trace, and without even language. When they were theorized as speaking, their language was denigrated as aesthetically displeasing and impenetrable. A lack of voice became a marker of racialized Otherness and was used as a designation of animality rather than humanity. This has legacies in today's state narratives of development and inclusion that exist alongside extreme prejudice. For Batek people, voice is a primary means through which they make sense of the Others whom they encounter every day in their rainforest boundary environment, in which they inhabit the border lands between national park and oil palm plantation. Yet this is a conceptualization of voice beyond a desire to 'have a voice' in the liberal multicultural sense of inclusion within state projects. This paper explores what voice is and what it does according to Batek people's metapragmatic discourses on language and speech as part of the sensory world more broadly. Doing so demonstrates how voice can be a tool of negotiation that allows for an understanding of cultural difference as contextual and ever changing rather than fixed and indicative of an essentialized identity. Voice is multifaceted, and attention to its ambiguities can be informative of the ways people find to live among and with Others beyond essentialized representation and inclusion in projects of statehood. Presenter: Alice Rudge (University College London)

Speaking the Language of the Path: Poetry and the Production of the Alevi Divine Speaker: In a transnational community of reformist Alevis—a messianic Sufi group based in Turkey and its diaspora—the authority to speak publicly within the community is tied to mastery of a repertoire of poetry. By reciting this poetry to musical accompaniment, Alevis embody past singer-poets, and through them, the saint Ali (the Prophet Muhammad's cousin and son-in-law and first imam of the Shia) whom they venerate as a divine being. This notion of voice diverges from Protestant ideas of the voice as an expression of individual interiority, liberal ideas of the voice as a disembodied locus of rational public deliberation, and Sunni Islamic ideas of the voice as mediator of God's singular call through the project of da'wa, or proselytization. Instead, Alevi reformists promote a notion of voice that ties speakers' authority to their capacity for embodying immanent human divinity. This paper examines how Alevi reformists over the past decade have objectified and popularized what they call the "language of the path" (yol dili) as a linguistic register that embodies God's agency. It focuses on a transnational movement called the School of Divine Wisdom (Mekteb-i İrfan) that recasts the traditional muhabbet (love/conversation)

ritual as a site for religious reform and revival among Alevi youth. By re-embedding Alevi sung poetry within the ritual context from which it was previously disarticulated for circulation in recorded media, this movement seeks to cultivate a new ideal Alevi speaking subject who can publically represent Alevis outside the registers of leftist politics and Sunni piety. Presenter: Alex Kreger (University of Pennsylvania)

Turkish Muslims as transnational racial ventriloquists in Africa south of the Sahara: This paper discusses the racial discourses in the context of Islamic humanitarianism and education in Africa south of the Sahara through the analysis of the ventriloquist practices of Turkish Muslims. It combines a multi-sited ethnography in Turkey, Tanzania and Senegal with a textual analysis of films, Islamic magazines and social media to develop an anthropological framework for the study of racialisation in and through the transnational Islamic sphere. Building on the work of Soviet literary critics, Bakhtin (1981) and Volosinov (1973), this paper approaches voice as sociohistorically situated, ideologically and politically motivated, and dialogically and intertextually constituted utterances that anticipate particular future responses and repercussions. This model of voice allows for an interrogation of how another's utterances are borrowed, appropriated, transformed, assimilated and superimposed with new meanings and intentions. Ventriloquism goes a step further in accounting for a simulation of voice that dissociates it from its owner (Jacklin 2005, Leppänen 2015). In this paper, therefore, voicing of the racialised other corresponds to silencing the other's voice in the process of its simulation. Presenter: Ezgi Guner (University of Edinburgh)

From #BlackLivesMatter to #DalitLivesMatter: Data as voice and social justice in the global south: Appeared on Twitter for the first time in 2014, #DalitLivesMatter (#DLM) consists of one of the latest chapters in the history of cross-fertilization between Dalit and African American struggles for social justice. Drawing upon a digital humanities methodology, this paper analyses this hashtag as a field site (Bonilla and Rosa 2015) featuring textual and visual narratives that braid symbols of the Civil Rights and Dalit Movement and episodes of brutal violence against Dalit and African American populations in India and the US respectively. Data containing #DLM illuminates the fleeting and ambiguous digital lives of some of its users and their voices, as a result of censorship, bot presences and lack of certainty with regard to identities and geolocalisation. Overall, these voices challenge 'the universality and uniformity of

human experience' in the digital sphere (Coleman 2010) and interrogate datafication's universalism (Milan and Treré 2019). However, data visualization of the use of #DLM also reveals that the ways in which the voices in question narrate the thanatopolitics produced along the lines of race and caste in the US and in India on Twitter are all but intuitive. While such voices appear to largely emanate from South Asia, they privilege racial violence in the US over caste crimes in India. In other words, data visualization shows #DLM as an epiphenomenon of the Black Lives Matter movement. Thus, the act of being vocal about violence against Dalits and invoking social justice from the global south might paradoxically contribute to the reproduction of geopolitical inequalities. Presenter: Manuela Ciotti (University of Vienna)

Technologies of Voice and Record in the Work of Civilian Oversight of Police Boards: One of the most popular forms of police reform in the United States in recent years have been the development of Civilian Oversight of Police Boards, sometimes known as Civilian Review or Civilian Complaint Boards. Key to developing a robust analysis of both issues is a finer attention to the requirements of "voice" in such encounters and their technologies of record. Although mechanisms of "community input" proliferate within such assemblages—complaint forms, public comment sessions, civilian reports, community forums, etc.—very little attention has been paid to what such mechanisms consist of in practice, nor has there robust analysis of such practices that take into account critiques of liberal subjectivity, governance, and their limits. For example, how do these mechanisms of "input" and "voice" both constitute particular governable subjects and limit the forms of experience that can be expressed through them? How do the constrained mechanisms of public record shape the perspectives that can be understood as actual, real, or otherwise as politically agentic with liberal infrastructures of governance? What forms of labor and affective investment make such infrastructures possible? This paper will take a step towards addressing such questions by drawing on extended fieldwork in civilian oversight. It will pay careful ethnographic attention to how particular voices are hailed—especially in racialized and gendered forms—in Civilian Oversight Boards and the various technologies of record (livestream video, automated transcripts, zoom meetings, public agendas and minutes) through which those voices are inscribed. Presenter: Kevin Karpiak (Eastern Michigan University)

Beyond Transition: Linguistic Anthropology as Transformative Praxis.

4:15 PM - 6:00 PM

TMCC - Hall G - MI

Executive Roundtable/Townhall - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Bernard Perley (University of British Columbia)

CHAIR:

Bernard Perley (University of British Columbia)

PRESENTER:

Paul Kroskrity (University of California, Los Angeles), Kathleen Riley (Rutgers University, New Brunswick, Department of Anthropology), Marybeth

Eleanor Nevins (Middlebury College, Department of Anthropology), Krystal Smalls (University of Illinois, Urbana-Champaign), Graham Jones (Massachusetts Institute of Technology), Kira Hall (University of Colorado, Boulder, Department of Anthropology)

DESCRIPTION:

The pandemic created convulsions of upheavals and uncertainties that prompted transitional strategies of 'returning to normal' in daily lives and professional expectations. It is tempting to see the disruptions as transitory, but the pandemic laid bare the structural inequities and slow violence of western regimes of capitalism, colonialism, and ideology. Linguistic anthropology has a rich tradition of critical engagement with language ideologies and a long history of disciplinary advocacy of social justice. Rather than view this moment as a transitional liminal space between the old normal and the new normal, linguistic anthropologists use our disciplinary tools, skills, and commitments to actualize transformative processes. Those processes include but are not limited to: •

Language and social justice have deep roots in linguistic anthropology that acknowledge the importance of addressing social justice as a broad category of complex and situated entanglements of unequal subject positions. Linguistic anthropologists identify problems and are actively seeking ways to transform structural inequities into sources for transformative justice. • Linguistic Anthropologists have been at the forefront of exposing language practices that encode, mask and perpetuate the violence of racism. Linguistic anthropological discourses of equity and justice push back against systemic racism to transform systems and institutions toward a praxis of equity and respect. • Language revitalization is an urgent global crisis garnering expert support and remediation. Community engagement and enactments of linguistic sovereignty is less focused on replicating past linguistic practices. Rather, linguistic sovereignty is a transformative praxis whereby emergent vitalities make language life the site of possible worlds. •

Decolonization in a post-socialist and late modern global milieu is often regarded as a corrective practice to mitigate the excesses and violence of our global condition; a process of negating colonial inscriptions onto and concomitant erasure of Indigenous worlds. Yet, the practice is less about a return to pre-colonial modes of being and more about what can be imagined as coexistent futures of respect and mutual support. • Socialization and intersubjectivity are critical semiotic social/cultural fields of emergent modes of being in the world. The field of social relations are

increasingly activated by social imaginaries of possibility through inter, trans, and relational embodiments. •

World-making is employed in communicative encounters with power to channel actions and recast the phenomenal experiences of participants. Actions that define the world, and actions premised on the world thus defined, form a recursive but forward-moving pathway. Contrasts between world-making paths can be approached as contrasting epistemologies, ontologies, and differently configured phenomenologies. • Ongoing imaginaries of hegemonic power relations resist emerging subjective embodiments and socialities. Contemporary media, communication practices, and subjectivities of engagement are potential sites for transformative praxis. This roundtable builds on ongoing visionary work across linguistic anthropology so the field can move beyond transitioning from one situated circumstance to another and instead provide mutual support for transforming regimes of structural and systemic violence toward our sustainable and just futures.

FLASH Presentation Session: Building Solidarity through Perennial Chickens

4:15 PM - 6:00 PM

TMCC - 604

Flash Presentation - In-person Live

REVIEWED BY:

Culture and Agriculture

PRESENTER:

Ana Fochesatto (University of Wisconsin, Madison)

DESCRIPTION:

In this community-based Participatory Action Research (PAR) project, I examine how a new initiative in the Upper Midwest is organizing a diverse group of farmers committed to raising chickens on perennial pastures and forests by employing Indigenous knowledge from Central America. The collective shares a vision for a just agricultural system that takes care of people and the environment, but faces critical challenges around organizing resources and decision-making power in an equitable manner. Utilizing grounded theory ethnography, I explore the organizational structures employed by the collective to ensure equitable and democratic decision-making throughout the supply chain. I also discuss how the research has served to create spaces where the group can reflect on their individual and collective stories and strategize to find solutions that align with their vision.

FLASH Presentation Session: Gas Station Futures

4:15 PM - 6:00 PM **TMCC - 604**

Flash Presentation - In-person Live

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Jessica Staggs

DESCRIPTION:

While the role of electric and alternative fuel vehicles is frequently discussed in relation to energy transitions, there is very little discussion about the future of pre-existing infrastructure associated with current gasoline-powered transportation landscapes. Currently, there are no research studies on what gas station owners intend to do with their stations as alternative fuel vehicles become more common and as states transition fully away from internal combustion engine (ICE) vehicles. A proper understanding of the futures of gas stations is necessary to make plans for new infrastructure and to create a wide-scale transportation transition without leaving wide swaths of areas dependent on just a few sources of gasoline as the transition toward alternative fuel progresses. This research project uses semi-structured interviews with gas station proprietors within Maryland, Virginia and Washington, D.C., to determine what plans they are making for the next twenty years of their station, including plans they are making in response to new ICE sale bans. In addition to new policies, these interviews will address differences in future imaginaries based on nearby infrastructure, rural vs. urban locations, and the potential of the stations to directly transition into alternative refueling locations. This flash presentation will address the preliminary findings from interviews and reflections on proprietor imaginaries of gas station futures.

FLASH Presentation Session: Migrantour Story-maps: sustainable, community-based tourism

4:15 PM - 6:00 PM **TMCC - 604**

Flash Presentation - In-person Live

REVIEWED BY:

Society for the Anthropology of Europe

PRESENTER:

Nadine Fernandez

DESCRIPTION:

Drawing on multi-modal anthropology and action research, this flash presentation will share snippets of digital story-maps recently created as part of the European Migrantour project

(<http://www.mygrantour.org/en/>). Migrantour's intercultural walks are a civic education and sustainable tourism projects operating through local NGOs to counter anti-immigrant rhetoric in European cities. Currently in more than 20 cities across Europe, these community-based, urban walks are co-created by people with diverse migrant backgrounds. University partnerships help provide background research to present a people's history of migration in the city and offer the opportunity for student engagement through action research in community-based tourism. These sustainable walking tours seek to reshape ideas of heritage and belonging in European cities giving voice to migrants' experiences and perspectives of the cities they now call home. This flash presentation will share the preliminary results of a new initiative to add a digital/online element to the Migrantour offerings. Collaboratively created by Migrantour guides and rich with audio-visual materials, these story-maps serve as advertisement for the walking tours, as well as a type of living archive capturing the voices and perspectives of a changing group of guides and Migrantour participants. Finally, the story-maps also function to preserve snapshots of dynamic, but often overlooked, immigrant neighborhoods in constantly changing urban landscapes. The flash presentation highlights Migrantour's collaborative approach to educational and sustainable tourism; as well as the possibilities that the easy-to-use digital story-map tools offer community-based projects to present results in a visually-engaging and accessible format.

FLASH Presentation Session: Models that cannot do what they are asked to do: a peek into problems of managing groundfish fisheries off the northeastern coast of the United States

4:15 PM - 6:00 PM **TMCC - 604**

Flash Presentation - In-person Live

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Sarah Robinson

DESCRIPTION:

Fisheries for cod, haddock, flounder, and other groundfish species off the northeastern coast of the United States have been subject to modern management regimes for almost 75 years. These regimes have employed a succession of techniques (gear control, access control, effort control, catch control) but none has succeeded in maintaining or

rebuilding fish stock sizes. One of the major reasons for this is that the models used to assess stock sizes and project catch amounts cannot render the advice that is needed to manage the fishery in accordance with legal requirements. An example: a stock assessment projects an amount of catch for a given year that will prevent overfishing; management measures limit catch to a level below this projected amount; actual catch (which is carefully monitored) comes in at or below this prescribed amount; and, yet, the following year, the model shows that overfishing did occur, despite the fact that actual catch came in below the amount projected to prevent overfishing. This is a common occurrence in the northeast groundfish fishery. Groundfish management has been famously controversial, painful, and unsuccessful, and this quick but concentrated look at problems posed by the models and the assessments offers a peek at a core dynamic in these difficulties. This presentation forms a part of an ongoing historical and ethnographic study of state efforts to manage the northeast groundfish fishery.

FLASH Presentation Session: Ocean Mobilities: Transitions in Maritime Transport

4:15 PM - 6:00 PM **TMCC - 604**

Flash Presentation - In-person Live

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Montse Pijoan

DESCRIPTION:

Seafaring practices in the service of clean transport include the construction and maintenance of innovative cargo ships and the restoration and adaptation of existing ships alongside corresponding practices of transport under sail. The latest engineering designs for cargo vessels use an age-old source of energy: wind power; wisdom from traditional practices is crucial for their success. Studying political, economic, and sustainability in eco-transport initiatives opens many lines of inquiry, including: how eco-shipping relates to environmental factors, how local producers' and crew's experience of eco-shipping relates to materials transported, and how eco-shipping practices impact the global circulation of goods. The project 'Ocean Mobilities' demonstrates how taking part in eco-shipping initiatives brings knowledge from different disciplines together in the experience of the seafarer. Qualitative research on transitions in maritime transport provides a point of access for a critical discourse on practices, understandings, politics and mappings of the

ocean, contributing to a study of the ocean as part and parcel of the world we inhabit. Organized under the theme of 'Ocean Mobilities,' this project investigates how relationships constituting the experience of the seafarer living and trading across the sea in the context of eco-shipping enterprises afford empirical knowledge about the environment. The presentation shares observations and early findings from fieldwork conducted among employees of eco-shipping companies in France, the Netherlands and the UK. This fieldwork builds on earlier PhD research that focused on the process of en-skilment at sea and the interconnection of action, perception and environment. Placing the lived experience of the sailor at the centre of research, the project 'Ocean Mobilities' seeks to re-centre the experience of ocean mobility in order to enable new understandings of mobilities as constitutive of social practices. Attention to micro-level details about life at sea and global analysis of the political, economic, social and relational understanding of the ocean have the potential to reveal possibilities for structural change in the business of shipping. The goal of this research is both to advance theory on ocean mobilities and to promote more sustainable seafaring practices. Engaging research on clean transport initiatives through study of mobility and relational sensitivities at sea can play a critical role in challenging discourses and practices of modern capitalism. It can also unveil complex labour processes in the mobility of goods in the current global dynamic (see Borovnik 2019, 134; Leivestad and Markkula 2021; Leivestad and Schober 2022). Re-centring ocean transportation and movement (and the subjective experiences that emerge as one moves), relationships of presence within eco-transport initiatives in an enlivened ocean world aim to substitute the emplacement of goods as 'codified containers' in capitalism (Leivestad and Schober 2022, 186); to rethink a series of cartographic and political norms that have developed over hundreds of years and that underlie the very foundation of modern society (Steinberg 2009, 488-489); and to compound ocean mobilities connecting people and our ocean. The study of life at sea in the context of transitions in eco-shipping practices enables development of a theory of ocean mobilities that foregrounds the relational intersection of experience and environment.

FLASH Presentation Session: The issues of perception of an erosive phenomenon in the displacement of a population in Atafona, Brazil

4:15 PM - 6:00 PM **TMCC - 604**

Flash Presentation - In-person Live

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER: **Paul Macalli**

DESCRIPTION:

This communication will aim to dwell on the intellectual and scientific difficulty of considering environmental displacement, also called migration. The categories of 'climate refugees', and 'environmental migrants' refer to a desire to categorize situations and human beings confronted with displacements caused by environmental problems. Unfortunately, this attempt failed to protect these individuals under international law. Here, I will present my doctoral research field which presents a case of population displacement. Atafona is a district of São João da Barra, located on the north coast of the state of Rio de Janeiro. There, the sea advances 5 to 7 meters per year. To date, the sea has engulfed more than 15 streets and 500 buildings, including houses of fishermen and summer visitors, but also clubs, churches, gas stations, and bars. A neighborhood community made up of fishermen, summer visitors and traders is forced to move because of an environmental problem, namely marine erosion. The erosion phenomenon is often characterized by the 'natural' aspect of the disaster, without focusing on what causes 'disaster' locally. I propose to reduce the disaster to a social experience of lived experience in order to question what constitutes an 'event' locally (Fassin and Bensa, 2002; Revet and Langumier, 2011). Indeed, the living conditions of the victims are particularly difficult since they experience repeated floods, and the gradual erosion of their daily lives before finally being forced to leave their homes. Thus, in Atafona, what is dramatic for local residents is not the erosion phenomenon itself but the fact of being forced to move and 'abandon' their place of residence. The experience of these individuals recounted in this ethnographic study will make it possible to ethnographically enrich the question of environmentally displaced persons, and to reflect on the current global crisis felt. This raises the question of our relationship with the environment. For this, I propose to question the anthropological particularism of environmental displacement by seizing the relational dimension to the place which is disappearing and to the local population forced to leave it. This approach will lead me to broaden conceptually and empirically the distinction between 'environmental displacement' and other displacements.

2-625

Challenges to Hegemonic Education in International Contexts

4:15 PM - 6:00 PM

TMCC - 714 A

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

PRESENTER:

Alexandra Allweiss (Michigan State University), Denni Blum (Oklahoma State University), Dawn Grimes-MacLellan

DESCRIPTION:

These papers present a variety of international contexts in which examine teachers, students, student organizations, and school graduates to understand how these actors negotiate their hegemonic contexts. The first paper, *The Struggle for and over Educational Value in Amdo Tibetan Areas in China*, examines the influence that mainstream schooling in China exerts on Tibetans. In this context, the author seeks to understand how Tibetan supplemental educators conceptualize what is educationally valuable and help students acquire it. In addition, the author considers Tibetan's negotiation of cultural capital and its potential to challenge the hegemonic educational structure. In the second paper, *The Transition of Low-Achieving Students to Adulthood*, the author describes, in this ethnographic account, what are perceived as 'low achieving' students and the teachers' approach to them during their attendance at a vocational higher secondary school in Czechia. The author contends that the school's hidden curriculum-in this case, the teacher's norms, values, and praxis-has a vital impact on the social mobility of their students. The third paper, *Mimicry and the Production of Elite Masculinity in Egypt's International Schools*, examines the divergently constructed feminine and masculine ideals that circulated among young people educated in an elite international school in Egypt. The author argues that the appropriation of sha'bi-inflected dispositions and skills facilitated the ability of young men to traverse class boundaries and to connect both symbolically and physically with Egyptians beyond their class in a manner that was foreclosed to elite girls. Rather than mimicking Westerners, these young men seemed to be 'mimicking Egyptians', and thereby participating in the reproduction of their class and gendered privilege. The fourth paper, *'That is Where I Opened My Eyes': Maya Chuj Girls' Decolonial Feminist Organizing*, drawing on a transnational ethnography with Maya Chuj educators and organizers in Guatemala and the United States, the

author focuses on findings from Jóvenes Chujes Organizadas (JCO, pseudonym), a Chuj girls' organization whose work was focused on women's rights and education. She centers the ways Chuj girls took up, discussed, navigated, and pushed back on Western liberal frameworks of rights and education in their work. The fifth paper, *Education for Freedom: Cuban Migrant Identity Formation*, focuses on what freedom means to Cuban Americans who were educated on the island in the writings of their national hero and leader of Cuba's independence from Spain, specifically looking at his phrase, 'To be educated is the only way to be free.' The author discusses the ways their perceptions and understandings of freedom have been influenced by both the US and Cuban contexts. The last paper, *A Pandemic of Precarity: Transitions in career decision-making among foreign university adjuncts in post-Covid Japan*, shows how the compounded effect that a Japanese labor law intended to bring stability to the workplace, together with an unforeseen health pandemic, has brought further risk to already precarious adjunct academic work that signals a troubling fragility within Japanese higher education as a whole.

'That is Where I Opened My Eyes': Maya Chuj Girls' Decolonial Feminist Organizing: Much feminist scholarship has shown how international development discourses and initiatives that focus on girls' empowerment, rights, and education are embedded in neoliberal colonial logics (e.g., Kapur, 2002; Moeller, 2018) and construct Indigenous girlhood through the interlocking systems of heteropatriarchy, racial capitalism, white supremacy, and modernity/coloniality (de Finney, 2015). Drawing on an 18 month transnational ethnography with Maya Chuj educators and organizers in Guatemala and the United States, this paper focuses on findings from Jóvenes Chujes Organizadas (JCO, pseudonym), a Chuj girls organization whose work was focused on women's rights and education. I center the ways Chuj girls took up, discussed, navigated, and pushed back on Western liberal frameworks of rights and education in their work (Lugones, 2007, 2010). This paper uses a decolonial feminist framework (Lugones, 2003, 2010) to make visible the complex interlocking nature of gendered, economic, raced, heterosexualized modern/colonial systems that shape dominant definitions of 'human' that ungird dominant framings and allocations of rights. By looking at the dual focus on girls' empowerment and women's rights and how Chuj young people took up, navigated, and reimagined them, this paper builds on and contributes to (1) critical scholarship on human rights that questions the emancipatory possibilities of

rights-based frameworks and also recognizes the radical organizing work centered around it (e.g., Suárez-Krabbe, 2013; Hodgson 2011) and (2) feminist scholarship that shows how girls' empowerment projects in international development work to reinforce racialized colonial gender logics of girls and women in the global south as victims (e.g., Kapur, 2002; Moeller, 2018). In line with the call to center 'transitions,' this paper engages with the in-betweenness made visible by Chuj girls organizing work and centers Chuj girls' frameworks of Maya self-determination and creative (re)imagining. Findings show how organizers of JCO worked to create a vision of gender equity based in Chuj ways of knowing and being, while also navigating Western/colonial notions of gender, education, and rights that acted as systems of containment (Sabzalian, 2019) couched in discourses of 'empowerment.' This was a particular challenge as JCO was also influenced and supported by outside organizations that aimed at addressing what they saw as 'severe gender inequities' in Maya communities through the lens of Western/colonial notions of gender equality (Méndez, 2014; Lugones, 2010). I argue that Chuj youth's voices and experiences exposed gendered modern/colonial exclusions built into Western women's rights frameworks and how these dominant framework worked to contain and discipline racial, ethnic, and gender identities and diverse ways of being. While navigating these projects, the youth of JCO also explicitly worked to extend their work beyond modern/colonial frameworks of rights and girls empowerment and to disrupt binary victim narratives in order to create community and organizing spaces and frameworks that sustained them. Xepel, a member of JCO, described the critical sense of solidarity and shared visions she and other young Chuj women and girls developed through their organizing experiences: 'That is where I opened my eyes because there were many girls, women, and we shared experiences.' Presenter: Alexandra Allweiss (Michigan State University)

Education for Freedom: Cuban migrant identity formation and José Martí: It is difficult to imagine a more important word for a former colony than freedom, or for someone who leaves their homeland to pursue it. On the island, Cubans have been educated in José Martí as the liberator of Cuba, killed on the battlefield, fighting for Cuba's independence. Martí is memorialized in plaster busts, statues, and in school curriculum as a symbol of Cuba's freedom and sovereignty. Although José Martí never purported to align himself with communist or socialist leanings, his heroism, poetry, and intellectual thought have been sowed seamlessly into the Cuban Revolution. His writings and his persona have

been idealized and iconified on the island. Educated in Martí, Cubans have experienced a double-edged sword; by reading Martí's works and through their lived experience they question what type of freedom they have and what type they desire; and how their understanding can lead to change their conditions in this world (Freire, 1970). Freire asserts that human beings naturally strive to achieve this kind of freedom, which is a key part of human identity. And so it is in the case of Cuban migrants over the past few years, whose migration to the US has been the largest in Cuban-US history. This study explores what freedom means to Cuban Americans based on their education about Martí and his famous phrase 'To be educated is the only way to be free.' Data was collected from 45 interviews with Cuban Americans who were educated on the island through twelfth grade and at some point migrated to the United States. The sample reflects Cubans who have migrated to different parts of the United States, who were born between 1940-1995. Participants told stories regarding their understanding of Martí's use of freedom alongside their own experiences and desire for freedom. This study found that although this sample of participants rejected their government's practice (often categorized as 'inhumane' or 'unjust') and its corresponding communist ideology, they maintained a loyalty to Martí. In fact, José Martí's words and actions were sacred and inspirational; in sum, Martí is/was dear to their sense of Cuban identity and culture. Their migrant destination of the United States became their quest for human completion or freedom (Freire), something that they felt unattainable in their homeland. Presenter: Denni Blum (Oklahoma State University)

A pandemic of precarity: Transitions in career decision-making among foreign university adjuncts in post-Covid Japan: Adjunct instructors make up roughly half of the academic workforce in private and public universities in Japan, and this rises even higher in foreign language instruction, where adjunct faculty comprise most of the teachers in many programs and departments. As in other industrialized countries, this heavy reliance on contingent faculty has created an academic underclass of people in Japan with advanced degrees but without secure stable employment and with few of the benefits received by their full-time colleagues with permanent employment. While this situation is experienced by Japanese too, foreign adjunct faculty often encounter additional challenges at Japanese universities related to language barriers, cultural expectations and visa and immigration requirements and procedures. This long-standing situation was made worse by a 2013 change in the Japanese labor law requiring employers to offer

permanent positions to workers after five years of service. Intended to provide stability for workers on perpetual contracts throughout the labor force, the unintended effect in higher education has been to create even greater economic insecurity for adjunct faculty, as many universities now limit the employment of part-time lecturers to a maximum of five years to avoid having to offer them permanent positions. This already precarious position of adjunct faculty in Japan only became intensified during the Covid 19 pandemic, as the rapid shift to online teaching placed greater demands on the workloads of part-time lecturers to retool their class preparation and delivery and also imposed a financial burden to acquire or upgrade their computers, peripherals and internet service at their own expense. As most adjunct faculty work at several universities, often at a different employer each day of the week, the adjustment cost in time and money was considerable. Then in 2022, after two full years of managing this workload remotely, many Japanese universities began transitioning back to the classroom, precipitating a steady wave of resignations from adjunct faculty unseen over the previous decade. This presentation will share the results of in-depth interviews with five foreign part-time instructors who despite long-term careers as university adjunct faculty have chosen new career trajectories due to the compounded impact of the new labor law, teaching experiences during the Covid pandemic, and the post-pandemic readjustment. Seeking stable employment, economic security, strategic lateral moves and work-life balance, their narratives provide insight into the structural conditions affecting the professional lives of adjunct faculty at Japanese universities and the ways in which people manage, or not. The presentation will also show how the compounded effect that a Japanese labor law intended to bring stability to the workplace, together with an unforeseen health pandemic, has brought further risk to already precarious adjunct academic work that signals a troubling fragility within Japanese higher education as a whole. Presenter: Dawn Grimes-MacLellan

DESCRIPTION:

Throughout a pandemic year, the organizers of this session met digitally reflecting around several issues: the impact of confinement on our lives, our academic work and our social-epistemic commitment and outstandingly, possibilities of collective construction of knowledge between Indigenous peoples and academics. From these collective reflections the idea of producing a book entitled *Community and activist reclamation in the Americas: Indigenous language education in critical times* arose. In step with the 2023 theme, *Transitions*, we bring this theme from our forthcoming book to this session to forward the practice of claiming space for diversity of voices, namely Indigenous teachers, activists and committed academics, to highlight the goals of Indigenous language reclamation as community center education. Our concerns for Indigenous education decenter state systems of education, i.e., schooling. Rather, this panel considers efforts of teachers (defined broadly), community activists, and scholars who are developing initiatives to support Indigenous language practices in, around, and beyond schooling. Therefore, emphasizing diverse processes of language reclamation in complex and diverse settings. The global pandemic has acutely underscored the shortfall of official educational policies in solving larger social, economic, and digital inequities in the Americas for decades; inequities which continue to impact Indigenous population the hardest—for example the passing of many elders and rural isolation. The climate crisis is a fact that impacts us all too. The consequences of neocolonial exploitation have placed responsibility on Indigenous peoples to subvert this situation, yet as Davi Kopenawa Yanomami (Indigenous Brazilian) states the responsibility belongs to us all. In this context, it is fundamental to reflect on the relationship between education and landscapes and how physical, social, and linguistic territories of Indigenous knowledge systems have been reshaped in recent years. Scholars and educators must deeply re-consider what is language reclamation today and to re-prioritize material investment in decolonial futures. We join voices in this panel to consider the innovation of liminal identities, the wisdom offered in in-between spaces, and the

beauty of (re)new(ed) practices of reclamation. By reclamation, we use Leonard's (2012) definition to catapult the efforts of Indigenous communities to claim, enact, and expand their rights to speak and live in their languages holistically. The everyday experiences of educators, those who act and reflect on language reclamation in many forms and places are critical to Indigenous self-determination and current and future wellbeing. Contributors in this session encourage the audience to see, hear, and feel language reclamation efforts as multifaceted and relational, embodied in mundane, explicit, and innovative ways. We highlight living experiences drawn from Indigenous knowledge that move to reclaim, restore and protect local-based epistemologies (Sumida Huaman & Martin, 2020), anchored in the role of the arts, wellness, school, and community efforts alike in the voice of their own practitioners. The guiding thread is a transition to the elevation of firsthand narratives as knowledge regarding reclamation practices, an embrace of the local and lived to subvert asymmetrical power relations between academia and educational practitioners and activists.

Indigenous-based Resurgence in Urban Education: This paper documents an interdisciplinary curriculum project at a tri-lingual Indigenous-based charter school in Los Angeles involving student-led reinterpretation of a 16th century lyrical codex called *Cantares Mexicanos*. Using an artist-in-residence model, high school students work with an expert in ancient codices to understand the original volume, their Nahuatl language instructor to interpret centuries-old poems into modern Nahuatl, an expert in Indigenous music to co-compose music to accompany the poems, and a rap artist to learn music and video production en route to recorded performances. The collective seeks to develop a methodology for language autonomy, vibrance, and relevance. Among other things, the project asks, how do youth advocate for their linguistic rights in urban schools? and how might educators make Indigenous languages and language curriculum relevant to students and communities today? Presenter: Ernesto Colin (Loyola Marymount University)

Nít'éégo bənáđdiih: The dissemination of Ndee epistemology in contemporary times. : Nohwiyáti (Our Apache language) is us. As documented by several authors (Lucy 1992; Gumperz and Levinson 1996; Slobin 1996) language is an important central tenet to any culture or community. Within the San Carlos Apache culture/community language continues to communicate essential aspects of our culture and ways of being. Language is our connection to the divine; or what is

larger than people. However, as with many Indigenous communities, linguistic extermination policies have been impacted by both de jure and de facto effects (Crawford 1995; Charlton 2019). In response to these realities, Apache speakers and teachers begin to remind the Apache community why the language is important. Reconnecting emergent speakers entail making explicit the purpose of language. This chapter will discuss the example of the San Carlos Wellness Center and the Apache Youth Mentorship Program which allows for language and culture lessons to reach the youth of the San Carlos Apache tribe. Epistemological dissemination utilizes in person interaction, internet, digital and printed materials as multimodal ways to engage contemporary young people. Presenter: Philip Stevens (University of Idaho, Department of Sociology and Anthropology)

Mapuzugun: Indigenous land reclamation and language revitalization in Wall Mapu: Indigenous languages have been marginalized through historic processes of genocide, displacement, and contemporary linguistic discrimination (Skutnabb-Kangas and Dunbar, 2010). The Mapuche language, Mapuzugun, is considered “definitely endangered” by UNESCO (Moseley, 2010). Despite this categorization, the Mapuche language is still spoken today in southern Chile and Argentina. This paper will explore the hostile political environment in which Mapuche language revitalization is taking place and how mass media uses discursive strategies to undermine their legitimate struggle to reclaim their land, language, and autonomy. Despite the claims made by the press and Chilean politicians that Mapuche activists are terrorists, there are many examples of land reclamation and language revitalization leading to positive changes. Primarily we will highlight a successful example of land reclamation leading to language revitalization and explore how the Mapuche language can be incorporated across fields of study. Because there is no standardized process to counteract and resist linguistic and linguistic imperialism (Philipson, 2018), it is crucial to hear from on-the-ground experiences of language activists so that we may embrace a diversity of tactics while strategizing for the future of marginalized languages everywhere. We will close by addressing how language ideologies impact revitalization efforts, the role of schools (Hornberger, 2008), the future of the Mapuche struggle, and the hopes for policy change at the constitutional level. Presenter: Kelly Baur (Arizona State University)

Relationships, Brokering, and Decolonial Partnerships for Indigenous Language Reclamation: Reclamation of

Indigenous languages challenges academics to enter into a new paradigm of relationships with Tribal Nations and Indigenous futures. Using the frameworks of Tribal Nation-building in education (Brayboy et al., 2012) and cultivating alliances (Anthony-Stevens, 2017) this paper reflects on ways non-Indigenous academics and educators support action-oriented and community-driven reclamation efforts led by Tribal Nations and Indigenous collectives. Efforts such as Indigenous teacher education, Indigenous-led K-12 curriculum, and building capacity for Indigenous methodologies in higher education are examples explored for disrupting colonial unknowing in institutional spaces. Opportunities to reflect on and learn from alliance relationships in outward facing academic-community partnership are engaged as transitional states where leveraging higher education in the work of creating the conditions for Indigenous languages, cultural practices, and communities to thrive in centered. DESCRIPTION:

Museums are permeable institutions. These papers collectively explore ways today's museums open themselves to connections of different forms and scales. The changes of 'Digital Museum Programming after Lockdown' offer broader lessons for globalizing knowledge in a hybrid world. A collaboration between museums in the United States and the Republic of Vanuatu is 'Reconnecting Communities and their Collections' through paired analog actions of restitution and visitation, changing how museums care for creations that remain far from home. Offering another model of access-based transformation, a personal story illuminates the impact of 'Museum Collections in Supporting Indigenous Graduate Students' at the Manitoba Museum in Canada. Brining these themes together, an ethnographic study of community-led

heritage how one Chinese heritage village navigates development, self-determination, and the responsibilities of cultural preservation. Mutual engagements between stakeholder communities and museums continue to be effective modes of applied anthropology.

One step forward, two steps back(?): Digital museum programming after lockdown: The COVID-19 Pandemic represented a period of rapid transition for museums. When forced to close their galleries in early 2020, North American museums adapted their programs and practices (literally) overnight, hoping to retain the interest and support of their publics. Two years later, this research revisits a study conducted during 2020-21 lockdown, asking participant North American museums how their digital engagement practices have changed in the transition out of pandemic-era restrictions. In 2020, museum professionals recognized Covid-era transitions as an opportunity for experimentation, imagination, and play with how they engage their audiences and imagine their communities. Applications of innovative digital techniques to museum work not only revolutionized audience engagement; they sparked institutional efforts to reassess how museums define their publics in a digital age. Increased accessibility (across space, time, class, language, etc.) was a much-talked-about benefit of peri-pandemic digital programs. In particular, the increased use of digital engagement techniques heightened awareness of global publics: worldwide populations of cultural heritage stakeholders, defined more by common interest than geographic location. Have museums continued to use and value digital programming in the transition out of the shadow of COVID-19? Have museums continued to extend the ways they imagine their communities beyond place? Or, have they returned to the pre-pandemic status quo? To what degree have commitments to diversity & inclusion, bolstered by the many accessibility benefits of online programs, remained a priority as the world transitions into yet another new normal? This paper will examine answers to these questions and make the case for continued, judicious use of digital programming moving forward so that museums may continue to serve their global publics. Presenter: Madeline Duffy (American Bird Conservancy)

“She’s so Smart!”: The role of Museum Collections in Supporting Indigenous Graduate Students: In the ongoing effort to decolonize museums, the potential role of Museum collections to support Indigenous scholarship is rarely explored. Relying on the work of Giovanna Vitelli, Cara Krmpotich, Jen Shannon, Laura

Peers, Marilyn Strathern, Bruno Latour and Alfred Gell, this paper looks at a Museum based Indigenous Scholars in Residence program at the Manitoba Museum which has been operating for 8 years and has materially assisted 14 scholars, 11 of whom have now completed graduate degrees in 9 academic disciplines. The museum opened its collections to Indigenous interrogation, encouraging Indigenous research that revealed the potential of these collections to become teachers, guides, and elders. As James Clifford reminds us, when museum collections as entities engage in 'contact work' and become responsive to the communities for whom these objects hold long-standing social bonds, the objects themselves form bridges and enable the construction of indigenous-led histories. These museum collections have inspired language revitalization, supported skills repatriation through the 'technologies of enchantment' exercised by their creators, and supported Indigenous scholarship, de-centering and decolonizing museum collections so that they better serve the communities for whom they hold so much meaning. Presenter: Maureen Matthews

Dual Effects of Ecomuseums in Heritage Tourism - A Case Study in Tang'an Village: Ecomuseums are described as community-led heritages or museum projects that support sustainable development. Ecomuseums can be an important model for promoting the relationship between tourism, heritage, and local development. Although ecomuseums are all based on community-oriented principles, some focus more on economic development through tourism, while the others are more forceful in the ways to preserve culture and empower communities. Tang'an Dong Village, in Guizhou, China, is an ecomuseum from the collaboration between the Chinese and Norwegian governments with a unique and diverse range of heritage resources including but not limited to the Grand Song of the Dong ethnicity (an intangible cultural heritage of humanity inscribed by UNESCO), and the traditional Dong farming 'Rice-Fish-Duck System', certified as Globally Important Agricultural Heritage Systems. As located in the mountainous rural area in southwest China, Tang'an has no convenient transportation to the outside world thus lacks development opportunities and faces economic difficulties. In such an underdeveloped region with world-class heritage resources, tourism has evolved into an 'inevitable' local development option. However, during the development of heritage tourism, inadequate heritage management policies, insufficient community participation as well as economic development concerns can hinder the sustainability of

the heritage and finally adversely impact the local economics. Therefore, the preservation of local identity and way of life requires appropriate heritage management approaches. The use of heritage for local community development should be seen not only in terms of tourism and its economic outcomes, but also in relation to the social and environmental benefits. Based on six-month fieldwork in Tang'an with data collected from participant observation, semi-structured interviews and participatory photography, this study aims to critically assess how Tang'an as an ecomuseum can dually support heritage management and economic development in the context of heritage tourism and thus provide clues to the sustainable development of local communities and how the ecomuseum concept can enhance community participation and promote local identity to shape and maintain the landscape of the Dong community. Tang'an is a popular heritage tourism destination. The well-preserved heritage provides a resource not only for visitors, but also for local communities to learn about traditional practices and appreciate their heritage. Particularly, field research and semi-structured interviews help find out Tang'an ecomuseum's relationship with the heritage and local development. And participatory photography encourages interviewees to tell their own stories about their community to better present how villagers perceive and participate in the development of their local community. Tang'an is currently undergoing a fundamental transformation in its relationship with the 'outside' world, with social changes already significantly affecting local economic development, heritage resources and community. The principles of ecomuseology also emphasise heritage interpretation with a focus on continuity and change, and in this context communities and other stakeholders are guided to better manage heritage in areas that continue to undergo significant change. Myron Cohen

DESCRIPTION:

This panel investigates continuity and change in East Asian families. It examines how traditional cultural patterns continue to exert complex effects on East Asian families despite the radical transformations of the modern era. Since the nineteenth century, East Asian societies have urbanized and industrialized at a rapid pace. Broad-based middle classes have emerged and acquired mass access to higher education. Women, long barred from competitive examinations, now outperform men in school and university. Inside families, the conjugal couple has replaced the extended patriline as the basic unit of social reproduction while parents emphasize individual happiness in addition to filial responsibility. Across the region, these social developments accompany profound demographic changes: Age at first marriage is rising and birthrates are falling, which, together with increasing lifespans, has resulted in a silver tsunami of rapid societal aging. These transformations are not restricted to East Asia; they are global in nature. Yet the East Asian region exhibits distinctive social patterns, including what demographers term the East Asian paradox: Ultra-low birthrates coupled with strong marriage norms. Although people in East Asia are increasingly delaying and sometimes even eschewing marriage, they largely bear children only within married relationships and shun long-term cohabitation outside of wedlock. Meanwhile, women have become primary providers to their natal families, traditionally a son's role. This panel asks: How do the cultural legacies of patrilineal and patriarchal Confucian values complexly influence contemporary family arrangements? How and why are ordinary people reinterpreting and transforming these values? How are states responding to these changes and how effective are their responses likely to prove? What pressures do rising inequality and slowing economic growth exert on the intergenerational contract and what are the affective consequences of these pressures? How do new patterns of domestic and multinational migration build on and rework earlier patterns of mobility? Although the papers focus mainly on China and Singapore, the panel aspires to situate these cases comparatively within wider East Asian contexts. Papers examine the transformation of intergenerational

expectations and the emergence of child-centered relatedness; intensive cultivation of children amidst an increasing focus on their individuality and happiness; attempts to legally enforce intergenerational intimacy through elderly protection laws; the 'turn inward' of the post-2000s 'digital native' generations as a reaction to hypercompetition in education and employment; and shifting patterns of multinational student migration in an era of rising geopolitical tensions. By addressing these topics ethnographically and comparatively, this panel contributes much-needed in-depth contextual knowledge to contemporary debates about transforming families and state-society relations in East Asia and beyond.

East Asian Anxieties: Child-centered Relatedness and Parents' Care Work in Education in Singapore: The size and 'quality' of the population are issues of major concern in contemporary East Asia, as fertility rates are falling and competitiveness increasingly centers on 'a fitting' human capital. While Singapore is located in Southeast Asia geographically speaking, it is culturally linked to East Asia in terms of its heritage of Confucianism and the Chinese language. Singapore and other East Asian countries are globally celebrated for their high academic standards and for producing students who excel in international assessment tests and rankings. In this context, parents' involvement in children's education is increasingly taken for granted. It is well documented in previous research that Singaporean (middle-class) parents invest substantial resources, time and emotion in supporting their children academically and developmentally. While the need for intensive parenting (cf. Hays 1996) is likely heightened in such a competitive education system, parents' efforts and aspirations in raising their young children cannot be understood as purely strategic and calculating. On the contrary, ethnographic data highlights the complexities of parents' risk management and how they navigate uncertainties with regard to their children's future. Sentiments of fear of regret and guilt are particularly conspicuous in parents' narratives around their children's education. In this paper I propose that the transformation of traditional intergenerational expectations and the emergence of a child-centered relatedness in East Asian societies (Kipnis 2011) are vital to understand parents' sentiments of uncertainty and guilt in relation to their children's future. By drawing on ethnographic fieldwork in Singapore, I attempt to shed light on the subjective desires, anxieties and aspirations that shapes contemporary parenting in East Asia, and address its consequences for family life and intergenerational

relations. Presenter: Kristina Göransson (Lund University)

Turning Inwards: Zhai as a Mode of Endurance in the Contemporary Chinese Family: This paper is based on an ethnographic study of the zhai phenomenon in contemporary mainland China. Zhai (literal translation: 'residence') is a term believed to have originated from the Japanese term otaku and refers to a tendency towards staying indoors. Chinese media began in the mid to late 2000s to report on youth labelling themselves zhai, a term that would come to be associated with a generation of Chinese that came of age alongside the expansion of the Internet and digital media. My research, conducted over a twelve-month period in Beijing prior to the COVID-19 pandemic, found that while zhai had lost popularity as an identity label, zhai behavior had become absorbed into mainstream youth culture. Within anthropological studies on urban Chinese who have come of age in recent years, there are two prominent themes: pressure and frustration. These studies have highlighted the psychological strains that youth may endure as a consequence of high parental achievement expectations. Scholars have observed that while many youth internalise traditional filial values, they may feel tremendous pressure, as well as frustration when their ambitions are not compatible with those of their parents. Zhai behaviour, this paper aims to show, can be seen as a response to situations that arise from being in this predicament. Facilitated by shifts in practices of the home and of digital media, zhai provides a way for youth in sometimes stifling family environments to carve out their own private, meaningful spaces in the context of an unfolding "inner revolution" (Zhang 2020). In exploring the ways in which zhai behaviour may exist in relation to the family, this paper also considers its consequences: what are the broader implications for the Chinese family – and for Chinese society – of a "turning inwards" among its youth? Presenter: Maria Nolan (School of Oriental and African Studies)

Duty to Care: Law and the Filial Bargain in China: Early in its assumption of authority in China, the PRC state inscribed long-standing cultural ideologies of filial obligation into law. In 2013, Article 18 of the revised Law of the People's Republic of China on Protection of the Rights and Interests of the Elderly (Elderly Protection Law) went into effect. The new law stipulated: "Family members shall care for the mental needs of the elderly, and shall not ignore or cold-shoulder the elderly. Family members living apart from the elderly shall frequently visit or check-in on the

elderly.” The Elderly Protection Law is a response to the problems posed by an aging society, in which the elderly have many fewer descendants to support them in retirement. Prior to the addition of Article 18, The Elderly Protection Law conferred a ‘duty to support’ legally obligating adult relatives to provide materially and financially for their elderly family members. Article 18 operationalized a new duty—that of what I call a duty to care. By care, I refer to a notion that “connotes both affective concern (caring about) and practical action (caring for)” (Buch 2015, 279). Legally mandated elderly maintenance payments provide for the material conditions of the elderly, however the duty to care mandates the direct, implicitly personal and affective involvement of people in the lives of their parents and elderly relatives. This paper investigates the responses of Reform-generation Chinese people to the state’s attempt to legally enforce intergenerational intimacy in the context of lived experiences of family and intergenerational alienation in contemporary China. Drawing on ethnographic data and content analysis of legal judgments related to Article 18, the paper reveals in particular what many saw to be the Gordian knot at the heart of the law’s vision of the ideal family—the affective experience of living a family in which a parent had not fulfilled their part in the filial bargain. Presenter: Kristin Sangren (University of California, Berkeley)

China’s Educational Fever: Between the Rising Individual and Descending Familism : It is well documented that Chinese parents invest substantive amounts of time, resources and emotions to secure optimal cognitive and academic development of their children. This educational desire (Kipnis 2011) is part of a global trend, most clearly pronounced among the urban middle-class. The phenomenon is well captured in the term concerted cultivation (Lareau 2003), which draws attention to the fact that educational desire implicates educational labour on part of parents through the mobilisation of private tutors, extracurricular school activities, and various leisure activities, such as sports and music classes. Orchestrating concerted cultivation places great expectations on children in terms of performance and time spent on educational activities. As such, effects of the educational desire are taking enormous proportions for both parents and children, even as the Chinese government is trying to reduce expectations and pressure placed on young children’s academic performance. This paper attempts to answer how the Chinese educational desire can be understood beyond the need to prepare for the highly competitive higher-education entrance exams (gaokao) and the Confucian

heritage (Kipnis 2011), long-term realities which alone are unable to account for the intensification of educational desire among Chinese parents. Building on ethnographic data from urban middle-class families in Beijing and Shanghai, the paper illustrates that educational desire needs to be understood in relation to the complex interplay between two parallel processes, conceptualised by Yan Yunxiang (2016) as the rise of the individual and descending familism. Presenter: Lisa Eklund (Lund University)

Springboard Singapore: Chinese Student Migration in an Era of Geopolitical Uncertainty: The education system in China gives ordinary people an opportunity to “change fate”—a direct though difficult route to status and power. But as growth slows and inequality grows, people face mounting anxiety about involution or neijuan—increasing competition for diminishing returns. Some members of the middle classes are coping by sending their children abroad. Amidst rising tension between the US and China, Singapore has emerged as an attractive migration hub or so-called springboard (tiaoban) for Chinese university students. Some use Singapore to “spring” to Western countries or from peripheral places in China to metropolitan cities like Shanghai or Beijing. Others come to Singapore after experiencing anti-Chinese racism in Western countries. For some, the springboard becomes “sticky”: they imagine a future for themselves in the Chinese-majority city-state, which they see as safe, inclusive, and close to home. In contrast to previous migrations, this one is being spearheaded by women, who are outperforming men academically and replacing sons as primary filial contributors. For such women, studying abroad is part of a complex process of transnational identity formation that involves (re)defining their notions of Chineseness and their attitudes toward sexuality, marriage, and childbirth. As they do so, they balance independence with familial relationships and social pressures with self-actualization. Reporting on ongoing ethnographic research, this paper adds to scholarship on multinational student migration, transcends the domestic-international binary in migration research, and contributes to understanding transforming families and state-society relations in an era of slowing growth, demographic transition, and geopolitical uncertainty. DESCRIPTION:

This session brings together presentations that examine and situate experiences with COVID-19 in relation to a variety of cultural and political actions across a range of contexts. Taken together, the presentations demonstrate nuances of COVID-19 in relation to illness, embodiment, suffering, and cultural and material aspects of daily life.

Differences in COVID-19 vaccine offer, uptake, and hesitancy among people with disabilities and chronic health conditions in Oslo, Norway.: People with pre-existing health conditions are at higher risk for negative outcomes of pandemic diseases like COVID-19 due to both biological and sociocultural reasons. Some conditions were therefore indicators for prioritized vaccination. However, disparities in actual vaccination rates may have occurred due to a variety of factors, including biases in research that meant certain conditions were favored over others in vaccine recommendations, stigma (e.g., regarding perceived quality of life) that influenced decision-making related to allocation of resources, accessibility of public health communication and vaccine clinics, and individual risk perception and hesitancy against vaccination. Consequently, differences between individuals with self-reported 'chronic health conditions' vs. 'disabilities' may be observed. Between June 16 and 24, 2021, survey respondents in Oslo, Norway, were asked whether they had yet been offered and received the vaccine and, if not, if they intended to take it, as well as whether they had a number of potential risk factors (e.g., cardiovascular disease, impaired immune system, impaired hearing or vision, impaired mobility, etc.). These potential risk factors were classified as chronic health conditions or disabilities based on the phrasing of the options and the likelihood that someone with the condition would identify as or be perceived socially as disabled. Out of 5442 respondents, 355 (6.5%) reported having one or more disabilities only and 809 (14.9%) reported having one or more chronic health conditions only; individuals reporting at least one of each were

excluded from analyses. Both groups were compared separately to those who did not report pre-existing health conditions, controlling for other prioritization variables, i.e., age and working in a health-related career with patient contact. People with chronic health conditions were significantly more likely to be offered and have received the vaccine and marginally less likely to express vaccine hesitancy. There were no significant differences for any of the measures for people with disabilities, in general. Looking at specific types of disabilities, results suggest that people with mobility disabilities were marginally more likely to have been offered the vaccine, people with sensory disabilities were significantly less likely to have taken the vaccine and more likely to be hesitant, and there were no significant differences observed for any measure for people with learning/mental or neurological disabilities. In sum, people with chronic health conditions seem to follow patterns that might be expected for groups who are prioritized or recognize their potential higher risk, while people with disabilities had either no differences in or less optimal vaccine-related behavior and attitudes compared to the 'healthy' population. Considering the substantial disease and mortality burden observed worldwide for people with disabilities, these results have important implications for pandemic preparedness and public health communication and practice.

Presenter: Jessica Dimka

Access to essential medicines within pandemics: The last mile in HIV pre-exposure prophylaxis (PrEP) access in Ireland and Kenya during the Covid-19 pandemic.: Essential medicines can only be useful to humans' health when they are accessed in a timely and effective manner and at affordable prices. Borrowing from supply chain terminology, we focus in this paper on the last point of delivery of such medicines, which we call the 'last mile' – the last point of delivery of essential medicines between service providers and end users through clinics, in home-based care, or community pharmacies. Just like in other sectors, for pharmaceuticals the last mile is normally the most critical and important part of the supply chain and has substantial influence on access. We use this term figuratively, referring not only to the physical last mile issues but also to social, cultural, and economic issues that influence access at this last point of essential medicines' delivery. We take access issues of HIV oral pre-exposure prophylaxis (PrEP) in Kenya and Ireland as our case study. We comparatively investigated how health advocacy and activism influence PrEP access at the last mile points of delivery, using ethnographic methods. Since our fieldwork took place during the

pandemic 2021-2022, we developed an interest in assessing how PrEP was accessed during the pandemic. We noted that even before the Covid-19 pandemic, several last mile issues negatively influenced PrEP access, including stigma related to taking PrEP, expenses incurred in accessing the services, physical distance to clinics, lack of PrEP awareness, among others. The Covid-19 pandemic made the last mile even longer. In Ireland for instance, HIV services closed for over 15 months adversely affecting the delivery and access of PrEP which had just been rolled out before the pandemic. This disrupted both new prescriptions and refills. In addition, travel restrictions limited access to clinics, and HIV services providers were re-assigned to support Covid-19 services. In Kenya, the lockdown and restriction of movement equally affected PrEP access, even though the clinics were not closed; fear of contracting Covid-19 and the stigma associated with being infected with the virus also made many afraid of going to clinics (especially where there were reported cases of infected healthcare providers). Despite all these challenges, healthcare providers, clients, and NGOs among other key stakeholders devised different means of bridging 'last mile' PrEP access gaps. In both Kenya and Ireland, PrEP services took place virtually as well as by phone, in addition refill medicines and test kits were sent via post (in Ireland) and formal and informal couriers (in Kenya). At a more informal level, Irish participants reported PrEP sharing among peers who were at higher risk of HIV infection, and some switched from daily oral to event-based PrEP. Similarly in Kenya, some clients picked refills on behalf of each other. In both countries some clients who could not avail of their PrEP switched to other HIV prevention technologies such as condoms as well as changing their sexual behaviors towards reducing the risk of HIV infection. Whereas the pandemic disrupted services in many ways, innovative service delivery models that emerged as a result of this disruption signal the possibility of bridging access issues for the 'last mile' of other essential medicines too. Thus, we conclude that disruptions as a result of natural disasters could also have positive outcomes in triggering innovation in the delivery of essential medicines. Presenter: Fernandos Ongolly (University College Dublin)

Social sufferings across the Nepal-India border; Fortification and marginality in the mist of COVID-19.: During the time of the COVID-19 pandemic, and national lockdown in India, thousands of Nepali migrants crossed the border of India and returned to Nepal. While crossing the border, the Nepal government restricted their movement by closing the Nepal-India

border to control the contagion of the COVID 19 which has overtly expressed the state's fortified mentality that has created the dichotomy of 'insiders' and 'outsiders'. While the basic idea of border is to secure the country, protect territory and its citizens, however, in this case, Migrant workers were projected as 'dangerous bodies' and denied entry to their host country for more than four weeks. Consequently, this draconian move of the Nepali state has let migrants feel outsider, less privileged, powerless, discriminated and, a 'sense of othering' in their own country Nepal. This paper throws light on the idea of national boundaries, migrants, and their experiences during the pandemic. Raising critical questions such as, are people more important or politically demarcated border? What is the purpose of regulating the border? Through these questions, this paper tries to explore the 'lived realities' of migrants and the 'state rationale of the border security during the time of COVID-19. Presenter: Sachin Ghimire (Centre Department of Public Health , Tribhuban University)

The Materiality of COVID-19 in East Asian Medicine: What is disease? What causes suffering? Which drug can alleviate the health problem? These medical questions are simultaneously material as materiality matters for ways of knowing and intervening in the disease. Anthropology's turn to ontology and its discussion of plural ontologies have raised the issue of various materialities on diverse ontological underpinnings. Despite the dominance of genetic explanations, biomedical materiality does not truncate other materialities on divergent ontological grounds. Drawing on anthropological fieldwork of East Asian medicine in South Korea, institutionalized as Korean medicine, and referring to analogism, one of the four ontological modes in *Beyond Nature and Culture* (Descola 2013), this paper examines the non-biomedical materiality of COVID-19 enacted in diagnoses, treatments, and imbibing medicinal herbs. Korean medicine does not premise 'the metaphysics of individuality' (Barad 2007) on which things with determinate boundaries and fixed properties exist in the Newtonian nature, such as the virus with a certain RNA coding. Rather, the materiality of the pandemic disease in Korean medicine is the state of entanglement in-between the infecting Qi and the infected body without clear boundaries. Barad's concept of 'phenomena' as the primary ontological units elucidates the materiality of COVID-19 in Korean medicine. Incorporating ethnographic investigations into the discussions in ontological anthropology and new materialism, this study highlights plural materialities, enacted on plural ontological underpinnings. Donald Trump's Legacy: Anthropological perspectives

4:15 PM - 6:00 PM TMCC - 713 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association of Latina/o and Latinx Anthropologists

ORGANIZER:

Leo Chavez (University of California, Irvine, Department of Anthropology)

CHAIR:

Carole McGranahan (University of Colorado, Boulder, Department of Anthropology)

PRESENTER:

Leo Chavez (University of California, Irvine, Department of Anthropology), Rosalyn Negron (University of Massachusetts, Boston, Department of Anthropology)

DISCUSSANT:

Margaret Dorsey (University of Richmond, Department of Sociology and Anthropology)

DESCRIPTION:

This Roundtable examines the Donald Trump's legacy in relation to anti-immigrant and anti-Latinx rhetoric among right-wing politicians, pundits, and policies. We also address Trump's influence on issues related to the U.S.-Mexico border, immigration policies, conservative Latinx politicians and Trump supporters. We ask, what is the appeal of Trump's rhetoric during an increasingly multiethnic American society.

Enacting climate knowledge and politics in global climate institutions

4:15 PM - 6:00 PM TMCC - 714 B

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Jessica O'Reilly (Indiana University, Bloomington)

CHAIR:

Cindy Isenhour (University of Maine)

PRESENTER:

Naveeda Khan (Johns Hopkins University, Department of Anthropology), Jessica O'Reilly (Indiana University, Bloomington), Andrew Mathews (University of California, Santa Cruz, Department of Anthropology), Cindy Isenhour (University of Maine), Noah Walker-Crawford (University of Manchester), Stefan Aykut

DESCRIPTION:

Activists and advocates often invoke the motto 'follow the science,' whether their cause is climate, vaccines, or fiscal policy. This slogan suggests that solutions are readily discernable from scientific research. But while decision-making may proceed from an apparently authoritative body of knowledge, both producing and enacting this knowledge involves navigating indeterminacy, both as a challenge and as a site of possibility. Panelists will explore how both climate knowledge and climate politics are formed, contested, and enacted in global climate institutions, with a particular focus on the United Nations Framework Convention on Climate Change (UNFCCC) 27th Conference of Parties (COP27), held in November 2022 in Egypt. Climate modelers present multiple sea level rise projections in IPCC reports based on uncertainties around human emissions and a still-murky understanding of the physics of ice sheet collapse. Negotiators at the UN Climate Change meetings try to make decisions for mitigation greenhouse gas emissions and funding responses to catastrophic climate change, called Loss and Damage, while weaving around geopolitical silences around unequal historical contributions to climate change and the people and places facing immediate threats. Aside from the substantive climate-focused decisions made at these meetings, delegates must negotiate the process itself, using multiple modalities to produce procedures for the upcoming global stocktake, required for implementing the Paris Agreement, or setting a new global finance goal after the first iteration failed to approach the ambitious \$100 billion/ year. The ethnographers of this panel examine how climate people navigate the tricky landscapes science, geopolitics, competing views of process in global governance, political demands and economic power to create some sort of movement towards climate solutions.

A Tale of Global Climate Negotiations: With a focus on the Nationally Determined Contributions (NDCs), the means by which countries are to report on their carbon

emission reduction targets and the pathways by which to achieve them, this paper describes common tabular formats for reporting as the central way the Paris Agreement seeks to corral countries to combat climate change. The accounting regime that is at the heart of the Agreement is excavated to show how it indexes, however feebly, the entangled and often violent histories of colonialism and extractivism without providing a clear pathway to redressing these. Presenter: Naveeda Khan (Johns Hopkins University, Department of Anthropology)

The Curve: a cultural history of projecting global sea level rise under uncertainty: The Intergovernmental Panel on Climate Change (IPCC) provides climate science reports to decision makers, including those of the UNFCCC. One of the hallmark figures of IPCC assessment reports depicts future sea level rise. An IPCC author and sea level rise expert I interviewed affectionally called the figure “the curve,” noting that one of the primary purposes of their chapter was to draw an updated curve for publication in 2021’s IPCC Working Group I report. The curve has changed over the decades of IPCC reports as scientists came to know more about ice melt, thermal expansion in the oceans, and in particular, the physics of projecting the disintegration of the West Antarctic Ice Sheet. The most recent depiction of the curve, however, is a figurative as well as epistemic innovation in how scientists communicate potential global sea level rise, including low-likelihood, high-impact scenarios like collapse of the polar ice sheets. This paper investigates the epistemic disruptions, disciplinary narratives, and labor that IPCC authors took to provide a figure that balanced authoritative knowledge with rapidly changing, and sometimes uncertain, science alongside the need for policy makers to have a relevant knowledge base for decisions. Presenter: Jessica O’Reilly (Indiana University, Bloomington)

Modeling alternative futures from the ground up: biomass energy politics in Italy: Climate change was originally detected through a world spanning infrastructures of data collection, analysis, and simulation, and most natural scientists, policy makers, and anthropologists think of climate change through a global framing. Climate change policy travels through international and national institutions, but it ultimately encounters ordinary peoples’ lived experience of landscape and the state. Through an ethnohistorical account of biomass energy politics in Central Italy, I show how ordinary peoples’ models of regional environmental change transform climate change policy.

Rural people in Italy respond to biomass energy policies by thinking about histories of agricultural abandonment, forest regrowth, and forest fires that leave traces on the landscape. They are interested in the capacities of trees to stabilize landscape form, and are more concerned with the possibility of landslides and floods than with changing climate. Opposition to biomass energy policies drew upon a commitment to caring for landscape and tree form and upon experiences of industrial pollution and state abandonment. Anthropological descriptions of regional social and environmental change can offer a counterpoint to global climate change science and policy frameworks. Presenter: Andrew Mathews (University of California, Santa Cruz, Department of Anthropology)

“Just” Numbers: Accounting for Equitable Mitigation Effort in the Global Stocktake: The Global Stocktake (GST) is considered essential for the success of the Paris agreement. Designed to measure progress and ensure increased ambition over time, the GST has been described as the “key to making it happen” (Espinosa 2022). However, early in negotiations about how to operationalize the mechanism, it became clear that many were already concerned that the GST would not be conducted “in the light of equity and the best available science” as agreed in Paris. Drawing on analysis of party inputs, decision texts, and observations of negotiations related to the GST at all Conferences of the Parties (COPs) since Paris, this paper tracks efforts to reinsert a stronger focus on distributional justice and equity into the Paris Agreement through the design of the GST. We argue that while equity discussions have long been considered normative and beyond the realm of science— reflective and transparent science, well-attuned to the politics of mitigation responsibility must also be considered the “best-available science” and used to inform the design of a more effective and just Stocktake. Parties clearly recognize that the carbon accounting techniques produced through the GST will be more than “just” numbers – they are political technologies with real implications and they must be “just” to ensure the success of the Paris Agreement. Presenter: Cindy Isenhour (University of Maine)

Save the climate but don’t blame us: Corporate responses to climate litigation : In recent litigation against major greenhouse gas emitters over their contribution to climate change, fossil fuel companies are no longer denying that human activities are causing global warming. Rather, they make political arguments about the responsibility of society – rather than individual polluters – for causing global warming. In

addition, they question the validity of climate science for establishing legal responsibility. This paper analyzes corporate defendants' evidentiary arguments in four climate change lawsuits. I examine the defendants' efforts to obfuscate the role of individual emitters, invalidate scientific proof and attack researchers' credibility. Plaintiffs' and defendants' legal narratives and factual claims are linked to broader concerns about who should take responsibility for climate change. Like all knowledge, climate science is inherently value-imbued, emerging in relation to policymakers' demands, public concerns and researchers' academic interests. While climate science on its own does not provide all the answers, it serves as a crucial tool for addressing legal and political questions about responsibility and justice in a warming world. Presenter: Noah Walker-Crawford (University of Manchester)

It's a performance, not an orchestra! Soft coordination in global environmental governance: As the focus in global climate governance shifts from negotiations to implementation, the quest for ways to effectively coordinate ambitious climate action has become a key concern. While existing studies frame this problem mostly in terms of institutional design (to 'facilitate' state ambition) and strategic delegation of authority (to 'orchestrate' nonstate action), this article builds on ethnographic research and dramaturgical policy analysis to examine soft coordination in practice. Using ethnographic methods, we analyze public performances at the twenty-fifth Conference of the Parties (COP25) in Madrid. We find that these were shaped by pre-established governance scripts and social roles available to participants, but also by creative improvisations and interventions. The United Nations Framework Convention on Climate Change Secretariat and COP Presidency intervened to configure the physical setting of the conference, mold its narrative arch, and shape available roles. We conclude that performances and dramaturgical interventions are important tools of soft coordination in global climate governance. Their analysis constitutes a productive entry point for grasping contemporary transformations in global politics. Presenter: Stefan Aykut

Engaging Decolonial Feminist Anthropology: Reflections from Research across Latin America and the Caribbean

4:15 PM - 6:00 PM

Virtual - Room 4

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

María Lis Baiocchi (CONICET)

CHAIR:

María Lis Baiocchi (CONICET), Florence Babb (University of North Carolina, Chapel Hill, Department of Anthropology)

PRESENTER:

Erica Williams (Spelman College, Department of Sociology & Anthropology), Carla Freeman (Emory University), Maja Jeranko (University of North Carolina, Chapel Hill, Department of Anthropology), María Lis Baiocchi (CONICET)

DISCUSSANT:

Lynn Stephen (University of Oregon), Krista Van Vleet (Bowdoin College, Department of Anthropology)

DESCRIPTION:

Decolonial feminist perspectives illuminate the mutual constitution of gender and sexual relations, coloniality, and capitalism in everyday life. They enrich our understanding of the intersectional inequities that people face in neocolonial and neoliberal contexts but also encourage us to explore the ways individuals actively engage in the re-making of the world. This roundtable brings together anthropologists with research experience in the Latin American and Caribbean region to reflect on what it entails to engage as anthropologists in the field from a decolonial feminist ethics lens. Participants will include scholars from institutions located in the Global North and the Global South who are at different stages of their academic careers. They will share their experiences of employing decolonial feminist approaches when conducting ethnographic fieldwork in Argentina, Barbados, Brazil, Bolivia, Chile, Ecuador, El Salvador, Guatemala, Mexico, Paraguay, and Peru. Key issues in decolonial feminist anthropology to be discussed will include research design; theoretical frameworks; methodologies; topics of study; the limits, perils, and/or possibilities for research; positionality vis-à-vis various interlocutors (including research participants, academic colleagues, and collaborating institutions); the politics of doing research in the Global South when affiliated with academic institutions in the Global North; as well as knowledge production and distribution.

2-770

Fields of Practice and Possibility: Cultural Expertise in Canadian and Global Courts

4:15 PM - 6:00 PM

TMCC - 713 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Emma Varley (Brandon University, Department of Anthropology)

CHAIR:

Emma Varley (Brandon University, Department of Anthropology)

PRESENTER:

Craig Candler ,Katherine Nichols ,James Rose (University of Melbourne),David Trigger ,Emma Varley (Brandon University, Department of Anthropology)

DESCRIPTION:

Cultural expertise has emerged as a comprehensive theoretical framework that accounts for a variety of involvements of social scientists, especially anthropologists, in legal arenas. By taking as its starting point Holden's definition of cultural expertise as 'the expert opinions formulated by social scientists appointed as experts in legal processes' (2020), this roundtable seeks to capture something of the nuance, complexity, and vital interdisciplinarity of this fast-growing field of scholarship and practice. Through emphasis on cultural expertise in Canada, the United States, and key sites around the world, the roundtable aims to confirm the diverse experiences associated with this framework and its deployments. In reflecting on their own engagements with cultural expertise, roundtable participants offer experiential, methodological, and ethical insights to the varied and sometimes politicized and contested ways such service takes form. While some apply their knowledge to complement the deep expertise already possessed by culture groups, such as work which supports Indigenous rights and claims (Banks 1997; Sieder 2018; Hale 2006; Loperena, Mora, Hernandez-Castillo 2020; Rose 2022; Trigger 1992, 2003), others apply their knowledge to corroborate and verify the poorly understood or otherwise-unsubstantiated claims of vulnerable persons, such as asylum seekers fleeing conditions of cultural threat and hazard (Campbell 2017; Good 2007; Salyer 2008). In both cases, the leading component is the primacy of the voices of the beneficiaries of cultural

expertise. Examples such as these confirm the impactful significance inherent to cultural expertise, whose practitioners follow anthropological as well as legal methodologies and abide by ethics undergirded and strengthened by disciplinary and deontological requisites. By direct relation, cultural expertise requires anthropologists recognize the ways that social scientific 'expertise' has been historically monopolized and leveraged in ways that could estrange communities from their own knowledge and power (Miller 2021a, 2021b, 2022; Hale 2020). Cognizant of these histories, our roundtable will reflect on the ethical and even restorative ways that anthropological expertise - as cultural expertise specifically (Clarke 2020) - can be meaningfully applied to make a positive difference. Together, roundtable participants will work to answer a series of guiding queries, including: What are the opportunities and advantages, and limits and bounds of the kind of cultural expertise we hold as professional anthropologists or other social scientists? What can we say of the relationships engendered between anthropologists, lawyers and the courts, and those persons and communities who stand to benefit (or potentially suffer) from our efforts? How might cultural expertise help reconcile the colonial past with the postcolonial present, such as the latter can involve emphasis on repatriation and reconciliation? How might 'living' or more formalized professional standards curb the potential for misapplications of expertise and the harms that follow, and render the field more ethically and legally effective in the different contexts we practice and serve? In which ways can cultural expertise be refined or reformed to better integrate and promote the principles of inclusion and diversity and meet the needs, for instance, of actors and groups traditionally marginalized or disenfranchised from the law and justice?

Fieldwork Precarity: Anthropological Work in Transition

4:15 PM - 6:00 PM

TMCC - 712

Roundtable/Town Hall - In-Person

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Jieun Cho (Duke University)

CHAIR:

Summer Steenberg (Duke University, Department of Cultural Anthropology),Ariana Avila (University of North Carolina, Chapel Hill)

PRESENTER:

Summer Steenberg (Duke University, Department of Cultural Anthropology), Ana Ramirez (University of North Carolina, Chapel Hill), Sophia Goodfriend (Duke University, Department of Cultural Anthropology), Brendane Tynes (Columbia University, Department of Anthropology)

DISCUSSANT:

Tarini Bedi

DESCRIPTION:

This roundtable brings together scholars and practitioners to critically examine the institutionalization of fieldwork and its implications in reproducing precarious subjects. Fieldwork is a cornerstone of anthropological research, providing a means for producing critical knowledge and engaging with diverse communities. However, the work of 'immersing' oneself in cultures is increasingly discussed in relation to issues of precarity, including financial strains, institutional pressures, and personal safety concerns. The COVID-19 pandemic brought the difficulties and limitations of conducting fieldwork to the forefront especially for anthropologists whose research relies heavily on being physically present in the field. While the pandemic has sparked important discussions around the precarity of fieldwork, this roundtable seeks to broaden the conversation by examining how fieldwork precarity intersects with social difference, including race, gender, class, disability, and nationality. Critically engaging the norms of fieldwork(er), it aims to disrupt ideas of 'going back to normal' and start to reimagine precarious encounters as transitioning moments for what fieldwork may become as a way of doing anthropology in and beyond academia. Drawing on personal experiences and critical analysis, we will discuss the ways in which fieldwork can both reproduce and challenge social hierarchies, and more broadly, the role of fieldwork in shaping our understanding of diverse cultures, communities, and the kind of anthropological work we can do ourselves.

2-745

Figuring the State: Affective Labor in Bureaucratic Encounters on State Margins

4:15 PM - 6:00 PM

TMCC - 709

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for the Anthropology of Policy

ORGANIZER:

Kathryn Berringer (University of Michigan)

CHAIR:

Tess Lea (Macquarie University, School of Social Sciences)

PRESENTER:

Kathryn Berringer (University of Michigan), Yun Chen , Hannah Obertino Norwood , John Doering-White (University of South Carolina, Department of Anthropology)

DESCRIPTION:

Contemporary anthropological scholarship on the state has argued that attention to the margins – that is, the places where state power must be continually reestablished – is essential, not peripheral, to theoretical and methodological accounts of the state (Das and Poole 2004). Similarly, this roundtable asserts the importance of ethnographic attention to those ambivalently positioned as state actors, whose existence challenges a clean-cut state vs. nonstate binary. Each presenter in this roundtable has engaged in ethnographic fieldwork with interlocutors who enact roles that mediate the state and the public. We situate our studies in dialogue with existing scholarship on, for example, the street-level bureaucrats of welfare programs (Lipsky 2010); 'peer' workers and 'people with lived experience' in medical, mental health, and addiction treatment (Voronka 2016); and the 'institutional killjoys' working in, around, and against policy to extract its promised benefits (Lea 2020). We ask: How is the state figured through professional actors who simultaneously facilitate state policies and contest state agendas? More specifically, this roundtable examines the affective labor inherent in the everyday practices of these actors – especially in the ways they are tasked with establishing and sustaining trust in the state. Where is trust imagined to be located and how is it built or leveraged for state projects? We also examine the ways human and non-human actors become enrolled in the affective labor of bureaucratic encounters: from documents (Hull 2012; Navaro-Yashin, 2007) to social technologies of quantification (Porter 1996) to technocultural assemblages of social media (Breslin et al. 2022). Roundtable presenters explore our interlocutors' everyday practices in conversation with anthropologists of policy and bureaucracy like this roundtable's chair, Tess Lea (2021), who attend to our own ambivalence and the ways we 'desire bureaucracy,' despite its failures and betrayals, because of a profound, sometimes paradoxical, belief in its potential for public good. We question the ways we ourselves are

implicated as ethnographers in the political and ethical negotiations of our interlocutors, as we, like them, are variously positioned relative to state power and institutions. Presenters of this roundtable will share ethnographic insights from a variety of field sites and topics, including: the affective labor of housing case managers tasked with enrolling LGBTQ+ youth in state-funded housing programs in Detroit, Michigan (Berringer); everyday negotiations of authority, credibility, and ethics by anti-drug social workers under the government purchase of social service scheme in urban China (Chen), ambivalence among case workers in transitional foster care settings about government-mandated psychosocial interventions for unaccompanied minors in the brief period between apprehension at the US-Mexico border and reunification with sponsors (Doering-White), uncertainty amongst 'enumerators' deployed as 'trusted messengers' to avert an undercount in the 2020 US Decennial Census (Norwood), and healthcare administrators' efforts to charge the banalities of bureaucratic work with consequentiality at a network of health centers in the Midwestern US (Wong). Our chair, Tess Lea, will bring highlights from these diverse sites into dialogue with her own research to further explore the unruliness of policy and those who labor within and against bureaucracy.

2-655

Future by the Numbers: Religious Engagement with Predictive Technologies

4:15 PM - 6:00 PM TMCC - 606

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Naomi Haynes (University of Edinburgh)

CHAIR:

Hillary Kaell

PRESENTER:

Naomi Haynes (University of Edinburgh), Hillary Kaell, Jon Bialecki (University of California, San Diego, Department of Anthropology), Omri Elisha (CUNY, Queens College, Department of Anthropology), Jamie Wong, Rebecca Bartel (San Diego State University)

DISCUSSANT:

Clara Han (Johns Hopkins University, Department of Anthropology)

DESCRIPTION:

The last century has been characterized by an ever-increasing 'trust in numbers' (Porter 1995) as larger data sets and computational systems promise to lessen future uncertainties and mitigate risks. While this epistemological foundation undergirds economic decisions, engineering projects, and government policy, it is not the only mechanism through which people seek to manage the future. Prophecy, numerology, faith, astrology, and divination often work alongside these more recent mechanisms. Such 'predictive technologies,' as we propose to call them, 'refer to and refine' one another, as a now-classic argument by Jane Guyer (2007) has it, breaking down distinctions between ostensibly secular modes of future management and those that are governed by religious logics such as providence or fortune. In this panel, we explore the overlapping predictive technologies that shape how religious actors engage the unknown future. How do recently developed forms of risk management enabled by technological advancement interact with more established ways of working with (or against) the future? How do people choose which models to embrace or reject, and what kind of ethical work informs these decisions? What kinds of variables are involved in prediction, and how are these balanced against the competing demands of personal fortune, climate emergency, individual risk, or eschatological expectation? How do religious, actuarial, or other explanatory frameworks respond to unexpected (mis)fortunes – what happens, in other words, when prophecy fails (Festinger et al. 1956)?

“My Season of Success:” Pentecostal Numerology and the Magic of Christian Practice: Anthropology has progressively complicated, and perhaps even eliminated, the distinction between magic and religion that was foundational to early work in the discipline. While this move away from rigid typological or evolutionary grids has been key to the development of anthropological knowledge, this paper argues the distinction between magic and religion remains important. I make this claim through an examination of

the numerological practices of Pentecostal church leaders in Zambia. Particular interpretations of the Jewish calendar, as well as other engagements with numerology, have expanded the approach to scripture that has become common in Zambian Pentecostal circles in the wake of the prosperity gospel. Not only do these practices order the temporal orientation of the Pentecostals who engage with them, training to their focus to the present or immediate future, they also foreground the “magical” aspects of other types of Christian practice. In the broad framework of the anthropology of Christianity, attention to the different ways that magic and religion combine opens productive comparisons of agency and time that in turn shed light on Christian predictive technologies more broadly. Presenter: Naomi Haynes (University of Edinburgh)

Future risk, ecological change, and moral expiation on the Outer Banks : In the Outer Banks of North Carolina, the ground is always shifting. A set of barrier islands made of sand, the Banks move slowly but steadily inland in a process that geologists call “migration.” More dramatic ecological ruptures happen during winter storms and summer hurricanes, exacerbated by global sea-level rise. Each of these changes poses a threat to human infrastructure, which has grown enormously over the last half century as ocean-front properties and tourist traffic generate millions of dollars each year. This paper begins with a dramatic example of ecological change: storm-induced erosion that led to four neighbouring houses collapsing into the ocean in 2022. It considers how decades of engineering, and real estate insurance, have quantified risk on the Outer Banks, and how this factor intersects with local Christian ideas about labour and progress. It then turns to “preparedness” as a moral-bureaucratic and neoliberal discursive form, which puts the onus on individuals rather than government to evaluate future risks. It puts these broader structural questions into the context of the outrage on social media as videos of the houses went viral, which I analyze as a type of moral expiation in the face of future ecological risk. My larger goal is to suggest some preliminary ways to think religious forms into studies of ecological change in the United States, beyond broad-scale surveys of whether U.S. Christians “believe” in climate change. Presenter: Hillary Kaell

Mythical Future-Making in Mormon Transhumanism: Technocratic Rationality, Supernatural Imagination: In the restored Gospel tradition founded by Joseph Smith, living prophets and apocalyptic scenarios play a central role; the predictive tendrils of this system reach down to the individual level, with life courses set by patriarchal

blessings and the ramification of complex choices made clear through personal revelation. Some North American anglophone Saints, though, supplement both the collective and individual aspects of their faith through other modalities. Mormon Transhumanists rely on what seems at the surface level to be scientific- and engineering-derived framings to reimagine Mormonism's claims, mixing discussions of new and emerging technologies with futurist predictions and science-fiction scenarios. By contrast, there is another set of Mormons who mobilize a tradition of folk magic that was an important element in the early days of the religion, making use of techniques ranging from ritual magic to freemasonry and contemporary Mormon-themed tarot decks as a means of reimagining their religious inheritance. There are ironies to both of these Mormon modalities, however. This paper will argue that Mormon Transhumanism, despite its technological imagination, often operates at the level of the mythic. At the same time, many Mormons who incorporate magic into their practice rely not on the supernatural but instead on rationalistic psychological concepts. Moreover, this presentation will claim that this conflation of different registers of predictive rationality is not particular to these sub-genres of Mormonism. Instead, in the institutional Church of Jesus Christ of Latter-Day Saints, at the level of Church governance, there is a tight relationship between technocratic and economic rationality and supernatural imagination. Together, this pattern of recurrent captures and inversions found in attempts to manage the future suggests a more complex relationship between futural modalities that are often conceived as antithetical to one another. Presenter: Jon Bialecki (University of California, San Diego, Department of Anthropology)

Prediction, Oracular Authority, and Intersectional Expertise in Western Astrology : It has been said that speculative forms under late capitalism are suffused with qualities of divination. But divination is more than just a metaphor for the magic of the market. In North America, predictive techniques based in metaphysical religion and the occult are increasingly popular and monetized tools for mitigating uncertainty and risk, especially among generations molded by experiences of neoliberal precarity and foreclosure. Taking the field of Western astrology as an example, this paper examines how purveyors of occult speculation invoke, synthesize, embody, and refine diverse technological, cultural, and media resources, from “ancient” esoteric knowledge to modern astronomy, popular culture, and computational algorithms, in the process of creating the conditions for oracular authority.

Drawing on fieldwork among professional and aspiring astrologers, I explore how practitioners approach the labor of prediction and its various epistemological entailments and ethical dilemmas. I address the construction of a liminal zone of expertise, which is positioned apart from other more established vocational spheres, including science, psychotherapy, and religion, but is also dependent on them for the sake of authentication, standardization, and legitimization. I argue that overlaps between otherwise disparate and competing forms of knowledge production and experience are not only vital to the construction of expertise in Western astrology but reflect intersectional imperatives that characterize other forms of populist speculation through which actors apprehend and envision possible futures. Presenter: Omri Elisha (CUNY, Queens College, Department of Anthropology)

“Big Data” as Divination: The Enchanted Ocularity of Digital Numbers in Contemporary China: Drawing on fieldwork with Chinese start-up companies, I argue that “big data” analysis – a technique that reveals correlations in large datasets but requires humans to infer causality – is in many ways akin to divination: the data entrepreneurs I study construe the correlations they disclose as not merely coincidental, but rather as signs that factor into a complex, but hidden whole – the “ground truth.” What they sell to clients is not just an isolated reading, but also an invisible cosmological order that undergirds worldly affairs (Holbraad 2010). Through examples of start-up entrepreneurs’ courtship of clients and investors, I highlight the tenacious faith in the divinatory potency of an “avalanche of numbers” (Hacking 1990): despite spectacular failures of astronomically valued start-up companies to discover and exploit predictive social patterns, Chinese data entrepreneurs continue to successfully claim cosmic mediumship in a way that challenges the authority of domain specialists. I argue that this faith in the oracular power of digital numbers is not only predicated on capitalist speculation, but also informed by an existential anxieties my Chinese interlocutors expressed about legacies of Western geopolitical and technoscientific dominance. Presenter: Jamie Wong

Debt and Deregulated Faith: Wagers on Faith and Futures in Colombian Pentecostalism: What is debt if not a form of (faithfully) predicting the future? A future in which accounts will be paid, books balanced, and credit scores resurrected? In Colombia, Evangelical Christians are tithing with credit cards. Individuals are going into debt with God. And in this moment of post-war re-imagining of the country, since 2016 Colombia's

future has been the focus of much Evangelical eschatological expectation. This paper, in response, considers the entanglements of debt and future-thinking in Colombia. Based on extensive ethnographic fieldwork, this paper explores the Christian morality that underwrites finance capitalism and the deregulated faith that accompanies imagined and (un)predicted futures. Financialization, at its simplest, is the process of incorporating individuals into the financial system through mechanisms of financial inclusion: opening bank accounts, taking out credits, formally becoming “banked”. It is a disciplinary regime that operates at the intersections of Christianity and Capital. For example, Colombian department stores now offer credit cards and their own lines of financing. Household debt and personal income are now fair game for the grist in the financial wheel. This process of financialization is still developing, however quickly, and thereby offers a privileged vantage from which to analyze the ways in which financialization intersects with social orders, as well as the localized moral rubrics that accommodate its expansion. These forms of financialization are animated by the desires of individuals who comprise Colombia’s growing evangelical markets for consumption and indebtedness; debt underwrites their dreams, their desires, and their future aspirations. Health Systems in Transition – Canada and US Perspectives

4:15 PM - 6:00 PM

TMCC - 715 A

Conversation/Debate - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Bradley Stoner (Queen's University)

CHAIR:

Bradley Stoner (Queen's University), Carolyn Smith-Morris (U. Texas Southwestern Medical Center, O'Donnell School of Public Health)

PRESENTER:

Michael Green ,Eric Reinhart (*),Puneet Sahota

DESCRIPTION:

The occasion of a joint AAA-CASCA annual conference provides an opportunity for anthropologists to take stock of current approaches to health system organization in Canada and the US, with an eye toward identifying friction points which help perpetuate

disparities of access and care. This Debate will facilitate anthropological explorations of health system equity, impact, and opportunity at a time when Canadian and US health leaders are equally frustrated with existing health system structures, and are looking for alternative ways to organize care delivery which are informed by principles of social justice. Health systems in Canada and the US are both at crossroads of different forms and character. Healthcare in the US, dominated by private sector options for access and reimbursement, facilitates tremendous opportunities of choice for patients with financial resources, but substantially leaves behind those at the lower end of the socioeconomic scale. Uninsured or underinsured persons have limited access to primary care and specialty resources, and are often forced through clogged systems of patchwork care involving emergency departments, federally qualified health centers, community health centers, and a variety of other low-cost or no-cost service options. Preventive care is essentially absent, and the political will for structural reforms such as Medicaid expansion is seriously challenged. In Canada, healthcare is publicly funded, and with few exceptions private care options are essentially unavailable. In theory this democratizes access to care and removes socioeconomic status as a fundamental determinant. In practice, however, a shortage of primary care providers, and gatekeeper referral systems to specialty care, serve as functional limiters of access, with resultant over-crowding of under-resourced emergency departments across the country, and calls by some for greater access to private care resources for those who are able to pay. This Debate foregrounds the perspectives of practitioners, policy analysts and researchers working in healthcare settings in Canada and the US, and who will provide cogent perspectives on how anthropological frames of inquiry can offer a path forward for social just, equitable healthcare reform in both countries. Debate panelists include physician-educators and researchers from Canada and the US who are intimately involved in care provision to marginalized populations, and who bring tremendous analytic insight to discussions of the ways in which capital, profit and profiteering dominate health policy decisions in both countries, often at the expense of health equity and social justice. Debaters will address questions of profound importance to the health systems of both countries including: How do health systems in Canada and the US recognize and correct inequities in care, and work to ameliorate harms in and from the healthcare system? What path-breaking strategies are emerging in the Canadian and US systems for education in medicine and the health professions, and how will they serve to reduce health disparities? What ethical

paradigms are driving Canadian and US healthcare systems, and how are those paradigms given authority? How do research and primary care inter-relate in both systems, and how can research findings be quickly operationalized to improve health outcomes in marginalized communities? This session will appeal to scholars working in academic and healthcare settings.

Horizons of Autonomy: Ethnographic Engagements with Emancipatory Struggles across Abya Yala (Part II)

4:15 PM - 6:00 PM

TMCC - 718 B

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Anthony Dest (CUNY, Herbert H Lehman College)

CHAIR:

Sam Law (University of Texas, Austin, Department of Anthropology)

PRESENTER:

Philippe Blouin (McGill University, Department of Anthropology), Kevin Suemnicht, Anthony Dest (CUNY, Herbert H Lehman College)

DISCUSSANT:

Mariana Mora (Center for Research and Higher Studies in Social Anthropology (CIESAS))

DESCRIPTION:

This panel continues the conversation from Part I of 'Horizons of Autonomy.' The historical eclipse of the worker's movement and the fall of the Berlin Wall created an impasse for emancipatory politics, a loss of a shared horizon or collective orientation for struggles that seek to overcome this world, as well as reenergized possibilities for anti-colonial and anti-racist struggles. The past few decades have been filled with tentative experiments – from uprisings to neighborhood assemblies, plaza occupations to clandestine networks of logistics and collective care-work. One emancipatory idiom that links struggles from Rojava to Chiapas, the Valle de Sousa to the Weelaunee forest, is that of autonomy, struggles that seek not to seize state power, but construct or recuperate of a shared potential that allows people to once again inhabit territories on their own terms. Autonomy is a transitional concept for transitional times, a concept that always suggests a double movement: a breaking away from , and the

accumulation of means to collectively determine life without reliance. In this sense, autonomy always operates as a horizon, a utopian impulse that is, in the words of Galeano, 'good for walking'. As anthropologists, we are particularly called to the emphasis that autonomous movements place on everyday life, lived relations, place, identity, and culture in the struggle for a new world. This panel builds on the growing scholarship on autonomy in anthropology and across other disciplines to create space for collective thought (Gutierrez Aguilar 2014, Hartman 2019, Mora 2017, Rabasa 2020, Simpson 2021). Drawing together anthropologists working in and through registers of autonomy, we will discuss autonomy, the practices of translation that make it legible as a global idiom of struggle, and the forms of transition it enables out of this world.

Stirring the Ashes: Kanien'kehá:ka Autonomy in the Absence of a Power of Attorney: This presentation will study Indigenous conceptions of autonomy as they played out in a legal battle at the Superior Court of Quebec in 2022 where the Kanien'kehá:ka Kahnistensera (Mohawk Mothers) sought an injunction to halt excavation work around a hospital where Indigenous victims of medical experiments were allegedly buried. In particular, it examines the Kanien'kehá:ka Kahnistensera's argument that they have a cultural obligation to represent themselves without lawyers, as there is no power of attorney in Kanien'kehá:ka culture, where everyone is responsible for their own actions. To this effect, it explains the cultural background of this autonomist cultural obligation through Kanien'kehá:ka people's use of a single word to describe assemblies, fires, and families: Kahwá:tsire'. To reach a consensus, when it seems that everyone has come to an agreement, the assembly still has to "stir the ashes" and ask everyone who has spoken yet to voice their opinion and bring their unique perspective in the balance. As a result of this method, individuals can only enforce collective decisions they fully support, and each individual 'ember' is vested with both legislative and executive power. Presenter: Philippe Blouin (McGill University, Department of Anthropology)

"Carbondale Spring, A New Vision for Our Town": Imaginal Practices at the Intersection of Abolition: The Carbondale Spring – a campaign that occurred in Carbondale, Illinois from 2019-2021 – proposed reducing the municipal police budget. Activists proposed using this money to create autonomous infrastructure in the city and an alternative ecological economy. Specifically, they sought to create a food

autonomy system, a worker cooperative ecosystem, alternative energy initiatives, and a team of "care workers" to respond to social problems without the police. Carbondale is a small college town of 20,000 people that has been in a prolonged crisis as its university has lost many students and with it the economy has declined, and its population is shrinking. Its goals were ultimately unrealized, the Carbondale Spring became a machine for articulating an alternative vision for the city, which found widespread support and appeal, and thus served as a window into the constructive aspects of abolitionist politics and a regional vision of autonomous life. I argue that the Carbondale Spring created a framework for collective practices of imagining autonomy and other modes of municipal politics. Indeed, drawing on an a-modern reading of Hegel's Phenomenology of Spirit, I argue that the imaginal sphere is an elementary element of anti-systemic politics, which makes the immediate conditions of life available for political intervention. Presenter: Kevin Suemnicht

Autonomous Struggles for Peace in Colombia: In Colombia, the word "manifestación" (manifestation) is used to describe demonstrations and protests. In this paper, I reflect on how autonomous struggles manifest the possibility of a radically distinct ideal of peace that decenters the state by exploring the struggles of the "mingas hacia adentro" or "internal mingas" in the region of northern Cauca. Despite being prioritized by the 2016 Peace Accords, northern Cauca remains one of the most dangerous places in Colombia, particularly for black and indigenous communities. Mingas typically refer to forms of collective labor in indigenous communities of the Andes, but these mingas hacia adentro are an exercise in autonomy and self-determination on behalf of indigenous communities to fulfill their mandates because they cannot rely on the state, capital, or mainstream indigenous organizations to do so. As such, I argue that the mingas hacia adentro are a form of what I call "dissident peace." Presenter: Anthony Dest (CUNY, Herbert H Lehman College)

In Conversation with Vodou en Vogue

4:15 PM - 6:00 PM

TMCC - 716 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Africanist Anthropology

ORGANIZER:

Laurian Bowles (Davidson College, Department of Anthropology)

CHAIR:

Aisha Beliso-DeJesus (Princeton University)

PRESENTER:

Yolanda Covington-Ward (University of Massachusetts, Amherst),Eziaku Nwokocha (University of Miami),Nicole Fadeke Castor ,Elyan Hill (Harvard University)

DESCRIPTION:

In Haitian Vodou, spirits impact Black people's everyday lives, removing any divides between the sacred and the secular and manifesting in vivid, creative displays of ceremonial fashion. Eziaku Atuama Nwokocha's book, *Vodou en Vogue*, pioneers a new path in Vodou, Anthropology, and Africana studies, providing poignant connections between fashion and the senses through a Black feminist ethnographic study. Through insights gained from over a decade of participant observation in contemporary Vodou ceremonies in Montreal, New York, Miami, Boston, Port-au-Prince, and Jacmel, Nwokocha illustrates how, within the religious and social life of Vodou, fashion contributes to transnational communal identity formation in the African Diaspora. This innovative ethnography on fashion and Vodou weaves together the performativity of gender, race, the multisensorial experience of religion, and religious and material exchanges between Africa and the African Diaspora while contemplating what the gods want and demand from worshippers. This panel brings together anthropology of religion scholars across theoretical, geographical, and religious landscapes to discuss *Vodou en Vogue* in relation to their own research and to tease out overarching themes that emerge in varying contexts. In doing so, we will consider the book's key interventions in spirit possession, material culture, labor, gender, race, and sexuality. Additionally, there will be a special performance by Haitian Vodou practitioner, Manbo Marie Maude Evans, who will showcase Haitian Vodou fashion and sing Vodou songs related to honoring the Black divinities of Haiti.

Joy and Sorrow in Expressive Life

4:15 PM - 6:00 PM

TMCC - 718 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Yana Stainova

CHAIR:

Lyndsey Copeland

PRESENTER:

Ahona Palchoudhuri (Brown University, Department of Anthropology),Yana Stainova ,Edward Escalon ,Lyndsey Copeland ,Yun Emily Wang (Duke University)

DISCUSSANT:

Basit Iqbal (McMaster University, Department of Anthropology)

DESCRIPTION:

This roundtable brings together stories, poetry, and music from four continents to think about the intersections of two concepts commonly considered mutually exclusive: joy and sorrow. Joy traverses pleasure, play, hope, and happiness. It admits critiques of cruel optimism and capitalist compulsions to enjoy or to be happy – but it also spills beyond, in excess of them. Joy may even bear a liberatory potential (Ross Gay; José Esteban Muñoz; adrienne maree brown). Sorrow also opens onto a multitude of affects and modes. These may include nostalgia and mourning in response to pain, suffering, and loss. But joy does not simply oppose sorrow. This roundtable explores the dense and often mercurial relationship between joy and sorrow in expressive life. We follow expressions of joy through song, dance, gardens, newborns, memory, faith, and revolution. We follow expressions of sorrow through death, violence, crucifixions, borders, the breakdown of everyday domestic relations, repression, and unfinished political transitions. In doing so we engage with theories of theopoetics, salvation and damnation, attunement, affective circulation, and embodiment. In the work assembled for this roundtable, joy and sorrow are intertwined in musical expression across multiple sites. One presenter lingers in the joy of new motherhood seen through the prism of immigration and its sorrows, both flowing together in children's songs. Another explores the excess of white Christian joy in evangelical music spilling over into missionary spaces and the songs of street kids in Tegucigalpa, Honduras. A third engages musicians in the Republic of Benin who perform other people's sorrow in funerary lamentation. A fourth traces the fluctuations between joy and sorrow in the development of voice in Indian classical music, where non-human pain finds expression. The fifth attunes to how residents of a Chinese Canadian nursing home conjoined grief with hope through expressions of regret in everyday vocal practices. Finally, a sixth participant confronts the

glittering ferocity of making life anew in Syrian revolutionary song, with special attention to the theological interface of joy and sorrow. In group discussion, we think about the coexistence of joy, sorrow, and their correlates in modes of expressive life. We notice non-linear movements between these affective states, consider how different communities and individuals experience transitions between joy and sorrow, and emphasize how these transitions are embedded in cultural practice. We think about the relationship of both sorrow and joy to time: if joy grounds us in the present and points to a future, sorrow brings with it the past. But sorrow is also a reckoning with the present, while joy is sheltered in memory. Our work converges on how these relationships are expressed in music. What can sorrow sound like? How is joy voiced? Is it possible to deposit memory in verse? How does one person's sorrow become another's joy?

Life Course Transformations, Categories, Care, and Marginalization

4:15 PM - 6:00 PM

TMCC - 206 E

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

John M. Coggeshall (Clemson University, Department of Sociology, Anthropology, and Criminal Justice)

PRESENTER:

John M. Coggeshall (Clemson University, Department of Sociology, Anthropology, and Criminal Justice), Annie Preaux (Tulane University), Alexandra Crampton, H M Ashraf Ali (MacEwan University)

DESCRIPTION:

This session focuses on lived experiences with life course transformations across a range of geopolitical and cultural contexts. The individual presentations bring ethnographic insight to people's experiences with such processes highlighting historical, faith-based, intergenerational, and embodied influences. Collectively, they also illuminate a range of understandings and debates about 'the life course' among anthropologists.

“Transitions In Life: Understanding African American Perspectives on Advanced Care Planning.”: This collaborative project examines the challenges of presenting Advanced Care Planning (ACP) discussions to Christian African American rural communities in South

Carolina. Only about 25% of African American adults have engaged in these discussions, and anecdotal evidence suggests that hospital staff might not understand the critical role of African American faith leaders and their varied denominational perspectives in discussions of ACP. Using ethnographic interviews with African American faith leaders in rural South Carolina churches, the goals of Phase 1 of the project are to (1) understand the denominational perspectives of these leaders about ACP, (2) to create an evaluation tool to assess current ACP training modules, and (3) to compare these existing modules to the perspectives of African American faith leaders. Additional phases will modify ACP training modules to align with denominational perspectives and will expand the training modules nationwide to improve communication about ACP between hospital staff and rural African American communities. Project Team: John M. Coggeshall, Adrian Duckett, Tracy Fasolino, Golnaz Irgens, Janice Lanham, Eunice Lehmacher, William McCoy, Lori Pindar, Michelle Taylor-Smith, and Bonnie Treado. Student workers: Chloe Cox, Morgan Johnson, and Jasmine Sampson. Presenter: John M. Coggeshall (Clemson University, Department of Sociology, Anthropology, and Criminal Justice)

A life course perspective on gender-based violence and intergenerational transmission of violence in the Dominican Republic: Women in the Dominican Republic experience a high prevalence of gender-based violence, and for women who have lower educational attainment or lower socioeconomic position, the risk is even greater. The life course perspective provides a useful framework for understanding the relationships between exposure to violence in different forms over a lifetime, as well as the intergenerational transmission of violence from women to their children. From an applied perspective, life course theory and public health approaches based on life course theory have been important to understand how both positive and negative exposures over the life course or during critical periods of development affect health outcomes and behaviors later in life, as well as the intergenerational transmission of health outcomes from parent to child. To better understand gender-based violence and intergenerational transmission of violence among women and children, Arachu Castro, Laura Sánchez-Vincitore, and I are conducting semi-structured interviews from March to May 2023 with up to 100 women in Santo Domingo. The women who are participating in these interviews currently have at least one child aged two to four years old who is participating in an early childhood development program offered by

the National Institute of Comprehensive Early Childhood Care (INAIPI for its name in Spanish). The interviews are structured to capture the women's life history to date; we ask them about their childhood and adolescence, including family structure, their household, important memories, education, and their first romantic relationships. We also ask about their pregnancy experiences, current romantic relationships, their children, and current household structure. Finally, we ask them about their future plans and life goals. As women discuss different phases of their lives, we incorporate questions about witnessing and experiencing violence as a child, how they were disciplined by their parents, experiences with violence, jealousy, and control in intimate relationships, violence towards their children, and how they currently discipline their children. As a framework for this analysis, I will use the 'life course cube' developed by Bernardi et al. (2019) to examine gender-based violence and its intergenerational consequences across three dimensions. First, I will examine several different life domains, including family relationships, intimate relationships, education, and life goals, and how these domains are interrelated. The second dimension is time. Here, I will consider the short and long term impacts of certain critical events or experiences, the timing of these events, and important turning points in women's lives. Finally, I will consider the ecological dimension; that is, how an individual's experiences in different domains and over time are shaped by community, institutional, political, and societal forces and expectations. To shape this analysis, I will also draw from past anthropological work on the developmental origins of health and disease, biosocial inheritance, and critical biocultural anthropology. This work will contribute to understanding intergenerational cycles of violence and gender inequality, as well as how culture, society, and history influence women's relationships with their family, partners, and children. Presenter: Annie Preaux (Tulane University)

Fears of Falling: Transition Avoidance in 'Deep Old' Age: For most of human history, average life expectancy was about four decades, and living into 'deep old' ages of 80+ years was highly exceptional. Today, however, within wealthy nations and among affluent cohorts, this longevity has become an expectation. A major contribution is biomedical interventions to extend life (Kaufman 2015). A question for those privileged by access to these resources is a paradox: In the United States (and other affluent nations), a perceived achievement of living longer comes with highly stigmatized changes to bodies, minds, and social status.

Social scientists clarify this boundary as that between a '3rd age' of active, healthy aging and a '4th age' of frailty, loss and risk of social death (Laslett 1991; Higgs & Gilleard 2014). This paper examines transition from 3rd to 4th age in a research site where interlocutors express fear of the 4th age in a literal (bodily) sense. The intermittent yet anticipated presence of ambulances 'on campus' in this Midwestern retirement community disrupts a country club atmosphere carefully cultivated through upscale architecture, landscaping, and services. Nearly all residents identify as white, cis-gender, and heteronormative. In the midst of enjoying longstanding social practices of affluence are unavoidable signs that yet another resident has 'lost it' in body and mind. This may be symbolically hard to hide when using a walker or seen with a paid caregiver. The price of assistance can be social ostracism and hostility among able-bodied residents who complain of 'too many old people' here. The facility is run under a biomedical model separating 'independent living' from 'assisted living,' and the average age has risen in the past decade to age 85. Weekly 'care team' meetings enable staff to assess when and which residents are falling into the fourth age and may need persuasion to hire help or move into assisted living. They labor to normalize this transition but it persists in stigmatizing individual residents and their spouses, with real risk of social exclusion. This paper examines transition from 3rd to 4th age during an ongoing research project that began shortly after 'lock down' Covid-19 pandemic restrictions were partially lifted (December 2020). While strict public health precautions resulted in only one Covid death among the 270+ residents, the death rate spiked. As residents said, 'We are dropping like flies.' But fears of death are not as powerful as fears of falling into the 4th age. Ironically, Covid restrictions protected residents from viral infection while accelerating risk of a greater, culturally inscribed fear- that of falling into frailty, disability, and social death. Both residents and staff must address fears of falling as more than a biomedical problem of staying upright. Residents move in with confidence that affluence has protected them, and that they are asserting maximum control over how they age. The purpose of this paper is to culturally examine an interplay of complex factors that underlie fears of falling and observed consequences for those who did fall physically and/or socially during the study period. The argument is that exploration of these fears reveals an underlying cultural refusal to accept and integrate loss as part of life, as well as an irrational, 'high modernist' (Knauff 1996) hope that irrevocable loss may be avoided given enough resources, technologies, and hard work. Presenter: Alexandra Crampton

Social Isolation and Mental Health among Bengali-Speaking Seniors in Edmonton, Alberta, Canada: The introduction of the multiculturalism policy in the 1970s led to the exponential growth of the immigrant population across Canada. With the rapid growth of immigrant population, seniors among immigrant population have also been increased over the last decades in Canada, and it is estimated that in Alberta approximately 18% of all seniors will be 65 years of age and older by 2036. Seniors coming to Canada with different ethnic, racial, cultural, and linguistic backgrounds experience mental health distress differently and so they need culturally appropriate methods to address their mental health needs. This paper is an outcome of a qualitative study conducted among Bengali-speaking seniors living in the Bangladeshi and Indian communities in Edmonton. This paper identifies the causes of social isolation among Bengali-speaking Bangladeshi and Indian seniors (55 years and older, both men and women). Social refers to living alone more often for extended hours persistently in the family for months, having little or limited social contact and limited opportunities for expressing or sharing feelings or experiences, etc. The paper describes the impact of social isolation on their physical, social, emotional, and mental health. Language, culture, traditional gender roles, and religious norms and values of the immigrant population that they carry with them from homelands as well as the social, cultural, and economic environment and practices of the host societies, contribute to making a difference in how seniors experience social isolation and how they act on to break social isolation. This study also describes the roles of different supporting programs, such as English-language, physical exercise, and recreational activities, offered to seniors by various not-for-profit organizations in addressing the issues of social isolation and mental health. This study argues that more culturally appropriate programs are needed to reduce the impacts of social isolation and improve health and wellbeing of South Asian seniors. Presenter: H M Ashraf Ali (MacEwan University)

Limits to the Production of Neoliberal Financial Subjectivities: Studying Microfinance as a Multilayered Industry and Social World

4:15 PM - 6:00 PM

TMCC - 716 B

Oral Presentation Session

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Molly Sundberg

CHAIR:

Molly Sundberg

PRESENTER:

Molly Sundberg ,Ståle Wig ,Tanushree Kaushal (Graduate Institute of International and Development Studies),Seyma Kabaoglu

DISCUSSANT:

Tanushree Kaushal (Graduate Institute of International and Development Studies)

DESCRIPTION:

As societal development is increasingly equated with economic growth, financial inclusion, especially through microcredit programs, has become a key policy tenet for many national governments and is defined as an 'enabler' of almost half of the 17 SDGs. This session brings together ethnographic studies of the actors, activities and intended beneficiaries of financial services that target people in the economic margins. Anthropological scholarship on development banking and financial inclusion has largely centered on the impact of microcredit schemes and the creation of financial subjectivities among local borrowers. Studies of finance experts, meanwhile, have focused on the trading floors, stock exchanges, and the intermediary roles of investment banks in the capitalist heartlands of Europe and North America, rather than on commercial or development banks operating outside the centers of global finance. The research presented in this session takes a broad empirical approach to the study of the latter, examining, in total, four levels of banking that range from financial elites to individual entrepreneurs. It spotlights investment managers and guarantee experts working for European Development Finance Institutions; mid-level employees in Islamic banks in Turkey; local micro-finance staff in India; and small business owners in Cuba and Mexico. Together, the papers address how finance professionals and their target groups reflect on, question or outright resist the logics of finance and its practical application in microcredit programs and other banking services aimed at empowering citizens. They show, for example, how the everyday functioning of financial services depends on individual staff members' gendered, relational work and how many bank employees contemplate the ethics, role, and limits of their institutions in making the poor bankable. Moreover, they elucidate ways in which citizens engage in what they consider successful businesses without the help of formal banks, by

exploiting alternative means of capital accumulation when bank applications are rejected, or by purposefully avoiding national strategies for financial inclusion. Their economic pursuits are based on interpretations of entrepreneurship and profitable enterprise which do not necessarily correspond to bank discourses.

Collectively, the papers indicate the value of multi-level ethnographies of financial inclusion and development banking. On one hand, such studies help depict the many organizational layers and types of actors operating within the jurisdiction of microcredit services. On the other, they offer comparative insights into both similarities and differences in how these various actors relate to fundamental questions in the industry, such as entrepreneurship, debt, national politics, and neoliberal capitalism.

A Question of Interest? Profits and Morality in Development Finance: In the world of international aid, profit-making actors and instruments are growing in number, and with them, a new group of development professionals specialized in finance. This article explores how investment managers in Development Finance Institutions and guarantee experts in a public aid agency are reshaping moral understandings of aid. At the core resides the link between profit-making and self-interest, which is sometimes deemed irrelevant, sometimes virtuous, and sometimes outweighed by profit incentives' superior ability, compared to non-profit aid, to foster reciprocity and equality in donor-recipient relations. Finance experts construe development investments as relational investments, suggesting a reinterpretation of financial risk-taking and profit-maximization in capitalist logics. Moreover, their favoring of commercial assistance models over grants is based on a conviction that capitalist exchange, just like charity, can foster social relations but in ways that empower rather than subordinate partners in the global South. These claims deserve empirical scrutiny. As increasingly influential ideas, they also merit theoretical consideration. My paper discusses how they compare with everyday practices of development finance, and how they inform two areas of anthropological theorization. One concerns the nature and scope of economic morality in neoliberal capitalism. The other pertains to aid as a Maussian gift and what happens when commercial financial capital, rather than alms, are made into gifts. Finally, I reflect on private sector aid as an "original" gift, and how it actualizes questions about foreign aid's ties to European colonial history in the midst of current debates about decolonizing aid.

Presenter: Molly Sundberg

Infrabanking: Mobilizing Capital in Communist Cuba: Since 2011, the Cuban government has initiated a vast project of "financial inclusion", authorizing banks to start offering loan credit to the country's growing number of small businesses for the first time since the beginning of the revolution while demanding all registered entrepreneurs to open bank accounts. Yet, citizens have largely circumvented these services. Drawing on twenty months of fieldwork among market traders in Havana, this article analyzes why so few Cubans rely on the formal banking system to raise capital and what other ways people organize their financial futures through kin, partners and friends, property, loan sharks and rotating savings and credit associations. To understand what these ways of mobilizing capital offer, it is necessary to examine how people live economic lives in ways that are encompassed but not dictated by short-term concerns for net profit. Non-monetary concerns about access, timeframe and visibility lead people to raise and store wealth outside the formal banking system, constituting a domain I call infrabanking: banking practices that are too far removed from the established assumptions about banking to be perceived as part of the same phenomenon. Presenter: Ståle Wig

Relational Labour and Financial Inclusion: How Gendered Care Work Runs Microfinance: Microfinance, despite its critics, has become entrenched as a key tool for enabling financial inclusion and constitutes the principal base activity for novel strategies such as impact investing and gender lens investing (GLI). Global discussions on financial inclusion frame the practice as requiring additional and improved legal, technological and regulatory infrastructures. This obscures the importance of social and relational infrastructures in enabling credit access. Even as large-scale microfinance aims to depersonalise debt relations by ensuring staff rotation, the role and care work provided by local microfinance staff remains key in ensuring credit access and loan repayment. Scholarship on microfinance and care work largely focuses on women borrowers' social reproductive roles and consumption uses of loans. However, care work extended by local staff is pivotal to maintain these loans – this includes care work towards women borrowers and their families and personal care work extended by women field staff towards male staff members. As investment strategies such as Gender Lens Investing place increasing emphasis on hiring more women staff in microfinance to qualify for GLI certification, these considerations of (unpaid) care work become increasingly relevant to further probe what qualifies as 'empowerment' and what is excluded.

Through empirics collected during fieldwork across Geneva, Switzerland and different locales in India over a period of 8 months, this paper will elucidate the centrality of gendered care work provided by local microfinance staff and how this is changed and challenged by new global policies and investment strategies. Presenter: Tanushree Kaushal (Graduate Institute of International and Development Studies)

“Never Debate with a Customer”: Navigating Financial Refusal in Islamic Banking and Finance: Doubting Islamic banking and finance (IBF) has been an integral part of the industry since its modern establishment after the 1970s. Is Islamic banking really Islamic? What does “Islamic” mean? Is it even possible to conduct ethical economic transactions under financial capitalism? These questions not only dominated academic discussions, but policy-makers also believed that they had resonance in the larger society. In Turkey, industry leaders often complained and wondered how the share of IBF in the banking sector could be so low (~ 7%) in a country where an overwhelming majority of the population is Muslim. Since IBF has been a fundamental part of financial inclusion strategies, these doubts have also been interpreted as a hindrance to financial inclusion efforts in the country. The policy-makers cited financial illiteracy as the reason for emerging doubts and proposed strategies for raising financial awareness. My paper pushes back against these assumptions, based on 18 months of digital and in-person ethnographic fieldwork among mid-level employees at Islamic participation banks in Turkey between 2017 and 2022. I argue that Islamic bankers themselves have similar questions and engineered techniques to navigate customer doubt as well as their own. Since similar doubt patterns are also observed among people who could be most literate about these transactions, it is not reasonable to consider the lack of awareness as the culprit. Instead, I propose to focus on “şüphe,” a Turkish/Arabic concept that describes the state of confusion due to resemblance, in this case, the similarities between IBF and Western-style finance. Presenter: Seyma Kabaoglu

Living Worlds of Labor and Value in Transforming Cities

4:15 PM - 6:00 PM

TMCC - 603

Oral Presentation Session

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Aman Roy (CUNY, Graduate Center)

PRESENTER:

Nick Welna (CUNY, Graduate Center, Department of Anthropology), Angela Romea (CUNY, Graduate Center, Department of Anthropology), Aman Roy (CUNY, Graduate Center), Yutong Han (CUNY, Graduate Center, Department of Anthropology), Paulo Suarez (Graduate Center, CUNY, Department of Anthropology)

DESCRIPTION:

Cities are constantly changing. These changes are often chronicled through top-down reforms or explained in reference to external pressures. Additionally, however, cities are transformed through the cooperative and competing efforts of people at work. This panel looks at a variety of economic sectors -- transportation, logistics, security, housing, and urban agriculture -- to explain how the work of city-dwellers is creating value and transforming cities. Moving beyond a monological account of capitalist consolidation, we work through the concept of 'living worlds,' adapted from Nancy Munn's (2013) writing on 'lived worlds,' which theorized socio-material urban transformations through a dialogic framework. With papers focused on Pittsburgh, Manila, Delhi, Jaffna, Memphis, and Los Angeles, we attend to spacetimes where people confront changes in their cities, in order to grasp how 'living worlds' are disclosed, and to describe how those encounters congeal into discourses of what is lost, gained, forgotten, or memorialized. Across these economic sectors, semiotic processes are foundational for creating, calculating, and contesting value. Middle-class urban professionals value feeling safe; supply chain managers value efficient flows; working-class commuters value their time off the clock; palmyra workers value the connection their products have with communal identity. These sectors are filled with attempts to measure and standardize those values, but urban encounters frequently overflow those categories. Our papers examine the contingencies and breaches that expose competing value projects (Agha 2011; Nakassis and Searle 2013) in security, logistics, transportation, housing, and urban agriculture. This panel builds on recent work in urban anthropology, economic anthropology, and semiotic anthropology to theorize value, labor, and urban life. It draws together scholars who have studied the rise of neoliberal cities (Smith 2008; Brash 2011; Philips-Fein 2017; Taylor 2019), the semiotics of racialization and class formation (Ralph 2013; Reyes 2017; Yeh 2018; Smalls 2020; Muir 2021), the interconnected processes of market-making and city-making (Elyachar 2005; Nam 2011 and 2017; Searle 2016), the geography of planetary urbanization

(Cronon 1992; Brenner 2014; Katz 2021), and the governance of global mobilities (Cowen 2014; Huber 2015; Danyluk 2021). Our aim is to clarify the emergent, open-ended ways that people work for, around, within, and against the contingently articulated value projects of capitalist urban transformation.

Logistics Labor in Personal and Civic Transformations: At first glance, it seems like Memphis, Tennessee, benefits immensely from the “revolution in logistics” (Cowen 2014) that has transformed the global economy since the 1960s. Logistics is the fastest-growing sector for employment in the United States, and Memphis has the nation’s highest concentration of logistic workers. Yet this city is also the poorest in the United States. The area’s poverty rates have not improved during its fifty-year logistics boom, and local white families still earn double that of Black families. Faced with persistent racialized poverty, many people in Memphis try to leverage the logistics sector to create opportunities for themselves and their communities. These efforts cross the city’s fluid class formations. Students work their way through college; parents pick up extra shifts to pay bills; volunteers mentor formerly incarcerated jobseekers; union organizers rally rank-and-file workers for labor actions. Drawing evidence from preliminary ethnographic fieldwork in Memphis, this paper reflects on struggles for personal and civic transformation that shape the “lived worlds” (Munn 2013) of this logistics city. Bringing together Marxian and semiotic methods, it explores how the logistics industry extracts value through processes that overlap, entangle, or clash with efforts of ordinary people to create value in everyday life. Following Munn, additional attention is given to encounters that disclose forms of negative value in specific logistical spacetimes. The King of the Road: Transformations of Value in Manila : Manila’s most accessible form of transportation, the jeepney is a bus-like form of public transit that originated as repurposed US military vehicles from World War II (jeeps, from which “jeepneys” get their name). In 2017, the “jeepney

modernization program” was announced, which planned to decommission jeepneys older than fifteen years with cleaner, safer minivan-like vehicles, establishing new routes with designated stops and better accessibility for the elderly and people with disabilities. In some spaces, however, the program was derided as “anti-poor,” as a proxy for class warfare. The Metro Manila Development Authority has, in particular, promoted the modernization program as a case for discipline. Indeed, jeepney drivers and passengers are often pilloried for their ‘lack of discipline’ in government forums, in social media, and so on. This paper examines shifts in jeepney drivers and passengers’ lived worlds (Munn 2013) as they interact with processes of modernization. What are the ways in which classed anxieties emerge with the modernization program and how is this negotiated in the everyday? How have discourses on modernization and jeepneys shifted across historical time, under different presidential regimes? This paper thus aims to examine the aspirations that accompany modernization projects, situating them along broader discourses of development, focusing on how everyday frustrations with congestion in Manila manifest in the jeepney and how it is reified through regulation and protest. These issues of immobility gain more significance as they are placed under broader, historical discourses of discipline and order. Presenter: Angela Romea (CUNY, Graduate Center, Department of Anthropology)

Defending Home: Security Technologies and Social Reproduction in Smart Nagpur: Nagpur, a city branded smart by India’s SCM (Smart Cities Mission) in 2015 was touted as an upcoming Information Technology hub, attracting foreign investment through promises of accelerated hi-tech urban development. Nitin Gadkari, national infrastructure minister, allayed the fears of belligerent real-estate investors in Nagpur last year by inviting middle-class investment into urban development through public infrastructure trusts that would keep foreign investment at bay, invoking financial ‘atmanirbharta’ – a form of economic self-reliance under hindutva austerity. My paper tracks how emerging real-estate projects in Nagpur mirror political cosmologies in homes and neighborhoods by relating domestic autonomy, urban value regimes and home security. Despite the unfulfilled smart promise, technologies trickled into everyday security: alarm systems and neighborhood surveillance networks that enact digital addressal, accusation and criminalization. The trope of home as the spiritual interior of nationalist discourse (Chatterjee 1996) needs re-examination as security technologies reconfigure spatio-temporal

regimes (Munn 1986) of domestic space and the city. How do these aforementioned anxieties of real-estate speculation and urban austerity mutate into such 'atmanirbhar' technologies? If so, are they articulated through the mapping of mobile threats to home security – by domestic workers, delivery boys and other foreign agents? I turn to social reproduction theory's challenge to value regimes of domestic work, security and labor to theorise this shrinking imagination of urban domesticity and technologies of care. My research spans resident welfare associations, home security advertising and real-estate conferences, sites articulating how the home as a site of labor mediated by technologies: domestic fortification and nationalist fortification. Presenter: Aman Roy (CUNY, Graduate Center)

Securiticscapes and Other Life Worlds in the Post-Industrial Pittsburgh: Celebrated as a successful revival story, Pittsburgh seems to have risen from the abandoned industrial landscapes with the emerging healthcare, IT, and higher education industries. Contracted physical security services are usually hired to protect the working sites of these new industries. What value, then, is generated by the physical security services to different actors in the post-industrial place-making processes of Pittsburgh? Following Nancy Munn's concept of spacetime (1986, 2013), the research traces the value-generating process of physical security services in the making of a multiplicity of living worlds of the security companies, the IT/healthcare industries, and the city government. With the private security management and consultants, I ask how value is imagined to be generated by the labor of the frontline security workers. The IT and healthcare industries, on the other hand, entail a global labor regime that significantly relies on Asian immigrant workers. What is the value of security services in helping these industries to attract, preserve, and govern global labor forces? And with the Urban Redevelopment Authority, I examine the value of security services in making Pittsburgh as "the most livable city" as promoted by the city government. Interrogating the threefold living worlds of post-industrial Pittsburgh, the research shows that the expansion of securiticscapes (Low and Maguire 2019) is deeply entangled with efforts to maintain financial profitability of the U.S. cities. Evaluating the World: Non-Value and Political Subjects in the Los Angeles Housing Crisis : Despite living in a city with the most progressive renter protections in the country, tenants in Los Angeles are one of the populations most vulnerable to homelessness in the world. This gap is a reflection of the global expansion of speculative corporations into the rental market after the 2008 housing crisis and the current pandemic crisis. Corporate investors have seized buildings foreclosed or cheapened in the last decade, primarily in poor urban neighborhoods, and evicted low-income residents in order to reintegrate their homes into a new financialized rental economy. In Los Angeles, non-profit and grassroots organizations have mobilized against this eviction upsurge by lobbying for tenant rights, protesting against landlords, and creating tenant associations. The L.A. city government has mediated these tensions with policies that incentivize real estate investment, while simultaneously developing legislation that helps tenants avoid eviction. Based on preliminary fieldwork and analysis of mass media artifacts, this paper explores how different political subjects - government, NGOs, grassroots- evaluate the "lived worlds" (Munn 2013) of tenants and landlords. Further, I seek to understand how these political subjects reflect on their own capacities to intervene and transform the value of these worlds. I argue that this becoming-subject unfolds through a dialectic relation between reflexive modes of valuation, or "social value projects" (Nakassis and Searle 2013), and what these modes repress in order to sustain their consistency, or "non-value". 2-675

Making Sense: The Challenge of Meaning Making in a Multi-Modal World

4:15 PM - 6:00 PM

TMCC - 206 F

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Sara Castro (University of California, Los Angeles, Department of Anthropology)

PRESENTER:

Ivan Roksandic ,Madoka Nishiura ,Sophia Walters (University of British Columbia)

DESCRIPTION:

Attention to meaning making has a long history within linguistic anthropology, socially grounded approaches to language highlight the emergent qualities of meaning making processes. These semiotically informed approaches emphasize how meaning is something that is situated and contextualized out of a broader interactional framework, and enhanced through other kinds of semiotic cues and modalities. Papers in this panel continue these conversations by drawing attention specifically to other kinds of modalities and qualia that also enhance and contribute to communicate practice, and negotiation of meaning across a variety of interactive contexts.

Xavante toponomastics in the territories of Marãiwatsédé and São Marcos: The process of European colonization in Brazil reconfigured the social, cultural and demographic structure of the country. Some indigenous societies in the heart of the continent managed to preserve their autonomy, social structure and cultural norms in relative isolation until the beginning of the twentieth century. However, the acceleration of the socio-economic changes which characterized the Military Dictatorship (1964-1985) had profound negative impact on traditional societies in Central and Western Brazil. In addition to extreme violence against the indigenous people, there was a continuous process of erasing the memory, history, and culture of these populations, which legitimized the loss of their territories. The Xavante are an indigenous group which has been living in the Central-West region of the country at least since the early 19th century. There are no precolonial records, nor archaeological evidence of this ethnic group. The earliest written records describe their migrations, under the pressure from European settlers, leaving their settlements in the province of Goiás and moving into Mato Grosso between 1820 and 1840. They developed a number of communities in that region and remained isolated until the first decades of the 20th century, when poor non-Indigenous peasants began to appropriate portions of native lands. They were followed by large business enterprises for agricultural projects, and the process accelerated during the Military Dictatorship when huge portions of Indigenous territories were taken. This process was responsible for the extermination of entire villages, either directly, through punitive expeditions, or indirectly, through dispersion of diseases for which the indigenous had no immunological defence. The purpose of this study is to shed more light on the processes that led to appropriation of parts of the indigenous territories in the communities of Marãiwatsédé and São

Marcos through toponomastic analyses, focusing on Xavante place names distributed over the territory they inhabited since the mid-nineteenth century. Toponyms are proper names that identify locations individually. They are resistant to change and frequently remain in place even after the transition of languages spoken in an area. Place names belonging to a specific language group demonstrate that speakers belonging to that speech community were physically present in and inhabited the location that carries the name meaningful in their language. As a result, toponyms remain in locations as markers of past and present communities that inhabit/inhabited them, and analyses of them can help us understand historical processes of migrations and intercultural contacts in the past. Place names in Mato Grosso reflect the region's turbulent colonial, postcolonial, and contemporary history, as well as the variety of ethnic groups that inhabited it in the recent past. Place names that carry meaning in Xavante language and their geographical distribution can help us delineate the extent of the area originally inhabited by this ethnic group. The combined results of linguistic studies with research results obtained through other methodologies (archaeology; forensic anthropology; ethnohistory) will enable us to understand better the impact of colonization on Xavante communities and their territories. Presenter: Ivan Roksandic

Translating Qualia: Intersemiotic Translation between Oral and Sign Language in Bali: As Roman Jakobson distinguished, translation involves not only interlingual translation but also intralingual and intersemiotic translation [Jakobson 1959]. The main goal in translation is to find equivalence between the source and target texts, which are never perfectly compatible, and this is particularly true in intersemiotic translation due to the gap in the semiotic dimension. This paper analyzes a translation from oral Indonesian to a village sign language in Bali called Kata Kolok as a combination of interlingual, intralingual, and intersemiotic translations. Kata Kolok is a local sign language used in Bengkala village in Bali, which has a relatively high number of deaf people. This paper analyzes the case of making a short video for a police campaign featuring local deaf residents signing sentences that were translated by a hearing interlocutor into Kata Kolok. Both the creator of the source text (i.e., the police officer) and that of the target text (i.e., the deaf signers) did not speak the other text's language. Nevertheless, the translation seemed successful; the deaf signers signed without confirming the intention of the source text, and the police officer approved the video clip. This paper discusses how the equivalence of this translation

is confirmed not only by the literal meanings of the message (in intralingual and interlingual translation) but also by the qualia in the linguistic anthropological sense [Chumley and Harkness 2013], which is shared intersemiotically. In Kata Kolok, the qualia is transmitted by non-manual markers, including facial expressions and body movements, and can be shared through the embodied process. Presenter: Madoka Nishiura

'Altsil and K'ujol in Tojol-ab'al Mayan: After volunteering at an Indigenous language center in Chiapas in 2016, Humberto Cruz Gómez (then a collaborator and now a compadre) invited me to visit his community; Saltillo, Chiapas, Mexico. My insights into the linguistic manifestations of Tojol-ab'al Mayan soul relations come from conversations with Humberto about everyday life and stories in Saltillo. These conversations led to the realization that the diverse contextual usage of the words 'altsil (soul/life force) and k'ujol (heart) shed light on who and what kinds of entities hold agency in Tojol-ab'al. According to B'a waxk'e sok ja b'a ex'tajan ja tojlab'ali (The Origin and Past of the Tojol-ab'ales): 'God made the first man and gave a soul to the ancient one and to everything that surrounded him. He gave life to all things, to the rocks, to the trees and even to the mountains' (Lomelí, 1988, p. 25). 'Altsil is given to every object in the universe by its creator and this is reflected in Tojol-ab'al stories and speech. K'ujol, a sister concept of 'altsili, has an important conceptual role in the construction of a range of compound phrases, like in ok'el sk'ujol, 'their heart cries' or 'they want something'. In interpreting phrases like ok'el sk'ujol, it is vital to use decolonial dialogic translation (Limón & Hernández, 2019), when simply translating the phrase as 'they want' we ignore a wider range of reference conveyed by the concept k'ujol. For instance, in a story about a tigress, one character says to another 'jel lek ja suerte awi'oj ja we'n wa x-ok' jk'ujol', 'what luck you have, my heart cries [out] for it', the type of inner yearning that this phrase communicates in this context cannot be expressed by the more common translation 'what luck you have, I want it'. Ixim (corn) is of utmost importance to Tojol-ab'al subsistence and spirituality, and is often discussed as sentient being with 'altsil; when farmers neglect their cornfields, the fields grow sorrowful and yield a less bountiful harvest. Community members reference a story wherein a family sows their cornfield along the bank of a river, torrential rains then flood the area and their cornfield becomes submerged, when the rain stops and the water table lowers, passersby hear the cries of women and children coming from the flooded cornfield despite not seeing anyone there, the corn was crying out because 'it wasn't harvested in the

time that it wanted to be harvested and was starting to rot'. The principle 'altsil extends beyond the animacy of tangible physical beings and includes meteorological (thunder, lightning etc.) and seasonal elements. Two oral history narratives show that kwaresma (lent) is an animated subject with agency over climatological patterns such as rain. In Tojol-ab'al, both human and non-human entities form part of community wherein tradition, praxis, holiness, and everyday life are not seen as independent spheres of reality but are interwoven into an experiential braid that emphasizes their inherent interconnection. Matter Beyond Agency

4:15 PM - 6:00 PM

TMCC - 205 D

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Mudit Trivedi (Stanford University)

CHAIR:

Cameron Hu (Research Institute for Sustainability, Helmholtz Centre Potsdam)

PRESENTER:

Severin Fowles (Barnard College, Department of Anthropology), William Mazzarella (University of Chicago, Department of Anthropology), Zoe Crossland (Columbia University, Department of Anthropology), Hussein Agrama (University of Chicago), Mudit Trivedi (Stanford University)

DISCUSSANT:

Aaron Eldridge (University of Toronto, Department of Anthropology)

DESCRIPTION:

As anthropologists and archaeologists have turned to contemplate 'materiality' over the last decades, we have often conceptualized matter as a problem of 'agency.' Our explorations of material life acknowledge matter's 'vitality,' 'activity,' 'autonomy,' 'recalcitrance,'

'resistance,' and similar idioms of agency. And we often take for granted that to acknowledge the agency of matter is to subvert a liberal-modern world-picture that occludes the ineluctable agency of non-normative entities. Yet: must the problem of matter be a problem of agency? Might this actually narrow, and not expand, the ethical and conceptual possibilities of anthropological inquiry? Might conventionalized talk of altermodern or non-modern materialities quietly reinforce liberal idioms of agency? This panel invites anthropologists to explore matter without agency. We visualize a conversation bridging critical and imaginative explorations of how matter comes to matter outside of agential relationality, secular historicity, and autonomous forcefulness. How might newly un/intelligible matter guide a rethinking of moral-political life? What enigmas of desire and what horizons of ethics arise beyond the problem-space of agency? And what conceptual and moral resources would we need for such object lessons?

Eco-Erotics and the Longings of Things: The subjectification of the object world—which is one way of characterizing the late twentieth century rise of thing theory—has hesitated. We have come to appreciate the agency of non-humans, to recognize their animacy, to expand semiotics to include forms of object perception, even to speak of the personhood of special sorts of things. But with some interesting exceptions, the subjectified objects of our imagination remain cold, transactional, and, quite often, oppositional: things that thwart, shift, or challenge human goals. The nonhumans conjured within thing theory, in other words, do not have personalities so much as personality disorders, as if they suffered from alexithymia or emotional incapacity. How might we reimagine the human-nonhuman entanglements of the material world as a field of desire and prurient curiosity? This paper looks to eco-erotics for an answer. Presenter: Severin Fowles (Barnard College, Department of Anthropology)

Self-Soothing Critique: The Anxious Matter of Agency: In this paper, I suggest that the ostensibly reparative granting of agency to non-human entities is, all too often, an attempt to avoid a more traumatic reckoning with an unexamined attachment to agency as ethical ideal. This becomes visible, ironically, through a rush toward an uncritical celebration of 'entanglement' in the name of destabilizing a supposedly hegemonic 'Enlightenment subject.' In fact, however, the desire to decenter the human, while laudable in itself, tends to reinstall, as a foil, a simplified conception of the human as a foil against which nonhuman difference can gain

critical traction. I relate this dynamic to a more general self-soothing anthropological response to the call to decolonize. Presenter: William Mazzarella (University of Chicago, Department of Anthropology)

Stones for seeing: crystals as boundary objects in archaeology and semeiotics: In Madagascar rock crystal is commonly known as vatolahita or stone that sees. Rock crystal seems to have been an important export into the medieval Indian Ocean world, but quartz crystal is also widely associated with tombs and boundaries in Madagascar's archaeology. This kind of white quartz is known as vatovelona or living stone. In this paper I'd like to think with quartz as something unsettled, a boundary object that can help us see how we constitute the line between life and nonlife and better understand the stakes in doing so. I revisit Charles Sanders Peirce's discussion of thought as appearing "in the work of bees, of crystals, and throughout the purely physical world". What might it offer for archaeology to consider thought semeiotically along Peircean lines, and to situate life as one kind of thought? This opens up a space of non-life that is not reduced to excess matter, the domain of physicists and material scientists (that which is left to study when no life is present), instead offering avenues for thinking the material world within a framework that is not only more-than-human but also more-than-life. Presenter: Zoe Crossland (Columbia University, Department of Anthropology)

Materiality and the Secularity of Science: A Rethinking: The historical secularization of the sciences (physics, cosmology, biology, geology, etc.) has usually been associated with the adoption of a materially reductionist ideology. Consequently, the embrace of a non-materialist stance (e.g. vitalism) is seen to open up a less dogmatic, less reductionist science. While these ideas may not be entirely untrue, the relationships between secular science and materiality are more complicated. Many of our central sciences are characterized by a continual drive to transcend the presumed constraints of the material (and especially Earthly) specificities in which they have been historically embedded, to achieve an ideal "universality," that is, the formulation of general laws that hold regardless of the specificities of particular substances. However, whenever this ideal transcension of the material and the Earthly meets a real instance of transcension (e.g. space travel), these universal laws are found not to hold, forcing the sciences back into the material specificities they continually try to divest themselves from. This ongoing desire and inability to transcend the material is a hallmark of their secularity, but it works to destabilize

some of their deeper presuppositions, such as the fundamental unity of all substance, and the deeper unity of science itself. It also works to open them up to once disavowed sciences that were more sensitive to material specificities, such as alchemy. Presenter: Hussein Agrama (University of Chicago)

Envy, Fragility and the matter of morals: Thinking between Instance and Substance: Agency-talk declares it is about what matters, and in recent anthropology matter has been extensively thought of as agential. To question this correspondence between matter and agency is to pose questions to both. This paper explores this curiously unproblematic correspondence of matter and agency in our discourse. It characterizes this correspondence in terms of two conditions: the loss of substance as an analytic, and the rise of (interactional) instance as a presumption of the social. If the first arguably leads to a separation of the moral and the material, the latter provides the arena for agency. I ground these explorations as they arise in an archaeology of conversion to Islam in South Asia. I consider exemplifications of substance as posed by the questioned relation of matter and morals in the quests and assemblages distinctive to the convert. I explore what glass ornaments, specifically made from glass deliberately made more fragile, might help us understand about these questions of matter and striving. Setting aside the scene of the agent agonistically suspended between the moral-and-material I turn to explore besetting, states of moral-material being inflected by the shadow of sin. I discuss the claims of *hasad*, or that envy which upsets agent and reason, that tries the patient, which promotes ruin, interrupting and limiting our moral quests. I reconsider how matter arises as substance and remedy, a means, an aid, on the horizon of that self upset and ruined by envy. From being beset by agency, to thinking of states of being beset by substance may then open new problems for what we call property and affordance. Presenter: Mudit Trivedi (Stanford University)

Negotiating Well-being: New Subjectivities and Identity Formations in Diverse Local Settings

4:15 PM - 6:00 PM

TMCC - 203 A

Oral Presentation Session

REVIEWED BY:

Society for Psychological Anthropology

ORGANIZER:

Brian Thomas

PRESENTER:

Brian Thomas ,Hema Ganapathy Coleman (University of Toronto),Yasmine Lucas (University of Toronto Libraries)

DESCRIPTION:

This session examines various new settings in which subjectivities are explored, and how cultural identities, Western and non-Western are negotiated. The papers examine the following sites and problematics: Using the British television show *Taskmaster* to explore how various types of contingency are leveraged by actors to devise tactical gambits during their participation in games, and their broader implications; Examining the meaning and purposes of a Hindu religious identity in a diaspora for first- and second-generation Indian youth active in a large Hindu organization in the multicultural city of Toronto in Canada, especially how these youth morally negotiate acculturation and experiences of racial and religious discrimination and a sense of spiritual emptiness; Using Heidegger's ideas of resoluteness and authenticity to examine transgenerational trauma among Holocaust survivors' children in North America, in particular, how various entities, material and conceptual, have brought parents' pasts into the present in confusing and fragmented ways, and how these Holocaust survivors' children have been transcending their childhood's ambiguities by nourishing entities that index the Holocaust; And, how the Kumeyaay people, a transnational tribe split by the U.S./Mexico border, struggle with colonization and traumas affected by the border, especially how they use various forms of resistance, including intertribal exchanges, reviving dormant ceremonies, and border protestations to empower their communities in the present and for the future.

Contingency and Tactics: Indeterminacy in *Taskmaster*: Prior research into games recognizes they are composed of measures of indeterminacy. Particularly this takes place through contingency, seen in four types; stochastic, social, performative, and semiotic. The following examines how these forms of contingency can be leveraged by actors to devise tactical gambits during their participation in games. This study conducts a content analysis of the first nine seasons of the British television show *Taskmaster*, initially examining whether devising tactics around any of these forms of contingency provides greater success within the context of the show. Further, it examines the role a referee plays in adjudicating this game, particularly when it comes to semiotic and (rarely) stochastic contingency. Finally, it places tactics, and referee adjudication within the

context of prior research examining tactics involving the manipulation of contingency in therapeutic trpgs, among both players/client, and clinician/referee.

Presenter: Brian Thomas

A Hindu Identity Abroad: Acculturation, Meaning-Making and Selfhood in the Lives of Indian Hindu Youth in Toronto: This paper studies the meaning and purposes of a Hindu religious identity for first- and second-generation Indian youth active in a large Hindu organization in the multicultural city of Toronto in Canada. The participants in this ethnographic study included youth attendees, organizers, and community leaders at Hindu events, including festival celebrations, religious discourses, Hinduism classes and yoga workshops in the Greater Toronto Area. Over a six-month period, I utilized in depth interviews, participant observation, and detailed fieldnotes as sources of data. Data from these sources were supplemented with a study of the newsletters and pamphlets circulated by the organization, and the website maintained by them. Qualitative analysis employing open, thematic, and focused coding in NVivo was used to arrive at the main themes that emerged across interviews. Textual analysis was used to understand the chief ideas embedded in the chosen published texts. The central theme that emerged from the data was that for immigrant Indians residing even in a putatively plural place like Toronto, if life had to have any real meaning, finding a community of religious compatriots, and engaging in routinized, systematic Hindu religious and cultural practices was crucial. The pressures of acculturation, and experiences of racial and religious discrimination leading potentially to ethnocultural rootlessness in what was seen as the morally deficient west, were driving concerns. For the participants in my study, commitment to Hindu ways of living and believing offered a practical path to resisting both assimilation, and the spiritual emptiness that could follow. Most importantly, it offered a powerful moral compass with which to live complicated diaspora lives, and a connection, whether real or imagined, to their homeland, their forebears and to extended family members while maintaining a unique, bounded ethnocultural identity. Presenter: Hema Ganapathy Coleman (University of Toronto)

Transgenerational Trauma Among Children of Holocaust Survivors: a Heideggerian Reading: Theories of transgenerational trauma that have popularized over the past thirty years suggest that people born of those who experienced traumatic events may experience their harmful effects without having experienced the events first-hand. In other words, the transition out of the traumatic event may span lifetimes. Contributing to

anthropological scholarship that seeks to de-naturalize this concept, this paper will take a Heideggerian approach to the idea of transgenerational trauma, as it manifests among children of Holocaust survivors in North America. Drawing on memoirs, ethnographies, and interviews I conducted over the past year with children of survivors, I will argue that inherited material and conceptual entities in these descendants' childhood worlds brought their parents' pasts into the present in confusing, fragmented ways. Through a confluence of social-political, practical, and emotional factors, the Holocaust came into these descendants' purviews more than other fragments of the past--say, remainders of their parents' prewar worlds. Heidegger theorizes a certain phenomenological disposition, called resoluteness, whereby people strive to actualize specifically chosen possibilities handed over to them by the past, in order to live authentically. This paper will argue that, to become resolute and transcend the ambiguities of their childhoods, children of survivors later in life often chose to nourish and develop entities indexing the Holocaust, because these were most ready-at-hand. Focusing on the Holocaust in this way has come with negative side effects, such as disdain or willful ignorance of people who threaten to discredit or dilute this Being-toward-the-Holocaust--for instance, Palestinians and people who suggest that the Jewish genocide was not unique. Presenter: Yasmine Lucas (University of Toronto Libraries)

Perspectivizing health: Frictions and alliances in conjoint conversations

4:15 PM - 6:00 PM

Virtual - Room 2

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Annette Leibing (University of Montreal)

CHAIR:

Dominique Behague (Vanderbilt University), Sahra Gibbon (University College London, Department of Anthropology)

PRESENTER:

Dominique Behague (Vanderbilt University), Annette Leibing (University of Montreal), Emilia Sanabria (National Centre for Scientific Research (CNRS)), Cíntia Engel, Helen Gonçalves

DISCUSSANT:

Claudia Fonseca (Universidade Federal do Rio Grande do Sul), Luiz Fernando Dias Duarte

DESCRIPTION:

This session challenges conventional forms of ethnographic practice and exchange when anthropologists situate themselves as 'native,' 'foreign' – or indeed something in between – vis-a-vis the landscapes and health issues which they seek to understand. The participants of this panel aim to unsettle the power and geopolitical positionalities that underpin the moral and cultural binaries embedded in the native-foreign distinction by taking Brazil as a 'glocal' example. What happens when conversations between anthropologists working in Brazil transcend essentializing divisions, such as those reified in framings of the so-called Global South and Global North? How to approach key analytical concepts that are prominent in the anthropology of (bio-)medicine – concepts that are often, but not always coined and popularized by scholars from the 'Global North' – in ways that generate multiplicity and experiments in perspectivizing health in Brazil? How is 'Brazilian health' entangled with wider historical and globalizing biopolitical developments like pharmacological governance and evidence-based medicine and how well do the concepts we use elucidate or obfuscate what is at stake? We understand this session to be a collaborative experiment, a conversation to spark the potentiality of 'mutual decolonization'. We depart from the premise that all scholars, regardless of where they are situated, are mutually colonized (though in dramatically different ways) by unquestioned dominant ways of analyzing health. We experiment with new ways of doing ethnography and theorizing health that move away from an attempt to 'give voice' to 'native epistemologies'. In enacting this shift, we highlight the convergences and frictions that arise when collectives of scholars from different positionalities --- from inside and outside the country as a glocal site — come together, to conjointly engaging with problems and possible solutions to specific landscapes of care. Topics to be co-discussed will cover the politics of the psyche, dementia and the notion of the person, genomics and personalized medicine, and the renaissance of psychedelics in Brazil.

Public Space in Transition: New Meanings and Configurations

4:15 PM - 6:00 PM

TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Setha Low (CUNY, Graduate Center)

CHAIR:

Suzanne Scheld (California State University, Northridge, Department of Anthropology)

PRESENTER:

Julian Brash (Montclair State University, Department of Anthropology), Maurice Rafael Magaña (University of Arizona), Valentina Gulin Zrnic, Naomi Adiv (University of Toronto), Mervyn Horgan (University of Guelph, Department of Sociology & Anthropology)

DISCUSSANT:

Setha Low (CUNY, Graduate Center), Matilde Cordoba Azcarate (University of California, San Diego)

DESCRIPTION:

This roundtable reconsiders the utility of public space as an analytic concept, spatial configuration and political ideal. As public space transitions into something new, virtual and hybrid, several key questions emerge. Is the term still useful for those who work on public activist projects? Is the philosophical and political ideal relevant to the public/private development of spaces like Hudson Yards in New York City or the northern suburbs of Bogota? Faced with the challenges of capitalist-driven illiberal and neoliberal urbanism, will public space retain normative value because of its role in providing greening and ecoservices, informal workplaces, health and well-being, and sites for democratic practices? How do we deal with these contradictory and complex forms of public space, and how do they influence our work? By questioning what public space means today and its political potential for tomorrow, this roundtable explores how the concept has changed, and perhaps no longer is adequate to address the contemporary complexity of urban space use and production. The panelists assess the value of retaining this term, with its conceptual and historical legacies, and to determine whether another framework offers a better way build a more inclusive, just, and socially and ecologically responsible future. We do so using ethnographically grounded analysis that explores the ways in which the novel and the familiar, power and resistance, and the virtual and the physical are entangled in these emergent, hybrid spaces that we have understood as public. -Maurice Rafael Magaña asks how public space can serve as an archive of struggle and community through the nexus of physical and virtual spaces. -

Matilde Còrdoba Azcárate investigates new forms of place-making occurring along the rails of the Tren Maya. -Mervyn Horgan examines Canadian outdoor ice rinks as expressive spaces of intergenerational, interracial, and multi-skill interactions that are absent or hindered in other spaces -Julian Brash discusses the relationship between aesthetics and the production of value on the High Line in New York City, which results in a politically ambiguous space characterized by a complex balance between openness and inclusiveness, on the one hand, and control and exclusion, on the other. -Kristin Monroe asks how current geopolitics shape and are expressed through the urban landscape of Beirut. -Naomi Adiv wonders that as North American cities transition to more privatized streams of revenue for capital and operating budgets, who will have the power to maintain the urban public realm? -Valentine Gulin Zrníc employs imagery and imagination to explore how we can become more visionary and creative through co-design and participatory planning processes. Setha Low, as discussant, asks why German and Austrian socio-spatial scholars reject the notion of public space and prefer the concept of 'lived space' in its stead. She considers where these various re-conceptualizations might lead in the North and South American context where 'publicness' has profound political consequences.

