrant labour regimes are contested amid the development of a post-apartheid “gangster-capitalism.” Presenter: Nicholas Abrams (University of Toronto, Department of Anthropology)

Integration by other means: vernaculars of violence in Italy’s immigrant worker struggles: On October 13, 2021, Italian newspaper *Libero Quotidiano* reported “shocking violence” in the industrial city of Prato, where “the Chinese beat the Pakistani.” “Behold Italian-style ‘integration’”, the title ironically concludes. This paper pauses on this polemical interjection to ask whether violence does, in fact, act as a means through which integration occurs in Italy today. For over a year, I conducted participant-observation in a labour union that led protests, strikes, and roadblocks for immigrant workers’ right to a forty-hour workweek. I observed as recently immigrated workers and Italy-born activists enacted maps of prior violent and exploitative encounters such as the one cited above in Prato’s industrial zones. These unionized workers and activists performed these maps through *italiano scioperato* (lit. struck Italian), a pidgin Italian that has emerged at roadblock encampments. They used transnational tactics, whose hybridized form and cross-ethnic support were often illegible to local officials and residents. And while workplace struggles were dominant, the union also deployed hybrids to protest bureaucratic holes in immigration policy, whose relevant institution for “victims of grave exploitation” they chose to elide. Anthropologists have critiqued immigration regimes that separate deserving, victimized immigrants from undeserving, economic ones, noting how these forms of (mis)recognition generate violence. This talk engages with this critique, noting the integratory elements of the vernaculars of violence – performed maps, pidgin, and ordinary acts of solidarity - through which immigrant workers refuse their institutionalization as “victims of grave exploitation” all the while fighting for *una vita più bella* (a more beautiful life). Presenter: Morganne Blais-McPherson

Extractive Labour in the “Soma Basin” and Re-Negotiating the Limits of Regional and Domestic: A

prominent agricultural town in the fertile West-Aegean region of Turkey previously known for its profitable tobacco cultivation, Soma grew into an internal frontier for extractive industries in just two decades following the ambitious energy independence policies of the Turkish state. The Soma basin has been turned into a hub for experimenting with energy extraction with the recently implemented wind power plants, solar energy infrastructures and a provincial hot-water energy system, along with the continuously increasing lignite coal pits and lignite-coal-firing power plants. This rapid expansion of energy infrastructures has rendered this coal basin an emerging center for new forms of labour and, thus, internal migration cycles. The underground hierarchy, particularly in half-mechanized coal pits in the region, reflects this internal migration trend and depends on a strict division of miners according to their regional origins. This regional division in the workplace, in turn, becomes an encompassing analytic that draws the contours of daily life in Soma’s working-class households and the limits of labour activism. Moreover, given the extensive availability of small bank loans, miners are often driven to maintain regionally popular marriage traditions with instruments of debt, which further contributes to the reproduction of these divisions and engenders a striking conflation between their approaches to regional and domestic. This presentation attends to differing definitions of collegial solidarity and strategies of indebtedness in Soma’s miner households in the context of internal migration by exploring which aspects of life are strategically rendered ‘regional’ and what it reveals about the miner’s approach to ‘domesticity’ and belonging. Presenter: Ferda Nur Demirci (University of Toronto, Department of Anthropology)

Farmworker transnational care chains and social reproductive struggles: This paper traces the global capitalist relations connecting the transnational reproductive practices of seasonal agricultural workers in Canada to their farming communities back home, where rural livelihoods have been undermined by several decades of structural adjustment policies and trade liberalization. The Seasonal Agricultural Worker Program (SAWP) is one of the few temporary labour programs in Canada forbidding transition to permanent residency or citizenship. Researchers and advocates have shown how the program contributes to the systemic production of less than full citizenship statuses rendering farmworkers vulnerable to exploitation. From our research with Jamaican and Mexican migrant farmworkers employed in Nova Scotia, we frame our discussion in relation to feminist political economy that

calls attention to capitalism's dependency on the otherwise devalued labour of social reproduction and to critical agrarian studies that explores how subsistence farming contributes to, and is transformed by, capitalist accumulation. We suggest that migrant farmworkers participate in a transnational "care chain", different from those usually examined, when paying others to work their farms back home. Furthermore, we argue that the importance migrant farmworkers place on land and farming constitute a struggle to ensure that social reproduction is possible in the future. This paper is coauthored by Liz Fitting and Catherine Bryan.

"We are like broken vessels; we get thrown out": The social death of Jamaican farmworkers in Canada: Every year, Canada's Seasonal Agricultural Worker Program (SAWP) hires thousands of Jamaican farmworkers on temporary work permits that tie them to a single Canadian employer. In Canada, SAWP workers are structurally vulnerable to physical injury, and despite

contractual entitlement to health care, they face many access barriers. A repatriation clause in the SAWP contract that permits employers to fire and deport workers without a grievance process means injured workers are routinely sent home before they can access health care or workers' compensation. In this context, most SAWP workers are afraid to refuse unsafe work, report workplace injuries, or seek health care for fear of being sent home. Some injured workers choose to stay in Canada past the expiration of their annual work permit, and this change in immigration status precludes their ability to access health care. Drawing on 18 months of ethnographic fieldwork and more than nine years of community engagement with injured Jamaican SAWP workers in Canada and Jamaica, this presentation presents a necropolitical analysis of the SAWP as a system of unfree labour. The SAWP maintains Jamaican workers in a constant state of injury through the triple loss of home, rights, and status, tantamount to social death. This research presents what I call the triple violence of injury: the pain and debility caused by physical injury; the necropower that injury both exposes and makes workers vulnerable to; and the necropolitical legacy of slavery and ongoing dehumanization through which Jamaican workers experience their bodies as racialised and vulnerable. Identity Transitions and (Re)Construction in International Contexts

4:15 PM - 6:00 PM TMCC - 715 A

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

David Hanks (University of Pennsylvania, Graduate School of Education)

PRESENTER:

David Hanks (University of Pennsylvania, Graduate School of Education), Dorothy Zinn, Amber Noor Mustafa

DESCRIPTION:

These oral presentations describe contexts where transitions have occurred in language policy, curriculum, migration, and displacement. The first paper, Transactional Identities in the Scalable Language Community, uses school advertisements, curricular materials, classroom discourse, and interviews with

students and staff collected during a multi-year ethnography of language policy in the tourist town in Bali. The author explores the ways the construction of the Indonesian language in school language policy facilitates not only its materialization as a scalable commodity that can be consumed by predominantly white tourists, but also how this transformation disrupts notions of how Indonesian-speaking bodies cohere and what this suggests about how these tourists see their place in the community. The second paper, *What Can (and Cannot) Be Done with History: A Vertical Case Study of Transnational Curriculum Ideas in a Chilean High School*, explores shifting relations between history and citizenship education at three different, interconnected levels in which the adoption of new ideas about historical thinking transnationally and their local application has affected the links between citizenship history and citizenship education in Chilean schools. The third paper, *Migrant-origin students in Italian Higher Education*, is an ethnographic study conducted in Northeastern Italy to investigate the transition of migrant-origin students to higher education. It investigates the construction and meaning of exclusion, inclusion and belonging in migrant-origin student perspectives. The fourth paper, *A Critical Pedagogy for Ukrainian and Palestinian Refugee Children*, uses a comparative critical lens to examine the education implementation for both Ukrainian and Palestinian refugees. Being displaced and having experienced war-related trauma can have cognitive effects on children's learning. Therefore, the author suggests a critically conscious pedagogy that is both transformative and emancipatory. The last paper, *When Resilience is the Only Option!*, the author presents a case study of the education experience of one Pakistani individual to understand the education landscape of Pakistan. In revealing the obstacles in the system-corrupt system, corporal punishment, lack of teachers and resources, as well as a poor infrastructure-the author proposes changes in educational policy at the federal level.

Transactional identities in the scalable language commodity: Education, desire, & the becoming-lokal tourist in Bali: The Indonesian island-province of Bali has regularly welcomed millions of domestic and international tourists each year, with what appears to be only a temporary interruption due to the COVID-19 pandemic as numbers continue to rebound. With many tourists opting to stay on the island for months--sometimes years--at a time, small commercial language schools have popped up to cater to those seeking to augment their tourist experience through learning the

national language, Indonesian. The website of one such language school asks prospective students, 'Are you living in Indonesia? What do you hear people call you usually?' Noting that some prospective students may have heard the Indonesian word [i]bule[/i], the school website describes this as just one of a number of terms for foreigners in Balinese/Indonesian society, and offers a few additional terms along with definitions. Absent, however, is any mention that [i]bule[/i] commonly means 'white person' or 'Caucasian' (Stevens & Schmidgall-Tellings, 2010), or indeed any mention of race at all. Instead, every term listed is hierarchically ordered from least to most [i]lokal[/i] ('local') based on degree of Indonesian language proficiency and respective desire (or lack thereof) to 'integrate' into the community. Working from a perspective of posthumanist performativity (Barad, 2003), I conceptualize this reconfiguration of difference through the materialist lens of viscosity (Saldanha, 2007), seeing the materialization of particular racialized and languaged bodies as a probabilistic alignment of embodied economic and raciolinguistic practices (Rosa & Flores, 2017). Using school advertisements, curricular materials, classroom discourse, and interviews with students and staff collected during a multi-year ethnography of language policy (Hornberger & Johnson, 2011; Hornberger et al., 2018) in a rapidly developing tourist town in Bali, I employ discourse analysis (Wortham & Reyes, 2021) and nonscalability theory (Tsing, 2012) to explore how the construction of the Indonesian language in school language policy facilitates not only its materialization as a scalable commodity that can be consumed by predominantly white tourists, but also how this transformation disrupts notions of how Indonesian-speaking bodies cohere and what this suggests about how these tourists see their place in the community. From this, I argue that in the context of the Balinese tourist economy this attempt as constructing language education as a scalable commodity for tourist consumption participates in an affective economy (Ahmed, 2004) of desire and self-transformation premised on the valuation of racial difference such that students are encouraged to see the only meaningful barrier to their ability to fully integrate into Balinese society--to become maximally [i]lokal[/i] and shirk a cumbersome and restrictive [i]bule[/i] identity--as their ability to purchase a quality language education. In conclusion, I discuss some implications for tourist-local interactions in Bali, as well as for commercialized forms of language education more broadly. Presenter: David Hanks (University of Pennsylvania, Graduate School of Education)

Migrant-origin students in Italian Higher Education: Facing Challenging Transitions: (paper co-author Hilary Solly) This paper presents preliminary results from the authors' ongoing research on migrant-origin students in Higher Education (HE) as a growing presence in Italian universities, as throughout Europe. Since the early 2000s scholars have noted how social scientists have been relatively slow in analyzing the link between education, ethnicity and social stratification, particularly when considering HE. Making the transition from school to HE has proven to be particularly onerous for students who come from immigrant families: on the whole educational research in Europe -for the most part quantitative- has demonstrated that a lag exists between the achievement of students from immigrant families and their autochthonous peers, which is then carried over into HE. The study presented here is based on ethnographic research in Northeastern Italy, complementing important existing quantitative studies on the pathways of migrant-origin students in HE, and it responds to calls for more research on the everyday and longer-term experiences of students from ethnic and racialized minorities in HE in general, and in Europe in particular. The study addresses the following questions:

- How do migrant-origin students experience the transition to Higher Education?
- To what extent does the university and its campus culture reproduce the very social inequalities it formally aims to abolish, or on the contrary, enhance inclusion and multiple belonging?
- How is exclusion – but also inclusion and belonging – constructed and given meaning in migrant-origin students' perspectives?
- How are university policies promoting diversity and equal access translated into reality in student experience?

Presenter: Dorothy Zinn

When Resilience is the only Option! Highlighting Problems of the Education System in Rural Pakistan, through the Story of a Child who did not give up, despite all Odds: This anthropological study highlights problems in the education system of rural Pakistan, through my husband's (Noor Mustafa) journey as a student in a village called Lar, near the city Multan. His resilience reaped favorable results for him but sadly this is true only for a miniscule percentage of the population. Education is envisioned to contribute to the social, economic and political development of a country (Ahmed & Zeshan, 2014; World Bank's report on Understanding Poverty, 2019; Kristof, 2010). Unfortunately, many factors have inhibited Pakistan's ability to achieve the Millennium Development Goal for primary education, hampering its growth and development severely (Pakistan Millennium

Development Goals Report, 2013). Resultantly, there are 22.8 million out of school children, nearly 70% have never been to school while 54% drop out by grade 5 (Alif Ailaan, 2014). 60% belong to low-income rural households and since 39% of labor force is agricultural, this factor is pivotal. After marriage I moved to Lar, and observed the deplorable face of poverty there. Being an educator, I felt responsible for the future of children and hence, became interested in Noor Mustafa's story to understand the educational landscape of rural Pakistan. His nursery class had 53 students, but he was the ONLY one who studied beyond grade 5, due to a corrupt system, corporal punishment, lack of teachers, resources and infrastructure (his classes were held under a large berry tree), poor teaching and cultural mindsets, details of which I share as his story unveils. According to Naviwala (2014), vested interests of political actors and ruling elite are the main cause for this dearth in public schools, as a stringent system of evaluation and monitoring is lacking to curtail this problem. Another significant reason for shortfall in academic performance, increased dropouts and low levels of self-esteem in students is the language of instruction. Noor Mustafa was taught in his local language till grade 5 but then in grade 6 all subjects were taught and assessed in English, without qualified teachers. This point of contention can be resolved by introducing English earlier for better language acquisition. Another important consideration is the role communal mindsets play in this regard. No one, except his mother, supported his desire to study. She kept him motivated throughout, despite her own very basic schooling. Andrabi et al. (2012) validate that mothers who have attended schools for an average of even 1.34 years can contribute far more to the educational journey, cognitive and behavioral development of their children. Mothers' education should therefore be a priority for policy makers. His village school was till grade 8, so for secondary school he had to travel every day to a nearby city (2 hours away) by public buses. He was bullied, discouraged from asking questions, frustrated by the change of language of instruction, tired due to long distances and poor travel facilities, but his resilience got him a professional degree eventually. He later established a philanthropic organization to support education of rural children. This study advocates that incremental and exponential changes are required at federal education policy level, to translate into change at the grass-root level and that resilience is key. He explains his life in this video: <https://www.youtube.com/watch?v=sj-sCUfjZw>

Linguistic Anthropological Methods in Education

4:15 PM - 6:00 PM TMCC - 203 A

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Tyanna Slobe (Dartmouth College, Department of Anthropology)

CHAIR:

Alexander Feliciano Mejía (San Francisco State University), Tyanna Slobe (Dartmouth College, Department of Anthropology)

PRESENTER:

Tyanna Slobe (Dartmouth College, Department of Anthropology), Nandi Sims (Stanford University), Anar Parikh (Brown University)

DISCUSSANT:

Keisha Wiel, Elaine Chun (University of South Carolina)

DESCRIPTION:

This panel brings together scholars from interdisciplinary academic backgrounds (linguistic anthropology, education, linguistics, and cultural anthropology) to discuss ethnographic approaches to the study of language in educational contexts. We start in the classroom: the first two presentations focus on student-teacher and peer interactions that reveal larger political projects related to socioeconomic class in Chile (Slobe) and mother-tongue, multilingual, and colonial education in Aruba and Curaçao (Wiel). The next speakers move us beyond traditional classroom contexts to examine (trans)local educational projects that encourage ethnographers of language to re-imagine our methodologies. Mejía's work with Mayan-Mam communities in Guatemala and Oakland grounds analysis of ethnoracial identities in participants' own perspectives on cultural and linguistic variation in contexts local to the Cuchumatán mountains and Bay Area diasporic communities. Sims highlights potential research contributions from groups historically underrepresented in academia through a community ethnography project on language and gentrification wherein youth from a predominantly Black high school in Washington D.C. make data collection, analysis, and publishing decisions. Together, the papers in this panel highlight the importance of incorporating community members' perspectives and experiences into our

research because our work has broader implications for educational and legal policy. This is especially clear in the final paper by Parikh that examines the consequences of U.S. federal policy that use the category of 'limited English proficiency' to describe individuals who face linguistic barriers in accessing federal programs and services. Drawing from ethnographic research with South Asian civic engagement initiatives in Chicago and applied anthropological work with an Atlanta-based Asian American advocacy campaign, Parikh considers how ideas about education and (il)literacy among marginalized communities inform broader policy campaigns centered around expanding language access. A discussion led by Dr. Elaine Chun will reflect on the scholars' contributions to linguistic anthropology and education.

Expertise and Elite Stances in Classroom Interactions: In October 2019 student protests in Chile against a metro price increase escalated into months of civil unrest motivated by wide-spread frustrations among the working and middle classes about cost of living and income inequality in the country. Overnight, the *estallido social* (uprising) caused abrupt changes to everyday life in Santiago due to massive protests, the collapse of public transportation, business and school closures, a mandatory curfew, and the deployment of troops to the streets for the first time since the end of Chile's military dictatorship in 1990. This paper examines classroom interactions among high school students and teachers in an elite private school on the first day of the campus's reopening following the onset of the *estallido social*. It draws from linguistic anthropological methods to examine and contextualize interactional moments where participants attempt to make sense of the ongoing *estallido*, its motives, and their personal responsibilities toward society. I combine theory on language ideologies (Schieffelin, Woolard & Kroskrity 1998) and expertise (Carr 2010) with attention to multimodal co-operative action (Goodwin 2018) to analyze the classroom interactions in the context of a larger school project of socializing students into political stances associated with the careers and social practices of socioeconomic elites. Presenter: Tyanna Slobe (Dartmouth College, Department of Anthropology)

Community Ethnography in Chocolate City: This paper considers how we can incorporate historically underrepresented populations in the processes of conducting ethnographic research and, subsequently, how these researchers conceptualize their responsibility to educate the public on their results. I describe a

community ethnography project aimed at understanding the cultural and linguistic outcomes of gentrification, led by youth researchers at a primarily Black high school in Washington, D.C. In the project, students will design ethnographically-informed research; conduct interviews; write fieldnotes; analyze linguistic and ethnographic data; and publish their results in a public-facing forum with the help of academic researchers. Historically, ethnographers aim to interpret a community's culture and translate it into meaningful theories with the assistance of community members. The project discussed in this presentation flips the dynamic so that community members are interpreting and translating with the assistance of a researcher. The design of the Community Ethnography in Chocolate City project is not new, but this analysis of and commentary on the methodology comes at a time in which calls to diversify academic voices and reach new audiences abound. Presenter: Nandi Sims (Stanford University)

Raciolinguistic Ideologies in U.S. Language Policy and Advocacy: Signed in 2000, Executive Order 13166 formally recognized linguistic discrimination as a form of national origin discrimination as outlined in Title VI of the 1964 Civil Rights Act. It also introduced the concept of "limited English" proficiency" (LEP) to refer to individuals who face barriers in accessing federal programs and services —and established guidelines for federal agencies to ensure that those individuals have meaningful access to those programs and services. Nearly two-and-a-half decades since it was introduced to U.S. policy lexicon, the LEP concept remains the paradigmatic framework for linguistic advocacy in U.S. policy spaces. In this paper, I examine the centrality of the LEP framework to contemporary language access and equity efforts in the U.S. I present ethnographic vignettes and analysis based on ethnographic fieldwork on the implementation of the Language Minority Provisions (Section 203) of the Voting Rights Act in South Asian communities in Chicago and applied anthropological experience working on a language access policy campaign at an Asian American advocacy campaign in Atlanta. Drawing on existing linguistic anthropological critiques of problematic language assessment in US policy realms (Zentella 2007;2010), I illustrate how deficiency frameworks rooted in raciolinguistic ideologies prevail even in settings that purport to celebrate linguistic difference. I argue that the dominance of LEP as the standard-bearer for determining the needs of linguistic minorities is part-and-parcel of a raciolinguistic ideology that continues to position those who use languages other than English as

linguistically deficient. I call on both language scholars and language policy practitioners to not only use their critical lens to challenge more hostile efforts to suppress plurilingualism, but to also contribute to the ongoing work of challenging assumptions about the linguistic practices of marginalized individuals and communities in progressive spaces. Presenter: Anar Parikh (Brown University)

4-665

Moving Beyond Disaster and Recovery: New Perspectives on Public Scholarship and Engaged Anthropology after Katrina

4:15 PM - 6:00 PM TMCC - Hall G - MI
Oral Presentation Session

REVIEWED BY:

Association of Black Anthropologists

ORGANIZER:

Martha Radice (Dalhousie University, Department of Sociology and Social Anthropology)

CHAIR:

Martha Radice (Dalhousie University, Department of Sociology and Social Anthropology), Rachel Breunlin

PRESENTER:

Roberto Barrios (University of New Orleans, Department of Anthropology), Antoinette Jackson (University of South Florida, Department of Anthropology), Justin Hosbey, Erin Tooher (University of New Orleans, Department of Anthropology), David Beriss (University of New Orleans, Department of Anthropology), Helen Regis (Louisiana State University, Department of Geography & Anthropology)

DESCRIPTION:

This panel broadly considers the temporality of displacement and placemaking in New Orleans and Southeast Louisiana. The deep and racialized social inequalities and environmental injustices of this region were starkly exposed after Hurricane Katrina and the federal floods that it precipitated in 2005. Subsequent disasters, notably the Gulf oil spill, the COVID-19 pandemic, and other hurricanes, as well as the region's obvious ongoing vulnerability in the climate crisis, have reemphasized social fractures and unmasked (again) the neoliberal dynamics of dispossession that exacerbate them. What has unfolded in New Orleans and Southeast Louisiana makes it plain that disaster is socially constructed. While they address how various communities deal with the compounding cycles of

disaster and recovery that shape the arc of their lives, the papers in this session also move beyond reductive narratives of vulnerability and resilience to examine the interplay of, on the one hand, corporate hoarding/asset-stripping and, on the other, collective strategies of repair, restoration, renewal, and resistance - or, as the late Clyde Woods put it, 'a dominant bloc deeply committed to preserving social inequality' versus 'the centuries-old campaign to build a new commons in New Orleans, Louisiana, the South, and the nation' (2009: 772, 792). Our papers explore themes of displacement and return, memory, imagination, and aspiration, time, place, and recognition. Substantively, they deal with topics including the restaurant industry, migration networks, the privatization of public education, environmental racism, and the fragmentation and gathering of communities. Taking the long view, they move our dialogue toward engaged social science and public anthropology for the common good. Woods, C. (2009). Les Misérables of New Orleans: Trap Economics and the Asset Stripping Blues, Part 1. *American Quarterly*, 61(3), 769-796. <http://www.jstor.org/stable/27735018>

What Katrina Revealed, COVID Reasserted: The social science of crisis and disaster in New Orleans : Social scientists have long held that catastrophes are moments that allow observers to recognize social fault lines and structures that are less visible during times of "normalcy." Hurricane Katrina, for example, is credited with challenging the illusion that the United States was moving in the direction of a post-racial society in the early 2000s. Likewise, the COVID-19 pandemic was accompanied by news editorials and media content that called attention to the ways the public health crisis shed light on the socio-economic vulnerability imposed on low level service sector workers, racial and ethnic minorities, the elderly, and both rural and urban poor. Additionally, social scientists have also proposed that crises are moments pregnant with potential for social change. Nevertheless, in the aftermath of Hurricane Katrina, the possibility of progressive social change was smothered by neoliberal policies and planning practices that privatized the city's public schools, public housing, and public hospital. The long-term effects of these policies and practices included the permanent displacement of over 100,000 African American residents and the perpetuation of profound inequities that became the ground upon which the Coronavirus spread throughout the city in 2020. This paper examines the revelations, responses, and transformations experienced by the City of New Orleans and its people between August 2005 and August 2023. Understanding

what post-disaster trajectories become possible requires social scientists to consider the roles of recovery politicization and neoliberalism as an epistemic force in setting the course toward "recovery," highlighting the need for a public anthropology of disasters that promotes environmental and racial justice. Presenter: Roberto Barrios (University of New Orleans, Department of Anthropology)

From Post-Katrina to COVID-19: Revisiting 'Race, Place, and Displacement in New Orleans' Again : Intensive media focus on New Orleans in the aftermath of Hurricane Katrina, now at the 20 year anniversary point, calls for national pause and critical attention be paid to the devastating hurricane of 2005 and the subsequent destruction, displacement, and death brought on by the COVID 19 global pandemic post 2019. Large scale disparities in housing, environmental protections, access to services, education, and healthcare for a vast number of residents has once again been made evident at the family and community level in New Orleans. This analysis revisits a 2011 article that made visible stories, critiques, and visions for the future shared primarily by African American residents and former residents of New Orleans, Louisiana to reveal what is going on now and what if anything changed by applying a longitudinal/retrospective approach to an analysis of place. Presenter: Antoinette Jackson (University of South Florida, Department of Anthropology)

Public Education and the Antiracist Terms of Recovery in Black New Orleans: The humanitarian disaster triggered by Hurricane Katrina exposed the racial violence and class domination that structures New Orleans and the broader U.S. South. In the immediate aftermath of the storm's destruction of the U.S. Gulf Coast, the state of Louisiana transformed New Orleans' neighborhood schools into privately managed charter schools and several thousand teachers, staff, and administrators were terminated. Drawing on ethnographic field research between 2013 and 2023, this article explores the social impact of this quasi-privatization by analyzing how the politics of space, place, and citizenship in Black New Orleans are being transformed by the jettisoning of traditional neighborhood public schools. I mobilize critical work in Black geographies and Black studies to argue that, despite claims of success, the neoliberal transformation of New Orleans' public schools contributes to the unmooring of low income and working class Black New Orleanians from their communities into the present. Presenter: Justin Hosbey

About, To, and Through: Latinx migrant responses to layered disasters in Greater New Orleans : After Hurricane Katrina decimated the Gulf Coast in 2005, thousands of Latinx migrants arrived in the region to help in the rebuilding and recovery processes. Specifically, the Greater New Orleans (GNO) region of the Gulf Coast became a hot spot for examining the complex relationships between disasters, forced migration, and vulnerable populations. This paper begins with Hurricane Katrina as only one disaster with which the Greater New Orleans Latinx migrant population has interacted, and moves through subsequent disasters, exploring, most recently, the COVID-19 pandemic and Hurricanes Delta, Laura, and Ida, and the unique ways in which Latinx migrants of the GNO area have moved through and responded to these layered disasters. I rely on years-long doctoral dissertation research and subsequent ethnographic research situated in the non-profit, hospitality, and service industries of New Orleans to highlight complex, local cultural knowledge amongst Latinx migrants that has been deployed as both political and economic survival techniques across the arc of these disasters. The ethnographic vignettes and testimony from across the Latinx migrant community – from food truck proprietors, hospitality laundry employees, dishwashers, adult English Language students, to name a few – included in this paper help us to envision anthropology through disaster via responses to disaster, thereby moving beyond anthropology of/about disaster. Presenter: Erin Tooher (University of New Orleans, Department of Anthropology)

Can Restaurants Save New Orleans? The Restaurant Index in Disastrous Times: This essay is framed by two disasters, in 2005 and 2020, that forced the complete closure of every restaurant in New Orleans. Drawing on over 15 years of research in New Orleans focusing on restaurant workers and owners, along with eaters and writers, this paper explores the ways that restaurants index many of the core ideas, conflicts, and struggles that define contemporary urban life in the context of disaster. In the years following the 2005 hurricane and floods, the restaurant industry's recovery served to gauge the rebuilding of neighborhoods and businesses. Restaurants were indicators of the revival of community, as returning residents joined friends and strangers for food and drink. They also pointed to the city's changing culture, as shifting demographics changed restaurant menus, styles, and workers. Restaurants became key symbols in discussions of the changing character of New Orleans. The pandemic once again forced the closure of every restaurant in New Orleans. The experience and

expectation of disaster shaped the way people in the culinary industry adapted and responded. However, the pandemic, building on social movements and other structural tensions in American society, seemed to trigger a different set of concerns about what the city should look like. Racial justice, wage equity, immigration, sexual harassment, environmental and cultural sustainability, among other issues, helped push aside chef-driven culinary questions and challenged ideas about the role of dining out in defining the city. As one of the largest industries in the city and one of the city's key cultural symbols, restaurants remain at the core of debates about New Orleans' future. Yet their role in helping sustain—or save—the city has changed. Or, perhaps more to the point, what needs saving has changed. This paper will explore that transformation. Presenter: David Beriss (University of New Orleans, Department of Anthropology)

Ethnography as Infrastructure for Imagining Futures in the City: This paper considers the development of a public and collaborative ethnography in New Orleans over the past 20 years. Founded in 2004, the Neighborhood Story Project published a series of books with public high school students using photography, ethnography, and creative non-fiction to tell (decolonized) stories about their neighborhoods and communities. This grew into a nonprofit organization in partnership with the University of New Orleans. The first five books were published in June of 2005. A few months later, when the city was under water, there was a strong pull from national media to concentrate on the disaster itself. As an organization, we made a commitment to situate living and writing about the city within long arcs of time and a deep commitment to building equitable futures. We were writing through rather than about disaster. We sought to create collaborations with neighborhoods and community-based organizations to put forward the best of themselves and what they could be. In 2006, we wrote about this beginning with the Nine Times Social and Pleasure Club's reclamation of the Ninth Ward, and have since developed an imprint at UNO Press, worked with community-based museums on catalogues and public programs, and built bridges between grassroots and mainstream institutions. We have co-created a living archive – spanning archive and repertoire (Taylor 2003) – that has helped to change the paradigm for ethical and collaborative co-creation in the city. Building on Alisse Waterston's (2020) query about lightness in dark times, we track some of the interventions of the NSP as public anthropology that has helped to create a narrative infrastructure for the city. **Co-authored with

Multispecies Futures for the End of the World

4:15 PM - 6:00 PM TMCC - 206 B

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Kip Hutchins (Oberlin College and Conservatory, Department of Anthropology)

CHAIR:

Kip Hutchins (Oberlin College and Conservatory, Department of Anthropology)

PRESENTER:

Kip Hutchins (Oberlin College and Conservatory, Department of Anthropology), Jessica Madison Piskata (Oberlin College and Conservatory, Department of Anthropology), Juno Parrenas (Cornell University Library), Marty Miller (New York University), Allison Caine (University of Wyoming, Department of Anthropology)

DISCUSSANT:

Barbara King (William & Mary, Department of Anthropology)

DESCRIPTION:

What do we do with a world that is falling apart? Embrace the new relationships that arise from shared precarity (Tsing 2015)? Leave our structures for animals to take over (Van Dooren and Bird Rose 2012)? Look off-planet for possibilities of life elsewhere (Praet and Salazar 2017)? In the aftermath of mountaintop removal in Appalachia, water defenders ally with candy darters – tiny shimmering fish whose endemic territory is in the middle of proposed energy speculation – to stymie pipeline projects. Meanwhile, as people continue to avoid the Chernobyl Exclusion Zone due to persistent radiation, herds of a once-extinct wild horse from northern Asia take advantage of human absence to make the area their new home. Any answer to the problems of climate change and environmental exploitation requires attention to multispecies entanglements (Haraway 2008, Tsing 2013). In keeping with the theme of 'transitions,' this session examines the ways that people imagine and build toward futures for a world transformed by climate change and the

death throes of capitalism. Each paper in this panel analyzes assemblages of humans and others navigating the transition from a world-that-was to a radically different world-to-be. This session picks up the recent movement in more-than-human anthropology, which contends that nonhuman animals, insects, plants, and fungi play vital roles in politics at the national and global scale (Parreñas 2014, Tsing 2015, Govindrajana 2018, Mathur 2021). This panel directs that multispecies, ethnographic lens on the end of the world and its many potential beginnings. Juno Salazar Parreñas' 'Mourning a Tropical Polar Bear' examines the public funeral for Inuka, the Singapore Zoo's polar bear, in the context of the species' likely extinction within the next 30 years. In 'Symbiotic Afterlives,' Marty Miller seeks life in the loam, examining how Dutch scientists conceptualize secular afterlives through the process by which microbial networks transform decaying matter into planetary energy. Yashendu Joshi's 'The Crocodile Conundrum of Charotar' looks at the uneasy relations between neighboring communities of humans and crocodiles in Gujarat, as people and reptiles adapt to rapidly changing social and ecological conditions in their shared territory. In 'For Whomever Comes After' KG Hutchins examines cases in which Buddhist monks rehabilitate wetlands near ruins of ancient monasteries in the face of the surrounding steppe's desertification to prepare for a future epoch of post-human perfected beings. 'Living with the Wild' by Allison Caine describes how Andean herders deal with increasing intrusions of wildness in the behaviors of their alpacas, brought on by the rapid disappearance of nearby glaciers. In 'Tsy Lahatra Ny Krizy (Crisis is Not Destiny)' Gabrielle Robbins describes how rural communities in central Madagascar mobilize a network of relations with nonhuman animals, plants, and spirits to imagine multispecies futures. Finally, Jessica Madison Piskata's 'Radioactive Traces, Homely Ghosts, and the Endemic Uncanny in a Bohemian Forest' traces the radioactive assemblage of a Czech forest, finding the Uncanny at home in the fruiting bodies of mushrooms, the hunted bodies of boars, and the microscopic bodies of nanorobots and ghostly bacteria. As discussant, Barbara King brings her works' attention to familial and ecological grief (and love) expressed by other-than-human animals in the face of anthropogenic harms.

For Whomever Comes After: Temples Built to Last in the Mongolian Gobi: This paper explores the more-than-human, and sometimes more-than-natural, networks of social relation surrounding two monasteries in the Mongolian Gobi. I argue that in both examples, heritage stands as a tool for crafting more-than-human

solidarities to survive successive waves of violence on the postcolonial landscape. The first monastery is a ruin, haunted by monks who were killed during Stalinist purges in the 1930s and 40s. The state maintains this site as a wetland and resting spot for migratory birds to combat the increasing desertification of the surrounding steppe. This is a site of “negative heritage” (Meskell 2002), both cultural and ecological, commemorating the twin violences of Soviet colonialism and neoliberal environmental destruction in the supernatural ecosystem that it supports. A short journey deeper into the desert leads to a second monastery, a recent construction. This temple is a work of cultural heritage specifically curated to appeal both to current humans and to the people of the Maitreya era – ascended posthuman beings who are neither human nor entirely nonhuman. The head monk describes how the monastery could one day show future Maitreyans that contemporary, Buddha-era humans were capable of beauty and insight, arguing that cultural heritage has the potential to appeal to things that come after humanity. The monk envisions a utopian future world, while the ghosts at the ruin play out the destruction of a previous one. As the monks wait for that time of transition, they care for the fish in the monastery’s well-appointed tanks and the stray cats who wander out of the desert. These acts of care demonstrate “nonviolence toward animals,” a precondition for humanity’s ascension into the Maitreya period. For the monks, ghost-hunters, birds, and stray cats currently living in the Gobi, creating one world from the other means relying on cooperation between humans, nonhumans, and the landscape. Presenter: Kip Hutchins (Oberlin College and Conservatory, Department of Anthropology)

Radioactive Traces, Homely Ghosts, and the Endemic Uncanny in a Bohemian Forest: The Uncanny was born in the forests and mountains of central Europe, and in the Karlovy Vary region of the Czech Republic (Czechia), ghosts and other hauntings are endemic to the craggy landscape itself. On the *stežka plna strašidel* (“trail full of ghosts”) outside the border of the town, one can encounter entities such as foul-smelling spectral dogs, phantom witches, and even centuries-old ghostly bacteria that can cause illness as well as their material counterparts. Another haunting are layered radioactive traces, most recently from the Chernobyl disaster, but also from the decaying remainders of the region’s uranium mines and radioactive waste produced by nuclear power plants since the 1970’s. Recently, inspections of the fruiting bodies of mushrooms (Čadová 2017) and bagged meat of wild boar in the

Karlovy Vary, Plzen, and South Bohemian regions of the Czech Republic turned up radionuclide contamination in excess of the legal limit, and debates among residents appear as frustration over the regulatory strictness of the market in contrast to the practices of everyday eating and digestion. Various plans for eventual cleanup have been floated, including bio and mycoremediation and the deployment of nanorobots—another microscopic haunting. The familiarity of these spectral critters is not to suggest friendliness or even comfort. Rather, it is reminiscent of the inherent *unheimlich* hidden within the *heimlich*—the deeply buried uncanny that is inherent within the notion of home. This paper draws on the concepts of uncanny ecologies (Fernando 2022) as well as the nonsecular (Bubandt, et al, 2018) and haunted (Gan, et al, 2017) landscapes of the Anthropocene to ask—what kinds of spectral entanglements go beyond the frame of species? How is a ghost bacteria like a nanorobot in an irradiated landscape? What other invisible beings, energies, and presences haunt the Bohemian forest? Presenter: Jessica Madison Piskata (Oberlin College and Conservatory, Department of Anthropology) Mourning a Tropical Polar Bear: Inuka (1990-2018), which supposedly means “Silent Stalker” in Inuit, was Singapore’s world famous tropical polar bear. Any visitor would notice that Inuka’s fur was not white as snow, but green like algae—the kind that proliferated in Inuka’s exhibit at the Singapore Zoo. Located in the tropics, it was impossible to ever manipulate the temperature colder than 70F or 21C. The bear, born in captivity in Singapore, died after years of geriatric medical intervention. A public funeral was held for the bear in 2018. How might the idea of polar bear extinction, which is projected to occur in the next thirty years, frame such acts of mourning? Presenter: Juno Parrenas (Cornell University Library)

Symbiotic Afterlives: Underworld Microbiomes and Secular Dying in Soil Technoscience: This paper explores how meanings of death are being remade in soil technoscience through novel explorations of underworld microbiomes. In recent years, soils have been described by scientists as the “final frontier” of ecological research (Sugden et al. 2004). Not only are soils the most biodiverse ecosystems on the planet, but underground networks of fungi, bacteria, protists, archaea, and invertebrates are now considered vital “bio-infrastructure” that enable entire biogeochemical cycles of carbon, water, nitrogen, and phosphorus (Bellacasa 2014). Drawing on ethnographic fieldwork amongst soil scientists at research institutes and agrotechnology companies in Wageningen - the Dutch “City

of Life Science” - this paper contributes to a growing interest in contemporary re-imaginings of soils that exceed the logics of militarized agricultural production (Bellacasa 2015; Lyons 2020; Kyrzonowski et al. 2020). Specifically, this paper explores how scientists generate conceptions of a secular afterlife by attuning themselves to the symbiotic microbial networks that decompose organic matter and facilitate the recycling of planetary energy. As multispecies scholars call for a re-thinking of anthropocentric conceptions of death and dying in the face of mass extinction (Franklin and Lock 2003; Rose and van Dooren 2011), this paper interprets the ethico-political significance of the technoscientific remapping of life and death distinctions through stories of symbiotic feeding and respiration. This analysis utilizes a multispecies lens to contribute to broader conversations about secular negotiations of death, afterlife, and immortality (Farman 2020). Ultimately, this paper asks: what are soils and death mutually becoming in an era of both global environmental breakdown and renewal?
Presenter: Marty Miller (New York University)

Living with the Wild: Deglaciation and Multispecies Futures in the Andes: At 4500 meters above sea level, Quechua alpaca herders live on the edges of glaciers that have retreated more rapidly in the past fifty years than at any point in the previous six millennia. In pervasive drought conditions, animals are becoming restless (k'ita) and straying outside the boundaries of their social entanglements with humans. This paper explores the “new wild” (Tsing 2018) of the high Andes, arguing that it isn't a question of kind so much as scale: it is not a new wildness that is troubling herding communities in the deglaciating Andes, but rather the unexpected excess of an existing, and necessary, wildness. Domestication, of animals of landscapes, is always and only partial: animal wildness is an essential component of the human-animal relationship, allowing humans and animals to coproduce vital landscapes in the dry montane pastures. However, an excess of wandering and the transgression of human spatial and temporal boundaries that is now troubling herder's sense of time and place. As Andean herders tangle with restless animals and attempt to bring them back into relation, they complicate the apocalyptic narratives of deglaciation as the end-of-times. There will be no full domestication and no return to an imaginary primordial balance-- rather, Andean herders are continuing to live with the wildness, engaging in the incessant and arduous practices of being-in-relation with others.

Palimpsest, Mirror, Mnemonic: Naked Fieldnotes in Transition

4:15 PM - 6:00 PM TMCC - 715 B
Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Denielle Elliott (York University)

CHAIR:

Matthew Wolf-Meyer (SUNY, Binghamton University, Department of Anthropology)

PRESENTER:

Michael Cepek ,Richard Vokes (University of Western Australia, Department of Anthropology & Sociology),T.S. Harvey (Vanderbilt University, Department of Anthropology)

DISCUSSANT:

Kelly Fayard (University of Denver, Department of Anthropology)

DESCRIPTION:

Fieldnotes are central methodological tools in ethnographic practice. From their earliest uses, they purported to capture thoughts, communication, actions, and interactions for later analysis by their authors, laying the empirical groundwork for anthropological practice. But, over time, the fieldnote has become less reliable. Questions about the veracity of 'objective' fieldnote-taking have haunted the discipline since the 1970s. Experiments with fieldnotes as a written document have enticed ethnographers since the 1980s. And emerging technologies-including multi-media, visualization, and sound technologies-have bred connections between ethnography and documentary filmmaking, sound art, and other forms of artistic expression. Ethnographers have also undertaken subtle experiments in finding the right materials for their research projects-pens, pencils, notebooks, and other low-tech forms of capture. In this panel, panelists reflect on their use of fieldnotes and the technologies that make them possible, showing how fieldnotes have changed in their personal and disciplinary uses. Taken together, the papers point to how fieldnotes have adapted to the demands of changing concerns about empiricism, ethics and subjectivity in anthropological practice-and how they have changed in response to the demands of individual needs in fieldwork practices. Contributors additionally reflect on their use of multi-

sensory technologies as supplements and foundations of fieldwork. Their experiences point to the changing contours of the fieldnote as a kind of text, at once informed by the reflexive turn of the 1970s-1980s, the critiques of objectivity in the 1990s-2000s, and the emerging interest in making ethnographic worlds vibrant, multi-sensory experiences for audiences. These changes in fieldnotes reflect broader trends in anthropology about the responsibilities of ethnographers and the fidelity of their ethnographic writing-which can serve as a palimpsest of experiences and ideas, a mirror of the self, and mnemonic for later recall, all of which make the ethnographer a technology too.

DISCUSSANT:

Ana Maria Ulloa (Universidad de los Andes)

DESCRIPTION:

Expertise is in transition. Some say it is in crisis. Where once anthropologists of the non-West attributed expertise with the power to create and order the world with their analytical categories actively, today, expertise is read as a series of historically and culturally situated effects resulting from boundary-making practices, a product of the valorization of rational, intellectual labor (Haraway 1988; Scott 1999; Mitchell 2002). Yet, experts continue to be mobilized in projects of power to reproduce state effects and perpetuate ongoing violence against marginalized communities to expand extractive capitalism markets (Besky 2013; Jegatheesan 2019). Against this backdrop, critical scholars and social movements, in some sense, experts themselves, are

working on challenging institutional hierarchies of knowledge production and reclaiming expertise (Callison 2014; Li 2015). There is a need to shore up knowledge-making practices toward creating just practices against a rising tide of neo-liberalization riding on the coattails of right-wing populism (Newman 2017; 2018). There is less consensus on how to go about it. This panel asks whether re-enchanting the affective and sensory components of expert practices might be one approach toward releasing expertise's emancipatory potential. Reenchanting expertise seeks to redefine and humanize the expert beyond the rational to the affective and the sensory in knowledge production (Boyer 2005; 2008; Shah 2018). Here, experts are both the subjects of national and global assemblages and neoliberalizing tendencies of institutions and complicit in maintaining hegemony (Clarke 2013; 2020; Riles 2018). A burgeoning literature shows us how experts-subjects of knowledge regimes engage intimately with their objects of knowledge. In 'sensing' their objects, they are riddled with doubts, uncertainty, and anxiety, learning from events as they emerge, all of which entails engaging in sensory labor (O'Reilly 2016; Vaughn 2017; Petryna 2018; Spackman and Lahne 2019; Spackman 2020). Intervening in these debates, the panel seeks to ask how affective and sensory relationships inflect the relationship between experts and their objects of knowledge. In shoring up the affective and sensory components of expertise, we seek to reorient it towards better serving collaborative projects for the future.

The Body Politic: On the Sensuousness of French Far-Right Political Expertise and Strategy: This paper is rooted in ongoing ethnographic research among far-right politicians and their supporters in a far-right town the south of France (where a far-right mayor has been twice elected with nearly 60% of the vote), alongside simultaneous digital ethnography on Telegram and in a far-right chat room. On the one hand, drawing on examples from fieldwork conducted 2022-2023 in the town of Milmarin, this paper discusses an emerging consensus among political experts and strategists from Marine Le Pen's Rassemblement National party that the distinguishing strength of the former Front National party is its proximity to voters. This proximity, performed at municipal events as well as regional town-hall style meetings, allows politicians to physically interact with constituents; to eat with them; to collectively engage in acutely sensorial experiences such as candlelit dinners, bullfights, and concerts. French far-right politicians explain that this capacity allows them to render "traditional" French political parties as detached, distant, and discursive ("all talk") rather than material

("here in the flesh"). Ethnographic examples of online sociality and discourse show how this dichotomy is further produced through far-right initiatives to sell far-right branded food, supplements, knives, and clothing, reflecting RN politicians' expertise and strategy of rendering politics material, sensorial, even penetrative. Beginning with a brief trio of ethnographic vignettes, the paper turns to Pierre Nora's *Lieux de Memoire*, Maurice Halbwachs, and Pierre Bourdieu, engaging with their theories, but also arguing for these texts as cultural artefacts that reveal how expertise on French identity has itself long been bodily and sensuous. Presenter: Damien Stankiewicz (Temple University, Department of Anthropology)

Transspeciesed Expertise: Human-Rodent Sensory Technologies in Tanzania: What does expertise mean in the context of projects where nonhuman animals are trained to use their sensorium to produce knowledge about disease or danger? In Tanzania, giant pouched rats are trained to olfactorily detect various substances usually invisible to the human eye. These include explosive materials, illegally smuggled wildlife products, and tuberculosis. Drawing on ethnographic fieldwork and participant observation, I argue that the sensory practices of using rats to detect danger or disease rely on the cultivation of transspeciesed expertise (see Hayward 2008). People and rats train together in ways that conjoin their sensorium, transforming themselves into a sensing technology that give them both extrasensory powers. Rather than understand such interspecies collaborations as "delegated sensing" or "proxy" (see Chun, Levin, and Tollmann 2021). I show that successful multispecies sensing projects require sustained and profound understandings of each other's sensory worlds, usually involving different kinds of sensory labor (Spackman and Lahne 2019) and sensory enskilment (Grasseni 2007). The process of training should not be understood solely as repetitive and gradual modifications of behavior in one organism by another. Training is also about dwelling in each other's *Umwelt*, the sensory world in which an organism exists and acts as a subject (von Uexküll 2010). In other words, expertise emerges through a shared knowing of how and when to entangle cross-species subjectivities. To be an expert is not to possess knowledge of an object, but to possess skills for cross-species entanglement. As an analytical framework, transspeciesed expertise therefore empowers anthropologists studying the senses, scientific knowledge production, or multispecies relations to recognize the active, relational practices that produce sensory expertise. Presenter: Jia Hui Lee

Expert Disenchantment: Ethical Ambiguities in the Sensorial Grading of Tobacco in India: State experts at the Tobacco Board in Andhra Pradesh mediate all transactions between Indian tobacco farmers and traders representing domestic and international tobacco companies. The auction and attendant grading system for Flue-Cured Virginia (FCV) tobacco, which they oversee, was instituted in the 1980s to facilitate greater transparency in price discovery, democratize the market for Indian FCV tobacco, and empower Indian tobacco farmers. This paper is an ethnographic study of the sensorial grading process, the bodily techniques and the expert's trained judgment. On auction floors, expert graders use their senses to see, feel, and smell FCV tobacco bales and, based on their evaluations, assign grades that index the quality of the leaf. Sensory grading is conducted amidst the bustle of the auction floor, making it rife with inaccuracies and errors. The stakes of this cost-effective grading technology are high for farmers and traders due to the grade's relation to prices and profits, making it the key site where stakeholders in the tobacco economy can contest experts' claims of objectivity and challenge their trained judgment. Often, these challenges extend to the moral intentions of experts and the question of market transparency. Re-enchanting expertise, conversely, will weigh market demands for transparency and the benefits of cost-effective technologies against the backdrop of imminent agrarian crises facing India. Presenter: Amrita Kurian (University of Pennsylvania)

Can one undo abjection? Embodied rationality and the remaking of water expertise : U.S. policy makers are increasingly embracing direct potable reuse (DPR) to stretch water supplies. Once considered an option of last resort, DPR takes highly treated wastewater and directly returns it to the drinking water supply, often eliciting reactions of disgust. Understood by many in the water industry as the "yuck" factor, this affective reaction has helped scuttle reuse projects in places like San Diego. Expert knowledge—produced through instruments, regulations, and testing—argues DPR water should be evaluated by its post-treatment quality, rather than its former abject status (Anand 2012). Despite consumer's distrust of tap water (Teodoro, 2022), DPR's taste profile is similar to bottled water. Thus, DPR sits at a strange intersection: it activates and undoes the affective and sensory relationships shaping belonging in contemporary U.S. water infrastructures. Might experimental ethnographic work bridge the gap between scientific expertise and embodied rationality in the debate over transitioning to DPR? We report on three experimental engagements that "staged

encounters" (Fortun 2012) between drinkers in metropolitan Phoenix and their current and future municipal water. These engagements facilitated collaboration with local policy makers, highlighting the affective and sensory realms of their own and their constituents' expertise. Yet these engagements also asked experts to risk their authority at a moment when adopting DPR seems essential to future water resilience; for example, experts expressed ranges of discomfort with encountering their constituents' affective concerns. We suggest that engaging with embodied rationality opens collaborative possibilities in water governance while activating new dimensions of care in water infrastructure. Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Anna Neumann (Harvard University)

PRESENTER:

Anna Neumann (Harvard University), Karolina Golemo, Mustahid Husain

DESCRIPTION:

From post-colonial landscapes in the Hague to Krump dancers in Los Angeles to post-soviet refugee objects to post-colonial monuments in Lisbon to youth masculinity among Bangladeshi-Canadian men in Toronto, this panel explores questions of displacement, emplacement, and belonging.

The Glitch: Transitions on the Dance Floor Imagine Utopia Otherwise: The glitch is a crucial moment for my interlocutors, one in which they demonstratively refuse 'to move without friction' (Moten and Harney 2013). With it they transition from a here and now to an elsewhere and otherwise. Reenvisioning history, sharing everyday lived experiences, and imaging fantastical worlds on the dance floor, Krump dancers in Los Angeles reimagine themselves as cyborgs, superheroes, and villains and in so doing suggest a rethinking of Black utopia. The glitch, I argue in my presentation, is an ever-important marker for a transitioning back and forth between a dystopic lived reality and an otherwise

world. The and the stories they embody and narrate in their dance importantly point to a disidentification (Muñoz 1999) from this for them, as Black men, unlivable world. Departing from existing scholarship, in my paper I suggest Krump dance as an interior, and in counterintuitive ways, quiet practice that importantly points to the concept of Black fugitivity while radically reimagining notions of utopia. The glitch, and other transitions, the dancers employ to signify their moving through and across space (and time) – staged deaths, rebirths, portals to other worlds – are, crucially, ever-recurring motives during a dance sequence; never complete, they demand continuous rehearsal, engagement, and practice (in an Arendtian sense and her understanding of freedom and politics). The transition itself and the possibility to imagine oneself otherwise, I would like to suggest, sit at the core of their version of Black utopia (Brown 2021). Presenter: Anna Neumann (Harvard University)

Decolonizing Memory and Spaces. Contemporary Narratives about Portugal's Colonizing Past: the Case of Two Memorials in Lisbon: Portuguese society can be considered a natural laboratory for intercultural dialogue. As a result of the country's colonizing past, it is now connected by linguistic and cultural bonds with many different areas of the world. A special place in the socio-cultural landscape of Portugal has been occupied by immigrants from former African colonies and their descendants referred to as afrodescendentes. They have a particular, 'mediated' relation with the colonial past, transmitted by their parents' generation and/or through media and cultural texts objectified in public discourse. They often respond to this complicated 'received history' through various practices of postmemory (Hirsch 2008). As the postmemory researchers have argued, the traumatic past reveals itself to the subsequent generations and cannot be easily pushed to the margins. It requires a clear reference to what Susan Sontag called the pain of others (Sontag 2001). The question of what do we owe the victims (Hirsch 2008) returns. The functioning of Afro-descendants in Portuguese society can be analyzed today from a postcolonial perspective, but also in the broader context of complex intercultural relations and socio-cultural transitions. Afro-descendants' activities go beyond issues directly related to racism and colonialism, as evidenced by the wide range of socio-cultural or artistic initiatives undertaken by African organizations and associations. However, references to colonial history and contemporary forms of racial discrimination are recurring themes in the social debate they initiate. Their narratives are in line with what Boaventura de Sousa

Santos, among others, has pointed out: colonialism as a form of social relations has survived longer than colonialism as a political arrangement. They engage in a dialogue with the mainstream Eurocentric way of thinking, posing uncomfortable questions about responsibility and the contemporary consequences of colonization. But they also point to the richness of African cultural heritage in Portugal and the contribution of Africans to the development of Portuguese society, thus going beyond the 'victim perspective' and accentuating their agency and subjectivity even more strongly. The paper aims to show contemporary artistic interpretations of the Portuguese colonialism created by representatives of Afro-descendants. The main point of reference for the considerations is the current debate on two monuments of Lisbon. The first one, Padrão dos Descobrimentos (Monument to the Discoveries), was created a few decades ago and is still one of the most recognizable sites in the city. The second - Memorial to Enslaved People - is a monument in spe, which, on the initiative of its originators, is intended to express the voice of Afro-descendants. The example of these two memorials illustrates how different memories coexist in social and urban spaces. The theoretical framework for the analysis includes issues related to postmemory, multidirectional memory (Rothberg 2009) and dissonant heritage. The broader framework for my reflections is the UNESCO Decade of People of African Descent (2015-2024), an initiative that resulted in different projects carried out in Portugal aimed not only at combating racism and intolerance but also at promoting African cultures. This paper is part of an ongoing research project on contemporary interpretations of African cultural heritage in Portugal. Presenter: Karolina Golemo

Islam-neoliberalism and suicides in young Bangladeshi-Canadian men in the Greater Toronto Area: This research problematizes youth masculinity and vulnerable diaspora in the Greater Toronto Area (GTA), where young Bangladeshi-Canadian men-most of whom are Muslim-are reporting worsening mental health. In 2016–2017, the last year for which data is available, this emerging crisis appears to have contributed to a disproportionately high suicide rate in this population. In collaboration with two community-based partners, this research interrogates the socio-cultural factors contributing to poor mental health in young Bangladeshi-Canadian men in the GTA by advancing understandings of their conception of Muslim masculinity. This research unpacks the stated issue with a critical lens on Islam and neoliberalism, in particular, employs Gauthier's (2019) argument that neoliberalism

facilitates producing and expressing identities and constructing meaningful lifestyles through marketization of religion. In addition, neoliberalism converts religion into a lifestyle and a voluntary union rather than a source of belonging and belief. These practices can profoundly modify institutions and their rapport with tradition, whose former modes can be dismissed, challenged, or renewed. The theoretical framework for the research focuses on the intersections of Islam and neoliberalism by drawing on two different perspectives: i) masculinity in Muslim men of colour; and, ii) the tensions and aspirations around migration and its limitations. Using participatory action research framework that embeds 30 semi-structured interviews and four focus groups discussions, the objectives for this project are to: i) articulate how the GTA's Bangladeshi Muslim community defines 'success'; ii) determine how social and economic pressures are developed and amplified in the Bangladeshi diaspora; and, iii) describe how young Bangladeshi-Canadian men navigate, internalize, and contest the socio-economic expectations, demands, and psychological pressures resulting from the cultural traditions, Islamic observances, and the opportunities presented by their lives in the GTA. Initial findings reveal interesting parental expectations of and relations with their young adult sons, that can amplify these men's voices in their communities and in the research literature. Understanding the cultural and familial expectations placed on these young men will nuance existing scholarship on neoliberalism while advancing the mental health, equity and inclusion of Bangladeshi-Canadian youth. Relation and Ontology: Making Worlds

4:15 PM - 6:00 PM TMCC - 709

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Felipe Moreira

PRESENTER:

Damian Arteca ,Elisabeth McCumber ,Jeffrey Ehrenreich (University of New Orleans)

DESCRIPTION:

How are worlds made? This set of papers takes on those processes, centering the ways that humans and nonhumans engage in such work

Investigating Therian Ontology: Structuralism, Psychoanalysis, and the Transhuman: The Therianthropes (or Therians) are a small community of individuals who identify as non-human animals. The Therians emerged in the early 1990's alongside the origin of AOL chatrooms and have retained a consistent, if reclusive, internet presence for nearly 30 years, making them one of the longest-standing 'transhuman' spiritual communities to exist in the modern West. As well as identifying as non-human animals, the Therians exhibit a rich repertoire of norms and ritual practices designed to elicit experiences of non-human corporeality (what the Therians call 'shifts') and a complex system of metaphysical beliefs regarding the cosmology of the Therian world. Between 2018-2020, I conducted cyber-ethnographic fieldwork in Therian cyberspace with the specific intention of examining their 'ontology'. By developing their own ontological framework, the Therians do not simply assume a position of 'liminality' but rather retroactively obviate the self-identity of the human in the act of inventing a new cosmology, whereby they assume a human exteriority and a nonhuman interiority. In this presentation, I take seriously this act of 'invention' and attempt to provide a model of the basic structure of Therian Ontology. The interpretation of this 'invention' of a new (trans)human through an 'obviation' of the human is informed by the Theory of Symbolic Obviation offered by Roy Wagner; which I place in close dialogue with Philippe Descola's recent structuralist attempts to propose identificatory modes beyond the human - indeed, beyond Nature and Culture. I outline how each of the four identificatory modes identified by Descola assume positions in Therian Ontology, and note how only one of these modes -the doubled similarity of interiority and exteriority Descola dubs 'Totemism'- remains unavailable to the Therians in their own cosmology. This place of absence coincides with the Taboo Therians place on 'Physical Shifts' (P-Shifts), and essentially guarantees the Therian position - discoordination between human exteriority and nonhuman interiority- be preserved. On this point, I bring Descola's structuralist schema in close dialogue with the psychoanalysis of Jacques Lacan. Through Lacan's concepts of Fundamental Phantasy [$\$ \ll a$] and objet petit a, I suggest that the transition from the human to the Therian transhuman involves effectively a 'traversal' of the phantasy of naturalist ontology in which the Therian assumes the position of a contradictory object, or objet petit a, for the Anthropologist. However, the creation of a new ontology guarantees a novel 'transhuman' phantasy which contains its own point of contradiction - namely,

the Totemic mode of identification, which is occluded by the P-Shift Taboo so as to prevent, in turn, a traversal of the Transhuman itself. Through a close dialogue between Therians, Wagner, Descola and Lacan I attempt to offer not only a picture of the structure of a transhuman ontology, but also examine through a psychoanalytic lens how it both emerges and solidifies itself through negotiations with contradiction. This investigation thus aims to take seriously the radical potential of a genuinely transhuman ontology while also examining how its structure is conservatively preserved from within. Presenter: Damian Arteca

Across Climate and Culture: Finding Home in the Pacific Northwest: Change is not new to the Pacific Northwest of the United States. Since the height of the last ice age, this land has experienced waves of dramatic ecological transformation. Meanwhile, through the same millennia, Indigenous cultures have not stood still either; they have actively and dynamically shaped and been shaped by the region's living systems. Social and ecological transition is the central story of the last 20 thousand years—and new transitions are coming. We face an accelerating climate change whose impacts are so significant, they are bringing about a new geological epoch, ushering us into the uncertain territory of the Anthropocene. We face social changes, too, also sweeping, as America's demographic balance shifts from majority to minority white for the first time in hundreds of years; and the crises of racial violence and economic oppression continue to escalate. Looking both backward and forward, change here is ever at hand: ecologically and transnationally; in deep time and recent history; in the near and far-off future. Its impacts touch our lives every day, in every sphere: from the findings of climate science, to the mythologies that define us, to the ethnographic worlds of our experience. What are we to do? I submit that deepening place relationship is the way forward. In my study of Native and Euroamerican relationships with one small valley of the central Oregon coast range, I observed that our attachment to the land we call home can be a stabilizing force, with potential to help us bridge community divides and establish firmer footing, even here on shifting ground. Simply put, it can help us find home, together. Presenter: Elisabeth McCumber

HIDING IN PLAIN SIGHT: TACTICS OF AN INDIGENOUS PEOPLE OF THE LITTORAL RAINFOREST OF ECUADOR, TO MAINTAIN CULTURAL IDENTITY IN THE FACE OF EXTERNAL PRESSURES: Cultural processes that maintain ethnic identity often are the focus of attack from external forces determined to incorporate indigenous

groups into westernized or 'civilized' society. Indigenous peoples of South America historically have employed various tactics to protect their traditional way of life. In this presentation, we look at the methods employed by one lowland group, the Awá of northwestern Ecuador, to conceal and protect their ethnic autonomy and cultural identity. Tactics such as physical isolation and adopting western dress allow the Awá to conceal their lifeways in the face of contact. Thus camouflaged, they become freer to maintain their ethnic identity through hidden cultural behaviors. Some Awá have eight foot crosses in front of their houses, but have transmuted this Christian symbol into traditional spiritual beliefs. Efforts to incorporate them into the cash economic system were often thwarted by the ability of the Awá to meet most of their household needs from the land. Predominantly, frequent traditional shamanic curing ceremonies, typically concealed from outsiders, reinforce cultural beliefs and behaviors. Combining archetypical shamanic practices and community participation, they act as a social mechanism, enacting and strengthening spiritual beliefs and behaviors, while reinforcing the Awá sense of communality, egalitarianism, and nonaggression-values often at odds with prevailing outside culture. Presenter: Jeffrey Ehrenreich (University of New Orleans)

Repatriation in Canada: Policy, Practice, and Implications

4:15 PM - 6:00 PM TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Chelsea H. Meloche (University of Manitoba, Department of Anthropology)

CHAIR:

Chelsea H. Meloche (University of Manitoba, Department of Anthropology)

PRESENTER:

Jaime Lavallee (University of Saskatchewan), Lara Rosenoff Gauvin (University of Manitoba, Department of Anthropology), Bailey Monsebroten , Laura Kelvin , Lucy Sdahl K'awaas Bell (Simon Fraser University)

DESCRIPTION:

Repatriation movements have significantly changed heritage management around the world. They have

required heritage-holding institutions, such as museums or universities, to critically examine their collections' histories and reflect on the often-problematic disciplinary practices and norms that built them. While other countries have developed legislation or national policy to address the need for repatriation, in Canada, no national framework yet exists to support this work. Indigenous social activism in the 1980s and 1990s brought repatriation to national and international attention, however, the response was to encourage a case-specific approach, where individual institutions would respond to repatriation requests as they arose. Today, many heritage-holding institutions have developed internal repatriation policies. While this approach allows for the flexibility necessary to work with diverse Nations on repatriation projects, it has also been limited by past curation activities, unclear procedures, and extremely limited funding. This session brings together repatriation practitioners who are working in institutional, academic, and community contexts across Canada, to review and examine current repatriation policies, practices, and procedures, and reflect on what changes are needed to do better in the future.

Building Nation-specific Repatriation/Rematriation Protocols and Laws: Building on the lessons learned from a survey which sought to review of the current situation of holding institutions on access to data, laws, policies and implementation across Canada - there is a need by Indigenous Nations' to create their own repatriation/Rematriation protocols and laws. Thereby empowering, and placing the control and agency into the hands of the people whom have inherent responsibilities to their ancestors and belongings. This may aide in cultural revitalization and strengthening of governance, and community engagement. There is no national or federal legislation concerning repatriation in Canada. This lack of national cohesion touches on the foundation of Aboriginal-Crown relations, and what role the federal government could or should play in repatriation. Based on the lack of national legislation, preliminary review of the diversity in provincial institutions and laws, and the burden upon Indigenous Nations and descendants to wade through these multitude and varied policies or lack thereof -as an Indigenous person, I believe it's time to assert our responsibilities and implement our own Indigenous legal orders onto holding institutions who have disconnected our culture and ancestors from the lands, peoples, laws, and ways of belonging. Presenter: Jaime Lavallee (University of Saskatchewan)

Respectful Repatriation Ceremony at the University of Manitoba: Co-author(s): Pahan Pte San Win and Cary Miller, University of Manitoba Since 2020, the Respectful Rematriation and Repatriation Ceremony at the University of Manitoba has served as an Elder-guided, community-engaged, process for the development of a comprehensive repatriation policy guided by Indigenous knowledge. We will discuss here the creation of a new proactive policy to mandate rematriation and repatriation of all Indigenous Ancestors, human biological materials as well as tangible and intangible cultural expressions obtained and stewarded by the University without proper consent, protocol, and input. Presenter: Lara Rosenoff Gauvin (University of Manitoba, Department of Anthropology)

Collections Management for Repatriation (or Shared Stewardship) at the RSM: In 2010, after many consultations with communities and the tribal councils throughout the province, The Royal Saskatchewan Museum enacted their repatriation policy. 13 years later, we are still yet to have any cultural belongings returned under that policy. During the initial consultations, it was found that many thought that they and their communities lacked capacity to take on the care of the belongings that were to be repatriated, and we instituted Shared Stewardship initiatives to account for this. While this has been slightly more successful than our repatriation policy, societal shifts are now allowing more nations and bands to gain capacity to care for and engage with their cultural belongings without the input of colonial institutions such as the RSM, and we are preparing for the coming changes. The center of this approach is collections management that allows for transparency in and access to our holdings. This began in 2018 with a project to reorganize our collections space to make it publicly accessible, expanded into outreach and collections tours, and continues with a digitization project to share all the RSM holdings that are not deemed culturally sensitive in an online catalogue. Future projects will include an XRF project to test all belongings for harmful contaminants, targeted community outreach to create bespoke approaches to the care of cultural belongings under our care, and a community loans program. Presenter: Bailey Monsebroten

Working through the Realities of Repatriation: Collaborations in Nunatsiavut: Co-author(s): Deirdre Elliot (Nunatsiavut Government), Lisa Rankin (Memorial University), and Lena Onalik (Nunatsiavut Government) Many institutions are eager to initiate the repatriation

of Indigenous cultural expressions and Ancestors as moves towards reconciliation. Unfortunately, many Indigenous communities do not currently have the capacity to deal with the onslaught of requests to work with these institutions for repatriation. This presentation will discuss an ongoing collaboration between the Nunatsiavut Government, the State Ethnographic Collections in Saxony, and archaeologists, which seeks to understand how museums can work towards decolonization and restitution in ways that make sense to the current realities of Indigenous communities and their capacities, while supporting self-determination and resurgence. Presenter: Laura Kelvin

Repatriation in Transition: Co-author: Jisgang Nika Collison, Haida Gwaii Museum Over the past year, the K'yuu team has been conducting a research cost analysis on Indigenous repatriation in BC for First Peoples' Cultural Council. The team is led by Lucy Bell and Nika Collison who have led the Haida Repatriation Committee for nearly 3 decades, and co-wrote the Indigenous Repatriation Handbook in 2019. Bell will share the preliminary results of the research into repatriation costs, policies, practices and procedures. Presenter: Lucy Sdahl K'awaas Bell (Simon Fraser University)

Species, Spaces, and More-than-human Lifeworlds

4:15 PM - 6:00 PM TMCC - 713 A

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Anu Karippal

PRESENTER:

xin xie ,Paloma Bhattacharjee ,Mardi Reardon-Smith ,Nicholas Miller (University of Wisconsin - Milwaukee | AnthroClub),Michael Sheridan (Middlebury College)

DESCRIPTION:

This panel engages more-than-human beings and their lifeworlds in places and moments of transition. The first paper explores the tensions and possibilities that emerge between multiple ways of knowing snakes in a Hong Kong wildlife rescue center. The second and third turn their focus, in different ways, to the symbolically rich and culturally contested role of the elephant as this being crosses paths with humans in India. The fourth

dives into the politics of defining certain plants as weeds in Australia. The fifth looks to archeological evidence to understand beaver-human relationships in North America longitudinally. The sixth seeks to understand plant agency by focusing on the humans who define it. The seventh paper reads the Caipora, a spirit and forest being in Brazil, as a sustainability mechanism.

Snakes in transitions: the multiplicity of knowledge and flexible species in a wildlife rescue center in Hong Kong: What is a species? And how do wildlife rescue centers contribute to the knowledge production about species and human-wildlife cohabitation? Anthropology's fascination with wildlife conservation has resulted in studies of all manner of topics ranging from biocultural diversity to the ethics of care. Taken together, this research reveals the complex politics in discursive construction, knowledges, and practices of conservation in local, national, and global dimensions. However, despite thorough analysis of power complex in knowledge, few studies elucidate the multiplicity of knowledge at work in everyday conservation work, or the role of wildlife rescue centers in the ongoing knowledge production of species. Based on one year of ethnographic fieldwork in a major wildlife rescue center in Hong Kong, this paper attempts to demonstrate how multiple knowledges are integrated and informing everyday practices of conservation. More specifically, by focusing on the center's snake rescue project, this paper first examines how different knowledges of snakes, e.g. modern herpetological knowledge, indigenous pharmaceutical knowledge, and embodied knowledge are entangling and translated into daily practices of identifying, catching, measuring, caring, relocating, and rehabilitating snakes. Secondly, this paper would address the transition of the wildlife rescue center from a place of animal rehabilitations to a constituting part of the knowledge production of snakes in the city and beyond. Hong Kong has pioneered a municipal snake management program in Asia since 1960s. While the program was officially initiated and integrated into the municipal's pest management division, it transformed in following decades into a conservation joint-effort among the municipal government, wildlife rescue centers, local universities, and snake catchers from local snake restaurants. Nowadays, conservationists, herpetologists, virologists, snake catchers, amateur naturalists, and anthropologists are collaborating on a regularly basis in maintaining this snake rescue project. I argue that the coexistence and interaction of these multiple knowledges create potentials to conceptualize species flexibly and contextually in its multispecies

environment. Moreover, these knowledges are historically rooted and culturally contextualized hence gendered and racialized. Presenter: xin xie

Temporal transitions in more than human places: Study of human–elephant relationship in Assam, India: Free-roaming elephants shape the temporal transitions experienced by farming communities who live close to them. The paper examines the interpretation of these temporal shifts by farmers as constitutive of their place-making activities. The paper emerges from an ethnographic inquiry in the Himalayan foothills of Northeastern India. It is based on fieldwork conducted with farmers in a village called Moirapur in Assam, adjacent to the Rani-Garbhanga reserve in the Assam-Meghalaya Border region. The village lies on the southern edge of Assam's capital Guwahati, a sprawling metropolis. The history of urbanization of Guwahati, from the 19th century onwards, happened on the back of resource extraction in these frontier forests and villages which continues to this day. This happens at the cost of forgetting that these regions have also been part of a larger and continuous elephant landscape that over time has shrunk into sequestered forest patches. The farmers in Moirapur address the political–ecology transformations of this region and their belongingness through discussions about the shifting patterns of elephant movement and behavior. They speak of the present as transitional times before the human–elephant relationship takes unimaginable forms. Further, the presence of elephant's shapes how people experience seasonal transitions. The intensified presence of the elephants in the villages during the rice-cultivating months means that the rice seasons are also experienced as 'elephant seasons', marked by hurried harvesting, acts of protecting farmlands from elephants and redefining and dissolving boundaries between human lands and elephant lands. During those months, the everyday transition between day and night is also determined by the nocturnal movement of elephants. The nights are transformed into extraordinary times, emotionally and sensorially charged. The unpredictable presence of elephants anywhere makes the familiar alleys, fields, farmlands, and home-ground places steeped with uncertainties, requiring one to maintain heightened caution and sensory awareness as they move about. People experience the transition of time at different scales and despite being regularized phenomena they are increasingly marked by acute indeterminacies. Through an exploration of the same, the paper will argue that the experience and articulation of the temporal transitions across days, seasons, and prolonged durations show the influence of elephants'

movement on shaping people's relationship with their places. Presenter: Paloma Bhattacharjee

Weeds are (not just) a metaphor: care, control, and invasive species in far north Australia: Invasive species management is an urgent issue around the world in the current era. Despite increasing amounts of land globally being gazetted for conservation and protection, biodiversity continues to be lost, vulnerable species continue to slide into extinction, and invasive species continue to proliferate and cause damage to sensitive ecosystems. In the settler-colonial island nation of Australia, biosecurity and invasive species control is of national concern. In such a context, weed control is often framed by conservation and land management workers through the lens of a war or battle. Plants have always travelled across landscapes and permeated borders, sometimes purposefully dispersed by humans and sometimes seeping into new geographies without human intervention. How these introduced species are understood, categorised, and valued by people is culturally and ideologically contingent, rather than reflecting any kind of biological fact. Definitions of weeds are slippery, with weeds loosely described as plants which are out of place, but often roughly mapped onto a native/non-native binary. Many anthropologists and geographers have argued that 'weed' is a metaphor; a way of denigrating and characterising plants that are of little use to humans. However, in this paper I argue that weeds are not just a metaphor. Weeds 'do things' in the social realm, and, importantly, so too does weed control. Weed control brings to the fore questions around how species are categorised as 'native' or 'invasive', belonging or not belonging. I follow Jessica Cattellino (2017) in moving beyond dismantling the categories through which we organise non-human species, and instead seeking to understand what structures and maintains them. I hold in tension in the productive possibilities in theorising around hybrid landscapes with the ecological destruction that (some) invasive species wreak on fragile ecosystems, waterscapes, and human lifeways. In far north Australia, the Cape York region is a complex mixture of land tenures, including pastoral leases, National Parks and Aboriginal land, and overlapping management agreements. Weed control comprises much of the work that land managers, including government-employed Park rangers, settler-descended cattle graziers, and Aboriginal traditional owners, in Cape York do. However, different people target different introduced species for control, and the ways in which certain species are understood as more or less problematic indicate how people understand and seek to order landscapes. In

their varied attitudes, practices and priorities around weed control, different Aboriginal and settler-descended land managers enact multiple and overlapping forms of non-innocent and interested care; for conservation and biodiversity outcomes, for vulnerable species, for the viability of the cattle grazing industry, for the ancestral spirits who dwell in the landscape. In this paper, I pull apart what weed control and the categorisation of introduced plant species does socially and environmentally in northern Australia, exploring knottings of plants and people, while also taking seriously the very real environmental impacts of the spread of weeds on iconic so-called 'wilderness' spaces. Presenter: Mardi Reardon-Smith

Wisdom and the Environment: Shared Worlds with the Beaver: Taking the beaver as a metaphor of creator and agent of social change – in the context of which these rodents are intertwined with humans – the core of the study hinges around a dialectic between ethnographic, archaeological, and historical scholarship. By using archaeological material evidence (e.g., iconographic and sculptural representations), ethnographic accounts and representations, and modern attitudes and more recent efforts to re-introduce beaver, it is possible to illustrate how contingent, and mostly self-serving, human interactions with this animal have been and continue to be. The varying aspects and situations of beavers during these interactions pose stimulating questions: how important is the beaver to other animals, and why, after hundreds of years of use, is the beaver still such a significant species for humans? To answer these questions and to open-up methods of transdisciplinary scholarship that engage with animal thoughts, not just the thoughts that humans have of animals, this research compares the correlation of two distinct societies in relation to the animal world: the Anishinaabe of the Great Lakes region and the Anglo-Europeans of North America. The animals themselves have not changed but human attitudes toward them have. The goal then, is to use the beaver as a proxy for understanding changing human/animal relationships over time from the Paleolithic to today and demonstrating how the animal in question is classified as living in harmony with, useful to or a nuisance to humans. What else has the beaver been used for in its long, storied history and what are humans doing to it now? Presenter: Nicholas Miller (University of Wisconsin - Milwaukee | AnthroClub)

Plant agency and personhood in multi-sited ethnography: Following Rappaport's rumbim plant: Roy Rappaport's *_Pigs for the Ancestors_* argues that rituals using the rumbim plant (*Cordyline fruticosa*) act as an

ecological maintenance system. The issues of human and plant agency are not emphasized, instead culture is the agent adapting to its environmental context. The cordyline plant, however, is significant across Papua New Guinea and known in Tok Pisin as the tanget plant. The first half of this presentation responds to recent work on plant agency by exploring how Papua New Guinea conceptualize the actions of tanget as a key symbol that marks boundaries on both landscape and society. The second half follows Cordyline to the eastern Caribbean, where an Afro-Caribbean peasantry of St. Vincent uses the plant in strikingly similar ways, but with a different cultural construction of plant agency. In Papua New Guinea, Cordyline roots social relations in the landscape, but in St. Vincent it both asserts land claims and transcends them through spiritual journeys to the edge of heaven. This multi-sited ethnography demonstrates how the organization of social labor shapes the construction of plant personhood and agency. Presenter: Michael Sheridan (Middlebury College)

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Katryn Davis (University of Nevada, Reno)

CHAIR:

Erin Stiles (University of Nevada, Reno, Department of Anthropology), Katryn Davis (University of Nevada, Reno)

PRESENTER:

Erin Stiles (University of Nevada, Reno, Department of Anthropology), Brian Howell (Wheaton College, Department of Sociology and Anthropology), David Knowlton (Utah Valley University, Behavioral Science Department), Zara Browne, Katryn Davis (University of Nevada, Reno), Elizabeth Bingham Thomas (Southern Methodist University)

DESCRIPTION:

Christianity, in its many forms and iterations, typically mediates between its adherents and their most intimate facets: their physical bodies, gender, sexuality, kinship,

and health. For a few decades now, Anthropologists and scholars in kindred disciplines have richly explored this relationship between Christianity and its most intimate subjects, challenging ideas about the sacred vs the profane (e.g. McDannell 1995), complicating entrenched assumptions about Christianity and the body (e.g. Cannell 2005), and exploring the relationships between physicality, the self, and the many forms that religious power can take (e.g. Cannell 2013, Csordas 1994, Lester 2005, Luhrmann 2012). The research we each present here broadly continues within, but also branches from, this vein of inquiry. We collectively examine contemporary manifestations, configurations, and changes in spiritual power and how it affects the most intimate domains that it reaches within adherents' bodies and lived experiences, specifically in a range of Christian communities in the United States. We conceive of spiritual power broadly, including within a range of institutional, social, and individual subjects and wielders of power. We also inspect a broad range of intimacies on which spiritual power operates. Brian Howell explores how theater students at an Evangelical university understand and navigate the 'sexual, religious, and social meanings that can make the giving and receiving of touch a complex phenomenon' as it is 'often fraught with sexual, religious, and social meanings'. Erin Stiles explores gendered aspects of spiritual power and tensions over Latter-day Saint women who leverage the masculine domain of priesthood power 'particularly in healing and casting out evil spirits' to 'contest the masculine nature of priestly authority' and take back what many see as the 'true' place of women and spiritual authority in Mormonism.' Zara Browne similarly explores gendered configurations of power within a Roman Catholic community of Irish Travelers, who 'regard Irish Traveller women – and especially Irish Traveller elder women – as the most powerful and authoritative players' in leveraging the power of saints and spirits to 'restore familial and community affairs'. Also examining gendered aspects of religious power and its use in community wellness and healing, Liz Thomas examines the contradictions inherent in Relief Society membership for Latter-day Saint women a Texas community, who provide social and emotional healing during times of hardship or need for their faith community, but in turn, find that 'membership can also create and exacerbate existing emotional wounds'. Turning toward other forms of spiritual power and gendered-tension within the Latter-day Saints' world, David Knowlton examines discourses among Mormon authorities and adherents to explore relationships between Mormon masculinities, and the 'complex bundle of genitals, sexuality, discipline,

spirituality, and hierarchy' that constitutes authority in Mormon. Lastly, Katryn Davis examines resistance to mainstream medicine which threatens a foundational link between the body and the spirit within a fundamentalist Mormon community. She explores the practice of midwifery and prenatal home care as a means for fundamentalist women to inscribe pregnancy as a spiritual process and contest what is understood to be the spiritually alienating power of allopathic medicine.

Contesting Masculine Authority: Healing, Evil Spirits, and Women's Spiritual Power in Northern Utah: This paper explores gendered aspects of spiritual power in a Latter-day Saint community in northern Utah. In the Church of Jesus Christ of Latter-day Saints, the masculine domain of priesthood power is a point of tension, and both men and women contest this exclusivity by asserting women's abilities to wage significant spiritual power. Debates about women and the priesthood are a point of "gender distress" (a la Butler, see also Thornton's work on Pentecostalism in the Dominican Republic) in the contemporary climate of the church, particularly for younger members (Reiss 2019). Here, in examining ethnographic interviews and archived memorates about spirit experiences, I consider how articulations of spiritual power in lived practice—particularly in healing and casting out evil spirits—contest the masculine nature of priestly authority. Conversations about gender and spiritual power are not only an avenue for identity formation, but also a site to contest both what are sometimes perceived as deleterious aspects of "Mormon culture" and the official position of the institutional church that many see as at odds with the "true" place of women and spiritual authority in Mormonism. Presenter: Erin Stiles (University of Nevada, Reno, Department of Anthropology)

Reconstructing and Healing the Experience of Touch in the Evangelical Christian Context: Physical touch is a crucial aspect of human experience, yet often fraught with sexual, religious, and social meanings that can make the giving and receiving of touch a complex phenomenon. For college student in the United States, questions of consent, body image, and trauma are part of how touch is negotiated. For students who are part of religious communities, questions of sexual response or ethical formation are part of the theologically inflected understandings of these experiences. This presentation explores the experience of touch among students who are part of a theater community at an evangelical Christian university. In this context, touch is meant to be

experienced as "safe," "holy," and "honoring." Students often express hopes that they will experience touch in this context as "healing" in psychological and spiritual terms. Students express desires of healing from past trauma, negative body image, and even the perceived negativity around touch of the wider religious community. Through the careful analysis of ritual, narrative framing, and explicit/implicit reordering of religious symbols, this presentation seeks to explicate the meanings of touch, gender, sexuality, and the body in this context, as well as the processes by which a range of meanings becomes available and malleable to these students in this artistically, academically, and religiously defined context. Presenter: Brian Howell (Wheaton College, Department of Sociology and Anthropology)

Holding to the Rod: Male Gender/Sex/Authority/Spirituality in Today's LDS Church: Tied to gender, authority in Mormonism is a complex bundle of genitals, sexuality, discipline, spirituality, and hierarchy that is challenged in a contemporary world where significant numbers of young Utah men are leaving the Church of Jesus Christ of Latter-day Saint and its masculine charms, while others still find it a meaningful challenge. This paper will cogitate on this situation as a conundrum requiring careful attention to the words and situations of authorities and the recent flood of voices in Mormon cyberspace where language and actions are argued to enable the holy and ultimately exaltation (salvation). Presenter: David Knowlton (Utah Valley University, Behavioral Science Department)

Female Apothecaries and Saints: Crisis and Healing in an American Irish Traveller Catholic Community: The Irish Travellers dwelling in the separatist community, Murphy Village, in South Carolina, practice Roman Catholicism imbued with culturally specific spiritual and superstitious beliefs and practices. In Murphy Village, Traveller women exercise religious power in times of distress. By calling upon spirits and saints and employing pious devotion in order to restore familial and community affairs, Irish Traveller women harness their female agency. This paper examines rituals of prayer and communion with culturally relevant saints to summon medical aid, healing, and miracles. These religious customs regard Irish Traveller women – and especially Irish Traveller elder women – as the most powerful and authoritative players in arranging healing by saints. Based on fourteen months of ethnographic research, which consists of participant observation and open-ended interviews with Murphy Village participants, this paper explores how Murphy Village

Irish Traveller women cultivate relationships with particular saints and why, how they determine a saint's belonging to a crisis, what entails calling upon saints for help with mental, emotional, physical, and spiritual healing, and what rituals are appropriate to these practices. Furthermore, I examine the role of female elder authority in regulating religious healing practices and how and why gender roles might inform these practices. Cannell's (1995) research with Catholic participants in the Philippines explores the community's relationship with "their saint," S. Ignacio and exhibits the diversity within and between Catholic communities and what saint-specific devotional acts consist of in Bicol. In Murphy Village, Irish Traveller women beseech saints such as St. Expedite, St. Jude, St. Teresa, and "the Blessed Mother" for help during medical and emotional crises. The transition from sickness to healing, or distress to peace, lies within a connectedness between spiritual agents and Irish Traveller female actors.
Presenter: Zara Browne

Bodies as Spiritual Ambassadors: Health and Pregnancy in a Mormon Fundamentalist Community: Scholars of Mormon fundamentalism and self-proclaimed Mormon fundamentalists themselves readily observe that fundamentalist communities typically identify with a sense of alienation from and persecution within mainstream America which derives from a history of Mormon difference and the legal and social disciplining of polygamy (Foster & Watson, 2019). Medical care is a major site that contemporary fundamentalist adherents use to articulate the division between their faith community and mainstream America, and to protect the spiritual sanctity and purity of their bodies. As with other aspects of life in Mormon fundamentalism, medical care is best 'kept in the family' (that is, the symbolic or extended family that comprises Mormon fundamentalism) for a number of reasons including avoiding faith-based marginalization, retaining self-sufficiency, and resisting medicalization of experiences like birth and death, which are thought to be spiritual. Here I explore these dynamics through an examination of how fundamentalist adherents in a rural Utah community understand and use midwifery and at-home prenatal care as a means to resist mainstream medicine, which is often understood to threaten a foundational link between the body and the spirit. Presenter: Katryn Davis (University of Nevada, Reno)

Healing Others, Healing Selves? Latter-day Saint Women's Experiences Serving in Relief Society: The Church of Jesus Christ of Latter-day Saints (LDS, Mormon) is home to the Relief Society, which the

church states is "one of the largest women's organizations in the world" (Church of Jesus Christ of Latter-day Saints 2023). It is through the Relief Society that many intra-congregational support efforts are devised and carried out, such as supporting sick congregational members and providing assistance after births and deaths. In this way, women become the backbone of service among Latter-day Saints. My research reveals that membership in the Relief Society can provide women with social and emotional healing during times of hardship. However, membership can also create and exacerbate existing emotional wounds for the many that perceive there to be a lack of deep, authentic relationships between women members of the congregation. This dearth may have serious implications for women's social, psychological, and physical wellbeing. Through the analysis of personal narratives as well as biomarker measurements of over 100 Latter-day Saint women living in Texas, this paper will explore the correlation between women's experiences giving and receiving support in their religious community and their biological wellbeing. Through examining the organization's goals to strengthen and heal congregation members, the organization's power and influence over the healing and hurting of individual women will be addressed.

Teaching Anthropology Through Contemporary Crises

4:15 PM - 6:00 PM TMCC - 714 B
Roundtable/Town Hall - In-Person

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Allison Schlosser (University of Nebraska, Omaha, Department Sociology of Anthropology)

CHAIR:

Shana Harris (University of Central Florida),Amelia Moore (University of Rhode Island)

PRESENTER:

Chelsea Abbas (Widener University, Department of Anthropology),Shana Harris (University of Central Florida),Laura Heinemann (Creighton University, Department of Cultural and Social Studies),Nolan Kline ,Eric Plemons (University of Arizona, School of Anthropology),Allison Schlosser (University of

Nebraska, Omaha, Department Sociology of Anthropology)

DESCRIPTION:

Teaching anthropology is critical to applied anthropology and the discipline at large, as anthropological theories and methods equip students with the perspectives, critical thinking skills, and research approaches necessary to confront the many global issues we now face. International, national, and local transitions in politics, economics, climate, and mobility have prompted crises related to environmental sustainability, sexual health, LGBTQ+ rights, democratic institutions, immigration and migration, public education, and public health. Teaching about such politically polarizing crises can present challenges due to the subject matter as well as the urgency of addressing these pressing issues. Moreover, anthropologists must increasingly teach in educational environments shaped by policies and politics that question or denounce central values of the discipline, such as holism, cultural diversity, and privileging the voices of marginalized communities. This roundtable will foster conversation among anthropologists teaching across controversial topic areas and educational contexts to explore these challenges and their effects on teachers, students, local communities, and the discipline as a whole. We will bring together scholars from a range of higher education institutions from across the U.S. to discuss their experiences of teaching through crises. Roundtable panelists will draw on their experiences and teaching areas: navigating state educational policies hostile to understanding diversity, race, and racism; teaching students from rural communities in which higher education may be vilified; discussing climate change and the need to decolonize science; presenting controversial health interventions aimed at addressing drug overdose and the spread of COVID-19; teaching LGBTQ+ and trans rights and health from a social justice lens; and leading community-based courses on immigration, policing, and economic inequalities across university-community borders. Panelists will draw on their experiences to consider the following questions: •How have federal, state, and local policies shaped how and what you teach? •How have local political debates and cultures shaped your teaching? •How have institutional policies and procedures related to teaching changed what and how you teach? •How has media coverage of controversial topics shaped your teaching? •How have students responded to controversial topics covered in your courses? By discussing these questions, we aim to approach the problems and opportunities presented by teaching through crises with a sense of creativity,

experimentation, and care for our colleagues, students, and communities in which we teach. Our overarching goal is to not only explore the challenges of teaching in and through contemporary crises, but also further explore ways in which we may better address these concerns as educators.

The Mediators of marginalization: Relaying and re-interpreting culturally reductionist discourse, part 2

4:15 PM - 6:00 PM TMCC - 718 A

Oral Presentation Session

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Greg Feldman (University of Windsor)

CHAIR:

Nancy Ries (Colgate University)

PRESENTER:

Kalyani Menon (DePaul University),Chloe Ahmann (Cornell University, Department of Anthropology),Annastiina Kallius ,Stefan Wellgraf ,Greg Feldman (University of Windsor),Alex Hinton (Rutgers University)

DESCRIPTION:

This two-part panel examines the role of people who relay and re-interpret the messages, agenda, and priorities of culturally reductionist politics resonant with what is variously called populist, fascist, authoritarian, or even totalitarian government. While the so-called 'charismatic leader', perched at the top, seems to operate as a singularly galvanizing force, a wide variety of other players transmit, interpret, and interpolate messages between such leaders and their various publics. These mediators could be found in elected offices, governmental bureaucracies, places of worship, the media, local grassroots organizations, the arts, and business among other places. Somewhat similar to Gramsci's 'organic intellectual', they serve to both consolidate broader structures of socio-political power representing those claiming to be marginalized by the mainstream media, traditional governing institutions, and national and global elitism, although their politics are more likely today to serve right-wing causes. This panel will investigate specific mediators living, working, and operating in places as different as India, the US, Russia, Hungary, India, and China among others. On the

one hand, papers will highlight the variety of local historical contexts in which reductionist politics foment. They will address such questions as what endows mediators with particular kinds of authority and powers of persuasion that they use to consolidate unidimensional views of citizenship and belonging. On the other, papers will consider the family resemblances between seemingly disparate ethnographic cases as these are too obvious to be ignored. They require us to explain the global proliferation of culturally reductionist politics in a historical trajectory accounting for colonialism and the spread of capitalism. For example, the colonial introduction of categories of race, tribe, or ethnicity prepared the ground for post-colonial conflict, but these developments mirrored processes of nation-state building in Europe and the Americas that similarly enabled xenophobia, racism, and segregation. Similarly, underlying culturally reductionist politics is a skepticism toward 'globalization', which often gets framed as the dilution of the race, nation, or religion by predatory financial interests from abroad. Viewing mediators in this dual context allows us to gain a richer perspective of culturally reductionist politics worldwide. It prepares us to ask, for example: how their networks integrate across national boundaries creating global alliances for defensively nationalistic politics; how they borrow and learn from each other despite national contexts; and how they unite powerful business interests with people living in poverty. A double panel is warranted given the global scale of culturally reductionist politics and the fact that it has become the fulcrum of early twenty-first politics. As many ethnographic case studies as possible are required to gain the most comprehensive understanding of it. Moreover, the panels support the mission of the Today's Totalitarianism, a project led by a group of nine anthropologists that aims to understand global trends toward reductionism, toward the centralization of state power, and against pluralistic politics.

Packaging Modi's India: The RSS and its Constituencies: Since he became prime minister in 2014, Narendra Modi has been seemingly invincible. Despite major policy failures on the economic front, a pandemic response that illuminated egregious state incompetence and callousness, the arrests of civil rights activists, scholars, students, journalists, and opposition members, brazen attempts to muzzle the media, escalating violence against religious minorities by his Hindu supremacist base, and India's precipitous decline on multiple global democratic indices, Modi's grip on power remains strong. Many key figures in his administration, in the media, and in organizations he is affiliated with, act as

mediators, packaging Modi's agenda for diverse constituencies and interpreting his actions on the national and international stage. I focus on one mediator, the Rashtriya Swayamsevak Sangh (RSS). While its messaging is often equivocal, and not always consistent with other groups that constitute the Hindu supremacist ecosystem, the RSS plays a critical role in addressing particular constituencies in India and abroad. Drawing on fieldwork with the Hindu Right, an analysis of the speeches and interviews of RSS chief, Mohan Bhagwat, and the writings of Prafulla Ketkar, the editor of its English-language mouthpiece with a global reach, *The Organiser*, I analyze how the RSS packages Modi's India for key players in India and abroad. That it's messaging sometimes diverges from other Hindu supremacist groups, and occasionally opposes them, underlies the strength of Modi's India. This variegated messaging is precisely what enables Modi to recruit electoral and monetary support from multiple constituencies divided by class, caste, religion, gender, sexuality, and nationality. Presenter: Kalyani Menon (DePaul University)

Reading for the Revolution: Notes on a Fascist Library: White power activism is an apocalyptic force in the United States: it is destructive, bent on accelerating the demise of the multicultural state order through revolutionary violence; and it is creative, animated by utopic visions of the world that will supposedly reign after this collapse. These two aims are tightly coupled on the Northwest Front (NWF), an ecofascist, white separatist website that urges self-identified "racial realists" to move to the far northwest United States. There, they will prepare for what leaders describe as an imminent apocalyptic race war, while also seeding a racially "pure" and ecologically "pristine" homeland. In this paper, we examine "Gretchen's Library," a collection of texts featured on the NWF which communicates these twinned ambitions. Our focus is less on the persona of Gretchen-as-mediator than on how the library establishes itself as a mediating force, combining extant works of literature, history, philosophy, and political theory with speculative fiction by movement leaders, in a manner that lends credence to the latter. Through a close reading of the library's form, content, and avowed purpose, we show how extremist visions of the world-to-come gain ground as part of a storied intellectual tradition, whose texts are plotted by the NWF as proof of an impending revolution. At a moment when fascism might seem to be reading-averse—evident in right-wing efforts to ban books and restrict curricula—Gretchen's Library suggests that reading is fundamental to fomenting fascist visions of a world

worth fighting for, dangled just beyond the strictures of the present. This paper is co-authored by Chloe Ahmann (Cornell University) and Devin Proctor (Elon University). Presenter: Chloe Ahmann (Cornell University, Department of Anthropology)

Citizens' House: Re-interpreting the Romantic Roots of Illiberal Propaganda in Budapest, Hungary: Aggressive propaganda on billboards and TV screens has settled as a prominent feature of the illiberal regime established by Prime Minister Viktor Orbán in Hungary. In 2018, the propaganda mainly targeted the Hungarian-born financier and philanthropist George Soros, and what Fidesz labelled his 'liberal shadow empire' that attempts to destroy European nation states. For many observers, this propaganda with its crude aesthetics and aggressive slogans seemed outlandish and unprecedented. In this contribution, I am interested in the opposite: what kinds of elements of continuity appear when the illiberal propaganda is placed in its historical context? I answer this question with a view from a cultural center in Budapest known as the Citizens' House, which is frequented by supporters of Viktor Orbán. I follow the center's functioning principles, its establishment during Orbán's grassroots mobilization in the 2000s, its folkish architecture, Christian-nationalist interior, and eventually, events that I attended in 2018 which were awash with illiberal propaganda. From this historical perspective, the Citizens' House appears as a manifestation of national Romantic thought, known in Hungary as an antagonism called the ethnopolit vs. urban divide (*népi-urbánus ellentét*). With the former emphasizing community over individual, Christian over secular, rural over urban, and national over cosmopolitan, the Romantic roots of this ethnopolit tradition have metamorphosed throughout the 20th century, culminating in illiberal propaganda. This propaganda, I argue, draws from a historical tradition of European Romanticism, metamorphoses it, and updates its tropes to 21st century culture wars and to the European scale. Presenter: Annastiina Kallius

The Motivator: Subcultural Charisma and Organic Intellectuals among East German Hooligans: The (East) Berlin skinhead and hooligan scene is considered an important pillar of the street-oriented far right in Germany. In the absence of formalized hierarchies charismatic leaders play a crucial role in organizing violent attacks and providing political orientation. These leaders often came from Stasi families (East-German secret police), while their supporters mostly grew up in proletarian backgrounds. Already in the 1980s they have been crucial in motivating dissident youth to join the

skinhead movement and in orienting them towards right-wing politics, but later in the 1990s also in resisting party-political appropriation – which made them controversial figures both inside and outside right-wing milieus. Using a particularly prominent example, I trace the role of such leaders and thereby provide insights into the modes of operation of right-wing subcultures in East Germany. I also show how 'the motivator' not only became a leading hooligan and role-model for skinheads, but a subcultural 'celebrity' – figuring, among other things, as an influential fashion icon, an organizer of techno-events, a falsely accused Stasi-spy and an organic intellectual, often making fun of social scientists. I also show how he recently became a mediator between football-hooligans and right-wing populist parties/movements rallying against refugees and Corona-restrictions. His already looming demise will lead me to reflections on the potentials and limits of such leaders in right-wing subcultures. Presenter: Stefan Wellgraf

Lawyers, Guns, and Money: The crystallization of the failed coup in the US on January 6th, 2021: Media commentators and academics frequently point to the fragility of democratic institutions, but do not sufficiently examine the conditions that render them so vulnerable. These are not difficult to understand once one accepts that institutions are governed by policies that are themselves susceptible to alternative interpretations. Those interpretations are, in turn, susceptible to changes in political discourse. Alexis de Tocqueville succinctly pointed to this threatening phenomenon in his 1835 study of US society *Democracy in America* when he presented the "tyranny of the majority". After a brief review of that threat, which is the the forerunner of what we now call fascism, the paper pivots to the failed coup d'état initiated by former President Trump and a widespread coterie of supporters along with vigilante groups hoping to maneuver him into declaring them a domestic police force. The paper shows how a variety of actors, all motivated by what they regard as democratic sovereignty, worked together to impede the confirmation of Joe Biden's electoral victory. Located in big business, government, and grassroots organizations, this failed coup attempt came together not by the former president's diktat but rather by the interplay of all these actors sharing a similar script for understanding politics and society. They pushed each other along as each read signals from the other that they could take one more step forward. Presenter: Greg Feldman (University of Windsor)

Mediators of Genocide: Ideology, Totalitarianism, and Khmer Rouge Cambodia: In March 2016, Alex Hinton testified at the Khmer Rouge Tribunal in Cambodia. For three and a half days, he gave testimony about the origins and dynamics of the 1975-79 Cambodian genocide. This experience, which he discusses in a book, *Anthropological Witness: Lessons from the Khmer Rouge Tribunal* (Cornell 2022), culminated in a direct exchange with Pol Pot's right-hand man, Nuon Chea. "Brother Number Two" was one of the main Khmer Rouge ideologues, writing propaganda tracts that sought, in part, to educate his followers and the masses about Marxist-Leninism and proper revolutionary conduct. These messages were then relayed down the chain of command with mediators at various levels reframing the ideological content to fit their institutional contexts. One such context was S-21, a security center that operated directly under the control of the Communist Party of Kampuchea Party Center. Perhaps 20,000 prisoners passed through the gates of the prison after which many were interrogated and tortured. Almost all the prisoners were executed. The prison commandant, Duch, served under Nuon Chea and spend much of his time annotating prisoner confessions – which Nuon Chea sometimes reviewed -- and giving ideological lessons to his Khmer Rouge interrogators. Some of these "torture notebooks" were introduced as evidence at the Khmer Rouge Tribunal and provide a point of entry to understand how the mediators of genocide transmit ideological messages during totalitarian regimes. Drawing on key moments during his testimony, Hinton will examine this process of mediation and how it fashioned revolutionary subjects and, in contexts like S-21, people who tortured and killed. Presenter: Alex Hinton (Rutgers University)

The Photoethnographer's Eye: The Praxis of Ethnographic Still Image Making

4:15 PM - 6:00 PM TMCC - 717 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Visual Anthropology

ORGANIZER:

Ulises Espinoza (University of California, Los Angeles)

CHAIR:

Jason De Leon (University of California - Los Angeles (UCLA), Department of Anthropology)

PRESENTER:

Nicole Smith (University of California, Los Angeles), Lee Douglas, Viki Eagle (University of California, Los Angeles, Department of Anthropology), Ulises Espinoza (University of California, Los Angeles)

DESCRIPTION:

Still photography has had a resurgence amongst anthropologists and other social scientists in recent years. This revival has seen a diverse range of photoethnographers attempting to reconcile with anthropology's troubled history of image making and usage while also acknowledging the complicated and multifaceted nature of photographic practice. This includes newfound interests in the mechanics of image making, the impact of evolving camera technologies (and an analog film renaissance), and the cultural, physical, and political nuances of the photoethnographic encounter itself. In this roundtable we bring together anthropologists whose current practice involves the production of photographs to engage in conversation focused around David MacDougall's work on the corporeal image. We ask our participants to think about and comment on their photoethnographic practice and their technological choices and how the two shape the relationships they have with bodies in front of the camera, their own bodies behind the camera, and with the world at large. We also ask a series of questions including: What does your photoethnography look like in practice? How do your technological and compositional decisions in the field both reflect and shape your understanding of culture(s)? How do your images interact with your text in post-field scholarly production? What possibilities do you imagine for the future of photoethnography? Note: This is considered to be the first of two sessions on photography. The other is 'Fieldwork, Cameras, and Workflows: embodied practices–anticipated traces' organized by Alexander Fattal and Craig Campbell.

DISCUSSANT:

Julia Morris (University of North Carolina, Wilmington)

DESCRIPTION:

Viruses/air, toxicity/bodies, and capital/value. All subject to industrial and imperial dreams of control and containment. All have propensities to leak. The covid-defined second decade of the 21st century has thus far been a massive test to enduring modernist delusions that politically deployed technologies and mobilizations of containment, separation, and isolation can prevent inevitable leakages: viruses spreading across the arbitrary borders that separate polities; air entering contained spaces and the breathing bodies that reside within; toxic solid and liquid wastes leaking out of waste streams; humans refusing to stay within the pods and bubbles that they and others construct; the state's and other institutional walls and borders incompletely confining human mobility; and the always unstable circulations of capital that only ever temporarily keep all that is solid from melting into air. In this panel we aim to interrogate the persistence of projects of containment, conceived as productive impossibilities that provoke, mobilize, and terrify. As Sloterdijk suggests in *Terror From the Air* (2009), an early historical step towards the principle of air conditioning—'disconnecting a defined volume of space from surrounding air'—was the emergence of atmospheric warfare in the second world war. This set off an arms race that involved protective gas masks and the deployment of new chemical agents that could penetrate them. Over three years after COVID-19 emerged and mass masking mandates and new restrictions on mobility spread across the world, we check in on this arms race of containment. We widen our lens to capture how projects of extraction, subjugation, expendability, and racialization infuse contemporary containment discourses and practices. And, we strive to generate a better understanding of the intertwined ways that containment simultaneously shapes the movements of bodies (human and non-human), waste (living and non-living), and value (concrete, fictitious, and non-economic). Drawing on

Schoot and Mather (2021), we focus not so much on what containment promises to hold inside, but rather on the broader regimes, structures, and logics that containment 'holds together,' and how containment ambitions structure novel forms of (cosmo-)politics that at times align coalitions of diverse actors. Containment is thus not only subtly productive but also at times overtly subversive and violent. Part 2 of this double session explores how the impossibilities of containment facilitate emergent forms of spatial demarcation, the mobilization of contingent networks, and novel means of survival amid environmental crisis. Uli Linke explores how visions of a 'borderless' world have been met with increasingly violent fantasies about migrant others and asks how border practices and imaginaries might be altered; Adam Liebman examines the conceptual containers that are popularly evoked as producing quantifiable amounts of waste and the Asian-originating environmental justice projects that are breaking the containers open; Hiroko Kumaki demonstrates how the impossibility of radiation containment enables new methods of life management in the aftermath of the Fukushima nuclear disaster; and Sophia Balakian highlights two different modes by which people in the global south with limited rights to move exercise creative control over their mobility, one private and illicit, the other collective and public.

Decolonizing the Border Wall: Containment, Suffering, and Transformation: Walls are physical constructs, built to enclose, protect, and contain. Geopolitical borders operate in much the same way, as manifestations of state sovereignty and power. In previous works, I examined transborder mobilities in Europe—the racist push by EU member states to impede asylum and immigration (Linke 2019, 2016, 2014). Border protection measures were to render the nation impervious to refugee presence. The deadliness of border-crossings increased during the 2015 Syrian refugee crisis. Yet at the turn of the millennium, into the twenty-first century, we observed the dismantling of political borders within Europe's presumed white national interior, developments that inspired critical visions of "a borderless world" (Mbembe 2018). Such theorizing from the Global South, posited with a decolonizing stance (Gupta 2021), exposes the strategic anti-migrant violence evident in the border zones of the state. In this paper, the US southern border serves as a case example. Under Trump's presidency, the wall construction along the United States-Mexico border was to follow a medieval design, with spikes at the top, to cause anticipated injuries that the president "describe[d] in graphic terms" (Miroff and Dawsey 2019;

Kray and Linke 2022). Such violent fantasies, popularized, and accompanied by images of migrant children in cages, are intertwined with the demonized figure of the Latin/Haitian border-crosser, dehumanized, conjured as contagion, a deadly threat. How can such border practices and imaginaries be altered? Drawing on the truth-revealing work of activists like anthropologist Jason De Leon and photographer JR, we glimpse the transformative potential of community engagement. Presenter: Uli Linke (Rochester Institute of Technology, Department of Sociology and Anthropology)

The Urban, National, and Continental Fantasies of Waste Containment: In this paper I ask how waste (anti-)politics are shaped by modernist fantasies of containment. I do so by examining waste accumulations and flows along with three types of conceptual containers that are popularly evoked as producing and delimiting quantifiable amounts of waste—the urban, the national, and the continental. Grounded on terra firma with reified boundaries, these nested scales constitute a developmentalist naturalization of waste. This naturalization obscures both the multinational networks of finance, extraction, and production that shape spatial materializations of waste as well as waste movements, bifurcations, and transformations that disrespect boundaries of all kinds. Drawing on ethnographic fieldwork in Kunming, capital of southwest China, I first highlight the ways that waste matter does not just flow into and out of the city, but also constitutes multi-scalar circulations of matter, bodies, and value that stretch spatialized notions of the urban. I then turn to the vilification of China as the newly emerged biggest “waste producer” and highlight how this constitution of the world gets reproduced despite counter stories of multinational networks of capital and extraction that do more to shape spatial materializations of waste. Finally, I dwell on a set of reports that blame Asia for plastic pollution in oceans and have recently been retracted as the Asian-originating global waste brand audit movement gains increasing influence in shifting popular discourse. I end with thoughts on theorizing the different scales of environmental justice projects that are pushing against the anti-politics machine reliant on myths of waste containment. Presenter: Adam Liebman (Dartmouth College, Department of Sociology and Anthropology)

Possibilities of Impossibilities: Regulating, Protesting, and Living a Nuclear Fallout: Following the nuclear fallout in Fukushima, Japan, numerous projects emerged to contain the radioactive particles released

into the environment, such as decontamination and monitoring of food, bodies, and living environments. However, despite the apparent investment in the possibility of containment, it soon became evident that radiation could not be entirely contained. As a result, the focus shifted to managing the impossibilities of containment. What became increasingly at stake then was the management of life “with” radiation. This paper examines regulatory policies, advocacy work, and everyday life following the Tokyo Electric Power Company’s Fukushima Daiichi Nuclear Power Plant Accident. Instead of discussing the limits and failures of containment projects, I ask how various actors have engaged with the impossibilities of containment, how they have made the condition more conducive to their situation and desires, and what kind of experiences emerged from that dynamic. I explore the possibilities that arise from accepting the impossibilities of containment and how these possibilities are negotiated and made meaningful through experimentations in the realms of governance, politics, and everyday life. Presenter: Hiroko Kumaki (Dartmouth College, Department of Anthropology)

Money, Memorials, and Leaking Beyond a Relocation Directive: Containing Refugees in Kenya: Discussions of migration and bodies breaching borders often revolve around borders between the global South and the global North. But these global and regional security regimes also have far-reaching consequences for borders at other scales. As wealthy countries restrict migration, millions of asylum seekers and refugees are contained in global South locations. In this paper, I consider one such location, examining Kenyan dreams of internal securitization and controlling the movement of approximately half a million refugees. After an attack on an upscale shopping mall in Nairobi in 2013, Kenya directed all refugees to relocate from cities to refugee camps, deploying police and paramilitary to refugee neighborhoods. People documented as refugees in Nairobi used various tactics to avoid arrest and deportation to camps. For example, many people took advantage of the remittances they received from relatives abroad and the Kenyan police’s reputation for accepting bribes to use money in lieu of a national ID. In a Congolese community in which many were survivors of a massacre in a UN-run camp in Burundi, the community used the occasion of the massacre’s tenth anniversary to pressure officials to exempt them from relocating. At a memorial to which they invited UN officials, they decried the United Nations that had allowed their loved ones to be slaughtered. These two examples—one private and illicit, the other collective

and public—represent different modes by which people with limited rights to move or reside where they wish exercise creative control over their mobility. Presenter: Sophia Balakian (George Mason University)

Trans Linguistic Logics: Spatial and Embodied Epistemologies Across Modalities

4:15 PM - 6:00 PM TMCC - 206 E

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Lal Zimman (University of California, Santa Barbara)

CHAIR:

Ariana Steele (Ohio State University), Joshua Raclaw

PRESENTER:

Archie Crowley (Elon University), Marina Zhukova (University of California, Santa Barbara), Kristian Ali, Ariana Steele (Ohio State University), Dani Heffernan

DISCUSSANT:

J Calder (University of Colorado, Boulder)

DESCRIPTION:

Now a flourishing area of inquiry, trans linguistics (Zimman 2020, Konnolly 2021) has come to be defined not only with respect to its subject matter - the linguistic practices of and surrounding trans people - but also through a commitment to trans epistemologies as advanced by both trans communities and trans researchers. Trans epistemologies are necessarily characterized not only by their orientations to gendered and linguistic transitions, but also by their sociopolitical, national, and linguistic contexts. This panel explores these epistemologies with particular attention to spatially-grounded and embodied ways of thinking and knowing across modalities. We begin with Crowley's analysis of interviews with trans people in South Carolina who resist the normative spatial epistemology that locates trans life in major US metropolises and understands transness as particularly incompatible with rural and/or southern US contexts. By contrast, trans people make sense of their place in the South in part through language, e.g. in relation to widespread use of sir and ma'am, advancing highly localized epistemologies of transness and space/place. Next, Zhukova identifies linguistic strategies in audiovisual and textual modalities across Russian media sources that resist national censorship laws targeting queer and trans

people as well as straightforward spatial localization. Each example exemplifies the way linguistic modalities afford different opportunities for subversion: visibilizing censorship by blacking out forbidden words in a book about gay men, maintaining the English audio in television with censored Russian subtitles, and using innovative grammatical forms in a progressive online political publication. Ali extends this attention to modality through autoethnographic insights from her experiences as a queer hearing interpreter for Trinidad and Tobago Sign Language. Focusing on a space organized by hearing queer feminist and deaf activist groups to address issues of access for deaf people, Ali attends to the complex interaction between deaf/hearing status and queer/trans identities in a Trinidadian context characterized in part by its homo-/transphobia. Heffernan highlights the embodied production of the gendered voice in her investigation of the epistemological frameworks in transfeminine people's engagements with vocal feminization practices and ideologies about the gendered voice. Here, the looming presence of a hegemonic cisgender listening subject creates an awareness and mastery that also manifests a creative potential for undoing those same systems. Finally, Steele's talk focuses on the embodied forms of knowing reflected by Black and white nonbinary people in Columbus OH, whose construction of transness is informed by their simultaneous engagement with embodied epistemologies of both gender and race. Focusing on the ways nonbinary speakers construct counter-hegemonic stances toward gender that are grounded by their simultaneous embodied experiences with racialization (or its absence), Steele uncovers the ways embodied power structures shape the linguistic and gendered creativity of nonbinary speakers. Together, the panel advances trans linguistics by charting articulations of trans logics across communities, languages and modalities. In the vulnerable political landscape trans and gender non-normative communities face across much of the world, our discussions map out potential linguistic paths toward liberation.

"I want to stay in the Carolinas because I want to create those spaces": Trans spatial epistemologies: Despite the increased public visibility of U.S. trans communities, most research documenting trans life has focused on large metropolitan areas in the West and North of the U.S., perpetuating a metronormative (Halberstam 2005) narrative of trans life. Further, the focus on "great cities" like New York, Los Angeles, or San Francisco omits not only the experiences of queer people in rural areas (Gray 2009) but also those of trans people in suburbs

and “ordinary cities,” i.e., urban areas that are not major metropolises (Stone 2018) across the U.S. In this paper, I draw on 20 ethnographic interviews with 41 trans people living in various regions across South Carolina to explore how trans people living outside of major metropolitan areas discursively construct trans ways of knowing outside of metronormative understandings of trans identity. I demonstrate how the participants confront gendered linguistic logics of the South (e.g., the use of sir and ma’am), navigate spatial organization of gendered spaces, reproduce and contest spatial-temporal constructions of the south as “backward,” and ultimately make lives for themselves in the region. Through interviews with trans people living in various regions across South Carolina in cities, towns, and rural areas, I show how “Southerners possess a distinctive way of knowing, an epistemology of place,” (Kinchelov 2011), contributing to scholarship that challenges the metronormative, “great city” representation of trans ways of knowing. Presenter: Archie Crowley (Elon University)

Under erasure: Linguistic innovations in response to anti-LGBTQIA+ laws in Russia: In November 2022, Russia’s homophobic anti-“gay propaganda” law, which banned 'propaganda of non-traditional sexual relations' to minors in 2010, was extended to all age groups, prohibiting the mention of LGBTQIA+ people in books, movies and news. This amendment changed the ways publishing houses, streaming services, and media agencies produce content and led to new language practices to resist censorship. Drawing on Irvine and Gal's (2000) concept of erasure, I explore linguistic innovations that allow LGBTQIA+ identities to remain visible or audible across various modalities even as creators stay within the confines of Russian law. My analysis explores three contexts. First, I discuss how LikeBook, a Russian book publisher, highlighted censorship by covering up lines mentioning the relationship between two gay men with a black marker before publishing the novel. Second, I analyze the subtitles to “White Lotus” and “And Just Like That ...” by the local streaming service Amediateka, where words referring to LGBTQIA+ individuals were rephrased while the original voice acting was preserved for the audience. Third, I examine the stances expressed in the news articles of the online student magazine DOXA. Introducing feminist and trans-driven linguistic innovation, *гендер гэн* 'gender gap' (an underscore between the word stem and the last letters of the occupation names, e.g., *житель_ницы* 'citizens'), DOXA acknowledges a range of gender identities and emphasizes the importance of women, feminine, and

trans individuals. By analyzing these three linguistic strategies, I provide insight into how language practices evolve to resist and subvert dominant power structures. Presenter: Marina Zhukova (University of California, Santa Barbara)

Navigating queerness, language and Trinidad’s sociopolitical landscape in sign language interpreting: Sign language interpreting is neither a neutral nor objective process because of its embodied nature. While the importance of accounting for race has been examined (Obasi 2012), there has been little research on the way queer and trans epistemologies are relevant to the sign language interpreting process. Further, Global South contexts have been consistently absent from sign language studies, making research that centers them prescient. The queer/trans and deaf communities in Trinidad have different linguistic norms that are extremely important to them – and this is crucial for interpreters to take into account. In 2021, a hearing queer-led feminist activist organization collaborated with a Deaf-led deaf activist organization to carry out multi-week trainings in response to a need for better interpreting and access to services for queer/trans deaf Trinidadians. While this series of collaborative events presented the first ever formal bridging of these two activist spheres in Trinidad, the process of interpreting these novel events itself was not examined. Drawing on Gill’s (2018) autoethnographic focus on Trinidadian queer resistance, I discuss working as a hearing queer Trinidadian interpreter at this event. I analyze the choices I made interpreting between spoken and signed language, examining how adding or condensing information in different situations depending on audience expectations and norms and how navigating political choices for queer and trans terminology were necessary. By presenting my experience of working between the spheres of hearing queer/trans culture, deaf culture and the post-colonial Trinidadian socio-cultural landscape, I demonstrate how queer embodied knowledge of resistance comes into play in sign language interpreting. Presenter: Kristian Ali

Liberation under hegemony: Nonbinary ideologies of gender subversion and the racialization of it all: Nonbinariness is defined by subverting gender norms in some way. To be both Black and nonbinary is to have a relationship to gender that is multiply subversive of hegemonic visions of gender as binary and of that binary as referential to whiteness (Mutua, 1999). Recent studies suggest that non-normative epistemologies of gender complexify our understanding of how non-normatively gendered speakers operate under the

white-centric gender binary (Calder & King, 2022; Calder & Steele, forthcoming). Through discourse analysis of interviews with Black and white nonbinary English speakers, this paper considers how nonbinary speakers construct counter-hegemonic stances grounded by their simultaneous embodied experiences of racialization (or lack thereof) and gender. Across these data, nonbinary ideologies of gender subversion are partially defined by a moral orientation towards the breadth of nonbinariness. For example, one informant noted, “nonbinary can be anything really,” a sentiment shared by most participants. That is, identifying as nonbinary means talking about gender in ways that distinguish nonbinary identity from outward presentation. Yet the same speakers describe nonbinary embodiment using the gender binary, delineating “those who look like their sex assigned at birth” vs. “people who go the opposite” vs. those who “blend men’s and women’s fashion.” This erasure (Gal & Irvine, 2019) of variation reflects the ambivalent relationship that gender non-normative speakers have to binary gender due to binary gender’s occupation of the semiotic material through which nonbinarity is formed. These speakers must accomplish gender subversion through “recirculation... hyperbole, dissonance, internal confusion, and proliferation” (Butler, 1990, p. 43) of existing constructs. Presenter: Ariana Steele (Ohio State University)

Narrating the 'cisgender listening subject' in trans metalinguistic commentary on voice feminization: This paper examines language ideologies – speakers’ positioned, multiple, mediating, and identity-shaping beliefs about language and language use (Kroskrity 2004) – emergent in trans-feminine individuals’ metalinguistic commentaries about voice feminization, a malleable set of practices aimed at altering aspects of the speaking voice associated with the perception of gender. Based on data collected from a recorded semi-structured conversation and from an online forum dedicated to trans voice modification, I examine how these discourses perform language ideological work around the gendering of voices and their speakers, highlighting an epistemological tension between understanding gender as self-determined and understanding gender as intersubjectively constituted (Bucholtz and Hall 2004). This tension surfaces through some trans-feminine speakers’ construal of conscious voice modification as affirming while simultaneously scrutinizing the practice of ascribing gender based on voice. Through various discursive moves, their commentaries tacitly narrativize and interrogate what Calder (2021) refers to as the cisgender listening subject – an ideological position which apprehends speakers’

voices through the logics of a binary gender system, indexically linking and naturalizing vocal practices with either one of two supposedly immutable, biologically constraining sexes. I argue that the awareness that supports cultivation and mastery of vocal practices aimed at successfully signifying within the indexical field of the cisgender listening subject concurrently denaturalizes those same semiotic linkages and reveals the possibility of imagining other ways of making gendered meaning. Presenter: Dani Heffernan

Transformations in Black Educational Experiences (Across Time and Space): Part II

4:15 PM - 6:00 PM TMCC - 801 B

Oral Presentation Session

REVIEWED BY:

Association of Black Anthropologists

ORGANIZER:

Molly Hamm-Rodriguez (University of Colorado)

CHAIR:

Molly Hamm-Rodriguez (University of Colorado)

PRESENTER:

Angela Crumdy (University of Pennsylvania), Tyler Hook (University of Wisconsin, Madison, Department of Anthropology), Riché Barnes (University of Florida, Department of Anthropology), Mariama Gray, Scott Barton (University of Notre Dame)

DISCUSSANT:

Krystal Strong (Rutgers University)

DESCRIPTION:

This two-part panel series considers transitions as a 'project of connection and mobility' across the African diaspora, centering transcendence as a framework for embracing 'blackness across borders' (Thomas, 2007) and resisting imperial and colonial fragmentation across linguistic and cultural lines (Torres-Saillant, 2016). We propose education in school and community contexts as a gathering space for bridging past, present, and future configurations of Black students, educators, and community members as they address and transform the crises of everyday life. In alignment with Yomaira Figueroa-Vásquez's (2020) perspective on relationality, we highlight shared subjective experiences across contexts while also acknowledging sites of incommensurability. By highlighting Black intellectual, educational, and political projects in defiance of national boundaries (Kelley, 2020), we share

anthropological theory and praxis to 'allo[w] a new history of freedom to be written' (Johnson, 2019). This panel advances understandings of disruption and transition to negotiate spaces for thriving amidst educational inequities as experienced in school systems and even our approach to research. Accordingly, panelists explore the following themes: (1) the effect of school choice expansion on Black families, using Black Strategic Mothering to consider how decisions about educating children are made in Florida's school choice marketplace; (2) the tensions between different types of productive work and negotiations about intergenerational care among Cuban women primary school teachers through the lens of black feminist theory; (3) the role of the white spatial imaginary in producing educational inequity in Northern California schools during the Great Migration and the protective factor of positive social relationships for African American children and their families; (4) the interrelationships between food activism and improvisation to build community awareness and political action amidst radical contingency and precarity in marginalized communities; (5) the legacies of black epistemological thought in the anthropology of education as it counters communicentric bias in educational research and practice; and the decolonial alternative of community gardens in counteracting corporatized models of schooling in Liberia against the legacies of the plantation.

Cuban Women Primary School Teachers Negotiating the Responsibilities of Social Reproduction: In this research, I focus on the tensions between different types of productive work, namely economic production and biological reproduction, and how these women's employment forced them to make specific negotiations related to intergenerational care—specifically childrearing and eldercare. Research findings are based on a larger research project conducted between 2017 and 2020, primarily in Havana, Cuba, with 21 Cuban women primary school teachers the majority, but not all of whom were women of color. I use black feminist theory and social reproduction theory to conclude that teachers' social reproductive responsibilities were complicated by their positions as women in low-salary, state-sector employment, and as a result, they often considered quitting or taking intermittent breaks. Presenter: Angela Crumdy (University of Pennsylvania)

“Let's Eat”: School Gardens, Plantation Futures, and Community Resistance of Corporatized Schooling: In 2016 Liberia adopted the Liberian Education Advancement Program (LEAP), outsourcing public

primary schools to largely international for-profit school management firms. Promoted as a means for moving the country's education system from a “mess to the best” through corporatized management and increased surveillance and standardization of the state, school labor (teachers), and students, the program was celebrated by international development organizations and investors as an “innovative” model to disrupt a failing school system, while also criticized by local watchdogs, community based organizations, and teachers who questioned the procurement process and lack of teacher/community involvement. This presentation, based on 18-months of anthropological fieldwork in Liberia (2018-2022) and drawing on the conceptualization of the plantation in the work of McKittrick, Wynter, and other Black feminist scholars, examines how teachers and communities understood, resisted, and remade LEAP. The presentation particularly examines the creation of new schools by administrators, teachers, and parents in private residences, churches, and businesses that sprouted up around corporate LEAP schools. Through the words of community and school stakeholders, I illustrate how these schools, constructed at the edges of the corporate plantation, act as community gardens, presenting decolonial alternatives amid an increasingly corporatized model of schooling spreading throughout West Africa. Presenter: Tyler Hook (University of Wisconsin, Madison, Department of Anthropology)

Wake Up! Black Strategic Mothering, Public Education, and the Florida Stop W.O.K.E. Act: For the past five years, Black Floridians have been given what is akin to political whiplash. Every other week there is a new legislative action or news cycle discussing race and sexuality in Florida's public schools. Indeed, what seemed like equitable opportunities being made available for Black families in the form of “school choice” has begun to increasingly look like Black families are being caught in the state's political crosshairs. In Florida, the money follows the student. This is devastating for school districts that have historically suffered from poverty and lack of funding (primarily Black and Latino). For example, in August 2022, it was reported that Florida's newly consolidated school choice program resulted in a \$16m loss for the Leon district schools in Tallahassee, FL. The consolidation also changed the rules for qualification for the voucher system raising the income eligibility requirements and removing the requirement that students had to have previously attended public schools. While the programs have been beneficial for some students, according to superintendent of Leon schools Rocky Hanna, “school

choice allows people to feel much more comfortable being separated from others who don't think, act, or look like them." According to many observing how school choice is playing out across the country, we are re-segregating public schools. The expansion of school choice has been an issue nationwide, but in Florida, it got even more controversial as Black children's enrollment in Florida Choice programs grew over time. For many Black families, it is a double-edged sword. This paper is part of a larger mixed-methods project in which I use Black Strategic Mothering (Barnes 2015) as a conceptual tool to consider the impact on Black families, particularly mothers, when making decisions about educating their kids in Florida's school choice marketplace. Presenter: Riché Barnes (University of Florida, Department of Anthropology)

Great Migration's Children: Pursuing Education While Contending with Indifferent Educational System: Historians have written extensively about the Great Migration experiences of southern adult migrants to northern cities like Philadelphia, Detroit, Chicago, Cleveland, Baltimore, and New York City. However, little is known about the migration journeys and sociospatial experiences of Great Migrants to California, the nation's most populous state. Even less is known about the experiences of the African American children who migrated alongside their parents, and like their southern peers, integrated the state's schools and community organizations. In this session, I examine the children's experiences in their own words in answer to the question, How did Northern California's sociospatial context shape the educational experiences of African American children during the Great Migration? This mixed methods study draws on interviews, historic artifacts, maps, and the genealogical proof standards to examine the children's educational experiences, the sociospatial barriers they faced from the regions' white families, business owners and educators, and how they traversed them. A thematic analysis informed by Lipsitz's (2007) concept of the white spatial imaginary was conducted. The presentation will highlight three themes: racial-spatial hierarchy, anti-blackness at school, and finding community. The findings show that White Californians were segregationists who organized educational opportunity for white students, and used the strategies of the white spatial imaginary to reinforce white space and educational opportunity; although white parents, homeowners and educators in California could not prevent African American children from attending schools with white children, they could make them suffer and bar them from educational opportunity, which they did in multiple ways; and positive social

relationships within the African American community served as a protective factor against racial-spatial isolation and anti-Blackness. Presenter: Mariama Gray

Activating Community Engagement for Food Justice and Progressive Change: Given the current polarity in social political thought, and the economic disparities existent nationwide, this essay offers methods and practices to harness heterogenous participants dedicated to social change, diversity, equity, inclusion and justice. These projects are grounded in designing alternative methods and strategies aligned to the arts, design and improvisation as an applied practice for program development and implementation can complement or jumpstart theoretical practice in generating ideas and leverage community outreach. My paper coheres two projects that harness food and artmaking are loci for public engagement, civic education and social justice initiatives on both coasts. In East New York, Universecity focuses on food justice, food education and artmaking workshops. From L.A. Common Ground, is a collaboration with ceramicist, Adam Silverman that metaphorically and literally creates community through food sharing, discourse and a set of handmade dishes made from earth, water and wood gathered from all fifty states and six territories. Through ideation and implementation of these projects' new strategies, and alternate protocols may be generated, and applied to address the targeted concerns. Dissemination and circulation of the transformative actions and programs offers greater potential for their success. Presenter: Scott Barton (University of Notre Dame)

Maurice Rafael Magaña (University of Arizona)

CHAIR:

Maurice Rafael Magaña (University of Arizona), Ethiraj Gabriel Dattatreyan (New York University, Department of Anthropology)

PRESENTER:

Reighan Gillam (University of Southern California, Department of Anthropology), Maya Singhal (Harvard

University, Department of Anthropology), Alize Arican (Boston University), Sabine Mohamed (Johns Hopkins University, Department of Anthropology)

DESCRIPTION:

This roundtable considers and carries on the interpersonal relationships and political solidarities that emerge from state violence directed at differentially racialized yet proximal communities in various parts of the world. We take inspiration from recent work in ethnic studies and geography that takes up Lisa Lowe's (2015) call to think through the intimacies of four continents produced as a result of colonization, intimacies that put racialized groups into contact and relationship with each other. Roundtable participants focus on and attend to what we can learn from relationships that emerge when state violence and other forms of directed antagonism shape everyday encounters, projects of mutual aid, and political organizing between racialized groups. Mobilizing this year's conference theme, we seek to transition from and decenter US racial logics as the governing rubric and haunting specter for theorizing race relations while recognizing that white supremacy shapes and contains the potentials and frictions that emerge when conditions of impossibility bring together racialized subjects in unexpected ways across the globe. We ask: What are the possibilities and limitations opened up by such emergent forms of relationality, reciprocity, and solidarity? What kinds of grassroots theorizations around race, belonging, and kinship emerge when we place state violence and carcerality as the backdrop and conditions of possibility for relations?

Transitions toward equity and sustainability in food systems education

4:15 PM - 6:00 PM TMCC - 205 C

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for the Anthropology of Food and Nutrition

ORGANIZER:

Jennifer Thompson (University of Georgia)

CHAIR:

Jennifer Thompson (University of Georgia)

PRESENTER:

Emily McKee (Northern Illinois University, Department of Anthropology), Ellen Kang (University of Illinois, Chicago, Department of Anthropology), Gina Hunter (Illinois State University, Department of Sociology and

Anthropology), James Daria, Jennifer Thompson (University of Georgia)

DESCRIPTION:

Across scales, food systems have a powerful and dynamic impact on our daily lives--from the health of our bodies, to our social and cultural identities and connections to local landscapes, to our national and global economic, political, and environmental systems. Over the last four centuries, an industrializing agri-food system has exploited natural and human resources under the banner of 'feeding the world' in ways that have often exacerbated both social and environmental inequalities. Hanna Garth and Ashanté Reese argue that '[s]ome scholars and activists have pointed to the brokenness of our food system, while others have suggested that there is nothing broken, that the inequities it produces are functions of how it should work, as the push to maximize production and consumption while devaluing labor are integral to capitalist production' (2020, p. 4). In response, there is an urgent need to 'center equity, particularly racial equity and its intersectional links with other inequities' in sustainable food systems education 'in order to interrupt the reproduction of systems of oppression within food systems' (Sterling et al. 2021, p. 2). Over the last decade, anthropologists and others have called for a more 'critical' and more 'equitable' food systems education. Meek and Tarlau (2015) propose a Critical Food Systems Education based in food justice, food sovereignty, political agroecology, and critical pedagogy; and Valley et al. (2020) propose an 'equity competency model' aimed at explicitly integrating tenets of equity and social justice into sustainable food systems education. However, in the intervening years, we've also witnessed a cultural backlash against explicit efforts to address equity and social justice in both K-12 and college classrooms, with at least 17 US states introducing bills to ban or severely limit diversity, equity, and inclusion efforts on college campuses in 2023. This roundtable brings together participants from public and private, historically-Black and predominantly-white colleges and universities to examine the role of anthropology in transitioning food systems education toward greater equity and sustainability. We ask: How do we bring the lenses and tools of anthropology to bear to cultivate a critical consciousness among the next generation of interdisciplinary food systems scholars and activists? How do we nurture more inclusive and equitable food systems programs and partnerships? What opportunities and challenges are we facing in this work? How might we navigate these challenges together?

David Syring (University of Minnesota Duluth, Department of Studies in Justice, Culture, and Social Change), Jasmine Blanks Jones (Johns Hopkins University)

PRESENTER:

Cassandra Hartblay (University of Toronto, Department of Anthropology), Ash Marinaccio (CUNY, Graduate Center), Debra Spitulnik Vidali (Emory University, Department of Anthropology), Jasmine Blanks Jones (Johns Hopkins University)

DESCRIPTION:

Contemporary anthropologists are engaged in a range of theater making initiatives, forging new connections and engagements across techniques, traditions, and stakeholders. This roundtable explores pathways and crafts of transitioning between and across ethnographic research, scriptwriting, acting, and staging. We share from recent projects to highlight how ethnographic theater making is a form of knowledge production and embodied theorizing, one which disrupts conventional forms of knowledge ownership and production (Gómez-Peña 2005, Vidali 2020). Moving from ethnography to the performance stage has a long history inside and outside anthropology (Chin 2014, Dunham 2000, Hurston 2008, Madison 2020, Saldaña 2011, Turner 1982, Vidali 2020). We touch on this interdisciplinary history, discussing our arrival routes, intellectual kin, and apprentice relationships. The roundtable's key questions are: What transitions are entailed in routes from ethnography to stage, aka the research-to-performance process? What forms of transduction occur as inquiry and knowledge-crafting engage multisensorial and affective forms of being and expression (Giordano and Pierotti 2020; Vidali 2023, 2020)? What alchemic transformations occur during theater making (Vidali 2020) and through provocations for audience engagement (Abdul Khabeer 2016)? What risks do anthropologists take (Abdul Khabeer 2016, Chin

2014)? How does collaboration work with research participants (Hartblay 2020, Jones 2018) and established theater practitioners (Gatt 2022, Giordano and Pierotti 2020, Kondo 2018)? How do anthropologists transition between researcher, director, and acting roles? Panelists' projects focus on civic engagement, race-based inequities in education and health, anti-Black racism, Black girlhood and youth, conflict resolution, (dis)ability, and relations to land, place, and more than human lifeforms. Research/production locations include: Kyrgyzstan, Liberia, Palestine, Russia, and North America. Abdul Khabeer, S. 2016. Recentring Ethics in Anthropology: When Do No Harm becomes Harm Done

6:30 PM - 8:15 PM

TMCC - Hall F

AAA Presidential Address

PRESENTER:

Ramona L. Pérez, Ph.D. (San Diego State University, Department of Anthropology)

DESCRIPTION:

As we continue to define anthropology for the 21st century, I argue that ethics – what we mean by ethics, how we invoke ethics, and how we demonstrate our ethics – should be at the center of our conversation. Through this conversation, I offer a challenge to center

an ethics of care in our work that derives not from the Common Rule or broad policies of US institutions but rather is derived from our responsibility for the impact of our actions whether intentional or unintentional, and is situated in the moral narratives of the communities that we serve.

Alternatives to the Neoliberal Self

8:00 AM - 9:45 AM TMCC - 802 A

Oral Presentation Session

REVIEWED BY:

Society for Psychological Anthropology

ORGANIZER:

Deborah Tooker (Le Moyne College, Department of Anthropology, Criminology, & Sociology)

CHAIR:

Deborah Tooker (Le Moyne College, Department of Anthropology, Criminology, & Sociology)

PRESENTER:

Deborah Tooker (Le Moyne College, Department of Anthropology, Criminology, & Sociology), Julia Cassaniti (Washington State University), Anna Jordan (Washington State University), Ellen Klady (Princeton University)

DESCRIPTION:

In this panel, we look at a variety of ways in which changing political economies in China, northern Thailand, and the United States, along with nationally and globally circulating discourses about the individual, interact with local discourses about the self, identity, and subjectivity. These local discourses have religious, cosmological, moral, and political dimensions. Several papers demonstrate the way the 'neoliberal self' is reinterpreted locally or opposed by other self-constructs. Another theme in the papers is that of complexity, conflict, contradiction, and ambivalence in discourses about the self with changing political-economic conditions. These papers illustrate, and theorize about, the relevant contexts within which understandings of the 'self' or 'psyche' must take place. Tooker looks at changing self-concepts among younger generation neo-traditionalist Akha (a minority community in Thailand) in relation to local

interpretations of socioeconomic change as a dialectical cosmic movement. Cassaniti looks at cosmopolitical realities of self as agricultural practices change in Northern Thailand. Yang examines the psychic toll of the forms of self-presentation required of government officials in China's bureaucracy. Jordan considers the way formerly incarcerated individuals in Los Angeles, California reconceptualize guilt as a relational phenomenon instead of a purely personal moral responsibility, which mirrors the latest wave of activist calls for reform of a racialized criminal legal system. Klady focuses on the Christian debt refusal movement in Appalachia (US) in order to examine the divergent understandings provided by evangelical notions of the self, conservative ideas about personal responsibility, and neoliberal personhood for the white, working-class in the US dealing with deindustrialization and financialization. Similarly, Strauss's examination of socioeconomically, racially, and ethnically diverse southern Californians struggling with long-term unemployment shows the way neoliberal, Christian, and New Age beliefs shape their subjective responses to economic adversity.

Indigenous Interpretations of Changing Self and Society among the Akha of Thailand: In the time period of my fieldwork (1982-2018), the Akha community of Bear Mountain in Northern Thailand has undergone a change from a mainly subsistence economy to a market-oriented economy with cash crops and wage labor. I recently started to see the appearance of western psychological ideas such as individualism and interiority in Akha discourse. In my interviews with members of the neo-traditionalist younger generation, I noticed what appeared to be contradictory remarks in the same conversation. These were contradictions about collectivistic ideas such as obligation to family/lineage and ideas of individual autonomy and interiority. While at first interpreting this as an acceptance of 'multiplicities', I here conduct a further analysis to include broader Akha notions of social/cosmic change through dialectics and the incorporation of opposites.

In this approach, western psychological notions get indigenized, not just in relation to self-concepts but also in relation to a larger philosophy of cosmic movement between opposites. I invoke Yang's study of 'psychologization' in China "in which socioeconomic issues are managed in "psychological" modes of thinking" (2015:6) and her usage of the Chinese concept of *biantong*, or 'change with continuity' which includes a dialectical movement between more individualistic notions (of potentiality) and more collectivistic notions. I also refer to Alting von Geusau's early study of an Akha dialectical 'attitude' towards social change that includes the interaction of opposites as people move through time and space in a cosmic process. This conclusion calls for attention to be paid to larger cultural contexts such as the local meaning of social change when tracing the global circulation of ideas of self. Presenter: Deborah Tooker (Le Moyne College, Department of Anthropology, Criminology, & Sociology)

Changing selves, changing spirits: The political economy of agricultural burning in Northern Thailand: Air pollution has become an increasingly significant health crisis in Southeast Asia, particularly in the summer months when farmers burn their fields to make way for new crops. In this talk I trace recent political and economic changes being made to agricultural land management in the region, and connect these changes with shifts in understandings of self and the spirits of the land. Based on ethnographic interviews with farmers in the District of Mae Chaem in Northern Thailand, I report on different local rituals enacted to propitiate spirits before harvesting, and attitudes about the commercial contract-farming use of fires to clear fields before new harvesting cycles. Such a focus, I suggest, draws attention to changing ideas about selfhood that remain hidden when pollution is seen to be the material result of ongoing agricultural practices. Rather than a local cosmopolitics being supplanted by an ostensibly cosmopolitan material one, however, I conclude with a suggestion that even what appears to be contemporary cosmopolitan materialist engagements also themselves invoke new cosmopolitical realities of self and society, and that such may be the case for other environmental practices more broadly. Presenter: Julia Cassaniti (Washington State University)

The Guilty Man: Politics of the Moral Self in California's Criminal Legal System: In the United States, formerly incarcerated people exist in a kind of "collateral afterworld" after their release from prison, which is characterized by extended carceral control and

surveillance, moral judgment, and precarity. Consequently, their (un)freedoms and futures depend heavily on carceral logics that are rooted in the changing sociopolitical history of the criminal legal system. These often surface in discourses that frame the problem of criminality in terms of the moral failure of the individual. At the same time, recent changes in state penal policies and public outcry concerning police violence against people of color has ushered in a new level of cultural awareness to carceral issues, suggesting perhaps an emerging horizon of social change. This paper is based on my dissertation fieldwork with individuals recently released from state prison in Los Angeles, California. Utilizing theory in phenomenology and the anthropology of morality, I examine the ethical exigencies of post-prison life as articulated by the changing landscape of sociopolitical consciousness and situated within a particular cultural legacy of punishment. Specifically, my paper focuses on a man I call Chalo and his subjective struggle with moral identity. In it, I illustrate the ways in which dominant rehabilitation discourses emphasizing moralized notions such as "individual responsibility" and "change" deeply impede on Chalo's moral self. I argue this engenders within him a subjective, ethical conflict that necessitates his creative engagement with and reimagination of concepts like guilt in order to shoulder their weight. This imaginative ethical engagement can be viewed as a challenge to longstanding penal-moral logics in that it reconceptualizes guilt as a relational phenomenon, which mirrors the latest wave of activism discourse concerning penal reform. Presenter: Anna Jordan (Washington State University)

"Doing Life Together": Neoliberal Selves in Evangelical Communities: The wildly popular genre of financial self-help hinges on the idea that anyone can learn to "win with money" by undergoing a process of personal transformation that fosters a version of neoliberal selfhood. Financial self-help programs claim to guide adherents through this transformation not only by introducing new knowledge, but also by reconfiguring desire and discipline, inculcating habits of ongoing self-scrutiny, and reimagining metaphors for economic activity. This is attractive in the first place because it fills a gap created by massive political-economic changes, which have made the management of a bevy of debt and insurance products increasingly central to ordinary survival. Indeed, financial self-help is overwhelmingly centered around managing debt not as a burdensome obligation to discharge, but as a tool for wealth-building that should be perpetually engaged. This paper considers the tensions entailed in Christian financial

self-help in order to investigate the way that neoliberal selfhood is taken up as a strategy to oppose (rather than facilitate) the consumer debt system. It draws on fieldwork in Appalachia, a region of the US that has suffered particularly from deindustrialization. Against this backdrop, Christian programs involve a particularly intense inculcation of the characteristics of neoliberal selfhood, like market rationality, personal austerity, and continuous skill development. But in stark contrast with mainstream financial self-help, they call for complete abstention from debt, which they view as a profound threat to the traditional family and Christian community. In other words, these programs inculcate neoliberal personhood as a means of realizing a neoconservative social order. This paper examines the tensions that emerge in these programs between neoliberal personhood, evangelical notions of the self in relation to community, and conservative ideas about personal responsibility. Presenter: Ellen Kladky (Princeton University)

Anthropological Transitions: Exploring a Changing Anthropology Through the Memories, Works, and Theories of a 1990s Cohort Part 1

8:00 AM - 9:45 AM TMCC - 604

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Ida Leggett (Middle Tennessee State University, Department of Sociology and Anthropology)

CHAIR:

William Leggett (Middle Tennessee State University, Department of Sociology and Anthropology)

PRESENTER:

Maria Tapias (Grinnell College), Sarah Phillips, Angela Glaros (Eastern Illinois University, Department Of Sociology, Anthropology & Criminology), JESOOK SONG (University of Toronto, Department of Anthropology)

DISCUSSANT:

Martin Manalansan (Rutgers University)

DESCRIPTION:

This double panel examines how the community built around one Anthropology Department, at one moment in time, experienced and continues to navigate the anthropological project. Each paper in this panel focuses on a specific shift in an anthropological concept and/or

methodology that was learned in our years as graduate students at UIUC, and that continues to influence how we think about and teach anthropology to a new generation of students. This panel thus serves as both a critical interrogation and a celebration of one school's lasting relevance to the field of anthropology and beyond. As anthropology graduate students at the University of Illinois, Urbana Champaign during the 1990s, we were products of and witness to an evolving and contested transition in the anthropological canon. This transition was manifest in our mentors' front-line position in American Anthropology between what became known as 'traditional' anthropology on the one hand, and the more fragmented outcomes of post-colonial, feminist, 'native', and other critical movements in academic and popular thought, on the other. As students learning through this moment of transition, we were engaged in discussions about an inversion and proliferation of theory and case-study, moving from the goal of proving an ethnographic truth through specific fieldwork toward using theory as a tool kit from which to understand our ethnographic experiences in 'the field'. We re-examined and expanded on previous discussions of truth and meaning, of self and 'Other', and of difference. This panel takes our shared education in anthropology at a specific time in a specific place and uses it as a palate on which to examine an underexplored but ongoing conversation of the anthropology we employ to this day. Through our papers we demonstrate how long-lived these debates are, how important they were to engage with, and how timely the lessons are in this global moment; for example one presenter examines how Ukraine can be understood through the lens of citizenship and post-coloniality, while another explores how COVID responses were influenced by the medical anthropology theories of the '90s. Additionally, our presenters explore how those long-ago lessons influence their work beyond anthropology departments into the fields of development, healthcare, and museum studies. Our panel demonstrates how anthropology transforms over time, and how anthropologists transform along with it.

Janus-Faced training: Multiple Ways of Being and Knowing in Anthropology : On the day before I set off to begin fieldwork in Bolivia in 1996, I received three separate pieces of advice from my professors. Committee member #1 advised me to review my funded proposal once a month and give it a good read to make sure I remained on track. Committee member #2 told me to rip up my proposal and see what emerged in the field and Committee member #3, laughed when they heard the advice I'd already received and told me to

reflect on whose advice I was going to follow. Rather than leave with more direction, the new questions emerging in my head concerned how to operationalize the projects we come up with in a library while honoring the stories our interlocutors tell us in the field. As I reflect on this experience and my 20 plus years teaching at a liberal arts college -- a context in higher education that has afforded me the freedom to continuously re-invent myself and my research and teaching interests--I am deeply indebted to these 'academic ancestors' for helping me forge my way through a changing and self-critical discipline that drew inspiration from other disciplines for guidance: philosophy, literary criticism, post-colonial theory. This paper reflects on the pull between competing methodological and theoretical approaches of the 1990s and how it has shaped my work in the anthropology of emotions; how emotions travel; and more recently in graphic medicine.
Presenter: Maria Tapias (Grinnell College)

Citizenship Regimes in a Post-War Ukraine: Inspirations from Illinois Anthropology : Citizenship is a seemingly fragmented, fuzzy, and malleable analytical category that nevertheless remains central in anthropological approaches to understanding the politics of identity and everyday life in specific ethnographic contexts. Inquiries into citizenship—the politics of belonging—necessitate fine-grained interrogations of power along multiple fault-lines of nation, ethnicity, language, ability, gender, sexuality, and more. This paper uses the lens of citizenship to reflect on the war in Ukraine since 2014 (escalated in 2022), drawing from and building upon insights from Illinois anthropology about post-coloniality and discourses of identity (Kelleher 2004), feminist anthropology (Abelmann 2003) and ethnographic commitments to long engagements (Plath 1980) and restless anthropology (Gottlieb 2012). How will citizenship regimes in a post-war Ukraine operate, and how can Illinois-inspired anthropology help us understand a post-war politics of belonging for Ukraine?
Presenter: Sarah Phillips

I'm Still Here: Doing Fieldwork "At Home" After Your Classmates Have Moved Away : While my doctoral coursework at Illinois touched on native anthropology, the relative status of this concept emerged most clearly in our department's everyday institutional practices: namely, US-based scholars largely conducted fieldwork in other countries (or among communities to which they were outsiders), while international scholars mostly conducted research in or near their home countries and communities. This observation taught me more than any class about the stakes for native

anthropology—what our profession believed it was and whom, ultimately, it was for. Continuing to live and work in Urbana-Champaign long after almost all my former classmates had moved to other places, I embarked upon a second fieldwork project on liturgical music in my own Greek Orthodox community. This fieldwork has challenged those received conceptions of native anthropology, to say nothing of applied anthropology, a concept that our decidedly academic department did not address. Indeed, this experience, while informed by my earlier Illinois training, has transformed my relationship to anthropology in ways I could not have anticipated. Presenter: Angela Glaros (Eastern Illinois University, Department Of Sociology, Anthropology & Criminology)

Postcolonial to Decolonial: Transition or Blinding History? : This paper explores ways in which rhetorical premise within "colonial" is shifted from postcolonial to decolonial in the discipline of anglophone socio-cultural anthropology. It traces disciplinary debates and contexts from 1990s when "postcolonial" studies and discourses were predominant to new millennium that "decolonial" discourses became ascendant. By doing so, this paper reckons infelicitousness in salient decolonial discourses in relation to postcolonial discourses without unraveling incommensurability between the different spatial-temporality. By excavating prefigurative decolonial challenges during the heydays of postcolonial rhetoric, this paper tinkers how those prefigurative challenges are doubly silenced. If they were trivialized in the postcolonial wave because they refuse commending the moment as novel vis a vis challenges to disciplinary and institutional coloniality, they are muted again ironically in the ascendance of decolonial discourse when the current decolonial writing lumps postcolonial and decolonial together as if it is by large continuum and commensurable in understanding to what extent coloniality is necessarily antagonistic. Although critique of Anthropocene is understood as paradigmatic departure of current decolonial studies from postcolonial studies, whether settler colonialism or racial capitalism as oppressive, extracting, and excluding structure and institution cannot be disavowed as it was dismissed as simplistic or oppositional in poststructural and postcolonial framework. This interrogation would intervene in the way in which academic enterprises, such as Anglophone anthropology, are persistent and reproducing coloniality through generating new discursive terrain even in its appearance of critical edges. Presenter: JESOOK SONG (University of Toronto, Department of Anthropology)

5-125

Anthropology in and of a changing global health

8:00 AM - 9:45 AM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Daniel Krugman (Brown University, Department of Anthropology)

CHAIR:

Svea Closser (Johns Hopkins University), Daniel Krugman (Brown University, Department of Anthropology)

PRESENTER:

Katerini Storeng, Raphael Frankfurter, Amber Wutich (Arizona State University), Alexandra Brewis (Arizona State University), Peter Locke (Northwestern University, Department of Anthropology)

DISCUSSANT:

Lauren Carruth (American University)

DESCRIPTION:

Global public health is in a paradoxical moment. While attention and funding to the field are increasing in the wake of the COVID-19 pandemic, there is also a push for transformation from many practitioners and researchers inside the field. Articles pushing different visions of 'decolonization' are published seemingly weekly. Yearly reports highlighting inequities of powerful boards, funding allocations, and authorship are proliferating. Scholars and practitioners from the nations in which global health happens are increasingly bringing their experiences of racism, xenophobia, and discrimination to light. In the midst of all this are us: medical anthropologists—who have a long, complicated, entangled history with the field of global health. Anthropologists have, for the better part of a century, included anthropologists of global health theorizing the field and its practices, as well as a large number of anthropologists working in or with global health. From teaching undergraduates in the huge proliferation of global health programs, to teaching in international health departments in schools of public health, to working in agencies from USAID to community-based NGOs, the lines between being anthropologists of, in, and with global health are perhaps becoming increasingly blurred. In these critical moment for global health this panel asks does the 'in' vs. 'of' distinction have current relevance? Where is it helpful, and where

is it not? Are there ways of being in and of that may make space for both critical and collaborative relationships? Or, is that just a way of letting ourselves be coopted? Undoubtedly, medical anthropologists have a lot to offer global public health, especially in these conversations of globality, social change, and power. However, what is our place in these conversations? Is the common framing in anthropology—that we in anthropology have the world system figured out better than people in public health do—accurate? What does this epistemological space open up for us, and what does it foreclose? Does global public health have anything to offer anthropology? Are there ways in which the current reckonings in both anthropology and global public health can speak to each other? This panel discussion seeks to explore these questions by bringing together medical anthropologists working inside, outside, and between global health. Discussants will contemplate what our role in global health is and what it could be. Sharing stories and experiences from field sites, inside the walls of global health departments and organizations, and the anthropological spaces where global health is discussed, we will unpack how we can conceptualize what it means to be an anthropologist in/of global health.

CHAIR:

Ivan Small (University of Houston, Department of Comparative Cultural Studies)

PRESENTER:

Yew Foong Hui, Ivan Small (University of Houston, Department of Comparative Cultural Studies), Doreen Lee (Northeastern University, Department of Sociology & Anthropology), Erik Harms (Yale University, Department of Anthropology)

DISCUSSANT:

Andrew Willford

DESCRIPTION:

Asia in the 21st century draws our attention as a

dynamic region where capital and migration flows have been escalating at astounding speeds, affecting residents in transformative ways, and providing compelling evidence of how globalization is now reorienting itself to and emanating from the East and South, rather than the West and North. This panel focuses on the particularities of some of those mobile flows to, from, and within Asia, ethnographically and analytically tracking the generative potential of circulation in Asia's unanticipated futures and geographical linkages. Considering a range of case studies including: contemplations of and desires for social mobility among Sri Lankan clergy and their followers connecting across global Catholic networks, the vicissitudes of interactions with strangers and things through consumption in Jakarta, the spectral temporalities of memory and return among migrants in West Kalimantan, the conceptualization of automobility regimes in Singapore labs and their subsequent implementation on Vietnamese city streets, and the reorientation of urban centers through urban infrastructural development in Ho Chi Minh City, this panel considers how affective dimensions of mobility and social transformation are ethnographically encountered in diverse sites across contemporary Asia. In doing so, we consider how the implementation and expansion of mobility involves infrastructural as well as transcultural processes, phenomena which are more effectively analyzed by attending to how movement(s) become embedded, linked and articulated.

Diasporic Desires: Tarrying with Mobility across Time and Generations: This paper deals not with desire for a real or imagined homeland, or for a cultural community embedded in a nation-state or straddling nation-states. Instead, it focuses on how historic moments of dispersion or mobility constitute diasporic subjects across time and generations, and in turn animate their imagination, narratives and peripatetic ventures. The paper will highlight three encounters with diasporic subjects, all related to West Kalimantan in Indonesia but representing different strands in historical subjectivity. The first is an Indonesian Chinese displaced from West Kalimantan and “repatriated” to China when Indonesia introduced discriminatory measures against its Chinese minority in 1960. In his twilight years, he engaged with his diasporic yearnings through writing – largely biographical essays and vignettes of cultural life in West Kalimantan. The second is the daughter of a West Kalimantan Chinese woman who married a Taiwanese man. Capitalizing on provisions made by Taiwan’s New Southbound Policy, she had visited West Kalimantan to seek her maternal roots. The third is the granddaughter

of a West Kalimantan lady “repatriated” to China in the 1960s. After the death of her grandmother, she left China and embarked on a journey to find the Indonesia that her grandmother left, living temporarily in different parts of Indonesia over the years. These diasporic subjects (which are not isolated cases) and their experiences demonstrate how moments of dispersion/mobility in their cultural memory persist in shaping their subjectivity and propel them onto trajectories both predictable and unpredictable, generating an economy of desires straddling both space and time. Presenter: Yew Foong Hui

Modeling the Megacity: Projecting Urban Mobility Futures in Southeast Asia: This paper examines emerging infrastructures and markets for automobiles in Southeast Asia, and how publics and transportation experts are anticipating them in the wake of the ASEAN Free Trade Area and other trade agreements and policies that are opening markets and reshaping urban and peri-urban mobility landscapes and everyday living patterns in emerging Southeast Asian megacities. Drawing on research with potential and current automobile consumers in Vietnam, as well as those who are shaping auto-mobility regimes across Southeast Asia including specialists in marketing, design, engineering, manufacturing, and planning, the paper considers the impending socioeconomic impacts of unmitigated automobile consumption and usage. It focuses on automobility practices and relations in Ho Chi Minh City and Danang, as well as regional and global conceptual design and engineering labs in research and development hubs such as Singapore that are mapping the future of mobility. Presenter: Ivan Small (University of Houston, Department of Comparative Cultural Studies)

Entering the Stream of Circulation in Jakarta: What does it mean to pass things on and put things into circulation in Jakarta? This paper examines the stream of circulation in Jakarta, where everyday practices of gift, deception, and delivery intersect and constitute the driving force for an economy that depends upon circulation, even as these practices generate ethical tensions and risks. The cultural norms around giving and receiving have become the site of sociotechnical expansion of financial logics and technologies, while informal forms of giving continue apace. Given the convenience of delivery services, wire transfers, and e-commerce, residents of Jakarta give over a portion of their lives to send and receive, to manage deliveries, and to place their burdens upon strangers. The delivery man becomes the new social critic whose social media

stories display class consciousness and heteronormative ideas about how strangers ought to interact in the city; while savvy consumers display strong ideas about rights and entitlements that map urban citizenship onto consumer rights. In this paper, I present ethnographic examples of how circulation has become the dominant social force and site of concern and performance for Jakarta's residents, ranging from forms of deception where suspect objects are put into circulation to ecstatic moments of feeling part of the flow. Presenter: Doreen Lee (Northeastern University, Department of Sociology & Anthropology)

Crossing the Saigon River: New Mobilities in a City Unbound: For most of Saigon's history, the Saigon River marked the city's boundary. In recent years, starting around 2008, a series of new bridges and tunnels, themselves made possible by economic incentives of rising real estate values, has shifted the direction of urban development and dramatically shifted the city's center of gravity. The river has not moved, but now cuts through the geographical center of the realigned city. Now that the city has jumped the river, the boundaries of the city no longer have a definable limit, and former edges are increasingly seen as centers of the city. This paper follows the movement of people across these new bridges, through these new tunnels and within these newly centered former edges to chart the intersection of social, political and material processes through which the city has jumped the river, and to attend to its unexpected consequences. I focus theoretical attention on the recursive dynamics playing out among people, their mobility patterns, large infrastructure projects, urban growth, real estate speculation, urban planning, and modes of transport. While I resist the call to say that bridges have agency, there is plenty of empirical evidence to show that the processes set in motion by their construction have transcended the intentions of the agents and agencies that built them. Presenter: Erik Harms (Yale University, Department of Anthropology)

ORGANIZER:

Johann Sander Puustusmaa

CHAIR:

Luisa Isidro Herrera (York University), Nicole Marchesseau

PRESENTER:

Alexandrine Boudreault-Fournier (University of Victoria, Department of Anthropology), Fiona Murphy, Anand Pandian (Johns Hopkins University, Department of Anthropology)

DISCUSSANT:

Columba Gonzalez-Duarte (University of Toronto, Department of Anthropology)

DESCRIPTION:

This roundtable considers how creative or multimodal spheres of inquiry might act as venues for speculation and attunement enduringly or tenuously tethered to anthropology. Discussions will centre around how novel projects might allow for anthropology's adaptability during transitional times and the role of the academy in supporting such projects. Panelists will be invited to reflect upon affiliations, methods, and collaborations, and to share projects with which they have been involved. Taking participants' creative projects as a point of departure, we question whether precarity in the form of such projects might be considered as conditional, extraneous, or prerequisite ingredients to participation in anthropological milieus. Panelists are also encouraged to reflect upon how such projects might act as springboards for early career anthropologists transitioning into spaces within and beyond academe, and within and beyond anthropology. Roundtable participants will offer insights from diverse experiences. Discussions of experience will involve exploring scales and depths of collaboration and engagement through multimodality, and the creative affordances made possible through the examination of multispecies mobilities and activism within social science research. Geographical foci shift between specific sites such as Beirut and Bangalore, along with distinct locations in Europe, North and South America, and spaces of intersection.

Expanding Politics and Art: Panel in Honor of Dara Culhane (Part I)

8:00 AM - 9:45 AM TMCC - Hall G - MI

Oral Presentation Session

REVIEWED BY:

Society for Humanistic Anthropology

ORGANIZER:

Petra Rethmann (McMaster University, Department of Anthropology)

CHAIR:

Petra Rethmann (McMaster University, Department of Anthropology), Denielle Elliott (York University)

PRESENTER:

Petra Rethmann (McMaster University, Department of Anthropology), Denielle Elliott (York University), Cristina Moretti, Stacy Leigh Pigg (Simon Fraser University), Magdalena Kazubowski-Houston (York University)

DISCUSSANT:

Dara Culhane (Simon Fraser University)

DESCRIPTION:

This panel celebrates the extraordinary life and work of Dara Culhane. In gathering students and scholars who have either collaborated with Dara or worked under her guidance, it acknowledges, traces, and marks the ways in which Dara's analytical and artistic commitments and ideas have shaped scholarly work and the life of others. Instead of simply returning to Dara's work, presentations may be organized as dialogue, performance, theatre, games, films, lab work, and so on. The goal is to provide exciting and rich insights into Dara's work, as well as reveal the fun and wonders it contains. As one of the co-founders and co-curators of the Center for Imaginative Ethnography, a consummate script writer and performer, dramatic storyteller and wonderful supporter of all things experimental, Dara's work evinces a long arc of genre-busting scholarship and creative performances. While her early research has concentrated on historical and contemporary relations between Indigenous peoples and the Canadian Nation State, as well as the politics of Indigenous women's health, Dara moved soon into urban and artful anthropology. In drawing creatively on collaborative, imaginative, and artistic research methodologies, Dara's research and work has forged new paths in anthropology and beyond, and brought forth a new generation of scholars deeply immersed in politics and art. An exquisite attention to questions of writing and representation, the asymmetries of power, and rigorous commitment to the ethics of self-awareness and reflection mark all of Dara's work, and presentations in this panel will echo these commitments.

The Radically of Critique and the Promise of Form: A Letter to Dara: The idea for this letter emerged when in November 2022 in Seattle Dara and I participated in an

AAA panel on memoir, auto-fiction, and auto-biography. On that panel Dara read - really: verbally performed - the way affect articulated itself in the letters that between 1922 and 1939 had passed between the Irish Sheehy sisters Hanna and Margaret, and the way she had been affected by these letters herself. In the early 1920s Margaret, who was also Dara's grandmother, took up with her godson, the poet Michael Casey, and was sent by her family - and I paraphrase here - into Montreal exile. In listening to Dara I was struck by the way in which her own auto-ethnography constituted not only an exquisite example of opening up more habitual and straightforward forms of ethnographic writing, but also a verbal trace of ancestors who loomed so large that they had become spectral presences or ghosts. Inspired by the hybrid, dialogic, and intimate letter form, I do not want to think about but with Dara's work about the relationship between representation and the content of intellectual, political, and artistic thinking. This also seems important to me as in these days many of us feel more and more provoked by the inert cynicism of institutional authority towards powerful modes of dissenting or nonconforming intellectual and artistic activity. In drawing on performative readings by Dara and her writing, I enter in particular into a dialogue about critique and the relation between form, anthropology, and historical-biographical-generational knowledge. Presenter: Petra Rethmann (McMaster University, Department of Anthropology)

Dara's Voice: In March 1999 I received an acceptance letter inviting me to join the PhD program in Anthropology at Simon Fraser University from the then graduate director, Dr. Dara Culhane. Little did I know that letter would signify the beginning of a lifelong friendship and that she would become such a powerful force as mentor and collaborator in my life. As time went on, I began to think of Dara as one of the little voices in my mind, my very own Jiminy Cricket, a personified conscience. In difficult research and life situations I would ask myself - what would Dara do, or what would Dara say? Sometimes she appeared as the Angel on my shoulder, but other times, a mischievous and satirical Devil. In this performative ethnographic skit, drawing on field notes, conversations, old documents, photographs and memories, I reflect on Dara's (often humorous) advice, her role in shaping my scholarship and approach to pedagogy, and her incredible generosity as mentor and friend. Presenter: Denielle Elliott (York University)

Walking with Sounds: In this talk I combine ethnographic moments from a sensorial walking tour in

Metro Vancouver with fictionalized encounters, to reflect on the generative role of surprises in fieldwork. Following Dara Culhane's engagement with the sensorial and her invitations to take the surprising and puzzling as points of departures for critical conversations, I discuss how interruptions, detours, and the unexplained can shape and contribute to sensory anthropology practices. My analysis draws from experimental ethnography walks with Dara Culhane and from Haraway's (2016) ideas of cat cradling as models for thinking, writing, and relating. Presenter: Cristina Moretti

Room For It: Imaginative Spaces Opened by Dara Culhane: We often lean on the word 'experimental' to characterize certain forms of anthropological practice or expression. This characterization, however, tethers these forms to a norm or a standard, with the risk that experimental work replicates normative anthropological practices by inviting us to recognize the 'experimental' mainly as novelty. Dara Culhane has enlivened an alternative label - 'imaginative ethnography' - thus opening doors to possibilities that are 'interesting' not simply for their unique creativity. Culhane models an understanding of ethnography less as research 'into' a thing but as a relational, expressive technique whose purpose is to open and link spaces of interpretive praxis. I present my understanding, formed over decades of conversations, of one aspect of Culhane's vision of an imaginative ethnography. Placing her innovations in relation to disciplinary attention to reflexivity, intersubjectivity, and colonial relations of power production, I articulate in my own vocabulary what Dara showed me over the years: how to imagine ethnographic praxis as an adeptly artful dynamic play among represented-represented-audience. Culhane's sense of ethnographic artfulness casts ethnography as a praxis that moves in the 'among' and 'between-ness' of everyone's imaginations of themselves and their worlds. Learning from Dara, I stepped through the door she opened for me. This presentation pays tribute to Dara Culhane's intellectual influence via a form she gave me the courage to try out: drawing. Presenter: Stacy Leigh Pigg (Simon Fraser University)

Juggling Power in an Ivory Tower: In this short play, Juggling Power in an Ivory Tower, I recall and re-enact highlights from my twenty-five-year collaboration with Dara, my PhD supervisor, colleague, and friend. Act I, mid-2000s, a mild, sunny day: Dara and I do a cold reading of the backstage drama of my dissertation project 'Juggling Power' - a collaborative performance ethnography in Poland. Act II, mid-2000s, a hot, humid

day: Dara and I juggle power during my dissertation defence, a melodrama with a cast composed of interdisciplinary scholars who are not ethnographers. Act III, early 2020s, a blizzard rages: I'm a professor and educator, and Dara's critical insights, generosity, and care guide me as I perform in the tragicomedy of the neoliberal academy - a perilous, endless storm of competition, hyper productivity, and deadlines. Presenter: Magdalena Kazubowski-Houston (York University)

Feminist Storytelling: Body Politics, Art and Imagining Otherwise

8:00 AM - 9:45 AM TMCC - 606

Oral Presentation Session

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Barbara Curda

PRESENTER:

Rubayat Jesmin (SUNY, Binghamton University), Julia Fernandez, Barbara Curda, Juliana Friend

DESCRIPTION:

Feminist storytelling is a critical site of knowledge production and interventional methodology much needed to advance anthropological inquiry. This panel explores unique approaches to the study of human rights and refugees, digital worlds, pleasure and asylum work, sex work and privacy narratives, and dance and spatial stories. The papers apply feminist ideas of narrative making to understand notions of body politics and movement in physical and/or digital spaces and to understand a larger feminist project of corporeality, embodiment, and reimagination of human freedom in the world.

Lives of Female Rohingya Refugees: Intersectionality is the name of the game: The Rohingyas are one of the most persecuted populations in the world. For decades, many of them have fled to neighboring countries due to the atrocity of the Myanmar authorities. Most Rohingya refugees have chosen Bangladesh and Malaysia as host countries because of geographical and religious proximity. Despite their socio-economic-political differences, both these countries treat these Rohingya refugees almost in the same manner. Neither of the two countries is a signatory of the international treaties relating to the refugees nor do they officially recognize

Rohingyas as refugees. Consequently, Rohingya refugees are deprived of many basic human rights alongside their rights as refugees in Bangladesh and Malaysia. They are now in protracted situations marred by overcrowded habitation, food insecurity, deficient water and sanitation provisions, lack of education and healthcare facilities, and poverty resulting from insufficient livelihoods. These are devoid of the provisions stipulated in international human rights and refugee rights regimes. This study is a part of a doctoral dissertation to understand the Rohingya refugees' on-the-ground conditions in Bangladesh and Malaysia. The secondary information-based findings reveal that these disadvantaged people had lived one type of unsettling life in their homeland, Myanmar, and started to live another type of unsettling life in periphery host countries, especially where they do not have official recognition as refugees. It is probably the next generation of these refugees who manage to find a degree of stability in life after the first generation is resettled in a developed country such as the USA or Canada. Presenter: Rubayat Jesmin (SUNY, Binghamton University)

Making life possible: imagination and pleasure in the British asylum system: To mother in harmful and vulnerabilizing environments often requires imaginative efforts to break down the limits of ordinary experience; to (re)create alternate realities where the lives that are made, gestated, and raised can thrive. This paper draws on fourteen months of ethnographic research on the experiences of mothers navigating the British asylum system to explore how life is made, sustained, and enjoyed through imaginative acts of (re)creating other worlds, in which decisions and experiences based on desire and joy become possible as well. My research revealed how mothering amidst suffering and pain, subjected to forms of state violence and control, allows space for experiences of pleasure and joy that not only animate the daily lives of mothers, but that make possible as well the making and sustainment of new ones. Dwelling in pleasure -as a common precondition for making life possible- often demands an imaginative leap that allows people to (re)create that what is not materially present, urging us to rethink imagination as a powerful site to explore how people transition through dark times and how they continue sustaining life beyond and despite the impacts of violence and harm. In this paper, I argue that as a medium for the unthinkable, imagining holds a productive and subversive capacity that enables people to discontinue the afterlives of violence and trauma, working with a productive tension between shielding them against the force of a harsh

reality and inviting them to inhabit the world in ways that remain otherwise hardly accessible. To transit across the experience of living in asylum accommodation, mothers forge links that traverse treasured pasts and uncertain futures, mobilizing memories, fantasies, and anticipations that enliven their present circumstances. Their experiences prompt us to ask, what new worlds and ways of inhabiting them might looking at pleasure illuminate? What are the desires and expectations for alternate realities mother's imaginative stances convey? Answering those questions demands being open to exploring the ways in which the pleasurable emerges and takes up space in particular ways in the lives of people that endure the impacts of asylum politics. Putting these ideas at the centre of the stage, I argue, invites us to move towards an anthropology of mothering in the asylum system that expands beyond examinations of violence and fear to the pleasurable acts that make life possible. In that context, imagining "the otherwise", stretching the limits of what is deemed possible and breaking down the boundaries of the confined worlds they are forced to inhabit are a means to give voice to what otherwise remains outside the margins of the precarious possibilities of the asylum system. Imagination, this paper argues, enables to dwell the -often unspoken- pleasure that makes life possible as we transit into new worlds. Presenter: Julia Fernandez

Corporeal practice in urban transitions: The dance form Odissi is considered to be the classical dance of the Indian State Odisha. This dance genre emerged in relation to nationalism around the Indian Independence, and has played an important role in post Independence India as a performance genre for urban stages claiming a high cultural status. I am interrogating the developments of the practice in the present scenario. India has undergone a major economical growth in the past two decades. Odissi is an urban phenomenon, predominantly practised in the capital city of the State Odisha, Bhubaneswar. This town is undergoing a galloping urban growth. Additionally, the technological revolution has modified the ways in which people communicate. So while Odissi is seen as 'traditional', its practitioners constantly adapt to many rapid changes. After the nineteen fifties, a genealogy had emerged, that highlighted male practitioners from rural backgrounds as masters of the dance, female practitioners grown up in the city as interpreters. As generations move by, how is this relational divide evolving? What are, today, the stakes in individual careers? What are the expectations of those who join the practices? A point that I wish to pay particular

attention to is how the transmission of the dance is evolving along with the manifold developments in society. Previous generations highlighted dance practice as a life choice, and valued a vernacular transmission model based on a strong bond between a teacher and a learner. In today's situation, teaching models seem more diversified. How are values evolving? What changes in the practices? And how do practitioners view the know-how of the dance in the changing scenario? I propose to look at operational chains and their effect on the way the corporeal practices evolve along with changes in the relations between learners and teachers. How far do the dynamics that emerge reproduce previous constellations of power relations? Presenter: Barbara Curda

'Suturalante:’ Senegalese Sex Workers Reimagine Digital Privacy as Mutual Aid: In the early stages of the COVID-19 pandemic, many sex workers sought to transition from in-person sex work to virtual sex work, such as video calls with clients. In Dakar, Senegal, this intensified fears of clients recording and posting intimate videos online without sex workers' consent, causing the potential for outing. Senegalese women engaging in sex work articulated the stakes of online outing in terms of sutura ('discretion'). A central Senegalese ethic, sutura predicates honor and gendered citizenship on one's perceived ability to shield aspects of life deemed 'intimate' from public view. Indeed, sex working communities are disproportionately impacted by digital technology-facilitated violence. This includes image-based sexual abuse, the non-consensual recording or circulation of intimate images. Activists engaged in sex work have also provided crucial expertise to technologists, asserting sexual autonomy as a guiding principle for tech policy and digital privacy protection. This paper amplifies Senegalese sex workers' novel conceptual frameworks for digital privacy. Challenging an intransigent focus on individual responsibility within data privacy policy, their frameworks may be better equipped to confront systemic inequities. In turn, they may open alternative digital futures. In a Participatory Action Research (PAR) process, Dakar-based sex workers identified a goal of concrete community benefit: creating a digital security toolkit for peers. We used digital security resources assembled by English-speaking sex workers as points of departure. While brainstorming content for toolkit PowerPoint slides, many participants agreed that the phrase 'protection of private life' should be accompanied by the Wolof term sutura ('discretion'). While the ethic can be weaponized to further discriminate against sexually stigmatized communities, toolkit creators highlighted sutura's other valence:

community protection. Sutura has historically been invoked to mobilize communities to shield someone from non-consensual exposure or violence. In the name of suturalante ('providing discretion to each other'), participants recommended asking sex workers to scan social media websites for non-consensually posted photos of sex-working peers, assist those peers in reporting abuse, and emotionally support peers struggling with the uncertainties of digital safety. Beyond the toolkit, they brainstormed advocacy campaigns that would call on tech companies like Meta to enact suturalante by embedding a commitment to consent into their platforms. Toolkit creators implicate tech companies in a network of mutual obligation. Participants' formulation of sutura displaces the centrality of individual awareness and responsibility that undergirds much of contemporary data privacy legislation. As they navigate transition between different modalities of sex work, toolkit creators reimagine digital privacy as mutual aid and community protection. Sutura provides a conceptual resource for promoting digital privacy and consent as sexual justice imperatives. Presenter: Juliana Friend

For and Beyond Sea-Level Theory: Transitions for a Future Planet

8:00 AM - 9:45 AM TMCC - 717 A

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Stefan Helmreich (Massachusetts Institute of Technology, Department of Anthropology)

CHAIR:

Sarah Vaughn (University of California, Berkeley)

PRESENTER:

Ryan Anderson (Santa Clara University), Camelia Dewan (University of Oslo, Department of Social Anthropology), Stefan Helmreich (Massachusetts Institute of Technology, Department of Anthropology), Sarah Vaughn (University of California, Berkeley), Stephanie Ratte

DISCUSSANT:

Ryo Morimoto (Princeton University, Department of Anthropology)

DESCRIPTION:

Paul Gilroy argues that the present time of Earthly crisis

calls for 'sea level theory,' a rejoinder to planetary theories of the Anthropocene that would seek to grasp matters of global concern as if from outer space. This is a salutary call, a demand for local, embodied, anthropological specificity. It can be extended, too, into a commitment that might draw attention to sea level rise as well as to the always oscillating and regionally uneven character of that moving line. And it may help focus attention on the multiple effects of sea level as an abstraction and object of intervention. Sea level originates as 'a metric used as a reference plane from which to measure terrestrial elevation, aerial altitude and ocean depth, all of which are entangled with nation, territory and borders' (Sammler 2020: 606). In this way, sea level emerges from histories of European maritime colonialism, with Liverpool, Amsterdam, and Venice key sites for the making of the form. But sea level also exceeds these origins - and also enlists waterscapes such as rivers, creeks, and swamps. This panel asks: which aspects of sea level retain their epistemically imperial framing origins and which zigzag against these, and how? In what ways do rising sea levels help us (re)imagine relations between land, sea, and air? How do visions of sea level rise compel thinking about present and future ecopolitical transitions on Earth? Papers on this panel experiment with thinking from and about sea level in distinct sites - from California to Bangladesh to the Netherlands to Togo to Hawai'i to Bermuda.

Unstable Beach Anthropologies: Lines in the Sand and Coastlines in the Meantime: This paper is a reflection on the unstable histories of beaches as they contrast with various (ongoing) human attempts to hold them in place, whether materially, symbolically, or ideologically. Beginning with a beach that collapsed in Baja California Sur more than a decade ago, and ending with recent coastal disasters that hit Santa Cruz County, California in January 2023, this paper traces the tensions between how coastlines are conceptualized (via maps, tidal gauges, and mean high water lines) and the day-to-day, shifting, dynamic processes that shape life along the coast. Such tensions are made more visible, the paper argues, during dramatic events that tear down piers, undermine seawalls, and disrupt humanity's various lines in the sand. Yet those moments give way, over time, to renewed hopes of and expectations for coastal stability (which are fueled by various competing politics, interests, and desires). And so the process begins again. Such patterns help construct coastlines as relatively stable entities that are disrupted by periodic, anomalous events, rather than as ongoing dynamic systems that experience change at varying rates.

Grounded in long-term coastal fieldwork and broader anthropological perspectives on human-coastal relations, this paper highlights the need for more flexible, dynamic conceptualizations of human-coastal relations that extend beyond the dichotomies of fixity and disruption that tend to dominate coastal management paradigms. It is also a meditation on the kinds of coastal environments—and risks—that people live with in the meantime as such patterns and politics continue to play out. Presenter: Ryan Anderson (Santa Clara University)

Sedimented Deltas and Dutch-style Flood-Protection Embankments: Complicating Sea-level Theory: This paper complicates sea-level theory through its attention to local understandings of floods in the sediment-rich Bengal Delta. The policy theory of climate adaptation projects in Bangladesh's development industry assumes that (1) sea levels will rise and cyclones will increase in frequency and intensity; (2) this will lead to devastating floods and salinity in Bangladesh; and (3) the best way to protect Bangladesh is to build larger 'flood-protection' embankments (World Bank 2012). However, this climate reductive translation of embankments as climate adaptation infrastructure is extremely problematic as this paper will show. Drawing on archival research and ethnographic fieldwork with development professionals, scientists, engineers and rural people living in Bangladesh's southwest coastal region – deemed by donors as one of the most climate vulnerable places in the world - I argue that sea level as an abstraction and an object of intervention ignores local understandings of different forms of floods borsha (annual monsoon rains), bonna (irregular destructive floods in the wake of cyclones, tidal surges, and storms), and jalabaddho (waterlogging, drainage congestion). Higher and wider flood-protection embankments prevent beneficial borsha floods that deposit sediment and raises land levels annually. Instead, the silt deposits outside embanked floodplains, and due to differences in elevation results in drainage problems and causes waterlogging, or what is locally referred to as jalabaddho floods. Embankments as a solution against rising sea levels in Bangladesh instead obstruct the delta's innate mechanisms of raising land levels through sediment-rich monsoon inundations that could help floodplains keep pace with rising sea levels. Presenter: Camelia Dewan (University of Oslo, Department of Social Anthropology)

Waves against Sea Level: The story of climate-activated sea level rise is one that is being written, in significant part, by ocean waves and their arrival to world shores —

shores eroding, shifting, increasingly armored. Sea level as a reference plane from which to calculate land and air elevation as well as ocean depth originates as a metric bound up with European and American national projects of extending and standardizing seafaring networks. It is a now globally distributed measure, one enlisted in delineating territories and borders, present and future. Drawing on ethnographic fieldwork with coastal engineers and wave scientists in the Netherlands (with vignettes, too, from California, Japan, Bangladesh, and Australia) this paper reports on how sea level is installed in the material culture of physical oceanography: in data-gathering wave buoys, in computer simulation, and more. In this tale, ocean waves emerge as modulations that both depart from and signal changes in sea level. More important, as avatars of sociogenic climate change (much like algal blooms or the faltering Gulf Stream), waves become kinds of inhuman agents with all-too-human — or all-too-Capitalocene-Plantationocene-Militariocene — origins. This presentation draws from the author's 2023 *A Book of Waves* to narrate the ongoing breaking and becoming non-linear of sea level politics, to deliver an anthropology of ocean waves. Presenter: Stefan Helmreich (Massachusetts Institute of Technology, Department of Anthropology)

Surfaces: A Photo Essay of Shorelines and Future World-Making in Guyana: Surviving the climate crisis requires care for shorelines. Anthropology has offered much scholarship on the infrastructural interventions that make the boundaries between land and water imaginable. Attention to shorelines becomes an important entry point for understanding the conflicting geopolitics of the climate crisis and its related conservation efforts. More than a quantitative measure of change, shorelines are cultural artifacts. A specific insistence of lines that converge at multiple points, shorelines draw together varied movements, gestures, and events. And yet, shorelines very rarely conform to one kind of surface, whether of materials, substances, environments, or bodies. Perhaps some of the more well-known innovators and excavators of shorelines are engineers constructing sea defenses. Building on Tim Ingold's (2016) insight that lines are a platform for generating meaning about surfaces, this paper uses photography to chart the cultural meanings of lines that emerge from engineers' efforts to adapt sea defenses to rising sea levels and erosion in Guyana. Throughout this paper I ask: what if we treated shorelines as a history of surfaces? My proposition is that, if we did, then the care for shorelines may amount to something other than a 'clash of worldviews.' Instead, we might begin to

encounter shorelines as sites of creativity and future world-making across differences. Presenter: Sarah Vaughn (University of California, Berkeley)

Delay and Decay: Climate-related flooding and questions of infrastructural maintenance in Honolulu: This paper examines a flood risk mitigation project that has long lingered along the watery corridors of the dense urban spaces of Hawai'i's capital. Prior instantiations of the project called upon the scenario of a catastrophic storm, following a congressional mandate to direct the force of its planning around the impacts of a 100-year flood. Along with interrogation of the stability of these expert projections, and concern that lived experience failed to corroborate the salience of such a risk, some community members raised a different set of temporal and material questions about the proposed concrete walls and detention basins: whether such structures would be amply maintained. Based on fieldwork in Honolulu, this paper asks how the anticipation of bureaucratic delay and infrastructural decay complicates well-circulating projections of sea level rise and coastal inundation along O'ahu's south shore. I examine how maintenance has emerged as a productive challenge to catastrophe-oriented flood projects that engage a particular sense of time and possibility—the distant and unlikely—when, in the midst of a coastal urban landscape felt at times to be crumbling, some worries here instead focus on the state's ability to maintain this future infrastructure in the near and everyday. Finally, in exploring the social life of a state project aimed at anticipating a catastrophe seemingly without equivalent past referent—in other words, pre- rather than post-disaster—this paper investigates how history and settler coloniality shape understandings of concretized landscapes with material-temporal trajectories that now seem to resist change. Presenter: Stephanie Ratte

[Higher Education Experiences with Transitions](#)

8:00 AM - 9:45 AM TMCC - 605

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Fatima Raja

PRESENTER:

Corinne Kentor ,Fatima Raja ,Mitra Emad

DESCRIPTION:

This oral presentation focuses on higher education and engages with experiences and spaces of the university lecture, being a first-generation student, cultivating belonging, especially for Muslim students, and finally, considering how higher education institutions might incorporate somatic resilience as a trauma-informed pedagogy. The first paper, *Rediscovering Lectures*, analyzes the college lecture as a social and communicative space across time that shapes faculty teaching, the academic socialization of students, and the student learning in lectures. The second paper, *What Does it Mean to Be First Gen?*, focuses on how older and younger siblings support one another through the transition from high school to higher education, investigating how they utilize their own institutional experiences to help their relatives avoid common pitfalls in the matriculation process. The author proposes an analytical framework that takes care for loved ones as a central component of how students both experience and make meaning out of the transition to higher education. In paper three, *Understanding the Relationship of the Politics of Belonging and Hypervisibility for Muslim American College Students*, the author explores Muslim American college students' experiences at two public universities in California with the student organization, the Muslim Student Association, a key site for understanding Muslim students' perceptions of belongingness within the university context. The author highlights how the boundaries of belonging are re-enacted, accepted, challenged, or rejected through inclusionary and exclusionary practices in everyday life. The last paper, *Transitions in Our Professional Identities: A Cultural Anthropologist, Yoga Therapist, and Associate Dean Reflects on Somatic Resilience in Higher Education*, focuses on college students' 'trauma bodies' and the need to integrate ways to cultivate somatic, embodied resilience in the higher education context.

What Does it Mean to Be First Gen? Using a Transgenerational Lens to Understand Care and College-Going: Significant research has been devoted to understanding how different student populations experience the transition from high school to higher education. However, most of this research adopts a deficit framework when it comes to discussion of first-generation college attendees, emphasizing the social, economic, and cultural capital prized by institutions of higher education, which they are seen to lack (see Alexander, 2019 and Abad, 2020 for a critique). To counter this tendency, scholars have highlighted the skillful ways students develop informal communication

networks to share ideas and insights with one another as they navigate the college process (Enriquez, 2011; Alvarez, 2010; Ceja, 2006; Kolluri, 2020). This paper furthers this research by focusing on such practices as they contribute to family caregiving arrangements. I draw on data collected as part of a 28 month of ethnographic study conducted in southern California to examine the comparative experiences of older and younger siblings who are considered first-generation college attendees. Methods for the research included participant observation, photo elicitation, text analysis, and interviews with over 100 students, family members, and educators involved in the college matriculation process. In the presentation, I focus on how older and younger siblings support one another through the transition from high school to higher education, investigating how they utilize their own institutional experiences to help their relatives avoid common pitfalls in the matriculation process. While two students might be viewed identically from an institutional perspective, I find that there are important differences among students whose close relatives (e.g., siblings, older cousins) have attended college and those who are literally the first in their families to pursue postsecondary education. When facing difficulties, older students continuously pointed to experiences advocating for relatives – particularly, younger siblings and cousins – as one of the primary reasons they planned to persist through to graduation. They thus made meaning of challenging experiences by redefining them as opportunities to support others, framing difficulties as fodder for sibling caretaking. These practices also had implications for younger siblings. Though younger siblings were less likely to experience significant missteps on their journeys into college, they continued to report stress and anxiety when they encountered roadblocks. Their feelings were augmented by the fact that, while they were treated as 'first gen' students in the context of college, they were considered privileged within the context of the family, heightening the pressure they felt to avoid the mistakes of older relatives. For younger siblings, care was therefore expressed through public success and private emotional resilience. In this paper, I investigate these two distinct but related experiences, proposing an analytical framework that takes care for loved ones as a central component of how students both experience and make meaning out of the transition to higher education. Drawing on literature devoted to care, work, and family, I move beyond the success-failure binary to investigate the affective dimensions of the high school to college transition. The paper thus connects multiple subfields within anthropology, considering educational

trajectories as a function of family and community-kin relations. Presenter: Corinne Kentor

Understanding the Relationship of the Politics of Belonging and Hypervisibility for Muslim American College Students: This study explores Muslim American college students' experiences with student organizations such as the Muslim Student Association (MSA). Student organizations are important sites of inquiry to understand their role in Muslim youth's perceptions of belonging within the university context. Using an interpretivist approach, I try to make sense of how the individuals' interpret and make meaning out of their interactions with various social phenomena (Cohen et al, 2007) by exploring how Muslim American youths' experiences contribute to their own transitioning understandings of belonging and citizenship. This project explores the perceptions of belonging of self-identified Muslim college students at two public universities in California. This project utilizes interviews, focus groups, and participant observation for data collection and analysis. I build on the theoretical contributions of belonging (Abu el Haj, 2015) and hypervisibility (Gordon, 1987) to provide the necessary analytical tools to understand Muslim American students' experiences of belonging at the university. Oftentimes Muslim Americans have non-white bodies or appearances that make them 'stand out' (Ahmed, 2006) and their Muslim identity is made hypervisible. This is especially apparent when exploring the experiences of female-identified participants who wear the hijab as we take into account their intersectional experiences of race, religion, and gender. This analytical lens also allows me to explore how Muslim American students describe the transitions in their own understandings of the politics of belonging and how the boundaries are re-enacted, accepted, challenged, or rejected through inclusionary and exclusionary practices in everyday life. Muslim American and immigrant youth are provided with nuanced and multifaceted perceptions of belonging and citizenship due to their everyday experiences of transnationalism which unsettle the normative societal perspectives. Their lived experiences come into contrast with the normative view of citizenship taught in their American schools where they are expected to adopt the ways of the American imaginary and become 'Americans' (Abu el Haj 2015). I use the concept of hypervisibility in conversation with belongingness to look at how students respond to moments where they feel hypervisible and seen through a negative lens that pushes them out of the parameters of belonging within certain spaces. Students claim that finding and participating in student organizations serve

as networks for advocacy and community building. These students share their experiences of reclaiming and reframing the tools and languages used against them to negotiate, resist, and reshape the politics of belonging and the definition of what it means to belong within the power structures that they encounter to demonstrate and advocate for what the Muslim American community needs to feel that they belong. As these students create their own social and academic spaces in response to their experiences of isolation, xenophobia, and alienation (Solarzano, Ceja, & Yosso, 2000), they enact agency as they intentionally identify and implement alternative spaces for themselves (Miron & Lauria, 1998). For some of the participants, organizations such as the MSA have become that alternative space for Muslim students to exert influence on their social surroundings to change the conditions of their higher education. Presenter: Fatima Raja

Transitions in Our Professional Identities: A Cultural Anthropologist, Yoga Therapist, and Associate Dean Reflects on Somatic Resilience in Higher Education: At this unique cultural and historical moment in higher education, what does it mean to be a cultural anthropologist who moves from research to practice in the realm of health and well-being? After over 1000 hours of training and certification in yoga therapy and somatic experiencing, this presenter explores and reflects on integrating opportunities for somatic resilience into one-on-one interactions with students and peers, into classrooms and pedagogy, and even into institutional and organizational structures. How can concepts like 'student success' benefit from cultural anthropology's acknowledgement and deep engagement with racialized, classed, and gendered trauma? How can we be responsive, informed, and compassionate in the moment we are aware of encountering our ourselves being 'trauma bodies' in our classrooms, field sites, and workplaces? This presentation argues that we can shape change through embodied resilience, a largely untapped resource in theory, pedagogy, and curricular structures in cultural anthropology. Presenter: Mitra Emad

Identity and Transition: Transformations in Method

8:00 AM - 9:45 AM TMCC - 716 B

Oral Presentation Session

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Alireza Gorgani Dorcheh

PRESENTER:

Joshua Liashenko (Chapman University), Alireza Gorgani Dorcheh, Mirtha Garcia (Arizona State University), Robert James Hellyer

DISCUSSANT:

William Hébert (Carleton University)

DESCRIPTION:

The papers on this panel explore multifarious dimensions of gender transition and trans identity, centering questions of transformation and creativity. Papers home in on critical methodological interventions with arguments for reflexive methods in understanding trans healthcare in Southern California as well as the importance of autoethnography in making sense of the position of queer migrant ethnographers. These are particularly queer forms of ethnography that go beyond just taking 'queer' as the object of study/analysis. Critical within these queer forms of study is immersion, as one paper makes clear in an ethnographic investigation of trans children and adolescents in three London schools. One paper on the panel also incorporates a non-ethnographic form of inquiry in order to investigate the role of media in perpetuating binary roles in Spain - by analyzing articles from 2000-2010 within local and regional publications. Together these papers allow in-depth discussion of how studying trans life and identity requires thinking creatively about tools of study.

Trans Healthcare Research in Anthropology: A Call for Malleable Methodologies: This work considers how the embrace of reflexivity, and the queer critique liberates ethnography from western and cisnormative ontologies in the production of anthropological knowledge (Adjepong 2019; Ghaziani and Brim 2019; Robinson 2022). Rooted in reflections on ethnographic research with healthcare providers of trans experience in Southern California from 2020 to 2021, I examine ethnography's malleability in work that challenges research design, the field site, and researcher positionality. The integration of narrative and storytelling highlight patterns in meaning-making among trans clinicians, while signaling the imperative to reimagine the research participant's relationship to practice and community. Studying the specific knowledges held by trans clinicians that are acquired from lived experience and clinical training call for a recalibration of how ethnographers engage in methodological framing and representation.

Anthropology's missteps in trans and gender expansive representation include ethnocartography (Weston 1993), the over-reliance of the 'third gender' concept (Towle and Morgan 2002), and a lack of reflexivity regarding the anthropologist's gender and subjectivity (Valentine 2007). Due anthropology contributing to the exoticizing and reductive depiction of cross-cultural gender diversity, an expanded interrogation of the ethnographer's positionality is needed, including from the perspective of study participants. Consideration and careful methodological reflection with communities we study allows for our ethnographic work to be reparative rather than extractive and serve as a site for collaborative knowledge production. This work offers insight based on my own research and application of queered methods to illuminate pathways for a more ethical and responsible methodological toolkit.
Presenter: Joshua Liashenko (Chapman University)

Poly transness: A performance autoethnography on ethnographer's identity: I am a queer migrant student of color. Through an autoethnographic performance, I will be digging into the notion of liminality and how it falls short in explaining different aspects of my identity as a student of performance and anthropology in Canada. The story of my autoethnographic performance is derived from and reflects on the ethnographic texts that introduced me to the two fields of anthropology and performance studies. It starts with Ruth Behar's *Translated Woman* to Victor Turner and others at the end of the twentieth century and moves toward recent research done by ethnographers that have barely been seen in the position of ethnographer in North America before. I will show how finding myself from and within these ethnographic research could contribute to discussions around the role of the ethnographer's identity in anthropological knowledge production.
Presenter: Alireza Gorgani Dorcheh

The perpetuation of binary roles within news media: How this affects the trans experience publicly?: As the topic of the trans experience has become more visibilized, it is important to understand how their lived experience is being portrayed and how it is compared to that of binary gender roles. Using archives from news publications that have been stored in Valencia, Spain, this paper will provide a framework of the binary trends and patterns that are perpetuated within articles and publications from 2000-2010. The articles range from local regional newspapers to national publications. Through the analysis of these articles, I will argue that even when there was an attempt by newspapers to share the trans experience in a subjective manner,

prevalent and hegemonic binary gendered societal roles have affected how the lives of trans individuals in Spain are depicted. Presenter: Mirtha Garcia (Arizona State University)

Belonging in Transition: Gender creativity, self-determination and narrating recent memory: Identity itself does not exist in a vacuum, but through the connected and contested relationships with others. For many whose identity and experiences conflict with hegemonic norms – whether gender binarism, heteronormativity, or another force – connection and support may instead be sought in forms of kinship that orient towards nonfamilial community. Close to kinship, friendship 'lies in between, and, perhaps because of this liminality, friendship is at once an ordinary, everyday relation and an intimacy too great for words' (Gilbert 2019: 419). For friendship to become community, the component of belonging is central. K.D. Hudson's (2015) four key 'dimensions' of community belonging amongst queer and queer-intersecting individuals range from 'being close' (i.e. the felt proximity to similar people), 'being read' (having a component of the self, such as your gender identity, perceived in some way by others, whether negatively or positively), 'being seen' (recognition and appreciation of the whole self), and 'being heard' (e.g. talking with peers about shared experiences). It is important to stress, however, that belonging is also a 'dynamic process' (Yuval-Davis 2006), which is both transient in its relation to others, but also its dependency on the individual self, something which is in constant transition. The shifting bounds and facets of 'self' are perhaps no more salient than for those for whom 'transitioning' is a conscious and constant experience. As part of a linguistic ethnographic project documenting the talk of children and adolescents in LGBTQ+ clubs in three London schools, the current case study focuses on the youngest cohort of 11-12 year-old trans and nonbinary students. The groups were recorded during their regular school club sessions and participants were invited to engage in ethnographically-informed, semi-structured interviews, during which students voluntarily disclosed their experiences of 'transitioning', or moving to identifying and expressing their gender as trans, nonbinary, or gender creative. These narratives of the recent past play a role in creating connection in the present, but also in the construction of queer futurity (e.g. Muñoz 2009). In the present, narratives of transition bring authenticity to the identity and body, both in constant renegotiation. However, these narratives also often indicate trace components of the individual's notion of future self and belonging. Crucially, the experiences of these students

occur within a context that follows the impact of Section 28, a decade and a half of institutional oppression through government legislation prohibiting the support of LGBTQ+ people in schools, repealed in 2003 in England and Wales. For these students, narrating their 'journey' through gender creativity, despite the 'tyranny of gendered spaces' (Doan 2010) also constructs amongst the trans and nonbinary students an 'affective solidarity', a solidarity born of 'the desire for transformation out in the experience of discomfort, and against the odds' (Hemmings 2012, p.158). Overt narratives of transition as recent memory speak not only to the power of memory and narrative to create community and belonging through 'being close', 'being read', 'being seen', and 'being heard', but also to the power of young trans and nonbinary students' narratives of belonging in transition in the 'queer transformative potentiality of schooling' (Coll et al. 2019). DISCUSSANT:

Nora Kenworthy

DESCRIPTION:

Submitter: Thandeka Dlamini-Simelane, Medical Health Humanities Africa - Eswatini Representative Abstract Healing the sick is about more than just diagnosing their illness. Our illnesses are not just biological conditions, but human ones. (Kleinman, 2017). Since its advent, medical anthropology has provided immense value to health professions and enriched the practice and

delivery of healthcare (Lindenbaum and Lock, 1993; Kaufman, 2005). Till now, medical anthropology's contributions to both the theory and application of health professions work have grown considerably in the Global north. However, anthropology has also frequently encountered frictions with institutions and practitioners of medicine, sometimes being sidelined by professional hierarchies, or facing outright opposition. Integrating medical anthropology into the training of health professionals has helped bridge these gaps and improve patient care. In the Global South, inter-professional challenges are experienced, while a number of factors limit the integration of anthropological insights into health professions training. Against a backdrop of often weak and grossly under-resourced health systems, typified by high patient volumes, few health workers, time, and space for integrating perspectives from medical anthropology into training and practice is particularly difficult. Professionals rarely have time or energy to consider issues beyond the clinic periphery that affect illness and disease, which can have further negative effects on patients' clinic experiences and outcomes. Furthermore, many countries in the Global south rely on overseas medical staff, or training their own students in overseas locations, which means that medical training is uprooted from the cultural contexts in which professionals ultimately practice. This roundtable brings together health professions educators and medical students from the Global South to bring light to the challenges of integrating medical anthropology into health training curricula. We ask, what injustices, therapeutic experiences and health outcomes ensue in the absence of insights and training from medical anthropology? How would the integration of medical anthropology perspectives into public health systems foster improved health outcomes for patients and further help to optimize the scarce resources of ailing public health systems? A more culturally appropriate and patient-centered model of care may enable more proactive and preventative approaches to disease and illness. This could result in fewer morbidities, less burden on health facilities, and ultimately less high-cost medical intervention. Given the budget constraints of health systems in the Global South, we consider the potential fiscal benefits as well as sociocultural benefits from integrating medical anthropology into care provision. This roundtable will ask medical students and health professionals' educators from the Global south to share experiential knowledge and value in applying medical anthropological insights and tools. Furthermore, educators will share practical steps and processes that helped in gaining breakthroughs to

embrace and support anthropological perspectives in medicinal and health professions training programs. Participants will share how to make medical anthropology training agendas more robust in settings where they are weak and face considerable resource obs

Mobilities and Migration: Between visibility and (in)visibility (1)

8:00 AM - 9:45 AM TMCC - Hall F

Oral Presentation Session

REVIEWED BY:

Society for Visual Anthropology

ORGANIZER:

Mari Korpela (Tampere University)

CHAIR:

Piotr Goldstein

PRESENTER:

Mari Korpela (Tampere University), JULIUS-CEZAR MACARIE (University College Cork), Piotr Goldstein, Paul Sperneac-Wolfer

DESCRIPTION:

Anthropologists have studied human mobilities for a long time and from various perspectives. Mobility can refer, among other things, to people's transnational movements or to local everyday mobilities. Some of these mobilities are visible, while others are not, and even when a certain mobility is visible, its particular aspects often remain hidden or unknown. Sometimes, this resonates with the (problematic) division between 'legal' and clandestine mobilities. and sometimes, it is the opposite: 'legal' mobilities may be relatively invisible while clandestine mobilities become highly visible, for example in the media. Many anthropologists use visual and other sensory methods to study mobilities: at times focusing on being on the move - on the transitions - while on other occasions focusing on the immobile situations during mobility. This panel seeks to investigate visible and invisible mobilities, their visible and invisible aspects, and the ways in which we try to 'visualize' them – aiming to facilitate their understanding and making them more visible and recognized. We invite methodological and contextual papers that discuss (im)mobilities, visibility and (in)visibility.

Visual methods with expatriate youth in Finland: What is actually made visible? : In the past two decades,

increasing numbers of highly skilled international professionals have moved to work in Finland for 1-3 years. They are often accompanied by their spouses and children. In my ethnographic research project with 'expatriate' children and youth in Finland, my intention was to make their existence known as they tend to be invisible in the Finnish society and immigration policy. During the fieldwork, I utilised various visual methods, including drawings and photos and eventually an ethnographic film. In this paper, I elaborate on what these methodologies actually made visible, and what remained invisible. I argue that although the participants were surely transnationally mobile and my ethnographic research investigated various themes related to their transnational mobilities, the visual methods ended up focusing more on their immobile lives; on their present lives as children and teenagers in a Finnish town. The paper is based on extensive ethnographic fieldwork among 9-15-year-old children in a Finnish town. Presenter: Mari Korpela (Tampere University)

Hidden in the night: Multimodal nocturnal ethnography of women migrant nightworkers in Ireland : In crisis or normal times, in Ireland, women migrant nightworkers (thereafter WMN) move in the night as a means of earning a living. In this paper, I focus on how nightwork connects or separates them from the rest of the Irish society. The challenge for anthropologists is not only how to capture their mobilities in the night with diurnal anthropological methods, but also how to reveal what it means to be mobile in the hidden spaces of nightwork. Among the burning issues faced by WMN, some are lack to English language training, gender performativity expectations at work, isolation, invisibility, and bodily exhaustion from nightwork and sleeplessness. Using a multimodal approach, this paper explores such ethnographic challenges in as many dimensions as possible, combining cyber (mobile apps), digital (audio-visual), and nocturnal ethnography (night mapping of places, soundscapes, physical sensations and conversations) to capture WMN's experiences that day research alone cannot. More, the paper shows how the researcher's own data – transcribed into 'bodily notes' taken while immersed in night ethnographies on streets, at night markets, warehouses, indoor and outdoor workplaces – complements data collected from the WMN. Further, with gender lens on, the paper unpacks precarity, migration, and nightwork, to analyse the connects and disconnects between these dimensions. In this way, the paper brings new insights into the wider implications of marginalisation among WMN in the current labour migration system in Europe. Presenter: JULIUS-CEZAR MACARIE (University College Cork)

Using Visual Ethnography to Visualize the Invisible Migrant Activism: Opportunities and challenges: This paper aims to summarize and bring together experiences of six years of the project "Visualizing the Invisible: Using Visual Ethnography to Explore Extra-Institutional Activism of Migrants and Ethnic Minorities", started at the University of Manchester and continued at ZOIS Berlin. The project focuses on the activism of migrants and members of ethnic minorities that happens outside key minority or migrant institutions and therefore remains invisible to the media and academic research. Its aim is to transcend the image of migrant/minority activism as always self-centered and instead explore, and indeed visualize, migrant activism for causes important to broader community. The project is as much an experiment of using different visual and sensory methods, and modalities of presentation (video documentaries, multimodal articles, multiscreen installation, public discussions), as it is a journey in exploring dynamics of (migrant) social engagement and community building; fuzzy differences between being a refugee, minority, migrant or ex-pat; discrimination, and privilege. In this presentation I will reflect on the experiences of working with the three ethnographic documentaries (co)produced as part of the project, and the opportunities and challenges of sharing them within the academia and with the broader public. Presenter: Piotr Goldstein

Insights from Dialogical Photography with Romanian Mobile Workers in Austrian Greenhouses: Researchers have documented the neglected, yet central role of Romanian mobile workers as a backbone of Northern European food production, which is enabled by multiple forms of legal and socio-spatial exclusion. This holds relevance in my research, in which I conducted visual ethnography in a greenhouse complex on the periphery of Vienna. Therein, two out of three Austrian cucumbers and a total of 40% of Austrian fresh fruit vegetables are produced by Romanian workers, who perform this work under oftentimes highly illicit conditions. By living and laboring with workers, I came across multiple narratives that would link and highlight the tension between physically present – that is visible – but invisibilized in discursive, legal, and spatial ways. In photo-elicitation interviews, workers would oftentimes take photographs as visual evidence to reflect on the exploitative nature of their workplace position, yet, photographs simultaneously evoke alternative and more just conceptions of mobile work and agricultural employment. Taken together, a dialogic-visual approach seems to be partly able to (1) depict and nuance

exploitative labor arrangements from workers' perspectives around the notion of "visibility", and (2) co-produce narratives that envision conceptions of a just food production. This presentation discusses my findings and focusses on my approach of developing photo elicitation into visual-dialogical interviews with transient populations. Contra the reluctance that photographs generate "thin description" in ethnography, I highlight and reflect on the fruitfulness that a visual-dialogical approach holds for ethnographic research. In doing so, this presentation speaks back to recent arguments that highlight the relationality within photo-ethnographic practice as a fruitful, yet underexplored direction in visual anthropology (Ferrarini 2020). Monster Mutability in Times of Turmoil

8:00 AM - 9:45 AM TMCC - 801 B

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Yasmine Musharbash (Australian National University, School of Archaeology & Anthropology)

CHAIR:

Geir Henning Presterudstuen (University of Bergen, Department of Social Anthropology), Yasmine Musharbash (Australian National University, School of Archaeology & Anthropology)

PRESENTER:

Yasmine Musharbash (Australian National University, School of Archaeology & Anthropology), Amarilys Estrella (Rice University, Department of Anthropology), Helena Onnudottir (Western Sydney University)

DISCUSSANT:

Geir Henning Presterudstuen (University of Bergen, Department of Social Anthropology), Mary Hawkins (Western Sydney University)

DESCRIPTION:

This panel offers nuanced understandings of the mutability of monsters and their relationship to times of crisis. By exploring the cultural work of the monstrous, the contributors demonstrate how analysis of monsters can shed light on social and cultural ways of coping with existential insecurity and imagining new futures. In doing so the panel engages with, and brings forward,

central ideas from a decade of monster anthropology in order to ask key questions about the experience of time, historicity and being in the world in an increasingly volatile present. J.J. Cohen (1996:4) proclaimed that monsters are born at 'metaphoric crossroads, as an embodiment of a certain cultural moment-of a time, a feeling, a place'. Monster anthropology (see Musharbash and Presterudstuen 2014 and 2020) has followed this dictum since its inception as an analytical orientation. Focusing on monsters in the ethnographic present rather than on monsters in fiction, it has documented how monsters in the field often become focal points of interest in situations of radical upheaval, whether they act as oracles or prophetic revelations, harbingers of doom, portents, punishers, protectors, or bad omens. What such appearances mean is frequently contested and any responses are always implicated in relations of power and politics of difference. How this is dealt with in the culturally specific can be observed ethnographically and analyzed anthropologically. The contributors to this panel seek to go beyond documenting and 'taking seriously' monstrous encounters and realities, by focusing on such ethnographic events as important temporal moments. They do so by examining the transformative potential of monsters in a variety of cultural and social contexts and ask what role the monstrous may serve in the cultural work of dealing with existential insecurity and in future imaginations. Whether monsters emerge in narratives of the past, future orientations or an increasingly volatile present, they always complicate straightforward reckonings of time, and unsettle the human experience of it. With a particular focus on the relationship between temporal flows and the monstrous, the contributors in this panel present ethnographic explorations of how particular localized monsters change and transform in contexts of social, political, economic or environmental crises. Analytically, the presentations focus on how monsters have the potential to break temporal modes. At once timeless, of their time and out of time, all monsters share the characteristic that they unsettle the flow of time. For instance, ghosts and ancestral spirits may serve to bring the past into the present in ways that inform genealogies, histories, and ways of remembering. Vampires and zombies, on the other hand, frequently challenge the logics of 'life' times. Other monsters, such as aliens and watchers, become monstrous in power of the perception that they emerge from other time dimensions. References: Cohen, J. J. (1996), 'Monster Culture (Seven Theses),' in J. J. Cohen (ed.), *Monster Theory*, 3–25, Minneapolis: University of Minnesota Press. Musharbash, Y. and G. H. Presterudstuen (2014),

Monster Anthropology in Australasia and Beyond, New York: Palgrave Macmillan. Musharbash, Y. and G. H. Presterudstuen (2020), *Monster Anthropology: Ethnographic Explorations of Transforming Social Worlds Through Monsters*. London and New York: Bloomsbury.

Monsters, Change, and Temporal Flows: Since we started our work on *Monster Anthropology*, Geir Presterudstuen and I have been working with the understanding that the world we live in is not simply one populated by us and others, but as one that is constituted through entangled living and being. This, we argue, is particularly important when trying to approach novel and hopefully deeper understandings of the current cultural moment of planetary crisis. In this paper, I provide an overview of *Monster Anthropology* so far and then sketch the paths we hope to take with this panel. I begin by elucidating how J Cohen's (1996) volume *Monster Theory* worked as a rallying point for interdisciplinary analyses of monsters – which until that point were niche and scattered. Geir and I, then, in *Monster Anthropology from Australasia and Beyond* (2014) attended to four issues in particular: 1. the indeterminacy of monster realities; 2. the particularities of the monstrous body; 3. how monsters are contingent on the humans they haunt; and 4. monsters and change. The last aspect formed the foundation for our next volume, *Monster Anthropology. Ethnographic Explorations of Transforming Social Worlds Through Monsters* (2020). Being concerned with monsters & change, specifically, in the introduction we outlined a number of ways in which monsters are engaged with change, namely emergence; adaptation; appropriation; amalgamation; extinction; and succession. In our current work and in this panel, we expand this to include other ways of change, and by introducing a focus on the temporal aspects of change, in particular. Presenter: Yasmine Musharbash (Australian National University, School of Archaeology & Anthropology)

Zombies: The Possibility of Life in Anti-Racist Organizing against Statelessness: How does the figure of the zombie conjure not only death, but also the possibility of life? What is the role of the zombie in the everyday discourse and practices of anti-racist activists? The Dominican Republic is currently home to the largest population of individuals rendered stateless or at risk of being stateless in the western hemisphere. Through a series of policies and juridical rulings over the past two decades, Dominicans of Haitian descent have been stripped of their once recognized legal status as citizens. In describing their ongoing condition as Black stateless subjects, Dominicans of Haitian descent often refer to

themselves and others as zombies who have been rendered *muertos en vida*, living dead. The zombie as embodied in the figure of the Haitian migrant and his children also becomes imbricated in the development of anti-Black nationalist discourses in which rallying nativist politics becomes a strategy for the securing of Dominican borders. However, As Kaiama Glover notes “Both alive and dead, neither alive nor dead, the zombie always retains the possibility, albeit slim, of reclaiming his or her essence... (2010:60).” Through a methodology I refer to as *reandando* I return to and examine my experiences conducting ethnographic research in the Dominican Republic as well as my digital encounters. I explore how anti-racist contestations in the Dominican Republic and the Dominican and Haitian diaspora are shaping understandings of national belonging leading the zombie to not only symbolize anti-Haitian and anti-immigrant discourse and death, but the possibility of Black liberation and life. Presenter: Amariy Estrella (Rice University, Department of Anthropology)

Elementary forces: fire, water, and ice as monsters in Iceland: Iceland is at the mercy of the elements of nature, specifically water, ice, and fire. The land was born of fire and named for ice. Winters are long, summers are short, harbours freeze, and volcanoes erupt; nature can be monstrous. Over centuries, Icelanders have learnt to negotiate their relationships with the elements, and in some cases attempted to ‘tame’ their monsters. Such taming may be through technology, but historically the primary form is to make the monstrous knowable, to embrace by naming. Through naming and knowing, monsters and gods might be contained within the human world, if not fully controlled. One such example is that of Surtur. Surtur is a giant, the killer of gods, a creator, and a destroyer. Surtur rides with a fiery sword that creates fissures, and calls new land into being. One of the youngest parts of Iceland, born of fire in 1963, is named after Surtur (Surtsey). In 1973, Surtur visited the small island of Heimaey (Home island), causing a new volcanic mountain to erupt from the land, and pour fiery lava deep into the harbour. Surtur was stopped by Iceland's elemental force of water, manipulated by humans. In this paper we explore the relationship between Icelanders and the elements, and the particular role of creatures like Surtur, who we position as existing, simultaneously, in two worlds, the human and the elemental. Presenter: Helena Onnudottir (Western Sydney University)

DESCRIPTION:

Narrative and memory are inherently and inseparably connected, and closely bound up with identity and the self, as has been observed by scholars across the humanities and social sciences since the beginning of what has been termed 'the narrative turn' (Riessman 1993). Giddens (1991) reflects on identity as rooted 'in the capacity to keep a particular narrative going' (54). Polkinghorne (1988), having defined narrative as 'the primary form by which human experience is made meaningful' (1), observes that narrative cannot exist without the plot, which 'functions to transform a chronicle or listing of events into a schematic whole by highlighting and recognizing the contribution that certain events make to the development and outcome of the story' (18-19). A similar point is made by Hinchman and Hinchman (2001): 'Through narrative emplotment, we organize, integrate, and seek an accommodation with temporality... emplotment humanizes our experience of time, making its passage meaningful to us' (1). Within linguistic anthropology, Ochs and Capps (2001) observe that 'Putting the pieces of one's life experiences together in narrative is one way in which a human being can bring a sense of coherence and authenticity to his or her life' (252). In this panel, we focus on narrating memories of trauma, or of pivotal, life-changing events. Crucially, psychologists researching memory have pointed to numerous ways in which memory is an ongoing and changing construct, a

continuous re-invention and re-interpretation of the past rather than its precise recording (Schacter 1999, 2001; Schacter et al. 2003). King (2001) contrasts the psychoanalytic metaphor of memory as an archaeological excavation with the more dynamic view of memory as a retrospective reinterpretation and reinscription. For King, collective memory and, correspondingly, collective forgetting, are both crucial for the construction of group identities and cultural belonging. Relatedly, the imperative to recall and name traumatic memories has been studied by scholars writing about institutional interviews with asylum seekers (e.g. Signorini 2015). Papers in this panel explore the narration of traumatic memories using the theoretical tools of linguistic anthropology. Presenters investigate how memories of displacement are framed within qualitative interviews; how adult children of Holocaust survivors construct intergenerational narratives; how competing narratives of loss and progress inform collective memory in a Belfast neighborhood; how memories of Algeria's colonial past are mediated by the material world of the urban landscape; how painful and intrusive memories are narrativized through visual media; and how a female heritage food producer makes sense of an accident that rendered her unable to work.