Religious Practice at the Edge of Institutionalization

4:15 PM - 6:00 PM TMCC - 206 D
Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

PRESENTER:

Toomas Gross ,Janaki Phillips

DESCRIPTION:

This panel features four papers, working across diverse ethnographic contexts, that ask how religious practice and identity succeeds or fails to coalesce when operating at the edges of established institutions.

From “buffered” to “porous” selves: Self-transcendence during spiritual festivals in Estonia: Multi-day festivals have become a common form of spiritual events that bring together increasingly heterogeneous crowds of adherents to emergent religions, practitioners and aficionados of fringe knowledge, self-seekers, and many others. Focusing on the ethnographic context of Estonia, this paper approaches such spiritual festivals as embodied events of boundary-crossing, self-

transcendence, self-fashioning, and learning, where festival participants can collectively engage in various mental and physical activities that enable them to 'open up' – to themselves, to others, and to the world. Gendered body is at the centre of most activities and rituals in these festivals. Sometimes referred to as 'processes,' these rituals are essentially acts of embodied learning that are generally performed in unison with other bodies, through synchronized movement and sound, dance, touch, or, at the very least, through purposeful eye-contact with others. Charles Taylor's (2007) distinction between the 'buffered' and the 'porous' self is useful for conceptualizing the essence and transformative potential of these embodied 'processes.' While the 'modern buffered self,' according to Taylor, is characterized by a firm boundary between the mind and the body, as well as between the self and the other, the 'porous self' is opened up to both inner and outer world. Rendering one's 'buffered' self a 'porous' one is an act of ethical self-fashioning that is considered to lead to a more 'authentic' way of coexistence and is sometimes also framed by festival participants in terms of 'becoming a tribe.' Presenter: Toomas Gross
 Past, Present, Future: The Temporal Structure of Contemporary Tarot Reading Practices: Three cards lay face up on a tarot reader's table representing the client's past, present, and future. This three-card spread is a mainstay of contemporary tarot reading practices. In this paper I examine the figure of the tarot reader as a cultural expert in decision-making, who helps clients negotiate their everyday aspirations and anxieties in the face of uncertainty. Today with more people identifying as 'spiritual but not religious' than ever, the tarot reader has emerged as a figure outside of religious institutions who is able to offer situated moral guidance by connecting clients with a variety of spiritual guides, offering interpretations of cards grounded in local ethical sensibilities, and by providing guidance on how to shape desired future outcomes. Drawing on ethnographic episodes from my dissertation research on the cultural production of futurity through tarot reading practices in Los Angeles, California and Mumbai, India I analyze the temporal structure of a tarot reading. Grounded in material semiotics and making use of Bakhtin's notion of the chronotope, this paper shows the ways in which a client's past, present, and future are opened up for re-narrativization during the course of a reading. The meaning of each card in each position of the spread only emerges through a lively relational process of making connections across the images on the cards to the time and space of the client's life history. Through this process of sense-making, readers aim to

help clients intervene in their own imagined timescapes in an attempt to help them re-frame their past and create desired futures. Presenter: Janaki Phillips

Ritual and Transition: Liminal Praxis in Uncertain Times

4:15 PM - 6:00 PM

TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Shayne Dahl (University of Lethbridge)

CHAIR:

Nicola Mooney

PRESENTER:

Nicola Mooney, Pauline Aucoin (University of Ottawa), Kianna Turner (University of Lethbridge, Department of Anthropology), Shayne Dahl (University of Lethbridge), Hillary Rodrigues

DESCRIPTION:

In this panel, we consider ritual liminality as a form of temporal praxis, a way of making, marking, and shaping time, of fusing historicity with futurity and speculative possibility to transform the present. Ritual gives cyclical structure to the temporal flow of life, but it can also generate or attempt to create transitions into desired futures, imagined worlds, and other ways of life. Ritual presents a symbolic medium into new lifeways and carries the promise of ontological and cosmological transformation. Our papers explore the liminal praxis of ritual in the uncertain, post-pandemic present. We begin with the transformation of the home through ritual during the pandemic and then consider the carnival of transformational protest, the digitization of Hindu gods and their ritual observance, a global UFO summoning ritual, and the nuanced ambiguities of ritual in the neo-nondual spirituality movement. Given that rites of passage are often life crisis rituals, we contemplate how ritual theory might illuminate the 'permacrisis' and 'neotribalisms' of the present as we transition into an uncertain future.

Transforming Homes to Transcend Time: Covid Rituals and the Domestic Sublime : Early in the pandemic, much was made in popular Western media of our loss of collective rites and the creation of socially-distanced rituals. Even the concept of liminality seemed to have

captured the popular imagination. Generally unrecognized in these accounts was the much longer durée of the apparent loss of ritual in the West, as well as the possibility that widely observed pandemic activities such as baking and decluttering might be construed as ritual practices. This paper explores the popular online discourse around these pandemic domestic trends as implicit forms of ritual. Reportage on the adoption of these practices was typically light and even humorous in tone, as well as refreshingly ungendered, but nevertheless conveyed an enchanting potential for collective wellbeing. While these ritual activities seemed particularly noteworthy owing to the featurelessness of everyday life amid loss of movement and assembly, precedents for the ritualization of domestic practices were clearly apparent in a range of consumer-oriented popular lifestyle and wellness trends like the 'life-changing magic of tidying up' (Kondo 2010), the embrace of hygge (Wiking 2016), and any number of food fads, artisanal and other. Confined to our homes amid a mass crisis, it is perhaps unsurprising that domestic rituals emerged with such force: transforming bodies and spaces enabled the seeming transcendence of time. Taken together, might rituals centering the home as sacred site of personalized space, aesthetics, wellbeing, and embodied practice suggest the potential of a domestic sublime, or are these supposed transformations neoliberal, consumerist, gendered, and reactionary? Presenter: Nicola Mooney

Carnival, Chaos and the Disordering Potential of Ritual at the Ottawa Truckers' Convoy: While anthropological studies of ritual have focused primarily on their formalized nature and importance to social cohesion, stability and consensus building (Durkheim 1912), recent approaches point to its 'disordering' potential as well (Kertzer 1988). A focus on the 'scripted,' Aalberts et al (2020) have argued, has been at the expense of understanding the 'dynamic tension' played out between recursivity and the ordering process and the disruptive potential of 'unexpected and creative' elements manifest in experimentation, reversal and liminality (Turner 1977); moments that bring with them the possibility of social risk (Douglas 1985). This paper examines events that took place in 2022 as part of the Truckers' Convoy, an anti-vax protest that saw the occupation of the core of Ottawa in February 2022. This event brought weeks of disruption to Canada's capital city and its Parliamentary precinct, as well as the closure of many downtown businesses and the University of Ottawa's campus. Marked by an air of the carnivalesque, protesters held music concerts, lounged in a hot tub, roasted pigs on a spit, displayed symbolic

reversals, played street hockey and set up a bouncy castle in Ottawa's core; while protest organizers delivered a 'manifesto' asking for the dissolution of the current elected government. Analysis focuses on the new lexicon introduced by protesters as they attempted to reconfigure understandings of government Covid-19 policies, and in the public commentaries that debated its meaning and wider political significance as a 'disordering' event within the context of democratic governance, the pandemic crisis, and global protest movements such as the gilets jaunes in France (Abélès 2020: Ravelli 2020). Presenter: Pauline Aucoin (University of Ottawa)

Death Doulas: Companionship and Ritual at the End-of-Life: Death inevitably marks the cycle of life. As an event, death provides meaning and structure to the passing of time, yet it is a feared and avoided topic. The COVID-19 pandemic brought death to the forefront of public consciousness, highlighting the importance of end-of-life care. Amidst the modern medicalization of death, there is an increased interest in support from death doulas, professionals who assist individuals and their families by providing practical, emotional, and spiritual support throughout the process of dying. All religions utilize beliefs, rituals, and practices that offer comfort and direction for understanding and coping with the process of dying and the afterlife. Yet, in secular domains there is a gap for end-of-life support, which death doulas aim to fill. Death doulas facilitate meaningful conversations and creative experiences to help people find peace and fulfillment as they transition toward the end of life. To date, there is little research on how death doulas use symbolic rituals to create a space where individuals can experience a sense of reconciliation, transition, and connection with a more profound sense of meaning and purpose with their past, present, and speculative possibilities in the afterlife. This paper incorporates evidence from literature reviews, digital ethnography, and semi-structured interviews to illuminate the role of death doulas in how we approach the cessation of our biological existence in an outwardly secular context. Presenter: Kianna Turner (University of Lethbridge, Department of Anthropology)

Close Encounters of the Fifth Kind: Anthropological Reflections on a Global UFO Summoning Ritual : In 1972, Dr. Allen Hynek, a professor of astronomy at Northwestern University, classified three levels of close encounters people report having with unidentified flying objects: First, a visual sighting of a UFO less than 150 meters away; second, the UFO is observed to have had a physical or physiological effect on the immediate

environment; and third, an animated entity is observed either operating the UFO or in the surrounding environment. Later ufologists would add two additional types of close encounters. A close encounter of the fourth kind is classified by abduction by the UFO. The fifth entails communication between human beings and the operators of UFOs, whether they be extraterrestrials, time-travellers, or interdimensional beings. In this talk, I consider a ritual called "CE-5" that began in Peru in the 70s but has since gained traction in the US and now around the world. Drawing on ethnographic fieldwork conducted in Japan, I argue that CE-5 is a ritual of cosmological transition. Through skyward meditation and intentions directed toward interspecies telepathy with the operators of UFO, CE-5 provokes in participants a unique form of cosmic consciousness in which the universe is viewed not as dead empty space, but as an animate expanse, teeming with intelligent life. This perspective, nurtured by CE-5 ritual practice, adds a cosmic dimension to participants' views of self and society at home, here on Earth. Presenter: Shayne Dahl (University of Lethbridge)

Inescapable Ritualization: Emergent Configurations within the Neo-nondual Spirituality Movement : The Neo-nondual Spirituality Movement (NSM) is a community of seekers and teachers seeking a pivotal religious experience of nondual realization. Influential NSM teachers include Ramana Maharshi, Jiddu Krishnamurti, Rupert Spira, Adyashanti, and Eckhart Tolle, who gained international prominence through his book *The Power of Now* and webinars with Oprah Winfrey. While classical Hinduism and Buddhism also consider nondual realization as the supreme goal, the NSM has distinct configurations from its conventional antecedents. For instance, the NSM dismisses rigorous ritualized methods such as intense meditations, with Krishnamurti being a trenchant critic of all authoritative religious teachers, traditions, and techniques. This critique is embraced within many factions of the NSM, which situates seekers intrinsically in a liminal space outside the boundaries of conventional religious structures and practices. However, despite the NSM's rejection of ritualized structures, emerging ritualization is observable within subcultures of the movement. Victor Turner's observation of the inevitable transition from anti-structure to structure and Catherine Bell's notion of ritualization provide valuable theoretical tools to understand the ongoing dynamics within the NSM. While most NSM teachings point to spontaneous mindful awareness, student-teacher devotionism and satsang gatherings are emerging, with group retreats and workshops of various body-mind techniques

entering the paid curricula of many teachers' offerings. Even those more aligned with Krishnamurti's teachings have begun to routinize a distinctive approach to inquiry known as 'dialogue.' Thus, ritualization seems inescapable in the NSM's struggle with intentional liminality as it transitions from anti-structure to structure. Presenter: Hillary Rodrigues

Studying Up? Ethnographic reflections on studying power from multiple positions of marginality and privilege across medicine, science, and technology

4:15 PM - 6:00 PM TMCC - 717 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Natali Valdez (Yale University)

CHAIR:

Natali Valdez (Yale University)

PRESENTER:

Jessi McNeill (CUNY Graduate Center), Anna Wynfield, Raphaelle Rabanes (University of Washington)

DISCUSSANT:

Alberto Morales (Princeton University, Department of Anthropology)

DESCRIPTION:

In her piece entitled 'Up the Anthropologist - Perspectives Gained from Studying Up,' Laura Nader made a call to examine wealthy, elite, powerful people and networks (1974). This call propelled a research trajectory that shifted the ethnographic gaze onto elite, hard-to-reach spaces in the United States and Europe, such as national nuclear laboratories (Gusterson 2004), Wall Street (Ho 2009), Hollywood film production (Ortner 2010, 2013), European secret societies (Mahmud 2014), and private equity financiers (Soules 2021). This tradition, along with the growth of the anthropology of biomedicine and science and technology studies, has focused on elite spaces of scientific knowledge production (Lock and Nyugen 2010; Traweek 1988). While these examples of studying up, or even 'studying sideways' (Ortner 2011), have shaped conventional ethnographic praxis, this roundtable re-examines questions of power, ethics of transparency or opacity (Glissant 1990), and access across changing contemporary political climates and diverse geographic

sites. Inspired by a forthcoming piece in MAQ by Natali Valdez, scholars/anthropologists in this roundtable ask different questions related to navigating dynamic power landscapes in studying elite processes of scientific knowledge production: for instance, how steep is the climb towards accessing privileged spaces? What kinds of hostile conditions or climates shape the ethnographic process? What does harm reduction look like in these spaces for ethnographers? How do approaches and methods change as ethnographers transition to different career stages and across other institutions? Panelists will draw on their past, present, or anticipated ethnographic research to provide reflections on a variety of topics and field sites, including heterogeneous native and settler research relationships; complex politics of studying Black and conservative anti-abortion advocates; accessing clinical and biomedical spaces from a variety of positions; experiments/experimenting with and along peripheralized scientists; and embodied sovereignty in non-sovereign contexts.

2-700

The Elemental Ethnography Toolbox

4:15 PM - 6:00 PM TMCC - 205 C

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Ashley Carse (Vanderbilt University, Department of Anthropology)

CHAIR:

Cymene Howe (Rice University)

PRESENTER:

Zeynep Oguz (Université de Lausanne), Elizabeth Reddy (Colorado School of Mines), Ashley Carse (Vanderbilt University, Department of Anthropology), Jeff Diamanti (University of Amsterdam)

DISCUSSANT:

Andrew Mathews (University of California, Santa Cruz, Department of Anthropology)

DESCRIPTION:

The ethnographer, we are often told, is a data collection instrument who learns through gradual attunement to a social world-by participating, observing, interviewing, and writing notes. But what do ethnographers do when their research is concerned with elemental forces that are only partially accessible to and comprehensible through the human sensorium? This panel brings together anthropologists conducting research on earth,

water, air, and fire to learn from one another's methods. We will discuss tips, tricks, and protocols from established conversations on elemental themes, as well as emerging work on wind, ice, extreme heat, and geology in order to make contributions to a toolbox for elemental ethnography. We are inspired here by the development of multispecies ethnography. If the ethnographer-as-data-collection-instrument can be attuned and extended to make sense of worlds populated by animals (including humans), plants, microbes, fungi, and other forms of life, could we do the same with phenomena typically characterized as abiotic? To understand assemblages of the living and the non-living? Each panelist's paper will propose a tip, trick, or protocol—a research tool—that contributes to the elemental ethnography toolbox.

Collision: Moving with Tectonic Plates Across Scales of Violence: Building on recent experiments in thinking elementally in anthropology, as well as Katherine McKittrick's provocation to not reduce geography (or geology) to a metaphor, analogy, trope, and symbol, in this paper, I move with tectonic plate movements and their geo-political consequences. Turkey lies at the intersection of three of the tectonic plates that make up the Earth's crust: the Anatolian, Arabian, and African plates. Arabia is moving northwards into Europe, causing the Anatolian plate to be pushed out westwards. The movement of the tectonic plates builds up pressure on fault zones at their boundaries, causing earthquakes. This movement has also shaped Turkey's inner seas, its mountainous southeast, and what lies under the ground. Taking tectonic plate motions as an ethnographic tool, I move with "collision" both metaphorically and materially across temporal, spatial, and sociopolitical scales: this motion takes me to the political making of a disaster during the catastrophic earthquakes that shook southeast Turkey in February 2023 and the public debates regarding Turkey's geology in their aftermath. From there, I arrive at the geographies of petroleum exploration and anti-Kurdish warfare, where geological formations are weaponized under regimes of counter-insurgency and military occupation. Moving through awkward scales and disjointed temporalities, I finally end up at another geo-political story, where tectonic plate movements' shaping of the Marmara Sea collide with capitalist industrialization, culminating in the seeming "death of the sea" in 2021, when a thick, ecru, jelly-like layer of slime, covered massive portions of the 2.5 million-year-old Marmara Sea. As an ethnographic tool for the elemental anthropologist, tectonic collision offers new possibilities for inter-scalar research and storytelling. It

also provides an opening to theorize and simultaneously interrupt the often temporally and geographically dispersed forms of geotrauma. Presenter: Zeynep Oguz (Université de Lausanne)

Choosing and Losing Attunement: A Protocol for Talking and Learning about Life with Seismicity: Technoscientists can describe the earth as a thermodynamic system of pressure and motion. Tectonic plates are always moving in different directions, over, under, and against each other, but immense friction also keeps them from slipping while stress builds up at faults within plates and at their interfaces. Eventually, the stress is great enough that rock slips against rock, releasing seismic energy, which travels through the earth at roughly the speed of sound according to effects of density, rigidity, resonance, and refraction. In my fieldwork, I found that many involved in hazard risk mitigation conceptualized people as part of this system. These people were responsive to unpredictable earth motion as if they, themselves, were part of inexorable geophysical systems: simple, disposed to action, and automatic. I sought this form of attunement for myself when I began to study seismicity, but now both pursue and seek trouble at once. In this talk, I draw on the "elemental" to sensitize me to the "conceptualization of the essential, material order of things" (Neale, Addison, and Phan 2022). Here, elementality facilitates attention to how technoscientific experts conceptualize human action. I first outline what I mean when I say that human actions like maintaining emergency supplies and taking emergency action are treated as if they should or could be part of abiotic churning underground. I then offer a protocol for enacting encounters that engage and disrupt this model. I describe my use of well-supported autoethnographic vignettes about my own failures to relate to earthquakes as experts might desire. I argue that doing so from certain kinds of subject positions might allow us to advocate for other models of human action and agency. It might, further, allow me to ask other questions about what is elemental to earthquake hazard for the people I work with, and explore what else they are doing as they find ways to include humans in geophysical systems. Presenter: Elizabeth Reddy (Colorado School of Mines)

The Ignorance Map: In this presentation, I modify the ignorance map, an analytical protocol proposed by Joseph Dumit to add to the elemental ethnography toolbox. In Dumit's "Writing the implosion" (2014), this exercise is presented as a way to grapple with patterned ignorance about a research object. It begins with the

creation of a “knowledge map” that takes stock of what has been learned in medias res—a schematic rendering of the themes, stories, symbols, plots, forms, tropes, and connections that anthropologists generally collect through their research. This suggestion echoes standard advice in ethnographic methods textbooks, which often encourage researchers to pause, take stock, identify themes, articulate emerging questions, and, perhaps, reorient. The ignorance map goes a step further. A figure-ground reversal of what the researcher knows, its creation encourages critical reflection on what they do not know and, crucially, why they don’t know. What “missing” information can’t be found? How might one explain patterned absences? Can one articulate a theory of lacunae and omission? This is potentially useful for the elemental ethnographer who, by definition, engages phenomena that illuminate the epistemic limits of the suite of methods we have inherited. Given the limitations of the standard ethnographic toolbox for understanding phenomena that are only partially accessible to and comprehensible through the human sensorium, the ignorance map can be a diagnostic tool and a catalyst for experimentation and collaboration. I explore the potential of this protocol by mapping my ignorance about geomorphology and the political life of sediment in Georgia’s Savannah River. Presenter: Ashley Carse (Vanderbilt University, Department of Anthropology)

Deictic Field Acts: In this talk I hazard an argument about where the abstract and concrete work of elemental forces becomes most legible for the social and humanistic sciences. While the elemental turn in anthropology, media studies, and cultural analysis has involved a thorough rethinking of the agential and atmospheric qualities of elements (both modern and classical), in addition to the ethical attention required for an orientation not premised on hylomorphic resemblances, I want to suggest that elemental forces are deictic in nature and hence require attention to the material syntax of interpretive semantics. I’ll offer two short examples of an elemental syntax—one drawn from John Sallis’ landscape philosophy, and the other from Luce Irigaray’s poetics of intimate negation staged in the furnace of Hegelian dialectics—and conclude by revisiting the category of “the field” in Marilyn Strathern’s “The Ethnographic Effect” with a focus on the modalities of immersion and placement working through her attention to writing. Presenter: Jeff Diamanti (University of Amsterdam)

2-705

The Personal and Political of Work

4:15 PM - 6:00 PM

TMCC - 802 B

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Benjamin Slightom (Yale University)

PRESENTER:

Dolores Señorans (University of Cambridge), Arpita Sinha (Washington State University), Carmen Nave , Benjamin Slightom (Yale University)

DESCRIPTION:

Papers in this session explore the relationship between the affective and institutional through ethnographic explorations of work. Discussion of both the individual and collective political experience of labor allow insight into policy, organizing, health, and aid. In these presentations, we will see the relationship between institutional bodies and working bodies in examples of: the complex demands of corporatized aid and formerly unhoused workers sense of obligation toward clients; the U.S. 'reasonable officer test,' which suggests a particular relationship between professionalization, violence, accountability; the political and affective implications of an Argentinian Union organizational strategy to create common workplaces; and the effect the industry norm of silence can have on models ability to manage their menstrual cycles.

Political Experiments with the Economy: An Ethnography with unwaged garment workers in Argentina: This paper addresses the creative experiments with the economy developed by a trade union that brings together migrant garment workers in Buenos Aires, Argentina. In the country, garment production is predominantly outsourced to medium-size sweatshops and small family sweatshops located in the workers' homes that supply both formal sector brands and informal markets. Drawing on over 7 years of ethnographic fieldwork and political collaboration together with workers that belong to the garment sector branch within the Union of Workers of the Popular Economy, it explores the political possibilities that opened up through the union's main organisational strategy: the formation of the textile hubs (polos textiles), common workplaces that allowed workers to move their work activities out of the family home. As the number of hubs grew and more workers were incorporated to the union, important efforts were made

to improve the labour process and collectivise production among the hubs which entailed the negotiation of large work orders from the State, private companies, and brands, alongside the development of a technical team and logistics. In doing so, workers and activists engaged in creative experiments with the economy that sought to increase the benefits for the workers within the supply chain of garment production, while at the same time, strengthening community organising. In dialogue with recent anthropological studies on labour and the economy, the analysis presented will trace the intertwining of politics, labour, and the creation of value. On the one hand, doing politics or militancy reveals itself as a form of labour as it helped secure important assets and produce value. Moreover, the creation of their garment brand (Carpincho Indumentaria) and the partnership with certain private work suppliers resulted somewhat unexpectedly in the monetisation of their singular productive and political organisation. On the other hand, the transformative potential of these experiments crystallised unexpectedly during the pandemic through a particular initiative in which scale and coordination allowed for a political redistribution of profit. Overall, the paper underscores that by producing commodities collectively they produced themselves as militant workers-with important affective implications- but also the changing nature of these experiments with the economy, the debates and controversies that emerged, and the multiple ways in which workers and militants imagined the futures deriving from these efforts. Finally, it connects the reflection on labour and value with issues related to care by tracing how these economic experiments also fuelled the creation of collective ways to sustain life through grassroots initiatives. Presenter: Dolores Señorans (University of Cambridge)

Hiding Your Period is Necessary: Menstrual Etiquette and the Working Experience of Fashion Models: The fashion industry holds the model's body to immutable standards. Even the smallest fluctuations during menstruation- bloating, dermatological issues, or other bodily changes can possibly cause models to lose their job. This is made worse by the stigma around menstruation which encourages a culture of silence, secrecy, and shame, stopping models from organizing work around their menstrual cycle. Additionally, menstruating on the job can have significant physical impact on the models (starting from fatigue and aches while performing physically demanding tasks in high heels to Toxic Shock Syndrome from inability to change tampons due to lack of access to restrooms) due to the demanding nature of the job and a workplace that is hostile by design. The fashion industry has, therefore,

failed to care about or accommodate the health needs of one of its primary worker demographics, the female models, who anyway work as precarious workers. This negligence on the industry's part, which threatens the health and well-being, as well as the labor rights of models, makes menstruation a deeply political issue in need of urgent scrutiny. In this paper, I use field observation and ethnographic data collected in India to cover aspects like the effects of changes in physical appearance, medication and pain management, menstrual hygiene, and special precautions like leakage prevention on the job. Combining Anthropology of the Body, Anthropology of Work, and Critical Menstruation Studies, I critically analyze the experiences and perceptions of menstruating models and investigate how they navigate workplace demands while on their menstrual cycle. This lets us ascertain what impact menstruating on the job has on the models' work and health and how the workplace poses further health risks to them. Finally, this brings attention to the need for more inclusive and supportive working conditions for models, particularly regarding the management of menstrual cycles and related health issues. Presenter: Arpita Sinha (Washington State University)

'It's the hands that kill you:' Training discourses and police oversight: In the United States, trials of police officers in relation to on-duty shootings are rare but significant instances of police oversight. During these trials police training is mobilized to help produce retrospective accounts of use-of-force. Four types of witnesses typically engage in discussions of police training during such trials: defendant officers, witness officers, officers who were responsible for training programs the defendant participated in, and use-of-force experts. Drawing on such testimonies, this paper argues discourse about training elaborates on the Supreme Court decision in *Graham v Connor* to suggest a uniquely 'police' perspective that is not readily understandable to the lay person. This unique perspective is epitomized in the 'reasonable officer test,' which sets officers apart from the more common 'reasonable man.' Testimonies suggest a profound relativism in the police perspective of the relationship between training and accountability-one that sees law enforcement agents as the only agents capable of defining excessive force. Presenter: Carmen Nave

Aid Recipients & Aid Makers: How Black Women Shape Nonprofit Aid in Detroit, Michigan: Since 2019, the local consortiums that govern nonprofit homelessness aid organizations and their federal funding, known as Continuums of Care (CoCs), have been in transition.

Diversity, equity, and inclusion efforts within the nonprofit aid world have pushed for the inclusion of 'persons with lived experience of homelessness' (PWLEH) on decision-making bodies within CoCs. The U.S. Department of Housing and Urban Development has backed these changes by awarding competitive bonus funds to CoCs that increase PWLEH participation. In turn, this backing has created a new, lucrative sector for 'equity consultants' that review CoC governance structures and recommend changes which incentivise PWLEH participation. In Detroit, I worked alongside a group of low-income Black women who joined the local CoC after an 'equity audit,' witnessing how their tenuous inclusion was both lauded as progressive and lampooned as setting a dangerous precedent for the organization. In this paper, I explore how these women were perceived by the broader CoC and how these women narrated their experience of the CoC. I argue that the inclusion of formerly unhoused Black women within these regulatory bodies sketches a picture of the contemporary transitions that the vast nonprofit aid economy these women labor within is undergoing - one in which unhoused people are becoming a valuable new commodity. The women I worked with understood their place on the CoC existed because their presence was being exchanged for aid dollars, and that their ability to influence the CoC was extremely limited. These women received little to no compensation for their work and were expected to complete complex regulatory trainings and tasks with little support while continuing to navigate precarious housing situations. Following Aimee Meredith Cox's notion of 'choreography,' this paper considers how formerly unhoused Black women do the work of 'making aid' in a world where their actions are institutionally surveilled as they balance the complex demands of corporatized aid and their sense of obligation towards aid clients they see as 'just like them.' Presenter: Benjamin Slightom (Yale University)

The Queer (A)Political: Labor, Capital, and the Production of Space

4:15 PM - 6:00 PM

TMCC - 605

Oral Presentation Session

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Lauren Ruhnke (Temple University, Department of Anthropology)

PRESENTER:

Ian Liuja Tian ,Johnathan Norris (Boston University, Department of Anthropology),Haiyan Huang ,Hatim Rachdi (Northwestern University in Qatar)

DISCUSSANT:

Casey James Miller (Muhlenberg College)

DESCRIPTION:

The question of the 'political' has been in constant transformation within the genealogy of thought that makes up queer studies, including queer anthropology. Critical to this sense of the 'political' has often been the 'anti-normativity' as well as - consistently and routinely - challenges to anti-normativity as central. The papers on this panel figure the queer political in different ways, reflecting on labor, capital, decoloniality, and juxtapositions with the apolitical, writing against the grain of the central role of 'anti-normativity.' Papers investigate a Moroccan trans woman refugee's experiences of a European state as cruelty while also making claims of the state to rights, the commodified labor of producing sexually charged music videos in a rural Chinese province, the role of business-ownership and capital investment in making queer space in Amman, and the role of the apolitical and depoliticized in creating space in Mumbai's pride March and at an LGBTQ organization in China.

Vulgarity-Production in Transition: performance and mediation in Yunnan shange videos: Mediated cultural productions and consumptions are key to understanding gendered and ethnic subject formations in China. However, a considerable amount of recent research has concentrated on large, coastal cities. This study focuses on the emergence of ethnic, do-it-yourself, folk music VCDs in rural Yunnan by Hani and Yi groups in the early 2000s. It first deconstructs the broader socioeconomic conditions that allowed for the creation of such music videos. Second, by examining the content of four music videos, this essay investigates how the performances of sexual and gender transgressions by women and cross-dressers mediate ideology, economic precarity, and changing gender and sex attitudes in rural Yunnan during the early 2000s when these videos were most popular throughout the province. Ultimately, this essay contends that their performances are commodified labor that represents a fictitious erotic, gendered, ethnic, and rural Yunnan. Reading these performances on their own terms, however, these music videos reflect an unexcavated field of embodied erotic freedom on the part of rural Yunnanese, whose material desires and aspirations are denied in the context of market transition and increasing geographical inequality. Key

Queer Spaces and Queering Capitalism: The Ethics and Politics of Running LGBTQIA+ Spaces in Amman, Jordan: Since 1951, same-sex sexual activity has been decriminalized in Jordan. However, due to political and social pressure, the government regularly intervenes in LGBTQ affairs; interventions which include arresting queers and threatening or closing LGBTQIA+ businesses. The government has largely justified such interventions under the guise of upholding public decency, preserving the kingdom's constitution, and 'common sense.' This paper analyzes the ways in which queer business owners in Amman, Jordan leverage the ethical discourses of safety, decency, and respectability as they navigate the politics of operating their business(es) in Amman. I draw on my ethnographic fieldwork with a coffee shop owner, the two organizers of the only queer club spaces in Amman, and two coordinators of queer villa parties as a way to explore both the interconnections and tensions between queer ethics and capitalistic aspirations under anti-LGBTQ government suppression. Though critical of capitalism and the ways that ethics intersect with neoliberal ideologies in the Middle East (Deeb and Harb 2013), this paper argues that through cognitive evaluation (Laidlaw 2014, Marsden 2005) entrepreneurial queers in Jordan actively harness the localized ethical discourses of safety, decency, and respectability as they strive to sustain safe spaces for other LGBTQIA+ persons while also maintaining their businesses in the midst of anti-LGBTQ crackdowns and suppression. Presenter: Johnathan Norris (Boston University, Department of Anthropology)

When the Queer Means an Alternative Space for Free Breathing: the Significance of OZ Land for Chinese Sexual Minorities: LGBTQ social movements in mainland China are currently in a critical transitional phase. On the one hand, the ever-authoritarian Chinese state government has tightened its control and censorship in every way in the post-2010 era since Xi came to power. Once open discussions of sexual minorities have been replaced by a crackdown on LGBTQ communities both virtually and offline. On the other hand, LGBTQ individuals' acknowledgement of their sexual identity has improved compared to a decade ago, as evidenced by their increasing visibility on social media. The public is also showing increasing interest and knowledge about different forms of gender and sexuality. Many bestsellers related to feminism; danmei novels

and TV dramas featuring boys' love are one of the most popular genres on the market. The Chinese diaspora has also been more actively engaged in LGBTQ studies and movements outside of China than before, while forming international alliances with their domestic activists. In the face of this turmoil, only a handful of LGBTQ organizations remain. My research focuses on exploring the actions and affections in OZ Land—one of the few remaining LGBTQ organizations in a second-tier Z city (for security reasons, the names here are pseudonymous). OZ is an grassroots organization for sexual minorities founded in 2010 by then university students. Since its inception, OZ has changed location three times and diversified its activities and services. Currently, it is located in a two-story loft in a residential community. Activities are organized on a daily basis and mainly include book readings, casual conversations, private chats, movie screenings, board games, talk shows, city walks, hikes, and psychological counseling. The average weekly attendance easily exceeds 100. Through ethnographic work over two different time periods (May to September 2021 and January to July 2023) and over 20 semi-structured interviews with the organizers, volunteers, and participants of OZ, I propose to understand queer as an alternative space where norms and conventions are not necessarily resisted, but can be sidestepped, forgotten, and reclaimed. At OZ, people not only are accepted for their non-normative practices, engage in norm-defying discussions, but also indulge in depoliticized fun activities such as board games and hiking. While the acts of avoidance and forgetting can be considered a form of resistance, for the subjects, the emotions and experiences of pleasure and fun outweigh the significance of political resistance, or in other words, it is not out of resistance that they play games and participate in outdoor activities with other sexual minorities. In this sense, the loft OZ serves as an alternative place where the alternative sexualities of Chinese queer people are accepted but at the same time diluted and even intentionally backgrounded. While this dilution and avoidance of queer identity which is in part due to concerns about strict political censorship of LGBTQ issues, it also opens up a new terrain for queer studies. That is, queer is not an identity or a process of becoming or performing, but a space in which individuals can freely 'breathe' by either engaging in non-normative practices or simply losing themselves in fun activities. Such an interdisciplinary understanding of queer as an alternative space integrates the new materialist turn in queer studies and extends the normative antinormativity often associated with queer. Presenter: Haiyan Huang

“Zalamuni, Zalamuni, Zalamuni” : The Queer Politics of Cruelty as Decolonial Praxis: In this paper, I explore how queer refugees' bodies become sites to witness, document, and resist colonial inscriptions. By centering the body, I gain insights into the complex ways in which the 'Modern/Colonial Capitalist World-System' (Grosfoguel, 2002), through migration management, shapes the lives of queer refugees and how these experiences have been resisted and negotiated over time. Using three months of patchwork (Günel et al., 2020) ethnographic fieldwork in Athens and subsequent online interaction and engagement with my interlocutors, I center the experiences of Tilila, a Moroccan trans queer refugee who has been in limbo for seven years. She is often referred to as a 'complicated case' of LGBTQ asylum by NGO aid workers, given that her kin-relations (i.e., having multiple biological kids and being divorced) do not follow the archetype of a European trans woman. Tilila asserts her relationship to the Greek state as one of Zulum (cruelty), based on her understanding of the state as a provider of Haq (right/justice). The latter is heavily impacted by her life in Morocco, where she witnessed, as a child, how her father and other villagers judicially fought for their land rights without gaining much material relief in return. Haq then, for her, transcends material gains and becomes a condition of dignity and autonomy. I argue that Zulum is inscribed in her body and intimate life. Through interactions with the asylum office, Tilila has been forced to 'cross dress' in front of her daughter and 'encouraged' to take hormones to prove her transness. I read these state tactics of entrenchment on Tilila's intimacy as a reaction to her non-conformity to colonial ideals not only of 'transness', but also of modernity. Thus, her relationship to the state mimics colonial domination and hetero conquest by enacting violence at the level of the intimate. I also suggest that, through Tilila's daily experiences of always standing up for justice, Haq, she situates herself as a Mazluma (a receiver of Zulum) in relation to the state. Her performances of Haq put her in situations of more Zulum from the state (e.g., she is currently stuck in a legal case where she initially wanted to help a sex worker who was robbed). Thus, the state in turn de-stabilizes and intervenes in her own performance of Haq. Zulum becomes one of the colonial inscriptions, and Haq is a way to counter it. This paper extends our understanding of the politics of cruelty beyond the liberal framework by looking at the intimate. It centers the body as a site of colonial/modernist violence but also as one of resistance by taking Zulum and Haq as decolonial epistemologies and performances

seriously. Presenter: Hatim Rachdi (Northwestern University in Qatar)

Society for Linguistic Anthropology

ORGANIZER:

Dozandri Mendoza (University of California, Santa Barbara)

CHAIR:

Dozandri Mendoza (University of California, Santa Barbara)

PRESENTER:

Marissa Morgan ,Jordan Tudisco ,Dozandri Mendoza (University of California, Santa Barbara),Dilara Caliskan (University of Illinois, Urbana-Champaign, Department of Anthropology)

DISCUSSANT:

Sherina Feliciano-Santos (University of Michigan, Ann Arbor, Department of Anthropology),Daniel Vázquez Sanabria (University of Texas at Austin)

DESCRIPTION:

For those rendered liminal to the archive 'assertion of rights to historicity necessarily means that assertions of collective memories are political, polyvocal and contested' (French 2015, pg. 339). This panel uses a linguistic and semiotic anthropological approach to focus on the re-constitution, maintenance, and transmission of memory for groups that are historically at the margins of state-sanctioned memorialization. We explore the stakes of entextualization for trans and Afro-diasporic communities' in their ability to project cartographies (Briggs 2007) and relationalities that situate themselves as meaningful actors against complex forces of semiotic erasure and eradication (Irvine and Gal 2000). Echoing Inoue (2004)'s question of what language does language remember, this panel focuses on the related question of who does language remember? How do trans and Afro-diasporic communities trans-cend an indexically-encoded naturalized temporality? How do ancestral ties, distinct chronotopes, and specific places/sites/actors become mobilized for a collective memory work aimed at

freedom-dreaming for those persistently dehumanized (Zimman 2018) and deemed disposable (Lane 2019) in an anti-Black and transphobic political present? The panel begins with Çalışkan's paper on Lubunca, a trans/queer way of speaking in Turkey, drawing from the matrilineal non-natal kin-making practices of trans women in Istanbul to examine how queer memory provides alternative historical narratives to the state-sponsored image of the ideal family. Drawing on similar themes of expansive trans models of kinship, Mendoza's paper outlines a concept called transcestral citationality, arguing that maximized relation rather than indexical remove motivates citational calibration in Afro-diasporic performance genres. Through an analysis of aesthetic and linguistic practices of a Ballroom performance collective in San Juan, Puerto Rico, they demonstrate how diaspora is recruited via a type of trans genealogical semiotic labor to assert and imagine oneself amongst a long history of resistance to cisheteronormativity and colonial governance. The next two papers explore the importance of organizing spaces of public grief as a means of collective survival for Afro-diasporic and trans communities as they are under threat. Morgan's paper on Marvel's Black Panther 2: Wakanda Forever features a semiotic analysis of the film, interviews with production crew, and participant observation in film panel discussions/screenings to examine how death and grieving rituals in the fictional nation of Wakanda are shaped by the audience's participation in the grieving of the film's titular character actor, Chadwick Boseman. She argues that the interdiscursive linkages between Chadwick Boseman's passing and the COVID-19 and 2020 summer racial reckoning in the U.S., mark the film as a unique space of Black grief and reverence. Along a similar vein, Jordan Tudisco's paper 'In Lieu of Flowers' explores the role of public-facing trans memorial sites as an important locus of trans techniques of struggle where the political and poetic interventions of anti-death, love, and relationality are staged. As a whole, these papers demonstrate the importance of a Black and trans anthropological linguistic (Zentella 1995) project of memory and remembrance at a moment when these histories are being actively subjected to revisionist attempts at erasure across U.S. national and global legislatures.

'Praise the Ancestors:' Memorialization, Reverence, and Collective Grief in Black Panther 2: Black grief and memorialization practices in the years following the COVID-19 pandemic and 2020 racial reckoning in the U.S. emerged in direct response to the mass unmourning of Black deaths, with links between hyper capitalism and grief illiteracy (Fletcher & Waraschinski

2022), as well as discourses of Black disposability (Lane 2021). In this context, Marvel's 2022 Black Panther 2: Wakanda Forever is marked by the titular character actor, Chadwick Boseman's death in 2020, an event which transformed the sequel into an expression of mourning and grief. Through a semiotic analysis of the film, interviews with production crew, as well as ethnographic research at film panel discussions/screenings, I investigate how Black diasporic death and grieving rituals are portrayed within the fictional, uncolonized, African nation of Wakanda and how Chadwick Boseman's passing shaped these representations and audience's reactions. The embodied elements of memorialization are particularly salient, demonstrated by social media calls to wear all white to the movie premiere, "in honor of those who have come before us – for the ancestors and for Chadwick Boseman" (Bryant 2021). These calls to action, in concert with the mourning of T'Challa as integral to the film's narrative arc, allowed audiences to collectively grieve alongside the actors, production crew, and characters in multilayered ways. I posit that in blurring the line between mourning Chadwick Boseman and mourning King T'Challa, Wakanda Forever creates a distinct and necessary space for an outpouring of Black grief as well as reverence, interdiscursively marked by the events preceding Boseman's death. Presenter: Marissa Morgan

In Lieu of Flowers: Trans Memory, Temporality, and Community-Building at Vigils, Days of Remembrance: Trans life, especially Black, Indigenous, and trans life of color, exists within an "atmosphere of violence" from which "there is no escape, no outside or place to hide" (Stanley 2021: 16); this atmosphere of violence often enacts brutal (de)transitions onto trans folks from the home into the streets, from community spaces into prisons, or from life into death. This paper examines a specific trans technique of struggle through which our violent reality can be trans-cended and trans collective life comes to be: trans memorialization at vigils, days of remembrance, and memorials. Following explorations of queer trauma (Cvetkovitch 2003), queer memory (Richardson 2013), trans trauma (Cerankowski 2021) and trans memory (Correa et al. 2019) in public and literary culture, I highlight trans people's complex relationships to temporality, mourning, memory, love, solidarity, and death. I suggest that trans memorial sites propose public-facing spaces in reaction to the atmospheric violence of trans life and enact a trans technique of struggle that allow for relating, loving, mourning, and surviving communally in the face of violent transitions. Trans memorial sites represent a

crux through which “mourning becomes militancy” (Crimp 1989, 9) and where poetics of anti-death (Delect 1986) are enacted. As such, they help us think through Black disposability (Lane 2021), (un)grievability (Butler 2016), and the Black diasporic practice of “wake work” (Sharpe 2016) in trans-specific ways. At its core, this paper asks: how do trans people grieve and honor their dead while themselves being mired in atmospheres of violence that are slowly killing them? Presenter: Jordan Tudisco

Transcultural Citation(ality): The Semiotic Utility of Diasporic Relation in Puerto Rican Ballroom: Citationality as a semiotic phenomenon refers to the uptake or construal of relationships between two events often marked by difference even as they share substance (Nakassis 2012). I build on the concept of citationality to develop a trans of color framework called transcultural citation(ality) – using Wynter (2005)’s uptake of Glissant’s poetics to argue that the discursive calibration of citation across Afro-diasporic queer/trans performance genres is inherently rooted in maximized (diasporic) relation rather than indexical remove. I ground this concept in ethnographic observation and interviews with the Ballroom scene in San Juan, Puerto Rico – centered around the Kiki House of Laborivogue. The Ballroom/Ball scene is a transnational community and collection of queer performance genres that traces its origins to 1980s Black/Latinx Harlem. I analyze aesthetic choices in Laborivogue’s performances, construals of genealogy in interviews with house members, and the reanimation of social voices from Ballroom history across queer/trans Puerto Rican performance texts to demonstrate how transcultural citation(ality) serves as a semiotic political move to exemplify Ballroom’s utility as a means to liberate the queer/trans Puerto Rican subject. These examples will illustrate how queer/trans Puerto Ricans in the archipelago engage with Ballroom’s historical archive via citation and engage in processes of diasporic deterritorialization (Rosa & Trivedi 2017), situating themselves amongst diasporic genealogies of resistance. Through these construals of citational relation across Ballroom histories, I demonstrate how the processes involved in transcultural citation(ality) become central to a decolonial activism emergent in contemporary Puerto Rico. Presenter: Dozandri Mendoza (University of California, Santa Barbara)

Lubunca: Trans Perspectives on Language, Memory, and Kin-Making: This presentation examines and explores Lubunca, trans/queer way of speaking in Turkey, to suggest trans approaches to studying memory and

inheritance. Drawing on the narratives of trans women in Istanbul, their practices of matrilineal kin-making, and stories with/in/from Lubunca language, I will discuss how gendered memories of state violence can create lineages through trans forms of being, becoming, and relating across generations. Lubunca, mainly composed of words of Turkish, Romani, Armenian, Italian, Greek, Kurdish, and Arabic, is a language spoken within LGBTI+ communities in Turkey, while echoing the multi-lingual, multi-racial, and multi-ethnic histories that are erased or forcefully forgotten within authoritarian regimes of nation-state making. Inspired by Lal Zimman’s work on Trans Linguistics (2020) I will argue that following Lubunca and trans forms of kin-making in Istanbul, introduces a trans-linguistic-lineage that is not interested in the coherent national narrative of the Turkish state that selectively narrates the history of the family and nation. Rather, the conversations between Lubunca and trans kin-making practices, show a lineage that helps us understand individuals and collective pasts, presents, and futures, that do not follow imperial norms of self, community, and history-making. They allow us to explore the radical potentials of the everyday, the ordinary, for forging creative spaces where marginalized experiences, memories, and identities can form unpredictable matrilineal ties to live, thrive, and connect. England), Roy Grinker (George Washington University, Department of Anthropology)

DESCRIPTION:

As anthropologists gather in Toronto to discuss how anthropology can 'rise to face our current condition' in this period of transitions, it is a good moment to reflect on the decline in the discipline's public presence over the past decades. If this is a moment for embracing transitions amidst uncertainty, then the discipline should assess its failures and seek out a new trajectory. There was a time in the early twentieth century when, as Charles H. King argues in *Gods of the Upper Air* (2019), 'a circle of renegade anthropologists reinvented race, sex, and gender in the twentieth century' by introducing into popular culture the idea that, despite our differences, humanity is one undivided thing. His book about the Boasians was a *New York Times* bestseller, yet King is a political scientist and not an anthropologist – like most of the authors who have, in recent decades, seized public attention for anthropology's contributions to understanding the human condition (such as Jared Diamond and Yuval Noah Harari). David Kertzer, a Pulitzer Prize winner, is perhaps the most accoladed anthropologist in recent years – but for works on popes and anti-Semitism, in the discipline of history. If one walks along the bookshelves at a major chain bookstore, one sees many books by historians who are university faculty, but few by anthropologists – in particular by cultural anthropologists, even in relatively marketable fields like China studies. There is often no 'anthropology' section, so it is hard to find the few books that are there. The days of Margaret Mead are long gone, with consequences for the viability of the discipline. Amidst budget cuts, anthropology departments are being eliminated by administrators and fellow faculty members who either don't understand what we do, or who know what we do but do not respect it. Anthropological insights should be more valuable than ever at this historical moment when hatred based on race, gender, religion, nation, and more, is on the rise. But neither politicians, nor media, nor the general public seek us out for answers. Clearly, the times are changing and the discipline has not changed with them. 'Why aren't anthropologists writing bestsellers?' Taking anthropological writing and publishing as a starting point, the roundtable will explore broader questions about the place of the discipline in academe and in the public sphere. The speakers assemble a wide range of experience – both inside and outside the academy – in writing (including award-winning trade books), publishing, and/or engagement with mass media. Susan

Brownell has given hundreds of interviews to media on the topic of China and Olympic Games. Niko Besnier is former Editor-in-Chief of *American Ethnologist* and has written and lectured extensively on anthropological writing. Dylan Montanari is Associate Editor for *The University of Chicago Press* lists in anthropology and history. Noelle Stout is a research faculty at Apple University and author of *Dispossessed: How Predatory Bureaucracy Foreclosed on the American Middle Class*. Chip Colwell is Editor-in-Chief of *Sapiens* and author of *Plundered Skulls & Stolen Spirits: Inside the Fight to Reclaim Native America's Culture*. Mary L. Gray is Senior Principal Researcher at Microsoft Research and author of *Ghost Work: How to Stop Silicon Valley from Building a New Global Underclass*. Roy Richard Grinker is author of *Nobody's Normal: How Culture Created the Stigma of Mental Illness*.

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Colin Scott

DESCRIPTION:

The foremost crises of our times – of human suffering and environmental decline – propel a diverse reimagining of anthropology, and how our discipline is to engage these crises. Orthodox accumulation of capital and consolidation of power deliver not just mounting levels of material inequality and insecurity for humans, but accelerating species extinctions and climate change that undermine well-being and beauty on Earth. It becomes increasingly difficult to think of human justice separate from environmental justice. If, through some force of inertia, human rights and the rights of nature occupy somewhat distinctive discursive registers, it is increasingly difficult to imagine solving one without solving the other. An anthropology for the human increasingly demands a more than human anthropology, an anthropology of relationalities that embrace whole webs of human and other-than-human life. I want to consider an activist anthropology for these times. It is not news for our discipline that biodiversity loss is tied to declines in cultural diversity – we have long worked among peoples for whom

territorial disruption and dislocation have accompanied the loss of institutions, of knowledge and of languages. Our work with Indigenous and other communities offers a particular vantage point on the perils of capitalist modernity, and at the same time, pathways for practical response and remedy, anchored in the outlooks of local interlocutors and collaborators, and their strategies for weathering storms and shaping worlds. The exceptional promise of these strategies is their reference to ontologies that refuse a logic of anthropocentric, competitive, perpetual economic growth, insisting rather on a more fundamental law of reciprocity – law in both scientific and normative senses of the term. This is not some pale cultural relativist accommodation, but recognition rather of a paradigm that understands modernist excesses as dead-end forms of negative

reciprocity, while advancing positive reciprocities as the standard of care for places, all beings, and territories of life. My discussion turns, then, to some key elements of a movement around 'territories of life,' governed and conserved by Indigenous and other local community stewards, where livelihoods, lifeways and stewardship practices are integral to flourishing biocultural community. This movement is a lens for considering a range of theoretical and practical matters for an engaged anthropology: our role in inter-disciplinary and inter-epistemic knowledge co-creation; the ethics of decolonial research and pedagogy in Indigenous and other community contexts; the political dynamics linking action at scales of community and territory to macro-system transformation; and the diverse alliances that are possible and necessary to generate change.

DISCUSSANT:

Mahiye Secil Dagtas (University of Waterloo)

DESCRIPTION:

The figure of 'minority' is a figure through which the modern nation-state governs various forms of difference – sexual, gendered, cultural, ethnic, and religious. 'Minorities' figure prominently in modern imaginaries of the nation-state, of violence, rights, patronage,

progress, development, and so on. Drawing from ethnographic and historical research, this panel will examine how difference is understood and legalized through the figure of 'minority' – in settler colonial as well as 'postcolonial' contexts - and how 'minorities' embody, counter and challenge it. In developing a comparative project on 'minorities', the panelists will draw from their research on citizenship, gender and sexuality, Islam, multiculturalism, and human rights in Canada, Pakistan, Lebanon, and India, building upon debates in the anthropology of gender and sexuality, law, religion, secularism, and human rights. Specifically, the panelists will explore: how difference is construed in temporal terms as an embodied difference and as a 'lag' by the courts as well as rights activists in the case of khwajasaras (non-heteronormative, non-binary persons) in Pakistan; how the sex worker's body in Kolkata, India, is seen as a sexually-deviant body, how such a construction is based on a bodily difference, and how the sex workers challenge their moral surveillance; how the 'Muslim difference' is constitutionally and culturally mediated in the context of citizenship and multiculturalism in Canada and India and how Sharia arbitration in Canada and Family Law in India, act as sites of creating minority difference in these states; how Muslims construct counter-institutions, building upon norms and rules drawn from everyday problem-solving practices in Bihar, India, and how their legal department sets up a sphere of power to counter majoritarian currents; and, lastly, how women's rights movement in Lebanon carves a counter space for women minority rights in the domain of secular legality in the multi-

religious constitutional context of Lebanon. By deploying their diverse ethnographic and analytical lens, the panelists aim to capture the evolving nature of the ever-historicizing transition of liberalism's logic of governing modern-'minority' life, and how the guaranteeing of preservation of difference of all individual freedoms (be it majority or minority) is realized through various state apparatuses, like law and secular legality.

Out of Sync: Time, Marginality, and the Khwajasara
Difference in Pakistan: How does liberal legality
construe difference in the context of activism for gender and sexuality rights in Pakistan? How does the transition from being marginalized to being different takes place? Drawing from fieldwork with a khwajasara (non-heteronormative, non-binary) community in Pakistan and a reading of the legal archive pertaining to the khwajasara case of 2009 (Khaki vs. SSP), this paper asks: how are khwajasaras construed as 'out of sync' (Ramberg 2016) with the historical time of the nation-state? How does the state (and rights activists as well as many khwajasara themselves) see khwajasara 'backwardness' as evidence of being 'out of sync'? The paper further asks: how do hijras, indeed, all those non-binary, non-heteronormative persons who now identify as khwajasaras - in a governmental project of, what I call, 'khwajasara making' - embody and respond to this temporal 'lag' in their so-called national development? Historically, khwajasaras refused normative kinship and 'respectable' (i.e., middle-class) forms of labor – a refusal that negated (and, even, reversed) reproductive teleology and liberal-capitalist reproductivity. In khwajasara making, 'respectable' labor has become one of the coveted and aspired routes, for many khwajasaras, to their realization of what the Supreme Court called, 'complete' citizenship. Presenter: Salman Hussain (York University, Department of Anthropology)

The Morality Slippage: Sex Workers and 'Good' Women as Minorities : Based on ethnographic work with Durbar Mahila Samanwaya Committee (Durbar), a grassroots female sex workers' organization in the iconic red-light district in Kolkata, India, this paper examines the construction of the sex worker body as a sexually 'deviant' minority in relation to the bhadra-mahila (educated middle class woman) 'asexualized' body. In nurturing, narrating and navigating this difference, the bhadramahila is posited and upheld as the moral standard for women. The sex worker, or the beshya, on the other hand, is immoral and carries the stigma as though it was 'stuck like glue' on their bodies. Yet, I argue that the difference is only superficially tenable. Rather, the bhadramahila and the beshya are on a

continuum. The slippage between the two is not only linguistically and socially ubiquitous but also serves as a tool for moral policing. In specifically focussing on the larger patriarchal narrative of good/bad women, this paper presents the everyday contours through which the slippage frames all women as sexual minorities. This continuum has significant consequences for the sex workers' rights movement as women where alliance-building with the bhadramahila is conspicuously limited. Thus the fear of stigma-contamination through association with sex workers imposes strict limitations on the wider workers' rights. Presenter: Simanti Dasgupta (University of Dayton, Department of Sociology, Anthropology and Social Work)

Homogenising Acceptable Differences: Becoming Secularism's Muslim Minority : What understanding of religion and culture as categories of social and political difference are asserted by modern nation states to craft their governance of especially Muslim minorities through constitutional commitments towards multiculturalism and secularism? Can it be argued that to govern Muslims as minorities, secularism and multiculturalism is deployed as a conceptual tool by modern nation-states to homogenise the legibility of acceptable differences? This paper examines the maneuvers and registers in and through which secularism and multiculturalism become sources of political homogenization in modern democracies. Using a comparative analysis between sharia arbitration debates in Ontario, Canada, and the Shah Bano case in India, I aim to explore the conditions under which religious and cultural differences threaten secular(ised) narratives of citizenship and democracy. This paper builds on anthropologies of law, Islam, and secularism to not just critically examine secular jurisprudence of religious difference, but also how the figure of the minority is a constant patchwork of being recognised by various state apparatuses, which, while enforcing and recognising difference and equality, also homogenize acceptable minority-practices. The Shah Bano case highlights how the state intervenes in personal law to bring a secular closure to a public battle of who interprets Islam, while sharia arbitration debate demonstrates the pressures of what constitutes essential practices within Islam and who adjudicates them. Presenter: Shantanu Mehra

Law, the Family and Counter-Institutions in Postcolonial India : We tend to think of minority politics as a matter of struggling for rights and recognition from the state and incorporation into its institutions. Drawing on ethnographic and archival research in a long-standing Islamic institution in Bihar, India, this paper argues instead that Muslim leaders in India have built counter-

institutions that flourish to the extent that they provide essential services such as education, medical care, and legal adjudication. The institution under study mirrors, relies on but also competes with the state as the primary locus of authority and power. Focusing on the legal department of this counter-institution, the paper shows that rather emanating from state power, the norms and rules that animate it are sedimented practices developed in response to problems that arise in everyday life. A locus of intensified religious family law, the legal department contributes to constructing and sustaining a domain of power and authority in the face of majoritarian forces. DISCUSSANT:

Jeff Maskovsky (CUNY, Graduate Center, Department of Anthropology)

DESCRIPTION:

We are taking advantage of the potential for wide-ranging comparisons in a panel to explore the contours of left and right activism in a moment when authoritarianism is on the rise. Instead of focusing on ideological stances or differences, presenters on this panel explore how activists engage with dilemmas common to most forms of activism in the contemporary moment. The panelists are exploring how activists on all sides of the spectrum might engage with prefigurative politics, attempting through speech and actions to carve out a different world. Sometimes activists advocate for change by exercising their historical imagination,

weaving together pasts that hope to persuade through crafting common touchstones, either for critique or for valorization. They also have shared dilemmas in managing how they circulate information effectively in a digital age, how they organize to be a collective, how they recruit members, how they manage internal conflict, and so on. Presenters will lay the groundwork through their ethnographic explorations of the logics and social organization underlying contemporary activism to begin addressing what left and right activists share in common despite opposing political views, and where they diverge in practice (not only perspective).

Pseudolaw and Relational Collapse: Pseudolaw broadly describes the legal consciousness of a type of activist litigant found across the Anglophone world, but especially in the United States, Canada, and the United Kingdom. Adherents of pseudolaw subscribe to a variety of strategies, often with common themes running between them, which ultimately express non-recognition of the state or of any social obligations deriving from state law. For the purposes of this paper, I focus on two aspects of pseudolegal philosophy: the collapse of legal history, and the collapse of social relationships. Pseudolegal arguments often assert that no state law enacted since an originary document such as Magna Carta, or an originary concept such as “natural law” or “the law of God,” has any legitimacy. In so doing they collapse history, or erase it altogether, suggesting a historical consciousness based in a domain of law that is extremely remote in time. Its very remoteness is what removes its power from the influence of state legal practitioners such as lawyers and judges, who tend to describe pseudolaw proponents as vexatious litigants and conspiracy theorists. The view of history that appears in pseudolaw cases does include elements of a concealed or speculative history that is a source of frustration to courts due to its fictional nature. It is this very fiction I propose to explore. The pseudolaw “practitioners: are also committed to a view of all social relationships, including those with the state, as contractual in nature. They endeavor to reduce all sociality to contract, and an idiosyncratic understanding of contract that amounts to their own granting or withdrawal of consent to a given set of obligations. Their legal consciousness simultaneously generates a gap between what they want relationships to be and what courts actually do in the enforcement of relational obligations, and populates that gap with a collapsing of the historical into secrecy and a collapsing of the social into contract. Presenter: Melissa Demian (University of St Andrews)

The Paranoid Politics of Property: Whiteness, Dispossession, and the American Dream : In Richard Hofstadter's classic 1964 essay on the paranoid style in American politics, he argued that the right wing felt "dispossessed" by cosmopolitans and intellectuals, socialists and communists, foreigners and statesmen. This paper examines articulations of dispossession by contemporary political movements to interrogate the role of property in defining paranoid politics in the United States today. It draws on ethnographic and archival materials to examine arguments about gun possession, land and home ownership, racial identity, class status, and territorial claims, tracing the ways in which property simultaneously grounds claims to the American dream and foundational paranoid ideas in American cultural life. Presenter: Meghan Morris (Temple University)

Engaging with 'White Supremacy': Raciologies and Dilemmas of Prefigurative Politics in US Media: This paper analyzes how US media commentators imagined their own politics through their engagements with 'white supremacy' during the summer of 2022. Drawing on media interviews completed for the book *Imagining the Heartland: White Supremacy and the American Midwest*, the paper looks at how the term itself became a site through which center-left, center-right, and conservative white commentators sought to enact their own prefigurative politics. Though commentators showed distinctive and patterned differences, they each embraced circumscribed ideas or raciologies concerning what was and was not entailed in the problem of white supremacy, including specific narratives of past and present, identity claims, and proposed action or ameliorative steps. In light of this, the paper probes the complex boundaries that exist between activism and politics by another name, recognizing that most of our media commentators would identify as 'political' but not 'activist.' By analyzing the dilemmas variously called forth by public talk of 'white supremacy', we consider the role of media commentators across political positions in not merely reporting on existing issues but also in shaping and limiting public discourse about race and racism. Ultimately, the paper reflects on the detrimental effects of this shaping work for broader recognition of the pervasiveness of racial formations and race-based inequality. It also revisits, through this critical lens, what it is to do public anthropology in the current time. Presenter: Britt Halvorson (Colby College)

"#content warning: "br*ccoli", and "the v-slur": Enacting Care and Harm Through Orthographic Play: This paper explores how social justice activists on the social media platform, Tumblr, imagine and enact ideals of what it

means to do and be good through their everyday orthographic practices. These young bloggers often articulate social justice as a project fundamentally rooted in commitments to "caring about others" and "not hurting other people", where activism involves practicing care correctly and confronting those they see as failing to do so. This paper explores how this is enacted through three linguistic constructions that overtly function to minimize the harm that certain words, topics, and ideas may cause others, particular others whose identities are already subject to broader patterns of marginalization, inequity, and injustice: hashtags labeling trigger and content warnings, words partially redacted with asterisks, and words euphemized by writing them with their initial letter followed by "-slur". This paper traces the sincere, humorously ironic, and somewhere-in-between use of these linguistic constructions within Tumblr's social justice communities. In doing so, I demonstrate that, despite the similar function attributed to these three forms of orthographic play, the pattern of their use prefigures two distinct, and opposing, imaginaries of a socially just world and the forms of activism necessary to achieve it: one grounded in a logic that argues for providing resources for people to live in a way that mitigates harm based on their individual needs, perspectives, and experiences and the other, grounded in a logic that demands removing any potential harms so people can live without risk of encountering anything that has the potential to do harm. Presenter: Michelle Morgenstern (Massachusetts Institute of Technology, Department of Anthropology)

The Practical Labor of Solidarity in Greece's Social Clinics and Pharmacies : "Social" pharmacies and clinics in Greece are citizens initiatives that sought to redistribute care and pharmaceuticals amid economic crisis and austerity, when state social services were cut back and even actively dismantled. According to my research interlocutors, these forms of grassroots care operated according to the horizontalized logics of "solidarity" and variously complemented, filled in for, or reconfigured failing and often exclusionary state systems—including public healthcare. Activists and scholars alike, within and outside of Greece, regularly characterized these interventions in discourses of resistance, creativity, or even revolution against austerity. For instance, Manolis an eighty-year-old organizer and interlocutor in my research, often proclaimed that "solidarity has to be politicized" in order to be meaningful. Such framings (most often within a Marxian line of analyzing and organizing) emphasized conscious, programmatic action grounded on an assumed sovereign, liberal—implicitly masculine—political subject (Athanasidou 2017). Still,

such accounts, while effective in communicating solidarity initiatives within a wider public sphere, often erased the feminized, backstage work of maintenance and repair so crucial to keeping solidarity running. Drawing on fieldwork from 2016-2020, this paper examines how the “practical labor” (de la Bellacasa 2017) of (so-called) non-“politicized” solidarity served to engender and maintain novel forms of collective life. In the social clinics and pharmacies, the social itself could never be taken for granted; rather, it had to be crafted, activated, infused with energy, assembled, cobbled together, woven, embellished— made. Presenter: Heath Cabot (University of Bergen)

Alcohol in Transition: Conflict and Encounter in our Social Worlds- Part 1

8:00 AM - 9:45 AM TMCC - 203 C

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Europe

ORGANIZER:

Brandon Lundy (Kennesaw State University, Department of Geography & Anthropology)

CHAIR:

Christina Collins (Indiana University, Bloomington, Department of Anthropology), Brandon Lundy (Kennesaw State University, Department of Geography & Anthropology)

PRESENTER:

Justin Jennings ,Katherine Parker (University of Tennessee, Knoxville),Christine Kray (Rochester Institute of Technology),Robert Ulin (Rochester Institute of Technology),Susanna Fioratta (Bryn Mawr College, Department of Anthropology),Christina Collins (Indiana University, Bloomington, Department of Anthropology)

DESCRIPTION:

Alcohol, as a special class of food-drug, is a rich ethnographic object for the study of both unity and discord. Alcohol as a social lubricant, facilitator, and binder brings people and communities together around life events. However, drinking also often acts as a catalyst in the moments leading up to dispute and discord. Attitudes and actions surrounding the production, distribution, sale, and consumption of alcohol are sites of social, cultural, political, economic, religious, medical, and environmental tension. This

panel explores how alcohol serves as a useful lens for exploring the socio-cultural processes of conflict and its reconciliation. Specifically, in line with this year's theme, Transitions, we examine how conflict emerges through encounter-not in a causal, but liminal sense-the build-up, the bubbling, and the brewing before the bonding or blowout. What story does alcohol tell us about conflict, as a social process, in transition? The anthropological literature on alcohol either examines drinking as a cultural act that gives insight into our social worlds (Douglas 1987; Heath 2000) or emphasizes a public health perspective through research on intoxication, addiction, and other harmful drinking practices (Babor et al. 2023; Singer 2012). Hunt and Barker (2001) call for scholars to conceptually bridge this divide-arguably, a divide that arises from alcohol's status as an embodied material culture that is simultaneously food and drug-or 'food with difference' (Dietler 2006; Dietler and Herbich 2006, 398). As a food, alcohol indexes the richness of social life as a marker of cultural, linguistic, racial/ethnic, religious, political, gender, generational, and class identities; but, as a drug, alcohol's psychoactive and intoxicating properties makes it a potent and paradoxical agent of social tradition, transformation, transgression, and trauma. Over the last two decades, several scholars have addressed this divide through the study of alcoholism and Alcohol Anonymous (AA) globally (Borovoy 2005; Christensen 2015, Raikhel 2016). However, how might an approach that more broadly interrogates the relationship between alcohol and conflict, in transition, further bridge such divergent conversations? From compulsion to addiction; conviviality to belligerence; legality to illegality; and indigenous production to commercialization, we invite papers that explore the relationship between alcohol and conflict. This may include research that examines transitional states of being (e.g., soberness to intoxication); mediations between material-spiritual realms (i.e., alcohol in religious ritual); regional, national, and/or global rivalries (e.g., corporate versus craft alcohol production); prohibition and resistance (e.g., informal brewing/distilling versus state regulation); alcohol as a symbol of repression or resistance; and the many other tensions arising from our everyday encounters with alcohol. Overall, we ask, in what ways does alcohol challenge our conception of conflict, in transition, or even transition, in conflict, to better understand our ever-changing, turbulent, social realities in an increasingly globalized world.

Drinking Together: Others, Family, and Politics in the Pre-Columbian Andes: It is difficult to overstate the

importance of alcohol in Pre-Columbian politics. For centuries, the drinking cup was the most important vessel in diplomacy, an offered beer freighted with meaning. This paper considers the different roles that alcohol played in the Wari and Inca Empires. Both emerged in highlands Peru and expanded through violent confrontations. Both then used alcohol as a means of transitioning to a broader state society. Contrasting mechanisms of alcohol production and consumption nonetheless led to very different kinds of societies. The Inca Empire was based on a politics of radical difference. There were Incas, composed of a handful of lineages from the imperial heartland, and everyone else. Inca leaders offered maize beer in prodigious quantities in return for their subjects' labor, a beer grown on special lands and prepared by special hands. Hundreds of people gathered in a plaza, celebrated Inca exceptionalism on stage, and then returned home. The beer was a gift that could not be repaid. Wari statecraft, in contrast, occurred at a far smaller scale. People came together in the interior patios of Wari elite homes, or the inside of a temple. Everyone helped prepare the molle beer used in ceremonies, transferring it into face-necked jars that represented shared ancestors. Outsiders were thus welcomed into the Wari family, creating a politics of affiliation that saw the extension of kin bonds across social divides. These bonds were accentuated by the addition of *Anadenanthera colubrina* to the beer, a psychedelic that induced a shared out-of-body experience. State expansion, today and in the Pre-Columbian world, create moments of tense encounter. Alcohol can serve as an effective social lubricant in these encounters, yet one that can index relationships between people in very different ways. These contrasting examples of Andean statecraft demonstrate how alcohol can be used as either a bridge or barrier to the integration of diverse populations. Presenter: Justin Jennings

Heritage In Flux: Plantations, Palimpsests, and the Political Economy of "White" Lightning: Following the end of the Civil War, plantation landscapes in the South Carolina Lowcountry underwent dramatic changes that broke up massive, generational landholdings and upended centuries of exploitative economic and social systems. Moonshining provided a means for some former plantation owners to maintain possession of core family properties, while providing a narrative of hardscrabble resilience that effaced the legacy of racial exploitation of their immediate pasts. Vacated plantation landscapes were likewise reimagined as historically vacant spaces, which aided in the creation of

material and symbolic distance from racially charged pasts—a pattern that is broadly evident in revisionist Southern histories. Yet for elite white enslavers who created massive, commercial-scale moonshining empires in the coastal South, their differential access to social and material capital that supported their extralegal ventures was anything but a distant memory. This paper will consider the political economy of privilege that plantation owners-turned-moonshiners had while navigating these clandestine pursuits. Moreover, this paper will examine the legacy of policing as historically enmeshed in Southern slave patrols that had long allied law enforcement with white enslavers, and the ways in which this relationship was complicated by the later criminality of former plantation owners engaged in moonshining. Archival, spatial, and archaeological evidence will be used to explore the role of moonshining in mediating the rapidly changing Lowcountry from a plantation economy to the post-Reconstruction New South, driven by the rise industrial timbering, railroad construction, and cross-class white supremacy in the twentieth century. Presenter: Katherine Parker (University of Tennessee, Knoxville)

Alcohol's Alchemy: Firewater, Firepower, Fiestas, and Labor Discipline-British Honduran Frontier: As a wellspring of joy, despair, and rage, alcohol is often both a gravitational center and a tinderbox within the social landscape—fueling sociality and its ruination simultaneously. In the British Honduran (Belizean) frontier, consequently, alcohol both indexed and ushered in colonial governance, Maya rebellion, and capitalist labor arrangements. At the time of the Spanish invasion in Yucatán, *xtabentun* was a fermented, psychoactive beverage derived from the seeds of or honey produced from the nectar of the morning glory flower (*Turbina corymbosa*). It was blended with *balche'*, an alcoholic beverage made from honey and the bark of the *Lonchocarpus longistylus* tree. *Balche'* was forbidden by the Spanish clerics and colonial agents because of its association with "idolatries" and carnal sin. Over time, in the frontier zone between Yucatán and British Honduras, *xtabentun* was transformed into "aniseed," as cane sugar often replaced honey, the link to morning glory flowers was weakened, and anise seeds were added to replicate the licorice flavor. Even while the beverage was transforming, traditional systems of rewarding followers with fiestas ensured that *xtabentun*/aniseed fueled the transmogrification of political and economic relations. In the nineteenth century, aniseed was ubiquitous at mahogany and logwood camps, camps of rebel and "pacified" Maya troops in Yucatán's Social War (Caste War, 1847–1901),

sugar plantations, saints' days fiestas, and shamanic ceremonies. Maya military leaders and majordomos alike used aniseed to attract and discipline soldiers and workers, respectively. Alcohol-related debts trapped logging and plantation workers into debt peonage, soldiers were rewarded with aniseed fiestas, and fears of violent, drunken Indians steered British colonial policies. Alcohol worked its alchemy. This paper charts the reciprocal transformation of a beverage and the British Honduran colony. Presenter: Christine Kray (Rochester Institute of Technology)

Hegemony, Conflict and Resistance Among Southwest French Wine Growers: Alcohol inclusive of wine is a window on a range of social issues from social class to gender to the "naturalization" of history and social relations. This is especially true in southwest France where wine is perhaps the most class-stratified and gendered commodities of all French exports. There is a long history to this stratification that dates to the early twentieth century that is codified through law (AOC). For example, French elites wanted wine to be defined in terms of "naturally" fermented grapes in contrast to competitive wines made from dried fruits on the part of small-scale growers. Another example is the Bordeaux 1855 classification that established hierarchy that has changed very little to the present day. Most notable, is the use of the chateau classification that designates that grapes must come from a single property in order to enjoy the cultural and commercial privileges that come from such a classification in spite of the French custom of partible inheritance. I will focus on small-scale growers that are members of wine cooperatives that occupy a subaltern position in relation to the chateaux estates. These small growers have used certain rhetorical devices to challenge their subaltern position, emphasizing their collective identity over the individualized identities of elite proprietors. Moreover, cooperative growers have likewise challenged the uses of climate and soil, inclusive of "terroir," to advance their collective interests. Because their wines come from a multiplicity of properties, they often present them as the authentic wines of the region. Their collective efforts surely open our inquiry to a historical process that hegemonically presents southwest French wine growing history as if it were natural. The notable points of resolution come from acknowledging this history and the increasingly shared technical and scientific knowledge involved in the production of all reputedly quality wines. Presenter: Robert Ulin (Rochester Institute of Technology)

"Welcome to the One Percent": Tensions and Aspirations Filtered through Craft Beer in Colombia:

Officially, Colombia is a country in transition to peace and prosperity. Rapid economic growth has led to rising incomes and an expanded middle class, particularly in the capital city of Bogotá. But with persistent, widespread poverty and uncertain results from the 2016 peace agreement between the government and the FARC armed group, prosperity remains elusive or precarious for many. Against this backdrop of uncertainty, craft beer has surged in popularity among Colombian consumers. The last decade has seen a rapid proliferation of independent craft breweries around Bogotá and other Colombian cities, offering a variety of previously unknown beer styles at significantly higher prices than the mass-produced lagers that have long dominated the Colombian beer industry. The largest of these craft breweries adopted the slogan "Welcome to the one percent"—purportedly referring to craft breweries' share of the beer market in Colombia, but also implying membership in a new, special class of beer drinkers. Perhaps in response, a collective of smaller craft breweries mounted a campaign calling themselves the "insurgent brewers." With a slogan of "Make beer, not war" and a symbol of a grenade made from hops, this group challenged the dominance of the largest craft brewery while humorously advocating for peace. Meanwhile, some smaller craft breweries have brewed beers more explicitly Colombian in identity, incorporating familiar fruits along with the initially off-putting bitter hops. Analyzing ethnographic encounters with craft beer brewers and drinkers in Bogotá, this paper explores the social and political implications of the transition many Colombians have made from corporate to craft beer. I suggest that this shift reflects popular aspirations and tensions surrounding middle class belonging, and ultimately the pursuit of a better life in the midst of precarious prosperity. Presenter: Susanna Fioratta (Bryn Mawr College, Department of Anthropology)

Consumptive Political Fantasizing: Beer, Modernity, and Nationalist Conflict in Ethiopia: In Ethiopia, beer brands often signify competing modernities, or vying nationalist imaginings, of the country's imperial past, ethnic present, and possible developmental futures. From 2016-18, Ethiopia was a country in transition. Over a decade of rapid economic growth and infrastructure development brought with it promises that the nation might finally become a middle-income country by 2025. However, this bubbling optimism was tempered by uncertainty as conflict brewing from longstanding political and economic tensions rapidly spread across the country—boiling over into outright civil war only a few years later. Numerous scholars have studied how

bottled beer and commercially distilled alcohols have come to symbolize post-colonial modernity in Africa. This paper explores how the crisp clear golden bottled lager with its smooth finish comes to embody promises of development and progress. But I also ask, in what ways do competing beer brands evoke contested nationalist imaginings of what an Ethiopian modernity is and should be? To what extent are these imaginings sites of possible schism within a nation? I argue that beer brands are a site of what I call “consumptive political fantasizing”—or the ways in which competing nationalist imaginings of Ethiopian modernity circulate through the consumption of alcohol and alcohol-related media. What beer one chooses to drink (or not drink), does not merely reflect one’s individual preference, or even habitus, but can also be an ideological choice—demonstrative of a set of ideas and beliefs that correspond to a particular vision for the country’s future. In the Ethiopian case, competing beer brands signal discordant visions rooted in dueling interpretations about the nation’s past and present—a tension underlying the promises of modernity. Such a modernity is neither apolitical nor solely conceived in opposition to a Western other, but in fact is multiple, endemic, and rife with local rivalries ready to implode. Presenter: Christina Collins (Indiana University, Bloomington, Department of Anthropology)

Anthropological Theories of Kinship and Social Reproduction Theory in Conversation

8:00 AM - 9:45 AM TMCC - 206 A

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Geoffrey Hughes (University of Exeter)

CHAIR:

Geoffrey Hughes (University of Exeter)

PRESENTER:

Geoffrey Hughes (University of Exeter), Matan Kaminer (Hebrew University of Jerusalem), Hannah Borenstein (Duke University, Department of Cultural Anthropology), Anne-Christine Trémon (Ecole des Hautes Etudes en Sciences Sociales (EHESS))

DESCRIPTION:

In the last few years, interest in Marxist-Feminist social reproduction theory (SRT) has been booming across disciplines, building on an older tradition of social

reproduction feminism and feminist political economy centered in Toronto, among other places. However, adoption of SRT's theoretical innovations in cultural anthropology has been slow despite the many historical linkages between anthropological theories of kinship and SRT's sources. Among these sources are Marxist anthropologists such as Eric Wolf, Emmanuel Terray and Maurice Godelier, who theorized kinship as a distinctive 'mode of production,' and those like Claude Meillassoux and Michael Burawoy who described how deployment of migrant labor facilitated the externalization of the social-economic costs of producing new workers. Feminist anthropologists of the 1970s like Gayle Rubin, Sherry Ortner and Marilyn Strathern also made great strides in challenging the patriarchal and androcentric assumptions of earlier approaches to kinship, especially the paradigm of the 'exchange of women.' More recently, the Gens collective has sought to put feminist insights at the center of anthropological understandings of the 'economy,' challenging a longstanding tendency to see kinship and economy as disparate 'domains' of social life. Today's anthropological kinship theory has left behind structuralism and functionalism, moving towards more practice-based, materialist approaches to the great diversity of contemporary kinship forms. Our panel will explore how this anthropological sensitivity to difference might inform discussions of the household's social-reproductive role in contemporary capitalist societies, wherein simplistic models of the nuclear family are sometimes black-boxed and naturalized. Instead, we seek better analytic purchase on how different familial arrangements remain indispensable to the maintenance of a complex division of labor in an integrated, but highly unequal, global economy. Contributions will seek to answer questions such as: What role do kinship systems and arrangements play in the economic lives of workers and in gender-based mobilities? What is the relation between hegemonic kinship ideologies and the realities of family life in different places around the world? How do differences in kinship arrangements (perceived or real) play into the racialization of different groups worldwide? How have changes to labor processes related to crises such as the COVID pandemic and climate change accentuated conflicts over normative and practical figurations of kinship? How might contemporary contestations around labor and kinship relations presage new forms of social organization? (Sponsored by the Commission on Global Transformations and Marxian Anthropology in the International Union of Anthropological and Ethnological Sciences)

Reproducing the Patriline Under Conditions of Austerity in Jordan: As in many countries, Jordan's neoliberal turn has been widely blamed for fraying a social contract that once held out the promise to a wide swath of society that a male breadwinner's salary could support the unpaid reproductive labor of his wife (in turn supporting him and their family). Yet different forms of patriarchy are vying for social, economic and political hegemony in a dynamic and culturally contested process here. Social Reproduction Feminism in particular invites us to consider how different schemes for articulating the distinction between domestic and wage labor become intimately entangled with the reproduction of alienated labor for global circuits of capital accumulation. During the colonial period, then-popular European and Ottoman notions of bourgeois domesticity were sutured to much older models of imperial divide-and-rule premised on collective loyalty to powerful lineages. Yet both liberals and Islamists challenge these tribal bonds in favor the husband-wife bond while striving to keep household resources within the household. These sociopolitical tendencies both urge younger generations to prioritize their own reproductive potentialities over those of their kin by striking out on their own with the help of various financial instruments (Islamic or otherwise) rather than waiting their turn for help from kin. Yet lineages have fought back against an increasingly austere economic order with demands for specially-allocated government jobs and the restoration of 'tribal' lands. These struggles exemplify how class and gender distinctions can only be grasped through careful attention to the micro-political struggles of specific human communities. Presenter: Geoffrey Hughes (University of Exeter)

On the difference kinship makes for social reproduction: Matrifocal Thai migrants in Israel: Social reproduction theory (SRT) argues that the exploitation of wage-labor in capitalist enterprises depends on unpaid reproductive work, mobilized in large part through kinship. My paper suggests that SRT's agenda can be refined by sensitivity to the global diversity of kinship arrangements, including the gendered axis along which the link between generations is organized, the axis of patri/matrifocality. In the case of men's migration for agricultural labor from Northeast Thailand (Isaan) to Israel, matrifocal organization plays a crucial role in the reproduction of migrant labor-power – a task which concerns workers, kin and employers. In semi-rural Isaan, upon marriage a man typically comes to live with his wife and her parents. Inheritance goes primarily to daughters, and upon divorce children stay with their mothers. Though both genders migrate, men go farther

abroad for longer, and among those in Israel, over 95% are men. Migrants remit primarily to their wives, who invest in debt service, schooling, and productive assets. Though migrants' wives depend on remittances for their livelihood, matrifocal organization grants them significant leverage. Aware of both dependence and leverage, the female kin of the migrants I worked with in Israel tried to mobilize employers in support of a perceived common interest in maximizing workers' productivity and remittances – an endeavor recognized as legitimate by both employers and workers. By demonstrating both the differences in the gendered balance of power entailed by the global diversity of kinship arrangements as well as capital's versatility in mobilizing workers and their families to contribute to its own accumulation across such differences, my paper shows the analytic and political potential of an anthropologically informed SRT. Presenter: Matan Kaminer (Hebrew University of Jerusalem)

Sporting Productive Bodies: Ethiopian Women Between Running & Mothering : Although women runners in Ethiopia often end up being the primary money earners and sharers in their familial networks, they are often expected to do the explicitly feminized work of biological reproduction, domestic work, and mothering. For my paper I plan to draw on a chapter from my dissertation about Ethiopian women runners' relationship between two modalities of work that require different ideal body types – thin and efficient running bodies, and "fatter" (wefram) bodies for mothering. Because of this incommensurability, husbands, boyfriends, and coaches demand different things from women's bodies at different times, often heightening how these roles are incommensurable. It is not so much that the contrasting bodily ideals mirror the contrasting realms of production (being a wage earning athlete) and reproduction (giving birth and caring for the family) – though at times they seem isomorphic – but that the impossibility of being both are evidence of deeply rooted contradictions systemic in capitalism. As women seek to run at the highest level, especially as it runs counter to many gendered expectations from the countryside areas where they grew up, they develop alternative kinship networks along the way, including, but not limited to international sports agents, who support them in liminal periods where family members may disapprove of their pursuits. In the paper I will draw on Marxist feminist ideas of social reproduction to show certain incommensurability with Ethiopian expectations for mothering (being reproduction and production) and the transnational athletics market, and with these hybrid

relationships of kin. Presenter: Hannah Borenstein (Duke University, Department of Cultural Anthropology)

Patriarchal Care ? Lineage and Social Reproduction in Shenzhen, China: Although anthropological studies of Chinese kinship have deemphasized the importance of the patrilineage, recent research has pointed out its revival in the context of China's adoption of state capitalism, particularly in the Southeastern coastal provinces that have been the first to open up to overseas capital and remain the prime loci of capital accumulation in China. Lineages have channeled migration overseas and they play a major role in attracting donations and investments from the diaspora. Although the Chinese central authorities tolerate the revival of ancestral rites that have come along with overseas capital, they hold an ambivalent attitude toward the lineage. On the one hand they consider the lineage a feudal, patriarchal form of social organization and a source of potentially subversive local power. On the other hand, the lineage echoes the state's neonationalist revival of traditional Confucian values as well as its global essentialist rhetoric of blood ties with the diaspora. Based on fieldwork in an emigrant lineage-village community that has become a neighborhood of Shenzhen, I combine anthropological theories of kinship and social reproduction theories to examine how this ambivalence plays out in the rapidly changing local context. I examine how the redistributive funding of educational and care services for children and the elderly, which are central to the lineage's moral economy, are partly at odds with the state's tendency to download the state's responsibilities in these matters onto the nuclear family but also private enterprises. While following the Gens approach (named in reference to anthropological studies of lineages and clans) which refuses to separate kinship and economy, I reflect on whether its substitution of "generation" for social reproduction is useful. Presenter: Anne-Christine Trémon (Ecole des Hautes Etudes en Sciences Sociales (EHESS))

Anthropology and Architecture in Conversation: Charting the Promise of Transdisciplinary Collaborations

8:00 AM - 9:45 AM **Virtual - Room 1**
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Brenda Chalfin

CHAIR:

Brenda Chalfin

PRESENTER:

Brenda Chalfin ,Vyjayanthi Rao ,Felicity Atekpe ,Alicia Lazzaroni ,Delia Wendel (Massachusetts Institute of Technology),Chat Chuenrudeemol

DISCUSSANT:

Cady Gonzalez

DESCRIPTION:

This roundtable brings together anthropologists and architects to speculate about transdisciplinary futures. Geared to a new generation of teachers and practitioners, the event offers a forum to hear from and respond to those already working at this nexus: anthropologists who teach architecture students and/or study creative processes and studio pedagogies, architects who read, teach and apply anthropological theory, urbanists and professors of practice who insist on alternatives to the established canon and for whom design overlaps with activism. Participants draw on wide-ranging geographic, professional, and personal experiences in academe and industry in the US, Europe, Asia and Africa. We ask: What collaborations, conversations and career trajectories might the intersection of anthropology and architecture inspire? Can a common concern with material worlds, location and empirical inquiry open a space for mutual engagement and reflection? How might architecture's investment in intervention displace anthropology's comfort zone of critical distance. Might new alliances and adaptations across these fields foster mutual responsiveness to contemporary problems, whether matters of global mobility, capitalism and the explosion of virtual worlds and spaces, climate change and threats to human and non-human habitation, or diverse manifestations of identity, politics and public life? Participants will address concrete programs of study as well as projects that exemplify productive tensions and intersections. Also discussed will be ways the two fields misconstrue one another and impasses that remain despite the collaborative impulse. Conversation will likewise speak to the roles of other interdisciplinary interlocutors, both expert and non-expert, in the office, classroom, studio, lab, and field. The roundtable will be recorded for the purpose of studying, sharing, debating and publishing transcripts in accessible format to document the promise of disciplinary boundary-crossing for career pathways. Felicity Atekpe is Professor of

Professional Practice at Bartlett School of Architecture and founder of White Table Architects specializing in sustainable design. Vyjayanthi Rao is an anthropologist, curator and architecture professor at Yale focusing on global urbanism and displacement and a founder of Spatial Ethnography Lab. Trained in architecture, anthropology and geography, Delia Wendel is Professor of Urban Studies and International Development and directs MIT's Planning for Peace collective addressing design and human rights. Mi Koudal Randlev is a landscape architect and partner of the Denmark based architecture practice, Schonherr, involved in curating Coastal Imaginaries pavilion at 2023 Venice Architecture Biennale. Brenda Chalfin is an Anthropologist with expertise in community-generated architecture and infrastructure in West Africa who incorporates studio-based methods into anthropological research, teaching and publishing. Alicia Lazzaroni specializes in post-anthropocentric architecture and is co-founder of the art/architecture practice Animalis Domestici. She on faculty at Aarhus School of Architecture and previously taught at Thailand's Chulalongkorn University. Chat Chuenrudeemol is an architect and originator of Bangkok Bastards collective devoted to documentation and celebration of architectural inventions, landscapes and spatial strategies adapted to the ecologies, economies and living conditions of Southeast Asia.

Anthropology of International Education in Transition

8:00 AM - 9:45 AM TMCC - 718 A

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Jonathan Marino

CHAIR:

Jonathan Marino

PRESENTER:

Jonathan Marino ,Pamela Reyes Galgani ,Kelsey A. Dalrymple (University of Wisconsin, Madison),Mariam Sedighi

DISCUSSANT:

Lesley Bartlett (University of Wisconsin, Madison)

DESCRIPTION:

This session features four diverse papers that explore periods of change and transition in the worlds of young

people and the educational and governance institutions that surround them. Together they ask critical questions about the dynamics of transition: who sets the terms of change? How do people cope amidst overwhelming change? And when and how do different stakeholders push back, speak out and shape the change they experience? In paper 1, Pamela Reyes-Galgani focuses on a period of immense transition in Chile in 2019 when the country faced the most violent and massive social uprisings since the fall of the dictatorship in 1990. To reduce social conflict, the Government called a plebiscite in which the majority supported the option of a New Constitution. Although in 2022, the constitutional proposal was rejected, the whole constitutional process was unprecedented in Chilean history: High participation of grassroots organizations, youth factions of progressive political parties, and new political parties derived from student mobilization resulted in a proposal with broad participation of sectors usually excluded from traditional politics. Reyes Galgani asks: How do youth activists organize and push for political change during the constitutional process in Chile? In Paper 2, Jonathan Marino focuses on a decade of pedagogical transitions in Uganda in how reading is taught in the early grades. Using a framework of 'educational projects' (Bartlett 2007), Marino seeks to understand why early grade reading became an object of concern in Uganda, how different stakeholders have implemented the various interventions, and what challenges arise during their work. In Paper 3, Kelsey Dalrymple centers the experiences of Burundian refugee youth. She maps the constellations of donors, UN agencies, and NGOs that have made significant investments in education programming for these refugee youth, with a particular focus on social emotional learning (SEL). SEL is perceived as an educational approach that can help improve academic achievement, build resiliency, and promote social cohesion for refugee and crisis-affected learners. And yet, Dalrymple finds that little is known about the effects of SEL on these communities. Her research, therefore seeks to remedy this gap. Finally, in paper four, Mariam Sedighi focuses on the educational spaces in Iran that have been increasingly asked to transition into spaces that cultivate entrepreneurial mindsets and skills in young people. Derived from a larger longitudinal and multi-sited ethnography conducted between 2015-2020 in Tehran, Sedighi's paper examines how the transnational discourse of entrepreneurship education is (re)articulated in the local spaces of entrepreneurship education in Tehran.

Early grade reading as educational project in Uganda: Bartlett defines educational projects as "durable (but

not permanent) constellations of institutions, financial resources, social actors, ideologies, discourses, pedagogies and theories of knowledge and learning that shape the way people think about schooling and its purpose.” (2007, p. 152). In this paper I use educational projects as a framework to make sense of the work a series of early grade reading interventions have done in Uganda over the past decade. Starting in 2012 with the USAID-funded School Health and Reading Program (SHRP), a constellation of international donors, Ugandan government officials, and local civil society actors have endeavored to shift reading instruction in primary schools across the country from a whole word to a phonics-based approach that also incorporates elements of learner-centered pedagogy. In Uganda, these pedagogical reforms are also situated within a language policy that calls for students in grades 1-3 to be taught in a local language. Instruction transitions to English in grade 4. I seek to understand why early grade reading became an object of concern in Uganda, how different stakeholders have implemented the various interventions, and what challenges arise during their work. Using a comparative case study design that draws on nine months of stakeholders interviews and participant observation in schools, I focus particularly on variations across language settings and reflect on the way linguistic and cultural factors complicate top-down efforts to induce pedagogical change. Presenter: Jonathan Marino

Social movements and Education during the Constitutional Process in Chile: In 2019, Chile faced the most violent and massive social uprisings since the fall of the dictatorship in 1990. To reduce social conflict, the Government called a plebiscite in which the majority supported the option of a New Constitution drafted by an Assembly that would exclude the participation of politicians in office. Later, pressures from social movements forced them to reserve seats for indigenous representatives and guarantee gender parity in the composition of the Assembly. Although in 2022, the constitutional proposal was rejected, the whole constitutional process was unprecedented in Chilean history: High participation of grassroots organizations, youth factions of progressive political parties, and new political parties derived from student mobilization resulted in a proposal with broad participation of sectors usually excluded from traditional politics. The constitutional proposal included principles of plurinationalism, feminism, and environmental protection, ideas alien to those that had dominated the Chilean political system. This ethnographic research asks: How do youth activists organize and push for political change during the constitutional process in

Chile? After six months of fieldwork in Chile, data shows that the activists' main strategies were to create educational instances in areas marked by exclusion and social conflict, combining their long tradition of social work in marginalized areas with a defense of the constitutional proposal. This study examines how youth participation in the political processes is reshaping Chilean politics. Broadly, the research contributes to studies on how social movements and youth activists are creating and pushing for new citizen participation forms in democratic processes. Presenter: Pamela Reyes Galgani

Social Emotional Learning for Peaceful Co-Existence among Burundian Refugees in Tanzania: Burundi is an East African nation that has endured decades of cyclical violence due to long-standing ethnic and tribal divisions. In 2015, renewed political and ethnic conflict forced more than 400,000 Burundians to seek refuge in Tanzania. Currently, over 145,000 of those individuals remain in Tanzania as refugees, split between two refugee camps. While NGOs provide numerous humanitarian services in the camps, a sector that has been prioritized by the Burundian refugee community is education. As such, various donors, UN agencies, and NGOs have supported education initiatives in the camps since 2015. A more recent initiative is the integration of social emotional learning (SEL) into education programming in the camps. SEL is perceived as an educational approach that can help improve academic achievement, build resiliency, and promote social cohesion for refugee and crisis-affected learners. Though, despite nearly half-a-billion dollars being invested in SEL programming for crisis and displacement contexts since 2018, little is known about the effects of SEL on these communities. This paper draws from ongoing ethnographic research that examines the effects of SEL with Burundian refugees in Tanzania. Preliminary findings show that despite the absence of any explicit objective related to social cohesion, peace-building, and future conflict-prevention in SEL project strategies and theories of change delivered by NGOs, local and pre-existing forms of SEL among Burundian refugees have a clear intention of supporting these goals: “We teach children here the skills to live together peacefully so that they can one day bring peace to Burundi.” Presenter: Kelsey A. Dalrymple (University of Wisconsin, Madison)

Gendered Divisions in an Entrepreneurship Education Classroom in Iran: In the past few decades, national governments and international organizations have embraced entrepreneurship as a major solution to different local and global challenges, including gender inequalities, youth unemployment, poverty, and

economic development (ILO, 2008; OECD, 2015). In this regard, educational spaces around the world, including in Iran, have been increasingly asked to transition into spaces that, among other things, cultivate entrepreneurial mindsets and skills in young people. Derived from a larger longitudinal and multi-sited ethnography conducted between 2015-2020 in Tehran, Iran, this paper examines how the transnational discourse of entrepreneurship education is (re)articulated in the local spaces of entrepreneurship education in Tehran. This interdisciplinary study is informed by the theoretical-methodological approach of “assemblage” (Anderson, Kearnes, McFarlane, & Swanton, 2012; Sharma, 2008), and draws on and builds upon 1) feminist theories concerned with the gendered and gendering aspects of (nation)state-building, knowledge-making, and globalization processes (Butler, 2002; Gibson-Graham, 1996; Harding, 1986; Moallem, 1999); and 2) critical policy studies’ exploration of policies as contingent processes and actants (Shore & Wright, 2011; McFarlane, 2011). It particularly shows how the discursive practices of entrepreneurship education (re)produce gender and geographical differentiations and divisions, and how the youth in Iran re-produce, navigate, and challenge gendered and colonial discourses embedded into the everyday practices of entrepreneurship education. In so doing, the study contributes to the growing body of post-colonial research concerned with the coloniality of knowledge, power, and being in modernity’s discourses of “progress” and “development” (Andreotti et al., 2015; Maldonado-Torres, 2007; Quijano, 2000).

Applying Anthropological Learning: The Use of Anthropology to Support and Promote Positive Change with and for Communities

8:00 AM - 9:45 AM TMCC - 205 A

Oral Presentation Session

REVIEWED BY:

National Association for the Practice of Anthropology

ORGANIZER:

Hilary Symes (The College of New Jersey, Department of Sociology & Anthropology)

PRESENTER:

Mikaela Williams (Memory Keepers Medical Discovery Team), Hilary Symes (The College of New Jersey,

Department of Sociology & Anthropology), Anya Meave, Hideki Yoshikawa

DESCRIPTION:

The application of anthropology can play a critical role in the improvement of community conditions. From identifying barriers and navigating conflicting interests to developing culturally relevant and appropriate responses, anthropology can provide key insights and help to map the path forward. These four papers explore these important roles in a variety of communities. The first paper looks at the development of a media literacy seminar for a senior center in northern Texas. The second explores barriers to law students attempting the bar exam in order to inform policy and as a result, to improve student outcomes. The third paper seeks to understand obstacles and incentives to the implementation of agroecology food systems within a community in Argentina. And finally, the fourth paper navigates the conflicting discourses surrounding the inscription of the Yambaru forest in Japan. Each of the papers presents an example of the myriad of situations in which anthropology can be instrumental in understanding and helping to address complex issues.

Exploring Older Adult Media Literacy Needs: The advancement and incorporation of digital technology in daily life continue to grow exponentially as the median age of humanity continues to rise. While there are a plethora of media literacy programs targeted toward children and adolescents, older adults are often left out of these initiatives. This research explores the way older adults analyze, interact with, and create media. Based on the findings, a seminar for the Denton Senior Center was created to not only teach older adults about media literacy but to also help them learn the skills to become peer educators to share knowledge with others in their communities. Presenter: Mikaela Williams (Memory Keepers Medical Discovery Team)

From Law Student to Lawyer: Using Qualitative Methods to Identify Barriers to the Profession: Law students hoping to practice law in the United States encounter systemic barriers to becoming professional lawyers. These barriers include living and exam expenses, travel costs, bureaucratic hurdles, and studying for and passing the Bar exam. Moreover, students' job offers are contingent upon successfully passing the exam. Pass rates vary by jurisdiction and each exam administration, but most administrations average approximately a 60% pass rate (NCBE 2022). Historically, law students from minoritized communities face even more barriers than others (Arete 2021; Colton 2002; Crenshaw 1989).

Currently, the National Conference of Bar Examiners (NCBE), a nonprofit organization which creates and administers bar exams in most jurisdictions, is redesigning the bar exam to be a more modern, competency-based exam. As a result, NCBE is conducting studies to identify barriers to success for minoritized bar examinees. Recent literature about the bar exam and examinee success takes a critical approach to the overarching professional requirements (Arete 2021; Howarth 2020; Kidder 2004). However, the literature rarely addresses practical approaches to mitigating some of these barriers. This presentation synthesizes qualitative data collected by researchers at NCBE in focus groups, think-aloud mock exams, and participant-observation research to understand how the bar exam affects examinees. All participants were financial aid recipients from the Council on Legal Education Opportunity. This analysis identifies three categories of barriers to examinee success: educational opportunity, economic and non-economic resources, and familiarity with the bar exam process. Ultimately, this research seeks to inform policy that will better prepare students, particularly from historically minoritized communities, for success in the legal profession. Presenter: Hilary Symes (The College of New Jersey, Department of Sociology & Anthropology)

BRIDGING THE GAP BETWEEN A HEALTHY DIET AND AGROECOLOGY IN GENERAL PACHECO, ARGENTINA: This study explores the role Comunidad Milpa (Milpa) plays in implementing agroecology food systems in Comunidad Pacheco, Argentina. From teaching residents about food cultivation practices, to the importance of a healthy diet and developing relationship with local agroecology producers, the method builds upon the idea of food sovereignty and self-governance. Research conducted for this study focused on obstacles residents encountered while seeking to incorporate local agroecology foods into their diet. Incentives encouraging residents to support area agroecology efforts were also investigated, as well as barriers producers experienced while marketing their products. Design methods used for the investigation included both qualitative and quantitative methods in the form of surveys and interviews with members and participants of Milpa. Data gathered through both methods resulted in identifying the perspective Milpa participants have of the organization, their food practices and choices, and obstacles food producers encounter within the community. Presenter: Anya Meave

Hesitant Heritage: Yambaru Forest, U.S. Military, and World Heritage in Okinawa, Japan: In 2021, the Yambaru forest in Okinawa, Japan, was inscribed as a UNESCO World Natural Heritage (WH) site, along with three

other areas in Okinawa and Kagoshima. While the public welcomes the forest's inscription, the inscription process exposed two clashing discourses and one alternative approach, stemming from the fact that the U.S. military's Northern Training Area (NTA) sits next to the then-nominated site. One and dominant discourse was led by the Japanese Ministry of the Environment. It downplayed the presence of the NTA and emphasized that the Yambaru forest should be valued for its rich biodiversity without being politicized. The other discourse was led by members of local communities and environmentalists who allied with Okinawa's long-enduring anti-U.S. military base sentiments. It insisted that the NTA should be closed first for the forest to become WH. Conversely, it argued that the inscription would legitimize the NTA if the forest became WH with the NTA kept intact. The alternative approach was led by a few NGOs, including the author, an applied anthropologist, and his Okinawa Environmental Justice Project. It envisioned the inscription process as a means or 'transition' to bring up the issues of the NTA from the U.S.-Japan political context into an international framework, the World Heritage Convention. This paper discusses how the alternative approach materialized in the inscription process and now challenges the NTA by using the framework of the Convention. Presenter: Hideki Yoshikawa

Barbenheimer

8:00 AM - 9:45 AM TMCC - 718 B

Late-Breaking Roundtable/Town Hall - In-Person

ORGANIZER:

Elizabeth Chin

CHAIR:

Anar Parikh (Brown University)

PRESENTER:

Matthew Durlington (Towson University, Department of Sociology, Anthropology & Criminal Justice), Sameena Mulla (Emory University), Ramona Perez (San Diego State University, Department of Anthropology), Maxime Polleri (Laval University)

DISCUSSANT:

Dana-Ain Davis (CUNY, Graduate Center)

DESCRIPTION:

What could be more American than the territory described by Barbenheimer -- that is, the territory encompassed by everything from Barbie to the atom bomb? What are the cultural connections and

contradictions that bubble up when we juxtapose that blonde bombshell and former sex toy to world-ending, world-creating technologies, imperialism, capitalism and the American way? This session aims to provide the foundation for a lively discussion, by turns serious and silly, nostalgic and nuclear, but always anthropological. Attendees are strongly encouraged to come as a character, real or imagined, from Barbie or Oppenheimer -- or as a Barbenheimer character of your own making.

Between Professional Stranger and Auto-Ethnographer: Degrees of Belonging in Anthropological Research, Part 1

8:00 AM - 9:45 AM **TMCC - 803 B**
Oral Presentation Session

REVIEWED BY:

Association of Senior Anthropologists

ORGANIZER:

Jim Weil (Science Museum of Minnesota)

PRESENTER:

Jim Weil (Science Museum of Minnesota), Lourdes Gutierrez Najera (Western Washington University, Department of Anthropology), Francine Saillant (Laval University), Phyllis Passariello (Centre College, Anthropology and Sociology Program)

DISCUSSANT:

Susan Trencher (George Mason University, Department of Sociology & Anthropology)

DESCRIPTION:

The title of Michael Agar's 'The Professional Stranger: An Informal Introduction to Ethnography' implies a research focus on the so-called 'other.' In contrast, panelists in this session provide examples of ways anthropologists have been or become part of the groups in which they work. Their presentations consider the extent to which they bridge or efface the dichotomy between 'us' and 'them' in fieldwork. How have relationships between the extremes of complete stranger and auto-ethnographic subject developed? Have involvements intensified along a continuum during their careers through ongoing research? ...long-term residence? ...local employment or marriage? ...post-retirement engagements? This is especially relevant for senior anthropologists who have experienced transitions in their own professional approaches and witnessed profound changes in the discipline. Now it

may be more common to do research 'at home' and less common in settings which, in one way or another, can be considered remote. Kirin Narayan (1993) raises challenging issues in what it means to be a 'native anthropologist.' Where anthropologists share an essential or existential identity with a local population, does a necessary element of professional detachment estrange them from their own neighborhoods, organizations, or other interaction sites and reference groups? Are we doing auto-ethnography when we debate over what it means to be an anthropologist, distinguishing our own identity within the discipline from identities we don't share with all of our colleagues (Goldschmidt 1977; Trencher 2000). Over many decades, moreover, the shift of emphasis from holistic community studies to ethnographies with local manifestations of global problems has countered the exoticism of past orientations and practices (MacClancy 2019). Also, cultural hybridity makes us members of multiple groups in widening circles of inclusiveness? Might our personal backgrounds and choices of research sites have become less crucial now than a professional stance combining reflexivity, self-effacement, and ethical commitment? In what ways have anthropologists developed their personal identity to resist and overcome the compartmentalization of the social contexts in which they live and work? (Bolles 1985). Many have carried out research in two or more contrasting settings (Gottlieb 2012). Accordingly, in an ideal world, what additional benefits can be expected when those, who so choose, have opportunities to draw from at least one fieldwork project in a community or equivalent setting they define as their own and in at least one other as unfamiliar as possible? Introduction: reassessing positionality in anthropological careers: Presenters on this panel, and in

the second part of the session which follows, reflect on the degrees of belonging that anthropologists have experienced in a wide range of research settings. Their experiences confirm that the image of an absolute outsider as the prototypical ethnographer has not adequately characterized the recent history of the discipline, if ever it did. Degrees of personal involvement reflect a greater diversity of anthropologists and anthropologies, also reducing distinctions between the here and the there. Correspondingly, current research reflects the increasing attention given to one's own groups, however defined and delimited, including anthropological subcultures. The presentations emphasize the intricacy of the relationships between ethnographers and the individuals among whom they work and live. Over time—in some of these cases, over long careers—the complexity of research settings and anthropological approaches has increased in unforeseeable ways, along with the pace of social change altogether. Early career research for some of the panelists was still carried out in a “beyond the frontier” mode, but all sites in their ever-greater variety are connected by intensifying globalization processes. These conditions are experienced along a scale with degrees of engagement and belonging—always with unique features—represented by each panelist in multiple and sometimes sharply contrasting examples. At the end of my dissertation fieldwork, Quechua colonists in the Bolivian tropical forest lowlands shared some troublesome information because, they said, we had become part of the community. Later, in Costa Rica, I blended into teams of rural community members and professional colleagues on projects guided by their own purposes. For attendees who would benefit from a review of the session abstract, the themes to explore and questions posed are highlighted as points of departure for the richly insightful set of presentations to follow. Presenter: Jim Weil (Science Museum of Minnesota)

The intersectional ethnographer: The politics of recognition and the limits of belonging: This paper examines the challenges of “Native anthropology,” as brown skinned, formerly undocumented, first-gen, Mexican transborder immigrant woman. In my anthropological encounters in both Mexico and the U.S., I am sometimes given insider status, while at other times I am given outsider status. My positionality affects not only how my interlocutors see me in the field but also how I am read by outsiders, particularly by representatives within state institutions. Whether working with Indigenous Latinx people or with undocumented youth, there are limits to belonging to

becoming an insider. At this stage in life, I know who I am as an anthropologist and as a woman of color, but other facets of my identity are less clear. Namely my own links to Indigeneity and Afro-descendance. These aspects of my history are fraught, but their consideration also contributes to ongoing discussions about the politics of claiming particular identities. Presenter: Lourdes Gutierrez Najera (Western Washington University, Department of Anthropology) Revenir chez soi, en assumer l'étrangeté -- Coming back home, assuming its strangeness: Mes premiers terrains se sont concentrés sur des espaces institutionnels en anthropologie de la santé et dans diverses localités canadiennes, le premier en milieu psychiatrique. Les terrains 'exotiques' sur les droits humains au Brésil se sont ensuite succédés dans divers espaces de la société civile pour une vingtaine d'années. Le terrain actuel se déroule dans mon quartier d'enfance à Québec. Ce terrain, objet de cette présentation, a ceci de particulier qu'il prend pour point de départ une action de mobilisation d'acteurs culturels et communautaires dans le champ de l'art et de la santé mentale. Il s'impose à moi comme nécessité et engagement. My first fieldworks focused on institutional spaces in health anthropology and in various Canadian locations, the first in psychiatric settings. The 'exotic' fieldwork on human rights in Brazil then followed in various spaces of civil society for about twenty years. The current fieldwork is taking place in my childhood neighborhood in Quebec City, and is unique in that it is based on an action to mobilize cultural and community actors in the field of art and mental health. It imposes itself on me as a necessity and a commitment. Presenter: Francine Saillant (Laval University) Anthropologist as professional tourist: nurturing universalism and incorporating semiotics: Reflecting on how my first awareness of the possibility of an “anthropology of tourism” had a profound effect on my life personally and especially as an anthropologist, I can look back at my own research (and so-called research) over the years, noting how a touristic perspective has nurtured my universalist tendencies and has moved me to incorporate semiotics into my thinking. This approach exaggerates the transitory aspect of belonging that often develops through ethnographic fieldwork. Acknowledging one's stance as a tourist bypasses questions such as how to approach data-gathering, how to address one's inevitable subjectivity, and how to maintain ethical integrity, opening rather than closing doors, allowing a freedom in presentation of self that is both honest and useful. I will highlight the particular scholars (Dean MacCannell, Nelson Graburn, Alan Dundes, Myrdene Anderson, Charles Sanders Peirce,

Mihalyi Csikszentmihalyi, Eduardo Kohn, among others) and the ideas and chains of thought that helped me develop as an anthropologist and a human being. Tourism fortunately can occur nearly anywhere. My own peripatetic field sites have ranged from a displaced Yaqui Indian village in southern Arizona in 1968 to a block in contemporary Detroit's urban ghetto, 2021; and also including Panajachel in Guatemala, Puerto Arista in Chiapas, Mexico, Latacunga in Ecuador, Aguas Calientes at the base of Machu Picchu, Peru, Mondana on the Napo River in the Ecuadorian Amazon, several Virgin Mary apparition sites (Lourdes, Fatima, Czestochowa, Montserrat, Pompei, Naples, and Norwood, Ohio), and several places in the Yucatan and Quintana Roo, Mexico. Please note: I have only left out South Asia, Southeast Asia, Brazil, and South Africa et al. for brevity. Presenter: Phyllis Passariello (Centre College, Anthropology and Sociology Program)

Beyond "Lonely Death": Communication and Engagement in Japan's Aging Society

8:00 AM - 9:45 AM TMCC - 802 B

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Shiu Hong Simon Tu (Chinese University of Hong Kong)

CHAIR:

Iza Kavedzija (University of Cambridge)

PRESENTER:

Aaron Hames (University of Hong Kong), Isaac Gagne (DIJ-Tokyo), Celia Spoden, Shiu Hong Simon Tu (Chinese University of Hong Kong)

DISCUSSANT:

Gordon Mathews (Chinese University of Hong Kong, Department of Anthropology)

DESCRIPTION:

It is widely reported that Japan's population is among the oldest in the world. In 2021, the aged population (65 years old or above) amounted to 28.9 percent of the total (Statistics Bureau 2022), and it is not foreseen that the rising trend would be mitigated in future. At the same time, Japan has also see an overall increase of single-person households, of which in 2020 approximately 6.72 million were constituted by elderly who lived alone (ibid.). [i]Kodokushi[/i], or 'lonely deaths,' draws as much media attention as scholar

discussion and governmental recognition. Against the bleak portrayal of social decline, empty houses, and loneliness, positive narratives that emphasize values such as care, self-cultivation, community, network, and social inclusion are commonly seen, and various social sectors undertake to promote welfare and encourage social participation. The growing awareness of the need for increased inclusivity and social engagement further anticipates social responses to other marginalized groups, such as people with disabilities. This session examines the practices and opportunities observed in Japan. One paper investigates the notion of being of use to others elaborated by Japan's leftist medical cooperatives, and analyzes how elderly people work to improve their neighborhood. Another paper brings two rural localities into attention; drawing on the concept of 'local moral worlds,' it demonstrates how aging residents' empathetic and sympathetic sensitivities have resulted in vibrant community-based social welfare services. The third paper explores the potential of technology. Based on the author's fieldwork in an avatar café, it demonstrates the opportunities of using robots for people with disabilities and elderly to engage in society. The last paper looks into the potential of art. Focusing on an international contemporary art festival taken place in rural communities, it discusses how elderly people participate in the artistic processes and let their stories told and circulated via artwork and images. Through diverse ethnographic studies, the session reveals the dynamics of elderly and physically impaired people's lives in Japan's aging society.

A Twilight Ideal: To Be of Use to Other People: Demographic change in Japan has made significant impacts on elderly life. Extraordinary longevity, mandatory retirement, and smaller families and households have given many elderly individuals copious time without the conventional role of grandparent. Social isolation and lonely death can be unfortunate outcomes as people age with diminishing connections to kin and society. Helping the elderly population maintain health and social participation has become a matter of societal concern. Public institutions often encourage elderly individuals to cultivate an *ikigai*, a "pursuit that makes life worth living." However, popular narratives and programs at state-funded institutions tend to neglect elderly perspectives. In this paper, I examine the notion of being of use to others, an alternative ideal for late life that the elderly elaborate in leftist medical cooperatives. Moving beyond inward concerns of cultivating the self and health maintenance, I contend, the drive to be of use to others animates the elderly to pursue endeavors with a wider scope.

Through institutional machinery of medical cooperatives, elderly individuals work to improve the social and built environments of neighborhoods in a variety of ways, including infrastructure projects, life counseling, tutoring children from impoverished families, and founding new medical institutions. I argue that cooperatives provide the elderly with a conduit to fashion new ways of being and in an aging society. Presenter: Aaron Hames (University of Hong Kong)

Social Welfare of and for the Community: Neighborhoods, Networks, and Volunteerism in Aging Japan: This talk discusses the roles of community-based social welfare services in aging suburban and rural communities in Japan. I draw from fieldwork in two communities that have vibrant, community-based social welfare services—a hamlet in Nagano, which has been navigating significant aging and depopulation, and the displaced district of Yuriage in Miyagi, which was devastated by the March 11, 2011 earthquake and tsunami. Through these case studies I examine how communities draw from their specific local conditions and resources to create a resilient moral economy of care rooted in the “local moral worlds” of community relationships. “Local moral worlds” refers to the patterns of life, including sociality and ethics, that anchor individuals’ sense of self and the order of their world (Kleinman 1992, 1997). These local moral worlds are created through and shared by the repeated social interactions among community members over time, among families across generations and among individuals through their daily lives in the community. These, in turn, will shape the notions of care that are particularly suited to the needs of each community. Moreover, the forms of care reveal locally inflected forms of volunteerism by and for aging community members. I suggest that these practices are motivated by residents’ empathetic and sympathetic sensitivities, and this characterizes the moral economy of care marking contemporary social welfare in many municipalities across Japan. Presenter: Isaac Gagne (DIJ-Tokyo)

Cyber-Physical Spaces in Japan: Social Inclusion of People with Disabilities Through Avatar-Work: In 2020 the Japanese Council for Science, Technology, and Innovation launched the “Moonshot Research and Development Program.” As Moonshot Goal #1, they formulated the vision of a society “in which human beings can be free from limitations of body, brain, space, and time by 2050” (CaO 2020). The Program aims to develop solutions through high-risk and high-impact research for societal challenges such as the declining birth rate and aging of society, particularly the resulting labor shortage. Elderly or physically impaired people

and people with responsibilities such as caregiving and child-rearing should be able to participate in the labor market, regardless of physical, cognitive, spatial, or temporal limitations. To enable labor market participation for elderly and physically impaired people as well as those with caregiving and child-rearing responsibilities, the government aims to establish so-called cybernetic avatars and a cloud-based infrastructure, which is envisioned as creating a super-smart society (society 5.0) in which cyberspace and the physical world are integrated into a perfectly networked, highly efficient, and inclusive society. The visions of the Japanese government and the objectives of the Moonshot Program may sound like science fiction, but they have already become a social reality. In my presentation, I draw on fieldwork in an avatar café, where people with disabilities remotely control robots and serve the guests. Based on interviews with the avatar-pilots, I explore their perception of social participation, work, disability, body, and space. I show, how the robot opens up new opportunities for social participation, leads to a feeling of independence and belonging, and helps to regain or adopt a positive attitude towards the future. However, these technologies also risk being technological fixes to social problems (Robertson 2007, Šabanović 2014), which remain untouched by welfare policies. Presenter: Celia Spoden

Art Lives On: Elderly and Contemporary Art at Japan’s Setouchi Triennale: Whereas Japan’s total population started shrinking since 2008, in many rural towns and villages demographic decline has been continuing since the 1950s. After decades of internal migration to large cities, nowadays rural Japan is characterized by severe depopulation. In 2019, some twenty thousand hamlets recorded that over half of the residents were aged sixty-five or above, and many of these hamlets had a population of a few hundred, if not tens. In response, both public and private sectors have devised plans to revitalize rural Japan. Setouchi Triennale is one such example. Whereas the large-scale art festival is renowned for using contemporary art to draw hundreds of thousands of visitors to a dozen of severely depopulated island communities in Japan, the artistic process also often invites the engagement of local villagers. How do these elderly people make sense of their participation in contemporary art? Based on my research centered on Setouchi Triennale 2019, this paper draws ethnographic data to examine the roles of elderly people in the production and representation of the art festival. I further cite artistic cases to demonstrate how local people negotiate in the process to let their life stories be crystallized in the form of

artwork. This paper suggests that whereas elderly villagers give meanings to artwork, their agency is distributed as a consequence of the consumption and circulation of artistic images. Presenter: Shiu Hong Simon Tu (Chinese University of Hong Kong)

DESCRIPTION:

Borders need to be materialized in order to serve as mechanisms of differentiation. From more spectacular things like walls and fences, to high tech and less visible infrastructures like biometrics, voice recognition, and algorithms to the more mundane and paper based but everyday performances of borderwork, all materializations of borders are also articulations of political imaginaries about the (im)mobility of things and people. While the violence of the materiality of borders is regularly addressed, less attention has been paid to the imaginative work of materialization. That is, we may be able to identify the political imagination of fear and domination built into the materiality of borders, but we attend less to the ways the materiality of borders produce and proliferate their own imaginings, regardless of their designers. That is, much scholarship and political discourse has identified either the grand technologies of total control and surveillance, or the ways these technologies are circumvented or transgressed; but can specific attention to the materiality of borders produce or enable us to see a different type of politics? How about the materialities that are produced not just to counter, but work alongside borders, the materialities of alternate routes, for instance, or alternate forms of living and crossing? What anthropological work is needed to mobilize other imaginative visions and politics beyond

the what we already assume about the violence of border walls and the predictable forms of resistance? Can an attunement to materialities and their conditions of change and porousness open the horizon of our imagination about movement and mobility, thinking about the movement of people in relation to that of things, commodities, non-humans and landscapes? This roundtable will draw on research on borders and how they are materialized in places like the US, Europe, and the Middle East to think about how people are both mobile and immobile, and how they imagine and live life in ways that are not captured by dominant border imaginaries.

Bringing truth to the surface. Stakes and challenges of searches for unmarked graves in Canada.

8:00 AM - 9:45 AM TMCC - 715 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association of Indigenous Anthropologists

ORGANIZER:

Philippe Blouin (McGill University, Department of Anthropology)

CHAIR:

Leslie Sabiston (McGill University, Department of Anthropology), Dallas Karonhianoron Canady

PRESENTER:

Kimberly Murray, Emily Holland (Brandon University, Department of Anthropology), Lisa Hodgetts, Hugo Cardoso (Simon Fraser University, Department of Archaeology), Kristen Barnett (Bates College, Department of Anthropology), Sarah Beaulieu

DISCUSSANT:

William Wadsworth (University of Alberta, Department of Anthropology), Katherine Nichols

DESCRIPTION:

Since the potential unmarked graves of approximately 200 Indigenous children were detected in the grounds of the Residential School in Tk'emlúps, British Columbia, in 2021, similar searches have multiplied across Canada, turning up ghastly preliminary findings. Confronted with this new evidence, which was followed by sorrowful admissions of Indigenous genocide in Canada by political and religious leaders, the public faces down an unsettling truth and an extraordinary ethical and political demand concerning its colonial history and the

lengths to which it will have to go to achieve reconciliation. While archaeology finds itself vested with the crucial task of bringing this truth to the surface in collaboration with Indigenous communities, this groundwork is purposed and mobilized in a very different set of political conditions and interests – reconciliation and decolonization – than the ideologies of salvation and collection of 'vanishing' Indigenous cultures that have marked the discipline's historical practices and concerns. In this process, anthropology is summoned to see itself anew, shedding light on the colonial history that has shaped concepts of Indigeneity and modes of relationship with Indigenous communities. This roundtable will bring together frontline investigators engaged in searches for unmarked graves from various perspectives to share their experiences of the challenges raised on the ground level. In particular, it will examine the political, epistemological and moral challenges that confront archaeology in this historical moment, as Canada's subsoil is re-figured as potentially enclosing the evidence of crimes against humanity. How are the discipline's academic priorities and practices of excavating historical truths rising to the challenge of the need for new forensic standards of investigation and evidence gathering, as well as the need for establishing best practices that respect the hopes of families searching for closure of their lost loved ones? Different protocols of mourning and burying the dead within Indigenous communities often require archaeologists to adopt non-invasive investigative techniques, which raises important technical questions about needs for training, accessing, developing and sharing skills in using remote-sensing technologies that are still in the making, and which often require collaboration with international experts. It also reveals longstanding conflicts between scientific disciplinary formations of knowledge production and Indigenous practices of knowing, clarifying aspects of how academia positions and attunes itself to Indigenous sovereignty more generally. The experts of this panel will explore how these conflicts are encountered in everyday ethical, political and legal issues that emerge in this work, including questions of ownership and the chain of custody of data, and how jurisdictional conditions of public and private land ownership impact the search for unmarked graves on former Residential School grounds and beyond. This panel confronts the dark reality of colonial relations with Indigenous peoples, but seeks to explore alternative pathways for thinking and enacting a politics of reconciliation; not only by dredging up the buried truths of a dark past, but opening up future

possibilities by grounding ourselves in new modes of collaboration in the present.

Cultural Continuity through Land, Sovereignty, Justice, and the Arts

8:00 AM - 9:45 AM

TMCC - 705

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Abra Wenzel

PRESENTER:

Abra Wenzel ,Caroline Herve ,Sarah Jacobs

DESCRIPTION:

This session brings together themes of Arctic and Indigenous sovereignty through the diverse lenses of photography collections, the tourism art market, justice and military practices. Papers draw on the role of Inuit and Stoney Nakoda values and ontological concerns in these practices, from narrating and representing land and art, to re-imagining tourist, justice and military practices in Indigenous-focused ways.

#IndigenousArt: Expressions of Tradition and Sovereignty Online: In the Northwest Territories (NWT), the tourism art market has been an important economic resource for communities and individuals. Women, in particular, have participated in these spaces through the making and selling of their art. Further, Indigenous women have had to rely on non-Indigenous, third-party tourist-oriented outlets to represent and sell their works with multiple consequences. First, the position of women and their creations within the tourist art economy has typically resulted in their labelling as handicrafters, or folk artists and their art as crafts. Second, the devaluing of art/artist in the tourism economy is reflected in their economic exchange value. Ultimately, and to date, the Northern tourism market has not accounted for the important sociocultural roles and values both women and their art carry. Dene, Métis, and Inuvialuit artists in the Mackenzie Valley, NWT have long taken part in the curio-arts market as a way of supplementing households. Using moose and caribou hair tufting as an example, I demonstrate how Western ideologies of monetary value expressed in the tourist market have diminished important cultural values significant to artists, families, and communities.

However, and of recent, Indigenous artists have started to gradually transition away from third-party tourism outlets through an uptake of Social Networking Sites (SNS). SNS has become a powerful tool for both economic exchange, and cultural preservation, expression, and sovereignty. This paper looks at the uptake of SNS in the Mackenzie Valley by Indigenous artists. Platforms such as Facebook, Instagram, and TikTok are important agentive spaces for Indigenous artists to continue to participate in an art economy. In addition, SNS platforms are transformed into spaces in which they are able to preserve, represent, and communicate their cultures and values embodied within their art. Presenter: Abra Wenzel

On the Margins of Justice in Nunavik (Arctic Quebec, Canada): Inuit Lived Experience of Justice and Ontological Encounters: In Nunavik (Arctic Quebec, Canada), the justice system has been imposed on the Inuit since the establishment of the first police posts in the 1930s. Today, the court system and all its appendixes continue to impose a frame to solve legal disputes. Qallunaat (white people) are the ones holding important positions such as judges, defense lawyers, crown prosecutors, and probation officers. Inuit working in the justice sector tend to occupy positions in the periphery only, being court interpreters, community reintegration officers, para-judicial workers, or victim support agents. While they are the main witnesses of the justice system inadequacies and violence, they play an important role as cultural mediators between Qallunaat and their people, trying to culturally adapt programs. Transitioning to a justice system that better incorporates Inuit values and practices reveals forms of ontological encounters and epistemic injustice. Through a research on the revitalization of Inuit legal practices, we analyze their experiences and perspectives on the justice system, and try to understand better the lived experience of justice in its margins in a context of neo-colonial relationships. Presenter: Caroline Herve

Re-Envisioning the Landscape: Photography and Îyârhe Nakoda (Stoney Nakoda) Resurgence: In this talk, I discuss a research partnership with the Stoney Nation, reviewing how we are working together to Indigenize a collection of historical and contemporary landscape photographs. Specifically, I will review the foundations of our partnership, the ethical framework for our research, our methods and early results, as well as our next steps. The photographic collection we are working with dates from the late 19th century to the present. The earliest images were taken by land surveyors tasked with mapping mountainous regions for resource extraction and settlement; over the past 25 years, repeat images were taken by ecologists studying

landscape change. Although there have been numerous excellent efforts to decolonize archival photographs, none have examined landscape photography. We therefore have the benefit and challenge of working with a unique collection of images and, in focusing our methods on connections to the land, bring a distinctive approach that draws on Indigenous methodologies, geography and anthropology. As our work continues, we are incorporating Îyârhe Nakoda history and narratives into the stories these photographs tell – stories of upheaval and destruction, as well as hope and resurgence. Presenter: Sarah Jacobs

Decolonizing Knowledge Production through Teaching Anthropology in Global North-South Encounters: China as Method

8:00 AM - 9:45 AM Virtual - Room 2
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Xinyan Peng

CHAIR:

Mengzhu An (Yunnan University), Mengqi Wang (Duke Kunshan University)

PRESENTER:

Mengzhu An (Yunnan University), Qiaoyun Zhang, Changgeng YUAN

DISCUSSANT:

Susan Blum (University of Notre Dame, Department of Anthropology), Chenyu Wang (Hamilton College)

DESCRIPTION:

As anthropologists, despite our continuing interest in plural ways of knowing and learning in different cultures, we have not sufficiently explored how anthropology itself is conveyed, embraced and challenged in the college setting. Teaching, especially in and for the Global South, has long been marginalised in an academic audit system that values publication in English. What possibilities for knowledge transformation exist within the dissonances and frictions that anthropological texts primarily produced when the Global North encounters the Global South in the classroom? How could teaching become a political practice that involves the active intervention of the communities and societies in which students live, while avoiding the reinforcement of epistemological

hegemony? This roundtable invites us to discuss the intellectual potential of the classroom as a space of decolonising anthropology, through cross-cultural encounters in teaching and learning. We situate the discussion specifically in China, where the tensions, reflections and practices around teaching here can serve as a method for re-investigating possible ways of producing knowledge in the broader contexts of global North-South encounters. We also focus on anthropologists' engagement with local cultural traditions within the classrooms as domestic field sites. This roundtable brings together anthropologists who were native Chinese with extensive studying and teaching experiences in the US, Hong Kong and mainland China. WANG Chenyu will share her dilemma as a foreign-born anthropology teacher at Hamilton College marked by her race, language, and nationality, whose anthropological craft is ironically overlooked. PENG Xinyan discusses her pedagogical experiment of introducing the Turners' performing ethnography into the Chinese classroom. Her collaborative project with AN Mengzhu attempts to engage with the embodied translation and transmission of anthropological knowledge by taking seriously the gap between ethnographic description and students' own cultural experiences. They also sought to explore a feminist pedagogy within a patriarchal and elitist culture of education. Drawing on her teaching experience in a Chinese university with an international background, ZHANG Qiaoyun examines how anthropology, both as knowledge focused on marginalised groups and as a pedagogy that emphasises empathy and reflexivity, helps to reshape China's general education system which refuses to reproduce China's toxic nationalism. YUAN Changgeng analyses the multiple tensions of teaching anthropology to STEM students by looking into the Chinese intellectual tradition which has lacked an academic 'other'. WANG Mengqi asks how teaching is a form of encounter in a joint-venture university with an extremely diverse student body, which compelled everybody in the classroom to revisit their taken-for-granted assumptions and question long-held beliefs. The realization also challenges entrenched dualistic views about teaching and research, teaching and learning, and the global north and the global south. We explore these issues in light of the information explosion and the popularisation of knowledge. These reflections and experiments in and beyond China aim to destabilise the dominant mode of knowledge production in anthropology and to recognise our responsibilities as anthropologists in relation to our students as interlocutors and the local societies to which they belong.

Digital Transitions in Africa and Melanesia: Emergent Socialities, Connectivities, and Infrastructures

8:00 AM - 9:45 AM

TMCC - 701 B

Oral Presentation Session

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Sasha Newell (Laboratoire d'Anthropologie des Mondes Contemporains (Lamc) of the Université libre de Bruxelles (ULB))

CHAIR:

Katrien Pype ,Robert Foster (University of Rochester, Department of Anthropology)

PRESENTER:

Montaz Léo (Laboratoire d'Anthropologie des Mondes Contemporains (Lamc) of the Université libre de Bruxelles (ULB)),Heather Horst ,Katrien Pype ,Robert Foster (University of Rochester, Department of Anthropology),Geoffrey Hobbis

DISCUSSANT:

Michael Lambek (University of Toronto, Department of Anthropology)

DESCRIPTION:

This panel seeks to examine the emergent potentials, aspirations, and fears made possible by the increasing accessibility of digital technologies, social networks, and internet connections in two regions known for their precarious locations in global economies: Africa and Melanesia. Often described in terms of abjection (Ferguson), global shadows (Ferguson), or their lack of coevalness (Fabian), these are regions that have served as icons of alterity both within and beyond anthropological representation. This has not prevented their populations from avidly seeking connection through consumption of 'modern' goods, creative economic and political schemes, occult efficacies, and religious transformation (often in combination). Drawing on a rich comparative history (Barnes 1962; Lambek and Strathern 1999; Rio, McCarthy and Blanes 2017), we seek to understand the social and cultural effects of the (uneven) narrowing of the digital divide and arrival of new forms of connectivity. What new imaginaries and imagined communities are produced by these new media? What new social and political forms are taking shape in response to such technological capacities, and

how have pre-existing cultural models shaped the uptake of digital virtuality? We examine how such connections shape temporality, citizenship, and a sense of global co-existence, while turning an eye to economic, political, and spiritual affordances. How does the haptic shimmer of screens (Deger 2019) intersect with local aesthetics and affective modalities of relatedness? Which practices of disconnection and desires of disconnectivity have emerged alongside the new realities of digitally connected lives? Examining African and Melanesian societies together as digital worlds take hold provides an important counterweight to technological teleologies (Michaels 1994) and gives anthropology the materials with which to rethink a global future of 'hyperconnectivity' (Brubaker 2022).

“The Con of the Century”: Bluffing and Digital Practice in Coupé-Décalé: Written and presented with Sasha Newell. At the turn of the millennium, a group of young Ivorian migrants in Paris made a name for themselves through conspicuous consumption in African nightclubs, drinking champagne, wearing Italian fashion, and giving money ostentatiously to DJs and dancers in the crowd. Calling themselves boucantiers [noisemakers], they soon turned to the music industry and despite no previous training or experience, they invented a new genre that took Côte d’Ivoire, Africa, and the diaspora by storm. Combining fieldwork in Abidjan and Paris from the year 2000 with contemporary fieldwork in the Ivorian music industry, this paper uncovers the intimate connection between coupé-décalé and the emergence of the digital economy. The boucantiers funded their early operations through Minitel scams (the French internet avant la lettre), applying these skills to the emergence of the internet to promote themselves using viral videos, social networks, and online conflict to disseminate their music and aesthetics even further. More importantly, they projected this ethos of coupé (stealing) and décaler (taking off) onto a generation of Ivorian youth, who were thus primed for the digital production of real and fictive notoriety, not to mention the capacity to use this virtual connection to siphon significant wealth from richer parts of the world into Abidjan. Far from further marginalizing Ivorians through the digital divide, the arrival of the internet has placed many of them at the heart of the digital economy, which they have continuously and creatively repurposed to their proper interest. Presenter: Montaz Léo (Laboratoire d’Anthropologie des Mondes Contemporains (Lamc) of the Université libre de Bruxelles (ULB))

The Aesthetics of Connection: In the Pacific Island of Fiji, the presence of Southern Cross undersea cable and

competition in the national telecommunications industry (Horst 2018) resulted in the exponential growth in smartphone ownership and social media usage. This is particularly prevalent in urban Fiji where individuals in Fiji’s creative industries sector – including Fiji’s dynamic fashion industry – have become some of the most enthusiastic adopters of digital and social media. Fashion designers, both established and emerging, have leveraged digital and social media to establish and build their brands and grow their customer base through sites such as Facebook and Instagram. Using smartphone cameras, video capabilities and editing software, designers take behind the scenes photos, announce events and new patterns, and post day-in-the-life videos with local and global influencers who collaborate to create an image of modern Fiji (Abidin 2016). Building upon recent work on social aesthetics (Born 2017), this paper examines how an aesthetics of connection is created by designers and others as the fashion industry goes ‘online’. As Colchester (2003:11) has argued for Fijian clothing practices in previous eras, “the articulation of apparently superficial forms of clothing, fabric or motifs may provoke new kinds of associations which can help to shift, or turn, the contexts of people’s thought”. This paper explores the dialogical relationship between pattern and clothing associated with Fijian traditions and collective forms of sociality (Kuechler & Were 2007) and new forms of social relations and identities associated with the aesthetics of connection. Presenter: Heather Horst

Digital Avoidance: Or, how to act upon the risk of connected lifeworlds in Kinshasa: Even though sharing online is sometimes merely a phatic activity (Varis and Blommaert 2015), these are “small acts” of which the accumulative work can have significant social meaning (Chua 2018). This is most clear in discussions about virality, swarming, and, of course, “oversharing.” The paper works with ethnographic data collected during reflections about context collapse with Kinshasa’s inhabitants, and show the kinds of thickening that go on when relatives (affines and agnates) remain in each other’s lives via digital infrastructures; and how people manage the various levels of proximity and distance that accompany different kin relationships. The material shows that the risk of oversharing and context collapse resides not so much in what is shared, but rather in the new audiences that should not receive this particular content. Interlocutors drew attention to the social space of the circulation of information. Exposure of private images and comments, or, more general, the uncontrolled circulation of digital content can lead to strife, harm, shame, and loss, while it also sets in

motion efforts to curb the social loss incurred by the undesired travel of the digital materials. In my study of context collapse in Kinshasa's social media worlds, I pay attention to the longue durée of conflict avoidance practices, and to non-digital social contexts in which boundaries between social groups are discussed, observed, and managed. I thus try to bring concepts of (digital) avoidance, context collapse, and urban kinship in conversation. Presenter: Katrien Pype

Partial Connectivity: Digital Disconnections and Discontents in Papua New Guinea : After Papua New Guinea (PNG) liberalized mobile telecommunications markets in 2005, the subsidiary of a foreign privately owned mobile network operator trading as Digicel began business. The swift uptake of affordable mobile phones and the extension of Digicel's infrastructure into rural areas made telecommunications services available to many people for the first time. New forms of connectivity unfolded, however, alongside new forms of disconnection. This paper starts from the premise that in PNG, as in much of the Global South, always anywhere "hyperconnectivity" (Brubaker 2022) is hardly the default condition. Digital disconnection—from electrical blackouts to disabled cell towers—is a basic feature of the way in which "infrastructural citizenship" (Lemanski 2018) materializes in PNG. Against this background, the paper sketches a mediascape of partial connectivity with ethnographic examples of digital disconnection and their discontents across various domains of everyday experience—social, political and economic. Voluntary forms of disconnection emerge when mobile users avoid connecting with other users, often kin, who make frequent requests for airtime credit. Most forms of disconnection are involuntary. When users fail to meet the government mandate for SIM card registration they forfeit connectivity. Involuntary disconnection further becomes a contested political issue when official social media policies inhibit dissent. New forms of connectivity enabled by smartphones (such as mobile banking) also threaten the economic well-being of informal street vendors who sell prepaid airtime vouchers ("flex cards"). Partial connectivity thus entails multiple forms of disconnection and discontent. Presenter: Robert Foster (University of Rochester, Department of Anthropology)

Digitizing Kastom and the Old Taboos of New Media in Island Melanesia: Written and presented with Stephanie Ketterer Hobbis. Based on classically conceived, longitudinal ethnographic fieldwork among the Lau-speakers of Malaita, Solomon Islands, this paper uncovers how the Lau negotiate the dangers of their

digitizing lives by drawing on longstanding taboos surrounding engagements with strangers, in particular. While many Lau seek new global connections through the avid use of digital technologies, platforms and media, they carefully curate how the digital becomes entangled with the body and the self. For example, they manage how bodily substances are shared digitally (e.g. through fingerprinting technology) and the extent to which they are identifiable online (e.g. by Facebook algorithms). We demonstrate how these and comparable practices, anchored in old taboos, aid efforts to circumvent the dangers of globally hegemonic economic (capitalist) and political (state-based) visions for digitization. Instead, by following kastom, they serve the goal of moral social reproduction alongside a new digitized global co-existence. Presenter: Geoffrey Hobbis

Discipline and Transformation

8:00 AM - 9:45 AM TMCC - 604

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Sanaullah Khan (Johns Hopkins University)

CHAIR:

Thomas Thornton (Johns Hopkins University, Department of Anthropology)

PRESENTER:

Tamara Kohn (University of Melbourne), Thomas Thornton (Johns Hopkins University, Department of Anthropology)

DISCUSSANT:

Jessica Cooper (University of Edinburgh), Harini Kumar

DESCRIPTION:

Broadly, this is a panel that is interested in investigating the relations between discipline and transformation. More narrowly, we approach this expansive entanglement by asking: What is the relationship between constraint, discipline, or praxis, on one hand, and transformation, on the other. Alongside important questions of resistance, violence, or oppression, we seek to bring together conference papers that grapple with personal, bodily, or social ethical projects of transformation and forms of relationality that develop in the face of power or even outright domination. Through a focus on these projects, we are interested in

how they more fully illuminate the messiness of authority and the nature of constraint by probing their arbitrary logics, ideologies of gender, and punitive and disciplinary forces, while also revealing the unfinished nature of authority apart from total capture. We ask: How are constraining environments or regimes constantly being remade or reimagined for transformative ends? What are the limits of such projects? And what might both the projects and their limitations tell us about the nature of the complex relations among disciplinary structures, bodies, and the social? Additionally, we are interested in knowing about the conceptual, imaginative, interpersonal, or material resources that people bring to bear on these environments to effect transformations. We aim to consider how punitive and rehabilitative models of transformation come to clash with one another or become imbricated in a way that care or custody can no longer be separated from the element of punishment within carceral or other institutes. We situate such paradoxes at the intersection between legal, medical and social institutes such as the court, sites of worship and the hospital. By considering these intersections, the panel asks: What kinds of de-carceral moves (in the broadest sense) are made possible by new religious imaginaries, racial, geographic, and other forms of solidarities forged through transformative ends, and how do (or might) these create new imaginations and possibilities of justice beyond the confines of legal jurisdictions? Instead of restricting the contexts of these projects to only that of prisons or the carceral, we aim to cast a wide net to more capably understand how conditions of constraint are not only resisted or endured but also become sites of creative and vibrant ethical engagement or care. We therefore seek topics that include incarceration and broader understandings of the carceral but also medical clinics, religious disciplines, military or athletic regimes, experiences of poverty or hardship, or other contexts that can speak to this general problematic.

On Practicing Resistance and Transformation – writing to and from a prison cell : What connects solitary confinement, aikido training, black mold and art? This presentation considers an epistolary relationship between an anthropology professor who is also a teacher of the Japanese martial art of aikido in Australia and her inmate interlocutor who has spent decades in solitary confinement in a US supermax prison. From his cell, this incarcerated individual expresses resistance and positivity in an environment that is designed to nurture physical and emotional decay. He effects his own growth through extensive reading, creative writing,

astral projection, and a reflexive study of aikido principles and bodily practice. Drawing on years of correspondence, this presentation considers the power of such creative practice, and the dire societal implications of hiding and silencing it. It asks how we can best work with such stories to educate and transform public imaginaries. Presenter: Tamara Kohn (University of Melbourne)

Prison Chaplaincy at the End of Discipline: In this presentation, I examine what emerges from chaplains' routine interactions with prisoners. Here, I want to take seriously the common distinction religious prisoners make between prison-sponsored rehabilitation (which they disregard) and their notions or practices of Christian transformation (which they readily engage). I focus on how prisoners and chaplains take up Christian masculinity – particularly as it relates to creating a sense of or a return to 'home' – as a site of ethical collaboration, experimentation, and transformational possibility, which is both part of and chafes against the roles of chaplains as both prisoners' ministers and managers. To develop this, I draw on scenes where chaplains and prisoners interactively engage theological notions of God's will, and I use these to illuminate the contours of the complex relations among discipline, gender, and ethical transformation. By pressing on prisoners' projects of Christian manliness, I argue that rather than explanatory frameworks of complicity with the state, we can better understand chaplaincy by noticing how it exists at the end of discipline. Chaplains' interactions with prisoners reveal the exhaustion of penal discipline, and they are often brought into the desperation prisoners can have for imagining an ethical transformation beyond the constraints of ever-tighter disciplinary frameworks, which the prison compounds through the everyday operation of its security apparatus. I end by probing the internal and contested workings of chaplaincy as state complicity. Here, I reflect on how disciplinary punishment is gendered and on the conceptual machinery available to effect ethical transformation apart from discipline. Presenter: Thomas Thornton (Johns Hopkins University, Department of Anthropology)

3-070

Discursive Negotiation of Inclusion, Exclusion, and Belonging

8:00 AM - 9:45 AM

TMCC - 206 B

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Thomas Hale

PRESENTER:

Marina Gotovina ,Nora Tyeklar (University of Texas, Austin, Department of Anthropology),Thomas Hale ,Gloria Nystrom (Simon Fraser University)

DESCRIPTION:

The notion of community has been central to the theoretical and analytic foundations of linguistic anthropology. Specifically, attention to community highlight how language and talk is recruited into the generation of symbolic boundaries, and used as a tool in processes of inclusion and exclusion. Papers in this panel highlight new perspectives in this area, focusing on the ways that language along with new forms of mediation are used to discursively construct new kinds of boundaries to enable regimes of social inclusion and exclusion of different social groups.

Nije To To/That's Not It: In-betweenness and Belonging for Immigrants from the Former Yugoslavia in the West: The belonging and in-betweenness felt by immigrants from the former Yugoslavia who are now living in the West (North America and Western Europe) is unique due to their lived experiences, personal transitions, and the set of norms and ideals that they maintain. Both belonging and in-betweenness are complex topics, and their development as concepts has progressed from somewhat vague definitions to eventual incorporation of associated ideas into recent sociolinguistic and linguistic anthropological research. Belonging can yield an important starting point from which we can examine social in-betweenness, but the connection between these two concepts has so far received little attention in the literature. In this study, I characterize the overall sense of in-betweenness and conflicted belonging felt by immigrants from the former Yugoslavia by using a new framework which is conceptually based on the ideas of micro-hegemonies and liminality. My data is ethnographic in nature and comes from multiple online and offline sources: personal discussions I have had with diaspora from the former Yugoslavia, snippets of Reddit discussions, online news articles, and recent books. By examining discursive orientations and key emblematic features across many conversations, I derive two specific micro-hegemonies corresponding to envisioned norms, and then use the concept of liminality as a lens to complete a picture of overall in-betweenness. I attempt to explain how pairing these concepts helps us to understand how immigrants experience transitions related to belonging in a new country. Presenter: Marina Gotovina

Discursive exposures of exclusion through the figure of the traitor: In this paper, I consider the figure of the hazaáruló / traitor and offer a historical conceptualization of the term while contextualizing it within the emigration of Roma from Hungary to Canada and their subsequent return from Canada. Roma from Hungary have been migrating to Canada since the end of the nineteenth century and in significant numbers since the fall of Communism. Through modifications to Canada's refugee determination system in late 2012, Hungary was designated a 'safe country,' suggesting, on an institutional and policy level, that Roma refugee claimants from Hungary were not plausible. In other words, despite fleeing a 'safe country,' Roma from Hungary could still submit a refugee claim, but it had become all the more challenging to attain a positive decision. Under such circumstances, Roma refugee claimants who had migrated to Canada faced the very real possibility of having to return to Hungary. Often, if they were deported, they returned to hostile environments and to circumstances made more difficult through their migration. I discuss the place of Roma in Hungarian society through the figure of the hazaáruló / traitor, a term often employed in political debates to delegitimize opponents, but also directed at Roma who had returned from Canada both by Roma and non-Roma. In Hungarian, the word hazaáruló translates as traitor. In tracing the concept historically, I take into account its legal definition and usage as codified in the Hungarian Criminal Code and contexts in which, for example, rulers operationalized calls of treason as a linguistic device for disarming a political opponent (Cornwall, 2015). Then, I describe a prominent contemporary example of the discursive usage of the term hazaáruló in the case of the Roma from the town of Zámoly who fled Hungary to seek asylum in Strasbourg, France. Several Hungarian intellectuals wrote an open letter to the Prime Minister of France thanking him for granting asylum to the Roma from Zámoly. One member of the Hungarian Parliament verges on openly naming the undersigned hazaárulók / traitors in a speech before Parliament, but refuses them that label to argue that they are not worthy of such a label as they have contributed little to society despite being renowned writers and artists. Ultimately, his comments are a political maneuver to make illegitimate the act of solidarity by the Hungarian intellectuals with the Roma who received asylum in France. During my fieldwork, Roma families frequently recounted instances of being named a hazaáruló / traitor for having moved to Canada. Such usage of the term is paradoxical in the sense that it was being used as a slur against Roma, yet

one must be a citizen to commit treason. So, Roma only become 'citizens' insofar as they have 'betrayed' Hungary, but it is precisely their lack of protections as citizens that motivates their asylum claims in the first place. As such, I contend that the very act of Roma from Hungary seeking asylum were public exposures of the normalized relations of exclusion. The claims of refuge Roma submit in Canada or other countries are acts that ultimately expose the everyday inimical conditions Roma have to face and survive every day. Thus, Hungary risks being publicly reduced to a 'sending' nation for refugees according to those non-Roma (and Roma) who encounter former refugee claimants returning to Hungary and at whom they direct the traitor pejorative. Presenter: Nora Tyeklar (University of Texas, Austin, Department of Anthropology)

Welcome or Deport? Chronotopic Analysis of US Christian Reactions to Muslim Immigration in Social Media's Virtual Public Sphere: This paper brings together two streams of literature on chronotopes, in an analysis of social media data about Muslim immigration to the US. Chronotopes interacting in the data include threat versus complexity, and control versus welcome. These interact within the 'virtual public sphere' (Papacharissi 2002) created by a particular social media post (Blommaert 2020). Furthermore, the virtual public sphere of the post can itself be seen as a chronotope. In the literature, the wider stream discusses what I call cultural-construct-based chronotopes, such as those surrounding the immigration debate in my data. This literature includes special issues of the *Journal of Linguistic Anthropology* (2011) and *Language & Communication* (2007; 2020) as well as numerous other articles and books (Woolard 2004; 2013; Wirtz 2011; Blommaert 2015; Rosa 2016; Kroon & Swanenberg 2019; Karimzad & Cathedral 2021). The narrower stream centers on what I call affordance-based chronotopes. In my data, the chronotope of the virtual public sphere fits this category; it depends on the affordances of social media. Previous literature in this stream includes Lemke (2005, multimedia chronotopes), King (2017, online chat rooms), and Lyons & Tagg (2019, mobile phone chronotopes). Refs: Blommaert, J. 2015. Transcending Sociopolitical Landscapes to Promote Understandings of Linguistic Belonging for Multicultural Youth in Canada: Canada's unique Multiculturalism within a Bilingual Framework (Haque 2012) supports a national cultural identity framed by the linguistic duality of two 'official' languages, English and French. Although federal multiculturalism extols the virtues of cultural diversity and the rights of individual self-identification, dominant language ideologies reified by government policies and rooted in political turmoil translate into a linguistic hierarchy. Within this hierarchy, linguistic differentiation between the languages of the 'founding nations' against all other multilingual languages is fundamental to gaining symbolic capital (Bourdieu, 1986) and belonging within the nation-state. This presentation reports on the research findings of *The Politics of Linguistic Belonging of Chinese Canadian Youth*, a qualitative study of identity which investigates the challenges of transitioning from minority at home language use to that of majority languages in a community focused on dominant national ideologies

and habitus. Intergenerational family language policy is an emerging field of study motivated by recent interest in the education of bilingual and multilingual children (Curdt-Christiansen, 2013; Kopeliovich, 2013). More specially, this intersectional research uniquely focuses on how racial identity is impacted by transitions from home language policies to 'bilingual mindset' ideologies (Piller, 2021) which are embedded in the politics of a region and those who map out the boundaries of language and people (Irvine & Gal, 2000). The theoretical framework is grounded in the constructs of iconization, fractal recursivity, and erasure-three semiotic processes used to construct ideological representations of linguistic differences (Irvine & Gal, 2019). The analysis investigates if and how 'linguistic injuries (Han, 2019)-psychological damages or inequalities caused by linguistic subordination and language erasure-translate into social and affective changes in youth identity negotiations. The findings of this inquiry will contribute to scholarly work on understandings of processes of language shift and the influence of economic, political, and social structures on the use and practice of certain languages within a 'bilingual mindset'. Ecologizing Therapeutic Practices

8:00 AM - 9:45 AM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Psychological Anthropology

ORGANIZER:

Leo Stillinger (McGill University, Department of Anthropology)

CHAIR:

Aidan Seale-Feldman (University of Notre Dame, Department of Anthropology)

PRESENTER:

Benjamin Wheeler (Concordia University, Department of Sociology & Anthropology), Vincent Laliberté (McGill University, Department of Anthropology), Stacey Langwick (Cornell University, Department of Anthropology), Nicolas Langlitz (The New School for Social Research, Department of Anthropology)

DISCUSSANT:

Lindsay Ofrias (McGill University, Department of Anthropology)

DESCRIPTION:

This roundtable will reflect on the variability of what can constitute a therapeutic experience by engaging a discussion of practices, from psychedelic-assisted therapy to organic farming and long-distance walking, which mobilize non-human ecologies for transformative ends. How can practices of environmental immersion, either through or beyond a clinical setting, serve as the grounds for transformative experience? How do such transformative experiences resonate between the registers of the therapeutic, the ethical, and the political? What is the relation between psychic life and the infrastructures and environments which surround it, channel it, or dispose it? To what extent do therapeutic 'uses' of the environment perpetuate extractivist relations to the non-human world? And how can the ethnographic study of such experiences ecologize our own theories of psychic transformation through an attention to the ways in which the subject of therapy is never atomistic, bounded, or ahistorical, but rather always caught up in complex relations to their own environment?

Embodiment and Materiality in Rites of Passage

8:00 AM - 9:45 AM

TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Anthropology of Consciousness

ORGANIZER:

Lisa Gezon (University of Alabama at Birmingham, Department of Anthropology)

PRESENTER:

Yuki Tanaka-McFarlane (Saint Louis University, Department of Sociology and Anthropology), Jing Wang, Lawrence Ramirez (University of California, Riverside), Natalie Bourdon (Mercer University), Laurie Greene (Stockton University, Department of Sociology and Anthropology)

DESCRIPTION:

Abstract: While threshold rites are generally understood as a central anthropological concept (van Gennep) and are viewed as essential to human growth and development, some critics argue that such essential rites have been eroded with the emphasis on secular and postmodern perspectives. During this time of social, psychological, and political transition, what does an examination of the classic concept of rites of passage have to offer us now? The presenters in this panel present research and reflections that illuminate

contemporary applications of this subject. Topics include ambiguous linguistic animacy of Japanese magic lanterns, construction of motherhood in urban China, Flamenco apprenticeship, transformations and belonging in the practice of yoga, and afterlives of Armenian literature in contemporary Europe.

Transforming Mu (Nothing) to U (Status of being) in Japanese Magic Lantern Performance: Understanding a Symbolic Empty Space in Japanese Art through Ambiguous Linguistic Animacy.: This paper examines a relationship between the symbolic use of empty space in Japanese art and ambiguous linguistic animacy in Japanese existential verbs *aru* 'there is/are (inanimate)' and *iru* 'there is/are (animate)', whose boundaries are permeably set by speakers' cognitive animacy. The focus is on the analysis of Nishiki Kage-e (Japanese magic lantern), one of the traditional theatrical arts in Japan whose performing style resembles a shadow play. Unlike its European equivalent, Nishiki Kage-e utilizes multiple hand-held wooden magic lanterns and various glass-made trick slides, whose images are painted with light transmissive dies and edged with black paint. Explanatory images are often cut off to the utmost extent so that the screen would not brim over with images. This minimalism highlights the contrast between *u* 'status of being' of the floating colorful images and *mu* 'nothing' on the background. However, the Japanese aesthetic views the space of *mu* 'nothing' not as emptiness but rather as fullness, and thus the empty darkness on the screen of Nishiki Kage-e is recognized as the space filled with *kehai* 'a sign of presence' of invisible characters and of supernatural beings as well as that of lantern performers. Simultaneously, the emptiness evokes audiences' imagination, allowing them to transform darkness into various buildings, landscapes, or any spacetime and to construct a multi-layered narrative space. I argue that the peculiarity of the Japanese sense of animacy and ontological awareness of the self and of others are deeply intertwined and that their complicated relationship attributes the physical and psychological processes of existential transformation of *mu* 'nothing' to *u* 'status of being' within an empty yet symbolically full space in Japanese art. Presenter: Yuki Tanaka-McFarlane (Saint Louis University, Department of Sociology and Anthropology)

'Zuo Yuezi' in Transition: Reconstructing Motherhood in a Postpartum Care Center in Urban China: The *zuo yuezi* tradition, also known as 'sitting the month,' is a month-long period of postpartum confinement for women in China. During this time, women are confined to their

homes and are cared for by senior female relatives in the family, usually the mothers-in-law and mothers. The women are expected to abide by a strict set of dietary, hygienic, and behavioral rules to facilitate optimal recovery from childbirth. The practice culminates in the celebration of the newborn's one-month milestone in a ceremony called *manyue jiu* or 'full moon banquet,' and the women reemerge from the confinement as mothers. This tradition is considered one of the most significant rites of passage for Chinese women, marking their transition from wives to mothers and cementing their position in the family. Although many cultural traditions have fallen out of fashion in modern China, *Zuo Yuezi* remains relevant and has even given rise to a booming industry of postpartum care centers known as *yuezi zhongxing*. These centers provide hotel-style accommodation, professional medical care including both biomedical and traditional Chinese medicine (TCM), and grooming services such as hairdressing for postpartum women. Moreover, their newborns receive care from nurses, doctors, and babysitters specializing in postpartum care. Postpartum care centers are often regarded as scientific, and consequently, are deemed to offer better care than the traditional practice of sitting the month at home. This paper explores the transformation of the *Zuo Yuezi* tradition from a private, family affair to a public, commercialized industry. Through ethnographic research conducted at a postpartum care center in Kunming and interviews with 12 women from three different postpartum centers, I argue that the commercialization of the tradition reflects not simply a shift in authority over postpartum maternal and child care. More importantly, the postpartum centers become a site for mothers to reconstruct a new type of postpartum motherhood. It is notable that, while the *yuezi* tradition serves as a pivotal moment marking the transition to motherhood for women in China, their involvement in childcare during this period is reduced as their health is the primary concern. As such, the responsibility of caring for the newborn typically falls on senior female relatives or hired babysitters, leaving women with limited control over the care provided to both themselves and their infants. By opting to sit the month at commercial postpartum care centers, however, women are able to assert greater control over maternal and child care, with a particular emphasis on 'scientific' care. Moreover, by expanding the 'postpartum tether,' which often is exclusively maternal, to include an even wider network of caregivers, women are better equipped to ensure the best possible care for their children while using the center as a site for learning 'scientific' childcare through the guidance of nursing staff. Therefore, for the

mothers at the Kunming postpartum center, good mothering during the postpartum period is not so much about building attachment as it is about creating a new type of motherhood that prioritizes the well-being of both mothers and babies, and learning to be effective mothers. Presenter: Jing Wang

Apprentice to the Duende: Liminality and Communitas in Flamenco Apprenticeship Tourism: How does a flamenco performer learn the 'authentic' style of performance? How does a flamenco performer become recognized as a 'legitimate' expert of the artform? Oftentimes, these require a 'pilgrimage to Spain,' specifically the southern region of Andalusia. Training in this region is expressed as 'going to the source,' as if the flamenco training in cities, such as Sevilla or Granada, connects the apprentice to a 'purer' and older heritage of the artform. This 'pilgrimage' is an important aspect in which a flamenco performer takes on a type of 'apprenticeship' role during which they develop into a 'legitimate' flamenco artist. Thus, the period of apprenticeship can be understood as a liminal state from which the performers emerge as potential 'maestros/as' of flamenco. After training on 'Andalusian soil,' the flamenco performer enters into a communitas of 'legitimate' flamenco performers. In terms of consciousness, this ascension to legitimacy is signified by being able to enter into the 'duende' state of consciousness at the height of a flamenco performance, especially for dancers, signifying an 'out-of-control' state of ecstasy in which the dancer is taken over by the spirit of the dance. Signifying this duende state is one of flamenco's most powerful expressions of authenticity. Although the 'duende' can be manifested by performers who have never trained in Spain, the combination of this ecstatic manifestation with a 'legitimate' training becomes a marker of authentic expertise. Presenter: Lawrence Ramirez (University of California, Riverside)

Being In The In Between: Kenyan and American Yoga Practitioners Reflect on Transformation: Contemporary yoga is one of the most thoroughly globalized and transnational, yet understudied phenomena, ambiguously situated between health regimen and psychospiritual practice. As a religio-philosophical practice, it has had a resurgence in its native India as a Hindu nation-building project (Hauschild 2007, Alter 1997). As an Eastern movement form, it has been taken up by Western cultures as a way for improving body image and identity, dealing with stress, and offering an alternative meaning system in societies that have become more secularized. Most recently, modern postural yoga has found its way to Africa promising

empowerment, education, and employment. Once a practice undertaken by ascetics who turned their backs on ordinary society, contemporary forms of postural yoga have been trademarked, commodified, and practiced by a range of people from CEOs to housewives to the homeless, yet there remains a suggestion of something 'spiritual' affixed, even in Western secular contexts (Smith 2007). At the nexus of lineage-based psychospiritual practices and modern postural yoga practices around the world lies an overlapping claim: that attention to and cultivation of the self will bring about empowered individuals and communities. Yoga practices are also localized sites of transcultural and intercultural exchange, allowing for the opportunity to study how ideas such as 'the self,' 'liberation' and 'empowerment' are constituted intersubjectively. Teachers serve as translators - of Sanskrit texts, Zen poetry, and bodily movement into the language of living anatomy. Students undergo transformations - how they think about their bodies, their minds, and others. This research project examines how self-liberation, freedom and empowerment are taught using both 'traditions' and texts associated with 'Eastern' and 'Western' milieus and become embodied by yoga teachers and practitioners in the Prajna Yoga Studio in Santa Fe, New Mexico and through Africa Yoga Project's work in economically marginalized neighborhoods of Nairobi, Kenya. This ethnographic research project was undertaken during a period of six months, with two follow up visits to Santa Fe. In this paper, I examine the following questions: How are self-liberation, freedom, and empowerment configured indexically depending on the context in which yoga is taught and learned? How are these concepts understood and adopted by yoga practitioners from diverse backgrounds? Particularly, how do women and men differently experience and understand yoga as a means of empowerment? Presenter: Natalie Bourdon (Mercer University)

Rituals of Belonging: Yoga and the Connoisseurs of Consciousness: The practice of yoga has gained popularity in the West today. Though it was traditionally understood in Eastern religious contexts (Vivekananda), yoga practice has largely become secularized. For many, modern yoga simply provides a path to fitness or relaxation, but for others it offers an opportunity for liminal experience as well as a place of belonging. In the face of social and cultural transition, threshold rites (Van Gennep) may have been lost, or they have been significantly transformed – recreated and redirected into liminal experiences that allow the individual to redefine their own identity. This paper argues that Western yoga functions today as a ritual of

transformation that privileges individual spirit. Yogic rituals center around the body and aim to clarify and contextualize mundane experience and understand one's identity. The techniques to facilitate this involve two qualities – stillness and continuous movement. Through stillness or movement these rituals either strive to negate the body's influence, and thereby the 'self' (asana) or celebrate the body in an active engagement with the 'other' (vinyasa). In either case, the world, and the human body, are intricately intertwined and mutually engaged in exploring the transpersonal. Consciousness is formed phenomenologically – created through the body's lived experience – and so the world and the sense of 'self' are emergent phenomena in an ongoing 'becoming' (Merleau-Ponty, et. al.). Within these emergent ritual experiences, embodied threats to the social order are evoked (e.g., trauma (past), anxiety (future), and toxicity (present)) which may then be expressed in ways that are transformative and cathartic. Yoga practice has transitioned from a solitary enterprise to one that is strengthened by and legitimized in intentional communities where these threats are addressed. The role of the traditional guru was to obliterate the ego of the disciple; today however, the teacher is more likely tasked with facilitating their healing – a healing that is both personal and transpersonal, but never completed. Unlike early Western experiments in yoga, modern yoga in its popularized form is largely domesticated making yoga now suitable and accessible to everyone. It is no longer couched within the confines of Eastern religion, but rather in the secular, physical, and spiritual body of the individual practitioner as they seek self-realization. Engaged Anthropology: Navigating the Transitional Spaces of Memory and Disappearance

8:00 AM - 9:45 AM TMCC - Hall F

Executive Roundtable/Townhall - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Victoria Sanford (CUNY, Herbert H Lehman College)

CHAIR:

Rosalva Hernandez-Castillo

PRESENTER:

Isaias Rojas-Perez (Rutgers University, Newark, Department of Sociology & Anthropology), Francisco Ferrandiz, Victoria Sanford (CUNY, Herbert H Lehman College)

DESCRIPTION:

In this in-person roundtable/town hall, activist and engaged anthropologists consider their experiences in the field and the academy to interrogate the role of social anthropologists in the forensic search for the disappeared as well as reconstruction of community memory and transitional justice processes. We will reflect on the challenges and possibilities of socially committed anthropology in contexts of political turmoil, violent conflict and transitional justice in local and international contexts. We consider the unsettled and hybrid structures of forensic efforts and truth telling processes over time to find the disappeared in Guatemala, Mexico, Peru and Spain. We explore the liminal space of the disappeared and the unknown signaled by their disappearance. While transitional justice models imply a society moving forward or moving on from the past, the disappeared are unable to move on. They are frozen in the past as their families and communities seek to restore and reframe their disappearance as well as re-imagine the relationship of the disappeared to the structures of power that produced the disappearances. In our discussion, we will consider how anthropology in theory and ethnographic collaborative research can contribute to the destabilization of epistemic hierarchies in the forensic field, through dialogues of knowledge with the families of disappeared persons. We will also reflect critically on the productive capacity of academic discourses that construct victim identities that often silence the agency of the social actors with whom we work. Our roundtable of three women and two men is diverse including Mexican, Peruvian Quechua, Spanish, Irish and US anthropologists hailing from public universities in Mexico, Spain and Ireland with two US-based anthropologists teaching in public universities in underserved communities of color with high levels of urban poverty. Our participants include senior anthropologists and recently tenured junior colleagues. Three of the participants are from working class families in Mexico, Peru and the US, and were the first in their families to attend college. All participants are committed to social justice and equality. We have spent much of our careers doing collaborative work with communities in Guatemala, Mexico, Peru, Colombia, Spain, Australia and Ireland. Each roundtable presenter has worked directly with local communities seeking forensic

exhumations to document the missing and the massacred. Our work cuts across the fields of cultural, forensic, archaeological and linguistic anthropology. Participants: Francisco Jose Ferrandiz Martin, Tenured Research Scientist, Institute of Language, Literature and Anthropology (ILLA) of the Center for the Humanities and Social Sciences (CCHS) at the Spanish National Research Council (CSIC), Madrid. Rosalva Aida Hernandez Castillo, Professor and Senior Researcher at the Center for Research and Advanced Studies in Social Anthropology (CIESAS) in Mexico City. (Chair) Fiona Murphy, Assistant Professor in Refugee and Intercultural Studies and Programme Chair, MA Refugee Integration, Dublin City University, Ireland. (Discussant) Isaias Rojas-Perez, Associate Professor of Anthropology, Rutgers University, Newark, New Jersey. Victoria Sanford, Professor of Anthropology, Lehman College (Bronx) and the Graduate Center, City University of New York. (Organizer)

Explorations in the Ethnography of Listening 1

8:00 AM - 9:45 AM TMCC - 206 D

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Xochitl Marsilli-Vargas (Emory University)

CHAIR:

James Slotta (University of Texas at Austin)

PRESENTER:

James Slotta (University of Texas at Austin), Jessica Lopez-Espino (University of California, Santa Barbara), Beth Semel (Princeton University, Department of Anthropology), Janet Connor (Leiden University), Daniel Fisher (University of California, Berkeley)

DISCUSSANT:

Jonathan Rosa (Stanford University), Michael Lempert (University of Michigan)

DESCRIPTION:

Over the past two decades, listening has emerged as an activity of interest across the humanities and social sciences. Sound studies and the sensory humanities have explored the auditory experience of everything from music and noise to the sound of machines and the human body, revealing the rich and vital role that the sense of listening plays in diverse times and traditions

(Erlmann 2004; Feld 1982; Howes 2005; Lipari 2014; Le Breton 2017 [2006]; Kramer 2018). Political theorists and anthropologists have highlighted the essential role that listening plays in religious, political, and cultural contexts ranging from the liberal democratic public sphere to the Islamic Revival to everyday practices of psychotherapy (Hirschkind 2006; Inoue 2006; Slotta 2015, 2017, 2023; Marsill-Vargas 2022). And scholars of media, communication, and rhetoric have turned their attention to the work of listening as an essential, though too often overlooked facet of both mass and interpersonal communication (Lacey 2013, Ratcliff 2005). Yet, among linguistic anthropologists, who have long studied how linguistic practices create and transform contexts, the idea that listening has the potential of generating and sustaining social relations has curiously not been explored in a similarly concerted fashion. In this panel, we bring together linguistic anthropologists and anthropologists of listening to consider what an ethnography of listening might look like. For over 50 years linguistic anthropologists have promoted a vision of speaking as a culturally-informed social activity in which people perform their identities, build and transform their social worlds, and even construct reality itself. But what about listening? What sort of social activities are performed in the act of listening? What sort of cultures and ideologies inform practices of listening? What role do listeners play in shaping the meaning and effects of communicative events? We consider what the analytics of linguistic anthropology, so fruitfully developed for the study of speech, have to offer the study of listening. And at the same time, we consider how centering the activity of listening challenges the field's understandings of language and communication, providing new insights into classic concerns as well as new avenues for future research.

Listening as a Site of Ethnographic Inquiry: In this presentation we focus on listening and its semiotic reach, to show its importance for ethnographic investigation. In the wake of the "communication revolution" that took place through the emergence of the printing press, it became commonplace to assert that the early modern West shifted from a predominantly aural to a primarily visual culture (Anderson 2006; McLuhan 1962). The subsequent "ocular permeation of language" took place because the ability to visualize something was linked with the ability to describe it verbally (Jay 1994:8), creating a visual-textual paradigm that permeated research analysis for many decades. The subsequent emergence of the "linguistic turn" (Wittgenstein 1921, Rorty 1967) that

saw the proliferation of studies that focus on different aspect of language, language users, and its empirical connection with the world, positioned the speaking subject as the most important actor during communicative interactions. It is not until recently that sound studies scholars, ethnomusicologist, and researchers of different fields began to focus on the important role that listening plays in creating and sustaining social relationships (Feld 1997, Earlamán 2004, Inoue 2006, Hirschkind 2006). In recent years linguistic anthropology began to examine listening practices and its importance in generating ideologies, social positionings, structure interactions, and the overall pragmatics that the receptive side of communication entails; discovering that listening is an active enterprise that shapes and directs behavior. We aim to discuss what possibilities the investigation of the multi-modal ability of listening brings to linguistic analysis and communicative practices, and its methodological reach for ethnographic research. Presenter: James Slotta (University of Texas at Austin)

Listening and Power in Courthouse Ethnography: In the United States, courts are envisioned to be places where the accused have the opportunity to be heard and where a mediating authority makes decisions about evidence and allegations by applying the rules, procedures, and knowledge of precedent. Scholarship on language and law has identified that racialized, minoritized, and low-income lay persons in legal settings often experience distortion and misunderstanding of their narratives in ways that impede their ability to be heard and understood in an equitable manner (Rickford and King 2016; Lippi-Green 1997; Berk-Seligson 1990; Angermeyer 2015; Merry 1990). This analysis draws on the role of the listening-subject, through which speech is (re)organized and socialized into an indexical sign (2006:57) and on how white-listening subjectivity informs the valuation of speech of racialized persons (Flores and Rosa 2015). Building on existing findings on listening as multi-modal (Marsilli-Vargas (2022), political (Slotta 2015), and embodied in listening practices (Berman 2020), I critically examine the social, relational, and semiotic avenues through which a disempowered legal subject is identified and heard before the law. I use ethnographic data obtained through the course of 18 months of observations of Latinx parents navigating child welfare proceedings in California to illustrate who is doing the hearing/listening in the contexts of a court hearing, through what modalities is this hearing accomplished, and how differently situated actors are heard on and off the record. Examining the modalities and positionalities of actors engaged in “hearings”

highlights the formation of institutional authority across various semiotic fields within legal settings. Presenter: Jessica Lopez-Espino (University of California, Santa Barbara)

Human Listening and Hierarchies of Reception in American Automated Mental Health Screening : 'AI Can Now Detect Depression From Your Voice,' the headline of a 2021 Forbes article declares, 'And It's Twice As Accurate As Human Practitioners.' This statement emblemizes a primarily US-based subfield called vocal biomarker research, in which engineers, computer scientists, and mental health care professionals collaborate to develop AI technologies that they hope can listen for biological indicators of mental distress expressed involuntarily in the sounds of the voice. Classifying their technologies as “clinical-decision support tools,” the stakeholders invested in vocal biomarker research aim to augment administrative, para- and pre-clinical practices of audile discernment such as screening, rather than diagnosis or treatment, which they frame as indelibly 'human' interactional arenas that machines cannot replicate. Meanwhile, they position screening (and the workers that guide it) as American mental health care's most vexing and viably automatable problem-space because it involves listening that is too 'human': too subjective, non-standardized, and sociopolitically mediated. This talk unspools the racial and gendered imaginaries animating vocal biomarker research's multiple “genres” (Wynter 2003; Marsilli-Vargas 2022) of human listening. I draw from ethnographic fieldwork with vocal biomarker research labs and human research subjects. Focusing on one lab's efforts to craft the anthropomorphic user interface of a vocal biomarker technology, I argue that one of the subfield's social effects is the enactment of a racialized and gendered hierarchy of listening. Nevertheless, research subjects' subversive interactions with the interface highlight the instability of this hierarchy, while also destabilizing another core premise of vocal biomarker research: the universalizable mentally ill speaking subject. Presenter: Beth Semel (Princeton University, Department of Anthropology)

Using the same words, but speaking different languages: Learning to hear difference : Throughout fieldwork in a gentrifying neighborhood in Oslo, Norway, my interlocutors working for local community organizations would frequently complain that important outsiders, like politicians and private foundations, could not hear the difference between how they were speaking about their work in the neighborhood and their visions for the future of Norway, and how organizations that, in their

view, were more profit-driven outsiders, spoke. They saw this confusion as the reason why these other organizations would frequently be invited to speak to parliament, or selected for grants, over their own organizations. Outsiders' inability to hear differences was not surprising, as both kinds of organizations commonly used an entrepreneurial register to talk about their work, which included words like "impact," "sustainability," and "incubator" and frequent code-switching between Norwegian and English. Yet from my interlocutors' perspectives, these organizations should be heard quite differently. As one succinctly put it, while these groups were using the same words, "we're not speaking the same language at all." This presentation examines these community organizers' listening practices, asking how they were hearing differences that others were not. I show how listening in this context goes far beyond a moment of auditory perception, but also includes observations and assumptions about a speaker's motivations and social position within the neighborhood. I ultimately argue that listening becomes a powerful tool in legitimizing one's own presence and perspectives in a gentrifying urban area. Presenter: Janet Connor (Leiden University)

Listening at its Limits: The Political Eco-acoustics of Urban Fire: This paper explores some ethical and political impasses that attend practices of listening amidst rapid ecological and political transformation. Two questions organize the presentation: What are the limits of listening as an ethical figure in the rapidly shifting political ecology of urban northern Australia? And, how might these limits inform a broader re-examination of anthropological and musicological theorizations of listening in relation to ethics, Indigeneity, and environmental change (e.g. Eidsheim 2019; Mathew 2021; Robinson 2020)? To address such questions ethnographically, the paper introduces the political terrain of listening in contemporary northern Australia, and the expressive elements of this politics across three sites: Public consultations in and with Aboriginal communities; Indigenous music production and performance; and public celebrations involving firecrackers and fireworks displays, and the related anxieties these latter entail amidst a newly flammable 'nature.' In each of these sites listening is granted an overt value and elaborated in practice as a fundamental virtue. In the latter, however, the limits of listening as a means to hear across difference are made palpable through forms of sound that challenge the principles and participation frameworks of the former. Bringing to the ethnomusicological insight that all expressive soundings may register histories of listening the related

understanding that listening practices participate in the significance of expressive sounds, I explore listening's metapragmatic affordances and conundrums in a place where what and who is being heard, and where what and who are said to be listening, are overt and marked sites of challenge and dissensus. Presenter: Daniel Fisher (University of California, Berkeley)

DISCUSSANT:

Michelle Ho (National University of Singapore), Shunsuke Nozawa (Hokkaido University)

DESCRIPTION:

'Transition' conjures up a sense of linear movement - something in transition, framed by a 'from' and 'to', something on the way to some place. Situating this rather commonsensical, hegemonic image of linear and teleological movement in the domain of gender and sexuality, our panel aims to document and explore unexpected ways in which the experience of transition, change, switch, or shift manifests itself in practice. What analytic and methodological insights might we gain by problematizing the familiar image of gendered and sexual transition as temporary and liminal? The contemporary interest in the trans approach and the politics of intersectionality are important sources of inspiration for our panel, as we pay closer attention to myriad possibilities in the temporal and spatial matrix (or chronotope; Bakhtin 1981) of gender and sexual transition. In particular, our panel emphasizes the significance of the way transition is 'framed' (Goffman 1974) - that is, situated within an emergent, contingent,

co-constructed structure of interpretability - in discourses and performances of transition that transpire on point to gender and sexual borders. What would transition look like if we pay heed to multiple and competing framing efforts made by people and institutions? Instead of or over and above the image of the line demarcated by stations ('from' and 'to'), transition may be framed as a spacetime with multiple 'centres' of authority and power (Blommaert 2007); as a conflictual or complementary field of attraction and repulsion; as an experience of layers, spirals, or refrains (in which the same 'point' may have different functions or effects); as an alternating pattern of presence and absence, putting-on and taking-off (as in some forms of crossdressing), movement and rest; or even as momentary stasis that serves as a bodily, affective, discursive, and/or material practice of anti-normativity (Milani et al 2020).

A Right to Misgender? The Framing of Free Speech and Gender in Popular and Legal Discourses: The rise of anti-discrimination policies that protect transgender and gender non-conforming students in the United States has also created an emerging legal question: are teachers allowed to misgender students based on their constitutional right to free speech? As this question is being considered within the American justice system, it is important to assess the different ways in which public and legal responses to this question are being framed as such framings have an impact on the content and form that judicial decisions eventually take. Using a trans feminist and discourse analytic framework, this paper analyzes public statements and text-based filings submitted by competing stakeholders in the Virginia case *Cross v. Loudoun County School Board*. Through this analysis, the paper examines the various legal and popular framings that have emerged with an emphasis on those that advance an implied "right to misgender." A more robust understanding of the various and sometimes competing discursive frameworks that is employed in relation to this case are particularly relevant as judges in a variety of cases have started to rely on the language of free exercise of religion and the perceived lack of public consensus on the validity of transgender identities to craft First Amendment protections for individuals who knowingly and willfully impose gender onto others through the act of misgendering. Allies versus 'Groomers': A Frame Analysis of the Drag Wars in Public Discourse: In the past few decades, the LGBTQIA community has made great strides within American society and no small part of that growth has been thanks to drag artists and performers. Although the art of drag can be performed by anyone, its complicated history and relationship with the queer community has helped to open many doors. The highly visible presence of drag performers, many of whom are also transgender, in public, shared spaces, rallies and protests have also often made these artists into targets for those who would prefer the queer community to be afraid and closeted going all the way back to the Stonewall riots. This is no less true today when anti-drag bills are progressing in over a dozen states including Tennessee, the first in the nation to ban public drag performances. This paper is a pilot study that seeks to show how semiotic frames are being utilized on both sides of this battle taking place within the modern mediascape by analyzing data drawn from both conservative and pro-drag interviews and podcasts. Utilizing both Goffman's frames and indexical fields (Eckert, 2008) this paper will show how the ideological war between religious conservatives and queer advocates and allies is rhetorically structured around large networks of meaning and inference. Additionally, popular terms among the anti-drag political movement such as 'groomers' will be analyzed in terms of its indexical influence as well as its semiotic and explanatory uses for fearmongering based on anti-queer conspiracy discourses. Possible applications of this semiotic analysis towards countering hate-speech and discrimination will be included in the discussion. Presenter: Gavin Furukawa (Sophia University)

The power of transition: Josō in Japan: This presentation explores the power of transition through examining diverse discourses of josō (male-to-female cross-dressing) in contemporary Japanese society, in particular, among participants at university josō contests. While josō in Japan has a long history and cultural meanings of its own (Mihashi 2008), today the culture of josō circulates widely through contemporary media, and its visible influence on popular and youth subcultures can be observed in numerous josō related manga, cosplay, blogs and SNS accounts. This presentation examines how josō practitioners frame transition – from male to female, from cool to cute, from real to virtual, from ordinary to extraordinary, and from binary to non-binary – in order to enable authority, control, attraction, and empowerment as effects of power. The reflexive accounts of four participants who

had various motivations for josō illuminate the power production of josō in different ways. One participant explained that josō is a means to express his ideal feminine beauty and enhance his social capital at his university. Another participant considered josō as his pursuit of performance, which permits him the freedom to go beyond the boundaries between femininities and masculinities, and self and other. For yet another participant, josō is an identity apparatus that controls the movements back and forth between non-binary complexities. There was another participant who advocates cuteness that this participant believes to be the greatest power generating force in human interactions. An analysis of these diverse interpretations of josō demonstrates that cross-dressing does not necessarily index gender and sexual identities or their marginalities in this Japanese context, but offers its practitioners a transitional framing device that transcend the liminal and expected pragmatics. DISCUSSANT:

Mark Liechty

DESCRIPTION:

Fifteen years ago, journalistic and academic writings marveled at the astronomic rise of the middle class in Africa, Latin America, and Asia. Inherently transglobal, mobility marked this new class, ably pursuing flows of capital in the slipstream of neoliberal globalization. Today, between stories of rising authoritarianism, the retrenchment of national protectionism, and ongoing political and economic strife stemming from the COVID pandemic, members of this same middle class are searching for new homes, accepting decades of drifting, family separation, and varying intensities of de facto exile. Such stories not only contrast aggregate data proclaiming the continued rise of the global middle class; they also reframe their once-hallowed mobility as endless transience, their mobility now stripped of agency. What to make of this shift? Narratives on the fragility of the global middle class are hardly new. On the one hand, a robust middle class is perceived as a stabilizing force to anchor developing countries within global capitalism. On the other, the global middle class is often discussed as newly emergent but always already on the verge of collapse. For those pursuing a middle-class lifestyle, this contradiction is part of one's lived experience. Vacillating between a comforting sense of advancement and terrifying moments of regress, many middle-class aspirants seem perpetually caught in a 'not yet' temporality, where self-determination is both promised and withheld. Suspended between precarity and immanence—both adjacent to financial ruin and tantalizingly close to a life of stable, modern affluence—being middle class is marbled with existential anxiety. Suspension has long been central to the lives of the middle class, especially those in the global south. What might be new is the accompanying sense of transience. Building on recent work on this state of being, we define transience as the incapacity to settle, or the inability to create a stable home that meets one's standards. While transience has often been used to describe the lives of more disempowered classes of people, we contend that it provides a useful lens for analyzing middle class-ness in the global south, for two reasons. First, discussions of middle-class people have too often over-emphasized their control over their own mobility. In tempo with a 'not yet' temporality, self-determination is a promise that often remains unfulfilled and beholden to the headwinds of geopolitical favor. Secondly, as the world pivots toward deglobalization, 'slobalization,' and the possibility of a new cold war, the promise of geographic self-determination also recedes. Or does it? Do middle

class aspirants believe they can still gain control of their transglobal movements? How do new social imaginaries confront frontier geographies to make new places where middle-classness can be attained or safeguarded? How has global middle class identity changed as emergent political barriers erode previous forms of global cosmopolitan into its threadbare aftermath? Is this once-heralded class itself a transitional category, the product of a moment in world history that is now ending? Our panel pursues these questions.

Approaching the middle class as neither monolithic nor Western-centric, we focus on the affective experience of those aspiring towards this lifestyle, and the overlaying social imaginaries, political realities and material practices that constitute it.

“Go With the Flow”: overseas Filipino workers’ vision of “good living” in Poland: Overseas Filipino Workers [OFWs] in Poland in recent years are more visible mainly due to the emerging Filipino community’s initiatives. Their education and work experience are rarely compatible, and the less prestigious employment they must take on often leads to a growing sense of frustration or a feeling of failure. In my ongoing project, I explore their oft-repeated statement ‘go with the flow’ as a way of coping with such frustrations. These words are seen as neither ambivalent nor a lack of agency, but rather as a constant search for the best opportunities often distributed globally. OFWs are rarely in one place for long, adopting a more transient lifestyle. In Poland they often perform different jobs and are becoming more active as entrepreneurs, so ‘go with the flow’ can also be treated as a flexible strategy for coping with the new reality. What is hidden under phrases like, ‘trying my luck’, and ‘catching favorable circumstances’? What influences their vision of transient life in Poland? The talk will show how OFWs pursue a middle-class lifestyle through acts of transience and how the temporary nature of the situation has shaped their worldwide vision of “good living,” which should not be described as ambivalent or defeated. This view stems from aspirations of the dream ‘global middle class’, in which membership is increasingly often determined by self-esteem and self-determination. Therefore, the case of OFW gives a positive vision that is supposed to bring future satisfaction and gives meaning to everyday duties, even if they indicate downward professional mobility. Presenter: Olga Wanicka (University of Warsaw)

The Unforgiving Temporality of Middle-Class Aspirants Amongst Nepal’s Diaspora : Nepal’s massive diasporic population is in part thanks to the popularity of circular

migration to East Asian and Middle Eastern countries, where many Nepalis work as laborers for several years at a time. While widely considered lower class migrants, many do not see themselves in that way. Instead, they stress their middle-class bonafides, claiming their migration is part of securing their family’s class position, through land purchases and investments in their children’s education. Embedded within such claims is the supposition that their mobility strategy has an endpoint, that their movement between home and abroad will conclude in true economic security, allowing for the migrant’s permanent return. This talk explores this supposition. Its focus is on how price inflation in Nepal continues to move the goal post for these migrants, inflation that is directly tied to the constant influx of remittances. Online interviews and ethnographic research in Kathmandu shows that migrants are quite aware that, as land prices, private education fees, and the basic cost of living rise, their endpoint becomes harder to picture. This talk then examines how such changing circumstances are incorporated into migrants’ future imaginings and self-perception. As the timelines of their mobility continue to extend, migrants must work to maintain a sense of agentive mobility aimed at the dissolution of transience. Migrants accomplish this, at least tentatively, by weaving numerous futures into a meshwork of possibility. While not resolving the issue, this meshwork enacts a self-image of middle-class global citizenry, and in doing so holds open the future. Presenter: Andrew Haxby (Max Planck Institute for Social Anthropology)

Japa, or, to Run, or to Flee: Nigerian youth and ‘survival’ migration’ as middle-class sensibility: ‘Japa’, a Yoruba term for ‘to run’ or ‘to flee’, has become part of the everyday vernacular of Nigerian youth since 2020. While migration has always been a part of Nigerian culture, this paper explores how migration recently became charged with urgency. Casting migration as an act of ‘fleeing’ implies its necessity for survival. The secrecy around planning and serendipity of destination changes the tenor of middle-class mobility, once ostentatiously flaunted for status, and primarily directed to the UK. Today, destinations are far more diverse, configured by availability and geopolitical shifts, as much as access to resources and connections. Why do middle-class youth frame their desires to leave as a matter of ‘survival’, a discourse more readily associated with refugees or asylum seekers? Drawing on a series of interviews and ethnography with Nigerian youth who plan to leave or have already left as education migrants, this paper traces the political, economic, and social configurations that weave urgency through the social-cultural

phenomenon of japa. I situate middle-class 'survival' migration in an ongoing process of contention over the viability of the Nigerian state. Economic and political vulnerability paradoxically appears to increase with greater economic and political participation. Middle-class youth are subject to the asymmetrical outcomes of their own efforts: savings are garnished through inflation and political protest ends in brutal punishment. When migration is no longer marked by prestige, but marred by vulnerability, japa is a means of affectively engineering a new discourse of 'middle-class' sensibility in Nigeria. Presenter: Jing Jing Liu (MacEwan University, Department of Anthropology)

No Country for Young Engineers: student migration from India to Germany, a second chance at success: This paper explores the reasons behind rising Indian student migration to Germany. The number of Indians studying in Germany has more than doubled between 2015-2016 and 2020-2021, and the majority are enrolled on postgraduate courses in Engineering (DAAD 2022). Engineering degrees have long carried social prestige within the Indian middle classes (Upadhyaya 2016). Nevertheless, as I examine in this paper, despite having met the expectations associated with a middle-class culture of education in India, a large proportion of engineering graduates are unable to find desirable jobs necessary for the successful (re)production of middle-class status. In this context, the affordable cost of study in Germany has made study abroad, for the first time, an accessible escape from unfavourable employment, and an alternative path to achieve social mobility. I argue that my interlocutors sought to study in Germany not because they believed that a degree from a German university would give them a positional advantage on the Indian job market. Rather, the cultural capital they sought to acquire, which they believed would be valued in India and elsewhere, was relevant work experience at a German company. A Master's degree was primarily valued as a path to obtaining such work experience. I also examine students' anxieties about whether study in Germany would, in fact, enable them to 'get back on track', and the tensions between privilege and precarity in their lives. The paper draws on interviews with Indian students in Germany and a digital ethnography of 'Study in Germany' social media communities. Presenter: Sazana Jayadeva (University of Cambridge)

Chinese Middle-Class Aspirants in Africa : "The Chinese middle class is not as big as westerners think," a Chinese engineer in Ethiopia once quipped to me, adding, "as if owning a house and a car means that we belong to the middle class." He spoke of himself and his colleagues

who would, by measure of income, fall solidly in China's middle class. And yet they remained mere middle-class aspirants. Why did this engineer and his colleagues feel they did not belong to the middle class? And what makes China's middle class different from how "westerners" define it? Inspired by the engineer's remark, this paper explores popular notions of China's supposedly swelling middle class. It does so by drawing on Chinese "Africa diaries" published online and narratives I collected during fieldwork in Ethiopia. Many Chinese expatriates in Africa lacked and longed for what they described as a sense of security, a wanting aspect of middle-class existence. Creating a middle-class lifestyle and living one were two different things that were, by virtue of middle-class aspirants' transience and an accompanying sense of insecurity, mutually exclusive. To live a middle-class life and maintain it, they were forced to continue moving. Their self-imposed mobility ultimately prevented them from achieving the longed-for stability of middle-class life. This paper explores how Chinese middle-class aspirants in Africa view their lives and define the class to which they aspire to belong. It encourages thinking beyond notions of the middle class as a material achievement and considering the experiential nature of middle-classness. Presenter: Miriam Driessen (SUNY, University at Buffalo)

Connectivity and Digital Nomads in Mexico : Mexico has become a hotspot for digital nomads in search for adventure, authenticity, travel, and even wealth. Part of the story of digital nomads in Mexico, particularly those from the rest of North America, is a desire to work and live in ways that they can maintain or advance their aspirations toward middle class status while staying mobile. Yet they might be less nomadic than their name suggests since their movement requires stable transnational networks of people, labor, and payment to produce the conditions of remote labor. Organizing life in this way requires conditions of connectivity, or those localized socio-technical arrangements that enable them to work across borders and in multiple currencies. Splayed across online communities of digital nomads in Mexico are questions about connectivity, like the strength of the internet in cities by the beach, how to move money around global financial networks, or how to use VPNs to appear physically located in another country. Digital nomads turn to each other for advice on how to produce the conditions of connectivity required to be a digital nomad. While the literature on digital nomads explores how they connect by forming communities, it overlooks the centrality of connectivity to their nomadic labor. Being nomadic while also pursuing middle-classness requires people to be

persistently connected to certain networks related to their labor. I argue that connectivity, as a condition of life in a certain place, becomes a measure of possibility for mobile, location-independent middle-class aspirations among digital nomads in Mexico. Going Hungry on Campus: A Roundtable on Anthropological Engagement with Basic Needs Security in Higher Education

8:00 AM - 9:45 AM TMCC - 717 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for the Anthropology of Food and Nutrition

ORGANIZER:

Jason Miller (Washburn University, Department of Sociology & Anthropology)

CHAIR:

Jason Miller (Washburn University, Department of Sociology & Anthropology)

PRESENTER:

Jason Miller (Washburn University, Department of Sociology & Anthropology), Corinne Kentor, Miriam Kopels (San Diego State University, Department of Anthropology)

DISCUSSANT:

Neri de Kramer (University of Delaware)

DESCRIPTION:

In 2019, researchers from Temple University's Hope Center estimated about 40% of U.S. college students struggled with food security, that is, they did not have enough access to reliable, nutritious, and culturally appropriate food. In 2023, some campuses saw their student's food insecurity rates jump above 50% due to the lingering impact of the COVID-19 pandemic and the looming economic recession. Those with the highest rates of food insecurity are often those who have been historically marginalized from higher education such as students of color, low-income, LGBTQ+, immigrant, and first-generation students. Moreover, food insecurity is not limited just to students on campus; faculty and staff may also experience stubbornly high food insecurity rates and all three populations struggle to meet other basic needs such as housing, technology, transportation, and healthcare. In this interactive roundtable, we will

discuss how anthropologists and the anthropological toolkit are uniquely suited to address these concerns on their campuses. We will hear from anthropologists who lead campus-based food pantries, conduct basic needs research, and work to create higher education policies to ameliorate these concerns. Focusing on best practices for addressing student and employee basic needs, we will also discuss ways in which audience members can make small changes right away to help students (such as including basic needs statements in their syllabi) and form a network of anthropologists interested in these issues.

PRESENTER:

Paul Lutard, Amélie Zarir, Mathieu Larivière, Xavier Gransden

DISCUSSANT:

DESCRIPTION:

La fin du 20^e siècle est caractérisée par l'éveil d'une conscience environnementale mondiale. Depuis, des gouvernements cherchent des solutions aux problèmes environnementaux qui transforment l'écologie planétaire. Pensons notamment à la création du Groupe d'experts intergouvernemental sur l'évolution du climat (GIEC) en 1988 ou aux Accords de Paris en 2015 (Lallemant-Moe 2016). Que ce soit pour lutter contre les changements climatiques, la déforestation ou la montée des eaux (Ourbak, Quinquis et Cristofari 2019 : 212), on retrouve mondialement des initiatives visant à générer une transition vers des modes de vie alternatifs, considérés plus sains et durables. Or, sur le terrain, les projets gouvernementaux et le pragmatisme des populations locales peuvent dissonner (Scott 2020;

Olivier de Sardan 2021). Nous voulons donc démontrer comment certaines communautés s'adaptent aux politiques de transitions environnementales en faisant face aux écologies en mutation (Latour 2015). Pour interroger ces enjeux, nous nous penchons sur le rapport au lieu que maintiennent ces populations, prises entre l'environnementalisme contemporain et leur mode de vie. Nous prenons en considération les propos d'Ingold (2000) sur le « dwelling », proposant l'idée qu'habiter un territoire dissout les dichotomies nature/culture et individu/environnement. Les travaux de Xavier Gransden (maîtrise en anthropologie, Université Laval) offrent une écologie politique de la commercialisation d'un champignon comestible à la Baie-James. Les travaux de Gransden s'inscrivent dans la lignée de scientifiques ayant étudié le rapport des Cris au capitalisme, notamment la manière dont ces derniers réagissent au tournant néolibéral de l'économie québécoise (Salisbury 1986, Morantz 2002, Feit 2010). La présentation de Paul Lutard (maîtrise en anthropologie, Université Laval) se base sur un terrain réalisé avec les Hmong dans les hautes terres du Vietnam. Son approche théorique se cadre par l'analyse des formes de subsistances (Scott 1977) liées au domaine forestier, permettant ainsi de saisir les mutations causées par les différents processus de transition. Depuis plusieurs années, des politiques environnementales ont façonné la vie forestière au Vietnam (McElwee 2016), changeant simultanément l'expérience au monde des personnes (Rosa 2018) et les tissus d'enchevêtrements (Tsing 2015). Les recherches d'Amélie Zarir (maîtrise en anthropologie, Université Laval) en Polynésie française s'intéressent à la souveraineté alimentaire en contexte insulaire par l'agriculture vivrière (fa'a'apu) biologique. Alliant l'anthropologie de l'alimentation (De Garine 1979), de la globalisation et du développement (Abélès 2008; Serra Mallol 2013), Zarir étudie les alternatives alimentaires et les imaginaires d'agriculteurs dont les activités ont été affectées par le nucléaire dès 1966 (Blanchet 1995) et, plus récemment, par les changements climatiques (Heinzl et Serre 2019). Le projet de Mathieu Larivière (maîtrise en anthropologie, Université Laval) s'intéresse à la production coopérative de vin au nord de la Catalogne espagnole. Sa présentation abordera les pratiques de travail viticoles évoluant au regard des changements climatiques (Sauri 2009) et les discours de viticulteurs enchâssés dans une paysannerie en transformation (Van Der Ploeg 2009). Les outils de l'écologie politique (Robbins 2012), alliés au concept d'espoir (Hauer et al. 2018), ont permis l'analyse de cette étude.

Hmong et forêt en transition, modification des moyens de subsistance et des expériences au monde: Les hautes terres du Vietnam sont le lieu de différentes initiatives politiques environnementales, provenant du gouvernement vietnamien et d'organisations non gouvernementales (McElwee 2016 ; Roberge 2021). Ayant pour but de pallier à l'urgence climatique, ces projets s'inscrivent dans un contexte autoritaire fondé sur un rapport de pouvoir entre ethnie majoritaire et minoritaire (dynamique politique intrinsèque au Vietnam) (Turner et al 2022; McElwee 2016). La conception de l'environnement dans un tel cadre politique implique des changements socioculturels en lien avec le territoire, modifiant par la même occasion l'organisation des populations. Les Hmong du district de Sa Pa, ethnie minoritaire au Vietnam, ont dû s'adapter à ces injonctions politiques, arrangeant leurs moyens de subsistance. Ma recherche s'est particulièrement concentrée sur les moyens de subsistance forestiers (forestry livelihoods). Je me concentre notamment sur ce qui peut être appelé les produits forestiers non ligneux (Tugault-Lafleur 2007). Ainsi, porter mon attention sur ces productions forestières permet de dégager les structures économiques et sociales de chaque produit, m'amenant à saisir également les attaches émotionnelles. Dès lors, je ne parle pas simplement des modèles économiques qui structurent l'organisation des forestry livelihoods, mais aussi d'expérience au monde (Rosa 2018) et des formes d'enchevêtrements (Tsing 2015) en lien avec les forestry livelihoods. Ma présentation porte en elle de manière implicite la conception de transition, qui devient un outil épistémologique. Je m'intéresse à expliciter, par la transition, les modifications des tissus culturels, au sens large, des Hmong dans les forêts du nord-ouest du Vietnam, dans le district de Sa Pa. Presenter: Paul Lutard

La souveraineté alimentaire en contexte insulaire : l'agriculture biologique en Polynésie française: Mes recherches sont motivées par les mouvements contemporains de retour à l'agriculture vivrière (fa'a'apu) biologique en Polynésie française. Depuis la baisse de la pratique de l'agriculture vivrière résultant des expérimentations nucléaires françaises par le CEP (1966-1996) ayant entraîné un afflux important de métropolitains, une modernisation et une urbanisation accélérée de la société polynésienne menant à une généralisation du salariat, la dépendance alimentaire aux produits importés des Polynésiens s'est accentuée (Blanchet 1995; Chesneaux 1995; Poirine 1996; Serra Mallol 2013; Toullelan 1984; Abélès 2008). De plus, malgré la faible contribution de cet État insulaire aux

émissions mondiales de gaz à effet de serre, leur situation environnementale et agricole est également aggravée par les changements climatiques tels que l'acidification des océans, l'augmentation du niveau de la mer, etc. (Ourbak, Quinquis et Cristofari 2019; Gemenne 2009). Au-delà de l'environnement, ce sont le quotidien des populations locales, leur territoire ainsi que leur qualité de vie qui sont affectés (Heinzlef et Serre 2019). C'est dans cette perspective que s'inscrivent diverses associations locales polynésiennes (Lallemant-Moe 2016) vis-à-vis ce « double » contexte (postcolonial et environnemental). Ma focale se pose notamment sur ces associations locales qui se mobilisent dans le développement de l'agriculture biologique en réponse à cette période de grande mutation (Latour 2015). Sachant que les îles nous transmettent actuellement un message (Ourbak, Quinquis et Cristofari 2019), les résultats obtenus nous permettent alors d'alimenter les réflexions sur la lutte aux changements climatiques, et ce, en nous fournissant certains outils pour penser la transition écologique. Presenter: Amélie Zarir

La vitiviniculture coopérative en Alt Empordà, Catalogne: Entre pratiques, discours et espoirs: Ce projet s'intéresse à la production vitivinicole de coopératives au nord de la Catalogne espagnole. L'intérêt de cette recherche tient au fait que cette activité est peu étudiée, alors qu'elle fait face à des enjeux propres au monde de la paysannerie et aux marchés mondiaux des vins (Bassegoda Pineda et Puig Vayreda 2012; Doyon 2020). Au cours de cette recherche, j'ai étudié les pratiques et les discours de production des vins et la paysannerie en transformation – en raison de l'industrialisation et de la mécanisation, de la fin envisagée du modèle coopératif conventionnel et de l'émergence de nouveaux modèles de paysanneries (Van Der Ploeg 2009; Altieri et Nicholls 2014; Narotzky 2016) – dans laquelle les viticulteurs sont enchâssés. Je me suis intéressé à leurs espoirs, passés et actuels, relativement à leurs activités et à l'environnement dans lequel ils évoluent (Appadurai 2004; Hauer et al. 2018). L'analyse de l'étude fut réalisée par le biais d'outils de l'écologie politique, notamment la jonction du local au global et l'examen des rapports de pouvoir selon une perspective spatio-temporelle (Robbins 2012). Les résultats de la recherche ont démontré les enjeux suivants : les nouvelles tendances associées à l'écologisation des pratiques représentent un défi pour les viticulteurs coopératifs (Pascual Manich et Salip Vilanova 2012) et le manque de relève agricole serait en partie lié au peu d'espoir qu'entretiennent les jeunes dans l'avenir de cette profession. Les rapports de

pouvoir multiscalaires et la lourdeur bureaucratique de la production complexifient également la poursuite des activités sur le territoire. Presenter: Mathieu Larivière

Cueillette et Résistance dans l'Eeyou Istchee: Le rapport des Cris au commerce des champignons est en continuité avec celui qu'ils maintiennent avec le capitalisme depuis les débuts du commerce des fourrures dans la région à la fin du 17^e siècle. Celui-ci est caractérisé par une résistance à l'économie occidentale (Scott 1985), mais aussi une réappropriation des marchés pour servir leurs propres intérêts (Morantz 1992). Les Cris ne s'opposent pas nécessairement à la marchandisation des champignons sauvages, mais appréhendent ce phénomène d'une façon particulière, qui n'est pas toujours en continuité avec la vision des entrepreneurs non autochtones de la région. Mon étude cherche donc à étudier le rapport entre les pratiques « péricapitalistes » (Tsing 2015) que maintiennent les cris et les tendances économiques qui caractérisent l'économie québécoise contemporaine (Desbien 2015; Doyon 2020; Feit 2010). Dans cette optique, mes recherches se focalisent sur le vécu journalier des cueilleurs de champignon durant la saison de cueillette (de la mi-août à la fin du mois de septembre). Je décris les conflits de valeurs et les diversités d'approches observables dans la petite communauté de cueilleurs commerciaux présente dans la région. Presenter: Xavier Gransden

DISCUSSANT:

Sophie Chao

DESCRIPTION:

The multispecies turn of the early 2000's expanded the political scope of anthropological analysis and broadened the field of anthropological subjects. Prominent authors like Haraway (2003) and Ingold (Ingold 2000) argued forcefully that narrowly human conceptions of the social and societal issues was not only an inadequate analytic for grasping the growing significance of climactic crisis, it also reproduced foundationally colonial ideas about what forms of life merited consideration and concern (Armstrong 2002). Though it remains somewhat contentious, multispecies anthropology has since proliferated and differentiated from the early focus on animals. Discussions now seek to account widely for non-human sociality including plants (Kohn 2013), microbes (Paxson 2008), land (de la Cadena 2015), mushrooms (Tsing 2015), spirits (Klima 2019) and climatic features (Rudiak-Gould 2014). Along with this proliferation of subjects has come diverse approaches that has opened multispecies conversations through theorizations as diverse as STS (Benezra 2021), biosemiotics (Kockelman 2011), political economy (Li 2010), gender studies (Parreñas 2017) and phenomenology (Fijn and Kavesh 2021). Much of this work has foregrounded the global north, but as applied in global south context post-colonial, and increasingly decolonial, thinking remains a key constituent in the critiques made by multispecies anthropology (Parreñas 2018; Ahuja 2009). Even so, concern for multispecies dynamics is still criticized for threatening to obscure the systemic causes of human dispossession (Watson 2016; Smart 2014). We frame a discussion about the post-colonial politics of multispecies analytics by comparing their manifestations in ethnographic analysis of Southeast Asia and Latin America. Even now, in both regions new policies claiming to commit local states to biodiversity and green transition declaim the beginning of new conditions for multispecies life. While obviously very different, these two regions share conditions of post-colonial extractivist economies, indigenous land preservation movements, authoritarian governance and geopolitical marginalization become regional orientations for diverging literatures of multispecies anthropology with distinct post-colonial critiques. Southeast Asianist anthropology has emphasized themes of entanglement and dispossession as rapacious palm oil economies and climate change alters conditions of life (Chua 2016; Chao 2022). Latin Americanist work has, in turn, mobilized analytics of biosemiotics and perspectivism to render indigenous ontologies and the ethical demands of multispecies modes of living visible to broader publics (Viveiros de Castro 1998; Howe 2019). These literatures are not sharply distinct.

Nonetheless, it is striking how these different contexts of analysis echo respective regionalist classics (Levi-Strauss 1971; Geertz 1963).. These comparative differences and similarities provide a vantage point from which to think about how critical politics of multispecies anthropology relate to regionality. This roundtable asks how the distinct post-colonial spaces of Southeast Asia and Latin America inform the development of multispecies analytics? How the specific politics of green transition and environmental degradation inform these analyses? How such differentiation is informed by enduring training in regional literatures? What is a reflection of the differences between these spaces? What are the advantages and risks

PRESENTER:

Amelia Frank-Vitale (Princeton University), Ahlam Chemlali (Danish Institute for International Studies), Seyedeh Mehrnaz Moghaddam, Lea Coffineau (CUNY, Graduate Center, Department of Anthropology), Ola Galal (New York University), Lupe Flores (Rice University, Department of Anthropology), John Doering-White (University of South Carolina, Department of Anthropology)

DISCUSSANT:

Jason De Leon (University of California - Los Angeles (UCLA), Department of Anthropology), Cecilia Salvi (CUNY, Graduate Center)

DESCRIPTION:

Life and Death in 'Transit': Mobility, Violence, and the Politics of Care from the Mediterranean to the Americas
In early July, the U.S. border found the remains of ten migrants after record high temperatures in Texas and Arizona. Around the same time, the corpses of a mother

and her infant were recovered after Sub-Saharan Africans were pushed into a no-man's land near the Tunisian-Libyan border. More than 500 migrants are feared dead or are missing after their ship drowned in the Mediterranean off the Greek coast in mid-June. How have the lives of migrants become so dispensable to the extent that they are left to die out of thirst in the desert or drown in the Mediterranean Sea? Are we seeing a new shift in governing mobility such that the liberal commitment to 'saving lives' has been completely replaced by the will to 'let die'? Being in transit has become more and more of a permanent state for migrants as borders are externalized and refugee law and asylum policies become more complicated or are non-existent in so-called third countries like Mexico, Turkey, and Tunisia that now play a more central role in shaping global migration. But it is also such policies, violence, and deaths that have galvanized a global solidarity movement from the US to Germany to Lebanon. As such, the deepening of the state of 'transit' for people on the move and their families—with its simultaneous uncertainty and potential—calls for an urgent interrogation into how lives are valued and come to matter or not as well as the way deaths are both allowed and countered at and outside the borders of the US and Europe. This roundtable focuses on migrants 'in transit'—transit conceptualized expansively to refer to journeys across sea or land borders, waiting, camp life, urban dwelling, bureaucratic mazes, legal limbos among others—to think about states, processes, practices of, and discourses about 'transitions' more broadly. How do we as scholars heed the call for 'anthropology of the good' (Robbins 2013) and examine the creative potential of 'transitions' without overlooking the very real ways people's lives are put at risk? At the same time, how can we account for the generative dimension of 'transitions' without romanticizing it as a form of alterity?

Marginality, structured inequalities and new policy technologies

8:00 AM - 9:45 AM TMCC - 206 E

Oral Presentation Session

REVIEWED BY:

Association for the Anthropology of Policy

ORGANIZER:

Sarah Raskin (Virginia Commonwealth University)

PRESENTER:

Natalia Orrego Tapia ,Nathan Boucher (Duke University),Natasha Neri ,Hanan Sfalti

DESCRIPTION:

Researching the margins are never about tinkering around the edges of the policy world. The margins always represent key insights into the centre of the making and unmaking of policies. This panel will interrogate the ways in which marginality, structured inequalities and new policy technologies offer valuable insights into policy actions, strategies, imaginaries and policy failures. The papers will problematise the sociotechnical, sociopolitical, sociocultural and sociomedical imaginaries of 'development' in context such as India, Chile, Brasil and France. All the papers will talk to issues around contested mobilities, racism, discrimination and the production of structural inequalities. The papers point to the need to challenge and unpack rather problematic linear development narratives, which themselves sustain structured inequalities and the complex role of policy and policy makers in working through marginality and inequalities. In all the papers, new policy technologies and imaginaries are emerging with profound effect and affect. The first paper will discuss the mediatization of mobile infrastructure in Chile, the second paper will focus on transdisciplinary teaching of organisational ethics, the third paper will discuss judiciary battle around policy brutality in favellas in Rio De Janeiro and the final paper will discuss the marginality of undocumented mothers in France.

'Spectacular spectacular', or the mediatization of mobile infrastructures and technologies for development: 'No words in the vernacular can describe these great events' because they don't often happen when you are outside technological innovation poles, like Latin America. Hence, they are a 'hyperbolic and novel' occurrence whenever they take place. This paper delves into the public demonstrations, private exhibits and governmental ceremonies for new mobile infrastructures and technologies in Chile between 1988 and 2023. This work is part of a doctoral dissertation about the 5G network's rollout in Chile, with a methodology that combines ethnography with archival research to reflect on the social life of telecommunications in developing countries. Under this light, to culturally understand the 'Cell Phone Country', time collapses, and the starting point is located years back. Telecommunications have been part of the development model since the telegraph, installed from 1852 and on. These types of systems were quickly understood as core tools for extractive industries and

sovereignty, eventually becoming essential for disaster management. They were part of domestic life when mobile phones arrived. The first public demonstration of cell phones in a 1G network happened in the spring of 1988 at Santiago's International Fair (FISA), organized by the National Society of Agriculture. One of the top attractions, it was a milestone towards the present. 'Towards the present?' a journalist asked. 'Of course', said a FISA worker and continued, 'because the cell phone is already in use in highly developed countries, where these things will soon be obsolete because there they live with half their heads thinking about the future'. The scene was the Chilean Telephone Company's pavilion, with a soon-to-leave dictator making the first call, surrounded by businessmen, statesmen, a general, and a model. That year, laypeople had a different time slot to attend. With more or less publicity, this type of event became normal for each new mobile generation, and the 'traditional spectacularity' of the Chilean government remained. Traditional, because it is austere and repetitive, yet spectacular because it is a well-planned performance to create supply before demand. By the spring of 2021, the commercial launch of the 5G network occurred at The Presidential Palace with masks, businessmen, statespeople, deans and a robot dog. The soon-to-leave president, live on TV and the official Youtube streaming, would highlight 5G's contribution towards creating a society where 'all its members have a place to share the benefits of development', remarking GDP growth and opportunities for technological entrepreneurship. His speech had a warning: 'arriving late (to technologies) means not arriving at all'. What is the common thread between these types of occurrences? From an anthropological view, they seem to condense Chile's development model both in symbolic and material terms, constructing a unitary sociotechnical imaginary about mobile infrastructures and technologies that permeates consumption through the media. Under the gleaming sun of 1988 and 2021, cellular systems are a promise for a society that doesn't exist yet because we are 'late' by default. The core difference between spectacles is the technological and media ecologies, alongside socio-political changes. The paper closes with the daily life consequences of this mediatization. By 2023: How does the spectacular pass to technology use? But more importantly: Is development still the final goal? Presenter: Natalia Orrego Tapia

Transdisciplinary Teaching of Organizational Ethics: Engaging Structural Inequity as a Unifier: If anthropology is concerned with values, norms, and patterns of behavior in society, how you help guide emerging professionals and their developing ethics

across disciplines is a paramount concern. Professionals get little formal ethics training in many professional programs yet make decisions with ethical implications in everyday practice. The field of public policy is transdisciplinary out of necessity and serves as an ideal laboratory to engage ethics across sectors or disciplines. How do we make organizational ethics accessible to different learners coming from many different backgrounds in, say, a professional public policy program? The challenge of structural inequity exists in all organizations and across every sector. Structural inequity is recognized as an ethical challenge as many organizations today turn an eye inward and engage difficult and important conversations concerning embedded inequity related to race, gender, ethnicity, social status, or income level. This inequity exists within organizations – often rooted in larger systems of which the organization is a part – and influences work they do in public, in their services and in their products. I designed a required graduate level organizational ethics course in an accredited public policy school that encounters structural inequity as a unifying theme. Each semester we engage structural inequity across participants' prior experience and training which may be grounded in fields such as business, medicine, nursing, non-profit management, government, sociology, education, and politics. This course evolved from my four years of teaching this course – observing students' engagement with the material and incorporating their feedback. In this short presentation, I will briefly illustrate my approach using selected examples from the course. In these examples, structural inequity plays a stark role: biomedical ethics principles (autonomy, justice, beneficence, nonmaleficence) applied across sectors; business principles (quality, competition, management, inclusion/exclusion, profit v. revenue) and their decidedly uncomfortable role outside of the for-profit sector; and ethics of stewardship (public trust in organizations, duty, fiscal responsibility, treatment of employees and customers) situated in the hands of organizational leaders. I include Joan Tronto's interpretation of the ethics of care – attentiveness, responsibility, competence, and responsiveness – in an organizational ethics framework, weaving the principles throughout this presentation's content as it is in the course itself. Also essential to successful transdisciplinary ethics learning are professional reflexivity exercises where students are given rich opportunities individually and in small groups – usually with large group debriefing – to examine their own beliefs, judgments, privileges and practices. In addition to students learning how to recognize and respond to structural inequity, this pedagogical approach allows the

learner to acknowledge their own discomfort and develop a universal understanding of ethics, avoiding what can be a narrow organizational lens in available ethics teaching today. Teaching organizational ethics in a transdisciplinary fashion is aided by a cross cutting topic such as structural inequity - a growing organizational concern. Presenter: Nathan Boucher (Duke University)

Favelas v. State of Rio de Janeiro : the judicial battle against police brutality at the Brazilian Supreme Court: This paper will analyze the central role of favela residents and families of victims of police brutality in the constitutional lawsuit against the state of Rio de Janeiro, ADPF 635, known as the 'lawsuit of the favelas'. For the first time in Brazilian history, favelas and black mothers' social movements are parties (amici curiae) of an action against the violation of a constitutional fundamental right and are suing the government of the State of Rio de Janeiro to reduce police lethality and implement measures for more effective police oversight control. Rio de Janeiro has one of the highest police killings rates in the world, and, in 2022, there were 1327 people killed by policemen, mostly in violent police raids in favelas. The article analyzes the social construction of the lawsuit as a judicial tool in the families' and favelas' fight against police brutality and racism in public safety policies in Rio. The Supreme Court's decisions to limit police raids during the pandemic, to install body-worn cameras and to implement a plan to reduce police lethality have raised criticism amongst state government officials, and the civil lawsuit has brought up public disputes around police oversight control, racism in policing and the rights of favela residents. The paper examines the empowerment of favela activists' and black families' voices throughout the lawsuit, since they became amicus curiae, in 2020, until the present moment, with their participation in a working group established by the Supreme Court to discuss the reduction of police lethality. The methodology includes participant observation in the advocacy campaign for the lawsuit, interviews with favela activists who are part of the lawsuit and the analysis of court decisions, filed petitions, public statements by government officials, recordings of public hearings held at the Supreme Court and videos used in the campaign. Presenter: Natasha Neri

Undocumented mothers of children who belong to France, a specific subjection.: Based on an ethnographic survey conducted in humanitarian and medico-social structures that accompany mothers in a migration situation in a commune of Île-de-France (France), I propose to show how the absence of a residence permit shapes maternal subjectivities. I will first show how the maternity of undocumented women allows them to

access their rights. Indeed, it is often as mothers (of French children, schoolchildren, or refugees) that they hope to obtain a residence permit. Moreover, it is also because they are mothers that they are accompanied by medical and social structures, humanitarian associations and are considered a priority for access to emergency accommodation (Eberhard et al., 2017). Yet, I will analyze in a second step that family ties are not enough to obtain support from structures and to access rights. These women must also act according to what is expected of them in order to avoid being qualified as bad parents and being sanctioned for this. Finally, I will show that what families perceive as surveillance by the structures transforms their behavior towards their children, but especially their parenting. Indeed, many families fear that their children will be taken away from them by the social services and question their place as parents - are their children really theirs or are they France's? Thus, I will question the way in which policies of access to rights, as well as the support offered to precarious migrant families, contribute to the regulation of maternal practices and question their place as mothers and subjects. DISCUSSANT:

Cassandra Hartblay (University of Toronto, Department of Anthropology)

DESCRIPTION:

This roundtable explores issues of (in)access to and (in)efficacy of healthcare services for individuals living with disability, neurodivergence, and/or chronic/long-term conditions. How are ableist and dominant

biomedical understandings experienced in healthcare settings by such service users? How do those who are disabled and/or deabled (Puar, 2017) contend with clinical and institutional assumptions regarding 'health,' 'recovery,' and 'efficacy' that exclude their own experiences, self-knowledges, preferred care options, and health outcomes? In line with the 2023 theme of transitions, we examine the uncertainties and mutabilities in healthcare provision faced by those living with disability, debility, and difference. Roundtable participants will open up avenues of thought that celebrate the types of expertise developed by virtue of navigating misfittings (Garland-Thomson, 2011) with healthcare dynamics, systems, structures, norms, laws, and languages, as well as clinical spaces, technologies, and distances. We are an interdisciplinary group with varied theoretical backgrounds and work spanning numerous populations. Many of us also have our own lived experiences navigating the settings/systems we study. Session will set aside time for audience participation.

PRESENTER:

Kamala Russell ,Danilyn Rutherford (Wenner-Gren Foundation),Terra Edwards ,Greg Downey (Macquarie University)

DISCUSSANT:

Agustin Fuentes (Princeton University, Department of Anthropology)

DESCRIPTION:

Organizers of the 2023 Annual Meeting invite us to consider the multiple meanings of 'transitions,' noting that transitions might denote 'a move from stable ground to less certain topographies, new vernaculars, and unfamiliar grammars.' In this double panel, we bring together anthropologists who draw on the

concept of proprioception – as a new vernacular -- to explore how humans cope with uncertain topographies and unstable grounds. Proprioception refers to our knowledge, without conscious awareness, of where we are in space and how elements of our physical body relate to one another. While the concept literally refers to the individual, we approach proprioception as a distributed collective capacity that allows us to upend lingering assumptions about how humans engage with one another and the wider world. Critical theorists such as Catherine Malabou have pointed to the ease with which proprioception can be absorbed into accounts of a neoliberal body maneuvering in a sea of risk and a synaptic self that is always responsible for self-improvement. Instead, we find in proprioception ample grounds for theorizing the distributed embodied self. Proprioception provides us with a helpful 'thinking device' for considering all kinds of 'challenges to equilibrium' offered by the 'current situation.' No body moves through the world unaided. Autonomy is an illusion. Agency is distributed and collective, at every scale. The concept of proprioception was developed at a moment when social science theorizing about human interaction was emergent, bold, and creative. Some lines of thought got closed off with the associations of physiology with racist pseudoscience and the ascendance of theories of the 'body as a house.' Recently, we are witnessing new and exciting lines of scholarship in and around anthropology on themes like multimodality, affect, and embodiment. Anthropologists and allied scholars have mapped out a terrain. The time is ripe to get on the ground – to develop the tools we need to do research that is ethnographically fine-grained and theoretically imaginative. With our discipline and societies in transition, it's an exciting time to be exploring how people navigate, together, in an unsteady world. Our panelists come to the question of proprioception, in these times of endless transitions, from different institutional settings, backgrounds, and life experiences. The group includes individuals working in an artistic vein with corporeal methods to convey that which cannot be conveyed in writing, and those who deploy and develop precise analytic terms that can push us beyond some of the confusion associated with 'embodiment' writ large. We deliberately include diverse theoretical, empirical, and conceptual approaches. Embodied, distributed, and collective: proprioception shares traits that characterize our lives together. The body is social, no less than the social is embodied. What happens when we drop our assumptions about sociality and the human and look over the ledge? In part 1, we focus on proprioceptive subjects. We consider how the concept

of proprioception challenges assumptions about the autonomous embodied subject.

Proprioception and the (un)observed body : What role does proprioception play in processes of relating to others? This talk draws on fieldwork conducted with speakers of a minority language (Shehret) in Dhofar, Oman. This area has undergone great infrastructural reorganization in the last 50 years in ways that have expanded the intensity and frequency of encounters within households and newly public spaces. On Dhofar's shaken ground, people move and speak in ways that limit and anticipate contact with others. Not simply a matter of enacting local norms, my interlocutors attend to where they are and how they are positioned with respect to actual and possible observers in and by feeling and moving their bodies. Walking with a disinterested slowness can diffuse a palpitation of anxiety as one passes across an open doorway where another may be: there are many ways to show less. My interlocutors point to these feelings, faculties, and the accessibility of the body as vicissitudes of being in the partial space of human existence (Arabic: *dunya*; Shehret: *dini*) and thus as an opening to ethical challenges around how one orients to God while living in the world. This talk considers these movements that arrange the person during, before, and in avoidance of interactions with others as proprioceptive navigations of worldly landscapes invested with social others. Does thinking actions through the sensations and orientations that enable them help circumvent common anthropological tropes of cultivation and performance that would reduce this ethics to problems of observation and representation? Presenter: Kamala Russell

Proprioception and the Connective Tissue of Sociality : The ability to see what another is seeing is the first step towards understanding what another is saying, according to most accounts of normal language development. A long tradition of western theory has built its account of the emergence of sociality on sight: language, and social life more generally, begins with the visual ability to imagine the world from another's point of view. An equally long tradition of western theory privileges the sonic: speech fosters reflexivity to the degree we can hear ourselves talk. But there are other ways of sharing senses, which become particularly apparent among people who don't use their minds and bodies in ways considered typical. In this paper, I explore some of the ways in which sensation becomes social by focusing on "proprioception," the feeling of one's own body in space. I consider the experience of a young English butcher, who lost his sense of

proprioception, and my disabled daughter, who constantly seeks hers out, to explore how proprioception serves as a connective tissue, binding people to broader social worlds. A close look at this capacity in situations that bring it into sharp relief, puts a new spin on what George Herbert Mead called the conversation of gestures. In sensing the self as another, participants in the interactions I consider develop a sense of the other as a self. Presenter: Danilyn Rutherford (Wenner-Gren Foundation)

The gravity of proprioception in protactile communication: rethinking "multimodality" : Over the past several decades, linguistic anthropologists have increasingly turned their attention to how communicative agents draw on diverse semiotic resources to carry out their social aims. As part of this, "multimodality" has become a central concern. In this paper, I consider recent innovations in "protactile" theory, a small but growing body of work by DeafBlind intellectuals at the forefront of a social movement aimed at uncovering new, and more tactile ways of being in the world. In this paper, I analyze protactile interactions with these theoretical interventions in mind. These analyses foreground the relation between proprioception and gravity. Once a gravitational field is in place, we are tethered to a surface, and on that surface, we are "oriented". As we walk forward together— going toward this, stepping over that— a meaningful environment is revealed. If we enter the problem of multimodality here, where proprioception and gravity meet, instead of starting with sensory modalities as such, the analytic project is transformed. Instead of asking: How can this or that social action be achieved by combining signs that are transmitted via diverse channels, one asks: How does our environment speak to us? What actions does it call forth? What are we in when we are together? For anyone interested in "embodiment" or "the senses," this approach may offer new ways of moving beyond the isolated capacities of bodies and toward the intensely relational, socio-historically conditioned, and often precarious conditions that constrain what can and cannot count as a sign for us. Presenter: Terra Edwards

Proprioception is the Target: Equilibrium as a Cultural Project in Bodily Practices: In activities like meditation, martial arts, and sports, participants actively cultivate heightened proprioceptive awareness through sustained practice over time: meditating, moving, breathing, and using other techniques. Paying attention to aspects of the self that are normally nonconscious, raising to awareness what is usually sub-aware, is often essential to becoming skilful. However, "practice theory" in anthropology and the social sciences, like some theories

of expertise in philosophy and cognitive science, assume that skill is synonymous with automaticity or decreased self-awareness. This presentation is based on long-term ethnography in martial arts and other bodily practices and on neurological accounts of the functioning and development of the vestibular system, the part of the nervous system responsible for equilibrium. I argue that that the vestibular “sense” is best understood as a complex dynamic assemblage that draws on diverse proprioceptive resources within the nervous system, interacts with the world at interfaces across the body, and emerges over developmental time, including by engaging with other people and with intentional training regimens. In other words, the proprioceptive vestibular sense is deeply encultured, not because of its “meaning,” but because lifeways, practices, and even concepts over time shape how it functions neuropsychologically. The implication is that understanding the enculturation of the proprioceptive subject requires us to fundamentally consider the limits of cultural theories based on meaning, symbols, or signs. Instead, we should recognize that neural enculturation irrevocably effaces the boundary between biology and culture, not by deconstructing them, but because they emerge together in the individual’s development. Presenter: Greg Downey (Macquarie University)

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Andrew Paul

PRESENTER:

Zoe Nyssa (Purdue University, Department of Anthropology), Andrew Paul, Jack Wheeler-Barajas, Maryann Cairns (Southern Methodist University, Department of Anthropology), Tapoja Chaudhuri, Liza Buchbinder (University of California, Los Angeles)

DESCRIPTION:

The papers in this panel offer fresh looks at the longstanding political, cultural, and justice issues surrounding conservation plans and policies. They examine conservation modeling, the work of designing decolonial Indigenous education programming in Kawthoolei on the Thai-Myanmar border, efforts to

center Indigenous perspectives in the context of Colorado River water management, water and heritage management in Macedonia, the link between authoritarianism and environmental politics in India, and the relationship between intensifying deforestation and forest-linked ritual practice in Togo.

Conservation by Algorithm: Biodiversity Data

Governance & Reciprocity: Unlike the scientists' beloved field sites and test plots-tended and measured; fenced if possible-the computer labs used for environmental modeling and analysis often have an air of semi-abandonment, a kind of temporary camp one bides time in until scraping up the research dollars to get away again. Though much has been made of ecological fieldwork practices, it was here, in the dusty computer lab, that raw data would become findings; patterns would become policy recommendations. The lab PI, Jay, and I sat down at a nearby workstation and he opened the lab's software suite. Like many conservation modeling programs, this one was minimalist and primarily based on typed commands, with most of the software development effort allocated to getting the machine learning algorithms behind the scenes working properly. This was supplemented by a semi-official lab protocol, thick with handwritten marginalia of best practices and tricks developed over time by successive cohorts of research assistants. Jay began navigating through the menus to set various parameters and weights, which would instruct the software to find the optimal conservation solution for our dataset of at-risk plant species in an adjoining state. At least one parameter set, Jay admitted, 'may not matter either way.' That is, although it had seemed like a good idea to include it, the algorithm appeared to never 'make use' of this particular setting. Though conservation modeling software has become increasingly sophisticated and user-friendly in the last decade, enabling scientists and practitioners to automate much of the work, there were still multiple decision points and hundreds-sometimes thousands-of possible permutations of the program settings. How then should we understand the conservation models underpinning much contemporary environmental policy and governance, when, as one graduate student described it, 'everyone knows that they don't work but they do'? Models have become an increasingly powerful intervention politically, economically, and biologically yet the practices associated with how these algorithm-based tools are developed and used in conservation remain little-known. Based on a year of participant observation in conservation modeling labs as well as interviews with over a hundred scientists and professionals specializing

in conservation science, policy, and biodiversity informatics, this paper provides a first-hand look at how conservation modeling looks in practice. These findings are contextualized in an emerging body of literature in cultural anthropology, science and technology studies, and critical data studies on modeling and AI/big data practices. The paper concludes with a snapshot of some recent efforts with an interdisciplinary group of collaborators to partner with the biodiversity informatics community to: i) improve understanding of current biodiversity data practices and infrastructures ii) expand access to biodiversity data infrastructures and resources to groups marginalized from the biological sciences and data science communities and iii) in a praxis-oriented effort, providing opportunities to reimagine and 'regrow' biodiversity data practices in terms of reciprocity and decolonial methods. Presenter: Zoe Nyssa (Purdue University, Department of Anthropology)

Collaboratively Designing a Decolonial Indigenous Environmental Education Program in the Salween Peace Park, Kawthoolei: Institutional education bears a deep and enduring colonial legacy and has often failed to productively engage Indigenous Peoples' knowledges, epistemologies, and ways of being in the world. Higher education in natural resource management and environmental conservation is no exception. Environmental education has tended to emphasize the production of environmental subjects, while resource management and conservation curricula have often focused on technocratic approaches to planning and management to solve conservation problems; neither of these tend to accord with Indigenous Peoples' ways of being in reciprocal relationship with a sentient more-than-human world imbued with agency. This disconnect has become even more important in times of widespread anthropogenic environmental change and increasing recognition of the need for a fundamental shift in dominant societies' relationships with the natural world. Meanwhile, Indigenous Peoples and local communities are defending their land relationships by declaring their own protected areas, known internationally as ICCAs or Territories of Life. One of these is the Salween Peace Park, a 6,748-square kilometre protected landscape initiated by Indigenous Karen communities in the autonomous territory of Kawthoolei on the Thai-Myanmar border in Southeast Asia. Home to more than 100,000 people in over 400 villages, the Salween Peace Park is an experiment in Indigenous environmental governance on a grand scale. Consequently, Karen administrators and civil society have identified a need for an Indigenous Karen

environmental education program to train the next generation of leaders. Since 2022, a collaborative process has been underway, bringing together Karen and international scholars, the Karen Education and Culture Department (KECD), Karen educators, and students in the Salween Peace Park to develop the first post-secondary environmental education program in the Indigenous Karen education system. Based on self-reflexive ethnography with collaborators and relevant stakeholders, this paper analyzes both the philosophy and process of developing an Indigenous environmental education program. The Karen environmental education program strives to nurture self-determining Indigenous thinkers who can confidently draw on both global and Indigenous knowledge systems in defense of ancestral Territories of Life. This research contributes to literatures on decolonizing, land-based, and liberatory education models in the Thai-Myanmar borderlands and beyond. Presenter: Andrew Paul

Transformations on the Colorado River: How centering indigenous voices in water management can decolonize the Colorado River.: Transformations on the Colorado River: How centering indigenous voices in water management can decolonize the Colorado River. Jack Wheeler University of Colorado Denver In the American West, water is allocated based on prior appropriation, or really, who put water to beneficial use first. Naturally, indigenous peoples put water to beneficial use first, but colonial encroachments and settler colonialism of capitalist United States society have created stark inequities and limitations to water rights, leaving indigenous nations with seriously limited access to water. On the Colorado River, 30 tribal nations continue to face suppression from states and the federal government with regard to water governance. Indigenous nations have been and continue to be excluded from participating in the planning process. They are left to fight lengthy legal battles to acquire their rights that were established in the 1908 Supreme Court ruling, *Winters v. United States*. In order to dismantle the colonial legacy of the American Southwest and bring about environmental justice to indigenous nations, planning efforts regarding water must be centrally informed by indigenous leaders and indigenous voices. Focusing their knowledge and leadership in the planning process promises to create a new sustainable and equitable framework from which the Colorado River is managed; one that can be expanded to include all water management practices in the American West. Through environmental science, law, the application of Karl Marx's theory of the Material Conditions of Life, as well as pulling from the successes

of the Columbia River Compact in Canada, this paper explores how elevating and centering indigenous knowledge, voices, and leaders in water planning can create a new framework for the governance of the Colorado River. This framework will permit the Colorado River to transition and transform in the period of anthropogenic climate change in a way that deconstructs colonialism, creates environmental justice, and allows the river to flow sustainably, all while providing autonomy and equitable resource allocation to indigenous nations. Key words: Water rights, Colorado River, water management, indigenous, decolonization, environmental justice, colonial encroachments, climate change. Presenter: Jack Wheeler-Barajas

Longing for the Lake: Cultural Heritage, Water Quality, and Tourism in Macedonia: Boasting both UNESCO natural and cultural World Heritage site recognition, the Lake Ohrid Region – which in 2019 expanded to include both locations in North Macedonia and in Albania-has some of the most distinctive environmental and cultural resources in the world. The lake is over a million years old and is home to unique wildlife. The area likewise has an exceptionally long history of human occupation; evidence of Ohrid's habitation reaches back more than 7,000 years. Modern patterns of migration, tourism development, and anthropogenic threats to water quality in the region prove oft-interwoven with both the very existence of such rich environmental and cultural heritage and with the perceived current-day 'value' of these draws. As the area faces potential relegation to 'endangered' status on the UNESCO site list, practical and philosophical questions about the future of the region arise. This ethnographic research suggests that water and heritage management solutions may actually be found in quite surprising, and yet deeply human, realms. The central tension here lies in who-or what-will end up longing for the lake, and what that means for all of us. Presenter: Maryann Cairns (Southern Methodist University, Department of Anthropology)

Emerging environmentalisms of 'New India.': On September 17 2022 Indian Prime Minister Narendra Modi released eight Namibian cheetahs in a protected forest in central India amidst much media coverage. The reintroduction of the cheetahs since its extinction in India in 1952 was to invigorate conservation efforts in India, despite the misgivings of some prominent Indian conservationists. This presentation analyzes the role of environmental discourses in general, and biodiversity conservation policies specifically, in the transition of the nation to become a 'New India.' While much has been

written about the colonial legacies of nature conservation in the Global South, and the role of endeavors like the 'Project Tiger' in postcolonial nation-building in India, this paper focuses on the role that environmental discourses play in India's current aspirations in becoming a civilizational force in global politics. To understand the emerging state-led environmentalism in 'New India' is to distance ourselves both from the ecology-centric environmentalism of the West and comparisons with other postcolonial nations where international conservation agencies wield a significant amount of control. Rather, this presentation argues that the Indian model of strong state presence in shaping environmental endeavors resembles that pursued by the Chinese government in recent times. As political ecologist Annah Zhu notes, China's aspirations to become a global leader are linked to its recent environmental investments. She argues for environmental pluralism that enables us to go beyond 'good' or 'bad' environmental actions and recognize alternative 'civilizational logics' that motivate the environmental leadership of the authoritarian Chinese state. Similarly, I argue that India's recent nationalistic turn in politics and its aspirations to become a 'Vishwa Guru' or a world teacher should form the background of our analysis of its environmental governmentality. The paradoxical actions of the Indian political regime in both destroying environmental habitats for economic development and its simultaneous promotion of significant private investments in the renewable energy sector should be understood in terms of the emerging aspirations of a strong authoritarian nation-state. This presentation analyzes environmental discourses promoted by the current political regime in India, including the carefully curated images of the Indian prime minister as a wildlife lover. In as much as South Asia remains both one of the most climate-vulnerable places on earth and home to almost a quarter of earth's population, 'New India' and its ecological aspirations matter to the world. Presenter: Tapoja Chaudhuri

Ethnography at the Intersection of Deforestation and Ritual: The COVID19 pandemic has brought into stark relief our global interconnectedness and the immediate threat of human encroachment on uninhabited lands. It also highlights the relationship between deforestation and the emergence of novel infectious diseases, in which an estimated 30% of known infectious pathogens originate from land use change. Since the 1970s, land transformation to cropland and unregulated logging with brush fires and slash & burn agriculture have transformed a large percentage of the West African landscape. With respect to the 'biodiversity hotspot' of

the Upper Guinean Forest that runs from southern Guinea to southwestern Togo, 84% of the original forest has been lost since 1975, transforming it into a fragmented system of remnant forest, interspersed with degraded forest patches. In the nation of Togo, the impact of habitat destruction has been particularly severe. According to the U.S. Geological Survey, from 1975 to 2013 Togo had the highest rate of agricultural expansion in West Africa with its dense tropical forests decreasing by over half since 1975. Without protection, the USAID concludes that 'the current rate [of deforestation] will lead to the complete disappearance of Togo's forests by 2025.' Despite the magnitude of the current climate change crisis, and the urgency of large-scale corrections to the current pace of deforestation, this paper argues for the importance of scaling down to a local understanding of indigenous biodiversity practices for communities that interface with Togo's remnant forests. In this paper, I describe preliminary ethnographic findings of the impact of sacred grove destruction on one community's religious practices. The author has a twenty-year relationship with a rural canton in eastern Togo named Yonda and has witnessed the dramatic transformation of the landscape due to decades of deforestation--accelerated in the mid-2000s with the 2005 death of dictator Gnassingbe Eyadema. These groves were planted during colonial rule and flourished until state-sponsored protections, which have subsequently faltered under the current presidency. With a focus on the clearcutting of sacred groves containing ancestral spirits, this study contributes to longstanding conservation efforts by asking what happens to ritual when the trees are gone? In addition to gaining a deeper understanding of local moral worlds driving deforestation and conservation efforts, this engagement fosters collaboration by eliciting evolving natural resource needs and on-the-ground impacts of deforestation and cultural practices. Presenter: Liza Buchbinder (University of California, Los Angeles)

Roundtable on Moving Words: Literature, Memory and Migration in Berlin

8:00 AM - 9:45 AM TMCC - 715 B
Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Swayam Bagaria

CHAIR:

Swayam Bagaria ,Naveeda Khan (Johns Hopkins University, Department of Anthropology)

PRESENTER:

Michael Puett (Harvard University),Tobias Kelly (University of Edinburgh),Sandra Laugier (National Centre for Scientific Research (CNRS)),Habiba Ibrahim (University of Washington)

DISCUSSANT:

Andrew Brandel (University of Chicago)

DESCRIPTION:

We are proposing a roundtable on Andrew Brandel's *Moving Words: Literature, Memory and Migration in Berlin* due out University of Toronto Press in the summer of 2023. *Moving Words* is an exemplary exploration of the artistic cultures and networks of contemporary Berlin, a city that has emerged as a major global node for such exchanges, thanks in part to its recent emergence as a significant literary capital of the world. The book covers a vast array of contexts through which life in the city of Berlin is provided with a literary quality or dimension – from old neighbourhood bookshops to new reading circles, NGOs working to secure asylum for writers living in exile to specialized workshops for young migrant poets. By attending to the everyday lives of writers, readers, booksellers, and translators, the book offers a crucial new vantage point on the politics of difference in contemporary Europe, at a moment marked by historical violence, resurgent nationalism, and the fraught politics of migration. Given its highly generative set of sites, methods, and disciplinary engagements, this roundtable aims to bring together a group of anthropologists, philosophers, and literary studies scholars to situate the interventions of the book in a wide range of debates, including but not limited to debates around the politics of migration, philosophy of aesthetics, and linguistic anthropology.

3-156

SAW's Conrad M. Arensberg Award: Celebrating the Contributions of Harsha Walia

8:00 AM - 9:45 AM TMCC - 716 B
Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Jennifer Shaw

CHAIR:
Jennifer Shaw

PRESENTER:
Arjun Shankar (Georgetown University), Seth M. Holmes (University of California, Berkeley), Natasha Raheja (Cornell University, Department of Anthropology), Adrian Godboldt (University of Kentucky, Department of Anthropology)

DISCUSSANT:
Stephen Campbell ,Gerardo Rodriguez Solis (University of California, Santa Barbara, Department of Anthropology)

DESCRIPTION:
Scholar, activist, and organizer Harsha Walia is the winner of the 2022 Conrad M. Arensberg Award, given by the Society for the Anthropology of Work for outstanding contributions to the anthropology of work from inside the discipline and beyond. She is author of *Border and Rule: Global Migration, Capitalism, and the Rise of Racist Nationalism* (Haymarket 2021), *Undoing Border Imperialism* (AK Press 2013), as well as numerous journal articles. Walia's analysis and her organizing show why the abolition of borders and prisons have everything to do with work. She demonstrates why refugee and migrant crises are the outcomes of conquest, capitalist globalization, and climate change. In such conditions, multicultural liberalism plants the seeds of racist nationalism. Her work critically illuminates the connections between state formation, the intensification and externalization of borders, and the economic exploitation of migrant workers past and present. Walia's writing also challenges ethnographic projects that take the form of 'anthropological consumption' of migrant lives and stories, urging us to turn our gaze from groups and subjectivities to the state regulation of difference. *SAW* sees the promise of dialogue between Walia's focus on structural processes of 'state-regulated relations of governance and difference' and anthropologists' diverse engagements with migration and borders. Given anthropology's interest in power, work, and migration, Walia's contributions stand to push us further on questions of unfree labor, criminalization, and the very work of research. This roundtable will feature anthropologists from a wide range of locations and career positions in conversation with Harsha Walia to explore and celebrate her work as it pertains to the anthropological discipline and migrant labor activism more widely.

3-160

Teaching at the Intersection of Medical and Linguistic Anthropology: Challenges and Opportunities

8:00 AM - 9:45 AM TMCC - 712
Roundtable/Town Hall - In-Person

REVIEWED BY:
Society for Linguistic Anthropology

ORGANIZER:
Emily Avera (Colgate University, Department of Sociology and Anthropology)

CHAIR:
Anna Corwin ,T.S. Harvey (Vanderbilt University, Department of Anthropology)

PRESENTER:
Abigail Mack (University of Virginia, Department of Anthropology), Hyemin Lee (New York University), Jennifer Guzman (SUNY, College At Geneseo, Department of Anthropology), Emily Avera (Colgate University, Department of Sociology and Anthropology)

DISCUSSANT:
Lynnette Arnold (University of Massachusetts, Amherst, Department of Anthropology)

DESCRIPTION:
As a result of the COVID pandemic, we are living in a time of increasing general interest in public health. At this historical moment, more students than ever are seeking out courses and programs that provide insights into the complex social realities of illness and the inequities that structure healthcare and health outcomes. Scholars working at the intersection of medical and linguistic anthropology have a great deal to offer to these conversations by tracing the central role of language in public health messaging, global health policy, clinical interaction, medical interpretation, and healing practices across space and time. Through this roundtable, we explore the challenges and opportunities of teaching about these issues. The conversation brings together an intergenerational group of presenters, ranging from early career scholars in the process of developing courses that highlight research at this intersection, to experienced instructors who regularly teach courses that cross these subfields. Discussion on this panel will address three key issues. First, participants will speak to programmatic transformations and institutional investment in new interdisciplinary programs that highlight social science

and humanities approaches to the study of health (e.g. Sociomedical Sciences, Global Public and Environmental Health, Medical Humanities). Participants will share insights about curriculum development that highlights different areas of anthropological expertise. Second, we will explore the institutional context that has created the demand for these programs, including changing pressures within higher education and shifting student demographics. Participants will highlight how these programs can respond to the interests of first-generation students in career preparation, while also providing ample opportunities for mentoring and professionalization. Third, we will explore specific strategies for teaching at this intersection, including designing syllabi and assignments, building community partnerships, co-teaching across specializations, and classroom activities and facilitation. Roundtable participants will reflect on the challenges and rewards of teaching linguistic and medical anthropological approaches, including how to unpack complex readings and concepts, training students in complementary methods, and working with the composition of students who are drawn to these kinds of interdisciplinary programs as a compelling alternative to more traditional pre-professional and exclusively sciences training. Ultimately, we suggest that teaching at the intersection of medical and linguistic anthropology not only makes a timely intervention in current issues, but can also respond to institutional pressures on anthropology departments in ways that carve out spaces for diverse students and powerfully shape the development of socially and linguistically aware future medical practitioners.

3-165

The Curious Case of Nonhumans in Anthropology

8:00 AM - 9:45 AM TMCC - 717 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Noha Fikry (American University in Cairo, Department of Sociology, Egyptology and Anthropology)

CHAIR:

Mariko Yoshida (Australian National University, Department of Anthropology)

PRESENTER:

Gabriel Esteban Espinoza Rivera (University of Pittsburgh, Department of Anthropology), H Max Pospisil (University of Saskatchewan), Francisco Rivera

DISCUSSANT:

Anne Meneley (Trent University)

DESCRIPTION:

In light of exacerbating environmental changes and ongoing anthropological debates on more-than-humans, this roundtable explores the following three main axes/questions. On the first level, when anthropologists conduct research on interspecies relations, what does the presence/absence of nonhumans – as passerby-s, passive subjects, backdrops of action, or lively capital (Haraway 2012; Mikhail 2013; Mitchell 2002) – tell us about the politicized logic through which interspecies relations have sustained colonial power and capital formation? What does the presence/absence of nonhumans reveal our commitments and the gatekeeping concepts contouring various regions such as 'the global South' (Mashkour and Grisoni 2016; Abu-Lughod 1989; Deeb and Winegar 2012; Naguib and Shami 2013)? More broadly, what does this presence/absence suggest the role of social theory and its incapacity to attend to interactions that question neat distinctions between nature, culture, humans, and nonhumans (Mitchell 2002; Fernando 2022; Taneja 2017)? How can we think with nonhumans to pay scrupulous attention to 'the uncanny intimacy of our relationship with the nonhuman' (Ghosh 2016: 33)? On the second level: How do we tackle nonhuman others in a regionally meaningful and relevant manner? In this light, our discussion departs from the growing subfield of multispecies ethnography and critical animal studies (Govindrajan 2018; Kirksey 2014; Tsing 2013). Recent indigenous, South Asian, and Islamic critiques of this subfield pose two questions relevant to our discussions: What interspecies relations are included in the predominantly secular multispecies discussions (Saha 2021; TallBear 2011; Tlili 2012; Khan 2014; Mustafa 2021; Fernando 2022)? We regard this panel as an invitation to center our varying ethnographic conceptual grammars, texts, and cosmologies in attending to interspecies articulation. Preliminarily, we describe this as a non-romantic and non-exotic engagement with nonhumans, featuring goats, jinns, angels, oysters, God, donkeys, chickens, all of whom co-narrating environmental challenges, gendered caring and killing relations, and nonsecular understandings of life and death. On a final level, this roundtable addresses the methodological and narratological challenges of interspecies articulation, including

invisible and at times unknowable ones. We seek inspiration from genres that have successfully engaged more-than-human reference points, including fiction, children's fables, and epistles such as Ikhwan al-Safa's seminal 'The Case of Animals versus Man before the King of the Jinn' (Goodman and McGregor 2009), as well as eco-literature such as Michiko Ishimure's Noh play 'Shiranui (2003).' These genres provide tools through which we can embrace our human limitations in narrating our interspecies lifeworlds.

3-170

The formation of persecuted subjects

8:00 AM - 9:45 AM TMCC - 716 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Nadia Fadil

CHAIR:

Nadia Fadil ,Jean-Michel Landry (Carleton University, Department of Sociology & Anthropology)

PRESENTER:

Anja Kublitz (Aalborg University),Nadia Fadil ,Candace Lukasik (Mississippi State University)

DISCUSSANT:

Hamza Esmili (*)

DESCRIPTION:

The notion of persecution has, in the recent years, gained credence as an analytical tool to examine the processes of criminalization of religious minorities across the world. Building on the legacy of R.I. Moore and his seminal book 'The formation of a persecuting society' (1987), several scholars have argued for the need to adopt this lens to attend to the various incriminating measures of religious minorities, such as Muslims, in liberal states (Malik 2014). In its initial conceptualization by Moore, persecution was tied with its political-theological ramifications and understood in to be continuity with the various ecclesiastical attempts to foster and shape a unified Christian body. More recently, this concept has been used in a much broader sense, mostly in the field of history, law (Maiani 2022), political science or social theory (André 2018). Lesser attention has been given to this notion within anthropology (Lukasik 2021). This panel seeks to probe into the anthropological value of the concept of persecution across different cultural and religious

contexts and minority groups. We thereby understand persecution not solely as a tool of governance, but also as a phenomenological experience which is structured around a perpetual sense of vigilance. Persecution thereby operates as a bodily technique of (self)governance, that shapes and regulates the formation of one's moral life in distinct ways. The questions we are interested in addressing in this panel are the following: how is the experience of being 'persecuted' expressed discursively and affectively? How does one shape oneself through this experience of being under persecution? How are religious traditions (such as Islam, Christianity) mobilized as a repertoire to situate and contextualise this experience of persecution in the everyday life? How does piety shape and mediate this experience of persecution? What forms of strength and resilience are constructed around this experience of being under persecution? How can we read persecution in conjunction with other categories such as surveillance and suspicion (Agrama 2022)? What forms of communal belonging are expressed and created through this experience of persecution? And how does one conduct research among subjects who feel persecuted?

To be or not to be: Maintaining anthropological identity and identifying as an anthropologist in a clinical education setting

8:00 AM - 9:45 AM

TMCC - 713 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Iveris Martinez (California State University, Long Beach)

CHAIR:

Iveris Martinez (California State University, Long Beach)

PRESENTER:

Patricia Hudelson (Geneva University Hospitals),Mirko Pasquini (Uppsala University),Chelsea Wentworth (Michigan State University),Kathleen Rice

DISCUSSANT:

Jerome Crowder (University of Houston),Jay Sokolovsky (University of South Florida, St. Petersburg, Anthropology Department)

DESCRIPTION:

Anthropologists employed in clinical education settings

often assimilate to the culture of biomedicine taking on the role expected of them, while feeling caught between differing worldviews, and even experiencing identity loss. Weaver noted long ago that the predominant 'utilitarian case study approach' of biomedicine, focusing on specific individuals or diseases, leads to 'philosophical isolation' of anthropologists (1968, 6). The isolation is also from one's own field of anthropology since those who practice in the health professions may be viewed by fellow anthropologists as co-opted by biomedicine and losing critical perspective. However, critical medical anthropology has had an impact on our reputation in biomedicine creating resistance and skepticism about anthropologist's motives (Johnson 1991,127). Therefore, anthropologists often find themselves 'hiding' their anthropological identities in order to integrate into roles in medical education, which is perhaps one of the key facilitators to being more effective in these contexts (MacDonald and Crowder 2021). Furthermore, anthropologists in health professions education may be distanced from anthropology by identifying with their job title, as well as the expectation to publish and affiliate with professional organizations within their new fields of employment. While anthropologists may be tempted to operate in 'stealth' mode, hiding their anthropological identity, by doing so do we miss the opportunity to have others understand the importance of the specific contributions of anthropology as a field compared to other disciplines? Chileshe (2021) noted that the anthropologist 'is constantly moving through the different categories of participation' in medical school roles (p. 158). How can anthropologists maintain their anthropological identity within these 'foreign' environments and shifting roles? International roundtable participants engaged in clinical education within the United States and Canada and abroad will discuss the pros and cons of identifying explicitly as anthropologists among health professions colleagues and students. How do we do so successfully? What are the pros and cons of being explicit about anthropological content in health educational contexts? If and when is it necessary? Does it facilitate learning? What does it mean for the profession of anthropology more broadly? What is the impact on our own self-identify, isolation and career success? How do we position ourselves for success as anthropologists in a health professions education setting? These questions seek to advance the conversation of the role of anthropology in medical and health professions education and inform our practices moving forward. The roundtable discussion will be followed by comments from two senior anthropologists: one

engaged in teaching humanities in medicine and the other with a long career helping train public health students and physicians in geriatric health. Johnson, TM. 1991. 'Anthropologists in medical education.' In Training manual in applied medical anthropology, 125-160. American Anthropological Association. Weaver, T. 1968. 'Medical anthropology' In Essays on medical anthropology, 1-12. University of Georgia Chileshe, M. 'Participatory Anthropology for Teaching Behavioral Sciences at a Medical School in Zambia. AND Macdonald, AL. and JW Crowder. 2021 'Wearing a Cloak and Many Hats ' IN Anthropology in Medical Education: Sustaining Engagement and Impact. Springer.

Transgender Temporalities: Gender Transitioning in the Everyday

8:00 AM - 9:45 AM TMCC - 603

Oral Presentation Session

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Taylor Silverman

CHAIR:

Austin Sibley ,Taylor Silverman

PRESENTER:

Austin Sibley ,Taylor Silverman ,Shilpa Menon (University of Illinois, Chicago, Department of Anthropology),Carmen Jarrin (College of the Holy Cross, Department of Sociology and Anthropology),Jianmin Shao (University of California, Irvine)

DISCUSSANT:

Eric Plemons (University of Arizona, School of Anthropology)

DESCRIPTION:

'Born this way,' a long-standing rallying cry for mainstream gay rights movements in North America and globally, has also been taken up by many transgender activists as a strategy to destigmatize gender 'non-conforming' identities. Though generating empathy and acceptance, this framework relies on a binary, static, and frequently medicalized understanding of gender that obscures the performative everyday practices and ethnographic realities that that bring gender into being. Meanwhile, queer anthropologists and trans studies scholars have been increasingly (re)imagining the social and physical 'transitions' of

transgender people as a definitionally form of 'movement across a socially imposed boundary' (Stryker 2017). Recent ethnographies emphasize transgender identities as fluid, relational, and contingent on interpersonal interactions and contexts (Plemons 2017; Brainer 2019). Other trans scholarship documents people traveling 'back and forth' between genders, inhabiting multiple genders, and/or occupying spaces 'in-between' masculinity and femininity, further queering queerness itself (cárdenas 2016). At the same time, biomedical concepts of 'plasticity' and malleability play a central role in maintaining dominant ideologies and hierarchies around race, sex, and gender (Gill-Peterson 2018). This dynamic body of work has taught us that gender necessarily evolves and morphs over time, and that gendered embodiment is fluid for all bodies, not just trans bodies. This panel seeks to explore the 'how' rather than the 'why' of transgender identities, bodies, and experiences, in relation to the multiplicity of timelines over which they emerge. We hope to further complicate the idea of 'transition' as a singular and dramatic change in expression and embodiment. Instead, this panel seeks to attend to quotidian micro-practices of gendering and the ways in which transgender people are making (and remaking) gender in the everyday. How do transgender people's bodies and identities continue to 'hang together,' while simultaneously morphing and shifting (Mol 2002)? How do mainstream medical interventions among cisgender people (hormones for fertility, hormones for birth control and menstrual suppression, breast augmentation and reduction) complicate the perceived uniqueness of trans bodies (Sanabria 2016)? And what understandings of gender are promoted and foreclosed by prevailing explanatory models and temporal frameworks of transitioning? Ultimately, we will consider how the micro-moments and macro-narratives of transgender transitioning can expand anthropological theorizations of identity and temporality.

Gender Exploration and Childhood Plasticity: The "Project" of Parenting Transgender Youth: Children, in the American cultural imagination, are commonly understood to be inherently innocent sites of potential and plasticity, "projects" whose outcomes rely on parents' ability to foster positive development (Casteñada 2002, Hulbert 2004). Within this concept of the child as potentiality rather than actuality – a concept that necessarily rejects biological determinism – gender exploration might be recognized as a natural, if not expected, aspect of growth and self-discovery. Yet the prevailing biomedical understanding of gender posits that it is innate and hardwired (Sadjadi 2019),

rationalizing the "treatment" of gender while at the same time reifying a binary gender system and foreclosing the possibility of fluid and evolving gender identity and embodiment. My ethnographic research with parents of transgender and gender nonconforming youth exposes the anxieties that stem from the imperative to foster burgeoning gender identities and legitimize experimentation while at the same time navigating medical, educational and social settings that leave little space for uncertainty. Quotidian familial interactions around topics ranging from sartorial choices to sexual desires and capabilities reveal gender's evolution through personal expression, interpersonal relationships and the embodiment goals that attend to both over time. Examining how parents – and youth themselves – approach and retell these moments reveals a recognition of youth as both malleable works in progress and unique individuals with self-knowledge and agency. Seen in this light, everyday moments of gender development in youth demonstrate the moral imperatives of "good" parenting and challenge us to live comfortably in spaces of uncertainty and transition. Presenter: Austin Sibley

Queering Adolescence: Transgender Teenagers & Gender Affirming Care in the US: Adolescence is a definitionally liminal category, understood in the US to be a critical period of development between childhood dependence and adult autonomy. For transgender and other "gender expansive" teenagers, emerging possibilities for identity expression and embodiment intensify this time of transitions. Drawing on clinic- and community-based participant observation and ethnographic interviews with youth, parents, and providers, I explore the ways in which the everyday practices and care of trans teens are reimagining normative processes of puberty, progress, and ultimately personhood. The biomedical treatment of trans teens, in particular, has become a key site for contemporary cultural contestation and negotiation of gender formation. Health care providers now suggest hormones that can "pause" puberty in order to allow for psychological but not physical maturation. A growing ethos of "affirmation" instructs parents to trust teen perspectives and prioritize agency over protection. And many members of the "gayest generation" accept and embrace gender exploration and fluidity. Taken together, this multifaceted "queering" of adolescence has begun to transform long-standing biosocial assumptions and moral imperatives around age and agency, affirmation and identity, and familial and institutional forms of care. Presenter: Taylor Silverman

Public Funds and Privatized Risk: Trans Reproductive Labor and Neoliberal Welfare in South India: Based on ethnographic work in the south Indian state of Kerala, this paper reflects on the ways in which privatized medical surgeries unevenly suture the spatio-temporalities of trans identity to the spatio-temporality of national/regional progress. I take up the highly publicized case, in 2020, of the suicide of a trans woman, Ananyah Kumari Alex, just days after she publicly complained of grievous medical negligence in her surgery. Responses, both by the public and by the private hospital that treated her, focused on the inherently “risky” nature of gender affirmative surgeries, painting trans people as ill-informed and unreasonable clients who want rapid results. This narrative of individualized risk, timeliness, and culpability, however, erased the broader implications of what many in the trans community saw as part of a rising trend of trans deaths and suicides in the state. In these narratives of “risky” surgery, I explore just why Ananyah’s and her chosen family’s graphic descriptions and images of her poorly healed genital region and bodily dysfunction after surgery circulated more widely than did their institutional critiques. Trans critiques of how the government funds medicalized transitions expose a broader terrain of critique regarding how the state and market collude to extract trans reproductive labor while perpetuating the conditions of trans precarity. Following Treva Ellison, I use the framing of “trans reproductive labor” provocatively to push theorizations of reproductive labor—underpaid or unpaid forms of devalued labor that reproduce the conditions of capitalism—beyond a singular association with female anatomical capacities for reproduction. The paper thus will delve into trans people’s critiques of welfare mechanisms that reveal how medical, neoliberal, and bureaucratic notions of safety, risk, and timeliness come together to sustain an image of trans wellbeing amid deepening crises of trans death and precarity. Presenter: Shilpa Menon (University of Illinois, Chicago, Department of Anthropology)

'Transition From Nowhere to Nowhere': Non-Binary and Travesti Temporalities Beyond the Gender Binary: The cisgender imagination has shaped what transgender transitions can look and feel like, by deploying medicalizing and pathologizing paradigms that assume a “before” and an “after” that coheres into legible femininities and masculinities (Stone 1993). Transgender experience, however, has always been more complex and very often resides in the in-between, challenging unidirectional definitions of transition. This paper, based on ongoing comparative research on non-

binary and travesti identities in both Brazil and the United States, argues that the transgender movement in both locations is embracing a more fluid notion of trans embodiment, complicating the idea that all trans people transition medically and the idea that gender identity will acquire stability over time. Instead, what emerges is a “queer, trans and asexual vernacular system of classification” (Amin 2023) that proposes a myriad gender and sexual possibilities, freeing people to experience transition in their own unique way and thus avoid the medicalizing paradigms of the cisgender gaze. Subjectivities that were assumed to be somewhat rigid, like travesti in Brazil (Kulick 1998), also thrive and multiply under these new social configurations, rejecting respectability politics and pointing towards the world-making potential of being a “gender terrorist,” as the activist and artist Linn da Quebrada calls it. Ultimately, the gender binary is being questioned by social actors as invalid and as a construct of colonialism, and new utopian horizons are being built (Muñoz 2009) even under the duress of political backlash. Presenter: Carmen Jarrin (College of the Holy Cross, Department of Sociology and Anthropology)

The Transgender Multiple: Selfhood, Entanglement, and Trans Onto-Epistemologies in China: In this paper, I center the life histories as well as the everyday experiences of trans and gender-nonconforming individuals in China to map the ways in which they come to resonate with and/or challenge the trans/KuaXingBie category. Based on in-depth interviews with KuaXingBie and gender-nonconforming individuals as well as participant observations in social events and gatherings in a cosmopolitan city in China, I show that the ways of being KuaXingBie are indeed multiple, heterogeneous, and irreducible to a simplistic “body-mind mismatch/incongruence.” Inspired by recent developments in anthropology and science studies concerning the question of ontology (De La Cadena 2015; Escobar 2020; Mol 2002), I argue that the ontologies of KuaXingBie subjectivity lie in the entanglement of the personal, social, and structural. These complex relations among the personal, social, and structural are entangled in the processes of making “transness,” even when they appear distinct and separate under modern, capitalist, and binary logics. Further, in light of emerging scholarships on trans studies, particularly in the contexts of Euro-American academy, my mapping of the ontologies of “KuaXingBie” in China aims to open up “transgender” rather than to provincialize it from the West, thus reimagining other possible ways of being and doing (trans)gender. The onto-epistemologies of transness is unable to be categorized, purified, and disentangled. They are ways

of knowing-being the otherwise capable of traveling with rather than within European-American traditions of making sense of gender. Presenter: Jianmin Shao (University of California, Irvine)
Discussion: Discussant: Eric Plemons (University of Arizona, School of Anthropology)

3-115

Transitioning from Class to Cultural Struggles: Social Divisions, Conspiracy Theory and the Politics of Feeling

DESCRIPTION:

'The heart is the site of Intelligence. [...] Intelligence passes through the brain [...], but in the heart lays its dwelling, as the heart is the site of participation to the world.' 'We will prevail, because we are deeper humans'. 'We are a schism. [...] We see regimes of reality diverge, domains of perception split apart, forms of life become irreconcilable'. This is a quote from the 'Conspiracist Manifesto', an essay issued anonymously in 2022 by the well-established Parisian publisher Seuil. The publication of the Manifesto itself, as well as the plethora of discussions about the emergence of 'conspiracy theories', 'fake news', and 'post truths' since the explosion of Covid-19, signal a deeper transformation in the ways humans are relating to and talking about power in the social arena. These narratives challenge the institutionally enforced alliance between 'power' and 'truth' and explicitly put conspiracy theories at the center of processes

(allegedly) leading to a 'schism,' an un-solvable fracture in the social structure--while stressing the aesthetic, sensory, un-mediated ways of 'apprehending reality,' through which such schism is being narrated. In 2003 Harding and Stewart noted how conspiracy theories were 'filling the vacuum created by postmodern incredulity toward grand narratives' while, at the same time, 'underscoring and intensifying a sense of historical fragmentation and disorientation.' In the last 20 years, both fragmentation and disorientation have nothing but increased, not only at the narrative-representational level, but in a direct and material relation with austerity measures, global war, the pandemic sanitary emergency, and subsequent states of exception worldwide. In this panel, moving from an understanding of conspiracy fantasies as the cultural/symbolic/emotional matter overflowing out of a multi-faceted crisis (e.g., politico-economic, social, epistemological, moral) of the world as we know it, we want to explore the articulation between deep social fractures and the alternative forms of meaning that conspiracy theories are engendering. In other words, we aim at mapping conspiracy theories as the terrain of meaning on which such 'schism' is built, as well as the 'schism' itself--understood as the fault line from within which alternative, fantastic narratives about power are generated. How are these new symbolic and cultural idioms emerging worldwide? How are they slowly starting to replace the old vocabularies of class conflict in the critique to power? In this panel, we will explore these emerging idioms and the deeper politico-economic conflicts, transformations, and structural re-adjustment policies that they seem to promote. Considering how all of the above imply large amounts of social/psychological suffering and a surfeit of negative affects towards what may be called 'established reality', how do conspiracy fantasies create webs of interpretive, non-verbal symbols, allowing for alternative ways of navigating reality, making it less painful? How do the anti-structural idioms of conspiracy theories (and similar genres of cultural performance) voice and express remnants of the social struggle? How do they conjure the state (that ambivalent mask of power), and re-frame and re-formulate its grassroots, vernacular representations?

I am another you. "Lived conspирituality" among contemporary Italian Pagans & New Age practitioner: Conspирituality—i.e., the connection between conspiracy theories and spirituality— has recently gained popularity in academic and non-academic circles. Often associated with populist and irrational beliefs, it has been linked, especially in relation to the Covid-19

pandemic, to right-wing politics, faulty thinking, and disruptive and potentially violent behavior (Greenwood 2021, Russell 2022). While these connections have been proven to be true, in some cases, in this paper, rooted in my long-standing ethnographic research, I will offer some ethnographic reflections on my study of conspirituality in conversation with the study of “lived religion”—i.e, the result of an approach that distinguishes the actual experience of persons from normative beliefs and practices, and that focuses on the “counterpoint” between online and offline lives. In my previous work on this topic, I argued that “believing in conspiracies” is not the same as “conspiracy-believing.” “(W)hereas the first is embedded in a paradigm that equates belief and faith (understood as the ‘non-rational’), the second, by focusing on the aesthetic (i.e., sensory and artistic) and performative dimensions, problematizes that same binarism.” By extending these observations to new and more recent ethnographic materials gathered on the field, in this paper I will give voice to some of the internal dynamics of conspiritualist milieus. In particular, I will analyze the role and strategies employed by those who, within conspiritualist communities, want to challenge the oppositional and polarizing narratives that often lead to social rifts, radicalization, and possible dangerous outcomes. Presenter: Giovanna Parmigiani (Harvard University)

Crypto-Utopian Occult Revivalism in Anti/Fascist Counterculture : My ethnography follows the ritual and everyday life of crypto-utopian occult revivalism and the political economic relations that produce its subjects to suggest unexplored factors contributing to the right populist capture of dissent during the Covid-19 pandemic. As my book *Occult Features of Anarchism* (2019) continues to “goes viral” I attend large festivals and small occult gatherings where cosmopolitan “digital nomads” share fears of biotechnology manipulated by occult powers, but also similar hopes in psychedelics research, cryptocurrency and technology writ large as sources of social justice and ‘spiritual awakening’. Many vaccine skeptics in my study are not mistrustful of “science”, instead considering technology divine, yet worry its power may be in the “wrong hands”, and argue about whose hands are better, critiquing or sacralizing capitalism and centralized power in the process. In the crypto-utopian occult revival, “media shamans” construct cryptography and the blockchain as continuous with the perennial “occult” magical tradition, which they revere in lieu of the values of transparency, representation and consensus that inform 20th century left social organization. Funded largely by “cryptocurrency” themselves, participants entertain occult conspiracy in the realms of government, but also

a general reverence for the power of the “occult”, a willingness to engage political action in the “occult” oneself, and a shared imagination that digitally perfecting the management of secrecy will inaugurate social equality. Meanwhile, vaccine skeptics throughout the counterculture complain of being pathologized as “conspiracy theorists” by left activists, which appears to contribute to them identifying with right critiques of the left. Presenter: Erica Lagalisse (The London School of Economics and Politics)

‘The Actually Guilty Ones’: Risk, Danger, Suspicion and Power in a Bulgarian Industrial Town: Workers’ death announcements are hanged outside factories in Pernik, a town that has been often assessed as one of the most polluted in Europe. Many of them died young, mostly from various diseases related to steel or mining production and to the town’s pollution. Daily concern about exposure to risk and danger became prominent during the pandemic, bringing to the fore discussions among workers about class, ethnicity, inequality and power. This daily discussion includes questions about who is “responsible” or “guilty” for the reproduction of inequality, the workers’ deepening impoverisation and exposure to various forms of risk and danger. Those are often based on several suspicions and mutual accusations about groups or individuals within the workplace but they mostly extend beyond the industry and the town, to discuss relations of power and potentially obscure acquirement of power within the country but also at a global scale. Those ideas and suspicions are often described as “conspiracy theories” mostly by more privileged groups in the country. By looking at industrial workers’ diverse understandings of power and their exploration of who are the “actually guilty ones” for different forms of inequality and by exploring how their ideas are shaped vis-à-vis conflicting ideas about what is and what is not a “conspiracy theory”, the paper aims to ethnographically explore the diverse scales and the various tropes that such forms of reasoning take among Bulgarian workers. Presenter: Dimitra Kofti (Max Planck Institute for Social Anthropology)

Conspiracy Theory, the Body, and Division in Cyprus: In December 2009, the remains of Tassos Papadopoulos, former president of the Republic of Cyprus, were stolen from his grave. This crime attracted intense public speculation, including widespread expressions of “sacrilege” and “desecration” indicating the sacred status of the president’s body and the transgressive nature of the violence done to it, along with rampant false accusations against Turkish Cypriots and Turkish nationals. The affective intensity of this public talk, and the specific affectivity of disgust and horror in that talk,

were implicated in “conspiracy theories” about the theft of the president’s remains. In this paper, I examine the transformation of Papadopoulos’s body into a site of discourse about “conspiracy theory.” I argue that this transformation expresses a political theology characterizing mainstream ethnonationalism in the Republic and refracting the enduring partisan and ethnonational division of Cyprus. Taking up the panel’s framing of “conspiracy theory” as a terrain of schism, I examine the dynamics of dissensus in the discourse around the president’s body, which emerged from and addressed not one community but several. The status of the president’s body as a question that could not be answered expressed contention among multiple reading publics, and the affective speech acts of shock, disgust, and horror that drove this contention turned on the religious significance of the president’s body for some but not others. Beyond this “case study,” I propose a reconsideration of local and historical context when we analyze the meanings and effects of conspiracy theory. Presenter: Elizabeth Davis (Princeton University) *Crisis, Charisma and Change. Mapping the Symbolic Grounds of Dissent: Conspiracy theories can be seen as webs of metaphors, and can be used as maps to navigate the complex world of socio-cultural reactions to the current crisis. My paper departs from ethnographic fieldwork in Milan (Italy) to explore the ways in which the progressive dis-integration of the structures and institutions of social cohesion, induced by our now 15 years old “organic crisis”, implies a double movement of creative destruction. On the one hand, the old jargons of both class analysis and class struggle tend to fade away; on the other, however, cultural, heavily symbolized and metaphorical idioms simultaneously emerge, and give shape and meaning to new forms of understanding the crisis, while liberating the affects (general frustration, anger, and resentment) of a perceived disempowerment. My analysis rests on observed features of both conspiracy theories and the politics of populism, to show the complex interplay of diversely situated metaphorical fields, and their diachronic relation with the (crisis related) politics of charisma. Here charisma figures as an agent of rupture, activating intricate webs of highly emotional processes, such as 1) identification with the totalities of structural inferiority (Turner, 1974), 2) the social establishment of non-rational, non-secular forms of truth or veridicity. 3) the explosion of long accumulated reservoirs of anomic, anti-rational and transgressive liminal energy, of the sort displayed in various forms of revolt. Presenter: Giacomo Loperfido*

DESCRIPTION:

Acoustic, visual, and narrative-based ethnographies come together to explore anthropologies of re/development, revitalization, migration, trust, and urban encounters. Canadian cities become sites of encounter and change as represented in urban refugee narratives, older downtown residents facing gentrification, creative film-making, sounds compositions, and other forms of urban engagement.

Hearing Culture in Reverse: developing an acoustempathic approach to sound through imaginative ethnography: 'I can tell you about many places in The World...What the sea is like in small fishing villages. Or a grain of sand in the desert. What is special about the view from a glacier...I can tell you about many places in The World. But you'll understand it better if I sing it to you' (Petrović 2012, 83) So begins Goran Petrović in *An Atlas Traced by the Sky*. These few short lines highlight a common Western musical trope - that music exceeds the limits of language, communicating what words alone cannot. It is certainly a romantic notion. The act of listening, in such a framing, transcends cultural bounds and subtly implies that music is where intercultural empathy lies. Yet musical meaning is culturally-mediated and subjective, not universally conceived. Music exists as a cultural record

of collectively valued sounds that communicate something of the community they come from. Noise and sound have often been framed in similar universalizing terms whether physiologically or otherwise. Municipal noise abatement strategies have largely focused on reducing all sound above specific decibel levels while physiological studies seem to focus on the decontextualized impact of sounds on the body. But such approaches do little to understand how people living in certain areas cope with their sonic environments nor do they account for the differential enforcement of noise bylaws across the North American city. Sound, as music above, becomes defined in universal terms, to be controlled based on perceived collective qualities. If the senses (and by extension our perception of sound) can be understood as 'made, not given' (Howes 2022, 45), the reality becomes arguably more complex. Since 2021 I have been developing what I refer to as an acouste(m)pathic approach to sound – or an empathetic approach to the acoustic environment – in Edmonton, Alberta. Drawing on Steven Feld's acoustemology (1996), the acouste(m)pathic project seeks to not only understand how people in Edmonton come to know the world around them through sound, but how on a larger scale we can learn to empathetically and collectively engage with other parallel and converging acoustemologies within our own cities. But how might we craft an approach that attends to the various sonic thresholds and literacies that exist among city dwellers? I'm proposing to begin with representations. Acoustic ethnographies have tended to feature representational sound compositions at the end of fieldwork, alongside textual analysis. But sound composition, while intriguing, can be equal parts esoteric, abstract, and inaccessible to the everyday person in Edmonton. Utilizing representational sound compositions at the start of fieldwork, rather than as a capstone, offers research collaborators sonic touchpoints from which to begin meaningful conversations around sound, creating a more direct route into what can often be an abstract concept. Contrary to popular culture, music and sound are not universal. But creative ethnographies can help us translate between experiences of sound, to develop and imagine sonic environments that work empathetically. Through developing this approach, I hope to add to the growing number of voices doing just that. Craig Farkash is a PhD Student in the Department of Sociology and Anthropology and Coordinator of the Centre for Sensory Studies at Concordia University in Montreal. Presenter: Craig Farkash

Uncertain Subjects and Encountering Ambiguity:
Navigating the Transition from Multimodal Fieldwork to

Dissertation Writing: In this presentation, I reflect on the transition between carrying out my doctoral ethnographic fieldwork and writing my dissertation. My fieldwork focused on collaborative filmmaking with one individual in the neighbourhood of Parkdale, Toronto. Together we made a series of absurd and unprofessional speculative fiction films we called ethnographic B movies. I want to explore how our research encounter and creative output afforded a space of ambiguous anthropological meaning, and the challenges of maintaining that ambiguity in written anthropological representations. We met each other at a community activist meeting held in the neighbourhood's drop-in centre a few weeks before the pandemic. Our coming together was predicated on a mutual desire for future-making; centering creativity and imagination, not biography. From 2020-2021, due to pandemic restrictions, my interlocutor and I met and worked on our films entirely outside in public spaces such as parks, sidewalks and alleyways. Working creatively in public gave the frame of our encounter an atmosphere of openness and ambiguity. My position as researcher and his as researched became backgrounded in the performative space of our filmmaking as we became co-producers. Over time I came to learn fragments of my interlocutor's self-professed failed academic life: getting his PhD, securing and losing an academic position, and then years of living in and out of shelters in Toronto. He rarely talked about his biography and I didn't ask, respecting the silence of his past. Instead, he wanted to make films that highlighted his desire to lead a revolution inspired by his unique philosophical, political and cosmological system, the Musicality of Reality. What mattered was not his past or marginality but sharing his ideas and intellectual contributions and it is these ideas on display in the films. However, now in the dissertation stage of my program, I'm finding it difficult to maintain that ambiguity of subject and meaning. I situate this tension within ongoing conversations around multimodal anthropology by asking the question: how can a student film speak for itself within academic conventions that require fieldwork's discursive rendering? The necessity of writing generates certain expectations of disclosure and meaning that hadn't been present in my fieldwork and in the films. How do I communicate meaning or lack of meaning created in public collaborative film making within the discursive space of a dissertation? And how do these conventions impact the kinds of research encounters that graduate students choose to engage with in the first place. Presenter: Jared Epp

Everyday Neighbourhood Relations : Exploring conviviality and urban encounters in Montréal: Public urban spaces in large cities play a critical role in how people become familiar with diverse others through everyday social encounters and how individuals learn to communicate across difference. Given increased levels of diversity and difference in urban spaces, what role does the neighbourhood play as a reference point for individuals in their everyday lives as they negotiate various identity markers including socioeconomic status, race, ethnicity, language and gender? How may individuals in these neighbourhoods develop connections across differences they might strive to ignore on a daily basis and how do their attitudes affect their degree of participation and engagement? This paper presents a neighbourhood analysis of how people share super-diverse urban spaces as part of their ordinary routines as they move through public and parochial spaces such as parks, corner shops, squares, public transport, and street corners. Employing ethnographic methods, this paper pays particular attention to the role that convivial practices and intercultural encounters play in building a self-awareness of difference and diversity. Likewise, the paper explores how higher levels of intercultural awareness may create opportunities for more sustained forms of organization as individuals pursue common objectives in their neighbourhoods. Presenter: Amanda Pichette (Concordia University, Department of Sociology & Anthropology)

Between Decline and Vitality: Aging in Downtown Edmonton, Alberta: In this presentation, I interrogate the space between representations and experiences of urban decline and urban vitality by drawing on fieldwork with older downtown residents in Edmonton, Alberta. Over the past couple decades, downtown Edmonton has been the focus of public and private forms of investment aimed at stimulating social and economic activity. The core of this work has more recently centred on the Ice District, a publicly subsidized private enterprise promoted as 'Canada's largest mixed-use sports and entertainment district.' This redevelopment, considered as urban revitalization by its proponents, is instead seen as gentrification by critics who cite the displacement of an already marginalized, mostly indigenous street-involved population. And yet, much of the urban space beyond the Ice District remain markedly 'unrevitalized' and 'ungentrified': whole blocks of store fronts sit empty and available for lease, many buildings and lots remain in states of disrepair and abandon, and so-called social disorder has gained the attention of both municipal and provincial

decisionmakers. Drawing on fieldwork with older downtown residents, I further complicate the debates surrounding urban redevelopment and representations of urban decline and vitality by exploring the lived experiences of older residents in a downtown undergoing change. I argue that urban redevelopment produces ambivalent spaces, experiences, and relations, particularly when explored through the aging body. The daily lives of older downtown residents in a variety of urban spaces is not accurately characterized through the language of revitalization nor gentrification. Their urban experiences are better understood somewhere in between decline and vitality. By tracing the variable experiences of older downtown residents, I consider the critical shortfalls as well as the potential benefits of downtown redevelopment. Presenter: Yvonne Wallace

The Missing Piece: Bringing Trust to the Forefront of Refugees' Stories: In 2015, the world saw a mass exodus of people fleeing intrastate conflicts in the Middle East and North Africa. This mass displacement placed significant pressure on many advanced economies to respond with swift action to 'manage' the crisis, but a clear dichotomy emerged. Some states opened their borders, while others enacted restrictive policies and practices to keep refugees out. Alongside these polarizing state responses came a sharp rise in far-right populism and divisive rhetoric that painted refugees as 'swarms,' 'invaders,' 'criminals,' and 'illegals,' which furthered their already precarious status. In a world with a growing divide of 'us' versus 'them,' it begs the question of how war-affected refugees experience trust-specifically in its generalized and institutional forms. The former refers to trusting people without any prior connections, and the latter refers to trust in institutions (e.g., government, healthcare). To explore refugees' relationships with trust in this increasingly distrusting world, I will draw upon various branches of the trust literature as well as interviews I conducted with Syrian refugees in my community of Kitchener, Ontario, Canada. I answer the following question: how does generalized and institutional trust affect Syrian refugees' journeys and their integration into the Kitchener-Waterloo (KW) community? The focus on my community stems from Canada's unprecedented response during the 2015 mass exodus when elected Liberal leader Justin Trudeau followed through on his election promise to resettle 25,000 Syrian refugees. Despite the global praise Canada received, there was a key piece missing in the academic work: refugees' relationships with trust. This paper helps fill this gap as the interviews place refugee stories at the forefront and provide unique insights into how trust influenced the

tough decisions throughout the refugees' journeys, from fleeing Syria to integrating into Canada. My findings also illustrate to the Canadian government, local refugee organizations, and community members the importance of developing reciprocal relationships with refugee communities. Overall, this study shows the importance of placing trust at the forefront of refugee stories and highlighting refugee experiences—especially in a world where external actors dominate the narrative.

Presenter: Felicia Clement

Uncanny Cosmic Melancholia: The Enchanted Materiality of Aging Apophatic Analogs: Terrestrial analog sites have long been utilized as tools for imagining possible cosmic futures. The diversity of these analog sites seem to implicitly mimic the assorted potentialities of imagined human futures off-Earth. In this paper, I will bring together ethnographic encounters at two seemingly disparate space analogs—the Biosphere 2 facility north of Tucson, Arizona and the Chernobyl Exclusion Zone in Ukraine—to propose that these two aging analog sites might give us a more nuanced insight into the inherent apophatic nature of attempting to predict the social, political, and cultural configurations of human futures, both on-world and off. Often, Western cosmic futures are imagined (and constructed) as new, clean, and “modern,” but what insights are occluded in this (re)imagining? What ontological and epistemological light might emerge from the dark, neglected cracks of more mature analog sites? I propose that the enchanted grime that coats places like Biosphere 2 and Chernobyl reveal a generative heuristic of melancholia—viz. melancholia-as-analytic paired with space-as-itself (Battaglia 2012) is able to develop an imagined futurity that is merely lacking, as opposed to embodying a sense of nihilistic loss, an affect often fueled by projecting the rampant inequalities of our Earthly present onto an uncertain and heterogeneous cosmic future (Žižek 2000). Therefore, an apophatic approach allows for the ability to break through the “residual” category often ascribed to anthropological engagements with outer space, exposing the nuanced fecundity of the analog sites themselves and the imagined extra-planetary futures we might ascribe to them. Presenter: Taylor Genovese (Arizona State University)

Are SpaceX “addicts” and pilgrims creating future extra-terrestrial relations in Boca Chica Texas?: This presentation engages with the theme of the panel by analysing the social world of SpaceX’s fandom base that coalesces around the company’s production and launch sites in Boca Chica, Texas. The aim of the paper is to take

seriously the ways in which SpaceX captures the imaginations of space enthusiasts. In doing that, I will consider how their active engagement with the company’s activities in Boca Chica may be prefiguring a range of radically new social relations that negotiate and respond to the hybrid social reality that SpaceX fans are inhabiting. It is a reality that encompasses real and digital realms on Earth as well as connecting present life here with a sense of human possibilities elsewhere. The paper will explore how multiple individuals (more permanent residents as well as visitors) experience and perform this physical and hypothetical space that Boca Chica represents. How do they tune their actions to their imagined cosmic and terrestrial orders? How does their pilgrimage reassert this structure of reality and how does the radically different nature of space help them endure and make sense of both mundane as well as extra-terrestrial problems and phenomena? Can the rockets built in Boca Chica be understood as a model of and for the self and the world? I will explore how Boca Chica can be perceived as a material place that is especially appealing to people who are seeking to experience and express their engagement with a radically different reality. Presenter: Anna Szolucha

KourouVision: Space, Queerness and European Identity in a launch town in French Guiana: Ever wondered what the European Song Contest and outer space have in common, other than that regularly the costumes and stage design of the former are inspired by the latter? The answer can be found in a launch town in French Guiana: KourouVision. This annual fringe event is hosted by a group of volunteers, who celebrate their queerness and Europeanness through their interpretation of the song contest. Teams, which are self-made and often consist of predominantly young metropolitan French and other European space industry workers, are assigned countries at random. Each team creates a video clip for a (usually parodied) song, often shot at the launch site, or otherwise important landmarks in Kourou, while introducing elements of the assigned countries. They create a visual presentation of the complexity of a European country on South American soil. This paper is based on participant observation in the spring of 2023 (representing Malta!), and playfully examines the intersection between queerness, outer space and European identity in an outermost region. This event embraces the queerness of outer space: it celebrates humour, music and dance and creates new, self-ascribed camp, dynamics on a launch site that is usually very formal. Yet, it also brings to the fore tensions of representation, as the event emphasises a particular type of Europeanness Kourou. The paper

examines if and how this event can be taken as a form of “radical, marginal, partial, torn, assembled, defiant, emergent selves—queer as also non-human—from stones and mountains to plants and ‘invasive’ species” (Oman-Reagan, 2018). Presenter: Karlijn Korpershoek

Why my interlocutors don’t joke about Musk: In 2021 Elon Musk was named Time Magazine’s person of the year. The year saw multiple commercial space flights. The media portrayed the flights as excessive ‘Billionaire Joy Rides’ at a time when the world faced threats from climate change and ecological collapse. Excess, according to Shosanna Felman (2003) is the basis of humour. A joke works when there is an excessive semiotic alignment, too much of something. However, for my interlocutors the billionaire missions, particularly that of Musk, were anything but a joke. In one of their weekly meetings the space enthusiasts discussed how they could ‘change the narrative’ from one of billionaire joy rides to one of visionaries and leaders. For them Musk’s actions were needed to create a good form of excess: excess vision, excess ambition, an excess that could only be realised with freedom and resources that go beyond state control. An excess enabled by capital accumulation. For my interlocutors the end of the world is brought about not through misuse of resources but rather from humanity (as a singular social project) remaining within the limits of the Earth. This paper examines the seriousness of outer space as a region of excess. It asks how thinking about outer space as an enabler of a necessary excess enables an anthropological analysis that examines how it is that certain social logics, such capital accumulation, whilst appearing excessive are able to endure, be maintained, and celebrated. Presenter: David Jeevendrampillai

The figure of ‘Elon Musk’ and the ‘residual’: understanding and method for cosmic ethnographies: The figure of ‘Elon Musk’ is without doubt polarizing, and one, I would argue, that is ‘good to think with’. Using materials from the ETHNO-ISS project, this talk will consider the significance of this polarization for the ways in which anthropology begins to consider the emergent integration of terrestrial and extra-terrestrial realms in its methods, theorisation and how we think about communities on Earth and in space as they emerge together under the conditions of the increased capitalist expansion of material life off world. Presenter: Victor Buchli

Water under the surface

8:00 AM - 9:45 AM TMCC - 714 A
Roundtable/Town Hall - In-Person

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Manuel Tironi

CHAIR:

Andrea Ballestero (University of Southern California, Department of Anthropology), Alaa Attiah (University of Toronto)

PRESENTER:

Cynthia Browne (Max Planck Institute for History of Science), Liviu Chelcea, Basak Sarac-Lesavre, Gina Hakim, Maddy Pearson

DISCUSSANT:

Teresa Montoya (University of Chicago, Department of Anthropology), Pablo Aguilera Del Castillo (University of Pennsylvania, Department of Anthropology)

DESCRIPTION:

Water also runs through the interiors of the Earth. Not just rivers, creeks, and gorges, but also phreatic bodies, aquifers, and caves. Not only flows and streams, but also viscosities and humidities happening and expanding below our feet, often invisibly but interconnecting with surface ecologies in ways that have become critical in the face of water-sucking climate change. Water under the surface poses several epistemological and political challenges that ethnographic imaginations are beginning to grasp. Groundwater creates bundles of meaning and time. They turn inside out well-established ideas about what ground(ing) is and how to maneuver around the vertical and the horizontal, the above and the below, the visible and the invisible, abundance and scarcity. Aquifers interconnect the present tense of droughts and capitalism with the geological trajectories of hydrological formations. Not-quite-visible, they challenge science's regimes of perceptibility and push civic, technical, and political publics to novel forms of (watery) representation. Groundwater is also the object of large-scale extraction for mining operations, agricultural growth, and urban development across geographies, disrupting life projects and entangling hydrogeological processes with technolegal devices and settler-colonial systems of expansion. Around the world, aquifers become the nodes around which Indigenous and peasant communities demand existential dignity and territorial sovereignty. In this Roundtable we bring together a diverse group of scholars to participate in an exercise of collective thinking that centers water under the surface as a distinct historical, material, and affective formation. We hope to develop a conversation

that highlights the conceptual and methodological possibilities that thinking below the surface opens and demands of anthropologists, communities, activists, and scientists.

3-120

WHY DO WE JOKE ABOUT ELON MUSK ON MARS? TRANSITIONING ANTHROPOLOGICAL THEORY... FROM EARTH (Part I)

8:00 AM - 9:45 AM TMCC - 205 C

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Amanda Pichette (Concordia University, Department of Sociology & Anthropology), David Valentine (University of Minnesota)

CHAIR:

Victor Buchli

PRESENTER:

Craig Farkash ,Jared Epp ,Amanda Pichette (Concordia University, Department of Sociology & Anthropology),Yvonne Wallace ,Felicia Clement ,Taylor Genovese (Arizona State University),Anna Szolucha ,Karlijn Korpershoek ,David Jeevendrampillai ,Victor Buchli

DESCRIPTION:

In the first of this two-part panel, speakers foreground space fandoms, space analogues, and methods that reach from terrestrial places to the cosmos. Three years before the Apollo 11 moon landing, Mary Douglas (1966) argued that nineteenth-century anthropology's cultural evolutionism and constitutive racism had been nurtured within twentieth-century anthropology's 'residual' category of magic, by absorbing a miscellany of ethnographic data (primitive belief, risible credulity, spurious iconicity, and merely efficacious ritual) and rendering them peripheral to the serious work of anthropological theory-making. It may sound like a joke bring together Apollo 11 and anthropological theory building (or magic and high-tech space projects) when so much on Earth demands serious anthropological analysis, from climate change and structural racism to mass migrations and novel forms of state and corporate power. However, we ask whether outer space may also be performing the work of 'the residual' in anthropology, absorbing the material excesses of

anthropology's contemporary concerns by figuring outer space as a domain like magic: absurd, peripheral, meaningless, and without consequence for anthropological theory making, ethics, sociality, politics, or futurity. While outer space is a site for powerful social actors to assert colonial, extractive, and exceptionalist imaginaries, we argue that it also constitutes a residuum for anthropological theory and ethics. We suggest that outer space (and its variety, alienness, and transformative demands) should be engaged seriously alongside collective anthropological concerns in terms that engage space-as-itself (Battaglia 2012). We nominate Elon Musk in our title because of the serious consideration his words and actions (from his role in popularizing electric cars to his takeover of Twitter) are given in scholarship and public debate. In contrast, his stated primary ambition to colonize Mars frequently provokes jokes and parodies. We suggest that it is the residuality of outer space that produces Musk's and others' nonterrestrial visions as external to the serious political, social, or ethical concerns of the terrestrial and the contemporary. Joking produces further residual effects: It effaces how space environments' novel affordances are central to terrestrial concerns, economies, and inequalities (i.e. that contemporary governance, war, and financialization are impossible without space). But it also presumes that terrestrial precedents already explain what might emerge in human encounters with space, despite the radical differences of varied space environments (i.e. that we can already know the fate of future, speculative space projects, without having to consider outer spaces' material demands on those projects). Yet, any nonterrestrial site (low Earth orbit, the Moon, Mars, the asteroid belt...) would demand revised anthropological attention because of the reconfigured, contingent, technologically mediated, and varied socialities and relationalities demanded of human projects by the material differences of nonterrestrial places, whether current and close to Earth or future and far away. Our Papers take seriously the material, terrestrial consequences of entrepreneurial space projects, but simultaneously ask how the differences of alien and unanticipable relations of nonterrestrial places require new forms of anthropological thinking that can transition from Earth to the cosmos.