“Well, no, it wasn't smooth”: Restorying spatiotemporal resources, uncertainty, and moral stance: Narratives of displacement are often characterized by liminality, uncertainty, transitions, and turmoil; yet, they also reveal an effort to impose coherence on details remembered. This paper investigates how memories of displacement and/or traumatic experiences are framed and reframed within the context of the qualitative interview—and how this kind of interactional accomplishment helps to shape/reshape the identities and moral stances of both interlocutors. With a focus on 'how we remember and continually restory our pasts, shifting the relative significance of different events for whom we have become' (Mishler 2006, 36), I examine the spatiotemporal resources mobilized by the narrator, how narrated memories of lived experience might 'exist in a state of intertextuality' (Gergen, K. 1994), and how 'human time flows back and forth from moments remembered, to the unfolding present, to moments imagined' (Ochs & Capps 2001, 200). Data excerpts come from interviews with a transnational migrant about his experiences with displacement, how he navigates the 'in-betweenness' that accompanies his mobility, and his ongoing community-based advocacy work. The analysis highlights the value of identifying and tracing temporal elasticity in narratives of displacement

(Ochs & Capps 2001) and how 'shifting time-space alignments' (Perrino 2011) are mobilized by narrators to 'invoke generational, historical, and national time scales' (Koven 2016, 19). Presenter: Doris Warriner

Telling Intergenerational stories of Holocaust Rescue: Inhabiting narratives of parental experience: Much discourse-oriented scholarship has focused on stories of firsthand experience, claiming that narratives of vicarious experience are usually less compelling (Labov 1972). On the other hand, scholars in other disciplines have adopted the notion of post memory (Hirsch 2012) to examine how children 'inherit' their parents' memories of trauma. This paper examines how a group of adult children construct, narrate, and identify with their deceased parents' experiences of rescue during World War II. Specifically, I examine how adult children reconstruct their parents' experiences of escape from Nazi occupied Europe, thanks to lifesaving visas from the Portuguese Consul of Bordeaux, Aristides de Sousa Mendes. Most were told only fragments and sometimes nothing at all about this key period of their parents' lives. However, with a sudden rise in interest in constructing a public legacy for Aristides de Sousa Mendes in Portugal, Israel, and the United States, many have been publicly enlisted (Kidrin 2009) to tell their families' stories. Although Wodak and Rheindorf (2022) found that adult children of Holocaust survivors in Austria often seem to lack specificity and affective engagement, my participants often seemed to inhabit the figure of their deceased relatives, similar to how Urban (1989) discussed theatrical projection in myth sharing. I examine how, in public testimonials and interactions with other adult children, members of the second generation try to construct and identify with these intergenerational narratives, as simultaneously their own and those of deceased ancestors. Presenter: Michele Koven (University of Illinois, Urbana-Champaign)

'We've lost so much': Challenging regeneration in a Belfast neighborhood through a narrative of loss: In post-conflict Northern Ireland, collective memory continues to be essential to the reproduction of sectarian identities (e.g. Rolston, 2010; McQuaid, 2017). More recently, official bodies have attempted to promote a 'post-conflict' narrative of movement towards peace. However, challenges have arisen via alternative ways of narrativising the recent history of NI. Among Loyalists, this has most often found expression as a narrative of loss, of both a 'privileged political and economic position', and a traditional way of life (Komarova and O'Dowd, 2013). This paper explores how

these competing narratives of progress and loss play out in one Belfast neighborhood, which has been understood as Loyalist in nature. It was designated in 2003 as a 'neighborhood renewal area', in which official narratives of 'post-conflict' transformation are manifested through urban regeneration plans. Using data gathered during ethnographically-informed fieldwork, I demonstrate how local memory of the neighbourhood, framed through the narrative of loss, comes to be politically mobilised by residents to shape and challenge ongoing processes of urban regeneration. The situation is complex in that connected processes of privatisation and urban regeneration have indeed resulted in reduced housing availability. This is sharpened by the arrival in the area of residents from outside NI in the post-Troubles era, who 'traditional residents' understand as competitors for the increasingly scarce resources available in the neighborhood. Through the narrative of loss, used to bolster a sense of collective identity, I argue that such material dispossession becomes conflated with loss of ethnic control of the neighborhood. Presenter: Coirle Magee (University College London)

The City as Archive: Narrating Colonial Memories in Postcolonial Algeria: In 1962, Algeria won its independence from France after a bloody eight-year war. As a settler colony for 132 years, the French built urban Algeria in its own image, and, long after independence, Algerian urban space has continued to carry intense colonial representational loads. Postcolonial attempt to repair the past by erasing colonial traces from the landscape have largely failed, at least in part, because these same French colonial spaces and structures have always also been Algerian. Buildings, roads, monuments, and other urban sites are, in fact, shared by the colonial and postcolonial period, making them both "theirs" and "ours" simultaneously. Scaffolded onto these contested places, many contemporary Algerians struggle to narrate their complex and contradictory memories—both personal and collective—of the colonial past. In this paper, I focus on one local radio host (known as Massinissa) in Oran—Algeria's second largest city—as he grapples with narrating this complex past of the urban landscape. I explore the linguistic tightrope that Massinissa navigates to acknowledge the genocidal regimes that built much of Oran while also making forceful claims to the past and urban space as always already being "ours." This shows that while narrative and memory are inherently and inseparably connected, they are also always mediated by the material world. The past's materiality is central to how narratives cohere by securing memories

in place. I explore the potential of seeing the ordinary material world as an “archive,” creating collective memory narratives rooted in people’s sensory and affective experience. Presenter: Stephanie Love (University of Pittsburgh)

When Words Fail: Memories, Narrative and Visual Art: Memories are the raw materials from which we construct autobiographical narratives, which in turn have powerful implications for one’s sense of identity. Indeed, narrative studies show us the mechanisms through which storytellers construct, enact, and negotiate identity vis-a-vis the narrated events (De Fina 2003; Ochs and Capps 1996; and Wortham 2001). These narrating processes, in turn, are a way to ‘work through’ traumatic, painful, intrusive memories, repairing a fractured sense of identity or disruption these experiences can cause (Hunt 2000; Ricoeur 1991). Through the narrative employment of these kinds of memories, they become more coherent, structured units, which are easier to understand, grapple with, and communicate to others. Through my ethnographic research with visual artists, I explore the relationship between memory, narratives, and visual art, and the role that visual narratives can play in the employment and narrative process when words are not able to handle certain ineffable memories. The ones that escape words either because of the nature of the memory itself or the cognitive style of the one remembering. For some, verbal communication does not have the same level of primacy as it does for others, and so dealing with traumas and intrusive memories narratively is not always initially within reach (Ferrara 2005). My work here extends scholarship regarding the role of narrative in trauma studies into the realm of visual narratives. Artistic expression through visual narratives is a powerful way for people to grapple with memories that defy words by evoking and indexing emotions and ideas. Presenter: Rachael Sebastian (SUNY, Binghamton University, Department of Anthropology)

“Mai in pace”: Memory, narrative, and the precarious self : Narratives make sense of life experiences, situating them within life courses and the political and socioeconomic conditions of the narrating and narrated moment. This paper is an analysis of what Katie Stewart (1996:138) called the “incessant, daily narrativization of the accidental, contingent, and phantasmic effects of the industrial and post-industrial order of things.” It focuses on an audio-recorded and transcribed life history interview in which one of the few female heritage food producers in the northern Italian

community within which I have done long-term ethnographic research narrates how she entered this business and made a life for herself within it, an account that melds the personal, familial, professional, and political economic. Talking soon after an accident that prevented her from working for several months, she identifies a car accident she caused several years before (in which no one was hurt) as the moment in which everything changed and since which she has had, as she put it, 'no peace.' The narrator draws on people, places, conflict, and the mundane practices of trying to make a living to bring her life experiences into social and psychological focus (Ochs 2007). In doing so, she aligns the narrating moment of powerlessness and productive inaction with a series of emplaced events, “crossed words,” and accidental mishaps that rendered her alone and isolated, unable to count on social, familial, or professional connections and resources to aid her. Her account reveals the structured and gendered precarity of self-employment in early 21st century Italy. Presenter: Jillian Cavanaugh (CUNY, Brooklyn College, Department of Anthropology)

Negotiating Wellbeing and Uncertainty amid Regimes and Structures of Care, Politics, and Power

8:00 AM - 9:45 AM TMCC - 716 A

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Heather Prentice-Walz

PRESENTER:

Raymond Schwartz ,Camilo Ruiz (University of Connecticut, Department of Anthropology),Daniel Manson ,Daisy Couture (McGill University, Department of Anthropology),Uzma Zafar ,Heather Prentice-Walz

DESCRIPTION:

The presentations assembled in this session share an anthropological concern with the ways in which institutions and interventions for wellbeing, stability, and care can undermine their goals and expose vulnerable populations to additional risk in contexts of instability and uncertainty. Individually and taken together, these ethnographic interventions also raise compelling questions about the politics of inclusion and exclusion in the production of knowledge about types of people in need of intervention. These insights emerge

from a range of perspectives such as NGO programs, 'supportive housing' projects, and medical encounters. Presenters also destabilize grand narratives about particular places and peoples primarily represented and intervened upon through tropes of poverty, lack of agency, and a presumed lack of knowledge for what is good for them.

Help Not Handcuffs: Exploring the Basis and the Results of a Police Response to a Mental Health Service Need: Help Not Handcuffs: Exploring the Basis and the Results of a Police Response to a Mental Health Service Need Between 2015 and 2020 nearly a quarter of the all the people killed by the police officers where people living with a mental illness. In addition, while injuries from police encounters are common statistics are not routinely available. In New York City almost half of the people killed by the police where in need of mental health services. Over the last seven years, nineteen New Yorkers' experiencing a mental health crisis were shot and killed by the police. Of the nineteen, sixteen were people of color. Almost all mental health crisis calls to 911 in New York City are responded police and EMTs with police in control of the response. A criminal justice response too often results needless arrests and jails disproportionately for people of color. Unequal access to community based mental health services, poverty, stigma associated with a mental illness and the unfounded association of mental illness and violence lead to untreated mental illness, shortened life spans and disrupted lives of individual, families and friends. Participating with an advocacy coalition and a community based mental health organization with a primary focus on community based services and on redesigning mental health crisis responses without the police requires a broader examination on criminalization of mental illness and the ongoing disparities in access to mental health care and social supports.

Anthropologists can be engaged in exploring the underlying dynamics of the criminalization of mental illness, treatment of mental illness and how class, race and ethnicity effect access to appropriate care.

Presenter: Raymond Schwartz

Painful Pleasures: A Multi-Gazed Ethnography of Heroin and Methadone Use in Urban Colombia.: Shifts in the opioid market within the Americas have led to an unprecedented decade-long heroin epidemic in Colombia, which has disproportionately hit youth, especially men in urban communities. While research on the impact of the opioid epidemic typically focuses on the Global North, this project zeroes in on Colombia, a country that both produces and consumes heroin.

Through community-based participatory research (CBPR) and arts-based methodologies, this paper reveals the arduous journeys of heroin users navigating addiction in a country deeply enmeshed in the global war on drugs, where drug use and addiction are paradoxically disregarded and harm-reduction policies are at an embryonic stage. This project is framed around the principle of returning legitimacy to people's knowledge, in which anthropology through CBPR becomes a collective venue for heroin users to portray both daily life struggles and positive futures of the right to live with pleasure. Presenter: Camilo Ruiz (University of Connecticut, Department of Anthropology)

Housing First, but what comes next? Exploring young people's return pathways to instability during a housing crisis in Vancouver, Canada: Housing instability, mental health, and homelessness among young people who use drugs (YPWUD) in Vancouver, Canada have increasingly been framed through a language of crisis. The declaration of these overlapping crises has prompted a wide range of targeted interventions, including the rapid expansion of 'supportive housing' projects that integrate housing-based substance use and mental health care supports for young people who use drugs. There is growing evidence demonstrating that these models are effective at stabilizing people who are experiencing protracted housing instability, mental illness, and substance use related health concerns. Yet, it is critical to understand how young people's experiences of uncertainty and precarity persist despite being housed in order to identify potential return pathways to unstable housing. This paper recounts the experiences of three young people who have lived in supportive housing buildings to demonstrate that achieving the relative stability afforded by these interventions is partially contingent on maintaining a delicate balance between being 'too much' or 'too little' in crisis. While being in crisis makes young people visible to forms of support, I argue that entering periods of personal crisis may reopen pathways into unstable housing by activating undesirable institutional responses that conflict with young people's sense of autonomy.

Presenter: Daniel Manson

A regime of certainty: Medical uncertainty, somatoform disorders, and conditions of (im)possibility in the clinic: This paper explores patient and clinician orientations to medical uncertainty in somatoform disorders (a contemporary term for hysteria). Interested in the therapeutics of uncertainty, I ask how insistence on medical certainty shapes the conditions of possibility for suffering, care, and recovery. Medical knowledge is

often colloquially synonymous with certainty and truth; however, where do we find ourselves when medicine is foundationally uncertain about a diagnosis, prognosis, or treatment? Somatoform disorders refer to the phenomenon in which someone is seriously ill – e.g. seizures, complex pain, paralysis – but no pathophysiological cause can be found. A multitude of competing explanations for this phenomenon exist – emotional distress somatically manifested, disturbances in nervous system connectivity, etc. – and yet profound uncertainties in care and illness experience remain. Research has historically focused on the therapeutic benefits of certainty, however, this paper follows recent calls to embrace medical uncertainty (Greco 2017) and approaches uncertainty not as a cipher for ignorance, but as a flicker, a simultaneous polyphony (Despret 2020); how do patient and clinician orientations to uncertainty shape the conditions of possibility in the clinic? Based on two months of ethnographic fieldwork with clinicians and suspected somatoform patients in a Canadian neuropsychiatric hospital, I argue that while patients and clinicians were avowedly conscious of medicine's uncertainties in this context, in practice, both enacted medicine as a regime of certainty – a term I offer to describe a cultural tradition that imagines medicine as a system able to provide access to objective truth, making uncertainty an unacceptable mode to inhabit. This paper argues that it is this imaginary and enactment that hampers efforts to transition to approaches that embrace uncertainty. Furthermore, while this will to certainty may be therapeutic in the moment, I argue that in the long-term it fails to hold the strange, dynamic, experiences of somatoform symptoms and participates in the marginalization of suffering that does not neatly correspond to pathology. Presenter: Daisy Couture (McGill University, Department of Anthropology)

'Authentic' Citizens: Transition Medicine and Legitimate Transgender Bodies in Pakistan: This paper explores emergent meanings of gender dysphoria in medical encounters between transgender people and medical practitioners in Pakistan. Since the introduction of the Transgender Persons (Protection of Rights) Act 2018, trans people can access citizenship under the category of khwaja sira (transwoman), khwaja sira (transman) and khunsa-i-mushkil (intersex or hermaphrodite persons). A transition based definition of legible gender variant citizenship has shaped meanings around 'authentic' trans bodies- who is 'really' transgender? What are the limits of transition medicine in the context of a specifically Sunni Muslim medical ethics in Pakistan? The use of biomedical ideas of disorder and

transition to investigate the 'realness' of trans experience has resulted in complex requirements of visibilizing dysphoric experience for the sake of access to citizenship and gender affirming care. Under the new law, doctors become assessors of legitimate citizenship claims as they assist bodies in transition. Clinical diagnoses of gender dysphoria come to sustain medical hegemonies of power in the anatomical geography of citizen bodies. Even as gender variant citizens become political participants, their bodies in transition are expected to display static correspondences with biopsychological modes of citizenship (Petryna 2016). In this paper, I analyze medical encounters and conversations between doctors and those engaging different aspects of transition medicine as they navigate the medical requirements of citizenship. I explore Sunni Muslim medical ethics among Pakistani psychiatrists and what ethical negotiations make gender affirming medical care possible for their transitioning patients. In the process. What are the questions asked of dysphoric patients to medically 'prove' their dysphoria? How is gender dysphoric experience visibilized in a psychiatric setting to qualify the trans body for transition care? This paper looks at the varied ways in which doctor-patient interactions become a place of negotiating different options for bodily transition to satisfy state legislative demands of citizen psychology. As a newly imagined therapeutic state which attempts to disseminate care for its gender variant citizens, I explore emerging practices of transition medicine in Pakistan and its related rearticulation of legitimate citizenship. Presenter: Uzma Zafar

Wellbeing Andeyò: Reimagining Frameworks of Wellbeing in the Grand'Anse, Haiti: Wellbeing Andeyò: Reimagining Frameworks of Wellbeing in the Grand'Anse, Haiti What does it mean to have wellbeing, or to be well? Moreover, whose experiences are excluded from and/or undermined by normative frameworks of wellbeing? In this paper, I explore these questions in the context of the andeyò (rural countryside) Grand'Anse region of Haiti, where I conducted intermittent ethnographic research focused on foreign aid interventions between 2016 and 2020. Drawing upon in-depth ethnographic material, this paper argues that community members' perspectives from the Grand'Anse: 1) challenge current frameworks of wellbeing that evoke and juxtapose the categories of 'objective' and 'subjective'; 2) highlight the importance of place-based understandings of wellbeing, and; 3) compel in-depth engagements with hope and futurity as part of a framework for wellbeing. By highlighting community perspectives on wellbeing in the

Grand'Anse-- including the ways in which community members define wellbeing, actively experience wellbeing, and affectively anticipate wellbeing-- this paper provides critical interventions in wellbeing discourse and related practices enacted by NGOs and other foreign actors in and beyond Haiti, in regions that generally appear to be excluded from academic studies of wellbeing. In the case of communities in Haiti, a country that has been argued to be made legible through tropes of suffering and poverty, and where there is a long and troubling history of essentializing, dehumanizing, and reductionist narratives (e.g., Bellegarde-Smith and Michel 2013; Dash 1998; Farmer 2003; Trouillot 1995; Ulysse 2015), the lack of in-depth research on wellbeing is particularly poignant. Wellbeing has no agreed upon standard definition, nor is wellbeing uniformly studied or applied across disciplines, or even within the same field of study. At the same time, wellbeing increasingly figures into international aid and development agendas (e.g., the UN's third Sustainable Development Goal, 'good health and well-being'; OECD's Better Life Index; WHO's 5-item Well-Being Index), even the concept's contours are uncertain (e.g., Dolan and Metcalfe 2012; Michalos et al. 2011; Pleeging et al. 2021), contested (e.g., Atkinson 2013, 2017; Barletti 2016; Breslow et al. 2018; Wittmer 2021), and often overlook people living in serious economic poverty (e.g., Gough et al. 2007). On the one hand, this leads to exclusionary understandings of wellbeing. On the other hand, the blind-spots in wellbeing studies, coupled with its conceptual ambiguity, create space for reimagining culturally-appropriate frameworks of wellbeing. DISCUSSANT:

George Bayuga (University of Colorado, Colorado Springs, Department of Anthropology)

DESCRIPTION:

Since its origins at the heart of anthropological fieldwork, the notion of 'community' has been both theorized and theorized away from. Scholars have pointed to the 'trouble' of community (Amit and Rapport 2002) and sought to de-center it (Deleuze and Guattari 1987; Latour and Woolgar 1986, Latour 1987). And yet, beyond the space of the academy, 'community' is used again and again to describe commitments to beings both human and nonhuman (Parreñas 2018; Blanchette 2020). While community has often been developed both ethnographically and theoretically as a relatively stable social formation (Schutz 1967), this panel re-opens the idea of 'community' as a term and process in transition-whose significance and meaning can touch on both the intimate dynamics of internal group inclusion and the power to link together different peoples across similar axes of identity.

Following the foundational work of Victor and Edith Turner and scholars of ritual processes, this panel incorporates the lens of pilgrimage, and specifically, the theory of 'communitas' to reconsider the liveliness of communities as spaces of transition- where social cohesion and fragmentation occur and recur in ways that engender new modes of 'being with' (Lévinas 1969; Turner and Turner 1978; Blanchot 1988; Nancy 1991; Bowie 1997). In so doing, it considers not only the liminal productivity of the notion of community, but the liminal space of communities in transition (Ikeuchi 2019; Coleman 2022). In a moment when the project of decolonizing anthropology often hinges upon recognizing voices hailing from communities subject to domination and erasure, this panel calls attention to the social processes that shape the shifting boundaries of communal identity, recognition, and action (Povinelli 2002; Simpson 2014; Nadasdy 2017; Cox 2018). Pilgrimage is thus both an exercise in individual mobility and belief and a social infrastructure for creating new networks, fictive kinship, and forms of association. Though pilgrimage emerges from religious origins, its characteristics serve as key reference points for interpreting contemporary mobilities seeking to reshape political institutions, resist systemic racism, and challenge hegemonic authority (Burton 2015; Haugerud 2016; Rouse 2021). How might new scholarship re-envision how pilgrimage and community work as

entities in a similar conceptual orbit? How might pilgrimage reinvigorate the study of religion in an increasingly secular world? How might secular forms of pilgrimage provide insight into ritual practices of politics and social life? In this panel, five scholars present ethnographic cases from a range of religious and geographic sites to delve into the ongoing dynamism of both pilgrimage and community as lenses from which to consider social cohesion in transition.

The Postcolonial Pilgrim: Creating Community in a Complex World: Travel is an important means of religious transformation and identity construction. In my ethnographic research on American evangelical short-term missions (STMs) among Haitian-Dominican sugar cane workers, I investigate the intersubjective process of community making. Meanings and identities are forged between actors who have “different cultural backgrounds and unequally positioned stakes in their relationships” (Faier and Rofel 2014:364). Building on the work of Howell and Dorr (2007), I examine STMs as postcolonial pilgrimages. Unlike the traditional religious pilgrimage, which is based around important holy sites and sacred relics, the STM pilgrimage is centered around the experience of Turner’s *communitas*, or sense of community based in shared experience (Howell 2012). In this paper, I will argue that STMs, moreover, become sanctified like traditional pilgrimages through the acts of seeing and serving the poor. Dominican mission sites and participants are imbued with spiritual qualities and are “blessed” by American participants who accumulate spiritual capital. Short-term missionizers attempt to move away from the modern world in order to be transformed by the missionized’ production of “authentic” culture. However, this transition between countries and ways of life erases American and Haitian-Dominican participants’ pre-existing relations, the results of US foreign policy, late-capitalist modes of governance, and the trade of sugar. These economic relations have trapped cane workers in poverty and created the need for the face-to-face charity provided by American participants. In this way, the STM encounter can “de-fetishize” commodities by creating communities between producers and consumers and thereby powerfully transform participants’ subjective worldviews. Presenter: Nicole Nathan

Faith In, and Outside of, Place: Pilgrimage, Circulating Objects, and Uncertain Publics: How does the circulation of images and objects through various publics shape the “community” of the faithful? In 1996, Adela Cárdenas Vásquez was murdered by ex-husband,

Vidal Cruz. Since then, Adela has become *Mama Adelita*, a popular saint (*santo*, Spanish) who performs miracles and protects especially children, students, women, and married couples. Like other vernacular saints in Latin America, *Mama Adelita* is not recognized officially by the Catholic Church, but the shrine built where she died attracts growing numbers of pilgrims. Those who travel to her shrine near Sucre, Bolivia, almost always engage in ritual practices—lighting candles, chewing coca, drinking alcohol, smoking cigarettes—to make requests or offer gratitude for miracles. Many native Andean Catholics deploy these same ritual practices to maintain sociality between members of a community and non-human persons, including local places (mountains, rock formations, springs). However, adherents of *Mama Adelita* also carry material objects (framed photographs, keychains, prayer cards) away from the shrine, to continue their observances elsewhere. They bring sweet treats and coca leaves for *Mama Adelita* and large pots of food to invite other adherents, mostly strangers, to eat. They follow popular press, documentaries, and social media stories about *Mama Adelita* that circulate on television, radio, and the internet. Drawing together various faithful publics that are not necessarily physically grounded in a singular physical place, this presentation explores how “being with” *Mama Adelita* may enable a transitory sense of community that nevertheless offers possibilities for individuals to actively imagine a less precarious future. Presenter: Krista Van Vleet (Bowdoin College, Department of Anthropology)

Pilgrimage, Faith, and Community in South India: The Nagore Dargah, a Sufi shrine, and arguably the most famous pilgrimage site in South India, recently celebrated its 466th urs, a commemoration of the death anniversary of the 17th century saint, Shahul Hamid. Nagore is a site rich for exploring communities in transition, the relationships between the human and non-human, and transnational connections to Southeast Asia and the Caribbean. Islamic rituals, Tamil traditions, a distinctive musical repertoire, people of different faiths, and a vibrant religious economy co-exist at this site throughout the year, but especially during the urs, a fourteen-day festival. Thus far, the Nagore Dargah has been studied using historical and literary texts. But little is known about the experiences of lived religion and contemporary social life in and around the shrine. Using ethnographic insights gleaned from multiple visits to Nagore and the neighboring town of Nagappatinam, this paper develops an approach to studying community life at this site that encompasses and moves beyond simply a faith-based examination typical of studies of Sufi

shrines. It further highlights the 'communitas' created through localized networks of travel to the shrine, wherein groups of supplicants journey together from across the region, stopping by various shrines along the way to their ultimate destination of Nagore. Presenter: Harini Kumar

Vital Communities: Existing Playfully in the Liminal Time of Violence: This paper observes that living in a time of uncertainty, due to curfews, internet shutdowns, lockdowns, killings, and gunfights, ordinary Kashmiris in the villages of South Kashmir are caught between two orders of time that are 'what is' and 'what is yet to come.' While this experience of uncertainty, or liminality, leads to a nihilistic feeling of being stuck in time, young men and women living in these villages constitute a sense of vitality and community, or what I call "vital community," through the play and humor that emerges out of conversations, games like cricket, making and sharing comic videos and images on social media, and online games. Drawing on an ethnography of a village playground, an online mobile based war game called PUBG, and an ethnography of conversational humor, this paper posits that play accompanied by humor and laughter performs the ontological work of knowing and 'being with.' Play engenders a liminal space-time through which people forge relationships with each other and their place of living, as well as realize the possibility of actualizing freedoms that are otherwise unavailable to them. Presenter: Arif Hayat Nairang (University of Houston)

From Pilgrimage Walk to Protest March: New Communities and Pilgrim's Walk for Future: In recent years, Lutheran pilgrimages have emerged in Sweden, modeled on the Catholic, Camino de Santiago. The ritual act of walking is central to the success of these newly-created Lutheran Church of Sweden pilgrimages. Pilgrims on foot foster temporary communities that connect with the landscapes around them in ways that exceed the powers of localized church services. Indeed, this Swedish pilgrimage movement has taken an ecological turn; pilgrims have joined environmental movements catalyzed by transnational climate actions. Diverse communities have burgeoned around this activist turn. This paper considers a particular instance of the "communitas" generated by the liminal Pilgrim's Walk for Future to COP26 in Glasgow, or what I call "communities-in-transition," to suggest that the interactions and articulations engendered by pilgrims undertaking these ecological pilgrimages generate new forms and rationales for not only "being with" fellow human beings, but also for "being with" the nonhuman.

I pay particular attention to the intersections of Nordic spirituality with the dialogue around climate justice, as well as to the processes of community-making that contribute to the transformation of walking pilgrimages into protest marches. I ask: how do ritual, political and religious forms and meanings create new transitional communities? What binds these communities together and what drives them apart? Presenter: Lena Gemzöe (Stockholm University)

Pollution and Waste

8:00 AM - 9:45 AM TMCC - 718 B

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Katherine Lambert-Pennington (University of Memphis)

PRESENTER:

ashima mittal ,Seohyung Kim (Purdue University, Department of Anthropology),Katherine Lambert-Pennington (University of Memphis),Jeff Silva

DESCRIPTION:

This panel is a discussion of how waste, from the trash and ruins of capitalism to the tiny particles that accumulate in polluted environments, is negotiated within situated everyday lives. The papers explore the financialization of air pollution in India through clean-tech investments, the role that particulate matter pollution plays in new everyday routines in South Korea, the political potentiality of waste in Sicily, and conflicts over environmental priorities in southern France.

"Speculating" on a Breathable Future: Examining the Workings of 21st century 'Clean' Techno-scientific Capital in India: India, the country with one of the most polluted atmospheres on the planet, is becoming a hub for global investment in 'clean' tech in the wake of managing its proliferating air pollution crisis. Through emergent vistas of green finance, air pollution zones in the country are being transformed into 'experimental' (Petryna 2009; Murphy 2017) ecologies to produce new visions of clean-energy transitions and sustainable growth. In these schemes, clean-tech is introduced as a technology of the present and the future, is touted to bring unprecedented opportunities for wealth creation, and while providing innovative solutions to problems of planetary scale (UNEP 2022; IPCC 2022). Based on 14 months of ethnographic fieldwork with venture

capitalists and clean-tech experts as well as analysis of policy documents, this paper will argue that such this process has resulted in a 'financialization' of the nature in India through global clean-tech interventions. Working through the negotiations and proposals from multilateral and national organizations, my paper will discuss the implications global 'adaptation' and 'mitigation' financial flows that are radically refashioning the meaning of 'just transitions' through creation of new markets, novel resources, and mechanisms of surplus extraction that operate through the language of GHG emission inventories and air pollution reduction co-benefits. Ultimately, the paper will comment on the status of green finance as a revolutionizing force in global capital flows that is transforming the meaning and scope of environmental governance in India in ways that goes beyond state-centric models. Broadly, the premise that technological application of modern science is radically refashioning the geophysical boundaries of the earth system is gaining ground among recent anthropological and social inquires (Ballesteros 2019; Fortun 2014; Masco 2015). However, dominant thinking on the matter focuses on new materialist lenses (Bennett 2010, Barad 2014) where a case is made to focus on the materiality of the object and the technical object itself is treated as external to the relations of production and historical process of capitalist accumulation (Latour 2018). By focusing on financialization of air pollution in India through clean-tech investments, my paper foregrounds how technological process are deeply entangled in and expedite geopolitical processes of exploitation (Kikon 2019; Yusoff 2018). The value form of capital in clean-tech provides a crucial vantage point to understand technology's life-making capacities, as well as the political possibilities that are enabled and foreclosed by the expansion of large-scale financial operations across the world (Foster 2022). Presenter: ashima mittal

Not Airpocalypse But Everyday Lives: Stories of Victims Complicit in South Korean Particle Pollution: In 2019, the Korean government passed a law stipulating particle pollution (also called particulate matter, PM) as a 'social disaster' after experiencing an apocalypse-like high concentration of PM. Pollution is often described as a damage-based narrative like disasters because environmental pollution becomes visible when a certain kind of damage occurs (Nixon 2011). Capturing the geopolitical context of particle pollution in Korea and the way people experience particle pollution in Korea can contribute to describing pollution as entanglement and relations rather than a damage-based narrative with one-way harm (Murphy 2017; Liboiron 2021). This

study reports on four months of fieldwork, digital ethnography, and 35 interviews with residents, citizen activists, and scientists in South Korea. Rather than interpreting pollution as an abnormal incident, this research aims to examine pollution situated in the everyday realm. Nowadays it has become an everyday routine to check air quality and PM concentration 'just like a weather forecast.' People constantly try to reach a compromise between their daily lives and the changed environment, sensing pollutants through symptoms, measuring air quality with technology, and reaffirming the accuracy of data by sharing and comparing with others'. People refer to the air quality index given by the WHO or the government, but they also set their own standards to match their needs and way of life. People actively measure the air quality of their nearest environment, and share, compare, and archive their own data online. The fact that individuals differently tolerate the severity of air pollution challenges the concept of the toxicity index that presupposes a certain normalcy. The global mobility and connectivity of air pollution and the chimeric positionality of South Korea show that there is no one-way pollution (Zee 2021). As transnational air pollution has partially contributed to particle pollution in Korea, social discourses on PM have focused on victimizing Koreans by attributing its cause to China. Thus, people expressed anger, depression, and resignation based on their victimized position. Simultaneously, some people reported that they feel guilty and responsible both as a consumer and a citizen, for buying products 'made in China' and living in a 'developed country' that contributed to environmental pollution. This complicated entanglement based on complicity and connectivity enables us to contextualize pollution as a relationship. Lastly, this research points out that the current interventions to tackle particle pollution in South Korea, including defining it as a 'social disaster,' are paradoxically contributing to maintaining the status quo by naturalizing and justifying anthropogenic causes. Conducting research in the era of COVID-19, I witnessed that PM has been constantly juxtaposed with and competing against other issues including COVID-19, climate change, other disasters, and even other air pollutants. This research problematizes the attempts to sever the relationship between the environment and the human beings, and even between different environmental issues. Pollution has been deliberately misread by constantly separating the environmental issues and human-environment relations. I would like to theorize these constant attempts to make separations and stratifications among environmental issues by prioritizing only one issue as a disaster with 'pinpoint environmentalism.' Presenter:

Seohyung Kim (Purdue University, Department of Anthropology)

Reinscribing Value in a Landscape of Abandonment: Waste and Agriculture in southeastern Sicily: Modern economies have a kind of metabolism premised on cycles of production, consumption, and rejection. Unwanted and sometimes unused and unusable objects are cast aside in trash bins, in rivers and oceans, on sides of roads, and in landfills. Waste, as matter out of place, also signifies broader processes of abandonment and ruination that characterize late-capitalism. In Southern Italy the 'waste crisis' has prompted numerous interventions, from illegal dumping to large scale incinerators to criminal activity. Not only is it emblematic of the political, economic, and environmental challenges the region faces, but waste has fueled activism and alternative ways of knowing, valuing, and relating to nature. This paper responds to Anna Tsing's call for anthropologists to attune our ethnographic eyes to what can happen in the ruins of capitalism and to reconsider Drawing on more than 5 years of intermittent ethnographic research with the Participatory Presidium of the Simeto River Valley, I critically examine how this coalition of farmers and activists in southeastern Sicily is attempting to reoccupy and contest the problem of waste through social farms and the Simeto Ecomuseum. I offer the lens of restorative attachment – the desire to (re)create connection (social, physical, emotional) based on care for a place (environment/ ecosystem/landscape) – to trace how residents' appreciation of and belief in the 'ecological and social wealth' of the Valley are uneasily interwoven with patterns of abandonment. I conclude by suggesting how these conflicting social and political orders make legible the challenges of reinscribing value in the Valley. Presenter: Katherine Lambert-Pennington (University of Memphis)

Beyond Words: A Sensorial & Interspecies Approach to a Multimodal Ethnography of a Polluted French Territory: This presentation draws on an ongoing post-doctoral research project 'ECOS' that studies social interactions and pressures between humans and other living worlds within a polluted environment and affected by climate change. <https://centrenorbertelias.cnrs.fr/programmes-de-recherche/ecos/> This proposal questions how to make tangible the interspecies entanglements and tensions around the Étang de Berre lagoon in Southern France. Situated between Marseille and the Camargue nature reserve, the Étang de Berre is a territory that takes its name from the sublime and enormous brackish lagoon that sits at its center. Home to a historically

unique and diverse ecosystem, over the last century, the French government along with municipalities around the lagoon, have invested heavily in petrochemical and energy industries. Today the Étang de Berre zone has become one of the most important economic industrial hubs of France on one hand, and yet an ecological sacrificial zone on the other. This presentation will highlight a range of polyvalent narrative approaches, adopting audiovisual technologies as an immersive, empathic sensorial methodological strategy to render perceptible, audible, and felt these phenomena that escape ordinary human perception. I will discuss the research and share samples, including sonic ethnographies, documentary videos and photography to explore their potential for expanding our notion of anthropological knowledge. Presenter: Jeff Silva

DISCUSSANT:

Megan Biesele, Alyssa Crittenden (University of Nevada, Las Vegas)

DESCRIPTION:

James Woodburn passed away in June 2022. Retired from the London School of Economics, he was mourned by family, friends, colleagues and former students. And also by a world-wide network of hunter-gatherer specialists, influenced by his key contributions to critical theory, innovations in field-work practice, and in his ethical clarity on the responsibilities of scholars to the

people they study. His field work with the nomadic Hadza of north-central Tanzania began in 1957 and continued into the 21st century. It is regarded as paradigmatic in the study of foraging peoples, and seen as a role model for generations of field workers. His articulated distinction between 'immediate return' and 'delayed return' hunter-gatherers has been widely adopted in helping to understand the diversity of hunter-gatherer case material world-wide. James Woodburn's most impactful accomplishment was his 1982 Malinowski lecture on 'Egalitarian Societies.' Under the massive impact of global capitalism, the very reality of societies based on egalitarian principles had been called into question. This lecture restored their legitimacy by documenting their existence across diverse continents and settings, and by critically examining the underlying principles by which they were sustained, and their range of variation. The panel, in Round-Table format, will bring together scholars, activists, and former students to evaluate his contributions to social anthropology. The panel will also situate his work in light of current trends in social and evolutionary theory, some of which strongly validate his contributions, while others challenge, critique, or ignore them.'

Revolution, Resistance, Decolonization: Remaking presents and futures in the Global South

8:00 AM - 9:45 AM TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Middle East Section

ORGANIZER:

Marta Zavaleta (Vanderbilt University, Department of Anthropology)

PRESENTER:

Sardar Saadi (University of Toronto, Department of Anthropology), Diana El Richani (University of Toronto, Department of Anthropology), Seyedeh Mehrnaz Moghaddam

DESCRIPTION:

This panel brings current experiences and answers from Lebanon, Iran, Rojava, and El Salvador to eternal questions: How do people living under multiple crisis, authoritarianism, war, and the legacies of violence redress the past, remake society, and make better futures? What kind of labor is required to bring such

change? What role can social media play? Who is imagined to do this work and what happens when those considered victims and without agency take on such initiatives? The first paper argues that children-soldiers are agentive participants in left-wing guerillas in El Salvador. The second turns to education as a site of emancipation by examining the struggle of the University of Rojava, founded by Kurdish revolutionaries to establish an emancipatory higher education system applying the principles of grassroots democracy, women's freedom, co-existence, cooperative economy, and ecological living. The third finds that some in Lebanon form alternative presents and futures through attachments to land (agriculture, burial practices, etc..). The fourth sheds light on the process through which women activists in Iran during the Woman, Life Freedom uprising were able to use video to extend understandings of what women's freedom can entail. The fifth examines the efforts of an Indigenous activists network in El Slavador to seek justice for Indigenous peasants disappeared in the 1932 massacre and finds the creation of counter-publics (again through social media) as essential to further legal efforts to challenge the exclusion of land rights of the recent state recognition of Indigenous peoples.

Higher Education and Emancipatory Politics: The Case of University of Rojava: This presentation reflects on the struggle of the University of Rojava to establish an emancipatory higher education system in Syria. The University of Rojava was founded in Qamişlo in 2016 in the autonomous region of North and East Syria, also known as Rojava, in the midst of ongoing violent conflicts, mass displacement of millions, and extraordinary geopolitical tensions. This region is where the majority of Syria's Kurdish population along with other ethnic and religious communities live. The diversity of this region was disrupted by colonial mappings of the Middle East in the early 20th century, followed by the rise of the newly established nation-states and decades of violence and repression. With the Syrian people's uprising turning into a civil war from 2011 onward, Kurds and other communities in Rojava escalated their struggle for democratic self-rule into what is known as the Rojava revolution beginning in 2012. Since then, the revolution has focused on defending communities of the region against violent attacks coming from Jihadist groups as well as the Turkish and Syrian armies. The revolution aimed to establish self-governing communities based on principles of grassroots democracy, women's freedom, co-existence, cooperative economy, and ecological living. This is historically significant, as the Rojava

Revolution proposed an alternative escape for the people from decades of suffocating conflicts and political repressions. In this presentation, I will talk about the ongoing foundation process of the University of Rojava and the many challenges it faces to navigate through everyday operations. The university strives to reflect the cultural and philosophical characteristics and values of intellectual traditions of Mesopotamia in its curriculum. In fact, it proposes a historical and unprecedented case in higher education for unrepresented communities of the region to revive their cultures and languages, which historically have been subjected to assimilation and different forms of repression and state violence. The university also takes experiences and practices of learning in higher education from various parts of the world, especially among indigenous and marginalized communities, into consideration. I will discuss the University's research and education programs as part of a curriculum that relays on theories, methodologies, and practices of decolonization. Presenter: Sardar Saadi (University of Toronto, Department of Anthropology)

'I am the Wheat': theorizing refusal and resistance through land in Lebanon: 'I am the wheat', I am told by one of my interlocutors in Beirut, Lebanon as our discussion encompasses an eventual return to land in death amidst the violence in the region. The reference to 'becoming' the wheat is not just about the material conditions of the cycle of life and death and the challenges that may prevent this return to soil, but rather, also about how our way of being is understood and embodied. Amidst the financial and economic collapse that Lebanon is going through, waves of mass emigration is underway. However, I look at those who stay behind and how they theorize this conviction of staying through the practices that build and sustain a relationship to land, whether that may be traditional agricultural practices, burial rituals, or other sorts of affective means that bring into focus a political imaginary that invokes an alternative way of being and eventual hopeful future. My interlocutors are theorists themselves who produce and embody theories of survival, *sumud* (Steadfastness), and attachment to land through the political and ethical claims that they make. How, then, can those who stay create and embody a politics capable of envisioning futures and invoking hope through land when in situations of crises in Lebanon and the region? How do people, not just survive, but actively form alternative presents and futures? The ethical and political claims that people who remain behind make then can be viewed as a site in which the self, the communal, and the cosmic is

understood and lived through, perhaps diverged from a hegemonic understanding. I look into the theories and practices that are evoked by those who stay behind through which a political imaginary can be formed and maintained in order to envision an alternative future and a radical detachment from coloniality. My methodology involves ethnographic work in two major sites: 1) the agricultural: grassroots organization that engage with traditional knowledge training in South of Lebanon as well as farmers and others who engage in these practices on an individual basis; 2) burial rites: exploring the Lebanese diaspora's wish to return in death and to be 'home' and in 'one's land' and the materialities involved in the practice of return and staying in the land after death, while also looking at how those who stay engage with death as a temporal practice and connection to land and belonging. Presenter: Diana El Richani (University of Toronto, Department of Anthropology)

Everyday Resistance to Everyday Revolutionary Practices: a Feminist Revolution in the Making on the Streets of Iran: The widespread protest in August 2022 ignited by the death of Jina Amini, the Kurdish Iranian young woman, at the hand of the morality police unified various groups of Iranians from different political, economic, and religious backgrounds into envisioning a revolution for the future of Iran. Scholarships on previous revolutions in Iran (Constitutional Revolution in 1911 and the 1979 Islamic Revolution) demonstrate that nationalist discourse excluded women from decision-making positions for their own bodies. In the recent Woman, Life, Freedom (WLF) uprising, women of Iran attempt to take control of the discourse by asserting their definition of freedom and feminism. Engaging with cultural relativist and feminist theories, this paper aims to explore how women in Iran negotiated and took action in response to authorities and cultural critics through bodily participation in the streets and cyberspace amid the WLF uprising. I compare the reaction of various groups of Iranians (conservatives, liberals, and leftists) who are in favor of the change of the state to two apart campaigns in which the videos of women dancing in public spaces were shared. In September 2022, the burning of the compulsory Hijab imposed by authorities during the protests and the call for practicing freedom of choice in everyday life which turned into a campaign of women posting their pictures without hijab in public were championed. However, a campaign of women posting videos of themselves dancing in public spaces wearing so-called 'loose' and 'improper' clothing received pushback from authorities and also the public. Using sexualized terms, authorities

attempted to discredit women's participation in protests, suggesting that women's protesters' idea of freedom is merely about 'exposing their bodies.' This was followed by both conservatives and liberals expressing that this campaign reduces the WLF struggle to the 'female body.' The response to these criticisms was the initiation of other campaigns by women. Desexualizing their bodies, during the calls for mass protests in November 2022, women posted videos of sliding aside their high heels and wearing boots symbolizing their preparedness to march in the streets. Secondly, women who had lost an eye during protests posted their pictures with the note that 'victory can be seen with one eye too.' Moreover, the old videos of the martyrs dancing were widely shared emphasizing 'life' as an important element of this revolution. In January 2023, a group of young women published a video in which they dance in the streets of Ekbatan town to be culturally perceived as more sexualized in terms of movements and clothing. This turned into a trend followed by other women all around the country. This time, however, the response from the public was encouraging, and dancing was noted as a form of 'resistance.' In a series of collective responses, women transfigured the female body from a 'tool of repression' to 'an assertion of power' (Namazie 2012). In this paper, I argue that women changed the ways in which the public countered the rebellious agency of the female bodies in public spaces and a new framing of women's agency emerged in public discourse. In so doing, they extended the interpretation of freedom to include the freedom of the female body to appear publicly, not only during protests and without the compulsory Hijab but also to dance wearing what was previously understood to be sexualized and inappropriate. Shifting Solidarities Across the Americas

8:00 AM - 9:45 AM Virtual - Room 2

Conversation/Debate - Virtual Live

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

ORGANIZER:

Chelsey Dyer

CHAIR:

Chelsey Dyer ,Maria del Pilar File-Muriel

PRESENTER:

Aviva Chomsky ,Carwil Bjork-James (Vanderbilt

University, Department of Anthropology),Christopher Courtheyn (Boise State University),Maria del Pilar File-Muriel ,Chelsey Dyer ,Evan King

DISCUSSANT:

Les Field (University of New Mexico, Department of Anthropology)

DESCRIPTION:

Across the Americas, Abya Yala, organized transnational resistance led by historically marginalized populaces has influenced the hemispheric political landscape. Historically, projects of transnational solidarity across the Americas have informed broader popular acceptance or aggression towards political alternatives that contest a Western capitalist agenda, such as support for or against communist or neoliberal projects. Recently, Pink Tide governments have been returning to Latin America. Based on these shifts, this session explores how projects of transnational solidarity are impacted during periods of political transition. Characterized by left leaning leadership, the officials of the first Pink Tide were elected on platforms contesting neoliberalism and emphasizing the rights of marginalized groups. Yet, after a successful right-wing backlash and the end of the commodities boom, many of the reforms of early 2000s Pink Tide governments were undone. However, in 2022 alone leftist Presidents swept the region. This new wave has explicitly contested US interventionism, environmental racism, and verbalized the need for greater protection of historically marginalized communities. The second wave of the Pink Tide is incomplete and contested. From the 2019 coup in Bolivia to the 2022 coup in Peru, the political terrain is in constant motion and tension. While a myriad of protests and campaigns have illustrated much of the population's discontent towards neoliberalism, privatization and corporate extractivism; the latest mineral boom, corporate power, and the need to fulfill national budgets creates contentious terrain for new leftist governments. Several of the new Pink Tide leaders, such as Colombia's Gustavo Petro, narrowly won their elections demonstrating a polarization of the national public. Activists across Abya Yala have celebrated leftist victories as the fruition of historic organizing directed at revanchist right-wing policies. North to South and South to South transnational coordination, education, and campaigns such as #NiUnaMenos and Black Lives Matter have been a consistent tactic used by factions of the left to advance their interests. This session explores how hemispheric solidarity IS being practiced and what it COULD be during times of transition- political, economic, and ideological transition. Some questions we consider are:

How do these geo-political transitions impact the relationships and tactics between activists from the Global North and South? Where leftist governments hold power, to whom are transnational activists directing their concerns or complaints? What are the types of relationships that transnational activists form (short-term, long-term) and how do they impact their (in)ability to transcend cultural boundaries and diverse geo-political circumstances? What new opportunities are created for the growth of more equitable relationships locally and transnationally in this period of transition? Charles Hale (2020) has demonstrated how the end of the era of neoliberal multiculturalism calls for a shift in how activists assess and strategize tactics of engagement. In this session we will address the unique situational challenges and opportunities that have emerged in this most recent Pink Tide transition. How do periods of transition redefine solidarity? Or do they?

'Soy Porque Somos': Pan Africanism, Back-to-Africa, and Trans-Atlantic Black Collective Identities

8:00 AM - 9:45 AM TMCC - 803 B

Oral Presentation Session

REVIEWED BY:

Association of Black Anthropologists

ORGANIZER:

Sara Busdiecker (Spelman College)

PRESENTER:

Layla Brown (Northeastern University, Department of Sociology & Anthropology), Gillian Richards-Greaves (Coastal Carolina University, Department of Anthropology & Geography), Chrislyn Laurie Laurore (University of Pennsylvania), Worku Nida (University of California, Riverside)

DESCRIPTION:

This panel examines the various ways that Pan and Trans-Africanism have been characterized and understood historically. The scholars on this panel highlight and recenter ethnographic and archival data from Colombia, Guyana, Liberia, Ethiopians in Seattle and Los Angeles, and Chile. They consider the material contributions of present-day Pan-African movements and Pan-Africanist women; how African movies are facilitating tangible and widespread changes in the expressive arts; what it means to be 'free slaves'; the intersection of a good life with discourses on

Ethiopian/African diasporas; and the journey towards legal recognition of Chile's Afro-descendants.

Vivir Sabroso: Pan-African Feminist Praxis and Francia Marquez's Vice Presidency: In September 2022, Francia Marquez Mina made history as the first Afro-Colombian (and Leftist) person and woman to serve as Vice President. In preparation for her presidential run, Francia Marquez co-founded 'Soy Porque Somos,' a political organization named after the Sotho epistemology of Ubuntu (I am because we are). Rather than centering Ubuntu's contentious readings and renderings, this paper argues that Francia Marquez's Vice Presidency, with the support of Soy Porque Somos, relies heavily on a Pan-African ethos and must be understood as a source of innovation and disruption in current global structures of governance. Through traditional and digital ethnography, this paper situates Marquez's vice presidency as one of the most visible displays of state-level Pan-African praxis in the 21st century. By unapologetically centering 'los nadies' (the nobodies), 'las mayores' (the guidance of communal elder women), the rallying cry of 'vivir sabroso' (living well/joyfully), and through her current global campaign to create meaningful connections with African peoples all over the world, Marquez's vice presidency confronts and challenges racism, heteronormativity, patriarchy, armed conflict, and environmental injustices daily. Despite the nascent stage of her vice presidency, Marquez has taken every opportunity to call attention to the perfunctory role of her position. At a pre-inauguration rally in Bogota, Marquez reminded the audience of Afrodescended, Indigenous, and Campesino laborers that: 'the vice president does not have a constitutional government mandate, that its main function is to accompany the president and that my tasks are based on the delegations made by the president.' Rather than being deterred by this fact, Marquez has strategically chosen to highlight this reality in order to make clear her intentions about building a Pan-African coalition. Sylvia Tamale's recent work, *Decolonization and Afro-feminisms*, renews the call for a clear articulation of what she interchangeably refers to as 'Pan-African Feminism' and/or 'Feminist Pan-Africanism.' On a broad (and somewhat distorted) scale, Pan-Africanism as both a political objective and ideological framework has been, as Temitope Fagunwa argues, 'misconstrued in the most treacherous manner.' This paper agrees with Fagunwa's argument, and further suggests that Pan-Africanism has also been largely mischaracterized as dominantly masculinist. Francia Marquez's vice presidency offers a contemporary opportunity to highlight and recenter the

material contributions of present-day Pan-African movements and Pan-Africanist women in particular, allowing for an eschewal of narrative that attempts to disregard Pan-Africanism's contemporary relevance on the basis of its so-called exclusionary gender politics. This paper concludes by arguing that when each of these distinct elements are taken together as a whole Marquez's political impetus to both acknowledge the distinct groups racialized as Afro-Colombian (Negro, Afro-descendants, Palenqueros, y Raizales) and to link those struggles with the Indigenous peoples of Colombia as well as the peasant farmers exhibits yet another Pan-African ethical praxis of political solidarity without losing site of the primacy of the experiences and liberation of African peoples in particular. Marquez's vice presidency offers a prescient opportunity to (re)think the operationalization of Pan-Africanism in real time. Presenter: Layla Brown (Northeastern University, Department of Sociology & Anthropology)

Nollywood, Emancipation Day, and the African Renaissance in Guyana: The African movie industry is often referred to as Nollywood, highlighting the fact that the bulk of African movies are currently produced in Nigeria or by Nigerian companies. However, African movies are also produced in Ghana, South Africa, and many other African countries. African movies address a wide range of topics, such as romance, polygyny, witchcraft, domestic violence, migration, rags-to-riches narratives, and more. These movies are also nationally televised, often alongside Bollywood and Hollywood movies. Over the past twenty years African movies have become such an integral part of the African-Guyanese community in Guyana, that they have begun to influence fashion, speech patterns, music-making, and other aspects of African-Guyanese culture. This paper examines the ways that African movies are facilitating tangible and widespread changes in the expressive arts among African-Guyanese in Guyana. It specifically examines how music and dance in African movies-including 'traditional' dances, choreographed Afropop music and dance combos, and everyday expressions of thanksgiving-are influencing the music in Guyana. Presenter: Gillian Richards-Greaves (Coastal Carolina University, Department of Anthropology & Geography)

A Nation By and For 'Free Slaves?' The Back-to-Africa Movement as Sovereignty in Process: The Back-to-Africa Movement began with the creation of the American Colonization Society in 1817. Believing that African Americans would fare better in their 'native homeland,' the U.S.-based organization facilitated the repatriation

of tens of thousands of free and recently manumitted Black Americans to the continent. As the site where settlers first arrived in 1822, Providence Island was central to the subsequent founding of the Liberian republic in 1847. The Island was added to the tentative list of UNESCO World Heritage sites in 2017 under a justification of outstanding universal value that emphasizes its significance as a reversal of the 'point of no return.' Throughout the description, African American settlers are interchangeably referred to as 'pioneers,' 'slaves,' and most curiously, 'free slaves.' Dominant narratives regarding Liberia's founding have been reanimated by recent bicentennial celebrations - 'Reunion 2022: Liberia Year of the Diaspora.' Based on fieldwork carried out during the same timeframe, the proposed paper is an exploration of the phrase 'free slaves.' As Liberia struggles to rebuild after decades-long civil conflict, I suggest that this oxymoron is indicative of a forestalled Black sovereignty that is still in process and still under threat. Presenter: Chrislyn Laurie Laurore (University of Pennsylvania)

Building "Good Lives" and "Good Futures" through Equbs (Ethiopian ROSCAs) among Diasporic Ethiopians in the US: A growing number of recent anthropological studies analyze how people dealt with transitions by using various strategies to build a 'good' life and a 'good' future (Appadurai 2013, Calestani 2008, Fisher 2014, Robins 2013). In this paper, I plan to contribute to these conversations by presenting and analyzing stories (such as the epithets above) and practices of equbs as critical resources for building a 'good life' and a 'good future' among diasporic Ethiopians in the US. Transitions'-a theme for AAA/CASCA 2023 conference-aptly speaks to the 'trans-ness' of lived everyday lives among diasporic Ethiopians in the US. Equbs provide insights into how diasporic Ethiopians used equbs to handle migration-induced challenges and opportunities and create 'good lives' and 'good futures'. I will specifically discuss how diasporic Ethiopians used equbs to fund entrepreneurial activities that gave birth to successful business enterprises in Los Angeles (including Little Ethiopia), Seattle, and back in Ethiopia. In doing so, I will provide insights into the histories, internal dynamics, ethnic compositions, contributions, lump sums of equbs in Los Angeles and Seattle. I will analyze Ethiopian business enterprises and Little Ethiopia as forms of 'good' life and future, in juxtaposition with the uniquely racialized experiences of 'historic' African Americans in mobilizing resources for business creation and building a 'good' life and future, contributing to anthropology of 'good' life and future and discourses on Ethiopian/African

diasporas. Presenter: Worku Nida (University of California, Riverside)

The Good Way, the Good People: Reflecting on (Forgotten) People, Histories, Relationships, Places and Methods (Part 1)

8:00 AM - 9:45 AM TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Sarah Moritz

CHAIR:

Sarah Moritz (Thompson Rivers University), Joshua Smith (Western University Libraries - Serial)

PRESENTER:

Joshua Smith (Western University Libraries - Serial), David Dinwoodie (University of New Mexico, Department of Anthropology), Liesl Gambold, Sebastian Braun

DISCUSSANT:

Robert Hancock (University of Victoria, Department of Anthropology)

DESCRIPTION:

Drawing from our individual and our collaborative endeavors and life projects, we reflect candidly on the transitional contexts of anthropologists' decolonial, action anthropological and collaborative inquiries in connection with the ways these have informed our theories, writing, relationships, and institutional engagements to do work 'in a good way'. We ask, what was, is and can be the role of timely actioned, engaged, and/or relational anthropology during these uncertain and turbulent times? What can our trans-disciplinary past and especially some of its forgotten, ostracized, ignored, subjugated, yet influential ancestors teach us about critical and enduring legacies for the present and future? We reflect critically on mentors, Elders, peers, and teachers who offered transitional gateways, portals, and re-imaginings of anti-colonial, decolonized, and alternative anthropologies through which we are, in turn, inspired to consider real transitional tools towards ethical, reciprocal, and powerful alliances and approaches for addressing the immense contemporary challenges facing anthropology now. By invoking gifted people and ideas who already transitioned or provided

alternative transitional paths towards a decolonized anthropology, we aim to identify radical pathways and alternatives that many of us routinely pass over, ignore, refuse to see. We offer a set of protocols, principles, and insights to inspire the ghosts, contemporaries, and future generations of those interested in working together through transitional contexts of critical decolonial reception histories, reconciliation, climate change, education, and social justice. (Part 1)

Transitional Pedagogies in the History of Anthropology: Action as Decolonized Anthropology: In response to re-occurring calls, perspectives, and arguments on anthropology's ever-present need(s) to decolonize, this paper offers insights into examples of ways in which Sol Tax's action anthropology has (1) cogently answered such calls both in theory and praxis in addition to (2) offering pathways forward, not yet fully considered by the discipline outside of a small community of scholars specializing in the history of anthropology. Why action anthropology continues to be misunderstood, devalued, and often subsequently dismissed despite the theoretical and methodological tools Tax and his colleagues implemented in their objectives to work towards decolonization is succinctly explained. This is contrasted with a final emphasis of how Tax centered power, epistemology, and pedagogy as crucial registers and focal points of action anthropology in arguing for its urgent relevance to transitioning anthropology today. Presenter: Joshua Smith (Western University Libraries - Serial)

Decolonization and Decolonization Ideologies in Native North America and the History of Anthropology: In this paper I am developing a perspective on decolonization and recognition as these movements arose, as they were given stimulus by Woodrow Wilson in the so-called Wilsonian moment, as they were taken up among Native North American leaders, as they were advanced in American Indian policy in the Indian New Deal, and as anthropologists have contributed to them. I will also sketch out several subsequent phases of activity on the part of anthropologists seeking to decolonize the field of anthropology and further self-determination among Native Americans, including, including the IRA and subsequent reverberations involving Nancy Lurie and Sol Tax, the effort on the part of anthropologists like Eric Wolf and Marshall Sahlins to detach anthropology from the American security state, and the effort to prioritize Native American voices in postmodern anthropology. I will argue that despite the fact that there is so far to go as far as ending all forms of exploitation and domination by Europeans, that histories of decolonization and

recognition in fact run relatively deep in Native North America, much deeper than present conversations suggest. I will also suggest that the movements of decolonization and recognition and along with them, the applied activities of anthropologists, have not led unambiguously toward ending all forms of exploitation and domination of Native Americans. Presenter: David Dinwoodie (University of New Mexico, Department of Anthropology)

On Humility and Knowing: Fredrik Barth and good anthropology: In these turbulent times fraught with civil unrest, violent racism, climate crises, misogyny, fake news, warfare, pandemic, and loneliness the argument has been made that there is a fundamental lack of understanding between different kinds of people. This is a troubling refrain for an anthropologist whose career has been built on trying to understand other people and trying to convince undergraduate students that it is vitally important to understand other people. To this end, I have found myself relying heavily on the work of several deeply engaged and relational anthropologists, one being the late Fredrik Barth. While Barth was criticized for his public formulations of models designed to help us understand complex, and often disordered, social systems, this paper examines Barth's work as an embodied and committed fieldworker. His devotion to witnessing the social and cultural construction of reality meant that he was focused on the individual, their actions, and their thoughts. But he always came back to the meaningful intersection of the individual, the group, and society. Barth's work recognized the inconsistencies and discordant nature of socio-cultural worlds and argued that it is our focus on some cultural differences that divert us from the 'good way'. Barth believed that anthropology lived among people and thus, so too must anthropologists. He argued for humility first and foremost as a way to be open to a different explanation or version of reality. This paper engages with Fredrik Barth's methodology as a critical tool for understanding in troubled times. Presenter: Liesl Gambold

'Bad Anthropology'. Paul Radin, James Agee, Zen, and the Art of Anthropological Engagement: In the current existential double or triple crises of ecological, political, and budgetary climate destabilisation, one of the responses from both the academic establishment and counter-establishment has been to insist on earnest didactics. In anthropology, this sometimes resembles an internal cultural revolution and counter-revolution, burning our ancestors at (thankfully imaginary) stakes or defending them against attacks by raising them to almost totemic heights. However, in focusing on

possible transitions through and from colonial and decolonial academic unrest, we sometimes forget that anthropology, as Tim Ingold wrote, is about 'how should we live.' Taking ourselves too seriously, we often forget to take those Others we are supposed to understand (non-academic humans) seriously. Taking inspiration from 'bad environmentalism' this presentation proposes that answers to transitioning crises might be found on the borders of our discipline, where - prevented from or eschewing access to the hegemonic disciplinary discourses - creative minds have found ways to apply anthropological knowledge in ways that have been rejected as unacademic, irreverent, or populist. Learning from those ancestors, who were prevented from taking themselves seriously and thus turned to taking others seriously, can teach us how we can productively get through the present crises. Presenter: Sebastian Braun

The Perils and Promises of Protection for Migrants and Refugees

8:00 AM - 9:45 AM TMCC - 718 A

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Jordan Levy (*)

PRESENTER:

Jordan Levy (*), Manuel Insberg, Houman Olliaei (Brandeis University)

DESCRIPTION:

Across the world citizenship and border regimes promise protection- both from 'illegal' migrants as well as to those appearing as asylum-seeking refugees. The papers in this panel examine the promises and perils of policing, protection, and everyday negotiations of political processes and citizenship by migrants and refugees.

Reading the Political Landscape and Deciding to Migrate: The Honduran Exodus as Seen Through the Collapse of Public Institutions: This paper explores the agentive decisions that Honduran migrants make in deciding to seek asylum, placing emphasis on their abilities to read political processes in Central American and U.S. contexts. The analysis provided here is based on extended ethnographic research among Hondurans active in the anti-coup resistance movement who have fought to maintain a robust public sector amidst

neoliberal reforms; Honduran migrants in the U.S. of mixed immigration statuses; and sustained expert witness testimony in support of Hondurans who flee from gang violence, gender-based violence, and political violence of different kinds. I emphasize the role of clientelism, corruption of state officials, and the pervasive networks of organized crime that control territory and act as state-like entities (charging tax, providing protection to local residents, and punishing those who challenge their authority). I show how these illicit or extra-state entities overlap and collaborate with actual state authorities, by applying the theoretical notion of a 'shadow-state' or 'para-state' for understanding this particular breakdown of Honduran public institutions in the post-coup political context. In so doing, I explore the utility of the shadow-state concept for writing effective affidavits that win asylum cases, especially on the basis of 'imputed political opinion.' Ultimately this paper argues how anthropologist expert witnesses can use state theory to better understand the dynamics of Honduran migration, and serve as effective expert witnesses – and that if done correctly, such application of anthropological theory has the potential to influence the mindset of U.S. state agents such as immigration lawyers and judges. Presenter: Jordan Levy (*)

'Norway should be a safe haven' - Exploring promissory acts and refugeeness within the Norwegian migratory regime.: During the final committee meeting that decided on his application for a refugee status in Norway, one moment was particularly memorable for my interlocutor Henry. 'I can't forget when [the commission head] closed her laptop and said: 'I promise you, my country will help you.'" Promises play a constitutive role in the migratory regime of Western liberal societies. They appear in bureaucratic procedures, political speeches, legal texts on asylum and migration, and far-reaching integration programs. Following Sara Ahmed (2010), promises comprise the desires for our demanded object(s), helping us to order and direct these desires. They are constituting elements of the relationship between and the positionality of the one who promises and the one who is promised something. At the same time, promises serve as a temporal technique for directing present actions toward a future object of desire. Protection, a good life, or participation in the receiving society form these promised yet vague objects that politicians, government officials, or humanitarian actors declare desirable for certain 'deserving' forced migrants. While there also circulate powerful promises to protect the integrity of the nation, its citizens, and the prosperity of the welfare

state against those declared 'undeserving'. Drawing on long-term ethnographic fieldwork in Norway's capital, Oslo, this paper explores the variety of promises communicated in the context of the Norwegian refugee regime. Thereby, I conceptualize this regime as an 'evolving and incoherent cluster of hegemonic promises' (Berlant, 2011), examining the different positionalities and power relations that these promissory acts create. Specifically, I aim to answer the following questions: What are the promises that circulate within the Norwegian refugee regime? Who makes these promises, to whom, and who is excluded from them? And what are the underlying hegemonic power relations? To answer these questions, I will focus on three specific objects of desire in this paper that I identified as characteristic of the Norwegian refugee regime. First of all, I will draw my attention to protection as a promised object of asylum. Secondly, I would like to interrogate the relationship between integration policies and the promise of a good life for refugees in Norway. Finally, I would like to discuss the implications of a promised equal treatment of refugees in an imagined egalitarian and multicultural society. By analyzing these objects of desire, I illuminate the power dynamics of the Norwegian refugee regime and contribute to a deeper understanding of the role of promises in Western liberal societies' migratory regimes. Presenter: Manuel Insberg

Stateless in their Homeland: Internally Displaced Yezidis and the Perils of Citizenship: In 2014, the Sinjar Region of northern Iraq was attacked by ISIS, resulting in the displacement of nearly the entire Yezidi community seeking refuge in Iraqi Kurdistan. The physical and mental trauma inflicted on Yezidis during the attack was compounded by forced displacement, which left them in a precarious state. As internally displaced persons (IDPs), Yezidis were no longer respected as full citizens by the Kurdish and Iraqi governments. Nor were they recognized and protected as refugees under international law since they remained within Iraq's territory. While international law has codified the protection of people crossing international borders since the 1951 UN Conventions, the plight of IDPs remains largely unaddressed. How does the experience of internal displacement and the humanitarian response to it differ from other forms of migration? And how do Yezidis, who fall into a protection gap of not being recognized as full citizen nor refugees, navigate both state and humanitarian networks to aspire for recognition of their rights? The paper addresses these questions, demonstrating that internal displacement has not only created distinct dynamics between humanitarian actors, state institutions, and displaced

populations compared to refugees, but has also placed Yezidis in a legal and political gray area between citizenship and statelessness. Although Yezidis theoretically have the right to citizenship while residing in their home country, they are classified as IDPs because their state has failed to protect or respect them as citizens, effectively rendering them de facto stateless. Being in this position has confronted Yezidis with an existential question: to what extent do they – and their future - belong to their nation-state as citizens and to what extent are they humanitarian subjects? Focusing on the deliberations of Yezidi IDPs, I suggest that the status of Yezidis as both stateless and citizens complicates conventional understandings of the relationship between citizenship, statelessness, and human rights. For Yezidi IDPs, statelessness does not imply a loss of one's 'right to have rights' as suggested by Hannah Arendt. Rather it is a new beginning: reaching the absolute zero of political belonging in the hope of gaining protection and resettlement abroad.

The Specificities of Place and Local Economies

8:00 AM - 9:45 AM TMCC - 501 A

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Eric Thrift

PRESENTER:

A. Oak ,Seamus Hodgins ,Gerald McKinley ,Eric Thrift ,George Wenzel (McGill University)

DESCRIPTION:

Place, space, and local economies come together in discussions around various socio-economic practices from Mongolia to Canadian northern, rural, and provincial contexts. Themes cover local food and clothing production to contested landscapes and the architectural/development implications when 'land' and 'built environments' emerge.

Talking place into being: Interactions between architects, a client, and a landscape: How does the built environment emerge through relationships between humans and non-humans? For example, how do people communicate to make decisions about where, in a landscape, a building should be located and what that building should be like? This paper explores a series of

meetings during which a group of human architects work with a client and a non-human landscape to decide where a building – a pavilion in a Canadian National Park – should be placed and, to a lesser extent, how that building should function. Through attending to the social interactions and particularly to the stories told by the architects and the client, this paper explores how the land, the location's weather, and the natural and human-made elements within the landscape exist as realities that are talked about as conditions of constraint and/or possibility: conditions that actively contribute to the nature of the future building and its placement in the Park. Through reference to segments of fieldwork-based video and audio recordings, this paper explores how transitions of knowledge, power, and persuasion occur as the human participants first walk and talk within a landscape, to when they subsequently meet indoors to achieve consensus concerning the building's location. Particularly considered is how speculative talk concerning the imagined building is generated from and enfolded into knowledge of, and descriptions of, the land as well as within shifting power relations within the group of actors. This research draws on the work of, e.g., Hallam & Ingold (2021); Ingold (2011, 2016); Marcus (2021); Murphy (2017), and Suchman (2021) as the paper attends to how dynamic social hierarchies, together with transient, embodied experiences of a place, become translated into the emergent design and potential physicality of a building. Also considered is how the practices of ethnography and ethnomethodology/conversation analysis might themselves be enfolded into what has been called ethnomethodological ethnography (Meier zu Verl & Meyer 2022): an approach to understanding the actions of social reality so that, as in this case, situated communicative events can be explored to reveal how the (human) ecologies of social order, embodied experience, temporality, and place are active in shaping imagined and real materialities. Brewing Up Change: The Transition Toward Conscious Capitalism Within the Ontario Craft Brewing Industry: As a movement away from many of the human, labour, and environmental harms associated with the structures of capitalism, conscious capitalism seeks to present an alternative. Away from the destructive harms of capitalism, conscious capitalism aims to develop ethical business practices which put community before profit. While some alternatives have been presented, such as corporate social responsibility, fair trade, and B-corporation certification, conscious capitalism offers craft brewers in Ontario, as well as North America, a more flexible system within which to operate. During a time of transition within the Ontario craft brewing community, with growing anxieties of corporate buyouts by multi-national brewing conglomerates, more people speaking up about labour issues within the craft beer industry, and growing concerns around the sustainability of the industry, conscious capitalism offers brewers as well as community members an opportunity to create a path to a form of less harmful capitalism. From collaboration between breweries, trading of key ingredients, the building of community partnerships and critical environmental initiatives, supporting ethical and moral decision-making to remain a certain size as a business, craft brewers hope to chart a new path for the future. In Ontario, various sizes of urban and rural breweries within the industry are often deeply connected to their local communities. While some in the craft beer community see conscious capitalism as an alternative model of 'more ethical business practices,' there are still outstanding issues within the craft community which are not being addressed. Can more ethical business practices exist and become a possible alternative to the current system of capitalism? While breweries hope to develop the community and express their political and ethical motivations, can this alternative enact social change? Do the strategies and practices created by craft brewers, as well as other community members, create a sense of 'localness'?

Presenter: Seamus Hodgins

Contested Landscape Narratives: The Ontario Greenbelt and the Discourses on Development: Despite campaign promises, Ontario Premier Doug Ford has opened the Ontario Greenbelt for development. The Greenbelt

consists of over 8000 square kilometers of protected farmland, forests, wetlands, and green spaces in Southern Ontario, mostly surrounding the Greater Toronto Area. The area was set aside in 2005 because it provides important environmental regulation in Canada's most populated region. This process of 'setting aside' created a space for discourse contesting the use of land by developers and environmentalists. Using official press releases, social media posts, news interviews, and environmental assessment frameworks, this paper first draws on Arran Stibbe's (2021) approach to ecolinguistics to explore the use of 'stories we live by' by both development and conservation proponents to demonstrate how each employs the same foundational narrative of ownership in their argument. In both cases the Greenbelt is a thing, separate from humans, which will be acted upon by the will of select people. From here I engage Bruno Latour's (2017) argument about the environment, deregulation, inequality, and climate breakdown and Donna Haraway's 'Chthulucene' (2017) to situate the Greenbelt within an expanding nationalist discourse on the use of resources and continued separation of resource from human. I will explore parallels from discourses on the emerging Ring of Fire development in Northern Ontario and with environmental protection plans in the United States to show how the increasing climate crisis is altering surface level environmental discourse while enhancing local efforts to convey ownership of resources for their development.

Presenter: Gerald McKinley

Branding, virtue, and alterity in the commodity chain for Mongolian cashmere: This paper explores mismatches between the ways that global cashmere consumers and cashmere-producing nomadic pastoralists in Mongolia imagine each other, using the lens of 'branding' as a mechanism for self-identification and virtue signalling. Whereas global marketing of cashmere apparel conventionally highlights luxury value and indulgence, fashion labels have increasingly adopted sustainability as an element of their branding. Mongolian pastoralists, who supply most of the world's cashmere, are themselves also 'branded' through this process, in ways that are not altogether positive. Fashion labels have reproduced claims that herders in Mongolia are in a state of 'crisis', ostensibly triggered by overgrazing and degradation of grasslands to satisfy a global mass market for cashmere. In this context, nomadic pastoralists are represented as reckless but malleable targets for improvement. On the ground, branded interventions include several competing standards for sustainable cashmere, supported by different fashion labels but positioned operationally within the

international development space. These new standards privilege technical improvements and increased production efficiencies, thus promoting a transition away from the 'cultural' in favour of the 'economic' in rationalized livestock production. At the same time, Mongolian pastoralists and cashmere processors aspire to a branding that associates cashmere with a place-based cultural identity. In imagining interactions with international consumers, herders emphasize their harmonious relationships with the land and livestock, positioning the ideal nomad as an ethically virtuous actor within modern Mongolia and the globalized economy. As these contradictions play out in the global marketing space, power differences within the political economy of cashmere are revealed and contested through branding actions that both mediate and perform virtue. Presenter: Eric Thrift

Inuit Food Sharing. Is It Economic?: The study of the Inuit economy has gone through a series of analytical phases since Boas's seminal work on the Inuit of eastern Baffin Island. Much of the research with Inuit in the 20th Century focused on the behavioral ways and technical means of Inuit hunting as the essence of Inuit economy. Non-Indigenous observers have typically conceived hunting to be the essence of the Inuit traditional economy (i.e., 'subsistence'). In reality, Inuit have lived some form of mixed economy (usually consisting of wild foods and imported technologies) since regular contact with Qallunaat began around the mid-nineteenth century. Damas identified four stages of increasing Inuit-Euromerican contact that loosely explicate how the hybrid economic adaptation lived today by Inuit developed. By the latest stage wild resources underwent gradual deemphasis as the pursuit and harvesting of the mammalian, fish and avian resources, once perceived to be the core of the traditional subsistence system, were increasingly seen as a marginal lifeway and form of livelihood. Here, the normative transfer (ningiqtuq or sharing) of wild foods is examined in terms of possible multiplier effects congruent with the ningiq ethos. This aspect of what is very much a social economy gives these transfers – and subsistence as a material system – a dimension that, while difficult to quantify except analogically, is economic as well as cultural despite its overshadowing by the mixed economy's market sector. DESCRIPTION:

Globally, ethnic groups are facing multiple crises at the same time. While the Covid-19 pandemic set a common historical ground, recent natural disasters, food shortages, rising living costs, and diasporic mobilities point toward the emergence of dense and contradictory social forms. Despite worldwide economic dislocation and dangerous diasporic movements, peoples in East Asia, Africa, Middle East, and Latin America are striving to build forms of solidarity, belonging, and futurities. Whether fostering solidarity bonds in Morocco's and Nigeria's urban neighborhoods, democratic experiments from below in northeastern Syria and Sri Lanka, or village networks of support under increasing rural diaspora in indigenous Guatemala, this epoch shows the emergence of new communal reconfigurations. This panel brings together ethnographic reflections from fieldwork in various parts of the world on how peoples' daily lives are drastically changing under rampant poverty, migration, political turmoil, and state crisis. Although rooted in different historical experiences, is it possible to trace the emergence of new social forms of communal relations and support to face current emotional distress in Nigeria, Tangier, or Guatemala? How do nation-states confront alternative modes of democracy in the Autonomous Administration of North and East Syria or in the recent massive demonstrations in Sri Lanka? One thing is certain: there is no such thing as going back to normal. Through multi-sited

ethnography and a comparative standpoint, this panel delves into people's daily life experiences, uncertainties and hopes despite increasing ethnic fear, conflict, and state repression. How can anthropology help to visualize the seeds of new and more democratic forms in a world seemingly trapped in chaos? This panel will discuss various crises and liminal forms of sociality in the world to grasp the common ground we share as humanity in this historical epoch.

Night Sky Fireworks: Post-Pandemic Crisis and Maya Indigenous Diaspora in Guatemala: While traditionally used in fairs and holidays, fireworks have become an almost weekly event in the indigenous municipality of San Juan Cotzal, Guatemala. When the sun comes down, Ixil villagers set off fireworks to announce that a relative has arrived safely in the United States. With at least three major tragedies where 150 Guatemalan migrants died between 2021 and 2023 in Chiapas, San Antonio Texas, and Ciudad Juárez, fireworks show the persistence of human mobility in a world characterized by uncertainty and chaos. For many Ixil villagers, diaspora is a direct answer to the post-pandemic economic crisis and two major tropical storms that wreaked havoc in 2020. These events affected people's daily relations and emotional expressions. Neo-Pentecostal churches visit the migrant's family and offer spiritual support through thanksgiving ceremonies, prayers, and collective meals. Migrants, in return, send money to their families and churches. The Maya diaspora is also modifying local landscapes and job opportunities. Through remittances, indigenous migrants finance big and luxurious houses in the villages, often hiring young local men to work in the construction. In contrast, other indigenous work for foreign NGOs on nutrition workshops, and sustainable agriculture. While Ixil masons and blacksmiths make their living out of remittances, the NGOs hire young indigenous professionals to work on projects to prevent the diasporic phenomenon. By exploring the hidden mediations of the night sky fireworks, this paper studies indigenous diaspora and how it is currently changing labor relations, religious belief, and urban landscapes in Guatemala. Presenter: Sergio Palencia Frener (William & Mary, Department of Anthropology)

Global solidarity in 'patios': Filipino-Moroccan relationship in the post-pandemic Tangier: Between the late 19th and early 20th centuries, wealthy European investors in Tangier built collective household complexes called 'patios' to rent to the city's working-class population, predominantly inhabited by Andalusian Spaniards. When the European population

started to leave the city after the independence of Morocco, Moroccans began to move into vacant households in different patios. While most patio residents became Moroccans by the 80s, Filipino migrants also started moving in after 2010, when the Filipino government sent their OFW (Overseas Filipino Workers) to the Middle East and North African countries. This paper explores the transformation of ethnic relations amongst the residents of patios during and after the pandemic, focusing on the practice of Daret (collective funds shared amongst women) in patios. While Filipino migrants living in patios used to have more social or economic relations with their ethnic community, primarily through churches, mobility controls and curfews during the pandemic hindered such ethnic gatherings. How did the social relations surrounding Muslim women's collective funds change into a supportive network for the Filipino diaspora group? How do these newly created ties influence the dynamics of the Filipino diaspora group in the post-Covid-19 era? Presenter: Garam Kwon (CUNY, Graduate Center, Department of Anthropology)

Home and the Nation: The Question of Home amidst Sri Lanka's 2022 Crisis: "We must eliminate this fascist threat. Ordinary citizens' houses must be protected," declared Sri Lanka's President, Ranil Wickremasinghe in July 2022. Wickremasinghe's comments followed an arson attack on his private residence, and the occupation of the former President and Prime Minister's houses by protestors during the island's worst economic crisis since independence. Spiraling inflation and acute shortages of staple food, fuel and power had instigated months of nation-wide protests. While it was unsurprising to observe the dissonance between ruling elites and ordinary citizens, there was even less understanding of the current impact that shortages were having on the concept of home, outside of its material and physical structure. For "houses are as much cultural constructions as they are built forms", and they represent the political and ethical stakes of 'home', as a place associated with wider forms of belonging and/or displacement (Birdwell-Pheasant and Lawrence-Zuniga 1999). In this paper, I analyze Sri Lanka's creole community, the Burghers, and the larger temporal question of the 'politics of home', to ask what happens when people's identity is not related to the land, or when land has no values, memories or history for the people who inhabit it? Focusing on the lived experiences and narratives of Burgher inhabitants of the Eastern Province, who lived through war, the 2004 tsunami, and the disappearance of their language (Portuguese Creole), I draw on "haunting", (Gordan and

Radway, 1997) as a theoretical structure through which to examine Batticaloa Burgher narratives about loss, dispossession, migration, progress, and development. Presenter: Deborah M Philip

Pandemic and Beyond: Kurdish Experience in Northeast Syria: The Autonomous Administration of North and East Syria (AANES), commonly known as Rojava, has illuminated the plight of the stateless in the times of crisis. Despite comprising almost a third of Syrian territory, the AANES has not been recognized as a legitimate body politic neither by the Syrian state, nor by the international community. The limitations that come with this lack of recognition—most importantly, lack of access to humanitarian aid—have inhibited the AANES' efforts to provide protection to its people during the COVID-19 pandemic and the most recent earthquake. However, the AANES's lack of access to resources goes beyond the times of crisis. In this paper, I show that starving the region of vital resources through a variety of means has been a systematic strategy by the Turkish and Syrian states to undermine the AANES's ability to provide safety and decent living conditions to its people and to fully realize its project of social transformation. The Turkish state in particular has used a wide range of tools – from drone attacks to an economic embargo to cuts of water flow – to create a heavy burden for the region's already-meager economic resources and to dampen the popular support for the administration, thus undermining its legitimacy. I argue that this strategy is best understood through the framework of counterinsurgency as both the Turkish and Syrian states are threatened by an experiment in direct democracy, pluralism and gender equality led by the AANES, which challenges the oppressive nation-states' control in the region. Presenter: Anna Rebrii (SUNY, Binghamton University)

Formations of hope(lessness): An Examination of Nigerian Contemporary Politics of Crisis: How is crisis imagined within the context of its continuity? While crisis as a term brings up questions around its temporal bounds, it also highlights complicated relationships to place that are inscribed within a hierarchical global landscape. Within this paper, I'll be exploring the ways in which "crisis" was and continues to be mobilized as a Nigerian condition that makes clear the exclusivity of the current nation-state form and the tensional relationship between notions of hope and futurity within a postcolonial African nation. Presenter: Chinoye Otuonye

Thinking Outside the Brain-Box: Extended, Embodied, Embedded, and Enacted Cognition in Anthropology

8:00 AM - 9:45 AM TMCC - 802 B

Oral Presentation Session

REVIEWED BY:

Society for Anthropological Sciences

ORGANIZER:

Stephen Chrisomalis (Wayne State University, Department of Anthropology)

CHAIR:

Stephen Chrisomalis (Wayne State University, Department of Anthropology)

PRESENTER:

Helena Miton (Santa Fe Institute), Conor Snoek (University of Lethbridge), Elizabeth Ostler (Fordham University), Stephen Chrisomalis (Wayne State University, Department of Anthropology), Scott Simon (University of Ottawa), Joel West (University of Toronto)

DESCRIPTION:

Cognitive anthropology offers an unparalleled interdisciplinary perspective across cultural and cognitive sciences. Over the past 20 years, a suite of new approaches known as '4E cognition' – extended, embodied, embedded, enacted - take seriously the notion that cognition is not merely in the mind, but builds on and marshals external resources for problem-solving, decision-making, and information-sharing (Newen et al. 2018). The brain occupies a major organizing and structuring role, to be sure, but, without denying the importance of the biological and neuronal, this panel seeks to look outside the 'wetware' of the human for a more complete cognitive anthropology. 4E approaches in anthropology may look traditionally ethnographic, build on discourse analysis, or employ innovative analyses of material culture (Hutchins 1995; Lave 1988). They offer key resources for practicing and public anthropologists in fields such as design, whose audiences may be largely non-academic. Working against what Levinson (2012) calls 'the original sin of cognitive science' - that is, the failure of methodological and theoretical imagination among cognitive scientists to fully appreciate and include culture, we take as axiomatic that anthropology is ideally suited to bridge the mind and the world around it. This panel brings together perspectives from all anthropological subfields

and allied disciplines to show how anthropological methods can contribute to an integrative cognitive science beyond the brain. Hutchins, Edwin. *Cognition in the Wild*. MIT Press, 1995. Lave, Jean. *Cognition in practice: Mind, mathematics and culture in everyday life*. Cambridge University Press, 1988. Levinson, Stephen C. 'The original sin of cognitive science.' *Topics in cognitive science* 4, no. 3 (2012): 396-403. Newen, Albert, Leon De Bruin, and Shaun Gallagher, eds. *The Oxford handbook of 4E cognition*. Oxford University Press, 2018.

How can anthropology enhance 4E cognitive methodologies?: Despite a relative disappearance of anthropology from cognitive science (Núñez et al. 2019), anthropological perspectives are key in understanding what is the whole range of cognitive mechanisms at play in everyday human life. Through examples and case studies, I will illustrate how anthropology and 4E cognition approaches can inform each other in (at least) two distinct ways. First, a careful anthropological approach can complement the study of cognitive mechanisms that are tapped in by cultural practices. In such cases, knowledge of the anthropological record can allow for deeper understanding and selection of how to capture variation in relevant cognitive phenomena, which I will illustrate through the example of writing, a cognitive technology (Miton & Morin, 2021). Second, ecological validity might, by definition, be more crucial to 4E cognition than to other approaches: the ecology, or environment in which one's mind is situated is also part of the cognitive process under study itself, and it can lead to intuitions leading to innovative models of cultural transmission – which I'll exemplify through a recent model of cultural transmission applied to tacit knowledge and observations on how technical traditions are passed down (Miton & Dedeo, 2022). Finally, I'll briefly touch on some difficulties related to such 'hybrid' approaches, whether they are methodological, conceptual, or institutional. Presenter: Helena Miton (Santa Fe Institute)

4E Cognition and Language-Learning Resources: Hailed as being on the verge of extinction in the late 1980s (Krauss 1992), Indigenous languages today exhibit a marked resilience. While Indigenous languages today are rarely acquired as first languages, the numbers of adult second-language learners are increasing rapidly. These learners typically have English as their first language and must rely on relatives, language classes, and language-learning tools in order to acquire competency. However, the grammatical disparity between English and the polysynthetic agglutinating

Indigenous target languages poses a particular challenge for acquisition. Language learning materials have striven to overcome this difficulty through different strategies – with varying success. This paper examines language materials from several Indigenous languages (Navajo, Plains Cree, Blackfoot) that are intended for use in instructed second-language acquisition contexts. Within the perspective of 4e (and 5e cognition), language-learning materials can be understood as cognitive artifacts (Norman 1991) forming part of a larger cognitive system designed to support the task of language learning. Current thinking on extended (Hutchins 1995) and ecological-enactive cognition (Rietveld et al. 2018) provides a novel body of thought with great potential for developing methods to overcome the gaps in grammatical structure that so many learners struggle with. The analysis presented here aims to demonstrate the theoretical import of considering instructed second-language acquisition within the context of research on 4e(5e) approaches to cognition, while showing the utility of cognitive science research for the design of language-learning materials. Presenter: Conor Snoek (University of Lethbridge)

An Interdisciplinary Approach to Cultural Master Narrative Identification: Cultural master narratives are a primary way that cultures proscribe how cultural members are supposed to behave and who they are supposed to be. This study used an interdisciplinary approach to identify Latter-day Saint (LDS) cultural master narratives that emerged from the perspectives and lived experiences of Latter-day Saint women. The research design successfully integrated the anthropological methods of cultural consensus analysis and cultural consonance analysis with the human development master narrative framework. Consensus analysis attended to the master narrative principles of ubiquity, invisibility, utility, and rigidity. The remaining principle, compulsory, as well as utility, were addressed through cultural consonance analysis. Building upon the findings from a previous study that identified descriptions of an ideal LDS woman, a pile sorting analysis was conducted with LDS women (N = 30) living in the United States, which led to the creation of a cultural master narrative survey, of which 2,346 LDS women in the United States completed. The findings showed cultural consensus of LDS female archetypes and LDS cultural expectations. And that as LDS cultural master narrative competency increased, LDS women experienced more stress, strived harder to meet the ideals, and their happiness decreased. Presenter: Elizabeth Ostler (Fordham University)

How can ethnography help us understand mathematical cognition? : Mathematics is a cross-culturally widespread socio-cognitive practice. Unfortunately, it is often treated as a 'black box' in ethnographic analyses of settings that are otherwise rich in mathematical practices. At the same time, cognitive scientists have not done a good job of investigating how humans use numbers to solve problems in actual lived experience. How do we measure time using analog clocks? How do we decide how to slice a pizza? There is clearly a middle ground to be found between excessively 'mindless' analyses which regard cognition as irrelevant to how people do mathematics in social contexts, or 'brainbound' ones that see it as fully explainable through neurological or experimental analyses. A solution is to be found in 4E cognition, which recognizes that people's mathematical thinking is neither purely external nor internal, but distributed across numerical gesture, notations, arithmetical devices, and language as well as the brain. We need better empirical tools, however, to ask how people actually solve the arithmetical problems they are faced with in human contexts. This will often take us outside of experimental settings or the classroom. While this subject began with the pioneering ethnographic work of Jean Lave on the arithmetical thinking in context-rich situations like the grocery store, cognitive anthropologists have been slow to incorporate this kind of analysis. Here, a set of methods and approaches are outlined to better allow ethnographers to understand the arithmetical work going on in social settings. Presenter: Stephen Chrisomalis (Wayne State University, Department of Anthropology)

Thinking with Birds: The Cognition of Hunting in the Formosan Highlands (Taiwan) : The Indigenous Sediq-Truku of Taiwan use the tiny sisil bird as a nationalist symbol; and ethnologists have often studied its use as divination practices. In my research, based on participant observation with hunters and trappers, I re-examine practices of bird observation, not as ornithomancy, but as a bricolage of 4E cognition. Sediq-Truku cognition of birds is embodied because it happens as humans walk through mountainous terrain in which they may look down as well as up at birds. It is embedded in casual thinking with other beings in the immediate surroundings. It is extended because the birds become part of the hunters' cognitive apparatus. Finally, it enacts a world because, as hunters plan for the outcome of their hunt in a spirit-filled forest, the bird becomes a life partner. This has superficial resonance with ways in which northern Indigenous peoples hunt with ravens. What is different is that the

sisil are passerines who gain nothing immediately from the interactions. The relationship is even more an example of how, in the words of Eduardo Kohn, forests think. It is only when the hunters return from the forests and tell stories, to anthropologists as well as to family and friends, that the bird becomes transformed into a symbol. The stories became more elaborate, and anthropologists made it into a trans-cultural category of divination. In further extended cognition, as the sisil becomes a political symbol and a marker of sovereignty in contested forests, the Sediq-Truku transform themselves into the people of the sisil. Presenter: Scott Simon (University of Ottawa)

"You Will See Them and You Will Remember" – Tzitzit and 4E Cognition.: A distinctive feature of Orthodox Jewish culture is dress; Observant Jewish men wear an undergarment called a tallit katan where, attached to the corners of this garment, are tassels which are called tzitzit. The textual source for this practice is found in the Hebrew Bible in the book of Numbers (15: 39 – 40), where it states that "you will place these tzitzit on the corners of your garments ... that you will see the tzitzit and you will remember My commandments and you will keep them." This verse is recited twice a day as part of liturgy; during morning prayer it is when it is recited, it is also the custom of many Jews to gather the tzitzit and to kiss each time the word is said. The ostensible purpose of the tzitzit is 1. to see them so 2. they then serve as a mnemonic to remember the Divine commandments 3. and then to keep these commandments. As such, tzitzit are mnemonics which are defined as "any device or technique used to assist memory, usually created by forging a link or association between the new information to be remembered and information previously encoded." (American Psychological Association, 2022) I will explore tzitzit as 4E cognitive devices in terms of the cognitive link forged between them and memory and I will demonstrate that tzitzit are a kind of embodied, enacted, and extended cognitive artifact. DESCRIPTION:

In recent decades, ethnographers have developed new approaches that expand upon traditional practices of ethnography, including multi-sited, network, and multimodal ethnography, comparative case studies, and team-based ethnographic work. These modifications have generated new insights and new dilemmas in equal measure. Mobile and dispersed communities require innovative ethnographic approaches. Yet, in multiplying the fieldwork locations, multi-sited, multi-scalar approaches have reduced the amount of time a scholar dedicates to each site and increased reliance upon data produced through interviews. How do we think about quality in relation to length of engagement? Most ethnographers commit to long-term fieldwork--but what does 'long-term' mean? Does it differ for ethnographers who work in a place where they are very familiar with the context, language, and relevant social actors? How do ethnographers conceptualize the relationship between time, their own temporal practices and dispositions, and ethnographic quality? Another dilemma relates to the changing relationship between experience and knowledge production. Historically, ethnography has been considered a deeply corporeal, emotional, and experiential form of knowledge production, with a commitment to representing people's experience at least partly in their own terms. But the 'mobility turn,' which calls for attention to circulation rather than 'dwelling' in a single location, challenges the ethnographic imperative of experiential knowledge. Reduced engagement also threatens another characteristic of quality ethnography: palpable data that vividly captures participant experiences. Innovative approaches such as team-based and comparative ethnography require scholars to use data generated by others, changing conversations regarding positionality and reflexivity and reshaping questions about power and authority in the construction and process of conducting research. Further, multimodal and virtual approaches to ethnographic work challenge the notion of what qualifies as 'naturally occurring' settings. These approaches necessitate attention to multimodality as data, tool, and record. Finally, post-humanist theoretical stances fundamentally challenge

the anthropomorphism of ethnography, while indigenous theorists recommend nonhuman ontologies. These shifts generate new epistemological questions for the field. In short, developments in ethnographic methods challenge fundamental ethnographic commitments, including long-term engagement, thick description, the researcher as instrument of knowledge production, relations of power and authority among 'researchers' and 'participants,' and the importance of data produced in naturally occurring interactions. The papers on this panel discuss the benefits and limitations of changes in ethnographic research--specifically, multimodal ethnography, comparative case studies, and team-based ethnography.

Multimodality as Stance in Ethnography: There have been increased calls for multimodal scholarship across higher education (Jackson, 2021) and growing enthusiasm for conducting as well as representing ethnographic research in genres and forms other than written articles, chapters, or books. With advances in mobile technologies, the impetus for entering into ethnographic research with a wider palette of tools for communicating and documenting is growing. Smartphones are equipped with higher quality sound and visual recording capabilities that invite greater engagement with audio and visual modes of documentation, for example. In this way, multimodal approaches to ethnographic research have gained traction over the last two decades, especially as tools of documentation have become increasingly accessible and usable (Dicks et al, 2011). Digital platforms, virtual spaces, and portable technologies open up where and how questions can be pursued and phenomena can be examined. Such changes in the digital landscape also lower barriers to participation for community partners to enter into roles as co-researchers and research collaborators. A multimodal stance in ethnography invites researchers to not merely employ digital methods within existing methodological frameworks, but rather to reframe an orientation to research multimodally. That is, such a stance presupposes a multi-dimensional sphere of communication and interaction that can be more robustly documented and represented with tools that can preserve the affective resonances of these phenomena. This presentation will draw from two multi-year ethnographic research projects to consider the multimodal dispositions ethnographers take in the field, including: what we react and respond to, how and with what we interact, make sense of, take notes on, and otherwise document or dismiss. Presenter: Lalitha Vasudevan (Teachers College, Columbia University)

“Studying Through” Computer Science for All: Methods, Power and Access: This presentation reflects on how “studying through” (Reinhold 1994, 477–9 cited in Shore and Wright 1997) the Computer Science for All: New York City, an initiative aiming to expand computer science education to all New York City public schools in a 10-year timeline, raised methodological questions, challenges and opportunities. How does one study initiative actors and assemblages that are not open to long term participant observation? How can methods like public document analysis, observations at public events, and interviews allow for the pursuit of research methods tracing assemblages across physical location and times following the organizing metaphor of “studying through?” What are the ethical implications of field work where access is difficult, limited or denied? And how can anthropologists embrace areas of inquiry where disciplinary practices like long term participant observation may need to be adapted, transformed, or even supplanted? Discussion of these questions in this presentation will be anchored in experiences with data collection of a schooling initiative centered on actors beyond classrooms. In this study, access to day-to-day activities was limited, but access to public presentations and events, interviews, and public documents formed the basis of an account using actor-network theory as a methodological guide. Presenter: Joseph Riina-Ferrie

Accommodating Diversity in First-Year College Writing: A Comparative Case Study: Drawing on multi-sited and network ethnography, the Comparative Case Study approach (CCS) (Bartlett & Vavrus 2017) encourages comparison across three axes: the horizontal axis compares how similar policies or phenomena unfold in distinct locations that are socially produced and, quite possibly, complexly connected; the vertical axis insists on simultaneous attention to and across scales; the transversal axis historically situates the processes or relations under consideration and traces their creative appropriation through educational policies and practices across time and space. This presentation considers the affordances, complications, and constraints of comparative case studies by discussing a CCS that compares how one community college, guided by a mission of expanding access to post-secondary education, developed two strategies to teach “academic literacies” to linguistically diverse first-year college students. We ask: How do these courses capitalize on linguistic diversity while preparing students to write for an academic system that has historically not valued language differences? This presentation provides insights regarding equity-oriented post-secondary

writing education programs as well as the possibilities and limitations of ethnographic comparative case studies. Presenter: Antonella Pappolla

Multi-Sited Team Ethnography: There is a small, but growing, literature on the practical, ethical, analytic, and theoretical issues raised by multi-country, multisited, team ethnography (e.g., Yelland and Saltmarch, 2013; Jazarbowski et al., 2015; Kenway et al., 2018). These include relations of power and authority among researchers located in different places and playing different team roles; questions of how team members co-construct research projects as they develop; questions of sense-making across sites with which people have varying levels of familiarity and in which their own positionality shifts; how comparative ethnographic methods may need to shift in team ethnographic approaches, and how to rethink the importance of “being there” versus a team’s co-construction of knowledge about a topic across diverse spaces. This presentation will reflect on these questions in relation to the three-country, six-site, longitudinal ethnography on the secondary school experiences of youth living in marginalized rural and urban communities in Colombia, India and Malawi. Urban Governance and Ideas of Progress

8:00 AM - 9:45 AM TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Critical Urban Anthropology Association

PRESENTER:

Maryam Riasat ,Ana Cukovic (University of Vienna),Cady Gonzalez ,Julio Gutierrez (University of North Carolina, Chapel Hill)

DESCRIPTION:

This session addresses the topic of urban governance, particularly as it is connected to ideas of progress, in cities in Pakistan, Philippines, Ethiopia, and the U.S. It explores both overtly political forms of urban governance (e.g. military rule) and 'apolitical' governance in the form of infrastructure and philanthropic funding. Ironies around urban governance are pointed to in some of the papers, e.g., the tensions between states' movements toward a liberating modernity or 'development' and adverse political

ecologies of class, caste, and gender inequities that arise from such movements.