Hearing Culture in Reverse: developing an acouste(m)pathic approach to sound through imaginative ethnography: 'I can tell you about many places in The World...What the sea is like in small fishing villages. Or a grain of sand in the desert. What is special about the view from a glacier...I can tell you about many

places in The World. But you'll understand it better if I sing it to you' (Petrović 2012, 83) So begins Goran Petrović in *An Atlas Traced by the Sky*. These few short lines highlight a common Western musical trope - that music exceeds the limits of language, communicating what words alone cannot. It is certainly a romantic notion. The act of listening, in such a framing, transcends cultural bounds and subtly implies that music is where intercultural empathy lies. Yet musical meaning is culturally-mediated and subjective, not universally conceived. Music exists as a cultural record of collectively valued sounds that communicate something of the community they come from. Noise and sound have often been framed in similar universalizing terms whether physiologically or otherwise. Municipal noise abatement strategies have largely focused on reducing all sound above specific decibel levels while physiological studies seem to focus on the decontextualized impact of sounds on the body. But such approaches do little to understand how people living in certain areas cope with their sonic environments nor do they account for the differential enforcement of noise bylaws across the North American city. Sound, as music above, becomes defined in universal terms, to be controlled based on perceived collective qualities. If the senses (and by extension our perception of sound) can be understood as 'made, not given' (Howes 2022, 45), the reality becomes arguably more complex. Since 2021 I have been developing what I refer to as an acouste(m)pathic approach to sound – or an empathetic approach to the acoustic environment – in Edmonton, Alberta. Drawing on Steven Feld's acoustemology (1996), the acouste(m)pathic project seeks to not only understand how people in Edmonton come to know the world around them through sound, but how on a larger scale we can learn to empathetically and collectively engage with other parallel and converging acoustemologies within our own cities. But how might we craft an approach that attends to the various sonic thresholds and literacies that exist among city dwellers? I'm proposing to begin with representations. Acoustic ethnographies have tended to feature representational sound compositions at the end of fieldwork, alongside textual analysis. But sound composition, while intriguing, can be equal parts esoteric, abstract, and inaccessible to the everyday person in Edmonton. Utilizing representational sound compositions at the start of fieldwork, rather than as a capstone, offers research collaborators sonic touchpoints from which to begin meaningful conversations around sound, creating a more direct route into what can often be an abstract concept. Contrary to popular culture, music and sound are not

universal. But creative ethnographies can help us translate between experiences of sound, to develop and imagine sonic environments that work empathetically. Through developing this approach, I hope to add to the growing number of voices doing just that. Craig Farkash is a PhD Student in the Department of Sociology and Anthropology and Coordinator of the Centre for Sensory Studies at Concordia University in Montreal. Presenter: Craig Farkash

Uncertain Subjects and Encountering Ambiguity: Navigating the Transition from Multimodal Fieldwork to Dissertation Writing: In this presentation, I reflect on the transition between carrying out my doctoral ethnographic fieldwork and writing my dissertation. My fieldwork focused on collaborative filmmaking with one individual in the neighbourhood of Parkdale, Toronto. Together we made a series of absurd and unprofessional speculative fiction films we called ethnographic B movies. I want to explore how our research encounter and creative output afforded a space of ambiguous anthropological meaning, and the challenges of maintaining that ambiguity in written anthropological representations. We met each other at a community activist meeting held in the neighbourhood's drop-in centre a few weeks before the pandemic. Our coming together was predicated on a mutual desire for future-making; centering creativity and imagination, not biography. From 2020-2021, due to pandemic restrictions, my interlocutor and I met and worked on our films entirely outside in public spaces such as parks, sidewalks and alleyways. Working creatively in public gave the frame of our encounter an atmosphere of openness and ambiguity. My position as researcher and his as researched became backgrounded in the performative space of our filmmaking as we became co-producers. Over time I came to learn fragments of my interlocutor's self-professed failed academic life: getting his PhD, securing and losing an academic position, and then years of living in and out of shelters in Toronto. He rarely talked about his biography and I didn't ask, respecting the silence of his past. Instead, he wanted to make films that highlighted his desire to lead a revolution inspired by his unique philosophical, political and cosmological system, the *Musicality of Reality*. What mattered was not his past or marginality but sharing his ideas and intellectual contributions and it is these ideas on display in the films. However, now in the dissertation stage of my program, I'm finding it difficult to maintain that ambiguity of subject and meaning. I situate this tension within ongoing conversations around multimodal anthropology by asking the question: how can a student film speak for itself within academic

conventions that require fieldwork's discursive rendering? The necessity of writing generates certain expectations of disclosure and meaning that hadn't been present in my fieldwork and in the films. How do I communicate meaning or lack of meaning created in public collaborative film making within the discursive space of a dissertation? And how do these conventions impact the kinds of research encounters that graduate students choose to engage with in the first place.

Presenter: Jared Epp

Everyday Neighbourhood Relations : Exploring conviviality and urban encounters in Montréal: Public urban spaces in large cities play a critical role in how people become familiar with diverse others through everyday social encounters and how individuals learn to communicate across difference. Given increased levels of diversity and difference in urban spaces, what role does the neighbourhood play as a reference point for individuals in their everyday lives as they negotiate various identity markers including socioeconomic status, race, ethnicity, language and gender? How may individuals in these neighbourhoods develop connections across differences they might strive to ignore on a daily basis and how do their attitudes affect their degree of participation and engagement? This paper presents a neighbourhood analysis of how people share super-diverse urban spaces as part of their ordinary routines as they move through public and parochial spaces such as parks, corner shops, squares, public transport, and street corners. Employing ethnographic methods, this paper pays particular attention to the role that convivial practices and intercultural encounters play in building a self-awareness of difference and diversity. Likewise, the paper explores how higher levels of intercultural awareness may create opportunities for more sustained forms of organization as individuals pursue common objectives in their neighbourhoods. Presenter: Amanda Pichette (Concordia University, Department of Sociology & Anthropology)

Between Decline and Vitality: Aging in Downtown Edmonton, Alberta: In this presentation, I interrogate the space between representations and experiences of urban decline and urban vitality by drawing on fieldwork with older downtown residents in Edmonton, Alberta. Over the past couple decades, downtown Edmonton has been the focus of public and private forms of investment aimed at stimulating social and economic activity. The core of this work has more recently centred on the Ice District, a publicly subsidized private enterprise promoted as 'Canada's largest mixed-

use sports and entertainment district.' This redevelopment, considered as urban revitalization by its proponents, is instead seen as gentrification by critics who cite the displacement of an already marginalized, mostly indigenous street-involved population. And yet, much of the urban space beyond the Ice District remain markedly 'unrevitalized' and 'ungentrified': whole blocks of store fronts sit empty and available for lease, many buildings and lots remain in states of disrepair and abandon, and so-called social disorder has gained the attention of both municipal and provincial decisionmakers. Drawing on fieldwork with older downtown residents, I further complicate the debates surrounding urban redevelopment and representations of urban decline and vitality by exploring the lived experiences of older residents in a downtown undergoing change. I argue that urban redevelopment produces ambivalent spaces, experiences, and relations, particularly when explored through the aging body. The daily lives of older downtown residents in a variety of urban spaces is not accurately characterized through the language of revitalization nor gentrification. Their urban experiences are better understood somewhere in between decline and vitality. By tracing the variable experiences of older downtown residents, I consider the critical shortfalls as well as the potential benefits of downtown redevelopment. Presenter: Yvonne Wallace

The Missing Piece: Bringing Trust to the Forefront of Refugees' Stories: In 2015, the world saw a mass exodus of people fleeing intrastate conflicts in the Middle East and North Africa. This mass displacement placed significant pressure on many advanced economies to respond with swift action to 'manage' the crisis, but a clear dichotomy emerged. Some states opened their borders, while others enacted restrictive policies and practices to keep refugees out. Alongside these polarizing state responses came a sharp rise in far-right populism and divisive rhetoric that painted refugees as 'swarms,' 'invaders,' 'criminals,' and 'illegals,' which furthered their already precarious status. In a world with a growing divide of 'us' versus 'them,' it begs the question of how war-affected refugees experience trust—specifically in its generalized and institutional forms. The former refers to trusting people without any prior connections, and the latter refers to trust in institutions (e.g., government, healthcare). To explore refugees' relationships with trust in this increasingly distrusting world, I will draw upon various branches of the trust literature as well as interviews I conducted with Syrian refugees in my community of Kitchener, Ontario, Canada. I answer the following question: how does generalized and institutional trust affect Syrian refugees'

journeys and their integration into the Kitchener-Waterloo (KW) community? The focus on my community stems from Canada's unprecedented response during the 2015 mass exodus when elected Liberal leader Justin Trudeau followed through on his election promise to resettle 25,000 Syrian refugees. Despite the global praise Canada received, there was a key piece missing in the academic work: refugees' relationships with trust. This paper helps fill this gap as the interviews place refugee stories at the forefront and provide unique insights into how trust influenced the tough decisions throughout the refugees' journeys, from fleeing Syria to integrating into Canada. My findings also illustrate to the Canadian government, local refugee organizations, and community members the importance of developing reciprocal relationships with refugee communities. Overall, this study shows the importance of placing trust at the forefront of refugee stories and highlighting refugee experiences—especially in a world where external actors dominate the narrative.

Presenter: Felicia Clement

Uncanny Cosmic Melancholia: The Enchanted Materiality of Aging Apophatic Analogs: Terrestrial analog sites have long been utilized as tools for imagining possible cosmic futures. The diversity of these analog sites seem to implicitly mimic the assorted potentialities of imagined human futures off-Earth. In this paper, I will bring together ethnographic encounters at two seemingly disparate space analogs—the Biosphere 2 facility north of Tucson, Arizona and the Chernobyl Exclusion Zone in Ukraine—to propose that these two aging analog sites might give us a more nuanced insight into the inherent apophatic nature of attempting to predict the social, political, and cultural configurations of human futures, both on-world and off. Often, Western cosmic futures are imagined (and constructed) as new, clean, and “modern,” but what insights are occluded in this (re)imagining? What ontological and epistemological light might emerge from the dark, neglected cracks of more mature analog sites? I propose that the enchanted grime that coats places like Biosphere 2 and Chernobyl reveal a generative heuristic of melancholia—viz. melancholia-as-analytic paired with space-as-itself (Battaglia 2012) is able to develop an imagined futurity that is merely lacking, as opposed to embodying a sense of nihilistic loss, an affect often fueled by projecting the rampant inequalities of our Earthly present onto an uncertain and heterogeneous cosmic future (Žižek 2000). Therefore, an apophatic approach allows for the ability to break through the “residual” category often ascribed to anthropological engagements with outer space, exposing the nuanced fecundity of the analog sites

themselves and the imagined extra-planetary futures we might ascribe to them. Presenter: Taylor Genovese (Arizona State University)

Are SpaceX “addicts” and pilgrims creating future extra-terrestrial relations in Boca Chica Texas?: This presentation engages with the theme of the panel by analysing the social world of SpaceX’s fandom base that coalesces around the company’s production and launch sites in Boca Chica, Texas. The aim of the paper is to take seriously the ways in which SpaceX captures the imaginations of space enthusiasts. In doing that, I will consider how their active engagement with the company’s activities in Boca Chica may be prefiguring a range of radically new social relations that negotiate and respond to the hybrid social reality that SpaceX fans are inhabiting. It is a reality that encompasses real and digital realms on Earth as well as connecting present life here with a sense of human possibilities elsewhere. The paper will explore how multiple individuals (more permanent residents as well as visitors) experience and perform this physical and hypothetical space that Boca Chica represents. How do they tune their actions to their imagined cosmic and terrestrial orders? How does their pilgrimage reassert this structure of reality and how does the radically different nature of space help them endure and make sense of both mundane as well as extra-terrestrial problems and phenomena? Can the rockets built in Boca Chica be understood as a model of and for the self and the world? I will explore how Boca Chica can be perceived as a material place that is especially appealing to people who are seeking to experience and express their engagement with a radically different reality. Presenter: Anna Szolucha

KourouVision: Space, Queerness and European Identity in a launch town in French Guiana: Ever wondered what the European Song Contest and outer space have in common, other than that regularly the costumes and stage design of the former are inspired by the latter? The answer can be found in a launch town in French Guiana: KourouVision. This annual fringe event is hosted by a group of volunteers, who celebrate their queerness and Europeanness through their interpretation of the song contest. Teams, which are self-made and often consist of predominantly young metropolitan French and other European space industry workers, are assigned countries at random. Each team creates a video clip for a (usually parodied) song, often shot at the launch site, or otherwise important landmarks in Kourou, while introducing elements of the assigned countries. They create a visual presentation of the complexity of a European country on South American soil. This paper is based on participant observation in the spring of 2023 (representing Malta!), and playfully

examines the intersection between queerness, outer space and European identity in an outermost region. This event embraces the queerness of outer space: it celebrates humour, music and dance and creates new, self-ascribed camp, dynamics on a launch site that is usually very formal. Yet, it also brings to the fore tensions of representation, as the event emphasises a particular type of Europeanness Kourou. The paper examines if and how this event can be taken as a form of “radical, marginal, partial, torn, assembled, defiant, emergent selves—queer as also non-human—from stones and mountains to plants and ‘invasive’ species” (Oman-Reagan, 2018). Presenter: Karlijn Korpershoek

Why my interlocutors don’t joke about Musk: In 2021 Elon Musk was named Time Magazine’s person of the year. The year saw multiple commercial space flights. The media portrayed the flights as excessive ‘Billionaire Joy Rides’ at a time when the world faced threats from climate change and ecological collapse. Excess, according to Shosanna Felman (2003) is the basis of humour. A joke works when there is an excessive semiotic alignment, too much of something. However, for my interlocutors the billionaire missions, particularly that of Musk, were anything but a joke. In one of their weekly meetings the space enthusiasts discussed how they could ‘change the narrative’ from one of billionaire joy rides to one of visionaries and leaders. For them Musk’s actions were needed to create a good form of excess: excess vision, excess ambition, an excess that could only be realised with freedom and resources that go beyond state control. An excess enabled by capital accumulation. For my interlocutors the end of the world is brought about not through misuse of resources but rather from humanity (as a singular social project) remaining within the limits of the Earth. This paper examines the seriousness of outer space as a region of excess. It asks how thinking about outer space as an enabler of a necessary excess enables an anthropological analysis that examines how it is that certain social logics, such capital accumulation, whilst appearing excessive are able to endure, be maintained, and celebrated. Presenter: David Jeevendrampillai

The figure of ‘Elon Musk’ and the ‘residual’: understanding and method for cosmic ethnographies: The figure of ‘Elon Musk’ is without doubt polarizing, and one, I would argue, that is ‘good to think with’. Using materials from the ETHNO-ISS project, this talk will consider the significance of this polarization for the ways in which anthropology begins to consider the emergent integration of terrestrial and extra-terrestrial realms in its methods, theorisation and how we think about communities on Earth and in space as they emerge together under the conditions of the increased

capitalist expansion of material life off world. Presenter: Victor Buchli

DISCUSSANT:

Amanda Jousset (University of Neuchâtel)

DESCRIPTION:

(Auto)Ethnographies of academic transitions Our academic lives are storied by everyday transitions: from teaching to writing, from research to grading, from conference to lecture. There are, also, transitions of longer durations: between research projects, between publications, between institutions, often between countries. Then there are those anchored in the *longue durée*, between books, between anthropological turns, between early career and ends of stories. While most of these transitions can happen seamlessly in our everyday routines, some of them force us to pause, to stop and wonder, to question, sometimes hopelessly, sometimes generatively. So too, we have transitions that leave indelible traces - etched deep, they disrupt, interrupt, anxiety-producing, they can derail. Others can inspire abandon, transformation, a striving towards doing academia differently or perhaps to no longer do it at all. In transitions, we make and lose community, we meet precarity but also solidarity, we meet uncertainty but also possibility, we meet extractivism but also integrity. It is in these in-between spaces, betwixt and between,

that we find intimacy but also experience loss, producing thus a 'transitional' poesis that shapeshifts, often relentlessly so. In this panel, we thus aim to explore those transitions in academic lives that are productive of affective ruptures, of discontinuities of thought, of political potentialities, of social and spatial restructurings that make us stop and wonder - that bring reflective pause. How do such moments of rupture inform our academic practice and our politics? How do they shape the knowledge we produce, and the relationships we weave to do so? How do they affect our academic and non-academic selves and our ways of being in the world? How do they orient us dis/affectively toward our institutions and our discipline? We welcome abstract proposals to our panel, including creative formats such as ethnographic poetry, multimedia presentations, ethnographic drawings, and so on. (Auto)Ethnographies de transitions académiques Nos vies académiques sont ponctuées de transitions quotidiennes : de l'enseignement à l'écriture, de la recherche à l'évaluation des étudiants, des colloques aux cours. Aussi y a-t-il des transitions de durée un peu plus longue : entre projets de recherche, entre publications, entre institutions, souvent entre pays. Et puis il y en a qui sont ancrées dans la longue durée véritable, entre livres, entre tournants anthropologiques, entre débuts de carrière et fins d'histoires. Alors que la plupart de ces transitions peuvent se passer de manière fluide parmi nos routines quotidiennes, certaines d'entre elles nous forcent à faire une pause, à nous arrêter et à nous poser des questions, à interroger, parfois sans espoir, parfois de façon productive. Il y a de ces transitions qui laissent des traces indélébiles – gravées en profondeur, elles troublent, elles interrompent, produisant des angoisses, elles peuvent faire dérailler. D'autres peuvent inspirer l'abandon, la transformation, l'aspiration de faire l'université autrement, ou peut-être de ne plus y être du tout. Au cours des transitions, on fait communauté et on la perd, on se retrouve dans la précarité mais aussi dans la solidarité, on est face à l'incertitude mais aussi la possibilité, on retrouve

The “Pandemic Pause” Effect and Affect: Rethinking Academic Career Aspirations and Identity : As the global pandemic unleashed by Covid-19 has abated, the discourse of “pre-pandemic” and “post-pandemic” indicates its relegation to the past as well as its historical significance. The abrupt and prolonged “pandemic pause” is increasingly understood as a temporal and ontological rupture of varying magnitudes and scales, from momentous losses of lives and livelihoods to quotidian disruptions of routines and social

relationships. Relevant to academia, many negative outcomes on student mental health, educational achievement, etc., have been noted. By chance, the “pandemic pause” dovetails and intertwines with other transitions in my life, typical of a middle-aged woman and mid-career tenured faculty member, that have positive and negative ramifications. Among these are the realization that I am two generations removed from my undergraduates and often older than their parents, and that I may be considered “old guard” in the eyes of some junior faculty. My auto-ethnography explores the (ongoing) compounding influence of the “pandemic pause” on academic transitions, drawing upon personal experience. Introspection inspires me to view these transitions and (dis)ruptures as the impetus for rethinking pedagogical practices and research protocols as well as collegial relationships. Moreover, reflecting on the work-life (im)balance, I consider the ethical responsibilities of academic institutions to ensure our academic lives are supported and sustained for human flourishing. Presenter: Arianne Gaetano (Auburn University)

“Disrupture and Repair: Affects of Ambiguity, Anxiety & Hope”: Temporally, I sit squarely at the equinox of my identity as an anthropologist, halfway between the summer-solstice-beginning and presumably the winter-solstice-ending of my career. I also speak from a particular set of intersecting transitions. To name a few, my institution transitioned from a trimester to a semester calendar, prompting radical curricular revisions and disciplinary reinventions. The COVID pandemic struck in the midst of that change. Simultaneously, during this same period, I lost nearly all of my departmental colleagues to retirements and The Great Resignation. A new generation has come in to replace them, and I am rather suddenly the “senior colleague.” In the last year, my institution has also hired a new president and provost, and a new strategic plan is coming. Change is the only constant. The backdrop to all of this, of course, are national and international reckonings with racial injustice, colonial legacies, climate crises, increasing capitalist pressures on the academy, and the rise of ethnonationalist politics. It seems like high time to reflect on my purpose – on our purpose – as anthropologists. What is the central point of the work we do, and how best can we do it? What are the everyday politics of anthropology, and how can we productively refocus them to meet the challenges we face, and transition to better futures? In this reflexive autoethnographic account of personal and collective disrupture, I explore anxiety and ambiguity, but also hopeful possibilities for repair and reclamation.

Presenter: Adam Kaul (Augustana College, Department of Sociology & Anthropology)

Facing the field: Saying Goodbye and Saying Hello differently : As both an artist and anthropologist, transition is my mode of being and even its source: my life and work are always in flux and becoming anew. That said, I have carried out longterm apprenticeship-based fieldwork with the coppersmiths of Santa Clara del Cobre in Michoacán, Mexico. For over twenty years I dedicated myself to this work. In the last few years, during the isolation of COVID, I have focused on sharing my fieldwork results through many publications. Soon my ethnographic study of Santa Clara will also be in print. The monograph particularly shares what I learned from my Master-Mentor Jesús Pérez Ornelas. For this panel I would like to present a video assembled from the notebooks I have filled while developing an anthropology of making. The drawings, paintings and writings in these notebooks bear traces of my transition as a person to become a scholar by integrating my artist self into the academy. Facing the field upon completing this long period of intense research and academic publishing, I am in transition once more and am imagining how to bring the work we do as anthropologists into the world in more accessible, affective and sensorial ways. Presenter: Michele Feder-Nadoff (Journal of Embodied Research)

From civil to political society: a socialist scholarly trajectory out-with East Central Europe: This paper draws on my own research trajectory to discuss issues that have pushed my research and political agenda from one of a scholar of activism increasingly into that of an activist scholar via initiatives within and outside academia. Starting with the 'civil society' term and its career in the East-West intellectual dialogue in the last decade of the Cold War, I reflect on the historical and theoretical tension between 'civil society' and 'political society' (two interrelated concepts with different - arguably reverse - connotations in Antonio Gramsci's and Partha Chatterjee's works). Against this background, I take stock of how different theoretical currents and mobilisations that I encountered through my research fieldsites and/or activist engagements across Europe, Latin America, Southern Africa and real-life predicaments of social movements within and outside academic settings, have informed my thinking of 'civil society' as a dangerously classed and thus limiting mobilising frame. Engaging with its intersectionally unequal spatial and temporal horizons, I discuss how such a frame renders invisible those living in precarious living and working conditions, and their alternative

frames and forms, routes and rhythms of social organisation and mobilisation. Against this background, I draw on some topics on the frontier between academia and activism which academics in general, and anthropologists in specific, are pushed to face frontally today, and reflect on our limitations and strengths in doing so in the present stage of academic capitalism. Presenter: Mariya Ivancheva

Title: Between Fire and Death: Two Monstrous Ruptures, Two Consequential Life and Work Aftermaths: In October, 1991, I experienced the total loss by fire of my home, library, every much and trifle of years of immersed field work, every earring, address, note, bagatelle. In October, 2021, I lost to sudden, unexpected death my beloved son. This presentation explores the aftermath of both these massive ruptures on my academic career, writings, mind, and life. The one opportunistically led to a major new direction in my interests, work, politics, productivity, and notoriety. The other, beyond comparison to the first, has so far led to a halt, derailment, dearth of purpose, and a questioning of worth. Both, the one older and the other recent, initiated a cascade of emotions, altered perceptions, and a blurring of academic and personal worlds. The word "transition" hardly, only barely applies. Precarity does not compute. For, it turns out to be a truism: Even in the most stable of circumstances, life itself is capricious. Presenter: Susanna Hoffman (Chair, Commission for Risk and Disaster, IUAES)

The Survival of Survivals: Scattered Thoughts on Untimely Persistence and Future Possibility: How might our understanding of transitions be complicated by considering what gets left behind? Does every passing present include elements that seem to belong to other times? I approach these questions by revisiting Edward Tylor's (today little discussed) theory of survivals - "processes, customs, opinions, and so forth, which have been carried on by force of habit into a new state of society different from that in which they had their original home" - examples of which included children's games, proverbs, and seasonal celebrations and masquerades. Following art historians Aby Warburg and Georges Didi-Huberman, I emphasize not Tylor's stadial theory of social evolution but rather the disruptive, untimely character of survivals, their capacity to trouble the smoothness of epochal transitions and to call into question the coherence and self-consistency of the present by revealing within it fragmentary glimpses of very different worlds, in which animals plants, stones, and material objects are endowed with souls, and shape-shifting and out-of-body flights are accepted

realities. Drawing on the work of artists, photographers, and writers to construct a montage of stories and images, I explore survivals as scattered intimations of other realities - or even on occasion portals to the same - bespeaking the immanence of other worlds within the actual, existing world, and thus demanding a creative as much as a straightforwardly descriptive response. Rather than an anachronism or an intellectual dead end, might survivals be a crucial means of resisting a present that often seems suffocatingly bereft of alternatives? Presenter: Stuart McLean (University of Minnesota, Twin Cities, Department of Anthropology)

“Clean” Energy Transitions: Social and Environmental Impacts of Mitigating Climate Change

10:15 AM - 12:00 PM TMCC - 202 D

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

James Blair (Cal Poly Pomona, Department Geography and Anthropology), Emma Banks (Bucknell University), Marc Brightman, Emily Hite (Saint Louis University, Department of Sociology and Anthropology), Dana Powell (Graduate Institute of Humanities, Taipei Medical University)

DESCRIPTION:

What are the implications of clean energy transitions for society and how are environmental anthropologists exploring these complex issues? The exploitation of fossil fuels by humans (some more than others) has dramatically increased the amount of carbon dioxide in our atmosphere, driving a global temperature increase and resulting in uncertain and non-predictable weather patterns around the world. Attempts to decrease atmospheric carbon loading have resulted in the development of new, low carbon technologies such as solar, wind, hydro, geothermal, and other sources that are considered more sustainable than coal, gas, and oil. Yet, many of these technologies themselves depend upon the extraction of minerals, massive alterations of ecosystems, and the production of environmental health disparities, vulnerabilities, and injustices on Indigenous lands and structurally marginalized and minoritized populations. In this session, we are interested in examining low carbon energy transitions and their social and environmental impacts. For example, in 2020, the World Bank predicted that

mineral exploitation would have to increase over 500% to meet current low carbon energy goals. Likewise, the siting of solar panels and wind turbines has caused consternation among environmentalists and Native nations for the negative effects these developments have on agricultural land, biodiversity, species movements, and watershed hydrology. These so-called 'clean' energy transitions, as important as they are in attenuating the global impacts of climate change, continue to produce 'sacrifice zones' as an inherent part of the national energy resource extraction and development agenda. What does 'clean' energy mean to differently situated social actors, and what qualifies as 'clean' in public discourse about the politics of energy and mineral resource extraction? What is at stake for different social actors, and what are their different ontological and epistemological standpoints? We are interested in papers that investigate the deeply entangled problems of climate mitigation, environmental health, and extractivism. How does the double optic of climate and environmental health perspectives apply to toxic mixtures of heavy metals from the extraction of other energy mineral resources, like uranium, lithium, coltan, rare earth minerals, and other industrial minerals used in forms of electrical generation that are often described as 'clean' and 'sustainable' from a pure carbon perspective? We welcome contributions to an environmental anthropology of mining and energy development; political ecology of natural resource extraction; and science and technology studies (STS) of extractivism and extrACTION. Potential topics could include: · Sustainable development · Disaster studies · Critical infrastructure studies · Environmental health governance · Settler colonial determinants of health · Technopolitical regimes · Energy minerals and hydrogen gas development · Mineral extraction

Between Clean and Green: Lithium Extractivism in Chile and California: Lithium is considered a “critical mineral” for mitigating climate change because it is a key component of electric vehicle batteries and renewable energy storage. Although lithium is present all over the globe, two of the largest and most controversial lithium resources are located in the Atacama Desert in Chile and the Salton Sea in California. This paper discusses the social and environmental impacts of these lithium extraction projects, by examining how: (1) on the one hand, the reliance on brine evaporation as an extraction method for lithium mining in the Atacama Desert has exacerbated conditions of ecological “exhaustion”; and (2) on the other, geothermal lithium development at the Salton Sea has been framed by tech entrepreneurs,

energy firms and resource managers as a cleaner alternative method of lithium “recovery.” Despite greenwashing, ongoing concerns from Indigenous and fenceline communities about water use, air pollution, waste streams, seismic activity and cultural resources remain in both instances. This paper is based on community-engaged ethnographic research in collaboration with environmental justice activists, Indigenous leaders, scientists and policy practitioners in Chile and California. It interrogates the socio-ecological contradictions inherent to “clean” energy transitions and “green” extractivism across comparable arid landscapes at different stages of lithium development. Finally, the paper considers under what conditions Indigenous and fenceline community participation may contribute new models and standards, not only to mitigate global climate change, but also to alleviate the local burdens of sacrifice zones and advance the well-being of societies and environments under extreme stress. Presenter: James Blair (Cal Poly Pomona, Department Geography and Anthropology)

Entangled Energy Transitions: Coal and Copper Mining in Colombia’s Northeast: Colombia’s Northeast has supplied thermal coal to global markets at the expense of local communities since the 1980s. Now, the green energy boom is creating new socio-environmental conflicts as copper companies move in. This paper considers the geographical and political entanglements of green and fossil fuel energy at multiple scales. At the international level, global trade and debt relations position the Global South to sacrifice its resources for the Global North. At the national level, economic policies center mining as a “locomotive for development.” At the local level, new copper mining projects rely on the physical and political infrastructure built by coal mining. Glencore’s Cerrejón coal mine has been at the center of dozens of socio-environmental conflicts with Indigenous and Afro-descendant communities. Now, Turkish miner Yildirim seeks to expand the coal mining zone. At the same time, and Canadian miner Max Resource Corp is prospecting for copper deposits in the mountains that abut the coal concessions. In illustrating these entanglements, I show the unevenness of the global energy transition that relies on expanding existing sacrifice zones, complicating what “clean energy” means and highlighting the continued dominance of fossil fuels. Local resistance leaders and their allies are using their experience with the Cerrejón company to fight back against new coal and copper companies, and to imagine alternative non-extractive futures. These movements illustrate how resistance to green and fossil fuel

extractivism is also entangled. Presenter: Emma Banks (Bucknell University)

Temporalities of transition: energy, infrastructure and horizons in the Po Delta : Ravenna, surrounded by the biodiversity-rich Po Delta regional park, is the iconic industrial heartland of Italy’s postwar economic recovery, immortalized in Antonioni’s *Deserto Rosso*. Today it is the focus of multiple initiatives that stand for the wider prospects of Italy’s energy transition. Such is the dominance of the petrochemical industry here that communities meet the prospect of vast new offshore wind and solar infrastructure with indifference. Conservationists and environmentalists have long protested against drilling platforms in the Adriatic for the exploitation of gas reserves beneath the seabed. This extractive activity is blamed for subsidence beneath the coastline, exacerbating saltwater intrusion of farmland and pine forests, and polluting the waters of the Po Delta. ENI, the Italian oil major, now proposes blue hydrogen production, using methane from existing reserves, with emissions to be abated by carbon capture and storage. Meanwhile Agnes, a consortium developing offshore wind and solar power with ‘green’ hydrogen electrolyzers, has secured important EU subsidies. But these developments proceed at a snail’s pace while geopolitical urgency has led in a few months to the installation of an LNG terminal on one of Ravenna’s offshore platforms. Debates about securing the gas supply and the risks of accidents eclipse discussion of the potential for electrification. Meanwhile the green energy transition has come to mean the addition of new energy sources and infrastructures, as none dare raise the spectre of a managed decline of the petrochemical industry. Presenter: Marc Brightman

Hydropower and (un)sustainable development: Whose Futures Matter?: Within the global climate governance arena, hydropower is marketed as a clean mitigation strategy and promoted as key to fulfilling Sustainable Development Goal 7: to ensure access to affordable, reliable, sustainable and modern energy. Yet, hydropower projects are known to consistently displace communities, sever peoples’ connections to place, degrade water regimes, and contribute significant amounts of greenhouse gases to the atmosphere. Considering these consequences, not everyone benefits equally from these ‘sustainable development’ projects. In this paper, I explore for who and for what hydropower is sustainable, with particular attention to understanding whose futures matter when implementing specific types of development. Framing this discussion within the context of hydrosocial

territories allows space for a multi-scalar assessment of the narratives, knowledges, and values incorporated into decision-making processes regarding human-water relationships, pinpointing issues of justice and equity of 'sustainable development.' Research includes ethnographic inquiries at climate and hydropower meetings where sustainable development initiatives are produced, contextualized with place-based research with a dam-impacted Indigenous community in Costa Rica, where such initiatives are implemented. This paper offers an engaged critique of the sustainability discourse, highlighting the disconnect between the dominant narrative of hydropower as part of a clean energy transition and its grounded realities. I illustrate that hydropower is an empirical example of 'sustaining the unsustainable' as it threatens peoples' lives and cultures, and increases poverty and environmental degradation – acting in direct opposition to the intended goals of the 2030 Sustainable Development Agenda. Presenter: Emily Hite (Saint Louis University, Department of Sociology and Anthropology)

Unjust Transitions: Industrialized bioenergy development and accumulation of harms in North Carolina: Co-Author: Rebecca Witter In North Carolina's inner Coastal Plains, a novel fusion of industrialized energy and agricultural infrastructures generates new technopolitical regimes to advance extractivism in the name of a clean "bioenergy" transition. Statist climate mitigation strategies enable the development of infrastructures for biogas (methane captured from hog waste and converted into natural gas) and biomass (energy produced via incinerated poultry and wood waste). These industrialized "waste- to-energy" initiatives unfold on a landscape of increasingly volatile hurricane events and decades of weakened, and now effectively hollowed, regulatory practices that enable an accumulation of capital among corporate actors rather than the expansion of environmental protections. In the Cape Fear and Lumbee Watersheds, BIPOC Communities live with landfills, pipelines, confined animal feeding operations, and now bioenergy development. Communities experience and analyze multiple social and environmental harms in relation to these polluting industries and in relation to institutions of settler colonialism, enslavement, migrant labor exploitation, economic inequality, political marginalization, and interpersonal violence. As the federal government advances recognition of "cumulative impacts" in environmental justice policy (albeit in narrow legalistic and technocratic terms), accumulating harms remain un-acknowledged by state regulatory bodies. The Eastern North Carolina Environmental Justice "Co-Lab"

(comprised of environmental defenders, scholars, and students) aims to identify, unsettle, and reimagine "cumulative impacts" by centering the epistemologies and experiences of impacted communities. Co-produced understandings of the harms that have amassed and accumulated across generations (time) and watersheds (space) demonstrate the urgency to re-examine theories and analytics of harm and justice in and beyond eastern North Carolina. Presenter: Dana Powell (Graduate Institute of Humanities, Taipei Medical University)

A Double-Edged Sword: Migrant Intersections with Modern Technologies, Part 1

10:15 AM - 12:00 PM TMCC - 715 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Jacqueline Wagner (Washington University in St. Louis, Department of Anthropology)

CHAIR:

Jacqueline Wagner (Washington University in St. Louis, Department of Anthropology)

PRESENTER:

Jacqueline Wagner (Washington University in St. Louis, Department of Anthropology), Marco Jacquemet (University of San Francisco), Zachary Sheldon, Xochitl Marsilli-Vargas (Emory University)

DISCUSSANT:

Greg Feldman (University of Windsor), Ulla Berg (Rutgers University)

DESCRIPTION:

How are modern technologies influencing the lived experiences of migrants around the world? What roles do these technologies play in their everyday lives, in the systems of surveillance that monitor them, and in the institutions that purport to help them? What are the advantages and disadvantages of such technologies for migrants themselves, and what is the impact on the broader politics surrounding migration in society as a whole? This roundtable will explore these questions and many more, incorporating work with migrants and other actors and employing a broad understanding of what 'technology' entails. With the dawn of the internet, people all over the world have been able to communicate and access information in unprecedented

ways. Migrants have utilized the internet to build community and maintain national connections in diaspora, redefining the meaning of citizenship (Bernal 2014). Additionally, the ubiquity of more recent innovations like smartphones and social media have fostered engagement not only with family members and friends back home (Berg 2015) but also with strangers who may provide advice about migrating or about life abroad. On the other hand, social media has proven problematic in that migrants often find that the picture-perfect lives displayed online are not necessarily representative. Smartphones also support various applications (apps) that facilitate migration and life in a new country. For example, translation apps like Google Translate allow migrants to communicate in a new society before learning the local language (McCaffrey & Taha 2019); however, such apps can be misleading when used in official asylum contexts, where they contribute to the exercise of suspicion (Jacquemet 2019). Similarly, smartphone apps and programs designed by humanitarian and activist organizations to help refugees, asylum seekers, and other migrants access resources and integrate into the local community can reproduce inequality and precarity (Mahmoudi 2019). Modern technologies have also revolutionized the documentation and investigation of human rights abuses (Niezen 2020). This has significant implications for migrants, particularly refugees and asylum seekers, who have the tools to record and present evidence of offenses. Additionally, artificial intelligence (AI) and algorithms have been used to investigate human rights violations; however, these technologies reflect the biases inherent in the data used to create them, making them unreliable and potentially discriminatory (Niezen 2020). As tools of control and deterrence, surveillance technologies are becoming increasingly common throughout the world and have made migration significantly more difficult and dangerous (Andersson 2014; De Leon 2015; Feldman 2011). For example, drones, video surveillance, biometric scanners, and cellphone tracking all serve the purpose of identifying, apprehending, and denying entry to migrants. Drawing upon ethnographic research conducted in Europe, the U.S., and the Middle East, the roundtable participants will touch upon the role of smartphones, social media, and communication apps in the everyday lives of migrants; the use of game apps by displaced people; machine translation and algorithmic analysis in asylum processing; urban technologies intended to promote the integration of refugees; humanitarian digitalization projects; border surveillance technologies; and translation mediated by virtual monitors during asylum interviews.

A Town Hall Forum on Revitalizing Anthropology Programs in a Changing Landscape

10:15 AM - 12:00 PM TMCC - 801 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

National Association for the Practice of Anthropology

ORGANIZER:

Elizabeth Briody (Cultural Keys LLC)

CHAIR:

Elizabeth Briody (Cultural Keys LLC)

PRESENTER:

Matt Artz ,Andrew Walsh (Western University, Department of Anthropology),Priscilla Linn ,Adrian Conway ,Christina Collins (Indiana University, Bloomington, Department of Anthropology),Suanna Selby Crowley, PhD, RPA (SWCA Environmental Consultants)

DISCUSSANT:

Elizabeth Briody (Cultural Keys LLC)

DESCRIPTION:

The Anthropology Career Readiness Network (ACRN) is aware of the substantial change occurring in higher education today. Overall enrollments are shrinking, departments are under pressure to attract and retain students, and instructor hiring is limited. Anthropology programs are no exception to these patterns. In the U.S., there has been a 20% decline in bachelor's degrees between 2011-2021. Some anthropology programs have been merged or are at risk of being merged; members of some other anthropology programs fear being eliminated entirely. Given that so much of this change affecting colleges and universities is occurring on the heels of COVID-19, it is no wonder that instructors and students are experiencing burnout, and that grave concerns are mounting over the future of anthropology programs. One option open to anthropology programs under these circumstances involves increasing anthropology's usefulness and relevance in the world. How might anthropology teaching faculty and anthropology students and graduates tackle this challenge? This Town Hall is designed specifically to discuss strategies for accomplishing this task. We welcome all instructors-from high schools and community colleges to those working with PhD candidates. Our hope is that you will talk about what

would be most useful to you as you are educating this next generation. We extend an invitation to all students, hoping you will share your thoughts and concerns about using your anthropology when you enter the workplace. We also ask anthropologists employed in industry, government, and nonprofits to participate to share what you have learned based on your personal experiences. The Town Hall begins with a brief overview of ACRN's work. Panelists describe selected activities including anthropology program advising, sponsorship of class projects and the experiences associated with them, student and/or instructor tools, World of Work blog, student focus groups and website reconfiguration, and the new Network for Students of Anthropology. Then, the focus turns to audience reactions to these activities, identification of issues faced in and out of the classroom, and possible solutions to those issues. Panelists also hope to capture suggestions on where to focus effort and energy over the next year.

- What theoretical and methodological knowledge represents the essential building blocks for a career in which anthropology centers prominently?
- What skills can be taught in the classroom which have the highest payoff for preparing students to use their anthropology in problem-solving scenarios?
- What practical experiences in organizations and community settings can have a lasting impression on students' abilities to identify a new direction for a plan, craft the basic elements of a new policy, implement a new initiative, or promote the value of anthropology to those unfamiliar with it? Come join us!

Abolitionist Pedagogies

10:15 AM - 12:00 PM **TMCC - 714 A**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Trishna Senapaty

CHAIR:

Rebekah Ciribassi ,Carla Hung (University of North Carolina, Asheville, Department of Sociology and Anthropology)

PRESENTER:

Renée Roundy ,Erin Roton (University of Houston, Department of Comparative Cultural Studies),Caleb Sabatka (Georgetown University),Andrea Morrell (Guttman Community College, CUNY),Megan Raschig

DISCUSSANT:

Laura Beach (University of Toronto, Department of Anthropology),Anand Pandian (Johns Hopkins University, Department of Anthropology)

DESCRIPTION:

What would it mean to think about teaching anthropology with an orientation toward increasing freedom and liberation in the face of carceral systems of racial inequality? We gather to discuss abolitionist pedagogies and the transformative work of teaching and learning about abolition to anthropologists and/or teaching anthropology to systems-impacted folk learning inside and outside correctional facilities. Our collective work allows us to think about transformative ways to approach accountability that realign us with liberatory work. Aligning with activist calls to abolish the cop inside our heads and hearts, we aim to propose alternate pedagogical practices as resistance to the broad reach of carceral regimes. Together, we are interested in histories and genealogies of abolitionist praxis, socio-structural dimensions of the classroom, navigating prison education programs, and other creative modes of challenging the accepted systemic relationships between the university and the prison.

Anthropologies of Anticipation: Timescapes in Transition and the Politics of Futurity

10:15 AM - 12:00 PM TMCC - 707

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Samantha Breslin (University of Copenhagen, Department of Anthropology)

CHAIR:

Reade Davis (Nipissing University),Karen Hebert (Carleton University)

PRESENTER:

Samantha Breslin (University of Copenhagen, Department of Anthropology),Carly Dokis (Nipissing University),Sabrina Doyon (Universite Laval),Reade Davis (Nipissing University),Emma Bider (Carleton University, Department of Sociology & Anthropology),Danielle Dinovelli-Lang (Carleton University, Department of Sociology & Anthropology)

DESCRIPTION:

In recent years, anthropologists engaging with STS, environmental politics, and digital worlds have paid growing attention to what Barbara Adam (1998) calls timescapes: lived experiences of time and temporality, which shape how future possibilities are understood, anticipated, narrated, and contested. 'Future-oriented' anthropologies (Salazar et al. 2017) engage with the ways in which variously positioned actors, including anthropologists themselves, imagine, work toward, or resist possible outcomes. Focusing on timescapes and futures can illuminate the tensions, fault lines, and interrelationships between hopeful possibilities and looming threats, as well as ongoing efforts to tame indeterminacy through rituals, statistical inference, and/or strategic planning and risk management processes (Adam and Groves 2007; Appadurai 2013; Pels 2015). Many scholars have explored the work that forecasting, anticipated outcomes, and unfinished projects do in the present (Carse and Kneas 2019; see also Graef 2013, Campbell 2015). These practices shape as much as they are shaped by the otherwise cyclical rhythms of earthbound existence, interrupting some flows and facilitating others, remixing everyday life, geological time, and perceived crises in ways that simultaneously amplify and diminish the capacity of actors to influence future conditions. Building on a diversity of case studies, including: the hype of 'new' technologies such as artificial intelligence (AI); naturalists' experiences of changing biodiversity from zoonoses and extractivism; tensions between housing and tourism development and species at risk; tree imaginaries and urban climate policies; shifting representations of socio-ecological resilience; and the future-oriented retelling and archiving of historical narratives, this panel examines how actors in different ethnographic contexts envision, fear, model, or lay claim to possible futures. How do people perceive time, temporal dissonances, and future horizons? What are the values implicit in attempts to frame decisions in terms of particular timeframes? What are the effects of transitioning between temporal scales and future-oriented practices for these differently situated actors? How, why, and in what temporal register should anthropologists narrate the politics of futurity?

The Future is Now: The Collapsing Timescapes of Computing Technologies: This paper draws on both an historical overview of "new" developments in Artificial Intelligence (AI) and contemporary discourses and practices in computing education to examine the timescapes of computing technological development. For decades, cyberneticists, computer scientists, and

tech entrepreneurs have been building and demoing various forms of AI to conjure the impending emergence of these systems as autonomous entities and their potential to bring about revolutionary change. Lucy Suchman (2011) highlights how such demonstrations work to evoke a future where the spectacular possibilities displayed by such systems are a part of everyday life. Contemporary "live" demos such as seen with ChatGPT bring these future possibilities into being as users become part of imagining and producing them in the present. Similar dynamics, however, are central to computer science and AI education where computing is treated as a world of possibility and computer scientists are taught to both model the world, and to change it. Visions of the possibilities of computing technologies thus shape present action as computer scientists learn, teach, and work to build these futures. I thus show how present and future are collapsed through narrations, demos, and hype of the power, possibility, and future of computing technologies in a recursive loop of future evocation and present construction. I argue that this collapse contributes to ideas about the agency and autonomy of computing technologies and especially AI systems. It also serves to enroll more and more actors into these automatized and anthropomorphic imaginings and inspire further development and investment. Presenter: Samantha Breslin (University of Copenhagen, Department of Anthropology)

Story Work as Decolonial Practice: Mobilizing Temporalities for Future Generations: In this paper I suggest that future-oriented research is one way that anthropologists can contribute to community-controlled revitalization and relationship-building projects. Drawing on ongoing story work with members of an Anishinaabe community in northern Ontario, I highlight how stories have been intentionally mobilized as offerings to future generations. Orientations toward recipients of stories have influenced how we care for stories in the present including preparing stories for long-term preservation and the development of digital infrastructure to support community repositories. Future-oriented story work also requires learning how to negotiate boundaries around present and future use and accessibility. In both theory and practice, community efforts to gather and preserve stories have worked to connect diverse temporal and spatial scales – ancestors and future generations, as well as situated territorialities, and diverse relationalities including those between researchers, community members, and potential audiences for research. Careful attention to the futurities of data preservation and use can also support continued efforts of Indigenous communities to reclaim data sovereignty and to disrupt colonial forms of

representation and appropriation. Presenter: Carly Dokis (Nipissing University)

The Nature of the Future: Environmental Forecasting and Solastalgia among Naturalists: The ways in which naturalists imagine the future are based on their knowledge of and relationships with living beings. These, in turn, are rooted in long-term observation and immersion in natural environments, as well as interactions with scientific and amateur research networks. Naturalists' observations in the form of "citizen science" make important contributions to the documentation of landscape alterations brought about by, among other things, extractive industries and zoonoses such as avian flu, which are themselves part of broader disturbances to environmental cycles and biodiversity (IPBES 2019). These disruptions are now affecting the accuracy and results of statistical systems based on previous patterns of biodiversity analysis and nature forecasting assessments. How is this context changing naturalists' visions of the future? How does their knowledge and experience of their environments, and their associated feelings of solastalgia – nostalgia for the disappearance of known, frequented, and complex environments on the temporal scale of human life – take shape in this environmental knowledge transition? Can they contribute to a renewed and broader understanding of this unpredictable future and the ways it is anticipated? Drawing on research in Québec and Catalonia, this presentation will explore how naturalists' practices sit at the crossroads of environmental hope that seeks to care in an engaged way (Van Dooren 2019) and a presentism (Hartog 2004) of nature dominated by quantitative environmental data that mark the politics of biodiversity, nature, and conservation. Presenter: Sabrina Doyon (Université Laval)

The Multispecies Politics of Refugia: Negotiating Extinction and Privilege in the Frontenac Arch: Anthropological studies of extinction have provided a welcome response to abstract, quantitative projections of species loss. Instead, this work has relied upon rich ethnographic accounts highlighting the connections and continuities between humans and non-humans in particular places, underscoring the grief and intimacy of species loss, and calling for multi-species reproductive justice (Bird Rose et al. 2017, Sodikoff 2011, van Dooren 2014). While much of this work has focused on longstanding relationships between rural and often Indigenous communities and the plants, animals, and fungi that live alongside them, less attention has been paid to the frequent overlaps between critical habitats

for species at risk and relatively privileged and long-settled recreational landscapes with low human population densities and high biological diversity. In these contexts, efforts to advocate for multispecies justice and sustain critical habitats in perpetuity can often be framed as efforts to defend elite interests, enact fortress conservation and exclude development projects that might alleviate demands for short-term employment, housing construction, and mass tourism opportunities. While discussions of the association between privilege and environmental protection are not new, it is noteworthy that this critique has increasingly become a staple of conservative populist politicians as a way to justify calls to relax development regulations. This paper explores the ways in which the politics surrounding the futures of ecological refugia are playing out in and around the Frontenac Arch Biosphere Reserve in Southeastern Ontario, a UNESCO Biosphere Reserve that is recognized as being one of the most biodiverse regions of Canada and a critical habitat for dozens of species at risk. Presenter: Reade Davis (Nipissing University)

"It's really hard to change cities": Trees, Climate Change and the Fantasy of Disposable Time : Borrowing from Doherty's (2016) conception of the fantasy of disposability in reference to waste streams, I argue that actors implicated in tree politics in Ottawa, Ontario, use trees to construct a fantasy of disposable time; that is that future horizons for apocalyptic climate change can be forestalled, and radical action can be deferred by enrolling trees into the neoliberal policies of the present (Carse & Kneas, 2019). When trees are incorporated into city planning documents through tree planting or protection, they serve as technical add-ons for city developments, "recoding" presently carbon-centric projects—parking lots, road widening, airport expansion—into carbon neutral endeavours (von Schnitzler, 2016). Meanwhile, activists seeking to protect treed places emphasize that trees' capacity as green infrastructure—providing oxygen, stores carbon, absorbs rainwater—justifies their preservation and proliferation across city spaces. This tactic, however, also relies on bureaucracies incorporating trees as objects of governance—presuming trees will conform to this incorporation (Collier, 2011). Tree imaginaries of both activists and government actors, then, work to reinforce the assumption that urban tree-planting and preservation will buy more time to make the bigger changes needed to mitigate or adapt to apocalyptic future scenarios on the horizon, thereby justifying inaction (Elliot, 2021; Weszkalnys 2016; Petryna, 2018).

Presenter: Emma Bider (Carleton University, Department of Sociology & Anthropology)

North to the Future!: Co-authored by Danielle Dinovelli-Lang, Sonya Gray, and Karen Hébert The north, the coast, the rural—these broad geographical descriptors converge in Alaska, where they each demarcate the “front lines” of anthropogenic climate change and its disruptions. For the mostly Alaska Native people who make their livings in these overlapping zones and timescapes of anticipated transition, however, the 21st century climate emergency is just another iteration of a more-or-less predictable cycle of imperial aggression and environmental threat (Ferdinand 2021; Whyte 2017). In this context, climate change brings an all-too-familiar mix of perils and opportunities — in changing migratory patterns of useful and harmful animal species; melting ice and regrown landscapes; wild oscillations in the price of oil and gold; and ever more intricate schemes to monetize the Alaska Native homeland as carbon sinks, tourist traps, or living labs for sustainable futures. Now, as then, those living on the edge of a vision of the world that was never going to hold are poised to assert their place at the center. Inspired by Kyle Powys Whyte’s critique of the fundamental coloniality of dystopian thinking, and building on decades of shared experience living and working in ever-changing coastal Alaskan communities, in this paper we seek to uncover not the past but the forms of thought and action that stem from coastal Alaskan people’s singular efforts to make history from the future. Presenter: Danielle Dinovelli-Lang (Carleton University, Department of Sociology & Anthropology)

Flash Presentation Session: Anthropology in the Age of AI: Transitions and Challenges

10:15 AM - 12:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

General Anthropology Division

PRESENTER:

Kashif Rustamani (Louisiana State University, Department of Geography & Anthropology)

DESCRIPTION:

The 21st century is reshaping our world digitally and pushing the boundaries of human experience across the continents. Hyper advancement in the technology world and the rise of AI as a powerful tool for handling complex tasks have restructured and agitated

conventional methodologies implemented in pedagogy, writing, and research. This transition in the making has crucial impacts on how we learn, teach, and apply anthropology from a people's perspective. The argument that AI is a super useful tool in advancing human knowledge has fundamental issues and goes against the very humanistic perspective we apply in anthropology. Crucial questions of anthropology as a discipline shaping and improving human conditions in the world are facing new challenges of understanding AI's long-term impacts, but at the same time, how the four fields of anthropology should establish a legitimate relationship with AI and negotiate the terms of authentic and credible knowledge production and dissemination. The presentation bases its argument in the context of rethinking the world's transition and seamless usage of AI implications on anthropology pedagogy, writing, and research in universities. To seek a discussion on how can rethinking our approach to the rapidly changing landscape of AI better enable us to understand the boundaries of our discipline and chart a course towards a more dynamic and engaged future for anthropology?

3-386

Flash Presentation Session: Catholic transitions in a godless place – Polish Catholic migrants in Denmark

10:15 AM - 12:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Society for the Anthropology of Religion

PRESENTER:

Michael Brixtofte Petersen

DESCRIPTION:

This paper engages with how ethical navigations and transnational Catholic practices intersect among Polish migrants in Denmark. I do this by focusing on tensions related to family values and educational ideologies in the encounter with Danish institutions and, in particular, the Danish school system. The Catholic Church and Catholicism in Denmark comprise a multitude of linguistic and national practices. These include language, material manifestations of religion, rituals, and lay organizations specific to that community or what the Catholic Church calls a 'language group.' The Polish Church is the largest, most visible, and fastest growing of such congregations. Polish migration to Denmark is mainly a product of intra-EU labor migration

since the expansion of the EU in 2004. In my Ph.D., I investigate how Catholic practices inform and cultivate ethical tensions and reconfigurations among Polish migrants in their encounters with the Danish public. As my work shows, many Polish work migrants who come to Denmark not only practice Catholicism as a form of religious homeland orientation but also as a framework for ethical navigation in a new place. Conceptually, I developed the notion of ethical navigation to denote situations and events where values and normative orientations are challenged by engagement with new public forms of knowledge. To illustrate my argument, in this paper, I explore three strategies that Polish migrants employ to navigate ethical tensions. The first refers to theological tropes in the Polish Catholic tradition, such as the idea of the Polish people being inherently Catholic. The second use the institutional infrastructure the Catholic church provides in a diasporic space, such as church guidance for families in Polish. The third introduces and incorporates specific practices from the country of origin, Poland, such as religious teaching by clergy members. These forms of experienced difference are made tangible in contexts and events where one can observe clashes and conflicts between the secular Danish public sphere and normative views and expectations among the Polish migrant population. These three forms of ethical navigation are ideal types, and they overlap, but they serve to identify salient forms of action in a diasporic space. The empirical material for my paper is based on 16 months of guided conversations, interviews, and observations among three Polish Catholic communities in Copenhagen. Fieldwork has been conducted in the churches and among families in their homes. The focus on family values and educational ideologies is fruitful since it distinctly shows ethical tensions and differences. Questions such as whether a child should go to Catholic school, whether the church should be involved in education, whether the Danish public school system is too secular, and which priest to talk to about such matters were returning topics of conversation in my fieldwork. Essentially, my paper is about what people 'do' with their Catholicism. Hence, my Ph.D. is connected to the growing research field in the anthropology of global and transnational Catholicism.

3-386

Flash Presentation Session: Cultural Attunements: Transformational Experiences through Ecological Embodiment

10:15 AM - 12:00 PM TMCC - 501 A
Flash Presentation - In-person Live

REVIEWED BY:

Society for Humanistic Anthropology

PRESENTER:

Kara Miller (California State University, Long Beach, Department of Anthropology)

DESCRIPTION:

This presentation explores antidotes for the inflictions of contemporary chaos through embodied practices. I ask how we might counter the effects of modernity by remembering our earthbound bodies. Using frameworks of cultural ecology and theories of bodily knowledge, this talk offers a discussion on cultural attunements, understood as personal and sensorial connections with local environments that have transformative power. Opportunities for meaningful emplacement in cities and towns encourage avenues for belonging, generating concepts of selfhood, and these have the potential to invoke the enchantment, awe, and wonder necessary for nourishing creativity, innovation, and resiliency of communities and for confronting current challenges. This talk asks how experiences of emplacement through relational attunements can ease uncertainty and reshape social processes, bringing solace to the modern condition. I consider how a sense of place can help cities thrive, and I argue for environmental justice as a way of illuminating reliable, stable, and sovereign solutions to put sustainable philosophies into practice. Transformative experiences in nature with art create self-expression and embodied knowledge production. Such self-discovery, self-development, and self-reflection contribute to greater wellbeing. I discuss concepts of cultural attunements in education systems, in the form of art, story, play, and experimentation, and in public spaces in the form of interactive art and culturally-rich programming. Encouraging somatic learning and thriving-in-place, this talk explores heritage projects, art-making, and authentic interactions with nature as generating empowered future-making practices. Using theories of dispossession and sovereignty, this talk explores the role of embodiment in meaning-making through multisensory encounters, and considers ethics as we transition into a future with new, varied, and unknown forms of bodily and earthly experiences.

3-386

Flash Presentation Session: Family Stones and Spectacles

10:15 AM - 12:00 PM TMCC - 501 A
Flash Presentation - In-person Live

REVIEWED BY:

Anthropology of Consciousness

PRESENTER:

Nicole Kinbarovsky

DESCRIPTION:

Our ancestral pasts are often concealed in the materials of our surroundings. Aesthetic interpretations of history regularly uncover essential objects in our present. Not simply for the sake of beauty but the social shaping of materials through recollections and memorializing bygone people and events. My stepmother's sudden death brought me face to face with critical family artifacts and ignited curiosity about my unknown ancestral past. From the cremation to the burial and afterlife, I noticed one kind of object became synonymous with the physical remainder of human existence—stones. Like family, interactions with stones are so common they often go unnoticed. But Anthropology's fixation with rocks and consciousness highlights the stone's potential role in a person's life. Stones offer the privilege to touch, sculpt, and interact with several stages of history (Gordillo, 2014; Panourgiá, 2010; Raffles, 2020; Stoler, 2008; Tsing et al., 2017). The proposed presentation employs personal aesthetic ethnography to highlight the interplay of things and human life. Specifically, the aesthetic features of familiar spectacles involving stones 'bearing the witness of time' (Panourgiá, p. 203). The images and stories collected uncover a family legacy of resistance and survival, some with legendary claims of influencing the modern world. How do these objects ground generations through aesthetics both real and imagined? What is the historical context of the spectacles 'witnessed' by stones in my family history, and perhaps more importantly, which stones are still watching? Gordillo, G. (2014). *Rubble: The Afterlife of Destruction*. Duke University Press. Panourgiá, N. (2010). Stones (papers, humans). *Journal of Modern Greek Studies*, 28(2), 199–224. Raffles. (2020). *The Book of Unconformities: Speculations on Lost Time* (First edition). Pantheon Books. Stoler, A. L. (2008). *Imperial Debris: Reflections on Ruins and Ruination*. *Cultural Anthropology*, 23(2), 1–4. Tsing, A. L., Swanson, H. A., Gan, E., & Bubandt, N. (2017). *Arts of Living on a Damaged Planet*. 368.

Flash Presentation Session: Quebec graduate students and reflexivity

10:15 AM - 12:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Mati Chameroy

DESCRIPTION:

Reflexivity can be seen as a ubiquitous process in the practice of our discipline: it supports our frame of understanding of the world. Although some academics have described their use of reflexivity in their research, students' practice of it is unknown. Through my master research, I try to understand how Quebec graduate students in anthropology consciously (or not) use reflexivity (or not) in their research process. My methodology intended to provide a broad enough framework to allow these students the space to express their conceptions of research in order to evoke their shared experiences (myself included). Through this collective reflexivity and integration of diverse perspectives, my intention was to allow a more epistemically inclusive scientific community to be achieved. This research was an occasion to observe how reflexivity, through its uncomfortable (and unstable) components, can lead to individual, disciplinary, academic, and social transformations. In turn, I ask how these different understandings may risk being co-opted by the university.

3-386

Flash Presentation Session: The “Model Minority” in Medicine: A Reimagination

10:15 AM - 12:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Shyal Ahmed

DESCRIPTION:

This flash presentation is based on an upcoming project for my Master's Applied Thesis. The project asks how can South Asian medical students transfigure the 'model minority' myth into a new insurgent/conscious Desi sociopolitical identity? The model minority myth, an oppressive white supremacist racial project¹, is the idea that Asian Americans are more academically and economically successful compared to other minority groups due to supposedly stronger values of hard work and determination. Despite ideas that being the 'model

minority' is advantageous, the stereotype is deeply harmful. First, it reinforces the illusion that U.S. racism is non-existent and emphasizes the successful docile immigrant experience, further strengthening the myth of American meritocracy. Second, it categorizes all Asian ethnicities into a monolithic racial group, overlooking disparities and the particular needs of different groups. Third, Asian Americans are held to a higher standard in society, to which other minorities are compared. Finally, the stereotype is a way to divide communities of color, creating a 'model' minority and a 'bad' minority along racialized lines. Diasporic South Asians (a.k.a 'Desis') experience this myth in a unique way. Desi is a transnational term for people with South Asian roots including those from India, Pakistan, Bangladesh, Sri Lanka, and Nepal. Growing up in the United States, Desis are socialized into Hindu-Indian ethno-nationalist ideas, and diasporic apoliticism, which is often reinforced by the professional institutions of their parents in medicine and technology. Many become complacent with the model minority myth as there is a normalized lack of curiosity and knowledge about South Asian histories and politics that are directly related to our lives. There is also a complicity on our part of propagating and purposefully reinforcing this stereotype that many South Asians believe is beneficial. This manufactured apoliticism, complacency, and complicity is likely further enforced for South Asian medical students, who also are being socialized in medical education. There is a necessity for reconceptualizations of identity and the self for diasporic South Asians ('Desi') that show an orientation towards emancipatory personal and collective resistance and practices. This identifier can take inspiration from the Chicana and Pan-Africanist identities that were forged in an urgency to form solidarity with others in their community. Conceptualizing this identity starts with deconstructing the model minority and using it as a locus of development for teaching. My field site will be a medical school in San Antonio, TX, where 40% of medical students are Asian. I plan to use semi-structured interviews, focus groups, and participant observation to collect data about the perspectives and experiences of South Asian medical students. As an engaged-applied project, I want to organize spaces with the medical students to have discussions about the model minority myth in an effort to help South Asian medical students better engage critical analyses of history and society, and hopefully begin to cultivate this politicized identity.

Flash Presentation Session: The UTSC experience: exploring immigrant experience of international students at University of Toronto Scarborough Campus through fashion

10:15 AM - 12:00 PM

TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

American Ethnological Society

PRESENTER:

Mallika Kodati (University of North Texas, Department of Anthropology)

DESCRIPTION:

Clothes are an integral part of the everyday life of people around the world. While clothing may be chosen for its functionality, such as its ability to offer protection from climate and the environment, it may also be worn for adornment, self-expression, and symbolic purposes. Wearing certain articles of clothing can also be a sort of performance, an act that serves as a declaration of an individual's identity or their association with a sociocultural group. Often, this form of expression is amplified by jewelry and other accessories worn along with clothes. Used in this way, clothes can be a tool for the display of agency, identity, and the sense of belonging of an individual. However, there are multiple factors that play a role in the choice of clothing and accessories of individuals. These include their gender, the global and local fashion trends, socioeconomic status, preference for comfort or appearance, the notion of modesty, the sizes available and so on, and navigation of these factors is crucial when choosing articles of clothing and accessories. Utilizing a comparative approach, this research attempts to understand the immigrant experience of international students at University of Toronto Scarborough campus through their fashion choices. Some of the dominant factors that have shaped the international students' clothing and accessory choices include the price of these items, and the Canadian weather. Along with these, other factors that had some impact on the fashion choices of international students include the willingness to fit in or stand out, insecurities, safety concerns, and domestic students' fashion choices. Domestic students are affected by some of these factors

as well, specifically price, willingness to fit in and safety concerns, and have asserted that fashion choices of international students can also influence their choices.

Flash Presentation Session: **White Adjacency: The Social Capital of Racial Hybridity and In-Betweenness**

10:15 AM - 12:00 PM TMCC - 501 A

Flash Presentation - In-person Live

REVIEWED BY:

Association of Black Anthropologists

PRESENTER:

Judith Williams (Furman University, Department of Anthropology)

DESCRIPTION:

Drawing from an ethnography of restaurant workers in Miami, this paper examines a shift in racial categorization from the US Black-white binary, towards a tripartite system that includes a third racial group of non-white people who I call, 'white adjacent'. Those in this category are defined as people of color with desirable intersectional identities that place them on the upper margins of non-white racial categories, often in-between and adjacent to whiteness. Using ethnographic narratives from a diverse sample of restaurant workers, this paper explores white adjacency as an ongoing type of racial formation that emerged out of the confrontation between processes of US racialization and the cultural constructs of race in Latin America and the Caribbean. This work builds on existing tripartite theories of race through the exploration of white adjacency as a liminal racial category that also includes some who are typically racially classified as Black. Lastly, this paper attends to the conditional experiences of race privilege and prejudice that result from racial hybridity and in-betweenness.

Conversation/Debate - In-Person

REVIEWED BY:

National Association for the Practice of Anthropology

ORGANIZER:

Anne Pfister (University of North Florida, Department of Sociology, Anthropology, and Social Work)

PRESENTER:

Jessica Chandras (University of North Florida, Department of Sociology, Anthropology, and Social Work), Steven Rousso-Schindler, Anne Pfister (University of North Florida, Department of Sociology, Anthropology, and Social Work), Jason Jordan

DISCUSSANT:

Jason Miller (Washburn University, Department of Sociology & Anthropology)

DESCRIPTION:

A century after anthropologists adopted in-person ethnography as their primary methodology, this panel looks to the future rather than the past to imagine what an inclusive, equitable, and diverse ethnography looks like. We invite speakers to reflect on challenges they faced related to these three themes and suggest what institutions can do to continue to improve the experience of conducting ethnographic research. In the wake of the major disruptions of industrial action, raised costs of living, the Covid-19 pandemic, and numerous other obstacles to pursuing and conducting ethnographic fieldwork, we reflect on new challenges and new inspirations for an inclusive ethnographic practice. Hosted by the New Ethnographer, a future-oriented project that seeks to influence teaching curricula, attitudes, and practices in training new generations of anthropologists, we invite participants to imagine a diverse, equitable, and inclusive ethnographic practice drawing on collaboration, innovation, and the protection of wellbeing.

Between Professional Stranger and Auto-Ethnographer: Degrees of Belonging in Anthropological Research, Part 2

10:15 AM - 12:00 PM TMCC - 803 B

Oral Presentation Session

REVIEWED BY:

Association of Senior Anthropologists

ORGANIZER:

Jim Weil (Science Museum of Minnesota)

CHAIR:

William Mitchell (Monmouth University, Department of History and Anthropology)

PRESENTER:

Rena Lederman (Princeton University, Department of Anthropology), Yohko Tsuji (Cornell University), Moshe Shokeid (Tel Aviv University), Myrdene Anderson (Purdue University, Department of Anthropology)

DISCUSSANT:

Virginia Dominguez (University of Illinois, Urbana-Champaign)

DESCRIPTION:

The title of Michael Agar's 'The Professional Stranger: An Informal Introduction to Ethnography' implies a research focus on the so-called 'other.' In contrast, panelists in this session provide examples of ways anthropologists have been or become part of the groups in which they work. Their presentations consider the extent to which they bridge or efface the dichotomy between 'us' and 'them' in fieldwork. How have relationships between the extremes of complete stranger and auto-ethnographic subject developed? Have involvements intensified along a continuum during their careers through ongoing research? ...long-term residence? ...local employment or marriage? ...post-retirement engagements? This is especially relevant for senior anthropologists who have experienced transitions in their own professional approaches and witnessed profound changes in the discipline. Now it may be more common to do research 'at home' and less common in settings which, in one way or another, can be considered remote. Kirin Narayan (1993) raises challenging issues in what it means to be a 'native anthropologist.' Where anthropologists share an essential or existential identity with a local population, does a necessary element of professional detachment estrange them from their own neighborhoods, organizations, or other interaction sites and reference groups? Are we doing auto-ethnography when we debate over what it means to be an anthropologist, distinguishing our own identity within the discipline from identities we don't share with all of our colleagues (Goldschmidt 1977; Trencher 2000). Over many decades, moreover, the shift of emphasis from holistic community studies to ethnographies with local manifestations of global problems has countered the exoticism of past orientations and practices (MacClancy 2019). Also, cultural hybridity makes us members of multiple groups in widening circles of inclusiveness? Might our personal backgrounds and choices of research sites have become less crucial now than a professional stance combining reflexivity, self-effacement, and ethical commitment? In what ways have anthropologists developed their personal identity to resist and overcome the

compartmentalization of the social contexts in which they live and work? (Bolles 1985). Many have carried out research in two or more contrasting settings (Gottlieb 2012). Accordingly, in an ideal world, what additional benefits can be expected when those, who so choose, have opportunities to draw from at least one fieldwork project in a community or equivalent setting they define as their own and in at least one other as unfamiliar as possible? References Agar, Michael. *The Professional Stranger: An Informal Introduction to Ethnography* (Academic Press, 1980, 1996, 2008). Bolles, A. Wherever we are and whomever we're with, insider or outsider identities aren't just ours to define: Transitions between everyday sociality and field research practices have long been distinctive facts of anthropologists' professional lives. Wherever they were, whomever they were with, 20th century anthropological self-representations tended to imply that managing life/work transitions was a professional responsibility. That ideal of control aligned fieldworkers' ethical values with those of detached, relationally-unencumbered research common among our neighboring social/behavioral sciences. In practice however, fieldwork blurred the research/life distinction and fieldworkers' identities were never just ours to control. Who one was to one's interlocutors was an ethnographic question. In recent years, disciplinary values have expanded to include collaborative research with and in service to host communities everywhere, paralleling serious revaluations of fieldwork "at home". This history suggests deep continuities in anthropology's older and emergent forms of reflexivity, humility, and ethical commitment—sensibilities and practices that bridge earlier radicalism and present decolonizing moves. Drawing on research in Papua New Guinea (1970s and 1980s) and in the US (1990s onward), I compare the dialectics of identities and control in these two fieldsites. In PNG I never imagined myself an insider.

Limping along linguistically in a radically multilingual space, gradually gaining social competence through participation in family and community reciprocities, I was moved by my neighbors' generous inclusion of me in their private events and in their circles of protection against dangerous outsiders. In academic settings in the US where I am indisputably an insider, my interest in how ethical assumptions act as epistemological tripwires distinguishing otherwise similar disciplines (e.g., history, anthropology, psychology) have "othered" me in multiple ways. As in PNG, inquiring into (not assuming) who we are to one another has been a key ethnographic question. Presenter: Rena Lederman (Princeton University, Department of Anthropology)

Being an outsider and an insider: cases of my research in America and Japan: This paper discusses the fruitful paradox of being both an outsider and an insider in my research. I am a native Japanese. When I moved to America in 1976, its culture was foreign to me. In 1987, I started my research on aging in America as an outsider both in the world of my informants at a senior center and in the negative view of senescence in America. While participating in elders' activities transformed me to an insider, maintaining my outsider's view sensitized me to what elders took for granted. When I began to study mortuary rituals in Japan in the 1990s, I was already an insider. But my anthropological training enabled me to adopt an outsider's perspective, raising questions natives would not ask or might answer differently from outsiders (e.g., why Japanese spend so much money on funerals). Simultaneously being an insider and an outsider helped my research in these two different cultures. While my long residence in America has made its once foreign culture as familiar as my native culture of Japan and I thought I had become an insider, a recent incident has confirmed that culturally I am not American. This became clear through the reactions of some Americans to my dealings with the problems in my apartment at a retirement community. When I moved in, my new home was a "sick house" saturated with fine construction dust. While I patiently notified the administrators with one problem after another and repeatedly requested their solutions, most American residents' responses were not so restrained. They advised me to sue the retirement community and stop paying the monthly rent. Though I know Americans often sue, Japanese try to avoid such confrontational actions. In short, coming to know a culture is an on-going process because culture is complex with numerous facets and changes. This fact underlines the benefits of being both an outsider and an

insider in conducting anthropological research.
Presenter: Yohko Tsuji (Cornell University)

An Israeli anthropologist's engagement in Jewish and non-Jewish field-sites at home and abroad: Moving from my early training in sociology to anthropology, I assumed I have been studying the "other" as my habitual mission. My various field-sites included Jewish immigrants from Morocco in a farming village, Israeli Arabs in Jaffa, Israeli emigrants in Queens, Jewish and Christian gay religious congregations in New York, the LGBTQ services center also in NY, and last, attending Jewish missionaries' performances. Thus, I shared some basic elements of personal identity with the Israelis and Jews in this research repertoire, compared with the apparently "official others"—Arabs, Christian devotees, multi-ethnic participants in the various gay associations hosted at the New York services site. However, in retrospect, my early perceptions about the participants in that apparently divided realm of the researcher's personal "belonging" to the studied "others", the entry strategies and fieldwork experiences, were not equally divided at the ethnographic present. Actually, the one specifically irritating participation and a challenging ethnographic report engaged the attendance at the Jewish missionaries' events. At all other field-sites, regardless of the initial anxieties, I experienced a similar friendly acceptance and feelings of engagement with the subjects' social-cultural agenda. Is this a matter of a personal disposition and exceptional circumstances, or rather the benefits of the anthropological training, ethos and world view? The paper will introduce some representative features of the author's ethnographic experiences among the "close" and "remote" others. Presenter: Moshe Shokeid (Tel Aviv University)

Suprasubjectivity: ethnography has always transcended the subjectivity-objectivity false dichotomy: Autoethnography comes close to the quintessential human faculty of living with conspecifics, sentient others, plus, within an Umwelt. Ethnography would then be derivative, and co-occurring. Given participant-observation coupled with ostranenie (making the strange familiar and the familiar strange), and with neither being exhaustible, ethnography is inevitably reflexive and autoethnographically tinged. Taking place in any setting worthy of notice, the process is not a procedure, nor is it reproducible. The self-conscious documentation of the ineffable process of ethnography is what anthropology claims as its "hallmark", even though not every anthropologist will engage with it. By being open to surprise (semiotic evolution), yet acknowledging regularities behind suspense (semiotic

development), figures and grounds may oscillate, even scramble. The ethnographer invites the cognitive dissonance that simultaneously explores both interior states and the sensed and perceived external setting, along with the interiors of those other entities, whether or not conspecific. With other humans in that Umwelt, languaging is apt to be involved—familiar and understood or quite otherwise. Especially if the latter, the researcher will be “like a baby” for an extended period—to quote Floyd Lounsbury—semiosically enhanced but never fused by/with the ecological/ethologic setting. The researcher’s manifold lived and sensorial experience will be “written down” and otherwise documented; this matures with the “writing up” of the public product(s), also called ethnography. Likely written, and in a single language, ethnography transcends the languaging that constituted much of the experience and observation. Consequently, the sharing of an ethnographic process will confront suprasubjectivity, reflecting the many voices of the experiencer while taking into account the many categories of potential interpreters, including the self and some interpreters almost as co-composers.

Council on Anthropology and Education

ORGANIZER:

Cristina Moretti

CHAIR:

Cristina Moretti

PRESENTER:

Erika Finestone ,Marta Quagliuolo ,Ibtesum Afrin ,Krisjon Olson ,Jessaca Leinaweaver (Brown University, Department of Anthropology)

DISCUSSANT:

Cristina Moretti

DESCRIPTION:

This roundtable discusses how bureaucracy shapes and participates in children's lives, and how in turn children understand and negotiate bureaucracy. Anthropologists

show that bureaucratic documents and processes are important sites for negotiating social relations and can 'shape the parameters of human agency (...) in intimate ways' (Billaud and Cowan, 2020: 7; Bear and Mathur, 2015; Hull, 2012). In school and institutional contexts, bureaucracy translates expertise, mobilizes resources, helps define children's interests, abilities, and goals and shapes adults' involvement in children's lives – often in ways that reproduce classifications and inequalities (Boyd et al., 2015; Heiskanen et al., 2018; MacLeod et al., 2017; Rossetti et al. 2020). Our work addresses the following questions: How do teachers, advocates, professionals, and caregivers use or contest bureaucracy in their everyday life and work with children? How does bureaucracy shape the places and institutions where children spend much of their time, and how can we investigate this through ethnography? How do children attend to, encounter, and have an impact on bureaucratic practices in different settings? How does age, ability, gender, class, race, language, and citizenship status affect the ways different children encounter bureaucracy and the bureaucratic practices of the adults in their everyday lives? Our research brings in conversation perspectives and practices from different countries and locales, including government offices in Peru, health care facilities and pre-schools in the U.S., refugee camps in Bangladesh, elementary schools and family services in Canada, and juvenile courts in Italy.

3-215

Capitalism & Socialism in the Everyday

10:15 AM - 12:00 PM

TMCC - 203 A

Oral Presentation Session

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Dalton Price (University of Oxford)

CHAIR:

Dalton Price (University of Oxford)

PRESENTER:

David Flood (University of Virginia), Shunyuan Zhang (Trinity College), Kailey Rocker (Lawrence University, Department of Anthropology), Dalton Price (University of Oxford), Miranda Garcia (University of Michigan, Department of Anthropology)

DISCUSSANT:

Jennifer Patino (Georgia State University, Department of Anthropology)

DESCRIPTION:

Our ways of understanding and speaking about capitalism and socialism are diverse. Socialism alone can be interpreted in various ways depending on where you are and who you are speaking with: as an ever-looming threat that could destroy the Western way of life, as a rough patch in history that people are still recovering from, as an economic lifeline and way of thinking that helps keep societies equal and inclusive, as a government-imposed ideology, and at times, as a term that people are unfamiliar with and do not use. The question of what exactly capitalism and socialism are, however, diverts our attention away from the varied, local understandings of these terms—understandings that we might call 'vernacular' or 'everyday.' Latour wrote about people 'downloading' social theories 'as effectively as they do MP3 files' (2005: 231), yet we as anthropologists know that it is not as simple. We manipulate, rework, and integrate these 'MP3 files' into our own pre-existing frameworks and lifeworlds. We generate our own files on these capacious terms, on capitalism and socialism. Analyses of vernacular capitalisms or socialisms and the varying discourses that surround these -isms should not focus on 'official' vs. 'unofficial' interpretations (Yurchak 2005). Instead, we can more productively approach these everyday uses by looking at how such discourses shape daily life and how

these economic theories are received, interpreted, and recreated by everyday people. To better understand capitalism and socialism, which are hegemonically wired into the vocabulary of people throughout the world, we must attend to the 'everyday (after)life of our social theories' (Kruglova 2017: 760). In this panel, we will approach these global economic-political formations and theories from 'below,' attending to the kaleidoscope of interpretations and uses of capitalism and socialism across our field sites and in our own communities. Specifically, our works span the USA, Russia, Poland, China, Albania, Colombia, Venezuela, and Cuba. We will not hunt for singular definitions of these terms but rather take them as global formations that are still being configured. What meanings have capitalism and socialism taken on throughout history and now in the present? How are lives and ways of thinking shaped by local instantiations of these hegemonic terms? How might this bipolar framing of global economics and politics limit us? How might we be able to think more imaginatively by attending to these vernacular descriptions? What might we learn about these global formations along the way? -- -- -- -- // -- -- -- --

'The Anti-Friendship Machine:' Defining Capitalism Through Relational Praxis: For a strand of US anti-capitalist activism, capitalism appears to 'be,' functionally, a term that signifies primarily the utter breakdown of good or ethical human social relationality (although it does not follow, for them, that socialism is a meaningfully different alternative in this regard). The way participants in this movement define 'good' sociality often reflects particular engagements with anthropological and anthropology-adjacent texts, from which these activists conclude that good relations mean dense social ties defined by proximity and frequent interaction, mutual aid, emotional intimacy, and the rejection of instrumentalized relationships. And indeed, their organizing praxis often consists primarily of strategies aimed at cultivating long-term intimacy and interpersonal solidarity in small collectives as a prefigurative political goal in and of itself. Their oft-repeated and quasi-sacralized term for this mode of political organizing is 'doing community' or 'building

community.' People who pursue this mode of organizing often semi-ironically refer to themselves as 'community organizers,' although not in the traditional sense in which they would be organizing an extant community towards a political goal. Rather, they see themselves as instead organizing individual people into communities—an activity that is by their own definition the essence of anti-capitalist political praxis. This anti-capitalist social movement's focus provides a deeply engaged 'definition from below' of capitalism, and at the same time a kind of mirror for disciplinary reflection—one in which certain utopian ideas ambient in much anthropological work on indigenous modes of sociality are manifested in an unruly and challenging way. Presenter: David Flood (University of Virginia)

Socialist Memory and Heritage Tourism in A South China Community: The recent “heritage turn” in China witnessed dramatic reordering of memory, value, and commodification. In this paper, I consider how the founding of a Cantonese embroidery association in rural-turn-urban community of southern China offers insights into the debates over memory, temporality, and subjectivity in late-socialist China. Focusing on elderly women participants of the association, all of whom worked as embroideresses in their youth during the socialist era of the 1960s and 1970s, I contextualize the embroidery association at the intersection of socialist memory, the development logic of cultural heritage, and grassroots community governance in late-socialist China. By viewing the embroidery association as a present space of experience that incorporates on the one hand subjective and intersubjective narratives of socialist youth in rural China during the revolutionary past, and on the other hand China’s Party-led future-oriented campaign of cultural revival-cum economic development and governance reform, I seek to tackle two issues. First, I look into the ways in which elderly women redeployed their socialist youth memory, especially their socialist work experience as embroideresses, as cultural and nostalgic/affective capital to re-enter communal life and earn an extra income to complement their retirement pension. Second, based on ethnographic observations of elderly embroideresses, I further explore the embodied continuities and disjuncture of socialism under the Xi administration and its promise of the “great revival of the Chinese nation”. Ultimately, through the lens of memory and heritage, this paper analyzes the everyday materiality of China’s cultural nationalism and the fragmented temporalities it enables. Presenter: Shunyuan Zhang (Trinity College)

Call it Komunizmi in Albania: Translating the Socialist Past in the Neoliberal Present: For many Albanians, 1991 represented the end of an era, the end of one-party socialist rule. Oddly, it wasn’t clear what it marked the beginning of. It did not clearly mark a democratic transition. For some, that moment came in March 1992 when an opposition-controlled Parliament entered office; for others, it’s yet to come. This lack of clarity was a harbinger of what Mariella Pandolfi (2010) calls a permanent transition – a period of uncertainty that has invited international intervention and driven many Albanians to question what socialism was and what democracy could be amidst the challenges of neoliberalism. In this paper, I document the ways that nongovernmental organizations redefine twentieth century Albanian socialism in order to address what they perceive to be a growing sense of frustrated agency (Kideckel 2008) in southeastern Europe. Through projects targeted at young adults, the socialist past is made tangible through different names: from diktatura (dictatorship) to komunizmi (communism). Calling Albanian socialism by these names is significant on two levels: broadly, it is a call to distinguish Albanian socialism from other iterations of socialism. More intimately, it is a call to attune Albanian youth to their own family histories. As one of my interlocutors remarked: “If you don’t know the past of your family, does it influence the way you think about the world?” My interlocutors draw on their personal relationships with the socialist past to challenge youth (and all of us) to understand what it means to be a democratic subject today. Presenter: Kailey Rocker (Lawrence University, Department of Anthropology)

Between Capitalism and Socialism: Social Life in the Colombia-Venezuela Borderlands: In the Colombian border state of La Guajira, you find a rather unique patch of the Colombia-Venezuela borderland that has a long history of back-and-forth movement. These ebbs and flows (as we might call them) between La Guajira and Zulia, the adjacent Venezuelan state, have been historically shaped by several factors: political regime changes, institutional inclusion, economic opportunity, guerrilla and paramilitary violence, weather patterns, familial ties, and Indigenous land claims. In recent years, given the ongoing political-economic situation in Venezuela, this borderland has changed significantly and turned into a discursive border not just between Colombia and Venezuela, but also between “capitalism” and “socialism.” Drawing upon 17 months of ethnographic research in La Guajira, I show how social life in this border region have been majorly reworked by discourses surrounding capitalism (in Colombia) and

socialism (in Venezuela) and how these -isms stick to bodies and alter subjectivities. I argue that borderlands like La Guajira offer us an important window to comprehend the human impacts of political regime change beyond material policy changes and an opportunity to understand the diverse iterations of these global political-economic formations. Presenter: Dalton Price (University of Oxford)

The New 'Hombre Nuevo'? Cuban Entrepreneurs, Social Responsibility, & Debate over Entrepreneurs: This paper traces the radical redefinition of entrepreneurial activity in Cuba over the past decade. For much of Cuba's revolutionary history, private business was seen as deeply immoral – embodying greed, selfishness, and individualism. Today, entrepreneurship has become synonymous with creativity, innovative solutions to communal problems, and collective, even national, prosperity. This redefinition process promoted global liberal values of economic liberty, individual autonomy, private property, and ideals of equity over equality, while couching them in the Cuban socialist ethos of racial and gender equity, community participation, and valorization of workers. This paper traces the rhetorical shifts that characterize this transformation, while also examining the lived ethics of Cuban entrepreneurs – how business owners routinely share resources and information, exchange favors, engage in community projects, and draw from collective funds. They are charting a course between the Scylla and Charybdis of “communism” and “capitalism,” creating a new and living ethos of “Cuban entrepreneurship.” Presenter: Miranda Garcia (University of Michigan, Department of Anthropology)

PRESENTER:

Daniela Miranda (University of British Columbia, Department of Anthropology), Marcela Omans

McKeeby (Michigan State University, Department of Anthropology), Maria del Pilar File-Muriel

DISCUSSANT:

DESCRIPTION:

The interconnectedness of flows of people, ideas, chemicals, political power, racialized identities, and knowledge turn a wide variety of seemingly place-based phenomena into 'international relations.' In the process, a wide range of people engaging with power-laden processes in their own communities can only be understood in the context of far-reaching webs of power and politically inflected forms of significance. The dramatic expansion of soybean farming in South America is intertwined with mass application of the pesticide glyphosate, whose toxic and likely carcinogenic effects are themselves debated at the global, national, and local scale. In debating the future of Argentine agriculture, environmentalists and farmers are drawn in to disputes over scientific discourse itself. A second paper examines the northwest Mexican city of Tijuana as a site for the shifting perceptions and participation in bilateral Chinese–Mexican relations, exploring the meanings of 'Chinese influence' and 'Mexican sovereignty' in times of local and global change. College students from the United States participate in a Nasa Yuwe language teaching program in Cauca, Colombia. Both this language's revival and the Cauca region were foundational parts of Colombia Indigenous demands for interculturality, and the paper examines the results of this transnational encounter. White Americans Christians engagements with Haitian children are critically examined through the lens of 'white saviorism' via a close analysis of social media representation. Racial, religious, and psychological narratives combine to portray Haitians as in need of particular forms of 'saving.'

Contested Meanings of Science in the Debates about the Toxicity of Agrochemicals in Argentina: Over the past 20 years, the rapid expansion of soybean farming in Argentina transformed this country, which became the world's third-largest producer of soy through the adoption of an agribusiness model based on the widespread use of genetically-modified soybeans and herbicides, the most common of which is Monsanto's glyphosate-based Roundup (Leguizamón 2020; Lapegna 2016; Gordillo 2014; Carrasco 2015; Aranda 2015 & 2010; Svampa 2014; Gras & Hernández 2013 & 2016; Barruti 2013; Arancibia 2012; Vara 2004 & 2012). This intensive use of pesticides has caused innumerable problems for the environment and human health, a

claim first made by the inhabitants of the affected communities (Rulli, 2009) and later supported by a scientific study published in 2009 by Andrés Carrasco, a renowned Argentine embryologist, and his team. The response of the then Minister of Science and Technology of Argentina, Lino Baraño, was to disqualify Carrasco and state that it was 'a private opinion' and not the result of a panel of experts. Although in 2015 the World Health Organization declared glyphosate probably carcinogenic, the region seems to be ruled by a logic of expansion through more efficient forms of killing (Hetherington, 2020), and today Argentina has the highest glyphosate application rate in the world. This paper examines how different actors in the central and coastal regions of Argentina draw from scientific knowledge on the toxicity of glyphosate to intervene in this dispute. In November 2021, a campaign promoted by more than 50 environmental organizations from these regions began to circulate a video on social media under the hashtag #BastaDeVenenos [#EnoughWithPoisons], warning of the extended presence of glyphosate in water, land, air and people's bodies. With the slogan 'our body is our territory, and we want it free of pesticides', numerous artists and public figures recounted having tested positive for glyphosate in their bodies and demanded an agroecological model. This led to a counter-campaign by the agribusiness sector under the slogan #BastaDeMiedos (#EnoughWithFears) that accused activists against agrochemicals of sow fear spreading lies and unscientific conceptions and not caring for 'development'. Building from the work by various authors on the uses of science (Eva Bertullo 2021; Sabater et al. 2020; Massarini 2020, Blois 2016; Rietti et al. 2015; Espoturno 2015; Proctor 2008, Jasanoff 2003, 2004) and on the impact of agrochemical fumigations in other areas of South America (Hetherington 2020; Oliveira and Hecht 2019; Gibson & Alexander 2019), I propose an interdisciplinary and activist approach to analyze how anti-fumigation activists and soy farmers use scientific narratives to back up their arguments for or against the use of agrichemicals. Focusing on environmental organizations that carry out anti-soybean activism in Gran Rosario in the province of Santa Fe, whose port complex is considered the main node for the export of agricultural commodities in the world (Bergero et al. 2020), I explore how the conflict expresses itself (but not only) in a dispute to control the meanings of scientific discourses: Whereas the affected communities and anti-agribusiness organizations appeal to the direct experience of exposure and poisoning with glyphosate, soybean producers seem to appeal to generic, disembodied ideas of development and

progress. Presenter: Daniela Miranda (University of British Columbia, Department of Anthropology)

Negotiating Visions of Future China-Mexico Relations: Public opinion formations on China in Tijuana, Mexico: The People's Republic of China (China) has increased its diplomatic and economic engagement across Latin America and the Caribbean (LAC) in the last two decades. This is a substantial change from previous eras in which U.S. interests dominated economics and politics of the region. This regional shift has coincided with countries of LAC changing both their foreign policy in diplomatic relations with China and economic policies that take advantage of new economic opportunities brought by China. At the same time, these changes and China's role in them have impacted the everyday lives of people across the region. While there have been efforts to survey Latin American publics on perceptions of China, these studies do not reveal what specifically about Chinese engagement in various countries is affecting individuals' opinions or what they perceive as 'Chinese influence'. However, a positive or negative opinion of China across the public of a country can change the political viability of policies that would engage China. Therefore, I present some findings from my dissertation research in Tijuana, Mexico, a city at the crossroads of economic and political relations between China, Mexico, and the United States. I found that residents' opinions on the future of China-Mexico government and economic relations, were based on their perceptions of past and present policy decisions of the Mexican government, some related to China but many not. Importantly, the residents formulated this opinion based on the perception that the past policies of the Mexican government had not successfully protected Mexican sovereignty and had failed to lead to real development success. Therefore, the respondents were overall supportive of more economic and diplomatic engagement between China and Mexico, but with the caveat that the Mexican government needs to be strategic as to not repeat patterns of the past. Presenter: Marcela Omans McKeeby (Michigan State University, Department of Anthropology)

Minga de pensamiento: Intercultural solidarity and cognitive approaches to planning a study abroad program and teaching Nasa Yuwe in Colombia.: This dialogic paper centers around a study abroad program in which US based college students travel to Cauca, Colombia and participated in a language program teaching Nasa Yuwe (the native language of the Nasa people). The program was implemented through collaborations between University of New Mexico, Universidad del Cauca, the Universidad Autónoma

Indígena e Intercultural, and community school Instituto Agropecuario Nasa Weçx. We pose the following questions: Can this program expand participants' understanding of 1) language beyond linguistic structure towards an understanding of language as general cognitive processes situated in the sociopolitical and cultural environment in which languages are used? And 2) the practice of academic research beyond extractivism towards scholarly work as the product of socially responsible intercultural and solidarity practices? We analyze this program through these theoretical lenses, 1) Interculturality (Rappaport and Ramos 2005), which highlights the importance of horizontal platforms to guide relations in language contact situations among individuals and groups that are situated in unequal power relations; 2) Cognitive embodiment, in which language is viewed as coordinated action within the social and natural world; and 3) 3) Activist scholarship (Escobar 2014; Hale 2006, 2008), in which we touch on topics of production and dissemination of knowledge, positionality, and practices of solidarity among program participants. We argue that through this methodological and theoretical intervention it is possible to understand language as repositories of cultural memory and guides to action, and see participants as agentic actors of change and knowledge production (Valera 1999, Wollock 2001).

PRESENTER:

Kate McClellan (Mississippi State University),Bridget Guarasci (Franklin & Marshall College),Kali Rubaii (Purdue University, Department of Anthropology),Gokce Gunel (Rice University, Department of Anthropology),Mariam Taher (Northwestern University)

DISCUSSANT:

Zeynep Oguz (Université de Lausanne)

DESCRIPTION:

How can Middle East scholars of the environment shape critiques of militarism in the era of climate change response? Insights on military and imperial political violence, and on the ways people endure/survive/thrive anthropogenically devastated environments in the Middle East, carry theoretical and political implications for how climate change mitigation and discourse is shaped. Given the growing trend to militarize 'solutions' to global climate catastrophe, this roundtable presents insights from the Middle East that confront such a paradigm.

DISCUSSANT:

Nadia Fadil

DESCRIPTION:

There is a spate of work, from diverse ethnographic and theoretical perspectives, that has drawn out both the discomfort with difference in liberal theory and concepts of coexistence, and the inability of associated policies to erase it. Critical work on tolerance (Wendy Brown 2008; Povinelli 2002), pluralism and multiculturalism (Hage 1998; Giordano 2014, Bender & Klassen 2010) and secularism (Mahmood 2005; 2015; Agrama 2012; Fernando 2014) have highlighted the hierarchical, marginalizing and (symbolic and physical)

violent ways in which difference is managed and 'dealt with' in liberal contexts. Others have pointed out how associated concepts, such as official policies of truth and reconciliation following conflict, often silence or leave unacknowledged underlying conflict or tension (Mokherjee 2022). Meanwhile, a body of anthropological work has emerged that does not erase but works through an acknowledgement of difference, including, for instance, the literature on conviviality in urban (Heil 2020; Samanani 2022) and marginal spaces (Marsden & Reeves 2019), the deployment of incommensurability as a mode of translating difference (Giordano 2014; Spies 2013, 2019) and irreconciliation in ethnic and religious conflict (Mokherjee 2022). Moving beyond dichotomies of peace and violence, or inclusion and exclusion, these works illustrate alternate possibilities that emerge when we resist the urge to seek a 'positive' resolution to difference and, instead, give space to tension, ambivalence, and unresolved encounters. At a broader level, the invitation to engage with difference in these readings of sociality speaks to longstanding debates within the discipline, including for example, the ontological turn or post-humanist anthropology. Building upon these works and connections, we invite ethnographic and theoretical reflections on the unresolved nature of sociality and engagement, where difference is acknowledged but never flattened, along with the potentialities that emerge from the in-between-ness and openness that it engenders. Can we view engagement with difference as a fact of social life, rather than celebration of a value, to offer a 'space of mediation' (Giordano 2014) that offers temporary and fleeting moments of coming together? What is gained and lost in such moments? How do we theorise these in-between states? We invite papers that adopt a relational approach to explore the ongoing (and changing) constitution of and engagement with difference across space and time, and where difference is understood in social and political as well as existential (self/other) and ontological terms.

The value of maintaining difference: friendships between Hindus and Muslims in Karachi: In Pakistan, official state ideology, with its insistence on sameness and unity – encapsulated in the idea of one nation, one language (Urdu) and one religion (Islam) – tries to erase difference in the name of nation-building. In everyday settings, however, relations and exchange between communities are often sustained through a maintenance rather than overcoming of difference. In this paper, I consider the place and value of difference in friendships between young Hindu and Muslim men and women in Karachi. Focusing on upwardly mobile

settings, where many of my interlocuters have migrated from smaller towns in Sindh to Karachi for education and employment, I illustrate how friendships across religious divides develop out of mixture of practicality, need and personal inclinations. Aware of their position as a vulnerable religious minority and (rightfully) fearful that any hostile encounter could transform into a blasphemy charge, my Hindu interlocuters often depend on the protection of their Muslim friends. Familiarity humanises the 'other', transforming an abstract hostile figure to a person, but too much familiarity can bring hostilities sharply back into focus. Hindus worry about giving their Muslim friends access into their homes and family life, in case it leads to romantic liaisons and attachments with sisters and female relations. My paper focus on how the maintenance of difference is crucial to friendship, and how personal 'rules of engagement' here are influenced by longer collective histories and memories. At the same time, I consider the new potentialities that are opened up through this engagement across difference. Presenter: Ammara Maqsood (University College London, Department of Anthropology)

Spiritual brotherhood and 'the poor' in Palermo, Sicily : This paper explores overlapping notions of spiritual brotherhood within two Catholic spaces in the historic centre of Palermo, Sicily: a listening centre based in a Franciscan parish that works predominantly with local migrant populations and a nearby Catholic lay confraternity populated by generations of mostly lower class Palermitani. What kind of rhetoric and practice of spiritual brotherhood is at play within these two spaces, and what forms of inclusions and exclusions do these forms forge and reproduce? I approach these questions through an ethnographic account of the death of Salvo – an elderly man of lower social class and one of the few to participate in both parish and confraternity – and the ways in which it was received and responded to within these two catholic spaces. In doing so I interrogate the potential and limits of a universal (liberal) notion of brotherhood implemented at the parish level which positions Salvo as a recipient of care. I also explore Salvo's role as organiser and elder within a spiritual brotherhood embedded within a *fedepopolare* (popular faith) that is at once folklorised and at times prohibited within official church rhetoric. By dwelling within these spaces and in moments that both include and exclude Salvo and local others (migrants and other Palermitani of various social classes), I reflect on the changing nature of catholic forms of sociality, the intersections between devotion, faith and social class, and more broadly on the place of 'the local poor' within an

increasingly diverse southern Italy. Presenter: Giulia Liberatore (University of Edinburgh)

Diversity and difference in Pumwani, Nairobi: Located next to Nairobi's Central Business District, Pumwani has long had a dangerous reputation as a site of crime and thuggery, a hotbed of Islamic radicalisation, and the originary locus of sex work in the city. It is a place of 'other-ness' par excellence – a primary target for security, anti-poverty, and (re-)development interventions. At the same time, Majengo, as it is locally known, is home to a historically diverse population, many of whose families can be traced to its founding as the first residential estate for Africans during the colonial era. In such a context, how do residents themselves conceive of difference(s), when do they matter, and if/how does Majengo's checkered reputation inflect these conceptions? I focus here on religion, particularly the ways in which my interlocutors criss-cross lines of difference typically understood as incommensurate. These include, for example, Christians and Muslims, both Kenyans and other East Africans, sharing houses; large Muslim families comprised of multiple inter-ethnic and mixed nationality marriages; and religious crossings and conversions between Christianity and Islam. In doing so, I reflect on themes of sameness and difference, visibility and invisibility, and inclusion and exclusion in the making of both kin and community in this Nairobi settlement. Presenter: Leslie Fesenmyer

Incommensurable Characters: Theorizing Difference in Southeast England : This paper considers the notion of "character" as employed by different research interlocutors in Thanet, Southeast England, to describe the historical element and physical properties of local buildings and towns. I explore how the local retired, conservative community, on the one side, and progressive artists, on the other, present divergent ways of understanding and engaging with the "character" of local buildings, rendering radically different experiences of space and time, which in turn has influenced their political affiliations. Whereas this distinction is often interpreted as the right-left political divide, here I argue that such dichotomy falls short in explaining the complexity of individual lives. If binary oppositions adopted by the state fail to translate migrants' alterity (Giordano 2014), they are also insufficient to explain the lived experience of nationals. Here I use this ethnographic material to consider theorizations of difference that go beyond the acknowledgement of varied cultures, and account for the radically distinct material realities that people seem to inhabit (Latour

2002, Viveiros de Castro 2004, Hage 2012), and what kind of mediation might be possible in the context of apparently incommensurable difference. Presenter: Ana Carolina Balthazar

Boys to Men, Girls to Soldiers: Gender, Sexuality, and Embodied Differences in the Indian Border Sec: How do state security institutions, particularly armed forces, deal with difference? Scholars across political science, international relations, and security studies have debated the risks and gains of policies that incorporate minorities - whether gender, sexual, racial, or ethnic - into armed forces that are organised around the promise of erasing difference with singular, horizontal national and professional identity (i.e. soldier of x nation). My research on the ongoing incorporation of women into India's Border Security Force across all ranks asks, at its broadest, how the unmarked figure of the soldier-citizen, a tenuous ideal-type, holds up in the light of this latest, dramatic transformation. Instead of getting stuck in "does gender matter or not" or "is gender suitably erased", or even trying to resolve the issue, I explore how this tension around embodied differences of gender and sexuality among soldier-citizens erupts within the world of the security institution. Through what other issues and terms does it speak itself, and how is this unsettling managed in the everyday institutional life of the BSF? My analysis builds on ethnographic attention to the training and transformation of civilians into soldiers and the making of a system that makes embodied differences commensurable and valuable in the emergent anthropology of security and militarism. Presenter: Sahana Ghosh (National University of Singapore)

Come as You Are: Grassroots experiments in Radical Inclusion in Israel/Palestine: Liberal public reason seeks to provide a neutral platform for public political engagement. Yet, it has a number of conditions- self-abstraction and generalized claims, unmarked citizenship, secular reason (the translation proviso), disembodiment- which effectively excludes many populations with non-liberal subjectivities from public participation. In countries with a liberal hegemony, such communities often choose isolation and non-engagement in the public sphere. However, in Israel-Palestine, the majority of both Jewish and Palestinian populations hold non-liberal subjectivities, and neither side can claim the position of an unmarked public speaking for a generalized, common public good. And yet, the price of isolation in the context of open, violent, intractable conflict, is exceedingly high. This article considers two attempts by locally created initiatives to

create a public sphere in which these groups can be accommodated and engage each other, politically, on their own terms and without translation. One is made by the civic organization “The Citizens Accord Forum” which brings ultra-Orthodox Israeli Jews and the Palestinian Islamic Movement into direct discussion. The second is made by the organization Talking Peace, which has transformed the Kabbalistic and Hasidic concept of the “unity of opposites” - a paradoxical logic that contains contrasts- into a methodology for radical inclusion in the public sphere. Presenter: Erica Weiss (Tel Aviv University)

Discourses of Landscape and Environmental Transitions

10:15 AM - 12:00 PM TMCC - 205 D

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Thea Strand (Loyola University Chicago)

CHAIR:

Michael Wroblewski (Grand Valley State University, Department of Anthropology), Thea Strand (Loyola University Chicago)

PRESENTER:

Thea Strand (Loyola University Chicago), Neşe Kaya Özkan (Appalachian State University, Department of Anthropology), Michael Wroblewski (Grand Valley State University, Department of Anthropology), Eric Kelley (University of Massachusetts, Boston, Department of Anthropology), Daniel Suslak (Indiana University, Bloomington, Department of Anthropology)

DISCUSSANT:

Jessica Pouchet (Bucknell University)

DESCRIPTION:

Whether driven by forces of capitalism or climate change, contemporary transformations of landscape and environment are experienced, narrated, and negotiated through discourse. Building on a rich tradition in the linguistic-anthropological study of language and landscape, this session also considers how discursive engagements with diverse and changing environments frequently implicate semiotic or language ideological assemblages (Kroskrity 2021). In these cases, language not only describes and delimits landscapes and their features, but may also be discursively and

ideologically grouped together with wide-ranging environmental, cultural, political, and affective phenomena. Examining how people talk about environmental transitions, including resource extraction, reforestation, and conservation, as well as how they link local landscapes to pieces of linguistic and cultural heritage, the papers in this session contribute to small but growing bodies of work at the intersection of linguistic and environmental anthropology and in the transdisciplinary field of ecolinguistics.

Discourses of Transforming Landscapes and

Transhumant Livelihoods in Mountain Norway : “It’s growing back everywhere” has become a ubiquitous lament in the mountains of rural Valdres, Norway, where rapid reforestation is underway. Driven by both global climate change and local declines in transhumant farming, including open grazing of livestock in the mountains in summer, the perceived overgrowth of trees and shrubs in a previously open landscape is an urgent problem for farmers, residents, and visitors alike. Discursively constructed as a specifically agricultural problem in terms of cause, reforestation and a rising tree line in Valdres are also a much broader cultural threat. The beloved pastoral vistas of Valdres’ unique socrionature (Morrison 2018)—with animals grazing freely on low vegetation among small lakes, streams, bogs, and centuries-old summer farms, backdropped by high snow-capped peaks in the distance—are being literally obscured by expanding forests. For over a century, this living scenery has drawn urban tourists and regular visitors to the rural district, and new tourism development has recently displaced family farming as Valdres’ primary industry. In both local and national discourse, reforestation in the historic summer mountain farming zone represents a highly regrettable loss of a patrimonial landscape but also of (agri)cultural heritage and dialect diversity, which together form a semiotic assemblage (Tsing 2015, Kroskrity 2021). Resisting globalized calls for forest conservation and active rewilding, reforestation in Valdres’ mountains is talked about as an existential cultural problem, not an environmental one, and closely tied to anxieties around dialect shift (Strand 2012), social mobility, land control, and economic survival. Presenter: Thea Strand (Loyola University Chicago)

Ideological Assemblages of Language and Environment in Hemshin Highlands, Turkey : This paper explores how Hemshin people living in Turkey respond to the sociolinguistic and environmental transformations on Hemshin lands after long-lasting Turkish nationalism and more recent investment projects such as hydropower

plants and major roads. As Hemshin landscape is dramatically transformed through these projects, Hemshins have been mobilized around a unique grassroots environmentalism. Through the analysis of written texts such as social media posts, news reports, and recordings of in-depth interviews that I conducted during the 21 months of multi-sited ethnographic fieldwork in Istanbul, Rize, Artvin in Turkey between 2021 and 2022, I demonstrate how the meaning of land goes beyond a “resource for livelihoods” and is grounded in experiences of inhabiting Hemshin landscapes. While Hemshins foreground the intimate interaction with their lands in their environmentalism, Hemshin words emerging from the stories, songs and everyday activities are used, re-circulated in new contexts, for new purposes, and find new possibilities for survival. Drawing from the literature on the ruined landscapes of the Anthropocene (Kirksey 2015, Tsing 2015, Tsing et al. 2017) and linguistic anthropological work on language “survival” and “vitalities of language” (Wyman 2012, Perley 2011) and on language ideologies (Kroskrity 2019, Gal and Irvine 2019) and posthuman linguistic studies (Pennycook 2021) I argue that instead of taking language and the environment as two distinct spheres of the political, we look at how these two are mobilized and constitute one another as parts of larger “semiotic assemblages” in people’s articulations of environmental and linguistic survival and social justice. Presenter: Neşe Kaya Özkan (Appalachian State University, Department of Anthropology)

“Words we live by”: Ecological Discourse and Indigenous Amazonian Language Revitalization: For several decades, Kichwa speakers in Amazonian Ecuador have been working to revitalize their indigenous language and culture through a combination of educational and popular media campaigns. The preservation of local ecological lexicon is seen by Amazonian Kichwas as critical to both cultural survival and a sustainable future for their tropical forest environment, which are conceptually linked. In intercultural discourses, such as public cultural exhibitions and my own ethnographic interviews, Kichwa words for flora, fauna, and their interrelationships are routinely deployed as semiotically dense markers of indigeneity, embodying a nexus of traditional language, knowledge, landscape, and lifeways. I will demonstrate the critical importance of ecological language for both indigenous language revitalization movements and linguistic anthropological documentation of contact between opposing “knowledge practices” (Gal 2015). As Amazonian Kichwas demonstrate through their discourse, concrete

ecological nouns are easily translatable while being resistant to unwanted linguistic transformation, including the processes of language standardization. They are semiotically bound to singular objects of reference, which are, themselves, bound to localized knowledges and place-based identities. Moreover, ecological language occupies a perceptual common ground between indigenous Amazonian peoples and non-indigenous allies with distinct ways of knowing and “different philosophies of being” (Uzendoski & Calapucha-Tapuy 2012). Indigenous ecological lexicon can therefore serve as a key starting point for more complex intercultural discourses about philosophical and cosmological differences, potentially establishing “inventive links between worlds” (Halbemeyer 2018). Presenter: Michael Wroblewski (Grand Valley State University, Department of Anthropology)

Avá-Guaraní Shamanic Laments and Quotidian Discourses of Deforestation, Development, and Identity: During nocturnal jeroky ‘shamanic dance’ performances throughout twenty months of fieldwork in Canindeyú, Paraguay (2001-2007), Avá-Guaraní shamans punctuated their laments with the urgent refrain, “opá ka’agúy!” ‘the forest is over, ‘opá Avá rekó!’ ‘Avá culture is over.’ This frequently elicited the supportive response of “yáko!” ‘indeed’ from performers. Rates of deforestation in eastern Paraguay are amongst the highest globally, most recently connected to the rise of soya plantations and the associated displacement of Indigenous and campesino communities (Kelley 2012, 2014). In this paper I analyze excerpts of shamanic laments concerning this profound loss in the context of quotidian community discourse concerning diminishing flora and fauna, increasing health concerns due to pesticide exposure and dietary changes, as well as an ongoing concern to categorize everything as either Avá rekó or what many of them associate with karai ‘white’ culture that continues to create socioenvironmental chaos in their lives. Shamanic laments, harangues, and community discourse in formal and informal contexts assuage socioenvironmental anxiety and develop a sense of agency as Avá-Guaraní improvise to adapt to changing circumstances. This case is analytically contextualized within research on wept speech within Lowland South America (Allard 2013; Bartolomé 2000; Beier & Sherzer 2002; Briggs 1992; Chernela 2003; Otaegui 2019, 2020; Urban 1988; Wagley 1977), as well as that on Indigenous communities elsewhere (Feld 1990). It also draws from relevant research on wept speech in other kinds of oppressive social environments (Abu-Lughod 1986; Wilce 1998) to understand how people negotiate trauma discursively. Presenter: Eric

Kelley (University of Massachusetts, Boston,
Department of Anthropology)

Going the Distance: Language Revitalization and Extreme Athletics in the Sierra Mixe : Mixe linguist and activist Yasnaya Aguilar argues that occidental environmentalisms, which treat humanity and nature as separate and the natural world as something to be “saved” or “protected” do not make sense from a Mixe perspective, which views the relationship between people and landscape as mutually beneficial. Their mountains protect them in exchange for constant offerings and ritual activity. In this paper, I examine one Mixe’s community to address some of the challenges of climate change and globalization through the creation of a new annual ritual: the Ultramaratón Sierra Mixe. Now in its fourth year, the community of Totontepec invites runners from near and far to race 100 kilometers along the same footpaths that their ancestors traversed, through conservation zones where endemic flora and endangered species such as the tapir and jaguar can still be seen, and up around the slopes of Anyu Kääts, the sacred peak that has protected Totontepec from invading armies for over a thousand years. Indirectly, but no less importantly for the organizers, the ultramarathon provides an annual opportunity to showcase their Ayöök language revitalization efforts via strategic deployment of signage and race instructions, welcoming rituals and invocations, a day-long series of presentations and performances that all visitors must attend, and a sophisticated social media campaign. Here I draw particularly on Jaffe’s (2018) examination of how place-based forms of authenticity provide the fertile soil for language revitalization projects and are simultaneously amplified by them. Presenter: Daniel Suslak (Indiana University, Bloomington, Department of Anthropology)

3-195

Dreams in Transition: Interview on a book 'Borderland Dreams: The Transnational Lives of Korean Chinese Workers' by June Hee Kwon

10:15 AM - 12:00 PM TMCC - 715 B

Interview - In Person

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

June Hee Kwon

CHAIR:

Ralph Litzinger (Duke University)

PRESENTER:

June Hee Kwon ,Tom Looser (New York University)

DISCUSSANT:

DESCRIPTION:

This interview panel is proposed to have a conversation on June Hee Kwon's newly published book, *Borderland Dreams: The Transnational Lives of Korean Chinese Workers*. The interview explores how Korean Chinese workers' aspirations have continued to transform in response to the rapidly shifting political economy across and beyond East Asia. On the one hand, the conversation frames the particular political and economic context that enabled the massive Korean Chinese transnational migration (the 'Korean Wind') between post-socialist China and the increasingly neoliberal regimes of post-Cold War South Korea. On the other hand, the interview reveals the process and principles in which particular transnational working subjects have been formed and transformed through their body practices, transnational money, and transnational time. The conversation generates theoretical and ethnographic questions on how to write different regimes of dreams in competition (capitalism and socialism, being Chinese and being Korean, being national and being transnational) and the ethnography of borderland as a zone of transition and transformation. The interview panel invites Anne Allison and Ralph Litzinger as chairs. They have worked closely with Kwon for a long time and have witnessed the evolution of her book from the dissertation stage. Thomas Looser, a critical theorist/anthropologist studying the futurity of global capitalism and space-making across East Asia, will re-examine Kwon's book from the point of view of neoliberalism, class theories, and diaspora studies. June Hee Kwon, the book's author, will revisit questions concerning ethnicized bodies, transnational temporality, and the remittance economy. This panel conversation with the four East Asianists will re-examine the intersection of political economy and neoliberalism and competitive dreams (and disappointments) in transition across East Asia. In *Borderland Dreams* June Hee Kwon explores the trajectory of the 'Korean dream' that has fueled the massive migration of Korean Chinese workers from the Korean Autonomous Prefecture of Yanbian in northeast China to South Korea since the early 1990s. Charting the interplay of bodies, money, and time, the ethnography reveals how these migrant workers, in the course pursuing their borderland dreams, are transformed into a transnational ethnicized class. Kwon analyzes the

persistent desire of Korean Chinese to 'leave to live better' at the intersection between the neoliberalizing regimes of post-socialist China and of post-Cold War South Korea. Scrutinizing the tensions and affinities among the Korean Chinese, North and South Koreans, and Han Chinese whose lives intertwine in the borderland, Kwon captures the diverse and multifaceted aspirations of Korean Chinese workers caught between the ascendant Chinese dream and the waning Korean dream.

3-240

Explorations in the Ethnography of Listening (Part 2)

10:15 AM - 12:00 PM

TMCC - 206 D

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

James Slotta (University of Texas at Austin)

CHAIR:

Xochitl Marsilli-Vargas (Emory University), James Slotta (University of Texas at Austin)

PRESENTER:

Janet McIntosh (Brandeis University, Department of Anthropology), Laura Kunreuther (Bard College, Anthropology Program), Jack Sidnell (University of Toronto, Department of Anthropology), Katlyn Anderson, Elise Berman (University of North Carolina, Charlotte, Department of Anthropology), Georgia Ennis (Western Carolina University, Department of Anthropology and Sociology), Jacqueline Messing (University of Maryland, College Park, Department of Anthropology)

DISCUSSANT:

Summerson Carr (University of Chicago)

DESCRIPTION:

Over the past two decades, listening has emerged as an activity of interest across the humanities and social sciences. Sound studies and the sensory humanities have explored the auditory experience of everything from music and noise to the sound of machines and the human body, revealing the rich and vital role that the sense of listening plays in diverse times and traditions (Erlmann 2004; Feld 1982; Howes 2005; Lipari 2014; Le Breton 2017 [2006]; Kramer 2018). Political theorists and anthropologists have highlighted the essential role

that listening plays in religious, political, and cultural contexts ranging from the liberal democratic public sphere to the Islamic Revival to everyday practices of psychotherapy (Hirschkind 2006; Inoue 2006; Rosa 2015; Marsill-Vargas 2022; Slotta 2023;). And scholars of media, communication, and rhetoric have turned their attention to the work of listening as an essential, though too often overlooked facet of both mass and interpersonal communication (Lacey 2013, Ratcliff 2005). Yet, among linguistic anthropologists, who have long explored how linguistic practices create and transform contexts, the idea that listening has the potential of generating and sustaining social relations has curiously not been explored in a similarly concerted fashion. In this panel, we bring together linguistic anthropologists and anthropologists of listening to consider what an ethnography of listening might look like. For over 50 years linguistic anthropologists have promoted a vision of speaking as a culturally-informed social activity in which people perform their identities, build and transform their social worlds, and even construct reality itself. But what about listening? What sort of social activities are performed in the act of listening? What sort of cultures and ideologies inform practices of listening? What role do listeners play in shaping the meaning and effects of communicative events? We consider what the analytics of linguistic anthropology, so fruitfully developed for the study of speech, have to offer the study of listening. And at the same time, we consider how centering the activity of listening challenges the field's understandings of language and communication, providing new insights into classic concerns as well as new avenues for future research.

Paradoxes of Listening in the United States Marine Corps: Scholars have provocatively explored the necropolitical soundscapes of war (see, e.g., Daughtry 2015), but not those of military training. A quintessential element of Marine Corps basic training is the experience of being yelled at by Drill Instructors. While yelling might seem to use amplitude to enforce listening, close reading of these speech acts and their metapragmatic ideologies suggest a paradoxical picture. First, even as Drill Instructors adjure recruits to have "Ears, open! Eyeballs, click!" (to listen and watch with hyper-attunement, in other words), some orders in the early weeks of training are deliberately confusing, even unintelligible, designed to create consternation, dependence, and herd behavior. Recruits strain but cannot grasp the logic, a gap between listening and understanding that suggests a broader evasion: some military orders aspire to secure abject obedience while

bypassing evaluation. A second paradox concerns the contradictory metapragmatics of insults. Drill Instructors repeatedly instruct recruits to “listen up,” yet repeated exposure to Drill Instructors’ insults is expected to “thicken recruits’ skin” to the point that these semiotic projectiles can “roll off.” Could this semiotic ideology of insensitivity be a model for the Marine’s selective empathic engagement with the world, in which necropolitically relevant orders are the “signal” but signs that risk emotionally overwhelming the service member must be relegated to “noise”? As the military teaches the recruit these paradoxes of listening, they help shape the state’s ideal necropolitical agent. Presenter: Janet McIntosh (Brandeis University, Department of Anthropology)

Interpreters as Earwitnesses: the condition of listening in the humanitarian field: This paper focuses on the experience of interpreters employed by humanitarian agencies in Kakuma Refugee Camp. Interpreters rely intensely on their ears and listening in order to accurately perform their work: they are, in this sense, ‘earwitnesses’. The concept of earwitness, coined originally by the composer Murray Schafer, draws our attention to active listening and centrality of sound in the work of interpreting that helps produce global subjects. Viewing interpreters as earwitnesses also highlights the ‘condition of listening’ (Burghart 1996) that recognizes and transforms both speaker and listener. In Kakuma Refugee Camp, interpreters are a double kind of witness. Employed as ‘incentive workers’, a special category of labor in the Camp, all interpreters working for humanitarian agencies are also refugees. As interpreters, they wittingly or unwittingly bear witness to the suffering and desires of other community members through their eyes and, professionally, through their ears. As refugees, they listen to and recount stories that may bear strong resemblance their own past experiences. Interpreters use of ‘I’ to refer exclusively to the voice of others makes their form of witnessing distinct from other humanitarian witnesses insofar as they have no testimony. In this paper, I analyze two instances where the interpreter as earwitness becomes a problem. In the first, the interpreter is positioned as an unratified ‘overhearer’ who nevertheless must interpret for the humanitarian officer the doubt harbored against her. In the second, we see how careful listening and then interpreting what one has heard affects the earwitness’ body and emotional well-being. Both instances are drawn from a fictional film called *The Bridge*, produced by a group of Kakuma interpreters, and based on our collaborative ethnographic research. *The Bridge*, I suggest, is a form

of testimony of the earwitness interpreters. Presenter: Laura Kunreuther (Bard College, Anthropology Program)

Hearing error, transgression and affectation: A history of expert listening in 20th century Vietnam: Early in the second decade of the 20th century, journalist Nguyễn Văn Vĩnh established a column in the *Indochina Journal* titled ‘Observing our defects’. Installments took the form of short, critical essays on topics such as, “The tendency to weakness in communication,” “The habit of lying” and “Laughing at everything.” In the last of these, he wrote, “People praise us, we laugh. People criticize us, we laugh. It’s good, haha. It’s bad, also haha.” Drawing on recent work in linguistic anthropology (Inoue 2006, Rosa 2019, Slotta 2014, 2015, Marsilli-Vargas 2022, Connor 2023), I move to trace a genealogy of such expert genres of listening through to the middle of the 20th century when, with the French ousted from the North, Ho Chi Minh listened to communist cadres, finding in their speech many instances of error as well as forms of affectation which threatened to undermine attempts to establish phatic connection with peasants and persuade them to join the revolutionary cause. The solution, HCM suggests, will involve cadres listening to the masses, not as experts discerning error but, rather, as students prepared to learn. Meanwhile, in Saigon, Phạm Cao Tùng published a book of etiquette titled *The Polite Person* in which he described errors of speaking he heard frequently among members of an aspiring bourgeoisie. While such genres of expert listening serve the interests of power in several different ways, my focus in this presentation is on their contribution to an on-going project of language and social reform. Presenter: Jack Sidnell (University of Toronto, Department of Anthropology)

Eye Gaze and its Meaning: Marshallese students and Intercultural conflicts in U.S. Schools: Coauthor: Rebecca Roeder Indices of attention vary widely across cultural groups. In schooling and professional contexts in much of the U.S., one central index of attention is eye gaze, reflecting research on multimodal discourse analysis which has found that eye gaze can be an important indicator of level of attention (e.g., Norris, 2019). However, in Marshallese communities in the U.S. as well as the Marshall Islands, eye gaze often functions as an index of disrespect rather than attention. This paper analyzes eye-gaze data from research with Marshallese students in the U.S. We examine emphases on eye gaze in schools and specifically in the English Language Development curriculum, Marshallese views and interpretations of eye gaze, multimodal video data on Marshallese indices of attention across varying contexts,

and ideological disagreements about the meaning of eye-gaze across different participants in the community. These data reveal that eye gaze and its meaning has become a source of intercultural conflict between the Marshallese and educational communities. Our analysis shows that culturally sustaining pedagogy reforms need to engage with and consider the impact of listening practices and indices of attention—multimodal signs that often lie below the level of awareness. Presenter: Katlyn Anderson

Listening Acquisition: Mediating Language Reclamation in the Ecuadorian Amazon: In the Ecuadorian Amazon, radio media plays an important role in language reclamation as it extends and amplifies existing ideas about the importance of listening in language acquisition. The Kichwa verb *uyana* has several related meanings, which include the ideas of “to hear” and “to listen,” as well as “to understand” and “to obey.” Children and adolescents demonstrate competence by listening and responding appropriately to caregivers. Elders in Napo increasingly claim that children do not “want” Kichwa and that they do not listen. Yet, many also expect that speech in Kichwa will eventually emerge, as it has been “planted” within children through listening. Media production and cultural

performance have increasingly become a manner of transmitting Kichwa language and interaction to listeners, new and old. Kichwa listening practices suggest that listening is fundamental to sociolinguistic socialization and competence in Napo. Prior research in settings of language shift and revitalization (Nevins 2004; Meek 2007) has shown that pedagogical practices emphasizing listening can, ironically, constrain opportunities for children to utilize language and contribute to further language shift. However, Kichwa ideologies of listening acquisition also allow for expanded understandings of what counts as success in language reclamation, beyond a common focus on youth and child learning. In a Kichwa theory of language, socialization is an ongoing process, in which passive listeners may become active participants, even as adults. This talk explores the acquisition of listening as an integral modality of communication competence and the role of aural media in extending such practices. Presenter: Georgia Ennis (Western Carolina University, Department of Anthropology and Sociology)

Describing listeners and understanders of multiple languages in Mexico and the U.S.: In this paper I analyze interview data and observations of listening and understanding Nahuatl in Tlaxcala, Mexico among speakers of (primarily) Spanish in Nahuatl-heritage communities. This analysis is informed by research on Latinx bilingualism in Arizona, and my experience growing up as a hearer of multiple family languages in the U.S. What does it mean to be a listener/hearer/understander of a Native language in a bilingual postcolonial country? How can attention to so-called passive listeners of Nahuatl, often labelled as “non-speakers,” inform understanding of language shift? The dominant focus of language shift research has been on robust speakers, and characterizing types of speakers, i.e. shift continua (Fishman 2001), semi-speaker (Dorian 1977), and quasi-speaker descriptions (Flores Farfán 1999). While helpful in fine-tuning the description of speakers, these analyses eclipse a role for “hearers,” “listeners” or “understanders” of languages in their environs. If language socialization is largely accomplished implicitly (Ochs and Schieffelin 2017), what would happen if we centered attention on speaker reception of this implicitness in postcolonial Native language shift situations where ideological multiplicity (Messing 2007) abounds? Notable examples include young “understanders” laughing unexpectedly at the punchline of a joke, and language reactivators who seek to fortify their use of the language. Theorizing listening (Marsilli-Vargas 2014) has important implications for understanding how language shift operates from a new perspective in which the focus is on listening subjects in

postcolonial raciolinguistic contexts such as this one.

Feminist Research and Pedagogy: The CASCA Women's Network Roundtable, 2023

10:15 AM - 12:00 PM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Pauline Aucoin (University of Ottawa)

CHAIR:

Nicola Mooney ,Helen Vallianatos (University of Alberta)

PRESENTER:

Tracey Heatherington (University of British Columbia),Robin Whitaker ,Heather Howard (Michigan State University, Department of Anthropology)

DISCUSSANT:

Heather Howard (Michigan State University, Department of Anthropology),Larisa Kurtovic (University of Ottawa)

DESCRIPTION:

The CASCA Women's Network Roundtable provides an opportunity to discuss current research and pedagogical approaches, as well as raise and address urgent issues in contemporary Feminist Anthropology. Tracy Heatherington's (UBC) research explores critical pedagogy, feminist engagement in political ecology, and diversity conservation in Sardinia, Northern Ireland and Arctic Europe. Robin Whitaker's (MUN) research examines feminist politics regarding peace making and abortion governance in Ireland and Newfoundland. The focus of Larisa Kurtovic's (UO) research is on activist politics, creative forms of political subversion, and transformations in post-socialist Bosnia. Helen Vallianatos's (UA) has addressed issues of gender, food and health in research on immigrant women's food choices, food, identity and health among Ghanaian and Bangladeshi women, health literacy among immigrant and refugee youth, and food choices during pregnancy in India. Current interests include women and leadership, and pedagogical practices that inform leaders in effective research and administrative teams. Heather Howard's (MSU) research addresses equitable

access to healthcare for Indigenous women in the Great Lakes region of North America, and women's art as a means to building and sharing community knowledge.

DESCRIPTION:

A select few U.S. cities and/or states (e.g. Denver, Oregon, Seattle) have recently elected to decriminalize the use of psilocybin and are moving towards mainstreaming psychedelic assisted treatment. Political conversations about decriminalization are happening throughout the U.S. and Canada. In this panel, we explore the transition from the decriminalization of psychedelics, as they become medicalized, professionalized, and capitalized, considering effects on caregivers, health providers, and communities at large. Individual papers explore discourses and movements supporting professionalization that subsequently elevate a biopolitics of care and marginalize non-medical uses of these substances, considering intersectional conversations around race, class, gender and indigeneity. More specifically, papers raise issues of insurance exclusion and its effects on class divides, complex processes of legalization in Colorado, conceptualizations of post-traumatic stress disorder, and the role of media in crafting messages.

Treatment Barriers at the Psychedelic Frontier: How Insurance Exclusion Perpetuates Inequity and Exposes the Mental Health Divide Between Rich and Poor: Psychedelic-assisted therapy and medically prescribed

psychedelics are gaining popularity as an alternative or additive treatment option to traditional psychotherapy and pharmaceuticals for mental health conditions. Research and anecdotal evidence show that psychedelics like psilocybin, MDMA, and ketamine can have positive effects on mental health conditions such as depression, anxiety, PTSD, and addiction, which can be even more effective when combined with integrative talk therapy. As the substances become decriminalized and legalized across the country, this opens the door for more patients to gain access to various potentially life-changing treatment options. The genesis of this project was not rooted in academia, but rather in a personal experience that began in the summer of 2022. At that time, both my neurologist and therapist suggested that I explore the potential benefits of psychedelic-assisted therapy to treat my Complex PTSD and chronic pain from Multiple Sclerosis. Since then, I have invested countless hours researching different treatment centers, navigating insurance coverage, and consulting with healthcare providers. As a patient who has experienced the positive impact of psychedelic treatment and integrative therapy firsthand, I have become a vocal advocate for this form of treatment and frequently assist others in finding insurance coverage. Ultimately, my goal is to examine the critical role that insurance carriers play in enabling or impeding access to potentially life-saving treatments and perpetuating inequity in health care. Despite the promising benefits of psychedelic-assisted therapy, it remains inaccessible to many due to the high cost of treatment. A single session can cost over \$1500 and is often not covered by insurance. While some clinics offer lower-cost psychedelic treatment without psychotherapist-assisted integration, Medicare and Medicaid do not cover off-label drug usage or experimental treatments, and many private insurance carriers follow suit. Although some individuals may perceive psychedelic therapy as a quick fix, treatment centers typically recommend three to six initial sessions in a short period of time, followed by 'booster treatments' monthly or as needed to maintain long-term effects. To address the high cost, many clinics offer financing or recommend options like CareCredit, perpetuating the billion-dollar industry of medical debt. While high-end clinics that cater to wealthy clients are popping up offering boutique psychedelic treatment options, other companies are pitching themselves as more affordable treatment options, including mail order oral ketamine or trip sitter services where patients find their own psilocybin, all of which bring up regulatory and safety concerns. Currently, none of these treatment options are covered by insurance and still cost hundreds or thousands of dollars. Insurance coverage for this

type of therapy is limited and often non-existent and the high costs for psychedelic-assisted therapy raise concerns that this form of treatment may only be accessible to those who are affluent, creating a significant gap in access between those who can afford treatment and those who cannot, resulting in 'unintentional' harm. While disparities in mental health treatment options between different socioeconomic classes are not new, they are particularly evident in the new frontiers of psychedelic-assisted therapy. Presenter: Tiffany-Ashton Gatsby (University of Washington)

Psychedelic Cynic: The Passage of the Colorado Natural Medicine Health Act: For the last two decades, the state of Colorado has contributed significantly to the professionalizing and formalizing of psychoactive substance access and consumption. First in 2000 it established a medical marijuana program, and again in 2014 it became one of the first states to implement an adult-use marijuana program. Then in 2019, the City of Denver became the first US city to decriminalize psilocybin possession and consumption. More recently, the state of Colorado passed Proposition 122, the Colorado Natural Medicine and Health Act, in November 2022, effectively legalizing the use of many culturally significant psychoactive plants and fungi, including psilocybin. This paper traces the legal history of the professionalization and formalizing of psychoactive substance consumption for both medical and adult-use purposes in Colorado. In so doing, it traces the fraught and complicated process of regulating and legalizing once illicit psychoactive substances. In particular, it explores the complicated ways that race, class, gender, and indigeneity impact discussions of psychoactive substances and their legalization, by documenting the ways that the popular acceptance of these substances is shaped by a process of professionalization of these substances through the 'successful' efforts to neutralize the various long held stigmas attached to these substances. Presenter: Santiago Guerra

Psychedelics and post-traumatic stress disorder: The roles of biopolitics and neoliberal capitalism in promoting novel treatments: In the wake of Canada legalizing cannabis in 2018 there has been a growing call for decriminalization and legalization of a variety of other substances, including psychedelics such as lysergic acid diethylamide (LSD) and 3,4-methylenedioxymethamphetamine (MDMA). These two chemical psychedelics, along with traditional organic substances such as psilocybin and ayahuasca, have started to be promoted as potential treatments for unremittent post-traumatic stress disorder (PTSD). The

way that these psychedelics are being promoted as potential treatments differs between three different sectors: (1) psychiatrists researching or interested in the clinical utility of psychedelics; (2) unlicensed treatment-providers who have a financial interest; and (3) individuals suffering from psychological distress who have not found relief through standard first-line pharmacotherapy or psychotherapy. Drawing from a near-decade long ethnographic project with veterans of the Canadian Armed Forces, this paper explores how each sector understands and promotes the use of psychedelics in the treatment of PTSD, arguing that an ethic of patient-centered care may be secondary to neoliberal capitalist incentives that reinforce a biopolitics of care. This paper will also raise questions regarding colonialist appropriation of traditional medicines (ayahuasca and psilocybin), particularly in how these medicines are being offered as treatments without consideration of the role that Indigenous cultures play in how these medicines are experienced. Presenter: Walter Callaghan (University of Toronto, Department of Anthropology)

Consciousness as currency in the transitions of psilocybin as a Western medicine: The 'psychedelic renaissance' refers to the renewed interest of Western biomedicine in the therapeutic applications of hallucinogenic substances / drugs to treat mental illness. Recent clinical trials using LSD (lysergic acid diethylamide), mescaline / peyote, ketamine, DMT – dimethyltryptamine, 5-MeO-DMT, Ayahuasca, Ibogaine, and MDMA show promise treating a wide variety of conditions. But this renaissance also involves the use of these substances for non-medical purposes. Intentions such as gaining personal insight, spiritual enlightenment, cosmic merging, communing with higher powers, and cognitive and/or creative enhancement connect hallucinogens with the history that once outlawed them. To support the biomedical legitimacy of hallucinogens as medicine, science must marginalize non-medical uses, especially in the context of this use currently being illegal. This paper explores how psilocybin's ability to alter consciousness is being leveraged and reinvented as currency in its transition to a medicine. Data are presented from an ongoing study investigating how news media is crafting messages about psilocybin, and from interviews with people, and alternative medical practitioners, using psilocybin. Presenter: Lee Hoffer (Case Western Reserve University)

DESCRIPTION:

The United Nations is committed to enforcing zero tolerance of Female Genital Mutilation (FGM) as a violation of women's rights, yet increasing numbers of women and girls in high-income countries undergo labiaplasty and other forms of Female Genital Cosmetic Surgery (FGCS), which are not considered human rights violations. Many high prevalence FGM countries are seeing a trend towards its medicalization. Moreover, surgical intervention such as hymenoplasty, labiaplasty and clitoral reconstruction are increasingly available both in Africa and among the diaspora. While countries in the global north (+Australia) estimate numbers at risk of Female Genital 'Mutilation' and are developing strategies to prevent, identify and prosecute new cases of FGM, the economy of FGCS is booming. The UN acknowledges the controversial nature of this medicalized turn. Yet, cosmetic interventions are not subject to debate, as the goal is abandonment of 'mutilation' and not modification. It has been argued that the current socio-legal framework is inconsistent, unjust, even racist – those who can pay for genital modifications get away with them, whereas those who perform them for customary reasons are liable to prosecution. We are interested in the choices that women who desire genital modification make within these socio-legal frameworks to bypass humiliation,

stigma or prosecution. How do bodies transition from 'mutilated' to 'repaired', or from 'imperfect' or 'impure' to 'enhanced', 'beautiful' or 'intact'? The panel reflects on the cultural fantasies framing women's choices when they desire to modify their vulvas and how they position themselves within the larger normative or socio-legal framework. In what ways are women's choices regarding their vulvas deviant to socio-cultural norms or family expectations? Is the modification lived as a bold victory over tradition or as resolution of a presumed physical deformity? Is it a response to an injustice subjected to without consent or a personal matter, silenced and kept secret from others by whom they feel judged as impure, incomplete, unfeminine, or disobedient? Key issues to be debated are genital autonomy, consent, agency, social norms and gender violence as these frame women's choices within larger socio-legal systems.

"The doctor said I was intact. How can that be? I remember my excision like it was yesterday!": Growing numbers of women who have undergone female genital cutting in their country of origin turn towards surgical procedures to have their clitoris repaired. The motivation is to become 'whole' again and to repair the 'mutilation'. Literature has shown that for many women living with female genital cutting in the EU, feeling 'like a woman' is associated with being uncut or having undergone clitoral reconstructive surgery. Despite limited evidence on the safety of the surgical intervention, the surgery is often perceived as the ultimate remedy for the 'missing' clitoris. Based on anthropological research among patients who requested surgery at the Brussels specialist clinic between 2017 and 2020, this paper reflects on cases of women who find out after examination that they are intact, yet they have believed that they had undergone FGC all their lives. I argue that for intact women who believe that they are cut, the 'sexual mutilation' is embodied through a combination of trauma, memories of pain, shock, anger, or the belief that they are not able to experience pleasure because they are cut. Such beliefs are nourished by predominant discourses of cut women as sexually mutilated. Following Butler, this presentation will elicit how discursive practices on the physiological sex of a woman can shape her gender identity as a complete or incomplete person. Examples from in-depth interviews and participant observation during reception appointments, gynecological consultations, sexology and psychotherapy sessions will nourish theoretical reflections on gender, trauma and medicalisation. Presenter: Sarah O'Neill

Bodily Integrity and the Myth of Normal: While the World Health Organization defines female genital mutilation (FGM) as comprising "all procedures that involve partial or total removal of the external female genitalia, or other injury to the female genital organs for non-medical reasons" (WHO January 2023), comparable genital surgeries performed in high income countries by biomedically trained physicians for cosmetic (non-medical) purposes are not conventionally labelled FGM. This paper struggles with that paradox and others stemming from it. Once largely confined to non-Western racialized populations and their diasporas, female genital surgeries now constitute a rapidly growing business in well-off mainly white and Asian societies. One such operation, labiaplasty, fits squarely within WHO guidelines for FGM yet does not attract international intervention. A major concern of the WHO is preserving bodily integrity, especially among female children for whom the customary modification of their external genitalia is deemed to violate their human rights. Yet according to a recent study (Luchristt et al 2022) – and in clear contrast to practicing physicians' self-reports – roughly twenty per cent of labiaplasties undertaken in the U.S. between 2016 and 2019 were performed on minors. In both Australia and the U.S., medical practitioners have been taken to court over performing customary clitoral nicking among girls of a diasporic religious community. Why these double standards? What are we to make of the recent transitions in Western standards of care? At stake here are questions of genital normality and freedom of choice, presumptive heterosexuality, sex/gender binarism, and race. Presenter: Janice Boddy

What's "natural," desirable, moral, sensual, and legal for a vulva? Transitions in countries: The genitals of girls and women are subject to extensive normative pressures, shaped by cultural ideals and enforced by stigma and mockery, religious expectations and moral codes, laws, and punishments. Modifications and enhancements of the labia, clitoris, prepuce, vagina, and hymen are pursued willingly by mothers and daughters out of desires for acceptance, love, respect, and successful marriages. The international movement against "FGM," though, seeks criminalization and eradication of most forms of modifications by 2030, including minimal procedures. Nevertheless, medicalized Female Genital Cosmetic Surgeries (FGCS) are generally accepted and have been growing in popularity internationally, practiced even on girls below 18. Some types of medical care for teens and adult women living with the after-effects of childhood genital modification procedures is also allowed while others are

not; countries are inconsistent about their laws, practices, and availability. In this presentation, based on data from ethnographic work in Sudan over four decades and published examples from the Global North on immigrant and non-immigrant attitudes and practices, the author explores transitions in traditions and popular trends in vulva aesthetics and modifications, circumcisers' innovative styles, medical deinfibulation and clitoral reconstructive surgeries, and the market for cosmetic surgeries. The need for more research on aging and life course transitions in relation to genital modifications, including FGCS, is highlighted: while FGCS favors removing parts of outer genitalia for mental health, aesthetics, or comfort, the long-term effects are not known; in other traditions reinfibulation is practiced on mature genitalia for "rejuvenation" or for old-age propriety. Presenter: Ellen Gruenbaum (Purdue University)

'Let's focus on this one thing': The logic and pragmatism of criminalizing medicalized female genital cutting (FGM/C) in Washington State: Bettina Shell-Duncan University of Washington On April 20th, 2023 a Washington State bill entitled 'Concerning female genital mutilation/cutting (FGM/C)' was signed into law. In comparison to the 40 other U.S. states that already adopted FGM/C laws, this criminal action is very narrow: it outlaws medical providers from providing non-medically necessary genital cutting on females under age 18. As a member of the Washington Coalition to End FGM/C, I had the opportunity to interact with members who include survivors who from 6 different countries, activists, local and national organizations focused on immigrants and child protection, and legal advocates. We worked in tandem with Washington State lawmakers to draft the bill and pass it into law. As a researcher who has long studied efforts to end FGM/C and been critical of aspects of legal reform strategies, my participation in this coalition was a surprise to many. But leaders of this coalition, all women who identify as survivors of FGM/C, asked me to provide estimates of local FGM/C prevalence and examples where legislative reform has produced positive and negative change, and I agreed. I was privy to planning sessions with coalition members, legislators and their staff. At two junctures there were discussions of whether to extend a ban on medicalized FGM/C on minors to other forms of genital cutting: first to apply it to male circumcision, and second to apply it to elective female genital cosmetic surgeries on minors. Numerous commentators have interrogated the double standard involved in restricting FGM/C while not simultaneously addressing other forms of elective pediatric genital

cutting, an issue that coalition members and lawmakers understood. But the consensus reached was to focus on medicalized FGM/C in isolation, and instead build legal provisions aimed at improving care for women living with FGM/C and their families, mandating outreach and education initiatives to prevent FGM/C, and creating a private right of action for victims of FGM/C. I will show that the logic of this legal reform strategy is to avert harming and compounding discrimination against FGM/C affected communities while providing needed resources and support. Hence, this measure may provide an opportunity to shift legal reform from a punitive zero tolerance tool to a compassionate intervention that may create collaborations with FGM/C affected communities to support survivors and prevent the practice. Presenter: Bettina Shell-Duncan (University of Washington, Department of Anthropology)

Sexual Ideals are Changing in Egypt: Reflections on the evolving narratives of genital modification.: Since the 1990s, Egyptian politicians and law makers have availed the resources to make female genital mutilation/cutting a costly crime. Research on FGM/C has become focused on monitoring the implementation of harsh penalties. The conversations on FGM/C are somewhat contained in a terrain of compliance and dissonance research. The "post FGM world" in which this one 'tool of control' is challenged leaves many other aspects of heteronormative sexuality understudied. The focus on FGM as a crime committed by criminals in unregulated or rogue commercial medical settings or by local practitioners who expose their clients to infection and danger has occluded an understanding of the ways by which sexuality and bodies are enhanced, made desirable, protected and controlled through therapies, surgeries, and the media. This paper is based on field based observations and interviews and conducted in 2021-2 in Cairo with 'mediators' of sexual health, rights and knowledge such as clinicians performing reconstructive surgeries, feminist activists lobbying for health and justice, sexologists, coptic and muslim religious scholars and OB/GYN specialists. I discuss the "post-FGM narrative" about bodily autonomy, pleasure in marriage and the traumas of frustrated desire. Whereas FGM/C has been banned, the perceived need for control, the confusions about desire and docility and the link between physical and psychosocial sexual health continue in 'secret' conversation on women's sexual rights and how to secure them. The values that inform the mediation processes are still steeped in contested territories whereby patriarchal control,

commercial interests, and personal desires and imaginations vie and tussle. Presenter: Hania Sholkamy

Sexual scripts and the intention to use reparative vulvar surgeries: In high-income countries, Female Genital Cutting (FGC) is predominantly positioned within the “mutilation” discourse. As a result, women subjected to FGC are offered -and encouraged to utilize- vulvar surgeries to treat or prevent health complications and “repair” their “mutilated” bodies. In this presentation, I depict findings from a qualitative study among Sudanese and Somali women in Norway who have been subjected to FGC, where four distinct sets of social norms and expectations related to premarital and marital sexual conduct (sexual scripts) seem to influence the women’s choices regarding the utilization of “reparative” vulvar surgeries. These sexual scripts ensue from an interplay between norms in countries of origin, norms in Norway, and the expectations and attitudes of husbands and partners. In turn, this interplay seems to have led to a gradual change in sexual norms among the Sudanese participants from traditional norms (e.g., premarital chastity, marital sexual availability, and passive sexual behavior) to transitional ones (e.g., premarital chastity, marital sexual availability, yet active sexual behavior) and finally to gender equality norms (e.g., the irrelevance of premarital chastity and taking control over own sexuality). In contrast, the sexual scripts among the Somalis were more dichotomous, with the total support of the traditional norms among older participants yet the complete rejection of these norms and adoption of gender equality among many younger participants. DESCRIPTION:

In the field of anthropology, the prevalence of sexual and gendered violence is gaining increasing and overdue attention in scholarly discourses (see Anderson and Naidu, 2022; Davids, 2020; List, 2017; Morrison, Ellsberg, and Bott, 2007; Sax et al. 2022). In different world settings, including but not limited to, South Africa, Germany, Britain, Spain, Italy, Poland, Canada, the United States, and Mexico, gendered violence and sexual assault is persistent in professional and educational settings - and the reverberations of these violences cause students and professors to not only experience (re)victimization but also non-disclosure practices among survivors (Anderson and Naidu, 2022; List 2017; Sax and Grenon, 2020). Structural and institutional transitions that disrupt this violence will be necessary for the discipline to be relevant in the 21st century. In her recent book *Complaint!* (2021), feminist scholar Sara Ahmed follows the institutional lives of complaints related to violence experienced within universities. She contends that tracing what she calls a 'complaint biography helps us to think of the life of a complaint in relation to the life of a person or group of people...[it is] not simply what happens to a complaint, a story of how a complaint comes about, where it goes, what it goes, how things end up;...To think of a complaint biography is to recognize that a complaint, being lodged somewhere [or not], starts somewhere else' (20). In her book, Ahmed shows how following the lives and deaths of complaints helps cast light on the reproduction of racial, classist, and gendered structures and violences within academic institutions. Complaints, she argues, are thus a form of feminist pedagogy and collective action that has potential to disrupt these structures of violence. Following Ahmed's articulation of complaints as pedagogy and collective action, this panel focuses on complaints and responses to gendered and sexual violence in anthropology. Here we discuss violence in terms of complaints lodged (or not) to focus on immediate, practical actions, rather than purely theoretical discourse. We ask: What are the social lives of complaints in response to gendered and sexual violence in anthropology? What can responses to violence tell us about structures of inequality in the discipline? How do disclosure practices enhance

preventive and healing practices? Further, how might responses to violence illuminate the transformations needed to disrupt racial, classist, and gendered structures within the discipline? We invite papers dealing with topics including narratives of navigating institutional complaints processes (or choosing not to); building policies with accountability mechanisms within institutions; and/or other responses to gendered and sexual violence within the discipline of anthropology.

Complaints and gendered sexual violence in ethnographic research in northern Canada: In her recent work, Sara Ahmed (2021) shows how complaints processes illuminate the political structures of power in academic institutions. Based on auto-ethnography and interviews with social scientists working in northern regions of Canada, this paper analyzes the process of filing complaints or taking legal action in response to gendered sexual violence in both academic and independent research contexts. Examining case studies of formal responses to gendered sexual violence experienced during academic and non-academic research, I compare how complaints travel through these two contexts to unpack the structural conditions that allow this violence to propagate. The northern Canadian context in which participants work, often characterized by remoteness and masculinist extractive industries, plays a role in how violence is experienced and navigated in its aftermath. This paper shows that while the structures of academic and non-academic institutions differ, academic training upholds informal narratives about expected hardships of research that put researchers at risk in both contexts. I also argue that the opportunities for recourse available for researchers who experience violence during their work are limited – which further perpetuates violence. The paper concludes with reflections on the potential for structural change and improved training for graduate students. Presenter: Tara Joly (University of Victoria, Department of Anthropology)

A History of Violence: An Ethnographic Study of Family Violence in Lima: The Peruvian state uses the term family violence as a catchall term for various forms of intersecting violence that manifest inside private and public spaces between intimate partners and various generations within an extended kin network. It often spills beyond consanguinity and draws in fictive kin and non-kin as a social phenomenon. Still, it is taboo to speak of one's intimate encounter with violence. Furthermore, state reporting often casts actors into simplistic categories of victim and offender, often occluding the nuanced intergenerational nature of interlocking structures of violence. Closer inspection of

violent events reveals unequal gender roles and the expectations that accompany and create a justification for restoring the status quo of unequal gender roles through further acts of violence and interventions that fail to resolve or heal all involved. Social institutions like schools, the judicial system, the health care system, and the family all fail to adequately comprehend how their interventions are informed by the same intersecting attitudes, preconceptions, and behaviours that play out in more intimate violent encounters. In short, when one deviates from the mandates of unequal social relationships and their attendant role prescriptions, shame and fear based punishment are enacted to recover ruptures and legitimate institutional violence at all levels of interaction in differing contexts. Despite the omnipresent representative influences that mischaracterize the violence, or reinforce it; there are local and extra-local efforts that provide small glimmers of hope into how we might go about dismantling these ever-changing, persistent systems and bring about a societal transformation. Two key features can be found in these efforts, individual awareness of one's privilege, or place in these systems coupled with transformative action; and a prolonged, intensive, transformative approach that focuses on the power of love and compassion to heal. Presenter: Brandon Rouleau
Sexist discourse: discrimination beyond words, grammatical gender and morphemes: The socio-semiotic perspective of discourse analysis considers, as Bronislaw Malinowski stated (1960), the types of interactional situations intertwine in an "upward" manner with the context of culture in which they succeed (Halliday, 2001, p. 89; Halliday & Matthiessen, 1999, p. 97). In other words, the discursive practice is and reveals the social practice. I concur with this, and my paper addresses precisely the patriarchal culture entwined within the Latin American context of denigrating, minimizing and relegating women to private spaces, as well as the use of sexist discourse practices. I propose a discourse analysis of popular linguistic constructions or the colloquial language used in Mexico. I intend to locate the construction and systematic function of the discourses that contribute to the enforcement of patriarchy in the construction of social spaces. From my first revision of these sexist discourse practices, I propose a critique of the use of inclusive language, which has been encouraged by political and social leaders. My point of departure includes the use of a comprehensive critique which places sexism at the level of structures of meaning, morphemes or isolated words in gender (e.g., masculine or feminine), and my second component is to look at the complex structural levels of phrase configuration,

which represent propositions for perpetuating sexist discourses. References Halliday, M. A. K. (2001). El lenguaje como semiótica social. La interpretación social del lenguaje y del significado. (S. DISCUSSANT:

Emily Vasquez, Laura Murray

DESCRIPTION:

Beginning in January 2023, the US National Institutes of Health (a major funder of global health research) will require researchers to submit a Data Management and Sharing Plan with all new grant applications. Similar policies seeking to govern data collection and stewardship are being enacted by the Canadian Institutes of Health Research, the European Commission and other leading public and philanthropic funders of global health research. Data collection, analytics, access, and ownership are also critical issues linked to the career advancement of global health scholars and practitioners, and ancillary data infrastructure economies have emerged in response to our expanding data needs. In addition to data collected directly by and for researchers, an increasing amount of data is being

generated by the adoption of electronic medical records systems across the world, while other, non-medical data is repurposed for medical research on an unprecedented scale. Not only is data central to how health is understood and intervened upon worldwide, but how we collect and store these data, who can access, analyze and interpret these data, and the rights of the individuals and communities that make up our data sets has become a central tension across global health. This roundtable seeks to examine mainstream global health data governance and management infrastructures critically and anthropologically to explore creative data stewardship approaches that foreground representation, self-determination, justice and solidarity. Panelist discussions will explicitly engage with issues of power, equity, and inclusion by querying how: Data infrastructures, ownership, and the ongoing practices intersect with legacies of colonialism and white supremacy; What counts as data, artistic and visual ethnographic methods as possibilities for new horizons in rights, ownership, production, interpretation and dissemination of knowledge; Lessons can be learned from the application of ethical frameworks, including but not limited to ethics boards' capacity to assess adequacy of data governance and management infrastructures, implications for country-level ethics guidance; Lessons can be learned from Indigenous data sovereignty to re-imagine data infrastructures and data justice; and What are some key learnings from Black, Latinx, and Indigenous Feminist data practices about how data systems are repurposed to center self-determination.

DISCUSSANT:

Deepa Das Acevedo ,Sindiso MnisiWeeks (University of Massachusetts, Amherst)

DESCRIPTION:

This panel brings together papers on India, South Africa, and beyond that open up an ethnographic examination of the ways in which movements of ordinary and marginalized individuals and groups not only reshape but even remake national laws and politics from the ground up. In their papers, the authors explore a variety of topics – from culture to gender, to poverty, to religion – all of which constitute sites for contestation over what the law is and what the law should be. Through these individual papers, we offer a multifaceted exploration of the afterlives of colonialism and imperialism as witnessed, experienced, and embodied by the most excluded segments of society in these countries in ongoing transition. We thus investigate, ethnographically, the nature of state-craft, state power, and constitution-making, and their impacts, 'from the social periphery of the global periphery' (Tortosa, n.d.; Acosta, 2010; Escobar, 2011).

The Battle for Sabarimala: Fluidity and Flux in the Debate Over Women's Entry: This paper draws together moments from the dispute over women's access to the Sabarimala temple in Kerala, India, to show how concepts central to the dispute remained fluid and unstable throughout. I collect three moments from the dispute, which in its most current iteration dates to 1990 but received especially prominent attention between 2015 and 2019. In the first moment, during litigation at the Kerala High Court, critics of the "ban on women" argued that excluding fertile women (defined as being ages 10–50) was a historically contingent response to infrastructural shortcomings rather than a religious necessity. In the second moment, supporters of the ban argued that even if the ban was not consistently observed and even if it was not applicable at any other temple to the same deity (Ayyappan), it was nonetheless an important element of Ayyappan worship at Sabarimala. And in the third moment, during the Indian Supreme Court litigation that culminated in a controversial opinion, Justice (now Chief Justice) Chandrachud argued that the ban on women represented a form of constitutionally proscribed untouchability. Together, these moments use one of contemporary India's most significant legal disputes

over religion to demonstrate the continued analytic value of instability. Indeed, the Sabarimala dispute writ large represents a moment of transition, both symbolically and legally, for India. Symbolically, the issue of women's access constitutes an inflection point for Indian politics during a period marked by the rise of Hindu majoritarianism. Legally, the dispute triggered a review of deeply established principles, especially the Essential Practices Doctrine used in religious freedom jurisprudence, which remains caught in an extended state of liminality. Both in its unfolding and in its aftermath, the battle for Sabarimala thus demands that we grapple with new and uncharted topographies in Indian law and politics. Presenter: Deepa Das Acevedo
Constitution-Making from the Bottom Up: Alter-Native Visions of Rights & 'Common' Law in South Africa: Whereas most scholarship on Constitution-making takes an institutional focus, this paper enters the debates on South Africa's 'transformative constitutionalism' from an ethnographic perspective. A prominent target of critique has been the conservative legal culture of South Africa's pre-democracy bench which is said to have lingered and stifled the 'transformative constitutionalism' (Klare 1998, 2011) ushered in by the democratic Constitution (Davis & Klare 2010; Sibanda 2011). Forming the beginnings of a project that centres on the normative visions of ordinary South Africans, this paper enters the fray by amplifying a surprisingly muted dimension in the discussion of the legitimacy and robustness of South Africa's democratic Constitution and constitutionalism: namely, the role of the vernacular law that is varyingly observed by four out of five South Africans. The paper unpacks the lived, empirical day-to-day context out of which the larger project arose by telling the stories of the ordinary people on whom the topics of rights, constitutionalism, and 'common' law in South Africa have primary bearing. It thereby demonstrates the devastating limitations of the hallowed transformative constitutionalism stemming from its failure to wholly integrate vernacular law into the South African legal order in a manner that might be described as Alter-Native Constitutionalism. This empirically grounded critique of the ongoing debate on the inclusive making and public legitimacy of South Africa's Constitution highlights the bottom-up law-making that is enacted by marginalised South Africans as an embodied argument for the remaking of South Africa's Constitution the public deems necessary and the reclamation of the 'common(s)' in law from colonisers' imposed visions and forms, and their vestiges. Presenter: Sindiso MnisiWeeks (University of Massachusetts, Amherst)

Bottom-Up Views on Violence Against Indigenous Women and Girls: Insights from Guatemala: Guatemala is one of 17 countries in Latin America to have passed laws criminalizing femicide and physical, psychological, sexual, and economic violence against women and girls (VAWG). This law passed in 2008 in Guatemala due to pressure from feminist movements. The law does not cover trans women, LGBTQI+, and two spirit people. This paper examines the patchwork nature of this justice system and provides an experiential account of it from the bottom up both from those limited number of women who make it into court, and the vast majority who do not, and who turn to other forms of relief or simply decide to aguantar or live with violence because they have no alternative. Highlighting ethnography developed with an Indigenous research team linked to three community-based organizations in the departments of Quetzaltenango and Huehuetenango in Guatemala, our work reveals how most Indigenous women, men, and their families and communities do not turn to the formal specialized justice system because of histories of structural racism, and exclusion, alternative forms of authority, and a series of racialized, classed, and ethnicized obstacles or tolls that affect different bodies and communities differently. This paper explores local Indigenous women's collective knowledge of the obstacles to the formal justice system and their solutions for supporting women facing violence through a settler colonial lens. I also discuss the possibilities for local officials, often men, to be potential and actual allies. Presenter: Lynn Stephen (University of Oregon) "What is Law? Putting people through difficulty?" How Subordinate Police in India Interrogate 'Law': How does the subordinate police in India perceive the law it is required to implement? Derived from an eleven-month long ethnographic study of two police stations in the States of Delhi and Kerala in India, this paper problematizes the relation of law with its implementation in the everyday of the state in postcolonial India. Conceptualised as the 'despised minority' (Baxi, 1982) subordinate police in India are often recruited from working class, rural backgrounds, who are then subjected to a disciplinary schema and socialised to 'police' the population. Turning the anthropological gaze towards the functionaries of the state institutions, rather than its subjects, this paper explores how subordinate police personnel transition through notions of 'power' and 'duty', to perform everyday state functions of fabricating social order (Neocleous, 2000). These everyday functions however, are suffused with class antagonisms within the police hierarchy, that can be traced back to its colonial legacy where law had the double intention of controlling and

using indigenous personnel in the subordinate police to govern the local population (Arnold, 1986). The subordinate police develop their own ideas of justice, morality and ethics which are often different from ones prescribed by law. Personnel often rhetorically ask "What is law? Putting people through difficulty?" to convey that the procedures prescribed by law are inconsistent with the everyday realities of police work, which mandates finding "practical" work-arounds, that are mutually beneficial for the personnel and the people. This paper focuses on the everyday of state functionaries and the multifarious ways in which power relations manifest. It notes how, while being subjected to a disciplinary schema, the subordinate police talk back to top-down laws, and alter its implementation through their grounded realities. DESCRIPTION:

Indigenous Repatriation: Community Priorities and Solutions Cultural treasures and intangible heritage are being reclaimed by Indigenous Nations and returned to their territories. While there have been meaningful advancements in museum and archive policies and mandates, Nations still face significant challenges in bringing home their ancestors, cultural belongings and intellectual property. This session explores community-based solutions to issues and challenges including data management, provenance research, hereditary protocols, community healing and collections care. Gitxa'ala, Haida and Nisga'a repatriation stories,

strategies and protocols will be shared. The participants in this session crosscut Indigenous and anthropological perspectives, including representatives from the innovative cultural institutions First Nations have created to facilitate their repatriation efforts.

The Wap n̄uudisk a txa'nii ndaa (Everywhere Museum) Project: Digital tools for repatriation: We work collaboratively with Gitxaala First Nation to create digital tools to repatriate their belongings held by museums and archives around the world. The Wap n̄uudisk a txa'nii ndaa (Everywhere Museum) Project is a community-led project to trace and repatriate belongings taken from the community and kept for generations in outside institutions. The project makes digital records of community belongings accessible to community members for review and identification in order for Gitxaala research staff to prioritize and manage repatriation efforts. Building on the Community KnowledgeKeeper (CKK), a digital tool already used by Gitxaala to manage cultural heritage and land use data, we are developing repatriation database features to track the location and status of community belongings in the repatriation process. The platform will make this data accessible to community members for input as well as to members of the public through virtual museum pages. As Gitxaala works with institutions to repatriate belongings and digital materials, the repatriation database will serve as a community-controlled place for the nation to store, manage, and access the acquired data on community belongings in museums. Presenter: Towagh Behr

łaluyeltgit N̄ut'isga Gitxaala ('Returning Cultural Treasures to Gitxaala): Gitxaala Nation is currently working to repatriate cultural treasures from 12 museums around the world. Gitxaala is also conducting archival and community-based research to identify Gitxaala cultural belongings that have not been properly labelled or catalogued in museum collections.

Traditional protocols in the repatriation process will be discussed as well as how this work has been a part of the healing journey and cultural resurgence of the Gitxaala Nation. Presenter: Dustin Johnson

Preparing to Bring Our Ancestors Home: The Ni'isjoohl Memorial Pole Rematriation Story: On December 1, 2022, the Nisga'a Lisims Government announced that a long-stolen memorial totem pole would be returned to the Nisga'a Nation. The decision follows a formal request to transfer the House of Ni'isjoohl Memorial Pole, made by a Nisga'a Nation delegation to museum officials at the National Museums Scotland in Edinburgh

in August 2022. A decision by the Board of Trustees of National Museums Scotland granted this request, and subsequently the decision was approved by the Government of Scotland Cabinet Secretary for the Constitution, External Affairs and Culture, Angus Robertson. The delegation was led by Sim'oogit Ni'isjoohl (Earl Stephens), Sigidimnak Noxs Ts'aawit (Dr. Amy Parent), and Shawna Mackay from the House of Ni'isjoohl along with witnesses and negotiators from the Nisga'a Lisims Government and Nisga'a Museum. The groundwork for the pole's return was developed in accordance with our Nation's governance systems and in close collaboration with the Nisga'a Museum's leadership. An Indigenous storywork methodology (Archibald, 2008) will be engaged in this presentation to share the research story of the Ni'isjoohl memorial pole's rematriation process (Parent & Moore, 2022). The presentation will conclude with important decolonizing mandates, actions and relational work that is required by academics and professionals working in colonial institutional systems (particularly European museums) to meaningfully support successful rematriation processes. Presenter: Amy Parent

Hli Goothl Wilp-Adokshl Nisga'a (Nisga'a Museum) – A history and critical reflection: Hli Goothl Wilp-Adokshl Nisga'a (Nisga'a Museum) opened on May 11, 2011 on Nisga'a lands in British Columbia. At the time of its founding, following the implementation of the Nisga'a Final Agreement with the governments of Canada and British Columbia, the return of over 300 treasured cultural belongings from the Canadian Museum of History and Royal British Columbia Museum represented the single largest repatriation in Canadian History. This presentation traces the history of Nisga'a Museum through the lens of the complex negotiations that resulted in a colonial museum on Nisga'a lands. The museum's origins and the tensions that play out in realigning the museum to a more Nisga'a-centred space serve as the basis for critical reflection on the cultural shifts in repatriation practice over the last two decades. The Nisga'a Museum is both a testament to how far we have come towards respecting repatriation of Indigenous cultural belongings as a human right and how far there is to go in creating actionable steps towards eliminating the power asymmetries and institutional paradigms that reinforce obstacles to First Nations in reclaiming their cultural heritage. DISCUSSANT:

DESCRIPTION:

From sperm and egg donation to gestational and traditional surrogacy, collaborative reproduction helps thousands of people worldwide become parents. We use the term 'collaborative reproduction' to acknowledge the limitations of the term 'third party'-as both coupled and single people become parents in this way and often there are either fewer or more than three parties involved. While much research focuses on transitions to parenthood through gamete donation and surrogacy, there is far less focus on how donors think about their role in helping create families. With a specific focus on egg donors, this panel spotlights the multiple layers of 'transitions' and 'liminality' in diverse cultural settings. In collaborative assisted reproduction, transitions occur at multiple levels. Transition and liminality are part of the process of becoming an egg donor. From recruitment, through hormone injections and retrieval surgery, to knowledge of a live birth from one's donated eggs, egg donors go through a range of physical and emotional processes in the journey to help others become parents. With new technologies enabling egg freezing, oocytes can now be stored for longer periods of time and shipped across borders, with fluctuating status and meaning in different cultural and medical settings. The transitions of the egg donation process invoke Victor Turner's discussion of liminality, where individuals are caught 'betwixt and between'

different levels of social status. Worldwide, access to consumer ancestry testing has increased donors' and donor-conceive people's ability to find one another, thus unraveling the promise of anonymity. This transition has occurred in countries such as the US, Sweden, the UK and Portugal, but is being resisted strongly, particularly by the medical establishment, in others such as Spain, the Czech Republic, or Greece. This shift is both driven by, and a motor for, an opening up of people's understandings of kinship and relatedness (Carsten, 1995, Becker 1999, Melhuus 2010), in their various aspects of intention, shared genetic material, and parenting. The transition from being an anonymous donor to connecting with one's genetic offspring can lead to transformations in perceptions of self as a 'donor' to a kind of a mother (biological) but at the same time not a mother. The transition toward non-anonymity, and the resistance it may meet, is cross-cut by hard-to-reconcile 'rights' of all parties involved: parents' rights to privacy regarding family formation, donors' rights to information about and contact with, or to avoid contact with, the persons born through their donation, and donor-conceived persons' rights to information about their genetic origins and to meet or forge a relationship with donors. Such encounters open up an entirely new topography for thinking about kinship and citizenship. This panel addresses themes such as: How do oocyte donors initially experience the process of becoming a donor? How does the movement of oocytes across borders-intended for predominantly affluent intended parents, intersect with donor recruitment and selection in different cultural settings? From their first donation to years later, how does donors' thinking about the children born from their eggs change over time? With direct-to-consumer ancestry testing-along with the increasing trend away from donor anonymity-how do donors think about the transition toward developing relationships with their donor-conceived offspring?

Conceiving a relationship with donor-conceived children: Spanish egg donors' thinking about contact: Gamete donation in Spain is anonymous by law. Despite growing claims by donor-conceived children of a right to their identity and information about donors, the medical community is resisting this international trend. Spanish fertility clinics inform donors that they are just donating some cells, that donation is anonymous, and that this is best for everyone, clearly placing donors in an in-between position: necessary to, but not part of, family. Doctors and clinics claim that a change to identity-release donation will wipe out donation. Our research with egg donors in Spain, however, shows a

range of attitudes toward possible future contact with children born from their donations. This mixed methods investigation draws upon over 180 egg donors surveys and 71 donor interviews to reveal that donors' thinking about anonymity often diverges from the medical establishment's position that anonymity is best. Upon reflection, many donors reveal a more complex consideration of donor-conceived people's desires to have access to information or contact with the donor, while also balancing intended parents' concerns about family integrity. Many donors also express curiosity and desire for different degrees of information, openness, identity release, and future contact. This perception can change over time, when donors consider the children born from donation as biological half-siblings to their own children. Their collaboration in family formation can shift from a simple instrumental approach to a richer inclusion of the possibility of contact and, perhaps, some kind of relationship. This paper will explore how egg donors in the Spanish context of mandated anonymity imagine the possibility of contact and the forms it might take, how they feel about this possibility, and how their empathy with donor children and families formed by donation shapes their reactions. Presenter: Nancy Konvalinka

Oocytes in Transit: How Egg Donor Selection in Spain Meets Demands of the Broader European Market: Oocyte vitrification enables the storage and movement donated eggs across borders. Prior to vitrification donated eggs were used fresh, transformed into embryos, and transferred to a recipient soon after retrieval. Frozen donor oocytes, however, may now remain in a stored liminal state indefinitely and be transferred to a recipient at a place and time detached from when they were retrieved. The egg donation industry in Spain relies heavily on the use of frozen and banked eggs and is the primary source of donor eggs for intended parents from France, Italy, Germany, the U.K. and other parts of Europe. Patients may either come to Spain for fertility treatment or have frozen oocytes from Spanish egg banks shipped to their clinic in their home country. In either case, Spanish egg banks and clinics are motivated to procure donor eggs that will move fast, rather than be burdened with a backlog of unmovable product. European demand for eggs from Spain drives donor selection in myriad ways. By Spanish law, physicians or other fertility professionals must select egg donors that phenotypically match the intended parent. For example, clinics often reject prospective South American donors who, in their opinion, have more "indigenous features" that they will not be able to easily match to a recipient. At the same time, Ukrainian, Russian, and other migrant women are highly sought

after as donors. Drawing upon fieldwork in Spanish fertility clinics, and interviews with fertility professionals and egg donors in Spain, this paper examines the shifting status of frozen donor oocytes across borders, how oocyte vitrification and transport influence the parameters of donor selection, how fertility professionals rationalize who they select and reject, and how migrant egg donors in Spain think about their own physicality in the selection process. Presenter: Diane Tober (University of Alabama, Department of Anthropology)

Assisted Reproductive Technology: Exploring Egg Donation in Buenos Aires, Argentina: Around the world, infertility presents a major roadblock for people who want to be parents. Assisted reproductive technology (ART) offers a pathway to biological parenthood that would otherwise be unavailable for people who are infertile. Existing literature suggests that egg donation is an emotionally complex, transitional experience for both donor and recipient. My research documents the lived experiences of egg donors, recipients, and providers in Buenos Aires, Argentina as they navigate transitions from infertility to parenthood; curious individual to donor; and "traditional" healing to clinical practice, respectively. The aims of this research are carried out through the following objectives: 1) to elucidate the deliberations, mobilities, and motivations related to egg donation; 2) to identify the impacts of egg donation/receipt on the idea of womanhood; and 3) to understand the doctor/patient relationship for ART care in Argentina. Ethnographic qualitative data research methods were used to understand the complexities of the egg donor process within the Argentine context. Using critical medical anthropology, this research seeks to comprehend the impacts of social, political, and economic influences that impact perceptions of infertility and egg donation. Infertility is further examined through Kleinman's explanatory model of illness to examine the popular, professional, and folk sectors that overlap. The popular sector examines the local perceptions around infertility, gender performativity, and ART. The professional sector addresses the "Western" biomedical approach to infertility, while the folk sector examines the "traditional" or non-allopathic forms of treating infertility. The embodied experiences for both egg donors and recipients bring light to the intricacies of gamete donation as ART is steadily on the rise. Presenter: Arianna Injeian

From Egg Donor to Donor Recruiter: Exploring Transitions in the Oocyte Donation Process: Drawing from my autoethnographic immersion into egg donation, this paper juxtaposes the experiences of egg

donors and their recruiters in the United States, particularly in Texas and California. Here, I examine the process of transitions both in becoming a donor and then in becoming an egg donor recruiter. While many others have examined various aspects of egg donation in a range of cultural settings (Deomampo 2019; Nahman 2018; and Tober 2021, 2022, 2023); my own research and auto-ethnographic methodology provide me with a unique glimpse into the incongruities between clinic/agency expectations and donor lived and embodied realities. From donor motivations, to physical side-effects of hormones, to the required networks of care, to the long-term effects of egg donation, there are numerous differences in the narratives told by clinic representatives and the narratives told by the donors. This paper follows my personal journey from researcher to donor to recruiter to address the following questions: How do donors physically and emotionally experience the donation process from decision to donate through egg retrieval? Where are the narratives of fertility clinic representatives and egg donors aligned and misaligned? What factors contribute to misalignment? How do egg donor recruiters see their role in providing information to donors and recipients—surrounding risks, physical and mental health, genetic inheritance, sexuality, and other information—some of which they may know is less than accurate? Finally, as a researcher, donor, and recruiter, I address the multiple ethical and moral dilemmas I faced in each of these different transitory roles. Presenter: Ashley Fitzpatrick (Rice University, Department of Anthropology)

Racialized Risk in “Asian” Egg Donation: Human oocyte (egg) donation—the process by which a person provides eggs to another for the purposes of assisted reproduction—is now a thriving aspect of the fertility industry, and race is among the primary traits used to select egg donors. Within the US fertility industry, Asian American donors are viewed as especially valuable given their relative underrepresentation in donor egg banks compared with donor recipients. As a result, demand for “Asian” eggs as a commodity has led to a tiered market in human eggs, and with no government agency or authority charged with tracking how people use or provide fertility procedures, Asian and Asian American egg donors are left to navigate the world of assisted reproduction on their own, figuring out as they go along how to manage risks, negotiate compensation, and deal with potential health consequences that may follow. This paper analyzes the ways in which differently racialized bodies encounter and experience risk (medical, social, and financial) as a result of commercial egg donation, and the ways in which eggs themselves are constructed as risky investments to be protected. In

doing so, I highlight the ways in which egg donors navigate the “in-between” spaces of assisted reproduction under conditions of capitalism, wherein their reproductive labor and tissues are not only viewed as sources of value; they are also, crucially, sources of increased medical risk for women who are constructed as especially desirable and thus, more likely to become repeat donors. Attending to egg donor experiences within these liminal spaces, I argue, is necessary in order to understand the complex links between reproductive practices and capitalist motivations. DISCUSSANT:

Sarah Besky (Cornell University),Kregg Hetherington (Concordia University, Department of Sociology & Anthropology)

DESCRIPTION:

In recent years, ethnographers have looked to agricultural settings, investigating places like the monocrop field, the factory farm, and the plantation, as sites where multispecies agrarian biocapital emerges and takes form. In doing so, they have advanced a critical more-than-human labor studies by recognizing the work performed by nonhuman actors, and rethinking labor through the relations of humans and nonhumans. As Sarah Besky and Alex Blanchette (2019) write, 'practices of labor in service of capitalism are expanding – in the sense of being performed by more diverse kinds of bodies and beings – at the exact

moment that (human) work's capacity to underpin and organize society seems to be waning.' At the same time, studying less industrialized sites of agricultural production, scholars like Anna Tsing, continue to remind us that ecologies of capitalism are always patchy, and offer other ways of thinking about how to understand nonhuman vitalities within capitalist regimes. With the term 'salvage accumulation,' Tsing (2015) notes that 'taking advantage of value produced without capitalist control,' is in fact 'a feature of how capitalism works.' Building from this scholarship, this session explores questions of multispecies labor in the context of emerging agricultural practices – new food and energy production systems created in response to climate change. Contributors to this panel will share empirical accounts of multispecies relations in these settings of agricultural production to consider: What characterizes the 'work' performed by nonhuman vitalities? To what extent and how are nonhumans constituted (or not) as 'workers'? How do nonhuman natures shape the labor carried out by humans? How can the framework of more-than-human labor help us attend to the patchiness of capitalism? How might the framework of more-than-human labor alter understanding of 'racial capitalism'? Is 'domestication' a useful analytic for understanding these emerging multispecies agrarian relations? And/or how might the context of climate change help us rethink what 'domestication' means?

“Raised by an Iowa farm girl, not Canadian robots”:
Crickets in Social Imaginaries of American Ag: In the past few decades, insects have come to be raised and promoted as an “alternative protein” for human consumption. In Thailand, the government has supported the industry’s development; the country boasts more than 20,000 small-scale cricket farms. Elsewhere, investments have been made to “automate” the industry. In 2022, “the world’s largest fully automated cricket production and processing facility” opened in Ontario, Canada, enflaming far-right conspiracies about a takeover by globalist elites who will force the masses to subsist on insects. Against this backdrop, this paper focuses on a site in central Iowa where crickets are raised, as the proprietor retorted to conspiracists, “by an Iowa farm girl, not Canadian robots.” Following crickets over the course of their lives and deaths inside what was once a single-wide trailer home but is now the Gym-N-Eat Crickets barn in central Iowa, this paper attends to the ambivalence of the crickets’ domestication – how they move back and forth between seemingly contained categories of identification: “captive” and “free,” “alive” and “dead.” I argue that this patchiness makes manifest an ethic – an

idealized relationship between human farmers and the non-human natures they care for and kill. It also helps constitute a “farming affect” of always being at nature’s mercy. This paired ethic and affect, I argue, lends legitimacy to cricket farming as a new form of agricultural labor in the American Midwest, by reinvigorating the trope of the “yeoman farmer,” keeping alive the fantasy of unalienated labor, and implicitly racializing cricket farming as “white.”

Presenter: Paolina Lu

Staying With the Trouble of Sugarcane: Critiquing Climate Futures with Sugarcane Research in Brazil: Working to make biofuels from sugarcane, São Paulo scientists are in a unique position to reconfigure the plant’s future amid its history as the driver of Brazil’s slavery-based colonial economy that entailed the widespread dispossession of land, destruction of the environment, and death of millions of enslaved people. The plantation form seeded by sugarcane has since been essential to global production, wherein peripheralized realms provide the raw materials for goods consumed elsewhere. Global North biotech, while seeking to combat climate change, has also relied on this: engineering microbes for renewable technologies, it often disregards the plant/biomass feedstocks that will literally feed or power the metabolic labor of such microbes in the first place. However, Brazilian scientists see their work on sugarcane as a crucial corrective to this tendency to dismiss the feedstocks—the raw materials, the energy for metabolic labor—required for renewable biotechnologies. Drawing on long-term ethnographic fieldwork, this paper traces how scientists in São Paulo shift the focus to sugarcane as a desirable feedstock, and through this multispecies attunement, open up perhaps unexpected critiques of climate futures. Ultimately, the paper examines the unforeseen geopolitical interventions made by Brazilian sugarcane scientists: their research and its inheritance of sugarcane’s dark history, notwithstanding their common romanticization of it, might at least disrupt easy pretensions that new climate biotechnologies simply conjure fungible, ahistorical plant feedstocks to power the metabolic labor of engineered microbes.

Presenter: Katie Ulrich (Rice University)

'A Vegetal Epistemology of Regenerative Agriculture' or, Asking Plants and Animals What's Going On: This paper emerges from ethnography with multigenerational US farmers transitioning away from industrial practices toward ecologically and socially reparative (often termed “regenerative”) agriculture. For farmers, this process entails questioning past education and internalized ideologies, making intentional breaks from institutions and family, learning to collaborate with

multispecies ecologies to repair degraded soil and improve health, and reckoning with one's own culpability in the social and environmental violences they seek to attend to. Within regenerative agriculture, however, the human farmer most often characterized as the agents of change is just one of the many beings up to stuff. Toward that end, this paper explores the topic of regenerative agriculture from the perspectives of the plants and animals within these farms. Through both creative and analytical writing, I treat the nonhumans in a regenerative farm's field as ethnographic subjects with cultural experiences worthy of paying attention to and theorizing alongside of. Applying a "vegetal epistemology," I consider plants' and animals' experiences of labor and rest, nostalgia and generational knowledge, and forms of alliance and imperfect repair as they reckon with their land's legacies. Presenter: Sydney Giacalone (Brown University, Department of Anthropology)

Illicit coca and the Plantationocene in Colombia : This paper develops a vegetal geography of the Plantationocene (Barua 2023) to understand the production of illicit coca in Colombia. Based on the study case of Argelia, a strategic coca enclave in the department of Cauca, I argue that the illicit coca economy operates under the same logics as licit plantation economies. While authors have studied illicit coca production from a smallholder and family farming point of view, this activity has yet to be analyzed from the perspective of plantations and climate change. Therefore, considering current planetary environmental transformations and the role of more-than-human agencies, I argue that the dynamics of the Plantacionocene (Haraway 2015, Wolford 2021), the era marked by the unprecedented expansion of monoculture plantations and the exploitation of humans and non-humans, undergirds the illicit coca economy. I show that coca plantations reproduce racial hierarchies through the territorial control of land by a whitened narco-elite, impose labor arrangements that exploit a fungible peasant labor force, and generate simplified ecologies that produce cheap nature while destroying forms of life. Furthermore, I contend that the

Society for Cultural Anthropology

vegetal work done by coca is crucial for the plantation and capital accumulation (Besky 2019, Ernwein, Ginn and Palmer 2021). Foregrounding relationships between people and plants, I demonstrate that the biological time of coca intersects with the economic and political time of the plantation, thus constituting a vegetal economy that shapes the exploitation of coca-growing farmers and seasonal coca harvesters while creating ethnic-like differentiations in the labor force. "Does It Work?" Conceptualizing Covid Drugs' Therapeutic Efficacy as Multispecies Medicinal Labor: When Covid-19 spread worldwide, Madagascar's government quickly commercialized a domestic pharmaceutical treatment, CVO+. A constant question followed in CVO+'s wake: does it work? This question normally sought to affirm or deny CVO+'s therapeutic efficacy against Covid-19. But CVO+'s conditions of production in Madagascar's fragile ecosystems unsettle what precisely it means for a drug to work. CVO+ is made with medicinal compounds extracted from the *Artemisia annua* plant, whose cultivation throughout highland landscapes also promises therapy for decreasing soil quality, hillside erosion, and other facets of ecological collapse on the island. CVO+ therefore folds together human and environmental health: therapeutic potential saturates Malagasy hillsides at the very beginning of the CVO+ supply chain as well as sick bodies at its very end, which forces attention to how drugs, their constituent compounds, or those compounds' originary plants work to secure health across scales and species. Amid wide debates about the merits of "green" medicine in cascading Covid and climate crises, translating questions about Covid drugs' therapeutic efficacy into questions about multispecies medicinal labor foregrounds unexpected relational ecologies of pandemic pharmaceuticals. DESCRIPTION:

This panel advances new avenues of inquiry into some of the most politically fraught debates in the anthropology of Indigeneity today. As Cattellino and Simpson have observed, 'work remains to be done to reap the epistemological, methodological, and relational rewards of research at the intersection of' Indigenous Studies and anthropology (2022, 376). Eschewing approaches that apply theory to ethnographic contexts, each presenter empirically generates theories of Indigeneity from specific geographic and historical conditions. Local and regional dynamics of class stratification, racialization, gender, militarism, criminalization, political economy, and geopolitics call for synthesizing understandings of Indigeneity that are, indeed, indigenous to particular contexts. The panel demonstrates new approaches to understanding Indigeneities on their own terms, with wider implications for how anthropology thinks about Indigeneity. Each panelist approaches Indigeneity as a variable in shared fields of contestation instead of as an ontological given, examining the possibilities and dangers of going beyond the Indigenous/settler binary. Thus, this panel engages the slippery notion of 'Indigeneity' with an empirical focus and attention to mediation. On another level, it represents a collective push across international North-South Indigeneities and regional priorities, which are too often siloed in practice and scholarship. Collectively, the panels examine Native Hawaiian class stratification and cultural politics; the possible convergence of variously conceived categories of 'Indigeneity' in colonial and anti-colonial movements in Afghanistan; the colonial lineages of drug commerce in the Indigenous Tarahumara region of Mexico; and the connections and disconnections between the production of knowledge and criminalizing practices in the Afro-Indigenous Moskitia region of Central America.

Fracturing Monolithic Indigeneity: Native Hawaiian Cultures of Politicization and Depoliticization: This paper approaches Indigeneity as a dynamic process, rather than a static monolith. A common trend in scholarship of Indigeneity is the implicit rendering of monolithic Indigenous polities locked in Manichean battle with settler colonialism. Such frameworks have afforded a range of political theories regarding Indigenous action, persistence, and resistance. However, a focus on internal contradiction produces a different picture: one

attuned to navigating the class contours and contestations of Indigenous life. Based on ethnographic research with my own Kanaka Ōiwi (Native Hawaiian) community, I examine the local category of "Hawaiian culture" that includes practices, language, relationships, and ideologies marked as Indigenous. This paper examines "culture" as a mediation of internal contradictions. I argue that two strains of "Hawaiian culture" contest Indigeneity itself. An elite strain of culture operates through reification and abstraction, stripping Indigenous cultural forms of their semiotic and relational embeddedness. The resulting idea of "culture" depoliticizes Native Hawaiian concerns of dispossession, while also providing institutional means and funding for propagating "safe" Indigenous cultural forms. The other strain of culture, incubated in grassroots movements and communities, combats reification through concrete, hyper-localized, and practice-based relations and cultural forms. This strain of culture crystallizes critical consciousness and politicization among actors. Taking these strains as a totality, this internal contradiction fractures the notion of monolithic Indigeneity, instead attending to how Indigeneity is deeply contested and remade from within. Presenter: Ikaika Ramones (Princeton University, Department of Anthropology)

Reading Indigenous Studies from Afghanistan: How do we bring the study of global militarism in the age of Empire in dialogue with the techniques and ongoingness of settler colonialism, which structure these global protractations? In my paper I will work through some observations drawn from Afghanistan in order to enter current discussions in Indigenous Studies — at an angle. My argument is premised on the capacity of contemporary Afghanistan, as the product of a particular kind of frontier imaginary, to trouble the conceptual pairing of the colonizer-colonized, which animates so much of anti-colonial thinking. In Afghanistan, where it is often repeated that the land and its people have never successfully been colonized, it has been precisely its designation as such — as an untouched place trapped in prehistory — that has rendered it repeatedly open to invasion, military experimentation, and abandonment. Yet, the use of this trope has hardly been the exclusive device of Euro-American forces. My paper will work through the writings of the Palestinian theologian, Abdullah Yusuf Azzaam, who published on the distinctiveness of Afghanistan as an ideal "base" or "al-qaida," for a global jihad, in order to interrogate the subterranean production of an Afghan indigenous-ness qua Empire that he deploys in his call for global jihad. The question of 'what happened in Afghanistan?' brings me closer to

seeing the parallels between tactics used by the US military and the competing factions of international jihadist philosophy who sustained subjection of Afghan populations in their homes and in refugee camps. Thus, I ask: what role does the figuration of Indigeneity play in the pathos of contemporary global militarism? What are the implications and dangers of broadening militarism to include both ostensibly “neo-” and “anti-” colonial movements? Presenter: Hala Habib (Columbia University, Department of Anthropology)

To Know or to Criminalize: Indigeneity and the War on Drugs in the Moskitia (Nicaragua/Honduras): Critical scholarship on Indigenous criminalization has called attention to the prominent role that anthropologists and sociologists of crime have played in reinforcing discourses and practices of criminalization. Some scholars even suggest that all academic examinations of criminalized practices among Indigenous peoples inevitably bolster punitive state interventions, for they perpetuate the continued association of those peoples with crime in scholarly discourse. This paper grapples with these claims in two ways: first, by asking the opposite question: what role do ethnographic ignorance and silence, rather than knowledge and discourse, play in projects of criminalization? Second, it proposes public secrecy as a productive site for the ethnographic study of the relationships and gaps between public, academic, and state knowledge – connections and impasses that are often assumed, rather than contextually explicated, by the aforementioned scholars. The paper draws on several years of cross-regional ethnography on drug economies and drug-related policing and militarization in the Afro-Indigenous Moskitia region of Central America (Caribbean Nicaragua/Honduras). In the Moskitia, criminal justice officials, police officers, and soldiers resist becoming knowledgeable about narcotics in multiple ways. To complicate matters further, local residents are differentially subject to regimes of public secrecy around narcotics in accordance with the regional organization of political and economic power, and in keeping with drug merchants’ differential position in that organization. Instead of assuming a straightforward complicity between scholarly and state knowledge, a robust critique of criminalization requires this kind of ethnographic inquiry into the relationships and non-passages between the production of knowledge and criminalizing practices. On and In the Streets: Vendors, Buyers, and Governmental Entanglements

10:15 AM - 12:00 PM TMCC - 717 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Walter Little (SUNY, University at Albany, Department of Anthropology)

CHAIR:

Brandon Lundy (Kennesaw State University, Department of Geography & Anthropology)

PRESENTER:

Walter Little (SUNY, University at Albany, Department of Anthropology), Josephine Smart, Sheri Lynn Gibbings (Wilfrid Laurier University), Jayne Howell (California State University, Long Beach, Department of Anthropology), B. Lynne Milgram (OCAD University)

DISCUSSANT:

Alan Smart

DESCRIPTION:

Street vendors are ubiquitous and crucial to local and national economies, even high-income countries. Vendors-hawking food, handicrafts, illicit drugs, sexual services, secondhand clothes, and other items and services-can be found just about everywhere, irrespective of local regulations. They perform services and provide food and other goods to a wide range of consumers: daily workers, tourists on holiday, students, and activists maintaining protest vigils. Indeed, the prevalence of street vendors reminds us that in places with limited infrastructural development the street and other public spaces become crucial settings for inventing ways of being sociable, earning a living, and gaining recognition. This Roundtable brings together research in Guatemala, Hong Kong, Indonesia, Mexico, and the Philippines. Walter Little discusses the liminal legal spaces where vendors serve food to city officials and police officers; Josephine Smart's field and archival research traces the shifting divide between (in)formality/(il)legality in street hawking under Hong Kong regulatory regimes; Sheri Gibbings analyzes how new Indonesian ride-hailing systems impact existing street actors and local laws; Lynne Milgram explores how Philippine vendors organize to navigate laws banning street cooking activities in Baguio; and Jayne Howell discusses multilayered relationships and affinity

between teachers and vending in Oaxaca Mexico. Panelists shed light on the contradictory economic and regulatory dynamics in which vendors are central to official vilification while crucial to provisioning, serving, and entertaining residents, city workers, and visitors. Panelists: 1. Question the limits of 'legal' versus 'illegal' and 'formal' versus 'informal' when vendors circumvent government constraints by physically and socially transforming the street. 2. Explore how gender, generation, class, and ethnic factors temper their strategies for attracting and selling to buyers, while negotiating with officials and police officers. 3. Compare the channels through which vendors gain access to consumers by resisting and reconfiguring regulations that prohibit their street-based livelihoods. 4. Debate how street vendors' livelihoods may destabilize the politico-economic agendas of those in power and lead to the renegotiation of public space use and civil society advocacy. Panelists will discuss instances in which officials may turn a blind eye to vendors' work. Indeed, when government and policymakers enable street vendor economies, the former's actions are complicit in 'formalizing informality' and materializing 'extralegality.' The pervasiveness of street vending testifies to the interpenetration of economic practices that limits the usefulness of informal/formal distinctions. Activities that States consider legitimate ('legal') and the pursuits that vendors' view as acceptable ('licit') raise questions about taken-for-granted understandings of legality. Street vendors' organizational efforts across formal-informal and legal-illegal divides provide evidence of alignments between groups of workers who are not conventionally linked and whose interests may conflict or become reconciled. Showcasing how street vendors' activities transcend constraints set by local authorities, states, and other regulatory agencies, the Roundtable challenges conventional notions of public space and civil society that restrict our understanding of contemporary urban political cultures.

**On love, marriage and backlash:
(re)configurations and contestations of intimate
relationships and sexual minority identities**

10:15 AM - 12:00 PM TMCC - 203 C

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

Elizabeth Agey

PRESENTER:

**Elizabeth Agey ,Kwaku Adomako (Université de
Lausanne),Manjot Multani**

DESCRIPTION:

This session interrogates assumptions, frictions, power relations and contested meanings, related to sexual identities, love, intimacy and marriages. It provides insights from Ghana, India, and Nepal.

Transitions from duty to love: The modern landscapes of arranged and love marriages in Nepal: Marriage unite families and shape communities. Nepal, like many other parts of South Asia, has been transitioning from a historically rich tradition of arranged marriages toward a system of marriages based on individual conceptions of love and autonomy, familiarly referred to as 'love marriages'. With these transitions come transitions in the social structures dependent on marriage, including connections among extended families, community support networks, and living arrangements. I will explore this transition in Nepal, and the associated social costs and benefits, through the marriage stories of a mother and daughter dyad whose marriages radically differ despite being connected by a single generation. Through the mother's story, I will demonstrate how traditional arranged marriages in Nepal facilitated connections with extended family in nearby communities, built obligations to the family and community, and built a village to help raise children. The daughter's story, recounting her non-traditional love marriage, exemplifies the marriage-driven shifts to nuclear family households outside of the community, but also the growth of different types of non-family social connections, which provide alternative benefits in a larger, urban setting. These stories, with additional evidence from focus group discussions and descriptive data from the community, indicate that family formation, child health, and marital satisfaction may also be radically altered from this transition, especially for women. Understanding how major transitions in the modes of marriage affect other facets of life can be informative for anthropologists of all subfields. Examining marriage transitions can help identify potential resulting power imbalances and structural inequalities and can help predict future health and wellness challenges for these altered communities. It also illuminates deficiencies in the evolutionary literature on mate choice, which is missing the impact of family and community level aspects of choosing a marriage partner and thus, neglecting to consider some of the fundamental bases of human social structure. In

this way, this talk will use the discussion of marriage transitions to also prompt anthropologists to think about transitions in their fields. Presenter: Elizabeth Agey

An overwhelming consensus? How moral panics about sexual and gender diversity help reshape local traditions in Ghana.: In June 2021, the Ghanaian parliament introduced a bill to criminalize LGBT* people and those who advocate for their rights. This article describes how the bill's authors and supporters are attempting to create a movement that equates belonging to the nation with heterosexual culture. All local peoples, identities, expressions, and desires that escape heteronormativity are therefore cast as alien and existential threats to the nation. This article presents two fundamental inconsistencies of the approaches used by interest groups that attempt to repress sexual and gender minorities. The first is that by attempting to repress these social categories, the supporters of the bill actually help publicize them by making them a subject of debate. The second is the use of predominantly Christian religious ideologies, historically circulated via colonial processes, to supposedly 'protect' Ghanaian 'tradition,' 'cultures,' 'customs' and 'values.' To address the first, the bill's authors and proponents attempt to secure a monopoly over truth claims of the debate. This is done by inventing new terms to describe sexual and gender minorities, placing a graphic emphasis on presumed sexual practices, mobilizing the frames of 'harm' and excess and then misrepresenting opposing perspectives. To address the second, they attempt to reinvent and modify the 'traditions' they claim to protect by discursively (re)inventing 'Ghanaian family values' and the traditional rulers. In the process of further marginalizing minoritized groups, interest groups help produce what we might call a new indigeneity. Presenter: Kwaku Adomako (Université de Lausanne)

'Chandigarh Kare Aashiqui' (Chandigarh Makes Love): An Ethnography of Desire and Intimacy among Youth in Chandigarh, India.: This session highlights the invisibility of the polysemy of love in North India through multimodal ethnographic methods exploring how gender, sexuality, intimacy, and romance are conceptualized and contested among college-aged Indian youth in Chandigarh, Punjab. The ethnographer encountered varied ways in which language describing love demonstrates how 'power and sex collide,' (Fahs and McClelland, 2016). Intimacy and sexuality taken out of the Western context become notions problematically limiting different experiences as universal ones, enabling this interrogation. This presentation traces how concepts travel transnationally and how these notions

are employed from the ethnographic perspective of an 'outsider in and insider out,' (Minh-ha, 1991). I discuss how terms like intimacy and love reveal more than what I may understand versus my interlocutors detailing the privileges and assumptions surfacing in our shared encounters. Additional themes explored include student dating practices, sexuality education experiences, and sexuality-related curiosities and how these in-turn inform sexual scripts pertaining to love, intimacy, and desire among Punjabi youth. Ethnographic data also unravel the influence of media technologies by turning to the same digital platforms integral to the circulating popular scripts around sexuality within North India. Youth are often left out of discourses where decision-making takes place further challenging youth to establish their own personhood. This project offers first-hand insight into Indian youth sexualities and how 'their own cultural understandings become assets' for them to make sense of sexuality (Carillo 2018, 28). Youth in India are currently challenging the pervasive assumption that India is solely a site of routine sexual violence or that love and romance cannot and do not manifest there. Discovering the curiosities, dilemmas and sexual scripts of youth provoked by this study will continue to challenge that narrative. References: Carrillo, Hector. 2018. DESCRIPTION:

Organizers of the 2023 Annual Meeting invite us to consider the many valiances of 'transitions,' noting that transitions might also denote 'a move from stable ground to less certain topographies, new vernaculars, and unfamiliar grammars.' In this double panel, we bring together anthropologists who draw on the concept of proprioception – as a new vernacular -- to explore how humans cope with uncertain topographies and unstable grounds. Proprioception refers to our knowledge, without conscious awareness, of where we are in space and how elements of our physical body relate to one another. While the concept literally refers to the individual, we approach proprioception as a distributed collective capacity that allows us to upend lingering assumptions about how humans engage with one another and the wider world. Critical theorists such as Catherine Malabou have pointed to the ease with which proprioception can be absorbed into accounts of a neoliberal body maneuvering in a sea of risk and a synaptic self that is always responsible for self-improvement. Instead, we find in proprioception ample grounds for theorizing the distributed embodied self. Proprioception provides us with a helpful 'thinking device' for considering all kinds of 'challenges to equilibrium' offered by the 'current situation.' No body moves through the world unaided. Autonomy is an illusion. Agency is distributed and collective, at every scale. The concept of proprioception was developed at a moment when social science theorizing about human interaction was emergent, bold, and creative. Some lines of thought got closed off with the associations of physiology with racist pseudoscience and the ascendance of theories of the 'body as a house.' Recently, we are witnessing new and exciting lines of scholarship in and around anthropology on themes like multimodality, affect, and embodiment. Anthropologists and allied scholars have mapped out a terrain. The time is ripe to get on the ground – to develop the tools we need to do research that is ethnographically fine-grained and theoretically imaginative. With our discipline and societies in transition, it's an exciting time to be exploring how people navigate, together, in an unsteady world. Our panelists come to the question of proprioception, in these times of endless transitions, from different institutional settings, backgrounds, and life experiences.

The group includes individuals working in an artistic vein with corporeal methods to convey that which cannot be conveyed in writing, and those who deploy and develop precise analytic terms that can push us beyond some of the confusion associated with 'embodiment' writ large. We deliberately include diverse theoretical, empirical, and conceptual approaches. Embodied, distributed, and collective: proprioception shares traits that characterize our lives together. The body is social, no less than the social is embodied. What happens when we drop our assumptions about sociality and the human and look over the ledge? In part 2, we focus on proprioceptive politics. We approach proprioception as a collective capacity for surviving uncertainty and transforming the world.

“Skin in the Game”: A Proprioceptive Critique of Detroit’s Bankruptcy: Austerity regimes forcefully tether means of collective survival to the balancing of the books. How might proprioceptive re-conceptions of balance help us navigate grounds shaken by accelerating cycles of financial crisis? This paper addresses this problem by taking up cultivated inattention to proprioception as a political, ethical, and epistemological problem. It is set in a courthouse in Detroit in 2014, as an unelected emergency manager executes municipal bankruptcy on the city's behalf—a case that will entail drastic cuts to the retirement benefits of the city's majority-Black civil service alongside payouts to Big Banks implicated in racially predatory lending to the city and its citizens. I explore these legal proceedings as a process of disciplining financially-responsible subjects through: 1) a sensory regime that abstracts histories and relationalities expressed in debt obligations; and 2) an imaginary of the body as an inert site of intervention—decontextualized, individualized, and manipulated by means of calculated pain. I ask how proprioceptive inattention works with the management of racial optics in this scene, seeking sensorial avenues for investigating the reproduction of white supremacy in legally-colorblind financial abstraction. I put the disciplinary apparatus manifested in this courthouse scene in conversation with pedagogies that cultivate proprioceptive awareness (e.g., Feldenkrais Method, vestibular therapy, accessible dance), as foils to austerity disciplines of intervention, self-sufficiency, and urgency. How does a proprioceptive re-orientation to the emergent present help us seek alternative ways of being, knowing, and acting together from within the “no alternative” hegemony of financial discipline? Presenter: Molly Cunningham

Proprioception on Shaken Ground: Lessons from Microbuses, Wobble Boards, and Fathers of Physiology: The term proprioception was coined by physiologist and medical doctor Charles Scott Sherrington in his 1906 book *The Integrative Action of the Nervous System* by bringing together perception with the Greek word *proprio*, or “own’s own.” Proprioception moves across the synapse and receptors on the skin outside the “container” of the individual biopolitical self and beyond the usual organs of perception considered in the anthropology of the senses. Locomotory practices on the urban street rely on proprioceptors in the nerve endings of the ligaments of hand and foot as much as through the eye, ear, or nose. In this paper, I draw on long-term ethnographic research in Cairo, readings in the history of physiology and Islamic philosophy, and my encounters with proprioception as cultivated in physical therapy to repair injury to argue for the importance of this early twentieth century concept in a world where all kinds of “grounds” are literally come undone. How, I ask, can an ethnography of proprioception help anthropology transcend a lingering ‘individualism of the body’ that appears in practice theory and critical takes on the liberal autonomous self? Throughout, I address the potential (and pitfalls) for anthropology and politics of attention to distributed proprioceptive capacities on grounds that cannot be assumed to be stable.

Presenter: Julia Elyachar (Princeton University)

Sympathy Pains: The Affective Terrain of Communal Violence in (Post)Revolutionary Iran: In this paper I consider embodied consciousness by reflecting on the physical and emotional terrain of revolt and repression in (post)revolutionary Iran. I bring together ethnographic scenes from the public commemoration of the political dissidents who were covertly executed by the state during the Iran-Iraq war (1980-88), the street mobilization of the 1990s Reform Movement that reached their peak in the 2009 Green Movement, and the ongoing movement for Life, Women, and Freedom. I suggest that the repetition of revolt across generations points to the shaken grounds of political society in Iran and the Middle East. Building on Julia Elyachar (2022) and the invitation of this panel, I consider the ways our bodies and feelings register and reflect the experience of time, space, and others (proprioception) as a resource to think beyond the anthropology of resistance. I suggest feelings of humiliation, stuckness, injury, shame, grief, and enjoyment sustain revolutionary politics and its representation. They are the form of social relations in contexts shaped by communal violence. I further suggest these feelings betray melancholy about the incapacity of the political to answer to grief, or to embodied and affective states

more generally. In so doing, I bring the panel’s invitation to reflect on shaken grounds and a world in transition with ongoing debates on libidinal politics, loss, and ruination within and beyond anthropology. Presenter: Milad Odabaei

How Do We Learn to Surrender? The Embodied Practice of Ritual Knowledge: What forms of world-building refuse the proliferating and palimpsestic histories of dispossession that characterize modernity, and the recursive and circulating assertions of dehumanization that have emerged alongside, against, and across these histories? How is it possible to imagine Black thriving in a context in which the specter of Black death on the plantation remains an ordinary parameter for organizing social and economic value? Where might we locate assertions of human-ness that speak to the necessity of living outside of but in relation to the juridical structures that govern modern Western political and social life? In this paper, I will explore how the quotidian, embodied, and collectively participatory knowledges and practices of *kumina* – a sacred and secular practice in eastern Jamaica that involves drumming, singing, movement, and other ritual elements designed to connect with and uphold obligations to ancestors – generates a kind of “proprioceptive politics.” I will elaborate the concept of surrender to attune us to the ways this proprioceptive politics circulates in and through a mode of world-building that is recursive and fractal, arguing that thinking through surrender can provide a way to envision a mode of relational sovereignty unanchored to a state, and untethered to masculinist notions of revolution and human-ness, a mode that is constituted through iterative practice that is future-oriented yet enacted in the day to day, and one that is grounded in decolonial love and accountability. Presencing Death: A Relational Anthropology of Mortality

10:15 AM - 12:00 PM

TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Society for Psychological Anthropology

ORGANIZER:

Anna Corwin

CHAIR:

Anna Corwin ,Natashe Lemos Dekker (Leiden University)

PRESENTER:

Natashe Lemos Dekker (Leiden University),Marjorie Goodwin (University of California - Los Angeles (UCLA), Department of Anthropology),Celeste Pang (Mount Royal University),Anna Corwin ,Elena Palma

DISCUSSANT:

Mara Buchbinder (University of North Carolina, Chapel Hill)

DESCRIPTION:

The present panel explores relationships with/in death. While death is a universal, anthropologists have long argued that the ways individuals and communities interact with death and dying vary tremendously. By focusing on everyday engagements and strategies that people use in living towards the end of life, this panel explores how death is variously made present or absent, engaged or resisted, and rendered temporally near or distant. Panelists focus on psychological processes, social interactions, and moral deliberations through which people negotiate various relationships with death. Panelists will explore the interactional achievement of hope and the acceptance of death and decline (as in Corwin's work), normalizing the everyday in the face of death (in Lemos Dekker's work), imagining the place of death (in Pang's work), healing through, learning from, and mentoring others in dying (in Goodwin, Raia, and Deng's work), and para-social relationships and grieving practices between humans and the more-than-human world (in Palma's work). Together, the panel reflects on the narratives and practices through which people create room for death in their lives, the intimacies of how they spend their final days, the skills they learn to cultivate when facing finitude, and how they engage in world-making with/in

endings of various kinds. While reflecting on the endings of human lives, the panel highlights linkages with (parallel) endings of institutions, rivers, selves, and ways of living. Thinking with and through finality, the panel reveals how death is presented or absented through social, moral, and embodied action and interaction.

Living toward the end of life: Normalizing the everyday in a palliative care unit in Brazil. : In Brazil, palliative care is developing rapidly, yet also continues to be associated with the withdrawal of treatment and a sense of giving up on the patient. Based on ethnographic fieldwork on palliative care in Brazil, I focus in this presentation on how medical professionals, patients and family members navigate the question of how to disclose, discuss, and cope with diagnosis and prognosis. I elaborate in particular on the narrative of Eliza, a patient in a palliative care unit who had kidney failure and understood she did not have much longer to live. She struggled with guilt towards family for not seeking further treatment, and at the same time sought to normalize the everyday by focusing on mundane activities. Hence, I show that, when facing the profound disruption that the prospect of death may entail, patients and families may avoid discussing prognosis and diagnosis and instead focus on everyday activities, not as a strategy of denial or acceptance, but as a way to ground themselves and their existence in familiarity. I suggest that maintaining the normalcy of everyday life can be a way of coping with impending finitude. In so doing, with this paper I contribute to a phenomenological understanding of living towards the end of life and the reorientations this entails. Presenter: Natashe Lemos Dekker (Leiden University) Learning to Experience Dying as a Part of Living: Marjorie Harness Goodwin (Anthropology, UCLA), Federica Raia (Education, UCLA and Dept. of Medicine, David Geffen School of Medicine, UCLA) Mario Deng (Dept. of Medicine, David Geffen School of Medicine, UCLA) Within an ethnographic and participatory research project, we examine the lived practices through which an American cancer patient inhabits an important transition -- the end of life. We ask how the patient, with the assistance of his heart doctor, whom the patient considers a "healer," learns to accept death as a part of living. We address our concerns by examining audio and video recordings, email exchanges, and interactions at informal events. We first examine the multimodal resources (Goodwin 2000), including touch, used by participants in an encounter between a patient, his wife, a doctor, and a Nurse Practitioner. We

utilize the Relational ontology framework (Raia 2020) to understand how caring-for-the-Other catapulted into an unfamiliar world of facing uncertainty, and death is possible and unfolds within a dialogical activity. We show how carefully listening and recruiting what is relevant in the patient's life, the clinician's talk engages in an activity that helps the patient build a narrative anchored in the patient's life of purpose, of mattering, and a meaningful sense of the path of being this person facing death as part of living. Through examining storytelling in email exchanges between the patient and his students, we find the patient unwittingly becomes a "mentor in dying" for his students. Presenter: Marjorie Goodwin (University of California - Los Angeles (UCLA), Department of Anthropology)

What Remains: Storying Queer Place & Placemaking in Later Life : What practices of queer placemaking do LGBTQI older adults engage in? How is place storied in later life, and after-lives? How is queer placemaking part of communities' practices of living with death, and towards dying? This presentation draws on two research projects that focused on lesbian, gay, bisexual, trans, queer, and intersex (LGBTQI) aging issues in Canada. The first, an ethnographic study examining the social norms shaping queer and trans older adults' experiences of aging and care, included participant observation and interviews with individuals living in publicly subsidized long-term care homes in Toronto. The second, an interview-based study conducted with the community organization Egale Canada, engaged 48 older adults from across the country in conversations about the social and material conditions needed for "aging and living well" on their own terms as LGBTQI people. In both, place emerged significantly in interlocutors' reflections, ruminations, and imaginings of death, as they narrated stories about where they would like to die, conjured places past, and reckoned with the actual material surrounds of where they were likely to spend their final days. Thinking with literature on queer geographies, queer and trans necropolitics, and anthropology of living & dying, this paper explores place-making as a practice of queer reckoning and worldmaking with ends of life. Presenter: Celeste Pang (Mount Royal University)

Our Beautiful Ending: Cultivating Hope in the Face of Institutional Extinction: Since 1965, the number of American Catholic nuns has declined sharply. Consequently, many American Catholic nuns are facing dual, overlapping deaths: as sisters face their own individual deaths, they face the subsequent "death" of the convent itself. Contemporary media have portrayed this demographic decline through the lens of moral failure, yet the sisters consistently describe experiences

of peace, awe, and hope. The present paper draws on ethnographic data gathered in a Franciscan convent in the United States over the past fifteen years to ask why Catholic sisters seem to be able to find peace despite an uncertain future while others experience distress. The ethnographic data reveals a myriad of social and institutional practices emphasizing acceptance of death and decline. Drawing inspiration from Jonathan Lear (2006), Marquis Bey (2022) among others, the paper highlights the interactional achievement of hope in the face of extinction, suggesting that hope is a skill cultivated in community over time. Bey, Marquis. 2022. *Black Trans Feminism*. Duke University Press. Lear, Jonathan. 2006. *Radical Hope: Ethics in the Face of Cultural Devastation*. Harvard University Press. Presenter: Anna Corwin

The death and life of a dammed river: past and present experiences in the BioBío river in Chile: In this presentation I mean to think about the social life of water - particularly the one of rivers - its possible end, the consequences on local communities and whether the river can be revitalized by local practices that aim to recreate the lost social ties. When an external intervention profoundly changes a river and thus the social and multispecies relations that it used to sustain, can the river die? If we consider death as the end of the social life, a dammed river might be considered dead. In the Mapuche-Pehuenche indigenous territory of Alto BioBío in central Chile, between the 90s and the early 00s, two big dams have been built on the BioBío river. According to several authors and my interlocutors, these constructions implied a profound change in the way local people relate to the river and its non-human inhabitants, among which the guardian spirits of nature called ngen (Course 2011). I was told that the environmental contamination caused by the dams also implied a human contamination; people started keeping distance from the river, they started dealing with depression and grief, as they had just lost a beloved relative. Nowadays, in reaction to a new hydraulic project, young local people started to merge and act to defend the river. They use white-water sports to re-actualize ties that have been abandoned after the dams' construction. Presenter: Elena Palma

Oral Presentation Session

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Jen Alvarez Hughes (Bates College)

CHAIR:

PRESENTER:

Elias Alexander (University of British Columbia, Department of Anthropology), Jordan Fraser Emery (*), Jen Alvarez Hughes (Bates College)

DISCUSSANT:

Margot Weiss (Wesleyan University)

DESCRIPTION:

Recent years have seen the growing malleability of queer anthropology-or, more accurately, queer itself-that at times side steps the more 'proper objects' of queer (Butler 1994). These include, for instance, Parrenas' (2018) ethnography of orangutan rehabilitation as she mobilizes queer theory to understand and nuance the work of care, or Puar's (2016) analysis of Israeli state practices that do not kill the (Palestinian) body but perpetually suspend it in a state of debility. We draw inspiration from Weiss' (2022:2-3) interrogation of what she calls 'queer's animating polarity'-where when queer attempts to move 'beyond' its proper object, 'we find ourselves drawn back to them,' but when we centralize same-sex desire as queer proper, 'we find ourselves elsewhere and otherwise.' We ethnographically dwell in this polarity, weaving through it sustained attention to media as our lens of analysis. Rather than focus on the proper object or the elsewhere and otherwise, this panel brings together both as not only a method of comparison, but more broadly, a way to distill a potential queer methodology to the ethnographic study of media. This potential queer methodology, however, is inherently transitory given that queer theory and queer anthropology have eschewed a static property to queer in favor of queer moving. This move, we suggest, is an ongoing transition of both the object of analysis and the lens of analysis. Recent studies in queer media and media anthropology prove useful as the dynamism of media objects-popular culture, social media, the internet-puts into motion those individuals with whom they engage. This is a collaborative, even dialogic, process, for when the of media object and individual(s) entangle, they collectively transition, not from one state to another, but rather in a perpetual state of transitory movement. In other words, media does more than

affect human action or thought, or represent a microcosm of human society; when media and individuals entangle, they are on the move through the social world. This panel thus focuses on that entangled movement between media and individuals, for the transitory movement of the entanglement speaks to and exceeds the polarity of queer (Weiss 2022). By combining ethnographic research on queer subjects' use of media, queer interpretations of media usage, and the queering of subjects and media--all interlaced but all after a slightly different object--this panel interrogates the entanglements and transitions as method for understanding media. Gitzen offers a methodology for turning away from the 'proper objects' of media and ethnography among US college students narrating their experiences with sex/education by focusing on the scripting of sex through both media and ethnography. Alexander interrogates the purchase of the analytic of 'soft masculinity' in Korean popular culture as it erases the lived experiences of gender divergent and queer Koreans. Ale-Ebrahim queries the friction of a racialized Grindr, where Grindr affords Middle Eastern and Muslim queer men in NYC space for community building while contributing to the surveillant structures that marginalize queer BIPOC folks. Emery queers the very production of self of artists in Sao Paulo as they are caught between underground nightlife spaces and Instagram profiles. Hughes explores the ways media practices of storytelling about the economy in Iceland produces the nation as a queer object of desire that challenge binaries.

Challenging Gender Representation in Hallyu: The Limits of "Soft-Masculinity": Hallyu, or the South Korean popular media, has been crucial in establishing South Korean image-making abroad (Kwon and Kim 2012; Y. Kim 2021). Scholarly work continues to position the popularity of hallyu as an important cultural export that aids in the influx of inbound tourism (Kim and Seo 2019) as well as the establishment of South Korean 'soft power' in foreign diplomacy (see H.S. Kim 2017; Maliangkay and Choi 2014). Scholars also often lay focus on the efficacy of boybands', and male actors' popularity in bolstering hallyu's success. Varying gender representations or embodiments of "soft masculinity" by male celebrities are cited as key factors in its marketability. Such representations have also been argued to allow individuals to identify with, and find solace in, these alternate forms of masculine expression, presenting hallyu as holding a unique potential to "queer" understandings of gender and challenges patterns of heteronormativity (Ainslie 2019; Almqvist-Ingersoll 2019; Lee et al. 2020; Kang 2018). Yet

a critical reading of soft masculinity's original formation (Jung 2010) reveals that while it is presented as an alternative, it does little to challenge or move away from hegemonic masculinity in the South Korean context (Moon 2001). This presentation argues that the attempt to assert a queer analysis of gender representations in media that disaggregate such representation form context, runs the risk of obfuscating the continued existence of asymmetrical patterns of gendered power relations and the upholding of heteronormativity that effects the actual lived lives of women and queer folks on the ground. Presenter: Elias Alexander (University of British Columbia, Department of Anthropology)

A look at the stranger to oneself: queer(ing) the gaze in multi-site ethnography: Our proposal is to participate in the conversation about entangled movement between media and individuals from a virtual ethnography (Murphy, 2008; Pink, 2015; Hine: 2005) conducted on Instagram and patchwork ethnographies (Günel, Varma, and Watanabe, 2020), namely short field trips constituting fragmentary but still rigorous data, a temporary way of inhabiting situations constructed by the individuals we follow online in the continuity of a multi-site ethnography (Debonneville, 2017). Indeed, the contemporary forms of appearing queer are being co-produced with modern hand-held media devices. The result seems to be a self-produced imagery of plural and fluid selves that can constitute a privileged moment of identification for those who do not conform to the hegemonic norms of sex, gender and sexuality. This self-design and personal branding, paraphrasing here Marion Zilio (2020), where the self is both the author and the result of one's self-ornamentation, is accomplished - at least in part - in private company digital devices, a sort of inverted Panoptic open to the exhibition and publicity of the self. So we ask ourselves what produces and who co-produces this contemporary queer visibility? And if, as Peter Szendy (2017) states, watching, seeing and circulating images is a work, what exploitation of the gaze is at work here? The transition for us takes place between the tangible terrain, in underground spaces of São Paulo's nightlife, and the digital terrain, on the Instagram profile that the artists we follow are publishing online. This move is an ongoing transition of both the object of analysis and the lens of analysis. Presenter: Jordan Fraser Emery (*)

Economancy, Economic Imagination, and Desiring a Queer(ing) Iceland after 2008: In this paper, I argue that economancy, the practice of storytelling about economy in Iceland, produces assemblages of liberal desires and enchants outsiders with the promise of a queer(ing) and emergent utopia (Munoz 2009). Through the practice of

economancy, I argue that storytellers such as singer and composer Björk, former Icelandic Prime Minister Sigmundur David, and Pirate Party politicians in the wake of the Panama Papers Offshore Banking Scandal made Iceland a queer object of desire (Weiss 2016). That this queer object belongs to non-queer capitalist economic imaginaires as well may point to the very queerness of its effects (Weiss 2022). By examining Iceland as queer object, I argue that storytelling is an economic practice with the power to enchant through mistranslations and misunderstandings (Benjamin 1969) that include racialization and indigenization (Day 2016; Hu Pegues 2021). I mobilize queer as a method and practice to engage media, with potential to not only unpack dualisms and theorize assemblages of humans and non-humans (Halberstam 2020; McLean 2017) but as a central analytical tool for economic analyses of Icelanders and their interlocutors' economic imaginations (Appel 2014). I conclude with a provocation that study of economancy points us toward a queer and trans-ing economic anthropology, i.e. a method of trans-historical analysis of original accumulation, multispecies relations, biopolitical control, and "ordering" that fuel contemporary capitalism and apparatus Iceland's magical and queer otherness. Reconsidering Japan through Alternative Modes of Communication and Sociality

10:15 AM - 12:00 PM TMCC - 603

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Satsuki Kawano

CHAIR:

Satsuki Kawano

PRESENTER:

Jennifer McGuire ,Lynne Nakano ,Satsuki Kawano ,Chikako Ozawa-de Silva (Emory University, Department of Anthropology)

DISCUSSANT:

Isaac Gagne (DIJ-Tokyo),Karen Nakamura (University of California, Berkeley, Department of Anthropology)

DESCRIPTION:

This panel explores the presence of diverse

communication styles and relationalities to enrich our understanding of contemporary Japan. People living with notable sensory, emotional, and cognitive challenges are often depicted as suffering from communicative and relational deficits associated with individual bodies and minds. Rather than taking a deficit-centered approach, a more inclusive analysis can deepen our understanding of the social and processual dimensions of alternative communication and relatedness. The participants of this panel examine the gaps between normative modes of communication and those involving sign language interpreter-mediated interactions, people living with developmental dyslexia, adults and children living with autism spectrum disorder (ASD), and individuals participating in online forums called 'suicide websites.' The following questions will be explored in this panel. How do people who routinely use non-dominant modes of communication make sense of their engagements? In what ways do they defy ableist stereotypes regarding sensory and cognitive differences? How do some people reject or dismiss alternative modes of knowing and relatedness in everyday life? What new understandings develop when people are socialized into alternative methods of communication? Jennifer McGuire discusses the role played by hearing Japanese Sign Language (JSL) interpreters by analyzing their culturally specific positioning as welfare providers. Fraught with a deficit-centered view of deaf people and their languages, this framing of interpreters negatively affects their training by failing to recognize deaf people as minority language users needing full-fledged access to multilingual communication. Satsuki Kawano investigates how people living with developmental dyslexia create non-dominant styles of literacy by mixing alternative formats and methods to work with written materials. Though their literacy styles are often rejected at school and work, some advocates open dialogue with uninformed skeptics to raise social awareness by addressing the inaccessibility of conventional literacy practices. Lynne Nakano analyzes the perceptions of sensory and communication styles that are stereotypically associated with individuals with autism spectrum disorder (ASD) by considering the views of special education experts, mothers of children who are diagnosed with ASD, and adults living with ASD. Their accounts reveal tensions between the social ideal of adjusting to normative styles of communication and the need to recognize people living with ASD as users of their specific communication styles. Meanwhile, by analyzing online forums known as 'suicide websites,' Ozawa-de Silva argues that through anonymous online communication, those struggling with the pain of being alone seek social connections

that are otherwise missing from their lives. Though the media often denigrates these users as 'irresponsible youth,' she notes that forum participants engage in non-dominant communication styles to forge personally meaningful ties with other sufferers to reduce their sense of loneliness. In sum, drawing on their recent or on-going ethnographic fieldwork, the participants of this panel attempt to rediscover Japan by scrutinizing alternative modes of communication and sociality.

Social Welfare Providers or Language Professionals: The Role of Sign Language Interpreters in Japan: Japanese Sign Language (JSL) is a language—not a gestural system or manual form of Japanese. Sign language interpreters play a crucial role in facilitating communication between signers and non-signers as interpreters bridge the national language (Japanese) and a minority language (JSL). However, the role of the sign language interpreter is often misapprehended. Sign language interpretation in Japan is typically viewed through the lens of social welfare (*fukushi*) rather than one of linguistic diversity. Due to this framing, hearing sign language interpreters are positioned as being there to provide a welfare service for the deaf person instead of enabling multilingual communication for all participants in an interaction. Cross-cultural research has highlighted how a deficit view of deaf people and their languages affects not only sign language interpreter training, but also the expectations held by both the interpreters and deaf “users” of interpretation services, which can negatively impact communication access. This ethnographic research has found that in Japan, where the profession is young and JSL is not recognized as a national language, interpreter training may be perceived as inadequate, the social status and recognition of the profession remains low, and interpreter expertise as well as “*aisho*” (compatibility) with clients are persistent challenges. This presentation also discusses how grouping sign language interpretation alongside other aspects of “social welfare” for disabled people can obscure linguistic diversity within and across deaf communities in Japan. Presenter: Jennifer McGuire

Communication and Sociality for Individuals Living with Autism in Japan: Sensory and cognitive challenges faced by young people, often described as “developmental disability” (*hattatsu shōgai* in Japanese) have received increased attention in Japan in recent decades among educationalists and in popular mass media. The term “developmental disability” is an umbrella term used in Japan to describe a variety of disabilities recognized by the Japanese government. Of these, autism spectrum disorder has received a significant amount of attention,

and is known for presenting challenges in the area of social communication and perception. This paper considers interpretations of sensory differences from the perspectives of special education experts, mothers of children who are diagnosed with autism spectrum disorder (ASD), and adults living with ASD. The paper discusses how individuals maneuver between expectations that (1) unconventional sensory and communication styles are remolded such that they can be accepted in schools and workplaces and (2) realizations that unconventional sensory and communication styles may not necessarily be inferior to standard sensory perceptions and communication. First, the paper discusses how educational experts navigate between acknowledging the special communication styles of students and encouraging pupils to adjust to normative styles with the objective of finding a place for themselves in society. Second, the paper discusses tensions experienced by mothers in which mothers hope that their child will be able to meet social expectations even as many come to resist medical labeling of their child as deficient. Finally, the paper considers the perspectives of adults who have been diagnosed with ASD and how they articulate meaning through the struggles they have faced. Presenter: Lynne Nakano

Alternative literacy engagements among people living with developmental dyslexia in Japan: While developmental dyslexia is often characterized by phonological deficits that affect accurate and fluent word recognition and decoding processes, limited attention has been paid to how people with dyslexia in Japan engage in communication through and beyond written language. By drawing on the data collected on the perceptions of learning disabilities and access to reasonable accommodations in Japan, I explore how informants living with dyslexia develop and make sense of their own literacy practices. I will show that informants create non-dominant modes of literacy by combining alternative and electronic formats, photographs of handwritten notes, and audio recordings. By making sense of their own strengths and critically reflecting on the limited availability of accommodations at school and work, informants cultivate their own styles of literacy engagement. However, people with developmental dyslexia often face the rejection or stigmatization of their alternative literacy practices in everyday life. As a result, some informants engage in advocacy work to foster dialogue with uninformed allies and skeptics by questioning the accessibility of print materials and the social expectation

of accurate and fluent manual writing in a Japanese context. Presenter: Satsuki Kawano

Suffering in Silence, Seeking Community: In 1998, suicide rates in Japan spiked sharply. Around that time, new forms of suicide emerged, including internet group suicide, and participation in online forums or “suicide websites” rose dramatically. Public and media perception of young people meeting online to discuss suicide or coordinate group suicide was largely negative and deficit-centered, seeing them as irresponsible, careless youth who did not understand the weight of life and had nothing serious to complain about. Over several years, I conducted ethnographic research on suicide websites, communicated with forum webmasters and moderators, interviewed college students on suicide, and met with suicide prevention experts. This research suggests that individuals contemplating suicide did not fit into the denigrating stereotypes presented in the media, but were rather employing non-dominant modes of communication to connect with others, seek out empathy, and feel less alone. The internet provided an anonymous means of communication and community unavailable to them elsewhere. This research suggests that loneliness, and even suicidal ideation, should not be pathologized as a disorder, even though it can be a serious affliction. An attention to diversity and subjectivity—in other words, a commitment to empathy—is what is required both on a public policy level, in the media, and by scholarship in dealing with such issues in contemporary Japanese society. Presenter: Chikako Ozawa-de Silva (Emory University, Department of Anthropology)

Signs in Circulation: Infrastructure, Logistics, Storage

10:15 AM - 12:00 PM TMCC - 716 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Michael Lempert (University of Michigan)

CHAIR:

Miyako Inoue (Stanford University), Jennifer Hsieh (University of Michigan)

PRESENTER:

Miyako Inoue (Stanford University), Eitan Wilf, Anna Weichselbraun (University of Vienna), Michael Lempert (University of Michigan)

DISCUSSANT:

Kathryn Graber (Indiana University, Bloomington, Department of Anthropology), Matthew Hull (University of Michigan)

DESCRIPTION:

Over the past few decades, linguistic anthropology has continued to draw out issues of materiality in and around semiosis. Some have foregrounded the material affordances of things or spotlighted the sensuous experience of qualia; others have considered the enskilled handling and circulation of artifacts such as paper and files. Still others have spotlighted medial technologies located in the pathways of circulation, such as recorders and playback devices, analogue and digital storage systems—all of which help convert (transduce) signs as they are felt to travel and change. Taking the materiality of signs and its technical and technological mediation seriously, these lines of inquiry intersect with an expanding literature on infrastructure and logistics, which are designed to facilitate, causally, the surface movement and storage of things. What can infrastructure and logistics teach us about semiotic circulation? In this roundtable, we consider the idea of infrastructure and related terms as we remember linguistic anthropology's pioneering scholarship on the 'movement' of communicative objects--signs, discourses, narratives, texts. This scholarship destabilized objects such as 'text,' for instance, with its processual notions of entextualization and simultaneous contextualization/recontextualization. It showed that texts are not intrinsically self-contained and stable, and that textuality spills over into social life in ways that can be studied ethnographically and semiotically. From the start, this literature also sensed the materiality of these processes. It distinguished the thingy-ness of 'text-artifacts,' for instance, from a real but immaterial 'text,' and it appreciated how the circulation of text-artifacts--the distribution of newspapers or movement of paper files, for example--could facilitate the emergence of second-order formations, such as publics and counter-publics, bureaucracies and nations. As we think about the notion of infrastructure for linguistic anthropology, we turn to infrastructures centered on communication of various kinds, especially those in transition. We compare cases that feature new and often contentious reporting systems, filing systems, and digital storage and retrieval systems. As Brian Larkin and others have stressed, the very identification of some assemblage as infrastructural is a semiotic and ideological act that selects out some things and ignores others. As infrastructures are not ontologically homogenous and unproblematically 'out there,' we attend to contestation

over what counts as infrastructural and what doesn't, who takes credit for it and who disavows it; and what logics and rationalities try to govern it. The cases we share and use as a springboard for discussion include a new corporate electronic documentation and communication system to transform Indian police practices; the stenographic recording and storage of speech in the Japanese parliament; the reform of a university's reporting infrastructure to improve accountability for sex and gender-based misconduct; the creation of a database of past jazz masters' recorded improvisations to be used in real time to mix masters' styles with the purpose of inspiring human musicians; the IAEA's nuclear verification system as semiotic infrastructure; an archive of acoustical knowledge inscribed in the sound barriers of Taiwan's noise control regimes; and the push for infrastructure to trace sustainably sourced cashmere.

CHAIR:

James Meador (University of Michigan, Ann Arbor, Department of Anthropology)

PRESENTER:

Karelle Hall (Rutgers University), James Meador (University of Michigan, Ann Arbor, Department of Anthropology), Gareth Smail, Yukun Zeng

DISCUSSANT:

Nishaant Choksi

DESCRIPTION:

How do activists build political futures by teaching people how to read? Reading, learning, socializing all possess a future orientation, leading students along an arc of skill acquisition into a community of practice. Some literacy pedagogy projects make no claims that their work is political, others advance specific claims about the political change they effect. The papers of this panel seek to understand something distinct from both of these kinds of claims about literacy projects. They seek to understand how activists advance their political

projects through semiotic labor that makes futures, rather than just describing them. This panel's papers approach literacy pedagogy as a form of social action centered on texts without being reducible to their contents or to statements about them. It destabilizes the conceptualization of literacy, pedagogy, education, activism, and their relationship in specific ethnographic constellations. What does text do beyond denotatively delivering political information? What does literacy bring about if not futures of social engineering? Who are the implicit activism and tacit education in future-making? What does it mean, semiotically speaking, to build a tacit future through text?

Writing Our Futures: Nanticoke Language Revitalization and Sovereignty: The Nanticoke language is returning home for the first time in generations and is being adapted into written form. Community classes, multilingual naming practices, a Nanticoke language themed city park, and a children's language book are all part of this revitalization movement. The Nanticoke community, in their cultural and language revitalization work, have grappled with economic shifts, heightened local visibility, political possibilities, dialogues of authenticity, land rematriation, and intertribal relationships. They have mobilized their language in these challenges, creating new channels for visibility and sovereignty work. This effort has also generated dialogue around colonial language ideologies of standardization and purism. The work of reclaiming language and place names in ancestral spaces are embodied practices of Indigenous sovereignties and resistance. These fluid sovereignties, articulated through both written and oral practices, are forming variegated decolonized ideologies of a Nanticoke past, present, and future. In this paper, I will explore how the Nanticoke community mobilizes their language as part of their continued efforts for survival, visibility, sovereignty, and hope. Presenter: Karelle Hall (Rutgers University)

Becoming Shock Workers: Model Workerhood in Soviet Chinese Mass Literacy Primers : How did a mass literacy campaign embody the political aspirations of the Soviet Chinese minority? Though the Soviet Chinese suffered mass execution and deportation in the Stalinist terror of 1937, their published texts from the early 1930s survive. This paper scrutinizes these texts in order to explore the interrupted political project that created these texts, not just as a record of political action, but as its vehicle. I reconstruct its goals by reading depictions of valorized characterological figures and social relationships against formal structures of addressivity and their political

historical context. Russian lexical material in Soviet Sinophone poetry and short fiction written in the Sin Wenz latinized script effectively blurred the line between code-switching and lexical borrowing. This formal indeterminacy in turn displays parallels with the ambiguous position of the Soviet Chinese themselves: simultaneously a Soviet national minority under intense pressure to speak the language of the Russophone majority, and an internationalist vanguard mastering the keywords and practices of a socialist society still in the process of being built. The texts used in the Soviet Chinese literacy campaign made frequent reference to the figure of the *udarnik* 'shock worker.' Embracing the shock worker was a bid to efface their minority status through 'socialist competition,' an emerging system of performance-based differential compensation. The organizers of the literacy campaign thus sought to demonstrate Soviet Chinese collective loyalty through applying the correct label to the material proof of their productive labor. Tragically, it was not enough to save them. Presenter: James Meador (University of Michigan, Ann Arbor, Department of Anthropology)

Cultivating Creativity: Ideologies of Text and Transformation amidst Morocco's Educational Reforms: When Morocco won independence from France in 1956, it inherited an education system largely modeled on the French Baccalauréat, centered around high-stakes exams that sort and certify students' performances. This exam system has long been accompanied by a set of ideologies about texts and personal transformation: that students become knowledgeable by transcribing classroom lessons as texts, memorizing them, and reproducing them on standardized exams. Recently, however, this so-called "traditional" model of classroom learning has come under public scrutiny in Morocco, amidst panic about the poor quality of Morocco's education system and rampant cheating on exams. From public debates to living room conversations, parents, pedagogues, and students have been reimagining how schooling can and should transform Moroccan children in relation to various visions of the country's postcolonial past and future. This paper examines one such alternative in the form of a new state-funded program focused on cultivating "creativity" and "worldliness" through extracurricular language arts. Drawing on ethnographic fieldwork conducted at a "creativity" school program in Morocco's Middle Atlas, this paper analyzes how teachers, parents, and students distinguish "creative" pedagogical activities—and their transformative potential—from "traditional" ones on offer in their community. Focusing on concrete instances of talk in and around the extracurricular program, the

papers shows that: 1) cultivating language arts “creativity” involved new ideologies of text and personal transformation that centered oral recitation and improvisation over standardized written assessments, and 2) when such semiotic ideologies were referenced in talk, they were often layered upon other local ideologies of class, ethnicity, and language in ways that complicated the activist vision of the program’s teachers. Presenter: Gareth Smail

Intelligibility and Intensity: Classics, Journalism, Knowledge, and Wisdom: “What about your life? Are you just doing your dissertation?” It’s the beginning of January, 2020, the end of my fieldwork, one of many times my dissertation project is straightly questioned by my informants. “You can never understand the mind of dujing parents!” Mostly, they are mothers, who play a much more agential roles in sending children to dujing. Dujiang, literally “reading” (du) “classics” (jing), is a grassroots Confucian education movement in People’s Republic of China (PRC), Taiwan, and Chinese American communities. Originated in Taiwan in 1994, this movement has mobilized hundreds of thousands of youths to read (Confucian) classics aloud without regard for understanding, with the hope that repetitive recitation will eventually lead to eternal wisdom (dao). I find that, in the most intensive forms of dujing, which is in Mainland China, students read eight hours a day for years, and are often urged by parents (usually mothers) to drop out from legally mandatory mainstream schooling. As the introduction to my dissertation project on dujing, this chapter provokes the trope of intelligibility and intensity to capture both the perceived feature of dujing’s reading without understanding, and the ethnographic difficulty for me, a PhD scholar, to study an “anti-intellectual” grassroots movement that entails intensive mode of reading and intensive education investment. This reflection is triangulated by my experience working as a journalist during the beginning of Covid-19 in China in 2020. Presenter: Yukun Zeng

The Anthropology Book Forum: Perspectives and Reflections on the Book Review in Transition

10:15 AM - 12:00 PM Virtual - Room 3
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Humanistic Anthropology

ORGANIZER:

Rasmus Rodineliussen (Stockholm University)

CHAIR:

Rasmus Rodineliussen (Stockholm University)

PRESENTER:

Susan Wright (Aarhus University), Juan del Nido (University of Cambridge), Gustavo Barbosa, Nomi Stone (University of Texas), Karen Strassler (CUNY, Queens College, Department of Anthropology), Matilde Cordoba Azcarate (University of California, San Diego)

DISCUSSANT:

Emilia Groupp (Stanford University, Department of Anthropology)

DESCRIPTION:

The Anthropology Book Forum (<https://anthrobookforum.americananthro.org>) was founded by the American Anthropological Association as an experimental digital platform aimed at accelerating the scholarly book review process and expanding conversations around newly published work. Based on the idea that book reviews are not just summaries of academic texts, but engagements with scholarship, ideas and authors, the Forum seeks to facilitate connections and exchange between authors and readers within and outside of anthropology. In 2022, the Forum was awarded the GAD New Directions Award (group category) for its sustained efforts towards transitioning to new modes of book reviews as well as to more diverse and accessible formats. In recent years, the Forum has sought to encourage and host new configurations of the book review, including visual, audio, and video formats that can reach a broader public both within and outside of academia. This roundtable seeks to host a conversation around the book review in transition, its role in contemporary scholarly exchange, and how it is evolving in the current era. Toward this end, this roundtable brings together authors who engage with reviews of their recently published work to reflect on the value of the book review, the role reviews play in reaching larger audiences, and what an author can learn about their work by engaging with reviews. It similarly highlights the ways in which different modes of review can provide a medium for early career scholars and graduate students to engage with disciplinary conversations, while also thinking about the value of reviews for larger audiences beyond anthropology.

The New Politics of Community Mobilization in Latin America 2

10:15 AM - 12:00 PM

TMCC - 604

Oral Presentation Session

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

ORGANIZER:

Jeremy Rayner (Max Planck Institute for Social Anthropology)

CHAIR:

Adela Zhang

PRESENTER:

Umberto Cao ,Jeremy Rayner (Max Planck Institute for Social Anthropology),Adela Zhang

DESCRIPTION:

This double panel explores the legitimacy of 'the community' as a vehicle for political, sociocultural, and economic transformation in the current moment. When referring to rural Latin America, 'community' is a nearly ubiquitous, yet vague term. It is seldom examined to see how and why communities continue to be used as vehicles for achieving broader political change and meeting livelihood needs in particular moments. In the current moment of crisis and conflict in Latin America, the media and official discourses often discount community political mobilization throughout the region (e.g., Ecuador, Peru, Bolivia, and Panama) with offhand statements such as 'they only participate in the protests because their communities will fine them.' By contrast, sympathetic analysts often presume that the pursuit of collective well-being is a cultural reflex characteristic of rural communities. Both positions (i.e., coercion by local elites or the cultural subordination of the individual to the collective) take for granted the active and changing production of communal legitimacy and the conditions of possibility for communal mobilizations. Thus, this panel will address a series of questions: (1) What do community structures and ideals look like today, particularly in the face of rural-urban migration and rapid cultural change? (2) What shapes contemporary commitments to those structures or ideals among rural peoples (e.g., material aims, like irrigation or tourism; social ties; or cultural identities; etc.)? (3) To what ends do people participate in communal mobilizations? In other words, where lies the legitimacy of the

community as an institution and, in turn, a vehicle for change?

Of energy transition and "overlapping" communities. Some critical considerations based on the case: The increasingly manifest and catastrophic effects of the ecological crisis make the energy transition an urgent and unpostponable imperative. However, how to ensure that this transition will be 'fair' remains problematic. On the one hand, the measures to achieve it very often leave unaddressed the issue of energy poverty. On the other hand, the move towards more sustainable sources and modes of energy production risks imposing a further burden on human groups already severely affected by the impacts of climate change, by imposing on their territories "green" energy projects and/or extractivism. Among the groups most exposed to this dual threat are undoubtedly many indigenous groups in Latin America. In this contribution will present the case of the civil resistance movement Luz y Fuerza del Pueblo, from Chiapas, Mexico. This is a peasant- and indigenous-based movement that stands for universal and non-discriminatory access to electricity. Yet, at the same time, it uses electricity as a means within a broader struggle for autonomy. We will specifically examine the community dimension in the mobilisation of Luz y Fuerza del Pueblo. First, we will assert the existence of an "activist community" that is articulated on the 3 organisational levels of community (i.e. village), region and state. By resorting to specific ethnographic cases, we will then explore the variety of positions existing at the village level, between the community of inhabitants and the community of activists, questioning the frictions and synergies, the forms of collaboration and opposition and the complexity of meanings, motivations and strategies. This will lead us to highlight how interpretative tools based on a totalising and oppressive idea of community, are inadequate to explain LA mobilisations against contemporary challenges. Presenter: Umberto Cao Commitment to the Comuna in Quito: While often regarded as a quintessentially rural institution, the comuna (commune) has been maintained and renewed in urban and periurban settings in and around the capital city of Quito, as subsequent generations of comuneros have renewed their commitment to community organization, refusing pressures towards dissolution and making new demands for territorial autonomy. In the process the comuna has demonstrated that it is an adaptable organizational form capable of serving multiple ends. The comuna allows members of the community to make decisions about land and water use, coordinate collective work and celebrations, and

address common concerns such as security, transport, and recreation. It can provide a shield from municipal policing and regulation, as well as a refuge from racism and a platform for recognition, ambition, and aspiration. It can provide as a base for political action, from conflicts emerging from suburban development in and around communal land to national struggles over austerity. And it maintains the continuity of ancestral communities and territories across generations. Across these diverse purposes is an interest in maintaining the capacity to work and act in concert for a common good; a commitment at once precarious and regularly renewed. The consistent work of administering common goods such as usufruct property and water maintains the forms that can be put to other, new or extraordinary purposes. Presenter: Jeremy Rayner (Max Planck Institute for Social Anthropology)

Toward an ethnography of interest: community mobilizations around large-scale extraction in Peru: Protests organized by indigenous and peasant communities around large-scale extraction are often termed “social conflicts” in Peru. The conflation of protests with conflict is characteristic of how certain forms of community mobilization, such as roadblocks and strikes, have become “problematized” (Murray Li 2007); that is, defined, bounded, and diagnosed as a problem that threatens the unity and functioning of some broader social whole (Coser 1956). Underlying the transformation of mining-related protests into a social problem is an imagined model for human motivation in which communities face incentives to protest, thereby making their protests the product of “interests” (“*tienen algún interés*”; see Aparicio Huaspa 2017). In its more generous iteration, this observation is an empty way of recognizing that a community and its members must have a reason to protest. But in its more common form, it questions the sincerity of community-led protests by suggesting that mobilizations have been instrumentalized by private, hidden “interests” and are therefore illegitimate. Diverse ways of thinking about protests—as decent or necessary to utilitarian and jaded—express what Wendy Espeland calls “contested rationalities” (1998). Rather than dismiss the accusation that protests are driven by “interests” as itself an “interested” claim (that is, deliberately made to discredit community mobilizations), I explore how *comuneros/as*, *dirigentes*, state officials, and even (non)academic observers’ varied ways of rationalizing mobilization express themselves through an ever-expanding idiom of interest. Drawing on in-person and digital fieldwork of social conflicts involving peasant communities in Peru’s Southern Mining Corridor, I approach “interest” ethnographically to ask: What is

interest? What does it represent? And what are the effects of thinking about community mobilizations (and communities themselves) as having interests? Presenter: Adela Zhang

The Politics of Conversion in Christian Contexts

10:15 AM - 12:00 PM TMCC - 203 D

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Religion

ORGANIZER:

Jose Abraham

PRESENTER:

Catherine Larouche ,Anusha Hariharan (University of North Carolina, Chapel Hill),Soren Pearce (Brigham Young University)

DESCRIPTION:

This panel features five papers that examine diverse ethnographic contexts of conversion to Christianity. The papers emphasize the political contexts, dimensions, and outcomes of conversion as practice and process.

Keeping Religion in the Backstage: Christian Associations and humanitarian relief in Delhi, India.: In India, where informal employment represents an important part of the labor market, the COVID-19 pandemic and ensuing lockdowns took a hard toll on those living in precarious financial situation, rendering them dependent on external assistance to survive. Within days, daily wage workers, street vendors and domestic workers started running out of food and basic necessities. Since usual public (and private) welfare systems quickly became under strain, preexisting non-governmental organizations as well as newly formed community groups and individual volunteers joined their efforts to fight the pandemic and its collateral effects, forming informal and semi-formal humanitarian networks of care alongside public social service provision. In certain contexts, governments praise such forms of 'demotic humanitarianism' (Taithe, 2019) or 'grassroots humanitarianism', as they participate in filling the welfare gaps created by neoliberal reforms and cuts in social services, which become particularly visible in times of crisis. However, state-led relief interventions and objectives do not always go hand-in hand with these citizen-led initiatives, especially when the latter are initiated by marginalized or minority groups. Based on a research project on religion and humanitarian aid in India, this presentation addresses these ambivalent

relations between state and non-state actors by examining the relief work conducted by Delhi-based Christian associations during the pandemic. I examine the ways in which state policies, especially regarding access to foreign funding, influence the work of these associations and their sense of recognition and belonging to the nation. By discussing more specifically how religion was made visible or invisible in relief initiatives, I highlight the delicate position that Christian associations now occupy within the Indian humanitarian landscape. While they were once closely associated to colonial powers, combining welfare activities with missionary endeavors, the way Christian associations now manage the religious dimension of their work signals important transitions in relations of power. Using relief practices during the pandemic as an example, this presentation thus addresses larger questions related to religious minorities, social citizenship and national belonging through the lens of aid and care. Presenter: Catherine Larouche

'From charity to justice': Political transformation and ethical self-cultivation among Tamil Catholics in Southern India: Since the 1970s, Tamil Nadu in southern India has witnessed the emergence of a resolutely Catholic social justice lifeworld, whose contributions to social transformation in the region are seldom acknowledged in the histories and ethnographies of either religiosity or political life in South Asia. The practices, aesthetics and poetics of this lifeworld have emerged as distinct from a mainstream Tamil Catholic religious landscape, begging the question as to why it emerged as distinctive. In engaging this question, this paper examines how activists in this lifeworld such as feminist nuns, Jesuit priests and lay Catholic social justice activists conduct forms of ethical self-cultivation to embody Catholic values in their everyday lives, and collectively re-imagine their social and political worlds in accordance with principles of social justice. In doing so, this paper engages how activists translate political discourses that travel globally – such as Liberation Theology and Paulo Freire's methods of conscientization – to their local Tamil contexts. Further, this paper explores how these activists creatively combine ideologies and discourses that have globally resonance, with localized political praxis such as anti-caste Ambedkarite philosophy and feminist forms of dissent, ethics and care, towards political transformation. Ethnographic attention to ethical self-cultivation offers us new modes to theorize Catholic life that social actors embody in the course of everyday, ethical action, marking a shift away from the study of Catholic practice embodied primarily through devotional and ritual

forms. Presenter: Anusha Hariharan (University of North Carolina, Chapel Hill)

Thou Shalt Kill: Violent Religion Among Street Preachers in Northern Ireland: This year marks the twenty-fifth anniversary of the Good Friday Agreement, the arrangement that effectually ended the conflict of the Troubles, which had characterized the country for the last thirty years. Despite the decline in violence secured by the GFA, Belfast continues to see ideological and physical struggle-including the very recent attacks on members of the police and military. The intersectional conflicts based on sectarian divisions in religion-between Protestants and Catholics-and politics-between loyalists and nationalists-affect the daily lives of most of the citizens of Belfast. Some citizens are more active in influencing those divisive structures than others. Among the influential are street preachers; some of the most extreme of them actively contribute to the sectarianism ideology that fuels the religious and political violence in the city. This paper examines how some street preachers use their public religious authority to incite violence among marginalized and vulnerable populations within Belfast. I also explore the reception of and response to these preachers and how religious people in Belfast reconcile messages of peace and conflict within Christianity. In a city still in the process of recovering from the Troubles, street preachers indicate how popular religion affects communities attempting to create lasting peace. DISCUSSANT:

Carole McGranahan (University of Colorado, Boulder, Department of Anthropology)

DESCRIPTION:

What does storytelling do in settler colonial times? Ethnographies do not just tell stories, but embed theory within them (McGranahan, 2020). Vivid narratives have the power to animate concepts through contextualized social worlds. Furthermore, the ways in which scholars form and communicate concepts are not only theoretical acts, but also political ones. When engaging issues of sovereignty and settler colonialism, it is especially vital to consider processes of ethnographic meaning making. As Linda Tuhiwai Smith (Ngāti Awa and Ngāti Porou, Māori) argues, dominant systems of classification, condensing, and evaluation underlie the very 'procedures by which indigenous peoples and their societies were coded into the Western system of knowledge' (1999, 44). Since worldviews are embedded within epistemologies, for decolonization to be meaningful within anthropology it must include how the high-status ideas known as theory come into being. Stories and oral traditions embody powerful social lives and insight, even as they are continually delegitimized by dominant state and academic forms of knowledge creation (Cruikshank, 2000). As Chocktaw scholar Leanne Howe writes, 'stories are theories' and they 'pull together all the elements of the storyteller's tribe, meaning the people, the land, multiple characters, and all their manifestations and revelations, and connect these and past, present, and future milieu' (2008, 330). This is exemplified by the work of numerous Indigenous scholars, including Leanne Simpson (2011), who theorizes Michi Saagiig Nishnaabeg analytics through multiple layers of storytelling. Indigenous North American scholarship is also inspiring new ways of reimagining colonial understandings in Asia, including Tibet (Lokyitsang, 2017). Here, we aim to further open conversations on the role of theoretical storytelling at the intersection of anthropology, Native studies, and Asian studies. We ask, what is the power of ethnographic storytelling in revealing and refusing settler colonialisms? How can such stories expand how and where settler colonialism and indigeneity are imagined? We invite papers that center specific stories—not as examples or data—but as their primary mode of thinking and understanding. Works Cited

Theorizing Loneliness in times of Invasion: Mis/Understanding Tibetan Residential Schools in Exile: This story is about an interview I did with Ngawang Dorjee in India at the beginning of 2020. He escaped Tibet during its invasion in 1959 and became part of the first generation of students at the residential schools for Tibetan students started by the Dalai Lama in India. During my oral history interview with him about his life at the Tibetan residential school during the early 1960s, I asked whether he was ever lonely during his time there as a student. I asked this question because loneliness had come up in my interviews with former students of the 1980s. These were students who had to leave their families behind in Tibet when they decided to join the Tibetan school system in India in the early 1980s, after China ended the policies of the Cultural Revolution. Ngawang Dorjee refused (Simpson 2014) to answer my question. Instead, he challenged the assumptions embedded in my question by insisting on his own experience and the context of invasion. My presentation focuses on this exchange. It theorizes Ngawang Dorjee's intervention as an important corrective against normative understandings of residential schools. While education and residential schools have been understood correctly as serving the interest of colonial and imperial powers of the modern nation-state (Bourdieu & Passeron 1970; Foucault 1972; Stoler 2010; Castellano, Archibald, DeGane 2008), Ngawang Dorjee's experience speaks otherwise. Instead, his interventions offer important insight on how native-led Tibetan institutions, such as the residential schools for Tibetan refugees, challenged the colonial violence and dispossession Tibetans were experiencing under China with their own care-interventions and institutions. Presenter: Dawa Lokyitsang (University of Colorado, Boulder, Department of Anthropology)

"The Real Racists:" A Settler Story : What does it mean to tell anthropological stories about stories in the

context of ongoing modes of domination? Given the ways in which historical anthropological assumptions about the availability of Indigenous stories for representation and interpretation have sedimented ongoing logics of settler colonial erasure, on the one hand, and, on the other, the ways in which particular stories can be (and are) forms of property within different communities, the question not just of what stories we tell as anthropologists but, also, why we choose to tell them seems a pertinent one, to say the least. With this in mind, in this talk I tell a story about settler society in western Canada - in particular, about the "off-the-grid" community of the unincorporated town of Towtown, established on the sovereign, unceded territory of the Haida Nation. The story follows the events of a talk I gave on Haida Gwaii that was heavily attended by this community and their responses to some of the critiques I'd offered of settler appropriation in that talk and in my first book, *Shaping the Future on Haida Gwaii*. From their responses - especially one question I was asked about why I hadn't focused on the "real racists" in Canada society - I unfold a way of thinking about the colonial character of settler good faith and the ways in which this encompasses the ways Canadian settler understand themselves as subjects of an ongoing structure of colonial domination. Presenter: Joseph Weiss (Wesleyan University, Anthropology Department)

"It Was Bears and Wolves that Protected Me": Surviving Maoist Xinjiang with Kazakh Humor : During socialist collectivization in China's western borderland—Xinjiang (1953-1983), increasing pastoral production was a political task. Hunting must serve its purpose of protecting the commune's livestock and also contribute to sideline production. Mobile pastoralist Kazakh, Kyrgyz, Sibe, and Mongol hunters were politically mobilized to hunt more than they needed to sustain lives, and hunting was defined as a form of labor to build socialism. This paper focuses on Kazakh writer Nurila Qizihan's book *Hunters' Stories* (Kz: Angshiliq Hikayalari, published in 2009) about her father as a commune hunter who strove to meet hunting quotas to avoid political persecution during that time. In these stories, Nurila's autobiographical "I" became her father, grandfather, other fellow hunters, or elderly people who lived through the various socialist campaigns, demanding labor, and humiliating struggle sessions. Many stories are embedded in light satires, humor, and animal metaphors. Many are told multiple times at family feasts, carefully avoiding ethnonyms and demonstrating of political views but instead focusing on individual cadres and soldiers' ridiculous mistakes. In

this paper, I examine how Kazakh humor, meaning-making, and active remembering in authoritarian contexts give a new perspective to our existing understandings about storytelling in Indigenous knowledge transmission, survivance, and resurgence, and decolonization. Presenter: Guldana Salimjan (Indiana University, Bloomington)
Discussion: Discussant: Carole McGranahan (University of Colorado, Boulder, Department of Anthropology)

3-320

Theorizing the "social" in mental health research and action

10:15 AM - 12:00 PM TMCC - 206 F

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Doerte Bemme (King's College London)

CHAIR:

Hanna Kienzler (King's College London)

PRESENTER:

Doerte Bemme (King's College London), Eugene Raikhel, Laurence Kirmayer (McGill University), Liana Chase (Durham University), Sumeet Jain (University of Edinburgh), Rochelle Rochelle (University College London)

DISCUSSANT:

Dominique Behague (Vanderbilt University)

DESCRIPTION:

This panel explores how the 'social' is imagined in relation to mental health research and practice. Advocacy and activist communities, social epidemiology, anthropology, sociology, epigenetics, and social psychiatry have offered important theorizations of the social dimension of mental health through frameworks such as social justice, the social determinants of health, social suffering, social cohesion, structural violence, or ecosocial theory, to name just a few. These theorizations are situated and partial because they foreground some and obscure other ways of knowing, which are themselves products of their time, place, discipline, and the positionalities of gatekeepers. Panelists are invited to consider the varied facets of the 'social' and to reflect on how it is constructed, embodied, and mobilized in different sites. What are the measures, narratives, imaginaries, and actions that get at the structural, collective, and interrelated forces that make people well

or ill? How are social causation, social change, and social interventions imagined and actioned in mental health knowledge practices and on-the-ground initiatives? Questions that we seek to address include: Concepts and measures: How is the 'social' defined, measured, imagined, and acted upon in relation to mental health? Disciplinary norms: Why are some approaches to the social more accepted than others? What alternative approaches might better capture the intersection of society and mental health, and why? Social change: How do we imagine the links between social change and mental health? What are the theories of change that underlie research, advocacy, and policy work? Action: How does activism and the work of scholar-activists open opportunities for theorising the social through action? Critique: What does 'social critique' mean and how does it motivate activism and research? What are the limitations of current social theories? Storytelling: What kinds of stories bring the social dimension to life? Is a focus on suffering effective? Power: How do you consider power and positionality in your knowledge production? How do you see it at work in clinical practices and policy-making?

Mutuality as a method: A practice-based theorization of the "social" in global mental health: Global mental health (GMH) has long been critiqued for perpetuating epistemic injustice within its knowledge practices and global partnerships. Despite more sustained efforts to decolonize the field, much of the funding, convening, and publishing power remains concentrated in institutions in the global north. Calls for "mutuality" and "mutual learning" have thus gained traction to produce knowledge more equitably across epistemic and power differences. In this presentation, I reflect on the outcomes and process of a virtual mutual learning process with 39 collaborators from 24 countries, who came together to theorize what a social paradigm for Global Mental Health should entail and how it could be put into practice. Their expertise grounded in and straddled quantitative and qualitative research, community mental health care practice, civil society, and lived experience. Mutual learning as a method allowed these differently situated actors to re-imagine key priorities, processes, concepts, and relations underpinning GMH, albeit within the constraints of the field's current institutional arrangements. The resulting practice-based theorization of the "social" called for four key shifts: 1) Move from a deficit to a strength-based view of community mental health, 2) broaden the evidence base for scaling and ground practices in local knowledge, 3) direct funding to community organizations, and 4) challenge key psychiatric concepts,

such as trauma and resilience, through the lens of lived experience of communities in the global south. Presenter: Doerte Bemme (King's College London)

Locating the social in the college mental health crisis: For well over a decade, professionals working in the domain of college mental health have contended with increasing rates of help-seeking and diagnosis among students. An emerging sense of crisis has been amplified by the pandemic and its aftermath, with a range of important social actors, including the US Surgeon General, describing a broader crisis of youth mental health. Explanations for these increases often point to "social" causes, though their specific character is widely debated. This paper draws on interviews with US mental health professionals working with college students, as well as publications and online conversations, to trace conceptualizations of the "social" in interpretations of the "college mental health crisis." Widely cited explanations include reduced levels of mental illness stigma and increased access to higher education, the effects of social media on young people, the increasing professionalization and precarity of students, and the experience of social-political anxieties. Among working mental health professionals, conceptualizations of the "social" which underlie these explanations often emerge less as fully formed theories than explanatory models linking mental distress to phenomena such as political polarization or inequality or racialized experiences of adversity or online social comparison, to name a few. At their most generalized, such theories take the form of the "common-sense" notion that, in the words of one mental health professional, "the overall... state of our world is making people just feel terrible." In this paper, I discuss these ideas of the social and consider their significance for practice and advocacy. Presenter: Eugene Raikhel

The Place of the Social in Psychiatry: From Structural Determinants to the Ecology of Mind: Social psychiatry considers the ways in which mental disorders are shaped by particular social environments. "The social" in this work stands for the structures and dynamics of groups of people interacting on multiple scales from the intimate sphere of couple and family to neighbourhoods, communities, societies, nations, and transnational or global networks. These interactions create social contexts, niches, forms of belonging, identities, institutions and larger systems that influence the causes, expression, course and outcome of mental disorders. Unpacking the health consequences of these local and extended systems requires an interdisciplinary approach that considers: (i) the social psychological,

psychophysiological, and sociophysiological processes that mediate the impact of the environment on body, mind, and person; (ii) the interactional dynamics of social systems that give rise to adversity and inequity as well as resilience; and (iii) the recursive effects of self-understanding, agency and subjectivity. This paper will outline a cultural-ecosocial approach that emphasizes the ways in which cultural meaning and practices mediate the effects of the social determinants of mental health on the mechanisms of illness, disorder and disease. In this view, “the social” is shorthand for interactional processes that constitute material and symbolic structures that provide cultural affordances, constraints and challenges as well as resources for healing, recovery and restitution. Presenter: Laurence Kirmayer (McGill University)

Theorizing the Human Social in Psychiatric Practice: Learning from Britain’s Open Dialogue Movement: Open Dialogue is an innovative model of mental healthcare informed by systemic family therapy and service user/survivor movements. It locates both the origins of mental distress and possibilities for recovery within social life, seeking to engage people’s wider support networks in a dialogical therapeutic process. In recent years, Open Dialogue has captured the imaginations of activists, clinicians, and people using services in the UK, where it is currently subject to a randomized controlled trial. Those advocating for the approach consistently describe it as a more ‘human’ alternative to conventional treatment. This paper draws on 24 months of clinical ethnography to explore the multivalent notion of the human that is mobilized in such claims. It considers how human care came to be defined in relation and juxtaposition to anonymous and bureaucratic regimes of care within the UK’s National Health Service. Yet whereas anthropologists have often highlighted the social capacities of human beings (e.g., empathy, connection) relative to impersonal bureaucracies, Open Dialogue supporters frequently emphasized their limitations. The human caregiver, in this context, was fallible, uncertain, and, often, wounded. These qualities were moreover construed not as barriers to high-quality service delivery, but as preconditions to high-quality therapeutic relationships that made space for the expertise and agency of service users. We close with reflections on what anthropology might learn from theorizations of the human social within Open Dialogue advocacy. In particular, we consider how an understanding of the humanity of service users and providers as mutually staked might enrich anthropological critiques of psychiatry. Presenter: Liana Chase (Durham University)

Innovative processes to deliver psychosocial care in community mental health organizations in India: The global mental health field seeks to close the “treatment gap” for mental illness in low-and middle-income countries by scaling evidence-based interventions. The evidence base has often bypassed psychosocial interventions by local organizations who do not fit a biomedical approach to evidence building. In India, non-profit mental health organizations are addressing care gaps through novel approaches that emphasise social recovery and inclusion. This study seeks to better understand the nature and dynamic of this innovation by examining the practices and processes of three community mental health care organizations. A comparative case approach was chosen for its strength as an exploratory means for inductive theory building. Three case organizations in Kerala, West Bengal and Uttarakhand states were selected based on their diverse socio-cultural and health systems settings. Qualitative data was collected in 2018-20, to examine their practices and processes using mixed methods and data sources including interviews, focus groups, participant observation and document analysis. Common strategies observed across the three organizations, included engaging community, prioritising beneficiaries, co-opting resources, devolving care, reorganising communication and recovery and integration. These strategies were further categorized into three domains: constructing a sustainable resource base, managing knowledge and redefining meanings. In contrast with conventional problem-solving approaches, these cases built on assets and strengths using inclusive governance which enabled coordination of the community health system. This study concludes that these organizations incorporate reflexive practice and two-way flows of knowledge to address complex social determinants of mental health by modifying processes relating to place, relations, and processes of care; challenge existing distribution of power in biomedical care models and redefine ways of scaling innovations in health. Presenter: Sumeet Jain (University of Edinburgh)

The struggle for the social: rejecting a false separation in our engagement with 'social' worlds : How are we to best conceptualise the social in relation to mental health? This presentation explores a series of tensions that emerge in our attempt to contemplate, engage with, and address the social in mental health spaces. First, I explore the tensions created by disciplinary demands for specialisation, questioning the value of this in with regards to treating the social and emotional body, which continually rejects this fragmentation. Drawing on the work of Foucault and Deleuze, and social representations as a theory of complex

knowledge and action, I re-interpret a case study of a woman seeking mental health services in South Africa. In doing so, I also explore the tension created by seeking to hold the complexity brought to systems and researchers by everyday people, within spaces for response and action. To move the field forward, I explore the need for, and simultaneous impossibility of a 'unifying theory of the social' which contains holds to the multiple ways that the social manifests and intersects. In developing these arguments, I reflect on opportunities provided by the application of Black Sociological scholarship, and its take on phenomenology which allows for a rejection of the hierarchisation of knowledge that supports this fragmentation. Such approaches, namely the 'world view' possibilities for a unified perspective of the 'social' provided by phenomenology embedded in Black Sociological scholarship, which reminds us that our understandings and ways of being in the world are situated within and against the life world. This approach more readily offers access to the full range of the 'social' that we often seek to differentiate for the purposes of analysis or manageable systems of response. I conclude with a potential call to action that asks us to develop maps of the social, which allow academics, activists, and practitioners to better engage in processes to recognise the constellation of social dynamics at work in people's lives. DISCUSSANT:

Berber Bevernage, Usmon Boron

DESCRIPTION:

On the one hand, the relationship between time and justice has recently been analyzed through a rejection of the past, frustration with a preoccupation with the past, and a call for more emancipatory, future-oriented politics. On the other hand, in the face of extended crises, an emerging anthropology of time has produced phenomenological accounts that highlight experiences of delay, waiting, uncertainty, speculation, and stuckness as new temporal modalities that mark our crisis-ridden present-signaling an analogous preoccupation, but with an interminable present. Meanwhile, futures, futurities, and aftermaths have inspired their own, equally abundant accounts. This panel explores the relationship between time and justice through alternative temporalities that are not stranded in a single temporal bracket. Specifically, we are interested in how to conceptualize transition outside a linear or cyclical temporality. Approaching transition as a desired pursuit of improved life conditions broadly defined, we ask: What alternative, neither linear nor cyclical, temporalities ground our understandings of transitions? How do we evaluate the 'success' of a transition outside a linear, future-oriented temporality? Can we conceptualize pursuit, transition, transformation, or emancipation within a temporality that does not start from the past? If a preoccupation with the past is perceived as a defeatist form of politics, what are alternative temporalities in which political transition, accountability, and repair remain possible? Is there a role for memory in emancipatory temporalities other than belaboring, weighing down, or burdening such pursuits with a never-ending past? We analyze transitional pursuits from political systems that range from authoritarian regimes to kinship structures. We are particularly interested in explorations of temporal modalities that propel transition, overcoming, or emancipation while grounded in non-linear trajectories. The panelists discuss all the above questions from ethnographic, historical, and literary approaches.

Sheila Walker

DESCRIPTION:
Black artists and curators have and continue to play a crucial role in the field of visual anthropology. Beyond existing with the 'savage slots' (Trouillot 1991) in which anthropology and the West project their colonizing gaze, Black artists constitute critical creators, archivists, and curators of visual media. Building upon other critical conversations regarding Black visual media making in anthropology (Mullings, S., Sobers, S. and Thomas, D.A. 2021), this roundtable features four Black curators, filmmakers, and media makers from different African diasporic locations to consider how artists create and negotiate the Black Gaze (Campt 2021) of visual anthropology. Tracing the pasts, presents, and futures of Black visual anthropology, this roundtable considers how artists and curators use Black feminist theories and methodologies in visual anthropology to not only contest the otherizing gaze but also create spaces of community, healing and counter geographies of belonging. Participants of the roundtable will explore the following topics: the toolkit left by the Black foremothers of visual anthropology, including Zora Neale Hurston and Safi Faye, the use of film to create diasporic geographies of belonging, the trouble of anthropological capture within the archive, temporal landscapes of Black futurity, and the critical importance of Black trans-feminist perspectives. The roundtable will be an opportunity to engage with the work of Black Visual anthropologists and filmmakers while also exploring the vital work that the field needs to engage in, in order to center Black feminist political praxis within Visual anthropology.

DESCRIPTION:
Similar to other scientific fields, training in and the practice of biological anthropology has moved in the direction of increased specialization. Gone are the days of single session conferences that span the discipline. The nature of the employment market further encourages specialization through graduate and postdoctoral training. However, these external forces do not necessarily change the fundamental shared nature of the questions explored in human evolutionary studies. In part one of a two-part session, scholars will focus on the ways in which the compartmentalization of the concept of time has influenced our understanding of human evolution, past and present. There is a historical tradition that divides human evolutionary studies up into key transitional moments; for example, segmenting studies of the origin of Homo away from the origin of contemporary Homo sapiens and away from the study of living and recent humans. At times these key 'transitions' are supported by our understanding of the evolutionary events and processes at play, but often they are artifacts of earlier, less-informed approaches to human evolution. In this session, scholars will explore questions and approaches that critically engage the rigid segmentation of our evolutionary past.

Fragile and persistent: Human demographic parameters in the Pleistocene : Human evolution in the Pleistocene and post-Pleistocene is often characterized by categorical differences on the basis of ecologically-relevant distinctions. For example, research studies often distinguish between hunter-gatherer versus agricultural modes of subsistence, as well as related archaeological industries. Less often explored are the

underlying demographic parameters that are more proximate drivers of evolutionary processes. Paleodemographic profiles are difficult to assemble in the ancient past given the dearth of sites that preserve sufficient samples to generate individual mortality, fertility, population size estimates. Nevertheless, subtle indicators of demographic status, at a regional level if not the individual population level, are preserved in different forms across fossil, archaeological, and genetic lines of evidence. In this paper I explore the intersection of those data with special emphasis on contrasts between the early and later Pleistocene time periods, as well as the evolutionary implications of these differences. The results here suggest the demographic distinctions/changes throughout the Pleistocene are subtle, and are consistent with a chaotic range of population outcomes across time and space. Rather than a linear progression through time, I argue that heterogeneity and population fragility characterize hominin populations throughout the Pleistocene, with significant implications for how we interpret the disparate lines of evidence available for research. Presenter: Adam Van Arsdale (Wellesley College, Department of Anthropology)

Mapping human histories: Correspondences between genetic and anthropological ways of thinking: DNA evidence has greatly changed our knowledge about historic human migrations, natural selection in human populations, and the differentiation and interaction of prehistoric populations. Geneticists rely on population models and modes of visualization that can be very different from models of interaction and change that are common in anthropology. In some ways these differences in models help to maintain the idea that DNA and other kinds of anthropological data provide independent lines of evidence about ancient people. But often DNA may be answering questions that anthropologists are not asking. Using examples from both prehistoric and historic contexts, I present alternative ways of visualizing and modeling genetic data and discuss how these relate to anthropological models and data. These methods include three commonly used in studies of DNA variation: Principal components analysis, STRUCTURE and TreeMix, as well as two types of network analysis. Using the same methods, I present alternative visualizations of cultural datasets from the Human Relations Area Files and skeletal datasets. These contrasting modes of visualization show that there may be many different pathways to examine correspondences across datasets from different disciplines. By making these patterns visually explicit, it is possible to probe whether

differences of interpretation emerge from the data themselves or from choices of different models and assumptions by specialists from different disciplines. Presenter: John Hawks (University of Wisconsin, Madison, Department of Anthropology)

The Origin vs. Evolution of Homo sapiens through time and space: Since the publication of Darwin's Origin of Species, paleoanthropological research has sought to identify origin events within our evolutionary history: the origin of bipedalism, of the genus Homo and of Homo sapiens are a few examples. However, evolutionary theory dictates that the factors that actually shape adaptive change and speciation are often without clear-cut temporal or geographic boundaries. I use the program of "modern human origins" research as a vehicle to explore this inherent contradiction in paleoanthropology. Scholarship on the evolution of our species focuses heavily on identifying the location and timing of this "event." Earlier models argued for a single African origin; more recent genetic studies pose the idea that there were multiple African origins, perhaps even a hybrid origin for our species. However, all of these are still distilling a temporally complex and diffuse process (evolution) down to what is fundamentally a temporally bound concept: an origin. As such, the search for modern human origins is fundamentally anti-evolutionary. I offer reflections and corrections for this, first by identifying the historical reasons why the concept of "origins" persists in Western paleoanthropology. Second, I demonstrate how the idea of "modern human origins" elevates Eurocentric cultural and social ideas. And finally, I provide a detailed application of evolutionary theory to the models and assumptions that have gained traction as explaining our "origins", evaluate their scientific soundness, and offer directions for future work that take into account the temporal complexities of our evolutionary history. Presenter: Sheela Athreya (Texas A&M University, Department of Anthropology)

Reconstructing the Story of Central Asian Neanderthals: An Integrated Approach: Palaeoanthropology is inherently a multidisciplinary endeavour. Complex questions about our evolution can not be answered working alone, but require collaboration with researchers from different specialties. In the last decades, the increasing specialization and development of new methods, such as ancient DNA, proteomics, analyses of organic residues, new dating and statistical methods, and numerous others, make it more and more difficult to look at the evidence for our evolution synthetically. This is a unfortunate, as an integrative

perspective, bringing together evidence from different areas is very valuable. Using recent research on Neanderthals in Central Asia as a case study, I will explore how the combination of morphological, genetic and archaeological evidence allows us to get better insights into the lives of these populations. Sites in the Altai mountains of Siberia contain the easternmost known Neanderthal fossils. Okladnikov, Denisova and Chagyrskaya caves yielded numerous specimens that are primarily linked to European Neanderthals genetically, while their morphological affinities are less clear. One possible reason for this is genetic drift. As ancient DNA studies showed, these were very small, strongly inbred and isolated populations, in which drift would have been a major factor. Another possibility is gene flow from other populations, for which we have direct evidence in the Altai through Denisova 11, an individual with a Neanderthal mother and a Denisovan father. Archaeological evidence indicates at least two independent colonizations of the Altai by Neanderthals, first by a group with a Levallois-based Mousterian industry around 130,000 years ago, and about 50,000 years later by a group with an industry most similar to the Eastern European Micoquian. Genetic evidence shows that these two groups were not closely related, but both show extremely limited genetic diversity indicating that they were a small and isolated population. Presenter: T. Bence Viola

The problems of dualistic thinking around the Pleistocene-Holocene transition: The Pleistocene-Holocene transition is often characterized in terms of environmental and cultural dualisms, between: climatic variability and stability, foraging and farming, and humans being either subject to, or in control of, nature. These simplistic narratives are no longer supported by archaeological and paleoenvironmental data, but their application has led to an artificial divide in theoretical framing within biological anthropology, between paleoanthropological approaches that apply evolutionary theory to understand biology within the Plio-Pleistocene, and the bioarchaeological application of biocultural theory within in the Holocene. An implicit assumption of these theoretical approaches is that cultural change has largely replaced biological evolution within our species. While this reinforces the independence of culture from evolution in anthropological research, it masks the complexity of bio-cultural interactions. In this presentation I critically review evidence for cultural change around the Pleistocene-Holocene transition and consider the effect of that change on human biology. In particular, I contrast trajectories of change in Western Asia, with

those in other regions, revealing the complexity of local environmental, cultural, and biological interactions on patterns of phenotypic diversity, health and disease, and ultimately the human genome. The preponderance of evidence from recent research demonstrates that cultural diversity and change did not replace biological evolution in the late Pleistocene and Holocene but set the conditions of dietary variation and disease that became the primary drivers of evolution within our species. These new perspectives highlight the inadequacy of dualistic thinking about transitions on our understanding of past human biology, health, and evolution. Presenter: Jay Stock (Western University)

Developmental compartmentalization of time: Paleoanthropology across the human life span: The compartmentalization of time in the study of human evolution can inhibit our understanding and identification of broad patterns, unifying processes, and biological themes that unite the field of paleoanthropology. Similarly, in much of skeletal biology and fossil analysis, the study of immature skeletal or fossil remains is treated as a separate pursuit, often with distinct goals and foci, from the analysis of adult material. Many areas of biological anthropology have begun to broach the rubicon between childhood and adulthood in their analyses and view the human life span more holistically; for example, research exploring the developmental origins of health and disease explicitly look to early childhood for answers to later life health issues. However, additional advances can be made to understanding human evolution by continuing to apply perspectives traditionally reserved for studies of adults to immature populations. This talk will explore several perspectives, including functional morphology and analyses of survivorship and selection, that, while typically restricted to studies of mature individuals, have great potential to shed light on human behavior and evolution across the life cycle. By tying together phases of the human life span that are often segregated, insights into general processes and principles are more likely to emerge. Presenter: Libby Cowgill

Patterns of change in cranial capacity in genus Homo: There is an uncontested agreement that cranial capacity increased over time in genus Homo, from the earliest appearance two million years ago through the appearance of the most recent species, Homo sapiens. However, questions remain regarding the pattern of increase: some have argued for a singular increase trend as a reflection of gradualism, while some have argued that some lineages were characterized by stasis, and still others have contended that different geographical

regions show different rates of increase. From a previous analysis of 94 cranial capacity data then available, it was concluded that the hypothesis of a single process of brain size increase was not rejected (Lee and Wolpoff 2003). Discoveries in the last two decades since then have added new data, especially those with particularly small- and particularly large-sized cranial capacity. The new discoveries raise questions about variation in addition to the simple question of increase in size. In this paper, we examine the patterns of change in cranial capacity in terms of size and variation. We collected from the literature cranial capacity data (n=156) dated to between 2 Ma and 50 Ka. Coefficient of variation (CV) of cranial capacity was calculated for resampled subsamples of sequential rolling windows over time. The results show an increase in both cranial capacity size and variation through time. The implications of this study regarding the hypothesis of Pleistocene human cladogenesis are discussed. Unsettling the Publics of the Public Good

10:15 AM - 12:00 PM TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Marianna Reis (University of Toronto, Department of Anthropology)

CHAIR:

Abdulla Majeed (University of Toronto, Department of Anthropology)

PRESENTER:

Marianna Reis (University of Toronto, Department of Anthropology), Abdulla Majeed (University of Toronto, Department of Anthropology), Rohan Sengupta, Sebastian Jackson (Harvard University), Sonya Rao (American Bar Foundation), Robin LeBlanc (Washington & Lee University, Department of Sociology and Anthropology)

DISCUSSANT:

Alejandro Paz (University of Toronto, Department of Anthropology)

DESCRIPTION:

More than ever, the neoliberal present has been characterized by the proliferation of different stately and quasi-stately iterations of the public good—public integrity commissions, transparency initiatives, participatory projects, Freedom of Information Acts—articulated as an ethos of democratizing practices. In these iterations, it is the management of revelation that comes to interpellate the 'public' of the public good. Here, the liberal democratic project of the modern nation-state effects its legitimacy by appearing or acting as if it is a government by/for 'the people' through promises of transparency and generative participation in decision-making processes—a logic of 'good governance' that entangles a system of states: foreign aid, transnational corporations, and (non)governmental institutions. Yet, the 'publicness' of the public good does not necessarily emerge through acts of unveiling. It can also be about the postponement and concealment of knowledge through the management of secrecy, under the guise of restoring or preserving public order or national interest. In particular, different iterations of the public good, such as transparency, come to also be presented with the package of liberatory 'promissory notes' that characterize imperial formations. Whether that be in the illuminations of the colonial civilizing missions, or in more recent encounters in Iraq and Afghanistan dressed in promises of freedom and liberation. Thus, we suggest that claims to the public good need to be read through/against its co-constitutive condition: that of the public threat. For the ethos of the public good to be efficacious, it needs to rest on a national or global crisis, real or imagined, that authorizes it. Under such conditions of crisis that continually redefine the boundaries of inclusion in the 'public'—especially the national public—the public good comes to be contested by communities that find themselves on its margins or outside its hegemonic frame. Alongside the stately public good then emerges a complimentary, competitive, or even insurgent grammar of the public good articulated by citizen-subjects themselves as they come to construct ethico-political subjectivities in their everyday life. Thus, we ask, in what ways does the 'public good' come to be called upon by ordinary people, and how does it order future claims of citizenship that might seek to 'grid' that future under the State, or transcend it as they imagine co-existing (counter)publics? How do these groups harness, navigate, or challenge the norms of legibility and

recognition that mediate the registers of claims-making in the public sphere? This panel aims to highlight emergent ethnographic inquiries into the 'public' broadly conceptualized, and how its various iterations (i.e. the public good, publicity, the public sphere, and public knowledge, among others) are implicated in the constitution of ethical and political subjectivities. We wish to trouble the taken-for-granted notion of the liberatory 'democratizing' potential inherent in many approaches to the public sphere, transparency, and the public good, while making space for the emergence of alternative political projects and aspirations around which ordinary people may articulate their publicity in pragmatic ways.

The promises and perils of public participation in urban planning for Palestinian citizens of Israel: Within Israel state discourses, notions of the public or collective good are largely conflated with national interests—that is, the supremacy of Jewish nationality and Zionist hegemony. These notions, then, rarely reflect the needs of Palestinian citizens of Israel, 90% of whom live in Arab localities in Israel that have developed mostly informally in spite of—or because of—long-standing neglect toward planning in Arab towns and rapid development of Jewish space for demographic and territorial control. Public participation in urban planning processes in Israel is mediated by the State's highly centralized and stratified planning system, which is guided by national objectives authorizing dispossession and settlement of Arab lands for the good of the Jewish public. Yet despite limits on public planning participation, the 'public good' is suffused through professional, public and academic planning discourses, tending to equate greater participation with transparency and spatial democratization. This paper examines participatory projects run by Palestinian advocacy NGOs in Israel aiming to professionalize local Arab grassroots groups via educational workshops on planning procedure. I argue that such advocacy strategies are caught between—and can take for granted—neoliberal discourses of technical expertise, liberal democratic discourses of citizenship participation, and ambivalence towards the promises and limitations of participation in and resistance to urban development projects. I show how such NGOs mobilize citizenship, planning expertise, and the law to appeal to and challenge state institutions in planning matters impacting Palestinian localities in Israel. I also show how they seek to mobilize the Palestinian public via informal channels of popular politics. In doing so, I argue that these strategies are mutually enabling, ambiguously bounded, and demonstrate multiple understandings of citizenship in

relation to the public good and public knowledge.

Presenter: Marianna Reis (University of Toronto, Department of Anthropology)

Exilic Unknowability, Transparency, and Ethical Publicity among Iraqi Exiles in Jordan: This paper examines how amidst the disenchantment with excessive, yet futile, transparency claims from post-occupation Iraqi (quasi)state institutions, the corruption characterizing governance in the homeland, and suspicion of "surrogate states" upon which Iraqi migrants hang their future citizenship aspirations, such as the UNHCR, Iraqi exiles in Jordan come to rework the legal-formalistic logic of transparency in their quotidian present. To navigate the many scales of legal and existential precarity characterizing their exile, Iraqis in Jordan establish their knowability about the future by reproducing stately transparency tactics in their quotidian dealings with each other. In doing so, those migrants articulate ethical claims while simultaneously "educating" the state in proper governance (Webb 2012). Based on long-term ethnographic fieldwork with Iraqi exiles in Jordan displaced following the North Atlantic invasion of 2003, this paper traces how the circulation of what I call "moving rumors" around resettlement applications and bureaucratic procedures emerges as an ethico-political act of quotidian transparency, in which Iraqi exiles mutually recognize each other as an "ethical public" through their shared desire to be informed. I refer to such rumors as "moving" because they deal with movement across borders, moving documents, movement between/within government institutions, and moving state policies that not only organize state-society relations, but that also move, or capture, those Iraqi subjects affectively. In reckoning with the absence/excess of the state, those Iraqi exiles rework transparency from a legal-formalistic logic to an ethico-political practice that articulates future aspirations for good governance and ethical citizenship. Presenter: Abdulla Majeed (University of Toronto, Department of Anthropology)

Threats, Intimidation and Accusations: 'Lawlessness' as an Ethnographic Encounter: Since 2014, the National Crimes Record Bureau (NCRB) of India has been releasing government-produced data on the 'alarming nature of political crimes against the Indian state'. These crimes, often punished under a spate of legislations—ranging from sedition and anti-terror laws to defamation tend to reproduce similar stories of indictment, honing in on the figure of the 'anti-national citizen' in India. What gets overlooked in these accounts however are

the ways in which the specter and forces of law operate on subtle but more routine forms of threats, intimidation and suspicion. How then might one make sense of practices that ought to contend with both the forces of law and its disavowal? This paper therefore proposes an ethnography of “lawlessness” in the public sphere by focusing on ecologies of news production in one particular site—West Bengal. One of the central claims of this paper is to highlight the inherent contradictions and therefore analytical productivity of viewing lawlessness as a public iteration. Ground reporters, ‘fact-finding’ journalists, photojournalists are regularly subjected to threats by the police, local strongmen and politicians across ideologies. Such a scenario invites one to consider the varied set of publics who encounter the overarching framings of law in their everyday lives. Paradoxically, this very scenario enumerates the surfeit of law and its hyper legality and presence, as opposed to its absence. This paper, ethnographically focuses on such instances of lawlessness in the state as recounted by independent and private ground reporters whilst engaging in their daily work life of producing news—across formats of print, broadcast and the digital. At stake here is to therefore examine the relationship between the law, forms of media making and the public sphere at large. Presenter: Rohan Sengupta

Interracial Publics: Race, Intimacy, and Desire in Post-Apartheid Public Culture: In the early 1990s, Desmond Tutu and Nelson Mandela proclaimed that the end of apartheid would signal the dawn of a new and truly multiracial “Rainbow Nation” in South Africa. Nearly thirty years on from apartheid, what has become of that Rainbow Nation? Contrary to liberal hopes and expectations for reconciliation, sociologists and anthropologists argue that the end of apartheid has not led to widespread desegregation and integration, particularly in people’s private and intimate lives. During the twentieth century, all marriages and sexual relationships between persons categorized as “white” and “non-white”—i.e., African, “Coloured,” or Indian—were regarded as taboo and were strictly prohibited under the “Immorality Laws” of apartheid rule. My ethnographic and historical research in Cape Town and Stellenbosch investigates the social and cultural afterlives of apartheid’s anti-miscegenation laws in contemporary South Africa, examining how racial meanings are reproduced, contested, and renegotiated in everyday life. Interracial relationships remain stigmatized in post-apartheid South Africa. However, the end of white-minority rule and its censorial regime following the dispensation of democracy, combined

with South Africa’s entry into the global neo-liberal economy and Digital Age, have also created new opportunities, social spaces, networks, and platforms for people in interracial relationships and families to claim belonging in the “new” South Africa. In this paper, I refer to these postcolonial, counter-hegemonic spaces and networks as interracial publics, and map some of the ways in which they are gradually transforming social imaginaries in post-apartheid society. Presenter: Sebastian Jackson (Harvard University)

A Public Good and a Lost Commons: U.S. Immigration Court Interpreters’ Challenge to Privatization: Under neoliberalism, communication – an inherently social activity and communal resource – is increasingly a commons enclosed (Hart and Negri 2011; Linebaugh 2014). In U.S. immigration courts, language services such as interpreting, transcription, and translation, are outsourced to private contractors. A person’s ability to communicate in this public space is shaped by interests of private profit – in particular, the contractor’s motivation to hire unqualified individuals as interpreters who will accept lower wages than experienced professionals (Rao 2021). From the margins of the immigration bureaucracy, experienced interpreters resisted effects of privatizing communication from 2015-18. As workers, they collectively organized for employment status and better wages. In public-facing communications, they argued that their working conditions directly impacted migrants’ ability to understand and participate in their trials. Where scholars of migration show that immigration systems leverage their own illegibility against migrants (Paz 2019; Hoag 2010; Zelnick 2021), immigration court interpreters show that States also generate migrants’ illegibility to use against them. Within the ideological constraints of neoliberalism, interpreters’ political organizing might have been limited to a knee-jerk response cry for argue for a communication public good where it has been privatized. However, I argue that because interpreters used labor power and politics, they also demand a future in which people not only have access to quality communication in public venues, but communication itself can also be reclaimed as a commons in which everyday people can more fully participate in politics and new publics can emerge. Presenter: Sonya Rao (American Bar Foundation)

Impermissible Vulnerability: Urban Space, Bicycles, and the Neoliberal Social Contract: In 2022, the city of Bologna, Italy, promoting its new initiatives encouraging cycling, authorized a two-hour blockage of a peripheral road for a “Bike Day” celebration ride. Hundreds

attended, including children, elderly people, and people with disabilities. After social media threats against the organizers, someone spread thousands of thumbtacks in the last few hundred meters of the course on event day. More than 50 cyclists punctured tires revealing their vulnerability to small attacks. That no one was seriously injured was a matter of dumb luck. Cyclists' imputed vulnerability becomes a reason to fight public efforts to give bicycles more access to public space. This conflict offers a window into community practice of the social contract, highlighting the link between the capacity for violence and inclusion in the city. The paper maps recent contests over the expansion of cycling spaces in Bologna. Looking at who cyclists are—from precarious migrant delivery workers to well-off participants in cycling as a sport—and tracing the discursive and spatial practices around cycling, the paper will highlight how vulnerability, itself, is seen as violation of community norms. The road, one of the most fundamental of public spaces, is also the site of a widely accepted and violent delimitation of citizenship in the modern democratic community. Examining how vulnerability is seen as an offense against the commons may improve our understanding of how multiple types of exclusionary dynamics—from race to gender identities—resist the equality and rights logic of democratic regimes. Presenter: Robin LeBlanc (Washington & Lee University, Department of Sociology and Anthropology)

WHY DO WE JOKE ABOUT ELON MUSK ON MARS? TRANSITIONING ANTHROPOLOGICAL THEORY... TO THE COSMOS (Part 2)

10:15 AM - 12:00 PM TMCC - 205 C

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

ORGANIZER:

David Valentine (University of Minnesota)

CHAIR:

Victor Buchli

PRESENTER:

Peter Timko ,Anne Johnson (Universidad Iberoamericana),Jake Silver (Duke University, Department of Cultural Anthropology),David Valentine (University of Minnesota)

DISCUSSANT:

Valerie Olson (University of California, Irvine)

DESCRIPTION:

In the second of this two-part panel, speakers focus on Earth-Space communications, humor, excess, and speculation. Three years before the Apollo 11 moon landing, Mary Douglas (1966) argued that nineteenth-century anthropology's cultural evolutionism and constitutive racism had been nurtured within twentieth-century anthropology's 'residual' category of magic, by absorbing a miscellany of ethnographic data (primitive belief, risible credulity, spurious iconicity, and merely efficacious ritual) and rendering them peripheral to the serious work of anthropological theory-making. It may sound like a joke bring together Apollo 11 and anthropological theory building (or magic and high-tech space projects) when so much on Earth demands serious anthropological analysis, from climate change and structural racism to mass migrations and novel forms of state and corporate power. However, we ask whether outer space may also be performing the work of 'the residual' in anthropology, absorbing the material excesses of anthropology's contemporary concerns by figuring outer space as a domain like magic: absurd, peripheral, meaningless, and without consequence for anthropological theory making, ethics, sociality, politics, or futurity. While outer space is a site for powerful social actors to assert colonial, extractive, and exceptionalist imaginaries, we argue that it also constitutes a residuum for anthropological theory and ethics. We suggest that outer space (and its variety, alienness, and transformative demands) should be engaged seriously alongside collective anthropological concerns in terms that engage space-as-itself (Battaglia 2012). We nominate Elon Musk in our title because of the serious consideration his words and actions (from his role in popularizing electric cars to his takeover of Twitter) are given in scholarship and public debate. In contrast, his stated primary ambition to colonize Mars frequently provokes jokes and parodies. We suggest that it is the residuality of outer space that produces Musk's and others' nonterrestrial visions as external to the serious political, social, or ethical concerns of the terrestrial and the contemporary. Joking produces further residual effects: It effaces how space environments' novel affordances are central to terrestrial concerns, economies, and inequalities (i.e. that contemporary governance, war, and financialization are impossible without space). But it also presumes that terrestrial precedents already explain what might emerge in human encounters with space, despite the radical differences of varied space environments (i.e. that we can already know the fate of future, speculative space projects, without having to consider outer spaces')

material demands on those projects). Yet, any nonterrestrial site (low Earth orbit, the Moon, Mars, the asteroid belt...) would demand revised anthropological attention because of the reconfigured, contingent, technologically mediated, and varied socialities and relationalities demanded of human projects by the material differences of nonterrestrial places, whether current and close to Earth or future and far away. Our Papers take seriously the material, terrestrial consequences of entrepreneurial space projects, but simultaneously ask how the differences of alien and unanticipable relations of nonterrestrial places require new forms of anthropological thinking that can transition from Earth to the cosmos.