Dystopia in Healthy Urbanization- A Case Study of Islamabad: Dystopia in Healthy Urbanization- A Case Study of Islamabad Abstract The post-colonial transition of the economy exploded a wave of restructuring in modernity and capitalism. A tangible tool of post-coloniality was necessary to operate the modalities of power. For the functionality of power in a hierarchy, the construction of Islamabad became essential to claim true independence. The development of Islamabad was one of the most ambitious projects of the twentieth century which was celebrated both nationally and internationally as an embodiment of progression. The progression towards modernity and growth only became tangible through foreign planners and advisory councils. The city was planned to contain well-being as a holistic concept for every citizen but while idealizing a utopia, dystopia became a reality. The research is an attempt to understand the etiology of dystopia in the urban planning and development of Islamabad. It looks into the Abadi populace (slums, squatter settlements, permanent temporaries of the city) and fortified populace to make an understanding of (ab)normalcy of representation in colonial modernism. The research is a case study of Islamabad, which is looking into both extremes of the city and trying to find a place outside of the dichotomies to make a sense of poor, elite, and CDA (Capital Development Authority). In the process of development of urbanized modern capital, the 'universal human rights' were also transitioned from being universal to relative. The relativities of these universalities depend on the land one owns in the city. The research looked into the invisible visibilities of dystopia in the utopic ideology of Islamabad. It looked into the (in)equalities of basic human rights such as water, shelter, and health. And the dissemination of resources for well-being that is decided by the established structures of authorities within the city. The urban ecology has reduced societies into class, status, and sectors of Islamabad where they are controlled or confined. Through In-depth interviews, netnography, and participant observations the study is redefining and problematizing the established norms associated with Abadi, its populace. and their asymmetrical reciprocal relation with the utopias of the city. The study is purposive in locating the subaltern realities and how they are patronage in settled and planned hierarchies of Islamabad. The structures of domination in the shape of different authorism are in the spectra of utopia, the study has collected the subjectivities of well-being located in the city. The research has presented a new

lens to see the well-planned city is not for well-being. It may be an overall planned dystopia. Key Words Islamabad, development, utopia, dystopia, modernism, urban planning, urbanization Presenter: Maryam Riasat

Situating Cities as Sites of Investment: Role of Philanthropy in Detroit: Over the past decades, the role of private philanthropy in urban growth has proliferated. Particularly in cities and neighborhoods considered on the margins of economic, political, and cultural power, philanthropy has stepped in as a prominent actor in urban governance regimes. Research focusing on the role of philanthropy in urban governance, while growing in policy circles, remains underrepresented in scholarship in general, and anthropology in particular. Focusing on Detroit, USA, this presentation draws from ethnographic fieldwork, archival evidence, as well as document and report analysis to investigate the role of private philanthropic institutions in shaping processes of urban 'revitalization'. I further contend that the ongoing dynamics of power arrangements, with philanthropy at the center, are rooted in targeted investments imparted by growth coalitions at different points in time throughout the city's history. Historical organizations such as New Detroit Inc. or Detroit Renaissance, launched by local business leaders, have, under different conditions of 'crisis' and in relation to different state regimes, led efforts at revitalizing Detroit. Today, ranging from the New Economy Initiative, Detroit Future City, to the Grand Bargain, philanthropic institutions lead the way in convening private and public partners at multiple scales. They do so under the banner of revitalizing Detroit in order to spur its 'transition' into new global, knowledge-based economy and a reimagined city plan consistent with urban shrinkage. Large scale involvement of philanthropy, together with members of corporate, government, and NGO sectors, have aimed to reframe and reconfigure Detroit from a declining city to a new site favorable for attraction of capital. These efforts, as such, I argue, are historical and cannot be isolated from previous attempts to 'revalue' Detroit as a favorable site of investment. Situating current philanthropic actors in relation to the emergence and changing roles of the aforementioned historical organizations highlights the actors and processes implicit in structural power within contemporary urban change. Keywords: cities, philanthropy, power Presenter: Ana Cukovic (University of Vienna)

Technologies of Hospitality: Public Toilets and The Jebena Buna Set in Urban Ethiopia: Toilets and coffee for

all! Addressing the deepening sanitation crisis in Addis Ababa, Ethiopia, the municipal sanitation authority redesigned the composition, delivery, and operation of public toilets. Now outfit as road rest areas, Addis Ababa's public toilets juxtapose excremental provisioning with another inevitability of life in Ethiopia- the traditional Ethiopian coffee ceremony, the nation's symbol of hospitality. With an explicit focus on hospitality, this paper opens waste management to new forms of analysis by exploring the material and sociopolitical technologies employed in this state-led public toilet program. Both a material artifact and stage for urban communication, the jebena buna set is what I call a 'technology of hospitality'-the primary, innovative instrument that plans, encourages and fosters encounters of hospitality and reciprocity. Here I use the term 'set' in a tertiary meaning: First as in a coffee set, a kit for making coffee. Second, as in a stage set, where the accoutrements and their placement are a backdrop for a planned performance. Third, as in set, the Amharic word for woman. Together, 'set' underscores the gendered, material and social aspects of the Ethiopian coffee ceremony as a low-tech, adaptable and appropriate technology that stems from local histories. I suggest that jebena buna becomes the key to operationalizing new sanitation infrastructures and powering the state's development visions in contemporary Addis Ababa. Presenter: Cady Gonzalez

Urban Spectacles and the Ecological Origins of Nayib Bukele's Authoritarian Populism: This paper looks at the ecological roots of Nayib Bukele's authoritarian populism in El Salvador and their connection to urban real estate. Concentrating on Bukele's period as mayor of Nuevo Cuscatlán (2012-2015), a small coffee town in peri-urban San Salvador, I examine the fundamental role of real estate development in the crafting of his profile as a rising political star. I highlight how Bukele used land policy as a revenue-generating mechanism to fund a populist strategy defined by the extreme mediatization of his municipal programs. This strategy was carried out at the expense of the forested areas of Nuevo Cuscatlán whose restrictions to real estate development were lifted to secure liquidity to the municipality. Drawing on the concept of the politics of spectacle, I argue that Bukele's strategy in Nuevo Cuscatlán constitutes an articulation between the financialization of real estate and authoritarian populism. This articulation is underpinned by an instrumentalization of nature which turns resources like land and water into tokens of exchange that facilitate populists' capacity of negotiation with real estate developers and their financiers. The continuous dealing with land and water

by populists leads to aggressive cycles of ecological devastation, resource grabbing and population displacement whose violence can be understood as a form of urban extractivism. Presenter: Julio Gutierrez (University of North Carolina, Chapel Hill)

Visualizing and Envisioning Inclusive Medicine: video as an inter-disciplinary bridge to addressing health equity

8:00 AM - 9:45 AM TMCC - 715 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Megan Muller da Silva (University of British Columbia)

CHAIR:

Megan Muller da Silva (University of British Columbia)

PRESENTER:

Jerome Crowder (University of Houston), Paul Holyoke, Doris Warner, Katinka Hooyer, Suze Berkhout (University of Toronto)

DISCUSSANT:

Chelsea Wentworth (Michigan State University)

DESCRIPTION:

This round table considers the use of video as a form of inter-disciplinary engagement on the influence of culture and social relations in medicine, whether applied as a research method, an intervention, or for education and knowledge translation. Video offers a means of addressing topics that are presently underrepresented in medical education and addresses the difficulty of reaching audiences who may not have the access, interest, or time available to read social sciences journals (Sobo 2009). Video may invigorate attention to health equity by affectively engaging audiences. Ethnographic film has been described as conveying the 'density of emotion' (Stevenson 2014), and as bringing viewers into the centre of the story depicted by initiating 'the viewer's ability to share someone else's consciousness' (Boudreault-Fournier 2017:74). Practically, we consider; How might video provide a means of inter-disciplinary exchange addressing health equity and socio-cultural dimensions of health and medicine? What has been the impact, uptake, and application of anthropological and multimodal ways of knowing, via video, in medical education and knowledge translation? How might these

videos assist researchers working in the space between research and health systems? More conceptually, this round table considers; how might the use of film mediate tensions between ways of knowing, such as anthropological uncertainty and medical facticity? The full films will be made available online for the audience to view beforehand so we can address their applicability for knowledge translation and interdisciplinary collaboration. Crowder will present on Videos developed with students and clinical faculty responding to the concerns of medical students who did not see themselves or their backgrounds in demonstration videos found on line. Holyoke and Warner will present a video project for First Nation communities in dialogue with cancer care health professionals, in which First Nations people and western-trained health professionals exchange their perceptions of, and move towards convergence on, the use of those medicines in the treatment of cancers. Hooyer will present on contemporary portraits of people living with mental illness, which provide brief glimpses into the experience of navigating the US health system as Medicaid recipients. The personal vignettes point to the impact of social-cultural and institutional determinants on health, and the resilience it takes to access care and get better. Berkhout and Best present on the short films created during a digital storytelling workshop with liver transplant recipient, capturing sensorially what cannot be easily communicated through words in relation to the embodied experience of transplant. A video submitted by Malcomson instructs how to administer CPR and AED in the context of remote Indigenous communities, where no formalized paramedical system exists, blending storytelling with first aid education, and evoking Indigenous culture and sense of place.

Volumes in Transition: Governing Deep Spaces and Changing Surfaces in the Anthropocene

8:00 AM - 9:45 AM TMCC - 714 A

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Caura Wood

CHAIR:

Sheehan Moore (CUNY, Graduate Center, Department of Anthropology)

PRESENTER:

Jonathan Eaton (University of British Columbia, Department of Anthropology), Caura Wood, Sheehan Moore (CUNY, Graduate Center, Department of Anthropology)

DESCRIPTION:

This panel dwells on the constitutive possibilities of deep spaces and changing surfaces. Construed neither as absence or void, nor as strictly container, deep spaces are imagined here as spaces of entanglement, of voluminous substances and materialities, production and transition, mutability and world making. Understanding changing surfaces requires a move beyond their static two- or even three-dimensional representations in order to capture volumes in transition. These factors pose unique challenges for attempts by states and other political arrangements to exploit and govern the environments under our feet (Elden 2013). They also introduce tensions in the temporal imaginary of this governance (Harris 2020), as diverse actors scramble to narrate new sub-/surface futures in the face of resource and climate crises. These papers ask after the socio-cultural and material worlds produced in relation to deep spaces and changing surfaces. How are these voluminous spaces-their qualities and potentialities, subductions or trappings-made knowable, transparent, and contestable? What political forms and political violences are reproduced through their governance? Importantly, how does the concept of transition come to bear on these deep contingencies and entanglements? Some of the deep spaces and changing surfaces explored in these papers include wellbores, hydrocarbon or geothermal reservoirs, mines, sea beds, river bottoms, floodplains, subduction zones, and cityscapes. Retrofitting Vancouver: How Deep Earth and Deep Time Shape the City : Kilometers below the city of Vancouver, pressure is building along the Cascadia Subduction Zone. When this fault ruptures, as it did in January 1700, it will produce a massive earthquake and tsunami, overwhelming cities and towns along the Northwest coast. While indigenous oral histories and geological analyses affirm the past occurrence of large earthquakes in this region, no one alive today has experienced such an event, and no one can accurately predict when the next one will occur. Within this

atmosphere of uncertainty, various institutions in Vancouver have undertaken hundreds of millions of dollars of seismic rebuilds and retrofits of vulnerable buildings over the past few years. This presentation draws on ethnographic fieldwork with city staff and Vancouver residents to make sense of what it means to imagine the future of a city that sits above a perilous fault. In my analysis, I center the emplaced experiences of Vancouver residents while recognizing the agency of tectonic forces through what Gastón Gordillo (2020, 161) calls “a materialist, non-anthropocentric phenomenology of terrain.” The long periodicity of large subduction zone earthquakes in the Pacific Northwest encourages us to look beyond the visible built environment, beyond the lifespans of humans or cities, and into deep time (Ialenti 2020) to understand how to form society not despite but with the deep forces of the earth (Clark 2010). As I demonstrate, even when quiet, tectonic forces exert agency on built environments – prompting people to consider what they most value about their community. Montney Verticality and Petrocapitalist Porosity: Reconciling hydrocarbon volumes in deep spaces: Fieldwork for this paper takes place at various locations in the Montney formation of NE British Columbia, a subsurface zone that spans from NE British Columbia through to NW Alberta, Canada. Working with perspectives on the vertical and volumetrics (Braun 1997; Field 2022; Weszkalnys 2015; Wood 2016), as they pair with notions of settler geology (Braun 1997, 2000; Schmidt 2020); this paper traces the choreographies of volumetric reserves calculations that are sanctioned by governments and regulators and that enable investors and producers to imagine both estimations of hydrocarbons 'in place' and those 'recoverable' for extraction. Where reserve estimates were once the main driver behind intensified corporate expansion and accelerated Montney development, especially as this geological zone is figured as feedstock for the upcoming LNG facility in Kitimat, new constellations of value, such as emissions estimates, land disturbance, fresh water usage, treaty rights (see *Yahey vs BC*) and low carbon futures, are unsettling the very pore spaces of NEBC petrosapes. The Permit and the Plan: Governing Louisiana’s Coastal Crisis : Louisiana is rapidly losing coastal land to the combined effects of sea level rise and erosion, accelerated by oil and gas development in wetlands. Following the devastation of Hurricane Katrina in 2005, lawmakers consolidated the state’s response to land loss through a fifty-year, \$50 billion Coastal Master Plan process. But while government planners scramble to reverse the ratio of acres lost to acres gained, other state agencies continue to issue coastal land use and air emissions permits for new fossil fuel facilities. This paper takes up permitting and restoration planning as seemingly-contradictory technologies of territory making and environmental governance in coastal Louisiana. Though the Master Plan appears preoccupied with the balance sheet of coastal surface area, permits for extractive development extend our view of state interventions into the subsoil, the atmosphere, and underwater. I explore what this verticality offers to our understanding of climate justice and coastal futures ethnographically through a discussion of a collaborative study to quantify coastal zone pollution following Hurricane Ida in 2021 – a situation where both industry regulations and efforts to protect coastal land appeared to come apart. Sensing and measuring releases into the air, water, and soil brought together government bodies and coastal residents with competing conceptions of coastal geographies. As I show, the ‘coastal zone’ targeted by state regulators and climate adaptation planners is a volumetric formation decades in the making. It interweaves national economic imperatives, shifting conceptions of nature and conservation, property rights, and the uneven and racialized distribution of restoration efforts. White Anxiety: Using the Experiential Sampling Method to Determine Causes of Marginalization on University Campuses

8:00 AM - 9:45 AM TMCC - 712

Roundtable/Town Hall - In-Person

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Josephine Zenger

CHAIR:

Josephine Zenger

PRESENTER:

Josephine Zenger ,Kaylee Wheeler ,Dinah Grantham

DISCUSSANT:

Kaliopasi Uhi

DESCRIPTION:

In this research, we employed the Experience Sampling Method (ESM; Csikszentmihályi & Larson, 1984; Zirkel et al., 2015) to document the feelings and experiences of belonging of 22 low-income, BIPOC, first generation college students and 15 white middle class students here at BYU. As per the ESM, these student-participants regularly self-reported their experiences and feelings of exclusion and belonging across a school semester. Participants also completed at least one interview (for a total of 68). Data suggest that anxiety among white students in a predominantly-white religious university hampers them from spearheading efforts to increase a sense of belonging on campus. Religious messaging at Brigham Young University emphasizes the importance of high moral standards and community building. However, these two messages come into conflict when students believe that efforts at community-building could be detrimental to their perceived virtuosity. White students in the majority demographic experience anxiety about appropriate language use when interacting with marginalized communities because they fear that their efforts to reach out will result in the fulfillment of a negative

white stereotype. Interviews find that uncertainty leads white students to actively avoid circumstances in which majority-minority interaction may occur, such as sitting next to a minority student in a classroom. Minority students sense this uncertainty and perceive it as distrust. This study indicates that the exclusion of marginalized groups at BYU is predominantly the result of white anxiety, not antagonism.

Youth Language Practices in Social Media and Performing Arts

8:00 AM - 9:45 AM TMCC - 717 B

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Suzie TELEP (*)

CHAIR:

Suzie TELEP (*),Asif Agha (University of Pennsylvania)

PRESENTER:

Suzie TELEP (*),Molly Hamm-Rodriguez (University of Colorado),Federica Guccini (Western University, Department of Anthropology),Katherine Morales (Trinity College Dublin)

DISCUSSANT:

Asif Agha (University of Pennsylvania)

DESCRIPTION:

Over the last three decades, the study of youth has shifted from the margins to the center of anthropological, linguistic and sociolinguistic studies, because youth are considered as significant contributors to social changes, and more particularly as the main linguistic and cultural innovators (the 'movers and shakers', see Kerswill 1996, Eckert 1997, Bucholtz 2000). These phenomena have been investigated as part of 'third wave variation studies' (Eckert 2012). So far, youth language practices have been extensively studied in everyday oral interactions, in different parts of the world (Nortier & Svedsen 2016, Hollington & Nassenstein 2022). Nevertheless, despite the growing centrality of social media in the everyday lives of young people in different parts of the world, and particularly in big cities, the role of these modalities of communication has been less taken into account in discussions about youth identities, language practices and sociolinguistic change (cf. Hollington & Nassenstein 2022: 349-350 for a discussion). Besides, few studies so far have shown

how the domains of popular culture (such as music and other performing arts) and social media in this era of globalization and 'superdiversity' (Bloomaert 2014) are currently interacting and cross-influencing. In this panel, we focus on youth language practices in social media and performing arts, and their key role in the construction of youth identities. We also aim to contribute to a more global and comparative perspective between youth language practices worldwide, not only in North America, but also in the Caribbean or in Africa and its diaspora in Europe. The various papers of this panel – focusing on the institutional enregisterment of youth language practices through social media and digital campaigns in the Dominican Republic; youths' transgressive language use in Jamaican and African popular music; the (re)production of gender ideologies through youth slang practices by French-speaking Cameroonians in a Youtube web series; performances of queerness by Puerto Rican adolescents through online translanguaging practices; and youth covert language practices about non-suicidal self-injury (NSSI) on Tumblr – offer new insights on enregisterment processes of youth language practices through mediatized communication (Agha 2007, 2011), their social indexicalities, and the dominant linguistic ideologies they are associated with in different contexts. The multimodality of these practices is also addressed, with an attention to the relationships between language and other non linguistic modalities. We also want to shed light on the (re)production of gender identities, in relationship with race, ethnicity, sexuality and class (Bucholtz 2009, Maribe & Brookes 2014, Smalls 2018, Telep 2022). Indeed, youth languages are often socially perceived as male practices, and associated with a normative heterosexuality; but few studies have shown so far how these language practices function to (re)produce, maintain, or even challenge gender and sexual divisions, and how mediatized forms of communication contribute to enregister these gender ideologies. Finally, through the study of youth language practices in social media and performing arts, this panel also aims to rethink the notions of 'community of practice' and 'linguistic community', by discussing how these practices on 'virtual' spaces modify the parameters that are typical of a traditionally local community of practice.

"Do 'gos' speak Francanglais?": youth slang and gender ideologies in a Cameroonian web series: Feminist and gender media studies scholars (Cameron 2007, Sunderland 2010, Gill 2007, Richardson 2014) have analyzed the media as a key site for the discursive

construction of gendered identities and maintenance of dominant gender ideologies. This paper builds on Feminist research, media studies and linguistic scholarship on gender (Hall & Bucholtz 2012) to analyze the semiotic representation of gender through Cameroonian youth language practices in a Youtube web series called Tu Know Ma Life ['You know my life']. The series, which follows the daily life of 9 middle and upper-class Cameroonian immigrants (5 young women and 4 young men) living in Paris, is highly popular among the Cameroonian diaspora in France. It is considered as an "authentic" representation of a Cameroonian identity, partly thanks to its remarkable use of Francanglais, a hybrid youth slang spoken in Cameroon. Like many other youth languages or slangs, Francanglais is ideologically associated with a street and urban masculinity, while women (or 'gos') are not socially recognized as legitimate speakers of this language due to normative ideologies that prohibit them from speaking a language which is perceived as too 'obscene' or 'vulgar' (Telep 2018). In this paper, I analyze the mediatized representation of Francanglais practices depending on the sex of the speaker, and the role that multiple interactional factors (discursive acts, topics, interlocutors, settings, interactional stances, persona management, etc.) play in the linguistic production of gender differentiation. I also describe which indexical meanings locally emerge through the marked use of Francanglais by some female characters in the show. I argue that, through the differentiated use of Francanglais by women and men, the Youtube series contributes to reproduce a dichotomous and essentializing representation of masculinities and femininities, while reinforcing the ideological association between Francanglais and masculinity. Presenter: Suzie TELEP (*)

Institutional Enregisterment of Youth Linguaging in the Dominican Republic: While the language practices and ideologies that mark youth cultures and their relationships to broader society are dynamic and varied (Bucholtz, 2002), institutions enregister (Agha, 2007) a narrower set of language practices to accomplish interactional goals that position youth as in need of social intervention. In the Dominican Republic, ways of speaking that are simultaneously valued and stigmatized (Lanehart, 2015; Nero, 2021) are enregistered as belonging to youth in mediatized communicative practices that seek to influence youth behavior change in education, employment, and sexual and reproductive health. Drawing on twelve years of experience working with youth, governmental institutions, and nongovernmental organizations in the Dominican

Republic, this presentation analyzes the role of social media, digital campaigns, and other mediatized formats in enregistering youth language through stylistic choices (Irvine, 2001). Through these mediatized stylistic choices, policymakers and practitioners enact language ideologies that problematize adolescence, framing youth as precariously transitioning into adulthood and thus requiring attention from the state and other actors through both care and control (Kwon, 2013). This presentation explores the role of indexical inversion (Inoue, 2004) in positioning certain social characteristics and language features as indexical of the Dominican youth targeted by these institutional initiatives. As these language practices are scaled up and resignified from their emplacement in urban community contexts, youth express a range of affective attachments and responses to their institutional usages, at times reifying and at other times subverting the ideological discourses that enregister youth as a recognizable social category. Presenter: Molly Hamm-Rodriguez (University of Colorado)

Imagined Communities of Self-Injury Practice: Covert Youth Language Practices on Social Media: Non-suicidal self-injury (NSSI), colloquially known as 'self-harm', disproportionately affects young people. Many turn to social media to post about their experiences anonymously. Online ethnographic approaches are beneficial in understanding how people who self-injure build 'imagined communities of practice' online (Anderson 2006; Cochrane 2017; Eckert 2006). I approached Tumblr, my field site, as a new user who is learning communal language and practices without engaging with the content or its authors. Data collection included systematic search of NSSI content, snowball sampling (content recommended by Tumblr), and fieldnotes of observations. I conducted non-participant research to protect users' anonymity. Occasional self-disclosure showed that users were from different geographic locations, but most were 15-25 years old. Youth language is always in flux, and the stigmatization of NSSI and content moderation contribute to the use of covert language practices on social media. Young people who self-injure make use of shared, ever-changing hashtags and lexicon consisting of slang terms and argot to creatively disguise their activity (Eble 2006). My linguistic anthropological research examines semiotic shifts and changes in the way young people talk about NSSI online. My findings show that Tumblr users establish communal norms and language practices around mutual safety and anonymity and engage in shared meaning-making through creative artwork or humorous and relatable content around NSSI. I argue

that these practices are conducive to the formation of identities and communities of practice, as they offer youths who self-injure a sense of belonging. Being able to use shared language can act as a form of support that they may not experience offline due to persisting NSSI stigma and misconceptions. As such, this paper highlights the importance of understanding youth language practices to improve NSSI prevention and intervention, and youth mental health overall. Presenter: Federica Guccini (Western University, Department of Anthropology)

Gendered fluidity in the online translanguistic practices of two Puerto Rican adolescents: Emerging work on island Puerto Rican youth (IPRY) has highlighted the fluidity in which they construct their daily identities blurring the boundaries between Spanishes and Englishes and emerging contact styles in between. Everyday linguistic performances of Latinx are often contextualized in the sociopolitics of race and linguistic nationalism as non-anglophone individuals (Dominguez-Rosado, 2015; Urciuoli, 2013; Zavala, 2000). Yet, lesser attention has been paid to other aspects of their social identities and how bilingualism too could be used as a tool to perform fluid and complex aspects of identity in interaction (Ayres-Bennett and Fisher, 2022). This paper addresses how adolescents perform queerness and gendered fluidity through their Translanguaging practices online, resorting to different multimodal and translingual registers, including non-binary morpho-syntax in Spanish (Slomp, 2021). By adopting a discourse analytic framework of indexicality and enregisterment of queer styles, I draw from a corpus of 500 screenshots of mobile phone interactions between 2 island Puerto Ricans, and highlight the instances in which these features are brought up to do identity work in interaction. I highlight the integral role both Spanish and English play in the everyday lives of the bilingual youth and in their negotiations of gender identity. The work presented in this presentation is an extension to a project that documents bilingual language practices in island Puerto Rican youth (HB-273677-21). DESCRIPTION:

This double panel examines how the community built around one Anthropology Department, at one moment in time, experienced and continues to navigate the anthropological project. Each paper in this panel focuses on a specific shift in an anthropological concept and/or methodology that was learned in our years as graduate students at UIUC, and that continues to influence how we think about and teach anthropology to a new generation of students. This panel thus serves as both a critical interrogation and a celebration of one school's lasting relevance to the field of anthropology and beyond. As anthropology graduate students at the University of Illinois, Urbana Champaign during the 1990s, we were products of and witness to an evolving and contested transition in the anthropological canon. This transition was manifest in our mentors' front-line position in American Anthropology between what became known as 'traditional' anthropology on the one hand, and the more fragmented outcomes of post-colonial, feminist, 'native', and other critical movements in academic and popular thought, on the other. As students learning through this moment of transition, we were engaged in discussions about an inversion and proliferation of theory and case-study, moving from the goal of proving an ethnographic truth through specific fieldwork toward using theory as a tool kit from which to understand our ethnographic experiences in 'the field'. We re-examined and expanded on previous discussions of truth and meaning, of self and 'Other', and of difference. This panel takes our shared education in anthropology at a specific time in a specific place and uses it as a palate on which to examine an underexplored but ongoing conversation of the anthropology we employ to this day. Through our papers we demonstrate how long-lived these debates are, how important they were to engage with, and how timely the lessons are in this global moment; for example one presenter examines how Ukraine can be

understood through the lens of citizenship and post-coloniality, while another explores how COVID responses were influenced by the medical anthropology theories of the '90s. Additionally, our presenters explore how those long-ago lessons influence their work beyond anthropology departments into the fields of development, healthcare, and museum studies. Our panel demonstrates how anthropology transforms over time, and how anthropologists transform along with it.

Four-Field Anthropology Training to Practicing Medical Anthropology in Not-For-Profit Health Care: In the healthcare "industry," socio-cultural phenomenon have long been seen through productive approaches that aim to optimize the medical outcomes of clinical encounters by attending to patients cultural backgrounds and concerns in the production of the medical encounter. More recently, critical approaches to the clinical encounter have come to the fore across a range of healthcare organizations. These approaches attend to the culture and power relations of healthcare institutions and the clinical encounter, with an aim to improve understanding and respect for the many facets of human difference. These processes fit into models of a "learning healthcare organization" in which inquiries and knowledge generation are embedded in daily practice; from clinical encounters to operational process improvement and formal research efforts, and ultimately to organizational infrastructures that supports health. Biomedicine's increasingly complex understanding of evolving systems, from human immunity to genetics and epigenetics, relates to developments in biophysical and social anthropology. The centrality of language, interpretation, and narratives in clinical interactions highlights the importance of linguistic competence. Attempts to improve upon healthcare systems require an ongoing historical archaeology, not only of clinical ways of seeing, but also of the accumulating strata of healthcare policy, financing, and infrastructure. These resonances highlight the relevance of anthropology's traditional four-fields and demonstrate the need for anthropology to remember and perhaps reintegrate some of its own past ways of knowing. Presenter: Bjorn Westgard

Navigating Anthropological Transformation with an Eye Toward Museum Anthropology in Transition : The 1980s and 90s was a time of transformation at the University of Illinois Urbana-Champaign Department of Anthropology. UIUC also housed the Unit for Criticism and Interpretive Theory, an important center for cultural studies and critical theory that brought the likes of Raymond Williams and Stewart Hall to campus. It was

an exciting time to be a graduate student, a time that required deftly deploying the ideas of “post-modern” theory among some faculty, while avoiding engagement with such ideas among others. It seems to me now, that the outcome of this period of transition was a department transformed, as was the discipline. After leaving UIUC I became a museum curator and later a museum director/university faculty member, and my experience at UIUC has served me well in the world of museum anthropology and museum studies. Museums (and museum professionals) have also been in a prolonged state of transformation in the United States since the late 1980s. Debates surrounding issues of representation in museum public programs and ownership of museum collections that emerged during that period, continue today, to be central to issues such as decolonizing museums and engaging with the interests of those battling for social and environmental justice. In this presentation, I reflect on the ways my exposure to anthropology transformed at UIUC continues to inform my work as a museum anthropologist and to characterize my own version of a theoretically informed and critically engaged museological practice. Presenter: W Warner Wood (University of Wisconsin, Milwaukee)

What Medical Anthropology in the 90’s Imagined and Failed to Imagine about the Coming Plague: By the 1990’s medical anthropology had established distinct yet complementary research trends: ethnomedicine and ethnography of culturally specific medical belief and practice, public health and global disease distribution and response, and social organization of healthcare practice and its institutional culture, including healthcare socioeconomics. The tumultuous rise of critical approaches to theory in the 1990’s added to these new emphases on illness as a social construct and medical knowledge as a productive process embedded within power relations. Examining the global COVID-19 pandemic, including how governments and agencies responded to the pandemic, as well as how the pandemic has been culturally signified (and some of my own personal observations fighting this pandemic as a frontline healthcare worker fighting this disease in the trenches), offers an excellent opportunity to reflect back on our concepts, methods, and especially our expectations of how we are to respond to catastrophic, world-changing epidemics. While many old concepts (Mary Douglas’ concepts of pollution come immediately to mind) remain remarkably valid to this day, the ways in which cultural concepts and the pandemic itself became politically weaponized in the pandemic through social media and by national actors complicate our

understandings of illness in new ways we could not have predicted in the 1990’s. This points to a greater urgency for research in medical anthropology, medical communications and healthcare politics, and a need for a return to international cooperation and unity in public health research and response, global vaccine development and distribution, and cross-cultural outreach on communication of disease threats. Presenter: Daniel McGee

Thinking and Doing Development : This paper explores my professional evolution as an anthropologist in development. Development was a dirty word when I started the graduate program in anthropology in the early 1990s. New to anthropology, it was unsettling especially as I arrived wanting to “make changes happen for my community”. I came to anthropology from journalism committed to development work — but upon arrival I was quickly introduced to the idea that “development”, like anthropology, was the offspring of colonialism, practiced to assert unequal power between the resourceful countries and those previously “conquered”. My reasons for becoming an anthropology graduate student now appear naive and outdated. Becoming a student of the ideologies of nation-states, marginalism, of plurality of voices, were encouraged by my professors who allowed me to explore my multiple roles: as anthropologist, as a “local”, an activist, during a momentous political movement in Indonesia in the late 1990s. I spent 10 years in taking courses, field work, writing the dissertation, while continuing to be active in political activism. When I completed the program, I came back to what brought me to anthropology: development. My training, however, provided me with a lens through which to see the complications, the competing voices, an acute awareness of power relations between the donors and the “beneficiaries”, the history behind these relations, as well as the complicated relationship between doing the “work” and thinking and writing about the human condition. This paper explores my personal story of “doing” and “thinking” that was part of my UIUC experience. Presenter: Sandra Hamid

Arsalan Khan (Union College)

DESCRIPTION:

Friendship is manifold. It escapes definition, defies boundaries, and endures time. Friendship is also paradoxical, often highlighting the contradictions and constraints of everyday life. Anthropologists have long grappled with where friendship 'fits' in classifications of relatedness and how it maps onto larger theories of social organization (Wolf 1966; Pitt-Rivers 1973; Bell & Coleman 1999; Desai & Killick 2010; Beer & Gardner 2015). As an ethnographic subject, friendship exceeds classification by operating in spaces of in-betweenness--in-between kinship, life stages, and communities. Building on anthropological renderings of agency as a 'capacity for action' (Mahmood 2005), this panel explores friendship as a capacity for relatedness during times and spaces of transition. What is the threshold of friendship in different contexts? How are capacities of friend-making forged, transformed, or broken in moments of transition? What are the affective capacities and limits of friendship in gendered, political, and transitional spaces? How can friendship mediate relations in the public and private sphere? What factors constrain and endure our capacities of relatedness in moments of transition and liminality? While friendships can be damaged and broken during times of transition, they also have a remarkable capacity for durability. What qualities of friendship enable such potential for durability during times and in spaces where other capacities for action may be more limited? Panelists are encouraged to think with the concept of durability in relatedness, alongside other concepts that lie in the shadows of more dominant affects associated with transition. Anthropological inquiry is also marked by both transition and friendship. Anthropologists are constantly transitioning between different epistemological orientations, different geographic locations, and different community entanglements. Friendships often mediate these transitions in profound

and complicated ways (Grindal & Salamone 1995; Driessen 1998). Panelists are encouraged to reflect on how friendship as a subject and praxis has figured into their own transitions as an anthropologist. Friendship, motherhood, and affective labor: Reflections from urban Pakistan : The women's rights movement in Pakistan is characterized by two major generations of urban women. The first generation established women's rights organizations in the 1980s during a period of Islamization and laws discriminating against women, while the second generation came of age in the post 9/11 era in the aftermath of the Global War on Terror and "new media" boom (Herrera & Bayat 2010). This paper attends to a third category, the "middle generation" of women, that comprises mothers of the second, younger generation of activists. These women do not participate in, nor actively support, their daughter's activist pursuits. However, through unlikely friendships and the deployment of affective labor within and outside the home, they forge alternative avenues and discourses of political engagement. Attending to these women whose mobility and engagement in the public sphere is constrained, this paper explores how friendships among "ordinary" urban women in Pakistan affect the contours of change in society. Political anthropologists note that women's everyday practices of sociality are often not foregrounded as political or meaningful (Elyachar 2010). This paper explores how women's practices of sociality and affective labor are political and meaningful in the development of their

political subjectivities. By engaging in everyday forms of community building and friendship in the fragmented political landscape of Pakistan, my interlocutors' practices of sociality show how women who are subordinated in some contexts, exert authority, and negotiate their circumstances in others. Presenter: Sana Noon (Emory University)

Fitness Friendships: Transgressive Relationships in Urban Uganda: Kampala – Uganda's bustling lakeside capital – is a city in transition. Rapid rates of urbanization, an emergent middle class, gentrification, inequality, and political instability have marked the last decade of urban life in Kampala as one of change and uncertainty. This paper explores friendship in spaces that are in many ways a direct product of these urban transitions: fitness spaces. In the last decade the "global fitness revolution" has taken off in Kampala. While in the early 2000s there were only a handful of gyms at the most expensive hotels, today there are dozens of gyms of all types across the city. Running, spinning, Zumba, kickboxing, Crossfit, and weight lifting have become favorite pastimes of not just the city's elite, but of Ugandans from many different economic positions. As the fitness scene has become accessible to more and more Ugandans, new types of communities have emerged from it, often giving way to unlikely friendships. This paper explores some of these friendships and the larger political implications of relatedness in and through fitness. While fitness spaces themselves are a product and symbol of growing inequality, the capacity for relatedness produced through them works to temper and even counteract some of the more exclusionary economic and political processes afoot in Kampala. This paper considers the transgressive potential of friendships forged in spaces produced through processes of exclusion. Presenter: Katharine Lindquist

Moral Choices: Friendship through Betrayal: Approaching kinship as "moral obligation" as McKinley (2001) compellingly argues we should, this paper explores how people navigate friendship and kinship in moments of crisis. In Kampala, Uganda, members of the working- and underclass forge bonds amongst one another to help alleviate the austere conditions of the city. This is especially true for migrant laborers, many of whom leave behind their natal kin as they search for employment. As their ties to people in Kampala deepen, the obligations that workers have towards kin sometimes conflict with their duties of friendship. Drawing on long-term fieldwork, I show how my interlocutor, Adam, was faced with such a conflict when

his friend in Kampala went missing after being physically assaulted by Adam's cousin-brother. While the moral obligation Adam felt towards his cousinbrother prevented him from revealing details of the assault, the competing sense of obligation Adam felt towards his friend challenged the allegiance of kinship. Following others who have ethnographically rendered the dark sides of kinship in practice, this paper investigates both the limits of kinship and the transgressive potentials of friendship. The web of relations explored shows how people can become collateral damage when competing bonds demand loyalty that proves to be mutually exclusive. Presenter: Christine Chalifoux (Franklin & Marshall College, Department of Anthropology)

Sister, Insider: Pedagogical Friendships in the Time of Feminist Activism in Pakistan: In academia, friendships are usually imagined outside the walls of a classroom. Limitless literature, cinematic compositions and multitudes of musical masterpieces are dedicated to such stories. This paper, however, will explore the budding of a pedagogical friendship within the classroom (offline and online), substantiated by local texts on historical (and historicised) feminist friendships. This paper will be based on an auto-ethnographic account of designing and teaching "A Brief History of Feminist Movements in Pakistan" at the Lahore University of Management and Sciences (Pakistan) with the revolutionary Aurat (Women's Day) March(es) as the socio-temporal background. This endeavour will be navigated through accounts of diverse friendships, inspired by the pedagogical connections between the instructor and the students, between the characters of history and current young Pakistani feminists and between friends made on-ground and in online spaces, with the longing to learn more about the feminist history of Pakistan binding them together. From organisations and iconic crossovers of yesteryears to marches and online campaigns of today, this paper will attempt to demonstrate that the history of feminist movements in Pakistan can be seen as a tale of many friendships, actualised and further strengthened in the classroom, across changing discursive and activist traditions. Presenter: Zainab Najeeb (Rutgers University, New Brunswick, Department of Anthropology)

Choreographies of Collaboration: How Synchronous Motion Fosters Friendship in Atlanta, Georgia: Within anthropological literature, delineations between friendship, kinship, community, and other forms of relation have been recognized as full of nuance and fluidity. Drawing from original ethnographic data collected with Chinese Dance practitioners in Atlanta,

Georgia, this paper considers friendship's role in dance program directors' stated goals of building community and coalition through regular dance practice and performance. These include collaborative projects with artists trained in other styles including hip hop dance and gospel singing. The capability of synchronous movement to build and strengthen social bonds and in-group identification has been argued effectively by scholars of dance (Desmond 1997, Hanna 1987) and evolutionary biology (Savage et al 2022). As such, current academic models might suggest that these dance practices and collaborative projects begin shifting boundaries of inclusion and exclusion (Bourdieu 1977) and strengthening coalition between groups (Benjamin 2017) in their very occurrence. Leveraging ethnographic methods, this paper explores friendships between performers participating in these projects; the paper correlates certain quantities and qualities of friendships to dancers' perceptions of different projects in which they have performed, understanding their claims of community be presentational, aspirational, participatory, or already extant. Findings suggest that friendships in which performers meet outside of dance practice, engage each other through texting and digital media, and communicate on topics other than dance are correlated with perceptions that the community and coalition portrayed onstage is genuine. While merely dancing together has theorized as action enough to reshape communities, this paper argues that friendship networks intertwining individual performers and bringing them together outside of the studio is an important factor of genuine community and effective coalition in Atlanta, Georgia. Presenter: Kristin Buhrow

Anticipatory Futures and Aftermaths of Violence

10:15 AM - 12:00 PM TMCC - 718 A

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Sébastien Roux (CNRS - University of Arizona)

PRESENTER:

Sébastien Roux (CNRS - University of Arizona), Isaias Rojas-Perez (Rutgers University, Newark, Department of Sociology & Anthropology), Omer Ozcan (University of Toronto, Department of Anthropology), Joshua Price, Muhammad Abdur Raqib (UC Irvine)

DESCRIPTION:

Temporal horizons of aftermaths and anticipated futures

are vital sites for negotiations with violence. The papers in this panel explore such temporal horizons of waiting, speculating, remaking, uncertainty, and transitional justice.

On Bitcoins & Gold Bars: Survivalist Investments for Uncertain Futures: This paper explores the economic rationality of survivalist groups who consider themselves 'resilient,' based on fieldwork conducted within US prepper communities. These groups are concerned about the potential end of the 'mainstream system' and are constantly seeking ways to prepare for possible catastrophes or a gradual decline in living conditions, which they are both anxious and impatient to experience. Preppers often advocate for the purchase of cryptocurrencies and physical gold, two financial strategies that may seem contradictory.

Cryptocurrencies are often associated with high volatility and speculative investments carrying a high risk of capital loss, while gold is perceived as a conservative investment with little profitability but proven stability. Most financial actors consider these two investment options as fundamentally opposed. Yet, how do preppers reconcile these seemingly divergent investment strategies, and why do they consider them equally wise choices? My investigation reveals that preppers' decision-making is primarily political. Cryptocurrencies and gold coins are viewed as means to escape dependence on a political system that is perceived as fragile and corrupt. They are seen as alternatives to the dollar and to central banks: investment instruments secured by the power of the market, outside the influence of the state and its perceived fallibility. This paper demonstrates how financial choices are always influenced by a social representation of the future and its aftermath, and how saving only makes sense as a form of anticipation with respect to possibilities of future spending. Therefore, the study of the prepper world reminds us that economic decisions are always shaped by political beliefs, rather than made by rational individuals acting in their economic self-interest. Presenter: Sébastien Roux (CNRS - University of Arizona)

History under the Weather: The Dead, Political Transitions, and Regimes of Animation in Peru's Postwar Andes: On August 14, 1985, the Peruvian army massacred 69 peasants in the Andean village of Accomarca, Ayacucho, Peru. Not only did the soldiers kill mostly women, elders, and children, but they also incinerated their victims' bodies. When the attackers left, the terrified survivors hastily buried the burned human remains in unmarked mass graves at the very

place where the killing occurred. Since then, they engaged in a protracted struggle for justice for their dead that would symbolically end almost four decades later, on May 20, 2022, when they were eventually able to offer their massacred loved ones the dignity of a proper burial. This reburial took place amid a large transitional justice project predicated on the proper circulation of dead bodies. In this necro-governmental project, a set of disciplinary practices including forensic anthropology, law, and psychology, among other forms of expertise, converged together into a broad effort aimed at guiding survivors, and society at large, in their attempts to move past their histories of violence. Thus, while mass graves are located; dead bodies are recovered, examined, identified, and reburied; and surviving relatives are counseled and consoled, the truth that these remnants tell is exposed to society at large to prevent the repetition of atrocities in the future (Rojas-Perez, 2017). This paper focuses on two distinctive developments in the Accomarca reburial that were at odds with the official necro-governmental ethos. First, the survivors' insistence that their slaughtered relatives should be buried together in a collective burial-which meant that some of the victims whose remains were identified early in the forensic process had to wait for several years, in a kind of suspended individual burial, before reaching their final resting-place. Second, the survivors' decision to bury their slaughtered relatives in the premises of the former military base rather than the village's regular cemetery. For several years this site was the visible sign of an abusive political regime that ruled the village with an iron fist. I consider this emplacement of their war dead on a special site on the landscape as separate from, and opposed to, their 'regular' dead buried in the village's cemetery. In Accomarca, the latter are seen as participating in large 'regimes of animation' (Gose 2018). When properly dispatched, the dead return in the form of rain-i.e., as weather. 'Death, in other words, is the primary condition of life's circulation' (2018, 117). The various ways in which water, breath, and the dead continue to be associated in Andean contemporary funerary practices and representations attest to this centrality of death in the circulation of life. I ask, then, how does this notion of time-as-weather unsettle the temporal landscapes in which liberal state-sponsored projects of governing legacies of mass death are typically stipulated-namely, the ethical temporality of individual biographies and the biopolitical temporality of managing populations including their dead? Most of all, how can we better attend to these atmospheric and earthly motions in our ethnographies of the war's aftermath? What kind of history emerges from the

entanglements between these different temporalities that are made visible in the Andean survivors' ways of dealing with legacies of mass atrocity? Presenter: Isaias Rojas-Perez (Rutgers University, Newark, Department of Sociology & Anthropology)

Mourning and Resistance in a Stretched-Out Present: This paper concerns the experience of waiting when people are placed outside of the protection of the law. This paper examines how the counterinsurgency practice of enforced disappearance, a distinct exercise of sovereign violence, produces specific forms of waiting in the Kurdish borderlands. By tracing the life stories of Xalid and Eyşan, an elderly Kurdish couple who have been waiting for more than two decades to find out what happened to their missing son, this paper explores the temporal effects of violence, which is not always instantaneous or spectacular but often gradual and uneventful. The paper is part of my larger project that seeks to understand the relationship between sovereign violence and the practices and states of waiting in the Kurdish borderland in Turkey. Presenter: Omer Ozcan (University of Toronto, Department of Anthropology)

Temporicide: Waiting, Punishment, and Social Death: Waiting is an individual and collective social process embedded in everyday life. It reveals elements of power, social hierarchy, and governmentality. This paper takes up the notion of waiting as a sociohistorical phenomenon predicated on difference and difference making. We draw connections between waiting and punishment to explore the systemic power structures that regulate social interactions based on processes of stratification, particularly in the criminal justice system. The criminal justice system is one institution where waiting is observed both at a structural and individual level. Some waiting is institutionalized, such as waiting in jail for a court date or a sentencing decision, but many types are informal – incarcerated people are forced to wait to use the phone, wait to leave their cell, or wait to see a grievance officer. The formal waiting (a sentence) is predicated on deferring a person's personal freedom; thus it is grounded in an idea of individual liberty and a particular understanding of time. Here we explore waiting through formal and informal processes in the criminal justice systems of Jamaica and the United States. Ultimately, we show waiting does not just reflect social power and social status, it is difference-making: waiting differentiates between people who have to wait and those who do not, as well as, how they wait, with what frequency, and what avenues for appeal or escape. [paper joint-authored by Joshua Price, Gabreëlla Friday and Nicola Satchell] Presenter: joshua price

Securitized Life: Political Widowhood and the Politics of Muslim Embodiment in post-9/11 Bangladesh: In the post-9/11 global order, Bangladeshi government agencies introduced a broad range of security tactics to control and manage the political activism and psyche of the 'Islamic masses', by modifying police practices into a militarized model. The police have been suppressing a series of sociopolitical movements seeking fair elections, justice, and civil rights, which repeatedly shook and shaped the sociopolitical fabric of Bangladesh. Around 10,000 activists have disappeared or been extrajudicially killed by security forces. A further one million people have been incarcerated and tortured, which has produced a massive number of 'political prisoners' and 'political widows'. By conducting a multi-sited ethnography across three Bangladeshi districts, where police forces employed large-scale violence, my project explores how political widowhood/imprisonment and the politics of Muslim embodiment illuminate Bangladeshi security practices and their relationship to the global war on terror legacies. Presenter: Muhammad Abdur Raqib (UC Irvine)

Dissolving the human/animal divide: transitioning to multispecies socialities

10:15 AM - 12:00 PM TMCC - 712

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Drew Winter (Lansing Community College)

CHAIR:

Drew Winter (Lansing Community College), Limor Chen (Ben-Gurion University of the Negev, Department of Sociology & Anthropology)

PRESENTER:

Seven Mattes (Michigan State University), Limor Chen (Ben-Gurion University of the Negev, Department of Sociology & Anthropology), Drew Winter (Lansing Community College), Margo DeMello

DESCRIPTION:

Multispecies ethnography has made space for ontologically dissolving the boundaries between human and nonhuman animal socialities within anthropology—demanding a recognition of how we co-constitute ourselves with other beings and their respective agency

in that process (Kirksey & Helmreich 2010). The boundaries between human and animal are ever fainter, and we are more cognizant of those contexts in which they were never present (Descola 2005). Examining not 'humans and animals' but naturecultures (Haraway 2003), assemblages (Deleuze & Guattari 1987), or interconnected systems that span biological to capitalistic commodities (e.g. Tsing 2012), these entanglements and movements between are of interest here. The 'animal turn' continues to grow and intersect with other areas of inquiry and critical perspectives. This interest is sparked, in part, by the post-domestic context (Bulliet 2005). The gaps between human and animals are closing as researchers (e.g. primatologists, animal behaviorists) increasingly demonstrate the presence of valued traits among animal others. Furthermore, as companion animals are embedded into the family, commodified animals are spatially and emotionally distant – leading to ethical concerns and cognitive dissonance. In short, we know more about other animals, and we care more. These societal shifts have led numerous scholars to ask, 'How shall we (and, some would ask, should we) rethink, rebuild, and recast our relationships with other animals?' (Kalof & Fitzgerald 2007, p. xiv). As anthropologists broaden their perspective to the reality of their more-than-human world, possibilities for understanding and practical trajectories for on-the-ground problems emerge. These relational becomings between human and other animals may hide under anthropocentric narratives, or exist as a violent clash. By contrast, this panel highlights attempts to not only recognize nonhuman agency, but actively recruit other animals as partners in world making. What alternative worlds are imagined or under construction? Engineers, architects, activists, policymakers, disaster managers and urban planners are applying their skills to account for and actively encourage 'multispecies flourishing' (Gillespie 2020). What are the epistemological blueprints for these projects that join, the challenges to implement them, and their shortcomings? What happens when multispecies futurism intersects with Afrofuturisms and indigenous futurisms? Bulliet, R. W. 2005. A One Health Framework for Japanese Animal Rescue Organizations : The continuing Covid-19 pandemic has brought the One Health framework to the forefront in disaster management. One Health considers the interrelationships between humans, other animals, and the environments that we share – with the understanding that attention to all are key to health for all. More so, it promotes collaboration among experts working within each area, from veterinarians to local animal rescue leaders, to ensure inclusion, planning, and appropriate responses at all stages of disaster management. While One Health arose to respond to zoonotic diseases, it has potential for managing other forms of disasters as it encompasses and addresses the more-than-human reality of these events. As One Health relies on co-production and partnerships with local leaders, anthropological methods are a natural means of assessing and integrating cultural perceptions of animal and environmental others in a given locale – documenting sociozoologic scales right alongside significant power relationships and established resource networks. To gauge the contributions and lacking aspects of One Health for animal disaster management, this paper applies this framework to ongoing research regarding Japanese disaster preparedness within non-profit animal rescue organizations. Presenter: Seven Mattes (Michigan State University)

Vegans and Other Animals: Renegotiating Boundaries and Hierarchies in Multispecies Families: This presentation explores whether ethical vegans, as part of a social movement that rejects animal exploitation, treat and perceive animals within their families and homes in ways that are different from non-vegans. The delineation of boundaries and hierarchies among multispecies vegan families in Israel is examined, as well as the renegotiation of the emotional attachments they form within their families and households. The research is based on ethnographic fieldwork and 23 semi-structured interviews among vegan parents in various Israeli locations. The talk delves into the ways vegans construct their relations with animals as they struggle to contend with the social constructions of multispecies entanglements that place companion animals as inferior to humans, and challenge what they view as social injustice towards nonhuman animals. The data reveals

that vegans, perhaps more than non-vegans, are struggling to define their relationships with animals, and the meanings these relations assume. At the same time, vegans in this research emphasized the role of compassion, obligation and responsibility. This presentation concludes that while ethical vegan parents in Israel try to challenge social hierarchies and norms regarding multispecies demarcations, they are nevertheless continually delineating them, although in multiple and varied ways. These findings have important implications for understanding the role of veganism in changing social constructions regarding the just and equal treatment of nonhuman animals, and on how this role is manifested in everyday lives of its participants. Presenter: Limor Chen (Ben-Gurion University of the Negev, Department of Sociology & Anthropology)

From Optics to Infrastructure: making multispecies architecture matter: Eco bridges that allow wildlife to safely cross freeways, window glass visible enough for birds to avoid collision, and rooftop bee sanctuaries are just the beginning. Architects, partnering with conservationists and animal rights activists, are reimagining how humans can live with other species in a more harmonious way through architecture and urban planning. Multispecies urban design marks a departure from both the traditional anthropocentric values of built worlds (Fieuw and Caldwell 2022), and the tendency of animal liberation activists to demand humans cease virtually all relationships with other species. But what are the embedded hurdles to building such environments, and what are the communal values required for them to flourish? Studying two wildlife crossing projects—the Liberty Canyon Wildlife Crossing over Los Angeles's 101 Freeway, and Natuurbrug Zanderij Crailoo in the Netherlands—reveals that the primary focus of these projects is as symbolic repositories of political hope (Durbin 2018), rather than material. Cities capture positive headlines and attract residents with their optics, but do not plan to replicate these structures or their corresponding logics as proper infrastructure. Interviews with architects and their colleagues—as well as their opponents—reveals the aspirations and limitations of this growing movement to build structures less hostile to their nonhuman inhabitants. Proponents face the notion—manifest in investor apprehension, building codes, and popular perceptions—that relaxing public spaces are specifically those that keep other animals at a distance. This talk discusses the tension between architects and advocates who, though supportive of existing projects, attempt to mass market multispecies architecture. Presenter: Drew Winter (Lansing Community College)

Cryptids as Borderland Creatures: Cryptids are, according to the subculture that hunts and studies them, hidden or secret animals, or animals whose existence has not yet been substantiated by science. These animals—and the myths, folktales, and other stories that surround them—are found in all cultures, yet have rarely been taken seriously by scholars, and have, with a handful of exceptions, been completely ignored by animal studies scholars. In fact, it is this tension between the refusal of the scientific community to recognize the existence of cryptids, and the cryptozoological community who fervently believe in that existence, that drives much of cryptozoological research as well as the popular understanding of cryptids. This talk will attempt to bring an animal studies/anthrozoological lens to the discourses surrounding cryptids. I am not interested in seeking to prove or disprove the existence of cryptids. Instead, I want to focus on alternative ways of seeing and understanding these beings who lurk just outside of the realm of the natural sciences. As an inter- and multidisciplinary field, animal studies is uniquely positioned to better understand creatures whose entire existence stems from the human imagination, and who live in the realm of folklore, myth and legend. Finally, I will argue that this precarious moment in the history (and future) of our planet demands that we pay attention to cryptozoology. As more and more species disappear forever from the planet, cryptozoology may offer alternative ways of thinking about co-existing on this planet. Presenter: Margo DeMello

Economic Engagements: Practice, Theory, Critique

10:15 AM - 12:00 PM TMCC - 709

Oral Presentation Session

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Shaye Soifoine

PRESENTER:

Jie Gao (University of Arizona), Catherine Vazquez (University of South Florida), Shaye Soifoine, SERGIO LOPEZ

DESCRIPTION:

This panel draws together work from across the breadth of economic anthropology. Topics include the

motivations of Chinese entrepreneurs in Morocco, the novel itinerations of digital nomads, the afterlives of colonial cash crops in the Comoros, and the impact on influential theoretical paradigms of the contemporary American banking crisis and union members' critiques of their pension plan's investments. Linking all of these papers is an attention to the liveliness of economic phenomena in the world.

Manufacturing Morocco: Chinese Industrial Entrepreneurs in Transitional Morocco: The Moroccan government has been endeavoring to accelerate Morocco's economic growth by building a competitive and sustainable manufacturing sector since the early 2000s. It has so far issued several plans for industrial emergence, developed high-quality infrastructures, and created an increasingly favorable environment for foreign investment. Since the global economic crisis in 2008 and the ensuing regional political unrest, both the Moroccan state and society realized the pressing necessity of transforming the country into a manufacturing powerhouse that provides stable employment for the underemployed young workforce. To attract Chinese investment, the Moroccan government lifted the entry visa requirement for Chinese citizens in 2016, leading to an influx of Chinese tourists and business visitors to this faraway African country that used to be largely unfamiliar to most Chinese people. Against this background, many Chinese entrepreneurs have been attracted to invest in Morocco's manufacturing sector. Based on fifteen-month fieldwork on Chinese entrepreneurship in Morocco, this paper presents an ethnographic account of the lived experience of Chinese industrial entrepreneurs in Morocco. Drawing on participant observation of and in-depth interviews with Chinese industrial entrepreneurs and their Moroccan associates, I explore the varied motives for their transnational engagement in Morocco's manufacturing industry, the everyday interactions between these Chinese entrepreneurs and Moroccan stakeholders, and the socioeconomic and transcultural impacts of Chinese industrial engagement in Morocco. Informed by critical development theories, I also investigate the discrepancy between the state's official expectations of industrial development assisted by foreign investment and the reality of foreign engagement in Morocco's industrial development, as reflected in my case of Chinese entrepreneurship in Morocco's manufacturing sector. My research suggests that the conflicting interests between different state institutions and across different administrative levels prevent Morocco from achieving the expected objectives of manufacturing development

and might cause foreign investors to lose confidence in continued engagement due to the mixed messages they receive or perceive in their interactions with the state.

Presenter: Jie Gao (University of Arizona)

Digital Nomads, Beyond Wanderlust: Examining shifting values of the 21st century labor force: As an increasing number of employers and employees turn to remote work as a sustainable model following the forced virtual experiments of the Covid-19 pandemic; opportunities emerge for individuals, families, communities, and employers to challenge existing expectations of what it means to be an employee, to climb the corporate ladder, and to pursue the 'American Dream.' The study of digital nomadism offers a novel perspective into emerging online and in-person worlds. Understanding why digital nomads chose to embark on the geographically impermanent life they lead is relevant to economic and social questions of value and how society measures success. Corporate denial of the demand for workplace flexibility has repeatedly, and often very publicly, proven detrimental to both employee morale and the corporate bottom-line. Around the globe, the list of nations offering a 'digital nomad visa' grows as countries look to capitalize on the social and economic benefits they envision in a transient, fully employed labor force interested in investing financially and emotionally in their temporary community and schools, but not seeking citizenship or the legal and social protections such status affords. Beyond the visa, cities in the United States and beyond are working to enhance their digital nomad attractiveness through incentive programs, partnerships with private companies such as WeWork and Airbnb, and sophisticated ad campaigns capitalizing on what makes their city a unique and exciting place to live, work, and spend money. The study of digital nomadism further blurs the boundaries that define community, virtual space, and multi-sited ethnography. Presenter: Catherine Vazquez (University of South Florida)

Future-building with Colonial Fragments: Comorian Engagements with Ylang Ylang Flowers: This paper traces the afterlife of French colonial cash crops in the Comoro Islands, specifically ylang ylang. Ylang ylang's essential oil has been a base for luxury perfumes produced in France, especially in the subprefecture of Grasse, since the 19th century. Following Independence in 1975, communities on Mwali, the smallest Comorian island, sought to sever ties with France and reclaim their land by cutting down the ylang ylang tree plantations. By the late 90s, however, community members were re-engaging with ylang ylang essential oil production for French buyers. During the same

period, demonstrators in the island of Ndzwani pulled down the Comorian flag, hoisting in its place the French tricolor. Reading such calls to 'recolonize' Comoros for France as protests against widespread economic and social insecurity, rather than as nostalgia for the colonial past, I draw upon preliminary dissertation research to explore Comorians' contemporary engagements with France and global capitalism. By centering local producers' various motivations for growing and distilling ylang ylang flowers as well as their strategies for obtaining the labor and land to do so, this paper provides an ethnographic account of how matrilineal Muslim Comorians use their kinship relations to negotiate with capitalist systems towards their own future making. Presenter: Shaye Soifoine

Silicon Valley Bank and the Holography of Western Economy: On March 13, 2023, Joe Biden gave a press conference addressing the collapse of Silicon Valley Bank. Many assumed that he was not just talking about one single bank, but about the more than 4,000 entities that make the fabric of the American banking system. Fifteen years after the collapse of Lehman Brothers, another banking crisis seems to be on the horizon. And, just as it happened in 2008, Silicon Valley Bank (SVB) became a metonym of sorts, a part that represents and contains the whole structure, not just of the financial industry, but perhaps of the whole market economy. This paper explores the 2023 Western Banking Crisis as an example of holography, a term that Roy Wagner borrowed from optical physics to explain social constructions in which one part of a culture contains the whole. In this presentation, I discuss the extent to which the different parts of a market economy are not simply interconnected, but they become one-aka 'the economy'. When applying this holographic model to explain the current 'banking crisis,' as it is called in the news, some have argued that the parts-the banks that came down-were affected by the whole-the so-called 'economy'. But does it work in a symmetrical manner? Does the whole change just because one the of the parts does? Can the entire system be 'fixed' just by bailing out one single bank, a few of them, or should federal assurances extend to all parts, including the 'too big to fail' financial institutions? I argue that a holographic interpretation of the 2023 Banking Crisis can shed light on the multiple ways in which the whole economic system is connected to its parts, and vice versa. Presenter: SERGIO LOPEZ

Ethnographies of Global Health in Power and Practices: Data, Infrastructure, and Ethics

10:15 AM - 12:00 PM TMCC - 707

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Katerini Storeng

PRESENTER:

Marlee Tichenor ,Katerini Storeng ,Margaux Fisher ,T.S. Harvey (Vanderbilt University, Department of Anthropology),Michelle Parsons (Northern Arizona University)

DESCRIPTION:

The presentations in this session individually and collectively bring into sharp relief the tremendous power of global health as a cultural and political arena. Ethnographic research in a range of contexts, and from a diversity of vantage points, explore rhetorics, institutions, and practices that are mobilized by global health institutions and interventions that can engender inequalities. Prominent themes and social actors include data, infrastructure, partnerships, and dis- and misinformation.

The Datafication of Health Policies: In Pursuit of a Defragmented Health Information System in Senegal: The demands of global health actors weigh on the health systems of countries that receive global health funding, particularly on digital data infrastructures for health. These infrastructures are formed to carry out two processes that are often in opposition. More important for donors are the data they can use to justify their health investments to their stakeholders, while recipient countries seek data to inform domestic health policies. These conflicting objectives result in fragmented and incomplete information systems in countries that rely on global health funds for data infrastructural support. As a civil servant and statistician in Senegal put it to me, 'Le Ministère de la Santé n'a pas un système d'information' (The Ministry of Health does not have an information system). Instead, health data are tracked by different departments resulting in a piecemeal and silo'ed information system, and mostly include input rather than outcome indicators. In this presentation, drawing from an article for a forthcoming special issue on digital health in *Anthropologie & Santé*, I use the examples of Senegal's malaria control program as well as the country's universal health coverage

policies – alongside global discourse about both health agendas – to show how this fragmentation of health data shapes health intervention possibilities in Senegal, and the ways in which civil servants and health workers navigate and resist this fragmentation. Presenter: Marlee Tichenor

When pandemic intelligence becomes big business: The commercialization of data and expertise in global disease surveillance and outbreak detection: The data revolution in health has opened new opportunities for commercial actors to oversee health data infrastructures, buy and sell data, and provide data science consulting services to enhance clinical and governance processes in public health and healthcare. This dual commercialization of data and expertise is particularly pronounced in global disease surveillance and outbreak detection. Galvanized by the Covid-19 pandemic, commercial actors with access to proprietary data and algorithms now market 'pandemic intelligence' products that promise to let clients predict and preempt disease outbreaks. Airfinity, whose success during the pandemic secured its position as a leading predictive analytics firm, exemplifies this development. In this paper, I analyze how the 'modern' pandemic intelligence Airfinity and similar firms provide contributes to displacing expertise based in more 'traditional' approaches to disease-surveillance relying on public health data and epidemiology. I then consider how the ongoing commercialization of pandemic intelligence jars with emerging norms about data solidarity, raising new governance challenges. Finally, I discuss how the World Health Organization, through its establishment of a new Pandemic Hub, is responding to these challenges to ensure that public health authorities everywhere have access to the data and expertise they need for pandemic prevention, preparedness and response. Presenter: Katerini Storeng

Health Data Advocacy in Transition: Promises and Pitfalls: Knowledge infrastructures and technologies are changing in radical ways through new forms of collective knowledge production (Edwards 2013). In my paper, I present how health advocates and health agency workers in California engage in collaborative health data production in their attempts to expand access to preventive and curative resources. In doing so, I contribute to anthropological understanding of how power and decision-making in public health is shaped by hierarchies of evidence and expertise, as well as supported, hindered, and challenged by a diverse array of stakeholders. This project recognizes the double bind of working in health advocacy, programs, research, and

policy. Drawing on the idea of para-ethnography (Marcus 2013) and the ways it has been applied in health systems research (Nambiar 2013), I approach my interlocutors in public health and health advocacy as epistemic partners through the creation and circulation of an ethnographic archive, with which I draw interlocutors into thinking ethnographically about the predicaments and paradoxes of public health work. Building on this ethnographic engagement, I suggest that the democratic dimension of the datafication of health is reshaping how public health agendas are created and contested. As data tools and expertise become more accessible to community-based health advocates, they are being leveraged in ways that may be expanding narrow definitions of evidence and expertise in public health, even as they remain constrained by biomedical hierarchies of knowledge production and exacerbate the burden of proof placed on communities experiencing health inequities. Presenter: Margaux Fisher

Faster than Disease: The Spread of Misinformation and Disinformation as Emerging Determinants of Health: Taking COVID-19 infections and the resurgence of mumps, measles and pertussis in the United States as its focus, using a medical and linguistic anthropological approach, this paper examines disinformation and misinformation as public health threats, 'infodemics,' linked not only to the production and circulation of risk but also vulnerabilities, and health disparities. Tedros Adhanom Ghebreyesus, current Director-General of the WHO, has labeled this crisis in health communication an infodemic. That is, 'too much information including false or misleading information in digital and physical environments during a disease outbreak that can cause confusion and risk-taking behaviors' that can harm health, lead to mistrust in health authorities, and undermine the effectiveness of public health responses and interventions. Understanding and addressing these under investigated determinants of health at the crossroads of disease, language, culture, and technology, requires collaborative multilevel and multidisciplinary research that engages the complexity of the misinformation as psychosocial, historical, linguistic, cultural, structural, economic, and technological. The data and analysis presented in this paper, a work of transdisciplinary science, seeks to problematize and understand what is perhaps one of the greatest threats to human health in the twenty-first century, misinformation. Presenter: T.S. Harvey (Vanderbilt University, Department of Anthropology)

Ethics and relationship harm in a global health project in Kabul, Afghanistan: Although global health ethics have historically been concerned with the lives of patients or beneficiaries, they are more recently concerned with global health partnerships, emphasizing equity, autonomy, and solidarity. These values, undergirded by notions of sameness, bely difference and 'modalities of coming together' (Brown 2015). In interviews about a global health project in Kabul in the 2000s, Afghans actors spoke about coordination and commitment in global health, terms which convey long-term interdependent relationships. Importantly, these relationships were not restricted to actors and agencies, but included donors. Afghans and some Internationals evaluated defunding not in terms of iatrogenic harm but in terms of relationship harm. How might the concept of relationship harm contribute to global health ethics? Presenter: Michelle Parsons (Northern Arizona University)

Ethnographies of Vertical and Volumetric Ecologies 1

10:15 AM - 12:00 PM TMCC - 717 A

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Angela Castillo (University of California, Berkeley, Department of Anthropology)

CHAIR:

Steven Schwartz

PRESENTER:

Steven Schwartz ,Adrienne Cohen (Colorado State University),Florence Babb (University of North Carolina, Chapel Hill, Department of Anthropology),Sayd Randle (University of California, Berkeley),Emma Pask (University of Chicago),Vanessa Koh (Yale University)

DISCUSSANT:

Marcos Mendoza (University of Mississippi, Department of Sociology & Anthropology),Eduardo Romero Dianderas (University of Southern California)

DESCRIPTION:

Vertical and volumetric ecologies have become salient features of contemporary material and political life. New extractive frontiers, from lithium mining to deep-sea harvesting of rare minerals, have drawn renewed

attention to subterranean and mountainous landscapes as emergent sites of capitalist capture, environmental violence, and political refusal. Analogously, the climate crisis, and the ensuing calls for post-carbon transitions, have thrown light on airspheres and their 'politics of verticality' (Weizman 2007), both by underscoring the uneven distribution of toxicity (Choy and Zee 2015), atmospheric violence (Simmons 2017, Masco 2010), and racialized inequalities (Graeter 2020) as well as by stressing their potential for planetary remediation and low-carbon futurities (Howe 2019). This panel explores how the emergence, existence, and unmaking of vertical and volumetric ecologies and relationalities shape subjectivities, bodies, social worlds, and other-than-human life. Recent scholarship on the production of space has sparked critical conversation around the three-dimensional character of places, challenging flattening framings that rely on a one-dimensional lens (Jackman & Squire, 2021; Marston & Himley, 2021; Mosquera-Camacho & Marston, 2021). In calling for an expanded conceptualization of space as having depth and height, these interventions invite us to reimagine space in terms of downward and upward vertical axes, as well as in terms of volumes that could be mobile, porous, portable, and ephemeral. Building on these works, this panel invites ethnographic reflection on subsurface (subterranean and subaquatic), mountainous and arboreal landscapes, the built environment on the surface, or aerial milieus that can be explored via their vertical and volumetric character. Some examples of these spaces are buried tunnels, caves, oil wells, underground zones, aquifers, subsurface natural resource exploitation, forests, waterways, rural and urban settlements' built environment, energy and transportation infrastructures, and the canopy of forests, among others. In this session, we ask: What affective, sensorial, material, political, epistemic, and legal coordinates shape vertical and volumetric ecologies? What political possibilities and foreclosures are afforded by these vertical and volumetric milieus? How do vertical and volumetric pluralities generate new horizons of experimentation, imagination, and future-making—including forms of justice, inclusion, or autonomy across racial, gender, and class lines? How could vertical and volumetric ecologies generate forms of racialized violence and exclusion? How does thinking with, or against, the vertical and volumetric engenders new grammars for making sense of transitions—climatological, sociopolitical, economic, or otherwise? We are looking for ethnographically-informed studies that explore the vertical and volumetric production of spaces and ecologies and their entanglement with quotidian experiences of mutability and transition.

Vertical Enclosures and Aeolian Speculation in Colombia: This paper ethnographically explores how the atmosphere has become a new capitalist frontier amid Colombia's wind energy rush. Drawing on long-term ethnographic fieldwork in La Guajira—the country's renewable energy epicenter—it traces the technical, epistemic, and material operations that enable the extraction of value from the wind. Conceived as the vertical enclosure of a resource that resists conventional harnessing, I analyze how this extractivist project gives rise to new political-economic relations and epistemic operations, some of which center on this frontier's ephemeral and atmospheric quality. This paper focuses on two such patterns. The first, "ghost projects," consists of wind farms that only exist on paper and which, through an intricate "economy of appearances" (Tsing 2005), seek to profit from securing access to and speculating on the future value of blocks of windy land. The second pertains to the work of "wind prospectors"—i.e., a 'guild' of technical workers who are in the business of measuring wind speeds across the peninsula, visualizing the movement of air, and speculating on the value of their datasets as they seek to sell them to energy corporations. Such projects emphasize how, in this atmospheric frontier, these forms of "speculative accumulation" (Campbell 2015) mobilize indeterminacy—in the material, political-economic, and social sense—as a source of value extraction itself. Presenter: Steven Schwartz

Vertical Proficiencies: Ways of moving presuppose and perform tacit thresholds. In the United States, as in many societies worldwide, the threshold between child and adult is built into our mobility habits and built environments. Playgrounds invite children to develop themselves through bodily exertion and volumetric spatiality, while adults are commended for being "settled" and derided if they act "flighty." Thresholds between human and animal are also implicit in movement. The upright bipedal gait is a physical trademark of the human, and other forms of mobility—especially using all four limbs and moving vertically—signal animality; something "less than" human in both evolutionary and Enlightenment logics. Rock climbing is a sport that invites practitioners to engage space volumetrically, breaking with the presumed relationship between groundedness and personal or species maturity. Climbers spend countless hours learning the intricacies of vertical landscapes and performing transcorporeal engagements with rocks. This paper asks what it means for people to cultivate vertical proficiencies, temporarily inhabiting stone landscapes where their

heavy bodies can exist only fleetingly. While much of the literature on volumetric spatiality is about institutional (and especially military) knowledges, this paper explores the volumetric through embodied, intimate encounters with vertical places. Presenter: Adrienne Cohen (Colorado State University)

The Return of Verticality? Racialized and Gendered Geographies in Andean Peru: The interdependence of ecological zones in the Andes was made famous by anthropologist and ethnohistorian John Murra (1968), who advanced the notion of a “vertical archipelago.” My multi-sited research in Peru in a rural Indigenous community, a mestizo town, and the migrant stream to the capital city of Lima shows that altitude and geography stand in as an index, though not only of economic interdependence and household diversification strategies for accessing land in various zones. Verticality also references the deep-seated intersectional differences of race and gender that distinguish those with more from those with less power and prestige in society. At a time when vertical ecologies are under renewed discussion by anthropologists and fellow travelers, I want to revisit verticality as it pertains to the enduring postcolonial conceptions of difference that came to be associated with Peru’s geography. An ideology of the inferiority of those native to the highlands stems from beliefs regarding the different lung and brain capacity of high-altitude residents; as such, Andeans were historically pathologized as receiving too little oxygen in the heights, rendering them intellectually weak. Verticalist thinking in and about Peru is not simply a scholarly preoccupation but, as I argue, a deeply embedded and prejudicial way that many in the nation continue to regard Peru’s social landscape. In this paper I contend that vertical ecologies are a generative site from which to critically examine inequalities that are undergirded by racialized and gendered geographies. Presenter: Florence Babb (University of North Carolina, Chapel Hill, Department of Anthropology)

Porosity and Danger (and Opportunity): The Contradictions of Recharging a Toxic Aquifer : This paper considers the vexing role of terrestrial porosity in state efforts to volumetrically manage the urban landscape. In conversation with recent anthropological accounts of the material, political, and cultural logics that structure groundwater depletion, here I examine the more-than-human arrangements that condition attempts to replenish subterranean basins. I do so through a case study of Los Angeles's San Fernando Groundwater Basin, a notoriously polluted urban aquifer. This

degraded condition is partially attributed to the porous nature of the landscape, the rocky, permeable ground that facilitated stored wastes seeping through subterranean environment over the course of the 20th century. As in other accounts of groundwater contamination, here the landscape's porosity is widely understood to threaten efforts to manage the aquifer as a public water source. And yet: in contemporary water agency plans, the same permeability is also framed as a vital opportunity to 'secure' LA's water future water supply. A growing range of blue-green infrastructure projects seek to further cultivate the capacity of the land above the aquifer to absorb stormwater to replenish the basin – that is, to enhance its porosity in the name of increasing the city's underground water reserves. Drawing on water agency planning documents, fieldwork among water managers, and newspaper archives, I trace (sometimes divergent) technocratic accounts of terrestrial permeability to explore how the ground's materiality concurrently enables and constrains such future-oriented projects of replenishment. Presenter: Sayd Randle (University of California, Berkeley)

On the Range and Under the Radar: Bats, Property, and the Science of Land-Relations in Texas: In the winter of 2022, a bat scientist told me that she relied heavily on a secret map of Texas’ caves to conduct her state-wide survey of bats and their diseases. Texas’ underground is the imagined place of gushing resources from water to oil, but bats also emerge from this underground, reinforcing this mythical natural economy, to produce millions of dollars annually in agricultural profit by acting as pest control in the skies. In a state where 95% of land is privately owned, caves puncture the property regime producing paranoia about sovereignty over land. This paper explores the caves and enclaves (Benton 2009) both studied and produced by bat scientists in Texas in their modelling of the underground (Ballesterio 2019) and asks: how do the volumetric ecologies of bats both reinforce and interrupt the dominant surface land-relations? In Texas, the settler project is invested in the (re-)arrangement of life on land according to species and racial categories. My project ethnographically explores how bats extend the politics of these arrangements below and above ground. Following the bats across these thresholds, the scientists who monitor them, and the landowners who reluctantly allow this research to happen, this paper argues that these ecological projects interrupt the fantasy of individuated liability and absolute confidentiality and control embedded in Texas’ property regime. In doing so, it examines the paradoxical nature of land-relations

invested in liberal, libertarian, and illiberal expectations, and how bats force landowners and scientists alike to confront the contingencies of Texas' political ecology. Presenter: Emma Pask (University of Chicago)

Governing the Ground: A Textured Analysis of Singapore's Subsurfaces: In the face of a purported dearth of land, the Singaporean government has undertaken terraforming projects that convert the city-state's waters into land. In light of states' interests in securing sovereignty over subterranean depths, scholars have argued for a rethinking of space in terms of volumes rather than areas (Billé 2020; Elden 2013). Processes of territory-making or territorialization can thus be read as a politics in which the ground itself forms sociopolitical worlds. Taking inspiration from this call to consider how volumetric ecologies might shape subjectivities and social worlds, this paper probes the entanglements between geophysical formations and more-than-human life. Based on ethnographic fieldwork conducted at Singapore's 101-hectare nature-park, Gardens by the Bay, that was entirely "reclaimed" from the sea, I look at the subsurface of reclaimed land to consider what kinds of textures and material properties make certain kinds of grounds difficult to govern. This paper examines how terraforming takes us deeper—in both a metaphorical and literal sense— than a story of speedy and showy capitalism to a more complex and considered genealogy of slow settlement. As the state left terraformed ground alone over decades, unexpected activities (e.g., the burial and decomposition of trees and other ecological matter) unsettled engineers' calculations of settlement and altered geological conditions of the ground. By simultaneously casting sinkholes in the ground as my figure of analysis, I argue that the ground per se uncovers the perceptual, epistemic, and architectural grounds on which state representatives build and govern Singapore. Presenter: Vanessa Koh (Yale University)

5-195

Expanding Politics and Art: Panel in Honor of Dara Culhane (Part 2)

10:15 AM - 12:00 PM TMCC - Hall G - MI

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Denielle Elliott (York University)

CHAIR:

Petra Rethmann (McMaster University, Department of Anthropology), Denielle Elliott (York University)

PRESENTER:

Leslie Robertson ,David Howes (Concordia University, Department of Sociology & Anthropology), Madelyn Prevost ,Danya Fast (University of British Columbia)

DISCUSSANT:

Dara Culhane (Simon Fraser University)

DESCRIPTION:

This panel celebrates the extraordinary life and work of Dara Culhane. In gathering students and scholars who have either collaborated with Dara or worked under her guidance, it acknowledges, traces, and marks the ways in which Dara's analytical and artistic commitments and ideas have shaped scholarly work and the life of others. Instead of simply returning to Dara's work, presentations may be organized as dialogue, performance, theater, games, films, lab work and so on. The goal is to provide exciting and rich insights into Dara's work, as well as reveal the fun and wonders it contains. As one of the co-founders and co-curators of the Center for Imaginative Ethnography, a consummate script writer and performer, dramatic storyteller, and wonderful supporter of all things experimental, Dara's work evinces a long arc of genre-busting scholarship and creative performances. While her early research has concentrated on historical and contemporary relations between Indigenous peoples and the Canadian Nation State, as well as the politics of Indigenous women's health, Dara moved soon into urban and artful anthropology. In drawing creatively on collaborative, imaginative, and artistic research methodologies, Dara's research and work has forged new paths in anthropology and beyond, and brought forth a new generation of scholars deeply immersed in politics and art. An exquisite attention to questions of writing and representation, the asymmetries of power, and rigorous commitment to the ethics of self-awareness and reflection mark all of Dara's work, and presentations in this panel will echo these commitments.

Biographical Drift and the Outer Limits of Life Stories: Moving through a number of vignettes drawn from various research engagements, my presentation explores the presence of the extraordinary within life stories. I am interested in phantasmagoria appearing at the edges of personal narratives and the interpretive

limits we run into as we turn attention to intangible aspects of existence. What happens when research moves away from the predictable analyses of life story narratives and walks with participants down their roads of imagination? What might be productive about the interpretive limits we encounter as attention turns to this alternative sensorium? Presenter: Leslie Robertson

Sensing Otherwise: On Dara Culhane's Contribution to the Sensorial Revolution in Anthropology : In her chapter on "Sensing" for *A Different Kind of Ethnography* (DKE), Dara Culhane urges us to lean in with the senses when we do ethnography. She abjures the status of the observer that is privileged in the conventional anthropological methodology of participant observation and interpellates herself as a collaborator who senses along with others, which shifts the onus onto participant sensation. This move not only mobilizes all the senses in place of the ethnographic eye/I it creates space for free rein to be given to affect and imagination as well. Importantly, it also induces heightened reflexivity regarding the positionality of the anthropologist and attention to how "the sensible" is fragmented along, gender, class or racialized and other lines, hence the political life of sensation. Her program thus advocates for anthropology as aesth-ethical practice: informants become co-creators and agents of transformation, the end of ethnography is no longer "the process of textualization" (*Writing Culture*), but rather sensualization (dancing, drawing, performing, playing - and writing, if you must). In the "Sensing" chapter, Culhane proposes a series of exercises that involve "tak[ing] your sensory imagination for a walk," and cultivating what she calls "sensory embodied reflexivity." I use DKE in my graduate seminar on "New Directions in Anthropology." I marvel at the way the exercises galvanize my students' imaginations. In this presentation, I would like to share with you some of the ways in which Culhane's practice of sensory ethnography have shaped their forays, and my own.

Presenter: David Howes (Concordia University, Department of Sociology & Anthropology)
Reflections on art, work, and ethnographic art work.: Inspired by the conference theme of 'transitions' this paper explores the transitions that occur during both the artistic process and the writing process: turning raw materials into a piece of art; transforming raw data into ethnographic writing. Reflecting on thirteen months of ethnographic fieldwork among fibre artisans (spinners, weavers, knitters, felters, stitchers, dyers) on the Sunshine Coast of British Columbia, Canada, this paper seeks to explore the many threads connecting fieldwork, ethnographic writing, and artistic process. As an artist-

anthropologist, in this paper I explore the way my art practice impacted my doctoral fieldwork, and the way doing fieldwork impacted my art. Further, it assesses the value of the multisensory fieldnotes I gathered during research and discusses how I used them to deepen my analysis and incorporated them into ethnographic writing. Presenter: Madelyn Prevost
Discussion: Discussant: Dara Culhane (Simon Fraser University)

Living On: Living On is an experimental short film project that attends closely to the sensory, and to imagination and dreaming, in circumstances marked by tremendous and unrelenting loss. Taking up Dara Culhane's (2017:14) call to foreground the multisensory, embodied, and affective dimensions of lived experience among beings "living and dying with others in historically specific and politically charged environments," each film is a collaboration between young people who use(d) drugs, a filmmaker, and an anthropologist. These are stories about drug use, overdose, recovery, care, kinship, and living through loss. They move beyond familiar images and scripts of addiction in Vancouver, attuning us to different, and sometimes unexpected, juxtapositions of voice, imagery, and sound. Presenter: Danya Fast (University of British Columbia)

From the Top Down: Museum Governance and the Practice of Cultural Heritage

10:15 AM - 12:00 PM TMCC - 711

Oral Presentation Session

REVIEWED BY:

Council for Museum Anthropology

ORGANIZER:

Haley Bryant (University of Toronto, Department of Anthropology)

CHAIR:

Haley Bryant (University of Toronto, Department of Anthropology)

PRESENTER:

Haley Bryant (University of Toronto, Department of Anthropology), Nelson Graburn (University of California, Berkeley), Jaanika Vider (University of Vienna, Department of Social and Cultural Anthropology)

DESCRIPTION:

This session is concerned with the broad question of how museum governance, funding structures, and

institutional organization at a variety of scales (e.g., individual, local, institutional, national) impact the performance of, production of, and participation in heritage work. In other words, how governance flows from the top down and is subsequently shaped from the bottom up, from the fringes, and along borders within and between heritage institutions and communities. The broad relevance of this question is apparent in, for example, the Canadian Museum Association's recently published report 'Moved to Action: Activating UNDRIP in Canadian Museums', the long-running activist-lead campaign to encourage museums to divest from the Sackler family and other controversial funding sources, the wave of museum unionization efforts in the United States that began long before the COVID-19 pandemic, but was undeniably exacerbated by pandemic-driven layoffs, and in cases such as the retention and use of the remains of MOVE bombing victims by the Penn Museum, among many others. The members of this panel take on a global perspective informed by a broad range of scholarly and professional experiences to engage in a discussion about how museum practices become protocols and standards, and vice-versa; how the neo-liberal and capitalist systems that museums are embedded in shape the work they are willing and able to do, and how ultimately these things both enable and limit the core work of museums and their capacity to engage with their publics and communities. Specifically, the papers in this panel examine the impacts of museum governance as they relate to: precarious and contingent labor practices in the context of community-oriented museum projects in the United States, North American corporate & extractive-industry funding and sponsorship models in the context of the Climate Crisis, how a community of practice increased cultural citizenship through arts programming and advocacy at the Emma S. Barrientos Mexican American Cultural Center in Austin, Texas, how a museum artist residency project at the Pitt Rivers Museum became an (un)likely instance of 'decolonization from without' that urges us to think about what to do when there is no policy or protocol in place, and the successful local adaptation of the international concept of the 'ecomuseum' in Anji County, Zhejiang, China. The members of this panel will think critically together about how societally entrenched and systematic museum governance(s) may stymie ethics-oriented and forward-thinking practices of heritage work, while also foregrounding the ability of creative and novel engagements to alter museum governance, generate new relationalities, and create space within institutions.

The Logic of Pre-care-ity: Contingent Labor in Museums: North American museums are increasingly reliant on contingent labor to fill roles previously occupied by salaried staff. This is especially applicable to museum initiatives like experimental digital projects, specialized projects focused on Indigenous cultural and language revitalization, and initiatives aimed at increasing DEAI that frequently operate on a limited term, grant-funded basis (i.e., outside of normal museum operations). This paper is based on my ongoing dissertation research, which foregrounds precariously employed museum collections workers and the implications of this form of employment for anti-colonial and DEAI (diversity, equity, accessibility, and inclusion) initiatives in museums. In other words, my research is concerned with the experiences and perspectives of independent contractors working in museum collections management. I am curious how, why, and to what extent the contingency of those positions and the precarity of the contracting system writ-large impact not only workers, but also the museum collections they care for, the communities who also care about those collections, and the museum itself. I first outline the documented shift toward contingent labor in museums and subsequently discuss how it challenges the robust, locally specific 'logic of care' that scholars argue undergirds satisfactory, equity and ethics-oriented museum work. Specifically, museum scholarship emphasizes the importance of relationships and relationality to decolonial work, and the necessity of sustained, dynamic institutional reflexivity to DEAI work. I conclude by introducing examples from my field work that illustrate how equity and ethics-oriented initiatives in museums are confounded by opaque institutional bureaucracy, deeply entrenched museum governance practices, and most importantly, the industry-wide shift toward contingent labor. Presenter: Haley Bryant (University of Toronto, Department of Anthropology) The Ecomuseum Grows Up: the Anji County Museum in Zhejiang, China: Nelson Graburn (U. C. Berkeley, USA) and Lu Jin (Ningbo U., Zhejiang Province, China) The original European ecomuseums were attempts to preserve aspects of both material and performative pre/early-modern heritage within existing communities rather than in dedicated museums housing only objects. Introduced to rural China around the year 2,000, most experiments faltered due to insufficient understanding and motivation and excess commercialization. However, in Zhejiang Province the remarkable Anji County "ecomuseum" system has surpassed others in China and more recent developments elsewhere. We have visited and researched this development together and separately, since its inception in 2012. We focus on its

innovative organization - one central natural/history museum and forty-one small local museums and exhibits. Unlike the 'traditional' ecomuseums in Europe and North America which connect Nature/Agriculture/Non-modern - stopping at the stage or time of 'proto-industrialization,' attempting to foster local interest in keeping non-modern technologies and tastes alive, the Anji museum system connects Nature/Agriculture/Non-modern with Industry/Consumption/Modernity, questioning the artificiality of 'frozen traditions'. The designers want to show the existing connections between original nature, traditional and industrial uses, e.g. bamboo growing, Bamboo crafts, and Bamboo in the building, clothing and 'plastics' industry. This is all part of wealthy Anji county's efforts to fashion itself as a leader in rural beauty, non-polluting industries and 'green living' for which it has received national and UNESCO awards. In addition, some of the peripheral units serve their local communities as kindergartens, senior centres, or emergency shelters. A separate, parallel development of an eco/community museum system was started a few years earlier in Yilan County, Taiwan! Presenter: Nelson Graburn (University of California, Berkeley)

Awkward collaborations, or decolonisation in practice: Historic ethnographic collections correspond to specific political, academic, and institutional conditions and desires, both past and the present. Embodying epistemological uncertainties of their discipline but also affording new engagements, the work these collections do is constrained by and maintained within specific institutional hierarchies and systems. Drawing on long-term research with the Maria Czaplicka Siberian collection at the Pitt Rivers Museum in Oxford, this paper examines what happens to the layers of (b)orders that an ethnographic collection is enmeshed in when it is subject to 'decolonisation from without.' What happens when a change to the understanding and display of material comes from the margins? Focusing on the 2022 artist residency and the collaborative 'Wandering in Other Worlds' (WiOW) project, the paper examines how various forms of gatekeeping within the museum, both in the past and in the present, affect how a collection can be understood and represented. Tracing the project from its inception to the curation of an Evenki exhibit and the performance of a healing ritual by an Indigenous and a non-Indigenous artist and museum staff, I look closely at moments of friction created by the lack of fit between the existing models of collaboration and the shape the project took. Examining the governance and institutional structures of the museum and university it is part of, and comparing

WiOW with other museum projects, I reflect on how management structures (or lack of) and resource allocation affected the enactment of museum's mission statement of "radical hope" during a time when partnership with Indigenous people of the Russian North was made near impossible due to the war in Ukraine. Presenter: Jaanika Vider (University of Vienna, Department of Social and Cultural Anthropology)

DISCUSSANT:

Sertac Sehlikoglu (University College London)

DESCRIPTION:

In 1920s Britain, Eve Brackenbury was sceptical of the poltergeists she went to investigate for the London based Society for Psychical Research. Not that she doubted the phenomena reported by the families she visited. As opposed to the elusive sensations described by victims of other kinds of hauntings (Delaplace 2021), these poltergeist manifestations involved objects and furniture being flung around the room, sometimes right in front of the bemused investigator – even right over her head. The question posed by Brackenbury, therefore, was not 'do these people hallucinate?' but 'who is responsible for these happenings?' (Delaplace 2022). The original meaning of the word 'poltergeist' is the 'knocking spirit'; the trickster who comes to knock at our lives. An unsettling, then, might not successfully topple or depose the ordinary nature of things. But it

does point to a desire for it. When a poltergeist flings a chair, we might ask, what is being knocked at? What is being unsettled here? And who is responsible for it? As Yarimar Bonilla (2017) writes, 'What is unsettled is not necessarily removed, toppled, or returned to a previous order but is fundamentally brought into question'. How does the capacity to act-at-a-distance emerge as a collective achievement, ritualised or narrativized by those who cooperate to unsettle a shared life? In this panel we approach the question through the forms of responsibility that are contested and reckoned via the unsettling work of apparitions, ghosts, witches, and spirits. In turn, we ask, what feminist concept of responsibility allows us to respond to the meeting of the worldly and other-worldly without tidying away animating tensions between politics and religion, power and ontology, feminism and anthropology (Nahum-Claudel 2022)? These are questions for a feminist anthropology of conflict, quarrel, and contestation that materialise in the capacity to act-at-a-distance – to haunt, scare, appear, harm. The question 'who is responsible?' is key, as responsibility is a contested realm, open to multiple forms of belonging, aspiration, exclusion, and violence. In addition to the poltergeists knocking within tricky family relations in inter-war Britain, the papers in this panel are about the lively dead in Afro-Cuban spiritism, who seem to be summoned to unsettle the affects and sensoria of their living kin; about the gender and hierarchy shifting spirits of Cambodia's mine-riddled former battlefields; about the fantasised faraway sisters who were mobilised to summon a response from first wave Norwegian feminists; about a haunting within a settler colonial family history that, materialised in documents and remnants, bequeath longing and lingering; about a witch hunt that never came to pass, resolving only as a diffuse unsettling that rested on women's passivity and submission. The unsettling materiality of an inherited haunting: This year as a birthday gift I was given a haunting. My dad had received it first on his 17th birthday, but determined it was time to pass it on and, as such, it arrived in the mail at my home. This ghost - a mere

collection of papers in a weathered manila envelope - was meant to reside with me now. But I had not been expecting any ghosts, and its unanticipated arrival, coupled with the troubling information in the envelope, unsettled long storied accounts. It was now clear that I had never known the truth about my dead uncle. In this paper, I work through the materiality of this gifted haunting; its debris, documentation, and remnants. In other words, the ever-present weighty-ness of the haunt, in order to think through how ghosts transition through time, how they age, and how they are inherited. How do ghosts confuse the boundaries of present-tense desire and a longing for, and lingering of, the past? In other words, how does their presence trouble the present? Working through the ways that ghosts rumble and growl, and even go bump in the night, this paper offers an analysis of how ghosts function as both unsettling and settling actants in worlds. Ghosts might reveal worlds to be shaky artifices, contributing to an understanding of how contested world-making is reckoned through ghostly and lively actors. Presenter: Laurie Denyer Willis (McGill University)

Social Life and Ontological Death: Embodiment, Feeling and Response-ability in Cuban Espiritismo: Cuban practices of African inspiration, like other creole, diasporic traditions have long been described as queering and querying taken for granted post-Enlightenment tropes like bounded persons or linear temporalities (Strongman 2019). In this respect, Cuban religious practices, much like the spirits who are crucial actors in their praxis, are inherently unsettling. But to whom? And what do they unsettle? And what does this unsettling open up for the world? This paper presents a joint critique of and through the pairing of feminist approaches to emotions and affect (Ahmed 2004 [2014]) and Afro-Pessimism's social death (Sexton 2011). The dead aren't solely remembered in everyday practice, they have a chance to show up and experience aesthetic pleasures and feel belonging. By exploring the sensitivity, sensoria, and imagination enabled through the collective and relational religious knowing that can emerge in Espiritismo Cruzado, the paper asks what the unsettling of religiosity offers to participants, living and dead. The ethics/politics of practice both produce and are predicated upon making space for others. Ahmed, S. 2004 [2014]. *Cultural Politics of Emotions*. Edinburgh: University of Edinburgh Press. Diffuse Spirits: Genders, Persons, and Transformations in Cambodian Postwar Ecologies: A ghost killed a landmine detection rat. The ghost, a deminer said, was trying to tell us they wanted more respect. From then on, as responsible parties to the spiritual actions, we offered fruits each Friday to Buddha's statue, a seated figure overlooking the minefield. Not to worry if Buddha wasn't directly accountable for the murder, another told me, because, as the 'manager' of all the spirits, Buddha would distribute the fruit to the spirit who had killed the rat. According to the deminers, the spirits existed as diffuse persons ranged into militaristic hierarchies. Their materialities, that is, their physical manifestations, were both interchangeable and changeable. Thinking with diffuse spirits as kinds of persons unsettles gender, hierarchy, and even agency such that individual accountability itself must be re-thought. Scholars have noted that male-presenting Buddha statues in Cambodia sometimes become inhabited by a goddess-like warrior; that villagers clothe statues of Vietnamese soldiers in women's robes to make them grandmothers; and that spirits themselves can metamorphose from woman to man for reasons of safety. Spirits caught in gendered transformations, in fact, shape the landscape of Cambodia as much as the millions of landmines that contaminate its soil. These spirits, too, configure (and are configured by) war—embedded in ecologies of former battlefields. This paper considers the diffuseness of spirits as a way to unsettle relations, accountabilities, and materialities of postwar ecologies, from the stories of a murdered rat to a spirit who dresses in drag.

Staying with the trouble of witchcraft : Due to a fearful diviner, the tardy payment of a death pension benefit, a savvy veterinary surgeon, and a reluctant leadership: there was a witch hunt in a highland part of Papua New Guinea (PNG) that – happily – never came to pass in February of 2018. Instead of a boiling, setting, wounding, there was a simmering-unsettling. Over two weeks, my women friends sat in the eye of that unsettling. I grapple with a feminist concept of responsibility that faces women's submission, passivity,

and complicity. In Simbu Province, PNG, it is more often women in the category wife/mother who are threatened, beaten, tortured, or murdered as witches by men acting to secure male lineal perdurance. During witch hunts, the sovereignty of the subclan is worked on women's bodies in the men's house, the sub-clan's "parliament". That witch hunts are patriarchal law enforcement is a first wave feminist point renewed by post #MeToo feminists (Zwissler 2018). And yet, anthropologists' special contribution to witchcraft studies is to know deeply that witchcraft – as action at a distance, and as a collective act of naming, narrativizing, and ritualising – is a coalescence of tangles of relational rot. As such, it is something real, something fearful, something that must be chased away, cut away, even if it stays unsettled, unknowable, out-of-reach. Witchcraft, in other words, is a theatre in which core animating tensions: politics and religion, power and ontology, feminism and anthropology, cannot be tidied or purified away, either for those who write it, or those who live it. These are not new quagmires, but they have sometimes been too readily bridged by anthropologists of witchcraft. So, how to stay with this trouble?

Acting at a distance. Poltergeists and the forms of quarrelling in 1920s Britain: As she was investigating houses disturbed by so-called "poltergeist" phenomena in 1920s Britain, Eve Brackenbury had little difficulty exposing the "trickery" around which she held them to revolve. As an assistant research officer for the Society for Psychical Research, founded in 1882 with the purpose of submitting to scientific scrutiny those phenomena (such as telepathy, mediumship or psychokinesis) that Spiritualist associations considered truth, she took it as her duty to ascertain whether occurrences of small objects being flung around, artefacts moved about and heavy furniture bulged out of place were caused by "normal" or "paranormal" agency. Each time, a young person – an adolescent – could be found responsible, acting physically rather than psychically on their environment to produce the raucous manifestations. Carried out by a woman on behalf of the Society's men of science, therefore, these investigations seek to establish who is responsible for the upheavals in British interwar conflicted domesticities, the answer always pointing towards the same kind of person. Brackenbury's investigations, however, are less striking for the mundane causality

they demonstrate (at times forcibly,) than for what they implicitly show has failed to elicit attention in these cases. Poltergeists tend to emerge from a specific kind of quarrel, which involves a measure of cooperation in conflict. I suggest that Brackenbury's meticulous maps, reports, and interviews are an inducement to understand the interactional conditions in which someone is deemed capable of acting on others at a distance. Presenter: Gregory Delaplace

What is your response today? The cries of imagined religious women in Norwegian first-wave feminism: In this paper I invite you to imagine the world of Henny Dons, who lived in Norway in the early twentieth century. She was deeply influenced by the early women's movement and actively sought to raise the status of women in her Christian groups. She was also one of the first women in Norway to write Christian texts. I examine some of her descriptions of women figures in her pamphlets and books from the 1920s, which are based on missionary and scholarly sources and are presented in a factual, realist mode. These women figures included non-Christian women around the world, such as "the heathen woman," "the Zulu woman," "the Muslim woman," "the Chinese woman," "the Indian woman," or "the Jewish woman." She presented these figures as "our sisters out there" who are "crying out to us." I suggest that these imagined women figures served as phantom beings that appeared real and that helped Christian feminists in Norway to navigate the gender quarrels in their own social worlds. They helped to give urgency to two interrelated questions: Who is responsible? And who will respond? I read the figures as historical beings that might haunt us too because they do not allow us to cleanly separate the histories of imperialism and liberalism (Lowe 2015), thus showing us part of the histories of a feminist concept of responsibility that shapes our world today. Infrastructuring Ethnography: A Collaborative Exchange

10:15 AM - 12:00 PM TMCC - 713 A
Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Andrew Gilbert (Humboldt-University zu Berlin/DFG)

CHAIR:

Kregg Hetherington (Concordia University, Department of Sociology & Anthropology), Deborah Thomas (University of Pennsylvania)

PRESENTER:

Melina Campos Ortiz (Concordia University, Department of Sociology & Anthropology), Rachel Howard (University of Chicago, Department of Anthropology), Nick Smith, Suzi Asa (University of British Columbia, Okanagan), Emilie Isch, Fiona P. McDonald (University of British Columbia, Okanagan), Indivar Jonnalagadda (Miami University)

DISCUSSANT:

Katie Ulrich (Rice University), Jean Chia (University of Toronto, Department of Anthropology)

DESCRIPTION:

What infrastructures can we build when we practice ethnography in collaboration, extend the field of inquiry across multiple temporalities and spatial locations, and create new networks of circulation? What potentials are activated when research objects, artefacts, methods and events circulate out of their initial contexts of emergence and assembly? What values can we create beyond proprietary notions of research practice and production? What new insights are afforded through re/combination, re/contextualization, and re/mixing? This roundtable takes up these questions by featuring an experiment in research networking between five ethnography labs: the Collaborative and Experimental Ethnography Lab at the University of British Columbia Okanagan, the Center for Experimental Ethnography at the University of Pennsylvania, the Ethnography Studio at the University of Southern California, the Ethnography Lab at the University of Toronto and the Concordia Ethnography Lab. Each of these labs is home to collective research projects clustered around keywords like porosity (USC), play (Toronto), tracks (Pennsylvania), and situated dissonance (UBC), or urban pits (Concordia). The roundtable begins with an offering: each lab will circulate an artefact from their project (an audio or visual document, found object, a method/methodology, a concept, a game, a syllabus, or other piece of writing) to members from another lab. The receiving lab will take up this offering and 'activate' it, transforming it or putting it to work in another context. In the round-table, members of each lab will report on the process of this activation, leading to a broader discussion with the audience about the

possibilities of such nodal ethnographic research and the infrastructures that support it.

5-210

Interembodiment Part 1

10:15 AM - 12:00 PM TMCC - 802 B

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Emma Bunkley (University of Colorado Denver | Anschutz Medical Campus)

CHAIR:

Emily Mendenhall (Georgetown University)

PRESENTER:

Erin Moore (Ohio State University, Department of Anthropology), Steph McIsaac (Bowdoin College, Department of Anthropology), Alejandro Cerón (University of Denver, Department of Anthropology), Maura Stephens-Chu (University of Hawaii, Manoa, Department of Anthropology), Daphne Weber (Washington State University, Department of Anthropology), Helen Vallianatos (University of Alberta)

DESCRIPTION:

Interembodiment, defined 'as the sharing of embodied experiences across and among biological bodies' (Bunkley 2022), has the potential to shape new discussions around the sociality of health and disease experiences. While originally written about Senegalese mother-daughter dyads experiencing metabolic disorders, interembodiment can be expanded to encompass new ways of thinking about how disease (or health) is shared or transmitted as well as deeply embodied ways of expressing empathy, care, and caregiving. This panel pulls together work on embodiment (biological and cultural) that emphasizes the porosity of care to show how anthropology can contribute to understandings of what the human body is and means in contemporary time. This panel draws together work from the rich bodies of literature on embodiment and intercorporeality (Csordas 2008, 2011; Husserl 1989; Merleau-Ponty 1962), local biologies (Lock 1993) and situated biologies (Niewöhner and Lock 2018) as well as notions such as para-communicability (Moran-Thomas 2019), and shared biologies (Wentzell 2019, 2021). Papers on Interembodiment Part 1 draw together work on causal explanations for Chronic Kidney Disease of non-Traditional Causes in Guatemala; insulin

affordability activists and experiences of chronic terror in the USA; gender-based forms of religious healing in women Thai Buddhist monks; how place affects women's health perceptions and practices in Ghana; Continuum Movement and the way these movers see their bodies as an evolutionary process and multispecies formation; and Japanese women's shared experiences of menstruation. Patient-Activists and the Interembodiment of Chronic Terror in the U.S. Insulin Crisis: At the protest, everybody's bloodsugar was high. Adrenaline is known to spike glucose levels. It was the summer of 2021, and activists from several midwestern states had gathered at Eli Lilly's Indianapolis headquarters to protest lethally high insulin prices. Aged 7-75, many of the protesters had type 1 diabetes, meaning they depend on insulin to live. While activists held signs urging Lilly to "make insulin free," wearable diabetes tech alarmed, making sonic demands for more of the insulin Lilly and other

pharma companies have made so profitable. From this scene of sickness, biocapitalism, and protest, I explore “interembodiment” among insulin affordability activists, a group that congeals at events like the Eli Lilly protest but primarily online, under the hashtags #insulin4all and #DOC (diabetic online community), and includes type 1s and their families, friends, and caregivers. Drawing Peter Sloterdijk’s work on atmospherism into conversation with disability anthropology, I consider how insulin affordability activists share and collectively combat embodied experiences of “chronic terror,” or the feeling that life is constantly, chronically under threat. Akin to “diabetes distress,” the increasingly used term for the presence of major depressive disorder as a diabetes comorbidity, chronic terror is an emotional response unique to the American healthcare cost environment. It gets under the skin, affecting bloodsugars as stress (adrenaline), which affects human-biotechnological configurations of care. By making space for expressions of chronic terror and developing methods for managing it, the insulin affordability movement allows patient-activists to redefine diabetes illness experience as they care for one another. Presenter: Erin Moore (Ohio State University, Department of Anthropology)

Inter(Species)Embodiment: Moving from a More-Than-Human Place : Continuum Movement—a self-proclaimed “species-inclusive” practice developed in the U.S. by Emilie Conrad in the 1960s—understands the human body as an ongoing expression of a 4.6-billion-year planetary process of evolutionary becoming, which intrinsically connects the human body to all life forms. Continuum practitioners use specific breath, sound, and movement techniques to, in their view, tap into an intrinsic “bio-intelligence” that is lost as the body becomes subject to the disciplining norms of culture and traumatic experiences. Through specific movement techniques, practitioners can access the primordial world of gases and lava, previous evolutionary states, and explore the physical traces of other species (like a wing or a fin) in the physical anatomy of the human body. Based on ongoing ethnographic research with Continuum Movement practitioners, this paper examines how Continuum movers come to see their bodies as an evolutionary process and multispecies formation, tracking the forms of more-than-human belonging that are made possible when the body is not separate from other species, but includes them in one’s very anatomy. In conversation with larger literatures on interembodiment, the permeability of the human body, and multi-species worlds, this paper asks: where does the body end—and is it ever itself? Presenter: Steph

Mclsaac (Bowdoin College, Department of Anthropology)

Collective Embodiments and the rise of Chronic Kidney Disease of non-Traditional Causes in Guatemala: Chronic Kidney Disease of non-Traditional Causes (CKDnT) has become a public health problem in several countries around the world. Traditionally, CKD in adults is caused by diabetes or hypertension, but CKDnT mostly affects young male agricultural workers with no history of chronic diseases, and it also affects women and children without a history of agricultural work. The existence of toxin-, environmental-, and work-related factors in the affected communities suggests the potential involvement of exposure to agrochemicals, environmental contaminants, and repeated episodes of dehydration. Drawing on ethnographic research over a period of four years, I present available evidence of the problem in Guatemala, as well as the competing and overlapping causal explanations offered by different stakeholders. I then explore the usefulness of the methodological approach of embodiment for making sense of CKDnT in these communities. To do so, I engage with social epidemiologist Nancy Krieger’s notions of embodied truths and emergent embodied phenotypes, and critical epidemiologist Jaime Breilh’s discussions on collective and eco-systemic embodiments, and put them in conversation with anthropologists Thomas Csordas’ construct of corporeality, and Emily Wentzell’s notion of collective biologies. I conclude with what I see as the possibilities and limitations of these concepts when used to explain public health problems such as CKDnT. Presenter: Alejandro Cerón (University of Denver, Department of Anthropology)

“Shō ga nai yo ne”: Interembodied Experiences of Menstrual Pain among Young Japanese Women: Pain and discomfort are such a normal part of menstruation for Japanese women that common euphemisms for menstruating are “my stomach hurts” and “I don’t feel well.” “Shō ga nai yo ne,” Kana, a young Japanese woman attending university in Tokyo, said to me – “there really isn’t anything you can do about it.” Based on 12 months of ethnographic fieldwork, I argue that in contemporary Japan, there is a social imperative to conceal menstruation, which leads to particular embodied experiences for women who must properly carry out “self-management and discipline” (Miller 2006, 11). When a non-menstrual body is the only socially acceptable body, then “gendered body negativity” (Bobel 2019, 32) is perpetuated; women’s bodies are naturally inferior and stigmatizing, requiring technological and commercial interventions to

“discipline” it. Women must tread carefully when sharing their pain: whether one can express one’s suffering through words or even a grimace depends on those around you. Recounting grade school woes, women repeatedly described their menstrual pain in relation to others: commiseration over shared experiences of menstrual cramps created bonds between female classmates, while failing to adequately conceal one’s suffering made one a target for teasing and harassment by ignorant boys. Whether and how these young women treat their menstrual pain depends on the pain experiences of other women in their lives. Descriptions of their own pain are often bracketed off as “not so bad” compared to other women they know. Lived experiences of menstrual pain are thus always shaped by processes of interembodiment. Presenter: Maura Stephens-Chu (University of Hawaii, Manoa, Department of Anthropology)

Monastic Vibes: Interembodiment and Gendered Trauma in a Thai Bhikkhuni Monastery: Institutions of Theravada Buddhism do not socially recognize women as female monks. Nevertheless, women – known as Bhikkhuni – continue to receive ordination and practice, despite this lack of formal recognition. While prior literature on bhikkhunis has focused on the personal narrative and charismatic qualities of the movement’s founder, Venerable Dhammananda, my research instead focuses on the healing practices of Thai Bhikkhuni. In this paper, I show how chanting during rituals is a form of interembodiment that creates intercorporeal energies of deities to rid women of jao kam nay wen, or Karma Masters who punish women for past misdeeds. Aborted fetuses are a common Karma Master among women since many Buddhists consider abortion one of the worst sins. In this paper, I argue that the ‘vibrations’ bhikkhunis refer to as the healing energy they collect and distribute during rituals. This energy is a form of interembodiment that engages the fifth element of space to process and heal gendered trauma. Because of female monks’ new emergence in Thai society, they are the first monastics to uniquely combine Buddhist doctrine with their personal experiences of women’s social issues. By using Jao Kam Nay Wen as a central point for gendered social ills in Thailand, my contributes to our understanding of gender-based forms of religious healing while exploring how the broader experience of being a woman in contemporary Thailand pushes women towards these practices. Presenter: Daphne Weber (Washington State University, Department of Anthropology)

Emplacing Interembodiment: An Exploration of Ghanaian Mothers’ Household Health Management: Co-

authors: Solina Richter (University of Saskatchewan), Patience Aniteye (University of Ghana), Kwasi Ansu-Kyeremeh (University of Ghana) This paper revisits our collaborative exploration of how place affects women’s health perceptions and practices for both themselves and their children, by working with women who have, and have not migrated within Ghana. Our collaborative, interdisciplinary project was conducted in 2015, in a rural area in central Ghana and in Accra. We worked with twenty migrant women in Accra, and twenty-one women in the rural area. We also conducted interviews with health professional to provide context on health care needs of women, and efforts to address these needs. Our analysis of emplaced experiences builds on John Lewis’ (2013:94) assertion that “places and bodies co-construct each other,” allowing us to compare rural and migrant women’s household social structures and how these affected food and health practices. In this revisitation, we apply Emma Bunkley’s (2022) concept of interembodiment – “animated bodily entanglements between people” – to explore how women’s understandings of health and healthy practices are grounded in traditional, familial ways of knowing, in the teachings of their mothers and mothers-in-law, and how women’s emplaced experiences intersect with their own and their children’s wellness. Our findings build how multiple biologies and places intersect to shape women’s health experiences. Presenter: Helen Vallianatos (University of Alberta)

Liminality and Social Suffering

10:15 AM - 12:00 PM TMCC - 705

Oral Presentation Session

REVIEWED BY:

Anthropology of Consciousness

ORGANIZER:

Nicole Torres (Western Washington University, Department of Anthropology)

PRESENTER:

Emil Røyrvik ,Marianne Blom Brodersen ,Jordan Kiper (University of Alabama, Birmingham),Elaine Mcllwraith (Western University),Isobel Johnston (Arizona State University),Laura Jewett

DESCRIPTION:

Liminality, or the state of being 'betwixt and between' (Turner) can offer an opportunity for transformation on both individual and collective levels. What happens when the state of liminality turns into a situation of

permanence, resulting in extended social suffering? The presenters in this panel will engage with people who suffer with 'abject liminality,' 'impossibly liminal' stages that raise epistemological and ontological quandaries – complex dilemmas that require reflection, nuance, and nuanced dialogue. Paper topics include extended liminality of Roma people in Bulgaria and Gitanos in Spain, moral injury in transition from combat to civilian life (including U.S. and Yugoslav War veterans), liminal rites of posthumosity of an African American woman educator, refashioning of Jewish ideas of *selv* in mikvah immersion, critical reflections on the inevitability of transition and change (considering experiences of queer men and trafficking survivors), and in-betweenness in Muslim citizenship in southern Spain.