Celestial influence and earthly arrangements: GSaaS in Mauritius: Low earth orbit (LEO) is becoming an increasingly busy place—according to the UCS Satellite Database, there are nearly 4000 satellites currently circling the planet in this orbital region. While LEO offers many geophysical advantages—including low-energy costs for placement, servicing, and transmission—satellites at this altitude have a narrow field of view which makes maintaining continuous contact with Earth a challenge. Ground station as a service (GSaaS) providers attempt to solve this issue by building a network of antennas which can then be rented to clients on an on-demand basis. Importantly, these facilities must be strategically distributed at locations around the globe. Using the example of a specific ground station in the Republic of Mauritius as an entry point, this paper examines the complex repercussions provoked when terrestrial conditions are adapted and reconfigured to accommodate the specific affordances and demands of LEO. It begins by delineating the geospatial and economic conditions which make GSaaS a burgeoning business model and those which make Mauritius an attractive site to host such ground station operations. Then, drawing on fieldwork conducted in the spring of 2023, it unpacks the process that emerged when an Italian GSaaS provider ventured to place a station on the island. Specifically, it discusses the collaborative arrangements set up between the provider and local Mauritian actors in the government and private sector and how the multiple groups involved attempt to square their own futures with the increasing influence of LEO satellites orbiting above. Presenter: Peter Timko

'Everyone that Elon Musk sent was dead and dried-up': Looking Up and Looking North from Mexico: In 2016, a few years after the creation of the Mexican Space Agency (AEM), the International Astronautical Congress (IAC) was held in Guadalajara. Well-known

astrocapitalist Elon Musk gave the keynote speech, "Making Humans a Multiplanetary Species," in which he invoked the planet Mars as "possible...something that we can do within our lifetimes." He argued that humanity can follow one of two paths: stay on Earth and, one day face extinction, or leave Earth and become a space civilization and multiplanetary species. Many Mexican space enthusiasts and professionals were motivated by Musk's plans. Projects were launched and working groups were formed, targeting Low Earth Orbit and, in some cases, the moon, for 'A Mexican conquest of space' by means of the consolidation of a 'Mexican NewSpace'. However, not all Mexicans were convinced by Musk's rhetoric. During a workshop organized by the collective Marsarchive.org in 2020, participants imagined what a Mexican settlement on Mars might look like. In the speculative narrative created for the foundation of Martenochtitlan, Musk's followers arrive first, but end up getting killed and turned to dust by Martian microorganisms as punishment for their lack of respect for the Martian environment. In this paper, I examine the material and speculative assemblages that have emerged in Mexico in the context of the last decade's renewed interest in human space exploration as a way of reflecting on Mexican future imaginaries in relation to two spatial axes: looking 'up' from Earth toward space and looking 'north' from Mexico to the United States. Presenter: Anne Johnson (Universidad Iberoamericana)

Starscapes, Sovereignty, and Something Else: On Excess in the Most Excessive of Places: Ethnography's etymology invokes a literal graph—a diagrammatic or representational form—to capture the social, political, and natural world. Yet anthropologists have long commented on all that necessarily exceeds our scholarship, invoking analytics like uncertainty, becoming, and the untimely to reveal the messy and moving incommensurabilities that our written word might not do justice. In this paper, I examine our anthropological understanding of excess through one of the most excessive objects there is: outer space. Ethnographically, this work pivots upon Palestine's y-axis, a vertical domain that Israeli military technologies are steadily entering. Through the case of one Palestinian astronomer who spent years in Israeli detention, I query how Israeli soldiers and Palestinian prisoners glimpse different political grammars from the cosmos. In so doing, I ask: How do colonial and anticolonial scripts long central to Israel's occupation reach out into outer space to make certain political objects (and projects) legible therein? This is a question of when a material force defined by its excesses (outer

space) and semiotic scripts that are highly overdetermined (Israeli/Palestinian nationality) meet. How might such encounters remake realms, discourses, and lives? What happens, for instance, when stars as material objects and sovereignty as a concept pulsating through the historical present collide? What “something else” are we left with? Here, terrestrial stories are not simply imposed upon outer space; instead, I follow how excess as an object itself (and outer space as the excessive object) revernacularize and even change the contours of the Israeli/Palestinian conflict, and vice versa. Presenter: Jake Silver (Duke University, Department of Cultural Anthropology)

Roman Jakobson's Time Machine : This contribution takes the form of a serious science fiction story. And rather than exploring the content of extant science fiction scenarios, this story-paper goes on a time-traveling adventure to unfold a conspiracy in the evidential role played by science-fiction-as-genre in the talk and writing of contemporary space-settler wannabes like Elon Musk —and in anthropological and allied critical scholarship on outer space. (Spoiler Alert! its goal is to give evidence of the linguistic resources that enable not-yet space dwellers and their critics to render each other’s positions as a joke!). To do so, this paper-story develops a time-traveling plot in company with Roman Jakobson and explores his concept of evidentiality with which he describes the linguistic resources speakers employ to position themselves in relation to the source and truth value of what they say. (Spoiler Alert! The B-plot of this story involves a conspiracy—or joke—in the very scientific datum that Prof. Jakobson uses as evidence for this concept!) The primary action of this story starts in media res in Cambridge, Massachusetts in late 1957 on the cusp of Jakobson’s publication of this concept and Sputnik I’s simultaneous first orbits around Earth, when commentators are still dismissing the possibility of humans walking on the Moon as either a joke or as just science fiction. Tracking anagrams, conspiracies, and accusations of “science fiction” through time, it stops off in the Sea of Tranquility on July 21st, 1969; at professional space conferences in the US throughout the 2010s; in Somerset, Wisconsin on Groundhog Day 2019; and even at a future Earth-originating Mars colony (date unspecified). Its denouement takes place on the shores of the Black Sea in the summer of 1935 in order to resolve the conspiracy—or to give truth to the joke—at the heart of Prof. Jakobson’s science fictional datum. Presenter: David Valentine (University of Minnesota)

Poster Session: “Something to wrestle with”: Intergenerational influences on children’s contact and collision sports participation

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Rosa Lawrence

DESCRIPTION:

Family decisions around contact sports participation become the site where private decisions about children's wellbeing intersect with the community, societal, and political significances of sports, as family socialization influences children's sports participation. Intergenerational transmission of sports is complicated by the evolving nature of sports and understanding of sports risks. In interviews with 19 parents (30 anticipated), parents noted that the level of play had increased since they were young, while protections, such as helmet technology or concussion protocols, had improved. The value that parents placed on sports participation paralleled or reacted to their own experiences. A parent who had not been allowed to play football aimed to never restrict his child's decisions, while another aimed to continue the family athletic culture. A subgroup of parents were themselves children of elite athletes and had direct experience with serious long-term effects of contact sports. 'I have literally seen firsthand my dad's body and mind breakdown almost certainly directly as a result of football. And I still don't know if... I let [my son] play, do I not let him play - because of this really cool life my dad got to live because of football.' Here we explore how intergenerational experiences with sports inform family decisions about children's contact sports participation. Special thanks to Christine M Baugh, who led this research, and the Boston University CTE Center team members involved in this project - Jesse Mez, Madeline Uretsky, Bobak Abdolmohammadi, Evan S Nair, Michael L Alosco, Kristen Dams-O'Connor, Ann C McKee

Poster Session: Actors and Observers? Disease outbreaks in conservation sites and species in Scotland

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Marie-Louise Woehrle

DESCRIPTION:

Ideas around achieving (and not-achieving) biosecurity during microbial and viral pathogen outbreaks highlight not only the relationship between biosecurity and care work, but also the difficult transitions of conservation workers, animals and microbes as active and passive beings. Infectious disease outbreaks in conservation metaphorically sharpen the 'dull edges of extinction' arising from global human-animal relationships (van Dooren 2014, van Dooren 2019). They create a sense of urgency and offer a specific life-form to focus on. Their management shapes and re-shapes multispecies entanglements and hierarchies. Conservation in the UK is often situated in specific sites and ideals around a sublime nature 'out there' with assigned regions for particular species to thrive (Lorimer 2015). Infectious microbes both disrupt and reinforce sited conservation approaches: Conservation staff working in the UK are deeply aware of the ease with which pathogens and parasites transcend conservation-made borders, and yet closely engaged in practices to shape or encourage contained sites and species groups. Conservation workers grapple with states of passivity and activity, highlighting both the care and violence present within conservation (compare Haraway 2008). This poster will draw on ethnographic fieldwork and interviews with conservation staff relating to ash dieback, H5N1, and e.coli, and offer insights on how recent infectious disease outbreaks in Scotland and the UK have impacted conservation workers and the sites and species they care for. We explore graphic anthropology as a way of expressing and communicating transitions between activity and passivity within the multispecies entanglements of disease outbreaks relevant to conservation.

3-813

Poster Session: An Invisible World: How Oregon Farmers are Making Sense of Insect Pest Pressure in a Changing Climate

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Culture and Agriculture

PRESENTER:

Elizabeth Olson (Oregon State University, Department of Anthropology)

DESCRIPTION:

Here in Oregon, climate change is already impacting agriculture. While the direct effects of climate change on Northwest agriculture are well-documented in the natural sciences, and farmer perception of climate change is well-studied by global scholars, little research exists at the intersection of those themes: how Oregon farmers perceive local environmental change. Farmers are on the front lines of climate change and make decisions every day about how to adapt. Their knowledge of local environmental change necessitates that their voices are included in third-party decision-making. For Oregon's food systems to be resilient to climate-related disruption, including changes in weather patterns and increased insect pest pressure, researchers and policymakers must gain a better understanding of both farmers' day-to-day experiences and their concerns for the future. In this exploratory study, I examine how Oregon farmers rationalize changes in weather and pest pressure, as well as their relationships to the invertebrates that both help and harm their crops. To do so, I conducted 12 semi-structured interviews with Oregon fruit and vegetable growers in late 2022 and early 2023. Preliminary results indicate that dominant pest management paradigms may be in the midst of a great transition, from control to cooperation, as farmers across Oregon adapt to a changing world.

Poster Session: At the intersection of tradition and change: An anthropological examination of Paracelsus

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of Europe

PRESENTER:

Pia Anderson

DESCRIPTION:

Philippus Aureolus Theophrastus Bombastus von Hohenheim (1493-1541), also known as Paracelsus, lived during the florescence of the Northern

Renaissance. Although he was an individual unique for his time and place, his work, writings, and life experiences represent and record this period of great cultural change. The Northern Renaissance was a time of religious and political turmoil, the founding of universities and the revival of classical knowledge, the transformation of traditional styles of art and architecture, inventions such as the printing press, and innovations in military hardware and strategy. The main medical scholars of this period in northern Europe were commonly divided between followers of ancient/classical expertise, followers of traditional northern European diagnoses and cures, and innovators of new knowledge. Paracelsus dedicated himself to the latter two approaches to medicine. A bombastic and proudly unconventional figure, Paracelsus challenged his contemporary medical experts with new ideas resulting from his synthesis of empirical work based on his observations of nature and human anatomy, with his supernatural, alchemical, and religious beliefs. He appalled his colleagues by publicly burning the classic works of Galen and Avicenna, while collecting and documenting folk remedies from midwives, barber-surgeons, bathhouse attendants, and other 'peasant' healers from the many regions in which he traveled as an itinerant doctor and healer. By studying the work, life, and impact of Paracelsus through the lens of historical anthropology, this paper hopes to offer new insights into the cultures in which he operated-both the scholarly culture in which he was trained, but which he objected to, and the 'peasant' and 'foreign' cultures from which he collected information.

Poster Session: **Climate Changes: Extreme Weather and the (Un)realities and Imaginaries of Global Climate Shifts**

12:15 PM - 1:45 PM TMCC - 800 Level

Late-Breaking Poster - In Person

PRESENTER:

Elizabeth Eklund

DESCRIPTION:

One of the challenges that faced climate change scientists decades ago was predicting what the possible outcomes of climate change could be. This lack of certainty resulted in envisioning a future based on extreme weather events, which shaped the imaginary of 'Global Warming.' The potential benefits in cooler climates of in the Global North / wealthier countries impacted the discourse, the desire, and the effort to mitigate or regulate green house gas emissions. Further,

efforts to plan for and adapt to climate change are still shaped by extreme weather events that fuel perceptions of what a changing climate might mean. In 2022-2023, North America saw an usually cold and wet winter which brought both snow and ice further south and to lower elevations. The precipitation resulting in vegetation growth. Many places saw a vibrant spring characterized by extensive flower blooms (super blooms). Heatwaves and long-term drought set the stage for the summer's wildfires which, to date, have impacted Canada, Mainland U.S. and Hawaii. This late breaking poster will take the most recent extreme weather event making the news in November and set the dialog with the events from this year to illustrate the social construction of climate change. This poster also focuses on climate injustice as wealthier countries may not see or become blind to the on-the-ground experience in resource constrained societies that are actively experiencing the routine (everyday) impacts of climate change, independent of the current weather news and how the Global North perceive it.

3-817

Poster Session: **Compassion and care in cause of death reporting? How concern for grieving parents may influence Medical Examiners' official sleep-related infant death determinations**

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Meredith Marten (University of West Florida, Department of Anthropology)

DESCRIPTION:

Despite precipitous declines in U.S. Sudden Unexpected Infant Deaths (SUIDs) in the 1990s, since 1999, SUID rates have stagnated. A barrier to reducing SUID is the enduring uncertainty surrounding the circumstances in which SUID occurs (see Parks et al. 2021) and variability in death reporting which impacts the ability to target prevention campaigns. Fetal and Infant Mortality Review (FIMR) programs have been established to help investigate and explain the causes of SUID. We initiated this research based on our experiences in Escambia County (FL) Healthy Start's FIMR program, rooted in our concern for evaluating the social and structural determinants of sleep-related infant deaths, as well as

the public (and policymaker) understandings of the circumstances surrounding these deaths. We noticed that our case review determinations often conflicted with the cause of death (CoD) reported by Medical Examiners. In this ongoing research project, we hypothesize that in addition to resource limitations, some under-evaluated, more subjective factors, including biases among death investigators and certifiers (see Dror et al. 2021), and subjective emotions – such as sadness, anger, and compassion – may contribute to variations in death reporting. Data from two surveys - and our own experiences serving as FIMR case reviewers - constitute the bulk of this research. First, a 50-question survey was sent to Florida Medical Examiner Office (MEO) personnel in October 2020, asking respondents to describe the degree to which material resource limitations, institutional and personal bias, and emotional factors may influence CoD determinations for sleep-related infant deaths (n=11). Second, we surveyed Florida FIMR and Child Death Review Directors in May 2021, asking for perspectives on the circumstances surrounding their jurisdictions' SUID and sleep-related deaths, and their thoughts on the reasons that potentially undergird differences in how FIMR teams may interpret sleep-related deaths and how MEOs ultimately categorize and report them (n=16). Despite the small sample, findings from the MEO and FIMR surveys were illuminating. Respondents indicated that CoD determinations appear to be rarely influenced by issues of bias, but emotional concerns for parents may be more central to decision-making processes, and included concern for parental emotional trauma and legal issues, as well as concern for under evaluated issues of racial equity. Some respondents also noted that for these reasons, sleep-related deaths may be underreported, and contribute to a public perception that they are rare. Preliminary results suggest efforts to standardize CoD determinations may need to consider subjective factors related to emotion or cognitive bias, in addition to discriminatory resource allocations and material constraints. Co-authors: Allysha P. Winburn, Claire Kirchharr, Genna Edwards

3-818

Poster Session: Dealing with Disaster: How Jewish Residents Experienced Compounding Catastrophic Events in Dallas, Texas

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Rose Hurwitz

DESCRIPTION:

As a 2022 Maguire Public Service Fellow, I conducted oral histories with the Dallas Jewish Historical Society to learn how Jewish people living in North Dallas experienced recovery from the October 2019 tornado as individuals, households, and a Jewish community. Both the Jewish Federation and Jewish Community Center buildings, along with many Jewish residences and businesses were damaged in the tornado, causing disruptions in people's home lives and livelihoods. A recurring theme in my conversations was that people viewed the tornado as a more isolated incident that traumatized a small number of families greatly and that the community was more broadly affected by the worldwide pandemic starting in 2020 and the Texas polar vortex power crisis in February 2021. Both the COVID-19 pandemic and the polar vortex disrupted the daily lives of nearly everyone in the community, whether it be from the forced isolation, causing everyone to live a more virtual, remote life or the failed energy grid, leaving many without power for days and with burst pipes that flooded homes and businesses. These three traumatic events occurring within two years put extra strain on the community and further proves that the events themselves are hazards and that the disaster unfolds as the community responds to the aftermath of the hazards. This study emphasized that catastrophic hazards cannot always be studied as solitary events and that the distressing compounding effect of multiple events must be considered to better understand how communities experience and recover from disaster.

3-819

Poster Session: Environmental Justice Legacies of Colonial Cattle Ranching in Yucatán, Mexico

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Anthropology and Environment Society

PRESENTER:

Chelsea Fisher (University of South Carolina)

DESCRIPTION:

Industrial cattle farming is a global driver of deforestation, soil erosion, water pollution, and land dispossession. In this poster, I propose that examining the localized historical roots of industrial cattle

agriculture is essential to addressing the environmental justice conflicts it causes. I draw insights from community-engaged archaeological approaches at Hacienda Cetelac, a 18th-19th century cattle ranch in the collective agricultural landholding of the Indigenous Yucatec Maya community of Yaxunah. Archaeological investigations at Cetelac and throughout the Yaxunah landholding demonstrate how the legacies of colonial cattle ranching remain legible in the landscape and continue to shape entanglements among farmers, land, water, and livestock. I frame Cetelac within anthropological dialogues about the Plantationocene to parse out the complex ways that colonial cattle farming both (1) undermined Indigenous Maya land tenure, and (2) seeded new opportunities for Indigenous Maya resistance and autonomy. Attending to these kinds of historical tensions, I argue, is essential for the ongoing work of aligning community-engaged archaeology with broader movements for environmental justice.

3-850

Poster Session: Exclusionary Views for LGBTQIA+ and Pregnant Youth

12:15 PM - 1:45 PM TMCC - 800 Level

Late-Breaking Poster - In Person

PRESENTER:

Philip White

DESCRIPTION:

At a time when LGBTQIA+ youth are being denied gender affirming care through policy (Human Rights Campaign Foundation, 2023), determined to be beneficial (Pediatrics, 2018), and reproductive healthcare and access is being restricted we must question what this looks like within our schools. Exclusionary measures have been enacted upon these populations before but with the increased attention and renewed vigor for restriction of these rights it is important to locate where these students may find themselves and who will be charged with their supervision. A student's removal may not initially seem inevitable but with states such as Florida and their so-called 'Don't Say Gay bill' now become law (Diaz, 2022) confusion among teachers and administrators (Carlisle, 2022) may lead to exclusion of these students as the path of least litigation for school districts. Disciplinary Alternative Programs (DAPs) are primarily created to serve students expelled from traditional schooling but students can also be placed within a DAP for removal when it is deemed in the 'best interest' of the student by the school. Through semi-structured interviews of teachers in DAPs findings suggest that students may be

removed from traditional school when it is determined to be in their 'best interest' and more specifically those who are pregnant or a member of the LGBTQIA+ community. Findings analyzed in July of 2023 suggest that teachers within these programs may hold deficit views of these students while simultaneously determining that the DAP is the best place for them as a student. Particular attention should be paid to rural areas where access to reproductive healthcare is limited and violence can and has been enacted upon members of the LGBTQIA+ community. Participants were located in rural and urban areas but more attention was paid to this matter in the rural area. This poster will explore quotations from teachers in the context of the movement to restrict reproductive and gender affirming healthcare access. Located in the midwest United States teachers suggest that the best place for students in these categories is removed from traditional environments and restricted access to engaging curriculum. Finally, these movements call us to examine and reject policy decisions that perpetuate the paradigm of removal such as Houston, Texas' move to repurpose libraries into 'discipline centers' (Walsh, 2023). With the creation of such spaces it is logical to assume that these populations will be the ones to fill what has now been created. Teachers view their role in these spaces as correcting or 'fixing' students within the context of a 'holding pen' for those deemed unfit for exposure. This can be understood to mean that these teachers are enacting national policy at a local level that seeks to erase LGBTQIA+ identities and exclude pregnant teens instead of supporting and caring for them. While these findings are preliminary, this is also call for continued investigation into DAPs and to focus attention on how national and state policies are enacted upon young people in schools.

3-820

Poster Session: Forensic Anthropology as a Potential Tool of Repatriation: Unmarked Graves at Kamloops Indian Residential School.

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster - In-Person Live

REVIEWED BY:

Biological Anthropology Section

PRESENTER:

Trinity Roche

DESCRIPTION:

In the wake of the discovery of the unmarked graves of 215 Indigenous children on the grounds of Kamloops

Indian Residential School in Kamloops, British Columbia, conversations around repatriation and reconciliation have arisen, drawing on discussions about possible forensic and archaeological work. The investigation and recovery of children in unmarked graves at Kamloops Indian Residential School is a monumental precedent that may guide other Indigenous communities' responses and plans of action regarding discoveries of unmarked graves at other residential school sites. Through literature review and analysis, this paper describes the political and cultural contexts surrounding the unmarked graves of Indigenous children who attended residential schools before discussing grief and repatriation in the processes of healing, followed by providing insight into how forensic anthropology can be a tool of repatriation through skeletal age estimation methods, as well as the roles and responsibilities that the Government of Canada, Government of British Columbia, and forensic anthropologists in different sectors have in best supporting Tk'emlúps te Secwépemc and the affected Indigenous communities in the ongoing project to bring their children home. These understandings will be supported by the wishes and plans expressed by Tk'emlúps te Secwépemc, the Indigenous government overseeing the repatriation of the children in unmarked graves at Kamloops Indian Residential School. Keywords: unmarked graves, Indigenous children, forensic anthropology, skeletal age estimation, reconciliation, repatriation, Truth and Reconciliation Commission.

3-852

Late-Breaking Poster Session: Guatemala's Presidential Run-Off: Another Warning-Shot of the Proximity of Democratic Transition to State Terror?

12:15 PM - 1:45 PM TMCC - 800 Level

Late-Breaking Poster - In Person

PRESENTER:

Erich Fox Tree

DESCRIPTION:

Before Guatemala's August 20, 2023 presidential run-off election between centrist Bernardo Arévalo --a sociologist with anthropological training--and conservative Sandra Torres, news media obsessed over leading candidates' accusations about their opponent's corruption and criminal connections. Public media rarely discussed the issue of state terror that had preoccupied many Indigenous Guatemalans, instead debating crime in purportedly primitive and

ungovernable communities. Yet, Mayas saw the election as a referendum of state-supported violence against Indigenous communities and the possibility of peacefully transitioning to a just government. Having spent the summer of 2023 in the K'ichee'-Maya township of Nahualá, which media frequently portrayed as a center of criminal violence, I have special insight into the issues. I witnessed the nearly unilateral gun-and mortar-fire from the neighboring indigenous town, Santa Catarina Ixtahuacán. I spoke to residents from both communities, neighbors, soldiers, and police, and even witnessed the inaction of the latter. With Torres having allied with Ixtahuacán for votes, and with the prior president having threatened to nationalize both town's lands to resolve the 'conflict,' Nahualeños -- like Mayas in many towns- saw vicarious state terror as the critical issue in the 2023 election. Indigenous violence against other indigenous people, with the tacit approval of police and soldiers, had protected conservatives' racist and increasingly neo-fascist agenda. Nahualeños' continued advocacy of peace while under threat before and after the election should be a model for other countries and communities, especially in the USA, as it transitions into the final years of the current electoral cycle.

3-821

Poster Session: Hemp Histories: How Illinois Farmers Work to Remember and Restore a Relationship with Cannabis Agriculture

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster - In-Person Live

REVIEWED BY:

Culture and Agriculture

PRESENTER:

Megan Styles (University of Illinois Springfield)

DESCRIPTION:

This poster frames the explosion of interest in hemp agriculture in Illinois (following its legalization in 2018) in historical context. Illinois was the site of a thriving small-scale hemp industry from 1840-1860, but hemp cultivation declined as new sources of fiber for rope and sailcloth were identified. Illinois farmers revived hemp production during WWII when access to jute fiber from overseas became difficult. Hemp production was made illegal in 1937, but feral plants survived and thrived as 'ditch weed.' Based on interviews with farmers and extension agents involved in preserving the genetics of feral hemp plants, as well as archival documents, this poster explores how contemporary farmers and

development agents think about the history of hemp production in IL and how they work to remember and restore a relationship with cannabis agriculture. Most IL hemp farmers do not have a personal history with the crop - for them it is novel - but the fact that it was once grown here successfully motivates their faith in the potentially explosive future of this industry. The history of hemp production is an easily overlooked part of the speculative frontier that inspires actors in IL to invest heavily in this crop.

3-822

Poster Session: Identifying Transitions in Household Production of Salt from Chemical Signatures In Marine Sediment at the Paynes Creek Salt Works, Belize

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Archaeology Division

PRESENTER:

Elizabeth Sills

DESCRIPTION:

Similar to other ancient farming populations with plant-based diets, the Classic Maya were deficient in salt. Underwater archaeology at submerged Classic Maya sites in a shallow lagoon in southern Belize indicates surplus household production of salt in response to the inland demand for salt. The Paynes Creek Salt Works include the posts from pole and thatch buildings preserved below the sea floor in mangrove peat that was deposited as sea levels rose in antiquity. Chemical signatures of human activities are evident in the marine sediment at the sites, associated with salt production, processing fish, brine enrichment, and pottery production. These activities have also been identified by artifacts associated with the buildings, but the chemical patterns expand the interpretations beyond the buildings to outdoor spaces as well. Inductively Coupled Plasma-Atomic Emission Spectrometry is used to analyze activities and multi-crafting occurring inside of and outside of buildings. The variation of chemical elements associated with human activity, notably potassium (K), manganese (Mn), aluminum (Al), magnesium (Mg), calcium (Ca), Zinc (Zn), and phosphorus (P) show spatial and temporal differences in activities at the salt works. Analysis of activities using sediment chemistry confirms that the Classic Maya engaged in multi-crafting for workshop production of

subsistence commodities such as salt and fish instead of single use production workshops.

Poster Session: Identifying Transitions in Ancient Maya labor organization at the Paynes Creek Salt Works, Belize

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Archaeology Division

PRESENTER:

Heather McKillop (Louisiana State University, Department of Geography & Anthropology)

DESCRIPTION:

Changing the scale of observation from the site to the individual pole and thatch buildings at the Paynes Creek Salt Works revealed transitions over 600 years of the Classic period when salt was produced for export to supply the Classic Maya people at inland communities where salt was scarce. The salt works appeared to be single component but that was an illusion created by sea-level rise: As sea levels rose over the millennia since the last ice age, red mangroves grew taller to keep their leaves above water, trapping sediment, leaves, and other matter in their prop roots. This became red mangrove peat, a highly-organic sediment. The Early Classic Maya constructed salt kitchens along the shores of a salt-water coastal lagoon, driving the building posts into the ground, which was mangrove peat. The portions of the posts protected by mangrove peat were perfectly preserved. Sea-floor survey and mapping of 4042 wooden building posts and associated objects revealed sites with multiple structures. Radiocarbon dates from 40 sites indicated most were used in the Late to Terminal Classic periods. During the covid pandemic, we radiocarbon dated a post from each building at two large sites with 10 buildings each, indicating that each site was multi-component and the main construction of buildings at each site differed. The associated objects revealed some buildings were salt kitchens, others were residences for the salt workers, and a variety of related tasks were carried out. From limited variability in house size and quality of associated objects, salt-making was evidently part of surplus household production and not controlled by overseers from inland cities. As pole and thatch buildings constructed directly on the ground without stone platforms or stone foundations, the Paynes Creek Salt Works buildings represent 'invisible architecture' not normally discovered by search for

mounded remains of buildings or remote sensing from LIDAR or even air photos. Preserved in peat below the sea floor, these pole and thatch buildings provide a detailed record of the ancient Maya household economy.

Poster Session: Meanings of problematic drug use in women of medium-high socioeconomic levels in Chile: Gender stereotypes facing an invisible problem

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Renata Boado

DESCRIPTION:

According to the UNDOC (2020), socioeconomic characteristics at the individual, community, and national levels can directly influence drug use patterns and disorders, focusing studies mainly on low socioeconomic levels by relating purchasing power to consumption commitment (Karriker-Jaffe, 2011). Furthermore, in the Chilean case, public policies tend to criminalize poverty, marginalizing historically impoverished socioeconomic sectors (Tijoux, 2002; Han, 2012) in a uniform and super-situated way, focusing control policies on these subjects (Aedo, 2020; Donnan and Wilson, 2021). In the case of women, the stigma associated with consumption problems is exacerbated by some religious and cultural issues (Taylor, 2003), mainly due to the association of women as central figures in care (Montecino, 2017). In this way, women do not have the same understanding, offer of help, and family accompaniment as men, tending to hide their consumption problem for fear of public opinion (National Council for the Control of Narcotics, 2004). In this way, although there have been attempts to generate a differentiated public policy for women (National Council for the Control of Narcotics, 2007), these proposals reinforce by perpetuating gender patterns that tend to associate problematic drug use with the commission of crimes, focusing mainly on those women of low socioeconomic levels. Due to this, the meanings drugs have for women with problematic use of medium-high socioeconomic levels are unknown. Based on this situation, the project developed with women with problematic drug use of medium-high socioeconomic levels to investigate the meanings they

attribute to their use. The study was carried out for a year, accompanied by in-depth interviews and therapeutic, reflective, and literary workshops with five women. This project was developed from an applied and co-constructive approach, so different topics were addressed during the workshops in the company of a mental health doctor, being a therapeutic and reflective space. The workshops were online via zoom and were approximately two hours long. The women anonymously had to write a story for each session. Subsequently, the team distributed them to read them, give each other advice and make a clinical approach for each case. The topics addressed were: 1) the conflicts for which drug use begins, 2) the relationship that women have with drug use, 3) the struggles they have with drugs, the family consequences that this has caused, 4) the recommendations that they would make to women who are just starting to use it. Based on these findings, we intended to make a book co-written with the women (each one prefers anonymously using a pseudonym or not), which tells their stories and the effects of drugs on their lives. These stories and the findings based on them are the ones that I want to present in the congress, emphasizing the importance of agency, especially of women participants in academic contexts, visualizing how a reflective and interdisciplinary perspective allows the development of new forms of applied anthropology.

Poster Session: Mental Health Identities in Transition: Disrupting the Normal-Pathological Binary Narrative of Mental Health in the North American University

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Adrianna Wiley (University of Toronto, Department of Anthropology)

DESCRIPTION:

Transitions have long been recognized as stressful periods in the human lifespan. Whether these transitions are biological, or social, transition implies upheaval, crossing through liminality, and developing new identities. One such transitional moment experienced by many North American youth is the

beginning of post-secondary education. In this space adolescents begin to emerge as young adults at a time corresponding to the age of onset for most 'diagnosable' mental health disorders. While the burden of mental disorders on post-secondary students is beginning to be recognized both socially and academically, how the North American university context patterns understandings of mental health and how these understandings are used and/or negotiated by students remains understudied. Using a critical phenomenology approach to analyze data from semi-structured interviews with university students (n=24) between the ages of 18-24 years who self-identify as experiencing mental health struggles, I explore how these students engage with diverse constructs of mental health, illuminating their experiences with mental health struggles as dynamic, fluctuating, and relational. Although one of the most pervasive constructs of mental health in North American society is the biomedical -with states of poor mental health conceptualized as a disorder of the brain occurring due to a 'chemical imbalance'- biomedical constructs of mental health do not seem to fully fit with university students' subjective experiences of mental health struggles given they report experiences of poor mental health at much higher rates that they report having diagnoses. My analysis of the interview data reveals the complex and sometimes contradictory ways students use the biomedical construct of mental health to navigate relational contexts while also critiquing the ways this understanding pathologizes their experiences as stagnant and discrete 'things.' I discuss how these findings blur the normal-pathological binary of mental health such that students' move beyond the biomedical to understand their mental health struggles as dynamic, fluctuating, and relational experiences that shape human diversity. Ultimately, these findings suggest recommendations for the creation of university mental health policies and resources which understand the fluctuating nature of mental health and centre subjective wellbeing and community-care as primary goals.

3-826

Poster Session: Provisioning Ancient Maya Cities: Modelling Food and Shelter In the Maya Forest At El Pilar

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Archaeology Division

PRESENTER:

Anabel Ford (University of California, Santa Barbara)

DESCRIPTION:

Despite the evidence of successful tropical adaptations provided by the settlements and monuments of Maya civilization, traditional Maya land-use strategies have been maligned as primitive. Agricultural methods documented at the time of the Conquest were legislated against in the Colonial period and oppressed in the 19th century, and yet they demonstrate persistence and resilience to this day. Denigrating the milpa forest garden cycle as shifting agriculture fails to see its quality of dynamic regeneration. The landscape is utilized in an asynchronous cycle that includes open fields of annual crops, perennial succession providing products used in the home, and closed-canopy forests for fruits and construction materials. This poster addresses this issue using cutting-edge techniques of spatial analysis, remote-sensing data, and traditional ecological knowledge from living Maya farmers. Combining settlement data and DEM-derived slope maps to quantify slope thresholds within to define areas suitable for traditional milpa-cycle agriculture-intensive practices, we examine the landscape of El Pilar. We model milpa cycle to test the limits of land use at El Pilar. Our work explores potential variability in agricultural production at El Pilar and investigates strategies of traditional land use in the tropical Maya lowlands. The results guide a discussion of the sustainability and sufficiency of the milpa cycle within the Maya forest.

Poster Session: Selling Sexual Education.

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Mahir Rahman

DESCRIPTION:

While themes of comprehensive sexual education (CSE) vary throughout communities, economic systems play a large role in the development of their program priorities. Through ethnographic content analysis and ethnographic data collected from the School District of Osceola County in Kissimmee, Florida, and Trujillo, Peru in 2023, I explore the distinct components of sexual education and agents that impact its implementation. Data collected through a review of curricula and related

coursework, in addition to school-based semi-structured interviews, free-listing, visual ethnography (photos), and observations, allow me to comparatively analyze sexual education curricula in two settings. Using preliminary data collected in the summer of 2023, I argue that curriculum development is influenced by local conceptions of sex linked to larger economic systems, both of which inherently transform sexual health and discourse.

3-829

Poster Session: Settler Organic Farming and the Tensions of Land-Based Movements

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

PRESENTER:

Benjamin Wheeler (Concordia University, Department of Sociology & Anthropology)

DESCRIPTION:

Through the examination of the relationships between organic farmers and their farms, my presentation explores the tensions between the land-based struggles of settler organic farmers and the land-based struggles of Indigenous peoples. Epekwitk, or Prince Edward Island (P.E.I.), is a place dominated by agriculture and over the past half-century, technological along with social and economic changes have ushered in the age of so-called agribusiness. With this, diversity and sustainability are sacrificed to maximise profit (Beingessner, 2020; Fairley et al.,1990). During this time, organic farming has emerged as one of the leaders in the struggle against agribusiness. Nevertheless, while organic farmers struggle against agribusiness, the Indigenous peoples whose land their farms are situated upon struggle against settler colonialism. As Wolfe (2006) explains, agriculture is multifaceted in its perpetuation of settler colonialism which makes it integral to the project and if we wish to transition to a decolonised world, then the relationship between agriculture and settler colonialism must be surmounted. For my research, I drew upon science and technology studies (S.T.S.) and anthropology beyond the human. However, it is clear that these fields do not adequately take settler colonialism into account. In this presentation, I compensate for this inadequacy by heeding the advice of Indigenous academics like Audra Simpson (2014) to take settler colonialism as a starting

point. I then build upon this foundation using the tools I acquired from S.T.S. and anthropology beyond the human. With this, I will highlight the relationship between settler colonialism and organic farming in order to demonstrate that truly ethical and sustainable agriculture will need to be decolonised and a truly decolonised society will need ethical and sustainable agriculture. I will discuss how the farms upon which I conducted my fieldwork both oppose and are actively perpetuating settler colonialism and finally, I will propose paths and practices that should be pursued in order to foster agriculture that is both decolonised and sustainable.

Poster Session: Sex education, transformation, and the emergence of moral concerns in young Ivorian women's health discourse

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Linguistic Anthropology

PRESENTER:

Laura Guadagnano (University of Bayreuth)

DESCRIPTION:

This contribution investigates the sexual and reproductive health discourse of young Ivorian women, its ethical entanglements, and the desire for transformation. Based on interviews and group discussions gathered among Ivorian women between 2020 and 2022, the analysis focuses on audio-recorded interactions dealing particularly with sex education and pregnancies in the Ivorian school context. These interactions reflect the media, social, and academic discussions, indicating a desire for transformation in the approach to sex education. Here, pregnancies in the school context are attributed to a lack of education since sex education is seen as a 'taboo' topic. Furthermore, even though motherhood is generally associated with social prestige, these pregnancies are frequently seen as a social problem for the future of young girls (Codjo 2016; Dagnogo 2014; Gogoua 2015). In my contribution, I will provide insights into my ongoing dissertation by elaborating on how participants express their desire for social change while simultaneously communicating moral concerns. The data collected suggests that participants' communicative practices contribute to the emergence and negotiation of different moral concerns, which can be understood as moral communication

(Bergmann/Luckmann 1999) or doing ethics (Drescher/Rothfuß/Spies 2022). Here, the participants use different linguistic devices and communicative practices to express moral concerns. These linguistic and communicative elements used to communicate moral concerns include a variety of explicit as well as implicit techniques. In particular, the latter may contribute to avoiding a potential conflict through open moralization. Hence, they can protect the involved interlocutors from losing their own face and/ or that of the other conversation partners. Among these devices and practices are, for example, the use of metaphors, interjections, and conditional sentences, as revealed in my data. Even though this paper is situated mainly in linguistics and, more precisely, in pragmatics with a focus on interactional analysis, it has an anthropological and social science background and fits perfectly with the theme of Transitions of the AAA/CASCA Annual Meeting. Late-Breaking Poster Session: Social impact assessment of Klamath dam removal for tribal community well-being: A collaborative research initiative with the Karuk Tribe

12:15 PM - 1:45 PM TMCC - 800 Level

Late-Breaking Poster - In Person

PRESENTER:

Carolyn Smith

DESCRIPTION:

This collaborative research initiative engages the Karuk Tribe, the Karuk Department of Natural Resources, and the Karuk Tribal community to co-develop an assessment tool to evaluate the social, cultural and economic impacts of dam removal in the Klamath Basin, which is the largest dam removal project in the world to date. The assessment focuses on the social impacts of dam removal and associated river restoration to Karuk Tribal community well-being, including cultural resources, livelihoods, self-governance, education and holistic health. This assessment provides a baseline for understanding social impacts of Klamath dam removal processes that have started this summer. Goals of this research include are to learn how and to what extent the Karuk Tribe benefits from dam removal, and how to better include tribal perspectives in social impact assessments. Research contributions include applying well-being frameworks to social impact assessment, building long-term tribal-academic partnerships, and supporting tribally-led initiatives for ecological and cultural restoration. Further research contributions include our findings on tribal community experiences and goals for Klamath dam removal and river restoration, which we have gathered from fall 2022 and spring 2023 focus groups with tribal community members, as well as from a survey offered to over 7,700 tribal community members. The origin of the project is tribally led sessions with the Klamath Dam Removal Science and Monitoring Technical Coordination Workshop (2020), where attendees noted a gap in socioeconomic assessment of dam removal processes to date, and Tribal colleagues invited academic researchers to work with them on addressing this gap.

3-831

Poster Session: Social, behavioural and environmental correlates of obesity in Mongolia

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Keiko Kanno (University of Oxford, Green Templeton College)

DESCRIPTION:

This multi-sited study looks at people in rural, urban and

peri-urban Mongolia to explore variations in dietary behaviours and sociodemographic characteristics with interplay with BMI. Body mass index (BMI) was calculated from the weight and height of participants in three areas. Sociodemographic factors and dietary behaviours were collected to explore the relationship between the participant's BMI and these factors. Obesity impacted some groups more than others in the country. Higher rates of obesity were observed amongst internal migrants, married adults, younger adults, and peri-urban male adults. One of the unique aspects observed in the sample was higher rates of obesity amongst young adults, which contradicts the worldwide obesity trends of higher obesity prevalence amongst older adults. This may be associated with the urban eating patterns amongst young people, peculiar to them. Higher obesity rates amongst internal migrants originally hailed from rural regions may also reveal changes in eating habits after they move into Ulaanbaatar. Young people may start to gain more weight when their metabolism slows down with ageing, possibly contributing to higher obesity rates amongst Mongolians in the longer term.

3-832

Poster Session: Soy de Aquí Como el Coquí:
Translocal Boricua experiences of care and
social connectedness in the era of COVID-19

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

Kayla Torres Morales

DESCRIPTION:

Older adults are disproportionately affected by 'natural' disasters, yet they are seldom the focus of anthropological research on disaster or humanitarian relief efforts, specifically when compared to other age groups (Buch 2020; Karunakara 2015). It was not until the onset of the COVID-19 pandemic that older adults came into the forefront of political and social discourse (Rinker et al. 2020; Sadruddin and Inhorn 2020). However, the polarizing hyperfocus on the vulnerability of older adults during the pandemic has obscured their experience and agency (Clothworthy and Westendorp 2020; Verbuggen et al. 2020). This creates a need for further inquiry into the lives of older adults, whose lives were often disregarded (Flaherty 2021) by neoliberal institutions and society at large (Sadruddin and Inhorn

2020, p. 17) prior to the pandemic. Exploring the care and social connectedness of older adults becomes a timely and relevant issue that requires addressing, particularly amidst the rise of super aging societies. In places like Puerto Rico (PR) aging adults and their families were still recovering from the aftermath of Hurricane Maria when the pandemic disrupted their lives once again. This poster brings together 'post'-disaster experiences following Maria and the pandemic and explores the effects these disaster had on the health, connectedness, and care practices of older Puerto Ricans and their translocal families. These narratives can provide insight into the community needs for a population that faces compounding marginalization due to their age, racialized identity (Lloréns, 2018), and second-class citizenship (Rodríguez Soto, 2017). The onset of Hurricane Maria and the pandemic that followed reinvigorated the social bonds between local Puerto Ricans and the diaspora leading to ongoing translocal community organizing (Garriga-López 2020a; Rodríguez Soto 2017). To gain a broad understanding of what is happening in PR, it is crucial to get a picture of what is happening outside of the island(s) as part of the larger Puerto Rican experience.

3-833

Poster Session: Staying Within or Going Beyond
the Scope of Care: Community Health Workers,
Liminality, and Transitions in Caregiving in the
U.S.

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for the Anthropology of North America

PRESENTER:

**Ryan Logan (California State University, Stanislaus,
Department of Anthropology and Geography &
Environmental Resources)**

DESCRIPTION:

Community health workers (CHWs) – a type of nonclinical frontline health worker often from the communities they work within – are seemingly ubiquitous yet broadly unknown by the public in the United States. Going by many different titles, CHWs often find employment in a variety of avenues including volunteering, in the healthcare system, and in social service agencies. Drawing on several years of ethnographic research and interviews with 49 CHWs, I describe the liminality and transitions experienced by

CHWs in Indiana who were 'officially' employed in a different job category (e.g., medical interpreter) or had advanced skills but were technically not allowed to draw on them in their role as a CHW. This transitory and liminal professional existence could place CHWs in morally distressing positions. Driven by their compassion for their clients yet limited by professional scope of practice, these workers addressed these challenges in a variety of ways. I draw on the theoretical framing of moral economy to provide further context to the broader structural, employment, and political economic factors that affected these workers and their clients. Through morally justifying this professional breach through dedication to their community members, CHWs transcended professional boundaries in the pursuit of care. However, not all participants engaged in this breach, rather holding steadfastly to their professional scope of care. Through the analysis of the lived experience of job ambiguity – predicated by going outside of their designated scope of care – I argue that these workers participated in transitory forms of caregiving – clandestine care marked by need and compassion.

3-834

Poster Session: Structural Vulnerability and Resilience Within Sexual and Gender Minority Communities in the Florida Panhandle: Exploring Mental Health Quality of Life

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Medical Anthropology

PRESENTER:

C Kirk

DESCRIPTION:

Increasingly, research indicates that people who identify as sexual and gender minorities (SGM) suffer substantial health inequities, and these inequities are alarmingly prevalent within the realm of mental health (Burgess and Lund, 2021). Those who identify as SGM disproportionately experience higher rates of depression, suicidality, and mood or anxiety disorders, in particular (Henderson et al., 2022; Källström et al., 2022). Through the lens of both embodiment (Krieger, 2005) and minority stress (Meyer, 2003) theories, these health inequities can be attributed in part to the seemingly ubiquitous experience of stigma, discrimination, and othering experienced by the SGM community. Oppression, violence, and stigma are

embodied processes – and this physiologically related process of embodiment can lead to heightened experiences of negative health outcomes among SGM individuals (Krieger, 2005; Meyer, 2016). These embodied realities are inherently related to the structural vulnerability of the SGM community (Meyer, 2003; Meyer, 2016), defined as a positionality characterized by an individual's hierarchical position within structures of violence, exploitation, and oppression (Quesada et al., 2011; Winburn et al., 2022). This research explores the dimensions of the structural vulnerability of members within the Pensacola, Florida, and University of West Florida SGM populations in order to elucidate intersections between structural variables and potentially poor mental health outcomes. Utilizing a mixed-methods approach, I explain several preliminary research findings, including areas of significant structural vulnerability that SGM respondents expressed as most profound, the impacts of these structural vulnerabilities regarding mental health quality of life, and salient facets of resilience exhibited by the SGM community, including cohesive and robust social networks, reciprocity, self-compassion, and mutual aid. The use of both survey and ethnographic data may provide a framework for further research into areas of health inequities, particularly those relating to structurally vulnerable populations. Identifying those structures that promote good health and perceived quality of life among SGM individuals is a goal of this work.

3-835

The historical ecology of hemp production in Burgundy, France

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Culture and Agriculture

PRESENTER:

Seth Murray (North Carolina State University)

DESCRIPTION:

Prior to the widespread adoption and commercial availability of cotton clothing after World War I, hemp cultivation was an integral part of the domestic farming economy and society in Burgundy, France during the late 19th-century and early 20th-century. The importance of hemp production is illustrated in government agricultural reports available in municipal and regional archives. Notably, these reports detailed whether farmers would receive an annual subsidy from

the government for their hemp production based on the amount of cultivated crops, and these declarations were regularly inspected and audited by local representatives of the nation-state, such as municipal workers or teachers. Our archival data was collected from four French villages, and these documents also reveal growing concerns about water quality and environmental conditions that influenced hemp crop quantity and quality. This poster outlines the historical ecology of hemp production for farming in Burgundy in its economic, political, and environmental dimensions. Our results reveal the strategically important role that hemp played as a non-cash crop during a period of profound transitions in rural France, within an increasingly capitalistic and integrated market economy in Europe.

Poster Session: The Other Side of Care: An Ethnographic Exploration of Recovery and Care Experiences Among People Experiencing Eating Disorders and Disordered Eating

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Psychological Anthropology

PRESENTER:

Fatima Ahmad

DESCRIPTION:

Numerous stereotypes surround people with eating disorders (EDs), both on a broader cultural level and among healthcare professionals. ED patients are sometimes considered to be 'manipulative' or 'resistant' to treatment by dietitians, therapists, family physicians, and psychiatrists. In addition, since there is little consensus among and between healthcare providers, ED patients, and their family members regarding the definition of full recovery, professional views of what constitutes 'good care' are often at odds with the views of individuals experiencing EDs. My project bridges this gap in understanding by examining the experiences that people with lived experience of EDs have had with healthcare professionals, and specifically, by asking what 'good care' and recovery looks like to them. Taking a digital ethnographic approach, this study uses participant observation, a survey, and interviews with individuals on an online peer-support forum where people experiencing eating disorders connect to share advice, support, and compassion with one another. Early results from this research indicate that people

experiencing EDs define recovery broadly, and as more than simply a reduction in symptoms. Further, individuals appear to find care helpful and 'good' when professionals focus less on symptom reduction, and more on enriching and rebuilding the areas of life-such as relationships, school, work, and life goals-that have been impacted by symptoms. Based on these results, this ethnographic study joins other voices in the field by calling for a recovery-oriented practice that situates the patient as an expert in their own life, drawing the focus away from symptoms and toward the person in a more holistic sense.

3-837

Poster Session: The rotational profile of the lower limb in industrial era modern humans and sources of variation.

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Biological Anthropology Section

PRESENTER:

Jessica Wollmann

DESCRIPTION:

The rotational profile of the lower limb includes femoral torsion, tibial torsion, and talar neck angle (TNA), which together affect the mobility of the hips, the rotation of the knees, and the angle of the foot during walking and standing. All three measures are likely developmentally plastic, but little research has explored how these measures vary between individuals or how they relate to each other within an individual. Therefore, we examine how femoral torsion, tibial torsion, and TNA vary with factors such as age, sex, body mass, and bone length. We also explore symmetry between the right and left leg and how these measures relate to each other within an individual. Bilateral data was collected from 45 (M = 37, F = 8) industrial era individuals from the J.C.B. Grant Collection. Males and females were compared. Correlations were used to evaluate bilateral symmetry, intra-individual relationships between variables, and relationships between the rotational profile and biological factors. There were no differences between males and females for any aspect of the rotational profile. The right and left leg were reasonably symmetric within an individual. Femoral torsion and tibial torsion were not correlated, but both femoral and tibial torsion were positively, although weakly, correlated with TNA. Tibial torsion was negatively correlated with age and body mass. Femoral and tibial

torsion were not correlated with bone length. Future studies will explore how the rotational profile changes during prehistoric transitions in subsistence strategy, such as a switch from intense terrestrial mobility to more sedentary agriculturalism.

3-838

Poster Session: The Work of Thrift Store Resellers

12:15 PM - 1:45 PM TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Economic Anthropology

PRESENTER:

Lorien Kelso

DESCRIPTION:

Anthropological research on secondhand economies has become more prevalent in recent years, from ethnographies about thrift store volunteers to the hybrid gift and commodity state in American garage sales (Berry, 2022; Herrmann, 1997; Larsen, 2018; Williams, 2003). Some research has also been done on resellers; that is, people who scour secondhand markets in search of anything they can buy for cheap, then turn around and sell for a profit (Ayres, 2017). But so far, the research on resellers has been rather location-based, locked in on the thrift store itself as the site where the resellers do the majority of their work, and focusing on the drive for profit in resellers. In my research, I focus instead on the community of resellers, specifically of thrifted clothing, and the work they do as a whole. Through semi-structured interviews, participant-observation, and content analysis spanning almost six months, this undergraduate research project answers the following question: Understanding that at its core, thrifting is a fight for limited resources, how do the resellers view their own role in this fight? Especially considering the history of thrift stores as a place of refuge for those with less power and fewer resources. The resellers I've spoken to have emphasized their passion for sustainability and hope that others will be inspired to thrift. They have mentioned intentionally limiting the profit they could make from the clothes they resell, instead choosing to keep the items as accessible as possible to many different audiences. In short, these resellers are not just selling clothes: they are providing a service to encourage more people to engage in a sustainable and environmentally-healthy lifestyle.

3-839

Poster Session: Toward a Sociogenesis of Resilience and Examination of Second Moral Injuries

12:15 PM - 1:45 PM

TMCC - 800 Level

Poster – In-Person Live

REVIEWED BY:

Society for Psychological Anthropology

PRESENTER:

Betselot Wondimu (Columbia University, Department of Sociomedical Sciences)

DESCRIPTION:

This presentation offers a critical examination of the formation of resilience and resilient subjects, and engages with neighboring dialogues in the study of moral emotions and moral injuries. In recent decades, research investigating institutional discrimination and structural violence as forces which produce and maintain disparities across all domains of life have extensively developed, and fruitfully complicated landscapes of knowledge production that stem from work in the clinical and social sciences. However, the same level of critical interrogation has not been afforded, specifically, to the discursive object of resilience, despite its prevalence in scientific research and celebration in public discourse. Resilience is generally defined as an ability to adaptively overcome adversity while maintaining ordinary psychological and physiological functioning. This presentation argues that rather than contending with a substantive analysis of causative mechanisms which differentially sustain harm upon individuals and communities, the deployment of the resilience object circumvents structural responsibility for adverse conditions and displaces accountability onto self-disciplining subjects. In public health and psychiatric settings, this tendency expresses itself in resilience-as-treatment (or in what Elizabeth Povinelli calls 'care-as-enervation') paradigms. The purpose of this presentation is to suggest that the resilience object has the effects of obscuring dynamics of power and drivers of stratified life chances in unequal societies; shifting sites of intervention to victims rather than perpetrators of harm; and disciplining subjects in ways that facilitate structural impunity for injustice. In particular, the presentation will consider the dynamics of what Margaret Urban Walker calls 'second injuries,' which are interlaid in moral emotions such as forgiveness, memory, and anger. Second injuries entail a failure to confirm a victim's sense of wrongdoing, constituting, in itself, another wrongdoing. These are

often exacerbated in instances of normative abandonment from institutions of care, wherein a desire for validation and vindication in the face of injustice is routinely neglected. In the case of resilience, second injuries arise because the resilience object expects (and mandates, from a survivability perspective) that subjects adapt to structurally-produced adverse conditions, despite such adaptive maneuvers constituting physiological and psychological harms. The ubiquitous valorization (and theodification) of resilience covertly compels subjects to contort their own bodies, preferences, and 'wills' in ways that function within the parameters of existing sociopolitical arrangements, and aims to ensure that subjects govern themselves to rigid confines of normality. When recognized, however, a failure to meaningfully address highly concentrated and patterned adversity constitutes a second injury and unique form of resentment. The fundamental aim of this presentation is to contest the naturalization of the resilience object by illuminating its sociogenesis in a neoliberal context, and to underscore the ways in which its deployment gives rise to second injuries in underserved communities. In doing so, it hopes to explore the implications of moral emotions toward a careful reshaping of resilience, subjectivity, and reparatory justice, and offer alternative paradigms that are rooted in health and social equity.

Oral Presentation Session

REVIEWED BY:

Association of Latina/o and Latinx Anthropologists

ORGANIZER:

Carlos Velez-Ibanez (Arizona State University)

CHAIR:

Carlos Velez-Ibanez (Arizona State University)

PRESENTER:

Josiah Heyman (University of Texas, El Paso, Department of Sociology & Anthropology), Robert Alvarez (University of California, San Diego), Elizabeth Ferry (Brandeis University), Casey Walsh (University of California, Santa Barbara, Department of Anthropology), Patricia Zavella (University of California, Santa Cruz)

DESCRIPTION:

'Pink Gold,' Seafood, Women, and Work in Mexico is a discussion of the new work by Dr. Maria L. Cruz-Torres and published by the University of Texas Press in December of 2023. Based on over 15 years of intense fieldwork, the book is a multi-sited ethnography which shows the many facets of market women's resistance and struggles to create and secure a livelihood, one strongly associated with shrimp, México's so-called 'pink gold.' This is a narrative of personal, cultural, economic, social and political transitions of women carving out unique livelihoods who are initially held in disdain by the public and political authorities but to eventually transition to become iconic public figures known as Changueras featured in music and film. Theoretically its narrative is integrated through a novel approach to feminist political ecology in which the work takes place within an economy that, although deeply local, has a strong global dimension. It also takes place in a country where many local industries transitioned from having a strong social emphasis to being privatized under the neoliberal policies of the late 1980s and early 1990s and on a daily basis to which the Changueras must negotiate and contend. The work features their use of urban public space, their organization and collective action, their families, and the many social, political, and economic challenges they still face. It traces the rugged path blazed by a group of indomitable women from their beginnings as despised street peddlers to their self-formation as politically influential unionized

workers, and finally as icons of the local popular culture. Each presenter will provide a discussion of selected portions of the work that theoretically, methodologically, and ethnographically discuss different aspects of the book's themes and underlying narrative architecture.

Women's Lives: From Life History to Wider Context: The pinnacle of social-cultural anthropology is understanding and expressing particular people's lives moving through time in wider contexts. "On Becoming Changueras: Gendered Livelihoods and Contested Identities" excels in this challenging task. Women's stories unfold from childhood through full formation as seafood traders (explored through the question of how women adopt a changuera identity). Women make complicated life decisions and commitments within intimate household and kin contexts, in markets and reproductive work, and also in broader power arrangements and ecologies. This ethnographic task—lives and contexts, carried across time—fully respects the value of the people we know in fieldwork and in our own lives. Presenter: Josiah Heyman (University of Texas, El Paso, Department of Sociology & Anthropology)

Resilience and Perseverance among the Changueras of Pink Gold.: In this ethnography, Mari-Luz Cruz Torres illustrates the importance of the long-term in field research and in the socio-cultural strategies of women in Mexico's shrimp markets. Here I explore Resilience as a persevering and persistent cultural-social strategy nestled and expressed in Changuera exchange networks, social/economic balancing and personal relations (confianza) in confronting risk in competitive markets. Although Resilience has been described as people/communities "springing back" (especially in Anthropological disaster research), I argue that it is also a social/cultural process that develops over time and in conjunction with various social-cultural actions that challenge, alleviate and subdue extra-political-economic patterns, subaltern class distinction, and social confrontation. The success of the Changueras in Pink Gold, Seafood, Women and Work in Mexico is a strong illustration of foundational social patterns and connections of women's resilience in the Mexican shrimp markets. Presenter: Robert Alvarez (University of California, San Diego)

Political Ecologies and Moral Economies in Northern and Central Mexico: Taking María Luz Cruz-Torres' forthcoming book Pink Gold as productive provocation, this paper looks at several forms of small-scale

extraction and trading that emerge in central and northern Mexico and occur at the margins of transnational commodity chains: the changueras or women shrimp traders described by Cruz-Torres, risqueros who extract mineral specimens in the mines of Mapimí, Durango, and lupios who extract gold and silver from abandoned entrances to mines in Guanajuato. Drawing on Cruz-Torres' feminist political ecology framework and a revitalized concept of "moral economy" that hews more closely to historian E.P. Thompson's original formation, I ask how these workers organize themselves to provide networks of support and to gain legitimacy in contexts where they are frequently despised or criminalized. The paper ends by considering how studies of -- and policies aimed at building justice into -- transnational supply chains can better take into account the perspectives and vulnerabilities of these types of actors, who exist in all supply chains, yet who are frequently vilified and silenced. Presenter: Elizabeth Ferry (Brandeis University)

Crisis, Reproduction and Regulation in Mexico: Mariluz Cruz Torres and the Changueras of Mazatlan.: In her fascinating book manuscript, Maria Luz Cruz Torres tells the story of the changueras – shrimp saleswomen – who have forged a space for living and working on the streets of Mazatlan from the 1980s to the present. The changueras are a product of the crisis of the 1980s, when patriarchal state-led economic intuitions in Mexico crumbled, opening spaces and creating needs for women to emerge into new roles as economic actors. I engage with and advance the book's theoretical framings of feminist political ecology and commodity studies, arguing that the labor and creativity of the changueras helped ameliorate the crisis of the 1980s by ensuring the reproduction of family and society, by stimulating the circulation of capital, and by enacting a new mode of regulation for the shrimp industry. Presenter: Casey Walsh (University of California, Santa Barbara, Department of Anthropology)

Forming a Union: Market Women's Complexity of Representations of Womanhood In Contemporary Mexico.: In Pink Gold, Seafood, Women, and Work in Mexico, Maria Luz Cruz-Torres presents an in-depth multi-sited ethnographic analysis of the labor of women who experience multiple marginalization. My assessment analyzes her theoretical/empirical contributions, focusing on how women came to unionize their informal work despite preconceived notions of proper womanhood that excluded them from the market, pejorative representations about them, and downright resistance to them forming a labor union. I

argue that in the process of forming a union, women offered complex representations of womanhood in contemporary Mexico and were able to claim public space where they are treated with respect. This ethnography contributes to the scholarship on women's empowerment. Presenter: Patricia Zavella (University of California, Santa Cruz)

DESCRIPTION:

The Anthropology and Environment Society of the American Anthropological Association is pleased to host the 2023 Rappaport Student Prize competition. The five panelists have been invited to develop article-length papers that have been judged for their originality, contribution to the field, and writing style appropriate to a journal manuscript for submission, and one will be selected for the 2023 Rappaport Student Prize.

Salty Seas: Contesting Flows of Water in the Little Rann of Kutch, India: This paper examines a standoff between Muslim fishworkers and commercial salt-manufacturers in the Little Rann of Kutch, a region along the Western coast of India that is normally inundated by the sea during the four months of the monsoon, and is a saline desert for the rest of the year. During the monsoon, Muslim fishworkers and their families live in temporary settlements to harvest prawns for as long as the desert is inundated. In Nagawadi, one of the oldest sites of

settlement, commercial salt manufacturers have been illegally taking over large swathes of the saline desert and building 8 foot high concrete bunds to set up saltpans. These giant bunds block creeks that merge into the sea, flood agricultural lands with saltwater, and prevent small scale fish-workers from taking their boats out into the water. Using data from 12 months of ethnographic fieldwork, I speculate that contestations over space in Nagawadi play out through conflicts over control and manipulation of the flows of water. Fishworkers have been contesting several issues like the material and size of bunds for commercial saltpans, salty rainwater that floods agricultural lands, and biodiversity loss from draining riverwater through canals, using practices like demolishing parts of the bunds with bulldozers, filing legal appeals, circulating videos on social media, and calling press conferences. I argue that the methods they use to resist dispossession are laborious practices of maintenance and care embedded within an unstable and amphibious place where lines between water and land are blurry. Presenter: Sita Mamidipudi

Urban Oil Afterlives: The Legacy of Idle and Orphan Wells in Los Angeles: With 26 oil and gas fields and over 5,000 wells, no place on earth has so many wells, so close to so many people as Los Angeles. This paper examines the ongoing legacy of urban wells, the majority of which are now defunct, deserted, and often indiscernible to LA residents—idle wells, which are no longer active but are not properly plugged and orphan wells, which lack solvent or legally responsible owners. Drawing upon 18 months of dissertation fieldwork and archival research, I explore how residents of Vista Hermosa, a redlined, historically working class neighborhood one mile north of downtown Los Angeles, are organizing to fight for the closure of hundreds of wells in the Los Angeles City Oil Field. For a decade, neighbors have filed complaints to state and city officials about rotten smells and illnesses that they attribute to leaking wells buried alongside their homes, schools, and parks. At the same time, residents fear being squeezed out by the construction boom in new residential projects—projects lauded by city officials for increasing the housing stock as well as cleaning-up old wells. The paper asks, in what ways do residents make visible the subterranean remnants of the city's petroleum past; and in doing so, how do they also contest the rapid changes to their neighborhood and related anxieties surrounding displacement? Presenter: Caylee Hong (University of California, Berkeley)

An Aquifer of One's Own: The popular hydrogeology of volcanic rock aquifer: As groundwater use grows in drought prone regions of peninsular India policymakers and development organisations advocate for the local governance of aquifers as commons. These community-based approaches are often frustrated by the proliferation of individual wells and pumps that characterize the atomized infrastructure of groundwater extraction. Recently a novel atomized infrastructure has been added to the mix in western India - farm ponds that are used to store groundwater pumped from the subsurface and enable agricultural intensification. While farm ponds are criticized as a way by which elites effectively privatize groundwater, they remain wildly popular. I compare the normative impulses imbedded models of groundwater behavior that are implicit in sustainable development discourse and practice to the "popular hydrogeology" of hard rock aquifers as it circulates among cultivators in the countryside. I show how sustainable development projects for groundwater management advance a simplified model of groundwater behavior that is at odds with the popular framing of aquifers as capable of storing limited volumes of water and groundwater as a lively resource whose fugitive behavior legitimizes its capture. Inflected by both hydrogeological science and experiential knowledge the popular model frames the farm pond not as something into which water from the aquifer is siphoned off but as an infrastructural extension of the aquifer itself. Cultivators faced with increasing climate uncertainty and generalized agrarian distress articulate an ethic of peasant proprietorship that is materialized through the emergent atomized aquifers produced by farm ponds. Presenter: Karan Misquitta

Wasteland Commons and Three Frames of Ecological Nihilism : The Anthropocene poses new challenges to those who engage in subsistence activities. In Appalachia, as vast acres of land are either seized for the extraction of natural resources or set aside for the protection of them, many continue 'the old ways' in whatever land they can safely access. This article asks how and why folks continue to gather wild-growing foods despite spatial lockdown. This article addresses calls to observe practices of commoning in the global north and attends to the ways gatherers turn the challenges of the Anthropocene into creative opportunities for collective living. Although much of the land in Appalachia is held by absentee corporations, the mountains have long functioned as an open-access, de facto commons. Literature on Appalachian commons often focus on native forest plants and the threats

extractive industry poses to them. I propose more nuanced engagement with 'wasteland commons' to understand how similar commoning practices persist beyond these idealized environments and into the contaminated spaces of modernity. To further the concept of 'wasteland commons,' I draw upon gatherers' experiences with three tropes of ecological nihilism that often dominate discourse on both the Anthropocene and Appalachia: invasion, toxification, and ruination. Invasion involves the spread of invasive species, toxification involves the gradual accumulation of harmful toxins, and ruination involves the blasting of landscapes. These three tropes can render entire environments unrecognizable, but the dangers of ecological nihilism are that we condemn these spaces to abandonment and further destruction. Through commoning the wastelands, we generate paths through the ruins. Presenter: Dominic Piacentini (University of Maine, Department of Anthropology)

The Subjunctive as Possibility: Dealing with Failure in Agroecological Organizing in Turkey : Based on multi-sited ethnographic fieldwork conducted in western Turkey in urban and rural settings between 2018 to 2021, this paper focuses on contemporary back-to-landers, secular and educated middle-class urbanites who ethically re-invent themselves as farmers of ecological food and cohere around a movement seeking to generate alternative food networks. Against the backdrop of increasing political authoritarianism, economic precarity, and ecological devastation, back-to-landers often face failure in their organizing efforts due to interpersonal conflicts, economic hardship, and political suppression. Failure and disappointment lead to an affective register whereby they envision situations that they know will not materialize, but still engage in the work of imagining what could have been. Oftentimes, comparisons to other countries, especially Europe and the west, dominate these narratives. Juxtapositions of the here and the there, often designations without a referent, give rise to a subjective mode, which, I argue, is emblematic of Turkey's contemporary condition where it is becoming increasingly difficult to bridge the gap between ideal and reality in organizing for radical socio-political change. Investigating how back-to-landers navigate feelings of possibility and impossibility and deal with the fragility of their actions, I argue that the subjunctive mood emerges as a site for enacting alternative possibilities, enabling people to sustain hope and keep activism going against all odds. DESCRIPTION:

Am I an Entrepreneur? Social Entrepreneurship and the Normalization of Gendered and Racialized Exclusion under Socialist State Retrenchment in Cuba: In the 1990s and early 2000s, the economic crisis brought on by political transitions in the USSR forced Cubans to reconfigure household survival practices as they, and their leaders, struggled to survive on what Fidel Castro called a 'Socialist island adrift in the sea of Capitalism'. Ethnographies of everyday life celebrated Cuban creativity and the underground independent economic activities, often risky and illegal, that became central to household survival. Even as self-employment was gradually decriminalized through the mid-1990s and early 2000s, it was still highly stigmatized as antisocial and morally suspect, understood to be channeling labor and innovation towards individual wealth accumulation, away from the Revolution, a state-led social project for the benefit of all. By the end of the first decade of the 2000s, this began to change. Cubans were encouraged to go into business for themselves and official state discourses began to destigmatize entrepreneurship, no longer described as a 'necessary evil' but as vital to the country's economic health. New narratives celebrated independent economic actors as the key to sustainable development and future Socialist prosperity. As U.S.-Cuban relations improved, growing tourism created new markets and the Cuban state, as well as its former adversaries the Catholic Church and the U.S. Embassy, began to support entrepreneurs. With access to the forms of capital needed to successfully organize new projects, this new social group was composed by those most privileged by Cuban class, race, and gender hierarchies. The exclusion of marginalized groups from entrepreneurship was compounded by the lack of

access to bank credits and legal frameworks that prevented the formation of cooperatives. I argue that the apparent transformation in the acceptance of Cuban entrepreneurs by the state and Revolution is actually incomplete. While some forms of independent economic activity and new economic actors are now celebrated and defended, the mobility and dignified life that entrepreneurship promises is not open to all Cubans who use their labor to undertake creative solutions to unmet social needs. Based on years of field research and residence in Havana from 2008-2023, I compare the experiences of two groups of independent economic actors that could both be described as entrepreneurs, but are not. The first, highly-educated young white female urban entrepreneurs with businesses providing services related to motherhood and childhood made necessary by retrenchment of state care infrastructures, and middle-aged black women, inhabitants of peripheral urban settlements with uncertain legal status in the city, who have focused their entrepreneurial energies on patching the failing state distribution infrastructures by waiting in days long lines to buy scarce basic goods for resale. Juxtaposing the experiences of these two groups of female entrepreneurial laborers, I show that the transformation of state and social acceptance of entrepreneurship in Cuba is limited and circumscribed by the misrecognition of the labor of women and black Cubans whose social entrepreneurship are not recognized as work and protected, supported, or subsidized in the same way as other entrepreneurial projects. Along regular Cuban fault lines and hierarchies of class, race, gender, and Revolutionary Cultural Capital, some independent economic activities, meeting acute social needs in the context of ongoing retrenchment, continue to be stigmatized and suppressed. In this paper, I go beyond documenting the racialized and gendered exclusions of new structures of opportunity to reframe our understanding of independent economic activity in Cuba and show how the promotion of Cuban entrepreneurship has also created new opportunities to normalize gendered and racialized exclusions. Presenter: Hope Bastian

Advancing Entrepreneurship in the Age of AI: Insights from Founder-Anthropologists: In recent years, the growth of Artificial Intelligence (AI) has been remarkable. This has most notably been demonstrated by the meteoric rise of ChatGPT, which Reuters reported as the fastest-growing consumer application in history, reaching 100 million monthly active users in its first two months. Impressive as this is, we must not forget that linked to this growth is the potential for creative

destruction and massive disruption, which will likely pervade nearly every business sector. Among the areas where the impact of AI will be particularly significant is entrepreneurship. AI has the potential to revolutionize how entrepreneurs approach business, from designing business models and organizational structures to identifying new markets and innovating and scaling new products and services. However, like any new technology, ethical concerns and potential negative consequences are associated with its use, including biases in the models, data and privacy concerns, change management needs, labor displacement, income distribution, health disparities, and power imbalances between producers and consumers. Despite these concerns, however, relatively little research has been conducted at the intersection of AI entrepreneurship from an anthropological perspective. As two founders who have implemented AI in our organizations and utilized it in our research, we pose the critical question: what does entrepreneurship mean in the age of AI? In this paper, we delve into the question of what entrepreneurship means in the age of AI, drawing from the unique perspective of two founder-anthropologists. Our professional experiences have involved working through complex ethical and strategic decisions on how, when, why/why not to incorporate AI into our products, organizational work practices, and 1 research methods. Furthermore, our approach is informed by our collective academic training in anthropology, business, information science, and law and years of conducting research in applied settings. To complement our personal experiences and insights, we present the findings of our mixed-methods research study. We combine ethnographic methods with AI-assisted digital methods to gain a comprehensive understanding of the intersection of AI and entrepreneurship. The ethnographic methods allow us to observe and document how organizations integrate AI into their work practices and explore how entrepreneurs perceive and understand the value of AI. The AI-assisted digital methods enabled us to analyze and visualize large data sets from social media comments, product reviews, and forum discussions to identify larger patterns and trends. This combination of qualitative and quantitative methods provides a nuanced and comprehensive view of the complex relationship between AI and entrepreneurship, including the potential benefits and risks of using AI in entrepreneurial activities. The study has significant implications for promoting ethical and culturally sensitive AI adoption and contributes to anthropology and entrepreneurship by deepening the understanding of the cultural dimensions of AI entrepreneurship. The findings have implications for

society and individuals across various fields (entrepreneurs, practitioners, educators, healthcare professionals, technology development teams, and policymakers), providing guidance on creating a supportive and responsible environment for AI adoption in entrepreneurship. Presenter: Matt Artz

Presenter: Yaya Ren

Entrepreneurship and Disease Management: This paper looks at the role of entrepreneurship in the management of celiac, an incurable autoimmune disease, affecting roughly 1% of the US population. This condition, included within the 2008 Americans with Disabilities Act, requires an unusually high level of vigilance with respect to diet and food preparation, in order to keep foods and the environments of their preparation gluten free. Compliance with this strict regimen, while alleviating many long-term side effects such as cancer and osteoporosis, often leads to other problems such as social anxiety, depression, and eating disorders, according to a variety of studies. My research, conducted with 17 gluten free bakery owners who identify as having celiac from around the US looks at the role entrepreneurship plays with respect to their own disease management as well as the management of celiac for others. Rather than work as a cause of stress and then disease, this research asks in what ways entrepreneurship might play a role in the management of disabilities and medical conditions. Furthermore, to what extent are these business websites and physical spaces hubs for the dissemination of relatively complex knowledge about diet and aspects of this disease, information that research shows is almost impossible to adequately communicate in brief consultations with medical personnel. While support groups are an excellent means of disseminating this information, they are attended by very few. Businesses may, in fact, be more successful in the transmission of this kind of

detailed information. Through the study of websites, interviews, and ethnographic research, this research looks at how businesses function as informal points of knowledge dissemination and how the information presented relates to the construction of brand and identity. This research fits within contemporary disability research in that it looks at the creative ways that disease and disability are met with innovative practices to construct inhabitable worlds, from the management of space, to micro-social interactions, to technology (Boellstorff 2020; Dokumaci 2020; Ginsburg and Rapp 2020; Hendren 2017). With respect to the study of entrepreneurship, it suggests that disabilities may both provide added value in businesses as well as be a platform from which to contribute to the care of others. Presenter: Suzanne Oakdale (University of New Mexico, Department of Anthropology)

Performing and Evaluating Creditworthiness: The Promise of Digital Bank Lending to Micro/Small Enterprises in Transforming Chinese Societies: In exploring how local and migrant microentrepreneurs obtain financing and how banks distinguish between creditworthy and uncreditworthy business loan applications, this paper unpacks the intricate links between political considerations, market economy, digital financial revolution, and social relations. Despite being a driving force in national economic and social development, MSMEs (micro, small, and medium-sized enterprises) in China have long faced difficulties in obtaining bank loan financing. On the other hand, the main obstacles for Chinese banks to lend to MSMEs are customer acquisition and risk assessment (Hua & Huang 2021, Huang 2022). The government thus introduced digital lending platforms like 'Credit Easy Loan' under its developing social credit system to enable 'creditworthy' microentrepreneurs to get bank loans without collateral. Banks' digital lending platforms are envisioned by national and local authorities to collect and integrate social 'credit data', thus easing the information asymmetry between banks and MSMEs. Most banks in China are heavily influenced by the state's political goals and are pressured to increase credit loans for MSMEs even if those loans are more likely to become non-performing loans (Bailey et al. 2011, Zeng 2012). Moreover, banks are encouraged to incorporate innovative digital technologies like intelligent risk control methods into 'traditional' credit evaluation models. In this sense, the state expects banks to play a key role in technological innovation and financial inclusion for MSMEs. Meanwhile, it is vital to investigate the 'digital implementation gap' between the state's digital ambitions and the actual local

implementation (Ding & Zhong 2021, Kostka 2022). This paper is rooted in extensive ethnographic fieldwork in two Chinese cities. My analysis comes from interviews and daily conversations with senior bankers, microentrepreneurs, and consultants who work with FinTech. I investigate banks' digital and non-digital methods of credit risk assessment, entrepreneur-applicants' varied experiences of obtaining bank loans, and their relations with the private 'packaging agencies' that assist loan applicants in 'beautifying' their creditworthiness. This research finds that banks and microentrepreneurs may work with 'packaging agencies' to fake credit data for the applicant and the enterprise in credit risk control for different purposes. Consequently, the state-initiated digital lending platforms risk becoming performative rather than inclusive. MSMEs, especially rural-to-urban migrant microentrepreneurs, still face difficulties and stereotypes when applying for bank credit loans. This paper hopes to further our understanding of the social practice of digitalized financial credit, trust relationships between banks and businesses, and migrant entrepreneurship. Presenter: Han Tao

Local Princes Encountering Transnational Peddlers: The State and Informal Chinese Entrepreneurs in Morocco's Tourism Sector: In modern market societies, the state has many incentives to regulate and formalize informal economic practices, especially when they grow visible and potentially interrupt the state-sanctioned market order of critical sectors. Whereas participants in the informal economy usually prefer to avoid state regulations. As part of the country's efforts to diversify foreign investment, Morocco lifted entry visa requirements for Chinese nationals in 2016, leading to a surge of Chinese visitors to a country they had little direct contact with before. Without adequate experience and facilities to handle large numbers of Asian tourists, the Western-oriented Moroccan tourism market quickly found itself incompetent to entertain continued waves of Chinese visitors. This situation instantly germinated a lucrative and informal niche market (untaxed and unlicensed) dominated by Chinese entrepreneurs and catering mainly to Chinese-speaking tourists in an otherwise well-regulated Moroccan tourism market. In 2019, the year preceding the outbreak of the Covid-19 pandemic, Morocco received around 200,000 tourists from China, most of whom were reportedly served by unregistered, small, Chinese-owned tourism companies. Except for the two-year hiatus of international tourism in Morocco during the pandemic, large crowds of Chinese tourists and accompanying Chinese tourism operators have been

seen in Morocco's major tourist attractions. As the pandemic recedes, this informal market is poised to bounce back. Drawing on fifteen-month fieldwork on Chinese migrant entrepreneurship in Morocco, this article provides an ethnographic account of the complex relationship between the Moroccan state and the informal Chinese entrepreneurs in Morocco's tourism sector. Specifically, it explores the reasons for this informal market's sustained existence, resilience, and potential expansion or transformation. In the context of the continuous governance challenge resulting from sub-Saharan African migration to Morocco, the Moroccan state has been overly sensitive to informality related to immigrants. However, the state authorities, at various levels, tend to regard these Chinese entrepreneurs as 'good immigrants' and remain reluctant to intervene with their highly visible and informal activities in the Moroccan tourism market, although local Moroccan tourism operators have been persistently calling for strict state regulation of the Chinese engagement. In general, the Moroccan state sees that the increasing presence of Chinese tourists in Morocco not only benefits its tourism sector but also increases the possibility of attracting Chinese investment in other sectors. Even if some officials support an interventionist approach, the Moroccan state lacks the administrative resources to effectively regulate the informal Chinese entrepreneurship in its tourism sector, primarily due to the latter's transnational operation mode, which is heavily assisted by digital technologies. Despite the state's acquiescence, many Chinese entrepreneurs in Morocco's tourism sector think their informal practices unsustainable and have been seeking to localize their businesses by hiring or partnering with local Moroccan tourism operators and to invest their profits in other formal sectors. Many long-term Chinese tourism entrepreneurs also welcome the Moroccan state authorities to impose regulations on Chinese-owned tourism companies so that the newcomers will be deterred from entering the business. Presenter: Jie Gao (University of Arizona)

Making a Living in an Alternative Sector: The Career of Taxi Drivers in Yaounde: The taxi industry has become a means of social inclusion for those who might otherwise be excluded from the job market. People enter this area as a temporary business with the intention of finding better possibilities and more meaningful occupations in the future, but they end up becoming entrepreneurs in the sector. People, who have never had the chance to complete a formal education, are immigrating to a new city, are finishing school and unsure of employment,

have early childhood obligations, or have lost their job and face an uncertain future. While waiting for their dream job or businesses, some people in this category have sought temporary relief in the taxi sector, either as drivers or as car owners, especially among those who can depend on family or friends for help. Most actors who saw the sector as a temporary business with the hope of finding greater opportunities and fulfilling jobs someday, finally climb the professional ladder and become taxi owners, while other actors find it frustrating. The taxi sector provides flexibility and independence, allowing individuals to work on their own schedule and earn money while they wait for their situation to improve. However, the industry is also highly competitive and can be physically demanding, which may not be suitable for everyone. This paper examines employment practices and employment relations in the transportation business, drivers' career paths, how they operate on a daily basis, the strategies employed to mitigate risk and evade governmental control, and how they finally become entrepreneurs in the sector. The results highlight the importance of the taxi sector in providing opportunities for marginalized individuals to participate in entrepreneurship and access resources that can help them succeed. This has a positive impact not only on their own lives but also on the wider community and economy. Finally, the paper highlights the importance of informal economies in creating opportunities for marginalized individuals and communities and emphasizes the need for policies that support and regulate these sectors. DISCUSSANT:

Ria Reis

DESCRIPTION:

Societal transitions forced through conflict, climate change, natural disasters and economic crises often reverberate at familial and individual levels. They also often coincide with transitions over the life course: from childhood to youth, to adulthood, to parent and grandparenthood and, at times, in less linear ways (Johnson-Hanks, 2002). At these interlocking transitional periods, the ways of being and becoming that are usually taken for granted are questioned anew, in perhaps more radical ways than implied by young people's 'fresh contact' with existing, shared cultural material (Mannheim, 1993 [1927]). For all generations, forced transitions can be hopeful, forge a search for better, safer grounds. They can also be experienced as frightening and threatening, leading some to hold onto a world that, perhaps, no longer exists. In this process, transitions may enable new ways of connecting, but may also cause distance and friction between generational cohorts. Tending to these generational dimensions and connections allows us to think of changes as potentially gradual and complex, rather than necessarily ruptures severing past from present and future (Cole, 2010). Presenters in this panel explore how interlocking transitions in socio-political life and the life course contribute to social change, tending to emergent patterns of intergenerational distance and proximity. How do older and younger generations experience and navigate (different, changing) futures, and how do they hold onto the known? How do older and younger generations transmit, adapt and learn new ways of seeing and doing? And under what circumstances do interlocking transitions forge a bridge too far - generating a crisis in social reproduction (Comaroff and Comaroff, 2004)?

Informal pedagogies in transition: the afterlives of mass violence and displacement in Rwanda : By Benjamin Tuyishimire, Verena Mukeshimana, Juul Kwaks and Lidewyde Berckmoes “For people who experienced conflict or genocide, can it ever be post-conflict?” (Health worker, Rwanda, 2018) It is well-known that experiences of mass violence and displacement have deep and lasting effects on societies, families and individuals. In this study, we investigate the intergenerational afterlives of experiences of mass violence and question how they feed into transitions in informal pedagogies for, perhaps, sustainable peace in the Great Lakes region in Africa. The Great Lakes region is notorious for regional and cyclical dynamics of mass violence and displacement, with the genocide against the Tutsi in Rwanda in 1994 perhaps the best-know black page of its recent history, and the recurrent violence in eastern DR Congo a particular reason for ongoing concern. In this study, we conduct research with families in Rwanda and exiled families from eastern DRC in Rwanda to understand how their experiences with violence inform and transform informal pedagogies of peace and conflict in their homes. We draw our findings from five months of ethnographic fieldwork by the first two contributors to this study and paper. The primary research method employed are ethnographic family visits, in which we combine informal conversations, semi-structured interviews and participant observation with parents and their children to capture the, often implicit, ways of care and socialization within families. By investigating how informal pedagogies of peace and conflict take shape amidst societal transitions to peace and/or citizenship in Rwanda, we hope to identify the interlocking transitions in society and family and what they may entail for, hopefully, more peaceful futures. Presenter: Lidewyde Berckmoes (Leiden University)

Generational ties among Burundian “Watanzania” or rupture in helping?: By Yvette Ruzibiza (Copenhagen Business School) and Simon Turner (Lund University) Burundian refugees have been arriving in Kigoma, Tanzania for over fifty years now, fleeing from violent conflicts of 1972, 1993, and the latest of 2015. They meet a generalized hostile environment that pushes many, regardless of their status (formal ID/refugee status/rights to work or illegal) to go to great lengths to hide their Burundian identity. They hide their language, and many seek Tanzanian citizenship to conceal their ‘Burundianness’ and appear as true ‘Watanzania’. This paper explores how these attempts to break with the past and become truly Tanzanian play into cross-

generational relations of care and belonging. Is it possible to shed one’s past and maintain kinship ties and ties to one’s broader ethnic/national community all at once? To understand this, we approach generation from several angles. First, the fact that Burundians have been displaced by consecutive conflicts has created cohorts in Mannheim’s sense; 1972, 1993, and 2015 arrivals. They share common historical experiences of conflict in Burundi – irrespective of age. Second, we are attentive to what in classical migration studies are seen as the first and second generation, i.e., those who were adults upon arrival and those who were born in Tanzania. Finally, we take a more classical anthropological approach to generation as a genealogical relation of kinship (Whyte, Alber & Geest) where we explore whether such relations are weakened in the case of Burundians in Kigoma. The paper is based on collaborative fieldwork in Kigoma town in 2022 and 2023. Presenter: Simon Turner (Lund University)

Changing Grazing Grounds and Traditions among Maasai: Effects of Climate Change and Urbanization : By Marion Sumari-de Boer, Tauta Mappi, Naomi Lekashingo, Perry Msoka Maasai have seen the grazing grounds for their cattle decrease. Periods of extreme drought have reduced green grassy areas as the soil becomes less fertile, and many cattle are dying. The problem is exacerbated by fast urbanisation, with the residential regions becoming larger, decreasing the grazing grounds for Maasai cattle. Maasai children traditionally consume a diet of milk and butter, so their food security highly depends on the number of available cattle. Families are usually large, with men aspiring to marry multiple wives and raising an average of 7 children with each wife. In our previous participatory action research, the ONDOILO (meaning VOICE) study, we found that young married Maasai realise they can no longer feed the number of children. Living up to traditional values and procreation norms is no longer sustainable. Focus group discussions showed that Maasai are interested in birth control means, but it highly depends on age and generation, as well as on the remoteness of the region. In addition, Maasai mentioned they are looking for other means to secure food for their children. They would like to find alternative ways to their traditional diet of meat and milk. This would fundamentally affect the nomadic way of living of the Maasai, as crop-growing would require the Maasai to settle instead of migrating for greener pastures. The agreement to settle may be perceived differently by different generations of Maasai. In this presentation, we present findings of a follow-up mixed

methods study which investigates how climate change and urbanisation limit the Maasai from keeping their traditional lifestyle of migrating and dieting. We will explore the gap in knowledge on alternative means of food security for both cattle and Maasai, how they may differ between generations, gender, and settlement areas, how this impacts intergenerational tensions and how these may be mitigated. Presenter: Marion Sumari-de Boer

Exploring Syndemic Vulnerability Across Generations: A Case Study of a Former Dutch Fishing Village: This ethnographic study uses a life-course approach to explore intergenerational transmission of adverse health outcomes in Katwijk, a community in the Netherlands that faced a rapid decline of the fishing industry. Analyses of population health data from the former fishing village showed clustering of psychological distress with cardio metabolic conditions and pain across multiple generations. Community members (> 65 years) were interviewed to map village history and explore how contextual changes affected family life since the 1940s. Adults with at least one of the clustering diseases, their parents (when possible) and their adolescent children participated in semi-structured life-course interviews. After drawing a lifeline to describe life-events, transitions and medical history, each family member was interviewed about the circumstances in which these events and transitions took place. Each generation was invited to elaborate on their experiences of navigating continuity and change. Building on syndemics theory, we systematically traced and compared processes leading to or from syndemic vulnerability by studying seven families across three generations. We found a complex interaction of endemic social conditions, life lessons, life habits, and disheartening life events shaped families' predispositions for a syndemic of psychological distress, cardiometabolic conditions, and musculoskeletal pain. Aspirational capabilities, educational attainment, and continued social support emerged as themes related to decreasing syndemic vulnerability. In sum, this study reveals the need to study how families experience and navigate transitions in the backdrop of large scale societal transitions. Current and historical trends are key in understanding specific patterns of poor health on a population level. Presenter: Nienke Slagboom (Leiden University Medical Center)

Palestinian refugees in Germany: The effects of toleration status along gender and birth order lines: Toleration status (temporary suspension of deportation) has been Germany's hesitant answer to providing humanitarian relief for Palestinians escaping

the dismal conditions of refugee camps and the civil war in Lebanon in the late 1980s and early 1990s. At the same time, the status has subjected families to years, even decades, of insecurity and uncertainty through constant threats of deportation and restrictions on work, travel and higher education. Such legal insecurity was paralleled by an increasingly hostile environment towards Muslims and 'foreigners.' Based on 19 months of ethnographic research in Berlin- Neukölln, I will demonstrate how the constant wavering between hope, fear and disillusionment impacts not only the parents who fled Lebanon, but also their children who were largely born in Germany. I argue that to understand the stagnant realities of the insecure status requires a gaze beyond parent and child generations and must be considered along the lines of gender and birth order. While gender influenced the expected roles and the degrees of freedom and possibility within and beyond the family, birth order affected how and if toleration status was experienced as a burden. By focusing on the eldest children on the verge of adulthood, the differing effects of the status reveal a family dynamic that demands proximity and interdependence, but not without push back. They find creative ways to find even moments of distance and independence. Presenter: Carola Tize (University College London, Department of Anthropology)

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

Jacqueline Wagner (Washington University in St. Louis, Department of Anthropology)

CHAIR:

Jacqueline Wagner (Washington University in St. Louis, Department of Anthropology)

PRESENTER:

Silvia Almenara-Niebla ,Nicole Braida (Johannes Gutenberg University of Mainz),Claudia Minchilli (University of Groningen),Ludovica Fales (University College London, Department of Anthropology)

DISCUSSANT:

Peter Redfield (University of Southern California,

Department of Anthropology), Marcia Inhorn (Yale University)

DESCRIPTION:

How are modern technologies influencing the lived experiences of migrants around the world? What roles do these technologies play in their everyday lives, in the systems of surveillance that monitor them, and in the institutions that purport to help them? What are the advantages and disadvantages of such technologies for migrants themselves, and what is the impact on the broader politics surrounding migration in society as a whole? This roundtable will explore these questions and many more, incorporating work with migrants and other actors and employing a broad understanding of what 'technology' entails. With the dawn of the internet, people all over the world have been able to communicate and access information in unprecedented ways. Migrants have utilized the internet to build community and maintain national connections in diaspora, redefining the meaning of citizenship (Bernal 2014). Additionally, the ubiquity of more recent innovations like smartphones and social media have fostered engagement not only with family members and friends back home (Berg 2015) but also with strangers who may provide advice about migrating or about life abroad. On the other hand, social media has proven problematic in that migrants often find that the picture-perfect lives displayed online are not necessarily representative. Smartphones also support various applications (apps) that facilitate migration and life in a new country. For example, translation apps like Google Translate allow migrants to communicate in a new society before learning the local language (McCaffrey & Taha 2019); however, such apps can be misleading when used in official asylum contexts, where they contribute to the exercise of suspicion (Jacquemet 2019). Similarly, smartphone apps and programs designed by humanitarian and activist organizations to help refugees, asylum seekers, and other migrants access resources and integrate into the local community can reproduce inequality and precarity (Mahmoudi 2019). Modern technologies have also revolutionized the documentation and investigation of human rights abuses (Niezen 2020). This has significant implications for migrants, particularly refugees and asylum seekers, who have the tools to record and present evidence of offenses. Additionally, artificial intelligence (AI) and algorithms have been used to investigate human rights violations; however, these technologies reflect the biases inherent in the data used to create them, making them unreliable and potentially discriminatory (Niezen 2020). As tools of control and deterrence, surveillance

technologies are becoming increasingly common throughout the world and have made migration significantly more difficult and dangerous (Andersson 2014; De Leon 2015; Feldman 2011). For example, drones, video surveillance, biometric scanners, and cellphone tracking all serve the purpose of identifying, apprehending, and denying entry to migrants. Drawing upon ethnographic research conducted in Europe, the U.S., and North Africa, the roundtable participants will touch upon the role of emotions in the everyday digital media practices of refugees and migrants; serious games, interactive maps, and data visualizations used by humanitarian organizations as tools for promoting solidarity with migrants; feminist podcast projects; refugees' engagement with assisted reproductive technologies, such as IVF and ICSI; and the social class dynamics of the digital media practices of migrant women in diaspora.

PRESENTER:

Anna Babel (Ohio State University), Devin Grammon, Margarita Huayhua (University of Massachusetts, Dartmouth, Department of Sociology and Anthropology), Anne Marie Creighton (University of Michigan, Department of Anthropology)

DISCUSSANT:

Bruce Mannheim (University of Michigan, Department of Anthropology)

DESCRIPTION:

The Andes have long been singled out in the academic literature as a site of syncretism (e.g. Marzal 1978, 1983), a concept that alludes to the combination of indigenous and European cultural practices and artifacts in colonial contexts (particularly concerning religion). However, this framing has been questioned by scholars for decades. For example, MacCormack writes that 'while Andeans did accommodate themselves to the invaders by sheer force of necessity, they also persisted

in constructing their own logically coherent and complete interpretation of their world and their experience. Andean culture remained intelligible from within itself after the invasion, just as it had been before that event' (MacCormack 1988: 960-961). Furthermore, Rivera Cusicanqui argues that the concepts of *mestizaje* and hybridity have served to erase indigenous autonomy under the guise of decolonial theory. In order to break with stereotypes of ahistoricity and the anthropological/scholarly denial of coevalness, Rivera Cusicanqui argues that we must recognize the independence, political commitments, and autonomy of contemporary indigenous actors (Rivera Cusicanqui 2012). This panel, entitled 'Andean TRANS-itions,' takes as a starting point the idea that in order to engage with the concept of transition or 'crossing' (Rampton 1996) we must recognize the historical and contemporary existence of opposition. This panel brings together a group of scholars who take language as a key site of the production of opposition, transition, and crossing. Our research recognizes the active role that actors, including indigenous actors, take in generating these semiotic processes in the contemporary Andes. In particular, we center practices that define, question, and 'put in play' (Ortner 2006) the concept of the Andes and Andean people(s). On the other hand, Hill defines syncretism in linguistics as 'the suppression of a relevant opposition under certain defined circumstances' (Kuryłowicz cited in Hill 1999: 244), arguing that 'syncretic linguistic projects are active and strategic efforts by speakers, who draw on their understandings of the historical associations of linguistic material to control meaning and to produce new histories by variably highlighting and suppressing these histories through linguistic means' (Hill 1999: 246). Following Hill, we treat both opposition and syncretism as semiotic processes that are produced by particular actors in particular contexts with particular means and to particular ends. This panel focuses centrally on language and the use of language in creating and maintaining borders which then become sites for potential 'crossing' or transitions. We use language in order to interrogate the production of difference and similarity through the production of ethnic, class, and national boundaries in the Andean region, including Ecuador-Peru-Bolivia, indigenous and non-indigenous identities, internal and international migration histories, and hierarchies of socioeconomic class. Bolivian transnational migrants: Social and linguistic awareness: It is estimated that more than 30,000 Bolivian migrants live in the area surrounding Barcelona, Spain, and many more have traveled through the area at some point in the past 20 years. In this paper, we report on data gathered in Bolivia in 2022 from interviews carried out with 40 return migrants (Bolivia-Spain-Bolivia). The interviews included a variety of tasks meant to probe different kinds of awareness/consciousness of dialectal differences, such as questions about migration history and attitudes towards Spain, explicit discussion of differences between Peninsular and Bolivian Spanish dialects, a narration activity in which we asked participants to switch between Peninsular and Bolivian dialects, a reading task in which we asked participants to switch between Peninsular and Bolivian dialects, and finally an echoing task in which participants were asked to imitate a Peninsular Spanish speaker. In particular, we were interested in how transnational migrants became aware of Quechua contact features in their varieties of Bolivian Spanish. We found that indeed, most interviewees reported avoiding words that they associated with Quechua influence and most interviewees commented on prosody and salient lexical/morphosyntactic differences. However, there was considerable individual variation in the participants' ability to recognize or produce Peninsular Spanish forms. This work is relevant to anthropological discussions of migration within and beyond the Andes, and provides an example of modern-day processes of syncretism and differentiation among transnational migrants. Presenter: Anna Babel (Ohio State University)

'Don't speak Spanish like a Quechua speaker': Language instruction and study abroad in Cuzco: The rise of study abroad programs in Cuzco, Peru is intricately tied to the region's transformation into a major center of international tourism centered on Incan patrimony. In this paper, I discuss linguistic syncretism in the context of a Spanish immersion study abroad program in Cuzco that featured coursework on indigenous language (Quechua) and culture. Specifically, I focus on the role of language teachers as agents of U.S. learners' socialization into the local contact variety of Spanish and examine how they reproduced oppositions between Spanish and Quechua during classroom language instruction. Drawing on examples from recordings of classroom discourse and interviews, I describe the ways that instructors socialized students to distinguish the

“pure Spanish” spoken by “native speakers” from the “non-standard” and “bad” Spanish spoken by Quechua-speaking migrants in the host community. I claim that by variably highlighting Spanish grammar forms as instances of linguistic interference from Quechua, these teachers reproduced ideologies deeply enmeshed in the local tourism industry that simultaneously disparage indigenous people while celebrating indigenous heritage and culture. These findings point to language classrooms as critical sites for the acquisition of sociolinguistic competence during study abroad and amplify calls to reexamine syncretism in the Andes in an era of elite migration. Presenter: Devin Grammon

Everyday Interaction and Shifting Languages in a Southern Peruvian Household: The southern Andes are characterized by multilingualism, in which indigenous languages (such as Quechua and Aymara) are used on everyday basis besides Spanish (the “national” language). While multilingualism has been studied in limited domains, particularly education, there is little research on practices of language use among indigenous people, particularly in rural areas, and in other institutional settings, such as Quechua households. I examine face-to-face interactions between Spanish-dominant but bilingual medical staff and Quechua-dominant but bilingual man and woman in a Quechua household. Whether they interact primarily in Spanish or using both languages, their interactions illustrate how the protocol for proper visit is violated. Quechua dominant speakers are denied sovereignty within the wall of their household; medical staff fail to follow host-guest protocols by initiating a heated discussion, questioning the birthing of a newborn in the house. Health workers display righteous attitudes as they treat their hosts as minors without the ability to carry out their own business in their own home. Although interactants shift between Spanish and Quechua, the effect is that the guests override the personal rights of the hosts. Bilingualism or language “crossing” reproduces relations of domination in everyday interactions. Presenter: Margarita Huayhua (University of Massachusetts, Dartmouth, Department of Sociology and Anthropology)

Quechua in Church: Audience-Making and Translation during Language Shift: In Tuti, Arequipa, Peru, members of the Iglesia Evangélica Peruana have developed bilingual practices including the extemporaneous translation of Spanish Bible verses into Quechua. Using recorded services and ethnographic interviews, I analyze these translations as linguistic and social practices. Where are they 'exuberant' or 'deficient'? Where do the translators provide commentary, of what kinds? Which elders can translate, and what qualifies them to do so?

Next, I examine the use of Quechua in the Iglesia Evangélica Tuti as an audience-making practice. Tuti is experiencing a shift from Quechua to Spanish; most current congregants speak both Quechua and Spanish. Who, then, is understood as benefiting from translation into Quechua? Drawing on and comparing interviews with members of Iglesia Evangélica Tuti and parishioners of Tuti's Catholic church, I suggest that the former understand their translation practices as benefiting all Quechua speakers in attendance, whether or not they also speak Spanish. Presenter: Anne Marie Creighton (University of Michigan, Department of Anthropology) Discussion: Discussant: Bruce Mannheim (University of Michigan, Department of Anthropology)

Late-Breaking Roundtable/Town Hall - In-Person

ORGANIZER:

Ana Ivasiuc

CHAIR:

Carmen Rial

PRESENTER:

Gabriela Vargas-Cetina, Bela Feldman-Bianco, Monica Heller (University of Toronto, Department of Anthropology), Bernard Perley (University of British Columbia), Ana Ivasiuc

DISCUSSANT:

Nicolas Petel-Rochette

DESCRIPTION:

The global rise of fascism(s) is visibly affecting our institutions as the world undergoes what looks like a transition to authoritarian rule. Although localized in their forms and manifestations, fascisms seek to establish authoritarian systems of rule that are highly racialized and gendered. At their center are mechanisms of exclusion and annihilation of those constructed as enemies, and although historically not new, such dynamics are gaining momentum in the current time at the intersection of multiple crises. Attacks on critical scholarship on race and gender are becoming normalized in many parts of the world, with some of the latest developments affecting the North American academic landscape (the eradication of Critical Race Theory from university curricula, or of Gender Studies

as a critical programme of scholarship). But other parts of the world are not exempt of such constraints on academic freedom, and constant pressures mobilizing the narrative of 'woke-ism' resurface periodically elsewhere too. At the same time, some academics mobilize an impoverished and misunderstood concept of 'academic freedom' to push for scholarship that undoes critical advances in knowledge on racialized and gendered power hierarchies. Unfortunately, this has started to happen under the umbrella of anthropological research, too. What we are facing globally as the rise of fascism(s) requires a strong position-taking and a reaffirming of anthropology's commitment to scholarship that works, as Ruth Benedict once said, to 'make the world safe for human differences'. The purpose of the round table is to gather the leadership of some of the major regional and global anthropological associations and debate the role and responsibility of anthropology against the global rise of hatred, authoritarianism, and violence. We are interested in engaging in a dialogue about anthropology's responsibility facing the global rise of fascisms (from trumpism to Modi, from Putin to Meloni, from the AfD in Germany to Bolsonarism etc.). Anthropologists are actively studying such movements and dynamics world-wide, but as such ideologies are starting to seep through in our academic institutions, we need to direct our attention toward our own practice of anthropology, too. What do we do when our own students start embracing fascist ideologies, against everything that we teach in the classroom? What do we do when states attack academic freedom in our universities? What do we do when research with exclusionary effects resurfaces as 'anthropological' knowledge? What should our discipline's concerted response be in the face of the global rise of fascism(s)? How do we shape solidarities with those whose very existence is threatened by the rise of fascism, be they our research participants, our own colleagues, or ourselves? How do we frame our future collective action as anthropologists and as leaders of anthropological communities worldwide?

Association of Senior Anthropologists

ORGANIZER:

Alice Kehoe

CHAIR:

Alice Kehoe

PRESENTER:

Noel Dyck ,Rick Feinberg (Kent State University),Yolanda Moses (University of California, Riverside, Department of Anthropology),Evin Rodkey

DESCRIPTION:

Franz Boas established Anthropology as a discipline with four subfields, reflecting: humans as biological organisms - genus Homo within Order Primates, human societies as culturally diversified, the archaeological past, linguistics. Anthropology's strength is its recognition that we cannot understand human behavior without taking into account, our physical nature derived from ancestors, the patterning of behaviors through imitating and learning from other people, the influence of histories, and our unique capacity for expression and communication in words. Anthropology is rooted in the fundamental theoretical position that the four specialties are different facets of what it means to be human. Democracy—rule by the people—is natural in selection for gregarious living, while it is challenged by cultural patterns supported by aspects of our evolutionary heritage such as lust, hoarding, fear of strangers and bonding for defense. When the broad foundation of American anthropology is gutted by academic cuts and restructuring into capitalist enterprises exploiting possessive individualism, we lose not only our unique understanding of the empirical reality of the human organism Homo sapiens, but also opportunities to awaken our compatriots to the humane values integral to our discipline, transitioning from 'silos' to solidarity. Our professional associations should work to increase community, technical and tribal colleges' outreach to all residents, and to support courses in anthropology that begin with a four-field Introductory course understood to be relevant to every person, regardless of their employment strategies, because everyone is a Homo sapiens. All our professional organizations are doing outreach. In numbers there is strength.

PRESENTER:

John Osburg (University of Rochester, Department of Anthropology), Susan Greenhalgh (Harvard University, Department of Anthropology), Nancy Chen (University of California, Santa Cruz, Department of Anthropology), Sara Friedman (Indiana University, Bloomington), Tiantian Zheng, Orna Naftali

DISCUSSANT:

Susan Brownell (University of Missouri, St. Louis, Department of History), Brendan Galipeau (National Tsing Hua Univ)

DESCRIPTION:

In its transition from impoverished Maoist state socialism to global capitalist power, China represents a puzzling anomaly. On the one hand, modern China was nationalistic and pre-occupied with its own domestic issues. With the Covid-19 crisis, China dug deeper into hyper-nationalistic insularity, and the transnational movements of information, people, and goods became even more constrained. On the other hand, these state controls have not prevented China from becoming the Number Two global power, and may even have helped. This Roundtable will discuss the ascendancy of China through an anthropological perspective highlighting themes that are often neglected by mainstream media. It delves into how China's transition shares common experiences found in other developing nations, and how China followed its own unique path. Looking to the future, it examines the pitfalls that may derail China's continued ascendancy. Economic Transitions While corporate media focuses on giant corporations and state trading, Ke explores the importance of transnational petty commodity trade of small entrepreneurs, such as the dissemination of medicinal goods by African traders. Yang also discusses small entrepreneurs and their 'ritual economy,' in which religious expenditures and spiritual indebtedness are deeply woven into the logic and materiality of petty capitalism, hearkening back to the Song Dynasty. Osburg tackles the transition from a thrift and savings mentality today's consumer economy and desire. Litzinger explores a familiar trope of capitalism, the exploitation of labor and polarization of class,

through the 'black lung disease' among miners.

Gendered Bodies, Families, Population The transition to economic power relied on the cheap labor of peasants and migrant laborers. These bodies are gendered, undergo aging, must be kept healthy and be reproduced. Greenhalgh examines how the commodification of food and diet, and massive infusion of sugar have produced an obesity epidemic. Medical anthropologist Chen discusses recent health trends, crises, and policies for the population. Friedman explores the growing multiplicity of family forms, including transnational and queer families that are not always geared towards biological reproduction, as heterosexual marriages and birthrates dramatically decline. Zheng thematizes the hyper-masculinization of bodies in statist discourse, which may detract from economic production and biological reproduction. Nationalism/Environmentalism Since the Covid lockdown, China has further tightened political controls and surveillance over the flows of information, media, and education. Does hyper-nationalism strengthen or detract from continued ascendancy to a global power? Can a society that blocks its citizens from knowledge of their own society and the outside world, innovate and take initiatives that will build a global power? Or is it easier for a society in lockstep with state leadership, to attain global power status? Naftali shares her research on nationalist education of China's youth, while Brownell explores the projection of national might in China's Olympics events. Does nationalism help or hinder the construction of transcendent concerns beyond national interests, where citizens identify not only with the human species, but care for all planetary life? As a global power, China needs to lead the world in environmentalism, and Galipeau examines China's past record.

DESCRIPTION:

Within the present, political-cultural conjuncture of the Anthropocene, the common-sense narratives that have constructed our dominant reality are unraveling in multiple directions, creating openings for other ways of thinking, being and doing - even as capitalist modernity attempts to pull-in and re-territorialize possibility. Drawing on engaged, ethnographic research with solidarity economy initiatives, Basque language revitalization activists, grassroots community organizers, and prison abolitionists, this roundtable opens a conversation on anthropological praxis and the building of other worlds. We pose the following questions: How might we as anthropologists understand our own enrollment into world-making assemblages, including those we hope to unmake? What can the role of a generative critique be in imagining and assembling other worlds? What questions might be asked, what theoretical tools are at our disposal, and what sorts of relationships among people and non-human others become apparent in thinking of politics and culture as assemblage?

3-846

Beyond Covid-19 – Fostering a multicultural and interdisciplinary understanding of the pandemic and its impact on mental health.

2:00 PM - 3:45 PM

Virtual - Room 1

Late-Breaking Oral Presentation Session - In Person

ORGANIZER:

Daria Morgounova Schwalbe (University of Copenhagen)

CHAIR:

Daria Morgounova Schwalbe (University of Copenhagen), Felipe szabzon (University of Copenhagen)

PRESENTER:

Felipe szabzon (University of Copenhagen), Anna Iskra (University of Copenhagen), Daria Morgounova Schwalbe (University of Copenhagen), Maura Cranny Ntow (University of Copenhagen), Cora Salkovskis (Danish Institute for International Studies)

DESCRIPTION:

Since the beginning of the COVID-19 pandemic, mental health has emerged as a prominent concern with profound implications for both the present and future repercussions of the global health crisis (Bambra 2020; Moreno et al 2020; Rose 2020; Lancet Psychiatry editors 2020). Mainstream journals (e.g., Lancet and Nature) presented conclusive findings that the pandemic was detrimental to mental health (Burgess 2020; The Lancet Psychiatry 2023). Leading international health organizations such as the WHO and World Psychiatric Association have issued guidance for preserving mental health in times of Covid-19. In most discussions, researchers and policymakers assume the universality of such mental health consequences around the world – after all, the pandemic-related circumstances and social measures appear to be strikingly similar in most sociocultural contexts, and in the current climate of global mental health the same guidelines, research instruments, diagnoses and questionnaires are often used across the globe. Within the history of transcultural psychiatry and medical anthropology, however, which have shed light on the multifaceted relationship between culture, society and mental illness, such assumptions about the global universality of psychological problems and emotional worlds should also be questioned (Bains 2020; Antic 2021; Kleinman 2023). In fact, the universalization of psychiatric concepts and instruments without considering complex sociocultural contexts can lead to the marginalization of both patients and experts from developing countries, may reinforce Eurocentric tendencies and power structures in mental health, and often results in ineffective policies (Mills & Fernando 2014; Kirmayer 2006; Napier 2014). Moreover, with the pandemic being declared to be over, the initial fervor surrounding pandemic-related prognostications has gradually abated, which brings forth the need for a more nuanced and comprehensive examination of the pandemic's transformative effects. This session brings researchers from interdisciplinary fields working with local communities and medical professionals (psychologists, psychiatrists, and therapists) in the Global South and Global North to explore how local languages, cultures and context have shaped communities and medical professionals' responses to the pandemic, and how cultural and social difference is constructed and worked into the mental health research during and after the pandemic. Bringing the diversity of voices and experiences to the fore, we ask: 'How can we conceptualize, understand, and alleviate pandemic-related distress and afflictions?' 'To what extend was the

pandemic suffering universal, and to what extent it was culturally determined or constructed?' Ultimately, 'How can we conceptualize 'mental health' in the post-pandemic world?' and 'What can we do to advance change?' The session will help to share the findings generated by the 'COVID-19 and Global Mental Health: The importance of cultural context' project, based at the Center of Culture and the Mind, University of Copenhagen. It will also provide a platform for scholars and younger researchers, working in the fields of transcultural psychiatry, psychiatric epidemiology, anthropology, medical humanities, and public health, to present up-to-date findings and debate new pathways to understanding post-pandemic transitions and emerging mental health problems.

The promise of 'Peace of Mind': Understanding mental healthcare responses to COVID-19 in Colombia: Colombia has been marked by its enduring exposure to a protracted violent conflict spanning over five decades. Within this backdrop, mental health policy has assumed a pivotal role in the nation's journey towards peace, garnering a prominent national focus since the 2010s. The onset of the pandemic has propelled mental health back into the forefront, necessitating comprehensive measures to address escalating levels of psychological distress among the populace. This study draws upon a six-month ethnographic fieldwork endeavor and a series of interviews involving policymakers, scholars, practitioners, and community-based mental health organizations, conducted from October 2022 to February 2023. The paper delves into the ways in which pre-existing perceptions towards mental health and institutional healthcare structures have influenced public health responses aimed at mitigating the psychological repercussions of the COVID-19 crisis. The findings shed light on the strategies employed by local authorities in four municipalities to formulate supportive interventions that alleviate the suffering and distress experienced by individuals. Conversely, these responses are juxtaposed with initiatives undertaken by community-based organizations, which similarly strive to alleviate the afflictions faced by local residents. Felipe szabzon (University of Copenhagen)

Counselling Unhappening. Viral Absurdity and Affective Dysphoria in Post-Pandemic Shanghai.: Walking through the streets of Shanghai today, one needs to seek hard to identify the traces of the pandemic in the texture of the city. Gone are the posters motivating frustrated citizens to power through the two-month lockdown with the sheer force of "positive energy" (zheng nengliang). The testing booths that once mushroomed on every other

street corner now became barbecue stands, garbage disposal sites, or, after their removal, just square-shaped discolorations on the pavement. In the Shanghai Mental Health Center, a leading psychiatric hospital in the city, there are plenty of posters and leaflets educating the visitors about mental afflictions and the current health-related campaigns. The word "pandemic" is absent from all of them. This talk examines the politics of unhappening that minimize the effect of the pandemic on wellbeing and mental health of urban Chinese today. It explores this issue through the narratives of psychological counsellors who provide talk therapy and other therapeutic modalities within Shanghai's loosely regulated psy-milieu. The accounts of counsellors spotlight their own and their clients' experiences of affective dysphoria as they are trying to validate their lingering discomfort and suffering that traces back to the pandemic times as they are gaslit by mainstream political discourses to forget, move on and embody hope and enthusiasm. Anna Iskra (University of Copenhagen)

Beyond 'talking cure'. Framing violence and Inuit mental health in post-pandemic Greenland. : It has been repeatedly pointed out that the long-term psychological consequences of the Covid-19 pandemic might still be underway, as the massive and complicated nexus of emotions and pain is only beginning to be understood. In the Arctic, the virus was not very widespread, and Greenland managed particularly well to control the pandemic, and the imposed social isolation measures were limited. Nonetheless, the numbers of suicide threats and cases of sexual and other forms of violence were reported to increase in Greenland, as well as across North American Arctic, particularly after the first wave of the pandemic. This talk explores how the pandemic was framed and reframed by experts in Greenland, compared to Alaska. By looking at assumptions about suicide, culture, and cure, embedded in therapeutic and health discourses, it scrutinizes the role of culture and context for mental health in Greenland. It also problematizes the 'culture of silence' (Danish: 'tavseskultur'), ascribed to Inuit societies, identifying the possible side effects of the 'culture of confession' which prevails in contemporary public and health care discourses, and which assumes that 'talking' is the only possible cure and hence, the only rational solution to mental health problems in the Arctic. This talk questions the universal idea of 'talking cure', arguing that to change the current mental health challenges in the Arctic we need to change the framework of understanding suffering experiences in relation to the conditions for people's lives. Daria Morgounova Schwalbe (University of Copenhagen)

The Social Life of Anxiety. Covid-19 related emotional distress and anxiety in Ghana and Nigeria. : There is wide range of literature describing the various psychological impacts of the COVID-19 pandemic with studies reporting a global increase in the prevalence of mental disorders and psychological distress due to the pandemic. The most reported emotional reactions are fear and anxiety. Owing to the emerging literature various COVID-19 fear and anxiety related psychometric tools have been developed. But how consistent is the presentation of anxiety in various social settings? Do social factors contributing to anxiety impact the meaning attached to the symptoms and hence, the perception of presence or not of illness? It is assumed that based on the meaning attached to an emotional distress, a specific form of intervention is sought, and the same can be said of anxiety in relation to the Covid-19 pandemic. The aim of this study is to determine the various situations, circumstances and events contributing to the development of anxiety to the people of Ghana and Nigeria in the context of the Covid-19 pandemic and explore the understanding, perceptions and help seeking behavior adopted in relation to the assumed precipitating factors. Using a combination of historical analysis, literature review and interviews, this talk will provide new perspectives to the understanding of anxiety in the Ghanaian and Nigerian populations and the direction in which help must focus to ensure the needed outcome. Maura Cranny Ntow (University of Copenhagen)

“Resilience died years ago”: temporality, NHS austerity, and coping in crisis amongst UK healthcare.: The NHS has been termed the UK’s ‘national religion’, but commentators are increasingly asking whether it is ‘loved’ so much it has become a form of ‘collective delusion.’ This paper considers two forms of collective action concerning this national institution and healthcare labour. Drawing from mainstream and social media analysis (between 2020 and 2023) focused on the Clap for Carers (later Heroes), and interviews with NHS clinicians during a period of historic strike action (2023), this paper considers overlapping and competing conceptions of community and identity at different points of the COVID-19 pandemic in the UK. Which model of community was being imagined, galvanized, and encouraged during these phenomena, and who was forgotten or obscured? It asks how rituals and practices such as the Clap, lauded in the media as making gratitude and community heard, silence carers’ protests, needs, and anxieties. How was a historical myth, or imagined community of ‘Britishness’ associated with

resilience, the NHS itself, and the ‘Blitz spirit’, performed? In being labelled ‘heroes’ and the symbolic center of the ‘war against COVID-19’, doctors on the ‘frontlines’ speak to the ways in which they are and have been asked to compromise their mental and physical health. Resisting a language of ‘resilience’, they instead point to experiences of ‘moral injury’ necessitating structural change after over a decade of austerity. Is the NHS ‘loved’ so much its staff are being forgotten or sacrificed? Cora Salkovskis (Danish Institute for International Studies)

DISCUSSANT:

Horacio Ortiz

DESCRIPTION:

This panel is the second and final part of an executive session held in Seattle last year. Climate disaster! Pandemic! Civil conflict! Inflation! The crises keep coming, yet financial markets are doing just fine. While billionaires plan their space escape, anthropologists are asking, what on earth is going on? Climate change threatens our everyday lives while democracies embrace kleptocracy. Across the Global North and South, party politics show the strain of social polarization and growing inequality. Amidst calls to decentralize finance for the people, we live on credit and die indebted, while our governments de-risk assets for institutional investors. Algorithmic calculations of risk manage the uncertainty of the future through money, transforming institutions, states and supply chains on a global scale. What do these transformations mean, why are they happening, and what will the near future bring? Our panel brings together papers that

consider the role of finance in the making and unmaking of neoliberal capitalism. We invite ethnographically-grounded speculations on the workings of finance under circumstances that invite, perpetuate, and profit from crisis. Anthropologists often approach global phenomena from a position of critique that stands outside what we seek to understand. However, it is becoming increasingly difficult to bundle material relations, ideas, and events into a coherent analysis of political economy. Is financialization the afterlife of neoliberalism, and, if so, what might that mean? Ultimately, what does this all reveal about the structures and infrastructures of the complex system we inhabit?

The Clash of Failures: Dark Humor in Turkish Financial Markets: Nobody in Turkey had expected the failed coup in 2016, which generated multiple perturbations, insecurity, fear, and paranoia. Nobody had expected the post-coup crisis either. As the AKP government became more authoritarian to recover its power, not only it intervened in the monetary policies of the Turkish Central Bank but also accused the Turkish finance industry of being “enemies of the state,” responsible for financial instabilities. Hence, the post-coup crisis led to an ongoing debt and currency crisis that nobody can name out loud due to the governmental repercussions, a functionless Central Bank, and the crumbling confidence in Turkish financial markets. In between the authoritarian regime and the logics and mechanisms of finance capitalism, that is, the clash between the state and market structures, how do traders apprehend Turkish financial markets and keep trading? To what extent do Turkish markets, a highly fragile emerging market between the Global North and South, reveal contradictions and frictions inherent in finance capitalism? This paper takes the dark humor proprietary traders produce and consume on the trading floors as a critical site for pursuing these questions. Embedded in the meme culture and subversive jokes circulated through digital and media networks in Turkey, I will argue that dark humor is pivotal for financial trading. It enables traders to navigate incommensurable uncertainties that escape being translated into calculable risks and become the epitome of the clash of failures: the failure of the logics and mechanisms of finance capitalism and the failure of the government to recognize the ongoing crisis. I will discuss dark humor as the manifestation of traders’ affective investments in markets (Berlant 2011, Lordon 2014), sense-making of the absent presence of the crisis, and attempts to recuperate their power in the

markets on the level of the everyday. Presenter: Deniz Coral (University of Minnesota)

Banking beyond Borders? Crypto-Boom and Bust in Little Senegal: In 2018 the performing artist Aliaune Thiam, aka Akon, announced plans to develop an Afro-futurist metropolis based on his own cryptocurrency, the Akoin. Born in the United States of Senegalese parents, Akon is an exemplar of transnational success among young people who have become disenchanted with the unmet promises of African development. Over the next few years, his wealth, visibility and political savvy would inspire a grassroots campaign promoting not only his improbable project but also the broader adoption of bitcoin as an international payment system. Based on interviews in New York City’s Senegalese community, this paper explores the infrastructural work of cryptocurrency promotion among the Senegalese diaspora, asking how the technologically-mediated remittance economy has engendered imaginaries of monetary sovereignty among Senegalese youth and their African American cousins, whose lives in the United States have delivered fewer opportunities for intergenerational wealth than their parents anticipated. Although Africa has the world’s lowest rate of internet usage, migrants and their relations rely on cell phones to stay connected, conduct business and transmit billions of dollars in remittances each year.

Cryptocurrencies have been particularly attractive to young African and African American investors with little surplus income who have been excluded from traditional financial institutions. Thus, despite the market crash of November 2022, crypto-based finance continues to make headway in Africa, where a history of inflation and currency devaluation tempers fears of market volatility. The Senegalese government has launched a national cryptocurrency, while entrepreneurs relish the prospect of a decentralized monetary system that cuts out the state altogether. Those with significant losses, however, may question whether escape from one form of domination entails capture by another for which Africans will, as always, pay the highest price. Presenter: Lisa Simeone (University of Chicago)

Finance and dream of future homes: Where should citizens live? And who should benefit from the debts they take on for the promise of stability? In the United States, 80 years of major housing policy grounded in federally-sponsored indebtedness binds government goals for managing populations to corporate profit motives and family desires for fulfilling lives. Today, the financialization of urban housing circulates its value in global financial circuits. This paper will contrast those processes with another, more sustainable, model, the

limited-equity cooperative in which generations of New Yorkers have built homes and communities. In particular, I will discuss how limited-equity ownership has shaped the concept of value and visions for the future among the original cooperators of Penn South, a limited-equity development in the Chelsea neighborhood of Manhattan. Black (Sub)Marine Ecologies

2:00 PM - 3:45 PM Virtual - Room 2

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Amelia Moore (University of Rhode Island)

CHAIR:

Amelia Moore (University of Rhode Island)

PRESENTER:

Adrian Cato ,Amelia Moore (University of Rhode Island),Akeia de Barros Gomes ,Ayasha Guerin

DESCRIPTION:

Environmental anthropology has long been attuned to the political complexities of ecological relations on a changing planet. This subfield deftly presents a critique of capitalist accumulation composed of revelations of inequitable rights, the formation of exclusionary knowledge systems, and the degrading and dispossessive practices that remake the material world into extractive zones for the benefit of the few at the expense of so many lives. This work is deeply necessary, and yet it becomes unstable when challenged by antiracist and anticolonial scholars to address the critical lacunae of Black and Indigenous presence within the anthropological understanding of planetary ecologies. Scholarship on racial capitalism, the historical and ongoing experiences of African Diasporic communities, and the growing networks of scholars of color in environmental fields are just a few examples that demonstrate the need for continued transition and experimentation within environmental anthropology, particularly within those aspects, such as the maritime and submarine, that have been framed as subcategories within a subfield. This roundtable moves the antiracist and anticolonial turn in environmental anthropology offshore into the (still) predominantly white and supremacist space of the maritime, the submarine, and

the subaquatic. As a transdisciplinary Diasporic group consisting of environmental anthropologists (senior and student) thinking with the Black benthic and marine restoration, a curator of maritime social histories and archeologist, an artist and scholar of inter-species relations on an iconic American waterfront, and a geographer of Black ecologies, we will discuss how our work expands possibilities towards specific examinations of racial capitalist formations, Black ecologies of survival, resistance, and innovation, and the reclamation of ocean and coastal space and place. While we bring multiple concepts, frameworks, relationships, and obligations to this session, our ultimate goal is to continue to extend the realms in which Black lives matter.

3-420

Carceral regimes across Central America and Mexico

2:00 PM - 3:45 PM

TMCC - 802 A

Oral Presentation Session

REVIEWED BY:

Association for Political and Legal Anthropology

ORGANIZER:

PRESENTER:

Brenda Garcia ,Grazzia Grimaldi (University of Illinois, Urbana-Champaign, Department of Anthropology),William Odum (Columbia University),R. Elizabeth Velasquez Estrada (University of Illinois, Urbana-Champaign)

DISCUSSANT:

Jon Carter (Appalachian State University, Department of Anthropology)

DESCRIPTION:

This panel brings together junior scholars working in the context of the war on drugs and gangs to consider carceral regimes in Mexico and Central America. From mega-prisons in El Salvador to the spread of the militarized National Guard in Mexico, the promise of securitization with zero tolerance politics led to 'transnational moral panics' (Osuna 2020) and local modes of criminalization and incarceration. After twenty-five years of zero tolerance politics, carceral

regimes have morphed into ongoing states of exception in the region, resulting in mass incarceration, disruption of communities and families, and death of criminalized subjects. Feminist scholars have long analyzed the carceral state through histories of slavery and racial capitalism (Wilson Gilmore 2007; Shange 2019; Khan 2022). Drawing on this scholarship, we understand the carceral state to go beyond the prison, consisting of technologies, everyday knowledges, and legal systems about crime. What are the discourses that shape the socio-political construction of the criminal and criminality? How does the interpretation of the law and judicial practices fit into carceral punitive logics? How does racialized gender influence carcerality? How do U.S. abolitionist frameworks clash with punitive populism in Mexico and Central America? How can carceral regimes in both Mexico and Central America help us theorize carceral states largely? Dr. Elizabeth Velásquez examines the intricacies of criminalization, punishment, and peacemaking in El Salvador, proposing an 'anti-carceral peacemaking' framework. William Odum explores how developments in El Salvador influence shared understandings of crime, criminality, and the police in Guatemala. Grazzia Grimaldi introduces the concept of 'carceral intimacy', examining how families in El Salvador grapple with the government's newly established state of exception that aims to end gang violence. Brenda Garcia examines how the security technology consisting of panic buttons, and wi-fi, speakers, and surveillance cameras relies on respect for the rule of law, politeness, and other racialized and gendered forms of Mexican liberal citizenship which makes certain residents eligible for protection.

How to Bribe a Police Officer and the Negotiation of Transnational Carceral Regimes: In October 2020, Mexico City won the Sustainable Cities Award for a project called Mi Ciudad Segura (My Safe City). A single government sponsored app established a network in which users could contact police, figure out public transit routes, gain legal assessment, and report crime anonymously. The app made Mexico City to a smart city status and an addition to a hefty security network in which 15,310 surveillance cameras, panic buttons, wifi access and earthquake signals were spread in almost every corner of the city on posts that look like street lights. In a country where the fear of organized crime haunts citizens, Mexico City's smart city infrastructures promise security to all city residents. This paper explores how the panic button installed in Mexico City promises security and protection from crime for all law-abiding citizens. I examine how knowledge of

criminalization and race that informed how the panic functions came from criminalizing knowledge both from the United States and Mexico. Through ethnographic analysis that follows my interlocutor Alex as he tries to recuperate his cellphone, I analyze how the securities system relies on respect for the rule of law, politeness, and other racialized and gendered forms of Mexican liberal citizenship which makes certain residents eligible for protection. Presenter: Brenda Garcia

Carceral intimacies: Gang criminalization, family, and the carceral state in postwar El Salvador: A year ago, the Salvadoran government declared a "war on gangs." It imposed a state of exception, suspending constitutional protections. This act amplified twenty years of punitive, carceral, iron-fist policies criminalizing gangs and young marginalized men. It also situated families as new public enemies, criminalized as gang collaborators, in unprecedented ways. As a result, mass arrests have crammed prisons with over 65,000 people, detained without due process in an increasingly politicized judicial landscape. Outside the prison gates, thousands of female relatives also crowd up every day, delivering food and hygiene packages, figuring out the legal paperwork, or seeking for missing relatives. Most importantly, many are proclaiming their family's innocence, through a redefinition of family ties that explicitly separates them from gangs. As family becomes a central field of power in El Salvador's carceral state, this paper examines its redefinitions, through an analysis of "carceral intimacies"—which I define as family ties with incarcerated persons, outside prisons but under carceral conditions, that are central to the workings of the carceral state. I build upon ethnographic work conducted with families of incarcerated people and independent lawyers, as they navigate this extraordinary new form of criminalization, deepened by judicial maneuvering condemned by human-rights movements around the world. By looking at carceral intimacies in El Salvador, I ask how this framework can help us theorize carceral states largely. Presenter: Grazzia Grimaldi (University of Illinois, Urbana-Champaign, Department of Anthropology)

The president in El Salvador and the politics of crime and policing in Guatemala: In 2022, El Salvador's president Nayib Bukele declared a war on gangs. Zero-tolerance policing strategies and skyrocketing incarceration rates in El Salvador have since earned both fame and infamy at local and international levels. In Guatemala, similar policies have remained popular across different sectors of society, but anti-gang policies have yet to successfully be put into place. However,

there have been ample resources directed towards the Guatemalan Policia Nacional Civil (PNC) to combat criminal gang activity. But internationally trained specialized task forces and prevention policing programs have not saved the PNC from the general distrust and contempt that civil society harbors for the police. Concerns of gang members and violence spilling over into Guatemala to flee Bukele's state of exception has led Guatemalans to ponder their own country's potential solutions. Coinciding with Guatemala's 2023 presidential election and the reversal of falling homicide rates, Bukele's strategy in neighboring El Salvador has become increasingly attractive in Guatemala. Crime and security have become energizing topics in electoral politics, and Mano Dura policies, large-scale incarceration, and the revival of the death penalty have regained significant discursive traction. But how do Guatemalans who support harsh policing and mass-incarceration reconcile a deep-seated distrust of the same state security institutions that would be tasked with carrying out anti-gang policies? Based on ethnographic research with Guatemala's PNC, neighborhood residents from the capital, and news and social media analysis, this paper seeks to explore how do developments in El Salvador influence shared understandings of crime, criminality, and the police in Guatemala. As such, it seeks to shed light on the intertwined local and transnational dimensions of the relationship between crime, policing, electoral politics in Guatemala City and Central America in general. Presenter: William Odum (Columbia University)

Does anti-carceral peacemaking threaten us? Criminalization, punishment, and peace in Central America: This paper explores the intricacies of criminalization, punishment, and peacemaking in El Salvador. After the 1992 Peace Accords, El Salvador became one of the world's most violent countries due to homicidal and femicidal violence. The Salvadoran state has held "the social plague of criminality" – gangs – responsible for this violence. It has implemented punitive security policies, designated gangs as terrorist organizations, and executed an ongoing state of exception against them. I draw on ethnographic research conducted between 2010 – 2015 with war veterans, female relatives of gang members, and male gang members themselves; Paul Amar's argument that a politics of sexuality has been key in articulating "human security governance," a system that creates a political victim that must be protected; and Alexander Weheliye's argument that racialization is "a set of sociopolitical processes of differentiation and hierarchization, which are projected onto the putatively

biological human body" rendering some individuals semi-humans and non-humans. This is to inquire how an abolitionist framework can challenge the dominant construction of "the social plague of criminality" that needs to be incarcerated to attain a healthy, peaceful country. I suggest that to end social violence, we need what I call an "anti-carceral peacemaking" framework. This framework asks us to replace the dominant approach to the issues of criminal violence through the lens of a few bad apples and take seriously enduring systems that have sustained crime and violence by rejecting the dichotomy between the criminal without humanity and non-criminals who deserve protection. The lack of attention to anti-carceral peacemaking will result in ongoing cycles of state and social violence. Presenter: R. Elizabeth Velasquez Estrada (University of Illinois, Urbana-Champaign)

Community Experiences of Changing Climates: An Anthropological Lens on Local Manifestations of Global Change

2:00 PM - 3:45 PM TMCC - 202 D

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Jennifer Sweeney Tookes (Georgia Southern University)

CHAIR:

Jennifer Sweeney Tookes (Georgia Southern University)

PRESENTER:

Catherine Bolten (University of Notre Dame, Department of Anthropology), Ajmalkhan Areethala (Harvard University), Hortense Gerardo, Jennifer Sweeney Tookes (Georgia Southern University), Can Dalyan (College of Charleston, Department of Sociology & Anthropology), Reddi Sekhara Yalamala

DESCRIPTION:

Climate change is an increasingly significant force that is changing global environmental systems (IPCC 2022), dramatically impacting human lives around the globe, and impacting every aspect of life on Earth. As the planet is warming, weather patterns are shifting, sea levels are rising, natural disasters are increasing in frequency and severity, and natural habitats are being altered (Chaudhary et al. 2021). These changes are experienced and understood in a myriad of different ways by communities around the world. As

anthropologists, we play a pivotal role in documenting and analyzing the ways in which people experience and adapt to changing climates, and how best to mitigate these changes. Without a deep understanding of the variety of ways different cultures will respond to ecosystem and environmental changes, climate change mitigation and adaptation projects are unlikely to succeed (Barnes et al. 2013). This panel brings together a diverse group of anthropologists who conduct research on the local experiences of changing climates across the globe. Each paper focuses on a different community, region, or impact of climate change, but all are committed to exploring the lived experiences of environmental transformations and changing climates. Together, these papers demonstrate the importance of examining the local experiences of changing climates in anthropology. By focusing on the specific ways in which communities are affected by climate change, interact with changing conditions, and perceive the causes or potential mitigating factors, we can better understand the social, cultural, and political dimensions of this global phenomenon. Through careful ethnographic research, we can document the ways in which people are adapting to these changes, and identify the opportunities and challenges for building more resilient and sustainable futures.

'We don't know why this is happening': 'Unknowing' farmscapes and climate change in Sierra Leone: Rice farming in rural Sierra Leone has historically occurred cyclically over years and generations, with knowledge of landscapes a cyclical process of knowing how 'old' land was based on when it had last been cultivated and by whom. Small, discrete areas of farmbush were 'brushed' with fire to prepare them for farming, and were then left to rest and grow strong for at least a decade after two cultivation cycles. Generational knowledge consisted of knowing when the bush was 'strong' and capable of producing good yields of rice, with social prohibitions on bringing 'weak' bush under cultivation because it would not produce. Recent rural population growth combined with climate change has produced a situation of 'unknowing' the landscape. Though rains were never truly predictable, the last decade has seen an unprecedented shift--they come early or late, heavy or light, or not at all--and burning that was once controlled entirely within communities is now confounded by wildfires, as lightning strikes and high winds in the late dry season send embers across the land and destroy land that was meant to be fallow. Instead of speaking confidently about the small adjustments they can make to accommodate the occasional seasonal drought or increase in demand for

farmland, farmers now speak only of 'unknowing', of not being able to predict what the land will do, and of having no good answers to how to farm in this climate, and of thinking about only how to feed their families today. Presenter: Catherine Bolten (University of Notre Dame, Department of Anthropology)

Doing Anthropology of climate change in South Asia: Anthropological reflections from the Sundarbans: Anthropological scholarship on anthropogenic climate change addressed risk perceptions and management, decision making processes, social production of knowledge, and interactions of science, policy, and politics. The rapidly growing body of scholarship in anthropology on climate change (Crate and Nuttall 2009; Dove 2013; Fagan 2010; McIntosh et al. 2013; Rayner) explored the human-associated nature of climate drivers and impacts across societies. The anthropological literature that looked at the indigenous people's knowledge and experience of climate change Lipset (2011) Rudiak-Gould (2011) explored the contrast between scientific knowledge and indigenous knowledge and the experience of the indigenous people among many other areas. However, even though there is a rich tradition of studying Adivasis (Indigenous people) in South Asia, there has not been much anthropological exploration of climate change and the experience of Adivasis. This paper looks at the climate in India considering Adivasi (Indigenous) identity as central socio-ecological category in the Indian sub-continent. Based on the fieldwork conducted among the Adivasi farmers in the world's largest area of mangrove forests in the Bay of Bengal, Sundarbans, this paper highlights the challenges to the existing anthropological tools to study climate change in South Asia. I demonstrate how unique forms of historic and socio-ecological, human, and non-human relations, and their multiple intersections determine and mediate the experience of climate change in the Sundarbans. I then argue that anthropologists in South Asia might need new tools and alternative frameworks to study the Adivasis experience of climate change. This could further help climate change mitigation and adaptation policies in South Asia. Presenter: Ajmalkhan Areethala (Harvard University)

Climate Perspectives: Fishing & Farming Adaptations to Climate Change in New England: Climate Perspectives: Fishing & Farming Adaptations to Climate Change in New England integrated focus groups and participatory art-making to collect individuals' perspectives on the current and future impacts of climate change and emerging resilience strategies. This project focused on industries and workforces with greater exposure to

climate impacts and employees who serve climate-vulnerable populations as part of their work. Metropolitan Area Planning Council (MAPC) Artist-in-Residence Hortense Gerardo worked with filmmaker Monica Cohen and the Boom House to interview two people affected by climate change: fisherman Jamie Bassett and farmer Dave Dumaresq. These short films serve as powerful reminders of the current costs of climate change and how people are adapting with creative innovation. Presenter: Hortense Gerardo

Climate Change and Commercial Fishing: Perspectives from the Lowcountry: Science indicates that climate change and fluctuations in ocean temperature affect marine species on which fishers rely for their livelihoods (Hare et al. 2016). Fishing community members are among the millions of Americans who live on the coasts of the United States and will be dramatically impacted by sea level rise and storms that are predicted to increase in frequency and severity in the future (Walsh et al. 2014). Specific elements of these changing climates that affect the Southeast Atlantic coast of the United States are shifting fishery ranges (IPCC 2022), rising sea levels, and increasing frequency and severity of hurricanes, (Melillo et al. 2014). Throughout this region, referred to as the lowcountry, these impacts are coalescing with existing infrastructural decay and insufficient investment in the commercial fishing industry to create dire conditions for these “Working Waterfronts” (referring to fishing communities and commercial fishing infrastructure) across the region. However, among commercial fishers in Georgia, these concepts and causes are controversial. Perceptions of changing weather conditions, and the causes of those changes, are hotly contested politically-charged issues. This paper presents findings around fisher’s beliefs about changing climate and the coastal Georgia ecosystem, and explores the influences on their thinking and the implications of these interpretations for community level mitigation of changing climate and weather conditions. Presenter: Jennifer Sweeney Tookes (Georgia Southern University)

Re-reconstruction: Rebuilding Charleston in the Time of Climate Change: This paper examines the rebuilding of Charleston, South Carolina, as the city prepares for the construction of an 8-mile seawall across its historic peninsula and a future wedded to water. Drawing on two years of ethnographic fieldwork in communities of color and among construction crews, real estate professionals, and environmental justice groups, it analyzes how climate adaptation in housing widens the racial wealth gap by retracing historical pathways of

segregation and dispossession upon which the city’s wealth originated in the eighteenth century. Focusing on the racial economies and material cultures of house elevation projects in the city’s gentrifying, historically Black neighborhoods and the socioeconomic underpinnings of the city’s long-awaited seawall, it demonstrates how class and race shapes climate futures in Charleston as the city wrestles with constant flooding and rapid sea level rise. Examining how the social and physical infrastructures of adaptation open up new avenues for capital accumulation and further a history of structural and environmental racism in the city, the paper argues that Charleston’s reconstruction solidifies the “sedimentation of whiteness as landscape,” and foreshadows how racism and capitalism underwrite US coastal communities’ fates amidst rising waters. Presenter: Can Dalyan (College of Charleston, Department of Sociology & Anthropology)

Indigenous Lens on Climate Change and Adaptation: The consequences of climate change adversely impact disadvantaged and vulnerable populations across the globe, such as rural and remote Indigenous communities. Concerning climate crisis and adverse impacts, Canada has committed to reducing greenhouse gas (GHG) emissions and complying with the Paris Agreement, which aims to limit the extent of global warming to an additional 1.2 degrees compared to pre-industrial levels. Canada has also pledged to adopt renewable energy technologies to meet its national climate goals by 2030 (IPCC, 2015; United Nations Climate Action, 2015). Many Indigenous communities are undergoing a transition from fossil fuels to a low carbon economy. For the last ten years, Canada has started to bring more Indigenous involvement in climate action and clean energy programs nationwide. However, there is a lack of Indigenous engagement, financial capital, and equity governance over climate adaptation programs across Canada. On the other hand, Canadian federal and provincial governments could maintain trust and long-term relationships through community-led climate programs and energy projects. Clean energy projects could strengthen climate adaptation, promote economic development and energy security, improve self-sufficiency, and advance reconciliation. This paper will explore the key elements of Indigenous engagement and community participation within the Pan-American and Canadian climate adaptation programs-clean energy partnerships that impacted rural and remote Indigenous communities. This empirical research relies on a two-year study exploring Indigenous power projects and challenges, various elements of engagement and equity-governance of climate change action and nature-based

solutions, and the advancement of reconciliation in Indigenous communities. The study will provide an Indigenous lens and cultural narratives from Indigenous energy experts who're gatekeepers of climate leadership and joint energy partnerships. Presenter: Reddi Sekhara Yalamala

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Europe

ORGANIZER:

Kristin Loftsdottir

CHAIR:

Antonio Sorge (University of Toronto, Department of Anthropology)

PRESENTER:

Brigitte Hipfl (University of Klagenfurt), Ignacio Fradejas-García ,Rine Vieth ,Lucilla Lepratti

DESCRIPTION:

Europe as a space of contestation became clearly evident during the two first decades of the new millennium. Different intersecting crisis drew attention to Europe's internal differentiation, simultaneously, as the so-called 'refugee crisis' of 2015–2016 made racism and securitization of Europe's external borders strikingly prominent, only to be followed by the Covid Pandemic and the war in Ukraine further demonstrating Europe as a fragmented space. This panel explores the idea of Europe by focusing on its margin, positioning margins as fluid, contextual and shifting. It inquires critically into the relations and tensions inherent in divisions between the Global North and the Global South as well as internal regional differentiation within Europe itself. The panel's contributors ask how different geopolitical hierarchies intersect with racialized subject positions of diverse people living in Europe, while also cutting across classifications of gender, class, sexuality, religion and nationality. What kinds of hierarchies are at play in being and becoming European and how do they engage with a racialized logic of the past and present? How can Europe as a concept and idea be better understood if we focus on liminality and margins? What are the different processes that exclude certain people from the space of Europe or where question regarding compatibility with the idea of Europe regarding specific populations are voiced? Can Europe be seen as a space

in transition in some way and then transitioning to what? We invite contributions that engage with these questions and draw attention to the fortification of Europe's 'borderland,' and/or focusing on internal regional hierarchies within the space of Europe, where some Europeans have been seen as 'more mature' than others. We especially welcome papers emphasize racism, gender, class and sexuality in such depictions and understanding of Europe, engaging with trying to understand how margins can be seen as contextual, relational and shifting. In doing so, this panel seeks to interrogate the hierarchies at play in the processes of being and becoming 'European' and the ongoing impacts of race and colonialism.

Transitions, affects, and the politics of translations: This presentation focuses on the affective side of transitions – that is the feelings of insecurity, vagueness and affective dissonance resulting from socio-cultural, political, economic, and/or ecological shifts. Following Clare Hemmings, affective dissonance that results from the discrepancy between the embodied feelings of oneself and the conditions of possibility for a liveable life can manifest itself in various emotions like anger, depression, frustration, and hopelessness, as well as hope and excitement for something new to emerge. It is at this point where the work of translation starts and the politics of translation is located: How are these feelings of structure (Sara Ahmed) translated? What kind of explanations and prospects for the future are offered and are available in the public spheres? And what do they do? In this presentation, recent racist right-wing politics in Austria regarding migration are discussed as exemplary for the work of translation that offers a “racist hook to hang one’s feelings” Presenter: Brigitte Hipfl (University of Klagenfurt)

Making Europe from Below: Intra EU-Migration and Mobilities Connecting the Margins: This presentation critically analyses the effects that emergent horizontal and peripheral intra-EU migratory mobilities have in the making of Europe from below at its internal margins. The case study draws on the migrant laborers of the so-called 'farm of Europe,' a vast agro-industrial district in the south of Spain that provides fresh, out-of-season vegetables to millions of Europeans. This marginal area within the EU exhibits the unequal and racialized contradictions of the European regimes of mobility that separate insiders from outsiders. African migrants in irregular situations are exploited, segregated, and menaced by deportation while targeted by racist discourses. This contrasts with the situation of Romanian migrants – White, Christian, EU citizens – who

have come to occupy specific economic and labor niches and have created a demographic enclave in the area that is connected with their place of origin in Romania through a migration corridor and transnational social fields. The results show that everyday social relations connect and territorialize European margins, previously unrelated, and reveal how Europe is practiced by those marginal European citizens that, far from the European centers and EU institutions, are benefiting from the political and economic advantages of the European integration from which they have traditionally been excluded. Presenter: Ignacio Fradejas-García

Geographies of Hostile Policies: The Margins of UK Migration Post-Brexit: In the still-liminal post-Brexit period, British migration policy seeks to simultaneously reaffirm connections to and distance the UK from those states that constitute the European Union. This tension between the UK and EU is particularly evident in ongoing experiences of the UK's 'hostile environment' policy, which reshapes internal and external experiences of migration to Britain. This policy, created in 2011, is now inspiring policies of 'offshoring,' thereby extending the system of British governance to Rwanda, as well as the renegotiation of safe third country agreements. In this paper--and in the contemporary political moment of major changes to UK migration policy--I argue that attention to the maintenance of the UK/EU border can help better understand the political imaginations of 'Europe,' as well as how experiences of border securitization expand beyond the margins of political borders. How might we understand the borders of Europe though attention to policies like safe third country agreements? What happens to the margins of Europe with the potential implementation of offshoring arrangements in Rwanda? What sort of contours can we find when we trace the margins of policies that curtail the possibilities for asylum-seekers to find refuge? Presenter: Rine Vieth

'South for South'-- Questione Meridionale and Categories of Difference: This paper explores the self-identification of activists and civil society actors based in Palermo, Sicily, as Southern or meridionali, and how this positionality informs their practices and discourses. These actors address intersecting registers of their Southernness, such as identity and culture, history or geographical and geopolitical location, radical traditions such as the landless peasants' movements, and various intellectual traditions such as dependency theory, and decolonial feminism. They thus claim a privileged vantage point for the capacity to analyse old and new problems pertinent to 'the Souths of the world' and

address issues of global inequality, including, but not limited to, border violence. Based on ongoing ethnographic fieldwork in Palermo amongst antimafia and feminist activists and civil society organisations, this paper analyses how multiple Southern Questions that unsettle the nation-state, namely the Northern/Southern Europe, Northern/Southern Italy, Global North/South divides are understood, enacted and devised in people's understandings of themselves as political actors operating from a Mediterranean location. Simultaneously, any such potential must be considered, as cautioned by recent contributions such as those of Hawthorne (2022) and the Black Mediterranean Collective (2021), in light of the risks that the identification with Mediterranean Southernness as a category of difference bears in terms of who it excludes from the category, and how it might discursively flatten racial and other power imbalances. DISCUSSANT:

Nick Seaver (Tufts University)

DESCRIPTION:

Who are you on the internet? Does this question of who you are make sense or nonsense when it comes to virtual worlds? How does digital data stand to what and for whom? This panel proposes the 'self' as a productive locus to examine the digital. Digital technologies--from search engines and social media to more recently emerging ones like artificial intelligence, deepfake, and big data--enable 'new' cognitive-perceptual, physical,

affective, and social affordances. They problematize the traditional notions of individual identity, spatiotemporal proximities, and bodily boundedness and embodiment. People can now relate themselves to multiple bodies of textual, graphic, and other multimodal forms of digital data like avatars (Boellstorff 2011), characters (Nozawa 2013), and hashtags (Brock 2020), whose emergence, translation, and interpretation are 'portable' (Kockelman & Bernstein 2007) across heterogeneous times and spaces online and offline. In approaching digital technology as intrinsically cultural and political (Beltrán 2020; Chun & Barnett 2021; Douglas-Jones et al. 2021), we focus on how digital datafication has enhanced or transformed our capacity to perform multiple identities and personas that simultaneously respond to and engender audiences and contexts in unprecedented ways. In doing so, we consider the sociopolitical implications of the reduction, abstraction, and imitation of living beings and lived experiences into digital data. This panel examines the entanglement of human agents and digital media objects through anonymous chats and deepfake circulations (S. Kim), 'fake profiles' (Cai), makeup transition videos (Malik), like and dislike buttons on social media (Albrecht), and censorship (D. Kim). In harnessing online and offline selves in our research, we experiment with the term 'transhumanism' as a way to interrogate and explore possibilities afforded by the prefix 'trans-', as seen in 'translation' (Latour 1993), 'transduction' (Silverstein 1998), and 'transmateriality' (Barad 2010). What imaginaries, futurities, limitations, and challenges does the digital transition of corporeal body and human consciousness into online data, and vice versa, present? How does digital data operate in intersection with gender, race, economic, and political power, and how does it complicate the notions of body, affect, and human agency? What happens to the idea of self when the digital poses challenges to the traditional notion of authorship and ownership? The questions motivating this panel are tied to the challenges that the digital brings to doing ethnography. The ontologies of digital existence complicate the boundaries of ethnographic objects and moments, including the disruption of the binaries like materiality/immateriality, ephemerality/traceability, anonymity/identifiability, and individual/crowd. While these concerns are not entirely novel to anthropological research, the growing methodologies of digital ethnography have effectively expanded the theoretical and methodological scope of offline-based research. In this regard, our panel pays close attention to how digital media and technologies have amplified or reorganized the already-existing modalities of relations. By bringing ethnographic

research across a wide range of locations and groups together, we ultimately aim to illuminate how digitally mediated and generated relationships between 'human' selves and 'non-human' data intersect with emerging forms of social relations.

Tracing Names and Faces of (In-)Dividuals: In Cases of Online Anonymous Chats and Deepfake Media: This paper explores the inalienable alienability (Weiner 1985; Kockelman 2007) between human selves and digital media objects. I approach digital media objects as the online body and embodiment (Hayles 1999), which are not necessarily isomorphic to the human actor's corporeal body and identity behind the screen. By examining 1) comments on a live-streaming platform ("AfreecaTV") and an anonymous forum ("DC Inside") and 2) the circulation of deepfake media objects crisscrossing on- and offline, I compare the textual and graphic modality of bodily presence on the internet. In the case of online chats, I trace the process of enregisterment (Agha 2005) and semiotic deconstruction (Irvine & Gal 2000; Uslu 2020). In the live-streaming community, "fictitious" status names are assigned to and contested by particular speech patterns, which constantly redraw the distinction between "us" and "them (the enemy)" among the participants themselves. By analyzing the indexical relations of those names and online agents, I question the locus of digital selves and otherness when social interactions are based upon anonymity and disembodiment, yet not manifesting total alienation of the actors in real life. The second part of the paper focuses on the impersonation of deepfake media objects. Unlike the former case, deepfake images foreground deanonimizing and dis-/re-embodiment effects on those whose bodily picture is appropriated. By following the trajectories of production, circulation, and deletion of deepfaked faces, I demonstrate how deepfake media generates extreme alienation while invoking the "original" face owner. Ultimately, the paper concludes with the methodological implications of two case studies in rethinking the recurring themes of the dividual/individual distinction in anthropology (Strathern 1988; Wagner 1991) within the digital realm. Presenter: Soojin Kim (Harvard University, Department of Anthropology)

Performative "Fakeness": Desire, Digital Self-Making, and Queer Urban Sociality in Digital China: "Fakeness" is a familiar term to both queer scholars and China scholars. While the gay social milieu is said to be infested with "fake profiles," China is oftentimes perceived by many as a country that produces fakeness.

Yet fakeness is not always the opposite of realness (Yang 2015). Under particular socio-technological conditions, the fake and the real can smoothly transform into each other. Exploring queerness in contemporary China, this paper asks: How does digitally constructed “fakeness” produce realities? Based on three years of ethnographic fieldwork in multiple cities in China and the virtual space, this paper centers on urban Chinese gay men’s (at-times conflicted) desire to simultaneously transition to higher social status, and to be “stuck” in—that is, to resist transitioning out of—social relevance and popularity. By ethnographically investigating this tension, it reveals how China’s booming platform economy and infrastructure as well as the practice of digital self-making made possible non-linear queer temporalities in relation to transition. Ultimately, it argues that, in contemporary China’s socio-technological circumstances, “desire” is an important force that transforms “unreal” into the liminal and ambiguous state of “not-yet-real,” which, in turn, bears the potentiality of transforming into realities proper. Presenter: Yifeng Cai (Brown University, Department of Anthropology)

Instagram Ready: Precarious Womanhood, Precarious Capital : On March 27, 2023, Olready, an Indian online platform for makeup artists seeking clients, posted a funny video reenacting the process of creating a transition video, to their Instagram account. Makeup artists often use the transition genre of videos to show stark transformations of their clients, largely brides. The contradictory images, set to trending music makes for viral content. The video posted by Olready features a nervous bride desperate to be in a video that would be posted to the Instagram account of an established makeup artist. At one point in the video, the bride worries “If I am not featured on her [Instagram] page, how will my relatives know that ma’am [the established makeup artist] did my makeup?” The video highlights the precarity of womanhood and the capital it can generate. While it is only through the body of the client that the labor of the makeup artist becomes visible, how do bodies become visible in the portrayal of this labor? The bride’s anxiety around being featured on Instagram is contoured along the lines of heteropatriarchy which holds women to impossible beauty standards. Makeup becomes the translucent substance around which digitally mediated selves are carefully managed and produced for different audiences to generate different kinds of capital for the client and the makeup artist. Based on ethnographic fieldwork conducted with makeup artists in New Delhi between May 2021 and August 2022, this paper unpacks the

gendered, class and caste politics of digital visibility that animates the makeup artist-client relationship. Presenter: Lakshita Malik

Fingers, Buttons and Faces: The Making Up of Audience Emotions : This paper presents a critical history of the quest to translate audience emotions into data, which has become a ubiquitous practice in digital media industries. I argue that this history started in the 1930s with the “likes and dislikes” studies and the invention of the Lazarsfeld-Stanton Program Analyzer (Scannell 2007). Invented by sociologist Paul Lazarsfeld and broadcasting executive Frank Stanton, this was the first “Like button:” the device simultaneously recorded multiple people’s reactions to a particular radio program in real time by having them press a green button if they liked the program they were listening to, or a red button if they disliked it (Fiske & Lazarsfeld 1945; Levy 1982; Scannell 2007). Now, only a decade after the emergence of Facebook’s infamous Like button, audiences will no longer need to push buttons. Instead, cameras can automatically capture our reactions to media messages as we walk by a corner on a busy street, do our grocery shopping, and scroll through our Facebook News Feed (Naveh 2017; Gillespie 2019; Lewis 2019). The affordances of the first Like button, the entanglements of these earlier ideas about audience emotions and ideas for the future of media audience research are a very part of the conditions of possibility for surveillance in digital media today. Even though the like and dislike buttons look slightly different now, they have significantly informed how we imagine audiences’ emotions and deliver content to the public through digital platforms. By diving into this critical history, I hope to recover the pre-conditions of digital surveillance that media industries helped to produce and unleash other imaginaries for digital media engagements. Presenter: Carina Albrecht (Simon Fraser University)

Navigating Citationality: Online Censorship and Meaning-Making: Can people express dissent and build solidarity in a climate of severe political censorship and increasingly sophisticated surveillance technology? This presentation examines the strategies that people deploy on Chinese social media as they attempt to circulate politically charged messages. In order to manage political risks and legal liabilities, they must constantly assess and interpret the censorship apparatus—the mysterious “black box” in which human agents and non-human algorithms, texts and images, official authorities and private businesses, and online and offline selves are all entangled together. In particular, this work focuses

on citationality as the key to understanding how people approach and navigate the censorship apparatus. Examples of citational strategies include intentional miscitation, removal of citable texts, obfuscating citable authors, and text-image interchanges. By analyzing various citational strategies observed in political grievance cases, gossip-sharing, and online memes, this presentation seeks to understand people's relationship with the law and the state in the contemporary People's Republic of China, which is being illuminated and challenged simultaneously by technological developments. Presenter: Dodom Kim (Rice University, Department of Anthropology)

Reva Jaffe-Walter (Montclair State University)

CHAIR:

Andrea Dyrness (University of Colorado, Boulder)

PRESENTER:

Reva Jaffe-Walter (Montclair State University),Thea Abu El-Haj (Barnard College),Sally Bonet (Colgate University),Ameena Ghaffar-Kucher (University of Pennsylvania, Graduate School of Education),Lucy El-Sherif ,Anne Rios-Rojas ,jamie Lew (Rutgers University, Newark, Department of Sociology & Anthropology)

DISCUSSANT:

Inmaculada García Sánchez (University of California, Los Angeles)

DESCRIPTION:

We are witnessing the flourishing of white nationalist forms of populism that are reflected in anti-immigrant, anti-black, anti-Muslim ideological positions that are inciting moral panics and spawning new policies and practices that regulate and discipline refugees and immigrants. Attending to 'nationalist racialized affects'(Berg & Ramos-Zayas, 2015; Ahmed, 2000; Jaffe-Walter & Khawaja, 2023), the papers on this roundtable explore the materializations, resistances and refusals of racializing projects. Rather than solely analyzing emotion or affect as circulating within individual bodies, our attention to affects involves a focus on how affect

lives 'in the social body so that one can examine how emotional discourses are formed by and in the shapes of ecologies and political economies in which they arise' (Lutz and Abu-Lughod, 1990: 13). Our panel attends to questions such as: how are racialized nationalist agendas affectively charged in media and policies; how are these affects spatialized; and how are certain bodies differentially affected by these flows and materializations. While these racializing processes have local inflections, shaped by the local political contexts and integration regimes in which they arise, they also draw on and reflect diverse durable historical global, colonial, racial formations (Said,1977; Winant, 2008). Participants explore how the flow of affect in a variety of spaces, geographies and national contexts raise questions about how we might better challenge exclusionary forms of nationalism and processes of racialization. Drawing on research with youth from Muslim immigrant communities across the U.S, Abu El-Haj explores how these racializing affects attach to specific spatial geographies, and how young people narrate the variable ways they navigate the racialized geographies of everyday life. Moving to Denmark, Jaffe-Walter examines how current integration policy regimes inspire moral panic and concern related to the sexuality of minoritized Muslim youth and incite new forms of surveillance, racialization that materialize in schools and in the embodied experiences of youth. Bonet discusses the ways that late stage neoliberal capitalism and American nationalisms, particularly military ones, have doubly displaced Iraqi refugees, both in their native land, and then again once they are resettled in the U.S. Ríos-Rojas discussion traces the ways that death and other necrophillic desires/affects structure national identities (in the U.S. and Costa Rica) so that the terms for belonging and citizenship come to be about rendering some bodies immobile and inert while ejecting and disposing of dissenting bodies. El-Sherif examines how Palestinian folk-dancing, dabke, done by youth in Canada embodies their relationship to Palestine and builds local community, as well as deepening their affective relationship with their homeland. Ghaffar-Kucher discusses how research can translate into practice by highlighting a curricular intervention that pushes back against the dominant narratives around youth from Muslim (immigrant) communities through focusing on the lived experiences of myriad communities impacted by 9/11 and showcasing how they are advocating, resisting, and imagining better futures. Jamie Lew shows how the newly arriving Syrian refugees,formed alliances with other long-term migrants and minoritized groups to

claim rights, advocate for state resources and resist racialization.

DISCUSSANT:

lisa holder

DESCRIPTION:

When one population systematically harms another-by warfare, genocide, enslavement, or other forms of abuse or deprivation, what does the harming population owe the harmed population? The issue is particularly vexed because of differing sociocultural systems involved and the likely lack of shared values-thus making the topic fundamentally an anthropological one. The panel will bring together practitioners representing different fields of inquiry-the law, economics, anthropology, sociology, philosophy, psychology, policy and practice, and history-to examine the grounds for reparations. Issues to be considered include: 1. what defines the offending and offended populations and their descendants, 2. what constitutes harm and its extent?, 3. What standards should be used to judge the harm and who should do this? 4. How might reparations be determined, allocated, and dispersed? 5. What conditions promote the pursuit and enactment of reparations? Past and ongoing work on reparations will be considered.

Foundations for a Theory of Reparations : When a population is systematically harmed by others—by warfare, genocide, enslavement, or other forms of abuse or deprivation, what does the harming population owe the harmed population? Bracketing the enormous challenges of the politics of reparations, this

presentation examines elements of a theory of reparations; what conditions justify or demand reparations, how might contrary values be resolved, what might be the elements of a repair? I distinguish four dimensions of a theory: 1. Defining harm and its extent. Do harms without apparent human agency merit reparations; from whom? 2. Characterizing the harming and harmed populations and their descendants. Harmed populations may include not only ethnic/racial minorities, but women, sexual minorities, immigrants, and others. Do recent Black immigrants merit reparations or the same reparations as descendants the victims of Jim Crow, or, of ongoing school segregation, or slavery? 3. Deciding standards to be used to judge the harm and determining judges? Harming and harmed populations may both believe their contrary positions to be justified and fair. I advocate the Golden Rule, or, in the terms of Rawls, the “original position,” in which judgments are made without knowing the identify or characteristics of the persons judged, thus avoiding self-interest. 4. Characterizing the forms that reparations should take. These might include sincere apology, acceptance of responsibility, cessation of harmful policies and programs, reparative programs, compensatory programs, and financial recompense. Historical examples of past reparations are cited. Presenter: Robert Hahn

Ethical foundations of a theory of reparations: the case of Blacks in the U.S.: I plan to define 'reparations' (inclusive of kinds of reparations) and state what defines the offending and offended populations and their descendants with regard to reparations to US Blacks and what constitutes a harm (as opposed to a mere offense) such that it would justify said reparations using historical records and ethics as the primary standards to judge the harms against US Blacks. I also plan to discuss plausible reparations policies to US Blacks, including drawing a distinction between reparations and affirmative action, which are quite distinct from one another. Along the way, I shall address the fundamental ethical values that are at odds with one another that underlie the entire discussion of reparative justice. Presenter: angelo corlett (San Diego State University)

Remedial Legal Theories for Reparations : The following forms of damages, equitable and legal, could be advanced in support of reparations claims. Restitution damages are focused on restoring aggrieved parties to the position they were in before they were harmed. Damages would include state sanctioned discrimination, and could entail reimbursement of income and property

taxes paid by Black Americans for publicly funded amenities they were legally prevented from utilizing because of their race. Loss of Opportunity damages are focused opportunities unavailable to the aggrieved by law because of their race. The calculus could focus on deprived educational opportunities, housing opportunities, and employment opportunities. Loss of Consortium damages address the value of familial relationships and injuries related to the loss of care and comfort inherent in disrupted intimate relationships. These damages could be sought based on the sale of children and spouses that resulted in the fragmentation of families of enslaved people. Unjust Enrichment damages are focused on recovering any windfall or profit that accrues to the perpetrator by virtue of harm inflicted on the aggrieved party. These damages would be calculated based on monies generated by virtue of free and underpaid labor (post-slavery) that generated profits by the perpetrator of the employment exploitation. Finally, injunctive relief is focused on forcing a perpetrator of harm to do something to avoid harm or forcing them to refrain from engaging in harmful conduct. These damages could prospectively prohibit entities and individuals from perpetuating future racialized harm against Black people and communities
Presenter: Tanya Washington Hicks

A Plan for Reparations for United States Freedman Descendants : Acts of reparative justice are motivated by the need to provide victimized individuals or groups with restitution for grievous damage inflicted on them. A comprehensive reparations plan should constitute a program of acknowledgement, redress, and closure for the extreme harm (or harms). We will discuss, in depth, the philosophical and logistical rationales for each of the four components of the plan in the context of both historical and contemporary conditions of structural racism in America. We apply the general principles of reparative justice to the specific case of living black Americans whose ancestors were enslaved in the United States. The proposed plan consists of four pillars: 1. Criteria for designating the eligible population, 2. Standards for establishing the amount of the payment due to the eligible recipients, 3. Specification of the party responsible for making payment, and 4. Determination of the form payments should take. We will outline a detailed plan for black reparations in the United States, extending the discussion in Chapter 13 of our book, *From Here to Equality: Reparations for Black Americans in the Twenty-First Century* (UNC Press, 2020, 2022). William Darity, Jr. and A. Kirsten Mullen
Presenter: William Darity, Jr.

DISCUSSANT:

Kamari Clarke (University of Toronto, Department of Anthropology), Ezgi Guner (University of Edinburgh)

DESCRIPTION:

Geographies of Empire and Race This roundtable aims to reflect on the entanglement of race and empire with a view towards looking beyond the United States as the formative impetus for contemporary imperial formations, and for theorizing empire's non-European varieties. We seek to complicate the binary frames that situate empire and colonial subject formations in either the Global North or Global South, and instead emphasize entanglement. In doing so, we pay attention to (trans-)regional dynamics within the Global South, and to shifting political landscapes marked by the growing role of China, Turkey, India, and the Gulf states. We aim to grapple with the significance of plurality and multiplicity for theorizations of the imperial-and concomitantly, for theorizations of race. The discussion will be informed by, and attempt to connect scholarship on the anthropology of empire (e.g. Collins & McGranahan 2018,), with scholarship that explores the ways race has both constituted and been constituted by global transformations (e.g. Clarke and Thomas 2006). What language and analytical frames do we have to interpret supra-national forms of war-making, infrastructure projects, land grabs, and the contestations of national boundaries within the Global South? How do these dynamics reconfigure the meanings and politics of blackness, arab-ness, african-ness, etc. and how can we better attend to the significance of the geo for our theorizations of the

geopolitics of race and empire? Scholars such as Trouillot (2005), Hardt and Negri (2000, 2019), and Getachew (2019) offer a critical perspective of European imperialism as well as its dominant reception in the social sciences (e.g., Getachew suggests focusing on anticolonial worldmaking projects that envisioned a transformation of an international world order). Pursuing this line of inquiry, what are the responses and counter-movements to these emergent imperial and racial formations? How do legacies of European colonization and the era of decolonization layer upon and/or inform current imperial projects? What are the political imaginaries of worldmaking that both mobilize as well as subvert contemporary imperial aspirations? In what ways does race work to divide and to create solidarity within contemporary imperial formations?

Global Urban Indigeneities

2:00 PM - 3:45 PM TMCC - Hall G - MI

Executive Oral Presentation Session - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Ana Luiza Morais Soares (Vanderbilt University, Department of Anthropology)

CHAIR:

Ana Luiza Morais Soares (Vanderbilt University, Department of Anthropology)

PRESENTER:

Ana Luiza Morais Soares (Vanderbilt University, Department of Anthropology), Nell Haynes (Saint Mary's College), Alexander Rödlach (Creighton University, Department of Cultural and Social Studies), Serah Shani, Kathleen Fine-Dare (Fort Lewis College, Department of Anthropology), Patrick Wilson (University of Lethbridge, Department of Anthropology)

DISCUSSANT:

Donna Patrick (Carleton University, Department of Sociology & Anthropology)

DESCRIPTION:

Indigenous people have been seen as transitioning throughout history. Whether it was due to false assumptions about the change from a 'primitive' to a 'modern' state or actual colonial exploitation that led to status changes from foreigners on their own land to second-class citizens or yet the natural or forced

movements in-between spaces. Indigenous peoples have inhabited urban areas since before colonization. However, it is important to remember that settler-cities have a long history of violence, dispossession, and displacement of minorities. The invisibilized urban indigenous past created an antithesis between native peoples and cities, this process of deurbanization naturalized stereotypes about Indigenous cultures. Indigenous peoples all over the world are often regarded as holding traditions and identities stuck in time. The misconception that 'authentic' Indigenous people only reside in rural settings and forest reserves supports structural racism and acts of violence against people who inhabit other spaces. However, there are indigenous cities all over the world that serve as hubs for inventive responses and (re)connection to indigenous roots. This panel comes together to discuss, recognize, and understand urban indigeneities as a way to dispel myths around indigenous authenticity and the common understanding that cities are places where cultures die. Indigenous peoples in urban settings are thought of as disconnected from their traditions, cultures, and lands, which is a misunderstanding. Thus, this panel highlights indigenous urban experiences and diasporic identities as a way to 'indigenize' and complicate concepts of city, identity, indigeneity, Indianness, aboriginality, sovereignty, and more. We also challenge what is deemed as 'authentic' indigenous culture all around the world. The papers cover identity politics and theoretical approaches to researching urban indigeneities, and the ways in which Indigenous peoples are raising their voices globally to demand recognition and rights. The researchers brought into conversation in this panel allow us to envision a transition both in academic thought and in society at large to imagine and acknowledge possible indigenous futures. In this imaginative exercise, Indigenous people are leading the way to show us their contemporary activism in cities around the world to be recognized on their own terms, decolonizing their identity, existence, and bodies. This panel focuses on the contemporary realities of urban Indigenous peoples to highlight their particular challenges and also the creative responses in the fight for self-determination, equity, inclusion, and justice everywhere they wish to inhabit. Let us all transition to understanding indigenous existences, sexualities, bodies, identities, and experiences as authentically belonging everywhere.

Brazilian Indigenous Social Media: Rewriting Indigenous History and Fight for Urban Recognition: After the Brazilian invasion, the colonialist endeavor created and continually reinforced the process of identity erasure of

the native peoples who lived in the territory. Crucial for Portuguese dominance, indigenous people were strategic to explore the natural riches, exploiting their work, making war against the resistant groups, and taking their land. After Brazilian independence in 1822, there was a necessity to forge the ideal of a homogenous nation with one language, one people, one culture, and one history, in which an idealized indigenous past was created through an erasure of their contemporary presence. Historical narratives consolidated and naturalized a perspective of indigenous people as 'contemporary ancestors' incompatible with modern life. With the widespread use of technology and the internet, which has connected the entire world, Indigenous people have indigenized identity politics by expanding and stretching the understanding of contemporary indigenities on their own terms in recent years. To the haters' displeasure, they are reclaiming their identity and modern existence everywhere: in the reserves, rural areas, the cities, the favelas, the mansions, international organizations, the government, etc. This paper focuses on indigenous influencers in Manaus and Rio de Janeiro. By telling their own stories on their own terms, indigenous influencers are disrupting the power dynamics of knowledge production and bypassing the gatekeeping of mainstream media. It is fundamental to build a strong historical grounding of this paradigmatic cyber-ethnographic present to fully understand and contextualize the content and discourses created and reproduced in Brazilian indigenous social media. Presenter: Ana Luiza Morais Soares (Vanderbilt University, Department of Anthropology)

Urban Iconic Indigeneity: The Chola as Symbol of Bolivian Indigenous Nationalism: While difficult to define and tabulate, census estimates place more than half of the population of La Paz, Bolivia as Indigenous. Indeed, defining who counts as Indigenous has been a prominent source of debate in Bolivia at least since the 1990s. However, since the early 2000s, the rising status of indigeneity in the country (associated with the rise of former president Evo Morales) has fomented the popularity of Indigenous symbolism as a central to artistic expression among young urban Bolivians, no matter how they identify racially. Tattoos, rock songs, street graffiti, and fashion all prominently reference symbols linked to Indigenous presence in the city. One such symbol is that of the "chola," the iconic Indigenous-descended market woman who occupies a liminal racial space, but is always understood in reference to the politics of indigeneity. As this imagery proliferates, the chola—like other symbols of

indigeneity—becomes understood as indicative of and accessible to Bolivians of all races in the altiplano, rather than specific to Indigenous individuals and groups (however defined). Through exploring the representation of the chola in popular youth-oriented forms of urban art, I offer the concept of "suffusion" to understand the ways indigeneity has become thoroughly enmeshed in notions of urban citizenship and nationalism in the Bolivian altiplano. Presenter: Nell Haynes (Saint Mary's College)

Being Indigenous in a North American City: The Case of Resettled Refugees from Myanmar in Omaha, NE: The Karenni are an indigenous group from Myanmar that has been displaced due to a prolonged and brutal civil war. About 600 Karenni have resettled in Omaha, Nebraska. As they rebuild their lives and communities, they celebrate their ethnic identity through rituals, such as the Kay Htoe Boe, a spring festival that is centered on a wooden pole, representing their history, cosmology, and identity. As the pole is "planted" during the festival, symbolizing their new roots in the city, they celebrate not only the continuity of their values, beliefs, and worldview, but also re-interpret them to underscore their relevance for urban life and being indigenous outside their traditional homeland. As the pole is a visible cultural artifact in the cityscape, it visually represents their presence in and belonging to the city, supported by another indigenous group, the Omaha Tribe, that welcomed them on land that was theirs until the arrival of European settlers. The two indigenous groups are economically, politically, and socially marginalized in the city of Omaha and their values, worldviews, and relationship styles clash with those of mainstream urban residents and leadership. Interpreting the festival through Juergen Habermas' thoughts, the paper (1) argues that encounters between the Karenni and other indigenous groups with the dominant urban society requires the creation of communicative spaces where all stakeholders interact as equals, (2) suggests that alliances between indigenous groups facilitate the creation of such spaces, and (3) concludes that such spaces contribute to the vitality of indigenous life in urban areas. Presenter: Alexander Rödlach (Creighton University, Department of Cultural and Social Studies)

Revitalization and reconstitution of urban indigeneity and parenting: This ethnographic research examines educated and privileged indigenous Maasai parent's experiences with Christianity, education for their children, and exposure to other ethnic groups. While this urban area, Narok town - Kenya, has historically

been predominantly occupied by the Maasai indigenous people and currently among the two Maasai counties, the city is hardly homogenously oriented to one cultural identity. With the increase of different ethnic groups migrating to Narok town, the increased spread of Christianity, and the emphasis on western education, Maasai parents face challenges on how to raise and educate their children, how their Maasai culture is interacting with these other cultures, and on how to retain their own Maasai cultural identity. The Maasai in this study confronted, with these challenges, demonstrated their agency by asserting their continued presence and their urban rights and ownership. These urban Maasai engaged in revitalization and reconstitution of their culture to maintain their current identity, to fit into the new Christian religion that they have converted to, to interact with other cultures, and to raise children that fit into the modern global market economy. This paper contributes to the emphasis that indigenous people have in past and currently lived in both rural and urban areas; spaces that are indigenous to them. The emphasis on the study of urban indigenous populations is crucial because indigenous people are part of the whole global phenomenon of the majority of people projected to live in cities in the near future. Thus, it is imperative that researchers engage indigenous populations living in urban areas. Presenter: Serah Shani

Urban Indigenous Force in the Ecuadorian Andes: Ethnogenesis and the Co-Creation of Urban Space/Time/Being: Early in this century a group of Quito-based individuals descended from former hacienda servants sought ways to create spaces of learning and cultural exchange that could address racism, sexism, historical amnesia, and the kind of Indigenous ethnocide often anticipated in urban and urbanizing contexts. Two decades later, and despite a debilitating pandemic, several connected and extraordinary achievements have been realized by this group—legally incorporated as the Kinde (“Hummingbird”) House—as they have made constant, creative, and intersectional modifications to ethical, aural, representational, performative, and other landscapes forcefully emanating from conscious projects of Indigenous ethnogenesis and recognition. In addition to providing an update of activities reported in my 2020 work, *Urban Mountain Beings: History, Indigeneity, and Geographies of Time in Quito, Ecuador*, I engage with issues such as cultural authenticity, the co-creation of Indigenized urban spaces, the challenges to achieving collective rights under the constitution, and the splintering effects of competing projects and

underwriters, one of which is the Municipality itself. The presentation will also connect the very local with the global, as I examine projects such as Indigenous filmmaking carried out by some community participants. I also connect Andean urban Indigenous expression to the North American “Pretendian” phenomenon, which is itself powerfully urban and grounded in the kinds of internal critique also experienced by Andean urban Indigenes. Presenter: Kathleen Fine-Dare (Fort Lewis College, Department of Anthropology)

Walking with SAGE Clan Patrol: Practicing Empathy in the Indigenous Urban Landscape: This paper examines the work of SAGE Clan Patrol (Serve, Assist, Guard, and Engage), a Blackfoot-led, volunteer-based outreach organization that patrols the urban core of Lethbridge, Alberta, providing support and connection to vulnerable community members. While settler colonialism is built upon the maintenance of exclusionary racialized geographies which locate cities as spaces of 'Whiteness' and reserves as places of 'Indianness,' we suggest that SAGE Clan fundamentally challenges these divisions. By patrolling the urban core and providing supports and aid to people experiencing homelessness and addiction, SAGE Clan physically marks its presence on the landscape, asserting an enduring Indigenous connection to that land as part of ancestral Blackfoot territory.

Further, through their concept of Niitsitapiikimmapiiyipitssinni, which understands being Niitsitapi (or the Real People) as not a product of blood or ancestry, but embracing a responsibility for mutual care, patrollers challenge neoliberal values of individualism and self-reliance—values echoed in Western medicalized addiction treatment programs—while also suggesting that being or becoming Niitsitapi is open to all who choose to walk with SAGE Clan and embrace a way of life premised on care and empathy (Kimmapiiyipitssinni). We suggest that by asserting that all citizens have a role to play in assisting vulnerable community members, and framing Niitsitapi values as open to all, SAGE Clan challenges the racial divisions which uphold settler colonialism, articulating a pathway to reconciliation. Co-authors: Amy Cran (University of Lethbridge), Patrick C. Wilson (University of Lethbridge), and Mark Brave Rock (SAGE Clan Patrol). Presenter: Patrick Wilson (University of Lethbridge, Department of Anthropology)

DISCUSSANT:

Tess Lea (Macquarie University, School of Social Sciences)

DESCRIPTION:

Indigenous peoples in settler colonial and post-colonial states regularly face state-imposed infrastructure projects that threaten their sovereignty. These projects often destroy autonomy from centralized authority (Scott 2009) and serve as nodes of capitalist, colonial, and imperialist expansion (Karuka 2019). Perhaps paradoxically, Indigenous peoples may simultaneously agitate for other infrastructural investments, only to be denied them. Myriad policies at the international, national, and subnational levels govern the development, approval, execution, operation, and maintenance of these projects. The social worlds in which these policies emerge and circulate (see Shore and Wright 1997) are key sites for understanding the relationships between infrastructure and sovereignty. Indigenous peoples are at once subjected to infrastructure policies and, through their own political institutions, creators of infrastructure policies. How does the governance of infrastructure, in its wildly varying forms, shape sovereignty in sites where it is contested? The papers in this panel aim to address infrastructure policies in sites of contested sovereignty across continents to illuminate the intersections of infrastructure, policy, and autonomy. Rubber Barons and Grain Traders: An Historical Ethnography of South America's "Northern Arc": As structural shifts in the international political economy of development create new sources of financing, regions like lowland South America are increasingly situated at the crossroads of global infrastructure investments. Anthropologists, building on a previous generation of development scholars, are often prone to interpret these investments along the model of the twentieth century—as top-down efforts by a centralized authority to impose new forms of control over people, landscapes, and commodities. In this paper, I examine the recent history of Amazonia's so-called "Northern Arc": a multimodal transportation network seeking to reconfigure the world's largest drainage basin as a transnational shipping corridor for soybeans and corn. After discussing the origins of the Northern Arc and its impacts on Indigenous, African-descendant, and mestiço communities in the region, I examine the historical parallels between these investments and the history of the Amazon rubber boom (1850-1920). Drawing on ethnographic interviews and family histories, I show that local elites have come to view grain trading investments as a new source of wealth, power, and prestige. While states have played a key role in instituting Northern Arc investments, to call these investments "top-down" obscures the substantial role of local elites in institutionalizing new development investments and their embeddedness in regional history. In contrast to contemporary development scholars, I argue that Northern Arc investments bear a much greater resemblance to development schemes concocted during the nineteenth century under capitalism's liberal era, with important implications for theories of state sovereignty, infrastructure, and governance today. Presenter: Matthew Abel (Kenyon College, Department of Anthropology)

The State as Obhibhabok: Petitions in the Chimbuk Pahar Resort Project: In this paper I look at petitions and what role they play in land struggles of the Jumma Indigenous Peoples. I particularly look at petitions in the context of the Chimbuk Pahar resort project, a five-star tourist resort project that was cultivated through a state-industrial collaboration between the military, a Bangladeshi private business conglomerate with a

corrupt past and a multinational hotel franchise. A campaign against the project began with protests by student groups, youth activists and local Mro Indigenous villagers as a grievance against land dispossession and displacement and picked up momentum through various petitions to the state to stop the construction for the project. The campaign generated several petitions aimed at urging the government to resolve the land disputes in the Chittagong Hill Tracts, a demand that has been at the heart of the struggles in the region, particularly following the signing of the 'Peace' Accord in 1997. In this paper I explore how petitions are written and submitted and what role they play in the expression of grievance, performance of citizenship and at the same time how the process is a form of governmental control. As I will show in this paper, petitions are written from a place of fear and surveillance as demonstrated by the appeasing and reverential language used in the petitions, this performs and reproduces a power hierarchy and reinforces the authority of the postcolonial state as the *obhibhabok* (guardian). The concept of the state as the *obhibhabok* then explains how the Jummas express their grievance, through measured forms of refusal and demand for recognition and under constant fear that is the marker of a region under military occupation. Presenter: Hana Shams Ahmed (York University, Department of Anthropology)

Complexifying Consent in the Context of Neoliberal Development and Indigenous Rights to FPIC: Critical development studies literature points to two simultaneous yet contradictory features of development and its impact on Indigenous peoples in Latin America: 1) that there is a high need for basic social services like sanitation, roads, healthcare, and schools in many rural areas, and 2) that large-scale development projects imposed by the state often fail to address local needs in these regions while exacerbating dispossession, income inequality, and public health concerns (Escobar 1995). The proliferation of participatory rights-based governance mechanisms like policies on Free, Prior, and Informed Consent (FPIC) presume to alleviate these issues by granting Indigenous peoples greater autonomy over their lands and resources. However, many states and development organizations have adopted weakened variations of FPIC like "prior consultation" which are deployed for various other purposes, such as to stifle opposition, coerce communities to sell land or agree to a project, or negotiate benefits-sharing arrangements between investors and affected communities. In this paper, we draw on ethnographic research conducted in 2022 in Peru to identify contextual and legal features that render FPIC laws

more or less likely to preserve Indigenous autonomy and self-determination in the face of external pressures on their land. This allows us to complexify the notion of consent in Indigenous rights laws, especially as it relates to the provisioning of infrastructure that serves to benefit Indigenous and local peoples, instead of furthering cycles of dispossession and disenfranchisement. Presenter: Katie Foster (University of Georgia, Department of Anthropology)

After the Rubber Meets the Road: Afro-Indigenous Policy along Nicaragua's Bluefields Highway: In the mid-2010s, the World Bank financed the construction of Nicaragua's Bluefields highway, which passes through the Indigenous and Afrodescendant Rama-Kriol Territory and the Black Creole Indigenous Community of Bluefields. As is often the case with overland transportation infrastructure in Indigenous and Afrodescendant territories, the project has facilitated the colonization of lands along the highway by giving settlers easy access to transportation for themselves and their agricultural products. Since the project was completed in 2018, the eastern end of the highway has become the subject of an emergent world of policymaking: newly formed Indigenous and Afrodescendant communal and territorial governments (see Erazo 2013). Policymakers within these new governance institutions have sought to shape the colonization of their territory by 1) charging rent for lands within their territories, 2) encouraging Indigenous and Afrodescendant people to settle along the highway, and 3) seeking Nicaraguan state interventions to remove settlers without rental agreements. This paper draws on long-term, collaborative ethnographic research with elected officials, lawyers, and advisors in two communal and territorial governments, analyzing their policy work as an assertion of Afro-Indigenous authority and jurisdiction (Pasternak 2017; Richland 2021). Even at a time of authoritarian retrenchment in Nicaragua, these actors have deployed policy on the highway to entangle their fate with that of both individual settlers and the settler state (Dennison 2017). When settler colonial infrastructure projects like the Bluefields highway cannot be stopped, I argue that they can still provide an opportunity for Indigenous and Afrodescendant policymaking that contributes to resurgent sovereignty. Presenter: Joshua Mayer (University of California, Los Angeles)

Indigenous Concessions: Broken Promises and Road Infrastructure Policy in Barotseland: This paper considers the intersections of infrastructure, policy, and autonomy through the case of Barotseland (now part of

Zambia). Early agreements between the Barotse royal family and British colonial agents exchanged access to natural resources and labor for the promise of 'communications' through transportation infrastructure. More than a century later, and despite contestation, Barotseland is now Zambia's largest geographical province and an increasingly important corridor for the nation's main economic export, copper ore, yet contains more tollbooths than it does interprovincial or international roadways. Barotseland's ongoing barter of sovereignty in exchange for connection would seem failed but offers insights for anthropological understandings of autonomy, belonging, independence, and exclusion as infrastructural experiences. Presenter: Rebecca Peters (SUNY, Oswego, Anthropology Department)

Whose Sovereignty? Promises and Threats of a Port Expansion Project in Nome, Alaska: Co-author: Peter Schweitzer (University of Vienna) The port of Nome in Alaska is slated to be significantly expanded over the next few years in order to receive and (un)load bigger ships and handle increased maritime traffic. As political and funding decisions for Nome as "the first Arctic deep-water port" of the USA have been made, this large-scale infrastructure will soon become a reality. A number of stakeholders anticipate that massive investments in construction of the sea port and associated infrastructures will strengthen national security interests and open new opportunities for economic growth, global tourism and trade. However, local residents have mixed sentiments toward the project, ranging from vague expectations to neutral attitudes to concerns over its social and environmental impacts. The new infrastructure might not only attract flows of construction workers and tourists and boost housing prices, but also disturb the marine environment on which Indigenous subsistence and cultures depend. This paper draws on ethnographic glimpses, observations and interviews gathered in Nome in the summer of 2022, and explores the promises and affordances of transport infrastructures for Arctic coastal communities. While recent geopolitical developments vis-à-vis Russia have been raising the strategic importance of the new port, indigenous activists see the project as merely the latest development project in a seemingly never-ending series of colonial interventions. Presenter: Olga Povoroznyuk (University of Vienna)

3-560

How to Navigate Transitions in a Life's Journey as an Anthropologist

2:00 PM - 3:45 PM TMCC - 717 A
Roundtable/Town Hall - In-Person

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Kathleen Millar (Simon Fraser University, Department of Sociology and Anthropology)

CHAIR:

Deborah Thomas (University of Pennsylvania), Jennifer Ashley (George Mason University)

PRESENTER:

Donna Goldstein (University of Colorado, Boulder, Department of Anthropology), Rayna Rapp (New York University), Faye Ginsburg (New York University), Kathleen Millar (Simon Fraser University, Department of Sociology and Anthropology), Emily Martin (New York University), Gina Ulysse

DISCUSSANT:

Anne Allison (Duke University, Department of Cultural Anthropology), Paul Stoller

DESCRIPTION:

The career of an ethnographer is not only a story of research, scholarship, and teaching. It is also a story of how work and life were stitched together--sometimes seamlessly, other times with rough edges--over the course of a lifetime. These stories are necessarily filled with transitions. An anthropologist might move from one field site to another or remain in the same site but take up projects that lead them to entirely new questions. The birth of a child, the care of an elder, a change in health, or the beginning or end of a relationship are among the many transitions in life that can impact the choice and nature of an anthropologist's research. This roundtable is an open conversation among anthropologists in mid-life and beyond, as they look back on the transitions in life and work that shaped the trajectories of their research. It is intended to offer wisdom and guidance to those who might be finding themselves in sticky middles, at impasses, or in places of uncertainty by sharing stories of navigating ethnographic fieldwork and writing in and through life's many challenges. Questions that will orient the conversation include the following: How did your research change as a result of changes in your life? Did you have to (or want to) pivot in the kind of research

that you conducted and if so, how did you find your way when entering into new theoretical areas, field sites, research methodologies, or collaborations? Or conversely, if returning to a field site, how did you contend with ways that you, yourself, had changed? Were there ever moments of being stuck? What did you learn at these times? How did you find the space or the stillness to explore something new, especially given all the demands of teaching, service, and care work? What has been frustrating or fruitful about the messy process of doing ethnography while also living a life?

3-450

Language Ideologies and the Semiotics of Liberal (Anti-)Racisms

2:00 PM - 3:45 PM **TMCC - 701 B**
Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Adrienne Lo (University of Waterloo)

CHAIR:

Jonathan Rosa (Stanford University)

PRESENTER:

Adrienne Lo (University of Waterloo), Kendra Calhoun (University of Illinois, Urbana-Champaign), Elaine Chun (University of South Carolina), Joshua Babcock (University of Chicago), Jonathan Rosa (Stanford University)

DISCUSSANT:

Shalini Shankar (Northwestern University)

DESCRIPTION:

Linguistic anthropologists have sought to challenge universalizing liberal humanist assumptions that presume upon distinctions between representational and material practices (Gal, 1989; Irvine, 1989; Shankar & Cavanaugh, 2012). This attention to the co-constitution of discourse and materiality has informed important insights into the role of language in (re)producing modern power formations and contestations thereof (McElhinny & Heller, 2017; Avineri et al., 2019). In recent years, critical language scholarship and popular discourse have increasingly focused on race and racism as key sites of power and protest (Alim, Rickford, & Ball, 2016; Chun & Lo, 2016; Smalls, Spears, & Rosa, 2021). While this attention to race is often framed as a counter-hegemonic project, it is crucial to consider how (neo)liberal constructions of

(anti-)racism have become central to the continuation of colonial and capitalist modernity (Melamed, 2011; Urciuoli, 2022). This panel considers how liberalism infuses understandings of language and social action, with a particular focus on liberal (anti-)racisms. Liberal anti-racist notions of societal equality based on sovereign subjects whose racial positionality and commitments can and should be discerned based on racially recognizable signs are apparent in many ethnographic contexts, including institutional discourses of diversity (Calhoun), university style guides (Chun), metasemiotic discourse on racism and racialization (Lo); regimentations of racial harmony in Singapore (Babcock), and debates surrounding racial fraudulence in the US (Rosa). This dialogue seeks to interrogate romantic notions of language as a wellspring of personal expression and identity (Bauman & Briggs, 2003; Lempert & Silverstein, 2012), with a view towards understanding how the fictions of liberalism can divert attention away from the workings of power (Brown, 2006; Lowe, 2015; Povinelli, 2021). The papers examine liberal (anti-)racism both in particular ethnographic contexts as well as in relation to paradigms of linguistic anthropology. We ask: What is gained and what is obscured by scalar projects that center the interactional scale as the site of anti-racist defiance and dismantling of structures of power? In what ways do reigning paradigms of linguistic anthropology center around notions of the sign as empirical object that has an existence apart from racialized bodies, listeners, or contexts (Inoue, 2006; Rosa, 2019)? How do investments in theories of free speech, agency, and the self rely upon rhematizing projections that misrecognize indexical relations (Carr, 2006; Keane, 2003)? Is there room for theories of power that refuse both totalizing regimes and the allure of resistance (Gal, 1995)?

On the semiotics of racialization: In this piece, I draw upon the literature on the semiotics of race (Rosa and Flores 2017, Smalls 2020, Telep 2022) to discuss how the widely circulating frameworks of racism/anti-racism and racism/racialization engage liberalism and its projection of an active, sovereign subject. I analyze how the “racism” / “anti-racism” dichotomy projects moral certainty into a frame of (in)justice with resultant imperatives for action, in ways that can seem starkly at odds with the commitment to a pragmatist understanding of meaning as unfolding, co-constructed, and not always shared (Lo in prep). Another opposition juxtaposes “racism” and “racialization”. These get mapped onto an orientation towards intentions as seated in individuals vs. as a projection; individuals vs. structures; folk vs. critical understandings of the social

world (Delfino 2021, Hill 2008, Reyes 2011). While some argue that the problem is typification itself, others highlight how debates about concepts like intentionality, responsibility, and action can be understood in relation to indexical vs. iconic grounding (Keane 2003, 2018) or the intricacies of token-type regimentation (Chun in prep, Nakassis 2018, Silverstein 2005). Through the analysis of a case study which hinges on the application of the racism/anti-racism vs. the racism/racialization frame, I argue that the relevant opposition is not between typifying and not-typifying, but about how types are framed and anchored to spacetimes (Gal and Irvine 2019). I conclude with a discussion of how attention to circulation can serve as one avenue for anchoring linguistic anthropological analyses within regimes of power. Presenter: Adrienne Lo (University of Waterloo)

“Checking the diversity box”: Race, capitalism, and (neo)liberalism in U.S. higher education: Contemporary institutional discourses in higher education present university efforts toward “diversity, equity, and inclusion” (DEI) as institutional desires to foster conditions that improve the institution for all members (Calhoun 2021). These discourses obscure the numerous political and capitalistic motivations behind institutional DEI practices and discourses, as well as the inequitable institutional structures that determine who actually benefits from DEI efforts (Leong 2021). To demonstrate legal compliance with diversity mandates and maximize marketing to prospective funding sources, institutional DEI paradigms rely on simplistic, “objective,” and easily quantifiable notions of race and racial identity – notions that linguistic anthropologists have shown to be far from reality (Alim, Reyes, & Kroskirty 2020). Many racialized students subjected to navigating this paradigm easily recognize the limitations of a DEI framework that glosses over rather than grapples with the complexity of race and race-based systems of power (Urciuoli 2018). In this paper I juxtapose institutional diversity discourses from a historically white Minority Serving Institution in the U.S. with narrations of institutional experiences from self-identified graduate students of color at the same university. I demonstrate how their lived experiences and articulated understandings of how race operates in the university context expose “DEI as anti-racism” as a neoliberal fiction. Reconciling the university’s discourses about diversity, broadly, and race, in particular, with graduate students’ reported experiences requires interrogating the intersections of systems of power at the national, state, institutional, disciplinary, and departmental levels as well as conflicting ideologies vis-

a-vis the functions of discourses about diversity (cf. Ahmed 2012). Presenter: Kendra Calhoun (University of Illinois, Urbana-Champaign)

Ideologies of Language, Anti-Racism, and Modernity in University Style Guides: Among the responsibilities of the “communications and marketing team” of most contemporary U.S. universities is its regulation of how university publications (e.g., webpages, magazines) refer to race when communicating with a public audience. In most cases, it circulates a “style guide” that prescribes conventions of capitalization (e.g., Black and Indigenous but not white), (non-)hyphenation (Asian American), or lexical choice (e.g., Latinx, BIPOC). In some cases, they supplement this style guide with an “inclusive language guide” that suggests alternatives to “racist” language. In this sense, the prescriptive genres generated by this “team,” broadly charged with creating a university “brand,” may be framed by the university as aligned with “anti-racism” (cf. Calhoun 2021). I examine how the “style guide,” when understood by the university as an “anti-racist” genre, is shaped by contemporary “theories of anti-racism” (cf. Hill 2008). By examining how specific race-related prescriptions within this genre have become enregistered (Agha 2005) over the past five years across thirty U.S. universities, I show how these guides appeal to both “sign-centered” and “structure-centered” theories of anti-racism, such as referential “correctness” or “clarity” (e.g., “lowercase ‘black’ is a color, not a person”) as well as institutional authorization (e.g., “This style guide is based in part on the AP Stylebook”). Yet I argue that these style guides largely adopt a view of anti-racism as performed by the liberal anti-racist subject. This “subject-centered” approach idealizes the public display of “anti-racist language” that indexes “competence” and “modernity” (Koven 2013) and thus increases market value (Urciuoli 2003). Presenter: Elaine Chun (University of South Carolina)

“Discuss Race Issues In the Right Way”: Totalizing Images and Partial Semiotic Facts in Singapore: Singapore today exists in a situation of “disavowed liberalism” (Chua 2018): of “harmonious,” raciolinguistic communitarianism, on the one hand, and anglophone state capitalism centered on the enterprising, rights-bearing individual, on the other. Against the claim that, unlike the West (read: the U.S.; Soh 2022), “racial harmony” in Singapore is always-already achieved, recurrent instances of state-backed and -sanctioned racism reveal “harmony” to be a coercive fantasy, one that is readily weaponized to silence antiracist action by intersectionally marginalized people (Pak 2021;

Thanapal 2015; Koh and Dierkes-Thrun 2015). This paper examines a series of high-profile cases from 2019– 2021 in which challenges to systemic and interpersonal racism in Singapore were systematically blocked (Gal and Irvine 2019) by state listening subjects (Pak 2021) and their opponents alike. By strategically individuating and collectivizing raci(al)ism through both institutional structures and discursive strategies, apologists and opponents oscillate between the interactional and the historical as sites and scales at which rac(ial)ist harms get known and remedied. Against prevailing scholarly and lay efforts to determine what Singapore “is”—whether an exemplar (or failure) of “harmony”—I track how totalizing images (Babcock forthcoming) of Singapore’s harmonious multi-ness get used to poetically construct and reject false equivalences between hurt and harm, conflict and abuse (Schulman 2016), resignifying metaphysical possibilities as existential necessities in regular, yet shifty configurations. I examine the thin (Jackson 2016) and irreducibly partial (Nakassis 2016; Strathern 2004) organization of race-talk in Singapore, arguing in the process for the irreducible partiality of all linguistic and semiotic facts. Presenter: Joshua Babcock (University of Chicago)

Individualism and Liberal Anti-Racism in Semiotic Perspective : Scandals surrounding allegations of racial fraudulence are frequent topics of contemporary popular discourse across liberal societal contexts in which collective commitments to anti-racism are normatively presumed and demanded. Such allegations characteristically center on white-identified individuals accused of misrepresenting themselves by claiming various forms of putative non-whiteness. These contemporary discourses and practices can be understood in relation to longstanding histories of racial appropriation and violence (Deloria 1998; Hill 2008) as well as shifting valorization and commodification of racial authenticity (Jackson, 2005; Shankar, 2015). This presentation examines how the ontology of the fake (Reyes 2017) in liberal discourses of racial fraudulence presupposes racial realness as a naturalized phenomenon, and, by extension, defines anti-racism as the regulation and embrace of individually defined, embodied, and enacted racial identities. I analyze ideologies that circulate in relation to distinctive cases of alleged racial fraudulence to track a poetics of racial categories, stereotypes, and structures, with a focus on how individualized racial legibility and structural racial illegibility jointly reproduce normative liberal governance (Melamed, 2011; Urciuoli, 2022). While prevailing semiotic approaches within linguistic

anthropology provide strategies for tracking the pragmatic organization of signs of race and (anti-)racism, this semiotic pragmatism also presents limitations for efforts toward understanding power relations associated with race as an expression of colonial and capitalist modernity. The goal is to rethink the relationship between liberal orientations to race and (anti-)racism focused on individualized identities on the one hand, and liberal approaches to semiotic pragmatism focused on individualized signs and contexts on the other. DISCUSSANT:

Andrew Hurie

DESCRIPTION:

Schools and other sites of formal and informal education operate under explicit rules and implicit understandings about language and literacy, their legitimate use, and expectations for curriculum and instruction. As bell hooks (1994) theorized, when educators choose to transgress prescribed and limiting boundaries that characterize dominant thinking about race, sexuality, class, and language, they act in the radical hope of furthering liberation (Lear, 2006). In this panel, we discuss papers that reflect on individual and collective decisions to resist or counter unjust practices in language and literacy education. What can be learned from decisions and actions to approach language and

literacy in school in ways unofficial, frowned upon, or even sanctioned? These papers report knowledge developed in practice and/or research with schools, families, and communities. Topics include:

- Resistance to monolingual language policies such as language bans; language separation policies in bilingual education; forbidding code-switching in oral/written language; etc.
- Using bilingual books in English monolingual curriculum
- Standing up for quality instruction ('I told my principal I won't teach reading with worksheets'; 'Just Say No to Accelerated Reader'; 'I don't teach with iStation because my students hate it')
- Site-based case studies of transgression in language arts and bilingual classrooms
- Families challenging school decisions about retaining a child, placement in special education, etc.
- Students and families 'opting out' of standardized testing.

The first paper is situated in the US. Midwest and showcases how Mexican American & Latinx novice and experienced teachers engage in Palenquera pedagogies to recenter community well-being and invisibilized knowledge. The second paper uses phenomenology to represent how a teacher engages in decisions to counter unjust isolative practices that criminalize alternative students. The third paper addresses the question of how bi/multilingual teachers learn to contest and transgress prescribed ethnocentric literacy curricula in order to support children's biliteracy development in Texas. The fourth paper looks at how an intercultural bilingual school in Quito, Ecuador, has embraced the teaching and use of non-standardized Kichwa (the most spoken Indigenous language family in Ecuador) as a model of citizenship education that challenges the emergent status quos of state-sanctioned Kichwa use. The fifth paper reports a qualitative study in which 25 teacher and leader candidates from diverse backgrounds (e.g., Latine, white, South Asian, Filipino) explore how Collaborative Conversations may support educators' understandings of culturally sustaining, and socially just pedagogy in the Northwest. The sixth paper also located in the Northwest narrates Mexican/American experiences in gaining access to education in a rural context. Our seventh paper takes us back to South America in the context of peasant women using multiple literacies to own their stories during the recent peace-building process in Colombia. Overall, these papers shed light on how teachers can transgress standardized pedagogies, linguistic policies, and normative literacies in schools and communities. These studies represent multiple perspectives from different locations in and outside the U.S.

Contesting and Transgressing Prescribed Literacy Curriculum with Emergent Bilingual Learners and Teachers: Despite advances in the study of how children develop biliteracy under supportive conditions (Moll, 2008), the literacy education of emergent bilingual children in the U.S. continues to be dominated by corporate reading programs, standardized testing, and accountability measures designed for monolingual English learners (García & Otheguy, 2017). This paper addresses the question of how bi/multilingual teachers learn to contest and transgress (Deumert, 2022) prescribed ethnocentric literacy curriculum in order to support children's biliteracy development. We describe how a team of bilingual teachers in elementary schools in Central Texas embraced the Indigenous concept of *tinku*, a dialogue of experiences (Mignolo, 2003) aimed at unlearning and undoing colonizing forms of instruction. Working with a university researcher/mentor, teachers used epistemologies from the Global South to implement decolonial literacy practices and create pedagogical anticolonial tools aimed at challenging reductive, monoglossic, and Eurocentric forms of curriculum (Mignolo & Walsh, 2018; Rivera-Cusicanqui, 2020). In a teacher study group over a two-year period, participants learned about systematic injustices faced by bilingual and immigrant families, including "displacement and destruction caused by capitalism, colonialism, and patriarchy" (Santos, 2018, p. 1), concepts not addressed in their pre-service teacher preparation. Through home visits, participants developed new knowledge about the wide array of semiotic resources that multilingual children and families draw upon in their daily lives. By centering the voices of immigrant families and children in literacy instruction and inviting families to share their literate lives on their own terms, participants reflected on what

Presenter: Luz Murillo (Texas State University)

Contesting Unified Kichwa in Everyday Instruction: How do educators contest policies of language standardization? Indigenous languages around the world now contend with a politics of standardization (Lane, Costa, & De Korne, 2017), which can compound efforts to reclaim those languages and excite speakers as planners seek to extend written materials across nation-states. Scholars in the U.S. have also shown how language standardization simultaneously yields ways of communicating that are non-standard and, hence, marginal, foregrounding the racialized and classed dynamics of standardization (Rosa & Flores, 2017). This paper looks at how an intercultural bilingual school in Quito, Ecuador, has embraced the teaching and use of non-standardized Kichwa (the most spoken

Indigenous language family in Ecuador) as a model of citizenship education that challenges the emergent status quos of state- sanctioned Kichwa use. Based on a year and a half of ethnographic research from 2022 to 2023, as well as participatory action research to author a curriculum teach Kichwa, this paper focuses on how teachers critiqued pre-existing state textbooks in Kichwa and what alternatives they offered for communicating in Kichwa, as well as how we operationalized those critiques into instruction. More marginal ways of communicating in comparatively oppressed languages are linked to dialogue, mutual support, and personalized pedagogies. Keywords: Standardization, Kichwa, ethnography, Participatory-Action-Research
Presenter: Nicholas Limerick (Teachers College, Columbia University, Department of International and Transcultural Studies)

Learning to Transgress: Teaching and Leading in Culturally Sustaining, Socially Just Ways : In this qualitative case study (Merriam & Tisdell, 2016), we paired up 25 teacher and leader candidates (TLCs) (13 were bi/multilingual) from diverse backgrounds (e.g., Latine, white, South Asian, Filipino) to explore how Collaborative Conversations (Authors, 2022) may support educators' understandings of culturally sustaining, socially just pedagogy (Khalifa et al., 2015; Ladson-Billings, 2005). Data include self-portraits related to family/community/school interconnections and culturally sustaining lesson plans, which we analyzed inductively (Merriam & Tisdell, 2016). Due to space, we focus on one candidate. Miguela emigrated to the U.S. from Mexico at age nine. Her new life held challenges, including learning English. Miguela recalled: "My third-grade teacher ... would lecture, and I would not understand a single word ... I remember her screaming at me and calling me a stupid idiot." Miguela's schooling often suffered as she helped her family by selling her mother's tamales, chicharrones, and champurrado in her neighborhood. She reminisced: "Nobody cared that I spent my advisory class sleeping because I was tired from working..." For her lesson with Juan, a second grader from Guatemala, Miguela read Fox's (1997/2002) *Quienquiera que seas*, explaining, "I wanted my student to be proud of his traditions and his Mayan language." The rapport she cultivated was evident. Juan leaned far-forward, examining the pictures as they talked. Bringing TLCs together, often siloed during preparation, is one way of helping future educators "to transgress" (hooks, 1994). Miguela's lesson exemplifies powerfully such transgression, contrasting starkly with the abuse and missed opportunities of her own teachers. Key words:

Bi/multilingual, culturally-sustaining-pedagogies, family/community/schools interconnections, transgress
Presenter: Sarah Newcomer (Washington State University Tri-Cities)

Mexican In/migrant Students Negotiating School Access in Rural Idaho: In Idaho Latinx im/migrant, and bi/multilingual students have faced school systems unresponsive to their needs. Over the years, Idaho schools have faced numerous complaints and charges for failing to fulfill state and federal mandates to meet the needs of bi/multilingual students (Jones, 2014). While the literature on the experience of Latinx students in Idaho is scarce, published literature documents how K-12 schools fail to meet the needs of nondominant and minoritized youth (Call-Cummings & Martinez, 2017; Hondo et al., 2008). Employing ethnographic and autoethnographic tools, data were collected from a rural school district in Idaho. Drawing upon the theoretical framework of Repertoires of Practice framework (Gutierrez and Rogoff, 2003) and Community Cultural Wealth (Yosso, 2005) lens, this study offers a nuanced documentation of how five students from Mexican im/migrant backgrounds participate and negotiate access and well-being in a rural high school in Idaho. Student testimonios shed light on how parents and extended family networks participate in schools by supporting children's school success and future. Moreover, findings revealed complex barriers im/migrant students and families confront as they negotiate school success, including limited opportunities to employ linguistic capital, instances of racism, and racial microaggression. Further participants highlighted ways they employed and nurtured their Community Cultural Wealth (Yosso, 2005) through relationships with family, community, and across the US-Mexico border. Insights gained from this analysis have important implications for local, state, and national education policies, including culturally responsive curriculum, teacher training, and language services to improve educational outcomes for nondominant students. DISCUSSANT:

Elizabeth Reddy (Colorado School of Mines)

DESCRIPTION:

Anthropological scholarship on engineering shows us that while this category of practice has broad social salience and is subject to contest and redefinition. Recent work in the field asks us to consider engineers as key agents in producing human relationships to environments (Vaughn 2022, Reddy 2023), but also points out that engineering is a field in which notions of accountability and agency are changing (Smith 2021). With this panel, we invite anthropologists whose work deals with engineers and engineering, broadly defined, to consider the practices of engineering. We ask: What conceptual and social boundarymaking does the field of engineering depend on? What boundaries does engineering break or otherwise transgress? How might engineers work in and through this professional category, and with what material and social effects? Cited: Reddy, Elizabeth. 2023. ¡Alerta! Engineering on Shaky Ground. UX is Not Dead, ChatGPT is Not Killing it: Embracing Conversational User Experience: UX is dead” claimed a provocative March 2023 headline (Nudelman). His argument was that recent breakthroughs in artificial intelligence had rendered the field of user experience (UX) suddenly, jarringly, obsolete. Amidst widespread anxiety about the role that tools like ChatGPT would play in automating and eliminating many kinds of jobs, UX professionals have been caught up in the collective distress. But while I argue that UX in general need not anticipate its elimination, conversational UX roles will be

especially relevant in the next decade. This work requires social scientists and humanists to partner with the engineers who create conversational artificial intelligence tools—ranging from chatbots to ECAs (embodied conversation agents). In the context of business environments where engineering culture dominates, Conversational UX experts often function as the first line of defense for users by helping to build systems that are engaging (or even possible) to talk to. In this presentation, I argue that conversational user experience is 1) an essential design step and 2) helps answer the longstanding hopes of social scientists and engineers alike that both “sides” would increasingly recognize the value of each other’s work (Cassell, 2019, Helmreich 2001). Engineers are indeed critical to establishing well-constructed relationships between people, technology, and environments. But they can’t do it alone. And while many are competent to design for the relationship between technology and individual use-cases or environments, not as many can design for the relationship between people and technology. Especially when one of the people is an A.I. Presenter: Elizabeth Rodwell (University of Houston)

Old Engineers, New Engineers, American Engineers: Contested Identities in a Multicultural Workplace: Engineering identity in the United States has for decades been stereotyped as masculine, technical, and antisocial. These stereotypes have long histories, with notable permutations over time, originating in ascetic Enlightenment scientists (Noble 1992), the purists, explorers, and industrialists of the late 19th century (Herzig 2005; Noble 1977), and the emergent “hacker” identity in the 1970s (Ensmenger 2015). Anthropologists who studied engineering identity have noted that, upon close inspection of actual engineers, a wide variety of identities emerge in practice: the Greeks, Nerds, and Academic Achievers of Tonso’s (1998) university engineers, or the “family men” and “pranksters” from Faulkner’s (2009) ethnographic study of the oil industry. However, most of these identities remain coded masculine and contribute to the exclusion of women and minorities in the discipline. In this study of the semiconductor industry, I investigate the contested boundaries of identity in a multicultural engineering workplace. I find a continued persistence of “old” engineering identity, with its fixation on technical skill and passion for the discipline. However, amongst the younger generations, a “new engineer” identity is evident, in which women confidently claim that this enables them to do engineering better than purely technical engineers. Importantly, the emphasis on communication is embraced and incentivized by the

company itself. Unfortunately, this “new engineer” identity contributes to the exclusion of immigrant engineers, who face language barriers and have not had as extensive training in American communication styles. The result is a contested space in which engineers debate amongst themselves the value of communication and “soft skills” in the engineering workplace. Presenter: Sarah Appelhans (Lafayette College)

The Engineer as an Ethnographic Context: Devices, Functional Entanglements & Auras of Accountability: I offer two cases to explore the function of the engineer as an ideal type of ethnographic interpretation of social relations; in particular the social relation as a special object in the administration of accountability in Delhi, India. First, I consider a transport and logistics engineer’s decision not to utilize GPS and data transmission technologies embedded in taxi fare meters for the purposes of distance measurement as an input to fare calculation. I outline their concern about how the identification, isolation, and management of error impact the administration of the nexus between these two functions, and how the semiotics of price as an index of commercial fairness govern the ethical evaluation of error as a material force. Second, I consider the commercial engineering of an app-generated receipt for transactions as supplemental displacement and superior provision of a capability to produce valid transactional accounts housed in licensed autorickshaw fare meters. I explore how interpretations of the proper instrumentation of accountability frame the scope and limit of the engineer as an interpretive frame to contextualise the social formatting of a device. In each of these cases, the engineer gathers and localizes a perspective on a device, system, or infrastructure as an interpretive bridge between the technological and the social, often speaking to the material complexities of design, and to the limits of design as a frame of apprehension. I ask how we identify the stakes of indexing the engineer and the engineered in locating technological mediation as a force. Presenter: William Stafford Jr.

Breaking boundaries for public accountability of artificial intelligence algorithm design : Co Author: Ethan Coppel, MS dual-major student in anthropology and engineering, Oregon State University As an engineering practice, AI algorithm design prioritizes accuracy and coverage, but often in a decontextualized manner, i.e. without taking into consideration pre-given biases embedded in the data sets and human agency in the real world. This paper is based on our direct collaboration with, and participant observation of,

computer scientists in an algorithm design project. This project experimentally added social principles of fairness into algorithm design for public accountability. We integrated the differently situated and limited human agency into our project starting with building a fundamentally new machine-learning framework that is a 3-way tradeoff between accuracy, fairness and coverage, instead of only 2-way between accuracy and coverage. Our project employed multiple strategies to address the 3-way tradeoff, including: (1) tracing the social trajectory of the data sets used; (2) designing an “I don’t know” option (abstention at the cost of coverage) for our algorithm to withhold from predicting challenging cases and leave those cases for human investigators; (3) opening up the blackbox of full automation of AI and turning key parameters (such as fairness and coverage) into adjustable for prospective users; and (4) conducting interviews for international and cross-cultural comparison of users’ take of supposedly neutral AI. Our initial results show the benefits and challenges of breaking the boundaries between academic disciplines and between computer scientists’ lab and the real world. While our collaboration led algorithm design more oriented towards public accountability of computer scientists’ work, it further reveals the dilemma of reconciling competing parameters of public accountability of engineering practice, including the parameters of fairness, coverage and more. Presenter: Shaozeng Zhang (Oregon State University, Department of Anthropology)

Migration in Action

2:00 PM - 3:45 PM TMCC - 705

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Zuzana Rendek

PRESENTER:

Zuzana Rendek ,Md Noor Hossain (University of Texas Rio Grande Valley, Department of Anthropology)

DESCRIPTION:

When lives cross borders, how are they managed? What is transformed and what is maintained? This collection of papers takes migration and identity/experience configurations seriously to explore the (un)settling aspects of life in motion

How second-generation Muslims in the Czech Republic cope with otherness and negotiate their acceptance: The paper focuses on the construction of identities of the second generation of Muslims in the Czech Republic. Their socialization took place in the context of a Muslim family and they got to know the country of origin of their parents only indirectly, but they grew up primarily in the context of the Czech environment. Second-generation Muslims, therefore, move between multiple cultural frameworks, transnational fields, finding themselves in the space between (Levitt 2009). They negotiate their identity situationally and have to come to terms with their relationship to their parents' country of origin, ethnicity and national identity. Therefore, I would like to use the testimonies of second-generation Muslims to show how these young people with a migration experience deal with ethnicity when they refer to their otherness, what strategies they use to negotiate key social identities, and what strategies they choose to be accepted by society. Presenter: Zuzana Rendek

Crossing Borders: Experiences of Bangladeshi Undocumented Migrant Workers in the United States: This paper examines the experiences of Bangladeshi undocumented migrants living and working in the United States. This research is derived from 5 months of ethnographic fieldwork conducted for a Master's thesis including in-depth interviews, participant observation, and focus group discussions conducted via phone and in person in New York and New Jersey during 2022-2023. Despite the challenges and risks, thousands of Bangladeshis continue their hard journey across Brazil or South Africa and then different dangerous jungles, hills, mountains, rivers and seas of different countries of central America with the help of human traffickers to make their way to the USA every year in last decade in search of better economic opportunities or political reasons. Preliminary findings suggest that Bangladeshi undocumented migrants described their motivations behind border crossing as being shaped by poverty and unstable political conditions in Bangladesh. Once arriving in the United States, although they found more economic opportunities, they realized many limitations, including being limited to jobs in restaurants and food service delivery, as well as isolation, family separation, and questions of belonging. This research paper seeks to explore undocumented Bangladeshi migrant experiences throughout their border crossing journey, in detention centers, issues with language and translators, employment opportunities and obstacles, housing insecurity, and health care access. By studying border crossings and undocumented immigrant workers'

experiences, this project has the potential to contribute to the anthropology of migration and diaspora studies, transnationalism, public policy, human rights, borders and boundaries, and public health. Presenter: Md Noor Hossain (University of Texas Rio Grande Valley, Department of Anthropology)

Morality, Justice, and Agency: Ethnographies of Reproductive and Maternal Health

2:00 PM - 3:45 PM

TMCC - 206 E

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Nga Shi Yeu (Stockholm University)

PRESENTER:

Julien Brisson ,Nga Shi Yeu (Stockholm University),Alicia Diaz ,Jessica Dailey (University of Notre Dame, Department of Anthropology)

DESCRIPTION:

This session brings together ethnographic work that investigates different aspects of maternal and reproductive health in a range of contexts. Individual papers illuminate the importance of ethnography for understanding different facets of reproductive and maternal health ranging from menstruation to pregnancy, assistive technologies, and birthing practices. Collectively, they share attention to the ways in which power, regulation (of bodies, choices, and care), ideology, and materiality convene in local and global spheres of reproductive and maternal health, precarity, and risk.

Transitioning Towards a Justice-Based Framing of Adolescents' Autonomy to Access Sexual Health Services: the case of Colombian adolescents: Worldwide, countries have significant policy differences concerning the respect for adolescents' autonomy to make healthcare decisions. Some countries have more rigid policies (e.g., strict parental consent requirements), whereas others provide more liberties for adolescents to access health services. The World Health Organization urges to address ethical questions about adolescents' autonomy and consent in healthcare as part of the United Nations' Sustainable Development Goals related to adolescent health. While it is an important project, it is critical to explore the topic of adolescents' autonomy and consent in healthcare from

a social justice perspective and not limit the analysis to questions of cognitive maturity as it is commonly done in law and medical ethics. This presentation discusses the importance of re-imagining adolescents' autonomy in healthcare settings, from a justice perspective, by using the case of adolescents' access to sexual health services (e.g., HIV/STI testing, contraceptives). To support the argument, the paper will demonstrate the pertinence of adopting a Reproductive Justice framework when analyzing adolescents' autonomy (i.e., agency) to access healthcare services. The presentation will use data from research on adolescents in Colombia to demonstrate the inequalities (e.g., discrimination) in terms of autonomy to access needed sexual health services. Unequal access to sexual health services among adolescents represents an apparent injustice, highlighting the need to redefine adolescent autonomy in healthcare. This redefinition of autonomy requires developing public health measures that enable equitable access to sexual health services for all young people, rather than limiting our understanding of adolescent autonomy solely in terms of cognitive maturity to access sexual health services. Presenter: Julien Brisson

Multiple sustainabilities: Narrating tensions around "sustainable" menstruation in Taiwan: 'I've been using menstrual cups for years. Psychologically, I feel I'm doing something good for the planet.' Going green has emerged as a social practice of menstrual care as the environmental zeitgeist encourages living in eco-friendly ways for menstrual health. A growing moralized discourse to use reusable menstrual products to reduce waste is imbued with the responsibility of becoming a good menstruator and invoking self-awareness in contemporary society. This paper focuses on menstrual cups as a reusable menstrual innovation and derives an analytic framework from user-technology relations and materiality to investigate the situated experiences of using menstrual cups and, concomitantly, its dialectical interactions with menstruators to re-articulate alternative views on sustainabilities in Taiwan. Based on semi-structured interviews with Taiwanese menstruators, this paper argues that menstrual cup users have complex definitions of perceiving menstruation sustainably as they contemplate social motivations, individual praxis, ideological bases, sensory, and spatial dimensions that go beyond the technological determinist aspect of global intersectional eco-feminism. At the juncture of regulation and liberation, at which point is the crux of the menstrual cup's positioning towards a technology of green care or self-care in its intermittent form? Instead of arbitrating a unified ontology for sustainable menstruation, the

notion of sustainability demonstrates tensions but also flexibilities in how users engage with and reconfigure meanings about menstrual cups and their menstrual health in the contexts of usage-the menstruators and the web of sanitary products within which menstrual technologies are invariably embedded. Presenter: Nga Shi Yeu (Stockholm University)

Perceptions and practices of menstrual regulation and abortion among traditional medicine providers in Peru: Introduction: Globally, women and people who can get pregnant seek traditional medicine methods and providers for menstrual regulation and pregnancy termination. In Peru, where abortion is legally penalized except for therapeutic reasons, the use of traditional medicine is widespread but scarcely documented. This qualitative study sought to explore the perspectives and practices of traditional providers in northern Peru in relation to abortion and menstrual regulation. Methods: We conducted in-depth interviews with 20 traditional medicine providers in northern Peru. All interviews were transcribed and thematically analyzed utilizing Dedoose software. Field notes were used to further contextualize the findings. Results: Participants recognized that women in their communities require menstrual regulation services due to delayed menses, or 'retenciones', and acknowledged that pregnancy might or might not be the cause of menstrual delays. While most participants reported treating menstrual delay mainly with herbs, most denied performing abortions. The majority of participants described abortion as immoral, and illegal, and associated it with irresponsible behavior on the part of women. However, some participants who had previously received training on sexual and reproductive rights spoke openly about their abortion practice and described their protocols for medication abortion utilizing misoprostol and herbs. Conclusions: This study evidences the key role that traditional medicine providers play in sexual and reproductive health care in their communities. The findings of this study describe some notable dynamics: the coexistence of traditional practices that help women regulate their menstruation and the disapproval of abortion due to stigma and misinformation. Moreover, the study highlights the nexus between natural medicine and biomedicine among providers who shared they provide abortions with medication. These findings shed light on the importance of honoring and respecting traditional knowledge and practices as a valued resource in many communities while also promoting knowledge of safe, respectful, and non-discriminatory abortion care. Presenter: Alicia Diaz

Hippie Moms and Homebirths: Ontological Boundaries and Medical Mistrust: Medical mistrust--such as is seen in the antivax or 'medical freedom' social movements--is a growing global phenomenon that is, as of yet, poorly understood. Additionally, research has found that anti-biomedical rhetoric is increasingly associated with communities that are socially quite powerful--with tendencies towards affluence and whiteness. Drawing on unique ethnographic fieldwork in Northern California, in this paper I discuss an upper middle class, majority-white community of 'Hippie Moms' who prefer or desire non-mainstream maternity care and birth options, such as homebirth or unassisted birth. In addition to preferences for maternity care, these interlocutors also seek out alternative forms of care and non-mainstream beliefs about medicine more generally--such as reiki, homeopathy, naturopathy, energy healing with crystals, and vaccine refusal and delay. High levels of medical mistrust have been implicated in adverse public health events, such as outbreaks of vaccine preventable illnesses, among communities similar to the interlocutors I discuss; meaning that improved understandings of the social drivers of medical mistrust is of critical contemporary import. In this paper I posit that birth care may be used as an analytic entry point to understanding medical mistrust more broadly. I argue that patient engagements with medical care must be understood as mediated by specific, subjective, local ontologies--that to the Hippie Moms, perspectives on the riskiness (or not) of certain behaviors or forms of care must be understood in the context of shared community beliefs about the natures of health, the body, and care relationships. Medical decision-making must also be understood in the context of structures of power and a community's position within intersectional social hierarchies. As a majority socially, politically, and economically powerful group, these interlocutors are not members of a population which tends to be medically marginalized--and yet they paradoxically perceive themselves to be at odds against, or in conflict with mainstream knowledge-producing institutions, such as biomedicine. I suggest that taking a critical anthropological lens to understanding connections between birth care and medical mistrust in this community of Hippie Moms in terms of ontological boundaries represents a powerful avenue to refine our understandings of patient engagements with medical care, medical decision-making, and the political economy of health in the US. Presenter: Jessica Dailey (University of Notre Dame, Department of Anthropology)

PRESENTER:

Amy Zhang (New York University), Shubhra Gururani (York University, Department of Anthropology), Preeti Sampat (Ambedkar University Delhi), Waqas Butt (University of Toronto, Department of Anthropology), Camille Frazier (Clarkson University, Department of Humanities and Social Sciences), Ben Mendelsohn

DISCUSSANT:

Roger Keil

DESCRIPTION:

Urbanization entails the rearrangement of numerous human and non-human actors in simultaneously dense and extended, hierarchically organized anthropocentric networks and relations of power. Various urbanisms - planetary, peripheral, agrarian, injected or subaltern, arguably produce extended more than human urbanization by combining the social and material affordances of land and water with other non-human actors and species. In this respect, we suggest extended more than human urbanization, pace Neil Smith, can be seen as a frontier of production of 'second nature'. In conversation with the articulations of the anthropocene, capitalocene, chthulucene, plantationocene, anthropo-obscene or feral anthropocene, we ask if there is a peculiar historical conjuncture for what may be called the 'urbanocene?' Who are the different actors in the urbanocene; how do they contour it's social, political, and environmental geographies; and how may the 'urbanocene' offer new openings to revisit urban theory in this moment of unprecedented social-spatial change? In this roundtable, we unpack the recruitment of land, water and other non-humans into extended more than human urbanization projects; trace the historically mediated anthropocentric dynamics of capital, caste,

race, multispecies and other social relations; and explore the possibilities of more than human recuperation in (and from) the urbanocene. We enter the urbanocene through four key frames: food, waste, construction and non-human animals. Saguin and Frazier map social processes and actors recruited into extended urbanization through food production and provisioning in the Philippines and India, respectively. Butt discusses waste economies and informality in Pakistan, while Zhang tackles waste in China. Mendelsohn discusses the conversion of watery landscapes into buildable plots in Nigeria. Gururani engages with the role of machinery in transforming land-water relations in urbanizing peripheries in India. Finally, Sampat discusses the recruitment of non-human animals such as blackbucks, coastal species and other ecological affordances into tourism and other infrastructures of extended urbanization in India. As a discussant, Roger Keil offers comments on the limits and possibilities of thinking through more than human urbanization.

Oral Presentation Session

REVIEWED BY:

Council for Museum Anthropology

ORGANIZER:

Gorda Stan

PRESENTER:

**Gorda Stan ,Sierra McKinney ,Nelson Graburn
(University of California, Berkeley),Nadia Sarwar
(Memorial University of Newfoundland)**

DESCRIPTION:

Museum exhibits and public heritage initiatives are the focus of this session, which considers public-facing interpretation as a tool for social change. 'Contemporary Art' from originating community creators has a role to play 'in Decolonizing Museum Display Practices,' but the presenter argues that problems remain in how, and why, these works are being presented. 'Distressing Heritage' may be unavoidable given the ubiquity of colonialism, exploitation, and discrimination, but this paper reviews techniques Canadian and other colonial museums use to mold 'negative' emotional reactions into positive social change. As the Royal Newfoundland Regiment Gallery has shifted its WWI interpretations from object-based to personal story-oriented, audiences report a

more powerful understanding of conflict and its aftermaths. Anji County, China, offers an alternate model to ecomuseums in North America and Europe with an ecosystem of institutions focused not on a pastoral ideal but on modern industry. The stories we make through museums matter, and institutions continue to experiment with ways better to do this work.

Transitions: The role of contemporary art in decolonizing museum display practices: Recent repatriation debates surrounding museums in Europe and the United States have again brought to light many contradictions inherent in the institutional desire to be entertainment/educational centres for the 'general' public, temples, scientific laboratories, and repositories of the past. Driven by ideologies of Renaissance and Enlightenment, guarding national treasures dating from the Age of Empire, natural history, art history, and ethnographic museums struggle to assign value and contextualize the objects of the colonial Other without addressing the devastating consequences of the violent encounter. One of the transitional display practices ethnographic museums have begun to use in addition to labelling artefacts with information such as object origin, visual properties, and ownership lineage are purchases of contemporary art and collaboration with the community. I argue the combination of traditional emic/etic interpretative frameworks continues to exacerbate the divide between the permanency of Western canon and abhorrent colonial artefact. This paper analyses, critiques, and offers an alternative to the traditional display practice of European museums practices in light of the recent trend to claim to be critical of the colonial past. De-contextualized new acquisitions fail to mobilize a more radical understanding of temporality/contemporaneity in museum displays. Instead, these updates read as a market-driven indeterminate approach devoid of the reckoning decolonization processes require. I argue analysis of the existing conceptual artworks in decolonizing museums' mainstream representations is central to the understanding of the ways museums reproduce the colonial power-knowledge matrix. I advocate undercutting socially constructed systems of visual representations as an essential step in decolonizing the decolonization movement (neo) colonizing practices. Presenter: Gorda Stan

Distressing Heritage and the Emotional Legacy of an Upsetting Past: Hidden within many national identities are distressing histories of colonialism, racism, slavery, and genocide. When confronted with these truths,

citizens of these nations are unconsciously tasked with ratifying these challenges to an, often idealistic, national identity with their own sense of self and understanding of their community. Shame, guilt, anger, and grief are all common responses to learning about upsetting pasts and, correspondingly, to these mental calculations of identity. As places of historical memory, many museums and heritage institutions are challenging visitors to redefine their understanding of national histories. As such, they are constantly engaging with the emotional legacy of colonial pasts and the impact of this emotional fallout on their educational and social aims as affective responses are neither neutral nor inconsequential. Negative emotions are instigators of action; whether this be deliberate avoidance, defensiveness, or a desire to make amends. As a result, the affective responses generated within museums can reinforce, replicate, or challenge the power structures inherent within colonial societies and the museums themselves. Through an examination of visitor responses to negative heritage within Canada and other colonial nations, this paper will consider the impacts of affective reactions to the past on meaningful reconciliation in the present. Presenter: Sierra McKinney

The Ecomuseum Grows Up - the Anji County Museum in Zhejiang, China.: The original European ecomuseums were attempts to preserve aspects of both material and performative pre/early-modern heritage within existing communities rather than in dedicated museums housing only objects. Introduced to rural China around the year 2,000, most experiments faltered due to insufficient understanding and motivation and excess commercialization. However, in Zhejiang Province the remarkable Anji County 'ecomuseum' system has surpassed others in China and more recent developments elsewhere. We have visited and researched this development together and separately, since its inception in 2012. We focus on its innovative organization and multi-purpose interpretations - one central natural/history museum and forty-one small local museums and exhibits. Unlike the 'traditional' ecomuseums in Europe and North America which connect Nature/Agriculture/Non-modern - stopping at the stage or time of 'proto-industrialization,' attempting to foster local interest in keeping non-modern technologies and tastes alive, the Anji museum system connects Nature/Agriculture/Non-modern with Industry/Consumption/Modernity, questioning the artificiality of 'frozen traditions'. The designers want to show the existing connections between original nature, traditional, modern and industrial uses, e.g. bamboo growing, Bamboo crafts, and Bamboo in the building,

clothing and 'plastics' industry. This is all part of wealthy Anji county's efforts to fashion itself as a leader in rural beauty, non-polluting industries and 'green living' for which it has received national and UNESCO awards. In addition, some of the units serve their local communities as kindergartens, senior centres, or emergency shelters. A separate, parallel development of an eco/community museum system was started a few years earlier in Yilan County, Taiwan! Presenter: Nelson Graburn (University of California, Berkeley)

Museum(s) in Transition: The Case of The Royal Newfoundland Regiment Gallery of The Rooms, St. John's, Newfoundland and Labrador, Canada: The history of the development of museums indicates the influence of colonial worldview and white supremacy in museum representations until the 19th century. In the current age of multiculturalism, decolonization and postcolonialism, there has been a massive push toward employing diversity, equity, and inclusion in museum practices. As museum exhibitions have transitioned from object-based to story oriented-representations, a tremendous shift in museum representation practices has been noteworthy. Scholars have identified the power of personal experience narratives to overcome bureaucratic museum representations and open respectful conversations around history and tradition. As a permanent exhibition of The Rooms (the provincial museum of Newfoundland and Labrador, Canada), The Royal Newfoundland Regiment Gallery was created in 2016 to honour all Newfoundlanders and Labradorians who served overseas and on the home front during the First World War (1914-1918). In this exhibit, the war histories are told through the personal account of the people who were involved in the war and/or affected by the war. Using ethnographic methods such as participant observations and semi-structured interviews with staff members, volunteers, and visitors of the exhibit, this paper explores what a museum exhibition based on personal experience narratives contributes to creating a democratic space and what challenges and dynamics may arise from developing such an exhibit. Presenter: Nadia Sarwar (Memorial University of Newfoundland)

Navigating Disabilities and Anti-Ableism in Life and Ethnography

2:00 PM - 3:45 PM TMCC - 206 F

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Kinga Pozniak (McMaster University)

PRESENTER:

Yuto Kano ,Vaia Sigounas (University of North Carolina, Chapel Hill, Department of Anthropology),Kinga Pozniak (McMaster University),Chunchun Wang ,Kevin Darcy (University of Colorado, Boulder, Department of Anthropology)

DESCRIPTION:

The presentations in this session underscore the importance of ethnographic research for situating experiences with disabilities in local worlds and everyday life. Working across a diverse range of contexts, collectively the presenters explore how individuals, families, and communities navigate interpersonal and social aspects of living with disabilities. Prominent themes include familial webs of care, technology and environment, neurodiversity and intersubjectivity, and the politics of expertise.

Designing epistemic justice for tojisha: A medical anthropological study on autism movements in Japan: This presentation examines the relationship that autism movements in Japan have developed with self-knowledge and professional knowledge in comparison to the United States in relation to the concept of epistemic injustice, which means a wrong done to someone specifically in their capacity as a knower. A central issue in the autism movement in the United States has been the first type of epistemic injustice, testimonial injustice, in which a person receives an unfair deficit of credibility as an epistemic subject due to prejudice. The neurodiversity movement that emerged in the United States brought a perspective that saw autism and other neurological conditions not as a disease to be cured, but as a natural human variation with its own unique values. From this perspective, autism can be seen as forming a kind of culture, and it has been problematized how various characteristics of autistic people, including their epistemological dimensions, are undervalued in relation to professional knowledge. Against this background, this presentation examines the history and practice of autistic people's movements in Japan from a medical anthropological perspective, based on fieldwork in autism support groups, co-production programs at a university, and a psychiatric department in Japan. In contrast to the United States, a central issue in the Japanese autism movement has been the second type of epistemic injustice, hermeneutical injustice, in which one is unfairly disadvantaged in making sense of one's social experiences. Historically, strong self-advocacy

movements have been limited in Japan. As a result, different perspectives on self-knowledge and expertise on autism have developed. The focus here is on how to create hermeneutical resources to help autistic people understand their experiences at the intersection of self-knowledge and expertise. This trend has been represented by the autistic people's practice of Tojisha-Kenkyu (person-centered research). Tojisha-Kenkyu is a collective practice in which tojisha, people with 'komarigoto (difficulties),' seek to reconceptualize their difficulties. Focusing on the practice of Tojisha-Kenkyu by autistic people, which became an important part of the autism movement in Japan, this presentation aims to describe how autistic people try to achieve epistemic justice. They have tried to expand the still inadequate hermeneutical resources and realize the 'universal design of language'. At the heart of this practice are not only autistic people, but also people with other intersectional difficulties and 'hard-to-see' disabilities, such as addiction and PTSD. These people do not have sufficient hermeneutical resources to understand themselves and their experiences. In Tojisha-Kenkyu practice, however, people share some of their characteristics and difficulties. From this starting point, they aim to create a collective hermeneutical resource from which each person can acquire self-knowledge by partially referencing and bricolaging each person's narratives and existing professional knowledge, while avoiding an essentialist view of autistic identity. Presenter: Yuto Kano

Steps, Ramps, and Stair-Climbing Wheelchairs: Encounters with Socially Responsive Technological Design: Rarely encountered in the wild, the stair-climbing wheelchair is an assistive device that bypasses the need for ramps or elevators by allowing one stair-climbing wheelchair user to traverse indoor or outdoor stairs. Critics have pointed out that this assistive device is often expensive, can be unsafe, and turns access to public spaces into an individual responsibility rather than a social good. In contrast to the stair-climbing wheelchair, a wheelchair ramp is a societal solution for a societal problem –and the need to improve access for everyone is a societal problem. Although a well-placed wheelchair ramp safely improves accessibility for a much wider range of people, ramps also have their drawbacks: Anthropologists have described soul-killingly ugly ramps and ramps to nowhere. Drawing on interviews with wheelchair users, biomedical engineers, and architects in the United States, the United Kingdom, and the European Union, I argue that divergent responses to technologies like stair-climbing wheelchairs reflect the multiplicity of social conditions

under which they are designed. For inventors of stair-climbing wheelchairs, surrounding social conditions inspire assistive technologies that foreground techno-optimism, individuality, and risk-taking. For people who would potentially use these devices, stair-climbing wheelchairs may be solving a problem that ramps already address but at much higher emotional, physical, and financial cost. Presenter: Vaia Sigounas (University of North Carolina, Chapel Hill, Department of Anthropology)

Transcending Covid: Disabled children and their families between 'returning to normal' and 'building back better': The Covid-19 pandemic has taken a disproportionate toll on the lives of disabled children and their families. Most of these children require medical or therapy supports in schools and communities, many of which were cancelled or reduced throughout the pandemic period and are still experiencing backlogs and shortages at present. For example, the pandemic has depleted the ranks of nurses, personal care workers and educational assistants, leading to inconsistent supports for children who require them at home and/or school. These gaps hurt children (for example if they do not receive the assistance they need to thrive at school, or if they are prevented from attending school altogether due to lack of staffing) as well as their parents who have no choice but to fill in the care/therapy/educational gaps themselves. However, parents of disabled children note that the hardships they experience are 'nothing new', but rather a continuation of the systemic hurdles they have always faced. These families do not long for the 'return to normal', since the pre-Covid 'normal' state of things did not meet their needs to begin with. Furthermore, some families identify a 'silver lining' in some of the new solutions that were widely implemented to cope with the lockdowns (for example, virtual healthcare visits). As the world rebuilds from Covid, we have a unique opportunity to rethink existing arrangements and identify new possibilities. This talk shares findings from an ongoing research study that seeks to identify what supports (in healthcare, education and community) disabled children and their families need as we emerge from the pandemic. It is based on photovoice activities and interviews with disabled children/youth and their parents across Canada, carried out at a research centre for childhood disability in a Canadian town. Children and parents' accounts illustrate that gaps in supports have persisted since before Covid, in some instances becoming magnified. There is a lack of therapy and recreational supports for children's fitness and for socialization, as

well as the multiple gaps in school-based education and other supports. Overall, the experiences of disabled children and their parents before, during, and after the pandemic, shed light on the workings of biopolitics and biopower in contemporary Canadian society. They show that the prevailing societal arrangements are informed by a capitalist logic of social reproduction and care relations which devalue those who are disabled as well as those who care for them. A 'new deal' is clearly needed to provide children and families with the conditions they need to lead healthy and fulfilling lives. However such a deal requires a rethink of existing healthcare and educational policies and ultimately a rethink of who, and what activities, bring value to society. Presenter: Kinga Pozniak (McMaster University)

Disability as a Repercussion of Care: The Dilemma of Care-giving among Prosthesis Users' Families in China: Care is an everyday practice entangled with responsibilities, ethics, and emotions. Researchers who are caregivers reflect upon care as experiences that hold the potential to reconfigure subjectivities and to integrate epistemology with ontology. At the same time, anthropologists have also examined the inequalities that are imposed through care in intimate relations, which reveal a dark side of care that deserves more analytic attention. This paper explores caregiving practices in two Chinese families, each including a prosthesis user as family member. Focusing on intimate interactions among members, it shows how caregiving can take on a twisted character as it morphs into self-sacrifice and engenders tensions within the family. It recounts how one member's ability to care turns into a liability for the whole family, to the point of having the unintended effect of worsening disability. Disability, this ethnography show, emerges as a repercussion of care. The paper challenges existing discussion on the foundations of caregiving, pointing towards under-explored dimensions thereof that should be taken into account in care studies. Presenter: Chunchun Wang

Crip Time as Disability Expertise: Reimagining inclusivity in higher education.: 'I can do everything everyone else can do, it just takes me longer and maybe I do it differently.' This is a common response to my question, 'What do you wish people knew about your disability?' I theorize this sentiment as an urgent call for institutions to take seriously the lived realities of crip time. Crip time means that people with disabilities need more time to arrive somewhere and that it takes people with disabilities longer to complete activities because of ableist barriers and the ways that disability shapes all aspects of life (Kafer 2013). Yet, crip time is also

agentive, a refusal to conform to heteronormative timelines of productivity, reproduction, and notions of adult independence (Wool 2021). This paper is based on 18 months of ethnographic research. I assess how people use subjective disability expertise (Hartblay 2020) to draw on crip time as a resource to work around ableist barriers in higher education. I argue that living on crip time is incommensurable with the timelines of productivity characteristic of neoliberal institutions. This research troubles these ableist frameworks by addressing the collisions between crip time and neoliberal timelines of productivity in higher education: student and workplace accommodations; the tenure track process; Universal Design for Learning (UDL approaches to course creation); and diversity and inclusion policies. In so doing, I draw attention to the ways that intersectionality should complicate analysis of these processes. My ethnographic data illustrates how crip time is inherent in quotidian activities, such as cooking and transportation, and the ways that crip time-as it emerges in professional academic spaces, such as in faculty expectations and completing course assignments-comes to matter in higher education. New Directions in the Anthropology of Islam

2:00 PM - 3:45 PM

TMCC - 203 D

Oral Presentation Session

REVIEWED BY:

PRESENTER:

Hamza Esmili (*), Hikmet Kocamaner (University of North Carolina, Wilmington, Department of Anthropology), Erin Atwell (University of Chicago, Department of Anthropology), Muhammad Osama Imran

DESCRIPTION:

This panel features six papers that explore lived Islam in multiple ethnographic contexts. Together, they raise critical issues for the comparative anthropology of Islam.

Back to the idea of an anthropology of Islam. Talal Asad and symbolic thinking: The idea of an anthropology of Islam - an article originally published by Talal Asad in 1986 - is a pivotal text for the field of anthropology of religions. In contrast to the concept of religion, which is held to be excessively centred on adherence to dogma,

Asad proposes the notion of a discursive tradition, i.e. a place of enunciation where forms of life, knowledge and authority are articulated and confronted. This way of approaching Islam is explicitly opposed both to the nominalist approach asserting the existence of an infinite number of realities of Islam - which amounts to abolishing the object of research that it constitutes - and to the opposite postulate of a Muslim essence at work beyond the meanings that the actors attribute to the historical contexts in which they evolve. The latter perspective - which Asad attributes as much to Ernest Gellner as to a profusion of political stances towards Islam - is in particular refuted at length in the 1986 article. Rather than an ahistorical social structure linked to religious practice by some modulation of the old antiphon of reflection theory, the discursive tradition of Islam is defined by Asad as a partially autonomous space in which modes of investment that are inseparably intellectual, ethical and political are aggregated. By reinserting the reflexive relationship of Muslim men and women to their inherited tradition at the heart of anthropological enquiry, Talal Asad's idea of a discursive tradition has gained traction within the field of Islamic studies. His insistence (Asad 1993; Asad 2017; Asad 2018) on the ways in which the bodily instruction of religious conduct and normativities is achieved - in particular in relation to the later Michel Foucault's work on the culture of the self - has led to a renewed interest in the ethical forms that run through the contemporary Islamic tradition. Underlying the ethical turn of Islamic studies, one of the main thrusts of Asad's critique of the anthropological discipline is the severe questioning of symbolism as a privileged way of elucidating human experiences (Asad 2017 op.cit.; Asad 2018). But the dismissal of symbolism is synonymous with the distancing of the main generalising device with which the socio-anthropological discipline is endowed. In the absence of an alternative for the apprehension of collective forms of religious experience, the ethical turn leads to an increasingly marked methodological individualism (Fassin 2014). While fully acknowledging the gains made by the anthropology of Islam subsequent to Asad's seminal work, the following article returns to the site of the tension constituted by symbolism, suggesting a reading inspired by Émile Durkheim and Marcel Mauss. In proposing this reincorporation of religious symbolism within Islamic studies, the aim is to include the formation of the self - whether ethical or not - in a chain of translations internal to the religious gesture, which inscribe it throughout in a historical relationship to the significant totality in which it takes shape. This enrichment must allow for a reaffirmed consideration of the variety of

collective experiences that constantly traverse the Islamic tradition as well as the historical events that shed new light on it (Laroui 1967). Presenter: Hamza Esmili (*)

Governance through Religious Infrastructures: Islam, Technology, and Political Transitions in Turkey: Within the last two decades, Turkey has experienced tumultuous transitions. Once considered a paradigmatic example of 'assertive secularism' that is antagonistic to the involvement of Islam in politics and public life (Kuru 2007), since 2002 Turkey has been ruled by a pro-Islamic government that defined itself as 'conservative democrat' and undertook several liberalizing reforms in its early years. In the aftermath of the nation-wide anti-government protests of 2013 and the failed military coup attempt of 2016, however, the government has increasingly resorted to Islamic populism (Yilmaz 2022) and competitive authoritarianism (Sommer 2017). The Directorate of Religious Affairs (the Diyanet in Turkish) - a state institution that has monopolized and regulated Sunni-Muslim religious doctrines and practices since the foundation of the Turkish Republic - has played a key role in these momentous political transitions. While anthropologists have explored the ways in which religious and/or occult phenomena are entangled with material infrastructures (Ishii 2017, Handman 2017, Schwenkel 2017), infrastructures that help regulate organized religion remain largely unexamined in anthropology (cf. Hoelzchen 2021, Mellquist-Lehto 2021). Bridging the anthropology of infrastructure with the study of religion and politics, this presentation asks: How do the technical infrastructures originally designed to regulate religion facilitate the integration of Islam into populist, authoritarian governance in Turkey? Sunni-Muslim mosques, religious functionaries, and religious practices are centralized by the Diyanet and interconnected through an assemblage of technical infrastructures - most notably a mosque loudspeaker network broadcasting calls to prayers, sermons, and government announcements, and an online data infrastructure aimed at auditing and standardizing the activities of Sunni-Muslim religious functionaries. Under the ruling government, these data and communication infrastructures have been appropriated to further integrate Islam into government's social services; to generate statistical data about the family problems of devout citizens; and to warn about impending 'national threats' like a military coup attempt. Based on the ethnographic research I have been conducting on these 'religious infrastructures' (Handman 2019), Sunni-Muslim religious functionaries operating them, and the citizens interpellated by them, this presentation will explore how Islam is entwined with populist governance

in the form of a techno-political project deployed to generate religio-political sensibilities and attachments. It will also examine how religious infrastructures constitute a key terrain for legitimating and securing political authority and for the making/unmaking of political subjects in an era of increasing populism, religious revivalism, and tumultuous political transitions in Turkey and other parts of the globe. Presenter: Hikmet Kocamaner (University of North Carolina, Wilmington, Department of Anthropology)

Fearing God: Embodied Temporalities of Anxiety and Divine Orientation at Egypt's al-Azhar: The importance of being godfearing in the expansive institutes, offices, schools, research centers, and mosque that constitute Egypt's al-Azhar stretches beyond compliance to a received orthodoxy or even individual commitments to pious practice. Navigating anxieties that Egyptian society is heading towards two equally threatening types of extremism, atheism and religious-based violence, at al-Azhar being the right kind of godfearing comes to index at once the cure to these woes and larger shifts in societal orientations towards the divine. The stakes of being godfearing-having taqwa-are the very preservation of this thousand-year-old religious institution, whether through mufti training programs, the lessons of women preachers, or meetings to agree on official Azhar translations of the Qur'an. Yet Azhar leaders' efforts to promote taqwa meet with varying degrees of success, at times re-entrenching precisely those societal shifts they are urgently trying to address. Exploring these programs and the responses to them by diverse Egyptians, this paper theorizes godfearingness as an embodied and material activation of a connection between individual interiority and external action established in the earliest days of Islam. On the one hand, at al-Azhar there is widespread and unwavering commitment to the relevance of textual sources dating to the first Hijri century as a guidepost for responding to contemporary problems. Indeed, through a bricolage of inherited texts, rituals, sayings, and bodily practices my interlocutors refer again and again to the internally and externally corporeal concept of taqwa that coalesced in early Islamic sources. On the other hand, there is tremendous friction in the ways groups within al-Azhar pair these sources with uniquely modern strategies of, for example, psychological counseling, Facebook livestreams, and electronic fatwa services, and how these pairings are received in al-Azhar's broader public reach. More than an abstract ethical concept, godfearingness at al-Azhar arises as the grounds for contemporary debate in Egypt around right orientations toward the divine whose temporal valences disrupt our

very notions of the internal/external and corporeal/immateral. Presenter: Erin Atwell (University of Chicago, Department of Anthropology)

Breaths of Extimacy: Haunted Subjectivities and Free Submission in the Sufi Practice of Zikr: Through ethnographic research among the silsila (spiritual order) members of Naqshbandia Awaisia in Pakistan, my paper focuses on the Sufi practice of zikr (remembrance) in which practitioners perform the synchronized repetition of their breath and head movement with the inner recitation of Allah's name. This is presumed to enable practitioners' recognition of and attunement to their own spirits, infusing a realization of a Divine Presence that is immanent to their being. My paper explores the significance of this recognition in shaping practitioners' ethics, desires, and everyday material (dis)engagements. It asks: When God becomes present with and immanent to the self, what will be the stakes for an anthropology of Islam that associates ethics of submission with certain forms of symbolic authority? What kind of an ethics of the self and a theory of a desiring subject does the Sufi practice of zikr make possible? And what does political Islam look like if the spirit becomes the subject's own legislator, and religious authority exceeds the form of external sovereignty? During my preliminary fieldwork this year, I observed that while practitioners' ethics of submission seemed to be conditioned by the founding scriptures, texts, or the authorizing practices and discourses of the shaykh, their ethics also gestured at a form of authority that took flight from the domain of the Symbolic and guided practitioners immanently. This guidance shaped judgements like whether the earth was flat to whether a certain politician was honest, decisions like who to marry, where to work, or whether to adopt children, and actions such as which social gathering to avoid or partake in, or in the case of members who serve as Airforce pilots, how to respond during military combat. Based on my observations, I speculate that the kashf (spiritual premonitions) that inspires zikr practitioners' ethics are not simply shaped by or measured against a given moral law, but rather, they become a source for the moral law's foundation. In these ethics of free submission, desire does not only seem to be subordinated to the idea of a 'discursive tradition' shaped by the authorizing discourses of scripture, religious leaders, formalized methods of worship, or even language (Asad 1993, Mahmood 2005, Hirschkind 2006), but may also be informed by the 'non-discursive' hauntings of a Divine Presence that is the self's own Other. Crucially, this Divine Presence is a presence of an abyss or an absence, since God cannot be an object of

representation, and much like the psychoanalytic conceptions of a lack or a void that founds the desire of the subject, the Sufi ethics point to the role of recognizing one's own desire as the desire of God in the realization of their free submission. By bringing the zikr practice of cultivating a state of recognizing and being guided by one's own Otherness together in a homologous dialogue with psychoanalytic theories on the heteronomy of desire, my presentation invites us to think of a political Islam where submission to authority exceeds the form of the abstract and the sovereign. Presenter: Muhammad Osama Imran

DESCRIPTION:

Documentary photography is at the heart of our discipline's engagement with the camera. And yet, we are living in richly mediated worlds where cameras and photographic images are both ubiquitous and perennial. This situation presents us with transitions from one mode of looking to another which challenge the conventions that inform our work. This in turn gives us opportunities to critically reflect on questions of representation in the ethnographic encounter that lies at the core of our disciplinary practice. In our daily lives we encounter myriad other camera operators, from amateur photographers to those whose work is categorized as artistic, commercial, journalistic, etc. Each of these categories unfolds into its own scenes and communities. Inspired by the theme of this year's conference, we attend to the trans-disciplinarity at the

heart of photography. For those on this panel this means thinking about our influences and inspirations. It means thinking about how the camera and the photograph exert their agency over our disciplinary research practices and how they allow us to account for transitions and frictions as we move beyond established boundaries. This attention to trans-disciplinarity can be explored by attending to photography's shared workflows. By claiming and defining a workflow, however ephemeral, we propose an analytic tool that helps us to appreciate shared ideas and operations in a trans-disciplinary frame. Looking at the shared workflows of photography exposes how the camera coordinates behavior, how the lens disrupts and animates the imaginary, how we labor in the frame of photography's agency, and how the photo essay, the slideshow, or the gallery becomes a space of remediated encounter. Workflow is thus treated as both a technical relation and a conceptual category. Anthropologists with cameras have increasingly sought to complicate documentary's realist claims in the past decades. Unraveling this pulls into tension anxieties of truth in capturing the realities of pervading transitions with the phenomenological experience of photographic precision. This tension that is at the heart of photography is what makes it such a compelling techno-social practice to think with.

DISCUSSANT:

Lin Zhang

DESCRIPTION:

The platform economy is one of the most influential and multifaceted technological and business innovations in

the recent decade. However, when discussing the success and impact of the platform economy, much of the existing literature still follows a determinist, teleological, and retrospective discourse that emphasizes how the inherent disruptiveness and merit of the platform economy determine its overwhelming success. This panel aims at challenging the above-mentioned perspective. With the case of China, the world's largest digital economy, the panel will discuss how the platform economy drives economic growth, social change, and transformations of the way people live, work, and interact. Beyond this, it will bring together perspectives from anthropology and political economy to also address how China's existing economic social situations and people's culture, lifestyles, and values construct the ever-changing assemblages of various platform economy businesses. Drawing on ethnographic research, panelists will explore various aspects of the platform economy, including the emergence of new forms of production and distribution, the infrastructuralization of super-sticky apps, the negotiation of trust and safety, and the role of algorithm and data surveillance in shaping social relationships and political identities. In this way, the panel aims to provide a critical understanding of the platform economy as a crucial, multifaceted, open-ended, and contingent force that co-constructs with the economic, political, and social organization in a globalizing China. It highlights the regional, historical, and contingent factors along the trajectories of the development, transformation, success, and failure of various platform businesses.

How WeChat and Didi became super-sticky: Designs, contingencies, and open-endedness in the infrastru: The platform economy has significantly reshaped many aspects of economic and social life.

Infrastructuralization of platforms, a thesis mostly developed by media scholars, breaks down the online-offline dichotomy and sheds light on how the platform economy becomes an integral part of everyday life. In noticing certain platforms' dominance and stickiness, many media studies tend to provide a retrospective interpretation in which specific technological features identified in the configuration of the platforms at the present moment are considered the key factors for their success. Drawing on studies of technologies in anthropology and other disciplines, this paper sees the development of stickiness and infrastructuralization of platforms as an open-ended process. Based on long-term participant observation of different types of platform users, interviews of platform users and designers, and news and business reports about platforms' operations and financing, the paper analyzes

five key moments in the trajectory and the synergies of WeChat (originally a social network platform) and Didi (a ride-hailing platform) in China. It discusses how purposeful technological designs and business strategies were intertwined with socio-cultural practices, political economy, and state strategies, which led to the intended and unintended effects of sociotechnical embeddedness. Via such case studies, the paper highlights the importance of open-endedness, contingencies, historical and regional specificities, and complicated interactions in understanding the infrastructuralization of the platform economy. Presenter: Jun Zhang

Sunshine Kitchens: Digital Governance, Food Delivery Platforms and Politics of Hygiene in Zhejiang: This paper seeks to complicate our understanding of the platform economy through an ethnographic study of the “Sunshine Kitchens” program in a Chinese city. In July 2021, the government of Zhejiang province introduced the mobile application “Zhejiang Takeaways Online” (ZTO) for hygienic and food quality control. Restaurant owners are requested to buy and install security cameras in their kitchens and broadcast the production of food on ZTO, which is simultaneously streamed on the “Sunshine Kitchens” page on food delivery platforms (FDPs) like Meituan so that consumers can choose food that is safe and clean. Based on fieldwork in small restaurants and interviews with local officials and Meituan employees in a city in Zhejiang, this paper describes and discusses how and why some restaurant owners cope with the “Sunshine Kitchens” scheme, from manipulating the cameras to building their own delivery services independent of FDPs, or giving up takeout services altogether. These stories that take place in the shadow of “Sunshine Kitchens” shed light on how grassroots businesspeople are both marginalized by and challenging the platformization championed by government agencies and Internet-based companies in the name of food hygiene. This paper provides a more complex picture of the platform economy than a triumphant story of the free market and technological innovation. Presenter: Pu Yang

Hope Labor in the Livestream E-Commerce Industry in Yiwu, China: China’s live stream e-commerce industry, debuted in 2015, has developed rapidly since 2016. Yiwu, the largest wholesale market in the world specializing in small commodities, serves as a magnet for ambitious migrants to pursue their dreams of lucrative careers as live streamers. However, it remains a contested issue whether these livestreamers can indeed become innovative entrepreneurs by following in the

footsteps of online new-rich celebrities or whether they are merely cheap labor feeding the profits of the platforms. Drawing on four-month fieldwork in which the author worked as a livestreamer in Beixiazhu, an E-commerce town in Yiwu, this essay discusses the livestream e-commerce industry in Yiwu, and explains the mechanism through which hope labor is valorized. This is explored, first, by contextualizing Beixiazhu village in Yiwu and the development of the livestream e-commerce industry. Then, the essay examines the roles of livestream e-commerce companies and the live streamers themselves in weaving the dreams of “sales spurts”—hope laborers’ main driver—by making short videos. Lastly, the essay analyzes the traffic fetishism among hope laborers in real-time broadcasting based on the concept of commodity fetishism. While the discourse of “sales spurt dreams” enticed migrants to become aspiring entrepreneurs who shed their working class subjectivities, this form of hope labor actually legitimates the endurance of hardship and sacrifice of unpaid work at the present while disguising the extraction of their value by the livestream e-commerce industry. The booming of livestream e-commerce and the impoverishment of migrants are just two sides of the same coin. Presenter: Ziwei Niu

Made-in-China Upgraded: How Amazon Shapes Design, Branding and Distribution in China’s Toy Industry: Border closure and lockdowns had brought great challenges during the COVID-19 pandemic. However, the Chinese toy industry has witnessed a rapid sales rise of Lego-compatible toys on Amazon.com. What was earlier known to the world as copycats and counterfeits, these Made-in-China products are now sold as ‘original creations.’ Engaging with anthropological studies of technology, infrastructure, and platform economy, this paper zooms into this niche market to investigate how the global e-commerce platform reshapes local economic practices, especially regarding design processes, branding, and distribution. It provides an ethnographic account of the Chinese toy-bricks industry based on multi-sited fieldwork, including participant observation of toy factories, designer houses, dealer offices, and in-depth interviews with a wide range of interlocutors, such as designers, intermediaries, managers, entrepreneurs, and office staff. It reveals the encounters, frictions, and disjunctions between algorithm logic, the global supply chain, the Intellectual Property Regime, and local ecology, adaptation, and creative initiatives. By showing Chinese entrepreneurs’ uneasy encounters with new technologies and their coping strategies, this study sheds light on how the global platform economy has reshaped, and been

reshaped by, local practices and how ordinary people experience and make sense of such socio-economic changes. Presenter: Yiwei Yang (Chinese University of Hong Kong)

Negotiating the 'Good Life': Xiaohongshu and Key Opinion Consumers in China : Chinese state media Xinhua Net released research in 2017 showing that over 54 percent of college graduates wanted to become digital content creators or influencers. The rising platform economy embellishes this career and life path for young people. To pursue this “good life” portrayed as highly lucrative and flexible, young Chinese have turned to platforms that frame them as enablers of their hopes and transform themselves into Key Opinion Consumers to join the platform’s influencer marketing economy. Xiaohongshu plays a critical role in envisioning such an ideal life. Xiaohongshu’s founder Qu Fang spoke at a specific time in 2021, during China’s tech crackdown, to align her company’s vision of “building a good life” for its users with the state discourse that has, since President Xi Jinping came to power in 2012, emphasized the “good life.” By drawing on a 10-month digital ethnography and affective governance framework, I argue that the state’s top-down intervention with digital content enacts through the promise of the “good life.” Yet, platforms and citizens are not passive recipients of affective governance. I identify the active role a digital platform like RED plays in negotiating the political ideology of the “good life.” I also attend to citizens, particularly middle-class young urban Chinese women, who see digital content creation as part of their career and life path with ambivalence within the “good life” discursive backdrop. This work contributes to platform studies and China studies by 1) showing the state’s affective governance in the context of digital content creation, 2) pushing against the tendencies that China is a “black box” and demonstrating the agency of platforms and citizens negotiating the political discourse despite the uneven distribution of power. Presenter: Huiran Yi

Poisons and Their Doubles

2:00 PM - 3:45 PM Virtual - Room 4

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Sandra Hyde (McGill University)

CHAIR:

Laurie Denyer Willis (McGill University)

PRESENTER:

Sandra Hyde (McGill University), Jasmine Pisapia (Columbia University, Department of Anthropology), Lindsay Ofrias (McGill University, Department of Anthropology), Matthew Kohrman, Kit Mitchell (McGill University, Department of Anthropology)

DISCUSSANT:

Syantani Chatterjee (Columbia University, Department of Anthropology)

DESCRIPTION:

What do we mean and do when we invoke the term poison? What are poisons' ontological and epistemological doubles? What else is there if it is a just-so story to convey poisons as scapegoats for pharmaceutical, industrial, and agricultural capitalism? What if, in the spirit of Michelle Murphy's idea of alterlife, we rethink poisons and embrace their doubles, including agendas that conceal poisons' destruction and those that allow chimeras to flourish as life-affirming? In Vincanne Adam's new book on Glyphosate, she swirls through many registers: scientific discourses on randomized clinical trials, complementary medicine's treatments for unexplained disorders as bodies break down in our overloaded toxic environments, science wars between the pro-chemicals and anti-chemical camps, academic capitalism, among others. But as poisons tear lives apart, is there a recuperative double here, meaning can decay and destruction create their renewal to redress a poisoned planet? For example, in Anna Tsing's work on the Matsutake mushroom, she explores an edible weed that grows in human-destroyed forests that thrives in spaces of decay, dirt, and dust. How do we reconcile the beautiful forever or what Jasmine Pisapia (n.d.) calls inscriptions of poisonous aesthetics baring down on landscapes of decay and destruction? There are always recuperative movements, especially in activist work, pushing and pulling the boundaries of pharmaceutical capitalism, hopefully to new life-affirming horizons. Carl Hart challenges normative drug addiction narratives to rethink the usefulness of heroin, but what other drugs do the work of recuperation? These are the questions. Now to their presentation. Instead of a standard round table debate or a queue of thoughts, in this round table, we will move through each panelist's work in the form of a short flash ethnography. We thus pivot our panel around this stark short ethnographic writing genre as a tool to rethink poisons and their doubles.

Positioning in Institutions: Transitions between belonging and otherness

2:00 PM - 3:45 PM TMCC - 803 B

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Kathryn Wright (Wayne State University)

CHAIR:

Kathryn Wright (Wayne State University)

PRESENTER:

Josefine Wagner ,Kathryn Wright (Wayne State University),Kellan McNally ,Maisie Gholson (University of Michigan),Ashley Easley (University of Michigan)

DESCRIPTION:

We examine social relations within institutions to show how embodied identities (e.g., racial or ethnic affiliation, gender performance, disabled embodiment, and visually-apparent mental health conditions) mediate institutional perceptions of cognition (e.g., neurodiversity, neurotypicality, 'giftedness,' 'smartness,' and 'slowness,' intellectual disability and psychiatric disability) and contribute to categorical emplacement and movement between categories. These categories can be spatial, temporal, ideological, institutional, cultural, and relational. Arguing that attending school is first a relational encounter before an academic, Gholson discusses how Black children's social networks mediate their access to mathematical success and achievement. In U.S. schools, Black children are positioned, outside of, if not in opposition to mathematical success as a function of racialized discourses concerning their capacities as individual students. She provides a view of 'successful' Black children to understand the anthropology of friendship and support. She contributes a theoretical framework to highlight the social, cultural and political dimensions of mathematical success for Black children. Both Wagner and Wright also hone in on social relations within school. Examining children with disabilities in three locations (Austria, U.S., Morocco), Wagner presents a policy analysis that investigates and juxtaposes friendship and social interaction with special education pedagogy focusing on the deficiencies of students conceived as cognitively impaired. She explores how friendship is implicated in policies and curricula - or not - of inclusive schools across all three countries. Wright's contribution provides an

autoethnographic analysis of teaching an elementary school class about Down syndrome. She raises questions about framing this difference in a way that preserves the delicate social relations of her son, who has Down syndrome, with others in the class, exploring how objective, top-down knowledge conflicts with the embodied, collaborative, diffuse, social knowledge that her son and his friends have cultivated. Jackson explores social relationships, examining the importance of friendship for Black women during their childhoods in the Southern United States. Using theories of Black geography and Black girlhood, Jackson illustrates how enduring pseudoscientific beliefs about race, gender, and cognitive ability shaped the geographies of participants' schools and their positioning within them. Jackson's work builds on existing Black girlhood studies within anthropology that document the dynamic effect that the afterlife of slavery has on Black girls in public schools by amplifying how friendships shield Black girls from the historical and structural violences that peregrinate across their lives. McNally reviews the transition from psychiatric hospital to community based care to show how this was simultaneously a shift in perceptions about cognition, disease expectations, and care requirements, leading to changing social relations through the approach to care. In similar fashion to Wright's questions about types of knowledge and cognitive capacities, McNally explores how shifting epistemology of disability lead to shifting relations between individuals and institutions. These papers raise concerns about how perceptions of cognition contribute to positioning inside and outside of institutions, communities, friendships, and structures of care.

Learning friendship? A policy analysis of social belonging in education (Austria, U.S., Morocco): Often children with disabilities or special needs have trouble entertaining in-depth connections with their classmates and experience a lack of friendship (Morrison and Burgmann 2009; Cook, Ogden and Winstone 2016). Considering that learning, however, is a social practice that is deeply intertwined with making sense of the world through interactions between others and self (Abu El-Haj 2020), the impact of absence of friendship on development, cognition, and learning cannot be underestimated. Why is it that special education tends to approach students in isolation, zooming in on their individual challenges and shortcomings for the sake of administering labels and categories? While diagnoses qualify individuals for resources and support, they also root the essence of label-bearing students in a very limited analysis of their functioning: How has the student performed in this class test? How are their

motor skills? Which cognitive thought and abstraction process are they able to perform? How many correct answers did they provide in the literacy test? Assessment with such a narrow focus on the individual, I argue, disregards the “affective dimensions” to teaching and learning, especially with regard to students’ identity formation as capable human beings in social settings (Abu El-Haj, Kaloustian, Bonet and Chatila 2018, 18). The overarching question is then how can friendships become the locus for belonging and offer opportunities to resist deficit labeling along many markers of difference? In my contribution, I present a policy analysis on the concept of social relationships in education with regard to directives and legislation published in Austria, the U.S. and Morocco, three locations marked by European imperialism in different ways. Focusing on the primary years of education, this ethnographic project comments on the value that we place on social ties, relationships, and friendships in the face of growing atomization in the digital as well as analogue world. Presenter: Josefine Wagner

Naming and placing the difference of disability in school: In this autoethnography, I explore a zone of transition where an unnamed difference becomes an object of knowledge (Foucault, 1973/1994). The context is a 4th grade classroom in the suburban American Midwest; the difference which becomes object is my son. In collaboration with their teacher and in honor of World Down Syndrome Day, I prepared and presented a lesson to my son and his classmates. By participating in his institutional life – his classroom – in this way, I hope to empower my son with knowledge about his trisomal condition and to increase the institution’s capacity to incorporate disabled members within it. I fear that the opposite will be true: that the presentation will whittle his presence into a pathology and that his classmates will find in it reasons to justify ignoring my son, or worse. This paper raises the question of how to recognize difference without dismissing it, and how forms of scientific knowledge might alter forms of social knowledge. I work in the tension produced by a Foucauldian sense that classificatory knowledge is controlling power (Foucault, 1973/1994) and the ideological standpoint that disability identity is crucial to disability empowerment (Kafer, 2013; Siebers, 2008). How might naming a difference empower a child to claim an identity and a place at school? Might this naming simultaneously create the conditions to dismiss that difference by fixing it outside of the bounds of normativity, thereby moving a child from the status of ‘friend’ to the status of ‘other’? Further, how might my well-meaning actions, undertaken in the service of

greater inclusivity and in the interests of my son’s future, unintentionally revivify the notion of the school as an abled environment by calling out the presence of disability as a special, rare thing? Presenter: Kathryn Wright (Wayne State University)

Reinstitutionalization: Compensating the self-care and coping of people with psychiatric diagnosis: From the early 1800s and for almost 150 years, state mental hospitals in the United States expected people diagnosed with psychiatric disorders to engage in daily forms of work. Whether tasked to milk cows, collect eggs, pick fruits and vegetables, mend mattresses or sew clothing, the manual labor of patient-workers was prized for its therapeutic and economic value. With the era known as deinstitutionalization, beginning in the 1960s, came shifts in these labor expectations for people with psychiatric diagnoses. As patients began receiving services outside closing state hospitals, managing chronic and incurable mental illness through lifetimes of adherence to biomedical treatment emerged as mechanisms for survival income within an emerging economy of services. I connect Manderson’s (2011) concept of “rehabilitation” with Kotz’s (1994) theory of Social Structures of Accumulation to understand how community psychiatric services incorporate within the bodies and behaviors of people with psychiatric diagnoses the labor of managing chronic disease, for which they are compensated below the federal minimum wage. Through programs like Supplemental Security Income (SSI), which expect and routinely verify the engagement of recipients with biomedical services, careers in managing personal illness bind people with disabilities today to mind and body altering treatments and daily forms of coping. Based on two years (2017-2019) of walking interviews with neighbors and former employees on the grounds of one closed state hospital in Massachusetts, archival review of annual and biennial hospital reports, and ten years of community practice as a licensed clinical social worker, I reconsider deinstitutionalization as a institutional transition in economic relations between people with disabilities tied to psychiatric diagnosis and corporations of community care. Presenter: Kellan McNally

Social, cultural, and political dimensions of mathematical success for Black American children: The historical intertwining of mathematics learning and development with cognitive psychology has narrowly attributed individual success in mathematics to innate cognitive abilities. Only recently has the field of mathematics educational research moved toward

sociocultural theories of learning and becoming, which invite the consideration of the social and cultural supports that allow for mathematical success (Gresalfi & Hand, 2019). The implications of this shift in common understandings of learning and development are particularly salient for Black children, who have been positioned outside of, if not, in opposition to mathematical success and achievement. The paper provides a cross-sectional view of two 20-person cohorts of successful Black children (starting ages of 12-13). We analyze the egocentric networks derived from multiple interviews to explore what friendship, support, and, specifically, mathematical support mean for high-achieving Black children. Children were recruited from three distinct Black communities within southeast Michigan. We forward an emerging theoretical framework that highlights the social, cultural, and importantly, political dimensions of mathematical success for Black children navigating the landscape of selective high schools. Presenter: Maisie Gholson (University of Michigan)

My Black queer posse: Reframing Black queer subjectivity through queer friendship: Black queer subjectivity and how it is made is theorized through the lens of resistance to heteronormativity, racism, and sexism. Yet, there is a scarcity of discussion around the role friendship in the making of Black queer personhood despite the role that it plays in Black queer life. This work examines the importance of friendship as a mechanism of selfhood for Ivy, a Black, pansexual, nonbinary person. This work was accomplished through using narrative inquiry methods that privileged narration as embodiment and identity. Ivy's narrative illustrates the importance of physical, virtual, and anonymous friendships in providing support and connectedness as they navigated romantic desire, gender dysphoria, and difficult family dynamics. Across time and space queer friendships led Ivy to a stronger Black queer subjectivity that currently serves as a source of pride in their personal and professional life. At the same time, Ivy's narrative troubles the dynamics between race, sexuality, and disability and its effect on forming friendships within the larger African American community. In this way, Ivy's narrative reveals that although some subjectivities can foster friendships, these same subjectivities may also produce barriers for individuals as well. Overall, Ivy's narrative has implications for expanding conceptions of how Black queer subjectivity is made in relation through ordinary affect. Presenter: Ashley Easley (University of Michigan)

Reciprocity and Benefit Sharing in Research with Indigenous Communities

2:00 PM - 3:45 PM TMCC - 716 A

Oral Presentation Session

REVIEWED BY:

Association of Indigenous Anthropologists

ORGANIZER:

Noah Collins

CHAIR:

Noah Collins

PRESENTER:

Olga Ulturgasheva (University of Manchester), Candis Callison ,Noah Collins ,Justin Lund

DESCRIPTION:

In publication-oriented academia single-authored outputs by university-based scholars are viewed as the most rewarded and institutionally recognized mode of knowledge dissemination which alongside benefiting their careers is assumed to benefit the communities with and on whom the scholars conducted research. Such assumptions, however well-meaning, implies that the studied (or source) communities are automatically involved in an economy of academic knowledge production that supposedly drives impact acceleration processes across various sectors of human population including the communities that have been an object of research. However, this widespread assumption about mutually benefitting research does not often entail reciprocal exchange. In reality, more often than not the research process represents a sheer act of neo-colonial extraction, i.e. when the lived experiences of the community members generously shared with the researcher are transacted as commodities in a profit-driven exchange undergirding the process of academic advancement. Although there are several types of methodological frameworks that deal with the issues of exploitation and extraction such as Community-Based Participatory Research (CBPR) and Participant Action Research (PAR), they often do not sufficiently encapsulate the level of personal risks and responsibilities that is inherent in research undertaken by Indigenous scholars. Benefit sharing as informed through collaborative research with Indigenous communities necessitates more direct and tangible relevance because of the immediate needs of Indigenous people. This panel will engage Native American and Indigenous scholars to explore the potential for productive transition from mainstream

modes of data collection to reciprocal relationships founded in Indigenous sovereignty and ethics of knowledge sharing.

The Other Side of Collaboration: Power Imbalances and Unshared Returns in Research: The paper will examine power imbalances and non-collaborative sides of 'collaboration' with Indigenous communities, namely how practices of epistemological extractivism feed neo-colonial patterns in academic scholarship. These extractive practices tend to mutate and hide under the claims of collaboration. Quite often, any attempt to start a collaborative engagement between members of distinct knowledge enclaves, such as Indigenous knowledge holders and natural or social scientists, often faces institutional resistance to the possibility of symmetric reciprocity. Frequently, it is the dominant anthropocentric (man-centered) ontology of natural scientists that defines the rules of engagement. Even if the aim of the endeavors is to include and support Indigenous initiatives, there is a long established institutional habit of prioritizing natural scientist rules that regularly opt for positivist, linear cause-and-effect perception in their understanding of the scenarios of change. Drawing from perspectives of Indigenous experts, the paper will explore the shortfalls and returns of collaboration between Indigenous communities and Euro-American/Western researchers, how collaborations are launched and implemented, and what type of knowledge politics and power imbalances make the aims of collaboration unattainable. Presenter: Olga Ulturgasheva (University of Manchester)

Indigenous Journalists, Expertise, and Collective Continuance: In the wake of pressing global environmental concerns like climate change, Indigenous people have been consulted more than ever before by journalists, scholars, and scientists. Much has been discussed in anthropological literature regarding traditional knowledge and its utility, contours, systematicity, and inseparability from knowledge holders and their communities. The ways in which knowledge holders and community representatives have also become experts deployed in a variety of contexts has arguably become a more urgent aspect for scrutiny, particularly in light of adaptation planning, climate-related reports, proposed policy changes, and media attention. Building on Callison and Young (2020), this paper looks closely at media in particular, drawing on multi-sited fieldwork with Indigenous journalists working in North American alternative and mainstream media in order to suggest insights for anthropologists from the distinctive approaches and methods being

pioneered by Indigenous journalists that address reciprocity, sovereignty, and "collective continuance" (Whyte, 2014). For example, Indigenous journalists actively work with and seek to understand issues like refusal (Simpson, 2014) and are likely to inquire from and within the needs and concerns of the communities they are reporting on (TallBear, 2014). Indigenous journalists are also aware of the histories of media coverage that their reporting counters, and the often under-recognized Indigenous publics they seek to serve. Presenter: Candis Callison

Tangibility through Collaboration: Benefit Sharing with Indigenous Peoples: As technology advances and next-gen sequencing techniques become not only accessible, but affordable, there is an increased interest from global Indigenous communities. However, as the rate for technological breakthroughs accelerate, so do the potentials for risks such as data breaches, misuse, and the breaking of cultural beliefs. Genomics offers potential solutions to some biological health outcomes, but benefit sharing historically has not been adequate, equal, or equitable. With specific regards to Indigenous communities, there is enormous potential for success and ethical outcomes, raising a question of how these outcomes are achieved. Through collaborative efforts that focus on mutual benefit with long-term relationship goals, we are transitioning to a new paradigm of benefit sharing. Indigenous communities are developing their own guidelines and frameworks for conducting research that produce self-determined products, but is a framework model sufficient in the wake of growing dangers? This paper discusses tangible outcomes at the intersection of bioethics in international genomics research and the work that occurs through unique dynamics of Indigenous methodological research. Presenter: Noah Collins

Genomics and Ethics Program from Native Students: exploring education, student support, and research: Institutions of education present an interesting space from which to engage Native American students and impact their potential successes. Knowledge and education have historically been used as tools of oppression and assimilation. In more recent times, research harms in the name of science have further complicated the relationship between Indigenous students and academia. Ultimately, this has resulted in a legacy that implicates educational spaces as unwelcoming and research as harmful to Indigenous learners and knowledge producers. The Genomics and Ethics Program for Native Students (GEN) was born out of the efforts of the NIH funded Center for the Ethics of

Indigenous Genomics Research (CEIGR) to foster collaborative learning opportunities for the advancement of Native American students in the ethical, social, and legal implications (ELSI) of genomics and research. The GEN program's goal has been to build sustainable, supportive learning environments and professional networks for Native students to pursue training and research opportunities that are grounded in Indigenous experiences. The GEN program is an interdisciplinary effort between CEIGR personnel, and a network of Indigenous professionals, Native-serving programs, tribal stakeholders, and other community partners committed to fostering the next generation of Native American researchers who will lead the field of genomics. The GEN program provides a student focused experience, builds networks and learning communities, and is grounded in collaboration and Indigenous approaches to science. We have identified that educational programs for Native American students require a unique set of investments from program personnel that includes adaptability, caring support, and strong senses of community. Presenter: Justin Lund

3-500

Reconstructing Kinship Practices in Archaeology: Materiality, Socio-cultural Anthropology, and Archaeogenetics

2:00 PM - 3:45 PM

TMCC - 501 A

Oral Presentation Session

REVIEWED BY:

Archaeology Division

ORGANIZER:

Sabina Cvecek (Field Museum of Natural History, Austrian Academy of Sciences)

CHAIR:

Sabina Cvecek (Field Museum of Natural History, Austrian Academy of Sciences)

PRESENTER:

Alissa Mittnik (Max Planck Institute for Evolutionary Anthropology), Maanasa Raghavan (University of Chicago), Catherine Frieman (Australian National University, School of Archaeology & Anthropology), Peter Whiteley (American Museum of Natural History), R. Alexander Bentley (University of Tennessee), Sabina Cvecek (Field Museum of Natural History, Austrian Academy of Sciences)

DISCUSSANT:

Sandra Bamford (University of Toronto, Department of Anthropology)

DESCRIPTION:

This session integrates archaeological studies of houses, genetics, and socio-cultural anthropological models to unpack the concept of kinship and gender in ancient societies. Archaeologists are faced with a persistent problem of how to best read and interpret the materiality of dwellings. Since the early days, socio-cultural anthropologists have recognized that dwellings are crucial in understanding thought and social organization. Hence, socio-cultural anthropologists' expertise is crucial in informing archaeologists about contemporary and recent kinship and gender practices, aiding the understanding of the distant past. In the past decade, archaeogenetics - the study of ancient DNA - has gained significance in modeling the organization of prehistoric communities. This development has reopened important questions about prehistoric gender and kinship. Archaeologists need to go beyond understanding kinship through biogenetic links and view it as a social practice, including commensality, adoption, reincarnation, shared suffering, friendship, and spatial proximity. These human relationships do not leave traces in DNA and isotopes, leaving an important puzzle to be solved. Moreover, anthropologists should highlight colonial and ethical concerns of conducting ancient DNA research on Indigenous populations and their ancestors. To understand the diversity of human possibilities in constructing kinship, a transdisciplinary approach is indispensable. Therefore, this session welcomes contributions from different anthropology subfields to address the historical legacy of kinship and gender studies in socio-cultural anthropology, which can aid in addressing current concerns in prehistoric archaeology. It welcomes experimentation in methods and approaches to understand unfamiliar grammars of materiality and transitions in kinship and gender patterns.

Archaeogenomic Insights into Kinship and Household Organization in Bronze Age Europe: The study of ancient DNA has enriched the archaeological toolkit by enabling us to integrate empirical evidence of genetic ancestry and biological relatedness into our interpretations of social practices in ancient societies. By reconstructing extended family pedigrees and combining them with isotopic, archaeological, and anthropological data, we can make inferences about the construction of social belonging, marital and residence practices, and mortuary customs. I will demonstrate the potential of

integrative archaeogenomic research using two case studies from different regions of Europe during the Bronze Age (ca. 3,100-1,000 BCE), which was characterized by cultural and technological transformation, intensifying mobility and connectivity, and increasing social stratification. In the Aegean, which was part of a wider Mediterranean network of trade and cultural exchange, ancient DNA allows us to trace transregional contacts and changes in material culture with instances of large-scale and individual mobility and genetic admixture. Despite the genetic diversity and shifts over time, as well as strikingly diverse funerary practices observed in the Bronze Age Aegean, we find commonalities across the region in the practice of burying close relatives together in intramural or other collective burial contexts. Furthermore, the importance of cousin marriage in this region is unparalleled in the archaeological record. In the Lech Valley in Southern Germany we find small farmstead communities that represented complex households comprising biologically related and unrelated individuals. These communities were part of a long-standing exogamous marriage network and followed patrilineal inheritance and residence conventions. Status differences within households were correlated with biological relatedness, and unrelated non-local women with high status may have played a special role as agents of supraregional communication and cultural transmission. Presenter: Alissa Mittnik (Max Planck Institute for Evolutionary Anthropology)

A paleogenetic lens on kinship and ethics: Paleogenetics has, in recent years, contributed multi-dimensional insights on the human past. While several studies investigate population origins, migrations, natural selection, and health and disease using ancient DNA, there is growing interest in the field to characterize fine-scale aspects of our past, such as genetic relationships between ancient individuals. My talk will cover case studies, limitations, and ethical reflections on kinship inferences using paleogenetics. New computational methods make use of sub-optimally preserved ancient DNA to discern the degree of genetic relatedness between individuals over a range of time scales. Coupling this analysis to information such as biological sex can aid in the construction of pedigrees relating ancient individuals. Multi-generational family structures have been identified using ancient DNA. On the other hand, new methods that look at identical stretches of DNA shared between ancient individuals from a larger group or population have shed light on the levels of parental relatedness over time. Studies implementing such methods have reported examples of close-kin

unions in the past, likely resulting from endogamous practices. The value of such inferences to archaeology and anthropology can be immense. The ability to infer the existence of biological relationships between ancient individuals as well as the nature of the relationship, is important when considering how social organization and kinship values have evolved over time and across space. At the same time, it is crucial to acknowledge that DNA only reflects genetic relationships and may, hence, not always paint a true or complete picture of kinship ties, as in the case of adoptions. Furthermore, as paleogenetics continues to add new insights on our species' past, there are increasing calls to recognize the ethical ramifications of this research, especially to Indigenous communities. Presenter: Maanasa Raghavan (University of Chicago) Matters of life and death: Kinwork at funerals: For decades, archaeologists have acknowledged that funerary contexts are imperfect mirrors of the living societies who assembled them. The dead, we well know, do not bury themselves. The production of funerary sites can be, and often is, an extended, contested, and carefully stage-managed process. These rites may well be designed with as much or more consideration for the future articulations of social relations as for accurately depicting their past conformations. Consequently, reconstructing social relationships—from status hierarchies to marriage patterns or more diffuse kin relations—is fraught. Yet funerary contexts and the human remains that derive from them are the source of much of the contextual data that contributes to genetic reconstructions of past social structures. These reconstructions centre patterns of biological relatedness and, through them, static and often heteronormative modes of relation. Here, we consider the funerary sphere as a site of kinwork. We argue that kinning practices form a key part of burial rites as the dead person or persons' relationships are reconsidered, renegotiated, transformed, or manipulated. The goal is to develop a more complex model of kin relations within funerary contexts in order to contribute to a more nuanced archaeology of social practice that compliments emerging discussions of family structure, kinship and relatedness. Presenter: Catherine Frieman (Australian National University, School of Archaeology & Anthropology)

Are descent groups and houses socio-evolutionary phenomena?: The house society model developed by Lévi-Strauss has been profitably extended to multiple social systems, both as observed ethnographically and as reconstructed from the archaeological record of settlement architecture. Structurally speaking, its

characteristic feature is to transcend lineality as the governing schema of social articulation. Conversely, the descent group model developed by structural-functionalism to explain myriad small-scale social systems privileged unilineality, notwithstanding Fortes' correlative notion of 'complementary filiation.' Do descent groups and houses occupy a socio-evolutionary series, are they constitutively opposed structural types, or are they alternative ways of framing co-eval social phenomena? How do they interact with kinship-terminologies? This paper revisits the question of kinship-system transformations, primarily from Native North American cases. Presenter: Peter Whiteley (American Museum of Natural History)

Multi-disciplinary approaches to reconstructing prehistoric kinship systems : While bioarchaeology is increasingly a means to study prehistoric kinship from human remains, assessment of sex-specific mobility in human communities cannot provide a full account of kinship systems, in all their diversity through time and space. Kinship systems are cultural systems that influence bioarchaeological patterns, as well as material culture social interactions and beliefs that are not discernible only from atoms or molecules. More traditional archaeological evidence, such as settlement and subsistence patterns, as well as linguistic evidence, can be revealing of ancient kinship. Large household complexes, for example, with communal courtyards can bring female kin together as multi-family compounds, facilitating collective child-rearing. I will approach this issue broadly, by starting with key theories of matri-centric hominin evolution and moving to multiple forms of evidence applied to kinship during the Neolithic transition to agriculture, as well as the heterogeneous resilience of matriliney. Through examples I propose that the best approach is multi-disciplinary: archaeologists need to apply as many different forms of evidence, as well as kinship theory, to reconstruct past kinship systems. Presenter: R. Alexander Bentley (University of Tennessee)

X-KIN: Exploring patterns of prehistoric kinship from socio-cultural anthropological perspectives: The X-KIN project aims at advancing our understanding of kinship in prehistory by taking an interdisciplinary approach that combines bioarchaeology, prehistoric archaeology, and socio-cultural anthropology within a unified analytical framework. This project will investigate how dwelling spaces and biological markers of kinship can be interpreted as 'material codes' of prehistoric kinship, leading to new insights into the social practices of prehistoric communities. Through a case study of four

prehistoric sites in southeastern Europe and Anatolia, the X-KIN project will investigate questions such as how ethnographic reports can help us understand the variability of kinship during prehistory, and how settlements, buildings, artifacts, and biological markers can be used to illuminate prehistoric kinship practices. This will be achieved through the triangulation of analytical methods and close collaboration between social anthropologists, archaeologists, and archaeogeneticists. By adopting this innovative approach, the X-KIN project will fill a critical gap in our understanding of prehistoric kinship and provide a valuable resource for archaeologists, cultural anthropologists, and bioarchaeologists alike. The results of this project will offer a new perspective on the complex social dynamics of prehistoric communities and contribute to our understanding of the cross-cultural diversity of kinship and gender practices. Presenter: Sabina Cvecek (Field Museum of Natural History, Austrian Academy of Sciences)

Relations in Transition: African and Caribbean Ethnographies of Marginality and Solidarity

2:00 PM - 3:45 PM TMCC - 714 B

Oral Presentation Session

REVIEWED BY:

Association of Black Anthropologists

ORGANIZER:

Maarit Forde (University of Helsinki, Social and Cultural Anthropology)

CHAIR:

Maarit Forde (University of Helsinki, Social and Cultural Anthropology)

PRESENTER:

Doreen Gordon ,Nadia Whiteman-Charles (University of Arizona),Florence Ncube (University of Johannesburg),Fabienne Valmond ,Shelene Gomes

DISCUSSANT:

Maarit Forde (University of Helsinki, Social and Cultural Anthropology)

DESCRIPTION:

Responding to the AAA/CASCA 2023 organising committee's invitation to think about transitions, in-betweenness, and transnationalism, the papers in this panel investigate relational infrastructures in ethnographic contexts marked by liminality or transition. The presenters consider care, solidarity, and

reciprocity, but also deeply hierarchical or disrupted relations as informed by conditions such as climate change, the Covid-19 pandemic, socioeconomic inequality, weakened public health and social services, drugs, and structural racism. While these conditions shape people's everyday lives, livelihoods, and social relations, they also engender possibilities for new kinds of alliances and solidarities. The interlocutors whose ideas and lived experiences form the foundation of this panel experience liminality and transition in different ways. For some, it results from a tangential or marginal relationship with the state: Florence Ncube works with young people using crystal meth in Mufakose Township in Zimbabwe, Nadia Whiteman-Charles examines young rock musicians and fans excluded from the Black Nationalist project in Jamaica, and Doreen Gordon studies rural, coastal communities in Jamaica dealing with climate change and the economic backlash of the pandemic. For others, a state of in-betweenness and transition is produced by transnational migration: Shelene Gomes examines care work, social reproduction, and gendered return migration in Trinidad, and Fabienne Valmond's work focuses on circulation of knowledge and care in the context of reproductive health in the African diaspora in Northern Europe. The panel's questions about social relations in marginal or liminal communities reflect the presenters' ethnographic interests, but also their own positionalities: they are from Jamaica, Trinidad and Tobago, Haiti, and South Africa, and have taught, or are currently teaching, in public universities in the Global South. Their locations in under-represented regions of global anthropological knowledge production add an important angle to their critical, feminist, and decolonial theory-building. The panel concludes with comments by the discussant, Maarit Forde, and a general Q&A.

Negotiating Change in Western Jamaica: This paper focuses on coastal communities in Western Jamaica whose residents have been experiencing multiple and intersecting crises such as climate change, declining fish stock, reduced access to traditional fishing beaches, unemployment and COVID-19 recovery. For decades, Western Jamaica has been affected by higher levels of poverty and inequality, migration, youth unemployment and agricultural decline, despite the importance of the tourism industry in this area. Coastal residents must individually and collectively face the challenge of sustaining their livelihoods in a difficult environment that poses existential threats (such as loss of livelihoods, food and water insecurity, ill-health, and the impact of natural disasters). Indeed, coastal residents are at the forefront of the battle with climate change, resulting in

more precarious livelihoods - especially for women, elderly, youth, farmers, and other vulnerable groups. The paper will discuss findings from an ethnographic pilot study carried out in six selected communities in Western Jamaica. Presenter: Doreen Gordon

Liminal Tastes and Moments of Communitas in the Jamaican Rock Music Scene : In Jamaica, the locally developed music genres of reggae and dancehall have become fundamental to nation-building and national identities. My paper queries Black Nationalism in postcolonial Jamaica by examining a marginal music genre that falls outside of this national soundtrack of reggae and dancehall: rock music. Through an ethnography of rock musicians and fans in Kingston, I highlight their syncretic tastes for both local and foreign styles of music and show how such tastes have marginalized the rock scene in the reproduction of Black Nationalist ideas of Jamaicanness. The practices and tastes of people in the rock scene are deemed inauthentic to the Jamaican way of life and contrary to Black Nationalist agendas. Pushed to the fringes of Jamaican cultural industries, rock musicians and their fans dwell in a liminal space. Drawing on Victor Turner's characterisation of the "three moments of communitas", I outline the historical development of the Jamaican rock music scene and discuss spontaneous, normative and ideological moments of communitas in the rock scene's progression from angsty teen rebellion to a tribe overprotective of their liminal tastes. These liminal tastes are lodged between the mainstream's production and consumption of reggae and dancehall and the alternative scene's adoption of "foreign" music; both deeply informed by local entanglements of race and class. Presenter: Nadia Whiteman-Charles (University of Arizona)

Crystal meth, the 'seized' body and the exclusion of youths from future-making in Mufakose, Harare: The paper explores the experience of being 'seized' by crystal meth among youths in Zimbabwe's marginalised urban community of Mufakose high density suburb. It foregrounds the 'seized body' as a lens in examining the meanings, constructions, experiences and practices associated with being seized in order to understand how the materiality of crystal meth influences the 'closing out' of youths from political participation and constructive future-making. The paper argues that crystal meth and the seized body can become useful capital in the hands of powerful groups that seek to exclude the youths from sustainable livelihoods and future-making. It asserts that while episodic bouts of seizure under the influence of crystal meth may seem a

momentary malfunction, such a breakdown need not be mistaken for a passing phase of experimentation. Rather, the bouts signify and forecast an endemic crisis for the structurally violated poor community of Mufakose. That is, the (ab)use of crystal meth has both instant and long-lasting negative social and experiential consequences for the youth. The paper draws from an ethnographic investigation among youths who (ab)use crystal meth in Mufakose. Deep hangouts, life histories and in-depth interviews were used to collect data. Analyses respectively draws on Agamben's (1990, 1999) concepts of chronicity and homo-sacer as well as Vigh's (2009) notion of social navigation. Presenter: Florence Ncube (University of Johannesburg)

Trying to Conceive: Infertility Forums, Knowledge, and Care in the Lives of African-descended women: The paper explores the significance of online forums in supporting the reproductive health of African-descended women in Northern Europe. While structural racism and migratory status can limit their access to public health and shape their encounters with medical professionals and institutions, infertility forums function as a space where women hoping to conceive can acquire and contribute to knowledge and encourage each other. Through digital and autoethnography, the study investigates how African-descended women in Northern European welfare states navigate the complexities of reproductive healthcare and utilize transnational, online resources and communities for support and information. The forums offer a perspective on medical pluralism in women's lives: my ethnography shows how people navigate infertility in the margins of public healthcare systems by balancing home remedies, biomedicines, religious healing, and other complementary treatments and how these frames of knowledge are reproduced and indexed in online interactions. The analysis highlights the significance of digital networks in enabling access to culturally relevant and language-appropriate information and fostering a sense of community and solidarity, but also acknowledges the limitations and challenges of online support networks, including issues of trust, credibility, and privacy. Presenter: Fabienne Valmond

Labours of Love in Trinidad and Tobago: Returnee Women's Care-Motivated Migration: This empirical study centres the ongoing experiences of nine highly skilled women return migrants to Trinidad and Tobago from various locations in the Global South and Global North. Guided by social reproduction theory, I detail the cumulative costs—financial, social, bodily, affective—that stem from the frictions of cultural norms

surrounding these women's "labours of love" to provide proximate care for elderly relatives. Women generally, including Caribbean women, have historically done productive and reproductive work that has been undervalued economically and socially by the state, family, and community, and rendered invisible. Migrant women have continued to fulfil these responsibilities transnationally even throughout the Covid-19 pandemic. Concurrently, labour emigration from the Caribbean to wealthier states across the Global North and South remains a route to improvement for persons and families. In these circumstances, who cares for the elderly at home? With ageing populations in many middle- to high-income developing countries, such as Trinidad and Tobago, and the contraction of state services accompanying neoliberal reforms, caring for the elderly becomes important to the state and how it allocates resources, as well as for families. Why do professional women voluntarily return home to perform this proximate care? In this presentation I argue that the cultural logics of kinship—with global gendered patterns and Caribbean particularities—provides cover for the undervaluing of migrant women's reproductive labour within the capitalist logics of work, thereby reproducing systemic inequalities. Presenter: Shelene Gomes

CHAIR:

Lynnette Arnold (University of Massachusetts, Amherst, Department of Anthropology)

PRESENTER:

Katherine Arnold-Murray (University of Colorado, Boulder), Timothy Loh (Massachusetts Institute of Technology), Sara Rosenau, Jiarui Sun

DISCUSSANT:

Sherina Feliciano-Santos (University of Michigan, Ann Arbor, Department of Anthropology), Netta Avineri, Sherina Feliciano-Santos (University of Michigan, Ann Arbor, Department of Anthropology)

DESCRIPTION:

The annual Gumperz Essay Prize of the Society for Linguistic Anthropology recognizes outstanding work by graduate students in the field. This session brings together the four finalists for this year's prize. All are invited to come hear about exciting cutting-edge research from emerging voices in linguistic anthropology.