Abject liminality and social suffering: This paper focuses on the experiences of Roma people in Bulgaria, especially in the town of Sliven. It explores the multidimensionality of their experience of extended liminality and its relationship to social suffering and injustice. The Roma people in question have been living in the community for centuries, are sedentary, proletarianized, and embrace compound forms of ethnic identification (as Bulgarian, Roma, 'gypsy'/'tsigani') as well as numerous other identity markers such as class, gender, religion, education, region, language, etc. The Roma in question has been integrated to a large extent into Bulgarian society and industrial working life since Ottoman times and throughout the communist period, with a significant exception in the nationalist and fascist period from 1923 throughout the second world war. Since the transition to 'democracy' and market capitalism from 1989, the Roma has experienced a second age of expulsion, and have to a large extent been suspended in an extended existence of liminality that includes rejection from the Bulgarian ethnic nation, from work life, and generally from being considered legitimate citizens and people of the country. In this extended state of liminality, they are stigmatized, dehumanized and perceived as pollution, dirt, and matter out of place, as for example stated in Bulgarian dictionaries second definition of 'tsigani' as 'dirty, liar, bad, not good man and others.' Despite a 'decade of Roma inclusion' and numerous other institutional efforts to improve the lives of Roma, the life span, living conditions, quality of life, and health is systematically worse among the Roma than among the Bulgarian population, and also comparing with Bulgarian neighbors living in close proximity to Roma. Unemployment among Roma is rampant and levels of education are comparably low. For many Roma the transition to democracy and market capitalism, and the

opening towards 'the west' remains a haunting specter of promises deferred and unfulfilled, and melancholia and longing back to the communist period prevail. A common feeling in this state of abject liminality is fatalism, hopelessness and gallows humor - and of fleeing the country with the hope of work and a better life, like numerous Roma (and other Bulgarians) do. Drawing on various nondual theories of mind and consciousness, such as pragmatist and process theories that emphasize the embodied and embedded mind, the paper explores the experience of suspension in an seemingly 'everlasting' liminality where existence is constructed in a context of continuing negation of positive social status attribution and prospects for life. Presenter: Emil Røyrvik

Ontological simultaneity: Religious and social liminality amongst the Gitanos of el Rastro: The topic of presentation is collected from long-term ethnographic fieldwork and participant observation conducted in the years of 2012-2020 amongst a group of middle-class Gitanos (Spanish Gypsies) in Madrid, Spain. The Gitanos referred to are self-employed traders and Pentecostal practitioners who work, live, and attend church in the outdoor market area in the city centre of Madrid, called 'el Rastro'. Based on my study, I would argue that extended forms of liminality, in both religious, socio-cultural, and economic terms, characterizes the lives of these people. The Pentecostal Gitano rite is held six days a week from 8-10pm each night and brings forth strong transcending and transforming dynamics of an inner kind, shaping the ritual participants in fundamental ways. Their highly frequent and profound ritual engagement brings forth strong epistemological and ontological notions through an all-encompassing religiosity that seemingly saturates every aspect of their lives. In anthropological writings, the liminal space is regarded as an 'in-between space'. Such liminal spaces are often understood as spheres in which cultural transformations occur. Positioned in the gap between defined and 'frozen' conditions, such spaces open up for new possibilities and change. In surrealism, liminality is understood as 'the threshold stage between waking and dream, or the conscious and subliminal state of awareness' (Thieme 2003: 144, in Chakraborty 2016: 146); that is, a central source of creative inspiration. We could see the daily Rastro Gitano ritual called *el culto* and the liminal, 'magico-religious' (Van Gennep [1909]1960) in-between space it produces, as a threshold environment apt to drive social transformation and change. But also, rather than understanding this form of extended liminality as 'in-betweenness', I would rather grasp the Rastro Gitano

position – in ritual as in society – as a position of 'simultaneity', much as a pendulum or Bateson's line dancer (1972), in a continuous 'both this and that' ontology which enables to combine otherwise separated binaries or tensional oppositions. This argument builds on other discussions and ethnographic descriptions in my study on how this ontological simultaneity looks like 'on the ground', for instance in terms of the relation between Gitanos and non-Gitanos, the Rastro Gitanos' ritual relation to oppositional dualities, and on the ritual creation of a 'spiritual gaze' and 'cultic habitus' through the integration of tensional dualities in the ritual practice of el culto. By extension, while the Rastro Gitanos' ritual practice may produce a space akin to a threshold, this space is at the same time filled with a range of simultaneously existing and interdependent dualities and oppositions, which they navigate, experience, challenge and embody. Within this ontology of simultaneity thus, apparent oppositions are put into dialogue. In analytical terms then, we can say that, through their ontological paradigm, the Rastro Gitanos carry, act out and produce structure and anti-structure, continuation and change simultaneously. Conclusively, what I call an 'ontology of simultaneity', describes not only 1) the ontological implications of the Rastro Gitanos' relation to majority society, describable as something akin to the figure of the 'Stranger' (e.g., Simmel 1908), but also 2) their deep engagement with simultaneously opposing dualities and position both within the ritual setting and outside. Presenter: Marianne Blom Brodersen

Moral Injury and the Struggle to Transition from Combat to Civilian Life: Military veterans often engage in various rites of passage after returning from war, such as homecomings, joining veteran support groups, and participating in remembrance rituals. Respectively, these rites demarcate the transition from military to civilian life, provide support and connection with fellow veterans, and offer ways to honor fallen comrades. However, while these ceremonies may provide some symbolic closure to wartime lives, they may not be sufficient in addressing the deeper psychological impacts of war, including moral injury. Moral injury results from experiences that violate one's moral codes, and in the event of war, where behaviors differ from the ordinary, veterans can experience moral injury as mounting guilt, existential crisis, and loss of purpose as they transition from combat to civilian life. Yet, unlike post-traumatic stress disorder, moral injury centers more on cognitive reflections of combat and shifting – often disorienting senses of self – rather than intrusive fears or feelings of threat after trauma. Current

treatments for moral injury include individualized psychotherapy, religious interventions, and support groups. But what if moral injuries were treated less as individualized struggles that one treated mostly through verbal therapies after leaving military life, and instead as collective injuries shared by soldiers that were treated through rituals during the more proximate liminality from military to civilian life? This presentation explores this possibility by drawing from participant observations and interviews with U.S. veterans from the Vietnam War and veterans of the Yugoslav Wars who reflected on moral injury when engaged in veteran-to-veteran post-conflict reconciliation efforts. It also draws on comparisons of military rites of passages for persons transitioning from war to peace and contemporary findings in the anthropology and cognitive science of ritual. Findings point to the greater need for shared rituals in healing moral injuries. Presenter: Jordan Kiper (University of Alabama, Birmingham)

Reparative Citizenship for Some: Demarcating historical voids through in-betweenness in Southern Spain: The seemingly revolutionary decision in 2015 to grant Sephardic Jews, a protracted diaspora expelled from the Iberian Peninsula in 1492, the right to obtain contemporary Spanish citizenship stood in stark contrast to lack of similar rights granted to Moriscos or Muslims whose families also recount similar histories of expulsion. The law itself generated opposition in certain circles, yet the relative absence of indignation about the uneven distribution of rights was salient. The reasoning behind the exclusion of Moriscos from Spanish citizenship has been a question that has lingered in the minds of scholars and activists for some time (Hirschkind 2021; Arigita Masa 2019; Manuel Rodríguez 2010; Domínguez Díaz 2013). Only more recently has the scholarly community begun to look beyond reductive charges of nostalgia in the historical memory of contemporary Moriscos (Lowenthal 1989), moving towards attempts to support Morisco claims and to fully understand the reasoning for the imbalance (Arigita & Gailan 2023; Bolorinos Allard 2023). Spaces of absence embedded in historical narratives about the Muslim period in Spain along with elements present in Andalusian identity construction have allowed for interrogation of the injustices inflicted on these two groups to develop alongside a narrative of in-betweenness – a belonging to a Muslim past and European present. I argue that this dual backdrop of that which has left a void and that which is present has allowed for a political space in which the inequalities of citizenship could be implemented without considerable contestation. In this paper, I draw on a decade of

ethnographic fieldwork with a wide array of Spaniards and Arabs living in Spain, including teachers, employees of the heritage sector, professors, tour guides and residents of an old Moorish quarter. By bringing together various aspects of this research – interviews gathering historical narratives, songs, related literature, citizenship policies and application regulations, among others, I outline voids in historical memory and identity construction that have allowed for these exclusionary citizenship rights. History lessons in schools tend to reference the immediate expulsion of Sephardic Jews in 1492 over that of the Moriscos, if any time is spent discussing the expulsion at all. The more complex marginalization, repression, rebellions and forced displacement of the Moriscos over the following century is generally passed over. Additionally, narratives of Andalusian (or Southern Spanish) identification with the shared Muslim past that strengthen a feeling of connection with the Arab World bump up against a sense of Europeaness, producing fluid identities of in-betweenness that allow for the disparity of particular rights. Meanwhile, little is known amongst the general public in Spain about the continued existence of communities of Moriscos spread across the MENA region, apart from their thriving Andalusian musical traditions. While the expulsion is often narrated as a great loss, this lack of general awareness is extended to the ways in which the 'purity of blood' ideology of the time is linked to contemporary structural racism and concepts of ethnic cleansing and genocide, nor are they linked to inequalities in citizenship. Expanding on these voids, I consider the ways in which memory, history and identity construction have become part and parcel of determining the boundaries of 'reparative' cultural citizenship in Spain. Presenter: Elaine McIlwraith (Western University)

Embrace and Closure in Complex Identity Transitions through Mikvah, Jewish Water Immersion: Sometimes rites of passage are inadequate because of the suffering that a person experiences either with the identity they are leaving behind or there's a fraught situation with moving into the new identity: marriages that begin with the partners geographically distant, pregnancies that don't happen or don't last, or religious conversions from a past fraught with abuse. Each of these scenarios are riddled with emotional complexities and personal histories that can generate layers of personal suffering and tenacious attachment to the identity to be shed or emotional resistance to adopting the new identity. In such circumstances, liminally structured rites of passage (per Turner via van Gennep: moving participants through a liminal process of shedding an old identity,

experiencing a trial or ordeal, and emerging with the new) are less effective. The Jewish traditional ritual of full-bodied immersion in a specialized pool of water known as a mikvah, with its traditional associations with both lifecycle transitions and personal purification, brings forward the role of purification and healing for effecting the closure needed for completing complicated personal transitions. Drawing on interviews conducted while studying the phenomenon of healing through mikvah immersion, I will explicate how contemporary Jewish re-fashioning of traditional ideas of self, wellbeing, and purity interface with ancient ritual structures of mikvah immersion to effect profoundly transformative personal rites of passage. This explication will also bring forward the conditions of ritual indeterminacy that can make mikvah immersion uncomfortable and counterproductive for some immersers. Presenter: Isobel Johnston (Arizona State University)

The Impossibly Liminal Posthumosity of Mittie A. Pullam: In February 2022, the authors of this paper volunteered to continue the decades-long, community-led effort to memorialize the life and work of African American educational leader and teacher through an online domain in her name and through social media. The social media and website house reproductions of significant primary documents related to Ms. Pullam's educational career and was designed to serve as an interactive monument in a small but mighty network of Pullman's former students and social media sites devoted to African American women educators. The initial goal of our ethnographic research on this project was to explore the process of memorializing the legacy of Mittie A. Pullam's educational work first, as the leader of the pre-Brown, one-room Frederick Douglas School located in a border town in deep South Texas, then as a respected educator in a corrugated outbuilding of a majority Mexican American elementary school, and then as the subject of a strategic and highly politicized campaign to memorialize her legacy as the namesake for a local Elementary School. But as Frederick Douglas (the namesake for the pre-Brown, one-room schoolhouse where Ms. Pullam led and taught) wrote in 1876, 'No one monument can be made to tell the whole truth' (White & Sandage 2020). This paper draws from the authors' larger ethnographic study, to critically explore the Pullam memorial site as a problematic posthumous space-time enmeshed in a liminal, racialized consciousness embedded in networked whiteness. More specifically, this paper uses endarkened epistemologies via Bostick & Manning (2015); Croom & Patton (2015); Dillard (2021) Hurtado

(2003) and Templeton (2022), to explore the cascading liminalities of social media monuments as interactive thresholds and ask what it might mean to make use of these liminalities to expand the reach of and generatively complicate local projects aimed at presenting the posthumous intellectual contribution of Black women educators (and other liminal yet marginalized luminaries). Towards these ends, this paper also asks important questions about living curriculum within and beyond the confines of corporeal consciousness toward liminal rites of virtually embodied posthumosity (Church, 2013; Ebert, 2014; Edwards, 2018; Kasket, 2012; Kidd, & Mcavoy, 2023; Navon, & Noy, 2023; Trevisan, Maciel, Pereira & Pereira, 2023).

Marine Restoration: Knowledge, Practice and Power

10:15 AM - 12:00 PM TMCC - 716 B

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Jessica Vandenberg (University of Washington)

CHAIR:

Amelia Moore (University of Rhode Island)

PRESENTER:

Jessica Vandenberg (University of Washington), Kyrstin Mallon Andrews (Syracuse University), Monica Barra (University of South Carolina)

DESCRIPTION:

Restoration practice and technologies are emerging as a dominant tool for addressing degrading ecologies globally. This increased popularity is reflected through growing calls for the prioritization and legitimization of restoration as a practice for not only preventing but also reversing ongoing degradation of ecologies. For example, the UN Decade on Ecosystem Restoration has established ambitious goals to 'heal the planet' in 10 years time. Given how oceans have featured centrally in discussions of changing climates, biodiversity loss and food security, marine restoration technologies in particular have gained significant support. Coral reefs, mangrove and kelp forests, and oyster and seagrass beds, among other habitats are not only seen as nature worth 'healing,' but as critical natural infrastructure for addressing ongoing environmental crises in the

Anthropocene. While marine restoration is dominated by technical and natural science, there is an emerging field of anthropological studies exploring the social, ethical and political dimensions and implications of restoration as a field of science and practice. Anthropologists examine how marine restoration assumes and enables certain kinds of human-environment relations, while excluding others. They have also brought into question how the global scale-up of restoration practices may unevenly impact people, their livelihoods, and their environmental relationships. This panel session brings together papers reflecting the diversity of perspectives and questions raised by anthropologists on the practices of ecological restoration, restoration technologies, and restoration logics. We bring together different strands of marine social science and the humanities that have examined restoration practices and other forms of ocean care through lenses of equity, gender, race, history, and governance.

Building Reefs for Whom? Examining the Discursive and Material Workings of Corporate Coral Restoration: Reef restoration is an increasingly mainstream mechanism for mitigating reef habitat degradation, as well as supplementing established approaches for marine conservation and fisheries management. While its effectiveness for marine conservation is contested (Hein et al. 2020; Boström-Einarsson et al. 2020), marine restoration technologies and infrastructures have received growing interest by both state and private sector actors. Tourism, seafood companies, impact investors and private philanthropists have all become increasingly prominent in supporting reef restoration, with the intention of improving the sustainability of fisheries resources, offsetting the impacts of coastal development, and integrating ecotourism models (Ferse et al. 2021). These private actors, commonly operating from the global North, enable new opportunities for supporting critical conservation agendas and to implement restoration programs at a global scale by influencing the networked flows of knowledge, finance, and materials that build up restoration programs (Iyer et al. 2018; Jacob et al. 2020). However, the interests of these private actors are also oriented to accumulation and/or distribution of capital that can conflict with the social and ecological sustainability and conservation goals driving restoration practice (Moore, 2021; Vandenberg, 2020). Through an ethnographic case study of corporate-led coral reef restoration in the Spermonde Islands of Indonesia, I illustrate the ways in which this program's outcomes serve external corporate agendas, rather than the conservation development goals it

presents. I discuss how the program outcomes deviate from the discourse that publicly defines the initiative, arguing that uneven “rhetorics of representation” in this initiative are used to deflect attention from the company’s own extraction of fishery resources and to redirect responsibility and blame towards the actions of local people. Through this case, I demonstrate the ways in which rest Presenter: Jessica Vandenberg (University of Washington)

Eating (or not) for Ecotourism in the Dominican Republic: Parrotfish, Sand, and Conservation: During Holy Week of 2018, the white sandy beaches of the Dominican Republic had a message for the nation’s beachgoers: “Save me, don’t eat parrotfish,” “If you eat parrotfish, I disappear.” Recalling SOS messages of castaways, the messages written on the beaches – captured by drones, and reproduced on social media with the hashtag, #lasplayashablan (the beaches speak) – encapsulated recent efforts at marine conservation that co-opt the nation’s most profitable industry: tourism. In efforts to restore the idyllic white sands of tourist brochures and postcards, marine restoration located its efforts on a particular species in attempts to change the culture of its consumption. While parrotfish were depicted as the “laborers of the sand factories” of the Dominican Republic, and thus crucial to the very environments on which Caribbean tourism depends, fishers were depicted as irresponsible and extractive actors, working against national ecological heritage, and contributing to beach erosion, among other environmental ills. This paper explores the cultures of consumption surrounding parrotfish, fishers, and tourists in the Dominican Republic, tracing how some kinds of eating are celebrated in attempts to restore fragile ocean ecosystems, and how other forms of consumption are criminalized in the name of marine conservation. Presenter: Kyrstin Mallon Andrews (Syracuse University)

Imagining Black ecological repair: Many African-American descendant communities in the American South have struggled with their relationship to the land, particularly rural and coastal areas that are often subjected to extractive practices of the racial capitalist state that degrade local ecologies and ways of life. While recent practices of ecological remediation and repair aim to address legacies of ecological harm, they often inherit and repurpose these histories of vulnerability and displacement, prioritizing the production of environmental goods over the protection of Black communities. This paper takes wetland restoration projects in southeast Louisiana and their racialized

displacements as a starting point to explore what Black ecological repair and restoration can look like. It examines how individual and community leaders from rural Black coastal communities impacted by large-scale restoration projects approach restoration as a practice of repair, emphasizing the maintenance of social and ecological relationships to the land and to each other. In dialogue with scholars who view restoration and repair as a relational project, this paper considers the challenges and possibilities of Black ecological repair and its implications for how we envision mainstream ecological restoration. Presenter: Monica Barra (University of South Carolina)

Material Movements

10:15 AM - 12:00 PM TMCC - 603

Oral Presentation Session

REVIEWED BY:

Council for Museum Anthropology

ORGANIZER:

Christopher Berk (Auburn University, Department of Sociology, Anthropology & Social Work)

CHAIR:

Catherine Nichols (Loyola University Chicago)

PRESENTER:

Claire Nicholas (University of Oklahoma), Christopher Berk (Auburn University, Department of Sociology, Anthropology & Social Work), Sabra Thorner (Mount Holyoke College), Catherine Nichols (Loyola University Chicago)

DISCUSSANT:

Cara Krmpotich

DESCRIPTION:

Co-Organized by Christopher Berk and Catherine Nichols
This panel engages with materiality and circulation in and out of cultural institutions. Our emphasis on the concept of objectscaapes, ‘dynamic repertoires of objects in motion,’ clarifies the contexts and processes that constitute, propel, and arrest groups of objects (Pitts and Versluys 2021). Through a focus on the mobilities and kinetic potentials of material culture, papers in this session engage with a range of interactions objects and object groups have with cultural forces, institutions, and practices. Our focus on material movements considers object itineraries (Joyce and Gillespie 2015) around, within, and through museum worlds broadly defined. A focus on mobility, both in historical and contemporary

contexts, directs attention to the dialogic interactions between objects, networks of exchange, and institutionalized practice. This panel explores movement and mobility in relation to cataloging and documentation, exhibition, storage and conservation, engagement, pedagogy and teaching, and/or repatriation. The extent to which these interactions produce changes in domains of materiality, relationality, and information attachment engages concepts of circulation, transition, and transformation. Green focuses on two Kanak ceremonial items in the collection of the Smithsonian National Museum of Natural History, objects that were gifted to US Naval Officers and were later “re-gifted” to the museum. Green considers the reciprocity networks these officers potentially entered into by initially receiving these gifts and the insights this case study can offer in engaged collaborations with descendant communities. Nicholas traces the itineraries of whole pieces and fragments of Moroccan embroidered cloth from the hands of women makers into two French colonial and American private collections in the early 20th century, before entering art and anthropology museums in France and the United States. Nicholas interrogates the role textiles continue to have in shaping embroideries centrality in visual and material representations of Morocco. Berk highlights an historical moment in which the curator at Harvard University’s Peabody Museum acted as an intermediary advocating for Tasmanian Aboriginal stone tools to be purchased by metropolitan institutions. Berk’s engagement with these relations of happenstance that enabled the movement of objects sheds light on the often-overlooked role chance and serendipity play in broader material mobilities. Thorner describes their work with the Living Archive of Aboriginal Art, focusing on the first possum-skin cloak made in the United States. The result of an experimental course and artists’ residency at Thorner’s home institution, this paper examines why it became both challenging and essential that the cloak remain in and on the place it was made. Nichols engages with specimen exchange involving the movement of ‘duplicate’ specimens between transactors and focuses on exchanges between Otis Mason and English folklorist and collector Edward Lovett. While curators and museum administrators sought to develop and implement ways to ensure disciplinary and organizational standards of practice, Nichols explores how social relations influenced the development of the movement of museum objects. By bringing together these diverse examples, this panel contributes to anthropological engagement with circulation and material movements in and around cultural institu

Heritage from Fragments: A Century of Collecting and Curating Moroccan Embroidery : This paper traces the itineraries of whole pieces and fragments of Moroccan embroidered cloth, from the hands of women makers into two French colonial and American private collections in the early 20th century, before entering art and anthropology museums in France and the United States. Thus assembled, embroidered objects languished in storage or appeared as tokens of Morocco in displays, before re-animation in two 21st century exhibits engaging French, American, and Moroccan scholars, publics, and communities of makers and artists. The discussion interrogates what these parallel movements, pauses, and renewed activation disclose about Franco-American networks of museum, art world, and empire building in the early 20th, and then 21st , centuries. What textiles, what narratives, and whose voices figure into these object itineraries, and what has changed over nearly 100 years? The analysis focuses on two collectors: Prosper Ricard, the principal architect of French colonial policies for “Indigenous Arts” and museums during the French Protectorate (1912 – 1956); and Eliza M. Niblack, American collector and textile curator at what is now the Indianapolis Museum of Art, and later the Brooklyn Museum. Ricard was the single-most important figure in the documentation, classification and consolidation of Moroccan artistic heritage as such. He also served as guide and advisor for Niblack’s collecting trips and acquisitions. A century later, Ricard and Niblack’s legacies continue to shape embroidery’s centrality in visual and material representations of Morocco as a crossroads of Arabo-Andalusian, Amazigh, and Jewish identities, a narrative serving both colonial and post-colonial projects of heritagization. Presenter: Claire Nicholas (University of Oklahoma)

Networks of Happenstance: Tasmanian Stone Tools, Circulation, and the Serendipity of Exchange: This paper builds on my recent collections-based research into the collection, circulation, and emergent meanings of Tasmanian Aboriginal objects in the present “museum age” (Morphy 2020). 2022 at Harvard University’s Peabody Museum of Archaeology and Ethnology centered on the roughly 400 Tasmanian Aboriginal stone tools in their collection and their accompanying information in the form of resources like accession files. While the collection includes tools collected by prominent anthropologists like Norman Tindale, my attention has continuously been drawn to the accession file for 111 tools collected by an Australian man named F.D. Manning and entering the Peabody Museum

collection in 1939. Manning was conspicuously absent in the correspondences found therein, and the accession file is filled with letters in which Peabody Museum curator Hallam L. Movius acted as an intermediary advocating for additional tools to be purchased by the Field Museum, the American Museum of Natural History, and The University Museum at the University of Pennsylvania. In examining one story of material mobilities between Tasmania, Australia, and American metropolises like Cambridge, Massachusetts and Philadelphia, Pennsylvania, this paper focuses on how such movements were reliant on preexisting networks of exchange but also serendipity and happenstance. My engagement with the numerous relations of happenstance that enabled the movement of these objects provides commentary on the “museum as method” (Thomas 2010) and the often-overlooked role chance and serendipity play in broader material mobilities and research conducted in and around museums. Presenter: Christopher Berk (Auburn University, Department of Sociology, Anthropology & Social Work)

The Making Is the Story: Sovereignty, Sharing, and the Seven Sisters Cloak: The Living Archive of Aboriginal Art is an ongoing, multi-year initiative based in Australia. Our objective: to radically reimagine what archives are and what they do, from the perspective of Indigenous ways of knowing, being, and doing. As part of this work, in spring 2022, I co-led an experimental course and artists’ residency at my home institution, called “Decolonizing Museums.” The major outcomes were a possum-skin cloak (the first of its kind made in the U.S.) and a series of high-art photographs of project participants wearing the cloak. The cloak has now been acquired by our college art museum. A through-line of this collaborative paper is a statement made by one of the Indigenous Australian artists-in-residence: “the making IS the story.” The making of documentary photographs of the work, the making of the cloak, the making of high-art photographs of people wearing the cloak – all of the making is all part of the story. The making is a form of knowledge transmission; it is also, always, a source of innovation, and of exchange. The making is an invitation to be in-relation, to join in the work of amplifying Indigenous sovereignty. What moves in this context? Art-making materials and tools, the artists themselves, and, as the project went on, their ways of relating to place, to Ancestors, and to stories were generously shared. I conclude with a discussion of why it became both very-challenging and absolutely-essential for the final cloak to remain in and on the

place it was made. Presenter: Sabra Thorner (Mount Holyoke College)

Exchange Between Friends: Social Relations and the Movement of Duplicate Specimens: In conversation with scholarship that attends to Indigenous agency in shaping collecting encounters and museum collections, this paper explores how social relations within the museum, especially those of friendship and collegiality, have been neglected in lieu of an interpretive focus on institutional rules and norms in our understandings of specimen exchange. As a practice largely centered in natural history and anthropology museums in the nineteenth and into the twentieth centuries, specimen exchange involves the movement of ‘duplicate’ specimens between transactors. Duplicate specimen objects were global, linking diverse trading entities between colonial outposts, regional hinterlands, and major political centers. This paper focuses on exchanges between Curator of Ethnology Otis Tufton Mason at the Smithsonian Institution’s US National Museum and English folklorist and collector Edward Lovett. Through analysis of over three decades of correspondence and exchange records, this paper considers the dynamics of social relations, exploring how individual agency mediated by perceptions of social class, impacts the larger practice of specimen exchange at the organizational level of the museum. The late nineteenth century has been especially associated with the institutional development of museums and anthropological collections, and their methods of producing knowledge through systemization and standardization. While curators and especially museum administrators sought to develop and implement ways to ensure disciplinary and organizational standards of practice, this paper explores how social relations influenced the development of the movement of museum objects. Presenter: Catherine Nichols (Loyola University Chicago)

[Mentoring for Tomorrow’s Anthropology: Training Graduate Students from the Global South](#)

10:15 AM - 12:00 PM TMCC - 713 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Brady G'sell (University of Iowa, Department of Anthropology)

CHAIR:

Brady G'sell (University of Iowa, Department of Anthropology)

PRESENTER:

Bianca Dahl (University of Toronto, Department of Anthropology), Jonathan Anjaria, Arzoo Osanloo (University of Washington), Jenna Grant (University of Washington), Brady G'sell (University of Iowa, Department of Anthropology), Gowthaman Ranganathan

DISCUSSANT:

Kelly Askew (University of Michigan, Department of Anthropology), Shaozeng Zhang (Oregon State University, Department of Anthropology)

DESCRIPTION:

Anthropology departments in the 'global north' are admitting an increasing number of graduate students from the 'global south'. While students, particularly those from countries where anthropology is underrepresented, have long migrated to receive training elsewhere, this recent uptick in applications offers an opportunity to strengthen international ties across institutions and deepen anthropological expertise globally. With this tremendous potential comes great responsibility on the part of the institutions who host these students to provide mentorship that is conscious of their particular needs. These needs can run from translating very different conduct expectations on campus, in classrooms, and in mentor relationships to establishing a credit history and covering the high initial costs of securing and setting up housing. At the University of Iowa and the University of Michigan, we have begun to document our strategies for helping students navigate visas (particularly during the 'Muslim Ban'), work restrictions, differences in prior educational format, language competency exams, administering fieldwork funding (e.g. Wenner-Gren disbursement) and many more. However there are many other individuals and institutions working to provide this next generation of anthropologists the support they need to flourish in the often hostile environment of the academy. This roundtable brings together faculty with experience mentoring graduate students from the global south and graduate students themselves to discuss challenges and strategies to map the landscape and learn from one another. We have intentionally invited participants from a variety of different kinds of institutions of higher

education to best capture varying structural conditions under which this mentorship is taking place. We see this pragmatic conversation as part of a larger project of shifting who participates in knowledge production in Anthropology.

Mobilities and Migration: Between visibility and (in)visibility (2)

10:15 AM - 12:00 PM TMCC - Hall F

Oral Presentation Session

REVIEWED BY:

Society for Visual Anthropology

ORGANIZER:

Piotr Goldstein

CHAIR:

Mari Korpela

PRESENTER:

Simon Coleman (University of Toronto, Department of Anthropology), Alexander Ephrussi, Daniela Giudici (POIITECNICO DI TORINO - DIST), Augusta Thomson (New York University, Department of Anthropology), Nina Khamsy (Graduate Institute of International and Development Studies), Mahmoud Keshavarz (Uppsala University)

DESCRIPTION:

Anthropologists have studied human mobilities for a long time and from various perspectives. Mobility can refer, among other things, to people's transnational movements or to local everyday mobilities. Some of these mobilities are visible, while others are not, and even when a certain mobility is visible, its particular aspects often remain hidden or unknown. Sometimes, this resonates with the (problematic) division between 'legal' and clandestine mobilities. and sometimes, it is the opposite: 'legal' mobilities may be relatively invisible while clandestine mobilities become highly visible, for example in the media. Many anthropologists use visual and other sensory methods to study mobilities: at times focusing on being on the move - on the transitions - while on other occasions focusing on the immobile situations during mobility. This panel seeks to investigate visible and invisible mobilities, their visible and invisible aspects, and the ways in which we try to 'visualize' them - aiming to facilitate their understanding and making them more visible and recognized. The panel includes methodological and

contextual papers that discuss (im)mobilities, visibility and (in)visibility.

Knowing Looks: Seeing and Being Seen On the Move: Behavioral traces of migration may endure and evolve years, even generations, after an original departure. Sometimes they transmogrify into other performances of mobility, whose study demands the development of an ethnographic imagination open to recognizing entrainments between experiences of movement operating through different scales, temporalities, and semiotic registers. In the spirit of these remarks, I examine intersections between past migrations and present pilgrimages to the Roman Catholic shrine located in the village of Walsingham, England. Such journeys—involving Irish travelers, members of the South Asian diaspora in England, recent migrants from West Africa, Eastern European settlers, among others—foreground the historically precarious religio-political positionings of Roman Catholicism in post-Reformation England as well as current debates over rights to belong within ‘Brexit Britain.’ They therefore point to anxieties over both spiritual moving and civic dwelling. At their background lies a more nebulous and hard-to-detect politics of visibility and invisibility, involving complex modalities not only of seeing but also of being seen in multiple spaces associated with pilgrimage. My exploration of such troubled visibility at Walsingham entails discerning the ambivalences and tensions roused as multiple memories of migration become channeled into publicly enacted yet often seemingly restrictive Catholic rituals. The methodological and theoretical challenge is to develop an ethnographic lexicon sufficient to characterize varieties of visual practice that not only extend across geographic spaces of current pilgrimage, but also acknowledge material residues of previous migration. Presenter: Simon Coleman (University of Toronto, Department of Anthropology)

Navigating the Gaze of Others: Visibility and Invisibility among Afghans in Turkey: My work explores how migrants navigate the gaze of other upon them in their efforts to avoid deportation, though practices of (in)visibilization amidst Turkey’s increasing deportation campaigns. It focuses on certain groups of “undocumented” Afghan migrants in Turkey and their use of a set of material, linguistic and embodied practices to navigate the urban landscape of Istanbul and avoid arrest and subsequent deportation. As part of this inquiry I examine the disaster relief efforts on the part of the Afghan community in Turkey in the wake of the devastating earthquake of February 2023, to understand how it pertains to a very specific way in

which the community in question chooses to visibilize itself in a way that temporarily defies the boundary between national community and “foreigner”. I examine the knowledge production and exchange among migrants, and particularly how it relates to their understanding of their position in Turkey’s highly politicized debate around migration and selective national (dis)belonging, and Turkey’s relations to its neighbouring countries. I argue that performativity (in Butler’s sense) is an essential lens through which to understand how migrants navigate exclusion and inclusion—practices that relate to their understanding of the aesthetics of class and ‘Turkishness’. By engaging with this performativity critically, I ask to what extent it opens certain social spaces for Afghan migrants in Turkey while simultaneously falling short of transforming material realities in a durable manner. Presenter: Alexander Ephrussi

Resisting observation. On the doorstep of a mediatized refugees’ squat: Migrants’ squats often inhabit marginal and “out of sight” urban areas, placed at the intersection of institutional neglect and radical forms of dwelling. Yet, at times, migrants’ informal settlements become highly visible places, as they can find themselves in the spotlight as symbols of governmental failure and urban decay. Drawing on a number of ethnographic encounters that took place on the doorstep of a refugees’ squat in Turin (Italy), this paper reflects on ethical and political dilemmas of ethnographically approaching such a place. Entering a housing squat, inhabited by documented and undocumented migrants, is nothing but obvious. This task was complicated by an intense mediatic attention - experienced as deeply violent by the squat’s residents - as well as by an imminent eviction, which entailed heightened precarity and suspicion. Squat’s residents’ search for invisibility and their - more or less explicit - resistance to the “ethnographic gaze” can be interpreted as political acts, in that they attempted at re-gaining control over exogenous narratives and representations. This scenario offers a fertile perspective to critically engage with some underlying aspects of the ethnographic encounter, such as researcher’s ambivalent affects and hesitations, the complex responsibilities of the ethnographic account, as well as the very refusal of the “researched subject” to be domesticated for academic purposes. Presenter: Daniela Giudici (POLITECNICO DI TORINO - DIST)

Glitching Pilgrimage: The Camino de Santiago in a Time of Climate Crisis, Pandemics, and Social Media: The Camino de Santiago is a Catholic, medieval pilgrimage

route transecting the north of Spain. Pilgrims have been walking this five-hundred-mile pilgrimage route since the Middle Ages. At the height of COVID-19 it closed down abruptly, catalyzing a variety of virtual pilgrimages. This paper examines one particular virtual pilgrimage, that of Pilgrimage in Place, initiated by American pilgrim, Annie O'Neill, in May 2020. Throughout the pandemic, members/pilgrims posted photographs of mini pilgrimages around their neighborhoods and met weekly in the "glitchy" space of Zoom to discuss books and films about the pilgrimage. Recent theorists in visual anthropology have suggested "the glitch" as a new reflexive turn in visual anthropology (DeAngelo 2022). Elaborating on this idea, I extend the lens of "the glitch," or glitch theory, to the Camino de Santiago to consider how the momentary disruption of COVID-19 catalyzed a move away from the pilgrimage route and toward more virtual means of encounter. While, in contrast to the physical Camino, the virtual Camino pilgrimages that arose during and out of the pandemic often did not require pilgrims to move together, or to move at all, this paper considers how these virtual spaces allowed the Camino to transform, or move, beyond the space of the physical route. I argue that COVID-19 comprised a "glitch" in the Camino's history, catalyzing the burgeoning of virtual pilgrimages that challenge longstanding "semiotic ideologies" (Webb Keane 2007) about the Catholic pilgrimage's ontological roots in materiality. These semiotic ideologies have profound consequences for the ways that the Camino becomes mediated, and correspondingly, visibilised and invisibilised. Presenter: Augusta Thomson (New York University, Department of Anthropology)

Visuality and multimodal ethnography of illegalized migration into Europe : The increased constraints imposed by nation-states to illegalized migrants has led anthropologists to direct their attention to mobility through the lenses of the policing of physical borders and the production of racialized boundaries (Fassin 2011). In the last decades, the anthropology of mobility and borders has recognized that borders have become itinerant and embodied, and that a narrow focus on physical borders runs the risk to reinforce the "spectacle of enforcement at 'the' border, whereby migrant 'illegality' is rendered spectacularly visible" (De Genova 2013). Yet, physical border sites such as fences, forests, and informal settlements, as well as instances of border crossing figure prominently in the visuality that some people on the move produce about their migration experiences and that is published on social media. In this paper, I argue that the inclusion of this visuality,

when embedded in an ethnographic study, allows to uncover new understandings of border and boundary processes experienced by people on the move. This approach counters a view of clandestine migrants seen as depersonalized masses where people's individuality is rendered invisible, but it requires a renewed reflection on the politics of representation. Based on the multimodal ethnography I conducted among Afghans on the move at the European Union's external borders between 2021 and 2023, I present a reflection on the methodological and ethical stakes linked to the study of people on the move's visual productions of border and boundary processes along migration trajectories on the so-called "Balkan route". I present my interactions with three key interlocutors, in particular in the Serbian-Hungarian border area, to contextualize our multimedia productions and exchanges and the vernacular verbal expressions used that uncover diverse illegalized migration experiences. Presenter: Nina Khamsy (Graduate Institute of International and Development Studies)

Fictional Materialities of the Border: The technological apparatus of the border with all materialisations involved produces and maintains a specific regime of visualisation: to know the unknown. The border thus operates through a selective visualisation of what is to be seen and unseen. This power over visualisations produces a fictional yet real and violent killing machine. It is materialized yet imagined and desired through specific political logics and imaginaries. It exists as real in a world produced and imagined by fictions about the danger of the racially other who no longer waits to be given the right to mobility but move to claim it. This visual essay centres around evidences from a court case on human smuggling in Sweden. It further weaves them together with the ethnographic accounts given by smugglers as well as a set of commercial and promotional visual materials from the transnational border security companies, international organizations as well as national security services. A simple stamp on a passport page, a thread used to bind pages of a passport; the words exchanged between a border guard and a border crosser, a particular choice of word; a specific facial gesture or a suspicious body posture all make visible or invisible the border crosser. In such framing, smuggling learns from the border in order to disrupt its visualisation regime while keeping itself invisible from the sight. Smuggling works with fictional materialities of the border to open up the border's selective regime of visualisation. What do we learn from smuggling's visualization techniques and tactics to

understand the violence of borders today? Presenter:
Mahmoud Keshavarz (Uppsala University)

Part 1: The Logistics of Forming a Team and Finding your Role: Medical Anthropology in Biomedicine, Public Health, and Policy: Strategies for Funding and Collaborating in Mixed Methods Research

10:15 AM - 12:00 PM TMCC - 715 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Jessica Mulligan

CHAIR:

Jessica Mulligan ,Austin Duncan (University of Arizona)

PRESENTER:

George Timmins ,Lauren Carruth (American University),Leslie Carlin (University of Toronto, Department of Anthropology),Matthew Dudgeon ,Kristin Yarris (University of Oregon),Waleska Sanabria León (College of Arts and Humanities, Pontifical Catholic University of Puerto Rico),Christine Chastain (Ascension Health)

DISCUSSANT:

Jennifer Hirsch (Columbia University, Department of Sociomedical Sciences)

DESCRIPTION:

Medical anthropologists in the United States increasingly work outside of traditional anthropology departments and alongside researchers and practitioners in other fields. Public health departments, medical schools, nursing programs, government agencies, technology companies and a wide array of nonprofits all serve as professional homes to anthropologists. Medical anthropologists also collaborate on research teams with clinicians of all kinds, policy experts, economists, bench scientists, and community advocates. There are many different ways for anthropologists in these settings to seek out funding, support, and collaborations that make research possible. Even though so much of what we actually do in contemporary research is team based and collaborative, our disciplinary traditions emphasize training individual ethnographers to work alone. This roundtable brings together a diverse mix of medical anthropologists who

are doing anthropology on interdisciplinary teams and often with funding sources outside of those traditionally earmarked for anthropologists. Participants will identify and share strategies for forging collaborations, accessing funding, and navigating some of the epistemological challenges of working across disciplinary differences. As a roundtable discussion sponsored by Research in U.S. Health and Health Care (RUSH), a Special Interest Group of the Society for Medical Anthropology, this session will invite participants to consider their roles in reinforcing and transforming health care systems, institutions, and intellectual landscapes. Participants will consider the following questions, among others: What are tips to look for when fielding requests to join a team or when trying to create an interdisciplinary team? Are there certain kinds of collaborations or research that you actively seek out or avoid? What areas of research are particularly urgent or in need of anthropological perspective within US health care? How can we make anthropological questions and methods legible and fundable to those in other fields? How do we deal with biases against qualitative research on our teams and with grant reviewers (i.e. that anthropological research is not generalizable, just anecdotal, is primarily good for suggesting future research using quantitative methods, etc.), and communicate the benefit of ethnographic approaches to interdisciplinary research? What does it mean to be the 'qualitative person' on the team? What funding programs and grant mechanisms are particularly open to medical anthropology research?

Practice into Coalitional Praxis: The Transformative Physician

10:15 AM - 12:00 PM TMCC - 714 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Mallika Kodati (University of North Texas, Department of Anthropology)

CHAIR:

Enrique Iglesias (University of Texas at San Antonio),Mallika Kodati (University of North Texas, Department of Anthropology)

PRESENTER:

Sandhya Ganapathy ,Jose Villagran (University of Texas at San Antonio),Vanessa Ferrel

DESCRIPTION:

The production of Euro-American medical knowledge, culture, and practice continues to be contextualized and shaped by the logics and processes of settler-colonialism, racial capitalism, white supremacy, heteronormativity, and Eurocentrism. Physicians, like many professionals, are professionalized further into an evolving medical-colonial cosmology that emphasizes apolitical approaches and decontextualized, individual disease and pathology, obscuring the complex sociocultural, economic, political, and historical processes and systems that shape people. To critically examine and reconfigure the relations of biomedicine(s), bodies, and health, we must consider the intertwined dynamics of power, injustice, inequality, and histories of domination and resistance involved. Medical anthropologists and sociologists have contributed much to the understanding of physician professionalization, socialization, cultural development, biomedicalization, pedagogy, bureaucracy, clinical practice, and critical studies of science and medicine. Current reforms in medical education and practice are predominantly oriented toward diversity, inclusion, and equity efforts that increasingly embrace neoliberal notions of multiculturalism and identity politics to achieve external legitimacy without addressing the ongoing structural and historical processes that fashion biomedicine(s) and physicians. We are seeking in-person roundtable participants for the AAA-CASCA meeting in Toronto to discuss how can medical professionals, clinically engaged anthropologists, scholars, activists, and community members move towards a transnational coalitional praxis with a commitment to collective and multidimensional action towards transformative futurities. How can we utilize global decolonial thought, transnational feminisms, and abolitionist action to recognize and combat all forms of oppression across multiple geographies and temporalities? How can physicians and collaborators rupture the confines of the colonial-medical matrix, and work collaboratively to dismantle systems of domination? How can we disarticulate knowledge production and dissemination from within the confines of Euro-American academia and its contribution to the modern/colonial matrix of power and transition towards creating new cosmologies of life? Ultimately, what does modern revolutionary medicine(s) look like and how is it embodied?

Repatriation, community-based archaeology, and collaborative endeavors across the Indigenous North

10:15 AM - 12:00 PM TMCC - 718 B

Oral Presentation Session

REVIEWED BY:

Council for Museum Anthropology

ORGANIZER:

Anna Mossolova (University of Oslo)

CHAIR:

Gro Ween

PRESENTER:

Anna Mossolova ,Gro Ween ,Anna Hudson ,Josephine Mills (University of Lethbridge),Rebecca Bourgeois (University of Alberta, Department of Anthropology)

DESCRIPTION:

Repatriation initiatives and community-based archaeology projects are pursuing similar goals: to return tangible (and intangible) cultural heritage to descendant owners and empower Indigenous communities to reclaim and steward their heritage. The return of cultural heritage is never limited to a physical transition of objects. Epistemological, political, emotional, and spiritual aspects are tightly interwoven. Articulations of what the processes of return entail are therefore described in many ways: e.g., as 're-semantization and re-socialization' of material heritage (Sarr and Savoy 2018), as 'healing through transformation' (Mossolova and Michael 2021), as a paradigmatic transition from 'repatriation to rematriation' (Nylander and Pieski 2022), and so forth. All these approaches emphasize the agency of heritage but choose different vocabularies to point out its relational matter. This panel opens a forum to discuss heritage in transitions and share examples of return-related grassroots initiatives across the North: Alaska, Canada, and Scandinavia. The focus of individual papers will be on artistic, ceremonial practices, exhibitions, and/or educational activities that aid such transitions.

Collaborative Research, Artistic Interventions, and Multivocality: Unpacking the Nunalleq Heritage: In 2018, the Alaska Native village of Quinhagak founded a community-based museum to oversee the archaeological material recovered from the ongoing large-scale archaeological excavation on the coast nearby. The site called Nunalleq or 'Old Village' (1400–1675 AD), like many other archaeological sites in the

Arctic, was locked in permafrost for over five centuries but started thawing rapidly due to climate change. Since the start of the project in 2009, the site has produced a collection of over 100,000 artifacts—the largest pre-contact collection of Yup'ik material culture. The Nunalleq project is characterized by long-term commitments, caring relationships, emotional investments, and shared responsibilities between Indigenous and non-Indigenous research partners. This paper reports on the outcomes of collaborative and arts-based methodologies that have helped re-socialize and contextualize the Nunalleq heritage in the present-day Yup'ik community. This talk will provide an empirical and multivocal account of how Yup'ik artists and young culture bearers engage with and shape the (re)installment of archaeological heritage into the life and identity of Quinhagak residents. Presenter: Anna Mossolova

NewArctic — Experiments in double vision : Following the repatriation of the Sámi collections to 6 regional Sámi museums, the Museum of Cultural History felt that this foundational process should be followed by a reconsideration of other museum practices, including exhibitions. There should be an acknowledgment of that whatever the imagery, the space called the Arctic, had always been a vision produced by outsiders, a Dreamland rather than a Homeland (Kramvig & Gonzales 2021). A New Arctic should also be more than a re-articulation of the past, a space where conditions for new futures and new forms of co-existence could be articulated (Finbog 2022). NewArctic was approached as a series of dialogical encounters. First, Sámi and non-Sámi scholars came together to conceptualize designs that made apparent colonial violence and ongoing appropriation. Seven points were articulated, partly as experiential, affecting audiences through sound, touch, and movement. Assembled into a traveling exhibition, Sámi curators at Sámi museums intervened in these elements, introducing elements of heritage or art. Aspects of Dreamland soon became irrelevant at Sámi museum. When the exhibition returns to the capital, however, both Homeland and Dreamland must be kept in sight. This paper considers modes of engaging, meshworks of peoples, objects, and procedures. Not simply assembled as a vision, but to provide both discomfort, and connection with, but also a sense of co-existence, based upon multiple stories, and kinds of agency. Presenter: Gro Ween

Qummut Qukiria! The reconciliatory potential of curation: Qummut Qukiria! – up like a bullet – refers to the book, Qummut Qukiria!: Art, Culture, and

Sovereignty Across Inuit Nunaat and Sápmi: Mobilizing the Circumpolar North. QQ! invites consideration of the impact of Inuit and Sámi art and curation on our collective future. Can art and curation advance the Truth and Reconciliation Commission of Canada's Calls to Action and the United Nations Declaration on the Rights of Indigenous Peoples to ensure Indigenous cultural resurgence? Is putting cultural health first a radical decolonial act? Curatorial practice, and the discipline of curation, offers a unique perspective, theoretical framework, and methodology able to bear public witness to different pasts understood outside of western epistemes, building on Indigenous philosophies. At issue, however, is the necessity of non-Indigenous reckoning for reconciliation. Dialogue is central, but as the curator and historian John Kuo Wei Tchen argues: "There are precious few spaces for people to come together who don't normally come together to collaboratively explore these issues [of colonization] by talking face to face." Qummut Qukiria! The reconciliatory potential of curation addresses the necessity of difficult dialogue for relationship building and posits the potential of XR technologies to facilitate object-centered conversations bridging Indigenous, settler, and diaspora cultural divides. Presenter: Anna Hudson

Mootookakio'ssin and contemporary gallery practices: I will discuss my role as a contemporary art curator within Mootookakio'ssin. The project's name was given by Leroy Little Bear and translates to "distant awareness." Mootookakio'ssin aims to connect people living on traditional Blackfoot territory (Treaty 7, Southern Alberta, Canada) with non-sacred, historical Blackfoot items housed in museum collections in Europe through detailed, digital imagery. Elders from the four Blackfoot tribes, Kainai, Piikani, Siksika, and Amskapiikani, are directing the project, which is based on a core Blackfoot principle that knowledge must be cared for and must be shared. Mootookakio'ssin is not about repatriation, but rather about access to the knowledge which the items can share. My role in Mootookakio'ssin arose from responding to the TRC calls for action and particularly from trying to create genuine engagement with Indigenous audiences at the University of Lethbridge Art Gallery. Through consultation, I knew that Blackfoot people wanted to connect with their historical cultural material, but as a modern art gallery we are not set up structurally to exhibit historical museum items – our display spaces, funding, and policies do not support this. As Richard William Hill explains, the Eurocentric art gallery is designed to exhibit cultural material made for architecture, not material made for the body, such as

Blackfoot beadwork. The strategy to transform the UofL Art Gallery's relationship with Indigenous audiences is to remove the separation between exhibitions and public programs: instead, the process of artmaking in relation to the Mootookakio'ssin research is the Art Gallery's role within this project. Presenter: Josephine Mills (University of Lethbridge)

Re-imagining Repatriation within Tłjchq Communities and Traditions: Repatriation in Canada is highly situational; therefore, often the "success" of repatriation efforts is determined by the physical exchange of "artifacts". The Tłjchq government (representing four Tłjchq communities in the Northwest Territories, Treaty 11, Canada) is working toward the establishment of a digital archive alongside the development of their community museum. These spaces are being built on Tłjchq understandings of stewardship and ownership, as well as the importance of cultural belongings within their language, culture, and way of life. This process includes working with Tłjchq Elders and community members to explore the Tłjchq meaning of repatriation from outside its institutional definition. This presentation will showcase these efforts by the Tłjchq and how they traditionally understand these concepts to re-imagine repatriation and address problems that are often faced in Canadian contexts from a Tłjchq perspective. Some of these Tłjchq insights include the importance of physical presence in traditional pedagogies, how limited access or support creates the need for internal repatriation after the physical exchange, how the ancestors' stories are meant to be cared for, and how we can redefine preservation. Our research draws on interviews and learning circles with Tłjchq Elders, as well as time in the community to provide insight into these facets of repatriation and cultural heritage management more generally. Recommendations will be provided for how institutions can better support communities through the repatriation process and for how they can re-think policy in accordance with an expanded understanding of the impacts of collections worldwide. Presenter: Rebecca Bourgeois (University of Alberta, Department of Anthropology)

Spectrality, Temporality, Ethnography: writing from the thresholds of worlds in transition

10:15 AM - 12:00 PM TMCC - 803 A

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Amy Leia McLachlan (Field Museum)

CHAIR:

Khalil Habrih (University of Ottawa), Margaux Fitoussi (Columbia University, Department of Anthropology)

PRESENTER:

Robert Desjarlais (Sarah Lawrence College), Damien Bright (University of Chicago, Department of Anthropology), Nida Paracha, Amy Leia McLachlan (Field Museum)

DISCUSSANT:

Cameron Hu (Research Institute for Sustainability, Helmholtz Centre Potsdam)

DESCRIPTION:

This roundtable considers the potentials for writing from our transitional present-conceived as a threshold between multiple, increasingly unstable timelines—through the figure of spectrality. We explore the intersection of three modes of attention: (1) practices of spectral attunement, (2) critical attention to the politics of partial presence, and (3) experimental openings in ethnographic temporality, as these inform diverse writing and worlding practices. We seek to deepen conversations between anthropologists (and other practitioners) engaged in each of these modes, and exploring ethnographic writing, phenomenology, and critique where the transitional edges of agency, objectivity, and mastery fray. Participants will share a set of media objects (images / text / video) as an opening provocation to discussion, and to a writing game with all attendees. Through a collective encounter with aleatory devices that interfere with our habitual authorial voices and vices, we will explore what writing practices and forms might be adequate to objects that dwell on the thresholds of transition. Scholarship from across the humanities, critical theory, and anthropology has increasingly turned to figures of 'spectrality' to account for and engage with forms of transitional, partial, or unsettling presence, to frame the unfinished work of mourning, and to recover political possibilities previously foreclosed (see for instance: Blackman, 2019; Good et al., 2022; Derrida, 1995; Desjarlais & Habrih, 2022; Gordon 1997; Kilroy-Marac, 2019; Sharpe, 2016; Tuck & Ree, 2013). Here we take up spectrality as it relates to ethnographic method and inquiries attuned to mnemonic and historical time. We understand 'ethnography' as a wide array of practices of writing from sites of encounter, whether contemporary or otherwise (through archives, texts, objects, landscapes, images, etc). We take up 'temporalities' as a frame for

exploring the historical production of aesthetic formations, and the aesthetic registers of historical formations (of politics, affect, ecology, etc). A spectral engagement with temporalities helps to frame modes of historical knowing that are oblique, partial, just out of view; marginalized, erased, disavowed; and constitutive of formations of power, politics, or normativity. .

This roundtable will then take up 'spectrality' to attend to a particular transitional intersection of aesthetics, temporalities, and writing. 'Spectrality' points to the quality of being only partially available to experience, to knowledge, or to sense-making. It characterizes objects of attention that appear as haunting, shimmering, symptomatic, erased, or suppressed, sites where temporalities are confused, overlapping, or nonlinear, and modes of practice (including reading and writing) that attend to the only obliquely disclosed. 'Spectrality' offers an opening to a question of the constitutive role of the obliquely sensible in constituting both objects of ethnographic attention and ethnographic knowledge. What might 'spectrality' disclose about objects, relations, or conditions that are powerfully organizing our worlds but not allowed into view? What kinds of sensory knowledge, communication, or participation are required by, or required to be excluded from, our habitual modes of ethnographic accounting? What could we learn from experiments with practice, and through experiments with writing (form, genre, constraint)?

Teachers' and Students' Agency During Critical Transitions

10:15 AM - 12:00 PM TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Aaron Leo (SUNY, University at Albany, School of Education)

PRESENTER:

Aaron Leo (SUNY, University at Albany, School of Education), David Saavedra (Virginia Commonwealth University), Maria Hantzopoulos (Vassar College), Reid Harris

DESCRIPTION:

This session examines policy and practice transitions that teachers and students participated in during the

COVID-19 pandemic, and in general, as well as in one school transitioning from high-stakes to project-based assessment. The first paper, *Educators' Emotional Labor During the COVID-19 Pandemic*, describes not only the pandemic's conditions and effects on teachers' labor in New York City public schools, but also their response and agency in adaptation, acquiescence and, in some cases, resistance. The second paper, *Pushed Beyond the Border*, focusing on ESOL teachers, documents the abrupt transition to virtual teaching and the crisis of identity that teachers experienced when teachers felt that they could not adequately meet their students' needs and experienced 'moral distress.' The third paper, *Tensions in Transition to Project-Based Assessment*, discusses the difficult transitioning away from high-stakes standardized testing in a New York City public school to project-based assessment, chronicling how both teachers and students make sense of this complicated process. Lastly, *Paths of Resistance in the Classroom*, addresses state policies that are negatively affecting classroom teachers and their students and the tools of resistance that are used to enact individual agency and learning.

Educators' emotional labor during the COVID-19 pandemic: Reports of educators' heightened anxiety, depression, and stress levels continue to demonstrate the deleterious impacts the pandemic had on educators' social-emotional wellbeing and mental health. While quantitative work has detailed the negative impacts incurred by educators across the world, there has been less qualitative research which has described in detail the subjective experiences of educators working through the pandemic and how they responded to these new challenges. This paper draws on data gathered through interviews and focus groups with 88 educators from 6 schools located in New York State. To analyze these data, we draw on Hochschild's concept of emotional labor which contends that an integral part of service-based work is the demand for workers to regulate their emotions in ways expected by supervisors and clients. Because expected emotional displays may conflict with the actual emotions and feelings workers' have, emotional labor can lead to stress and exhaustion. Through this framework, we argue that the pandemic created new and unprecedented contexts in which educators were asked to manage their emotions. Findings call attention effects of the pandemic on the conditions under which educators must work as well as the differential impacts of the virus across lines of gender, race, socioeconomic status, and rurality. Lastly, we address the ways in which educators – as agents – responded to the new demands of their jobs through

adaptation, acquiescence, and, in some cases, resistance. This paper has policy implications for educators and researchers seeking to better understand the effects of the pandemic on the teaching profession as well as policymakers seeking to address the educator workforce shortage afflicting school districts across the U.S. Presenter: Aaron Leo (SUNY, University at Albany, School of Education)

Pushed Beyond the Border: Shifts in Professional Identity of Teachers of English for Speakers of Other Languages During COVID-19: When COVID-19 forced schools to move instruction online, the nature of teacher-student relationships was fundamentally altered, and the disruption to daily life deeply impacted the moral sensibilities of teachers. Gestures that had once seemed insignificant—the offer of a pencil, a pat on the shoulder, a genuine smile—were now, in their absence, understood to be indispensable in establishing the relations of trust and care that are central for learning in schools. The absence of such gestures and of the sharing physical space together were deeply felt, and a shift in teachers' connection to students occurred. In-depth interviews (Seidman, 2019) with eight secondary teachers of English for Speakers of Other Languages (ESOL) reveal how the abrupt transition to virtual teaching deeply impacted their moral sensibilities and their culturally constructed sense of self (Heine, 2007; Markus & Kitayama, 2010; Ortner, 2006). Teachers could no longer connect to and care for their students; they could only care about their students from afar (Noddings, 2013). Pushed to the sidelines of the traditional realm of schooling by the pandemic, these teachers began to fear for their students (Yan & Slattery, 2021), expressing their desire for students to survive physically, emotionally, and educationally. Their inability to adequately meet students' needs also led them to experience what Jameton (1984, 2013) calls 'moral distress,' a deeply felt uneasiness when circumstances prevent one from pursuing the actions one feels are right. These changes resulted in a crisis of identity. No longer able to find purpose and a positive sense of self-regard in students' achievement, identity development, or development of language skills to express themselves, these teachers floundered in their conception of themselves as educators. Their sense of purpose evaporated in this new space beyond the confines of the traditional schooling and educational context. These experiences reveal the centrality of relation in teacher's conception of themselves as educators and suggest that bringing the concept of relation into the center of educational discourse is important to confronting some of the major challenges

of modern schooling. References Heine, S. J. (2007). Culture and motivation: What motivates people to act in the ways that they do? In S. Kitayama & D. Tensions in Transition to Project Based Assessment: Negotiating Transformative Agency while Shifting Curriculum and School Culture: In the last two decades, high-stakes testing policies have proliferated exponentially, radically altering the broader educational landscape in the US. Although these policies continue to dominate educational reform agendas, researchers argue that they have not improved educational outcomes for youth, and have exacerbated inequities in schooling across racial, economic, geographic, and linguistic lines. Furthermore, the humanizing and democratizing pedagogical practices that engage students academically remain excluded from these policies and reforms. Many argue that alternative project-based assessments show more promise in aiding the creation of transformative educational spaces. Given this context, this paper takes up the questions: How can schools that use project-based assessment (PBAs) reinvigorate school culture to address enduring inequities that persist in schools? How might PBAs reframe schools to be more humanizing and transformative spaces? Drawing from three years of qualitative data collection at 10 NYC public high schools undergoing a policy (and practice) shift transitioning away from high-stakes standardized tests to PBAs, this paper explores how students and teachers make meaning of and negotiate this complicated transitional process. The research team used multiple qualitative methods to understand how this shift influenced

curriculum and practice, and consider the role assessment might play in creating a more humane, equitable and just school culture. We conducted a broader investigation of the 10 transitioning schools (including annual anecdotal staff surveys) and three ongoing focal school case studies (including observations, interviews, focus groups) over the three years. Anchored in the concept of transformative agency, we considered how this transition affects the school actors most implicated in this policy change. Overwhelmingly, school actors felt that PBAs shaped curriculum in ways that standardized tests could not, by fostering more innovation, inquiry, cultural and 'real world' relevance, and rigor. They also felt PBAs helped mold school culture by facilitating processes of care, support, and respect. These processes were dynamic, overlapping, and nonlinear, and enabled the curriculum and culture to transform in desirable ways. Still, there were two main challenges that arose in relation to the transition which highlight the tensions of enacting transformative agency relative to the contexts in which PBAs are situated. The first results from the urgency around 'getting the process right' quickly, which not only relates to ensuring students meet high expectations, but also to legitimizing the reform in the eyes of those who ultimately enact it: the teachers and students. Second, school actors were challenged to contend with larger structural forces that influence the ways in which students engage in the work required for PBAs. While data showed that teachers were generally positive about the new policy change, they were also concerned that larger systemic barriers extrinsic to school might impede students' ability to engage full in school life. Overall, the data shows promise that the transition to PBAs gave space for transformative agency among teachers and students alike. Although there were inevitable bumps in the process of transition, the data suggest school actors mediated some of them, and ultimately felt that PBAs helped create more humanizing and dignified spaces for youth. Presenter: Maria Hantzopoulos (Vassar College)

Paths of Resistance in the Classroom: As state laws are enacted that simultaneously suppress academic freedom and target marginalized and minoritized student populations, the teaching workforce has become exhausted. This has created a renewed teacher shortage crisis as effective teachers leave the profession. As a former high school teacher, and in conversation with other teachers, I utilize critical ethnographic methods to reveal and critique power in a Midwestern high school. Oftentimes teacher resistance, as well as student resistance, to these unjust and

harmful laws took the form of quiet resistance, while strengthening teacher-student solidarity. This, I argue, is how educators can still find the motivation to teach, while also equipping teachers-in-training to do the hard work in these political times without succumbing to the path of least resistance. The methods I used to collect data included fieldwork and observations. I also analyzed policies that influenced and targeted public schools and conducted interviews with educators, students, and union leaders as they embodied this resistance. The data was collected throughout a single school year, beginning in the fall of 2023 and ending in the spring of 2024. My theoretical framework utilizes Freire's approach to schooling engaged in an emancipatory lens for teachers and students to be critically reflective in their respective positions. I also examine this moment by using resistance theory (Willis, 1977), or ways in which acts of resistance can be viewed as an essential tool for individual agency and learning. The findings of this study suggest that compassionate, aware teachers may consider a path of resistance. These same teachers want to cultivate students with agency and power as they participate in their own acts of resistance. Veteran teachers want new teachers to have tools to help them navigate these situations. Overall, the findings address the laws that impact education, while establishing ways to address the teacher shortage. Presenter: Reid Harris

CHAIR:

Daniel Knight (University of St Andrews)

PRESENTER:

Andreas Bandak ,Limor Samimian-Darash (Hebrew University of Jerusalem),David Henig ,Charlotte Al-Khalili ,Joyce Dalsheim (University of North Carolina, Charlotte),Kristin Loftsdottir

DISCUSSANT:

Bjorn Thomassen

DESCRIPTION:

There seems to be a grind between several temporal concepts that characterize both contemporary societal events and the ethos of the contemporary world itself. Emergency, crisis, transition, and disruption – all involve an urge to know how to identify (the next) break in normality as early as possible and how to understand its implications. While emergency violently punctures our very sense of normal temporal progression; transition indexes an elongated period of necessary but gradual change; and disruption evolves into an effort not only to view future changes (to prepare for them), but also an ambition to create and utilize changes, i.e., 'innovative disruption'. Think transition/emergency/disruption in the following contexts: climate and energy, economic reform, medical conditions, population movement, political reigns, and conflict zones. While transition is a drawn-out process of consensus and collaboration; emergency requires immediate response and provokes a rapid reaction from a highly skilled few; and disruption is developed into a style of thinking and expertise working toward designing such fundamental changes. Emergencies are becoming pasts when they are identified and responded to; Transitions can be extended into the future; Disruptions 'strike' not only further in the future but conceptually already destabilize the present. Yet despite their seemingly contrasting temporal rhythms and depths, they all call for action in the present in foresight of not-yet realized futures. This panel questions the temporal dynamics of transitions, emergencies, crises, and disruptions and asks how the labeling of multidimensional planetary events provokes different forms of response. For instance, what temporal gymnastics are at play when a transition is in crisis, like the collapsing zero-carbon drive? What is life like in a wartime buffer zone where transition and emergency are constant bedmates? And where might the 'unprecedented' be located in situations of perceived normality and rupture? We suggest that temporality could provide a mode of critique of an uncertain world where different states of eventualities overlap, intermingle, and are otherwise indistinguishable.

The Edge of Reality: Syrian Nightmares, Dreams and Imaginings: The Syrian Uprising of 2011 sparked an enormous energy among activists, artists and ordinary Syrian people. This was a moment of change and a popular mobilization drastically attempted to push for a revolutionary change of the repressive Syrian system. As will be known, the revolution was defeated by the regime and Syria was drawn into a massive tragedy entailing massive destruction, mass displacement and

ongoing war. In this paper I explore the different ways notions of what is real, of fiction, and of the surreal and even unfathomable as this is reflected upon by Syrian cultural producers in exile. During the uprising, an urgent feel of being able to actually drive the system towards change was overriding. As such, this sense of being on the brink of breaking the walls of fear and repression was a persistent trope in many narratives. Now twelve years later I reflect alongside Syrian thinkers and artists such as e.g. Odai al-Zoubi, Mohammad Al Attar, Rami Farah, and Khaled Barakeh on very edge of reality and the haunting dreams, nightmares and imaginings that in exile are moving from collective to existential registers. As such, I intend to explore the urge to make history (Runia 2014) alongside the afterthoughts and consequences of defeat. What, this paper asks, does it mean to live after such massive historical events, how does one recuperate from having lived a life not just on the edge but actually after the edge, and how does fiction allow for novel engagements beyond the capture, even seizure, of what happened. What terrains and entanglements of crisis do we see in the aftermath of revolution? Presenter: Andreas Bandak

From Crisis to Disruption: Temporal Observations of Future Change: In recent years, 'disruption' has become a prominent new term used to refer to a particular approach, style of thinking, or type of expertise adopted to view future changes and prepare for them. The emergence of this notion has involved, on the one hand, an urge and ambition to create and utilize disruptive events and, on the other, a desire to know how to identify (the following) disruption as early as possible and how to predict and understand its implications. With some notable exceptions, the sociological and anthropological literature that mentions or addresses disruption has largely considered it an adverse event or change, and thus more or less similar to the term crisis and disaster. Whereas recent scholarly accounts of disruption have brought a more critical perspective on the term and its widespread employment, particularly by addressing its 'technosocial' dimension, ideological construction, and underlying narrative – I propose going beyond those studies to critically examine how disruption taken as a temporal term (rather than a mere event) marks a break (this time) in the future, and how contemporary societies and organizations have become interested in breaks or radical future changes – and sometimes even in creating such disruptions. My analysis draws on a long-term ethnographic study on scenarios and scenario planning in the energy field and how 'disruption' has become a means and an end in

using scenarios on this site. Presenter: Limor Samimian-Darash (Hebrew University of Jerusalem)

Modes of infinity: On temporalities and quantifications of wastes of war: This paper interrogates the temporalities of transition between wartime and peacetime. It focuses on the long-lasting presence of unexploded ordnance and other dangerous wastes of war and their deadly potentialities. For those who live with and around wastes of war, the temporalities of wartime and peacetime continue to be blurred in the present, and the possibility of risk and harm extends indeterminately into the future. Drawing on my multi-sited research in Bosnia and Herzegovina, I explore how this indeterminacy of wastes of war is problematised and debated across various social fields and among different actors as a matter of infinity. In this presentation I will briefly outline and reflect on the two most pervasive modes of infinity associated with wastes of war, that of their indeterminate temporalities and quantifications, and what forms of response have these modes of infinity engendered. Presenter: David Henig

Of Crisis and Disaster among Syrians in Turkey: emergency, transition and disruption : In the last decade, Syrians displaced in Gaziantep, Turkey, have lived through a variety of crises: emergency -the 2011 revolution; disruption - its violent repression and ensuing war; and transition - a precarious life in exile after their defeat. Building on long-term fieldwork with Syrians in Gaziantep, this paper argues that emergencies and disruptions have deeply marked my interlocutors' present and radically redefined their understanding of the future. Early in fieldwork (2014-16) the texture of my interlocutors' present was thinning out as waiting for a future to start elsewhere became a common horizon. But with displacement becoming more permanent, the tempo of the present has stalled and its depth fleshed out as it appeared in subsequent ethnographic engagement (2017-19). However, new types of emergencies have recently disrupted Syrians' everyday life, with the violent and unruly deportation of thousands in summer 2022, and with the devastating February 2023 earthquake, whose epicentre was Gaziantep. The rapidity and acuity of the devastation - in a few seconds 60.000 have lost their lives and hundreds of thousands more their homes - render the temporal texture, tempo and depth of this new kind of emergency peculiar. My interlocutors' present and future have been greatly impacted: with many reporting not being able to sleep and difficulties in resuming daily activities, they have been displaced once more. In this paper, I ask : how are displaced Syrians'

present and future redefined in the wake of the earthquake? How does it push my interlocutors to rethink the past, reassess the present and reimagine the future? Moreover, how are the earthquake and its consequences re-activating apocalyptic readings of time? Finally, how can one differentiate between the temporal modes of crisis that Syrians have encountered in the last 10 years, and how does this help us better grasp Syrians' lived experience of time? Presenter: Charlotte Al-Khalili

When is Crisis?: Climate change is arguably the greatest current existential threat to humanity. And yet, its temporal quality seems to evade human cognizance of "crisis". As a result, the climate tends to take a backseat to what are experienced as more immediate crises. A number of scholars have pointed to this problem of representation and the trouble of comprehending the scale of climate change. Others suggest the urgency of decentering human beings and focusing on the planet. The most common temporal imaginaries tend to focus on the idea of "progress," whose problematic modernist hegemony is well known. Departing from these ideas, this paper draws on the work of Walter Benjamin, Jacques Derrida, and the 16th Century Jewish sage the Maharal of Prague, to consider how particular conceptions and experiences of temporality can shape the possibilities of perceiving different sorts of crisis. Based on fieldwork in Israel and the U.S., this paper will consider how political crises—including shifts to the far right, racism, state violence, and threats to democracy—are apprehended at a different temporal scale, disassociated from the climate crisis and experienced as requiring our attention "now." Presenter: Joyce Dalsheim (University of North Carolina, Charlotte)

Toe-pics in Tenerife: Temporalities and Crisis in Icelandic Mobilities : After the travel restrictions were lifted after the Covid Pandemic, people in Iceland have flocked to Tenerife. While the crisis constituted by the pandemic seemed over – at least in Iceland – other new or lingering senses of crisis were present, with the post-2008 economic hardship still felt by many, housing-crisis and growing concerns with environmental risks, as well as a feeling that the future was increasingly becoming characterized by multiple uncertainty (Kleist and Jensen 2016). Crisis has been theorized as not only signaling an abrupt change, but also continuities or transitions (Knight 2022; Vigh 2008), where crisis can be the feeling of cancellation of a predictable future, either permanently or momentary (Loftsdóttir 2019). I stress temporalities as particularly relevant in regard to mobilities from Iceland to the Canary Islands, regardless

of whether people are spending vacation in the island or moving there momentarily. I suggest the island as desirable due to their perception as existing outside normal time, constituting in a sense a parallel universe, that are not shaped or affected by a world in crisis. However, even though for some Icelandic travelers this space constitutes in some sense “everyday utopia” (Cooper 2014; Bock 2016), for others occupying the same space, there is be a sense of entrapment, and being struck in everyday struggles shaped by a world’s crisis. I draw attention to how different actors exist in the same space, while located in different temporalities. Presenter: Kristin Loftsdottir

The Good Way, the Good People: Reflecting on (Forgotten) People, Histories, Relationships, Places and Methods (Part 2)

10:15 AM - 12:00 PM TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Sarah Moritz

CHAIR:

Joshua Smith (Western University Libraries - Serial), Sarah Moritz

PRESENTER:

Sarah Moritz ,Andie Palmer (University of Alberta), Project Filus Team Pamela Block (Western University), Davie Donaldson ,Robert Patrick Wishart (University of Aberdeen)

DISCUSSANT:

David Anderson (University of Aberdeen), Regna Darnell (Western University Libraries - Serial)

DESCRIPTION:

Drawing from our individual and our collaborative endeavors and life projects, we reflect candidly on the transitional contexts of anthropologists' decolonial, action anthropological and collaborative inquiries in connection with the ways these have informed our theories, writing, relationships, and institutional engagements to do work 'in a good way'. We ask, what was, is and can be the role of timely actioned, engaged, and/or relational anthropology during these uncertain and turbulent times? What can our trans-disciplinary past and especially some of its forgotten, ostracized, ignored, subjugated, yet influential ancestors teach us

about critical and enduring legacies for the present and future? We reflect critically on mentors, Elders, peers, and teachers who offered transitional gateways, portals, and re-imaginings of anti-colonial, decolonized, and alternative anthropologies through which we are, in turn, inspired to consider real transitional tools towards ethical, reciprocal, and powerful alliances and approaches for addressing the immense contemporary challenges facing anthropology now. By invoking gifted people and ideas who already transitioned or provided alternative transitional paths towards a decolonized anthropology, we aim to identify radical pathways and alternatives that many of us routinely pass over, ignore, refuse to see. We offer a set of protocols, principles, and insights to inspire the ghosts, contemporaries, and future generations of those interested in working together through transitional contexts of critical decolonial reception histories, reconciliation, climate change, education, and social justice. Part 2 builds directly, organically and practically on the foundational work done in the first session (please see Part 1) and provides evocative ethnographic, grassroots and community cases and examples of a 'good way/good people' research approach.

'Good Anthropology': James Teit and the Oral History of the Declaration of the Lillooet Tribe: On May 10th 1911, several St'át'imc Chiefs, accompanied by ethnographer James A. Teit, drafted, signed and distributed the charter Declaration of the Lillooet Tribe in Spences Bridge of today's British Columbia to articulate a written, documented version of a historic treaty and oral tradition to developers, government and settlers on who they are, how their territory has been impacted by colonial expansionist agendas and what their creative vision for a self-determined future is. The inception of this ongoing process dates back to the first fur traders and early colonial contact. The Declaration was supported by and supportive of a larger regional Indigenous self-determination movement, the Indian Rights Association of BC and similar decrees. Based on long-term ethnographic and oral history research with St'át'imc Elders, leaders and community members, this paper explores the important messages and original context of the written vis-à-vis the oral declaration process as form of treaty relationship to ensure the continuity of a St'át'imc way of life. James Teit's theories and methods as political activist, ethnographer, hunter and associate of Franz Boas and other Boasians and his role in the declaration movement will be assessed and the importance of these relationships examined in revisionist and historicist fashion. Critical insights will be drawn for engaged anthropological and decolonial

research methods for transitional times. Presenter: Sarah Moritz

Tracing the Genealogies of Supportive Networks: Maori Anthropological Pathways: What are the strengths of Maori anthropology, and what in its practices, historical connections, and placement might foster the ethic of relationality that is so evident in the work of the best of its practitioners? The correspondence between ethnographers and dear friends Sir Peter Buck/Te Rangi Hiroa (1870-1951) and Sir Apirana Ngata (1874-1950) supplies a useful point of entry, as it illuminates points of engagement and application that noted Maori anthropologists and their Pakeha counterparts in Aotearoa New Zealand, are still grappling with today, including efforts to repair systems of health, to reclaim and restore damaged landscapes and waterways, and hold Crown treaty partners to account while upholding the mana of the tangata whenua, the people of the land. Ngata and Buck passed away just as the first anthropology department in the country opened at the University of Auckland, but those whose training and job placements necessitated residence at overseas engaged with Indigenous movements on campuses in the US and Canada, the nonaligned movement in Europe, expanding te ao Maori (the Maori world) globally. By considering life's work of one anthropologist of this second wave, Te Patu Hohepa, some connections, common purposes, and effective tools for change are revealed. Presenter: Andie Palmer (University of Alberta)

Projeto Filus: Cinema and Co-creation: Filus is a remote community of quilombola descendants in the mountains of the Northeastern Brazilian State of Alagoas. It is a black, rural community of approximately 200 inhabitants, 40 families, some of whom experience albinism. Communities descended from quilombolas have unique nationally recognized cultural identities enmeshed with historical realities of colonialism, enslavement, and racism. Our project, which strives to be decolonizing and anti-ableist, is framed to counter previous research incursions in Filus that have been biomedical and extractive in nature, which pathologized and framed the albino quilombolas as deviant medical subjects, serving to elevate and enrich the urban researchers with copious amounts of grant funding while giving nothing back to the community. Our project uses participatory methodologies of ethnographic film-making and anthropological research with the goal of deepening our understanding of how albino people create and improvise Filus as a livable world. Residents of Filus collaborate in all phases of production:

mobilization, research, script-making and filming. They are co-creative partners in the decision-making concerning the life stories to be shared. Our research process involves literature review, field work, participatory research training, and ethnographic data collection by local researchers. Through this process we will learn of places, celebrations, knowledge, forms of expression and orality, and the possibilities and improvisations of the world in which the albino people of Filus create their daily lives. Projeto Filus Team (Co-Authors): Barreto, J.; Bernardo, S.; Block, P.; Conceição, A.; Silva, J.; Silva, S.; Sousa, Luana; Simões, T.; Teixeira, B. Trans linguistic logics: Pronominal and grammatical epistemologies

10:15 AM - 12:00 PM TMCC - 501 A

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Ariana Steele (Ohio State University)

CHAIR:

Joshua Raclaw ,Ariana Steele (Ohio State University)

PRESENTER:

Joshua Raclaw ,Julia Spiegelman ,Kirby Conrod (Swarthmore College),Cedar Brown ,Cooper Bedin

DISCUSSANT:

Lal Zimman (University of California, Santa Barbara)

DESCRIPTION:

Sociocultural linguistic research on trans, non-binary, and other gender-diverse communities has often focused on the complex relationship between grammatical and social gender. Within queer linguistics, one major strand of this research has been concerned with the ways that such speakers exploit potential 'misalignments' between a grammatical form and its gendered indices as a resource for constructing identity. Work in this area has explored the local epistemologies articulated in these forms of grammatical practice just as it has upheld hegemonic epistemologies of gender that challenge the authenticity of trans identities (Zimman, 2020). A trans linguistic framework challenges scholars to highlight how trans speakers formulate their own counter-epistemologies regarding the way that language is used and understood. In keeping with the theme of 'Transitions,' this panel presents new research highlighting how trans speakers articulate their own trans epistemologies as they use pronouns and other gendered grammatical forms across interactional and institutional contexts. The panel begins with Raclaw's discussion of English speakers who use non-binary

pronouns (e.g., singular 'they', neopronouns such as 'xe/xem'), analyzing interviews where these speakers offer metacommentary about how the perceived indices of pronouns can shift across contexts. The analysis speaks to how these individuals assert their own agency in creating and upholding trans logics for using and understanding pronouns. Spiegelman's work continues the theme of trans speakers asserting agency in language by exploring how non-binary Spanish language learners articulate their identities using resources drawn from their multilingual repertoires. Through a discourse analysis of data from participatory action research and interviews, Spiegelman shows how these students navigate linguistic constraints in English and Spanish to formulate their own epistemological orientations for using and transforming these languages. In the third paper, Conrod examines metalinguistic comments about neopronouns from free-form survey responses. The analysis highlights multiple themes regarding the indices of these grammatical forms and uncovers anti-hegemonic folk epistemologies regarding the perceived value of neopronouns as a form of deliberately engineered language change. Brown's paper moves the panel to a discussion of how corporate entities co-opt trans epistemologies for their own profitable ends through the use of inclusive pronoun practices. In analyzing the discursive strategies used by these corporations to create benevolent trans-inclusive personae, Brown asks what these shifts in organizational practice mean for trans people and trans self-determination. Bedin's paper shifts the discussion to examine metapragmatic discourse surrounding the use of two non-standardized second-person pronouns in English, 'you guys' and 'y'all.' Bedin's work shows how epistemological shifts in mainstream understandings of these pronouns must be situated with regard to indexical fields related not only to gender but also race and place. Taken together, this panel advocates for researchers, educators, and communities alike to challenge the dominance of normative discourses of non-binary and trans uses of language that treat them as unidimensional, and move toward furthering trans epistemologies and enhancing the linguistic agency of trans communities themselves.

Trans logics and the preservation of agency in talk about pronoun use: A common refrain in trans communities is that pronouns are not gender. This particular understanding of gender indexicality reflects a range of ideologies concerning pronoun use among trans and non-binary individuals, like the understanding that neither gender identity nor presentation can adequately predict the pronouns an individual might use. Trans and

non-binary speakers in fact have varying preferences, allowances, or expectations for what pronouns others use with them that shift across interactional and institutional contexts, and the agency entailed in such choices reflects how pronoun use among these groups is “driven by a fundamentally different logic than that governing more normative uses of these forms” (Zimman, 2019:161). This paper examines how such trans logics inform language use through a discourse analysis of interviews conducted with English speakers who use non-binary pronouns (e.g., singular they/them, neopronouns such as xe/xem). The analysis focuses on moments where participants offer metacommentary about how the context and frame (Goffman, 1974) of the interaction become relevant to the perceived social meaning of pronouns. For example, one non-binary participant who self-referentially uses only they/them pronouns described their discomfort with being referred to as she/her within a cisheteronormative interactional frame but subsequently described how they can experience those same pronoun practices positively in a queer setting where their interlocutors understand they are not a cisgender woman. Through an exploration of trans epistemologies regarding pronoun use, this paper offers a deeper understanding of the complex indexical relationship between pronouns and social gender among non-binary, genderqueer, and other gender-diverse individuals. Presenter: Joshua Raclaw

Translinguistic agency and its limits: Lessons from adolescent non-binary learners of Spanish: Linguistic practices of trans and non-binary individuals have received some attention in monolingual contexts, yet little has been documented about how trans and non-binary multilinguals articulate their identities across the languages they use (c.f., Simpson & Dewaele, 2019). The majority of U.S. high school students learning a language at school study Spanish (ACTFL, 2017), a language that applies a category of grammatical gender, either “masculine” or “feminine,” to all nouns and most corresponding modifiers. While grammatical gender is distinct from social gender, the two are often conflated (Knisely, 2020). In classrooms, non-binary students learning “gendered” languages may feel frustration at a lack of official non-gendered options, experience misgendering as traumatic, and/or use grammatical gender as a tool for their own ends (Baros, 2021; Spiegelman, 2022). This study asks: How do non-binary language learners exercise agency to express their identities across languages? Given that gender self-determination is not an equally distributed resource (Zimman, 2019), what aspects of students’ contexts and positionings mediate their access to self-definition? This

paper draws from participatory action research and interviews with non-binary U.S. high school learners of Spanish. Discourse analysis reveals a range of resistance strategies used by students to navigate linguistic constraints in English and Spanish, including morphological innovation, translating noun-self and neopronouns, cognitive strategies, and building queer communities of practice. Finally, possibilities for action are constrained by contextual and ideological factors such as native speaker ideologies and classroom power hierarchies. Presenter: Julia Spiegelman

Metalinguistic commentary about neologistic pronouns: In a large-scale online survey (n=1,000) on naturalness of English sentences containing neopronouns (xe, fae, ze, ey, thon), we collected free-response comments regarding the acceptability of nonbinary pronouns, singular they, and neopronouns. In a discourse analysis of these comments, several themes emerged: morphophonological transparency or analogy to canonical pronouns aided participants’ comprehension of neopronouns; reports on hypothetical language practices rather than actual language practices; comparisons between neopronouns and singular they noted trade-offs in confusability; and experiences with neopronouns were linked to online communities and social media as the point of first exposure. The themes shown in this metalinguistic discourse suggest that neopronouns index particular relationships to genderqueer identities as a subset within a wider queer community, as well as draw connections between verbal hygiene and what we term folk linguistic engineering, a type of language reform (Zimman, 2017) in which non-trans speakers express an interest in deliberately engineered language change (in which they are not already taking part) as a way of addressing what they see as an unfulfilled need or gap in their language. Speakers who identify themselves as trans or closely embedded with a trans community, on the other hand, largely espoused acceptance and a (folk) descriptivist linguistic approach to language changes in pronouns. Presenter: Kirby Conrod (Swarthmore College)

Commodification of pronouns: Corporations’ discourse on trans-inclusive practices: As society moves increasingly online, the role of companies in shaping our realities through their infrastructure is expanding (Cammaerts 2020; Couldry & Mejias 2019; Ginsburg, Abu-Lughod, & Larkin 2002). Concurrently, increasingly common practices of pronoun sharing affirm an individual’s agency regarding how gendered language should be applied to them. This epistemological shift in the way people conceptualize gender reshapes the

gendered subject by prioritizing an individual's own experience and internal sense of knowing over state-sanctioned gender assignment and physical or stylistic indexes of gender (Zimman 2019). Picking up on a movement of people sharing their pronouns in bios and social media, several multinational corporations have introduced fields on their platforms specifically for people to share their pronouns. This paper asks how the mobilization of pronoun inclusion is able to construct multinational companies as sympathetic subjects, distracting from the role they play in perpetuating inequality through global capitalism. I use critical discourse analysis to investigate pronoun inclusion statements on social media companies' corporate websites, examining the discursive strategies that are used to create benevolent trans-inclusive personae. I additionally analyze response articles and videos from news outlets and public blogs/vlogs by trans and otherwise allied speakers, zooming in on how people frame companies as caring entities in these conversations. In doing so I ask: how does seemingly embracing trans epistemologies help corporations? Why is it an effective business model to take up trans inclusive language practices? And what does this mean materially for trans people? Presenter: Cedar Brown

Beyond third-person: Epistemologies of race, place, gender, and power in 'you guys' and 'y'all': Current trans activism on inclusive language focuses heavily on English third-person pronouns. However, the construction of identity in interactional contexts can be located across a broader range of discursive and grammatical domains. Such growing demand for trans-affirming language (Zimman, 2017) makes now an opportunity to interrogate embedded ideologies in the English second-person pronouns 'you guys' and 'y'all.' On the surface, 'you guys' can be problematized as being "sexist," and 'y'all' as being "Southern" (Maynor, 2000), but examining their indexical fields (Eckert, 2008) through metapragmatic discourse in both linguistics research and in opinion journalism tells a more complex story. 'You guys' represents not just a sexist language practice, but is capable of misgendering—a fact that is sidelined in mainstream discourse. When 'y'all' is suggested as a substitute for 'you guys,' it is then resisted by invoking anti-Southern and anti-Black attitudes. These constructed narratives (Inoue, 2004) around 'you guys' and 'y'all' thus serve as methods to maintain existing structures of power. While second-person pronouns across many languages index status relationships, modern English is typically regarded as an exception to this rule (Silverstein, 2003). However, examination of 'you guys' and 'y'all' demonstrates that

negotiations of power are still happening at this site in the language. My analysis of mainstream metapragmatic discourse around 'you guys' and 'y'all' further demonstrates that trans-affirming language cannot always be accomplished by simple substitutions, but can require navigating a minefield of competing ideologies in order to replace problematic forms. DISCUSSANT:

David Murray (York University)

DESCRIPTION:

Queer anthropology is a well-established yet ever evolving sub-field of socio-cultural anthropology, with ongoing discussions over its theoretical and methodological features, as well as its utility as a cross-cultural analytical framework. But what happens to queer outside or beyond Euro-American anthropological frameworks? Queer is as much an identity marker (individual and social, descriptive and political) as a theory in North American contexts—is this the case in other locations as well? Queer anthropologists have long observed the complex transformations in meanings of sexual/gender identity terms like 'lesbian', 'gay', and 'trans' as they move across local, national, and transnational borders. However, less attention has been paid to the transnational movements, landings, and (potentially transformed) meanings of 'queer' in divergent socio-cultural contexts. This panel explores the movements and meanings of queer from a range of socio-linguistic and/or ethnographic perspectives, in order to better understand how this concept becomes

subject to 'contingency, revision, and even failure' (Carsten 2004) as it travels the globe. This panel approaches the meanings, uses, and translations of queerness from diverse locations, including India, Turkey, the Anglophone Caribbean, and South Korea.

“Queer” Contradictions, Negotiations, and Redefinitions in Queer Feminist Activisms in India: Naming and self-definition has always been a contentious issue for LGBTQ activism in India. Within India’s postcolonial and increasingly neoliberal milieu, debates about the authenticity and Indian-ness of “queer” have shaped its circulation, and remain ongoing even today. As such, conversations about whether “queer” fits within the Indian context are fruitful in analyzing the role of culture, society, and the nation in LGBTQ activism in India. In this presentation, drawing on ethnographic fieldwork with queer feminist activists in New Delhi and Mumbai, I will trace the ambivalent and multifarious ways in which queer feminist activists deploy “queer” as a category, identity, and way of life. Queer feminists critique “queer” as a “Western,” and therefore alienating, identity category in the Indian context. Despite these critiques, within India’s current climate of heightening Hindu nationalist violence, queer feminists also reclaim “queer” as an intersectional sexual politics that resists majoritarianism. In doing so, they decidedly delegitimize LGBTQ activists supporting Hindu nationalism as “not queer”. However, even as queer feminists seek to fix “queer” as a necessarily radical politics, they also reject such ossification, cautioning against policing queerness in its many manifestations. These uneasy, and often contradictory, negotiations with “queer” highlight the persistent tensions between the global and the local, and between “queer” as identity and as a way of life, ultimately revealing the pitfalls and promise of “queer” in India. Presenter: Shraddha Chatterjee (University of Houston)

Queer Resistance, Queer Asylum, and Queer Anthropology: Being/Doing Queer in Turkey: In the last decade, the Turkish government has launched a ‘total war’ against the growing queer and trans resistance in the country, banning all public events and criminalizing LGBTQAI+ communities and activists. The same regulations that target citizens have also criminalized queer refugee lives with the threat of deportation. My talk asks: what does it mean to be queer and to do queer things (including queer resistance, queer asylum, and queer anthropology) in an environment shaped by state-sanctioned oppression against gender/sexual transgression and dissent? I draw on my ethnographic research with Iranian LGBTQAI+ refugees in Turkey, and

my political engagements with local and national LGBTQAI+ groups in the country. I explore how ‘queer’ is articulated in diverse ways, used for various purposes, and means and does different things in refugees’ and lubunyas’ encounters with state institutions and with one another. At times, activists and communities use ‘queer’ strategically to escape from state surveillance, and at other times, to acquire international visibility for their struggle. By embracing queer, kuir, lubunya, or khodemun, they also form translocal alliances around a shared ‘us-ness’ that transgresses narrow identity categories. However, who is included in this collective ‘us’ often gets caught in questions of power, privilege, and difference, drawing our attention to queer’s failure to subvert power hierarchies along race and class. How ‘queer’ travels to formal asylum arrangements further complicates this picture. Refugees’ queer identifications are not recognized by international asylum law, turning ‘queer’ into a site of negotiation for recognition, rights, and protection. Presenter: Elif Sari (University of British Columbia, Department of Anthropology)

Naming Transgression in the Anglophone Caribbean: The term “queer”, like many other Euro-American identity markers, has been gaining increased legibility in the Anglophone Caribbean. However, it resonates unevenly with people in the region because of the baggage it carries for being largely unrepresentative of nuanced and deeply complex Caribbean experiences. Still, it has been used widely in academic discourse, among people engaged in transnational discussions about LGBTQAI+ experiences and by non-government organizations who benefit from international LGBTQAI+ funding. Indeed, the ways that queer terminology and theorization has been adopted is also influenced by race, class, and ethnicity (among other things), and many persons located outside of these communities have a contested relationship with its usage. In this paper I draw on ethnographic data collected in four Anglophone Caribbean countries – Barbados, Jamaica, Guyana and Trinidad and Tobago to explore how sex and gender transgressors are envisioning their unruly and disruptive praxes as they negotiate and resist dominant heteronormativity. I also examine contentions among groups who are using or not using 'queer' as an identity marker and wrestle with what it might mean to center other more culturally legible ideas of sex and gender transgression in ways that refuse to align neatly with and disrupt Euro-American identity politics and theory. Presenter: Nikoli Attai (Colorado State University)

Whirlpools of Sexual Discourses: “Queer” Korea : In recent decades, postcolonial nations worldwide have

been the site of vigorous new LGBT movements that mimic and challenge Euro-American models of identity, sexuality, and citizenship. Dubbed “queer globalization,” this phenomenon has provoked debates over whether or not these Westernized projects herald an accelerated Americanization, the homogenization of gay culture, and the rise of the “global gay.” However, there is confusion within the literature around what exactly is being globalized. Is it concepts of “gay,” “lesbian,” or “queer”? Or subject positions? Or certain types of types (McGuire 2016)? In this paper, I examine the accelerated flow of Westernized sexual concepts to South Korea since the mid-1990s. Historically, homosexuality was never an appropriate grounding for identity, ignored within official documents. For instance, during its militarized modernization since the 1960s, South Korea constructed itself as a pure nation-state by attributing its national Others, such as Japan, with “perverse” sexualities such as homosexuality. During the global AIDS epidemic in the 1980s, the state even confidently declared that Koreans had nothing to worry about as South Korea “had no homosexuals.” Within this vacuum of a hegemonic state discourse around homosexuality has flooded various competing ideas of same-sex love that cannot be reduced to the master Western category of “queer.” Instead, historicized ethnographic work must be conducted to disentangle the complicated ways in which Westernized terms—gay, lesbian, queer—coexist and compete alongside localized concepts, such as bogal and eban, to construct “little whirlpools, each with its own centripetal force” (Seo 2001). Presenter: John Cho (University of British Columbia, Okanagan)

DESCRIPTION:

What are the stakes in contests over whether a given human activity is recognized as 'work'? Debates and struggles over which practices of social reproduction to include under the category of labour extend beyond the academy, characterizing a wide range of political and cultural milieus. This panel turns attention toward scenes of contestation (whether explicit or indirect) over the terms of recognition of different ways of producing value and reproducing the means of its production. Particular modes of recognition operate in contexts where the category of wage labour, often fetishized as the only form of work that 'counts', has different histories and significance. Anthropologists have long analyzed types of political thought and action that emerge where selective membership in formal labour categories exists alongside tendencies toward generalized 'idiosyncratic forms of livelihood' (Smith 1994). At the world scale, the number of people who come to the market with only their labour to sell has never been greater—both in absolute and proportional terms. Late-20th-century decades of 'structural adjustment', which dismantled social welfare and nation-building programs, have been followed by 21st-century efforts to insulate formal job markets and precarious 'informal' economies from unstable world-market forces and the scarcity of productive capital. Drives for industrial modernization spurred by Chinese investment, notably in Southeast Asia and Africa, exist alongside home market-oriented policies to poverty reduction in Latin America, calling into question theoretical claims of 'the end of work' as a pillar of social belonging. Such claims contrast with critical deconstructions of discourses that withhold the classification as 'work' from activities that, whether productive or not in and of themselves, enable the reproduction of workers, consumers, environments, and means and conditions of production (e.g., James 2012). These critiques can inform the analysis of the realities of 'floating populations,' made 'surplus' to the needs of capital and separated from self-evidently productive work, who face insecure terms of household reproduction and varying degrees of abandonment. Expanded social transfers, which alter the status of the un(der)employed, combine with revived promises of national development to intensify regimes of unequal

labour recognition, in which different groups are granted or denied access to the status of 'worker'. Regimes of differential recognition may entrench, overlap with, or fragment existing axes of identity and difference, and highlight or disguise class relations. In what ways do such modes of recognition bear the imprint of transitions in livelihoods, dis/investment, and economic governance? What value regimes, relations of exploitation and dependency, class frictions or complicities are revealed (or occluded) in discourses that grant or withhold recognition of activities as 'work'? To what extent are emerging forms of political belonging shaped through shifts in binary distinctions such as those between work and idleness, or productive and unproductive labour? What are the conditions of possibility for the emergence, suppression or fragmentation of the 'collective worker', that figure of potentiality that would cut across unequally recognized labour dimensions of variously insecure livelihoods (Clouscard 1996)?

Outstretched Hands: Indigenous Land Rights, Labor, and Ethnic Boundaries in Venezuela: This paper explores the ways in which social order is fabricated through collective property and labor. Taking as its object the struggle for indigenous land rights in the sierra of Perijá, a frontier region in western Venezuela, it investigates the co-production of ethnicity and sovereignty as well as how efforts to settle longstanding land claims and provide aid to indigenous communities have resulted in a re-demarcation of the ethnic and territorial boundaries of the nation. In step with Article 119 of the Venezuelan constitution, which recognizes the right of indigenous peoples to traditional forms of land tenure, the Ministry of Agriculture has returned large portions of former ancestral range to indigenous communities in the Andes in partial fulfillment of the promise of equal citizenship. Yet while Venezuelan leaders laud indigenous peoples as 'pure Venezuelans' and a force for the revitalization of the nation, in practice, these interventions negate the sovereignty of indigenous peoples over land and labor. Historically, the labor of indigenous people has not been recognized as 'value-making,' and nation-building programs have sought to promote wage labor in extraction industries as the road to modernization. By contrast, Venezuela's current government recognizes the value of indigenous labor in agriculture and its capacity to contribute to the national economy. The modes of labor which stem from this official recognition, however, produce new forms of exclusion. Integration into the regulated market entails supervision by Ministry of Agriculture experts and imposition of cultivation patterns to create commercial

surpluses, which in turn, subjects Perijá's residents to rule by a new caste of indigenous elites. The joint recognition of land and labor thus fosters a reorganization of class relations that fractures indigenous identity itself. Presenter: Aaron Kappeler (University of Edinburgh)

The Domestic Labour of Public Safety: Gender and violence mitigation in a prison-periphery circuit: Scholarship on urban (in)security in Latin America has primarily focused on the role of masculinized organizations – e.g. police, militias, and groups of self-identified criminals – in meeting demands for order and the regulation of violence. In turn, scholars who examine women's contributions to community well-being tend to focus on those who are actively and explicitly engaged in political activism. This paper documents and analyzes the unpaid activities of women who do not self-identify as activists and yet who engage in work that mitigates violence or limits its harms. Drawing on ongoing ethnographic research conducted in and around prisons in Northeast Brazil, it centers the experiences and perspectives of people targeted by criminal law, and anti-Black state violence more broadly, to rethink the work of violence regulation. Such activities, which include childrearing, prison visitation, churchgoing, and other forms of care-work, are seldom recognized as "work" and are generally excluded from scholarly discussions of both formal and informal, state and "non-state" governance of violence in Latin American cities. Yet, women targeted by criminal law, including those who do not participate in organized movements, play an essential role in protecting themselves and members of their communities from state violence as well as intra-communal violence. In a context in which social value is said to be ascribed to the lives of people categorized as *trabalhadores* (workers), prisons become focal points for gendered and unrecognized community security labour, which mitigates intersecting forms of violence and thus sustains conditions for social reproduction of marginalized households and communities. Presenter: Hollis Moore (Carleton University)

Values of work, techniques and commodities within global transitions: Firozabad's bangles industry: Particular dynamics of recognition of work within transformations of contemporary globalization can reveal the complex interaction between three intermingled processes of valorization: of work, of techniques, and of commodities. This paper analyses relations and classifications of work in the glass-making city of Firozabad, North India, through a historical

anthropology perspective. It examines the historical and contemporary transformation of bangles production, grounded in exchanges between colonial empires, and a transition from serial artisanal production in India, to industrial production in Habsburg-ruled Bohemia (now the Czech Republic) and finally to an industrial shop labor regime relocated to Firozabad. The symbolic value of the commodity took part in motivating a localization of know-how, and the relevant skills were reabsorbed by the traditional Muslim Seeshgarh glassmaker's caste, leading to their renewed recognition as skilled and valued workers. In the present, the value of bangle production work has been diminished by a dual movement composed of a subdivision of the production process, and a slow diffusion of the specialized skills out of the Seeshgarh caste due to mechanization. I argue that these processes of (re)valorization become significant only in light of the social construction of categories of work and skill. This construction is illustrated by comparing the valorization of core bangle production activities with the relatively undervalued tasks of finishing, cleaning, and decoration work, all performed by groups facing systemic discrimination (women and ex-untouchables). Ultimately, the interrelations between the value of goods, skills and work emerge as a nexus of political order, thus informing an interrogation of both the dynamics of uneven and combined development which sustain an industry, and the interactions among members of castes, religions, classes and genders. Presenter: Arnaud Kaba (University of Strasbourg)

'Idle' recipients? Unrecognized work and economic displacement in West Papua: What types of political belonging are possible among populations that have been displaced into livelihoods based on unrecognized work? In the highlands of West Papua (a territory on the island of New Guinea, forming the contested, easternmost extremity of Indonesia), it is often said that indigenous rural residents become "idle", "lazy", and lose the "will to work" as a result of receiving social transfers in the form of cash or food disbursements. The State administration massively expanded this social assistance in the wake of the 1997-98 Indonesian monetary crisis and the subsequent Papuan independence uprising. These social transfer programs targeted both unemployed urban dwellers on Java and indigenous peasants in "outer" islands, whose agrarian livelihoods have faced a variety of pressures. While newcomers to Papua from other Indonesian islands populate an expanding commercial sector in the heart of the highlands, many indigenous residents leave the countryside in an attempt to become part of the

administrative apparatus that distributes social benefits. Discourses that name the impacts of the expansion of social transfers as "idleness" or "laziness" reinforce comparative ethnic stereotypes, obscuring both the forms of work that underlie the expansion of markets and enable access to social transfers, and the historical forces that have produced underemployment and inequality in an intersection of displacement trajectories. At the same time, discourses of "idleness" evoke a concrete reality of underemployment, whereby rewarding work opportunities are systematically unavailable to indigenous rural residents displaced from agriculture. The norms and practices of local citizenship thus bear overlapping imprints of non-recognition of work and quasi-recognized, systemic obstacles to its mobilization. Presenter: Jacob Nerenberg (Leibniz-Zentrum Moderner Orient (ZMO))

Footloose labour, durable inequality and contradictions in the mines of southern D. R. Congo: This paper engages with threads of past and present anthropological theory to highlight how forms of recognized and unrecognized labour come together in emerging political formations. It takes as its starting point the predicament of "living labour" in the postcolony which, as Ranabir Samaddar (2018) has argued, is enacted through articulations of rudimentary working conditions and the reproduction of advanced forms of capital, which leave almost no social surplus available to construct value within the postcolony. Historically, mineworkers in the Copperbelt of D. R. Congo have tended to serve as the conduit through which social transformations have been channeled, institutionalized and rendered effective. I argue for an analysis of mine labour as a "creative act of mediation" that captures the multiplicity, discordance, and strain of social times (cf Bear 2014:21). I do so in an attempt to reconcile emerging Marxist understandings of the footloose nature of postcolonial labour with anthropological attempts to understand the embodied and temporal contradictions of durable inequality as a social form that emerges from a politics of work and the international circulation of capital. The paper attempts to show how artisanal mine labour is mediated by State imperatives to formalize the so-called 'unorganized' work of artisanal mining, so as to render it interoperable with global market rhetorics demanding transparency and 'decent work'. However, this analysis also makes clear how such attempts to make artisanal work legible are often confounded by the temporality of a global market with vacillating mineral prices. In this way, the recognition of mine labour does little to address durable

inequality as experienced by a diverse mining public.

Affecting encounters: transcending the affect-semiotics divide

12:15 PM - 1:45 PM TMCC - 714 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Adrienne Cohen (Colorado State University)

CHAIR:

George Bayuga (University of Colorado, Colorado Springs, Department of Anthropology)

PRESENTER:

Andrew Carruthers (University of Pennsylvania), Eléonore Rimbault (University of Chicago, Department of Anthropology), Diego Arispe-Bazan (Northwestern University), Jay Ke-Schutte (Colorado State University), Paul Kockelman (Yale University)

DESCRIPTION:

Social theorists have written a great deal about affect, often defined as the pre-cognitive, embodied, unstructured and unmediated alternative to that which is linear, textual, cognitive, static, or structural. In affect theory, semiotics is frequently equated with language, coding, or 'representation' and therefore dismissed as not relevant to the study of immediacy and 'intensity' (e.g., Clough 2008; Gregg and Seigworth 2010; Guattari 1996; Massumi 2002; White 2017). Such characterizations not only inadvertently reinscribe a Cartesian mind-body duality (Lutz 2017, 187–88), they also misconstrue semiotics as being fundamentally about language or texts, and they reduce linguistic and other semiotic phenomena to referentiality, which is but one of many functions of signs (e.g., Keane 2003:413, 2005; Jakobson [1934] 1987:63). A host of theorists have critiqued divisions built into much affect theory—between affect and language (Gray 2013: 245; Wetherell 2013, 2015) and between affect and emotion or selfhood (Ahmed 2004; Kockelman 2011, 2016; Martin 2013)—thereby opening the field of affect studies beyond a narrow theoretical genealogy (on diversifying affect theory, also see: Cohen 2021; Iskra 2023; Kockelman 2022; Mazzarella 2017a, b; Navaro 2009, 2017; Newell 2018). However, the supposed division

between affect and semiotics continues to be reproduced in various guises. Participants on this roundtable explore diverse themes at the intersection of affect and semiotics, including: collective memory, public feeling, performativity, intensity, and ethnography beyond the human. DESCRIPTION:

The institutionalized practice of biomedicine has a

history of delegitimizing other forms of medical care. However, biomedicine is not monolithic, and other modalities of care exist in the U.S., at various degrees of integration with mainstream medical institutions and praxes. Certain alternative forms of care have been gaining social traction in recent years, including midwives, doulas, chiropractors, naturopaths, homeopaths, and more. In addition to an increase in plural forms of medical care, the social authority of biomedical knowledge production has been undermined by popular questioning of its legitimacy, as seen with social movements such as antivax and 'medical freedom.' These complicated exchanges between medical practice(s) and social power, production of authoritative knowledge and legitimacy, and medical decision-making among individuals and groups, take place within the logics and landscapes of neoliberalism and late-stage capitalism. Articulations between social and medical worlds can be understood as a microcosm of broader societal, economic, and political issues—and therefore critical analyses concerning the power dynamics of medical care are crucial to advancing social theory and anthropological knowledge. Ongoing transitions between and beyond mainstream healthcare systems calls for continuous re-evaluation of social and biological healthcare landscapes, particularly emergent and complex strains and successes in relationships between biomedical and alternative practitioners, institutions, and those receiving care. Anthropological work in the U.S. and abroad has demonstrated anthropologists' unique capacity for critical insights into mechanisms of social change, embodiment, well-being, and power. In this panel, we will take a critical anthropological lens to understanding the complex landscape of medicine, health, politics, and care in contemporary global spheres; paying careful attention to the interplay between dominant and alternative care modalities. Can we usefully consider the channels of transition between mainstream medicine and alternative forms of care in terms of economic realities, social power, integration/rejection, or something else? How is medical care perceived and experienced, and how are clinical encounters shaped by political, economic, and intersectional conditions? How do shared local ideas about risk, care relationships, and the human body shape decisions between mainstream and alternative practitioners? How can anthropologists and anthropological knowledge help make sense of the complex, shifting realities of medical care, and what implications might that have for broader social concerns?

Towards Community Care: Addressing Mental Health In Peru: Peru is currently undergoing an important reform regarding mental healthcare. The country is transitioning from an asylum/institutionalization model to a Community Mental Health model. This model heavily relies on the work of nurses, social workers, and especially, neighbors, and is often framed as an ethical project of Community Care. In this paper, I present the case of Ciudad Norte, an impoverished and underserved district located at the outskirts of Lima, Peru, where the transition to Community Mental Health first started. Drawing from 16 months of ethnographic fieldwork and interviews with Ciudad Norte residents and health providers, I highlight the potential of community care as an effective way to deal with severely mentally ill individuals and incorporating them in the community dynamics. However, there are also challenges to confront as residents and neighbors of Ciudad Norte often feel anxiety and fear due to the proximity of mental illness in the community. With the reconfiguration of mental healthcare in Peru through a different kind of care and its different agents, I signal the possibilities and challenges of this reform. Keywords: deinstitutionalization, psychiatry, community care, Peru Presenter: Julio Villa-Palomino (Bucknell University, Department of Sociology & Anthropology)

Misoprostol and Abortion Beyond the Hospital: In 2018, the Moroccan Ministry of Health pulled Artotec, a generic drug containing misoprostol, from pharmacy shelves around the country. Misoprostol, one of the two ingredients in Artotec, has been on the WHO's list of essential medications since 2005 thanks to its applications in basic maternal and reproductive healthcare, including abortion (Kumar 2012; Miller et al. 2005; Sherris et al. 2005, Suh 2021). State representatives nevertheless mobilized harm reduction rhetoric to justify making misoprostol inaccessible, citing "misuse" of Artotec in illegal abortion and the necessity of exploratory studies to determine its "potential negative impacts on women's health." Meanwhile, off-label of drugs containing misoprostol within hospitals was the standard for legal, postabortion care. Misoprostol thus changes the contours of both illegal and legal practices in Morocco. In this paper, I consider the scales of vulnerability that influence how people "misuse" misoprostol across institutional and social contexts. Misoprostol's movement beyond hospitals to the public is exactly what states like Morocco, Sri Lanka, Brazil, and Chile try to control when they restrict the drug's commercialization (Casas and Vivaldi 2014; de Zordo 2016; Kumar 2012; Mishtal 2019). Misoprostol de-institutionalizes abortion care,

frustrating the biomedical gaze even as it facilitates the "biomedicalization of illegal abortion" (de Zordo 2016). Misoprostol provokes anxiety among states and health officials because it is a safe, effective and presumably undetectable way to terminate pregnancies. Dissolved pills leave no physical traces, and undissolved pills can be spat out, or removed and discarded. Contradictory approaches to misoprostol gathered under the sign of harm reduction thus beg the question: Harm reduction for whom? Presenter: Jess Newman (Cornell University)

Transitions In Life: Understanding African American Perspectives on Advanced Care Planning: This collaborative project examines the challenges of presenting Advanced Care Planning (ACP) discussions to Christian African American rural communities in South Carolina. Only about 25% of African American adults have engaged in these discussions, and anecdotal evidence suggests that hospital staff might not understand the critical role of African American faith leaders and their varied denominational perspectives in discussions of ACP. Using ethnographic interviews with African American faith leaders in rural South Carolina churches, the goals of Phase 1 of the project are to (1) understand the denominational perspectives of these leaders about ACP, (2) to create an evaluation tool to assess current ACP training modules, and (3) to compare these existing modules to the perspectives of African American faith leaders. Additional phases will modify ACP training modules to align with denominational perspectives and will expand the training modules nationwide to improve communication about ACP between hospital staff and rural African American communities. Project Team: John M. Coggeshall, Tracy Fasolino, Golnaz Irgens, Janice Lanham, Eunice Lehmacher, William McCoy, Lori Pindar, Michelle Taylor-Smith, and Bonnie Treado. Student workers: Chloe Cox, Morgan Johnson, and Jasmine Sampson. Presenter: John M. Coggeshall (Clemson University, Department of Sociology, Anthropology, and Criminal Justice)

Of Medicine, Care and the Korean Body: Biomedicalization of Korean Traditional Postpartum Care: Since it was first introduced by Christian missionaries in the late nineteenth century, Western biomedicine has maintained a complicated status in Korean society in which a rich ethnomedical knowledge and health care tradition has been playing a prominent role in providing medical care to local Koreans for hundreds of years. From an enviable technology of colonial and imperial powers to a promising market product that will guarantee the nation's future

prosperity, biomedicine has gained increasing power and legitimacy in South Korean society, despite the persistent institutional attempts to promote Traditional Korean Medicine by the state. Given the context, this project examines how traditional Korean postpartum health beliefs and behaviors have been incorporated into the maternal care services provided by Western biomedical institutions such as obstetrics and gynecology clinics in contemporary South Korea. Documenting how biomedical practitioners – i.e., nurses and physicians – became the most influential interest group to control the Korean postpartum care market, this paper demonstrates that, in South Korea, biomedicine expands its cultural and economic power through aggressively adopting local ethnomedical health practices. I argue that this makes a case that Western biomedicine does not evolve through a monolithic knowledge and technology genealogy. Rather, it shrewdly adopts diverse health care practices at local people's behest and continuously creates new forms of health care service products particularly in the context of late-stage capitalism. Presenter: Yoonjung Kang (University of Pennsylvania)

Caste in Nepal's mental health policies and education: A few small-scale researches conducted in Nepal have shown that Dalits often have higher rates of mental health disorders than the so-called 'upper castes'. Dalits' own caste identity has become a major contributor to mental health problems. Caste-based discrimination, humiliation, and indignity are important factors, among others, that have been associated with the high risk of mental health illness among Dalits. Yet, caste has not been a subject of public discourse. In this context, this paper examines how caste is understood, perceived and treated in Nepal's psychiatry. In the paper, I address three central questions: to what extent does the caste appears in the formation of mental health policies and plans? To what extent do the service provider agencies consider caste issues while developing their own or following treatment protocols? To what extent does the mental health educational program include caste in its course curriculum? I review a) the government's mental health policies, plans, and strategies, b) the treatment protocols used by service providers, and c) the curriculum of the universities that run education programs in mental health. I argue that caste has been peripherally sidelined in the formation of mental health policies/strategies and intervention protocols. This paper finds that the Nepalese psychiatric stakeholders have never officially recognized caste discrimination and untouchability as mental health problems. Additionally, my paper demonstrates that the

universities that offer mental health courses has not given priority to include caste in their syllabuses. The results of this paper consider the possibility that the inclusion of caste in mental health policies and protocols, as well as in teaching curriculum, can contribute in achieving of quality mental health services for Dalits. Keywords: caste, mental health, policies, education, and protocols Presenter: Prakash B K (University of Notre Dame)

Shamans and Their Magical Scripts: Ketamine, Liminality and the Market: Ketamine is an old (prescription) drug that is undergoing a renaissance of varying degrees in the marketplace of psychedelic therapies. This paper ethnographically traces a three sequence set of office visits of one patient to more fully understand the place of ketamine in both integrative medical spaces and modern healthcare. Brief interviews and focused ethnography with psychiatrists, ketamine prescribers, and (licensed) psychotherapy-ketamine 'trip guides' are combined with the narrative of the ketamine user to probe and understand how the drug is being deployed in ways that alters the work of psychotherapy (and psychotropics). The results allow one to argue that ketamine remains in a liminal space – neither fully accepted psychedelic nor fully embraced psychotropic. Nevertheless, its use (and cost) continue to increase and defining the multiple efficacies of ketamine depends on the subjective experiences of the user and how their journey is employed through the work (and concepts) of the trip guide and the larger cultural and scientific narratives of ketamine itself. Presenter: Michael Oldani

"Inclusionary" Boundary Work and Relational Shifts in Functional Medicine: I attempt to locate functional medicine in the contemporary medical landscape. Is functional medicine science or pseudoscience? To answer this question, I hold functional medicine to criteria laid out by Karl Popper, an early twentieth century philosopher of science, as well as contemporary scholars such as Hansson, Pigliucci, Boudry, and Beyerstein. I argue that while functional medicine resists most of the characteristics Beyerstein (1996) and Hansson (2013, 2017) describe when defining pseudoscience, some features of functional medicine suggest that it unfolds in the "gray area" between science and pseudoscience. I analyze this "borderline case" vis-à-vis existing literature on boundary work. Ultimately, I argue that, by aiming to expand the limits of conventional medicine, functional medicine interlocutors are engaged in "inclusionary" boundary work. While the scientists engaged in exclusionary boundary-work hope to protect their work from political

interference, functional medicine advocates are fighting for political recognition and reimbursement of services through health insurance. Their work aims to extend the existing boundary surrounding medical care to imbue reimbursable value to lifestyle interventions and prevention in addition to treatment of existing disease. In so doing, these advocates hope to renegotiate the hospital division of labor and place prevention at the forefront of primary care. This “inclusionary” boundary work sets the stage for relational shifts in the clinical encounter. Proponents argue that functional medicine liberates the patient from biomedical authority by valuing the patient’s embodied knowledge as authoritative knowledge and positioning the provider as a guide or coach. Lilly Irani (University of California, San Diego)

PRESENTER:

Sarah Montoya ,Purnima Mankekar (University of California, Los Angeles, Department of Anthropology),Vijayanka Nair (San Diego State University, Department of Anthropology)

DISCUSSANT:

Wendy Chun

DESCRIPTION:

This panel stages a conversation between postcolonial and decolonial perspectives on Artificial Intelligence. Diverging from reductionist and simplistic binaries of utopian vs. dystopian approaches to AI, we develop perspectives that attend to the varied histories and genealogies of AI and, in so doing, align with scholars in critical internet studies, digital humanities, and indigenous AI studies. Genevieve Bell provides us with a pre-history of the development of AI in the United States that foregrounds the consolidation of the bridging of corporate America and academia. She posits that surfacing this history enables us to carefully parse

out the relationship between computing, the environment, and cultural formations. Sarah Montoya identifies settler colonialism as a structuring logic in AI, and communications infrastructures more generally, in the United States. By prioritizing the work of Black, Native, Indigenous, Aboriginal, and First Nations feminist scholars, Montoya formulates a methodology to connect settler colonial rhetorical and spatial imaginaries to the development of AI infrastructures in the United States. Keolu Fox places the trafficking of the remains of Native Hawaiian ancestors (such as hair and DNA) in the context of emerging technologies of AI and genomics. While these technologies present challenges for activists and scholars in their struggle for indigenous data sovereignty, they also offer opportunities towards the tracking and preservation of the remains of ancestors. He points to ways in which AI, in particular, machine learning, and digital auditing and ledger systems offer native communities opportunities for access to resources through impacting policy. Akhil Gupta and Purnima Mankekar build on postcolonial perspectives on computing, Big Data projects, and AI to argue that the current romance of and with technology has historical antecedents tied to multiple projects of, first, the colonial and, later, the post-independent Indian state. They argue that colonial as well as post-independence discourses on bodies, race, and difference have cast long shadows on the development of contemporary applications of AI, particularly with reference to those regarded as racial and cultural Others who deemed a threat to the integrity of the nation and/or as disposable surplus. Vijayanka Nair draws on her previous and ongoing research on the Indian state's universal ID scheme, the Aadhar project, to examine the implications of Aadhaar Mitra, an Artificial Intelligence/Machine Learning powered Chatbot that was added in 2023. She is concerned with how the digital relationships initiated by the Indian state are confounding the boundaries between voluntarism and constraint, between the unofficial and official, and between managed and chosen interactions. Her objective is to engage how these new modes of artificial amiability might conceal the tightening digital grip of the state over the citizen, and how the trope of friendship might both reinforce and depart from Hinduized kinship and nationalist imaginaries in India. In unsettling notions of AI as singular, placeless, and 'universal,' our goal in this panel is to track how bringing together postcolonial and decolonial scholarly perspectives enables us to formulate frameworks that examine the complex projects of AI.

Unsettling the Electronic Frontier: Approaching AI through Settler Colonial Studies: Though critical infrastructure studies disrupts the tendency of scholars and writers to vanish supply chains, material infrastructures, and the project of land acquisition, there has been little work that explicitly differentiates and identifies settler colonialism as a structuring logic in the field. My paper considers how a methodology attentive to settler colonialism allows us to identify the ideological and material/territorial projects of settler colonialism in relation to the development and maintenance of internet and communications infrastructures. Dominant representations of the internet as a singular, democratic, disembodied space work to conceal the logics of colonialism and settler colonialism, specifically those related to the territory and land – what historian Patrick Wolfe calls the “irreducible element” of settler colonialism (388). In this paper, I prioritize the work of Black, Native, Indigenous, Aboriginal, and First Nations feminist scholars and formulate a methodology to connect settler colonial rhetorical and spatial imaginaries to the development of AI infrastructures in the United States. Presenter: Sarah Montoya

Is there an “Indian” AI? The Romance of Technology, Postcolonial Logics, and the Development of AI: In this paper, we build on postcolonial perspectives on AI and Big Data to develop a conceptual framework that takes seriously the national(ist) underpinnings of the development of Artificial Intelligence in India. By centering the heterogeneous and discontinuous circulation of transnational capital in conjunction with strategies of surveillance adopted by the postcolonial Indian state, we examine how the romance of technology has a longer genealogy that may be traced back to colonial and post-independence discursive formations. Faith in technology was central to the modern post-Independence nation-state, not least because it was hitched to developmentalism. The place of dams, power plants, nuclear plants, and steel mills in the nationalist imagination is now occupied by software development, startups, solar and wind power, and broadband connectivity. AI thus enters an ideascapes preconfigured for favorable reception. How will AI become part of the state’s active role in pushing neoliberal governance? Will it be employed in extractivist economies that further exploit Adivasi lands and livelihoods, and aid counter-insurgency efforts against oppositional groups within the nation? In a nation where high rates of growth coexist with large-scale and persistent unemployment, will AI result in further displacement of people from paid jobs? Aligning

with the panel’s objective of dislodging conceptions of AI as “universal,” placeless, and cultureless, while also diverging from culturalist conceptions, we bring a genealogical approach to how AI represents a mutation of racial capitalism in India. Presenter: Purnima Mankekar (University of California, Los Angeles, Department of Anthropology)

Friendly Foundations: The Aadhaar Mitra Chatbot and Artificial Amiability in Digital India: In early 2023, Aadhaar Mitra, an Artificial Intelligence/Machine Learning powered Chatbot was added to Aadhaar’s website. Aadhaar, which means ‘foundation’ in many Indian languages, is India’s colossal national biometric ID program. Aadhaar Mitra has been designed to lend a digital helping hand to India’s over 1.3 billion biometric ID holders and potential applicants. It can assist residents with locating biometric enrollment centers, register and track grievances, and answer questions about enrollment/updation status, among other things. Dubbed a ‘mitra’ or ‘friend,’ this chatbot is to improve ‘resident experience’ while working as an efficient new ‘Customer Relationship Management (CRM) solution’. Notably, over a decade ago when there was debate about Aadhaar’s brand personality, an advisory council recommended that Aadhaar be assigned the personality of a ‘good friend.’ In India, then, good foundational friends like Aadhaar are creating a widening circle of digital friends. This paper probes the valence of figuring both Aadhaar and its newly inaugurated chatbot as ‘friend’. I analyze how digital relationships initiated by the Indian state are confounding the boundaries between voluntarism and constraint, between the unofficial and official, and between managed and chosen interactions. More broadly, I consider how new modes of artificial amiability might conceal the tightening digital grip of the state over the citizen, and how the trope of friendship might both reinforce and depart from Hinduized kinship and nationalist imaginaries in India. Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Daniel Krugman (Brown University, Department of Anthropology)

PRESENTER:

Ayo Wahlberg (University of Copenhagen), Nina Francis-Levin (University of Michigan), Michiko SAWANO, Daniel Krugman (Brown University, Department of Anthropology)

DESCRIPTION:

This session focuses on cancer experiences from a variety of cultural and geopolitical contexts and positionalities. The presentations pay attention to local worlds of surveillance, survivorship and care, and the promises and pitfalls of universalizing discourses around cancer in different national contexts. Individually and taken together they exemplify the essential role of ethnography for undermining essentialist understandings of cancer while also drawing connections between local contexts and their global health implications.

Surveillance life: predisposed in welfare State Denmark: The ever-expanding segmentation of populations into differentiated 'at risk' groups with attendant routinization of pre-emptive augmented vigilance trajectories is leading to what might be termed 'surveillance life' for increasing numbers of people. This augmented vigilance is aimed at detecting (signs of) a disease that likely/potentially will strike. In this paper, I will explore how a preventive healthcare complex has stabilized around transmission prevention, lifestyle prevention, pharmaceutical prevention and genetic prevention. Using Lynch syndrome as case involving the latter, I will ask what living surveillance lives entails for families with a known inherited elevated risk of colorectal cancer. Presenter: Ayo Wahlberg (University of Copenhagen)

Pre-living cancer: Biosolidarity amongst young adult breast cancer (BRCA) gene carriers in the United States: Between 2020 and 2022, I conducted virtual ethnographic fieldwork (via Zoom software) at the Mid-West Oncology Research and Teaching Hospital (M-WORTH). My interlocutors were oncology providers and their adolescent and young adult (AYA) cancer patients and survivors. AYAs are an age-defined population (15 to 39 years) whose biopsychosocial characteristics distinguish their biomedical and psychosocial treatment needs from both pediatric and adult care. Sexual health, reproductive health, and fertility preservation – together known as 'oncofertility' – are salient needs for this group. My research examines the ways in which

AYAs re-negotiate body image, gender identity, sexuality, and notions of kinship in light of a cancer diagnosis. Concurrent with my virtual fieldwork, my closest life-long friend, Matilda, became an AYA patient at M-WORTH – as a 'Previvor.' Matilda is a known carrier of the breast cancer gene mutation BRCA1. After serious deliberation, she underwent prophylactic bilateral mastectomy and fertility preservation (embryo cryopreservation with pre-implementation genetic testing). With Matilda's consent, I incorporated her into my primary ethnographic research on AYAs. I interviewed Matilda – and her husband Derrick – at three time points: before her mastectomy (February 6, 2021); before her breast reconstructive surgery (June 19, 2021); and after her fertility preservation procedures (April 23, 2022). Throughout her medical encounters, Matilda explored her emergent identity as a 'Previvor' (Friedman, 2000). 'Previvor' is a term used amongst BRCA1/2 carriers to self-identify as someone with a known genetic predisposition who preemptively pursues life-altering medical intervention. In the milieu of social media, 'Previvor' has come to engender public, multi-modal practices of biosociality (Rabinow, 1996). Furthermore, as an advocacy coalition, Previvors have arguably shifted the analytic from biosociality toward biosolidarity (Bradley, 2021). This conference paper contemplates Matilda's inhabitation of Previvorship as a surfacing identification over the consecutive course of her preventive medical operations. Furthermore, I seek to understand and substantiate biosolidarity as a virtual practice amongst Previvors in public, online fora. Finally, I engage in reflexive methodology as I confront the intimacy of interpellating a close friend as a research subject when personal, life-circumstances arise and interpose professional, ethnographic practice. Presenter: Nina Francis-Levin (University of Michigan)

Mimesis and Family: From narratives of AYA female cancer survivors in Japan: In this presentation, I discuss about families in the late modern era through the narratives of young adult cancer survivors in Japan. In modern times, stable family norms have collapsed and families seem to be diversifying. However, as Beck(1995) mentioned, we also need to focus on the high remarriage rate as much as the divorce rate, and we need to focus on thousands of people trying to have babies through fertility treatment as much as the low birth rate. Beck called the 'religion of love,' family love attracts people more and more in today's world full of uncertainties. Although there are differences among social groups, people are driven by the 'ideal image' of the family. People try to make their own families as the pursuit of a happiness (Giddens 1991). Even after people's actual family forms have diversified, the image of a happy family has been shared among people, and people have formed families performatively by mimicking it. The image of family in the media mimics the real family, and at the same time, people mimic the image of family in the media to form a real family, creating an endless mimesis of mimesis. Mimicry cannot always be the same as the ideal, but when mimesis fails, alterity is evoked (Taussig 1993), and the 'magic' of the illusion of the happy family works greatly. In other words, when a happy family cannot be successfully formed, the image of a happy family attracts people more. As mentioned above, problems of mimesis and alterity (Taussig 1993) are commonly observed in the formation of families in modern society. In particular, the lives of young adult cancer survivors are layered with multiple issues of mimesis and alterity. Cancer cells themselves are in a state in alterity which is beyond self-control (cancer) in their own bodies due to the failure of normal cell replication. In addition, fertility preservation, which is sometimes done before cancer treatment, is a reproductive technique that is assumed to replicate modern families in the future. And when it comes time to create a family, many problems of mimesis and alterity arise. In this presentation, I focus on the two aspects in narratives of female young adults who have experienced cancer. (1) Desire to have children to meet the expectations of those around them, or to help their partners and parents realize their ideal family. It shows that personal desires about family are closely related to collective desires. It also shows the importance of mimicking typical happy families. (2) Cold spots where doctors and people around them do not give consideration to fertility preservation if they have

already gotten one child. As long as there is a couple and a child, they are considered as a completed happy family. On the other hand, those who want a second child feel that their family is not complete compared to those around them. Presenter: Michiko SAWANO

Kansa and Saratani: The Politics and Perils of Biocommunicability, Decolonial Nationalism, and Naming Cancer in Coastal Tanzania: In the small Swahili town of Bagamoyo in coastal Tanzania, the Bagamoyo District Hospital is at the front of a growing war against proliferating cancer cases and deaths. However, instead of fighting this proliferating epidemic with mastectomies and CT scans to test patients to then be referred to the Ocean Road National Cancer Hospital in the capital of Dar es Salaam-a mere 50 kilometers away-doctors must first fight with words. While the 'official' word for cancer used by doctors and broadcasted around the public health system is saratani, the word dominantly used on the streets is the creolized English word kansa. In contrast to kansa, which came to be the vernacular translation of cancer in Swahili through popular usage and global media, saratani was explicitly created by the government to be that translation guided by logics of Tanzanian postcolonial nationalism aiming to recover and preserve the 'cultural autonomy' of the nation. The result is a situation where saratani and kansa are popularly seen as two separate diseases and doctors are left struggling to communicate the biological phenomenon of cancers. Based on six months of ethnographic immersion in Bagamoyo with doctors, cancer patients, survivors, public health workers, and local healers, this paper presentation explores the linguistic disjuncture between saratani and kansa. Through the ethnographic details of how patients in Bagamoyo experience the disjuncture between the Swahili names for cancer, doctors and public health workers struggle to communicate the disease, and government officials justify continued 'swahilization,' I use this situation to interrogate the burgeoning study medical sociolinguistics and biocommunicability in new ways. I illuminate how biocommunicability of cancer in Tanzania-and more broadly-is a contest between global, state, and local political forces. In this, I not only assert how vernacular and constituent agency is a space of resistance against state biocommunicability, but also document how medical linguistics is a key arena where the perils of the global transition between coloniality towards 'decolonial' ways of being, thinking, and talking can be explored. Presenter: Daniel Krugman (Brown University, Department of Anthropology)

DISCUSSANT:

Alexandra Crampton

DESCRIPTION:

Conceptualized as a separate life stage in modern discourse, 'old age' has been defined through dependency care ratios in which 'body-selves' (Scheper-Hughes & Lock 1987) are aggregated into social bodies imagined as populations that age. Demographic statistics create categories of 'independent,' working-age adults and 'dependents' - those too young to work, and those now retired or too old to work. The self-identified mission of gerontology and geriatrics has been to serve those in the latter, 'old' age category. 'Old' is associated not only with lost productive economic engagement but also with frailties of body and mind while losing loved ones. Frailty and loss, in turn, are constructed to necessitate public and professional intervention. Experts use population aging statistics to naturalize and track this problem, using such metaphors as 'age tsunami' when numbers seem too high. This discourse is challenged by critical gerontologists and social historians. Their work de-naturalizes underlying presumptions and points to the colonizing dynamics of a mission grounded in western constructs of personhood and social value within modern, capitalist societies. Anthropological research counters presumed universalities, such as 'successful aging' (Lamb 2015) and 'old age' itself (Degnen 2018; Lynch & Danely 2013; Sokolovsky 2020). Anthropologists who embrace calls to

decolonize anthropology often counter hegemonic norms of 'best practices' in aging research and professional practice by de-centering the role of expert and repatriating expertise to local knowledge and lived experience. This panel examines past efforts and ongoing need for decolonization in gerontology and geriatrics. Anthropologists contribute through privileging the epistemological and ethical turns associated with decolonizing anthropology. Each presenter provides an example. Angela Zhang explains how learning how to walk from interlocutors living with cognitive impairment in Australian nursing homes reveals linguistic bias both in research consent practices and in assessing perceptual capacity. Brooke Jespersen challenges the underlying cultural biases of 'successful aging' through research with older Puerto Rican adults about desires expressed as 'tranquilo.' Casey Golomski situates his Black interlocutors' call for changes in historically white 'old age' homes as part the current social movements for decolonization that animate higher education and politics in post-apartheid South Africa. In addition to learning through immersive fieldwork, anthropologists have worked with gerontologists towards potential forms of decolonization from within gerontology and geriatrics. Successful projects from the past, such as that of Jean Schensul and Terrie Wetle (during the 1990s), beg the question of why successful projects were not institutionalized as best practices. Current projects provide hope. Brittany Howell and M. Aaron Guest work within the Gerontological Society of America's 'Reframing Aging' initiative addresses decolonization of central gerontological constructs through interdisciplinary collaboration. Tam Perry works on an NIH funded Community Advisory Board shares a knowledge translation program that empowers older Black adults to provide direct feedback about research participation and to raise economic concerns. Decolonization challenges and transforms hegemonic gerontological and geriatric theory alongside the practical outcomes of age-based intervention.

Black interrogations of long-term elder care: Decolonial prospects from South Africa : Long-term care for older adults in South Africa—old age homes—began as a white settler colonial project, one later underdeveloped in “native reserves”-cum-“homelands” for Black people during the racial-segregationist apartheid era. Since the post-apartheid transition, today’s homes include some built by Black people in and for majority-Black communities. Nationally, most homes could be more racially integrated but remain culturally and majority-white spaces. Based on research in old age

homes there between 2015 and 2022, this paper shares Black peoples' interrogations of these spaces—both their criticism and praise—using perspectives of nurses, sangomas (vernacular healers), older adults and their families. Criticisms included the failures of subacute nursing to medically heal and the resource disparities between majority-white versus -Black homes, while providing expert care knowledge and physical and social security for older adults was praised. This paper interprets and links these interrogations to South Africa's robust and evolving student-led decolonial movements in higher education (2014 onward) and its major claims. It argues that critical interrogations of elder care can or will increasingly reflect aspirations of a young and upwardly mobile generation that openly acknowledges how their ways of thinking and worlds have been dominated by Western, white-racist, heteropatriarchal, classist, and dehumanizing epistemologies. It considers how these claims center a decolonial approach to elder care that can undo its most violent distortions: by desegregating and rehumanizing older adults, empowering caregivers in remuneration and education, and indigenizing elder care by incorporating vernacular healing and re-emplacing care practice in communities. Presenter: Casey Golomski (University of New Hampshire, Department of Anthropology)

Whose Knowledge Counts in "Successful Aging"? The Importance of Decolonial Thinking in Gerontology: Decolonizing gerontological knowledge requires grappling with the questions: whose experience and knowledge counts as valid? And from which geopolitical locations is that knowledge produced (Mignolo 2000)? This paper considers these questions with regard to the dominant "successful aging" paradigm, defined by gerontologists Rowe and Kahn (1998) as the avoidance of disease and disability; maintaining high levels of mental and physical function; and active engagement with life. Scholars have criticized successful aging for reflecting American cultural-historical values, obscuring social inequalities, and perpetuating ageism (Calasanti 2016; Lamb, Robbins-Ruskowski, and Corwin 2017). Moreover, research on successful aging tends to exclude older adults' own voices and conceptualizations of desirable lives in old age (Martinson and Berridge 2016). In this paper, I draw on remote ethnographic research with older Puerto Rican adults, their families, and service providers in Cleveland, Ohio to show how older Puerto Rican adults desired old ages characterized by feeling tranquilo, what I call a "tranquil old age." I use the concept of a tranquil old age to challenge the privileging of Eurocentric and "expert" knowledge

embedded in the successful aging paradigm, while illustrating how prioritizing older adults' own perspectives opens analytic possibilities. I conclude by reflecting on how anthropology, with its inductive approach and attention to the politics of knowledge production, is well-positioned to contribute to epistemic decolonization in gerontology. Presenter: Brooke Jespersen (Case Western Reserve University, Department of Anthropology)

Decolonizing Alzheimer's disease intervention: The Puerto Rican Alzheimer's Education Project : Over the past 30 years "science for the people", the CBPR movement in public health, patient-centered treatment, patient advocacy groups, local knowledge and indigenous science approaches, and the citizen/community science movement have moved the needle in decolonizing research, intervention and service. Nonetheless, these efforts have not fully embraced those historically marginalized communities that need them most. Health service providers including gerontologists continue to decontextualize patients, without understanding that those patients represent local communities and cultures with whom they should collaborate to develop more relevant and equitable forms of community driven health literacy programs and services. In this paper we describe a participatory effort to develop and disseminate to providers and public audiences culturally framed and community relevant information about Alzheimer's Disease (AD), widely prevalent and heavily stigmatized in Puerto Rican and other Latino communities. The project engaged health providers, Puerto Rican older adults and family members, Puerto Rican artists, historians and organizations, two geriatric/gerontological treatment centers and a community-based research center with deep ties to a large mainland Puerto Rican community. Interviews with pharmacists, botanicas, and elicitation of beliefs about dementia through artist-rendered drawings of Puerto Ricans with AD, resulted in a bilingual curriculum on AD disseminated locally and nationally, a coloring book for children and a community gallery exhibit. The project offers a model for decolonizing gerontology through partnership development and collaboration across provider/patient/community boundaries to increase health literacy, integrate provider and patient communities and pave the way for service improvements. Presenter: Jean Schensul (Institute for Community Research, Inc)

Decolonizing gerontology by increasing engagement between anthropologists and gerontologists:

Gerontological scholarship on aging and older adult populations has historically advanced ageist discourse that then permeates within cultures and media. Often, this work lacks the nuance of a cultural lens. Anthropologists are in a unique position to help decolonize this scholarship through increased engagement with gerontologists and research on older adulthood. Doing so requires that anthropologists first reconcile their engagement with aging and older adulthood as part of the life course. In our view, anthropologists can find common ground with the 'Reframing Aging Initiative' in gerontology. In an attempt to decolonize from within, Reframing Aging is a multi-sectoral initiative led by the Gerontological Society of America aimed at improving the public's understanding and perception of aging and the myriad ways that older adults contribute to society. These efforts include the creation of toolkits, communication guides, and other resources for gerontologists to improve how they research, write about, and talk about aging. Still, closer engagement with anthropological scholarship and methods would bolster these and other efforts to ensure an age-integrated society. This presentation will provide examples of anthropology's engagement with gerontological research and identify potential strategies to increase cross-discipline engagement. By engaging with gerontologists, anthropologists can reframe the public discourse on aging by improving research methods, data analysis, and the interpretation and application of research findings that decolonize gerontology. In so doing, we hope to create a truly transdisciplinary and decolonized approach to aging and older adulthood. Presenter: Britteny Howell (University of Alaska, Anchorage)

Older African American Consultancy Program: Collaboration Based on Long-Standing Engagement: Community Advisory Boards have become an essential component of community engagement in recent decades in order to inform program outreach and directions. This paper will focus on the novel leadership roles that members of a Detroit, Michigan, USA-based Community Advisory Board that serves to decolonize gerontology in practice. Through situating the older adults as experts, this program promotes inclusion of older Black voices, historically marginalized/harmed by research. The Community Advisory Board (CAB) of the Healthier Black Elders Center (HBEC) of the NIH funded Michigan Center on Urban African American Aging Research launched a consultancy program in 2020. This consultancy program is a local entrepreneurial effort that has already attracted tech, grantmaking and research sectors. CAB members have participated in

over 11 consultancies. This knowledge translation program has created opportunities for older Black adults to provide direct feedback on their experience participating in studies, and ways to increase participation of older minoritized adults in research. This program also promotes generativity (e.g., opportunity to pass on wisdom) as well as economic concerns (e.g., revenue for programming for health outreach for older Detroiters and individual CAB members). Bringing anthropological approaches to working with this group such as extended time, and attention to relational and affective dynamics as well as attention to the unexpected, this project is the result of long-standing trusted relationships between faculty, staff and CAB members where collaborative models are the norm. Daniela Soto Hernandez ,Eduardo Romero Dianderas (University of Southern California),Victoria Nguyen (Amherst College, Department of Anthropology & Sociology),Angela Castillo (University of California, Berkeley, Department of Anthropology),Hadeel Badarni ,Kathryn Goldfarb (University of Colorado, Boulder, Department of Anthropology),Amanda Kearney (University of Melbourne)

DISCUSSANT:

Eduardo Romero Dianderas (University of Southern California),Marcos Mendoza (University of Mississippi, Department of Sociology & Anthropology)

DESCRIPTION:

Vertical and volumetric ecologies have become salient features of contemporary material and political life. New extractive frontiers, from lithium mining to deep-sea harvesting of rare minerals, have drawn renewed

attention to subterranean and mountainous landscapes as emergent sites of capitalist capture, environmental violence, and political refusal. Analogously, the climate crisis, and the ensuing calls for post-carbon transitions, have thrown light on airspheres and their 'politics of verticality' (Weizman 2007), both by underscoring the uneven distribution of toxicity (Choy and Zee 2015), atmospheric violence (Simmons 2017, Masco 2010), and racialized inequalities (Graeter 2020) as well as by stressing their potential for planetary remediation and low-carbon futurities (Howe 2019). This panel explores how the emergence, existence, and unmaking of vertical and volumetric ecologies and relationalities shape subjectivities, bodies, social worlds, and other-than-human life. Recent scholarship on the production of space has sparked critical conversation around the three-dimensional character of places, challenging flattening framings that rely on a one-dimensional lens (Jackman & Squire, 2021; Marston & Himley, 2021; Mosquera-Camacho & Marston, 2021). In calling for an expanded conceptualization of space as having depth and height, these interventions invite us to reimagine space in terms of downward and upward vertical axes, as well as in terms of volumes that could be mobile, porous, portable, and ephemeral. Building on these works, this panel invites ethnographic reflection on subsurface (subterranean and subaquatic), mountainous and arboreal landscapes, the built environment on the surface, or aerial milieus that can be explored via their vertical and volumetric character. Some examples of these spaces are buried tunnels, caves, oil wells, underground zones, aquifers, subsurface natural resource exploitation, forests, waterways, rural and urban settlements' built environment, energy and transportation infrastructures, and the canopy of forests, among others. In this session, we ask: What affective, sensorial, material, political, epistemic, and legal coordinates shape vertical and volumetric ecologies? What political possibilities and foreclosures are afforded by these vertical and volumetric milieus? How do vertical and volumetric pluralities generate new horizons of experimentation, imagination, and future-making—including forms of justice, inclusion, or autonomy across racial, gender, and class lines? How could vertical and volumetric ecologies generate forms of racialized violence and exclusion? How does thinking with, or against, the vertical and volumetric engenders new grammars for making sense of transitions—climatological, sociopolitical, economic, or otherwise? We are looking for ethnographically-informed studies that explore the vertical and volumetric production of spaces and ecologies and their entanglement with quotidian experiences of mutability and transition.

Ontologies and the 4D in volumetric ecologies: the case of lithium extraction in Chile : In the context of the energy transition, lithium extraction has gained enormous attention due to its use in lithium-ion batteries for electric cars. Following economic growth imperatives, increasing quantities of brines are being drilled from the Salar de Atacama in the Atacama Desert to produce lithium and in consequence, tonnes of water evaporated. While distinctions about water and brines have been considered in past literature as connected through volumetric ecologies, Puri (water understood as a more than human being by local indigenous communities – Lickanantay people) and her hydrocosmological cycle have been left out from ecological considerations reinforcing colonial understanding of volumetric ecologies just in their material dimensions. Therefore, the extraction of lithium in the Salar de Atacama (Chile) constitutes an example of the production of belowground ecologies by actively destroying Lickanantay volumetric world. I propose to expand notions of ecologies by considering processes where the sacred and the material are intertwined, embedding volumetric ecologies with ontological matters. Based on 12-month fieldwork in the Salar de Atacama basin, I will argue that the discursive and practical production of lithium needs to render invisible the interconnected Lickanantay ontology where ecologies are not only volumetric but timely sacred (4D). By drawing on postcolonial and decolonial studies, I aim to discuss how lithium extraction foster fragmented ways to relate with the underground, installing vertical axes instead of volumetric relations. In this way, I expand this case to consider how the technocratic energy transition is expanding racialized inequalities, and vertical ecologies by actively producing one-world worlds. Presenter: Daniela Soto Hernandez

Taming volumetrics: The political temporality of tropical timber volumes in the age of climate change: In recent years, volumetric thinking has arisen as a mode of critique that subverts our dominant understandings of territorial power. But the politics of volumes can also be traced in the ways the governance of transnational supply chains are rapidly changing in the larger context of the global environmental crisis. By following how volumes are articulated and disputed across different kinds of transnational supply chains, volumetric practices are revealed as a space where new political temporalities contentiously emerge at both local and planetary scales. In this paper, I explore the nexus between volumetric practice and political temporality by following ongoing state technocratic attempts to

tame tropical timber volumes in Peru's tropical timber supply chains. As trees of different species, magnitudes and shapes are transformed into commensurable numerical quantities amenable to be traced and verified, I show how thinking through the mundane practices of volumetric calculation can help us to consider the new political temporalities cultivated by emerging modes of global environmental governance in Amazonia. In particular, I examine how efforts to tame volumes enact a temporal rupture where longstanding racialized practices of trickery and deceit in the region are to be hopefully replaced by global standardized modes of environmental transparency and accountability. In this way, I consider how volumes can be taken as privileged ethnographic terrains where to appreciate how different political histories intersect and collide with each other as Amazonia enters the age of climate change and biodiversity loss. Presenter: Eduardo Romero Dianderas (University of Southern California)

“Nature’s cycle”: Circuitry, Sustainability, and Volume in the Chinese City: This paper investigates the lived and imagined effects of urbanization without limits at precisely the moment when amplifying visions of ecological precarity are dominating debates in the earth sciences. In the context of China’s unprecedented mass urbanization program, it interrogates the logics of sustainable design that animate urban development in China today. Thinking across the vital interconnections of air, water, and land in the life of the city, I examine how China’s recent Sponge City initiative conceptualizes the city as a volumetric ecology that entangles urban landscapes with planetary atmospheres, subterranean depths, and ecosystems, transforming the social, ecological and political parameters of the city. As Chinese urban planners come to increasingly view city planning as a total environment encompassing aerial, terrestrial and subterranean resource loops, the paper asks after the excesses and contingencies that might exceed and escape the closed world logics of the sponge city. Presenter: Victoria Nguyen (Amherst College, Department of Anthropology & Sociology)

Birds, Territorial Defenders, and Above-the-Surface Vertical and Volumetric Ecologies: Much of the work on vertical and volumetric ecologies focuses on subterranean landscapes and processes of state and corporate territorialization. This body of research has revealed how the underground is constituted as an object of scientific knowledge production and commodification through the epistemic, legal, and geospatial representation practices of earth sciences.

While studies on urban milieus, securitization, and atmospheric politics have addressed vertical and volumetric territorialization that takes place above the surface, additional exploration is necessary. Similarly, the emphasis on spatial representation devices has resulted in less investigation of how animals, plants, and different water and landforms (mountains, rivers, waterfalls, forests) are entwined in the formation of vertical and volumetric ecologies. This paper focuses on above-the-surface vertical and volumetric ecologies, as well as aerial and arboreal animals, to examine the social production of space done by movements of territorial and water defenders. Drawing on ethnographic and archival fieldwork with a coalition of territorial and water defenders in Central Colombia who opposed the Colosa mining project (corporate industrial gold extraction), this presentation explores the role of montane birds in the emergent politics of vertical and volumetric territorialization of Colombia’s Central Mountain Range amidst one of the country’s most significant extractive disputes. For over a decade, defenders have been cultivating a wide range of practices of epistemic, legal, political, and sensory attunement to montane birds. This, in turn, has afforded the coalition the opportunity to assemble forms of upward vertical territorialization that challenge the vertical-subterranean territorialization of the mining corporation. Presenter: Angela Castillo (University of California, Berkeley, Department of Anthropology)

Colonial Ecologies of Vertical Know-How: The Making of Israel’s ‘High-tech’ Agriculture : This paper takes Israel’s rising agricultural technoscience as a site to trace and study settler-colonial modes of environmental apprehension in Israel/Palestine. It seeks to explore how certain webs of interest, optics, and imaginaries come to weave modes of reasoning and patterns of knowing into industrially operational know-how. In the past decade, Israeli R&D programs (corporate and governmental) have been carrying out large-scale scientific experiments with the aim to adapt military technologies into agricultural use. As civilian forms of military know-how, Israel’s agricultural technologies take legacies and practices of colonial domination as their preconditions and epistemological lifeline. Once military technologies are “proven effective” in Palestinian and “hostile” milieus, subsequent agricultural systems crop up in Israel to replenish supposedly enhanced forms of non-human life. In this order of ecology-making, that which aims to suppress life in one place is resurrected to cultivate it in another. Surveillance gadgets morph into crop monitoring technologies, urban warfare robotics re-emerge as pesticide drones, and a “brain” implanted

in large-scale irrigation systems has its original software in Israel's Iron Dome. [1]Such technological forms exhibit how certain conditions render concepts such as "high-tech life", "vertical growth", and "precision agriculture" explicit phenomena in particular fields of knowledge, foregrounding what may have thus far remained imperceptible or non-appearing. As nature comes to be autographed by Israel's military technologies, latent codes of spatial (mis)recognition are availed both as tested technologies and candidates for expansionist and prototypical know-how. What does an ecology-making enterprise entail in so far as it apprehends the natural world militarily? How have lineages of scientific knowability and thresholds of proven "effectiveness" shape Israel's "high-tech" agriculture and the space it subsumes? and wha
Presenter: Hadeel Badarni

Knowing Fire, Knowing Air: Atmospheric, Epistemic, and Embodied Ecologies in a Wildland Urban Interf: The family diamonds had evaporated in the heat. In the pyric ecology of Boulder County, Colorado's Marshall Fire, things that had seemed both permanent and impermanent were omnivorously vaporized, particlized, atmosphericized. And yet the atmosphere itself was imbued with a toxic solidity that settled and seeped into the structures and stuff that was left, contaminating homes still standing. The cause of the December 30, 2021 Marshall Fire, a grass fire driven by winds up to 115mph, is still officially unknown. As the most destructive fire in Colorado history, it ravaged more than 6,000 acres, burned over 1000 structures, and killed two people. However, residents and scientists alike see the fire not as a limit scenario but as a new reality for increasingly vulnerable wildland urban interfaces (Petryna 2022). How do wildfires prompt new ways of knowing air—the stuff that is vaporized and settles in as a direct product of fire, but also the indices in the air, like ozone and particle pollution, that point to broader social inequities and ecosystem degradation, and require unwelcome but urgent engagement with policy and legal regimes? How might interactions with quantitative data—the information gained from air quality monitors or mass spectrometers—shape qualitative, sensory, and embodied experience, new attunements, risks, and meanings (Zee 2021, Choy 2012, Stewart 2011, Ingold 2010, Kenner 2018, Ahmann 2020)? This presentation draws from an emergent collaborative archive, the Louisville Historical Museum's Marshall Fire Story Project, to consider how fire reconfigures both epistemic and ontological sensibilities about air. Presenter: Kathryn Goldfarb (University of Colorado, Boulder, Department of Anthropology)

Mapping submerged landscapes: Plurality and knowledge of saltwater territories in Indigenous Austral: There are distinct bodies of cultural knowledge attached to the sea. We orient our focus towards the nature and extent of cultural framings of sea territories, as inclusive of submerged landscapes enlivened by Indigenous oral histories and ancestral presences. This approach embraces a pluralist methodology that brings into relation Indigenous perspectives and western scientific understandings of the geomorphology of Australia's continental shelf. Attention to the ocean, as part of an ongoing reframing of geographies of the sea, has birthed a discourse of critical ocean studies, inclusive of 'wet ontologies', 'slippery ontologies' and 'blue economy'¹. These provoke new thinking on materiality, volume and liquidity. By extension, this opens up pathways for new approaches to the study of, for example, tidal zones, mudflats, deep ocean plains and continental slopes, and as we propose, the sea floor and submerged landscapes. In Australia, undersea cables and pipelines, deep-sea prospecting, seabed anchored windfarms and the decommissioning of oil and gas platforms are emergent (or already advanced) economies. Indigenous marine tenure aspirations remain strong, yet federal, state and territory political interest in progressing this agenda is not. Engaging ethnographic accounts of Indigenous Australian knowledges of Sea Country, as inclusive of ancient pre-inundation landscapes that lie out-of-sight on Australia's continental shelves, we highlight the potential for a more expansive vision (vertical & volumetric) of human connections to past and present continental landmasses. Our aim is to co-ordinate mapping efforts to support Indigenous marine tenure aspirations.

Experiencing Biomedicine

12:15 PM - 1:45 PM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Christine Kirby

CHAIR:

Christine Kirby

PRESENTER:

David Kofi Mensah (Northern Arizona University,

Department of Anthropology),Christine Kirby ,Clinton Humphrey (Northern Arizona University)

DISCUSSANT:

Carly Thompson-Campitor

DESCRIPTION:

This roundtable will focus on three separate interdisciplinary research projects and the various ways we interact with, create, reject, and recreate biomedicine. Exploring contested illness in the US, mental healthcare in Ghana, and oral healthcare education in two American Indian communities, this roundtable aims to contribute to the discussion of experiencing biomedicine. Contested illness debates—and the ways illness knowledge is constituted and disseminated across biomedical and social domains—have a considerable impact on individual lives. Social science scholars have examined the various dimensions of contested illness and the fraught ways medical knowledge influences embodied experience of illnesses deemed biomedically questionable or unsettled. For example, literature has shown that processes of illness contestation play a significant role in shaping public perceptions of illness, while also directly informing health policies, medical education, patient-provider interactions, and patient access to care. This discussion considers the impact of illness contestation on lives in the context of chronic Lyme disease. Specifically, it examines how the very characterization of illness contestation across biomedical and other media effectively conceals the emerging and multidisciplinary state of chronic Lyme disease knowledge production and practice. (Carly Thompson-Campitor) Medical anthropologists interested in mental healthcare in Sub-Saharan Africa argue that the biomedical approach to treating mental illness in Sub-Saharan Africa sometimes yields a negative impact due to how mental illness is understood and approached by most Sub-Saharan African communities. These researchers propose collaboration between biomedical psychiatric care and Traditional/Spiritual Healers (TSH), which can help provide holistic treatment and care for the mentally ill in Sub-Saharan Africa. My discussion will center around my experience with biomedicine in a culture where the belief in spirits influences the healthcare-seeking trajectories of the people. The study involves clients and staff at the Ankaful Psychiatric Hospital in Ghana. (David Kofi Mensah) Despite efforts focused on decreasing early childhood caries in American Indian (AI) populations, these children have the highest incidence of dental caries of any ethnic group. Partnering with a Health Equity research group at Northern Arizona University, two Indigenous communities created a

culturally relevant oral health education program for each community. Implementing the educational sessions with local mothers through a motivational interviewing (MI) format, this study aimed to remove structural barriers to OH information and supplies. MI is a conversational style claiming to transcend speech communities and help participants talk themselves into behavior change. As both a resource for the research study and a member of the community, community health representatives (CHRs) implemented the tailored educational sessions in their communities. To do this, CHRs were asked to learn a new way of speaking (MI) to other members of their community. This shift in communication with community members caused pushback, discomfort, and behavior change in both them and the participants. For the purpose of this discussion, I will explore the experience of MI for the CHRs and participants. (Christine Kirby)

Feminist Resistance, Violence, and the State

12:15 PM - 1:45 PM TMCC - 606

Oral Presentation Session

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Christine Schenk (University of Zurich)

PRESENTER:

Elham Shahsavari Zadeh (York University, Department of Anthropology),Lynn Kwiatkowski (Colorado State University),Christine Schenk (University of Zurich),Farid Muttaqin (SUNY, Binghamton University, Department of Anthropology),Andrea Ariza Garcia

DESCRIPTION:

Feminist anthropologies have long centered research about resistance, violence, and the State. This panel explores emerging feminist ideas and interventions through intersecting themes to examine systems of power. The papers cover a spectrum of feminist topics about digital ethnography and activism in the Middle East, domestic violence and emotions in North Vietnam, marriage and law in Sri Lanka, nationalism, religions and gender in Indonesia, and the colonial archive, religion and speech in Mexico.

MahsaAmini's Moment: a U-turn In The Conception of Transition: MahsaAmini's moment in Iran: a U-turn in the conception of transition For decades social scientists have described Iran as a society in transition (Bashiriyeh 2003, Renani 2005, etc.). Numerous studies

elaborate on how Iranians negotiate their agency between patriarchal authority and institutionalized bureaucracy, religious obligations and secular law, mass movement and representative democracy, backwardness and development, etc. This conceptualization of the everyday life of Iranians is based on an unwarranted assumption that the pain and humiliation that people endure in this struggle are temporary and there is a relief in the final destination of this transitory phase which is liberal democracy.

Although the deterioration of the economic situation in the shadow of international sanctions and the dominance of religious fundamentalism in the political sphere, on the one hand, and the crises of liberal democracy on the global scene, on the other hand, left no emancipatory prospect for this 'society in transition.' The ongoing uprising following the murder of Mahsa-Jina Amini in police custody (September 2022) put an end to the claim of 'society in transition'-the possibility of continuous change within existing structures; while it starts a new era of transition in Iran that provides the possibility of thinking about altering those structures. Adopting a comparative approach and through the digital ethnography of Instagram pages of a few feminist groups, I discuss shifts in the narrative of 'transition' before and after Mahsa Amini's moment. I will show how recalling the history of the ordinary life of Iranian women helps activists to challenge the presumption of 'society in transition'. However, their statements have shown while they have given up the 'cruel optimism' (Barlant 2011) behind this comprehension of society, they are still in a transitive state of 'not-yet-being' (Bloch 1986). Presenter: Elham Shahsavari Zadeh (York University, Department of Anthropology)

Transcending Gender Violence, Negotiating Constraints: Domestic Violence in Northern Vietnam: Women in northern Vietnam who live with husbands who are abusive experience embodied suffering that penetrates their everyday lives, even if the violence is intermittent. Vietnamese women are impacted by this form of domestic violence in diverse ways and have different responses to the abuse. Many women who are abused bear the violence silently. Other Vietnamese women attempt to transcend their husband's abuse, even as they live within a political and economic context that can make this a long and arduous process of transition, marked by struggle, pain, fear, uncertainty, planning, and waiting. Yet, these women's moves toward transcending domestic violence may be tinged with hope and anticipation of a renewed future. This paper will inquire into embodied ways that these abused women internalize the broader social environment in

which they live, but also imagine their transcendence from violence and navigate their emotional experience of inequality and constraints they face as they reconfigure their future. While on a journey through time with an uncertain outcome, these women draw on some resources that extend care to them to reduce their vulnerability and on others that present obstacles, extending their anxiety and waiting. I explore the complex process of transcending gender violence for women in northern Vietnam who look to the potentiality of a renewed future for themselves, and, for some, other women as well. Presenter: Lynn Kwiatkowski (Colorado State University)

War and the fragmentation of Muslim Personal Law in Sri Lanka: In this paper, I show how in Sri Lanka the legacies of decades of war have resulted in a constant struggle between Muslim organizations, women's rights activists, and Muslim judges on how to read and implement Muslim Personal Law. The political struggle has fragmented the practice of Muslim Personal Law and obfuscated the legal traditions. In Sri Lanka, where Muslims are a minority, violence against Muslim women is often not legally pursued due to the internal injustices of Muslim courts, called Quazi court system. The Quazi court system is ruling under Muslim personal law as part of the Sri Lankan justice system. Since the 1990s, activists have widely addressed these injustices, such as the appointment of male judges only, the possibility of child marriage and polygamy as well as the missing consent by the wife during the ceremony of the marriage. Despite the claim of the Muslim umbrella organization All Ceylon Jayamathul Ulama (ACJU) and their influence on determining the court setups and its practices, the practice of jurisdictions diverge. Comparing cases from eastern and western Sri Lanka based on fieldwork between 2017 - 2023, I highlight the distinct influence of Muslim organizations in relation to the civil war and the consequences not only for Muslim courts, but also for lawyers and Muslim women's rights activists. Presenter: Christine Schenk (University of Zurich)

Keislaman & Keacehan: Nationalism and Gender in Contemporary Post-Tsunami Aceh, Indonesia: This paper is a segment of my doctoral dissertation research examining gender politics at the local level in the context of the nationalist struggle. Using the case study of Aceh, an autonomous region under the Government of Indonesia, I discuss how and why different social groups express a great desire in deploying gender in their quest for Aceh nationalism. Aceh has been granted the legal authority to institutionalize sharia law. This

paper observes why under the solid establishment of the nation-state, as an academic idea and political institution, such a nationalist desire remains alive at the very local stage. Earlier studies of Aceh's nationalism refer to the experience of the 3-decade conflict involving the Free Aceh Movement against the national government. It is undeniable that the conflict plays the most pivotal role in the making of the nationalist desire among the people in Aceh, yet the reference to this particular event seems no longer adequate. In the past two decades, the area has been in a peaceful place. The analysis of the experiences of the tsunami that hit the area in 2004 and the post-tsunami redevelopment program that also turned out to be the post-conflict reconciliation agenda that has been neglected in the studies of post-conflict nationalism in Aceh is a key alternative to understanding the current Aceh's nationalism beyond the experience of conflict. Importantly, these post-tsunami and post-conflict reconstruction agendas were the site where the locals were exposed to many different programs on gender brought by both the national and international agencies with more 'Westernized' and 'Indonesianized' feminist frameworks. A tangible result of these gender programs is the transformation of the dominant social norm based on Islam and customary law (adat) of women's roles in the domestic sphere. More women now go public, join the community and political organizations, and express more freedom in public spheres. Since the emergency period of post-tsunami moved to a more stable circumstance, many groups in the area started showing their serious concerns about the recent social dynamic involving women and even referring to this case to legitimize their campaign for the re-Islamization of Aceh and the return of Aceh as the real Aceh pure from the western contamination of secular feminism. Many of them call for the idea of going back to the core identity of Keislaman (Islamness) and Keacehan (Acehness) as the foundation of gender norms ideal for the people of Aceh. This paper investigates the complex implication of these gender programs to driving nationalist movements in peaceful post-conflict Aceh as shown in the ongoing campaigns for the institutionalization of gendered sharia. I argue about the importance of contextualizing the history of Aceh's ethnonationalism as the social-historical production of gender to make sense of how gender is strongly deployed in their ongoing search for national identity. This study indicates how the idea of transition in society appears to be a never-ending social process. This study contributes to three anthropological areas: the anthropology of Islam examining the uneasy relations between Islam and liberal ideas, such as feminism, anthropology gender

observing the ongoing gender politics at the local level, and political anthropology studying the continuing production of new political institutions and contemporary nationalist movement. Presenter: Farid Muttaqin (SUNY, Binghamton University, Department of Anthropology)

COMPULSORY CONFESSIONS: DISCURSIVE MATERIALITY AND SUBJECT CONSTITUTION IN THE COLONIAL ARCHIVE: Witchcraft, sorcery and superstition, as crimes prosecuted by the Holy Office of the Mexican Inquisition, are founded in the distance between these real, quotidian and embodied practices, and the narration that appears of them in the Inquisition papers. That distance allows for an understanding of the mass production of otherness in the bureaucratized colonial project. Exploring the Mexican Inquisition procedures for witchcraft, sorcery and superstition abuses during the XVII and XVIII centuries, this investigation focuses on forced confession as a transitional speech act required for the formation of the subject of otherness. Through a decolonial and feminist archival ethnography, this research looks at the materiality of language embedded in the colonial archive analyzing, on the one hand, the confessional acts as transitions in the constitution and control of bodies and subjectivities – the production of gender and race–, and, on the other, the anxieties, insecurities and raptures of power of colonial epistemologies inscribed in the colonial archive. How, in the confessional performative act, these processes become convenient for the production of otherness? What are the bourdian magical boundaries that are being delineated, in that interstice that forced confession is, for the formation of a particular body? Why, such a highly fictional narration is compulsively and compulsory repeated across numerous inquisitorial cases? And above all, why is it inscribed in the national archive? In Transition: Shifting Paradigms of Women's Health and Care through Black Authoritative Knowledge

12:15 PM - 1:45 PM Virtual - Room 2
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Association of Black Anthropologists

ORGANIZER:

Corliss Heath

CHAIR:

Corliss Heath

PRESENTER:

Rachel Chapman (University of Washington, Department of Anthropology),Chelsey Carter (Yale University),Diana Burnett (University of Pennsylvania),Stephanie Keeney Parks (University of California, Los Angeles),Corliss Heath

DESCRIPTION:

Brigitte Jordan defines Authoritative Knowledge (AK) as rules that carry more weight than others in part because they are associated with 'structural superiority' or hierarchy in health care settings, where providers' knowledge is centered and becomes the basis on which decisions are made (Cheney 2021, Browner 1996). Where inequalities exist, the perceived superior knowledge often decenters, devalues, delegitimizes, and disempowers, the knowledge, experience, and wisdom of others. Modifying Jordan's term, the participants of this panel define Black Authoritative Knowledge (BAK) as rules where Black women's centered experiences, needs, and confidence to advocate for, empower, and inform others about their lives and health become the basis of decision-making. Black Authoritative Knowledge exists within Black women inherently. It is an inner source that is cultivated. While AK is most often seen as existing in the expertise of most providers, this panel explores ways that BAK frameworks inspire, shift, re-imagine, transmute, and transform health care in diverse settings. Women's health care has traditionally focused on screening, diagnosis, and treatment of conditions unique to women. However, recognizing differences in risk factors, disease manifestations, and responses to treatments, affects the best evidence-based options of interventions for many conditions that vary among women. Compared to women of other ethnic groups, Black women experience excess morbidity in obesity, diabetes, and adverse birth outcomes, and are more likely to die from breast and cervical cancer, cardiovascular disease, and HIV/AIDS (CDC 2014, DHHS 2016). Various factors contribute to Black women's health outcomes. Income, education, race, class, and sexuality, as well as stress resulting from institutional, structural, and interpersonal discrimination all have increased risk for adverse health effects. Social and cultural factors such as values, beliefs, religion, and traditions shape how Black women think about and respond to chronic illness, prevention, and intervention activities. Some Black women have difficulties accessing care and disparities exist in them receiving quality treatment. Moreover, lack of confidence and cultural mistrust in the health care

system causes some Black women to delay seeking medical care or to avoid health care settings all together (Belgrave 2016). Effective interventions exist for improving Black women's health across various domains including maternal and perinatal health, HIV care and treatment, cardiovascular health, and mental health disorders. This panel assembles scholars who focus on shifts in approaches to include Black perinatal telehealth, Black families caring for autistic children, adapting strategies of culturally responsive care for Black women with HIV, Black women community health workers caring for people with ALS, and paternity for Black birth persons framed by the impact of inequities in maternal mortality. This session suggests that BAK is critical to increasing patient confidence and establishing and implementing reciprocity in Black women's health care. It strengthens embodied knowledge of marginalized patients, caregivers, and families, by centering Black women's needs, experiences, and wisdom to create healing spaces, equitable conditions for care and treatment and approaches to account for and address multilevel factors of health disparities among Black women and their families.

DESCRIPTION:

With late capitalism, mobilities within and across borders have intensified and conflicts over what it means to belong to a people or a place have become more salient. In this context, intimacy has played a

central role in the pursuit of livelihoods, respectability, and futures. On the one hand, social relations have shaped the dynamics of mobility and transnational migration and have provided people with a wide array of material and immaterial resources to move and settle in new places and claim belonging. On the other hand, intimacy has also become a key moral criterion for belonging and citizenship and a tool for states to regulate mobility. For example, over the past decades, European countries, in their effort to control access to citizenship and prevent 'unwanted' migration from Africa and elsewhere, have started imposing harsher restrictions on migrants' family relations that may facilitate cross-border mobility, such as introducing strict requirements for spousal visas. This panel considers the intricate and shifting intersections of intimacy, mobility and belonging in contexts of transition and accelerated change. By focusing on empirical cases from Africa and African diaspora in Europe, the papers in this panel explore the dynamics and new moral dilemmas that emerge in the constantly shifting constellations at the nexus of intimacy-mobility-belonging. How do Malagasy marriage migrants in Europe sustain their relationship with Madagascar ensuring that their children could later claim belonging there? What do the entanglements of sex and death reveal about citizenship and belonging in contexts of intensified mobility in coastal Kenya? How do female African migrants in Europe negotiate gender roles and responsibilities with their 'left behind' husbands? How do young men in Ghana, married or soon-to-be married to women, imagine a life abroad through same-sex intimate relations? How do urban migrants in Accra deal with the tensions and moral dilemmas that arise due to their absence from their rural hometowns and their intention not to return there? In all these cases, intersections of intimacy, mobility, and belonging have become dominant in the making of social worlds. By interrogating the multiple and shifting ways in which intimacy, mobility, and belonging are interconnected, the panel aims to discuss the implications of accelerated change in a globalized world and how people craft their livelihoods in these constantly changing settings.

The Politics of Intimacy and Partial Belonging among Malagasy Marriage Migrants in France: Since the 1990s, thousands of coastal Malagasy women have pursued upward social mobility through marriage to Frenchmen and migration to France. Women do not see their marriage, migration and incorporation into their husband's families as either totalizing or permanent. To the contrary, they also seek to maintain enduring ties to their natal families and through them their ancestors,

on whom their well-being depends. They also wish to maintain a place for their children with their Malagasy kin. Most recent analyses of intimate mobility focus on the policies of European states. Of special concern is the way that draconian laws intended to restrict migration through marriage make a women's visa status dependent on their husbands, thereby potentially forcing them to stay in what may be coercive marriages. Put another way, the combination of global inequality and restrictive immigration laws creates a situation in which it is easier to extract – a Malagasy woman might say steal --women's intimate, sexual and caring labor. But women know that their kin and the laws of the Malagasy state pose another set of dangers with which they must contend. In this paper, I focus on the role of ancestral rituals in women's efforts to maintain their own ties and the future claims of their children to belonging in Madagascar. By following the story of one woman as she returns to Madagascar, my analysis teases apart the creative ways that women draw on a combination of long standing Malagasy ritual practices and ideas they bring from France as they seek to ensure future belonging for their children. Presenter: Jennifer Cole (University of Chicago)

Sex at the Funeral: Intimacy, Mobility, and Death in Kenya's Coastal Economies: With the rise of Kenya's coastal sexual economies since the 1980s, refugees, migrants and migrant settlers in towns such as Mtwapa have witnessed the emergence of new kinds of practices related to death and funerals. Young people moved to coastal towns from across Kenya (but also Uganda and Tanzania), hoping to meet tourists by way of sex work or to leverage their identities as sex workers or gay and lesbian migrants with humanitarian organizations as stepping stones towards possibly moving to Europe. While pursuing and waiting for such opportunities, funerals became a site to reflect on both the miraculous promises and radical deceptions of extant economies of sex and sexuality. Indeed, sexuality and death became entangled in more ways than one. At funerals, stories abounded about the dangers of sex, not only as coupled with HIV/AIDS, but also with sorcery, violence, trafficking, and the extraction of bodies' life force. Struggles emerging over whether some dead bodies could or should be repatriated to their rural 'homelands' also placed sexuality front-and-center: Would the kin of sex workers and queer people accept them for burial in ancestral land? Meanwhile, in Mtwapa, so-called vuguvugu funeral ceremonies—including open bars, DJs, and disco nights—became central sites for new sexual encounters among the young, quickly drawing the attention of public health workers concerned with STI-

prevention. Drawing on these developments, this paper seeks to further examine the links between sexuality and death in contexts of intensified mobility. If anthropologists have explored this link primarily in relation to the HIV/AIDS pandemic and queer psychoanalysts in relation to the 'death drive,' the entanglements of sex and death around coastal funerals require further conceptual elaboration. Inspired by the early ethnography of Giriama ritual deployments of sexuality at funerals, this study links these concepts through prism of mobility and im/permanence.

Presenter: George Paul Meiu (Harvard University)

Visiting wives: Negotiating Intimacy in Transnational Marriages: This paper investigates how migrant spouses and husbands 'left behind' negotiate their gendered roles and intimacy across the multilayered homeland and host society. I examine the mutual constitution of migration and transnational marriages by concentrating on negotiating intimacy between Ghanaian and Somali migrant wives in the Netherlands and their left-behind husbands in Ghana, Somalia or Kenya. The findings reveal that gendered roles are not fixed but rather are constantly negotiated and re-negotiated through the transnational experiences of migrant wives and their husbands. This study highlights the importance of considering the intersections of gender, mobility and intimacy in understanding the complexities of transnational marriages. First, I explore how gendered ideologies anchored in notions of women as 'home keepers' and men as 'breadwinners' shape and support the discourse and practice of marriages among people of African descent who are also religious. Nevertheless, even as these gendered constructs travel beyond borders, restrictive gendered roles become increasingly untenable as women's migration and accompanying economic opportunities cause shifting power dynamics in transnational marriages. As a result, migrant wives employ various ways to maintain emotional and physical closeness with their husbands using a) frequent visits b) communication and technology c) gifts to make the marriage "work". Presenter: Amisah Bakuri (University of Amsterdam)

Orientation beyond the Horizon: Migratory Aspirations, Same-sex Partnerships and Kinship in Accra: Facing the possibility that a new law, currently under discussion in the parliament, will severely restrict all forms of lgbtq+ life, expression and advocacy, many lgbtq+ Ghanaians consider leaving the country. In a particular slum of Accra, young men who are (or want to be) in same-sex partnerships with foreign men also eagerly try to relocate abroad. Their desire to leave, however, is not

due to the fear of persecution and discrimination. Like other aspiring migrants, they anticipate that a life in aburokyire (abroad, lit. beyond the horizon) will be better for themselves and their families. A marriage or an intimate relationship with a gay man in Europe can materialize the migratory aspirations of these men, who are married or soon-to-be married to women through customary and often unofficial ways. These young men are not the first in the slum who formed intimate and sexual relations with foreign gay men. Many from the generation of their fathers have also had intimate relations with foreign men. Experience-based knowledge circulates within the kin networks of these men (fathers/sons, uncles/nephews, older brother/younger brother, cousins) and help them succeed in finding a foreign gay partner and eventually relocating abroad. Disputing the labelling of these men as "fake gays," I argue that the migration of these men and the circulation of resources within their networks that mobility enables, often lead to intricate transnational arrangements and the crafting of lives that are meaningful and fulfilling for these Ghanaian men, their gay partners in Europe as well as their wives and families in Ghana. Presenter: Apostolos Andrikopoulos (Harvard University)

Absence, Duration and Kinship in Ghanaian Rural-Urban Migration: This paper considers absence as a site of affective and intergenerational tension by exploring the changing temporalities of rural-urban migration in Ghana. Fueled largely by the mobility of younger and middle-age generations and a long-lasting rural-urban economic divide, more than half of Ghana's population is now living in cities, with many urban migrants no longer anticipating returning to their rural homesteads. At the same time, extending life spans and shrinking family sizes are making established rural-urban circulations of care, based largely on intergenerational obligations of kin, an increasingly scarce social resource. These changes are reconfiguring reciprocal care arrangements and the moral economies that sustain them, and they alter valuations of duration, loneliness, longing, and belonging. This paper relates the effects these changes usher through the lens of a family of six siblings who have all migrated out of their native village and their ageing parents who stayed put. It tracks the family's relations in time and over increasingly dispersed geographical distances to show how absence figures in normative reckonings of kinship, separation, and social reproduction. Drawing on selected family members' shifting experiences of proximity, attachment, and the felt lack thereof, it argues that disrupted expectations about the cyclicity of absence and return – expressed

through idioms of duration – reveal the moral and affective dimensions of the temporality of migration. Conversely, the family members' changing views of duration offer a nuanced reflection on how notions of time intersect with those of intimacy, affective distance, and the wherewithal of relatedness. Mapping and Moving: Inclusion, Incorporation, and Transition

12:15 PM - 1:45 PM TMCC - 603

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Michaela Knot

PRESENTER:

Michaela Knot ,Paulette Curtis ,Christina Owens (Florida State University),Sara Tahir

DESCRIPTION:

Identity is negotiated through place. This collection of papers addresses questions of moving through and knowing about the world, interrogating how inclusion is managed and problematized.

Mapping Disability Inclusion in Social Procurement and Canadian Municipalities: Procurement, the purchasing and act of buying becomes a complex nexus of trade agreements, legislations, policies and guidelines to help ensure fairness, transparency and accountability. The purchasing of goods, services and facilities in the public sector is both a highly structured and complex process across most public entities. Inclusive and social procurement seek to use these purchasing power to impact local communities and increase supplier diversity in creating increased social benefit. The international standards organization (ISO) has development guidelines on social and sustainable procurement, highlighting guiding principles and practices. Research in public procurement have addressed supplier diversity from specific equity seeking groups, with only passing mention towards disability inclusion and accessibility. We have undertaken a project to define and understand how accessible procurement differs from inclusive and social procurement in Canada and abroad. We have taken a literature review and policy review to scan 97 Canadian municipalities on their public facing documents related to procurement and accessibility strategies. Our results show that inclusive and social

procurement and frameworks are emerging and differ from accessible procurement. Our presentation will show how disability inclusion does or does not emerge in inclusive and social procurement policies. Despite the moral lens and moral economy around disability inclusion as 'the right thing to' there are significant systemic barriers for disability inclusion that relate to both accessible procurement of and accessibility in procurement. Research Team: Laura Inoue-Cheng, Andrew Livingston, Sheetal Kochhar, and Dr. Mahadeo Sukhai. Presenter: Michaela Knot

Transitory Spaces: Vietnam, Washington DC and the Societal Implications of the Post-Vietnam Moment: Based on dissertation fieldwork in Vietnam among American veterans of the Vietnam (America) War and an ethnographic and archival research project concerning objects left at the Vietnam Veterans Memorial in Washington DC, I analyze the ways that remembrances of the war - whether 'permanent' in the case of the memorial or 'transitory' in the case of veterans' returns to the battlefield - allow us to think about how actors use space to register social and political acts of resistance. . In these contexts, resistance takes multiple forms, as policy (e.g. the National Park Service's creation of the Vietnam Veterans Memorial Collection), as practice (e.g. the use of memorial spaces to protest the forgetting of POW/MIAs in Vietnam), as passing through (e.g. veterans tours of battlefields and concomitant claims to spaces that are no longer associated with war except through history and memory). These acts of resistance are impermanent, but have the potential to disrupt present-day complacency regarding the meaning and impact of significant historical events, from the present-day war in Ukraine to the COVID-19 pandemic. Presenter: Paulette Curtis

Linguistic Gold-Diggers, and Other Imperial Fantasies of White Male Victimhood in (Neo)Liberal Japan: While the trope of 'Asia as sexual playground' continues to shape many white men's discourse about their experiences in Japan, white migrants' celebrations of racialized heterosexual sexual access has an ambivalent underside. Echoing terms within the U.S.-culture wars, white men's active engagement in sexual adventurism in Japan's 'gaijin' (a.k.a. foreigner) bars often quickly slips into concerns about white victimization at the hands of a racialized, feminized Other. Drawing on a year and half of ethnographic fieldwork in Nagoya, this paper examines white men's anxieties about how objectifying intimacies threatened to write them into a corner and render them 'victims' of their own good fortune.

Extending Elizabeth Povinelli's theorizations in *The Empire of Love*, this paper explores how, for native English teachers in Japan, transactional labor value (as English teachers) often infiltrates leisure interactions and potentially undermines (neo)liberal ideals of love and friendship. For white migrant men, the very imperial structures that produce a privileged position from which to speak (in English) co-constitute a position from which to feel victimized. Through participant observation in Nagoya's bar scene and semi-formal interviews with the U.S. men I met there, I found that whether the intertwining of labor and intimacy was considered a problem depended on how people conceived of themselves as racialized, (neo)liberal subjects. Concerns about instrumentalized friendship and romance were alternately connected to fears of getting inadequate compensation for imperial privileges (and thereby failing as a self-responsibilized, profit-oriented neoliberal subject) and fears of endlessly inhabiting a one-dimensional stereotype when interacting with others (thus failing as a liberal individual). Within the context of the hypersexualized 'gaijin' bar scene, these (neo)liberal anxieties morphed into a contradictory mixture of resentment of Japanese English language learners (painted as linguistic gold-diggers) and contemptuous forms of linguistic exclusion, especially of Japanese men. Privilege and victimization intertwine and mutually reinforce each other in these narratives. The more one feels victimized, the more appealing reassertions of imperial hierarchies can become. In other words: when working within (neo)liberal interpretative frameworks, the privilege structures the victimization and forms a discursive feedback loop that legitimates further claims of imperial entitlement. Presenter: Christina Owens (Florida State University)

Negotiating personhood in the context of globalization and migration in urban Pakistan: Anthropological scholarship has a long history of debating the incommensurability of the Western notion of the individualized 'self' and non-western socio-centric notions of the 'person'. Within the tradition of the anthropology of South Asia, Louis Dumont's ideas about holism denied the possibility of a 'self' in Indian culture where the part was fully subordinate to the whole. These earlier anthropological works coincided with colonial framings of the 'family' as the basic social unit of analysis of Indian society, leading to the reification and institutionalization of the family in post colonial South Asia. This paper picks up this thread in contemporary South Asia to investigate how globalization and migration have caused disjunction

between space, place, culture, and identity in Pakistan. It looks to the contemporary globalizing world where precarity casts a long shadow on everyday life and international migration emerges as an integral avenue for economic and social mobility, particularly in the global south. It asks how do people in such contexts make sense of place, and in relation to it, make sense of self? Utilizing original data from fieldwork in urban Pakistan during 2021-22, this paper investigates how people in the city of Lahore make meaning of Pakistan and 'abroad' as place and what that means for their understanding of personhood and their capacity for social and cultural reproduction. DISCUSSANT:

Rebecca Bryant (Utrecht University)

DESCRIPTION:

Times of transition are moments of deep uncertainty and unpredictability that, at times, lead to profound social, political, economic, and cultural transformations and produce novel understandings of the past, present and future. Archives are not left untouched by these radical changes characterizing different states of in-betweenness, be they conflicts, political, economic and ecological crises, and even migration to name but a few. This trans-ness and the changes it produces are imprinted in the archives and their artifacts, redefining, throughout time, the connections between people, relations, and histories they contain. These critical moments of transition and ruptures punctuating contemporary times lead to the loss and destruction of archives, their dislocation and fragmentation, but also to their reimagination and recreation. These constant

mutations have a spatial as well as a temporal dimension tying together different geographies and scales. This process of redefinition gives birth to different configurations of the presence and absence inhabiting the archive and their relations to space and time. Yet, this metamorphosis does not only reshape its content but also the nature of the archive itself and the meanings people attach to it. Drawing on insights from different regions, this panel seeks to address how times of transition mutate regimes of production, circulation and use of archives and their objects. Through case-studies from the borders of Turkey, Lebanon, Canada, South Korea and Syria/Europe, the papers in the panel will examine films, legal documents, urban space, monuments, heritage, and digital media, among other things, as mutating archives in times of uncertainties to capture the features of these repositories as transient entities and their ties to people and histories. Focusing on the spatial and temporal reverberations of these critical times in the archive and its transformation, we ask: Which kinds of histories do the mutating archives contain or silence? To what extent are these histories disarticulated from state and (post)colonial forms of knowledge-power? And how, and by adopting which approaches, can we retrieve these histories and their transient nature? Engaging these questions in light of different approaches and the histories they unveil, this panel interrogates what constitutes 'the archive' as a site of transformation to rethink and, possibly move beyond, the relationship and tension existing between subaltern or dominant histories.

Scattered and Remade: Archives of Legal Documents Between Syria and Europe: Wartime Syria questions the idea of an archive as a physical repository of documents and a set of institutional practices safeguarding the past and present. Since 2011, Syrian state archives and legal documents have fallen victim to evacuation, destruction and plundering. Simultaneously, Syrians in the diaspora have been saving and retrieving copies of mundane legal papers originally stored in state archives as these documents are official proof of legal identities, education and relations to kin and land. These papers are fundamental in any migratory project where they are needed for numerous procedures which make them ingrained in the complex transnational circuits of people, objects, memories and relations within Syrian families. Indeed, these documents are also central in preserving a connection to family members in Syria and in the diaspora becoming a form of care from a distance. While these papers become a mode of care aiming at sustaining life worth and relatedness in times of war and migration; their journey across borders bears

traces of wartime in Syria and the discriminatory features of bureaucracy in Europe. The scattering and the remaking of these archives speak of the entanglement of moral economies with legal and bureaucratic regimes that reconfigure their usage and archival logic. This process also mutates the significance of these repositories giving rise to a different political history of the archive partly disarticulated from the state's forms of knowledge-power. Presenter: Veronica Ferreri (Ca' Foscari University of Venice)

An Archive of What?: The first scene of Cinema Fouad, a forty-minute documentary by Mohammad Soueid that was made for Lebanese public television in 1993, is of a woman brushing her hair. As she arranges a red headband on her forehead, the filmmaker asks her, "is this the headband you used to wear to go on suicide missions?" Without missing a beat, she answers, "no, this is the headband for going out at night (sahra). The headband for suicide missions is black." This is how we are introduced to Khaled al Kurdi, a young woman squatting a dilapidated building in a destroyed neighborhood in 1992 Beirut, two years after the end of the fifteen-year Lebanese civil war. In conversation with the filmmaker, she tells him, and the audience, her story—a story that includes her life as a trans child, her journey from Syria to Lebanon, how she joined and was a soldier in Fatah, and all about her hopes, desires, and love. Often touted as the first documentary film on a trans person in the Middle East, it is also an archive of civil war and of postwar reconstruction. This presentation will outline how we might approach this film through the prism of archival opacity, and suggest an ethnographic approach to historical multiplicity. Presenter: Maya Mikdashi (Rutgers University)

(Trans)forming Archives of Our Own: Activist Archives in South Korean Queer Movements: Queer movements have increasingly played out as legal campaigns in the past 15 years in South Korea. In sharp contrast to its early years from the mid-1990s to the mid-2000s, law has seemingly emerged for activists as the most potent means of politics. This paper examines how this historical legalization/judicialization has (trans)formed queer activist archives, broadly construed. How does the growing significance of legal agendas influence the activists' decisions on what to remember and how to communicate their institutional memories? Every political action of queer organizations accompanies the production of records. The records and historical materials are housed in different organizations' archives, often in fragmented ways. Queer activist archives, both in material and figurative forms, do not grant equal

access to every community member. The problems of equity and accessibility have severe implications, given that specific modes of citation and documentation can strengthen and shape the role of collective memory in political resistance. Queer activists' archiving projects are often less concerned about the quest for historical "facts" than the transformation of "experience" as a powerful historical resource for political agency. In other words, activist archives were planned and defined by their intended archive effects. By comparing how Korean queer activists archive legal records and other types of materials, I argue that their increasing engagement with legislative and judicial campaigns intensified the stratification of archival access and thus transformed the distribution of knowledge-power within the queer spaces for political emancipation. Presenter: Yookyong Im (Indiana University)

Sensing the Cloud: Archives and Anthropological Mediality: From galaxies to pixels, from flowing rivers to humming server farms, from family image archives to AI-generated compositions: the contemporary media environment is deeply relational, material, and political. In this paper I highlight the work of artists, ethnographers, and research-creation scholars who are interpreting the ways in which emergent anthropological medialities are sensorial and entangled with human agencies, fugitive archives, and capitalocene-era (Demos 2017) climate emergency. I look to the adjacent turn in anthropology towards multimodality (Westmoreland 2022) to argue for a greater orientation towards the mediality of new ethnographic forms to counter the problem of unreflexive techno-fetishism, or our bad habitus (Takaragawa et. al. 2018). I explore the massive proliferation of AI-generated images (Crawford and Paglen 2019), their socio-technical infrastructures, and ubiquity of cloud-based computing (Hu 2015) through a collaborative research-creation artwork that mutates and visualizes entanglements with archives and rapidly transforming anthropological mediality. Presenter: Kate Hennessy

Archiving the interfaith history of Antioch in the aftermath of a catastrophe: The earthquakes that struck Antakya (Antioch) in southern Turkey in February 2023 destroyed not only many lives and families but also the living memory of interfaith history in this ancient city. In a country that built its national identity on the expulsion or extinction of ethnic and religious others, this region was among the last pockets where different minority communities lived together. In the early 2000s, this diversity gained political recognition as part of Turkey's democratization efforts, which also reshaped the urban

landscape with concrete material forms such as monumentalized religious symbols and renewed architectural designs. Despite the contradictions that they register for Antakya's minoritized communities, the often-digitized visual memories of such material forms have come to serve as mutating archives of social cohabitation in the aftermath of the earthquake. This paper explores how members of Antakya's minority communities, now dispersed across the country, keep a record of their relationship to the city's interfaith history by charting the times of various historical ruptures onto their fragmented material traces. By examining the unfolding of this process in public life and the silences and absences that it reveals, this paper reconsiders minority lives as part of an extended temporality that binds centuries-long traditions within the everyday lives and collective memories of (once) coexisting communities. In so doing, it also highlights the limits and possibilities of these local archiving practices to trouble the dominant spatiotemporal configurations of national historiography. Presenter: Mahiye Secil Dagtas (University of Waterloo)

DISCUSSANT:

Rylan Higgins (Saint Mary's University, Department of Anthropology)

DESCRIPTION:

Medical anthropologists in the United States increasingly work outside of traditional anthropology departments and alongside researchers and

practitioners in other fields. Public health departments, medical schools, nursing programs, government agencies, technology companies and a wide array of nonprofits all serve as professional homes to anthropologists. Medical anthropologists also collaborate on research teams with clinicians of all kinds, policy experts, economists, bench scientists, and community advocates. There are many different ways for anthropologists in these settings to seek out funding, support, and collaborations that make research possible. Even though so much of what we actually do in contemporary research is team based and collaborative, our disciplinary traditions emphasize training individual ethnographers to work alone. This roundtable brings together a diverse mix of medical anthropologists who are doing anthropology on interdisciplinary teams and often with funding sources outside of those traditionally earmarked for anthropologists. Participants will identify and share strategies for forging collaborations, accessing funding, and navigating some of the epistemological challenges of working across disciplinary differences. As a roundtable discussion sponsored by Research in U.S. Health and Health Care (RUSH), a Special Interest Group of the Society for Medical Anthropology, this session will invite participants to consider their roles in reinforcing and transforming health care systems, institutions, and intellectual landscapes. Participants will consider the following questions, among others: What are tips to look for when fielding requests to join a team or when trying to create an interdisciplinary team? Are there certain kinds of collaborations or research that you actively seek out or avoid? What areas of research are particularly urgent or in need of anthropological perspective within US health care? How can we make anthropological questions and methods legible and fundable to those in other fields? How do we deal with biases against qualitative research on our teams and with grant reviewers (i.e. that anthropological research is not generalizable, just anecdotal, is primarily good for suggesting future research using quantitative methods, etc.), and communicate the benefit of ethnographic approaches to interdisciplinary research? What does it mean to be the 'qualitative person' on the team? What funding programs and grant mechanisms are particularly open to medical anthropology research?

Power/Plants: Phytocommunicative Transformations of Authority

12:15 PM - 1:45 PM TMCC - 501 A

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Karl Swinehart

CHAIR:

Karl Swinehart

PRESENTER:

Paja Faudree (Brown University, Department of Anthropology), Karl Swinehart, Becky Schulthies (Brigham Young University, Department of Anthropology), Kathleen Riley (Rutgers University, New Brunswick, Department of Anthropology), Anna Riley-Shepard

DISCUSSANT:

Anna Browne Ribeiro (University of Louisville), Ingrid Hall (Université de Montréal)

DESCRIPTION:

This panel examines cases of plant-people relations within competing regimes of authority. The status of knowledge about the cultivation and consumption of plants, or phytocommunicability (Schulthies 2019, 2020), often concerns diverging claims of legal, religious, and scientific authorities. Traversing and negotiating rifts across what different communities deem alternately legal/illegal, obligatory/forbidden, sacred/profane, these conflicts take on varied forms and scales, for example: The cultivation of cannabis, coca, opium and other plants deemed alternately illegal narcotic or valued medicine has been a focus of often violent state/community conflicts across the globe. Access to the plant life of forests and parks may be foraging or theft, gardening or land invasion, depending on differing frameworks for plants, property, and the public. Both assertions of intellectual property within the commodification of plant derivatives by pharmaceutical companies and the expansion of monoculture agribusiness have set private large commercial interests at odds with community relationships to plants and the biomes that sustain them. This panel also considers how plants come to do more than mediate, but also intervene in these affairs. This panel also scrutinizes the roles anthropology, linguistics, and other human sciences have played within such disputes. Within linguistics, for example, as horticultural and botanical knowledge lexicalized within Indigenous languages refer also to threatened biomes and even ones that have disappeared (Muehlmann 2013), how have plant-human relations figured into language reclamation projects? When the discipline of

anthropology has engaged in phytocommunicative acts, how have these aligned with, extended or, alternately, restricted or even erased, other sources of phytocommunicative authority? Muehlmann, Shaylih. 2013. *Where the River Ends: Contested Indigeneity in the Mexican Colorado Delta*. Durham: Duke University Press. Schulthies, Becky. 2019. 'Partitioning, Phytocommunicability, and Pieties,' *Anthropology Today* 35(2): 8-12. Schulthies, Becky. 2020. 'Phytocommunicability and Cross-Species Sociality,' *Ethnos* 86(1): 1-8.

The "Discovery" of *Salvia Divinorum*: Prosthetic Expertise and Narrative Violence: Gordon Wasson -- professional banker and amateur ethnobotanist -- is widely credited with "discovering" *Salvia divinorum*, a psychoactive variety of mint. But his boastful and widely repeated claims do violence to *salvia's* full history. Indigenous people from Mexico's Sierra Mazateca have grown, used, and built community with *salvia* for centuries. Indeed, because the plant is endemic worldwide only to the Sierra, its residents are directly responsible for its very existence, having protected *salvia* and knowledge about it from violent state repression. Nevertheless, public histories of *salvia* dispense with that history in a sentence or two, detailing instead the recent history of the plant's scientific examination and conversation into a global commodity. Central to that narrative is Wasson's "discovery," a claim based on what I call his "prosthetic expertise," which depended upon harnessing and claiming as his own the knowledge of Indigenous people, especially Indigenous women. Wasson's narratives of "discovery" -- like so many other tales of colonial possession and scientific advancement -- simultaneously erased their contributions and disqualified them from making similar claims of their own. As a result, sacred, collectively-held knowledge of *salvia* became relocated in secular science and recast as individually owned, commodifiable property -- whether in the form of intellectual property rights undergirding pharmaceutical patents or the commercialization of *salvia* extracts by cyber vendors. Furthermore, the narrative dynamics outlined here are not unique to the case of *salvia* and call for a profound rethinking of how we understand histories of scientific knowledge and claims to scientific advancement. Presenter: Paja Faudree (Brown University, Department of Anthropology)

Peyote Problems: Anthropological Authority, the Native American Church, and 1960's Counterculture: Anthropologists studying the use of peyote among

plains Indians and the Native American Church were recruited both by peyote practitioners and the US state to participate in legal debates over whether peyote was a narcotic or sacred medicine. These anthropologists found themselves in a curious situation with the rise of 1960s counterculture. While anthropologists actively advocated for the legalization of peyote for the Native American Church, they also found themselves forced to position themselves before a growing youth counterculture interested in psychedelics. Countercultural non-Native psychedelic enthusiasts presented both a growing audience for ethnological research, but also one whose reputation posed potential challenges to the scientific respectability to the field of anthropology. Triangulating between these differently positioned communities, this paper draws on correspondence between Beat poet Allen Ginsburg and the anthropologist Weston La Barre, author of "The Peyote Cult," and LaBarre's writings on peyote and the Native American Church to examine the stakes involved in anthropology's role as mediator between Native peoples' religious practices, the US state, and non-Native countercultural psychedelic enthusiasts. Presenter: Karl Swinehart

Making Ulema/Scholars Through Phytocommunicative Action : In recent decades, discussions about plants have been an important element in debates about expertise and scholarly authority in Morocco. What kinds of knowledge and training qualify one to issue fatwas (non-binding religious instructions) about appropriate plant-human-Allah relations? Is it training in the religious sciences or training in the natural sciences that gives one appropriate expertise? And what roles do plants inhabit in the making of scholarly authority? In this paper, I analyze the kinds plant-human-deity communicative and relational ideologies embedded in arguments about and uptakes around who can be a Muslim scholar ('alim) and issuer of fatwas (mufti). I also trace how phytocommunicative ideologies of plant agency and action debated in this domain echo or fail among plant-based practitioners engaging in Muslim therapeutics and prophetic medicine. Presenter: Becky Schulthies (Brigham Young University, Department of Anthropology)

Becoming Otherwise: Multimodal (Inter)Actions in the Anthropocene: Much interdisciplinary ink has been spilled over examining the Anthropocene, but most scientists now agree that although life emerged out of an entangled web of interspecies relationships, human manipulation of the threads may lead soon to the annihilation of all. This paper presents the authors'

engagements in several multimodal and multisensorial forms of plant-human (inter)activism directed toward unleashing global awareness and transformation. We also analyze some of the contradictions and barriers encountered even in these modest efforts at contributing to planetary health and justice. The activities include corporate ESG projects (e.g., green walls), farm-to-school programs (e.g., edible classrooms), a plant-human poetry journal and some rewilding-the-body dance research, and finally a sound-and-light botanical exposition that helped visitors imagine how plants transmit and interpret signs. In each case, the intention has been to slow down and sensitize humans to other ways of communicating, to de-atomize and declassify perception, to decentralize and deconstruct hierarchy, in short to accept entanglements and relinquish top-down control. However, each of these projects was in varying ways enmeshed in institutions (corporate and non-profit, governmental and educational) and so constrained by designs based on rational efficiency and speed, impact-driven strategizing and top-down decision-making. Tension and disruption resulted in each project from the conflicting values, voices, and visions of artists and scientists, teachers and local leaders, CEOs and NGO activists. Somehow, we keep emerging from these activities with “hope” -- that (inter)activist’s dream -- that humans are becoming otherwise in “the art of living on a damaged planet”. Presenter: Kathleen Riley (Rutgers University, New Brunswick, Department of Anthropology)

Becoming Otherwise: Multimodal (Inter)Actions in the Anthropocene: Much interdisciplinary ink has been spilled over examining the Anthropocene, but most scientists now agree that although life emerged out of an entangled web of interspecies relationships, human manipulation of the threads may lead soon to the annihilation of all. Sensory Ethnography

12:15 PM - 1:45 PM TMCC - 715 A

Oral Presentation Session

REVIEWED BY:

American Ethnological Society

ORGANIZER:

David Howes (Concordia University, Department of Sociology & Anthropology)

CHAIR:

Alexandrine Boudreault-Fournier (University of Victoria, Department of Anthropology)

PRESENTER:

Kathryn Geurts (Hamline University), David Sutton (Southern Illinois University, Carbondale, Department of Anthropology), Gili Hammer, Timothy Malefyt, Muhammad Kavesh (Australian National University), Leonidas Vournelis (Baruch College, Department of Sociology & Anthropology)

DESCRIPTION:

Sensory Ethnography Session Abstract Organizer: David Howes, Concordia University, Montreal Chair: Alexandrine Boudreault-Fournier, University of Victoria The sensory turn in the anthropology of the 1990s introduced the notion of 'sensing cultures,' which took over from the preoccupation with 'writing culture' that prevailed during the 1980s, and substituted the methodology of sensory ethnography, or 'participant sensation' for that of participant observation and textualization. Attention came to focus on 'the sharing of the sensible' (le partage du sensible) across cultural borders, as François Laplantine put it in *Le social et le sensible* (2005) – that is, as anthropologists, 'we observe, we listen, we speak with others, we partake of

their cuisine, we try to feel along with them what they experience,' and join with them in 'making sense' of that experience. This session brings together two of the pioneers of sensory ethnography (Sutton, Geurts) with practitioners belonging to the second generation (Malefyt, Hammer, Boudreault-Fournier) and the next generation (Vournelis, postdoc Kavesch). It traces the expansion of doing sensory ethnography into the domains of ethnopsychology and disability studies; experimentation with diverse media such as film (or 'multimodal anthropologies'); and, on to marketing and multispecies anthropology. As the papers in this session demonstrate, the progressive sensualization of anthropological theory and multiplication of the modalities of ethnographic inquiry has challenged many of the presumptions of Western (academic) psychology; rendered food studies more tasteful and food consumption (potentially) less wasteful; and, disclosed heretofore unsuspected dimensions of and/or to human perception, such as extra-sensory communication in a deaf-blind theatre, and the sonority of aquatic worlds. The latter (acoustic) opening is exemplified by Boudreault-Fournier's current research-creation project entitled 'Listening to a Sea of Change: Underwater Cinematographic Explorations,' which takes issue with Jacques-Yves Cousteau's 1956 film (codirected by Louis Malle) *Le monde du silence*. We now know that aquatic worlds are actually full of sounds, even though the human ear is not adequately equipped to perceive them. In her cinematographic project (which involves making underwater sound recordings in various locations, and engaging in multiple sessions of listening), Boudreault-Fournier shows how listening to the sounds of the ocean can build new forms of relationships with the aquatic worlds, a relation that is not easily accessible to humans without the mediation of technologies. She also brings out the ways in which sounds and images are experienced underwater, creating new forms of knowledge and sensitivity to the changing conditions of the ocean. Bibliography: Howes, *The Varieties of Sensory Experience* (1991); Sutton, *Remembrance of Repasts* (2001) Geurts, *Culture and the Senses* (2003); Hinton, Howes and Kirmayer, 'The Medical Anthropology of Sensations' (2008), Hammer, *Blindness Through the Looking Glass* (2019); Howes, *The Sensory Studies Manifesto* (2022); Vannini, *The Routledge Handbook of Sensory Ethnography* (forthcoming)

Toward an African Sensory Psychology : A West African (specifically Anjo-Eve) cultural psychology supports an understanding of the bodymind that diverges from that of mainstream Western (Global Northern) psychology

and neuroscience. In stark contrast to the neurological reductionism of the latter, an Anjo-Eve cultural model of 'how we know what we know' is rooted in their esoteric phrase *seselelāme* which I have glossed as bodily ways of knowing. It encompasses more than the canonical five modalities -- and sensation itself, for Anjo people, is deeply implicated in personhood, relationality, well-being, and morality. Conducting sensory ethnography in the 1990s, my observant-participation involved 'being of two sensoria' (Howes 1991), intent listening for sensory-rich language and remarks, and interviews to excavate reflection about ethno-psychological phenomena. But I lacked the neat rubric of "sensation schemas, sensation interpretants, and sensation scripts" that we now possess as part of our toolkit for a 'medical anthropology of sensations' (Hinton et al. 2008). None the less, my Anjo colleagues and I constructed their sensorium and demonstrated how it informs child rearing practices, cosmological beliefs, understanding of what it means to be healthy and ill, and so on. Two of the more highly valued senses among Anjo people include proprioception-kinesthesia and balance (or the vestibular sense) – neither of which was in my list of five to investigate when I first arrived. This paper will argue for the integral relationship between a sensorium and ethnopsychology, thereby underscoring the vital need to include consideration of Global South societies and epistemologies in the making of any claims about the universality of the brain sciences and psychology, following Boaventura de Sousa Santos' lead in *The End of the Cognitive Empire: The Coming of Age of Epistemologies of the South* (2018). Presenter: Kathryn Geurts (Hamline University)

Is Pesto the Pineapple Pizza of Greece? (with Leonidas Vournelis): What is more typical in images of the Mediterranean Diet than basil as a key ingredient flavoring pasta, salad and other "fresh" dishes? And yet, one rarely finds basil in the restaurants and home cooking of Greeks. Why don't (most) Greeks eat basil, even though it is ubiquitous in daily life and much beloved? Why does Greek cuisine with all its regional diversity historically afford little if any space to basil? In exploring this puzzle, we treat basil not as a flavor to be abstracted and studied in neurogastronomy laboratories with their accompanying "neurological reductionism," but rather as a total sensual fact, an activity embedded in many and diverse contexts. Approaching experience as inherently synesthetic, tied to a larger sensory regime, and bound up in daily practice, we explore the way the senses make a difference in Greek categorization of the edible and the non-edible. The power of the senses, never not wedded to emotions

and memories, create an experience of intensity as part of the effectiveness of ritual, and which provides the material with which identities are created and reproduced. Sensing is cultural work that makes the world sensible, and sense-making is a social activity enabled by historical and cultural contingencies. Greek experiences of basil can be traced to childhood memories, kinship, death rituals, church blessings, historical consciousness, and musical experiences, and rarely as a taste to be consumed. Thus, we take Simmel's prompt ("That we become involved in interactions at all depends on the fact that we have a sensory effect upon one another") to trace the many sensory effects that basil provides that make up Greek daily, multitemporal interactions. Presenter: David Sutton (Southern Illinois University, Carbondale, Department of Anthropology)

Extra-Sensory Communication in a Deaf-Blind Theater: Ethnography of Sensory Diversity: This paper focuses on what I call "extrasensory communication" in a deaf-blind theater, exploring the potentials, as well as limitations, of negotiating diversity and aspiring for socio-political change when those goals are contextualized in disability culture and intertwined with the sensory body. Within the field of disability culture, this paper focuses on the case study of a multi-sensory cultural center located in Jaffa, Israel, which consists of a sign-language coffee shop, a dark restaurant, and a theater bringing together deaf, blind, deafblind, hearing, and seeing performers, employees, and audiences into shared social, cultural, and educational encounters. The theater offers an opportunity for an analysis of a multi-sensory dialogical performance as expressed in the artistic means employed on stage (e.g., utilizing spoken language, sign language, subtitles, video, original music scores, audio description, and even scents), as well as in the daily interactions among participants. Based on a two-year anthropological study I conducted in collaboration with an Israeli-sign-language speaker research assistant, the paper will present the varied ways multiculturalism and pluralism based on sensory-physical-social differences can be promoted or restricted, focusing on the phenomenon of "extrasensory communication" – the way the shared work of people of different abilities and modes of communication engenders an expanded use of and connection to the senses. This enables not only bridging different cultures, languages, and identities, but also boundaries of ability and disability, merging the typically segregated sensorial mechanisms of sight, hearing, touch, and movement. Presenter: Gili Hammer

How Sensory Strategies Can Mitigate Food Waste and Help Solve the Dilemma of Hotel Hospitality: In 2017, I was hired as a consultant by the World Wildlife Fund and a conglomerate of hotel chains to propose and experiment with ideas for minimizing hotel food waste. 40% of food is discarded while alternative ways of utilizing guest food go unrecognized. My objective was to create new awareness and suggest measures within the food distribution process of hotels to curb wastefulness. I interviewed chefs, hotel managers, kitchen workers and hotel guests about the hotel food experience. However, when researching the topic, I encountered an unexpected dilemma: food is the primary means by which hotels market "hospitality" to guests. Dining buffets popularly display an abundance of food choice to guests, yet they also represent the most wasteful format: how could the hospitality industry reduce or limit a pleasure that was promoted as a benefit? Nevertheless, I discovered that a sensory strategy applied to the dining experience could subvert people into consuming less. Sensory strategies can subtly discourage guests from wasting food: using heavier and/or wide rimmed plates set kinesthetic and visual boundaries; food cooked in front of guests enhances enjoyment while reducing excess. These tactics help mitigate food waste and limit surfeit, while not interfering with the marketing dictum of hospitality that attracts guests. This paper's premise is to advocate sensory ways to craft food experience journeys that appeal to consumers' emotional concept of free choice, yet also help hotel management act responsibly to encourage moderation. Presenter: Timothy Malefyt

Rethinking Multispecies Engagement Through Sensory Ethnography : The association between multispecies anthropology and sensory ethnography foregrounds the critical role of sense-based methodological praxis that offers novel possibilities for detecting and understanding the nuances of interspecies connectedness. Moving beyond any particular sense to unravel sensorial potentialities, including how the touch invokes feelings, the sight that generates visions, the hearing that transmutes into deep listening, the taste that develops companionships, and the smell that brings back memories, a multisensorial engagement allows us to open new ways of understanding relationships that cross species boundaries. This sense-based approach carries the potential to generate new modes of knowledge-making, foster interdisciplinary collaborations, and rethink more-than-human futures. Presenter: Muhammad Kavesh (Australian National University)

Is Pesto the Pineapple Pizza of Greece? (with David Sutton): What is more typical in images of the Mediterranean Diet than basil as a key ingredient flavoring pasta, salad and other “fresh” dishes? And yet, one rarely finds basil in the restaurants and home cooking of Greeks. Why don’t (most) Greeks eat basil, even though it is ubiquitous in daily life and much beloved? Why does Greek cuisine with all its regional diversity historically afford little if any space to basil? In exploring this puzzle, we treat basil not as a flavor to be abstracted and studied in neurogastronomy laboratories with their accompanying “neurological reductionism,” but rather as a total sensual fact, an activity embedded in many and diverse contexts. DISCUSSANT:

Susan Brownell (University of Missouri, St. Louis, Department of History)

DESCRIPTION:

Sport, as a global institution, is in transition. State actors and transnational sporting organizations maintain the trend of hosting ever larger, more extravagant, expensive, and environmentally costly mega-events (i.e., The World Cup, The Olympic Games). National governing bodies of sport are struggling to address harm and abuse within their organizations and on the fields of play (CBC Sports 2023; BBC News 2023). Grassroots sport collectives become pitted against transnational governing bodies seeking transitions to more just, fair, equitable, and inclusive ways of conducting and participating in sport. Simultaneously, scholars have long shown how sport reproduces gendered, racialized and ableist inequalities, leading some to call for 'the end of sport.' The movement to 'transform sport' (Carter et al. 2018) targets the hierarchies and institutional structures in contemporary sport by unpacking the power relations which perpetuate discrimination within it. We invite participants to consider the numerous transitions happening both of sports and in sports. As scholars, themes of becoming, in-betweenness, and liminalities all open space for a radical reshaping of our understanding of the embodied practices (Crawley 2021; Rana 2022), structures (Besnier et al. 2021), and ways knowledge is produced in sport. As such, this panel explores transitional approaches, which offer multiple paths forward in the transformation of sport to effect positive change in society. Panelists are encouraged to explore the following sporting 'transitions', among others: - Sport transitions for and due to climate change - Transitions through life stages (childhood, adolescents, youth, adulthood) - Transitions from a hyper-commercialized globalized sporting sphere to local and grassroots sport - Transitions from and between indoor and outdoor sporting activities - Transitions to equitable gender and racial inclusive sports - Transitioning from a win-at-all-costs model that perpetuates abuse

and harm in sport toward embodied activities that center well-being

Becoming in Movement: Rethinking 'Play' and 'Sport' through an Ethnography of Physical Education: This paper draws from my mid-stage PhD research on the 'ordinary ethics' (Lambek, 2010) of Physical Education (PE) at a secondary school in Aotearoa New Zealand, to interrogate the conceptual boundaries of 'play' and 'sport'. Anthropology recognises in play 'not so much an activity separate from the world but a disposition toward the world' (Besnier et al., 2018, p. 28) that 'coalesces the emotional, cognitive, and moral dimensions of existence into sharp, distilled instances' (p. 34). In games, we see the structures of collective action that channel this creative force. Games bracket and extract experience from everyday life by subjecting it to explicit rules and conventions. They offer metacommunicative frames, conduits of hermeneutic engagement with cultural scripts through which the individual discovers a character and disposition. To what extent can this framework describe PE as an autopoietic space for youth subjectivities? Although the pedagogies informing the curriculum acknowledge the ontogenetic dimension of play, in Aotearoa, PE has progressively transitioned toward a 'sportified' model and is increasingly externalised to outside providers. This process has political ramifications extending both towards the historical ties between sport and colonialism and across the present configuration of an industry that commodifies the athletes' bodies and circulates racial and gender stereotypes. Through an ethnographic engagement with the phenomenological realities of students and teachers, I try to complexify the theoretical relationship between play and sport. I locate their tension within the performative architectures through which the subjects' paths of 'biosocial becoming' are woven (Ingold & Palsson, 2013).

Presenter: Adriano De Francesco

'Banter is a part of swimming': transitional forms of linguistic play: For competitive youth swimmers in England, Brexit, the current European energy crisis, the closure of recreation centres during COVID-19 lockdowns, and Swim England's mismanagement of abuse and child welfare complaints from affiliated competitive clubs have all contributed towards a transitional shift in swimming patterns, places, and practices. For youth suddenly caught out on 'dry' land, transitioning from highly sociable aquatic spaces to isolating at-home training regimes forced a transformation in both athletic practices and self-formation. Similarly, accusations of welfare

mismanagement by the national government body, Swim England, have increased focus on well-being, safeguarding, and the agentic cultivation of well-being by youth within competitive swimming regimes. Youth are already situated within transitional worlds (changing schools; changing bodies; life-stage transitions; qualifying for the next level of competition; etc.) with junctures and 'disjunctures' (Amit 2015) forming the background of their lifeworlds. Within this turbulent environment, I trace transformations in sociability, banter, and physical practices of girls and boys enrolled in a competitive swimming squad. In learning the social and linguistic skills to banter, or in learning ways of sensing their bodies and environment in order to enact fast swimming, youth have the capacity to provide meaningful contributions to transforming the governance of their squad, club, and sport at large.
Presenter: Sean Heath (University of Leuven)

Pickleball in Transition: The Liminality of Potential and Promise: Pickleball, once a sport relegated to the geriatric community, has now become America's fastest growing sport. The sport saw a surge of enthusiasm during the COVID-19 pandemic, which grew the sport exponentially increasing the players. As a saying goes the sports is "easy to learn, difficult to master" and has a low field of entry in terms of equipment and access to public space. The sport has generated interesting debates regarding the transition from pastime to professional leagues, from a sport for the retirement communities to now recruiting young players. In this birth of a sport popularity, the transition's the wave of popularity an offer insights into how a sport can become inclusive or exclusive to communities, and how larger sports governance addresses investment and the sports future. This paper examines the current state of affairs of pickleball globally and its future as a potentially inclusive, far-reaching sport. Using Besnier et. al's (2018) call to use sports ethnography as a way to analyze the local, national and global as mutually constituting institutional and personal networks of unequal power, I will discuss how this sport's origins create a new pathway for sports going forward.
Presenter: Gwyneth Talley (American University in Cairo, Department of Sociology, Egyptology and Anthropology)

Changing the Field? Concepts of change in local and global Sport for Development and Peace: In the recent past, numerous review articles covering the academic research on Sport for Development and Peace (SDP) have been published. While this suggests that a rapidly growing field of study is reaching a point of critical mass, efforts to cohere the field have had limited success.

Though common ground has been found in critically assessing the potential of sport in development contexts, the idea that sport can incite positive social change remains under-theorised, with limited exploration of change by SDP scholars. So while many researchers have shown there is limited evidence sport affects development outcomes, these same scholars remain unsure how sport could be better employed for social change. Reviewers note that future examinations of SDP must tie together micro, meso and macro level analyses, with some suggesting that examining SDP in isolation is itself problematic, as SDP must be understood in connection to broader issues. By focusing on SDP in specific settings, this scholarship ignores the complex contexts within which sport is mobilised for development and peace, and the discrepancies in notions of change that exist at local, national, and international level. In sum, researchers of SDP that wish to substantiate robust theory about the link between sport and change must assess change within and across contexts. Consequently, in this paper I review the various concepts of change found in specific SDP contexts, what these say about sport as a social phenomenon, how they are mobilised by individuals, and how successful these may be. I will draw together the ideas of change mobilised by practitioners, participants, SDP organisations and in SDP research, and also assess how these ideas change when mobilised at the local, national, and international levels. In doing so, I highlight that cohering the field of SDP requires not only examining the connections between SDP contexts, but in understanding the ideas of change that support such activities. Presenter: Ben Hildred (Durham University, Department of Anthropology)

Socioecological predictors of sport participation among U.S. children: Sport participation is posited to promote physical and mental health, to reduce potential for chronic disease, and to aid in development of interpersonal skills. Yet, many young people in the U.S. do not participate in sport and have limited physical activity, with attendant negative effects on health and wellbeing. Models of health derived from socioecological frameworks suggest that factors from across the systems in which children are embedded may influence sport participation. Using this approach, we here evaluate the variables that predict involvement with sports among U.S. children (<18 years old). Our sample is derived from the 2020 National Health Interview Survey dataset, the last time sport participation was included in the survey. Results from a logistic regression indicate that a wide range of factors influence whether a child is engaged in organized

physical activity. Specifically, age, sex, race, parent education, family income, and region are key determinants. Further, our findings suggest that sport participation declines precipitously with age, but parent education and income may be important buffers. Reduction of financial barriers across childhood, but particularly in adolescence, may be key to increasing sport participation and amplifying the lifelong benefits associated with physical activity. Presenter: Courtney Helfrecht (University of Alabama, Department of Anthropology)

Experiences of psychosocial stress during the COVID-19 pandemic in US college students: Organized sports are a vital source of physical activity and socialization for US youth, and participation is connected to physical and mental health benefits. Notably, many proponents believe these benefits persist, improving well-being into adulthood, and they support and normalize high investment in these activities. However, whether these benefits continue into young adulthood independently from related social factors, if they differ between sports, and how organized sports compare to non-organized activities is unclear. This study uses a mixed-methods approach to investigate these questions in a sample of US college students (N = 197) recruited throughout the COVID-19 pandemic (Fall 2020 – Spring 2022). Participants reported the sports they participated in growing up and when and how long they participated. They also responded to survey, free-response, and interview questions about their childhood levels of psychosocial stress, their current psychosocial stress, current physical activity, and how the COVID-19 pandemic impacted their lives. Preliminary analyses suggest that longer, more regular participation in organized youth sports predicts lower psychosocial stress during the pandemic but that this association is mediated in part by current membership on an NCAA sports team. My presentation will delve more deeply into these results and critically assess the view that organized youth sports inherently protect individuals' well-being as they transition into adulthood and face novel challenges in new ecologies. Further, I will discuss how the challenges of the COVID-19 pandemic offer a unique insight into understanding the impacts of organized sports on young adults. Presenter: Robert Tennyson (University of Washington)

[Synaesthetics- An Anthropology Beyond the Senses](#)

12:15 PM - 1:45 PM TMCC - 604

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Roshanak Kheshti ,Salar Mamani (University of California, Berkeley),William Scarlett

DESCRIPTION:

This panels uses the term 'Synaesthetics' to refer to sensory fields that exceed the senses as well as sense-making – that which overflows the boundaries of an orderly aesthetics, or normative sensings, to generate openings and exposures through bodies, prostheses and networks, creating new possibilities of response, of reception and emission, and hence of relationality into existence. If the senses have a history, as Marx famously declared, we approach synaesthetics as a field in which one can cultivate or entrain the sensorium otherwise to not only sense beyond the discreteness of the five senses, but also to to emit and respond beyond or below our levels of awareness in registers that we ourselves cannot fully perceive but may nevertheless cultivate by responding to others. Each of the papers will explore ways in which synaesthetic encounters can bring each other and the world in to new or alternative modes of existence.

“We See with the Skin”: Zora Neale Hurston’s Synesthetic Theory: Zora Neale Hurston opens her short story “Black Death” by writing: “We Negroes in Eatonville know a number of things that the hustling, bustling white man never dreams of... He is a materialist with little care for overtones. They have only eyes and ears, we see with the skin.” Hurston’s localization of this mode of perception on the largest organ of the body presents seeing with the skin as not only a Black sensibility but also her methodology thus framing Hurston’s promiscuous use of recording technologies (like audio recording, film, photography, and writing) as prosthetic organs that exceed the limits of “writing fieldnotes” otherwise standardized among ethnographers of her day. Drawing on archival research performed over the course of ten years I examine Hurston’s diverse body of work attending to how synesthesia functions for her throughout. What I contend is that hers is not a salvage methodology, it is an encrypted and improvisational performance ethnography toward a theorization of Black life. As a neurological phenomenon, synesthesia is described as a crisscrossing of sense perceptions but prior to cognitive science’s application of the term, synesthesia was used to describe the instinctive means by which bodies

perceive by a number of philosophers. In Hurston’s work, synesthesia represents a social and political condition, one in which Black skin can see. Hurston’s synesthetic theory reveals the fundamentally flawed premises of a deracinated organization of modes of perception; for her, to “see with the skin” is a theory and praxis of Black aesthetics. Presenter: Roshanak Kheshti

Crude Inhale and the Toxic Synesthetic: Toxicity is not often described as an aesthetic experience because toxins revel in our base senses. They mix with our fluids, with mucus, with saliva, and slide into the intimate organs of our bodies. Toxicity is a good place to explore aesthetics because it brings the distancing mechanism of our sense organs into crisis. When we inhale toxins, our sense organs become enmeshed with the outside world, a world warmed in the heat of fossil fuels. In this paper, I offer two proposals: First, I read intoxication as a synesthetic experience where sense organs become bound with toxins and their distinct delineations become impossible to hold. Second, I propose that toxicity not only unsettles the coherence of aesthetic categories but decenters the human as the site of sensory perception. As Katherine Hayles has provocatively asked, “What would it mean to imagine an aesthetics in which the human is decentered and inanimate objects, incapable of sense perception as we understand them, are included in aesthetic experience?” What would happen, in other words, if we thought (syn)esthetics through the materiality of a substance such as crude oil? Can crude oil, as a sentient, living matter, enable aesthetic knowledge in such a way that breaks down the boundaries between the human and the nonhuman, and can toxic materials such as oil teach us something about how we sense ourselves in the world? Presenter: Salar Mamani (University of California, Berkeley)

Being There and Not There: Making Presence in Virtual Reality and Forest Therapy : 'Presence' is a central concept and experience in social contexts ranging from virtual reality research to mindfulness practices and ecology. Often described as the experience of 'being there,' presence is a cultural category referring to multisensory phenomena that often emerge where the boundaries of the 'real' are disrupted through sensory displacement into some kind of 'elsewhere.' Presence commonly describes the feeling of reality, especially where it goes beyond what is commonly defined as real. This research approaches presence not as primarily a technological phenomenon but as a sensory and cultural one that expands latent sensory and conceptual

ambiguities around the real. It explores how presence is currently being cultivated, described and experienced in VR research and Forest Therapy as liminal states of being there and not there, by immersing participants in synaesthetic environments between embodiment and disembodiment, the material and the immaterial, reality and illusion. DESCRIPTION:

In the parlance of shipping and transportation industries, 'the last mile' is the last leg of a journey from a hub to a final destination—the leg that is typically the most expensive and the most difficult. The economic inefficiency of the last mile poses financial and logistical problems not only for postal services and supply chain managers, but is also a profound challenge to the extension of electricity networks. Around the world, people have constructed an astounding variety of political, technological, and economic forms to solve or overcome the problem of the last mile in electrification and to access and finance rural energy services on the margins of infrastructural networks. Such energy institutions—some in existence since the 1940s, others only nascent entities—include rural electricity cooperatives, mini-grid authorities, utility boards, village

electricity committees, and savings groups. The function of these groups is to mobilize capital for the extension of energy services, establish and enforce regulatory norms, oversee services, and distribute and redistribute their costs. In doing so, they serve not only vital economic and technological roles, but also often fraught social and political ones. This panel aims to advance anthropological conversations about energy, infrastructure, and the social construction of rural worlds. Building on theorizations of infrastructure (Anand, Gupta, & Appel 2018; Harvey, Jensen, & Morita 2017; Simone 2012; Star 1999); energopower (Boyer 2014); cultures of energy (Strauss, Rupp, & Love 2013) and energy frontiers (Degani, Chalfin, & Cross 2020), this panel theorizes energy practice and governance in the social space of 'the last mile.' Drawing on case studies in both East Africa and North America, it asks: What political, social, and economic forms and practices have emerged to contend with the challenge of the last mile? How have these changed over time? How do these institutions mediate access to energy and distribute and redistribute its costs? How do different social actors understand, explain, and justify selective energy service and/or differentiated pricing systems? Who is involved in the governance of collective energy resources and how do people obtain or contest this authority? And how do last mile institutions arbitrate or prompt social debates about inequality, consumption, citizenship, and/or rights?

Tensions of Affordability and 'Non-emitting' Energy on New England's Rural Edge : This paper explores how rural polities navigate thorny, sociotechnical dilemmas involved in equitable transitions to renewable energy. It does so through ethnographic and documentary analysis of unsuccessful campaigns to divest municipal utilities in western Massachusetts from nuclear energy. This rural region largely receives electricity through for-profit utilities servicing millions of accounts across New England. However, six towns operate municipal electrical utilities established in the late-19th and early-20th centuries, with each servicing between 460 and 26,000 accounts. With energy prices spiking globally, Massachusetts' for-profit utility customers have shouldered up to 60% rate increases. Meanwhile, municipal utilities' rates have remained relatively low. Consistent rates stem from the small towns holding ownership stakes in hydroelectric dams and the two remaining nuclear power stations in New England. Whereas state energy transition requirements bind for-profit utilities to achieve 100% 'renewable' energy by 2050, municipal utilities are required to achieve 100% 'non-emitting' energy—a category that adds nuclear

and hydroelectric sources alongside renewable solar and wind. Despite pressure from renewable energy advocates to voluntarily divest from nuclear energy and its environmental risks, municipal utility boards have collectively maintained reactor contracts. Their decisions cite renewable energy rates that would unfairly burden low income and elderly neighbors. This paper thinks from the tensions between environmental and economic justice embedded in attempts to balance carbon emissions, radioactive consequences, and energy access. It argues that calculations made by last mile institutions like municipal utilities do not merely affect geographically limited constituencies. They also shape operations of the broader grid. Presenter: Nicholas Caverly (University of Massachusetts, Amherst, Department of Anthropology)

Belling the Cat: Rural Electric Cooperatives, Race, and Democratic Governance in the Deep South: Rural electric cooperatives—also known as electric membership corporations, or EMCs—emerged in the 1930s to electrify rural areas not served by for-profit utilities. Today EMCs power 56% of the US landmass, including 92% of persistent poverty counties. In Georgia, EMCs are regulated only by elected boards, who govern cost distribution, investment, and energy mix for rural spaces. But EMC boards are unlikely to reflect the demographic diversity of their members, especially in the South, where they tend to be white men who may keep their position for decades and have been documented to suppress voices of Black member-owners. Racial justice advocate Steve Suitt recalled his 20-year quest to force integration of EMC boards. He asserted: “If we make democracy work, we solve many of the problems in EMCs. But, it’s like in Aesop’s fable where a group of mice meet about their enemy, the Cat. One proposes: ‘All we need to do is bell the cat!’ The mice all rejoice at this solution, until an older mouse asks, ‘But who will bell the cat?’ The question is how exactly do we impose democracy on EMCs?” Strong democratic accountability, for Suitt, is the obvious answer to racism in EMC governance, but it is also the key question: How do we build democratic institutions on the foundations of segregation, disenfranchisement, and structural poverty? Indeed, how do we bell the cat? This co-authored paper documents a 2022-2023 community scorecard project to democratize EMCs in Georgia co-led by an energy justice organizer (Wan Smith) and a cultural anthropologist (Kristin Phillips). In the project, Georgia’s 41 EMCs were rated on their democratic governance based on community-driven criteria, with results being used to drive change at EMCs. We ask: how do EMC member-owners in Georgia

conceptualize democratic governance? What does a review of EMC bylaws reveal about EMC governance in Georgia? And what practices and principles should guide efforts to improve democratic governance? Presenter: Wan Smith

The Face of Electricity: Household Connection and Moral Meaning in a Post-Socialist Utility: This paper considers the “last mile” of energy infrastructure from the perspective of those enabling household connections, the utility technicians and managers who are in many ways “the face of electricity” for rural customers. On the island archipelago of Zanzibar, a recent presidentially-decreed policy change has dramatically lowered the cost of household electrical connection in pursuit of an ambitious 2032 universal electrification goal. While previously residents were responsible for paying the costs of extending electrical infrastructure to their homes, under the new plan the costs and labor of constructing this “last mile” of infrastructure connection falls directly on the beleaguered state-run electrical parastatal, ZECO. In exploring the logistical, political, and social work of connecting homes to electricity, this paper asks, how are state goals of universal electrification and the economic policies designed to stimulate connection experienced and negotiated by the managers and technicians of state-run utilities? What physical and emotional labor goes into connecting homes? How are ongoing material challenges of capacity and supply negotiated and resolved at the level of household connection? And how do legacies of socialism persist in contemporary relationships between customers and utility employees? The labor of the last mile is personal in Zanzibar; it is at the point of household connection that the social composition of infrastructure, the relationships that may be obscured in the technical networks of poles, amps, and wires, is once again made manifest and mutable. Presenter: Erin Dean (New College of Florida, Division of Social Sciences)

‘Last Mile’ Electrification in Tanzania: Generating an Infrastructural Palimpsest: Energy access in rural mainland Tanzania is a rapidly expanding enterprise with a multiplicity of competing actors and initiatives. In this study, we interviewed leaders and residents from 22 “last mile” villages in Dodoma, Iringa and Kigoma regions about village access and use of electricity. The national grid, off-grid diesel generators and power plants, and solar electricity dominate the electricity sphere, with all but one village having access to some combination of these. Uses range from household lighting to income-generating activities, but every

source of electricity possesses significant limitations. Access rates, costs, and governance structures proved to be some of the largest issues. Despite a village reporting electricity access, for example, the actual proportion of residents accessing electricity varied dramatically, from 8% connectivity to the national grid in one village to 90% using solar in another. Reasons for these disparities included geographic and socioeconomic divides, in which those far from electricity lines and those with the lowest incomes had lower rates of access. Flat-rate payments appeared to be detrimental to low-income families who were often disconnected from the grid due to inability to pay, with a possible resolution in smart meters that allow households to pay for what they use. Years-long delays in installation of the national grid and problematic maintenance and community governance of the mini-grids also impacted availability and cost. Finally, successive electrification projects introduced by different actors with discrepant payment models have produced an infrastructural palimpsest in which decaying forms of energy infrastructure are visible alongside newer interventions. This co-authored paper by Hannah Schneider and Kelly Askew will examine each of these factors and explore local responses to electricity connectivity and the governance quandaries they generate in “last mile” communities. Presenter: Kelly Askew (University of Michigan, Department of Anthropology)

The Poly Transition: Plural marriage, polyamory, and marriage in global flux

12:15 PM - 1:45 PM TMCC - 709

Oral Presentation Session

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Bruce Whitehouse (Lehigh University, Department of Sociology and Anthropology)

CHAIR:

William Jankowiak (University of Nevada, Las Vegas)

PRESENTER:

William Jankowiak (University of Nevada, Las Vegas), Rebecca Lester (Washington University in St. Louis, Department of Anthropology), Melanie Heath (McMaster University), Bruce Whitehouse (Lehigh University, Department of Sociology and Anthropology), Magdalena Brzezińska

DESCRIPTION:

In many regions of the world, including North America and Europe, monogamy is regarded as the default if not the only form of marriage, while plural marriage is widely regarded as a backward custom and polyamory is either stigmatized or unknown. Yet the presence of various non-monogamies in a diverse array of contemporary societies suggests fascinating global changes afoot in the construction of marital relations, household organization, and sexuality, and the modern 'companionate ideal' of monogamous marriage is not as dominant as it once appeared. In some settings, polygamy thrives either clandestinely or in the open. In other settings, polyamory is an emerging trend. Based on their ethnographic study of polygamous marriage and polyamorous relationships in Europe, North America, and West Africa, the scholars on this panel consider what these non-monogamies signal about the future of marriage and intimacy in the twenty-first century.

Themes and Trends in the Study of Fundamentalist Polygynous Relationships: Since the Middle Ages, people have erroneously misunderstood the primary motivation for establishing a polygamous family. Contrary to the prevailing folklore, the polygamous family was never principally designed to satisfy male sexual desire. On the contrary, it is the institutionalization of a marriage and family system intended to increase reproduction to achieve an exalted spiritual state of being. It stands in contrast, therefore, to the monogamous family system, which is ideally anchored in a couple's intimacy, complemented by active co-parenting of the mother and father. The polygamous family system values and promotes the development of warm, supportive relationships with all family members. Its structure is distinctly more collective than individualistic. My talk will provide a summation of the state of the field, its persistence patterns, and notable exceptions with an eye on where future research may be directed. Presenter: William Jankowiak (University of Nevada, Las Vegas)

“It’s Relating on Steroids”: Polyamory, Anxiety, and the Politics of Intimacy: Polyamory/Ethical Non-monogamy (ENM)--is by many reports the fastest growing sexual practice in the United States, with estimates that one in five American adults is engaged in polyamorous relationships (Haupt et al. 2017). While open relationships are certainly not new, polyamory/ ENM is moving from the fringe to the center, becoming an example of what McDougall (1986) calls “neo-sexualities” or new configurations of intimacy, affinity,

and economic ties. Both NPR (2019) and Scientific American (2013) have characterized this rise in polyamory/ENM as “the new sexual revolution.” From feature articles in Medium, Vogue, and The Atlantic to reality TV shows and plot lines in network dramas, polyamory/ENM has, in many ways, become mainstream. It seems, then, that something tectonic is shifting in how many Americans think about, practice, and experience sexual and emotional intimacy. Using the poly concept of compersion (getting pleasure from your partner’s pleasure, even if it’s with someone else) as an entry point, this paper explores how poly practitioners understand the dynamics of intimacy and ethics, and what this might tell us about the shifting foundations of American social institutions. Based on interviews, life history narratives, and case studies, this paper engages questions of why different people get involved in polyamory/ENM, what it’s like to live plural intimacies on a daily basis, and why some people choose to leave. In doing so, it explores intimacy as an intersectional phenomenon that is intimately bound up with culturally shaped structures of value and care. Presenter: Rebecca Lester (Washington University in St. Louis, Department of Anthropology)

Polygamies in Comparative Perspective: France, Canada, and the United States: In the Global North, governments regulate forbidden intimacies—intimacies that are prohibited based on the need to uphold the white, monogamous, heterosexual family ideal—to determine what the state sees as its limits of tolerance. One form of forbidden intimacy that is viewed as especially objectionable is polygamy. Drawing on ethnographic research in France, Canada, and the United States, this paper argues that there isn’t a monolithic, inherently harmful form of polygamy. Instead, there are polygamies lived differently based on social context, geography, and multiple other factors. I theorize the concept of labyrinthine love to capture the multiple ways that polygamies are lived. Second, I demonstrate that regulating polygamy allows states to define themselves against a racialized Other. Regulation becomes a way to displace anxieties about current changing structures of intimacy onto this family form characterized as inherently harmful and outside the realm of Western ideals. Presenter: Melanie Heath (McMaster University)

Normative Polygyny: How Plural Marriage Shapes Society in Mali, West Africa: In many societies around the world, polygamy is stigmatized if not criminalized. Even in some Muslim-majority countries such as Malaysia and Indonesia, it is often practiced

clandestinely, and husbands taking additional wives open themselves up to accusations of impropriety. In West Africa, by contrast, polygamy (specifically polygyny, the marriage of one man to multiple wives) remains common and generally socially accepted. In the case of the Republic of Mali, where up to half of married women share their husbands with at least one other wife at some point during their marriages, polygyny is quite normative: polygynous households set the standard for all other households in many respects, and polygyny remains deeply rooted in everyday life, even in urban areas. Malians often express suspicion of monogamy, for reasons largely specific to their country’s history and legal system. Ultimately, I conclude, polygyny’s normative status in Mali is less a matter of culture and more a matter of power relations and gendered opportunity structures which serve men’s needs while making it more difficult for women to avoid polygynous marriages. Yet polyamorous pre-marital strategies by young women as well as men prior to marriage suggest ongoing shifts within these power relations. Presenter: Bruce Whitehouse (Lehigh University, Department of Sociology and Anthropology)

Coping with Polygyny: the Attitudes of Women in the Gambia and Guinea-Bissau: Polygyny seems largely inescapable to many women in Guinea-Bissau and the Gambia as it is a well-established norm in West Africa. It is a type of marriage based on male privilege of sexual entitlement and more broadly on gender inequality. Polygyny has a negative impact on women’s emotional fulfillment and their sense of self-esteem. Some women voice aspirations to romantic love and monogamy, inspired by the global media and the Western monogamy ideal. A few embrace the patriarchal polygynous ideal. Most do not oppose polygyny directly but accept it with resignation. Yet they do not remain passive. Rather than attempting to challenge the entire institution of polygyny, women try to negotiate better terms for themselves within it. They approach it pragmatically. The polyamory of pre-marital relationships in the region, on the other hand, seems to pose a certain challenge to polygyny as it has an enduring impact on people’s understanding of intimacy, love and sexuality. Transitioning Lenses: Navigating Neurodiversity and Neurological Identities

12:15 PM - 1:45 PM TMCC - 717 B

Oral Presentation Session

REVIEWED BY:

Society for Psychological Anthropology

ORGANIZER:

M. Cascio (Michigan State University)

CHAIR:

Anna Jaysane-Darr (Massachusetts College of Liberal Arts, Department of Sociology, Anthropology & Social Work)

PRESENTER:

Elizabeth Mathews, M. Cascio (Michigan State University), Elizabeth Fein, Anna Jaysane-Darr (Massachusetts College of Liberal Arts, Department of Sociology, Anthropology & Social Work), Catherine Tan (Vassar College)

DISCUSSANT:

Project Filus Team Pamela Block (Western University)

DESCRIPTION:

Neurodiversity, the idea that neurological difference is an important part of human diversity, has grown in social and scholarly prominence in the past several decades. The neurodiversity movement started with, but was never limited to, autistic self-advocates (Graby 2014; Singer 1998). Although initially a marginalized perspective, scholars, clinicians, researchers, and the media are increasingly engaging with neurodiversity in a variety of ways. These engagements reflect the increasing dominance of the 'neuro' as a paradigm for understanding disease, behavior, sociality, and the self (Gardner et al 2018; Ortega 2009). This panel considers the ways autistic people, fandom communities, teachers, and therapists engage with the neuro, neurodiversity, and neurological identities, transitioning between different ways of considering neurology, identity, similarity, and difference. While neurodiversity may be considered a 'model' of difference, compared and contrasted with social, medical, and other models of disability, this panel considers how people mix and match and otherwise navigate these various ideas in daily life. Elizabeth Mathews will present narratives of women pursuing an autism diagnosis in adulthood, and the positives and negatives participants identified in receiving the diagnosis, asserting the validity of self-diagnosis in a context of medical negligence and limited access. M. Ariel Cascio will present narratives of autistic employees in Michigan, USA, about similarities to and differences from others at work, highlighting how meanings of work contribute to the construction of meanings of autism. Catherine Tan will present ethnographic research with autistic rights activists,

mostly in the Northeast USA, arguing that this social movement generates and enacts contentious knowledge that challenges orthodoxy. Elizabeth Fein will present ethnographic research in the furry fandom in the United States and Canada, describing how the fandom welcomes social participation of autistic people and arguing that neurodiversity itself is a source of cultural innovation. Anna Jaysane-Darr will present ethnographic research in South Africa exploring how teachers and therapists use language of similarity and differences from students in autism schools to explore their own neurotype, arguing that this personal navigation is more complex than the therapeutic system itself implies. Pamela Block will serve as discussant, and the panel will invite questions and comment from the audience. References: Gardner, John, Narelle Warren, Paul H. Mason, and Juan F. Dominguez D. 2018.

Autism in Women: What are the costs of a diagnosis made in adulthood?: This paper explores what it means to be female and autistic. For years, autism has been known as a "boys disease." Girls just did not have autism. As a result, women have often been labeled as hysterical and moody to the point where women have reported overmedicalization to keep them compliant. Women with autism may be viewed as less capable or intelligent impacting their educational and professional opportunities. For survival, women will mask—perform certain behaviors while suppressing others to be more like the people around them. This paper presents the results and analysis of qualitative research exploring the struggles women have had pursuing an autistic diagnosis. Out of 75 narratives from autistic women, 35 reported trauma from medical negligence and trauma associated with a lack of support from medical professionals, friends, and family alike. For some women, a diagnosis gives them a sense of relief and understanding of their struggles. Others experience social isolation and the loss of their identity. This study

richly describes how Autism presents itself differently in females than it does males and highlights variation in how autistic women engage with diagnosis and identity. In light of participant narratives, I argue that self-diagnosis must be seen as valid due to exorbitant financial costs preventing women from obtaining a diagnosis and accessing crucial support and interventions. Presenter: Elizabeth Mathews

“We're pretty dedicated to what we do”: Autistic Employees Narratives of Similarities and Difference: Employment has become a salient site of concern for autistic people, advocates and self-advocates, as well as scholars. Clinical and educational literature often focuses on entry into the workforce as an important part of a “transition to adulthood.” Anthropological literature addresses this transition period through the anthropology of adolescence. Anthropological and related literature has documented many different ideas, medicalized and non-medicalized, about what autism “is” that impact clinical practice, educational work, and personal identity. Today, we ask: how do autistic people describe these similarities and differences as they relate to work spaces? Is autism important in those distinctions and if so, how? We will draw on semi-structured and photo-elicitation interviews with autistic employees to present amalgam stories representing two typical narratives of similarities and differences at work: those who identified being autistic as a core similarity to or difference from others at work; and those who emphasized professional, cultural, and/or experiential similarities and differences over neurotypes. We propose that the meaning that the participants made of their work itself related to the meaning they made of autism at work. Work can be a means to an end in which autism and disability figure as key axes of difference. Work can also be an end in itself in which work goals, interests, and roles take prominence. Negative case examples will also be discussed. While autistic people indeed bring unique strengths and needs to the workplace, autism is not all-defining for autistic employees and meanings of autism at work are contextually dependent. Presenter: M. Cascio (Michigan State University)

“In This Community, We Take Everything At Face Value”: Neurodiversity in the 'Furry' Fandom: This paper explores the ways in which neurodiversity functions as a driver of social and cultural innovation within a particular creative community: the “furry” fandom. Furies have a keen interest in anthropomorphic animals – walking, talking, human-animal hybrids of the sort one might see in a Disney cartoon or read about in fantasy

literature. A thriving global subculture, consisting largely but not exclusively of young adults, has coalesced around this shared interest. At get-togethers both virtual and live, furies celebrate anthropomorphism through developing and roleplaying their “fursona”: a version of oneself as an imaginary anthropomorphic animal, often possessing one’s idealized or desired traits. Demographic research within the fandom has suggested that up to 15% of furies identify somewhere on the autism spectrum. The research being presented here today sought to explore why. What is it about the furry fandom that invites and supports such a high rate of social participation by people on the spectrum? And most importantly, what might people who are not furies (such as this researcher) learn from this community about how to build more inclusive and participatory spaces? This paper presents the results of an ethnographic study of autism in the furry fandom, involving five years of participant observation, interviews and focus groups at furry conventions in the United States and Canada, as well as online qualitative and quantitative surveys. I will focus particularly on how neurodiversity itself functions within the fandom as a source of new social and cultural practices that facilitate greater accessibility. Presenter: Elizabeth Fein

Neurological Identities in the Neo-Apartheid Special Education System: Post-apartheid South Africa inherited from the apartheid era a concept of disability that categorizes it as radical difference that must be separated and hidden in ways that are deeply entangled with the lingering effects of their racial stratification system. This is exemplified in the persistence of special schools for disabled learners and an entrenched stigma toward autism and other disabilities in the post-apartheid state. Given this context, this paper explores how neurological disability is conceptualized in the interpersonal therapeutic domains of the classroom and clinic. Drawing on fieldwork data from autism schools and organizations in the Western Cape, South Africa, I explore how teachers and therapists construct their own neurological identity in relation to their learners. This identity is not built on a purely neurotypical-neurodivergent binary, but rather operates in the transitional space in between, working through and against the binary as they try to understand their own neurotype. Sometimes this identity is framed as difference, sometimes as likeness, and often something of both, a kind of hybrid model that captures the intersubjectivity of the educational and therapeutic space. Thus, I find that teachers and therapists have a more complex relationship to neurological disability than the therapeutic context might imply, one that has

the potential to transform the South African special education system. Presenter: Anna Jaysane-Darr (Massachusetts College of Liberal Arts, Department of Sociology, Anthropology & Social Work)

Among 'fellow travelers': Social movements as spaces to reconstruct and empower autistic identity.: The field of autism is populated with a diverse group of stakeholders: autistic people, parents, advocates, researchers, clinicians, etc. This study investigates the autistic rights movement and how it organizes the social, conceptual, and material resources to reimagine autism. The autistic rights movement conceptualizes autism as a human difference that should be respected

and valued—not treated or 'cured.' I argue that social movements like this one are important spaces for the cultivation of contentious knowledge—or knowledge that aims to challenge expert authority and orthodoxy. Within the autistic rights movement, members form and empower an autistic identity that resists medicalization. They create temporary physical and social spaces to model acceptance. Drawing from ethnographic observations (meetings, conferences/retreats, and special events) and interviews with 37 autistic rights activists, this study illustrates how contentious knowledge is collectively generated, enacted, and protected within social movements. “Before there was nothing”: pursuing a good life on the coast of south Goa (India)

Talk - Virtual Pre-recorded

REVIEWED BY:

American Ethnological Society

PRESENTER:

Raquel Maria Mendes Pereira

DESCRIPTION:

Anthropological studies give a comprehensive account of the analytical possibilities that emerge when we conceive tourism as a complex and multidimensional arena, rather than an abstract and external entity with detrimental effects on 'passive' populations (Leite and Graburn 2009; Stronza, Hunt and Fitzgerald 2019). However, little attention has been given to the experiences and practical responses of those situated on the social system's margins who become small-scale entrepreneurs through tourism and utilize local knowledge to succeed in their endeavors (Adams and Sandarupa 2018). Based on a long-term ethnography conducted with artisanal fishermen in south Goa, that are also tourism businessman, this presentation contributes to these reflections. In addition, it will focus on people's motivations to enter and succeed in tourism, arguing that these choices are influenced by social dimensions not related to tourism itself. Understanding these underlying dimensions, which require anthropological scrutiny, is essential for fully comprehend the complex arena of tourism in Goa.

Through a description and analysis of a lived story of transition moments (fisheries industrialization, work mobilities, environment governance, and tourism processes), this paper shows what drove these artisanal fishermen to become micro entrepreneurs, by arguing that their motivations and responses can only be read by paying serious attention to the social entanglements that are produced in fast-changing and disturbed landscapes (Lounela, Berglund and Kallinen 2019) or overheated ones (Ericksen 2016), where disturbance is understood as incorporating possibility (Tsing 2015) for a life well lived or a good life (Fisher 2014).

“Cooking without tasting” sensory experience of undocumented Indonesian immigrants in Southern Illinois.

Talk - Virtual Pre-recorded

REVIEWED BY:

General Anthropology Division

PRESENTER:

Lumban Arofah

DESCRIPTION:

This study explores the experiences of Indonesian undocumented immigrants who work as hibachi chefs in Asian restaurants in Southern Illinois. The process of migration is fraught with uncertainty and transition, particularly for undocumented workers. The research shows that these workers must rely on sensory experience and knowledge to survive in their jobs,

despite having no formal culinary training. Unlike in Indonesia where cooking is typically followed by tasting, undocumented chefs must cook in front of customers without the benefit of tasting the food. Instead, they must use their senses of smell, sound, and color to judge the quality of their dishes. Understanding the unique sensory cues of each food ingredient, such as meat, rice, noodle, vegetable, and shrimp, is essential to avoid termination by restaurant owners. This study investigates how these chefs adapt to their new sensory environment and learn to cook in a new way. The study also examines the metaphorical language these chefs use to describe their sensory perceptions, including how they use their sense of hearing to not only literally listen for sizzling meat and customer requests but also metaphorically to hear about job opportunities in other restaurants to secure their income and safety. Safety is particularly crucial as their undocumented status makes them vulnerable to exploitation. Through this study, we gain insight into the daily lives of undocumented immigrants and how they navigate their new sensory environment.

6-115

“Don’t forget that you’re Sahrawi”: Young refugee-students becoming migrants in Spain

Talk - Virtual Pre-recorded

REVIEWED BY:

American Ethnological Society

PRESENTER:

Rita Reis

DESCRIPTION:

Most refugees live in camps, spending decades in exile (Milner 2016). Nevertheless, the notion of physical and symbolic stagnation coincides with the development of survival mechanisms, which encompass various types of voluntary movements (Fiddan-Qasmiyeh 2012; Wilson 2017), including economic migration. Due to the failed Western Sahara's decolonization process, Sahrawis have been living in exile since 1975. In light of the priority given to education, a transnational model was created through protocols that were established between the exiled-Sahrawi Arabic Democratic Republic (SADR) and third countries such as Spain, Algeria, and Cuba. As a result, thousands of students leave the refugee camps annually to continue their education in foreign countries. These students' mobilities have been transformed by the 'ambivalent temporality of the 'meanwhile'' (Solana 2016) triggered by the extended period of exile. The notion of studying abroad and

subsequently returning to build for the nation's future is being replaced by migration and transnational circular movements between the refugee camps and the diaspora, primarily located in Spain. Based on long-term ethnographic research conducted in Spain and Algeria, this paper explores the transitions experienced by young Sahrawis from refugee-students to migrants in Spain, as well as the aspirations of their peers in Algeria to follow suit. Becoming an economic migrant involves intense social negotiations in which young people must balance the collective desire for Western Sahara's independence (the meaning of life) with their individual hopes for a fulfilling life with economic security (a meaningful life), 'remembering' to be and act like a Sahrawi.

6-295

A Culture of Nonviolence: An Autoethnography of Transitioning from Codependency to Authenticity in Relationships with Self, Others, and Nature

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Humanistic Anthropology

PRESENTER:

Kim Skarns

DESCRIPTION:

Context This autoethnography explores a self-transition between cultures of codependency and authenticity. I incorporate a framework of nonviolence and also consider anthropologist Tim Ingold's notions of attention and undergoing in the autoethnographic process. I am discovering through research in nonviolence that sometimes, I mistakenly think of myself as 'at peace' and 'authentic' in relation to myself, others, and nature, when truly there are moments where my self is unknown or unexplored; relationships with others are oriented from peace-making and care-taking rather than genuine peace; and relationships with nature are performative rather than truly connection-seeking. Research Questions • What practices might I engage in to center myself in achieving inner peace through nonviolence to promote peaceful and authentic connections with other people and with nature? • What might I need to unlearn, examine meta-cognitively and openly, and relearn to transition from a culture of codependent-minded relationships to authentic relationships with self, others, and nature? Methodology Autoethnography will support my

exploration of my culture of self and culture of relationality to others and nature within the lens of codependency transitioning to a lens of authenticity between the months of March and May, 2023. Theoretical Frameworks Nonviolent theory will guide my research, as it is 'based upon a strong sense of interconnectedness among all beings' (Wang, 2023). According to Wang (2023), Peter Herschok (2012) explains one aspect of nonviolence theory in that 'realizing patterns of interdependence 'necessarily entails both a critique of self and a critique of culture'' (Wang, 2023). This theory will guide my critique of my self and culture of codependency to examine how I can transition myself toward living within a culture of authenticity that is one of healthy interdependence, rather than codependence. I will navigate this using Ingold's (2018) notions of attention (rather than intention), undergoing (rather than understanding), and communing. Findings This research is on-going and incomplete, as cultural growth is never static. However, I can assume that through a focus on personal guided reflection on attention, connections with others, journaling, and studying aspects of codependency that are illusions of authenticity, I will experience my own transformation toward a culture of empowerment of self and peaceful relationships with others and nature. I will share what that transformation looked like before my research and at the time of the findings report to reflect on specific examples of transition from codependent patterns to authentic patterns through nonviolence within my relationships with my self, others, and nature. A Ministry of Things: Evaluating Maritime Pastoral Care Networks Through Material Agency

Poster - Virtual Pre-recorded

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Jennifer Brett (University of Texas at San Antonio)

DESCRIPTION:

In this project, I consider how ministry to international seafarers has created a large and largely invisible network of many types of care in the city of Boston. The site of my research is a small evangelical mission

operating at a cruise terminal. I argue that while the mission's primary goal is to cater to the spiritual needs of visiting crewmembers, their secondary functions as a clearinghouse for undistributed promotional items, a middle-man for the hand crafted donations of elderly supporters, and a 'healing space' for local volunteers challenge definitions of 'ministry' and extend the care community beyond the seafarer.

6-020

A New Kind of Faculty Brunch: The Pancake Model of Graduate Student Mentorship

Podcast - Virtual Pre-Recorded

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Adrianna Wiley (University of Toronto, Department of Anthropology), Alexandria Cosby (University of Guelph)

DESCRIPTION:

Within the neo-liberalized university, mentorship constitutes a form of communal care with the potential to resist the structural barriers to career advancement faced by many graduate students, particularly those with marginalized identities. As students transition from taught undergraduates to independent researchers under the supervision of a faculty member an effective and meaningful mentor-mentee relationship is imperative to our learning how to 'be' in the academic space. While mentorship is valued and effectively practiced by many individual faculty members in anthropology, formalized training and support for building meaningful and effective mentorship relationships with graduate students is currently lacking, leaving mentorship to be learned through experience. In this podcast, we use the metaphor of making pancakes to explore the challenges we have faced in our mentorship relationships as graduate students in relation to systemic barriers present in the university environment. We also discuss the differential impacts learning mentorship through experience has on students who engage with faculty at different stages in their careers. While most neo-liberalized universities prioritize the production of research products, we argue that mentorship as a form of knowledge production can be framed as productive subverting neoliberal policies to produce an environment of communal care in our departments. This restructuring will not only improve faculty and graduate student mental health but will also

result in students who are better able to produce quality research. In our conversation, we will extend the pancake metaphor to further suggest two strategies for improving faculty-graduate student mentorship relationships: (1) the creation of policies and procedures for improving support for faculty mentorship by improving the amount of time and resources they have available to develop and practice these relationships; (2) creating multi-level mentorship opportunities as a part of graduate programs, improving the mentorship skills of future early career scholars.

[Africatown in Guangzhou: Multilingualism and Belonging on the Move](#)

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Linguistic Anthropology

PRESENTER:

Xia Chao

DESCRIPTION:

Using social-spatial notions of geosemiotics and assemblage, this participatory ethnographic case study examines the intersection of store signs in the Africatown in Guangzhou and transnational African migrants' meaning-making and place-making practices. Data collection is employed through a combination of traditional and participatory ethnographic methods including visual texts, interviews, and virtual field observations with fieldnotes. Findings from this study indicate the Africatown as geosemiotic assemblage, which a response to human geography that material and social environments are imbued with meanings in daily practices. The Africatown as geosemiotic assemblage is a multifaceted and dialogic process in which meanings, perceptions, multi-senses, and symbols are tied together to a locality. This study illustrates that the African migrants' perceptions of the Africatown are mediated by both material and social environments. Specifically, African migrants are able to engage in multilingual social practices with both non-human artefacts and humans, placing great emphasis on spatiality in their reconceptualization of Africatown as more than a local African migrants' hub. This study further demonstrates that the materials assembled in the African migrants' milieu are historical, social, cultural, and multilingual in facilitating their reconstruction of the Africatown's transnational space and African migrants' identities. This study argues that a geosemiotic assemblage approach is salient in

expanding current understandings of multilingual and transnational research by foregrounding materiality in meaning-making and place-making practices.

[AI Ethics: A comparative ontology between Indigenous and Western discourses](#)

Talk - Virtual Pre-recorded

REVIEWED BY:

Association of Indigenous Anthropologists

PRESENTER:

Paraskevi Zotali (Panteion University)

DESCRIPTION:

The study attempts to comparatively discuss a collection of publications on the ethics of Artificial Intelligence developed from indigenous actors/academics [the Indigenous Protocol and Artificial Intelligence Working Group] in relation to AI ethical protocol/guidelines as proposed by major Western institutions [UNESCO/EU]. Following Holbraad, Pedersen & Viveiros de Castro (2013), the theoretical approach of the study is 'not the comparison of ontologies, but comparison as ontology'. How indigenous cosmologies, put into technopractice, decenter the dominant understanding of what AI is and what terms define our relation to it?

[Alterity Register: Negotiating Tensions between the Maintenance and Transformation of Ethnolinguistic Practices of Indigenous Adivasi \(Veddas\) of Dambana in Sri Lanka](#)

Talk - Virtual Pre-recorded

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Nimasha Malalasekera (University of Montreal)

DESCRIPTION:

Alterity Register: Negotiating Tensions between the Maintenance and Transformation of Ethnolinguistic Practices of Indigenous Adivasi (Veddas) of Dambana in Sri Lanka This talk focuses on how indigenous Adivasi (also known as Veddas) of Dambana in Sri Lanka negotiate pre-existing aesthetic resonances and sentimental attachments to their cultural and linguistic practices in the context of linguistic and cultural

endangerment. Adivasi of Dambana are widely seen as uniquely representing continuity with the past as they consider themselves the descendants of the original inhabitants of the island. They are also considered one of the last remaining hunter-gatherer, forager, or relic groups in South Asia. Since the 1950s, they have been displaced from their forest dwellings and their traditional subsistence activities, such as hunting and gathering, were criminalized. Owing to their engagement in cultural tourism in the present day, they are known for living a 'traditional way of life' like their ancestors. They deploy an alterity register to mark their ethnolinguistic difference in the cultural tourist scene of Dambana. This alterity register constitutes linguistic and non-linguistic signs of otherness. The use of this alterity register in cultural tourism has enabled them to generate economic capital. The data for this study come from ethnographic fieldwork conducted in collaboration with Dambana Adivasi. The ethnolinguistic practices of Dambana Adivasi have not necessarily lost meaning in the process of cultural commodification whereby these practices undergo transformation. Rather, they have acquired new meanings for the cultural actors as they have become markers of their ethnolinguistic identity while old meanings remain significant for the in-group.

An Invisible Place: Memories of San Antonio Landscapes

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Visual Anthropology

PRESENTER:

nadia m luis

DESCRIPTION:

This film seeks to capture the visual experience of the tangible relationships between urban landscape, law, and accessibility of public space. Building upon my previous research of interviews with volunteers and employees that work with harm reduction groups, I return to ask those working in harm reduction to recount a memory they associate with a physical landscape in San Antonio. Harm reduction programs within Bexar county involve volunteers and employees who act as advocates for individuals experiencing substance misuse and abuse issues. Often they provide critical resources to the marginalized who may not live in a permanent location. This ethnographic film seeks to continue the dialogue developed in my previous research project 'Sharp! The Dangers Around

Inaccessibility of Sharps Containers and Needle Exchange Programs in San Antonio, Texas' which investigated how San Antonio's 2021 pilot needle exchange program, along with harm reduction advocates, interacted with the complicated legal landscape in Texas. This is critical because substance misuse and abuse is heavily stigmatized and penalized within the State of Texas, more specifically, within particular urban contexts/environments. With the visual aspect, I hope to immerse my audience into the political and legal intersections that are actively shaping the utility of San Antonio's landscapes, landscapes that vulnerable population members are dependent upon for access to community resources. This project was reignited when I learned that the camp I used to visit while volunteering with Yanawana Herbolarios, under the HWY 37 overpass, had been swept for the final time and permanently fenced off. A once thriving community of individuals, of at least 20 people, were permanently displaced and symbolically told by municipal officials their presence was unwelcome in that urban public space. The space is now utilized as a large parking lot. This project seeks to answer questions about the relationship between the law and the material products it creates within the urban landscape, as captured through an ethnographic style film portraying the lived experiences of the individual's relationship with a changing landscape.

Anthropology as Marxist Praxis: From the Cold War to Contemporary Re-Emergence

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for the Anthropology of Europe

PRESENTER:

Ahmed Kanna (University of the Pacific, School of International Studies)

DESCRIPTION:

In this paper, I look at a largely forgotten history of public engagement by anthropologists and their interlocutors. I focus specifically on contributions by anthropologists and their critics to socialist and communist mass publications during the latter half of the 20th century. I argue that such writings, which appeared in periodicals such as *The Daily Worker*, *The Militant*, and *International Socialist Review*, and which tackle various questions pertaining, to name a few examples, racism, US imperialism, and gender oppression, constitute an anthropological discourse that

is radically different to the model of the anthropologist as public intellectual after the collapse of state socialism in the 1990s, both in terms of communicating anthropological theory to a mass audience and in openly articulating an anti-capitalist politics. Finally, citing recent examples from social reproduction theory to Indigenous, Black, and queer Marxist contributions, I argue that anthropology can revive its traditions of mass, Marxist and anti-capitalist education.

Anthropology of learning as applied experience. Illegal Design. Urban walls workshop

Talk - Virtual Pre-recorded

REVIEWED BY:

Council on Anthropology and Education

PRESENTER:

Roberta Bonetti (University of Bologna)

DESCRIPTION:

As part of the course 'Illegal Design - Urban Walls' at the Faculty of Arts and Design of the Free University of Bolzano (in Northern Italy), a group of students produced five short experimental videos exploring the urban landscape and the Bolzano city walls. The aim was to understand the anthropological concept of the border or 'limine'. More specifically, the students addressed the very sensitive issue of the balance between legal and illegal, permitted and illicit spaces, and how territorial and symbolic boundaries affect our perception [not just of these]/of urban spaces] but also of human behaviour. They also explored how ideas and objects can be used to disobey, provoke and transform these boundaries, and our relationships, dynamic in themselves, with other people. Through this experience, the students became more aware of how a physical space-the wall, in this case-is not necessarily a limit, an inert barrier, or a boundary that demarcates one space from another, but can be, instead, be experienced as a limine, or a transition, in fact, a creative opportunity to playfully and imaginatively experiment with a new way of inhabiting and using space. The wall provided an opportunity in which the students were able to stage an experimental event that provoked interesting and unforeseen interactions: they experienced, in effect, new behaviours and a reversal of habits in themselves, and created new interactions between the urban space, and the people who inhabit or pass through it. This entire experience can also be understood here as an 'anthropology of learning'. For reasons of time, I

propose to show on YouTube just a selection of three of the five videos.

6-380

Archive, memories and gender: three generations of circus women from Latin American through an ethnographic documentary

Talk - Virtual Pre-recorded

REVIEWED BY:

Association for Feminist Anthropology

PRESENTER:

Camila Losada (University of Buenos Aires)

DESCRIPTION:

Three generations of women circus artists go through their memories from 1910 to the present, based on the photographs preserved in family albums. Olga remembers her trapeze artist mother, life in the circus and together with her daughter Jorgelina, also a circus artist, they reflect on the place occupied by circus women throughout history. From Mexico to Argentina, the trajectory of Naty Morales is outlined in the first place, 'an advance for the time', the star trapeze artist with her exceptional 'escape to heels' who in the 1930s crossed Latin America with different circuses together with her husband, until they arrived to Brazil and afterwards to Argentina. Olga and Jorgelina's memories advance to reflect on transhumance, artistic work, community life, the transmission of knowledge and allow us to rethink the ambiguity of the place occupied by circus women. Women artists, nomads, professionals, workers, with strong bodies dressed in bras, briefs or bikinis in contexts of times of moral and sexual repression. Also, wives, mothers, caregivers, cooks, seamstresses. Women in a community of circus families and women in a community of women weaving upbringing, affection and their own knowledge. This talk recovers the experience of making an ethnographic documentary. An nth, feminist and multimedia research project that works from ethnographic interviews and the digitization/preservation of photographic archives. From an anthropological and gender perspective, we recover the memories and trajectories of women circus artists and we plan to make visible the contributions that these women have generated for the conformation of the circus arts in the country. Through this project we seek to preserve and, above all, disseminate archives and memories and thus activate them as part of the

cultural heritage of the circus in the country and in Latin America.

6-165

Becoming 'Mheshimiwa': Transitions and Subjectivities in a Kenyan Legislature

Talk - Virtual Pre-recorded

REVIEWED BY:

Association for Political and Legal Anthropology

PRESENTER:

Miriam Kilimo (Emory University, Department of Anthropology)

DESCRIPTION:

In recent years, political and legal anthropologists have called on scholars to focus on legislatures as a site of social analysis (Crewe 2021; Gershon 2011; Kaplan-Kelly 2021). In this presentation, I respond to this call by discussing how legislatures function as 'sites of transitions' for politicians. Drawing on ethnographic fieldwork conducted in 2019 in Kwale County Assembly, one of Kenya's forty-seven regional legislatures, I discuss the materiality of the institution and the everyday actions of legislators. By centering the materiality of the legislature, I demonstrate how Kwale County Assembly privileged legislators who were knowledgeable of the law and of the county assembly's internal rules and regulations. I also show how the county assembly simultaneously provided space for cordiality, public debates, and political rivalry. Altogether, I argue that the rituals and inner workings of the county assembly produced multiple subjectivities among the legislators. They often transitioned between cordiality and rivalry, between national and regional politics, and between explicitly gendered and seemingly nongendered utterances. Consequently, the business of legislating occurred within an outwardly stable institution that was internally in flux. Becoming 'mheshimiwa' (honorable members - the title given to legislators) entailed moving through the sites of transition within the legislature, navigating its dynamism while advancing one's political agendas within its rules and regulations.

Becoming a Jellyfish – Floating to Find Life in Academia

Talk - Virtual Pre-recorded

REVIEWED BY:

General Anthropology Division

PRESENTER:

Miriam Jaehn (CSEAS, Kyoto University)

DESCRIPTION:

Submitting my dissertation, I cried – a lot. It felt like a huge relief, but it was also an immense loss that caused instability, fear, and self-doubt. I searched for an anchor and wondered how other people were able to strive in academia. I suddenly found myself solely focusing on publishing in top tier-ranked journals and finding a position at a prestigious university as I developed the desire for a cookie-cutter academic career made by rankings, metrics, and status. These desires threatened to alienate me from myself as I no longer listened to what I needed. In this paper, I will reflect on how the transitioning of PhD graduates is sometimes so enwrapped in fear and doubt that it creates desires that lead us astray from where we need to be. As a way out, I propose, to do a deep dive, cancelling the light and noise pollution of our environment distracting us. I call this turning inwards 'becoming a jellyfish hibernating in the deep sea'. In the vacuum of the deep sea, we become able to look with love and care at the affective noise emanating from inside of us. We learn how to take time to carefully ask where the noise originates from and to listen to our inner voice. As such, 'becoming a jellyfish' and floating in our emotions becomes a tool to return to our individual needs. We create space for playful and creative rebellion against limiting perspectives and restrictive interpretations of how to find a life in academia.

6-215

Between independence and vulnerability in later life: British retirees' aging experiences in Spain

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Emma Fàbrega

DESCRIPTION:

When experiencing aging in Western contexts, there is a sense of being at a threshold between able-bodied adulthood and vulnerable and dependent old age, representing structures of power that reproduce adult-centrism and able-bodied normativities. This is exemplified by various old age classifications, like that of 'third' and 'fourth' age, that have increased in cultural use along with rising population longevity (Gilleard &

Higgs, 2010). This threshold represents a conflict, or gap, between diachronic processual aging experiences and old age synchronic classifications and social discourses (Gell, 1992; Degnen, 2007). Thus, when approaching aging anthropologically, the heuristic device of in-betweenness or liminality proves to be useful. Experiences that are 'neither here nor there' allow society to evaluate itself and reflect on its existing structures, social discourses and imaginaries, and how these can be changed (Coman, 2008:95). This talk will apply the perspective of liminality to Global North aging experiences, drawing on a two-year ethnographic study of British retirees living on the coasts of Spain. These migrate to Spain in search of a 'better' aging experience that postpones old age's negative effects. Despite the groups privilege – due to their whiteness, geopolitical positioning, and expendable resources – their aging migrant condition amplifies the liminal later life experience of teetering between independence and vulnerability. Consequently, the lifestyles they lead are an embodiment of this 'old age threshold', illustrating the conflicts that exist between phases of life. Within these liminal aging experiences, this talk will highlight how aging discourses and categories affect embodied experiences, while also reaffirming the generative use of liminality and in-betweenness as a heuristic device.

Can climate conversations catalyze collective action?

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Linguistic Anthropology

PRESENTER:

Maria-Keiko Yasuoka

DESCRIPTION:

Previous research has shown that interpersonal conversations can increase concern about the climate

crisis (Lawson et al. 2019), knowledge of climate science (Goldberg et al. 2019), and support for climate policy (Fang 2022). However, little is known about whether and how climate conversations can encourage collective, politically engaged action, which researchers and practitioners increasingly prioritize as a goal of climate change communication (Moser 2016:351). To address this question, this study examines a series of climate conversations between 40 climate activists and their chosen non-activist partners (e.g. friends, family, and acquaintances). The results show that the climate conversations influenced many non-activists to seek out more information, talk to others, and make lifestyle changes, but were less successful at inspiring social movement participant and political advocacy. Discourse analysis reveals two interrelated barriers to these forms of collective action: (1) lack of knowledge about climate action and (2) low perceived efficacy. These barriers are part of a distancing phenomenon in which non-activists frame collective action as faraway, often preferring marginally effective lifestyle changes like recycling because they feel closer to home and easier to control. The analysis further reveals activists' strategies for proximizing collective action, such as explaining sub-types of action, discussing theories of change, linking action to audience skills and interests, and making specific invitations. In sum, the results indicate that climate conversations are an effective means of awareness-raising even when participants receive little prior guidance, but action-focused training is necessary to make climate conversations effective for movement building and mobilization.

Chromagraphy: Toward an Anthropological Theory of Color

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Visual Anthropology

PRESENTER:

Samuel Novacich

DESCRIPTION:

Color shapes our engagements, brings allegedly inanimate objects to life, and defines – at least in part – how we understand ourselves and see one another as humans. Color is abstract and mysterious, yet anchored in the most basic foundations of common sense and phenomenology. With some notable exceptions, however, anthropologists have historically approached color in only one of two ways. First, color is studied in ancillary relation to the more traditional targets of social science. In this supporting role, color emerges as a tinted container within which more pressing social phenomena are placed and understood. In the second, color is studied metaphorically, and deployed as a

heuristic device for exploring human cognition and, most frequently, language. While productive as a tool in understanding erstwhile academic projects, neither of these approaches adequately take on color as a unique object of study itself. An anthropological theory of color departs from these limitations, and, following Alfred Gell's theory of art, explores color as a semiotic and relational extension of the human. Emerging from conversations with makeup and tanning artists in Rio de Janeiro, I begin this talk by exploring the ways in which my work with bright aesthetics both built upon and departed from preceding anthropological work on color. Drawing from anthropology's sporadic and oftentimes surprising history with color, I recount Franz Boas's references to blue, yellow, and green in early attempts to set the technical groundwork for his theory of relativism, discuss evolutionist and linguistic debates about the nature of color categories, and, most proximate to my own fieldwork – at least geographically – consider and critique Marvin Harris's preoccupation with color in relation to race in Brazil. The goal of this paper, however, is to learn from while moving beyond these rendezvous with color. I therefore plot a path that snakes past color as only ever adjective or metaphor, and toward a distinctly anthropological approach that explores chromatic exchanges as essential and generative features of everyday life. I conclude by suggesting that chromagraphy – a novel analytical framework and method for writing about color – should form an integral component of modern ethnography.

Circle of Care: Building social, cultural, political, and economic inclusion for grandmother- and child-headed households in Malawi

Talk - Virtual Pre-recorded

REVIEWED BY:

Association for Africanist Anthropology

PRESENTER:

Nancy Kendall

CO-AUTHOR:

isaac phiri

DESCRIPTION:

In this prerecorded talk, we describe the Circle of Care project, a new approach to community mobilization rooted in participatory ethnographic practices--from project design research rooted in community participatory dialogue and debate, to Theatre for

Development performances as a key tool for community sensitization and mobilization, to monitoring and evaluation frameworks rooted in Quality Improvement approaches that center 'recipient' experiences and voices, and that work with participants to constantly improve every aspect of the project. We will explore the strengths and weaknesses of this approach through the Circle of Care project, which is being implemented in Machinga District, Traditional Authority Nkula, Malawi and aims to re-establish the socio-cultural importance and wisdom of grandparents who are heading their own households, and of the grandchildren (and child-headed households) that they support; and improve their economic stability, involvement in local governance, and access to elder- and orphan-responsive services (health, education, agriculture, etc.).

6-345

Conceptualizing “native language” in Russia: Indigenous perspectives vs. federal government discourses and policies

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Linguistic Anthropology

PRESENTER:

Valeriya Minakova

DESCRIPTION:

The Russian invasion of Ukraine in 2022 brought to the fore Russia's imperialist and colonial agenda regarding the former USSR states, their cultures, and languages. Multiple indigenous peoples within Russia have been experiencing this colonial attitude for decades, but little is known about their struggles due to the lack of empirical research on the topic. This presentation explores the language concerns of the Circassians (Adyghe), an indigenous people of the North Caucasus that was conquered by the Russian Empire in the 19th century. Since a large part of the Circassian population was deported from their homeland after the conquest, the Circassians now form a minority in their traditional territories and are struggling to preserve their ancestral language. Based on a 10-month ethnographic study in the Republic of Adyghea in the North Caucasus, this presentation examines how the Circassians conceptualize the notion of 'native language' and its significance for the preservation of the Circassian nation. Analyzing local folklore, interviews with teachers, questionnaires with children, and local social media discourses, I illustrate that when defining 'native language', the Circassian community prioritizes

inheritance over proficiency, seeing 'native language' as inextricably tied to the category of ethnicity. This understanding causes controversy in modern Russia as some influential Russian scholars and politicians promote the idea that a 'native language' is the one a person speaks most proficiently, i.e., it is not necessarily related to one's ethnicity. In 2018, the federal government passed an amendment that allows parents to choose what language their children will study at school 'as a native' thereby canceling the mandatory teaching of indigenous languages that was in place in some national republics of Russia. In practice, the policy encourages parents to proclaim Russian as their children's 'native language', regardless of their ethnicity. The redefinition of the term and the 2018 policy have drawn sharp criticism from Circassian scholars and language activists who see them as part of the russification policy leading to the further decline of indigenous languages in Russia. I place this debate into the current discussions in sociolinguistics about the ontology of such categories of 'language', 'ethnicity', and 'speech community'. As argued by scholars informed by poststructuralist and postcolonial paradigms (e.g., Canagarajah, 2017; Pennycook and Makoni, 2020), these concepts became prominent during the rise of the European nation-states and have been used to oppress multiple populations in colonial contexts. To transition from modernist to decolonial sociolinguistics, it is thus necessary to 'disinvent' these categories while attending to alternative understandings of language that exist among indigenous groups. My research illustrates two problems with this approach. First, modernist ideologies of language as tied to ethnicity and place might be highly relevant to indigenous communities and be perceived as part of their traditional knowledge. Second, in certain political contexts, deconstruction of the link between language, ethnicity, and territory might serve the interests of the dominant groups and further marginalize minoritized populations. These issues need to be considered to understand the consequences of scholarly 'deconstructivist' rhetoric in different contexts around the world.

6-398

Conversation and Community at 'The Philosopher's Table': The Re-invigoration of a Multicultural Club in Southern Italy During and Post-Pandemic

Poster - Virtual Pre-recorded

REVIEWED BY:

General Anthropology Division

PRESENTER:

Anne Schiller (George Mason University, Department of Sociology & Anthropology)

DESCRIPTION:

How voluntary associations promote social interaction across difference and contribute to community-building are questions of relevance in multicultural settings. To be successful, associations must earn and maintain reputations as groups worth joining. To do so can be challenging, given that they bring together people with different life experiences and languages. To thrive, these groups must remain flexible and adaptive. This presentation discusses a less considered variety of voluntary association intended to build relationships and a shared sense of belonging across cultural and linguistic boundaries: the multicultural social club. It is based upon findings from an on-going ethnographic study in the Apulia Region of Italy on the aspirations, activities, and life-cycles of multicultural clubs. The presentation describes how members of one organization – The Philosopher's Table – launched themselves on a path of reflection and re-invigoration during the Covid-19 Pandemic. Their goals were to consider better ways to serve existing members, contribute to the community, and increase membership. Among the club's noteworthy characteristics is that it includes locally-born Italians and expatriates in nearly equal number. Expatriates generally receive only limited attention in discussions of diverse and inclusive communities. Findings from this project help address that knowledge gap by drawing upon original field data collected as part of long term fieldwork in Italy.

Designing Landscapes of Environmental Potency: Macro- and Micro- Topographical Sewage Infrastructure Case Studies in Central Illinois

Poster - Virtual Pre-recorded

REVIEWED BY:

Archaeology Division

PRESENTER:

Anastasia Ervin

DESCRIPTION:

Historical archaeology provides a unique insight into twentieth century critical infrastructure because it allows for a holistic analysis of the infrastructure as it was physically manifested within urban societies and how it has changed over time. In the 1920s and 1930s in Central Illinois, urban areas implemented sewage infrastructure consisting of underground sewers and sanitation plants. These sewage districts soon became an essential service provided within the community and the established infrastructure has undergone expansion and technological updates in the decades since. This paper presents the case studies of three sewage districts in Central Illinois: Bloomington-Normal, Urbana-Champaign and Sangamon County in order to understand how these infrastructures shaped their urban landscapes. The first part compares GIS viewshed analysis from perspectives at the edges of urban areas looking toward the sanitation plant in order to understand the urban residents' experience with the districts in the context of daily life. These viewsheds are complemented by historical records and odor analysis. The second part of this paper analyzes the landscape owned by the sewage districts, focusing on the design choices the sanitation plants choose to measure how the sewage districts controlled their public image. I argue that these sewage districts deliberately designed their landscapes at both macro- and micro- levels as an attempt to enhance the positive, environmentally minded function of the sanitation plants. It is through this positive imagery that the districts sought to divorce themselves from the negative aspects of intaking raw sewage, an imposed 'purposeful forgetfulness' of the industrial function of the plant. Elucidating this landscape choice helps to contextualize the districts within the past, but also informs the contemporary public image of the sanitation plants.

Different visibility and narratives towards immigrants and refugees: being “legal” and “illegal” in Lithuania

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for the Anthropology of Europe

PRESENTER:

Ruta Dapkunaite

DESCRIPTION:

Lithuanian attitudes towards refugee immigrants are at the negative end of most of the survey scales measuring EU citizens' tolerance, integration and attitudes toward refugees. However, with the recent Belarus–EU border crisis and current wave with more than 70 000

Ukrainian war refugees in Lithuania, contrasting attitude of local people and the way between how media divides 'legal' and 'illegal' immigrants and refugees in Lithuania is visible. The existing body of research suggests that major part of Lithuanians opposed to refugees immigrating to Lithuania is due to media news. But is that only due to the different visibility and different portrayals of refugees in the social and the news media? I suggest that these different visibilities and different stories towards the refugees and immigrants are not just reproduced from social media and media news platforms, that overwhelmingly depict refugees differently - others positively and others - negatively, but also stems from Lithuanians' life experiences and precarious feelings about their own lives.

Doing 'ecological transition' in a southern Chinese village: The politics and ethics of grassroots civic practices in an authoritarian state

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for East Asian Anthropology

PRESENTER:

Llangliang Zhang

DESCRIPTION:

This paper ethnographically explores grassroots social and economic initiatives located in the physical and digital spaces associated with one of China's first self-proclaimed 'eco-villages' (shengtaicun) in Guangdong. It

analyzes how grassroots agricultural entrepreneurs, alternative education advocates, and managers of a party-affiliated 'village culture and tourism company' stake out their understandings of 'ecological transition' (shengtai zhuanxing) through entwined economic-ethical practices. In the context of the central government's 'rural revitalization strategy' launched in 2017, I show how new and varied investments in rural China have espoused diversifying civic practices that challenge the value hierarchies prevalent in contemporary Chinese society. However, value conflicts among actors pursuing different 'ecological transition' projects have also engendered social tensions and local environmental crises. These findings contribute to our understanding of grassroots civic practices and citizen-state interactions in contemporary rural China, centered on the polyvalent concept of 'ecological transition.'

6-105

Environmental Justice, Racial Justice, Transitions, and Urban Sustainable Development

Talk - Virtual Pre-recorded

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Edward Sankowski

DESCRIPTION:

This presentation describes recent and ongoing environmental justice research. The research addresses transitions from supposedly less just to more just societal arrangements, primarily as regards greenhouse gases. Sustainable (urban) development, as analyzed here, aspires to aim at environmental justice. There are advantages (discussed in social science development literature) to theory and practice that addresses such transitions, rather than aiming to define an ideally just societal arrangement in an area. In this research, initially funded by the University of Oklahoma, the Oklahoma City urban area and some of its neighborhoods were designated for attention. Some of these communities have minority populations more vulnerable to negative environmental impacts than other communities. Besides interpreting data about what has been and is happening in the vulnerable communities, the aim of this research has been, and is, to initiate and further urban transition processes which would produce more environmentally just arrangements. The processes include surveys and interviews in neighborhoods that are more vulnerable. Matters of race, ethnicity, and

class are relevant to selection of vulnerable communities. While the focus here is about Oklahoma City, it is also argued that there are structurally generalizable implications of this research that are applicable about other urban areas in the US and beyond. Challenges have been encountered in pursuing this research, some of which challenges may be unique to the Oklahoma context, while others are generalizable. Research process challenges, and strategies to deal with them, are themselves part of the subject of the research.

6-060

Everyday 'translations': Of vision and authorship in Hindi 'daily soap' production

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Sreenidhi Krishnan

DESCRIPTION:

A typical Hindi soap opera, also known as 'daily soap', production set employs upwards of hundred artists and technicians daily, in departments such as direction, acting, set design, costuming, production, and hair and makeup. While the more visible creators like actors and producers enjoy celebrity and credit for their contributions, the technical and creative crew that forms the majority of the workforce remains peripheral to conversations on media production (Wilkinson-Weber 2014). This exclusion, rather marginalization, of predominantly below-the-line media workers then raises the question of authorship. Who is the 'author' of a soap opera and who is able to claim ownership of it as a media text? My paper – through a combination of participant-observation and in-depth interviews with Hindi soap opera creators based in Mumbai, India – explores authorship as articulated in the context of soap opera production and how it complicates socio-economic notions of creative ownership and artistry. Mass production cultures obscure authorship by enforcing organizational hierarchies and elevating auteurs. However, labor on soap opera sets is highly 'distributed' (Gell 1998) and 'rhizomatic' (Deleuze 2004) necessitating an examination of who is considered an artist and essential to the final outcome. Artists and technicians along the production ladder, from writing to acting to makeup, frequently offer differing interpretations of whose creative 'vision' gets translated on screen or if such a 'vision' even exists. Occupational

classifications, and specific configurations of class and gender, shape ideas related to creativity and autonomy. My examination of on-set filming practices, and how otherwise anonymized workers reflexively characterize the nature of their contributions, reveals that Hindi soap opera production is as much an account of contestations as it is of collaborations. With this paper I attempt to make transparent how various industry norms shape workers' subjectivities as creators and their valuation of their own artistic labor and that of others.

Exploring university students' emotions of teaching in placement schools through a photovoice analysis

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Visual Anthropology

PRESENTER:

Anna Chan

DESCRIPTION:

Exploring university students' emotions of teaching in placement schools through a photovoice analysis
Chrysa Keung (The Education University of Hong Kong)
Anna Chan (The Education University of Hong Kong)
Abstract This study aims to scrutinize university students' emotions of teaching during the placement period, especially how they make meaning of the emotional labour (i.e., managing one's own emotions to fulfil profession requirements) and emotional demands of the teaching profession. Using photovoice as a methodological and pedagogical tool, data were collected through 11 university students' coursework and interviews. In a pre-service teacher education training course, university students were asked to take photographs that could conceptualize emotional labour in terms of their placement experience. In the follow-up interviews, university students were invited to describe and elaborate on a challenging emotional experience they had faced during their practicum. In this presentation, we will exhibit four university students' photographic journals and analyse their perceptions of using visual metaphors to illustrate their lived experiences. Methodologically speaking, emotional display rules experienced by university students were portrayed in the images and different emotional labour strategies (e.g., surfacing acting, deep acting and expression of naturally felt emotions) were identified in the interviews. Emotional dissonance emerged from the discrepancy between the emotions they felt and

expressed. With the scarcity of using visual metaphors in higher education teaching, findings of this study recognize photovoice as a pedagogical tool to teach university students concepts of teacher emotions and help convey their inner state of emotions creatively. This could be an effective means of developing university students' reflective practices in their learning process.

6-401

Faithful Giving in the Face of the COVID-19 Pandemic: A Case Study Among Liberal Mennonites in VA, USA

Poster - Virtual Pre-recorded

REVIEWED BY:

Society for the Anthropology of Religion

PRESENTER:

Tomomi Naka (Tottori University)

DESCRIPTION:

This poster examines how American liberal Mennonites collectively and individually tried to allocate monetary resources to reflect their faith during the COVID-19 pandemic. Historically, Mennonite congregations have emphasized mutual aid among members and support for the poor and socially disadvantaged in surrounding communities. Financial contribution to the church has long been encouraged as a way of expressing their religious commitment. Individual members often respond to this request while managing their limited resources. However, the recent changes resulting from COVID-19 have introduced additional challenges to members of the church. Being unable to worship together physically, members sought alternative ways to connect to their faith community. Moreover, economic and social disruptions caused financial instability and created anxiety among members and surrounding communities. In this context, by focusing on the topic of financial contribution, this poster explores how members and congregations responded to many challenges caused by the pandemic. Ethnographic data used in this poster are from interviews and observations between 2020 and 2022 among two Mennonite congregations in Virginia, USA. Ethnographic data suggest that although congregations responded relatively well during the first year of the pandemic, more time and effort were required for long-term adjustment. During the first year of the pandemic, congregations promptly provided additional financial and other assistance to those who were in need. They extended their contributions to aid such efforts. As the situation gradually returned to the pre-pandemic

period, congregations began working to reestablish their religious communities and adjust to new spending priorities. While several members were willing to support such initiatives, their offering practices did not necessarily demonstrate this willingness. Considering recent studies on religious giving and morality, this poster examines how Mennonite congregations and their members individually and collectively deal with the many, and sometimes competing, needs and desires to give in the face of changes caused by the pandemic. The poster suggests that religious giving can illuminate how their faith communities are reimagined in changing social contexts.

6-200

Feminism and the US Death Penalty

Talk - Virtual Pre-recorded

REVIEWED BY:

Association for Feminist Anthropology

PRESENTER:

Nicole Kinbarovsky

DESCRIPTION:

If there ever was a topic ripe for feminist dedication, it's the death penalty. Key areas include the gendered structure of law, additional victimization, and the power dynamics between the State and the marginalized population of capital offenders. While trends continue to see a steady decline in support for the US death penalty, 2,414 people live on death row, 51 (2%) of which are women (dpic, 2023). For each person sentenced to die there are dozens more impacted by an impending death sentence (Jones & Beck, 2007; Long, 2011; Smykla, 1987). The retributive policy ignores the reality of executing a human being, including the emotional suffering extended to the loved ones, a female majority of caretakers who provide supplemental support while waiting execution. For the 8.5% of death sentences overturned, exonerees spend an average of 25 years imprisoned between the trial and release. Official misconduct was discovered in 83% of last year's exonerations, 75% of which were black defendants. Of the states reporting data on capital cases, 96% contained racial discrimination—a white victim with a black defendant is two-thirds more likely to receive a death sentence. Feminist anthropology's guiding principles are committed to supporting all marginalized communities, confronting injustices, abusive power, and gender difference (Davis & Craven, 2023). Yet, in an area so desperate for help and clearly ripe for feminist scholarship the literature is surprisingly

sparse. The proposed presentation asks not whether feminist inquiry is a good fit for death penalty scholarship. Capital punishment is an abusive practice that is racist, anti-poor, and creates many additional victims, mostly women (Jones & Beck, 2007; Beck & Britto, 2006; dpic, 2023). This presentation asks, where are our feminist anthropologists to shine a light on such injustice? How can feminist dedication contribute to understanding and the education of state-led homicide?

Forecast of events in a folk agriculture

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Anthropological Sciences

PRESENTER:

Viacheslav Rudnev

DESCRIPTION:

A dependence of the life support system on local natural and climatic factors traditionally determined an attention of society to observation of the environment in order to searching for phenomena which indicate upcoming changes. Folk/ Indigenous culture fixed unique data, decisions (and technologies) that are quite effective and useful for using Nature in a regime of spare. This presentation will focus attention on the specificity of Folk Modes of Life and techniques which have been used for getting unique data about Nature. A lot of folk recommendations in agronomy are based on empirical knowledge about specific characteristics of local biodiversity. Special attention to phenological indicators, based on observation of local flora and fauna, assisted a lot in minimizing risk in agrarian business, in the pre-industrial period. The segmentation

of the surrounding world and the choice of the object of attention were often based on special ideas about the world (for example, in the context of ideas about the meaning of the phases of the moon, color characteristics or long-term cycles of ancient calendar systems) In my paper I will focus attention on the role of folk knowledge (wisdom) in flora and fauna diversity for minimizing risk in agrarian business and for maintaining an environmental resource.

6-310

Gloominess as Resilience. Contesting Hegemonic Affective Regimes in Pandemic-Era Shanghai

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for East Asian Anthropology

PRESENTER:

Anna Iskra (University of Copenhagen)

DESCRIPTION:

At the height of the pandemic in China, local mental health services providers had their hands full. In this talk, we will journey through the affective landscapes of Shanghai's middle-class urbanites, as narrated by local psychological counsellors who operate in the country's vibrant and loosely regulated therapeutic milieu. Pandemic policies hit Shanghai hard, which culminated in the infamous two-month lockdown. While the authorities managed to temporarily contain the spread of the virus, negative affects proliferated in the city with a truly viral force. As gloominess spread, state propaganda and official media circulated enthusiastic reports on fighting the pandemic with 'positive energy,' generating dysphoric feelings among citizens mentally worn out by draconian pandemic policies. This study is an anthropological investigation into the frictions generated in the clash between state-constructed affective regimes that promote positive thinking and disseminate politics of hope and trust in the political status quo, and various tribes of 'affective aliens' among Chinese urbanites that resist performative positivity by embodying gloominess. The accounts of psychological counsellors contest the dominant narrative of pandemic-induced anxiety and depression as primarily marked by withdrawal and passivity. Instead, such affects can be re-imagined as modes of resilience under authoritarian policies that question the censoring impact of the politics of 'positive energy.'

6-140

Going Childfree in India – “Choices” Made, “Choices” Challenged

Talk - Virtual Pre-recorded

REVIEWED BY:

Association for Feminist Anthropology

PRESENTER:

Sreeparna Chattopadhyay

DESCRIPTION:

There is limited research on why urban, educated individuals may choose not to have children in India- a country that is perceived to be highly pronatalist. Neomalthusian concerns around population explosion continue to be foregrounded in public discourse and state policies on family planning, despite fertility rates dipping to replacement level for the country, and below replacement levels in several Indian states. This research explores the reasons why urban, educated individuals are 'choosing' to be childfree in India. The methods used in this study include anthropologically informed qualitative methods along with participant observation on social medial platforms and analysis of digital data. At a time of immense transitions, both hopefulness and hopelessness in the country, I explore the extent to which not biologically procreating has the potential to challenge dominant and entrenched norms around procreation. Simultaneously not all childfree individuals choose to subvert existent dominant paradigms and in fact (particularly male childfree individuals) through several material and discursive practices may reinforce gender inequitable norms and belief systems. The discursive and material practices of childfree groups and individuals are nuanced and complex – they defy compartmentalization into binaries such as progressive/regressive, modern/primitive, local/global, and religious/secular, an allegory for a nation that is undergoing massive transformation both aided and impeded by the techno-material practices of its citizens.

6-205

Healing the Homelands: National Parks Service Lands and Indigenous Co-Stewardship in Pennsylvania

Talk - Virtual Pre-recorded

REVIEWED BY:

Association of Indigenous Anthropologists

PRESENTER:

Erica Walters (Living Heritage Anthropology)

DESCRIPTION:

#landback is a popular online tag, used by indigenous people in the Americas and their allies to demand the return of land previously held by indigenous people. However, the catchphrase is often followed by questions that are increasingly difficult to answer; what lands? how can it be returned? who is returning it? who is getting it back? who gets to decide? Tangible examples of #landback are happening all over the United States and Canada today; and these models can help to inform indigenous land reconciliation moving forward. This paper will discuss one such example out of Pennsylvania. Starting in 2021, The National Parks Service (NPS) approached The Delaware Tribe of Indians; a federally recognized Lenape Tribe based in Bartlesville, Oklahoma, to begin work in The (NPS-owned) Delaware Water Gap National Recreation Area. Recognizing the recreation area lands as Lenape homelands, the NPS provided a grant for the Delaware Tribe to do ethnographic, ethnohistoric, and genealogical research on the lands as a first step to a co-stewardship/co-management relationship. The Lenape have been removed from Pennsylvania since the 1700s, and are now a 'native diaspora', with communities in Oklahoma, Wisconsin, and Ontario. This paper will review the fieldwork done in Lenape communities in the United States and Canada, the limitations of this work, the dynamic between the Tribal and the Federal governments, tangible outcomes, and the importance of allowing indigenous communities to return to their ancestral homes on their own terms. This paper seeks to provide an example of how this type of work is done, and what it can accomplish.

6-280

Hearing the Tahuantinsuyu: Exploring Inca Landscapes through Sound

Talk - Virtual Pre-recorded

REVIEWED BY:

Archaeology Division

PRESENTER:

Alba Menéndez Pereda

CO-AUTHOR:

Rachel Schloss

DESCRIPTION:

Co-Authors: Alba Menéndez Pereda and Rachel Schloss

The soundscape of Tahuantisuyu, also known as the Inca Empire (ca. 1440–1532 CE), was composed of a diversity of performers including singers and drummers, crying llamas, cooing birds, rushing rivers, the sound of maize beer preparation, and the voice of ancestral mountains. Ethnohistoric sources record how the sound of natural forces like water and wind carried significant cosmological meaning for the Inca. What role did architecture play in orchestrating the Inca soundscape? In this paper, we investigate the sensorial experience of Inca landscapes with a focus on the relationship between acoustics and the built environment in the heartland of Tahuantisuyu. This inquiry is situated among archaeoacoustics and phenomenological studies focused on sound undertaken in recent decades as a means to construct a more nuanced and humanized understanding of past lived experiences. In particular, the Andes has witnessed trailblazing work on sound, but this research has been dominated by the study of music and instruments, rather than the holistic acoustic environment in which social life is embedded. This paper focuses on ambient sounds to push beyond the musical boundaries that have limited sonic investigations of the past. Specifically, we investigate the Inca soundscape that emerged as the byproduct of daily activities enacted by human and non-human performers. We examine this soundscape by analyzing the ways in which Inca patrons and architects engineered the environment through elements like construction materials and architectural design in an attempt to harness the powerful sonic atmosphere of Tahuantisuyu.

6-040

Historical anthropology in times of crisis

Podcast - Virtual Pre-Recorded

REVIEWED BY:

Society for Humanistic Anthropology

PRESENTER:

Garam Kwon (CUNY, The Graduate Center), Sergio Palencia Frener (William & Mary, Department of Anthropology)

DESCRIPTION:

This podcast discusses the importance of considering the historical weight to understand post-pandemic crises, specifically focusing on Guatemala and Morocco. Many people define the post-pandemic era as a time of 'new crises', such as the Ukraine war, rising living costs, and increased migration. However, what people mean by 'crisis' and how they experience it differs from its

regional and historical context. Guatemala and Morocco are no exceptions. In this podcast, we argue that we can better understand people's plights in the post-pandemic era only by historicising their meanings and experiences of crises. The podcast departs from how two discussants (us) doing historical anthropology started to navigate the meanings and forms of crises in contemporary Guatemala and Morocco during their fieldwork. As anthropologists studying these countries in the 1960s and 1970s, we conducted our research mainly through archival work and interviews about the recent past with community members in the region of Quiché in Guatemala and Tangier in Morocco. However, living with these communities, we naturally engaged with different forms of their daily hardships and their migrant family members' difficulties in the U.S. or Spain. While it seemed afar from our original research period in the beginning, we will discuss how we benefited from our historical approach to the field in terms of better comprehending the complexities of contemporary crises and people's lives. Then, we move our discussion into how our historico-anthropological research could be a valuable tool to challenge colonial ideologies in local society, which often put people into pessimism or find faults in individuals going through crises. Facing post-pandemic crises, people in the field frequently blamed themselves as 'unlucky' or 'incompetent', often repeating colonisers' racial ideologies about local people in the past. In these circumstances, we will debate how our historically informed conversation with the community people was useful in challenging such prejudices and exploring other structural factors that perpetuate the hardships they were experiencing.

6-155

Identity Work and Playful Resistance in a University-Based Youth Equity Intervention Program

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Christopher Hu

DESCRIPTION:

Racial categories are socially constructed concepts of self and other actively maintained through interactional processes (Fassin, 2011; Miles, 1989; Omi & Winant, 2015). Since such categories are inherently unstable, transitory, fluid, and negotiated, racial identification can change across time, space, and context (Davenport,

2020; Doyle & Kao, 2007; Harris & Sim, 2002; Saperstein & Penner, 2012). Drawing from a year of ethnographic participant observation in a university-based youth equity educational intervention program, I focus specifically on the ways a small group of Latino students engage in identity work or processes of identifying as Hispanic (Bucholtz & Hall, 2005; Elliot, 2011; García, 2010). Considering the in-group dynamic, I explore how one particular student who is racialized as white by others asserts a Hispanic identity using linguistic and chronotopic resources (Blommaert & De Fina, 2017). His identity claims are not validated by his peers and thus remains in an in-between state at the peripheries of traditional categories. Considering the group's interaction with organizational staff, I also explore how these Latino students-using identity-based resources-engage in what I call 'playful resistance' to traditional authority figures and their educational efforts. I conclude by discussing the instability and negotiation of categorical membership, highlighting the complexities of Hispanic and Latinx as social categories, as well as the ways that youth actively participate in these processes of identity work and play in an educational context designed to 'serve' them.

6-402

Impact of Internet Resource Integration on Immigrant-Owned Microenterprises' Profits in the Triad Area of North Carolina

Poster - Virtual Pre-recorded

REVIEWED BY:

National Association of Student Anthropologists

PRESENTER:

John Luke Farah (Elon University)

DESCRIPTION:

This research explores immigrant-owned microenterprises supported by a non-profit agency in the Triad area of N.C. It focuses on the impact of the implementation of online resources on immigrant and refugee-owned microenterprises. This study investigated the effectiveness of developing an online presence for the increase of microenterprise market reach and profits. The ultimate goal was to explore whether other similar microenterprise programs nationwide should develop curricula in online resources integration in addition to credit-history building and microenterprise-loan training. The research methodology in this study included fieldwork observations with the business loan manager at a resettlement agency in the Triad area of N.C., review of

written profiles of the micro entrepreneurs, one-on-one business and media consultations with micro entrepreneurs and a final semi-structured interview with six micro entrepreneurs to determine the effectiveness of the online resources and the likelihood that they will continue to use them. The study started in July of 2022 and will continue until May of 2023, and the sample included 6 micro entrepreneurs, 4 male and 2 female (including from the Democratic Republic of the Congo, Syria, Sudan, South Sudan, Ethiopia and Eritrea), in a variety of micro businesses, including grocery services, hair braiding services, transportation services and food services. The main findings of this study indicate that each micro entrepreneur needed specific types of online and offline resources to best facilitate their online market presence. These online resources include social-media marketing strategies, advertisements, online business-card tools, Square business software, social media presence (e.g. on Facebook and Instagram), translation of online materials and graphic design support. Preliminary conclusions of this study reflect that the implementation of online resources into microenterprises can be effective at increasing market reach and profitability. This study suggests that microenterprise programs should include training for refugees to develop an online media presence as part of its training curriculum to benefit their clients and their programs.

6-120

Japan downgraded COVID-19 in May 2023: What does this transition mean for organ transplant patients?

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Maria-Keiko Yasuoka

DESCRIPTION:

Japan has a severe organ shortage (with a total of 934 donations by 03/26/2023), so most recipients rely on living donors and overseas transplants. When the COVID-19 pandemic hit in 2020, no vaccines or medicines were available; transplant surgery was discontinued; and overseas travel was restricted. Hospitals were filled with coronavirus-infected patients, leaving no space for living donor transplants. Organ transplantation involves a continual fight against infectious diseases: it is a high-risk treatment because patients must take immunosuppressive drugs after

transplantation; these also make the effect of vaccinations slower and shorter. The COVID-19 pandemic has lasted for three years, and Japan is now in the '8th wave'. However, on May 8th, 2023, the government decided to downgrade COVID-19 from its current 'category II' to 'category V' – the same level as influenza. This transition is the first step in the post-COVID-19 era, but what effect will it have on the lives of organ transplant patients? The purpose of this study is to clarify the issues arising from the category downgrade for building an organ transplant system that can withstand the post-COVID-19 crisis, focusing on organ recipients. I conducted interview research – both onscreen interviews and online chats – with recipients using anthropological methods via Skype, Zoom and Facebook. In the post-COVID-19 era, it is necessary to think about infectious disease countermeasures to reduce the risk for procedures such as organ transplantation. It is also essential to build a sustainable organ transplant system for patients, and to consider how to adapt to future crises.

6-245

Liminal Migrants: A rapid appraisal of recent immigration patterns from Latin America to the US.

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

PRESENTER:

Lennin Caro (University of North Carolina, Charlotte, Department of Anthropology)

DESCRIPTION:

Since 2022, the number of Latino migrants crossing the Mexico-US border has dramatically increased. Much coverage is devoted to policies and executive orders to address this renewed 'border crisis', but little anthropological research attempts to understand the lived experiences of Latino migrants. Camino Research Institute conducted a multi-sited, mixed methods rapid appraisal to better understand recent migrant journeys, including migration motives, means of travel, and transitions to the US. Results are based on 20 semi-structured and impromptu interviews with migrants and organization representatives near the Mexico-US border and 18 semi-structured interviews with recently arrived migrants living in North Carolina. Results show participants commonly decide to migrate because of poor economic conditions or to escape violence.

Participants who traveled by land to the border usually deplete their life savings and refer to Mexico as the most difficult part of the journey. All participants who crossed the border report surrendering themselves to border patrol to begin their asylum process. Once released back into the US, almost all experience difficulties in acquiring work and financial stability due to documentation issues. Narratives also indicate participants experienced trauma and chronic stressors, pointing to the possible need for behavioral health services. Results are discussed through the theoretical lens of Victor Turner's concept of 'liminality' (the state of being 'betwixt and between') and demonstrate how immigration policies are integral to the production of liminal subjects. Information presented in this talk can help inform immigration policy reform and highlight additional services to improve the lives of immigrants.

6-250

Mobility, Misdirection, and jurisdictional Limbo: Brokering Presence under Swiss Integration Law

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for the Anthropology of Europe

PRESENTER:

Shirley Yeung

DESCRIPTION:

What different kinds of borders condition the possibilities for migrants' social and transnational mobility? How do such differentiated borders become the site of various stranger-relations, and how are such borders mediated in the everyday? This proposed presentation will reflect on the salient role played by intra-national (or jurisdictional) borders in shaping the possibilities for (im)migrants' legal and social inclusion under Switzerland's federal Integration policy. The presentation will address how the intra-national administrative unit of 'the canton,' whose model of local sovereignty rests on mapping language onto territory, can create states of protracted bureaucratic limbo for (im)migrants who 'fall through cracks.' Drawing on ethnographic fieldwork with migrants in the canton of Geneva who occupy varied legal statuses, I first address how such 'cracks' are actively constituted through official language and 'integration' policies working in concert with everyday practices of misdirection. The presentation will then address how various 'street-level' bureaucrats (Lipsky 1980) work to broker and mediate individuals' long-term social and legal status. The presentation will argue that such interstitial street-level

agents play a critical role in mediating national and intranational borders and are, critically, key agents in the brokerage of presence and the boundary-making of 'locality' itself.

6-170

[Narrative and Rites of Passage in Adolescence: Catalysts for Cognitive and Social Change](#)

Talk - Virtual Pre-recorded

REVIEWED BY:

Anthropology of Consciousness

PRESENTER:

Rachel Bomalaski (Fine Arts: Muscogee County School District)

DESCRIPTION:

This talk explores the usefulness of narratives and rites of passage in adolescence. Narratives, broadly defined, include many cultural forms of storytelling. Narrative as it is generally considered in psychology is a western and agency-centric phenomenon. The beneficial features of narrative for identity formation, including emplotment of life experiences, integration of past and present selves, and dialectic with the social milieu, can also be achieved through the use of formats with wider cultural relevance, such as rites of passage. Culturally sanctioned rituals engage individuals in dialectic with their social setting, which can strengthen self and social efficacy.

6-150

[No Volunteers?: Addressing Connecticut's Unpreparedness for Climate Change-Induced Weather Events by Uniting Local Emergency Management Directors and Residents](#)

Talk - Virtual Pre-recorded

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Ashley Walters (University of Connecticut)

DESCRIPTION:

Historically New England has been considered an area of the United States at minimal risk for natural disasters and extreme weather events. However, Connecticut is now facing more frequent and severe climate change-induced weather events including hurricanes, tornados, flooding, wind events, and Nor'easters yet its towns are ill-equipped to handle the social, economic, and

infrastructural impacts of these weather events. Each town of Connecticut is required to have an Emergency Management Director (EMD) who is tasked with making sure the town is prepared for weather events. Although this role is crucial, most towns have volunteer EMDs or EMDs who hold multiple other roles within local government leaving them limited time to devote to emergency management and preparedness. Meanwhile, socioeconomic disparities continue to increase in Connecticut and many residents are unprepared and uninformed about weather events and risks. This research used ethnographic fieldwork to investigate issues of weather preparedness in Connecticut from two perspectives – the government personnel in charge of handling preparedness and response and the residents that are impacted by weather events. Interviews with both local EMDs and state level emergency management personnel identified the gaps in both preparedness and communications between the local and state governments while also investigating the impacts and potential solutions to the current overreliance on volunteers to fulfill key emergency management positions. Focus groups with residents identified the needs and knowledge base of residents with regards to weather events. Using the ethnographic data gathered, a model to address the gaps in preparedness and communication between governments and residents is being formed. Ethnographic data has much to add to this work on climate change and disaster preparedness which tends to traditionally be focused mainly in non-social sciences. The transition to including ethnography within such research can help facilitate communication between local governments and residents, increase resources available to residents, and improve preparedness so that each town is better equipped to handle the increasing weather events that Connecticut faces.

6-305

[Online Data Capture as Qualitative Research Technique](#)

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Allison Kabel (Towson University)

DESCRIPTION:

This presentation will include discussion of the techniques used to collect and analyze data from online forums addressing topics related to religious-based

modesty and exercise, sport or other physical activity. These qualitative research studies used online data capture to explore the relationship between modesty-protecting athletic apparel and health-seeking behavior among women from religious backgrounds, with special attention to older women. Online forums are capable of functioning as sites of knowledge production, influencing the opinions and health-related behaviors of their participants and readers. All data were collected on publicly available social media platforms featuring health and fitness forums and discussion threads for women interested in maintaining standards of modesty. This technique was valuable on its own merits, and was ideal during the Covid-19 pandemic, due to contact-free data collection and analysis.

Participatory Action Museography: "Mining" Action Research Strategies for Collaborative Museum Work

Talk - Virtual Pre-recorded

REVIEWED BY:

Council for Museum Anthropology

PRESENTER:

W Warner Wood (University of Wisconsin, Milwaukee)

DESCRIPTION:

There seems to be no end in sight to writing about how, when, and with which community 'partners' to undertake collaborative museum work. While such writing does seem to coalesce around the idea that museum practice should incorporate the voices and perspectives of folks that previously museums largely assumed they spoke to (and on behalf of), what is meant by phrases such as 'community voices,' in discussions about how to, for example, open-up 'curatorial authority' to 'community perspectives' has been interpreted in a variety of ways. And, it would seem with few exceptions, without taking account of the ways that social scientists (including anthropologists) have gone about doing this kind of work for decades. As a socio-cultural anthropologist, ethnographer, and 'museum anthropologist' who has worked collaboratively with research participants, it seems to me that there are opportunities to 'mine' social science approaches to collaborative research practices and methodologies, such as Participatory Action Research (PAR). While a handful of museum anthropologists have discussed the use of PAR in museum contexts, I believe that, with a reorientation toward some of the unique characteristics of museum

work, it could be more productively employed by the wider museum professional community-including museum anthropologists. I call this way of doing collaborative museum work Participatory Action Museography (PAM). In this virtual talk, I provide a theoretical and methodological overview of PAM while outlining the contours of its practice through examples from my own work.

Perpetual Transition: Transitional Justice and the Missing (16 Years) After Nepal's Armed Conflict

Talk - Virtual Pre-recorded

REVIEWED BY:

Association for Political and Legal Anthropology

PRESENTER:

Krista Billingsley (Saint Michael's College, Department of Sociology and Anthropology)

DESCRIPTION:

When is transitional justice over? When has the transition occurred? Who decides (e.g. the United Nations, international donors, victims, national governments)? Processes of transitional justice aim to redress human rights violations that occurred during armed conflict and prevent such violations in the future. For families of the missing (forcibly disappeared by state forces) in Nepal, the loss and ambiguous status of their loved ones continues despite a lack of sustained interest by international donors, the United Nations, and academics. This paper, based on ethnographic research conducted in 2013, 2016, and 2021, examines the perspectives of families of the missing regarding transitions and justice in Nepal.

6-015

Podcast: Primary Care in Transition: implementation supports for interdisciplinary primary care teams in BC

Podcast - Virtual Pre-Recorded

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Sarah Fletcher

DESCRIPTION:

The transition to a post-pandemic world has drawn increased attention to the tensions, pressures and capacity challenges that are experienced by health care

providers and patients in primary care systems around the world. In the face of these challenges, in British Columbia, policy makers, funders, providers, and patients are working through another transition- the transition to team based primary care. The Innovation Support Unit, in the Department of Family Practice at the University of British Columbia, has been working to develop a series of implementation supports for communities, teams, providers and patients engaged in this transformation of Primary Care. Designed to accelerate planning and implementation, the mapping methods support inclusive, patient-centred and equity focused discussion and decision-making.

6-085

Podcasting as an Effective Approach for Clinician Education: A Study on Increasing Knowledge of Immigrant and Refugee History and Culture

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Kumara Sundar

DESCRIPTION:

Background Educating clinicians can be challenging due to time constraints, resistance to change, and a lack of alignment between content and clinical practice. Much is unknown about the most effective approaches for educating clinicians, including the optimal frequency, duration, and how to tailor content to individuals best. To address this challenge, our study investigated whether podcasting could provide an innovative and effective approach to clinician education. Methods We recruited clinicians from a convenience sample and provided a podcast-based educational intervention to increase their knowledge of immigrant and refugee history and culture. The podcast series included 13 episodes made available for download on all available podcast platforms, and metrics such as download counts and listener percentages were tracked to assess the effectiveness of the intervention. Results: Our results showed that the podcast intervention was successful, with 2183 downloads and an average of 218 downloads per episode. Listener engagement was high, with a listener percentage of over 70% across all episodes, and the podcast was accessed in over 24 countries to the podcast platform. Conclusion: These results suggest that podcasting can be an accessible and engaging method for educating clinicians globally. Our findings have significant implications for immigrant and

refugee health, as increasing clinician knowledge of the unique challenges faced by these populations is essential for providing culturally responsive care. Therefore, further research should explore the potential of podcasting as a tool for clinician education in other healthcare areas, given the success of our intervention.

6-180

Post Human Angels: Compassionate Relationships with Inanimate Objects

Talk - Virtual Pre-recorded

REVIEWED BY:

Anthropology of Consciousness

PRESENTER:

Chandler Zausner (University of Southern California, Department of Anthropology)

DESCRIPTION:

Post Human Angels: Compassionate Relationships with Inanimate Objects presents seemingly reactive and compassionate believable agents empowered by a suspension of disbelief that facilitates the Anthropomorphism of Machinery. Metadata from past interactions is applied to customize ongoing experiences, including alerts, data visualization, entertainment and conversation. This virtual talk considers a global epidemic of loneliness that is increasingly addressed by post-human thinking machines. What is the endgame if humans form a deep emotional attachment to artificially intelligent illusions of companionship? Implications of emotional vulnerability and commercial manipulation are some ethical considerations to be explored. Elements of attachment theory must be followed to their logical conclusion of detachment, to ease the transition to a replacement purchase, if consumerism is to grow. Twenty-first century commerce enacts an elemental shift in user engagement with products, services, and processes to address the human struggle with diseases of despair and a universal yearning for empathy during a global epidemic of loneliness. This shift in human attitudes towards emotionally intelligent machines challenges the prevailing wisdom that there is something fundamentally negative about artificial intelligence posing as conversational partners. Both Boomers and Gen Z are emotionally invested, with full knowledge that their partner is a post-human entity. Limitless customization promotes a diversity of 'idealized happy paths' while allowing for the possibilities of alternative realities. Anthropologists working in the commercial sector have the opportunity

to guide UX/UI AI developers and product marketers through the challenge of creating artificially intelligent thinking machines that can nurture consumers, while building brand loyalty, carefully considering the implications of blurring the lines between a constructed reality and genuine human connection. It's a good business model, while also a cautionary tale.

6-315

PreacHER: Examining the impact of sermonic discourse on congregation attitudes regarding Black clergywomen within the Black Church.

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for the Anthropology of Religion

PRESENTER:

Crystal Carter

DESCRIPTION:

Intro Although data indicate a greater level of religious involvement, including church attendance, for women when compared to men, amongst Black Americans, female participation within the clergy and church leadership are disproportionately underrepresented (Banbury, 2014; Hoegeman, 2017; Matthews, 2014; Taylor, Chatters, & Brown, 2014; Whitson, 1998). Additional research suggests that leadership opportunities for clergywomen have increased from 1998-2012, but senior clerical posts for women still lag behind those of men and most tend to be held in White, Mainline, Protestant denominations with clergywomen concentrated within smaller congregations (Hoegeman, 2017). Further research suggests that this phenomenon may be linked to doctrinal positions during sermonic discourse taken by senior, Black clergymen that embrace a secular, hegemonic viewpoint of gender norms that, in effect, has heavily influenced congregational attitudes towards clergywomen, thereby limiting the leadership opportunities of Black clergywomen and seminarians, creating an institutional infrastructure embedded in patriarchal hegemony (Barnes, 2015; Lee, 2004; Matthews, 2014; Smarr, Disbennett-Lee, & Hakim, 2018; Whitson, 1998). As such, the purpose of this presentation is to explain the experiences of Black clergywomen pertaining to challenges in clerical leadership and to explore the impact of public discourse that affirms women functioning in clerical leadership on the attitudes of the congregation towards clergywomen across denominational and non-denominational contexts. Research Questions The research questions addressed

within this study are as follows: 1. What are the experiences of Black clergywomen within the Black Church? 2. How are gender norms reinforced through sermons and teachings within the Black Church? 3. What is the impact of professional socialization in facilitating gender roles within the Black Church? Methods/Methodology For this research project, I am using a variety of ethnographic methods, such as observation and detailed participant interviews. The interviews were conducted from January – April of 2023.

6-410

Racial Justice and University Admissions in Transition: Challenging "Rule of Law" Colorblindness

Late-Breaking Talk - Virtual Pre-recorded

REVIEWED BY:

Late-Breaking

PRESENTER:

Edward Sankowski

DESCRIPTION:

The US Supreme Court (on June 29, 2023) ruled in favor of Students for Fair Admissions, Inc. in a case addressing race-related admissions practices at Harvard and the University of North Carolina. SCOTUS transitioned from qualified 'academic deference' to disruption about admissions practices. Racial justice and fairness are phrases or words at issue in the case. There are, however, varying uses of these words or phrases. One type of use denominates justice as what a legal system within its own terminology declares as just. Another treats justice declarations of a legal system as subject to challenge, even 'overruling', arising from extra-legal-system cultural stances, often ethical, sometimes academic. One such challenge can be derived (moving beyond its debt to legal, even constitutional roots) from efforts by Kimberle Crenshaw and collaborators. They critique colorblindness ideology in academic disciplines. The SCOTUS decision incorporates an ideology of colorblindness. Anti-colorblindness implies an overall normative ethics account of how universities should function justly about race, including governance standards and admissions. SCOTUS has increased governmental power to regulate the basic functioning of universities. This is one attempt to increase control of universities by government (in this context, far-right government). As a counter to that, we anticipate a counter-transition, continuing critique and political-cultural mobilization favoring a distinctive role for

universities as cultural institutions defining racial justice. It is uncertain how successful such a significantly extra-legal academic agenda can be in promoting racial justice by assembling academe's cultural resources to counteract SCOTUS and Republican Party governmental trends.

6-365

Reassembling Sasang Medicine: The scientization of Sasang medicine as an attempt to make 'alternative modernity'

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Hyunkoo Kim (Kyung Hee University)

DESCRIPTION:

This presentation explores how Sasang medicine, a branch of traditional Korean medicine, is being 'scientized' at the national research institute of South Korea. The idea of 'scientization' is a historical and social product that has been advocated in Korea and East Asia in conjunction with the slogans of 'modernization' and 'Westernization'. In this context, Sasang medicine is reassembled for 'scientization' in the national research institute by making new networks with diverse agencies. Based on ethnographic fieldwork at the National Research Institute of Korean Medicine, this paper traces the reassembling process of Sasang medicine by examining how the notion of chejil (body constitution), considered the main focus of Sasang medicine, is reinterpreted and redefined in the scientization project. Through the scientization project in the National Research Institute, the idea that disease can be prevented before it occurs by determining an individual's constitution was linked to the concept of weibing (not yet being ill), which appears in East Asian medical classics written well before Sasang medicine emerged. In the scientization process, the traditional concept of weibing became reduced to biological and biomedical data. This assemblage of data was easy to circulate in the network that the institute formed to build the 'K-Biobank'. In this process, chejil was interpreted as biomedical information and transformed from the doctor-patient relationship or having human characters in the Confucian society to the characteristics of individuals managed by various modern institutions and organizations. This paper thus examines the manifestations of 'alternative modernity', which the scientization project of Sasang medicine imagined

through the reassembling process. Also, it investigates the conflicts and dilemmas between the agencies involved.

6-075

Refugee Journeys in Asia: Transitions or Endless Travail?

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Miriam Jaehn (CSEAS, Kyoto University)

DESCRIPTION:

My paper is concerned with refugee journeys in Asia, specifically with those of the Rohingya across South and Southeast Asia. While journeys are generally understood as transitions constituted by departure, transit, and arrival, I argue that refugee journeys in Asia must be understood as an often endless 'travail'. The term 'travail' captures what I consider the three central elements of refugee journeys: forced displacement (movements); suffering and trauma (hardship); and precarious work (labor). First, after being displaced, refugees are often thrown into a cycle of being forced to move and made unable to do so through their 'illegal' and deportable status. Second, refugees' suffering and trauma begins with the experience of persecution, war, and loss of home, but it becomes seemingly eternal through the individual and collective memorization and experience of flight. Third, their journeys are defined by precarious work as most refugees have little financial resources and must rely on their and their relatives' labor power to finance their ongoing displacements. As such, refugees' journeys are processes of continuous 'travail'. However, they are also to be read as 'performative acts' that work with, question, and contest international and national regimes of refugee protection who deny them legal recognition. In effect, competing regimes of refugee protection force refugees into a constant state of transitioning – of becoming yet never being (legally recognized as) refugees. In facing exclusionary norms on the figure of 'the refugee', refugees must and do work towards becoming a transnational diaspora that helps itself. Resourceful individuals of the diaspora hence aspire to gain legitimate leadership to challenge their community's exclusion from refugee protection. However, as Rohingya leaders generally lack legal-bureaucratic authority, their power tends to remain fickle and they primarily act as intermediary (political) brokers. In the

end, the travail of negotiating and performing legitimate refugeehood during their journeys fatigues Rohingya refugees and their leaders. As such, refugees' travail in Asia exposes that the norm-alization of refugee interventions constitutes another moment of displacement that keeps refugees in transition and at bay.

6-210

Rethinking Quantum Ethnography After COVID-19

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Abigail Dumes (University of Michigan, Ann Arbor)

DESCRIPTION:

In previous work on the controversy over how to diagnose and treat Lyme disease, I offered 'quantum ethnography' as a conceptual practice whereby the ethnographer 'fully and simultaneously' inhabits multiple perspectives within the parameters of their project's field to capture and represent those situated perspectives across lines of difference (Dumes 2020, 13). In their work on myalgic encephalomyelitis/chronic fatigue syndrome (ME/CFS), Emily Rogers takes up quantum ethnography as a spatial practice to describe the way that fieldwork with 'a group that is largely homebound' often takes place 'simultaneously in virtual and physical space' (2022, 416). Drawing from interviews conducted over Zoom with Long COVID patients during the COVID-19 pandemic, and bringing scholarship on contested illness in conversation with disability studies, this paper explores how quantum ethnography might work both conceptually and spatially in the context of digital technologies that enable ways of connecting with and learning about others that are at once 'here and there.'

Shhh! I'm a School Librarian Using My BA in Anthropology to Radically Transform the Library

Talk - Virtual Pre-recorded

REVIEWED BY:

Council on Anthropology and Education

PRESENTER:

Jain Orr

DESCRIPTION:

The core spirit of libraries is to promote social equity through the sharing of resources. School libraries are institutions that must adapt to remain relevant to the population they serve. Using basic ethnographic research methods, such that one might learn about in an introduction to cultural anthropology course, I have radically transformed the practices of the high school library I run. The culture I study (to better serve) are urban, creative-type teenagers, the kind you'd find in a fine arts-focused public high school in Austin, Texas. Participant observation, surveys, interviews, and focus groups guide most executive decisions I make as the school librarian: from the lighting to books I buy. Librarians can use ethnographic approaches to guide the curation of resources and services they provide. Ethnographic methods are ideal because (1) libraries operate at a neighborhood level, (2) librarians have direct access to the communities they serve, and (3) librarians are comfortable doing research. In my case, the application of ethnographic methods to guide my decision-making has resulted in a high school library that is useful, dynamic, and busy serving a population of respectful, creative, and intellectually-curious teenagers.

6-330

The "political party" and "its people"—Disorder and alliance formation in a small-scale election in Mumbai, India

Talk - Virtual Pre-recorded

REVIEWED BY:

American Ethnological Society

PRESENTER:

Aiman Mustafa (Emory University)

DESCRIPTION:

In a municipal corporation election in Mumbai, campaign organizers repeatedly invoked the binary of 'the party' and 'its people,' as they sought votes. They saw the centrist Congress party, for which they were campaigners, as best representing the interests and aspirations of the people. In doing so, they drew a sharp distinction between other political parties in the fray and saw these as sharply marked out by different ideologies. As the campaign heated up, however, organizers found it increasingly difficult to sustain this category of 'the party' and 'its people.' The separation between different parties, and also between a party and its followers seemed to dissolve on the eve of voting. A section of card-holding party members constantly felt sidelined by other organizers who were not even official

members of the party. All along the campaign they had grappled with the lack of remuneration for their efforts. They pointed out that such payments were an accepted and normal part of any election campaign. They noted all along how the main organizers offered money and other favors to other non-party workers, and prospective voters. They achieved clarity on why this was so on the eve of voting. They were, however, left grappling with the nature of the boundaries between their party and the people it claimed to represent. In this paper, I use field materials from this election held a decade ago, to investigate the nature of the political party. In literature across the social sciences, the political party is often taken as a unit of analysis. I examine the mechanisms give rise to this categorical division between 'the party' and 'its people.' I build on recent scholarship that sees democracy not as a normative ideal, but explains the range of practices that go into the making of claims about democracy. My ethnographic analysis of this campaign engages with earlier work on patron-client relations, and on alliance formation. It argues that shifting analytical attention to the workings of individuals in webs of alliances helps account better for the ways in which elections are actually organized and contested.

6-025

The Color of Resilience

Podcast - Virtual Pre-Recorded

REVIEWED BY:

PRESENTER:

Nayantara Premakumar

DESCRIPTION:

For many marginalized and minority students, the Ph.D. can be a site of violence, mirroring and leveraging homophobia, racism, and misogyny under the cover of academic rigor. This situation is at times so bleak that students give up - some on the Ph.D., some on caring for their mental and physical health, and some have taken their own life. While this is widespread across the Ph.D. experience, anthropology, with its history as a tool of colonization, should be the site of reflection and transformation. So it is with great urgency that we ask: How can resistance and endurance be created through joy and aesthetics? This paper examines the case of a cohort who banded together in the face of academic and state violence. Rather than falling into a culture of toxic critique or allowing themselves to be divided by competition, they decided to cooperate. They baked

and cooked to show care for each other. They came to seminars color-coordinated as a joyful show of solidarity with each other. In creating a herd aesthetic that confused those in positions of power who perpetrated violence, they protected each other. They created a fictive person who, with an email address and social media, accompanied each of them throughout their respective fieldwork. To the outside, it looked silly and nonsensical. But these acts of resilience grounded participants to their work and the self, despite the violence enacted on them (and which still has long-reaching implications to this day).

6-407

The Emergence of Chinese Ethnourban Communities in the New York Metropolitan Area: Examining the Paradoxical Discourses of Settlement and Spatial Assimilation

Poster - Virtual Pre-recorded

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Christopher Hu

DESCRIPTION:

Over the past several decades, a new immigration and settlement pattern in the U.S. is emerging within large metropolitan areas: newly arriving immigrants who have sufficient resources are settling in ethnourbs-or suburban communities with notable ethnic immigrant concentrations (Harun & Fillion, 2021; Li, 1998, 2005, 2009; Zhou et al., 2009). Although Asian American and Asian diasporic communities are closely associated with the ethnourban phenomenon, much research is focused on demographic or geospatial analysis rather than understanding the lived experiences of ethnourban immigrants through an ethnographic and interpretive approach. Therefore, in this paper, I first provide context by illustrating the expansion and growth of Chinese ethnourban communities in the New Jersey and New York metropolitan area using U.S. Census data from 1990 to 2021. I specifically find a pattern of dispersed settlement rather than concentrated self-segregation, with many new suburban Chinese communities forming further from New York City. Then, drawing from ethnographic life-history interviews (n=25) with highly skilled and educated first-generation immigrants from China, Hong Kong, and Taiwan (De Fina, 2019; Mintz, 1979; Spradley, 2016), I explore the discourses and the ways that they make sense of their transition to wealthier suburban neighborhoods from

both city centers and their places of origin. This transition to wealthier suburban neighborhoods is undergirded by a culturally patterned perception of what constitutes high-quality education, and when recounting their life stories, these professional class Chinese immigrants invoke seemingly paradoxical discourses: a discourse of survival in a white-dominated society and a discourse of accumulating advantage. On the first point, settlement into predominantly white middle-class suburban communities is a calculated decision that is strongly motivated by the prospect of their children attending a school with name recognition, as determined by publicly available rankings, standardized testing data, and awards. By employing such an approach to evaluating school quality, these families ultimately make settlement decisions that move them into white and wealthy neighborhoods. However, to make sense of their social and spatial position as an ethnic minority in white suburbia, these first-generation Chinese immigrants invoke a discourse of survival by describing the ways that they have been forced to adapt to a white-dominated and discriminatory society in order to survive, just as early Chinese migrant laborers did (Wang, 2001). At the same time, however, they also employ a discourse of accumulating advantage in that settling into suburbia is described as the means to secure a better future for their children by reaping the social and educational benefits available in white and wealthier communities. Corroborating recent research regarding Asian ethnoburbs (Kye, 2023), this paper suggests that the emergence of Chinese ethnoburban communities is not primarily due to ethnic self-segregation but rather spatial assimilation into predominantly white spaces driven by perceptions and beliefs about high-quality education. Furthermore, this paper also highlights the highly complex and seemingly paradoxical position of more privileged and well-resourced immigrant groups who make meaning out of their experiences as an outsider or foreigner surviving in U.S. society and as a privileged group seeking to secure status.

6-175

The Grotesque Archive: Marked Bodies as Articulators of Past, Present and Future

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

PRESENTER:

Paloma Rodrigo Gonzales (CUNY - BMCC & Graduate Center)

DESCRIPTION:

Anthropologists in the early 1900s assessed monogenetic and polygenetic approaches to the peopling of America to try and determine the true origin of the 'American aboriginal.' Evidence of the trajectories that brought human beings to the continent was sought in geographic transformations, archeological discoveries, ethno-linguistic practices and on human bodies, dead and alive. Through their quests and debates, researchers like Aleš Hrdlička, Paul Rivet and Florentino Ameghino did not uncover, but rather helped produce the criteria for racial difference-and thus for 'race' as an ostensibly measurable truth. This presentation focuses one of such pieces of evidence, the so-called 'Mongolian spot,' a fleeting dark birthmark that early-twentieth-century anthropologists used to trace lines of descent and geographic migration routes on living human bodies. Their inquiries however, comprised not only space, but also time. The further into the past their sources could go, the closer they would get to the 'pure,' 'original' racial types. Anthropology's stress on time supposed that people's temporalities could be mapped onto biological evolution. But it also meant that Indian bodies were capable of manifesting the past in the present. This paper explores a trans or post-disciplinary (Tylor 2006:71) and queer (Warner 1993) approach that presumes 'the body can act as an archive that articulates the past, present, and future' (Martínez 2014:177). Even when theories of the peopling of America, and the notion of race as a biological reality have been largely contested, those early classifications still inform the way in which we group racial identities throughout Latin America. Terms like Caucasian, African, Indian have been replaced with categories that still communicate, as in early Anthropology, temporalities and presumptions of difference. In this presentation I suggest that the 'Mongolian spot' (still considered in Latin America, evidence of non-white origins) can function as a 'grotesque image,' an entity 'entirely different from ready-made, completed being' (Bakhtin 1984:25). Determined by ambivalence and a sense of time that is both historical and cyclical. The grotesque can help us think of living bodies-in this case 'marked' or 'stained' bodies-as archives that instantiate shared and silenced pasts while opening up new possible futures that establish embodied connections beyond colonial racial categories.

6-050

The Heart of the Matter: Regional Perceptions of Root Causes of Buraku Discrimination as Reflected in Museums

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for East Asian Anthropology

PRESENTER:

Lisa Mueller (Florida International University)

DESCRIPTION:

The (hi)story of the Buraku minority group in Japan is complex and fragmented, variously tied to living space or profession, the Edo-era mibun caste system or post-liberation migration, personal identification or family lineage. Central to Buraku identity is the concept of discrimination, or *sabetsu*, which when modified by another noun is almost always referred to as *buraku sabetsu*. That is, it is almost never referred to as racial, ethnic, or caste-based discrimination. This tautological descriptor seems to indicate that Buraku discrimination is best described as its own category; one is discriminated against because one is Buraku, and the nature of this discrimination is Burakuness. But what is Burakuness? Through examination of Buraku-focused museums in both eastern and western Japan, this talk will provide evidence of stark regional differences between how Burakuness is defined and interrogated, with the West presenting Buraku discrimination as neighborhood-based and the East presenting Buraku discrimination as profession-based. However, the Fukuyama Peace and Human Rights Museum (FPHRM) in Hiroshima Prefecture stands out among the museums by presenting a more nuanced and intersectional understanding of Burakuness that incorporates both views under the metaphor 'layers of discrimination.' For anthropologists, this talk explores how the Buraku-focused museums of eastern and western Japan can serve as an excellent case study of how regional contexts can influence subaltern identity, particularly when this identity is contested. For museum practitioners, evidence from the FPHRM provides guidance on articulating an intersectional understanding of contested identity.

6-195

The Politics of the South American Migration Regime: Notes from a Review of the Interdisciplinary Literature on Migration Policy in the Region since the Venezuelan Exodus

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

PRESENTER:

María Lis Baiocchi (CONICET)

DESCRIPTION:

The importance that the study of Venezuelan migration in South America has recently acquired is related to its constitution as the most significant phenomenon of human mobility in the recent history of the region. The production of knowledge from the social sciences on the social, political, and cultural implications of Venezuelan migration in South America has run parallel with the increase, celerity, and scale of the phenomenon. Indeed, since 2017 there has been an exponential increase in the number of academic publications on this topic, published primarily in Spanish. This talk will present the results of a review of the anthropological, sociological, Political Science, International Relations, and Legal Studies literature on migration policy in South America in the face of the reconfiguration of the Venezuelan migratory flow in the region between 2015 and 2023. The literature reviewed is based on empirical investigations that shed light on the politics of the South American migration regime at the current unprecedented social, political, and historical juncture of intraregional migration within South America. The review of the literature provides evidence of a field of study in the making within the larger field of Latin American migration studies, highlights the centrality of Latin American academic production in both empirical and theoretical terms to this specific topic and to the field of migration studies more broadly, demonstrates the prevalence of studies based on documentary analysis for studies employing ethnographic approaches, and shows the need for studies that would examine this topic from an intersectional perspective.

6-240

The Tacit Landscape: Palimpsests of Religious Meaning Along the Pilgrimage Trail in Central Mexico

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for the Anthropology of Religion

PRESENTER:

Jonathan Extract

DESCRIPTION:

This talk explores the palimpsest of religious practices within the symbolic-historic landscape of Central Mexico. Through my participation in four different pilgrimages-Cholula, San Miguel del Milagro, Huetziatl, and Chalma-I trace the continuities, ruptures, and translations of practices along routes and landmarks that have been used for hundreds if not thousands of years. The emergent question from these experiences is how can the meanings of these rites change while the geographies remain fixed? While on the one hand this talk muses at the echoes of generations of practices, it also necessarily confronts the entanglement of European Catholicism and the 'Popular Religion' of Indigenous Mexico. What is revealed through the specifics of ethnography is not a dichotomy between Catholic belief and pre-Hispanic antecedents, but the complex and plural ways Indigenous identity and religious devotion manifest.

6-030

Thinking Together About (Post)COVID-19 Fieldwork Anxieties and Possibilities Through Black Feminist Methodologies

Podcast - Virtual Pre-Recorded

REVIEWED BY:

Association of Black Anthropologists

PRESENTER:

Nana Charlene Elfreda Adubea Toa-Kwapong (Duke University), Alexis Holloway (Duke University, Department of Cultural Anthropology), Joseph Hiller

DESCRIPTION:

In this proposed podcast presentation, three cohort mates who joined the Duke University Cultural Anthropology PhD program in 2019 will discuss how the COVID-19 pandemic and concurrent social movements - particularly the global Movement for Black Lives - have

shaped our journeys as anthropologists-in-training. The pandemic presented many logistical challenges but also invited ethnographers to think creatively about what fieldwork could be in the face of lockdowns and travel restrictions. However, as we returned to 'normal,' the methodological tools we cultivated during this time have (unintentionally) been pushed to the back burner as we have embarked on 'traditional' fieldwork. We are all currently in the field – doing research in Colombia, the United States, and Ghana. We are observing how our interlocutors (primarily people of African and/or Indigenous descent), in different ways, have also been transformed by the ongoing pandemic and the social movements that have overlapped with it. How do we incorporate the 'non-traditional' methods we adopted and developed into in-person research? While our positionalities as researchers and human beings are varied, our projects are indebted to Black feminist theoretical and methodological interventions of scholars like Faye Harrison, Irma McLaurin, Anne-Maria Makhulu, and Jennifer Nash, whose works have inspired reflection on collaboration, care, and interdependence – in the field and on the page. Our podcast proposes a free-flowing conversation about these fieldwork challenges and the methodological and collaborative possibilities they have produced for us as individual researchers and a cohort, drawing on the work of Black feminist theorists.

6-408

Time and The Camp: Examining the Politics of Aid and Power through Ethnography in Azraq Refugee Camp

Poster - Virtual Pre-recorded

REVIEWED BY:

Middle East Section

PRESENTER:

Melissa Gatter

DESCRIPTION:

This poster examines the everyday politics of time in Azraq refugee camp in Jordan based on more than a year of ethnographic fieldwork conducted in 2017-18. Through a thorough investigation of everyday aid interactions, the poster examines how Azraq's power structures have established a monopoly over time within the camp's borders. It analyzes the role of street-level aid workers within Azraq's bureaucracy as both shapers of policy but also subject to the power system and its particular temporalities. The poster also explores how refugees navigate this system, both in the day-to-

day and over years, by evaluating various layers of waiting as they affect refugee perceptions of time in the camp – not only the present, but the past, near future, and far future. By looking at the temporal politics of Azraq, this poster argues that the bureaucratic system of the camp actually forecloses the futures of its residents that it is meant to preserve. Residents negotiate with this temporal power to create alternative presents and imagine ordinary futures. This poster is a call for anthropologists and social scientists to study time, and not just space, in their examinations of refugee camps. Examining time in the camp reveals the invisible power dynamics of aid that are otherwise overlooked.

6-390

TitleThey Trespass our Bodies, Like They Trespass Our Lands: Educational Effects on Native American Children in Rural Oklahoma

Talk - Virtual Pre-recorded

REVIEWED BY:

Association of Indigenous Anthropologists

PRESENTER:

Kendra Root (Oklahoma State University)

DESCRIPTION:

From settler colonialism, Native American women have experienced high rates of violence alongside violent acts and violations to Native lands, waters, air, and all living relatives. All elements of Earth will be referred to in this presentation as biodiversity. Both Native American women and our biodiversity provide life and sustainability, making both in ceremony sacred for the parturition and sustaining of life. With continued resistance against extractive industries, Native women have a responsibility to our biodiversity for the continued survival for Native peoples and lands. This research makes meaning of colonial encroachments by exploring land violence through mining in rural Northeastern Oklahoma and brings forth the contribution of this new knowledge to the dominant society. Historical accounts of the colonial rape culture and pillage of Native American lands from extractive industry of mining is indisputably connected to educational outcomes of children within the Quapaw Nation of Oklahoma reservation, thus ultimately the closure of the public school system. Data collection includes photographs, website information, historical records from the school, information from the community to show and understand the effects within the community. With the understanding of the multi-facet theories regarding Native students' academic

success and educational definitions of success in the dominant society, native students are stigmatized by dominant societal evaluations and statistics when being compared to non-native students. Our Native American children's western colonial educational success is displayed in dominant societal statistics as being the highest dropout rates and low achievement rates in the United States. The EOG (2016) reading data showed that Native American students performed 27.8 percentage points below the average for white students in reading. Only 42.8% of Native American students demonstrated grade level proficiency in reading. The small rural Oklahoma town, Picher Oklahoma, reflects a community that was mined for lead, zinc, and cadmium on Native American lands belonging to the Quapaw Nation, as the reservation was established with the Treaty of 1833. In this process, Quapaw Nation's lands and environment was polluted with contaminations ultimately leading to a U.S government deeming of a super fund site. Quapaw lands that are inhabitable for the Quapaw people and our living relative beings, is a failure of the United States federal government not upholding their trust responsibility for the Quapaw Nation and its people. Contaminations were not known immediately, however after many children in the public school system had demonstrated learning challenges, traces of lead engulfed the young innocent bodies, were then traced back to the environmental contaminants. While many researchers study Native Americans, either discuss colonial land violence or the poor academic achievement of Native children, few, if any, have made the connection between colonial land violence as the production of contaminants and pollutants and educational outcomes. My goal and hope are to make the Quapaw Nation and its people's voice heard. To achieve my goal, I will translate to the dominant society, through an Indigenous lens, the relationship between colonial land violence and educational outcomes clearer, using Indigenous methodology.

Transitions of care for the farmers and their cocoa plants in Ghana

Poster - Virtual Pre-recorded

REVIEWED BY:

Association for Africanist Anthropology

PRESENTER:

Barbora Kyereko

DESCRIPTION:

In the post-colonial context of farming in Ghana, the

social sphere and the natural world adapt together to meet world market demands, rather than the other way around. Well-being is produced, experienced, measured, and negotiated with care, as plant growth and various activities accelerate time and divide space. The demands of the world market, global ecological actions, and local government shifts make policy-makers hope for a transition from subsistence to a market economy. However, farmers still hope for fewer droughts and better yields. For both to happen, the matrilinear system may need to shift to a patrilinear, non-market-based system of farming has to transit into liberal capitalism and ecological policies concerning deforestation implied by 'the West' need to be integrated. Science can measure or accelerate various aspects of plant growth and develop new varieties that are more resistant, but there is no mechanism to measure or consider the shifting circumstances of the farmers. They have to disappear or transition into a new system. The move here comes rather from the „unknown' to the „known' – from less certain topographies resulting from the colonial past to pre-designed capitalism. However, the space of transition that spans in between offers no solution, as there is no alternative for what keeps emerging from the colonial past. What can then be achieved through care? And whose well-being is at stake, while farmers and their plants are measured, defined, and contested?

6-125

Transitions to Project-Based, Transdisciplinary Learning: A Guide to Creating Virtual Collaborative Learning in Undergraduate Courses

Talk - Virtual Pre-recorded

REVIEWED BY:

General Anthropology Division

PRESENTER:

Audrey Ricke (Indiana University, Purdue University at Indianapolis, Department of Anthropology)

DESCRIPTION:

The COVID-19 pandemic brought a rapid transition to online learning but also a heightened awareness of addressing existing inequalities in higher education. Although some in-person classes have resumed, this does not mean that virtual learning in these spaces should be discontinued. This presentation illustrates how to creatively mobilize virtual learning strategies and technologies to create collaborative, transdisciplinary project-based learning in undergraduate courses that is

inclusive of students of diverse backgrounds and life situations. It draws on lessons learned in creating an online collaborative transdisciplinary project in an undergraduate introductory international studies course with an anthropological component. The presentation will discuss the pedagogical strategies that instructors can use to design and scaffold course materials, including weekly icebreakers and weekly assignment deliverables, that build to the end project and facilitate collaboration. It includes advice on how to integrate virtual platforms, like Zoom and Google, to coordinate local as well as transnational collaboration with peers in other countries. A focus of the presentation will be on the 'how,' 'why,' and 'when' of designing and scheduling course readings, assignments, different icebreakers, and lectures to facilitate collaboration, avoid 'overloading' students, and provide students with the group-planning skills, communication mediums, content, and structure needed to work outside and within the class space to complete the transdisciplinary project. The goal with this scaffolded design is to support personal connection and the transition to transdisciplinary project-based learning, especially for students who are experiencing another layer of transition, that is to college and balancing work, school, and family responsibilities.

6-230

Trauma & Ritual Initiation: A View from Psychedelic Research

Talk - Virtual Pre-recorded

REVIEWED BY:

Anthropology of Consciousness

PRESENTER:

Reed Morrison

DESCRIPTION:

It has been observed, by this author and others, that there are similarities among reports of those who have been victims of traumatic events and those who have participated in traditional ritual initiation ceremonies. One commonality is the experience of some degree of violence. For the trauma victim, violence can lead to acute or protracted suffering characterized by recurrent and prolonged psychological distress, including depression, dissociative reactions, intrusive thoughts and memories, hypervigilance and avoidance behaviors, i.e. the symptoms of posttraumatic stress disorder (PTSD). Participants in traditional ritual initiation ceremonies, on the other hand, are subjected to controlled violence that is intended to be generative and purposefully aimed at engendering healthy

transformations of spiritual beliefs, personal identities and social standing. The author, in a previously published article (Morrison, R.A. (2012). Trauma and transformative passage. *International Journal of Transpersonal Studies*, 31(1), 2012, pp. 38-46), argued that the traditional tripartite ritual initiation structure of Separation, Ordeal and Return, described by Eliade, van Gennep and others, is an appropriate template for organizing and comparing the experiences of both groups. This talk adds a third group to the mix, participants in studies evaluating the effectiveness of psychedelic-assisted psychotherapy. The author, for three years, worked as a facilitator/guide in psychedelic study sessions conducted by the Johns Hopkins University School of Medicine Center for Psychedelic and Consciousness Research (CPCR). Is the three-phased psychedelic-assisted psychotherapy model analogous to the traditional model? Can psychedelic medicine be viewed as an introduction of trauma for healing purposes? What are the similarities and differences among a victimizing trauma, ritual trauma and psychedelic trauma? What can a psychedelic session initiate? What about spiritual/mystical experiences? Questions such as these and others will be entertained and discussed.

6-065

Unsettling the Forest Islands of Kissidougou

Talk - Virtual Pre-recorded

REVIEWED BY:

Culture and Agriculture

PRESENTER:

A Endre Nyerges (Centre College, Anthropology and Sociology Program)

DESCRIPTION:

Hundreds of tall, dense, forest islands, each surrounding a village at its center, characterize the landscape of Kissidougou, Republic of Guinea. Current opinion holds that these peri-village forest islands are anthropogenic productions, created by settlers founding villages in open savanna and growing trees by their farming practices. In *Misreading the African Landscape*, Fairhead and Leach (1996) corroborate the narrative that more people equal more forest by comparative examination of forest cover depicted in aerial photographs from the 1950s and SPOT satellite images from 1989/92. These comparisons, for one location, purportedly show a 50% increase in forest cover from 1952 to 1992. The accumulation of freely available Landsat satellite imagery allows for both a restudy and

forward projection of the Kissidougou situation from 1974 to now. Preliminary analysis shows that the earlier work overlooked mundane spatial effects of population growth, i.e., that more people equal more town. In the period of 2002-2022, if not decades earlier, expanding towns in some areas consumed forest islands from the inside, thereby eroding, fragmenting, or destroying them. Looking to the past, rather than increasing over time, forest cover was stable or decreased slightly from 1974 to 1991, thereby contradicting the thesis that earlier sparse forest cover grew by the effects of settlement. Evidence that forest cover was unchanging or diminishing slowly in the last quarter of the 20th century and then declined precipitously under pressure of village expansion in the 21st implies that a full restudy of the unsettling of Kissidougou forests is now due.

6-220

Victims of Failed Systems: Human Trafficking, Structural Vulnerability, and the Case for Prevention

Talk - Virtual Pre-recorded

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Alicia Peters (University of New England)

DESCRIPTION:

Since the passage of the Trafficking Victims Protection Act (2000), the U.S. government has framed its approach to human trafficking through what it calls the '3 P's' of prosecution, protection, and prevention. Yet the 3 P's are not weighted equally, and the response has focused overwhelmingly on a criminal legal response. Most prevention efforts are limited to public outreach and awareness campaigns. Outreach is vital to connecting potential survivors with resources, but it is a reactive approach that depends on reaching individuals after they have been harmed. Primary prevention is proactive and seeks to decrease vulnerability before trafficking occurs. Drawing on two years of ethnographic fieldwork in the northern New England region of the U.S., including participant observation and interviews with social service providers and survivors of trafficking as well as with members of law enforcement, this paper illuminates the ways in which structural vulnerability arises before, during, and after trafficking as a result of failed systems. Approaching the subject through a public health lens, the paper explores opportunities to address structural violence and argues for an approach to

trafficking that moves 'upstream' to identify and intervene at the level of root causes. An expanded approach to prevention should incorporate interventions to disrupt patterns of exploitation before trafficking occurs and address factors that make survivors vulnerable to re-trafficking. The best approach to preventing trafficking may lie in policies that seem to be quite removed from the crime itself.

6-415

Where Violence Comes From: Colombian “Infiltration,” Xenophobic Discourse, and the Murder of Fernando Villavicencio in Quito, Ecuador

Late-Breaking Talk - Virtual Pre-recorded

REVIEWED BY:

Late-Breaking

PRESENTER:

Alana Ackerman

DESCRIPTION:

Where is violence imagined as originating? What consequences do these imaginings have? Fernando Villavicencio, an Ecuadorian presidential candidate, was murdered at a political rally in Quito in August 2023, less than two weeks before the country's 'snap' elections. During this time of governmental transition, Ecuadorian political figures and media sources have blamed six Colombian citizens for Villavicencio's murder, and have represented his murder-and rising violence in Ecuador in general-using the language of 'infiltration,' 'organized crime,' and 'mafias.' Based on long-term ethnographic research in Ecuador and analysis of media sources in the wake of Villavicencio's death, I argue that political discourse represents violence as external to the Ecuadorian state, and as associated with armed conflict and drug trafficking, marked as Colombian. This xenophobic discourse reproduces an imaginary of Ecuador as a space of innocence and peace, erasing violence perpetrated by the Ecuadorian state, as well as the violence of racism that Colombians experience within Ecuador.

6-190

Who is an Environmental Activist?: Ethnographic Approaches to Pro-Environmental Action

Talk - Virtual Pre-recorded

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Peter Sutoris (University of York)

DESCRIPTION:

Only a fraction of grassroots collective pro-environmental efforts, often ones associated with protest and disruption, are seen as 'environmental activism' in academic and public discourse. But many other forms of pro-environmental action that do not fit into this conventional understanding of activism remain unrecognised and understudied-and may not be viewed as pathways to political change. The proposed project will study such 'under the radar' collective actions to develop new, more expansive ways of thinking about environmental activism, and compare these findings with mainstream understandings of who an activist is. The dominant paradigms in the conversation about activism often dictate whose voice is heard in academic and public debates about environmental decay. Countless individuals and collectives unknown outside their proximate communities are often barred from meaningful participation in debate about the future because of their geographic location, because they speak languages other than English, because they lack clearly identifiable spokespeople or 'leaders', or simply because of identities that trigger (un)conscious bias among the gatekeepers of public debate. When activism is narrowly defined as 'protest', it is cut off from what many see as their day-to-day work. This paper considers how anthropologists might develop new, more expansive ways of thinking about environmental activism by comparing an ethnographic exploration of grassroots pro-environmental action with mainstream understandings of who an environmental activist is. It reflects on how the power of ethnography could be leveraged to address questions such as: What are the ideas, narratives and imaginations of the future that drive collective pro-environmental efforts in different social, cultural and political settings? Who do different societies see as an environmental activist, and how does this differ from grassroots pro-environmental action? The methodological and theoretical reflections in this paper are grounded in initial pilot fieldwork with grassroots environmental movements in Nepal and the United Kingdom. By comparing a site in the 'Global North' with one in the 'Global South', the paper illustrates the potential of multi-sited ethnography to illuminate the changing cultural landscapes of environmental activism.

6-395

Worship in Transition: An Encounter with the Rājrajeshwarī Devī of the Garhwal Himalaya

Talk - Virtual Pre-recorded

REVIEWED BY:

General Anthropology Division

PRESENTER:

Vineet Gairola

DESCRIPTION:

The state of Uttarakhand in India is referred to as Dev Bhūmi (Land of the Gods) as it is home to several devī-devtās (local deities), sages, and rishis. During the times of Navrātri, the nine forms of the goddess Durgā are worshipped. It is also one of the times when various religious practices in conjunction with worship take place in the Garhwal Himalayan region. An older idol of the devī was replaced by a newer one during this time in the Rājrajeshwarī devī temple of Kandara village situated in the Rudraprayag district of the Garhwal Himalayas. The research question is to understand the

dynamics of changing the idol marked by both-Vedic fire worship and possession. The findings in this research are based on ethnographic fieldwork in this region which included participant observation, case study, and semi-structured interviews. Rājrajeshwarī devī, through possessing her naur (representative/medium), engages with her devotees and 'remembers' their problems and conflicts which she attempts to resolve if asked. Through these transactions, a strong intimate bond in everyday living is formed with a deity. This paper aims to provide a closer peek into the realm of lived practices and traditions from the Central Himalayas and to document such experiences which often lie in the zone of orality. It is as much about contributing to the existing works on spiritual and cultural practices of the Himalayas as it is about catching a glimpse of the 'extraordinary' in between ordinary moments. The worship of the Rājrajeshwarī devī holds not only a cathartic value but a protective function. This paper captures the essence of the worship of the Rājrajeshwarī devī which included the following elements: rhythmic music, establishing a new idol, doing a havan (fire worship), sacrifice, and possession.

Workshops

Graduate Student Workshop: Drafting A Prospectus for Dissertation

11/15/2023

12pm - 2pm 205 B

ORGANIZER:

Silvana Montanola (Graduate Representative Association for Political and Legal Anthropology)

DESCRIPTION:

During this workshop, led by the APLA student committee, PhD students will get an overview of the important tips and tricks towards completing a successful prospectus from the words of seasoned professors in the field. In the second half, we will have ample time for discussions between graduate students only, with the chance for students to share pieces of their prospectus and workshop them.

Trans-Versing Storyworlds via Ethnographic Poetry and Interstitial Art

11/15/2023

12pm - 3pm 203 B

ORGANIZER:

Luke Kernan (Ph.D. Candidate & Lecturer - University of Victoria)

PRESENTER:

Paola Juan, (Ph.D, Candidate & Teaching Assistant - University of Lausanne)

DESCRIPTION:

This storytelling and arts-based workshop will challenge participants to creatively organize and replot ethnographic data into compelling, theoretically rich storyworlds. It aims for participants to explore methods that give texture, sensitivity, and depth to ethnographic material.

Collaborating with Clinical Investigators New to Qualitative Research: Strategies for the Anthropologist

11/15/2023

2:30pm - 4:30pm 205 B

ORGANIZER:

Robin Higashi (Assistant Professor, UT Southwestern Medical Center, O'Donnell School of Public Health)

PRESENTER:

Carolyn Smith-Morris, (Professor, UT Southwestern Medical Center, O'Donnell School of Public Health)

DESCRIPTION:

The purpose of this workshop is to guide the burgeoning population of medical anthropologists working with clinician investigators in healthcare and community-oriented settings, medical research, and schools of medicine and public health. Participants will gain practical guidance and tools to initiate and execute collaborative research relationships with clinicians, create and maintain rigorous anthropological standards, and negotiate shared research products.

Collaborative Event Ethnography at Climate Conferences

11/16/2023

10:30am - 12:30pm

205 B

ORGANIZER:

Emily Hite (Assistant Professor, Saint Louis University)

PRESENTER:

Katie Foster, (Postdoc), Colleen Scanlan Lyons (Associate Research Professor, University of Colorado Boulder)

DESCRIPTION:

The purpose of the workshop is to create a network of anthropologists who are interested in collaborating and conducting ethnographic research at climate-related events, with particular focus on meetings hosted by the United Nations Framework Convention on Climate Change (UNFCCC). We invite all anthropologists to join us in a lively discussion about climate related research, new collaborative ethnographic methods, and opportunities for attendance at UNFCCC events.

NAPA Professional Development Workshop Teaching Students to Practice Anthropology

11/16/2023

12:30pm - 2:30pm

203 B

ORGANIZER:

Heidi Bludau (Senior Lecturer, Vanderbilt University)

DESCRIPTION:

Learn how to design an applied anthropology class that fits your program. Whether you're a professor with limited "practice" or a practitioner with limited classroom experience, this workshop is for you!

NAPA Professional Development Workshop- Tool Share: Borrowing from the Journalist's Toolkit

11/16/2023

1pm - 3pm

205 B

ORGANIZER:

Adam Gamwell (Founder, This Anthro Life & Anthrocurious)

PRESENTER:

Emily Kennedy, (Journalist, Writer/Researcher, AnthroJourno.org)

DESCRIPTION:

Blend anthropology with journalism to amplify your expertise and research reach. Gain practical insights from anthropologist Adam Gamwell and journalist Emily Kennedy, develop a pitch, and receive digital handouts for long-term use in engaging the public through traditional or self-publishing platforms

Grant Writing for the Wenner-Gren Foundation and the NSF

11/16/2023

3pm - 5pm

203 B

ORGANIZER:

Jeff Mantz (Cultural Anthropology Program Director, National Science Foundation)

PRESENTER:

Danlyn Rutherford, (President, Wenner-Gren Foundation)

DESCRIPTION:

Participants in this workshop will discover what the two major funders for anthropological research are looking for in an application. This workshop is perfect for anyone who wants to learn to describe their research in more compelling terms.

Translating Anthropological Knowledge to Practice in Health Professions Education: Strategies for Effective Teaching

11/16/2023

8am - 10am

205 B

ORGANIZER:

Dennis Wiedman (Emeritus Professor of Anthropology, Dept of Global and Sociocultural Studies, Fla. International U.)

PRESENTER:

Iveris Martinez, (Professor & Archstone Foundation Endowed Chair in Gerontology, and Director of the Center for Successful Aging at the College of Health and Human Services at California State University, Long Beach.)

DESCRIPTION:

Designed for anthropologists engaged in health professions education who wish to develop frameworks and concrete learning strategies for more effective teaching by translating theoretical and ethnographic knowledge into clinical contexts. It will be of interest to those from other fields engaged in teaching behavioral and social sciences in health as well as anthropology graduate students who desire work in health professions education.

[Anthropology in Implementation Science](#)

11/17/2023

10:30am - 2:30pm **203 B**

ORGANIZER:

CATHLEEN WILLGING (Center Director and Senior Research Scientist, Pacific Institute for Research and Evaluation)

PRESENTER:

Ashley Hagam, (Assistant Professor, Yale School of Public Health), Sarah Raskin (Associate Professor, Virginia Commonwealth University)

DESCRIPTION:

This interactive workshop will orient participants to models and methods in implementation science, a field dedicated to overcoming research-to-practice gaps to improve health and wellbeing. It will feature guidance and skills building activities focused on optimizing the contributions of anthropologists to implementation science design, measurement, and practice.

[Tools in the Satchel: On Embodiment and Research Based Devised Theatre](#)

11/17/2023

1pm - 5pm **205 B**

ORGANIZER:

Melissa Moschitto (Founding Artistic Director, The Anthropologists)

PRESENTER:

Haile Cole, (Independent Scholar, AAA member), Jalissa Fulton (Performer/Deviser, The Anthropologists)

DESCRIPTION:

Led by award-winning New York City-based theatre company, The Anthropologists, and Dr. Haile Eshe Cole, this half-day workshop explores theatre as a mechanism for experimentation and play, its potential intersections with research and the role of theatre as pedagogy, praxis, and a means of public engagement. Part lecture, part hands-on practicum, participants will be invited into the company's methodology and gain tools for transforming research into embodied experience.

[How to Write for the Public](#)

11/17/2023

3pm - 5pm **203 B**

ORGANIZER:

Chip Colwell (Editor-in-Chief, SAPIENS)

PRESENTER:

Jeff Martin, (Director of Communications, AAA)

DESCRIPTION:

How can anthropologists make their voice heard? Writing for the public. This workshop gives you everything you need to know to get started—and find success.

[Going Up? Offering the Perfect Elevator Pitch](#)

11/17/2023

8am - 10am **203 B**

ORGANIZER:

Elizabeth Briody (Founder and Principal, Cultural Keys LLC)

PRESENTER:

Jeff Martin, (Director of Communications and Public Affairs, AAA)

DESCRIPTION:

Come practice your elevator pitch with us. Create a compelling and concise perspective of where you are heading in your career.

[Indigenous Land Acknowledgments and the Unsettled Settler](#)

11/18/2023

12pm - 1:30pm **205 B**

ORGANIZER:

Sandra Bamford (Associate Professor, University of Toronto, and Co-Chair, CASCA Local Organizing Committee)

PRESENTER:

John Croutch, (Indigenous Training Coordinator, Office of Indigenous Initiatives, University of Toronto), Maggie Cummings (Associate Professor, Teaching Stream, University of Toronto and Co-Chair, CASCA Local Organizing Committee)

DESCRIPTION:

The 'Indian Problem' was a saviour narrative crafted to justify the absorption of Indigenous peoples into the Canadian body politic. The Indigenous land acknowledgement has the potential to expose the real objective of settler colonialism - LAND via the elimination of the original peoples not assimilation.

NAPA Professional Development Workshop— Before, During and After: Strategies for Communicating with Collaborators and Critics

11/18/2023

1pm - 5pm 203 B

ORGANIZER:

Melissa Cefkin (Independent)

PRESENTER:

Suanna Selby Crowley, (President and Principal Investigator, HeadFort Consulting, LLC)

DESCRIPTION:

Join NAPA members Melissa Cefkin and Suanna Selby Crowley for an in-depth participatory workshop on communicating with clients, collaborators and critics. In this two-part workshop, Part 1 will consider where and how anthropologists present their qualifications for work (e.g., job interview or a project proposal), report on work (e.g., research proposal or project results), and ways to mobilize others to take action (e.g., codesign activities, influencing clients or leadership). Part 2 will focus on developing strategic approaches to generating visibility for projects and research results with special emphasis on the realities of communications crises and how to manage negative attention. This workshop is designed to be a discussion of how to shape approaches to internal and external communications.

NAPA Professional Development Workshop- Facilitating Creativity: Skills and Tools of Workshop Facilitation

11/18/2023

8am - 10am 205 B

ORGANIZER:

Christine Z Miller (Professor, Savannah College of Art and Design)

PRESENTER:

Jenessa Mae Spears, (Portfolio Manager and Anthropologist Consilience Group, LLC)

DESCRIPTION:

The aim of this dynamic workshop is to equip attendees with facilitation techniques that inspire creativity in both groups and individuals. Participants will be educated in utilizing the creative process to guide groups towards innovative idea generation and proactive problem-solving. Proficiencies in creative thinking and facilitation are not only valuable, but also widely applicable in various professional fields beyond anthropology. Specifically, within the realm of anthropology, these skills can be employed to collaborate with communities and clients, enabling a better understanding of issues at hand, stimulating creative data utilization, and designing effective interventions.

The session will commence with an overview of creativity research, setting a theoretical foundation. Following this, we will delve into the fundamentals of steering interactive workshops designed to ignite creative thinking. These workshops will empower groups to identify and effectively address issues or areas of interest. We will provide a range of tools, as well as textual and web-based resources, to kick-start participants' creative thinking toolkit.

NAPA Professional Development Workshop: Storytelling Skill-Building from Novice to Pro for Anthropological Communication

11/18/2023

8am - 12pm 203 B

ORGANIZER:

Cathleen Crain (Managing Partner, LTG Associates, Inc.)

PRESENTER:

Adam Gamwell, (Founder, Anthrocurious), Elizabeth Briody (Founder and Principal, Cultural Keys)

DESCRIPTION:

Join us for an engaging skill-building workshop on storytelling for anthropological communication. Discover practical techniques to transform complex concepts into compelling narratives that resonate with diverse audiences. Explore successful storytelling techniques and strategies and learn how to translate complex learning into accessible, effective communication. Plus, gain insights on engaging with journalism and mainstream media outlets. Open to aspiring and experienced anthropologists at all career

stages interested in effective communication. Let's amplify the impact of anthropology through the power of storytelling!

Connecting Ethnographic Methods, Culture, and Diversity, Equity, and Inclusion (DEI) Work in Organizations

11/18/2024

2pm - 6pm

205 B

ORGANIZER:

Melissa Maceyko (Faculty Member, California State University, Long Beach | Sr. DEI Consultant, Willing Observers)

PRESENTER:

Luzilda Arciniega, (Director of Diversity Strategies & Implementation, Salk Institute | Sr. DEI Consultant, Willing Observers)

DESCRIPTION:

As conducting cultural assessments has become a critical aspect of organizations' diversity, equity, and inclusion (DEI) strategies, understanding organizational culture is increasingly an important component of DEI work. In this environment, competing understandings of what culture is and how it operates, both within and outside of the organization, can critically impact the success of DEI efforts.

During this session, students and potential jobseekers will be provided with illustrative case studies and led through hands-on activities that seek to hone their ability to apply ethnographic theory and qualitative

methods to cultural assessment and DEI work in organizations. Specifically, small group exercises are designed to teach attendees how to articulate the differences between diversity, equity, and inclusion in-practice, to ethnographically assess organizational values, and to apply a DEI lens to the remaking and institutionalization of these newly created values within an organization. Attendees will leave the workshop with a better understanding of how ethnographic and qualitative research can contribute to the development of impactful DEI strategies and outcomes.

That Almost Finished Journal Article: A Writing Workshop

11/16/2023

8:00 am – 12:00 pm

203 B

11/17/2023

8:00 am – 12:00 pm

205 B

ORGANIZER:

Jaida Samudra (Editor, Professional Editing for Scholars)

DESCRIPTION:

During this 2 part (8 hour) advanced writing workshop, intended for junior professors, post-docs, or ABDs, the facilitator demystifies peer review processes, discusses how to structure research articles, leads participants through interactive exercises in which they analyze and receive feedback on their draft manuscripts, and provides other guidelines and strategies for revising and (re)submitting to journals in the social sciences.

Installations

Curating Gaps

Friday, November 17

9:00 AM - 5:00 PM

TMCC, 704

ORGANIZER:

Sound Braid. Luisa Isidro Herrera, Johann Sander Puustusmaa, and Nicole Marchesseau.

DESCRIPTION:

"Curating Gaps" engages with a collection of sounds and silences amassed from Sound Braid's curators' everyday field-recordings. Mediated through recording and listening technology, the collection of sounds brings into

relief transitions, memory gaps and blurred boundaries. Recordings feature laughs, recorded voices, heavy machinery at a municipal dump, industrial screeches, human heartbeats, and other sonic encounters that probe time, space, and experience. The installation hopes to prompt discussions about leaky in-between spaces by probing what dwells in between sounding and receiving bodies of various sorts.

"Curating Gaps" is composed of three separate tracks of different lengths. Each track loops, meaning it plays again when it concludes. Because the three looping tracks are of different lengths, new sonic combinations form during the five-hour duration of the piece.

“Curating Gaps” will play one and half times during the installation. The installation also provides descriptive text of the sounds emanating through the loudspeaker system. This text is projected onto the screen and rolls out in loops. Like the sonic loops, text loops form different combinations that are meant to spark conversations between looped segments. We hope that the combination of sounds and texts in emerging and ever-developing discussion will generate new insights about mediated environments.

Old Korea Story

Friday, November 17

12:15 PM - 1:45 PM

TMCC, 701B

ORGANIZER:

Glenn T. Hubbard and Jin-Ae Kang, co-creators

DESCRIPTION:

This piece weaves together seemingly disparate elements to tell a complex story about Korea and Korean-American immigrants. On the surface, it's about an art collector, Dr. Young-Dahl Song, and an exhibition of his collection in the Fall of 2022 in Greenville, North Carolina. His motivation for collecting and exhibiting western artists' depictions of Korea during Japanese occupation prior to World War II yields powerful insights about generational progress but also continuing issues of racism and hatred.

A quote from the documentary itself sums it up beautifully: "Why do we have to get exposed to other people's cultures, life values, and different worldviews? To live together...deepen each other's understanding...toward harmony." In 16 minutes, the viewer sees images of a people oppressed by a foreign occupying force and gets to know a man who experienced the tail-end of that occupation along with Korea's liberation at the end of World War II, only to see his country fall into another war five years later. The documentary follows this man's story as he pursues a better life in the U.S., and also introduces younger Koreans who, despite living a more peaceful life than their parents and grandparents experienced, still face racism in modern times, especially in the era of the Covid-19 pandemic.

The creators of this documentary hope it results in greater understanding of Korean people, their culture, and their amazing spirit of perseverance in the face of hardship.

Requiem for a Fieldsite

Friday, November 17

12:15 PM - 1:45 PM

TMCC, 701A

ORGANIZER:

Susannah Crockford and Rine Vieth

DESCRIPTION:

I have been undertaking fieldwork in the US since 2012, and in 2023 I was banned from returning by the Department of Homeland Security. This installation intends to provide a space to mourn the loss of field-sites. In part, by acknowledging that ethnographers' and anthropologists' access to field-sites is not fixed, but mediated by social, political, economic, and immigration statuses. But also by accepting that field-sites themselves are in flux. Laws change, wars break out, diseases spread - all with the potential of ending the relationship with people and place. Fitting with the meeting theme, the installation will cultivate a sensory experience of the relationship between anthropologists and field-sites as in transition. The installation takes the form of a wake - a memorial for field-sites lost. An audio-visual presentation will display images and text to tell the story of how I lost access to my field-site. Acknowledging that this experience is not unique to me, anthropologists and ethnographers are encouraged to share their experiences of losing access to their field-sites. In keeping with the funerary theme, the room will have refreshments, seats, sympathy cards, and a condolences book for attendees to share their experiences in person or in written form. Attendees will also be invited to contribute to an in-process publication that I am currently working on that will collect experiences of anthropologists who have been shut out of field-sites against their will.

The Alchemy of Ethnographic Theater Making

Friday, November 17

12:30 PM - 3:00 PM

TMCC, 703

ORGANIZER:

Debra Vidali, Organizer, Chair, Presenter, Co-Creator, Jasmine Blanks Jones, Presenter, Co-Creator, Ash Marinaccio, Presenter, Co-Creator, AAA attendees, Participants, Co-Creators

DESCRIPTION:

This installation is a participatory event in ethnographic theater making, offering a hands on experience for

anthropologists of all subfields and styles – especially those with no acting experience and those who have never thought about using theater and performance to communicate anthropological insights. Participants are expected to arrive at the start time, and stay for the 2.5 hour duration. We will be in motion, action, and collaboration as we explore a range of theater-making techniques (verbatim documentary theater, physical theater, Theater of the Oppressed) and the affordances of embodiment & staging to communicate ethnographic knowledge and theory. The theme of our creative work will be Planetary Life / Planetary Death. Our core goal is to learn about and experience the various components and transitions in ethnographic theater making, e.g. transitioning across & between (a) data, analysis, embodiment and performance; (b) individual identity and collective identity; and (c) linear and nonlinear expressive forms. Following work by Abdul Khabeer, Blanks Jones, Chin, Dunham, Hartblay, Vidali, and others, our questions include: How do we make statements with bodies? How do we produce nonlinear, multimodal work in performance form? What is the alchemy of ensemble building? How do we forge collaborative knowledge production through theater ensemble work? How do we produce theory through staging? Via our participatory installation work, we will generate a mini performance. Options to present the mini performance at other moments during the conference will be explored. This participatory installation dovetails with approaches discussed during a Saturday roundtable on Anthropology-Theater Intersections.

Casa Común: A collaborative art project with victims of the armed conflict in Colombia.

November 15 – 19 TMCC, 600 Level

ORGANIZER:

César Abadía-Barrero, Vanesa Giraldo-Gartner, and Camilo Ruiz-Sánchez

DESCRIPTION:

Casa Común is a collaborative art exercise made by survivors of the Colombian armed conflict. The work was created in the Colombian Amazonian foothills; a fertile area with abundant water, a hinge between the Andes and the Amazon where the women and men who carry out this creative, communitarian, affectionate and supportive process live. We, the artists who have suffered the devastation of war, offer the public this "communal house". A poetic space to recreate dreams

and memories guided by the idea of Buen Vivir (a good, harmonious and beautiful living) and Vivir Sabroso (living joyfully and deliciously), a place of healing and reconciliation with violent pasts and presents where peasant life, water, plants and animals play a leading role. In this work, through embroidery and painting, we capture ideas of more harmonious and serene futures, as opposed to those proposed by violence. The Communal House has on its exterior walls colorful flowers interspersed with medicinal plants used to heal personal and collective wounds and to repair our relationship with the earth. From each piece we build, but above all from the strength of collective creation, we want to transmit the hope that the atrocities of war will not be repeated.

Picturing the Pandemic: Images from the Pandemic Journaling Project

**November 15 – 19 TMCC, 800 Level,
Prefunction Space**

ORGANIZER:

Sarah S. Willen, Katherine A. Mason, Heather M. Wurtz

DESCRIPTION:

The Pandemic Journaling Project team is proud to bring a capsule version of Picturing the Pandemic: Images from the Pandemic Journaling Project to AAA/CASCA in Toronto. Picturing the Pandemic is an exhibition of images and audio contributed to the Pandemic Journaling Project (PJP), an online journaling platform and research study created in May 2020 with the goal of pre-designing an archive of COVID-19 narratives and experiences, especially from people whose stories might not otherwise be heard, or preserved, as a form of grassroots collaborative ethnography and archival activism. From May 2020 to May 2022, PJP provided an online space where participants 15 or older, anywhere in the world, could create a weekly chronicle of their COVID-19 experiences using their choice of text, images, and/or audio. Participants could access the interface by smartphone or computer, in English or Spanish, and create entries in any language. Over 1,800 people in 55 countries contributed nearly 27,000 journal entries. Toronto is the fifth stop for Picturing the Pandemic, which launched in Hartford in Fall 2022 in collaboration with local partners, followed by additional collaborative exhibition stops in Spring 2023 in Providence, Heidelberg, Mexico City. Links to include (either embedded in the blurb or listed separately): Pandemic Journaling Project: <https://pandemic-journaling->

Cartoon Capture: Ethnographic Transitions from Event to Representation

Saturday, November 18

8:00 AM - 5:00 PM TMCC, 700 Level,
Prefunton Space

ORGANIZER:

Participants: Erika Hoffmann-Dilloway, Jennifer Dickinson, Stacy Pigg, Steven Van Wolputte, Carli Hansen, Allisse Waterston, Charlotte Corden, Nayanika Mookherjee, Natalie Konopinski, Bernard Perley

DESCRIPTION:

work of authors, artists, and editors. The installation accompanies the roundtable conversation of the same title scheduled for Saturday Nov. 18 from 2pm to 3:45 in TMCC 712.

The long life of an ethnographic moment can go through multiple transitions from event to representation. The strategies of entextualizing an event start during the event as neural tracings of our experiential sensory and cognitive mappings. Our recollections of those tracings continue the transition to more tangible forms or artefacts of the event. The conditions and circumstances of those events will prompt myriad forms and modes of "capture" and representation.

The participants in this installation have identified cartooning as an efficient and effective mode of representation that more fully utilizes the broad semiotic potential for animating semantic awareness and understanding that text alone may not achieve. Graphic novel pioneers describe cartooning as sequential art thus signaling a commitment to read/interpret multiple "frames" as segments of a larger aesthetic work. Similarly, sequential graphic ethnographic representation brings aesthetic dimensions to bear on best approaches to augment the reader's sense of "being there" at the unfolding of the event. Our installation participants bring diverse graphic, textual, and formatting strategies to communicate the broader implications and social concerns our ethnographic work seeks to animate.

Transitions/Transmissions: a Sound Installation

Thursday, November 16

9:00 AM - 5:00 PM TMCC, Room 703

ORGANIZER:

Organizers: Leonardo Cardoso and Alexandra Lippman
Contributors & Work Titles: Kat Bernhardt & Miriam Kolar - Title TBD, Joella Bitter - Nocturnal, part iii, Alex Blue - Ways of the Pads: Samplers and "Handmade" Hip-Hop, Megan Gette - Wind Listening, Jay Hammond-The De-Steadied Heart, Farzaneh Hemmasi - (A), Carmen Alvaro Jarrín - Visceral Politics: Trans and Travesti Audiovisual Performances Against the Necropolitical Brazilian State, Winnie W C Lai - Losing Freedom, Losing Home: Sensing Hong Kong's "Now" and "Then", Alexandra Lippman- Cumbia Sonidera on Broadway: A Radio Documentary, Natalie Marshall & Doğa Tekin - Listening to Big Sur: Interspecies Songs, Sound Braid (Luisa Isidro Herrera, Johann Sander Puustusmaa, and Nicole Marchesseau) – Curating Steps, Tom Miller - Sonic Anthropology (live radio broadcasting), David Novak - Performing the Archival Crossfade with Irama Nusantara, Marina Peterson & Joella Bitter - Ethnographic Listening (workshop)

DESCRIPTION:

Sound provides unique ways to think with and through transitions. DJs transition between records, radio transmits through space, and transduction pushes back against assumptions about presence and immersion. Inspired by the multiple possibilities of transitions in and through sound (as remixing, transmission, transduction), this sound installation includes soundworks on a wide range of soundscapes (from Indonesian popular music to the early morning city sounds in Gulu, Uganda) and modes of transmission (from live radio broadcasting to audiovisual documentaries). Contributors to the installation draw on the tensions between the audio recording as artifact and sound's ephemerality. In transitioning from research site to sound installation, their soundworks propose an auditory bridge from fieldwork to conference space, creating zones of dialogical listening within and between them. Equally attuned to the AAA/CASCA 2023's theme, the works presented here address various transitional instances – including migration, displacement, protest, archival databases, music queering, and interspecies relationships. The exhibit will culminate with the off-site DJ performance Transitions/Transmissions/Reception. During this post-installation party, scholars will perform their soundworks as selectors, DJs, and curators to amplify the installation and bring the conference out into the city. We ask: What if the anthropologist were a DJ? How would she perform scholarship, fieldwork, and research? How can we push the creative, collaborative,

or dance-able possibilities for multimodal ethnography? Each selector will perform their set comprised of fieldwork videos, curated music videos, archival recordings, vinyl records, and DJ-ready field recordings. Participants will explore unexpected resonances,

echoes, and friction rather than seamless and perfectly beat-matched transitions. Website: transitionstransmissions.org

Special Events

Visual Research Conference

11/14/2023

9:00 AM - 4:30:00 PM **TMCC – 601**

Public - anyone can attend

The Textile Museum of Canada: Talks and gallery tour of ethnographic/historical global fabrics and contemporary artist interpretations

11/15/2023

2:00 PM - 4:00:00 PM **Offsite - Offsite**

Public - anyone can attend

SECTION AFFILIATION:

Association of Senior Anthropologists

DESCRIPTION:

The Textile Museum of Canada (TMC) is a unique museum space founded in 1975 by textile historians and anthropologists with expertise in global historical and contemporary textile material culture production, history and use. For anthropologists, the Museum offers exhibits and a collection of historical textiles from around the world along with their stories. Exhibitions and educational programming also highlight the work of contemporary artists inspired by the collection and its traditions and demonstrate the Museum's commitment to engage in innovative ways with the communities whose stories and cultures are shared in gallery outreach and events. An example of its community

participatory approach is the current exhibit, Gathering, which presents pieces from the Museum's permanent collection of over 15,000 objects from around the world. Gathering explores themes related to migration and diaspora, the search for comfort in the domestic and familial, reclamation of ancestral traditions through contemporary artistic responses, and the relationship between textiles and the environment. To develop this exhibition, open online calls and partnerships with local organizations and artists' interventions produced choices of objects, responses, and retellings used to select and reflect on textiles and their makers.

This event will feature brief gallery talks by Dr. Lynne Milgram, co-founding TMC member and Professor Emerita (Anthropology), OCAD University and Sarah Quinton, Curatorial Director Emerita, Textile Museum of Canada on the history of the museum, historical textiles housed at the Museum, and examples of combining historical and contemporary textiles in curated exhibitions. These short talks will be followed by an interactive gallery tour of the permanent collection (second floor) and current exhibit(s) (third floor) led by Roxanne Shaughnessy, Senior Curator and Manager of Collections. The current (third floor) exhibition highlights channels through which contemporary artists combine or adapt traditional textile styles and approaches and artifacts that can represent their historical situatedness. Small group visits of no more than ten people at the same time to the fourth-floor collection storage area are possible with advance reservations. Visitors who would like to discuss specific textile traditions with Roxanne will be able to indicate their interest in advance. This event offers anthropologists a truly special opportunity to hold conversations with experienced textile curators who can explicate these products in ethnographic contexts, both past and present.

Location: Textile Museum of Canada 55 Centre Avenue, Toronto, Ontario, M5G 2H5.

Nearest Subway station: St. Patrick Street Station

Date and time: November 15th, 2023; 2-4 PM (with option to remain till 5 PM)

Cost: Adults CAD \$15.00 (approximately \$12.00 USD plus \$1.00 CAD/USD administrative fee), Seniors CAD \$10.00 (Approximately \$7.50 USD plus \$1.00 CAD/USD administrative fee).

Participation: Participation is limited to 25 people. 10 people maximum will be able to enter the textile collection storage area.

Climate Change Interest Group Meeting

11/15/2023

2:15:00 PM - 4:15:00 PM

TMCC - 203A

Public - anyone can attend

SECTION AFFILIATION:

Climate Change Interest Group

DESCRIPTION:

This will be the second annual Climate Change Interest group meeting for members and those interested in climate-related issues to gather and discuss the human dimensions of climate change. We expect 30 people, some designated folks will share brief synopsis of their work, so a projector/screen would be greatly appreciated. This will be a space to network and share information, build on the focal areas of the group, and establish more (semi) formal working groups to tackle the goals of the group. We may also have some small catering service requests.

From Rough Translation to Rough Transition

11/16/2023

8:00 AM- 9:45:00 PM

TMCC - 716 A

Public - anyone can attend

DESCRIPTION:

After six highly successful years, Rough Translation, the NPR podcast that asked the meta-like question “How are the things we're talking about being talked about somewhere else in the world?” will be coming to an end. Podcast creator/host Gregory Warner will talk about how the original podcast began and how his new start up, Rough Transition, will still be about telling stories that follow familiar conversations into unfamiliar territory. Think of it as an anthropological field guide to...the future.

At a time when the world seems small and it's as hard as ever to escape our echo chambers, this session will take you places. Q&A will be included.

Gregory Warner is the founder and creator of NPR's Rough Translation, named a top 10 podcast by the New York Times in 2021. He is a Peabody-award winning former NPR bureau chief whose stories from around the world have aired on This American Life, Radiolab, and many NPR podcasts and newsmagazines. He was a Yale Poynter Fellow in Journalism and has brought his accordion to unlikely places, like Afghanistan.

Engaging Play to Transform Pedagogical Practices in Anthropology

11/16/2023

12:00 PM- 2:00 PM **Virtual - Virtual**

SECTION AFFILIATION:

ASAP -- Association for the Anthropology of Policy

DESCRIPTION:

Within the current moment, what pedagogical tools are available to us as anthropologists to transform and transition structures in our educational systems? This mentoring event is part two of a conversation we began last year and hope to continue to nuance with fresh voices and perspectives evolved over the last year. Last year, our mentoring event, "Exploring Pedagogical Practices and the Integration of Just, Anti-racism Methodologies in Anthropology" delved into a

discussion about sharing methodologies that align pedagogical practice with a just, anti-racism framework. Our aim was to create a space to engage in dialogues from across multiple academic and career levels about these issues and how we might best advance them in our classroom, service, and advocacy roles. In our commitment to the transformative potential of collaborative thinking, we intend this mentoring event to build on that foundation. In concert with efforts by the Association for the Anthropology of Policy (ASAP) anti-racism working group, our event will linger on one main theme: play. What can an emphasis on play prompt in our pedagogical practices---as a framework for fostering curiosity and openness in curricular development, as a mode of engagement that is inclusive, and as a site of experimentation? We welcome all levels and experiences in anthropology of policy and beyond to contribute to this event. Additionally, we invite practitioners in equity, diversity, and inclusion work to participate with us in building this toolkit. By the end of the session, we plan to have gathered notes and recommendations for a resource guide that the community at ASAP and beyond may draw on.

Questions/topics that precipitate and motivate this event: What do you think is important when designing an open, playful, and generative pedagogical framework? What motivates you (as an educator, manager, learner) to want to be part of a learning environment? What are experiences in your life have become pivotal to the way you create connection in the classroom and beyond? Overall, we encourage conversing deeply together about the methods and challenges of transforming pedagogy in anthropology and the implications of our pedagogical practice as anthropologists working in and outside of the university.

2023 A&E Graduate Student Workshop 1

11/16/2023

12:15 PM- 2:15:00 PM **TMCC - 501B**

Private - only invited guests can attend

SECTION AFFILIATION:

Anthropology and Environment Society

DESCRIPTION:

The objectives of the A&E Graduate Student workshop series are to help graduate students develop necessary skills for writing and publishing and to prepare students

for the job market (both academic and non-academic). Students will have the opportunity to present and receive feedback on their dissertation proposal, a dissertation/book chapter, or a journal article. The workshop series is for doctoral students at any stage of their program.

To participate in the workshop series, students will submit either: a dissertation proposal, dissertation chapter, or journal article for consideration. Students selected to participate in the workshop will receive feedback by an A&E member mentor and receive comments on their work before the AAA conference.

During the first session, students will present for 5 to 10 minutes on their research or research proposal. There will be time for questions after each presentation, and students will receive feedback from the other participants and faculty mentors.

Anthropologica Editorial Board Meeting

11/16/2023

12:15 PM- 1:45:00 PM **Delta Hotel - Distillery**

Private - only invited guests can attend

SECTION AFFILIATION:

CASCA

DESCRIPTION:

The Canadian Anthropology Society's (CASCA) journal Anthropologica hosts its annual editorial board meeting to discuss current and future thematic issue proposals, specific agenda items as well as decisions related to publication priorities. This meeting is for the editorial board members as well as the editorial team at Anthropologica.

La principale revue de la Société canadienne d'anthropologie, Anthropologica, tient sa réunion annuelle du comité de rédaction pour discuter des propositions de numéros thématiques actuels et futurs, des points spécifiques à l'ordre du jour ainsi que des décisions liées aux priorités de publication. Cette réunion s'adresse aux membres du comité éditorial ainsi qu'à l'équipe de rédaction d'Anthropologica.

Anthropology and Environment Society Graduate Student Workshop 2

11/16/2023

12:15 PM- 2:15:00 PM **TMCC - 206E**

Public - anyone can attend

SECTION AFFILIATION:

Anthropology and Environment Society

DESCRIPTION:

The objectives of the workshop series are to help graduate students develop necessary skills for writing and publishing and to prepare students for the job market (both academic and non-academic). Students will have the opportunity to present and receive feedback on their dissertation proposal, a dissertation/book chapter, or a journal article. The workshop series is for doctoral students at any stage of their program. Workshop 2 focuses on publishing, incorporating peer-review feedback, and preparing for the job market.

Workshop 2 will be divided into two parts. The first part will focus on how to effectively incorporate peer reviews into academic writing and how to structure responses to reviewer comments during the peer-review process. The second part will be an open discussion on the job market and the ins and outs of applying for both academic and non-academic jobs.

Culture and Agriculture

DESCRIPTION:

This will be the annual business meeting for the C&A section. We will need ppt and a screen and seats for members. We share many members with SAFN. If possible, we would like for this meeting to start at 5PM on Saturday and be held in the same room as the SAFN business meeting, which they would like to start at 6PM. We are then hoping to host a shared speaker in the same room at 7PM, followed by an off-site reception. SAFN is submitting the request for the joint speaker.

FICTION SALON: Longmire and Crime Fiction

11/16/2023

12:30 PM- 1:30 PM **TMCC - 802A**

Public - anyone can attend

SECTION AFFILIATION:

APLA

DESCRIPTION:

Our salon will discuss the "Longmire" crime fiction books by Craig Johnson and the subsequent television series. So far this year (April 2023) there have been 140 mass shootings in the US. Gun crime has been declared a public-health crisis, even as debates about its prevention divide the citizens of North America. Yet crime fiction is an enduringly popular literary genre, much of it featuring firearms. The Longmire series, set in small-town Wyoming, is a prime all-American example. Sheriff Longmire is as smart as Poirot and as literate as Wimsey; he is also as reliant on guns as he is on little grey cells. We want to hold a conversation about the lure of Longmire's fictional armory in the context of the loathsome landscape of contemporary gun violence. Reading one of the books or watching one of the television episodes will prepare attendees for participation.

Nordic Countries Research Networking Event

Public - anyone can attend

SECTION AFFILIATION:

AES

DESCRIPTION:

Discussion and Q&A session

Interest Group Convener Meeting

11/16/2023

1:00:00 PM - 2:00 PM

TMCC - 206A

Private - only invited guests can attend

DESCRIPTION:

Meeting of the Conveners of the AAA Association Interest Groups

ASAP Executive Board Meeting

11/16/2023

2:00 PM - 3:30:00 PM

Delta Hotel -

Kensington A

Private - only invited guests can attend

SECTION AFFILIATION:

ASAP

DESCRIPTION:

Meeting with approximately 12 people; projection is appreciated but not required. Large conference table with chairs would be best. If possible, please schedule this Board meeting immediately prior to the ASAP business meeting. If possible, in the same space. The small meeting room used in Seattle was wonderful - a large table was in the rear of the hall for our board meeting and several ranks of chairs were in the front, conference presentation style, for our business meeting.

Dying and Bereavement: Networking and Resource Sharing

11/16/2023

2:00 PM - 3:45:00 PM

TMCC - 401

Public - anyone can attend

SECTION AFFILIATION:

SMA Dying and Bereavement Special Interest Group

DESCRIPTION:

This event will provide scholars and students whose research interests are in the fields of End-of-Life issues and/or social bereavement to network, discuss their work and share resources.

Royal Ontario Museum Visit

2:00 PM - 5:00 PM

Offsite - Offsite

Public - anyone can attend

SECTION AFFILIATION:

Association of Senior Anthropologists

DESCRIPTION:

This event will include a visit and guided tour of the ROM's leading exhibits of interest to anthropologists by its chief curator. Cost of the event will be posted once it is determined.

SMA Health Professions Education SIG Organizational Meeting

11/16/2023

2:00 PM - 3:45:00 PM

TMCC - 715A

Public - anyone can attend

SECTION AFFILIATION:

SMA

DESCRIPTION:

Second annual organizational meeting at the AAA to establish a new SMA Special Interest Group. Conduct business, report on initiatives, make decisions on critical issues, welcome new attendees, recognize leaders.

Association for Feminist Anthropology Board Meeting

11/16/2023

2:15:00 PM - 4:15:00 PM

Delta Hotel -

Distillery

Private - only invited guests can attend

SECTION AFFILIATION:

Association for Feminist Anthropology

DESCRIPTION:

We will have reports from committees, and discussion among members of the Board. We'll need a table, some kind of ability to project information on a screen, and may have a few people on Zoom (though mostly an in person-discussion).

ASAP Business Meeting

11/16/2023

3:30:00 PM - 5:00 PM

Delta Hotel -

Kensington B

Public - anyone can attend

SECTION AFFILIATION:

ASAP

DESCRIPTION:

Meeting with approximately 45 people; projection is appreciated but not required. Rows of chairs & ability to move them into small groups would be wonderful. Or several large tables and chairs. If possible, please schedule this Business meeting immediately after the ASAP board meeting. If possible, in the same space. The small meeting room used in Seattle was wonderful - a large table was in the rear of the hall for our board meeting and several ranks of chairs were in the front, conference presentation style, for our business meeting.

“Engaging Toronto Community Activists on Questions of Local Economic Resilience,” AES Community Engagement Event

11/16/2023

7:30:00 PM - 10:00:00 PM

Offsite - Offsite

Public - anyone can attend

SECTION AFFILIATION:

AES

DESCRIPTION:

The event will provide a venue to highlight local resilience that addresses urban inequality and economic precarity. It brings together community figures engaged in innovative projects that seek to remake community economic activity with anthropologists to spark conversations, spread information, and create networks between scholars and practitioners. The event will enable anthropologists to meet community activists, organizers, and policymakers. We also intend to alert and invite key government stakeholders, such as the local municipal councilor and other policy makers to facilitate an idea exchange and highlight successful community initiatives taking place amongst growing and new forms economic restructuring, urban socioeconomic inequalities.

SAFN and C&A Grad Student Mixer

SECTION AFFILIATION:

CAE

DESCRIPTION:

This is a closed meeting for the Council on Anthropology & Education (CAE) Concha Delgado Gaitán Presidential Fellows with their mentors. The Concha Delgado Gaitán Presidential Fellowships support early career educational anthropologists in ways that contribute to their success within the academy or broader communities of education policy and practice. Agenda will include introductions of the Fellows, details regarding the fellowship program, and dedicated time for mentors and mentees to discuss their work.

[Feminist Anthropology Journal Board Meeting & Social](#)

11/17/2023

8:00 AM- 10:00:00 AM **Delta Hotel - Harbourfront**

Private - only invited guests can attend

SECTION AFFILIATION:

AFA

DESCRIPTION:

This hybrid meeting allows the editorial collective to discuss the journal's annual business and provide a publication update for their international editorial and advisory board. This discussion includes a visioning session and time for members to network with one another. The editorial collective has 4 members, and both boards include 56 members. Of that 60, we anticipate 25 to 30 people to attend in person and at least 20 to attend via an online meeting platform. This proposal includes a request for the technology and screen for streaming in some international meeting attendees, projection capabilities for the presentation, seating for a meeting of about 30, and room for modest refreshments for 2 hours. We hope to avoid conflicts with AFA board/business meetings or mentoring sessions. Northern Arizona University is sponsoring this session.

[MAQ Editorial Board Meeting](#)

11/17/2023

8:00 AM- 10:00:00 AM **Delta Hotel - Riverdale**

Dr. Izzeldin Abuelaish, Gaza Doctor and Inspirational Peace Activist—A Special Session

11/17/2023

10:15:00 AM - 12:00 PM TMCC - 801B

Public - anyone can attend

DESCRIPTION:

A Special Session with the five-time Nobel Peace Prize nominee, the Gaza Doctor, Izzeldin Abuelaish, MD, MPH, and a conversation with him regarding his life and work. Dr. Abuelaish found new meaning in the midst of tragedy. Three of his daughters and a niece were killed by a tank shell during Israel's December 2008-January 2009 offensive in the Gaza Strip. Abuelaish turned his intense grief and anger into reconciliation work and promoting Israeli-Palestinian peace activism. He is known as the "Martin Luther King of the Middle East." One anthropologist has said, "I think Dr. Abuelaish is one of the most impressive human beings on the planet." His book, *I Shall Not Hate: A Gaza Doctor's Journey on the Road to Peace and Human Dignity*, was a bestseller on five continents and has been translated into 23 languages. His work has characterized hatred as a pathology that can be analyzed through the tools of public health. Dr. Cynthia Saltzman, an Anthropologist at Rutgers University-Camden, NJ has organized and will Chair the session.

NAPA / AAA Careers Expo

11/17/2023

11:00:00 AM - 4:00:00 PM TMCC - Hall E

12:15 PM- 1:30 PM **TMCC - 802A**

Public - anyone can attend

SECTION AFFILIATION:

Society for the Anthropology of Europe

DESCRIPTION:

Led by an experienced, extensively published and prize-winning anthropologist, this workshop is designed to help advanced graduate students and early career scholars transform a dissertation chapter or conference paper into a publishable manuscript for a peer-reviewed journal. We will discuss how to develop transferable writing practices and skills for publication and anticipate reviewers' assessments. Students will leave the workshop with a cogent plan for journal publication. Recommended materials to bring: draft dissertation chapter or conference paper and one article publication you admire from the targeted publication.

APLA Speed Mentoring Session

11/17/2023

12:30 PM- 1:45:00 PM TMCC - 803B

Public - anyone can attend

SECTION AFFILIATION:
Association for Political and Legal Anthropology

DESCRIPTION:
The APLA Speed mentoring event allows students and early-career faculty to meet multiple mentors in a short time. The event gathers together mentees who are just beginning to plan their graduate or post-graduate career steps with mentors who are experienced researchers or established faculty members. Mentees will have the chance to meet senior colleagues outside of the mentees' immediate circle, and will also have the chance to learn about variations in institutional and sub-disciplinary practice. The goal of the event is to inspire, encourage, and share ideas about field work, writing, networking, and publishing, all in a judgment-free, supportive context.

SECTION AFFILIATION:

CASCA

DESCRIPTION:

This event is for CASCA members to consider the direction of the Society in a way that honours our past. How do we continue our work guided by the principles of transparency, inclusivity, and respect that we have always striven to uphold? What new initiatives in Canadian anthropology do we want to take up while sustaining those that have distinguished our work in a global context? Join us to ensure that our mid-life is one of meaningful opportunity, not crisis!
Cet événement invite les membres de la CASCA à explorer l'orientation de la Société d'une manière qui rende honneur à notre passé. Comment poursuivons-nous notre travail, guidé par les principes de transparence, d'inclusivité et de respect que nous avons toujours cherché à mettre en valeur ? Quelles nouvelles initiatives en anthropologie canadienne souhaitons-nous entreprendre, tout en soutenant celles qui ont marqué jusqu'à maintenant notre travail dans le contexte mondial? Venez nombreux et nombreuses afin que cette étape charnière dans la vie de la Société soit l'occasion d'engagements significatifs plutôt que d'une crise de la cinquantaine !

Fiction Salon: I Care a Lot

11/17/2023

12:30 PM- 1:30 PM TMCC - 501B

Public - anyone can attend

SECTION AFFILIATION:

APLA

DESCRIPTION:

We propose a fiction salon around the film *I Care A Lot* (<https://www.imdb.com/title/tt9893250/>) whose plot revolves around the issue of court-ordered guardianship of older adults. In the movie the lead character runs a business making older people wards, removing them from their homes and placing them into care. The plot develops into an extreme situation involving gangsters and other dramatic features, but guardianship arrangements -- and similar abuses of them -- do also exist in real life. Using an anthropological lens, we wish to generate a discussion around what guardianship can show us about aging and capacity as well as about aging in the context of family and society.

FICTION SALON: Percy Jackson and the**Olympians****11/17/2023****12:30 PM- 1:30 PM****TMCC - 206B***Public - anyone can attend***SECTION AFFILIATION:****APLA****DESCRIPTION:**

We are interested in leading a discussion on the YA fantasy series *Percy Jackson and the Olympians* by Rick Riordan. We (two anthropologists of education, one an autism researcher and the other a parent of a child in the process of being acquired by a diagnostic category) are drawn to these texts not only because of the explicit re-situation of ADHD and dyslexia as “superpowers” (a discussion in and of itself) but also because, at the root of the story, PJO is about how one learns who they are. When and where does Percy’s (and his friends’) education of self-hood occur? With whom? What does it mean to be (and to be told you’re) a hero? We hope to explore these questions and others through a salon discussion.

Fiction Salon: Remi Weekes’ Film ‘His House’**11/17/2023****12:30 PM- 1:30 PM****TMCC - 206C***Public - anyone can attend***SECTION AFFILIATION:****APLA****DESCRIPTION:**

His House follows the life of a refugee couple (Bol and Rial) who have made a harrowing escape from their home in war-torn South Sudan. It depicts their journey leaving South Sudan and seeking asylum in the UK. Our open-ended discussion of Weekes, Evans, and Venables’ brilliant film will invite participants to explore its keen contributions to understanding the traumas experienced by people who have sustained encounters with war, displacement, immigration regimes, and the anti-Black racisms that shape these processes. In particular, we will draw attention to how the ethnographic exploration of culturally specific time-space frameworks (or chronotopes) and the situated time-making projects of displaced peoples can offer unique insights not only into this film. It can also illuminate the political economic, sociocultural, phenomenological, and psycho-emotional dimensions of global displacement, understood as the ongoing outcome of white supremacist, (neo)colonial projects of foreign intervention and wealth extraction by the Global North in the Global South.

Fiction Salon: The Glass Bead Game**11/17/2023****12:30 PM- 1:30 PM****TMCC - 206E***Public - anyone can attend***SECTION AFFILIATION:****APLA****DESCRIPTION:**

As a bricolage of correlated forms constantly transforming into each other and combining to generate new forms, *Glass Bead Game* resonates with 20th century efforts to reconstruct ‘primal’ language and grammars in historical linguistics, with symbolist poetry, and Lèvi-Strauss’s myths that think one another. As echoes of these academic disciplines also converge in Semiotic Anthropology, Lijing would like to bring it in mutual illumination with *The Glass Bead Game* through Aesthetics (in Baumgarten’s sense of thinking via/by means of senses) that reverberate in both. Marko would explore *Glass Bead Game*’s affinities with Western projects of Universal Language and Calculating Machines that since Leibnitz have been inspired by creative misunderstandings of certain elements of Chinese thought. Moreover, he would like to think current academia through Castalia as Polanyi’s exterritorial Republic of Science suspended between managerial calculation and Romantic bildung.

General Business Meeting

11/17/2023

12:30 PM- 1:45:00 PM TMCC - 801B

8:00:00 PM - 10:00:00 PM TMCC - 716A

Public - anyone can attend

SECTION AFFILIATION:

Society for Anthropological Sciences

DESCRIPTION:

(Description for PLANNING purposes) One-on-one research methods mentoring with multiple people at one time - small tables to allow small group discussions would be perfect! One-two professionals mentor 1-3 people at a time with 8-10 groups at once. (ABSTRACT) Anthropology students and professionals are expected to learn ethnographic research and analytical methods and may not have an expert available with whom to consult. SAS therefore invites students and professionals to engage directly with experts about their research and analysis questions.

Experts will be available to discuss research design and both qualitative and quantitative data collection and analysis. In addition, experts will be available to discuss dissemination and career paths. Before the meetings, each expert will post materials within the context of a case study on the SAS website (<https://www.societyforanthropologicalsciences.org/p/mentoring-event-materials.html>). Any and all conference attendees, especially undergraduate and graduate students, are welcome to come and go during this informal mentoring session.

Kalahari Peoples Fund 50th Anniversary Celebration

11/17/2023

8:00:00 PM - 9:15:00 PM TMCC - 711

Public - anyone can attend

SECTION AFFILIATION:

DESCRIPTION:

Catered breakfast and networking for department chairs

Mentoring Activity: Compiling Fragments of an Anthropological Memoir

11/18/2023

8:00 AM- 9:45:00 AM

TMCC - 715A

Public - anyone can attend

SECTION AFFILIATION:

Association of Senior Anthropologists

DESCRIPTION:

This activity is intended for anthropologists who have done some autobiographical writing and seek guidance in preparing partial or full memoirs that position their work in the broader contexts of the places and times in which they have lived. Efforts might focus on one or both of the following: (1) settings, events, and experiences, beginning in childhood, that shaped choices leading to an anthropological career; (2) continuing influences of social positioning in personal and public life, and how these affect opportunities and choices in professional practice. One objective is to develop a shared understanding of possibilities for synthesizing ethnography, ethnohistory, and autobiography in a hybrid genre which could be called auto-ethnohistory.

The event is led by senior colleagues who promote engaged writing, whether as a genre that complements conventional anthropological reportage and analysis or as a preferred mode of ethnography. Embracing subjectivity encourages imagination and storytelling (Behar 2022, Stoller 2023) and clarifies insider/outsider distinctions (Harrison 1995). Relevant formulations include auto/ethnography (Reed-Danahay 1977), the ethnographic self (Collins and Gallinat 2010), anthropological autobiography (Okely and Callaway 1992), self-narrative (Chang 2008), and social memory (Climo and Cattell 2002). Recent refinements in epistemology and representation (Zenker and Kumoll 2010) are considered, along with innovations in writing forms, techniques, and strategies (Waterston and Vesperi 2011; Wulff 2016).

The convenors comment on brief readings of exemplary autobiographical passages, then respond to questions from other attendees. The mentoring proceeds with breakout groups and one-on-one conversations to help colleagues draw from their own lives in selecting scenarios to portray in analytic vignettes. Likely take-aways for participants include reintegration of neglected memories, reevaluation of past purposes, and recognition of shifts and growth, which may lead to new directions in ongoing career development.

Critical assessments of anthropology have made it increasingly difficult to ignore the historical matrix that uniquely channels the interests, explanations, interpretations, and goals of each practitioner through the sciences, the humanities, or both together. Memoir writing, while promising personal insights on its own terms, can address perplexing issues involving anthropological reflexivity in approaches, encounters, and responses that remain controversial within the discipline and beyond.

Olaf Zenker and Karsten Kumoll (eds.), *Beyond Writing Culture: Current Intersections of Epistemologies and Representational Practices* (Berghahn, 2010).

The event is led by senior colleagues who have worked on and thought about memoirs from an anthropological perspective. Potentially distinctive features of ethnographic approaches to anthropologists' own lives are addressed. Relevant concepts and methods include auto/ethnography (Reed-Danahay 1977), the ethnographic self (Collins and Gallinat 2010), anthropological autobiography (Okely and Callaway 1992), self-narrative (Chang 2008), and social memory (Climo and Cattell 2002). Refinements in epistemology and representation are considered (Zenker and Kumoll 2010), and suggestions about writing forms, techniques, and strategies are offered (Waterston and Vesperi 2011; Wulff 2016).

Some of the participants read brief passages of their autobiographical writings which demonstrate the mutual interactions between their personal and professional orientations. The convenors discuss these readings and respond to questions and comments from other attendees. The mentoring concludes with breakout groups or one-on-one conversations to help colleagues draw from their own lives in selecting scenarios to portray in analytic vignettes. Likely take-aways include the reintegration of neglected memories, enabling further evaluation of underlying purposes and resulting practices, which in turn may lead to new directions in later career development.

Critical assessments of anthropology have made it increasingly difficult to ignore the historical matrix that channels the interests, explanations, interpretations, and goals of each practitioner in a distinctive way. Memoir writing, while promising personal insights on its own terms, can address perplexing issues involving anthropological reflexivity in approaches, encounters, and responses that remain controversial within the discipline and beyond.

Public - anyone can attend

SECTION AFFILIATION:

AFA

DESCRIPTION:

According to the World Prison Population List, published December 2021, there are more than 11.5 million people currently incarcerated worldwide. This population is disproportionately Black, Indigenous, and otherwise targeted by discriminatory policies and disenfranchisement. Increasing awareness of the ubiquity of police violence, wrongful and biased convictions, and a deeply violent prison industrial complex has led to a global movement toward prison abolition and anti-carcerality. Anthropologists have occupied various roles within this movement: as educators teaching university courses on prisons; or within growing numbers of prison education programs; as researchers studying the specificities of carcerality worldwide; and as scholar-activists using our position to support community-based abolitionist projects. At the AAA Meeting in Seattle in 2022, a group met to discuss the future of abolitionist anthropology, and to network

across these multiple currents of abolitionist practice. This has expanded into a virtual working group with members who are focused on developing a mutually supportive presence of anthropologists who are doing diverse anti-carceral scholarly and social justice work. This special event is intended to continue this collaboration through an interactive and guided discussion on the priorities and possibilities for an abolitionist anthropology in the coming year. The agenda will involve developing a concrete plan to build a more sustainable working group with areas of focus including but not limited to supporting students in correctional facilities and creating shared resources on anti-carceral methods in anthropology. We aim to set in motion actionable resources and an organizational structure that will facilitate these collaborations. Participants do not need to be previous members of the working group to attend; anyone who is interested in abolitionist pedagogy, scholarly practice, and/or activist work is welcome.

Abolitionist Anthropology Working Group

11/18/2023

12:15 PM- 12:00:00 AM **TMCC - 701A**

Public - anyone can attend

DESCRIPTION:

According to the World Prison Population List, published December 2021, there are more than 11.5 million people currently incarcerated worldwide. This population is disproportionately Black, Indigenous, and otherwise targeted by discriminatory policies and disenfranchisement. Increasing awareness of the ubiquity of police violence, wrongful and biased convictions, and a deeply violent prison industrial complex has led to a global movement toward prison abolition and anti-carcerality. Anthropologists have occupied various roles within this movement: as educators teaching university courses on prisons; or within growing numbers of prison education programs; as researchers studying the specificities of carcerality worldwide; and as scholar-activists using our position to support community-based abolitionist projects. At the AAA Meeting in Seattle in 2022, a group met to discuss the future of abolitionist anthropology, and to network across these multiple currents of abolitionist practice. This has expanded into a virtual working group with members who are focused on developing a mutually supportive presence of anthropologists who are doing diverse anti-carceral scholarly and social justice work.

This special event is intended to continue this collaboration through an interactive and guided discussion on the priorities and possibilities for an abolitionist anthropology in the coming year. The agenda will involve developing a concrete plan to build a more sustainable working group with areas of focus including but not limited to supporting students in correctional facilities and creating shared resources on anti-carceral methods in anthropology. We aim to set in motion actionable resources and an organizational structure that will facilitate these collaborations. Participants do not need to be previous members of the working group to attend; anyone who is interested in abolitionist pedagogy, scholarly practice, and/or activist work is welcome.

History of Anthropology Interest Group Luncheon **11/18/2023**

12:15 PM- 1:45:00 PM **TMCC - 716A**

Public - anyone can attend

SECTION AFFILIATION:
Aging and Life Course IG

Anthropology & Environment Society Business Meeting **11/18/2023**

12:15 PM- 2:15:00 PM **TMCC - 715B**

Public - anyone can attend

SECTION AFFILIATION:
Anthropology & Environment Society

DESCRIPTION:
Business meeting for elected and ex-officio board members of the Anthropology and Environment Society to share section updates with members and announce annual award winners.

CASTAC Business Meeting **11/18/2023**

12:15 PM- 1:45:00 PM **TMCC - 714A**

Public - anyone can attend

SECTION AFFILIATION:
General Anthropology Division (GAD)

DESCRIPTION:
Business Meeting for members of this Interest Group

History of Anthropology Interest Group Luncheon **11/18/2023**

12:15 PM- 2:15:00 PM **Offsite - Offsite**

Public - anyone can attend

SECTION AFFILIATION:
General Anthropology Division

DESCRIPTION:
Lunch gathering for those interested in the History of Anthropology. Please contact Nick Barron (nicholas.barron@unlv.edu) for details. Information on the luncheon is also available via the History of Anthropology Interest Group listserv (<https://lists.virginia.edu/sympa/info/history-of-anthropology>). [We would like this text included in the program, if possible-thanks!]

SANA Business Meeting **11/18/2023**

12:15 PM- 1:30 PM **Delta Hotel - Kensington B**

Public - anyone can attend

SECTION AFFILIATION:
SANA

DESCRIPTION:
Open meeting of SANA to give out 2023 awards and discuss the future activities of the section.

Section Graduate Student Representative Gathering **11/18/2023**

12:15 PM- 1:45:00 PM **Delta Hotel - Riverdale**

Private - only invited guests can attend

SECTION AFFILIATION:
ASAP - Association for the Anthropology of Policy

DESCRIPTION:
This reception is an opportunity for graduate student representatives of the AAAs sections to gather. Making space for representatives to meet will hopefully

facilitate discussions about collaborating on events, building a network of support among peers, and a chance to share information about this role. We welcome all graduate student representatives to join.

SLA Mentoring Workshop

11/18/2023

12:15 PM- 1:45:00 PM Delta Hotel -
Kensington A

Public - anyone can attend

SECTION AFFILIATION:

Society for Linguistic Anthropology

DESCRIPTION:

The workshop will bring together mentors and mentees to provide guidance on professionalisation and career advice for students, early career, and mid-career scholars.

ALLA Business Meeting

11/18/2023

12:30 PM- 2:00 PM TMCC - 717B

Public - anyone can attend

SECTION AFFILIATION:

Association of Latina/o/x Anthropologists

DESCRIPTION:

Business meeting for ALLA members also covers annual awards

Annual Italianist Network Meet-Up

11/18/2023

12:30 PM- 1:30 PM TMCC - 206F

Public - anyone can attend

SECTION AFFILIATION:

Society for the Anthropology of Europe

DESCRIPTION:

The Italianist Network is for any scholar who works on Italy or has an interest in connecting with Italy specialists. We meet informally to reconnect with one another, and share current research projects and professional plans.

Beyond the “R” word: Strategies for successful transitions to works after work (“retirement”)

11/18/2023

12:30 PM- 2:00 PM

TMCC - 802B

Public - anyone can attend

SECTION AFFILIATION:

Association of Senior Anthropologists

DESCRIPTION:

The term “retirement” is defined by Miriam Webster in two alternative parts, first by “withdrawal from one's position or occupation” or [withdrawal] from active working life. In this special mentoring event conducted by the Association of Senior Anthropologists (ASA), we reject the notion of withdrawal from active [working] life and the “R” word that characterizes this sometimes-maligned status, to explore the opportunities for “works after work.” For anthropologists entering the latter stages of their careers, works after work can be defined broadly to include the incorporation of both anthropologically related and unrelated activities that enhance our lives and contribute to ours and others well-being. This event will bring together senior anthropologists who have established a wide variety of pathways that include continuing full, part-time, or volunteer teaching and research, professional service to the discipline, applying for government grants and awards (e.g., Fulbright), consultation to non-profit organizations, archiving the products of lifetime work, “fixing” and “defending” anthropology or engaging in non-anthropological activities (e.g., art, boat building, bike riding, travel) that create or expand on new skills and social networks, health and mental health, and issues around creating scholarships and other donations to non-profit entities. These pathways and others are presented to provide and discuss examples and models to assist attendees in defining their own works after work.

Culture@Large

11/18/2023

12:30 PM- 2:00 PM

TMCC - 718A

Public - anyone can attend

SECTION AFFILIATION:

DESCRIPTION:
“Dialogues”: We envision a collaborative space of exchange and guided dialogue among the Cultural Anthropology Journal (CA) Editorial Collective members, CA Editorial Board members and the general public to share and address: new CA editorial initiatives—such as Editorial-at-Large /Intersections and CA submissions in Spanish—, mentorship on what constitutes a good CA paper and the editorial process in general.

FICTION SALON: Alice in Wonderland and Through the Looking Glass

11/18/2023

12:30 PM- 1:30 PM TMCC - 206B

Public - anyone can attend

SECTION AFFILIATION:
APLA

DESCRIPTION:
Of the works of the Anglican deacon, mathematician, and logician C.L. Dodgson, the best remembered are the dream-fantasies he wrote under the name of Lewis Carroll. The most successful and enduring of these, the two Alice books, became and have remained the most widely read expeditions into dreaming, at least in the Western world. These texts, produced at the heart of the British Empire and its version of a world economic system, during a period of increasingly ruthless individualism and hard-headed realism, and at the very moment of the rise of evolutionist anthropology—*Through the Looking-Glass* was published the same year as Tylor’s *Primitive Culture*—can be read as manifestos against the prevailing trends of their day and place. Against this overwhelming Whiggery, the Alice books stand foursquare for dreams in their trans-Bourgeois beauty and terror, lands in which the calculation of

profit and loss is pushed to mathematical madness, straightforward language is unmasked as a web of contradictions, and both can sometimes be forgotten in a moment of love for one’s fellow-beings, given and returned.

Fiction Salon: Babel: An Arcane History

11/18/2023

12:30 PM- 1:30 PM TMCC - 206A

Public - anyone can attend

SECTION AFFILIATION:
APLA

DESCRIPTION:
R. F. Kuang’s 2022 novel *Babel: An Arcane History* is a work of speculative fiction, set in a version of the 19th century British Empire. In this world, language can be used to enhance the workings of material things through the incorporation of spoken and written spells into them: carriages and ships made to move more swiftly, weapons more efficiently, gates to protect those within from unwanted others, bread can be baked more successfully and so on. This power belongs to translators, most of whom were children stolen from distant colonized sites and brought to a central institute in Great Britain. As native speakers, these translators are valued for their ability to feel the resonances across their various languages in order to enhance the power of the spells they conceive and eventually perform, all in the service of governmental and elite interests. The book follows a group of these children as they progress through their training at the Institute, and collectively recognize the extrativist, colonial structures that have shaped their lives and profession. They eventually see that their native speaker status is foundational to the might and functioning of the Empire, and rebel against it. The book shows how racialized, colonial subjects are differentially integrated into colonial systems and spaces, and foregrounds how intimate semiotic practices like language use exist within and may support unequal relations of power.

Fiction Salon: Fernanda Melchor & Mexican Fiction

11/18/2023

12:30 PM- 1:30 PM TMCC - 501B

Public - anyone can attend

SECTION AFFILIATION:

APLA

DESCRIPTION:

There has been an increase in Mexican fiction that addresses violence: its origins, its effects, and the social contexts where it takes place. More specifically, writers like Fernanda Melchor (Boca del Río, 1982) have become important commentators on the generalized state of violence, impunity, and insecurity that prevails in Mexico. This Fiction Salon would look at two of her novels addressing violence: *Temporada de Huracanes* (translated as *Hurricane Season*) (2017) and *Páradais* (translated as *Paradais*) (2021). Both of these novels are short, compelling stories about violence in Melchor’s native state of Veracruz that paint complex portraits about how violence is experienced differently based on class and gender. This Salon seeks to discuss representations of violence and death in the work of Melchor and in the recent works in Mexican (and Latin American) literature.

Two Decades On: Teaching the US Wars in Afghanistan and Iraq

11/18/2023

12:30 PM- 2:00 PM

TMCC - 712

Public - anyone can attend

SECTION AFFILIATION:

Middle East Section

DESCRIPTION:

We will share texts, documentaries, websites, and other resources for teaching about the US wars in Afghanistan and Iraq and their long aftermath. We will discuss integrating such materials across a variety of courses.

Transforming Grief at the Fort York Historic Site

11/18/2023

2:00 PM - 4:00:00 PM

Offsite - Offsite

Public - anyone can attend

SECTION AFFILIATION:

Anthropology of Tourism Interest Group (ATIG), Society For the Anthropology of North America (SANA), AAA Archaeology Division, The Council For Museum Anthropologists (CMA)

DESCRIPTION:

With generous sponsorship from the AAA Archaeology Division, the Society for the Anthropology of North American (SANA), and the Council For Museum Anthropologists (CMA), The Anthropology of Tourism Interest Group (ATIG) has organized an exciting event to take place at the Fort York National Historic Site on Saturday Nov. 18 from 2:00-4:00 pm. Event attendees will have the opportunity to explore the special exhibit, “Transforming Grief: Loss & Togetherness in COVID-19” with the exhibit curator, Raven Spiratos. Event attendees will also experience guided tours of the Fort York with site interpreters.

The “Transforming Grief: Loss & Togetherness in COVID-19” exhibit is very much aligned with the conference theme of Transitions. It features “interviews, art, and artifacts” from front line workers, artists, and other members of the community to voice the continuing experiences and impacts of the COVID pandemic. This is a part of Toronto’s Stronger TOgether program, a suite of initiatives that “honor the resiliency and perseverance of the community – particularly those who were disproportionately affected and those who continue to live with the effects of the pandemic.” The curator explained that as the curation process occurred, the contributors considered the seven stages of grief as a way to consider experiences of COVID through art as well as what it means to create work about peace in a space of war.

The exhibit is located in the visitor center of the 43-acre archaeological park, Fort York National Historic Site—the location where British soldiers, First Nations warriors and Upper Canadian militiamen defended Toronto during the War of 1812. Today the site includes several exhibits about battle experience and excavation, and more—see the links below. The site uses oral accounts and memoirs to ensure the inclusion of indigenous narratives. The Visitor Center also includes a Medicine Wheel Table created in collaboration with members of the Anishnabeg community.

Event Details:

- Group tour for 100 participants between 2 and 4 pm (arrival time 1:30) on Saturday November 18, 2023.*
- Curator of special exhibit "Transforming Grief: Loss & Togetherness in COVID-19," Raven Spiratos will lead 30 participants at a time through a 20 minute tour of the exhibit and be available to answer questions, participants will also be able to spend time on their own in the exhibit

- While these tours are going on, the rest of the group will have a guided tour of the Historic Fort given by the Fort's interpreters.

*Note: this is a limited capacity event. The 100-person cap is based on capacity at the Fort York Site and in the Special exhibit.

WCAA Board Meeting

11/18/2023

2:00 PM - 6:00 PM Delta Hotel - Riverdale

Private - only invited guests can attend

Practice Day

11/18/2023

On Saturday, November 18 at the Annual Meeting in Toronto, we present Practice Day, a full day of programming designed by and for anthropologists who work in business, government, and nonprofit settings. The day will feature specially curated workshops, facilitated discussion on key problems of practice, networking opportunities, and a keynote from Anya-Milana Sulaver, Editor-in-Chief and founder of Peeps Magazine. Events are open to all in-person Annual Meeting attendees, including weekend registrants. Come join us!

Practice Day- Workshops

8:00:00 AM - 6:00:00 PM 203 B & 205 B -

Checkout the workshops taking place on Saturday, November 18! Four of these workshops specifically focus on skills that are important to anthropologists working in business, government, and nonprofit settings, such as communicating outside of the academy, connecting ethnographic methods and DEI work within organizations, and workshop facilitation.

- *NAPA Professional Development Workshop - Facilitating Creativity: Skills and Tools of Workshop Facilitation 8:00 AM – 10:00 AM | 205 B*
 - *NAPA Professional Development Workshop: Storytelling Skill-Building from Novice to Pro for Anthropological Communication 8:00 AM – 12:00 PM | 203 B*
 - *Before, During and After: Strategies for Communicating with Collaborators and Critics 1:00 PM – 5:00 PM | 203 B*
 - *Connecting Ethnographic Methods, Culture, and Diversity, Equity, and Inclusion (DEI) Work in Organizations 2:00 – 6:00 PM | 205 B*
- Prior registration for workshops is required.*

Practice Day Networking Lunch

11/18/2023

12:15 PM – 1:45 PM Delta Hotel - Distillery

Private - only invited guests can attend

Practice Day- Keynote Address from Anya-Milana Sulaver

2:00 PM - 3:45 PM TMCC - 802 A -
Each year, Practice Day features a keynote address by an anthropologist who has forged a unique career in a different field of practice and who has a perspective to share with colleagues from any sort of workplace setting. This year’s keynote will be offered by Anya-Milana (A-M) Sulaver, a cultural analyst by training, a television and communications producer and magazine publisher by trade and a cultural translator by vocation. A product of a complex mix of cultures, A-M spent much of her upbringing in what is now Serbia, Bosnia and Herzegovina, and Croatia, providing her with a unique perspective on a part of the world known for its conflicts. While working for one of Canada’s first female

Indigenous Executive Producers, bringing Indigenous stories to Canadians through nationally broadcast documentaries, A-M came to understand that there were exciting opportunities to expand accountable and ethical information production that could be inclusive of the very voices depicted. The approach and the rigor used to develop this approach were honed when A-M returned to school, completing a degree in International Development and a Master's in Interdisciplinary Studies (Anthropology, Film, and Balkan Studies). Immediately upon graduation, A-M applied this rigor with recognized results, producing the award-winning publication Peeps Magazine. Articulate, passionate, and devoted to information integrity and inclusivity in representation, A-M is known as a champion for those written over and an eloquent analyst at the intersection of policy and culture.

Practice Day- Affinity Groups

4:15 PM - 6:00 PM 802 A & 802 B -

Affinity groups will provide an opportunity to discuss particular contexts of practice or areas of interest in professional anthropology. Specific topics will be chosen collectively by Practice Day attendees. The discussion guide for each topic will be, 1) What is the state of the art? 2) What problems of practice are we facing? 3) What does the future hold?