Settle for Biden: The scalar production of a normative presidential candidate on Instagram: This paper performs a multimodal digital discourse analysis to examine how the 2020 Progressive social media political campaign called "Settle for Biden" successfully encouraged young Progressives to vote for Joe Biden. In contrast to previous U.S. presidential campaigns that highlight the extraordinary capabilities of their candidates, this campaign utilized the scalar production of normativity to highlight Biden's "mediocre" capabilities. The campaign's focus on "settling" for a mediocre candidate was feasible only in the sociopolitical context of 2020, at a time when Donald Trump's leadership had come to be perceived as chaotic and dangerous. While the upscaling language and communication style of Trump has been a popular site of exploration for linguists (Hall, Goldstein, & Ingram 2016; Sclafani 2018; Hodges 2020), I focus, in contrast, on the downscaling language of the campaign in its often humorous posts depicting Biden as a boring, normal candidate who is "good enough" to be president. While using humor to make salient the normal nature of Biden, the campaign uses semiotic strategies appealing to interconnected unmarked normativities of middle classness, Christianity, age, gender, and sexuality. Building on previous research within sociolinguistics and linguistic anthropology (Blommaert 2007; Carr & Lempert 2016; Hall, Levon, & Milani 2019), I adopt a scalar perspective as I view normativity as interactionally produced through appeals to scales constructed by centers of authority. To draw on Hall (2021), the campaign produces "language in the middle", constructing Biden as neither extraordinary nor reprehensible yet preferable to the abnormality of his competitor. Presenter: Katherine Arnold-Murray (University of Colorado, Boulder)

al-lugha al-'umm/'arabi mukassar: Competing discourses about Jordanian Sign Language (LIU) in Amman: This paper draws upon the tools of linguistic anthropology to examine competing discourses about Jordanian Sign Language (LIU, from the Arabic *lughat al-'ishara al-'urduniyya*) among both deaf and hearing people in Amman, based on ethnographic fieldwork at

an educational start-up for deaf children and at a deaf cultural center as part of a larger project on assistive technologies for deaf Jordanians. In these spaces, how the company and center staff discussed the use and value of LIU sometimes took on conflicting ideological tones: on the one hand, they would emphasize the importance of access to sign language for deaf children, which they would often describe as the "mother tongue" (*al-lugha al-'umm*) or "first language" (*al-lugha al-'ula*) of deaf people. On the other hand, especially at the deaf cultural center, they would make occasional comments that disparaged Jordanian Sign Language as a form of "broken Arabic" (*'arabi mukassar*). I argue that these contradictory discourses can be productively read as forms of rhetoric: for instance, calling LIU the "mother tongue" of deaf Jordanians is a way for the start-up staff to convince audiences to support their cause, while describing LIU as a form of "broken Arabic," while incorrect, is useful insofar as it asks students of sign language not to sign in conformity to Arabic grammar. I build on recent work on sign language ideologies (Kusters et al. 2020; Snoddon and De Meulder 2020) to argue that understanding these contradictory discourses requires attending to the contexts in which these discourses are deployed. Presenter: Timothy Loh (Massachusetts Institute of Technology)

Mock Koreaboo: Appropriating Appropriation: In the last decade, Korean pop music (K-pop) has garnered a large and passionate fanbase on the internet. One of the most notorious types of fan is the "Koreaboo", a pejorative term used for global fans perceived as wishing they could be Korean themselves and seen as being far too invested into K-pop itself at the expense of the rest of Korean culture. This paper examines the use of Korean by fans deemed Koreaboos and the way other K-pop fans use language to criticize the Koreaboo archetype. Specifically, this paper investigates a form of speech which I am terming "mock Koreaboo", a mock language variety (Hill, 1995) created by K-pop fans for the purpose of condemning the behaviors of the Koreaboo and positioning themselves as above them. This study is concerned with the following question: why do K-pop fans use mock Koreaboo? To investigate this question, I analyze social media posts using mock Koreaboo along with discussions of the Koreaboo in general. I argue that through the use of elitist stances (Jaworski & Thurlow, 2009), K-pop fans index their disapproval of Koreaboos and their perceived fetishization of Korean culture, creating a separate indexical order (Silverstein, 2003) through which to interpret Koreaboo speech. In the process, K-pop fans

signal their status as global, cosmopolitan citizens while positioning Korean culture as needing to be defended from those appropriating it. Presenter: Sara Rosenau

Platformative Rituals in Danmu: The Enregisterment of Rabbit Talk in Chinese Online Nationalism: This article investigates how language-in-use and digital platforms together facilitate the enregisterment of a specific kind of nationalistic discourse on the Chinese internet. While existing scholarship often associates Chinese online nationalism with state intervention and internet users' affective engagement, this article emphasizes the indispensable role played by the infrastructure of digital platforms as well as participants' various metapragmatic uptakes. Focusing on the case of user-generated live comments (danmu) for the popular animation series *Year, Hare, Affair*, I illustrate how metapragmatic accounts of viewers' platformative rituals—that is, patterned integrations of language and the platform's interface—achieve and condition the enregisterment of Rabbit Talk, a set of discourse associated with youth nationalism. Instead of taking online nationalism as a pre-given empirical fact, I bring together linguistic anthropology and platform studies to show how language and platform infrastructure collaboratively produce the persona of young nationalists, a social emblem rarely claimed by those who do the talk, yet constantly evoked by different groups of observers out of various ideological motivations. In so doing, this paper makes its methodological contribution by showcasing the importance of bringing together ethnographic attention on users' patterned behaviors and an understanding of the platformative logic that sets up the framework for online interactions. Presenter: Jiarui Sun

Storying Otherwise: On the Possibilities of Creative Ethnographic Writing, Session 3 of 4.

2:00 PM - 3:45 PM TMCC - 707

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Humanistic Anthropology

ORGANIZER:

Susan Frohlick (University of British Columbia, Okanagan, Department of Community, Culture and Global Studies)

CHAIR:

Laura Meek (University of British Columbia, Okanagan, Department of Community, Culture, and Global

Studies), Susan Frohlick (University of British Columbia, Okanagan, Department of Community, Culture and Global Studies)

PRESENTER:

Damina Khaira (Harvard University), Alicia Sliwinski (Wilfrid Laurier University), Khalil Habrih (University of Ottawa), Kaori Hatsumi (Seinan Gakuin University), Nataya Friedan

DISCUSSANT:

Petra Rethmann (McMaster University, Department of Anthropology)

DESCRIPTION:

This roundtable will explore the burgeoning genre of creative ethnographic writing with a focus on storying otherwise. We take inspiration from McKittrick's (2021) insistence that stories are themselves interventions with world-making potential, prompting us to inquire if storying otherwise might create possibilities for telling different stories and thus for potentiating and enacting different worlds. This question requires us to first recognize the ways in which disciplinary norms around knowledge-making and dissemination are entangled with anthropology's colonial histories and presents; the academy's neoliberal orientation; the imperial impetus behind state investment and funding; racialized, gendered, and heteronormative department cultures; differential distributions of risks and harms; and the non-innocent ways in which all these inhere in our body-minds. It also means that the choice of which stories we tell and of how we tell them matters, with stakes that are at once political, epistemic, ethical, and ontological (Hunt 2014, Meek and Morales Fontanilla 2022). Through storying otherwise there lies the potential to disrupt long-guarded boundaries including those between scholarship, politics, and creative writing. Reworking disciplinary practices around writing, this roundtable will explore storytelling as a form of speculative thinking-with-care (Puig de la Bellacasa 2012) that is committed to feminist, anti-racist, queer, and anticolonial worldmaking. In today's neoliberal academy, we face increasing demands for 'data,' in the form of objectified, rationalized, disciplined facts (Harvey and Moten 2013). Yet the work we do-- as fieldworkers, activists, teacher-scholars, community collaborators, and co-thinkers with myriad others--often unfolds in ways that resist and refuse the dictates of data-making (Tuck and Yang 2014). Such excesses may reside as ellipses, questions, disconcertments, or half-thoughts that populate our fieldnotes but never make it into the structuring form of journal articles (Frohlick 2022). A story, on the other hand, can remain open,

unresolved, and unsettling. This roundtable thus experiments with storying otherwise to disrupt enclosure and to harness the creativity, willfulness, and possibilities of stories that, through their refusal of reductive and instrumentalizing logics, 'do' other things. This roundtable will engage with these possibilities in a wide variety of ways. Panelists will reflect upon excesses in our fieldwork and fieldnotes to ask what storying these moments might potentiate. We will offer a critique of writing conventions that is performed through storying otherwise-- such as reading a partially 'cooked' poem or a narrative that has been stitched across/between 'raw' fieldnotes. Our roundtable will also consider how storytelling reworks prevailing epistemological frameworks, ontological certainties, and disciplinary norms; how telling certain stories in certain ways (and perhaps, opting not to tell others) facilitates ethical, interpersonal, and community obligations; and the possibilities and limitations of deploying stories in various registers-- as knowledge making, public engagement, or worlding practices, to name a few. Together we explore how storying otherwise brings knowledge, entities, relations, worlds into being through its enactment and how this endeavor might move anthropological 'work' into public audiences and spheres beyond the academy.

3-580

The Boycott of Israeli Institutions, Academic Freedom, and the Question of Palestine

2:00 PM - 3:45 PM **TMCC - 718 B**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Middle East Section

ORGANIZER:

Maya Wind (University of British Columbia, Department of Anthropology)

CHAIR:

Ilana Feldman (George Washington University)

PRESENTER:

Nadia Abu El-Haj (Barnard College), Darryl Li (University of Chicago, Department of Anthropology), M. Muhannad Ayyash (Mount Royal University), Maya Wind (University of British Columbia, Department of Anthropology)

DESCRIPTION:

The boycott of Israeli Institutions at the American Anthropological Association has been subject to

rigorous debate since the issue was first brought to the membership in 2013. Called for by Palestinian civil society, the boycott of Israeli universities is grounded in the institutional complicity of those universities in the ongoing infringements on Palestinian rights. Israeli higher education is imbricated in Israeli settler-colonialism and apartheid, and therefore in the violation of the rights of Palestinian citizens of Israel, Palestinians under military occupation, and Palestinian refugees. The movement for Boycott, Divestment, and Sanctions (BDS) seeks to address all three dimensions of Israeli colonialism. This roundtable seeks to contribute to the long-standing debate at the AAA and reflect on the last ten years, by examining the question of academic freedom in the context of Palestine. The roundtable will engage with new research on Israeli university complicity in Israeli colonialism and violations of international law, from campus infrastructures serving Israel's territorial and demographic project to academic disciplines conducting research for the Israeli security state and military industries. It will then consider the limits of academic freedom for Palestinian scholars and students. In Israeli universities, administrations restrict Palestinian knowledge production, pedagogy, and critical expression, while Palestinian universities under occupation face Israeli military bombardments, raids, and bureaucratic violence. Finally, it will address the ways in which attempts to discuss and advocate for Palestinian freedom are silenced in North American and European universities. The roundtable will situate the discussion of the academic boycott at AAA within larger debates about censorship and free speech in higher education. The speakers will reflect on the state and future of the campaign for the academic boycott and investigate how critical research, scholarship, and pedagogy can push against the imposed boundaries on the question of Palestine. Together, we will ask how the academic boycott might challenge us to redefine academic freedom? And how might it inform long-standing struggles by faculty and students to decolonize the university?

3-585

The Politics of Abundance: Commoning in an Era of Capitalist Austerity

2:00 PM - 3:45 PM **TMCC - 206 B**

Roundtable/Town Hall - In-Person

REVIEWED BY:

Critical Urban Anthropology Association

ORGANIZER:

Jeff Maskovsky (CUNY, Graduate Center, Department of Anthropology)

CHAIR:

Jeff Maskovsky (CUNY, Graduate Center, Department of Anthropology), Ida Susser (CUNY, Hunter College, Department of Anthropology)

PRESENTER:

Oana Mateescu (Babes-Bolyai University), Irina Carlota [Lotti] Silber (CUNY, City College, Department of Anthropology, Gender Studies, and International Studies), Jeff Maskovsky (CUNY, Graduate Center, Department of Anthropology), Ajantha Subramanian (Harvard University, Department of Anthropology), Gustav Peebles (The New School for Social Research, Department of Anthropology)

DISCUSSANT:

Ida Susser (CUNY, Hunter College, Department of Anthropology), Sarah Muir (CUNY, City College, Department of Anthropology, Gender Studies, and International Studies)

DESCRIPTION:

Scholars interested in new commoning practices are challenging governing logics rooted in austerity and are encouraging new ways of imagining change, transition, and transformation through a politics of abundance, not scarcity. This session considers the ways that public intellectuals, protagonists in political movements, and dissenters, disruptors, and insurgents from various locations within and across global North, East and South divides are working with the abundancy concept to expand the practice of commoning. We are hoping to encourage new theorizations that can help to imagine and practice justice, egalitarianism, anti- and post-capitalist/socialist politics, abolitionist politics, the transition to more inclusive, collaboratively governed societies, and positive ecological futures. We focus on recent theorizations of commoning/enclosures/containment that have gained traction among critical urbanists and critical scholars of mobility and migration, and we draw on new ethnographic and historical work on the politics of abundance. Working across these scholarly conversations, we seek to expand the understandings of abolition, markets, property, justice, egalitarianism, agonism, the public realm, and the political itself through engagement with abundance-scarcity thinking. Scholars working on urbanizing inequality, urban revolutions, violence, disability and war, crisis thinking,

and mobility and migration will find this session to be especially of interest.

3-515

The Role of Anthropology Journals in Promoting a Francophone Anthropology in the Americas

2:00 PM - 3:45 PM

TMCC - 605

Oral Presentation Session

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Natacha Gagné (Université Laval)

CHAIR:

Natacha Gagné (Université Laval)

PRESENTER:

Alexandrine Boudreault-Fournier (University of Victoria, Department of Anthropology), Natacha Gagné (Université Laval), Pascal-Olivier Pereira de Grandmont, Laurent JÉRÔME

DISCUSSANT:

Émile Duchesne (Université de Montréal), Robert Crepeau (University of Montreal)

DESCRIPTION:

How have journals contributed to the institutionalization and promotion of a francophone anthropology in the Americas? This is the question at the heart of this panel, which will examine the role of three Canadian journals: *Anthropologica*, a bilingual journal founded in 1955 that became the official journal of the Canadian Anthropology Society (CASCA) in 1998; *Recherches amérindiennes au Québec*, 'the only French-language Amerindianist journal in America' (Gélinas 2000), founded in 1971 and renamed *Revue d'études autochtones* in 2022; and *Anthropologie et sociétés*, founded in 1977, the only francophone journal specializing in anthropology in the country. From a historical perspective, we will look back at some important moments in the life of these journals, but also at their missions and characteristics in an attempt to better understand how they have contributed to the constitution and dynamic expansion of a francophone anthropology. We will also focus on the challenges and moments of transition that marked the life of these journals, which offered opportunities for anthropologists to reinvent themselves and innovate. In so doing, this session will contribute to documenting the history of francophone anthropology, with a

particular focus on its originality, thus contributing more generally to the history of anthropology in Canada.

Comment les revues ont-elles participé à l'institutionnalisation et à la promotion d'une anthropologie francophone dans les Amériques ? Voilà la question au cœur de ce panel qui se penchera sur le rôle de trois revues canadiennes : *Anthropologica*, une revue bilingue fondée en 1955 qui devint la revue officielle de la Société canadienne d'anthropologie (CASCA) en 1998 ; *Recherches amérindiennes au Québec*, « seule revue amérindianiste de langue française en Amérique » (Gélinas 2000), fondée en 1971 et renommée en 2022 *Revue d'études autochtones* ; et *Anthropologie et sociétés*, fondée en 1977, seule revue francophone spécialisée en anthropologie au pays. Dans une perspective historique, il s'agira donc de revenir sur certains moments importants de la vie de ces revues, mais également de s'attarder à leurs missions et caractéristiques dans l'idée de mieux comprendre comment elles ont œuvré à la constitution, puis à l'expansion dynamique d'une anthropologie francophone. Il s'agira aussi de s'attarder aux défis et moments de transition ayant marqué la vie de ces revues, lesquels offrirent des opportunités pour les anthropologues pour se réinventer et innover. Se faisant, cette session participera à documenter l'histoire de l'anthropologie francophone, en s'attachant notamment à ce qui en fait l'originalité, contribuant ainsi plus généralement à l'histoire de l'anthropologie au Canada.

From the Beginnings to the Open Access and Digital Turn: *Anthropologica* and the Francophone Presence: This presentation provides an overview of the history of the journal *Anthropologica*, the bilingual and official publication of the Canadian Anthropology Society (CASCA). *Anthropologica's* mandate is to reflect the range of research carried out by Canadian Anglophone and Francophone anthropologists and to disseminate that research within Canada and internationally in both languages. In 1998, *Anthropologica* merged with *Culture*, another journal initially associated with the Canadian Ethnological Society. Based on research of *Anthropologica's* publications since 1955 and *Culture* from 1981 to 1997 (recently digitized and available free of charge on the *Érudit* site), this presentation provides an overview of the Francophone presence in anthropology in Canada. By focusing on key moments in the history of *Anthropologica*, this presentation highlights the challenges, obstacles, but also the opportunities and successes of the journal in promoting social and cultural anthropology in French in a predominantly English-speaking environment. Finally,

the open access and digital transition achieved in 2020 offers new challenges for French-language publication while providing visibility for our discipline on a global scale. Presenter: Alexandrine Boudreault-Fournier (University of Victoria, Department of Anthropology)

The Life of *Anthropologie et sociétés* Through its Archives: The Period 1977-1987: In 1977, the first issue of *Anthropologie et sociétés* was published. It was the first and, to this day, the only French-language journal specializing in anthropology in Quebec and Canada. Although there is no inaugural editorial text announcing the journal's orientations, an editorial project has indeed guided its editors over the years. The idea of this paper is to trace this project from the journal's archives. From the outset, the journal's team set itself the mission of 'representing and promoting anthropological reflection in Quebec and making it known on the international scene' while being 'a crossroads for all currents of social anthropology and stimulating debate in the profession'. The pluralism that characterizes the journal is reflected in the variety of topics addressed in its thematic issues and the composition of its editorial board. The journal wishes to reach not only academic researchers, but also anthropologists inserted in the professional milieu and to participate in the public debate. Although the journal was created in the Department of Anthropology at Université Laval and is still published there, its vocation goes beyond the department and the challenge is to make it a must-read journal for anthropologists and social scientists in Quebec and internationally. However, a reading of the archives shows that the decision to publish a French-language journal was sometimes difficult to maintain in the face of other bilingual journals, the costs of translating the work of the growing number of English-speaking authors, and the objective of making Quebec and French-language anthropology known in English-speaking and international scientific circles. If the aims of the journal will change slightly over time through challenges of all kinds, including technological migrations and the fluctuations of funding, we will focus on the period 1977-1987, which was the period of the journal's foundation and its gradual professionalization. Presenter: Natacha Gagné (Université Laval)

Anthropologie et sociétés Since 1977: A Quantitative Overview: Founded in 1977 at Université Laval, in Quebec City, *Anthropologie et sociétés* is to this day the only French-language journal specialized in anthropology in Canada. Based on a quantitative study, the objective of this communication is to offer a broader panorama of the evolution and trends of the journal

since its birth through the analysis of the different types of content that have been published and the profiles of his different contributors. In order to draw this portrait, a review of all the issues of the journal published between 1977 and 2022 was carried out, taking into account the professional affiliation of the authors, their respective fields of research, their work environments, their gender, the geographical areas studied and the themes addressed. This longitudinal analysis has made it possible to highlight certain important aspects of the journal and its contribution to the constitution of a francophone anthropology in Canada. The themes of the issues reflect both its local roots and its participation in the debates and currents that animate the discipline abroad – particularly in France and the United States. We also observe, among these trends, a desire for internationalization as well as a diversification of the fields of research, work environments and affiliations of the contributors to the journal. Particular attention has also been paid to the more general evolution of the format of the issues and articles, which shows a process of institutionalization and professionalization punctuated by moments of experimentation and stabilization. Presenter: Pascal-Olivier Pereira de Grandmont

From *Recherches amérindiennes au Québec* to *Revue d'études autochtones*: A 50-Year Retrospective: This paper draws a portrait of the evolution of scientific publication in Quebec through more than 50 years of scientific publication in the pages of the journal *Recherches amérindiennes au Québec* (1971-2021) which was renamed *Revue d'études autochtones* from 2022. Initially conceived to provide a space of expression for francophone researchers in Native Studies, 50 years later the journal still fulfills this mission while transforming its practices and broadening its horizons. This is at least what a statistical study of the content of the articles published by the journal between 1971 and 2021 reveals. We note a constant diversification of the areas studied, of the origin of the authors and of the academic disciplines represented, although the formal and informal networks from which the journal benefits remain anchored in the Quebec context and largely in anthropology. The name change of the journal in 2022 was accompanied by an update of its mission. Still resolutely francophone, the journal plans to open up to indigenous issues around the world and to give greater space to indigenous voices. This renewal inevitably poses various challenges, including those of accessibility, outreach and dissemination of a francophone journal on an international scale, and the importance of non-academic contributions. Transitioning Queer Anthropology: Building Community in Queer Praxis

2:00 PM - 3:45 PM TMCC - 715 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Manjot Multani

CHAIR:

Manjot Multani

PRESENTER:

William Hébert (Carleton University), Michelle Marzullo (Human Sexuality Dept., California Institute of Integral Studies), Danielle Ellis (University of North Texas, Department of Anthropology)

DISCUSSANT:

Erika Finestone, Nesselte Falu (University of Texas at Austin)

DESCRIPTION:

At the 2022 AAA Annual Meeting in Seattle, the roundtable 'Unsettling Queer Anthropology: A Conversation to Renarrativize Towards a more Just Practice' created space for a critical conversation about new directions in queer anthropology. Our conversation picks up where this session left off to explore possibilities for the making/sustaining of an inclusive, collaborative, and accountable community of queer anthropologists. At last year's session, a diverse subset of international and intergenerational, queer anthropologists came together questioning their own transitions/shifts into locations within the field of queer anthropology, as well as their emerging application of the key theoretical and methodological tools in their own unique research areas. As we witness, with horror, the rise of anti-trans legislation across the US (and in other nation-states across the globe), we simultaneously acknowledge a growing countermovement of trans rights activism which powerfully resists the attempted erasure and violent dispossession of queer and gender diverse peoples. This one example alone raises the question of how we can stand in our roles as anthropologists and allies on the battleground of settler colonialism, late liberalism, ableism, carcerality, and conservatism to support and

sustain queer futurities. Recognizing the constant unsettling felt by those engaged in this work with variant and transitioning positionalities, we continue to question: How does queer anthropology hold up as students and scholars enter the 'real-world' and integrate their theoretical investigations within queer anthropology while remaining committed to their own and their interlocutors' material well-being and political freedom? As we continue to engage and theorize the ethnographic richness of contextualized, lived experiences of sexuality, race, gender, class, and other simultaneous/intersectional social locations, how can we use the tools of queer anthropology to mobilize, find each other, and deepen political solidarities with communities of non-hegemonic sexual, gendered, relational and political lives, especially LGBTQIA2S+, BIPOC, and disabled/crip lives (Allen 2016; Falu and Parker 2021)? Furthermore, how can queer anthropology and queer anthropologists help to imagine a political future that is radically different than the current, queering the 'possible' into the 'potential'? Presenters in this session will unpack these questions through reflections on their own unique locations in the field of queer anthropology and as queer anthropologists before opening the floor for an inclusive discussion with participants in attendance. This session recenters the Association for Queer Anthropology as a place for support and networking amongst intergenerational scholars in/of queer anthropology to advance the field. PRESENTER:

Ramazan Aras ,Marie-Eve Drouin-Gagné ,Iliana Viridiana Roa González ,María Cristina Manzano-Munguía

DESCRIPTION:

In multiple socio-cultural regions across the world educational policies have been imposed over centuries with the objective of creating and promoting knowledge as part of the project of Colonial Modernity (Quijano, 1991). In the last two decades we, the scholars of underrepresented minorities, witnessed the inclusion of socio-cultural transitions in models of inter-learning which included, but were not limited to, social inclusion, culture of emotions, autonomy, multilingualism and citizenships among children and youth (see Manzano-Munguía and López, 2022). Therefore, we are interested in creating spaces for conversation which represent the efforts located in different political geographies across the world. We call for interdisciplinary, comprehensive and horizontal approaches to contribute significantly in our understanding of horizontal knowledge while creating the curricula, participatory educational projects and programs oriented to universal access to science, as well as the socio-educational dynamics in knowledge building, feelings and emotions conducive to knowledge constructions and violence survivors. Women, children and youth are the social actors of popular pedagogies and of human mobility which represent a special interest in our conversations. References Quijano, Aníbal. 1991. (2022). *The Nigigua community jagüey: a sanctuary of Indigen*

Authoritarian Secularism, Education and Religious Learning Practices : Education has been one of the most operative and persuasive apparatuses in the process of making of a new nation-state and embodiment of imagined community. In this modernist project production of knowledge, secularism, positivism, evolutionism and materialism were acknowledged as the fundamental bases of this new paradigm. Therefore, education system was captured, uprooted and transformed into a battle ground between the secular modernist paradigm and religious epistemology and traditions. Education mechanisms were confiscated by the state in order to create a Kemalist secular hegemony

in social, cultural and political domains. The Eurocentric nature and character of modern secular Turkish nation-state resonates what Anibal Quijano called “colonial modernity” in diverse aspects which are going to be traced in this work. This paper aims to unveil violent secular politics of Turkish modernization process in the Republican period which is based on European modernity-rationality and how religious (Islamic) epistemic forms and traditions were targeted and suffocated systematically during the single-party era (1923-1945). By an analysis of narratives of children and youth who survived this period, this paper reveals diverse tactics and daily practices of ordinary religious Muslim subjects and their struggle of resisting that education system. Indigenizing the Academy: Learning from Indigenous Education Land-Based and Intercultural Pedagogies: This paper explores trans-systemic approaches as a possible avenue for 'Indigenizing the Academy' and, more specifically, what Indigenous higher education programs and institutions can contribute to a trans-systemic approach to education. Considering two existing models encountered in my doctoral research, namely the intercultural approach as developed by the Andes (García et al., 2004; Mato, 2009; Walsh 2012), and land-based pedagogy as developed in North America (Coulhard, 2017). I argue they present trans-systemic elements that would allow us to re-think the frameworks in which to engage with Indigenous Peoples' rights and knowledge systems in the mainstream academy. What could be learned from the principles and practices of these two Indigenous higher education philosophies to articulate Indigenous knowledge into trans-systemic education in the mainstream academy in ways that foster solidarity and mutual understanding between Indigenous and non-Indigenous people? Presenter: Marie-Eve Drouin-Gagné

Challenges and successes of the intercultural education: experiences of students from Indigenous communities: This proposal tries to analyze the educational experiences of students from Indigenous communities in their transit through higher education. In Mexico, the higher education system is diversified and segmented, that is, there are different types of educational offer, which

differ in budget, location, infrastructure, educational model and number of students. This makes not only educational institutions different, but also the student experience between institutions and within institutions. One example is the case of students from native communities who access different types of higher education, where they share the infrastructure, the educational model, and the classrooms with their peers, but not the same experiences and this makes their transition more complex inside the university. Here I present some of my findings in the field while currently working on my PhD in Social Anthropology at the Center for Research and Higher Studies in Social Anthropology (CIESAS-Mexico City). This work is divided into two large sections. The first one, covers the educational trajectories of students in basic and upper secondary education, to observe the challenges students face while pursuing their undergraduate education, such as discrimination, management fragmentation, learning or reinforcement of their mother tongue and their decision making process for continuing their studies. In the second section, the analysis is limited to the experiences of higher level students and how their transition has been mediating university education with migration, discrimination and inequality, among other aspects that are present. Presenter: Iliana Viridiana Roa González

From academic practice to community bonding: Intercultural education a response to Indigenous needs: The Intercultural University of the State of Puebla (UIEP) is located in San Marcos Tlacoyalco, Puebla, Mexico. This university serves the Indigenous community living in the southern part of the state of Puebla and surrounding areas mostly related to people who speak Nguigua, totonaca and nahuatl. Since the fall of 2020 (in the middle of COVID-19 pandemic) a group of researchers (including undergraduate and graduate students) have been conducting fieldwork in San Marcos Tlacoyalco and at the Intercultural University (UIEP). Despite the different lines of research and findings, here I want to explore how the students of Lengua y Cultura (Language and Culture) relate and create community bonds while carrying out community research projects. Despite the fact that these projects originally served the interests of the academia (the institution), in the practice they turned out to serve community needs and created channels of communication and bonds between and among community members. Consequently, first I look at students' agency while designing and undertaking students projects and assignments that relate, but are limited to, the revival of the Nguigua language, environment preservation, and alternative medicine practices within a multicultural and

multilingual setting. Presenter: María Cristina Manzano-Munguía

DISCUSSANT:

Jacob Hickman (Brigham Young University)

DESCRIPTION:

For the last quarter century, Belfast has been trapped in a prolonged moment of critical transition. Beginning with the Good Friday agreement in 1998, the lingering 'post-conflict' transition context has lasted nearly as long as the period of the Troubles from which it ostensibly represents a transition. Despite decades of reforms and inter-party collaborations, Northern Ireland never really seems to move beyond this transitional state, marked by changes ranging from Stormont stalemates to Brexit. The Northern Ireland Protocol provides a constant reminder of the dangers of the re-emergence of a land border or the continual prospect of a referendum, all of which are imagined to precipitate a return of widespread civil violence. Collectively, the papers in this panel consider how political identities are maintained, transformed, or discarded, in this oscillating moment of ostensible post-conflict transition. With its rich history of aural and visual art, Belfast provides an ideal space for understanding how political and religious identities are communicated through creative expressions, including how communities resist dominant discourses of sectarianism, or even post-sectarianism. For example, contemporary artists use shared community art to alter the image of Belfast in an attempt to distance the present city from its violent history. Other local art has emerged very recently in reaction to the United Kingdom's withdrawal from the European Union, giving insight into how shifting political

landscapes affect cultural memory. The relationships between music producers and consumers within the religious and political environment of Belfast demonstrate how artists struggle to either maintain or move beyond sectarian dynamics within the community. Young performers in the contemporary punk scene are also reacting to new political events and environments, shedding light on the process by which a counterculture develops its own rebellious sub-counterculture. This panel begins with a multimodal presentation that resulted from a collaborative ethnographic project in Belfast. This ethnographic film brings together media that take seek to understand how these artists take advantage of the affordances of music, visual representation (both still imagery and film), and other media to undertake the contested representations of religion and politics in this community, followed by four papers that analyze specific media at the core of these distinct efforts to reimagine a post-Troubles Belfast.

Punk Solutions: Understanding the Relationship of Rock Music and Sectarian Life in Northern Ireland: Since the 1970s, punk rock has been popular in cities across Northern Ireland. During the Troubles, many young people chose to participate in the punk scene as a direct act of rebellion, rejecting the established dichotomy between the Protestant loyalists and the Catholic nationalists. In a highly divisive society, punk rock emerged as a third option for youth who did not want to take part in the sectarian conflict. Even more than avoiding joining either side, punk rock provided a way to reject the very ideology that framed their world as a total dual division marked by violence. Decades later, the political and domestic climate of Belfast has changed dramatically, but the city is still affected by the lasting influence of the Troubles. As many in the city attempt to encourage a transition from its violent history to a more peaceful future, the punk scene is also adapting to reflect the changing values and hopes of young adults today. This paper explores the ways in which the contemporary punk scene is changing in reaction to changing politics, especially the way that young adults in Belfast are using punk music to reject the earlier punk culture of rejection and rebellion; how a counterculture gives rise to its own rebellious sub-counterculture. Presenter: Soren Pearce (Brigham Young University)

Sectarian Resistance to Progressive Movements in Belfast Music: Relations between venues, performers, and consumers determine the ways in which music in Belfast preserves traditional sectarian values. After twenty-five years of ostensible "peace", these sectarian

dynamics have crippled their progressive efforts for peace. This paper looks at how music functions as a symbol of self-expression and identity, and shows the transformative effects involved in reconstructing or fortifying structures of national identity. Despite the tendency toward segregation of Nationalist and Unionist communities, which one would imagine would polarize identity within the music scene, many musicians are tuning their politics in new ways that undercut these sectarian imaginings of Northern Ireland society. This causes music to then question the structures of ethno-religious identification by undercutting the dichotomous identities or oppose the structures by creating alternative identities. The progressive push for peace drives the unification process and proposes the restructuring of traditional identities. These efforts are obstructed by broader sectarian identities formed through a history of oppression and violence. Consumer participation and performance of music creates an atmosphere that cannot be accurately depicted through logocentric methods. Multimodal methods depict these key performative aspects of subcultural identities. The binary music scene of northern Ireland functions to support the traditional sectarian ideals while simultaneously pushing toward reform of social structures in communal unification. Presenter: Joshua Booher

(Re)painting Belfast: Art as a Medium for Transforming Sectarian Identities: Since the beginning of the twentieth century, Belfast artists have employed public and private infrastructure as a mode for inter-communal dialogue. With paint in hand, these artists have used city walls to establish and reinforce visual symbols within Unionist and Nationalist communities. One contemporary art movement in Belfast continues as a medium for expressing current political dialogues and transforming community identities embedded within the conflicting groups. Activist artists represent community voices through their art as they move away from themes of political conflict towards reimagined reflections of the city. Through these efforts, artists redraw the image of the city through public institutions and spaces, contesting and recasting concepts such as sectarianism, the role of religion in society, and how public representation shapes or challenges the relationships between space, community, and ethno-religious identity. Art acts as a window into the city's current transitional state by portraying contemporary community values regarding the modern political context through visual means. Both the image of Belfast and the sectarian identities are transformed through the creation of new visual symbols and the re-signification

and re-indexicalization of existing political and religious symbols. These transformations occur through public spatial platforms including community art galleries and wall murals. Whether displayed through the work of contemporary artists or the alteration of historical wall murals, art is both a reflection of and an agent in the transformation of community identities within Belfast. ORGANIZER:

Mark McIntyre

CHAIR:

Mark McIntyre

PRESENTER:

Xue Ma ,Anureet Lotay (University of Victoria, Department of Anthropology),Han Tao ,Mark McIntyre

DESCRIPTION:

The onset of the COVID-19 pandemic resulted in interruptions to research and necessitated a shift to remote learning worldwide. Many researchers found themselves adapting projects to incorporate online research methods due to restrictions on face-to-face interactions, travel, and limited access to research facilities. This roundtable discussion seeks to interrogate how our collective experience of anthropological research and work—transitioning from face-to-face to virtual environments—helps us to rethink existing theories and paradigms about virtual environments with regard to research, pedagogy, and everyday life. The advent of smartphones, social media, and the participatory web has changed the way we perceive the Internet. Emerging online modes of sociality signify not only the blurred boundary between online and offline daily life, but also online and offline ethnographic fieldwork. Central to this discussion is the tendency that favours the 'real' or the 'authentic' rather than the digitally mediated identity or representation. Scholars (Hine 2015; Beaulieu 2007; Kozinets 2010) have problematized the boundaries between the 'online' and

'offline', recognizing the complex relationship between the two, and that the online world should not be seen as a self-contained sphere separate from everyday offline activities (Miller and Slater, 2003; Miller et al., 2016). However, Boellstorff argues that online worlds are, in their own right, virtual places, and are real places that must be understood in their own terms (Boellstorff 2016: 395). This existing foundation of anthropological research on virtual environments and sociality foregrounds this discussion and also signals the need for new understandings of how these technologies are experienced and managed in the everyday lives of people following the rapid expansion and ubiquity of digital media technologies globally, which was further precipitated by the COVID-19 pandemic. The questions for anthropologists doing online/offline ethnographic research then shift to more nuanced ones, such as dealing with changing roles and expectations for both fieldworkers, participants, and stakeholders as they pertain to how we exist and work within the continuities and discontinuities of virtual work. Panelists will reflect on their diverse field experiences before and during the pandemic to ask how states of in-betweenness inherent in virtual research imply dynamics of continuity, uncertainty, transition, and openness for research in anthropology.

(En) Countering Misunderstanding and Misrepresentations of Mental Health with Ethnography

4:15 PM - 6:00 PM TMCC - 206 F

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Jung Eun Kwon

PRESENTER:

Faith Cole ,Jung Eun Kwon ,Loa Gordon (McMaster University),Brittany Franck ,Farzana Habib

DESCRIPTION:

The presentations convened in this session share a vital concern with misunderstandings and misconceptions of mental health lives and conditions. Based on research from a range of geopolitical and cultural contexts, the presentations illuminate how such misunderstandings are largely entrenched in and driven by hegemonic biomedical models and neoliberal assertions about individual responsibility for well-being produced in daily

life and institutional settings. Such pathologizing processes take on meaning in contexts shaped by aspects including but not limited to gender norms, intergenerational differences, and cross-cultural encounters. Ethnographic research illustrates that strategies people cultivate to navigate and struggle with daily life and their broader worlds are often dismissed by myopic viewpoints, and that they also provide examples of 'self-care' and how to create livable worlds.

Mental Health Care in Transition: Contested Expertise in the Movement for Deinstitutionalization in Argentina: In 2010, Argentina enacted legislation mandating the deinstitutionalization of mental health care: prohibiting the creation of new psychiatric hospitals, regulating inpatient psychiatric care, and encouraging community-based mental health services. The National Mental Health Law cites provincial legislation as antecedents and echoes principles of the global mental health movement. More than a decade after implementation, however, debates about how to restructure mental health care in Argentina are far from settled. In 2019, the Association of Argentine Psychiatrists critiqued the 2010 law for imposing the prohibition of asylums and the marginalization of psychiatry, ideas developed in 'faraway lands' (Comisión Directiva Asociación Psiquiatras Argentinos 2019, 2, 3). Indeed, global mental health recommendations were conceptualized for settings where psychotherapeutic resources were scarce. Argentina, in contrast, has the highest per capita ratio of psychologists in the world and a robust history of activism around mental health care reform, especially from provinces such as Río Negro. This paper explores how global mental health principles were taken up, contested, and reformulated during the development of Argentina's 2010 National Mental Health Law, centering Bemme and Kirmayer's proposal to investigate 'in whose names and terms, and to what ends, 'mental health' is configured and intervened upon' (Bemme and Kirmayer 2020). I combine archival research with in-depth interviews of policymakers and practitioners from Buenos Aires and Río Negro to contextualize the development of the 2010 legislation in relationship to the emergence of global mental health principles, as well as in relationship to local histories of mental health care reform. Presenter: Faith Cole

Beyond the Narrow Understanding of Suicide and Care: South Korea's Suicide Prevention Project from the Perspective of Young Women: This research examines young women's experiences of mental distress and care, and compares those with the South Korean state's governance of suicide through prevention. Despite the

South Korean government's commitment to suicide prevention and its ongoing efforts since 2005, younger Koreans, particularly young women, seem to be hesitant in utilizing the services provided by the state. This hesitancy is evident from their low interest and lack of participation in these services, and instead seeking private psychiatric and psychological services that require payment. This study aims to investigate the underlying rationales for this gap between the state's approach to suicide prevention and the perceptions of young women. To achieve this, the researcher conducted fifteen months of ethnographic fieldwork in Seoul, South Korea, involving participant observations, interviews, and analyses of governmental documents. Through this research, the narrow and medicalized approaches of the state in understanding mental distress and suicide, and its standardized bureaucratic protocols, are criticized. I draw on the narratives of young women to highlight their experiences of social exclusion and discrimination within social groups such as family, school, and workplaces that have led to their mental distress and suicidal thoughts/attempts. Women are under immense pressure to conform to societal norms, which often makes them suppress their own feelings and desires, leading to self-doubt and self-hatred. In this context, women increasingly desire agency in determining the course of their lives, including how it ends. The goal of my study is to expand the discussion on conditional and unconditional care in terms of the care receivers' identities and the conformity to existing systems or social norms. I situate my research within scholarly conversation about bureaucracy, anonymity, and affinity. Presenter: Jung Eun Kwon

The Bubble-bath-ification of Self-care: Problematizing Rest in Self-directed Mental Health Care Promotion: Self-care movements were born out of activist need for 'self-preservation' among marginalized groups encountering systemic barriers to well-being. Emergent anthropological conversations recognize that while self-directed care can be a 'tactic for survival' among the most vulnerable, processes of commodification and pressures of neoliberalization can divorce self-care from its radical roots. While self-directed configurations of care are increasingly prevalent in mental health promotion and programming, the 'responsibilization' of people as simultaneous providers and recipients of their own care has yet to be adequately investigated as a lived experience among self care's practitioners. Drawing from cross-provincial fieldwork at mental health events across Canada, I investigate the emergence of Rest as a key discourse in institutional

settings where encouragements to take breaks and incentives to be idle are permeative. This paper contends with the type of subjectivities that are created when self-care divests itself from activeness to an ethos of inactivity in the name of psychological well-being. Data involves fieldwork, interviews, and archival analysis in conversation with students from several Canadian universities, the stakeholders and staff of their Student Wellness Services, and representatives from national community mental health organizations. Findings reveal that practitioners of self-care desire purposeful activity, which conflicts with institutional invitations to Rest – invitations that can rarely be actualized due to superseding demands of productivity. Outlining provocations with theoretical and clinical relevance, this paper also contends with problematics of discouraging doing as a mode of healing when undoing structures of inequity is a primary goal among young Canadians. Presenter: Loa Gordon (McMaster University)

"It Will Always Be Work': Borderline Personality Disorder, Recovery and Struggle: Borderline personality disorder (BPD) has a fraught history in U.S. psychiatry of being stigmatized as untreatable and hopeless. Recently, BPD advocates have countered this notion, citing clinical studies suggesting people with BPD can achieve remission of symptoms and recover. However, my (auto)ethnographic research with adults living with BPD suggests that while hope for recovery is necessary, a focus on symptomatic remission can obscure the pain and daily work that are at the heart of living with BPD. In this paper, drawing on findings from my ongoing dissertation research, I will reflect on the usefulness of the concept of 'struggle' (Jenkins 2015; Desjarlais 1994) in understanding the lived experience of BPD, and the ways in which 'symptoms' and 'coping' can be potentially helpful yet inadequate and/or limiting concepts in both the analysis and subjective experience of BPD. How might the concept of ongoing struggle, and a methodology focused on the everyday, validate and illuminate the work it takes to make BPD livable without pathologizing BPD as a set of chronic symptoms (and therefore untreatable or hopeless)? Can we understand struggle in the sense of endurance and even improvement, rather than equating it necessarily (only) with suffering? Presenter: Brittany Franck

Between and between: Unraveling the perception of mental illness and health-seeking behaviour of second-generation Bangladeshi migrants in the UK: Between and between: Unraveling the perception of mental illness and health-seeking behaviour of second-generation Bangladeshi migrants in the UK This study aims to

understand the perception of mental illness and in-betweenness of health-seeking behaviour of second-generation Bangladeshi migrants in the UK. The data of this study was collected using different online interview platforms during Covid-19. Most of the Bangladeshi migrants came to the UK from Sylhet district of Bangladesh. For them, mental illness is primarily misunderstood, whereas stigma and shame are associated with it. First generation Bangladeshi migrants carries their beliefs and values from Bangladesh to the UK and impose it to their next generation. However, second-generation Bangladeshi migrants' perception and explanation regarding their mental illness is quite different from the older generation yet, they prefer both biomedical and traditional treatment like their older generation. In these contexts, this study will explore the in-betweenness of the concept tradition and modernity in the context of second-generation Bangladeshi migrants' mental health-seeking patterns. This study will demonstrate that the concept of tradition and modernity are paradoxical or transitory and second-generation Bangladeshi migrants are passing their life with myriad of transitions regarding the treatment seeking pattern of mental illness in the UK. Further analysis will explore the medical tourism of second-generation Bangladeshi migrants like their older counterparts as they are influenced by their older counterparts for their treatment of mental illness. Keywords: second-generation, mental illness, Bangladeshi migrants, tradition, modernity, in-betweenness/transitions Presenter: Farzana Habib

Activist Methodologies for the Future: Engaged Pedagogy and Research in Anthropology

4:15 PM - 6:00 PM TMCC - 714 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Canadian Anthropology Society/Société canadienne d'anthropologie (CASCA)

ORGANIZER:

Karine Vanthuyne (University of Ottawa)

CHAIR:

Larisa Kurtovic (University of Ottawa)

PRESENTER:

Marie Lily Jiapizian (University of Ottawa), Megan Blanche (University of Ottawa), Gabrielle Richards (University of Ottawa)

DISCUSSANT:

Nelli Sargsyan (Emerson College, Institute for Liberal Arts & Interdisciplinary Studies)

DESCRIPTION:

North American activist anthropological engagements are not new. They go back to the early 20th century when Franz Boas challenged the scientific racism of Victorian anthropology to insist on racial equality – albeit in ways that reinforced the racial common sense (Baker 2021). The neoliberal restructuring of academia, which rewards fast scholarship and publication, however, stands at odds with the practice of socially responsible research which requires the time and space for nurturing relationships. The privatization of research funding, the shift to underpaid, devalued academic labor, combined with the emphasis on individual advancement over and against community concerns (Navarro 2017) have all contributed to increasingly extractivist ethnographic research practices (Burman 2018). To be sure, more recent calls to decolonize education, which gathered momentum in Canada following the Truth and Reconciliation Commissions' Call to Action in 2015, have prompted university administration and faculty to revisit their relationship with the Indigenous communities whose territories their institutions occupy. In their strategic plans, most Canadian post-secondary institutions have expressed more tangible commitments to Indigenous peoples (Raffoul et al. 2022). Yet, as scholars of liberal states' policies of recognition and inclusion have already pointed out (e.g., Povinelli 2002; Coulthard 2014), these developments seem to be more about neutralizing the critique of higher education institutions' deeply ingrained coloniality than about radically transforming existing teaching and research practices (Gaudry and Lorenz 2018). Conditionally included, Indigenous knowledges are to remain on the sidelines, or be forced into existing academic disciplines, where they can be conscripted to reinforce institutional whiteness (Ahmed 2012), instead of disrupting Euro-Canadian philosophies' claim to universality (Battiste 2013). In this roundtable, we ask: In an era of dominating market logics, extractivist research practices, and enduring settler colonial material and symbolic violence, what does it mean to place emphasis on knowledge co-creation with the communities within which we conduct our research, so as to reimagine researcher accountability as an ethic and a practice? Is it possible to leverage knowledge co-production practices that strive not only to document or theorize, but to also affect conditions on the ground, in (dare we dream) transformative ways? This roundtable gathers

professors and students who have since 2022 participated in the University of Ottawa's Laboratory for Engaged Research and the adjacent pedagogical innovation project 'Activist Research Workshop.' The aim of this laboratory is to bring together uOttawa faculty, and graduate students who are interested in the kinds of scholarly research that seek to actively collaborate with movements focused on issues of social justice-including racial, Indigenous, migrant and climate justice, but also issues like policing and carceral violence, and water rights and protections, among others. Together, we will reflect on the openings and challenges each of us met, as we co-labored from a diversity of positionalities to deepen our understanding of engaged and activist methodologies.

Affect and Identity in Colonial and Indigenous Latin America

4:15 PM - 6:00 PM TMCC - 205 A

Oral Presentation Session

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

ORGANIZER:

Travis Fink (Tulane University, Department of Anthropology)

PRESENTER:

Sarah Saffa (Oklahoma State University), Aleksandra Wierucka, Travis Fink (Tulane University, Department of Anthropology), Elise Hjalmarson (Graduate Institute of International and Development Studies)

DESCRIPTION:

Anthropological investigation can reveal how collective identity and understandings of self are emotionally charged, even constructed and reconstructed through the feelings such as longing, abjection, solidarity, and deference. In this panel, anthropologists of Latin America examine such construction of ethnic and national identities, of spiritual and religious figures, and familiar honor and its transgressors through inquiries that attend to emotion and feeling. Mixtec codices depict the bodily practice of humans carrying and being carried by other humans, marking the labor practice of *corvée* as well as religious distinction and ceremonial labor. Stigmatized the colonial encounter as essentially satanic, Amazonian shamanism continues to be the subject of misrepresentation, as a survey of current cultural texts reveals: rather than understood on its own

terms, it is characterized as either inscrutable or a purely medical practice. In the legal defenses offered by offenders accused of incest, a researcher finds rhetoric meant to remove stigma and revulsion, to 'deincestualize' these sexual encounters. The violence attending international and interethnic warfare in Ecuador served as the context for an emerging Shiwiar identity in the twentieth century, as recorded in oral history interviews. This identity has shifted further in response to legal recognition of Indigenous communities. Finally, Cuban migrants express loss and longing for their homeland in Spain, cultivate a morose affective closeness and building community in exile.

Deincestualizing Incest in Colonial Guatemala: Incest taboos are universal to human societies, though their definitions have differed through time and space. For Spain and its American colonies, the legal definition of incest was quite broad, including sexual relations with various types of kin among others. Various authors have addressed the topic of incest in colonial Latin America (e.g., Floris Margadant 2001, Jaffary 2007, Penyak 2016, Rodríguez Sáenz 2005 [1994]), and Saffa 2019, 2021). However, the ways in which incestuous offenders and their contemporaries utilized kinship norms to explain or justify a breach of incest codes merits further exploration. The nature of this process is of particular significance considering that incestuous crime often intersected with sexual violence. This paper explores this phenomenon through examination of incestuous offenders who were tried in the secular courts of colonial Guatemala. It finds that incestuous offenders and their peers were able to effectively, though not necessarily intentionally, deincestualize-or render less incestuous-a sexual encounter by appealing to other cultural norms related to kin relations. These included references to a cultural emphasis on blood ties, assumptions about marital relations, and a culture of honor. Such rhetorical devices functioned to both subtly and explicitly diminish the incestuous aspects of a sexual encounter, potentially rendering it more culturally intelligible in the process. This, in turn, had the power to influence behavior within and without the legal realm. Presenter: Sarah Saffa (Oklahoma State University)

An Image of Amazonian Shamanistic Practices in Western Popular Cultural Texts: Among the non-European cultural practices, the greatest emotions in the Western world are still evoked by shamanism. It is still mysterious, not fully explained and disputable, and yet it was practiced (and partly still is) on almost all continents. In the Amazon, shamanism is very diverse,

nevertheless, there are some common elements that are characteristic for the region's practices. From the beginning of geographic discoveries and later colonization, in Western world shamanism was seen as an activity of the devil – communicating with spiritual beings to heal or retrieve life teachings was not within the Christian framework of approaching life and religion. This image is still valid - despite the history of research and gaining knowledge about Amazonian shamanistic practices, the popular image of it is far from reality. In widely available texts of culture, shamanism is most often presented in two ways: as an incomprehensible practice (a kind of 'secret knowledge') or as a matter of healing (not necessarily spiritual, but rather as herbal healing practices). Through an analysis of more than sixty Western cultural text from the first two decades of twenty first century I aim to prove that the image of shamanism in Western popular culture did not go through decolonizing process and is not shown using postcolonial theory. Presenter: Aleksandra Wierucka

Shiwiar Winiawai! Shiwiar Identity Formation and Transformation in the Ecuadorian Amazon: This paper will examine the ethnogenesis of the Shiwiar people of the Ecuadorian Amazon, and their conceptions of history and ethnic identity. Using oral history interviewing with Shiwiar men and women from multiple generations, this paper aims to understand the development of the Shiwiar ethnic identity in relation to neighboring ethnic groups like the Achuar, Andwa, and Pastaza Runa (Kichwa) peoples. I argue that the Shiwiar developed a distinct ethnic identity in the decades following the Guerra del 41 war between Ecuador and Peru, and that intraethnic warfare in the Achuar territory led to the development of the Shiwiar ethnic identity. I examine how Shiwiar identity is understood over generations and how ethnic identity is becoming less fluid as indigenous territories and affiliation are becoming more rigid and formally demarcated due to conflicts and incorporation into the Ecuadorian State. Presenter: Travis Fink (Tulane University, Department of Anthropology)

Love, Loss, and Longing: Affective Transnationalism and Embodiment among the Cuban Diaspora in Spain: This paper explores the circulation of affects in the lives of Cubans with migration experience. Over the last two decades and, keeping pace with a groundswell of renewed scholarly interest in emotions, anthropologists of migration have increasingly turned their attention to migrants' intimate lives to thicken our understanding of their lived experiences. Accounts of dashed hopes and 'cruel optimism', disillusionment with situations of

precarity and perpetual crisis, and 'Ulysses syndrome' contrast with the euphoria of family reunions, increased autonomy, and the hope of achieving a 'better' life abroad. In unique and salient ways, these works highlight the significance of emotions and 'emotion work' – so long dismissed as 'feminine', irrational, and therefore irrelevant – as social and cultural practices worthy of attention. Situating my work within this literature and drawing upon thirteen months of doctoral fieldwork in Cuba and Spain, I examine the emotional and embodied practices utilized by Cuban migrants to foster an affective 'closeness' to Cuba. Such practices, I suggest, not only support their efforts to endure the loss and longing they suffer in their lives lejos de Cuba – far from Cuba – but also enable migrants to continuously reconstitute their sense of selves as Cubanos living in Spain. Attending to migrants' emotional lives, identity formation, and migration decisions in tandem reveals once more the extent to which knowledge, judgement, and boundary-making are necessarily embodied and affective. Presenter: Elise Hjalmarson (Graduate Institute of International and Development Studies)

Anthropologies of Capture

4:15 PM - 6:00 PM

TMCC - 717 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Cal Biruk (McMaster University, Department of Anthropology)

CHAIR:

Kristin Doughty (University of Rochester, Department of Anthropology)

PRESENTER:

Cal Biruk (McMaster University, Department of Anthropology), Kristin Doughty (University of Rochester, Department of Anthropology), Habib Lawal , Eddie Pesante Gonzalez (CUNY, Graduate Center, Department of Anthropology), Noah Tamarkin (Cornell University, Department of Anthropology)

DISCUSSANT:

Rebekah Ciribassi , Kyrstin Mallon Andrews (Syracuse University)

DESCRIPTION:

This roundtable seeks to move away from critical tropes of neglect, dehumanization, and abandonment that

often characterize anthropological theorizations of politics and governance in marginalized, racialized, impoverished, or peripheral places. Such registers for thinking about politics, our roundtable suggests, minimize the active and tense nature of multi-species politics today—perhaps especially so in transitional moments—wherein hunting, enclosing, and capturing manifest as logics of governance, control, surveillance, and management of individuals, environments, and populations. Inspired by anthropologists Kevin O'Neill and Jatin Dua's (2017) provocation to attend to how 'multiplying genres of captivity' (p. 4) characterize our world(s), we organize our individual contributions around the analytic of capture, a term that conjures catching, imprisoning, containing, confining, hunting, or enclosing living beings, data, resources, spaces, or practices. Thinking across seemingly disconnected social and geographic locations foregrounds how capture, which is at its heart a strategy for making value through and with techniques and technologies of containment, cannot be thought outside of imperial ambitions, the afterlives of transatlantic slavery, and ongoing settler colonialism. The transitions and indeterminacies that characterize our present condition—shifting climates, energy transitions, and evolving regimes of global health and environmental governance—engender diverse imaginaries, interests, and projects that aim to capture space, time, people, resources, or even the future. Our roundtable excavates the layered entanglements that track across environmental, political, and biological domains to foreground who and what are capturing, and getting captured, simultaneously. We consider how capture as an analytic might draw attention to fugitivities, impure politics, and ways of knowing and being with(in) captivity that tropes of neglect or abandonment flatten. Panelists explore these themes across diverse contexts, including technologies of biomedical surveillance in Malawi, polio eradication efforts in Nigeria, power plants and electrification grids in Puerto Rico and Rwanda, fire suppression projects in the US West, aquaculture in Tanzania, fishing regulations in the Dominican Republic, and forensic DNA databases in South Africa. We weave capture as an analytic into our empirical cases, not in the interest of bringing to light only obvious moments or events of forceful subjugation or captivity, but, rather, to foreground how capture manifests in mundane, slowly building, less visible ways, thus troubling notions of escape, liberation, or freedom anchored in the liberal subject, instead, perhaps, inviting us to think about capture's inverse, abolition.

Late Breaking: Anthropology and the Assault on Academic Freedom, Affirmative Action, and DEI

4:15 PM - 6:00 PM TMCC - 803 B

Late-Breaking Conversation/Debate - In-Person

ORGANIZER:

Pauline Strong (University of Texas at Austin)

CHAIR:

Pauline Strong (University of Texas at Austin)

PRESENTER:

Lee D Baker (Duke University, Department of Cultural Anthropology), Daniel Segal (Pitzer College, Anthropology Department), Cheryl Rodriguez (University of South Florida), Maria Vesperi (New College of Florida)

DESCRIPTION:

Anthropologists at many institutions are facing a forceful assault on their ability to teach about subjects central to the discipline, including race, gender, sexuality, and structural inequality. Many are working in institutions in which diversity, equity, and inclusion (DEI or EDI) are under attack. Anthropologists in the US are working in contexts in which admission and student funding policies are being reformulated in response to the Supreme Court decision on race-conscious admissions. Opposition to these policies is often based on the concepts of academic freedom and cultural diversity, but these concepts are themselves contested both within and outside of the discipline. In this fraught context, the panelists will engage in conversation with each other and, crucially, with the audience about the historical and contemporary relationship of anthropology to debates about academic freedom, diversity, equity, and inclusion. What insights into the present moment does the history of the discipline offer? How can anthropologists most effectively work together to protect our research, teaching, and institutions? How can we work to build a world that better reflects the discipline's commitment to social justice?

Interview - In Person

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

ORGANIZER:

Emma Crane (Columbia University)

CHAIR:

Sarah Muir (CUNY, City College, Department of Anthropology, Gender Studies, and International Studies)

PRESENTER:

Alejandra Azuero-Quijano (Swarthmore College, Department of Sociology & Anthropology), Gloria Gloria Perez-Rivera ,Eilat Maoz ,Nicole Cartier

DISCUSSANT:

Caroline Schuster (Australian National University, School of Archaeology & Anthropology), Meghan Morris (Temple University)

DESCRIPTION:

El paro como teoría / The strike as theory (Herder, 2023) is a collection of essays conceptualizing the 2021 national strike in Colombia as an 'epistemic outbreak,' an event that allows us to rethink the past to imagine what is possible in the present. Through her analysis of popular repertoires of resistance and interruption, Azuero-Quijano shows how the national strike reorganizes how Colombian politics are understood, imagined, and represented and, by extension, transforms political and social realities in Latin America and the Caribbean.

3-860

Late Breaking: Canada and the Local and Global Struggle for Black Life

4:15 PM - 6:00 PM TMCC - 803 A

Late-Breaking Roundtable/Town Hall - In-Person

nisrin elamin

CHAIR:

Bertin Louis (University of Kentucky, Department of Anthropology), nisrin elamin

PRESENTER:

Kamari Clarke (University of Toronto, Department of Anthropology), Pablo Herrera Veitia, Jemima Pierre (University of California, Los Angeles, Department of Anthropology), Bertin Louis (University of Kentucky, Department of Anthropology)

DESCRIPTION:

The joint AAA/CASCA meeting is taking place at the convention center in Toronto, Canada, this year on the occupied indigenous lands of the Mississaugas of the Credit, the Anishnabeg, the Chippewa, the Haudenosaunee and the Wendat peoples. As a city, Toronto is often lauded as a beacon of tolerant multiculturalism and a safe haven for refugees and immigrants from around the world. Within walking distance of the meeting's venue, however, is the city's shelter intake office, where over 200 African asylum seekers were forced to camp out for weeks this July because officials refused to house them. While diverse, Toronto also ranks as one of the most unequal cities in North America in terms of income, food security and housing and yet the city allots more to the policing of Black and Brown communities (\$1.1 billion) than to libraries, housing and shelters combined. Canada has similarly been celebrated as a global champion of human rights and a country without a colonialist and imperialist legacy, despite its long history of imperial incursions and extractive practices in Africa and the Caribbean. Leaving aside the terrible questions of indigenous dispossession, Canada has been a mining superpower in Africa for over a hundred years. Canadian mining companies' presence on the African continent and their efforts to disempower local artisanal miners are new iterations not only of colonial economic systems but also of racialized practices and discourses, where the industry perpetuates racist narratives of African citizen miners as inept and ineffective. Canada also has a long history of economic imperialism in the Caribbean. This two-part roundtable challenges Toronto and Canada's unearned reputation as champions of human rights and racial harmony by focusing on the unique and specific ways imperialism, white supremacy, and anti-Blackness are articulated in the Canadian context. In part 1 of this roundtable, Toronto-based scholars, activists, organizers and artists will draw on the city's history and present to discuss the ways imperialism, the afterlife of slavery, anti-Black police violence and other forms of state-sanctioned violence structure and shape the everyday realities and material conditions of Black life in this city. Speakers will also reflect on the histories and legacies of organized resistance against state-sanctioned violence and on the many ways people in and beyond Toronto are organizing toward a future of Black freedom. Speakers will consider what this future might look like and discuss how their visions for the future are linked to the struggle against Canadian imperialism in the Caribbean and Africa. The second part will then take as a point of departure and

deploy imperialism as a real political phenomenon and analytical framework. Since last year and, especially earlier this year, Canada took the lead to force a US/Western-led military intervention in Haiti against the wishes of the people. It did so despite protests from Haitian grassroots organizations that Canada and the U.S. are mostly responsible for the current political and economic situation in the country - a result of the US/Canada/France-sponsored coup 2004 d'etat against Haiti's democratically elected president. Canada has also worked with the U.S. Southern Command (SOUTHCOM) in 'Operation Tradewinds,' yearly military exercises that incorporate Caribbean and South American neo-colonial states in asserting western hegemony in the region. This panel asks: Is there an ethnographic practice that makes today's relations of imperialism intelligible and compelling and attends to varying geopolitical, geographic and moral scales? What happens to the analysis of continuing Western imperialism and Black life if we center Canada (instead of the U.S.)? How do we research and interrogate imperialism when it is rarely acknowledged, actively denied, or deemed inconsequential? How do we speak and write about the history and continuing presence of imperialism in such seemingly disparate contexts of resource extraction in Ghana, militarized policing in Canadian cities, and an ongoing defacto-western military occupation in Haiti and the Caribbean region?

3-615

Critical Engagement with Design and Designers in Medical Anthropology

4:15 PM - 6:00 PM

TMCC - 802 A

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Anisha Chadha (University of Toronto, Department of Anthropology)

CHAIR:

Cassandra Hartblay (University of Toronto, Department of Anthropology)

PRESENTER:

Anisha Chadha (University of Toronto, Department of Anthropology), Anna Harris, Aaron Su (Princeton University), Rachel Parks (UCLA), Danya Glabau

DISCUSSANT:

Lilly Irani (University of California, San Diego)

DESCRIPTION:

This panel brings together new ethnographic work at the intersection of anthropology of design and critical medical anthropology. Anthropologists theorize design as a realm of expertise, as a human practice, as a way of ordering systems and reshaping material objects, and as an expression of an imagined possible 'good life.' Critical medical anthropology examines medical and rehabilitation practices as a site of power. This panel seeks to bring these subfields into conversation to understand how emergent ethnographic research at this intersection contributes to longstanding medical anthropological concerns about embodiment and shifting materialisms. This line of inquiry leads us to ask: How does design expertise circulate globally in clinical and therapeutic contexts? How does the tinkering and hacking of design counterpublics or user-experts index the materialization of power? What conflicts and generative frictions are produced through the global production and transnational dissemination of designed objects and systems in clinical or rehabilitative settings? How do patient or clinician practices come into conflict with engineering practices and outputs, in biomedical or other medical systems? How do applied anthropologists and UX designers working on biotech and medtech draw on critical medical anthropology? And how might insights from critical medical anthropology or disability anthropology advance anthropological theorizations of design and contribute to design anthropology as a subfield?

Hacking Health: The Role of the Product Designer in Indian Medical Device Production: This paper focuses on product designers' role in creating new medical devices in and for South Asian patient populations and markets. Designers—specifically, product and industrial designers—play a significant role in the pre-production of medical devices. The job of a designer is to undertake a series of interactive processes to create and improve a prototype. Designers bridge constraints between the initially imagined purpose of a device and its ultimate material parameters by experimenting with raw materials and crafting sketches and diagrams into 3D models. In this paper, I ethnographically trace the earliest stages of “design thinking” and prototyping of emergent biomedical technologies in a Bangalore healthcare design studio, querying how bodies—of experimental subjects, designers, and resident anthropologists—are used as sites of iterative design thinking practices and ethnographic methods far before formalized clinical trials. In doing so, I question the ethics and methods Indian “medtech” designers rely on

when beginning the initial steps toward potential device creation. Specifically, I will focus on the ways authoritative knowledge leveraged by Indian designers to speculate knowledge about Indian bodies, markets, public health needs, and technological futures indexes designers' privileged caste, class and gender positions in relation to their experimental subjects. Presenter: Anisha Chadha (University of Toronto, Department of Anthropology)

Crafting medicine: ethnographic engagements with design in medical schools: The history of training doctors has involved a vast array of teaching tools, from glass uterus and botanical specimens to moveable mannequins and papier mâché body parts. Many of these objects were and still are handmade by teachers and technicians in medical schools. This tradition continues, although such crafted objects often remain obscured in medical school collections and niche research papers, while the more sophisticated models and technologies are more visible (and expensive). Homemade models are often more attentive to local materials and more affordable for medical schools. They can be more sustainable and vegan, by finding alternatives for animals for simulation and by re-using, recycling and upcycling with existing materials. Based on almost a decade of ethnographic research in medical schools in Australia, Ghana, Hungary and the Netherlands, my paper will explore the craft of making and using learning materials in healthcare professions' education. I will unpack the role of improvisation, embodied knowledge, analogy and imagination, and tie this into the concerns of critical medical anthropology through attention to the ethics and politics of circulating and making objects across sites of clinical learning. Ultimately I will suggest that attention to the making and crafting of learning materials might open up ways of thinking about medical bodies as otherwise. This paper is part of a larger research project (called Making Clinical Sense) and agenda to bring making with materials more squarely into medical anthropological ethnographies, not only as a topic of study but also as a hands-on methodological approach. Presenter: Anna Harris

"Participatory Design" and Its Limits: Healthcare, Indigeneity, and the Remaking of Taiwan: In response to a glaring 10-year gap in life expectancy for Indigenous groups in the country, Taiwan's government has recently pushed for experimental "participatory design" initiatives to incorporate rural, elderly, and Indigenous groups in the making of new medical technologies and programs. Such recent policies have ushered in novel collaborations between technology companies,

government bureaucrats, and Indigenous groups in order to produce Indigenous-led health education apps, telemedicine services, and smart health systems "catered to local needs." Yet this streamlined approach to health disparities through design thinking has often been met with tension and failure. Through 21 months of ethnographic research on these collaborations, my paper will illuminate how Amis Indigenous groups in Taiwan subvert the call to participate, pluralizing the ontology of "design" in these programs to insist on larger issues of Indigenous sovereignty and economic dispossession irreparable by these designers' existing knowledge systems. Theoretically, this paper thus brings critical medical anthropology's insights on structural inequality and dispossession to complicate conventionally optimistic understandings of "participatory design" and "co-design" paradigms in producing just worlds. Presenter: Aaron Su (Princeton University)

Designing an understanding of distress: Translating unspoken experiences of pain using clinical tech: The DisDAT, or Distress and Discomfort Assessment Tool, is a medical document designed to capture the individual signs of pain and distress of patients with developmental disabilities who cannot communicate using words. Caregivers fill out the DisDAT and record their loved one's personalized behavioral cues in order to allow medical professionals to avoid, or at least mitigate, their distress in clinical settings. The form was designed for the treatment of adults with intellectual disability in a palliative care setting in England's NHS, but the clinical team working to introduce the DisDAT form at my field site is bringing it to the treatment of children in an acute hospital setting in a corporatized, technocratic health conglomerate in a U.S. city. In the U.S. healthcare system, with its short admissions and high turnover, pieces of information are not "real" unless they are located in the electronic medical record. Rather than tangibility conveying reality, it is digitality that does so. In this talk, I will theorize the DisDAT form as a technology designed to turn embodied caregiver knowledge into medical data. How do familial and care relations developed over time enable the DisDAT's work of translation? What are the various modes of inscription and documentation that the DisDAT form requires, and how do these modes transform intimate embodied and affective kin-based forms of caring? Finally, how does introducing the DisDAT form to the clinical encounter feed back on and mediate both family and professional knowledge of the child's experience? Presenter: Rachel Parks (UCLA)

Designing Parents, Designing Babies: Baby Tracking Apps and the Making of Capitalist Subjects : Critical medical anthropologists recognize that the first weeks and months of a baby's life are an important time for their inculcation into kinship and cultural networks, the habitus of everyday life, the physical environment that will shape their lifelong health, and ultimately their formation as a human being. Smartphone-based baby tracking apps now help parents manage and mold their emergent person's subjectivity. As designed objects, baby tracking apps offer an array of affordances for optimizing baby care. This talk examines how these apps fashion new parents into caretaking technicians in a middle-class United States context where child care, paid bonding and caretaking leave, and affordable medical care are all scarce. Squeezed between an immediate return to work and capitalist time discipline on the one hand, and the naturally unpredictable rhythms of baby life on the other, these apps offer parents a fantasy of an orderly, clock-adherent, minimally disruptive baby. How does the design of baby tracking apps shape parental expectations of their infants and of themselves? What happens when the babies or parents fail to live up to the image of babyhood these apps rely on to drive downloads and sales? What future benefits do parents believe their children will reap thanks to baby tracking apps? Finally, how do baby tracking apps make parents and babies into compliant subjects for capitalism? Presenter: Danya Glabau

3-601

'Culture' and the Making of Modern Medicine: History and Medical Anthropology

4:15 PM - 6:00 PM TMCC - 713 A

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Catherine Mas (Florida International University)

CHAIR:

Seth M. Holmes (University of California, Berkeley)

PRESENTER:

Catherine Mas (Florida International University), David Ansari (University of Illinois, Chicago), Eugenia Rainey (Dartmouth College), Dennis Wiedman (Florida International University), Jennifer Karlin (University of California, Davis)

DESCRIPTION:

Seventy years ago, William Caudill published his influential essay on 'Applied Anthropology in Medicine,' identifying a professional transition that had been underway for a subset of anthropologists. They were working in medical schools and mental health clinics, international health projects and public health campaigns – both studying the culture of medicine and applying anthropological knowledge and methods to the delivery of healthcare. Much of what he had described was work that had not yet been published or whose products were not academic publications but rather practical applications, such as a clinical model or a resident training program (Caudill 1953). This professional transition coincided with a so-called 'health transition,' whereby industrialized countries saw a transition in morbidity and mortality rates from infectious diseases to chronic and noncommunicable ones. As governments increased funding towards the behavioral sciences in health and medicine, health policymakers and medical educators turned to social scientists for their particular insights and skills. A little more than a decade later, one of Caudill's former doctoral students at Harvard, Hazel Weidman, would go on to serve as acting chair of the Committee on the Organization of Medical Anthropology: an early version of what would become the Society for Medical Anthropology (Mas 2022). In the following decade, she worked to translate anthropological knowledge and methods into the practice of biomedicine, moving between patients' communities and the academic medical complex (Weidman 1982). Such movements across disciplinary, social, and spatial boundaries have shaped the theories and praxis of medical anthropologists for decades. The participants in this session explore two related questions: What can medical anthropologists learn from the past? What can historians learn from the origins and development of medical anthropology? We aim to probe the history and legacies of this moment of academic and professional organization. In the seven decades since Caudill's 1953 essay, medical anthropologists have comprised a diverse group of individuals who employ diverse methodologies, theoretical frameworks, and strategies for the improvement of health levels, the expansion of healthcare access, and the pursuit of health justice. Turning to the historical context of Caudill's essay and the formal organization of anthropology promises to offer valuable lessons about the present challenges of applying anthropology in medicine--from the 'cross-cultural' approach of the 1960s to more recent demands for 'structural competency.' Moreover, the origins and growth of medical anthropology as a profession and

disciplinary orientation can shed key insights on the historical transition, whereby postwar geopolitical currents, economic globalization, social activism, and the problem of diversity and social cohesion reconfigured the landscape of modern medicine. Caudill, W. (1953). Applied anthropology in medicine. In: Kroeber, A.L., ed. *Anthropology Today*. University of Chicago Press, 1953: 771-806. Mas, C. 2022. *Culture in the Clinic: Miami and the Making of Modern Medicine*. University of North Carolina Press. Weidman, H. 1982. 'Research Strategies, Structural Alterations, and Clinically Relevant Anthropology.' In *Clinically Applied Anthropology: Anthropologists in Health Science Settings*, eds. N. J. Chrisman and T. W. Maretzki, 201-242. Springer Netherlands.

From Boundary Work to Brokerage: Professionalizing Medical Anthropology in Cold War America: In 1968, Hazel Weidman accepted a faculty position at the University of Miami (UM), where she would serve as UM medical school's first and, for many years, only medical anthropologist. Her expertise would serve its goals to adapt the curriculum to the changing concerns and practices of biomedicine, and relatedly, to bridge the cultural gaps between the academic medical center and the local ethnic communities it was seeking to enroll as a patient population. Weidman, on the other hand, was eager to use the multicultural setting of Miami as a laboratory for medical anthropology—a newly organized discipline on which she was at the forefront. As she was planning her move to Florida, she chaired the Committee on the Organization of Medical Anthropology. After a lively and contested forum at the 1967 AAA meeting, Weidman proceeded to enact the professional boundary work (Gieryn 1983) that shaped a new professional identity, community, and practice. That included establishing the Group for Medical Anthropology (later renamed the Society for Medical Anthropology) and the Medical Anthropology Newsletter (later the Medical Anthropology Quarterly), which she edited and distributed to an international community of self-described medical anthropologists. This paper delves deeper into this historical moment of professional and disciplinary organization. Using Weidman's longer career as a lens onto transformations in medicine and U.S. society reveals the complex forces compelling medical anthropologists to, on the one hand, create professional boundaries to bolster their expertise in clinical settings, and on the other hand, transgress boundaries as they served the changing needs of an American medical system. Gieryn, T. F. (1983). Boundary-work and the demarcation of science from non-science: Strains and interests in professional

ideologies of scientists. *American sociological review*, 781-795. Presenter: Catherine Mas (Florida International University)

The haunted curriculum: Providing therapy for immigrant and refugee patient populations in France: In France, psychiatrists and psychologists created inclusive mental health care for immigrant and refugee populations and their descendants who have been excluded from public mental health services due to language differences, bureaucratic barriers, and because the ways that people understand and experience mental illness do not always easily map onto psychiatric disease categories. An important aspect of inclusive mental health care is the experience of immigration among therapists and their students. Therapists were predominantly clinical psychologists and psychiatrists, and their students were graduate students in clinical psychology and residents in psychiatry. The enactments of belonging among therapists and their students are intended to establish a supportive environment for patients to reflect on how difficult migration trajectories and discrimination have shaped their experiences of mental illness. I examined the subtle, informal, and contradictory moments of learning, or the hidden curriculum (Hafferty & Franks, 1994), to become a therapist for this patient population. I also analyzed the ways that therapists attended to the haunted aspects of care for this population—notably narratives of trauma and the remnants of colonial histories. Drawing on a framework of hauntology, inspired by the scholarship of Jacques Derrida (1994), that examines how specters of violence and trauma continue to loom large in the present, I considered how learning to become a therapist meant learning to engage with these violent histories and narratives. I demonstrate how student therapists and their supervisors challenged and reproduced these hauntings in clinical and therapeutic interactions. Presenter: David Ansari (University of Illinois, Chicago)

“Deserving” Immigrants and Standardization in Biomedicine: In *Culture in the Clinic*, Catherine Mas argues that “Depictions of Afro-Cuban religion as ritualistic crime... were part of larger efforts to render dangerous those cultural forms that resisted standardization in an emerging biomedical landscape” (2022, 142). This presentation explores why Afro-Cuban religion resisted standardization into the biomedical landscape. As Jean Langford (2013) reminds us, biomedical institutions bear the palimpsest of Protestant eschatology. The Protestant belief-based system does not lend itself to practice-based systems

like those of Afro-Cuban religion. Yet, other practice-based religions have managed to establish a productive relationship with biomedical institutions. In Merced, California, Hmong shamans perform modest rituals at patient hospital beds; on Navajo land in Northern Arizona, the Indian Health Service has medicine men on staff. It is unlikely that anything like this would have happened before the work of Hazel Weidman and the Health Ecology Project. Yet Afro-Cuban religion, which was a significant part of this initial work, has not had the same success. This paper reveals how the history of colonialism and anti-blackness affect standardization in biomedical institutions. This exploration is based on fieldwork done with the Lucumí community, medical educators, and the developers of the Miami model of cultural competency in south Florida. Brown, Patricia Leigh. 2009. 'A doctor for disease, a shaman for the soul.' *The New York Times*, September 19, 2009. Langford, Jean M. 2013. *Consoling Ghosts: Stories of Medicine and Mourning from Southeast Asians in Exile*. Minneapolis, MN: University of Minnesota Press. Mas, Catherine. 2022. *Culture in the Clinic: Miami and the Making of Modern Medicine*. Chapel Hill: The University of North Carolina Press. Presenter: Eugenia Rainey (Dartmouth College)

SMA Founding to the Health Professions Education Special Interest Group: Legacies of Hazel Weidman: This presentation documents the legacy of Dr. Hazel Weidman in founding the Society for Medical Anthropology (SMA), to fifty years later the initiation of the SMA Health Professions Educations Special Interest Group. Weidman was a founder of the SMA in the early 1970s, and editor of the first newsletter, now the *Medical Anthropology Quarterly* (Wiedman and Martinez 2021). She refined the use of cross-cultural community research methods, the theoretical concepts of health culture, culturally appropriate care, transcultural medicine, culture broker and professionalized clinical anthropology. These influenced the cultural competence movement and the making of modern medicine as detailed in the book "Culture in the Clinic" (Mas 2022). Hazel Weidman's "Miami Health Ecology Project" begun in the 1960s to understand six ethnic groups underuse of the public hospital. She and her team in 1974 established clinics in each of the ethnic neighborhoods to provide culturally appropriate care (Weidman 1978). Anthropologist culture brokers became directors of the clinics, consultants, and trainers to the hospital physicians and health professions (Weidman 1982, 1983). The Office of Transcultural Education and Research at the University of Miami School of Medicine Dept. of Psychiatry became a focal

point, a model for anthropologists influence on today's global health. Weidman's legacies led to the new Herbert Wertheim School of Medicine at Florida International University focusing on training physicians with skills in community-based care (Wiedman 2021). Then most recently, the 2022 initiation of the SMA Health Professions Education Special Interest Group supporting anthropologists employed in the clinical and health professions. Presenter: Dennis Wiedman (Florida International University)

Translating History and Anthropology into Medical Education as a Disposition Toward Knowledge: Having dual training and practicing in both medical practice as a family doctor in the US and in the conceptual and historical studies of science and medicine, it has become clear that it is impossible to separate out the practice of medicine from the critical analysis of it. Recognizing the problematic nature of translating the object of "culture" between anthropology and medicine, my paper explores whether and how to encourage a meta-analytic practice and disposition toward knowledge and the social through medical education. Reporting on my experiences and findings from a course I developed for the first- and second-year medical students at UC Davis, I aim to shed further insight onto how methodological and pedagogical tools from anthropology and history might help educators develop the kinds of dispositions that will improve patient care. The course, entitled I-RESTORE (Identity-Formation through Reflection, Social Analysis, Team Orientation and Enrichment), implements the concept of physician identity formation (Cruess 2014, Jarvis-Selinger 2012). It encourages curiosity through interviewing techniques aimed at open-endedness rather than to develop a differential diagnosis, reflexivity by self-reflection exercises about students' personal journeys through medical institutionalization, and social analysis through making explicit the norms and hidden curriculum in medicine. While my course and other curricular innovations in medical education aim to achieve greater structural competency operate with the best intentions, the work becomes challenging when confronting the ever-present and seemingly intractable norms and structures in biomedicine. Cruess RL, et al. Reframing medical education to support professional identity formation. *Acad Med*. 2014;89:1446–1451. Jarvis-Selinger S, et al. Competency is not enough: Integrating identity formation into the medical education discourse. *Acad Med*. 2012;87:1185–1190. Presenter: Jennifer Karlin (University of California, Davis)

DISCUSSANT:

Elizabeth Davis (Princeton University)

DESCRIPTION:

Selected by the Oxford Dictionaries as the word of the year, 'post-truth' made a dramatic entrance into the public, political, and scholarly fields in 2016. The theme for the AAA meeting in 2021 was 'Truth and Responsibility,' which urged anthropologists to grapple with 'the demands of the present moment,' defined as 'a precarious 'post-truth' era.' Our proposed roundtable, the result of ongoing conversations among a Wenner-Gren Workshop Grant participants who got together for a three-day workshop in September 2022 , highlights the continued relevance of these concerns, whilst being careful not to 'romanticize a time when truth was truth' (Ho & Cavanaugh 2019). As practitioners of a discipline with a formidable legacy of questioning neat divides between rational and embodied knowledges and between the real and the imaginary, how can anthropologists map a nuanced spectrum of responses to contemporary discussions of post-truth? To what extent does the outrage at alternative facts eschew deep-seated histories of manipulation of facts, which were always part of the sociopolitical landscape? Conversely, recognizing the limitations of purely empirical accounts of the world, how can we expand the realm of truth claims in creative and critical ways? Do we reclaim the empirical and deepen our alliances with the social sciences or veer towards alternative

methodologies such as critical fabulation (Hartman 2008) and forge new affinities with the humanities? Rather than a linear format of individual presentations, we have envisioned this roundtable as a space of lively debate that will reflect and further explore the convergences and divergences that currently exist among the participants. We hold in tension our commitment to, on the one hand, engaging with the malleability of facts, the fragility of truth claims, and the performativity of falsehoods, and on the other hand, honoring the value of being arbiters of fact given the ruinous consequences of altogether dismissing science and evidence as partisan. Drawing on ethnographic research within, on the edges of, and across Senegal, Turkey, Cyprus, Poland the U.S., and conducted in landscapes engineered to wipe out memories of slavery, genocide, dispossession and extraction, we ponder how and to what extent we can most effectively create data that will parse, among others, strong facts (Harding 1987), rational facts (Arendt 1967), make-believe (Navaro 2012), bullshitting (Frankfurt 2005), systematic disinformation, conspiracy theories, fakes, refusals (Simpson 2014) and indigenous hyperrealism (Biddle & Lea 2018), all the while paying unwavering attention to whose authority counts, emboldens or disempowers. Without trying to resolve productive lines of dissent among us, we are all committed to 1) thinking genealogically as to when the question of whether something is true or not becomes a matter of concern; 2) understanding polarization as context instead of just bemoaning it or being outraged by it; 3) owning moral outrage as both our strength and our weakness to ponder how best to put it to use analytically and affectively; 4) considering alternative or supplementary genres to ethnography in our quest for thinking beyond fact and fabulation as a binary. We thus hope to collectively nurture cross-disciplinary dialogues that straddle the social sciences, the humanities and engaged/activist research: a balancing act that has always been a unique asset and potential of anthropology.

Greg Beckett

DESCRIPTION:

In recent years, cultural anthropologists have produced a substantial body of ethnographically grounded work on futurity, inquiring at both intimate and global scales into people's varied ways of imagining and co-creating the future. Less fully explored ethnographically are how and why apocalyptic/salvific visions of the future are taking on growing prominence in mass-mediated controversies pertaining to the environment, sexualities, financial markets, technology, democratic governance, policing, and human geographical mobility. Prospects of imminent catastrophe loom from both right and left on the political spectrum, cut across by strong disagreements about what we need to be saved from, and how. As if stuck in the middle, many people say they feel assailed by anxiety as never before, unsure about whether everything will stay as it is or soon never be the same. The subjunctive and future modes, of allegations not yet substantiated and disasters foretold, are perhaps more than ever social and political lingua franca. In this panel, we propose that the pervasive moods and expository modalities of doom/salvation are understandable as an object of study through established multimethod ethnographic approaches as well as through critical vocabularies of feeling, rooted in literary and visual cultural studies. We as social researchers should take serious notice of the methodological and theoretical challenges that come to the forefront when we study how families, community organizations, and government agencies take unsubstantiated possibilities and projected future states as their ground for decision making and collective planning. The question of what humans of the future and all life on the planet now requires of us runs as a common thread across more than one public controversy and private dilemma. Panelist Pierre Minn

examines the intentions of young men in Québec to be voluntarily childless, and how this decision shapes their imagined futures on personal and collective levels. Jennifer Musto traces trauma-informed anti-trafficking efforts, which maintain an existing pro-law-enforcement bias and thus create new vulnerabilities even though framed as a paradigm shift away from punishment. Jennifer Cook presents findings from her bi-national research into the dilemmas of transnational migrants and their families as they make future-oriented decisions about migration and legal status amidst the shifting terrain of immigration. These insights shine light on the unexpected descriptive possibilities that ethnography may bring to futures that have been evacuated of security while at the same time overpopulated with rumor, innuendo, allegation, position-signaling and other forms of 'thought/feeling.' Fundamental questions inevitably arise about ethnographic researchers' possible contributions to public understanding of the counterfactual turn in talk about the future of our lives and of humanity. In situations where evidence and facts about efficacy may matter less than affects and moral position-taking, our interlocutors may no longer permit us the comfort of choosing to be anti-pundits - mere falsifiers of others' simple prognostications. Admitting that neutrality may no longer be possible or desirable, questions remain open about how ethnographers are to move responsibly from closely scrutinizing how things mean to pronouncing on what it all means, as well as what bases ethnography provides us for deciding how much of this is actually new.

Futurity: Prospects for its future study: This concept paper justifies why the time is right to gather together anthropological perspectives on the rise of the counterfactual in mass-mediated controversies pertaining to state and private regulation of the environment, sexualities, human geographical mobility, and more. The trend for allegations to be held higher than facts, for dogma to trump science, and for faith to guide policymakers more than reason has been widely observed. At the same time, the complexity of futurity as a dimension of current politics is indexed by the highly visible rise of skepticism and backlash against global climate change activism, #MeToo feminism and Black Lives Matter anti-racism. In this paper, I put forward a project statement highlighting the potential insights and knowledge that scholars of varied methodological approaches and theoretical persuasions are producing and could yet produce around questions of futurity. How are we to understand better the urgency and contentiousness expressed about the

future, in more than one public controversy and private dilemma? Recently published anthropological studies cover a range of affects and dispositions toward the future, including waiting, hope, techno-optimism, uncertainty, despair and patience. Anthropologists have already demonstrated more than one way to build the study of futurity “from the bottom up” (Wilk 2007), chronicling individual and collective orientations toward chronic uncertainty through studies of topics as diverse as the epigenetic intergenerational transmission of trauma, fear of everyday crime or political violence, global climate change and disaster preparedness, resource management, refugee resettlement, and human trafficking, to name just a few. New descriptive possibilities even so remain to be realized. Among these, I give emphasis to the potential contributions of multi-method hybrids of ethnography with cognitive scientific experimentation, on one hand, and literary and media studies, on the other. Presenter: Samuel Martinez (University of Connecticut, Department of Anthropology)

Blurry Horizons: Voluntary Childlessness and Uncertain Futures in Québec: As is the case for many populations in industrialized countries, the fertility rate in the Canadian province of Québec has been declining in recent decades and is currently calculated to be 1.58 birth per woman. While much anthropological scholarship on reproduction has focused on women’s experiences, infertility and new reproductive technologies, a small body of scholarship addresses the issue of voluntary childlessness. In this presentation, I present the stakes of childlessness and visions of futurity as experienced by young, heterosexual French-Canadian men, who are increasingly vocal about their commitment to eschew biological reproduction both because of its potential contribution to climate change, and because they cannot imagine a viable future for the next generation. Presenter: Pierre Minn (Université de Montréal)

Carceral Care and Trauma-(Mis)informed Justice: In a moment of converging crises, attention to care like talk of trauma is ubiquitous (Chatzidakis et al. 2020). Yet while trauma is a grammar through which ever more people express harms previously unrecognized (Haslam and McGrant, 2020), in the United States, a growing number of anti-trafficking reformers leverage discourses of trauma to diagnose harms purportedly tied to sex trade involvement, while at the same time, calling for the installation of caring, “trauma-informed” interventions framed as alternatives to punishment. Just as trauma is a rubric reformers use to account for the

injuries sustained by youth and adults in trafficking situations, trauma-informed interventions are the promissory note offered to transmute carceral interventions in more caring directions. State and humanitarian actors’ affective investments in trauma further signals an aspirational vision of the future. That such carceral oriented visions of care grate against ethnographic findings on the harms it induces is notable, yet unsurprising (Musto 2022). Yet while limited empirical data exists authenticating the efficacy of trauma-informed innovations, the absence of data isn’t the only issue at stake. Additionally salient is how ethnographers approach reckoning with the limits of nascent carceral care arrangements without denying the shattering effects of trauma or eschewing timely questions about how to support people impacted by it. This paper draws on two studies, a multi-year ethnographic study of a trauma-informed anti-trafficking efforts and a study on the impact of COVID on anti-trafficking work as a launchpad to more broadly reflect on what it means to critically investigate the affective attachments fueling carceral care developments. I am also interested in advancing new conceptual frameworks to imagine a radical vision of trauma justice and care beyond carcerality. Presenter: Jennifer Musto (Wellesley College)

Lawful permanent migration and intergenerational potentiality: time “legality” in the US: U.S. lawful permanent residency (“LPR” status) is considered “full” legal immigrant status. It is, except for citizenship, the most complete form of legal inclusion a non-citizen can be granted, and it accords the bearer with employment authorization, the ability to petition for certain family members to immigrate to the U.S., and access to citizenship by naturalization. Nevertheless, the status of LPRs remains precarious, as their protection from deportation is contingent upon compliance with the complex bureaucratic requirements of the U.S. immigration system. This paper explores the forms of temporality produced by lawful permanent residence. The title of the status – “permanent,” “resident,” – invokes both temporal and spatial stasis. Indeed, the state expects individuals with lawful permanent resident status to remain permanently resident in the territorial U.S., and to obtain the ultimate form of enduring political membership in the nation: citizenship. But in practice, the U.S. immigration enforcement system’s preoccupation with the mythical “illegal migration crisis” draws attention away from the migration and settlement patterns of legal immigrants, creating space for these supposed “permanent residents” to fashion alternative uses of the cross-

border mobility and access to family-based immigration granted by their status. Thus, in contrast to other precarious statuses characterized by temporal frames of uncertainty, waiting, or indecision, LPR status produces a timespace of potentiality, in which multiple intergenerational transnational futures can not only be imagined, but possibly made real through engagement with the legal immigration system. Into the Ani-verse: Explorations in the anthropology of animation

4:15 PM - 6:00 PM TMCC - 206 C

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Teri Silvio

CHAIR:

Paul Manning (Trent University)

PRESENTER:

Teri Silvio ,Ilana Gershon (Rice University),Paul Manning (Trent University),Debra Occhi ,Patrick William Galbraith

DESCRIPTION:

The anthropology of animation, which has developed rapidly in recent years, looks at animation in both the narrow sense (a media genre, an industry) and the broader sense (as the process of investing objects with life, soul, mind, etc.). This field looks at all the ways in which people create fictional characters and bring them to life, as well as the ways they create non-human social others by projecting human qualities into the material environment. There are almost infinite ways in which virtual personae can be animated. It can be done by providing material bodies and borrowed voices or it can be done with nothing but language and imagination. This panel explores some new directions in this field. Presenters working in Japan, Taiwan, and North America focus on a variety of questions: What kinds of objects are available for animation and how are those sets of objects defined in different places and times? What techniques are effective for animating different types of objects, and why? How do animated characters interact with human bodies? What kinds of critiques of contemporary society can be made using the concept of

animation that cannot be made otherwise? Three of the papers, those by Galbraith, Occhi, and Silvio, are based on research with the producers and fans of animation in the narrow sense. Occhi looks at how characters from a game franchise (Pokemon) are turning into mascots for specific localities, a process in which local governments and fans play different roles. Silvio looks at the relationship between different codes in Taiwanese video puppetry, and how the role of the voice is changing in relation to visual elements as the tradition of a solo voice actor is being replaced by a cast of many voice actors. Galbraith focuses on a controversial genre of manga and anime character, the sexualized 'little sister.' Based on fieldwork in a café where adult performers embody these characters, he argues for the situatedness of the 'real' and the ethics that are implied by it. The other two papers focus on more unexpected objects of animation. Manning's paper looks at the animacy of plants, specifically vines, and how vines actively haunt gothic literature. Gershon looks at how people animate themselves, reading the Hunger Games novels as one critical illustration of how seeing the labor of crafting public personae as animation rather than performance demystifies aspects of contemporary capitalism. Together, these papers present a broad view of the state of the anthropology of animation, and shows the wide range of places that a focus on the idea of animation can take anthropology.

The Voice Actor as Centripetal Force in Taiwanese Video Puppetry: Po-te-hi, Taiwan's most popular genre of puppetry, has been remediated many times, adapted to the media of commercial theater, radio, cinema, television, VHS tape, DVDs, and now digital streaming services. The video po-te-hi of today, with its large and intricate puppets, detailed sets, and computer-generated special effects, looks very different from the earliest televised po-te-hi, to say nothing of the traditional puppetry that has been performed at temple festivals for centuries. But until very recently, it sounded very similar. The tradition of one man voicing all of the characters' dialogue and the narrative voiceovers has been maintained for over a century. With the retirement of the second generation of video po-te-hi voice actors, the companies that produce video po-te-hi have started using multiple voice actors. While this is seen as a practical necessity, at least for the short term, many fans still see the solo voice actor as ideal, with some declaring that with multiple voice actors, "it's not po-te-hi anymore." This paper asks why the tradition of the solo voice actor is so important in po-te-hi and why it lasted so long. Based on interviews with voice actors, trainees, and fans, I argue that the while

visual aspects of video po-te-hi, the puppet in particular, are a centrifugal force, propelling the characters into the world, the voice of the solo voice actor acts as a centripetal force, holding the imaginary universe together, giving it its sense of realness, and connecting it to Taiwanese and masculine identities. Presenter: Teri Silvio

Animating Katniss Everdeen: The Hunger Games Read through Animation theory: Animation theory brings a new set of questions for understanding how people experience the labor of crafting self-representations and social unities, which we explore through an analysis of Suzanne Collins' Hunger Games trilogy. We frame the Hunger Games as a pedagogical text, one that instructs readers to use animation to explore the ways in which social and labor relations are mystified under contemporary capitalism, along with the political forces that may constrain people's free will. Animation poses a social arena in which labor is not obscured, a perspective performance struggles to provide. Katniss does not embody celebrity in the classic sense wherein the labor that produces a public persona is obfuscated or fetishized. On the contrary, she points directly to the labor that constructs certain types of social and political actors, including The Girl on Fire and the Mockingjay. The books consistently invite audience to draw connections that Katniss does not recognize. Moreover, this resistance to fetishism exists across scales in the Hunger Games. By casting a national economy as a legible set of taxonomic embodiments—and not as a complex, perplexing entity that only experts can grasp—the novels effectively resist contemporary narratives that ascribe agency to abstractions such as “the market” or “the economy.” Presenter: Ilana Gershon (Rice University)

Creepy Creepers: Planty Animacy in the Ecogothic Landscape: The animacy of plants stands in the neglected posthuman borderland between the “turn to animals” and the “turn to things”. Situated on an “animacy hierarchy” betwixt and between animals and things, plants are perhaps more involved in human acts of placemaking. As Hartigan notes “because plants are sessile organisms...[they are] far more exquisite ciphers of ‘place’ [than animals].” No plants are more “animate” than the “twitchers, twiners, climbers and scramblers” whose animacy so fascinated Darwin that he kept such a vine in his study to study its movements. Obviously vines and creepers are everyone's favourite example of invasive species, plants whose uncanny speed of spread and seeming immortality make them like a horde of zombies. We frequently resort to using them as metaphors for the entangled agencies of

assemblages. Similarly, the aesthetics of “ecogothic” landscapes, gothic haunted houses and picturesque ruins, are heterogeneous assemblages demarcated by the animating presence of vines and creepers: The road to ruin, in gardens as well as houses, is crawling with creepy creepers. Creepy creepers are so pervasive in ecogothic aesthetics that the entire literature of the Southern Gothic, for example, is usually evoked simply by reference to Kudzu. I show that the ecogothic differs from the traditional gothic “animation” by recentring the landscape from the ruinous haunted house, throughout which an unseen ghost, afflicted with “spectral aphasia”, distributes its spooky and noisy animations, to the ruined garden outside the house, where creepily animated creepers take on some of the animating role of the ghost. Presenter: Paul Manning (Trent University)

Animating Pokemon as local mascots in the Japanese pokefuta manhole cover promotion: Pokemon, those fantastic, collectable critters who emerged in Japan and globalized, are recently re-domesticated and animated as local mascots who represent Japanese cities and prefectures in media mix. Fake manhole covers called pokefuta are being placed at various landmarks and touristic locations. The pokemons' names and identities are reimagined as belonging to their respective locations, including wordplay and other mechanisms of typicalization. For instance, they often co-appear with specifically localized imagery on the pokefuta. Souvenir goods, transport vehicles, and other tourist consumables are wrapped in Pokemon imagery. This lamination of Pokemon as contents tourism resources onto existing products and places of interest inspires fan pilgrimages, particularly during promotional stamp rallies and other events managed by their local governments. The Pokemon depicted on these pokefuta are not only implanted in the landscape but are also animated as agents resembling yuru kyara local mascots including live appearances as kigurumi character suits that allow fans proximal interaction with a fuzzy, embodied Pokemon. The pokefuta phenomenon is geographically based but extends to the mediascape including a homepage with fan resources, including Google Map links. The location-based mobile game Pokemon GO also includes pokefuta promotional affordances. Virtual gifts of the pokefuta image players get at the pokefuta pokestops can be sent to in-game friends as postcards and saved in an album. I will share the analysis of participant observation fieldwork and linguistic analysis starting in the pokefuta birthplace in Kyushu and ranging beyond. Presenter: Debra Occhi

The Limits of Animation? On a Controversial Café in Akihabara, Tokyo: Animation opens new vistas for anthropologists to see, experience and question the world differently. This does not mean, however, that all that has been seen, experienced and questioned before simply evaporates. Indeed, theorist Teri Silvio is absolutely clear that animation and performance are “intertwined in specific cultural practices” (Silvio 2010: 423). One might consider them tendencies, which can be more or less emphasized in situ. Thus positioned, this paper explores a controversial café in Akihabara, Tokyo, which plays with costumes and set phrases to animate a character often seen in manga and anime, namely the “little sister” (imōto). Special attention is given to the outfits, or colorful children’s clothes, that the adult staff wear. Participant observation conducted in the café from January to March 2023 suggests that some customers identify as “people with a particular disorder;” a few go further to speak of a “love of children.” Confessions of such love are not entirely new in Japan or beyond (e.g., Morioka 2017), but never before have they so vividly intersected with animation. This paper goes on to stage a dialogue between Silvio’s work and Stephanie Patridge’s claims of relatively fixed meaning in “a particular social reality” (Patridge 2011: 308). Ultimately, the paper raises questions about how one is to know the difference between engagements with animated figures without cultural literacy and years of fieldwork. Can we really not know how animation and performance are entangled, or where the limits and lines of the former lie, without “being there?”

University, Department of Anthropology), Lilith Mahmud (University of California, Irvine)

DISCUSSANT:

Noelle Molé Liston (New York University), Michael Herzfeld

DESCRIPTION:

This panel brings together leading ethnographers of Italy to interrogate anthropology's project from one of its most elusive sites of inquiry. When the anthropological gaze first turned towards Europe, it hyper-focused on its margins, rather than its centers of power. Italy quickly became an oversaturated field site—one in which anthropologists at 'home' could reproduce the same colonial dynamics of anthropology elsewhere. Neither Mediterranean nor European, and never fully white, Italy's in-betweenness provided a testing ground for anthropological theories of kinship, religion, or politics, which were developed in the global South but deemed inapplicable to European societies. Like the rest of southern Europe, Italy was therefore anthropology's litmus test of the discipline's relevance in a postcolonial world. Rarely, however, was Italy studied in its own terms, as an original source of anthropological knowledge that could challenge disciplinary assumptions and radiate questions to other scales and other anthropological locations. Comparing the field of anthropology to the country of Greece, Michael Herzfeld (1987) famously critiqued the colonial mythologies that sustain both, and he theorized a militant approach to anthropology starting from the demystification of its Euro-American imaginaries. If 'Anthropology Through the Looking-Glass' made our discipline's familiar tropes look strange, this panel aims to distort a romantic common sense about Italy in order to theorize a new anthropology of the political. Calling into question what we think we know about the *bel paese*, contributors will address real estate speculation, fake news, criminality, racist police brutality, and the deadly politics of border crossing, to ask how anthropology can rise up and meet the urgent political demands of our times.

“An Unjustified Revolt”: Italian Politics and Chinese Migrant Resistance to Inspection Culture: This paper takes as its object of analysis political discourse connected with a series of events culminating in a protest that turned violent in the heart of metropolitan Tuscany as Chinese migrants clashed with Italian health inspectors and riot police. It compares the Italian political characterization of Chinese migrants’ protest as “an unjustified revolt” with Chinese social media discourse that justified the protest. The paper argues

that Italian political discourse appealed to common sense to rationalize the politics of inspection and demonize migrant resistance. It further extends the anthropological study of Italy to a transnational scale. Presenter: Elizabeth Krause (University of Massachusetts, Amherst, Department of Anthropology)

Expatriate Settlement and Real Estate Investment in Rural Sicily: The emptying-out of small towns and villages, born of a history of labour emigration, is a perennial theme of public conversation in rural Sicily. People grapple with the meanings of such a process, which they understand to be an outgrowth of the region's marginal status within Italy, today and in the past. Successive generations have left for greener pastures, and those who remain scrape by however they can. Within this context of abandonment, a transnational class of expatriate real estate investors have appeared over the past decade to buy old houses and renovate them, to thus realize a lifestyle goal that presents an edifying alternative to their workaday lives in large North American or northern European cities. This paper explores the complexities of this site of encounter among monied newcomers and a wide variety of local people with divergent interests and perspectives on the matter, forcing a confrontation with the implication that to many privileged outsiders, Sicily is but a place to behold, size up, and consume. Presenter: Antonio Sorge (University of Toronto, Department of Anthropology)

Speech in Gommopoli: The recounting of post-WWII events related to crime, politics, and society in Western Sicily seems to unfold along a division of labour between magistrates and academics (and other writers) that is both agreed upon in coordinates and yet repeatedly transgressed. Both sides of this division often cite Ginzburg's "marginal notes on a late-twentieth-century miscarriage of justice" to define the border between the craft of the judge and that of the historian (Ginzburg 1999), thus conjuring up a division that should be as old as modern politics. I consider how both this division of labour and the bilateral penchant for challenging it come from developments in the evidentiary labour process that occur in the various inquiring professions (journalists, police investigators, prosecutors, different kinds of judges) since the late 1980s. I then consider investigative journalists' strategies in navigating their narrowing latitude in recounting the past and the ensuing legal and public struggles in which they find themselves. Presenter: Naor Ben-Yehoyada (Columbia University, Department of Anthropology)

Performing Incompetence: Race and Migration in Italy : Because of its geographic position on the Mediterranean, Italy is the first port of entry in the EU for thousands of migrants and refugees every year. According to EU regulations, the first country of entry is responsible for handling asylum petitions—a policy that leaves Italy and other southern and eastern nation-states to bear a disproportional cost of the global displacement toward Europe. In a form of resistance against EU policies, Italian authorities have long played up on nationalist stereotypes of backwardness, inefficiency, and incompetence to defy EU requirements. By neglecting to register, fingerprint, or detain large numbers of migrants who arrived at their shores, for instance, Italian authorities have facilitated their escape from detention centers and effectively enabled them to cross the border illegally into Northern Europe. In this paper I explore Italy's performative use of incompetence in the bureaucracy of European migration. I suggest that, rather than a mere weapon of resistance against the EU, incompetence further entrenched the precarity of Black and brown refugees, leaving them at the mercy of human traffickers even on EU soil. By examining the racial frameworks of migration discourses, I explore the limits of solidarity, resistance, and humanitarianism in fostering life along the deadliest border in the world. Linguistic Landscapes of South Asia and the Middle East

4:15 PM - 6:00 PM

TMCC - 205 C

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Christina Davis (Western Illinois University, Department of Sociology and Anthropology)

CHAIR:

Chaise LaDousa (Hamilton College, Department of Anthropology)

PRESENTER:

Sonia Das (New York University), Nishaant Choksi, Deina Rabie (University of Arizona, School of Anthropology), Rizwan Ahmad (Qatar University), Chaise LaDousa (Hamilton College, Department of Anthropology), Christina Davis (Western

Illinois University, Department of Sociology and Anthropology)

DESCRIPTION:

The term 'linguistic landscape' was initially used to refer to the various languages spoken in an area, region, or political entity. But more recently it has been used to describe the presence of visual language in built environments. This panel seeks to investigate what studies of linguistic landscapes can contribute to understandings of sociolinguistic dynamics and power relations in cities in South Asia and its diasporas and the Middle East. We take a multimodal approach to analyze how different languages and scripts are used in government signboards, advertisements, flyers, banners, magazines, and newspapers, and how public signage is connected to online worlds through URLs, hashtags, and QR codes. We also attend to how people reflect on the meaning and significance of public signage in other modes of communication (like talk and social media discourse). Overall, we use the concept of linguistic landscape to reflect on how public signage functions as a salient form of political action, whether on the part of the state, or on the part of different ethnic and religious groups seeking authority.

Linguistic Landscapes and the Trans/national Politics of Language Loyalty in Little Jaffnas : This paper showcases script-mixing in Tamil, English, and French to analyze how linguistic landscapes shape and are shaped by competing language loyalties. Focusing on urban neighborhoods in Montreal known colloquially as Little Jaffnas, where Tamil script on signage indicates Sri Lankan Tamil ownership, I investigate the extent to which store signs overtly or covertly comply with or else transgress the provincial government's nationalist language law, which specifies that signage must feature larger font-sized French script located top and center. Suspected of preferring English over French, Sri Lankan business owners are under pressure not to write signs interpretable as disloyal to francophone nationalismism. From a political standpoint, it makes sense to include the least amount of English possible on signs; yet from a commercial standpoint, the inclusion of English words assists shopkeepers in marketing their merchandise to multi-ethnic, local anglophone clients. Most signs adopt a conventional bilingual format, where smaller Tamil script is positioned underneath larger French script. Less common are signs that adopt a trilingual format, with, in addition to French and Tamil, English words being typically written in a smaller font size and situated closer to the sign's bottom. Finally, there are signs that veil English and non-standard French words in Tamil

script and colloquial Tamil sounds in Roman script. Analyzing these signs uncovers differentiated stances of language loyalty directed at the nationalist regime in Quebec and transnational organizations such as the World Tamil Movement, and elucidates how signage contributes to political action through language choice. Presenter: Sonia Das (New York University)

Inscriptional Ecologies among the Displaced of the Narmada Valley, Western India: While concerns about migration have been an important part of ethnographic accounts of linguistic landscapes (eg Blommaert 2013), this presentation will focus on how those who are forcibly displaced use graphic repertoires to create an 'inscriptional ecology' to carry with them memories of a lost homeland while also adapting to new linguistic and cultural circumstances. The focus of the study will be on communities of indigenous, Adivasi residents displaced from villages in the Narmada Valley in western India due to the construction of the massive Sardar Sarovar Dam on the river Narmada. Most of these communities were not conventionally literate, and scripted writing was uncommon in the villages at the time of displacement in the early 1990s. Currently, these communities have been resettled in the plains areas, and subsequent generations have been exposed to literacy through schooling. Based on ethnographic fieldwork in the resettlement sites, this talk will analyze the few, but significant, examples of scripted material appearing on the surfaces of newly built homes, water tanks, and storefronts of the resettlement sites of the displaced residents. It argues that writing serves as one way in which features of the lost landscape, including the Narmada River itself, and associated sites of ritual and ecological importance which are now submerged, are reinscribed and emplaced onto the new physical landscape in the plains. Inscription serves to fashion a new social identity of the "resettled" (vasahati) among the diverse communities displaced by the dam. Presenter: Nishaant Choksi

Between the Tailor and the Café: Sociolinguistic Landscapes and Ethnic Hierarchies in Abu Dhabi: With oil reserves predicated to end sometime in the next fifty years, the United Arab Emirates is in the process of rebranding itself as an international knowledge hub for technology, media, education, and luxury tourism. Accordingly, in the capital of Abu Dhabi, like its sister metropolis Dubai, space and language play a vital role in creating distinct domains of access and movement in the city's superdiverse urban landscape (Blommaert 2013). This paper compares the linguistic landscape of three neighborhoods in Abu Dhabi: the Arab and Asian

middle and working class Central Market neighborhood, the white collar middle class Umm Al Emarat family park, and the upscale Western expatriate Soho Square district in the new suburb of Saadiyat. While most signage across the different neighborhoods is bilingual in Arabic and English, language prominence, place names, as well as the use of other languages like Malayalam, Urdu, and Tagalog in the Central Market neighborhood, provide a textured and diachronic portrayal of different forms of movement and place making among the city's multiethnic population of migrant workers, white collar expatriates, and Emirati citizens (Leeman and Modan 2010). The paper examines the way each of these neighborhoods projects a different kind of cosmopolitanism which undermines the state's streamlined binary as a space of Western middle class consumption with a singular tribal, Bedouin history. With an ethnographic focus on Emirati women, the paper additionally explores the semiotic and linguistic negotiations these members of the country's elite citizen minority must undertake across these different spaces. Presenter: Deina Rabie (University of Arizona, School of Anthropology)

Printing Local Identity on Street Signs : Focusing on official street signs in Qatar written using non-standard Arabic words and spellings, which reflect the local Qatari pronunciation, in this presentation, I discuss the complex interplay of language, dialect, script, and issues of identity and migration. The use of dialect forms on official street signs militates against the deep-seated ideology favoring standard Arabic, Fusha, forms in formal writing. In 2018, the issue became a matter of public debate in which proponents of Standard Arabic argued that the signs distort the beauty of Arabic and that they must be corrected immediately. The most controversial part of the debate was the spellings of words containing the definite article al which were written without the letter alif, to reflect the dialect pronunciation in which it is dropped. So, street names such as al-Wusail and al-Xuraib were written as 'Lūsail' and 'lXraib' in Qatari Arabic. Using insights from linguistic anthropology and sociolinguistics, I argue that the supposedly "incorrect" spellings on street signs serve as visual icons that mark the public space as Qatari, distinct from other Arabic-speaking communities. The desire to encode Qatari identity in signs stem from the demographic composition of Qatar in which nationals constitute only about 10-11% of the total population and the discourse of fear of loss of Qatari identity and culture is quite pervasive. Presenter: Rizwan Ahmad (Qatar University)

The University, Coaching Institute, and Cafe: Reflections on Advertising in North Delhi: University of Delhi's North Campus and its environs is one of the largest agglomerations of students pursuing higher education in the world. The campus itself consists of multiple colleges, graduate departments, several institutes, and the university administration. To the west and southwest of campus is Vijay Nagar and Kamla Nagar which have become places of student leisure with cafes, restaurants, lounges, and bookstores. And to the north is Mukherjee Nagar, yet another location infamous for educational pursuits in the form of coaching for the Union Public Service Commission exams. This presentation considers the ways that educational institutions, entrepreneurial coaching organizations, and businesses catering to student leisure use language and imagery in their signboards and printed and digital published advertising. One of the primary concerns of the presentation is to account for language (English, Hindi, etc.) and script (Devanagari, Roman, etc.) usage among institutional types. Framing the analysis is an effort to understand how histories of standardization with highly salient and often taken for granted associations with schooling and academic discourse – sometimes aligned with notions about mother tongue, the basis of recent educational policy – sit alongside and inform language and imagery used to attract customers. Of interest is the space of coaching institutes where academic and entrepreneurial pursuits come together, evidenced by the offer of amenities like air conditioning, library usage, and personality development. In sum, the presentation considers the parts played by indexes of the academic and leisurely in the construction of the North Delhi campus area as a linguistic landscape. Presenter: Chaise LaDousa (Hamilton College, Department of Anthropology)

The Linguistic Landscape of a Trilingual Protest Movement in Colombo, Sri Lanka : In the midst of Sri Lanka's worst economic crisis since independence, in 2022 young people from all ethnic and religious backgrounds started a protest movement called Aragalaya (struggle) to call for President Gotabaya Rajapaksa's resignation. From April to July 2022, Aragalaya was physically based at a Gota Go Gama (GGG), a protest village in the heart of Colombo. The use of the hashtag #GotaGoHome was pivotal in drawing supporters to the movement. Paralleling the government's struggle over the last two decades to fully implement the Official Languages Policy, GGG participants attempted to make the movement trilingual in the co-official languages, Sinhala and Tamil, and English. The trilingual effort involved signboards, slogans, speeches, and text on websites and social

media posts. This paper draws on participant observation and interviews with Tamil and Muslim young adults in 2022 and 2023 to examine the language politics of GGG and Aragalaya in relation to widely circulating discourses of ethnic unity in Colombo, and efforts to ensure Tamil language rights following the end of the civil war in 2009. I look at how participants created trilingual physical and online protests spaces and consider how participants contrast their lived experiences at GGG and other protests sites in 2022 with how the movement was represented by the national and international news and on social media. Overall, this paper considers how the linguistic landscape of a youth-led protests movement driven by social media can reimagine the position of Tamil-speaking ethnic minorities in a postwar context. Presenter: Christina Davis (Western Illinois University, Department of Sociology and Anthropology)

Lucy Lowe (University of Edinburgh), Ahlam Chemlali (Danish Institute for International Studies), Tatiana Sanchez Parra ,Kaveri Qureshi ,Julia Fernandez

DISCUSSANT:

Dana-Ain Davis (CUNY, Graduate Center), Nicole Constable (University of Pittsburgh, Department of Anthropology)

DESCRIPTION:

Pregnancy, motherhood and migration are intimate transitions, at times divergent, but often mutually constitutive. Migration, citizenship, and residency status can fluctuate on ever-shifting border regimes, while reproductive decisions can transform migratory pathways, including mechanisms of detention, deportation, and settlement. Transitions through different intimate, kin, and migratory statuses produce

new swathes of surveillance and documentation. Migrant women are frequently subject to heightened surveillance and management of their reproductive bodies, through contraceptives, sterilization, and high rates of interventions during pregnancy and birth. Migrant and reproductive surveillance can be simultaneously framed as acts of care and risk-management, which can (re)produce vulnerability, exclusion, and inequalities. This panel seeks to explore the intersections of maternal and migratory transitions. How are ideologies of motherhood and practices of mothering shaped by border regimes and restricted mobilities? Migrant mothers can be deemed as 'welfare queens' or cunning producers of 'anchor babies' or, conversely, as the pinnacle of vulnerability and innocence, deserving of protection. 'Pregnant refugee' may elicit very different affective responses to 'illegal immigrant' or 'foreign domestic worker'. Migrant women must navigate such perceptions of deservingness and demonisation, which can have profound effects on their strategies for settlement, kin-making, and livelihoods. How do restrictive borders and the resultant high-risk journeys shape women's need for and access to reproductive health services? How are identities and communities constructed around the transitions to mother, parent, refugee, or migrant? Pregnancy and motherhood, by choice, accident, or force, are common but frequently underacknowledged features of conflict and displacement. Reproductive justice acknowledges the right to have children, to not have children, and to raise children in a safe and healthy environment – rights that are regularly denied to marginalized migrants, who are often forced to endure intentionally hostile environments. Motherhood (and even the perceived capacity for motherhood) can exacerbate structural vulnerabilities, but it can also open up opportunities for connection. Analysis of such connections can illuminate communities of care and kinship that straddle national borders. How do women navigate transnational mothering, as others care for their children left behind while they engage in paid reproductive labor, or give birth to new lives, in new, unfamiliar environments? How do migrant women care for their own reproductive bodies and needs, when required to meet the demands of employers or healthcare providers? How might relationships with birth workers, including doulas, midwives, and obstetricians, contest or reinforce reproductive violence and obstetric racism? Might such relationships present possibilities for transformative solidarity? Drawing on ethnographic research in Europe, South Asia, North Africa, and South America, this panel will explore the mutable experiences of pregnant women and mothers

in contexts of conflict and migration, and the intersecting gendered and racialized stratification of pregnancy and motherhood. Professor Dána-Ain Davis, drawing on expertise in race and reproductive (in)justice, and Professor Nicole Constable, drawing on expertise in gender, labor, and migration will respond to the papers.

Transgressing maternal and migrant 'vulnerability' and 'risk' in the UK asylum system: If passed, the 'Illegal Migration' Bill is intended to prevent anyone entering the UK 'illegally' from claiming asylum, which will, in effect, end the right to asylum in Britain. When discussed in parliament, a core concern was how such legislation might harm pregnant migrant women, indicating their exceptionalism in contemporary discourses and practices of migration and asylum in Europe. Pregnant women and mothers are identified as icons of vulnerability and deserving of protection, in contrast to (and assumed victims of) migrant men, who are cast as deviant, dangerous criminals and the intended target of increasingly restrictive border regimes. Far from an indication of reproductive or migrant justice, the exceptionalism of migrant women who are pregnant or with young children speaks to a perceived biological vulnerability that is highly gendered and racialized. Drawing on ethnographic research with people in the asylum system in Glasgow, Scotland, this paper examines how pregnant women and mothers navigate transformational expectations produced by the ideologies of vulnerable motherhood and practices of anti-immigrant racism that underscore the British 'hostile environment' policies. Focusing on perinatal support, surveillance, and interventions, it explores the divergent forms of 'care' provided by doulas, midwives, and doctors. In doing so, it illuminates entangled notions of migrant bodies as unruly sources and sites of maternal and migrant risks. Presenter: Lucy Lowe (University of Edinburgh)

Stuck in Transit: Undocumented Motherhood, Waiting and Smuggling in the Tunisian–Libyan borderlands: Anecdotal evidence suggests growing numbers of migrants intercepted at sea – referred to by the Tunisian coastguard as *les rescapés* (the rescued) – return to Libya via smuggling. In this article I empirically document the experiences of so-called “rescued” migrant mothers who consider and/or purposely re-engage in irregular, high-risk returns involving crossing the Tunisian border back into Libya. Employing a feminist ethnographic approach, this paper explores how undocumented motherhood is experienced and shaped in the context of EU-sponsored counter-

smuggling and border enforcement. Building on fieldwork in Medénine, in southern Tunisia, I also examine the considerations of migrant mothers “stuck on the move” concerning clandestine navigation and redirection in the complicated temporal and spatial context created by international organizations and EU-sponsored forms of “protection.” I argue that border enforcement and counter-smuggling policies not only impact everyday life and mobility for undocumented mothers and their children but, as gendered practices, also trap and confine them in a cycle of protracted vulnerability, indefinite waiting, and uncertainty in which opting to travel with smugglers becomes the best bet and last resort. Presenter: Ahlam Chemlali (Danish Institute for International Studies)

Forced motherhood: Reproductive violence and armed conflict in Colombia.: Forced parenthood resulting from conflict-related sexual violence remains neglected within human rights agendas. Drawing on ethnographic work with a rural Afro-Colombian community that suffered a four-year paramilitary confinement, during which women endured conflict-related sexual violence, became pregnant and gave birth to children who the community labelled 'little paramilitaries', I argue that children and women's experiences of reproductive violence are unintelligible to the organisations seeking to address the consequences of the armed conflict. Unlike in other war contexts where identity is transmitted through the paternal line and children are discriminated against as part of an 'undesirable other', in Colombia, women transmit identity and their children are accepted within their community. However, this does not mean that the children are not seen as problematic, or that their biological fathers' traces are gone. This paper follows the fading of the use of the label of 'little paramilitaries', to unveil the less obvious but entrenched gendered politics of identity and reproduction. While the vanishing of the label freed the children from its cruel associations, it created an illusion that they are like any other person of the same age. This paper shows that this illusion is conjured through the imposition on women to perform the labour of motherhood; regardless of the consequences that sexual violence left on them and the dreams they had for themselves before they became forcibly pregnant and gave birth, sometimes under circumstances where abortion was not an option despite being legal. Presenter: Tatiana Sanchez Parra

Migration, class and childcare-related domestic service in Lahore: This paper explores the perspectives of employers and employees in childcare-related domestic

service in Lahore to highlight how inequalities of class and migration shape how babies and small children are differentially valued. Informed by the colonial legacy of the culture of domestic servitude, middle class women in Lahore employ so-called maids to assist with childcare. Expressive of the class and racialized hierarchies that condition the occupation's low economic conditions and social status, maids are predominantly drawn either from rural-to-urban migrant families recently settled in Lahore. The paper explores the relations between the reproductive labour domestic servants are paid to do, and their own unpaid reproductive labour and experiences. Those with children of their own are unable to care for them because their employers require them to be at work from morning to night, overextension precipitating miscarriages, breastmilk drying up. They are keenly aware of the differential value accorded to their employers' children vis-à-vis their own. Non-monetary and immaterial goods transacted – for example entitlement to hand-me-downs and social connections and introductions to health professionals – are noted but do not compensate for the poor level of pay. The paper engages the intersectional rooting of reproductive justice struggles entailing not only a fight for safe and healthy reproduction but also for parenting with dignity and enabling conditions such as paid leave and economic security. The relationality of stratified reproduction, between the employers' privileged reproduction and maids' constrained reproduction, engages concepts of care chains and extraction of emotional surplus value, but also takes forward critiques about how this work has privileged the transnationalization of care, signalling the need to re-direct debates by analysing the non-transnational aspects of care chains. Presenter: Kaveri Qureshi

Making life in transit: experiences of motherhood in the British asylum system: Subjected to forced mobilities and protracted confinement, mothers in the British asylum system conceive, gestate, give birth to, and raise children while inhabiting indefinite states of transit across uncertain terrains and into unforeseeable futures, subjected to gendered and racialized forms of state violence and control. Writing about motherhood in the British asylum system demands attending to how life is made, sustained and enjoyed in the indefinite dilations that occur between asylum claims and resolutions, suspended between moves from one house to another, in the interlude that stretches between the birth of a child and the conception of a new one. This paper draws on fourteen months of ethnographic research on the everyday experiences of mothers living

in asylum accommodation in London to explore how people dwell transitional spaces as life moves on beyond and despite the impacts of asylum politics. Lingering in the transitional, I argue, allows us to appreciate how the textures of the everyday contain as well the existence of subtle liminalities; of those ordinary moves that occur in other semantic domains as mothers transit across uncertain territories where joy, pleasure, and pain collide in particular ways. To create and sustain life, this paper suggests, demands crossing the fragile threshold between conflicting aspects of ordinary life. How can we reimagine transit as a site where the conditions for creating and enjoying life as well as for experiencing pain coalesce? What can a focus on transit reveal about what it means to make life possible in harmful, precarious environments? Presenter: Julia Fernandez

DESCRIPTION:

This panel aims to reconsider the anthropology of 'things military' (Mohr, Sørensen, and Weisdorf 2021), namely, matters that materially, socially, and culturally relate to the interactions between military bases and the island communities that coexist with them. Anthropological scholarship focusing on the military may be traced back to as early as 1924 (Linton 1924), and has continued through WWII, the Vietnam War, and subsequent wars. (Peacock et al. 2007). In general,

military anthropology has positioned both the military itself and military actors principally as objects of study in field research, focusing on soldiers' minds and bodies, on the base as an installation and institution, and on military life and cultures (Ben-Ari 1998; Hawkins 2001; Macleish 2012; Vine 2015); beyond treating it as a fixed object, anthropologists have ethnographically documented experiences, practices, sentiments, fissures and contradictions within military communities as well (Wool 2015). Moreover, anthropologists have critically examined how civil-military relations play out not only on the domestic front (Lutz 2001), but also across transnational (Höhn and Moon 2010; Tanaka 2015), or even 'trans-imperial' spheres (Stoler, McGranahan, and Perdue 2007), providing a crucial glimpse into how militarization or militarism works in different societies (González, Gusterson, and Houtman 2019). Collectively, these studies manifest how the military encroaches on every aspect of social life, in order to reveal not only the lives of military servicemen, but also those of everyday people who live in and around the military. Inspired by the edited volume *Ethnographies of U.S. Empire* (2018), this panel attempts to analyze the military as an 'assemblage' as well as 'dis-assemblage'-- that is to say, how things have or have not been conceived as being connected to the military. How are certain topics categorized as 'military anthropology' and others not? How might ethnography help us rethink anthropology of the military and vice versa? In response to these questions, the presenters examine multiple ways in which anthropology can offer insights into the studies of the military and its impact on contemporary societies. Chu-Wen Hsieh examines the transitions of a military port city, Yokosuka, and asks how it builds its image that comes together with the Imperial Japanese Navy and the U.S. Navy. Carl Gabrielson analyzes the cultural education programs conducted by the U.S. bases in Japan to explore how the military aims to recast an entire nation as a resource for force multiplication. Chris Cristóbal Chan attends to the Republic of China Armed Forces in the Taiwan Strait and the sociocultural transformation of the militarized Matsu islands to a space of pure aesthetics to show what it means for a military strategy to be replaced with a cultural one. Finally, Charmaine Willis explores how Okinawan anti-US-military activists have attempted to use the UNESCO designation of Yanbaru Forest to leverage international pressure on the Japanese and US governments to achieve their goals. Following the 2023 AAA Annual Meeting theme, 'Transitions,' this panel invites scholars to discuss how our everyday lives are transformed by the military and its own transitions.

From Kaigun Curry to Navy Burger: Transitions of A Military Port City : The massive global network of American military bases overseas creates seemingly contradictory experiences and events in the communities where they are located, ranging from crowd-pleasing friendship events and long-standing anti-base activities. Those who work and live in such communities have been transformed by their encounters with the American forces on their doorstep. How do these base neighbors understand their experiences of action, resignation, conflict, and intimacy? This paper focuses on a community in the close proximity to Yokosuka Naval Base, Yokosuka City on the periphery of metropolitan Tokyo. The city has developed as a military port since the pre-war Imperial Japanese Navy launched the base and now hosts the United States Fleet Activities Yokosuka. According to the survey (2017) conducted by the city government on attitudes towards the presence of U.S. military bases in Yokosuka, more than half chose the option of 'inevitable,' or 'that's just the way life is'. It reveals what I term 'extraordinary ordinary life,' a precarious condition in which local Japanese residents are subject to actions by the U.S. military, where security and danger, peace and war coexist side by side. In response to Lutz's (2006) call for studying the empire in the details and Stoler's (2018) reminder of keeping an eye on things that look nonrelational, this paper examines local military-related events, such as Friday Night Patrol and Monthly Protest March, and asks how a Japanese city builds, if not reluctantly, its image integrating both the Imperial Japanese Navy and the U.S. Navy. Presenter: Chu-Wen Hsieh (University of North Carolina, Chapel Hill, Department of Anthropology)

Combating Culture Shock: Weaponizing Cultural Knowledge at U.S. Military Bases in Japan : United States military doctrine identifies knowledge of foreign cultures as a "force multiplier," meaning that it improves the armed forces' ability to wage war on behalf of the state. This doctrine is applied almost universally at military deployments and facilities outside of the U.S., notably including those located within allied nations. Using U.S. bases in Japan as a case study, this paper reveals how cultural knowledge is repurposed for force multiplication outside the presence of combat. Based on extensive fieldwork on U.S. bases in Japan, I show that substantial funding and labor are poured into cultural education programs not to promote understanding, but to help troops feel comfortable stepping outside of base fences. Military leaders describe personnel who never leave the bases as having insufficient morale, poor job performance, and a lower likelihood of reenlisting, and thus frame morale, job performance, and attrition as

problems solvable by getting those personnel outside of the bases. This singular focus on troop comfort casts Japanese culture as the antidote for military mental health problems and insinuates that troops are entitled to help and even caregiving from the Japanese people . While Lutz (2001) has explored the ways that bases depend on local communities and González (2010) and Stone (2017) have highlighted the ways that foreign cultural knowledge is applied to combat situations, this paper unites these threads and extends them to an allied context, uncovering how military cultural education aims to recast an entire nation as a resource for force multiplication. Presenter: Carl A Gabrielson (University of California, Santa Barbara - Department of East Asian Languages & Cultures)

Militarized Islands and Militating Art: Taiwanese Transitions of Military Space to Art Space: This paper examines the sociocultural transformation of a set of militarized Taiwanese islands to a space of pure aesthetics through the organization of a contemporary arts “biennial” within former military sites at the front lines of the Chinese maritime border in the Taiwan Strait. By mobilizing artists in lieu of soldiers and artworks instead of armaments, a strategy of cultural production replaces that of militarization and the space of former military infrastructures over the last half century become imbricated with the environment through the work of art that both contends with social imaginations of crisis and militates against an increasingly imposing narrative of inevitable war and disaster. This study thus explores a contemporary moment and experimental strategy of a post-Cold War de-militarization transition in the midst of a resurging “new Cold War,” where the aesthetics of apprehension and anticipation are mediated through the state-sponsored public contemporary art production and exhibition within the spatial vacuum left by vacated troops of the military. Through a multi-sited ethnographic study of site-specific artworks and peripetatic artists working within art between a range of islands in the Taiwan Strait (from the Kinmen Islands to the Matsu Islands), this paper asks what it means for a military strategy to be replaced with a cultural one, particularly through the mediations of cultural production from the margins in an increasingly interconnected yet divisive present. Presenter: Chris Cristóbal Chan

A ‘Boomerang’ of a Different Kind: UNESCO Recognition and Resistance to the US Military in Okinawa: Keck and Sikkink (1998) argue that when activists’ demands are not met by their home government (“State A”), activists

may create advocacy networks with activists in another country (“State B”) where the government is more responsive to activists’ demands. Activists in State B may be able to lobby their government into pressuring State A’s government to concede to activists’ demands. State B may also bring the issue to an international organization, which may put pressure on State A. This theory is called the ‘Boomerang Model.’ Some activists in State A, however, seek recognition from international organizations themselves, among other strategies. In connecting with an international organization directly, State A activists hope that the organization will pressure their own government to concede to activists’ demands. The anti-helipad/Osprey movement in Okinawa, Japan has adopted this strategy to pressure the Japanese and US governments to close the US military’s helipads and the Northern Training Area (NTA) in Yanbaru Forest. Activists supported a UNESCO designation for Yanbaru Forest with the hope that the bid for designation would bring international attention to the helipads and the NTA. They believed that Yanbaru could not win a UNESCO designation with the helipads and US base in the forest, pressuring the Japanese government to choose between them. I build on Keck and Sikkink’s theory by drawing on interviews with Okinawan activists and other primary sources. I find that this strategy ultimately backfired for activists as UNESCO eventually granted the designation despite the US military’s presence in Yanbaru Forest. Presenter: Charmaine Willis

MPAAC: PUBLISHING ANTHROPOLOGY WORLDWIDE: ISSUES, CHALLENGES, AND CONCERNS

4:15 PM - 6:00 PM TMCC - 716 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Emily Metzner (Western Connecticut State University)

CHAIR:

Virginia Dominguez (University of Illinois, Urbana-Champaign)

PRESENTER:

Monica Heller (University of Toronto, Department of Anthropology), Gordon Mathews (Chinese University of Hong Kong, Department of Anthropology), Carmen Rial , Michel Bouchard (University of Northern British

Columbia, Department of Anthropology), Emily Metzner (Western Connecticut State University)

DESCRIPTION:

Sponsored by MPAAC and its commitment to the World Anthropologies movement, this session focuses on issues, challenges, and concerns that the World Council of Anthropological Association's Council on Publishing has identified as vital for North-South relations within anthropology itself. Presenters are members of that WCAA Council as well as editors, former editors, and assistant editors of anthropology journals and presidents of anthropological associations around the world. The Roundtable follows the lead of the Brazilian Anthropology Association in calling for genuine decolonization of anthropological practice, but it also addresses issues such as language of publication and language of review, readership, geographical distribution, editorial board membership, and patterns of submission.

PRESENTER:

Andrea Pettit (Southasia Institute of Advanced Studies), John Hartigan (University of Texas at Austin), Alberto Morales (Princeton University, Department of Anthropology), Ingrid Hall (Université de Montréal), James Beveridge (University of Texas, Austin, Department of Anthropology)

DISCUSSANT:

Alice Hovorka (York University)

DESCRIPTION:

Multispecies ethnography has advanced considerably over the last dozen years. The range of sites where ethnographers observe and analyze interspecies sociality has expanded greatly; just as crucially, so has the array of theoretical concepts deployed in

understanding the interplay between humans and nonhumans. This panel highlights a variety of endeavors to hone or reconfigure the conceptual frameworks that multispecies ethnographers bring to bear in the field. This current moment also features a great deal of conceptual traffic between the humanities, social sciences, and natural sciences. Questions of power, justice, and intersectionality are coming to the fore in multispecies research; at the same time, ethologists are trying out concepts like friendship and politeness in their studies of nonhuman sociality. These concepts develop differing valences and modalities of analytical attention depending upon context: in labs, on farms or ranches, in zoos and in various novel urban settings, all far removed from 'natural' environments. Each panelist presents a uniquely positioned assessment of their efforts to think and theorize across species boundaries. This conceptual traffic is fueled, in part, by a significant philosophical shift, from concerns over anthropomorphizing to a recognition of the fundamental problem of anthropodenial (Frans DeWaal)--the refusal to recognize fundamental similarities in how humans and nonhumans socialize. Rather than assuming human exceptionality, researchers pursuing multispecies studies are asking instead about overlapping and underlying forms of commonality that constitute humans and nonhumans alike. Another influential strand in these conversations is the newly reinvigorated concern with field methods. Multispecies research both prompts and depends upon advancing claims based in situated and embodied knowledges. Because this research features intimate and sometimes fraught interspecies relationships, methodological concerns (from ethics to participant observation) have become a key locus for theorizing. Our panel opens with Pettit expanding upon her theorization of multispecies intersectionality via an ethnographic attention to animal-plant interactions in agricultural practices in Nepal. Hartigan--building upon his previous ethnographies of horses and of maize--demonstrates how to retheorize animal rituals by drawing on basic tenets of social analysis. O'Connor analyzes how desire is conceptualized and theorized in agricultural dynamics involving insects and crops. The next three papers focus ethnographically and theoretically on dynamics in the Global South. Morales examines how crises threatening amphibian biodiversity are prompting natural scientists to consider multispecies assemblages in the reengineering of biotic materials, beyond concerns with human health and economic speculation. Hall reflects on the 'plant turn' in the social sciences by recentering it in the Global South, particularly through the practice of small farmers in the

Andes. Beveridge examines the adoption of wild animal offspring in the Ecuadorian Amazon, providing a critical assessment of how competing conceptualizations of 'predation' and 'conviviality' construe nonhuman adoptions. These papers work in concert to highlight key patterns in the development of new ideas or the refashioning of old concepts in theorizing multispecies ethnography today.

Multispecies intersectionality: Humans, bovines and plants in the Rocky Mountains and Himalayas : In the Himalayan hills of Nepal, women grow plants to secure their livelihoods through selling and/or consuming the crops. Their agricultural success and their relation to these plants are mediated through relations with bovines. Cows, water buffalos and yaks are loosely paired with women's agri-cultures growing legumes, vegetables and wintergreen respectively. In the Rocky Mountains of Colorado, cowboys', ranchers' and cowboying women's relations to cattle are instead mediated through their relations with horses and grass. This paper engages multispecies intersectionality to explore these multiple and entangled relations. Multispecies intersectionality was fashioned to consider how individuals of other species are affected by human intersections of power relations, but it also takes into account how non-humans themselves are engaged in, and reproduce intersectional relations within and beyond their own species. This articulation of intersectionality also draws on the idea that individuals of different species have 'valued projects' that they variously pursue through the tangle of power relations. Extending my previous work on multispecies intersectionality—developed in the context of the multispecies triad of humans, horses and cattle (2022)—to now also include plants, this paper ponders the possibilities and limits of conceptualizing multispecies notions of power. Via an attention to dung collecting, milking and herding, I convey how tactile and affective ethnographic methods of data collection are necessarily molded to emic notions and practices of multispecies relations; these, in turn, shape possibilities for analysis, entangling the human ethnographer in divergent multispecies power relations. Presenter: Andrea Petitt (Southasia Institute of Advanced Studies)

Animal rituals: A social theory perspective on greeting rituals in nonhuman social species: Ritual has long been a multivalent concept applied both to humans and nonhuman species. All vertebrates have ritual, but natural scientists rely exclusively upon evolutionary frameworks for explaining their competitive manifestations (e.g. mating, fighting). Yet animal rituals

are evident in many mundane spheres of daily life, such as grooming, play, and greetings or leave-taking. These less dramatic displays feature communicative interactions that signal willingness by individual animals to comport themselves in accord with shared social behavioral conventions. Social integration signaling also features ritualized forms for recognizing conspecifics, group members and kin, rivals and mates, as well as friends. Male-female partnerships, parent-offspring relations of care, and group-mate interactions all hinge upon ritualized displays that make continued social integration possible. This paper makes the case for applying basic tenets of social theory to expand greatly how animal ritual is studied and analyzed in the natural sciences, arguing for recognize complex interpretive and performative activities in other social species. For ethologists, the underlying function of rituals is to diffuse or contain aggression. But this assumption ignores a vast range of affiliative behaviors (e.g grooming, play) that are an important source and basis for ritual activity. These affiliative behaviors are not simply innate; they are the means by which the social world is constituted, reproduced, and maintained in the face of manifold environmental challenges. Building upon my ethnographic work on wild horses in Spain, this paper examines greeting rituals across a range of taxa, from fish to birds to mammals. Greetings are nonaggressive signals (vocal, postural or visual, and tactile) produced when approaching or being approached by another animal. As with humans, greeting rituals establish each participant as a social entity, and greetings are expected to elicit social recognition. Presenter: John Hartigan (University of Texas at Austin)

Sound as Method: Global Pathogens and the Promise of More-than-human Biomedicine: These are perilous times for amphibian biodiversity due to environmental deterioration, climate change, and the changing composition of species habitats. Specifically, this presentation focuses on the deterioration of amphibian and frog populations due to the ongoing menace of *Batrachochytrium dendrobatidis* (Bd), a global microbial pathogen. Concerned with biodiversity decline, natural products scientists research microbial communities on the skin of the Panamanian poison frog to detect new chemical compounds for drug development that may enable the survival of other amphibians. This presentation focuses on the potentials of multispecies assemblages in the reengineering of biotic materials beyond human health and economic speculation. Attunements to forest sounds reveal the pressing need for understanding recent changes in

conceptualizing life forms and forms of relatedness due to climate change and other ecological pressures. This presentation traces shifting concepts and uses of life and interprets natural products scientists' forms of experimentation in contributing to more livable worlds. Presenter: Alberto Morales (Princeton University, Department of Anthropology)

Considering the 'plant turn' from an Andean Perspective: This past decade, more and more ethnographies have been conducted from a multispecies perspective, and lately the interest for plants has been growing (Hustak et Myers 2013; Rival 2016; Gibson 2018; Hartigan 2019; Laplante et Bruno-Pasina 2020). This renewed interest for plants in anthropology has been largely stimulated by philosophy and biology, as new researches pointed out quite new aspects of the life of plants and especially its chemistry. Anthropologists like Myers (Hustak and Myers 2013) have opened the door to other kinds of narratives (involution), highlighting the isolation to which the naturalistic approach had previously reduced plants. In some works, there is an aim to "restore" the connections that bind plants to other beings (Haraway 2015, Myers 2020), to enter a new era that Myers calls the planthropocene. Drawing from my own research on the in situ conservation of Andean landraces of potatoes (Hall 2018, 2022), I propose to discuss how this proposal both stimulates and frames the ethnographic study of plants. What kind of choices it entails in terms of research subjects, methodologies or even bibliographic corpus one decides to refer to or not (especially ethnobiology) ? My wonder is, do we leave enough space to take seriously the way people conceive and engage with their plants, especially small farmers like Andean ones? Presenter: Ingrid Hall (Université de Montréal)

Huibana: cultivating Runa and forest animal relations of mutual obligation and care: Runa women living along the Bobonaza river in the Ecuadorian Amazon raise captured forest animals, in a practice called huibana, to act as semiotic mediators between Runa and the forest. Runa women are attentive to the particular ways the huiba (raised) animals interface with the world, and learn the huibas' semiotic repertoires in order to 'read' what huibas sense in the forest, including dangerous beings. Empirical research into embodied-semiotic practices such as huibana is an entry point into dimensions of ontology that crosscut typical ontological concerns such as discursive, supernatural, and cosmological. I move beyond the two predominant frameworks traditionally used to theorize Amazonian

sociality, the neostructuralist paradigm of predation and the conviviality approach, I draw upon scholarship of biosemiotic relationality as well as Indigenous scholars' theorizing of relationality to analyze the huiba—Runa relationship within a more-than-human collective kin network based on intersubjective relations of mutual obligation and care. Presenter: James Beveridge (University of Texas, Austin, Department of Anthropology)

CHAIR:

Philipp Budka (University of Vienna, Department of Social and Cultural Anthropology), Giuseppe Amatulli (Carleton University, School of Public Policy and Administration)

PRESENTER:

Giuseppe Amatulli (Carleton University, School of Public Policy and Administration), Philipp Budka (University of Vienna, Department of Social and Cultural Anthropology), Katrin Schmid, Kaylia Little (University of Waterloo)

DESCRIPTION:

Narratives of change intertwined with sustainable development opportunities permeate the current debate around the need for better infrastructures in rural and remote Canada, where communities often face a shortage of jobs, which translates into fewer opportunities for local residents to stay and build a future in their hometowns. To counter this situation, major projects have been planned and developed in the last decades (such as the Coastal Gas Link -CGL- pipeline project in British Columbia, the Iqaluit deep sea port in Nunavut, the renovation of the Hudson Bay Railway in Manitoba, or the Inuvik–Tuktoyaktuk Highway in NWT). Infrastructures are at the core of many social transformations, sociopolitical developments, and creative processes of innovation. They have become important indicators of an ongoing transition towards a

preferable future; signs of economic development, technological advancement, and 'modernization'. Infrastructures are planned, approved, built, and operationalized with the hope that they will create economic growth while improving the socioeconomic well-being of people and making them want to live in areas that would otherwise offer far fewer economic possibilities. As argued by Larkin (2013), infrastructure holds 'promises of emancipatory modernity' – such as speed, connectivity, and economic prosperity; they 'enchant' the hopes and dreams of development (Harvey & Knox, 2012). They are used to create imaginaries of better futures, which however, cannot be defined (Koselleck, 2004). In the Canadian context, pipelines and LNG facilities, new power grids for small and isolated communities, and better transport infrastructures to enhance economic opportunities while opening new trade routes have been used to shape a narrative around better futures that can only be achieved through development; nowadays depicted with sustainable and green adjectives (i.e., supporting the green transition). Whereas infrastructures that allow resource exploitation have been promoted and generously funded, other fundamental infrastructures, such as housing, have often been neglected (Graneau, 2022). This situation creates an interesting dichotomy between infrastructures necessary to ensure the flow of goods, resources, and, therefore money, in contrast to infrastructures needed to ensure community well-being. As a matter of fact, infrastructures are transitional and their realization is usually surrounded by uncertainties. This transitional feature leads us to consider infrastructure approval, construction, and operationalization as open-ended processes, as they are never truly finished but rather in an ongoing completion process in which maintenance, replacement, and restoration play an important role (Gupta, 2016). Drawing on the research expertise and fieldwork experience conducted by the panelists in several provinces and territories of Canada (BC, Manitoba, Nunavut), this panel proposes to explore how locals perceive infrastructures, as for the feelings, expectations, and hopes infrastructures generate. It investigates the ideas of possible better futures that infrastructures shape among the population as well as the impact they have on people after their dismissal - how people live with their ruins.

Development, promises and a better future in British Columbia: Reflections on the current situation: The lure of economic development, intertwined with job opportunities and greater well-being, has had a vital role in shaping British Columbia's development projects

in the last decades. BC is a province extremely rich in natural resources, with oil and gas reservoirs that abound in the Northeast of the province, ore deposits, relevant forestry resources and expanding shipping opportunities provided by two major Canadian ports, such as Vancouver and Prince Rupert, with the latter often advertised as the shortest route to link Asia to North America. In such a context, major pipelines such as the Coastal Gas Link Pipeline (CGL) have been approved and are under construction in North-eastern BC in connection to the construction of the LNG liquified facility in Kitimat (expected to be put in operation by 2025). In the same area, another liquified floating facility (the Cedar LNG Project) proposed by the Haisla Nation has recently obtained the green light from the Federal Government to go into environmental assessment. The massive development BC has been experiencing has been supported by a narrative that has promoted economic well-being as the driver of people's desires. Thus, future expectations have been shaped by this narrative, with little space left for other possible ways to envision the future. Expanding on the theoretical framework of atemporal modernity that I developed in my PhD thesis and drawing from my fieldwork experience in Fort St. John (2019-2020 and 2022) and Prince Rupert (2022), in this presentation, I'd like to highlight how people perceive development in these areas, what they define as development, what they believe to be important for their social well-being and how they envision the future. Presenter: Giuseppe Amatulli (Carleton University, School of Public Policy and Administration)

Infrastructural disruption, entanglement, and change in Northern Manitoba, Canada: This paper explores transport infrastructures in the Subarctic town of Churchill, Canada. The community of 870 people in Northern Manitoba, which is not accessible via roads, is unique in terms of transport infrastructures. It is home to the only deep-water port on the Arctic Ocean that is directly linked to the North American railway system. And due to the former presence of US and Canadian military the community has a big airport, which has become key for the growing tourism industry in the "Polar Bear Capital of the World". Churchill only exists because of these infrastructures and it has been changing together with them. This entanglement becomes particularly visible and tangible when infrastructure gets disrupted, when infrastructure fails. As in 2017, when a flooding destroyed the tracks of the Hudson Bay Railway and Churchill was without land connection for 18 months because nobody wanted to pay for repair. Five years later, however, and in the light

of recent geopolitical developments, the federal and the provincial governments agreed to invest up to CA\$ 133 million in the Hudson Bay Railway and the port. By discussing ethnographic findings, gathered within the ERC project InfraNorth, this paper focuses on the role of transport infrastructures in sustaining and transforming the community of Churchill. Presenter: Philipp Budka (University of Vienna, Department of Social and Cultural Anthropology)

Gravel, asphalt and concrete. Canada's northernmost runways: Temporality of infrastructure in Nunavut: In Canada's largest, youngest, and northern-most Territory, gravel, asphalt and concrete determine much of daily life. Airport runways' materialities dictate the types of aircraft that can land in each of the 25 fly-in communities and with them the cargo carrying capacity, passenger mobility, and frequency of intercommunity connections. The last jet capable of landing on gravel was recently phased out, a move that further limited access to Cambridge Bay and works counter to desires voiced by residents of Pond Inlet to bring jet access to their community. Temporality, an immaterial concept, becomes intimately articulated through the physical realities of transport infrastructure in Nunavut. This paper examines the interplay of residents' imagined futures for their communities and the on the ground reality of development, operation, repair and maintenance of territorial transportation infrastructure (Hetherington 2016; Gupta 2018). By focussing on the role of airport runways in Nunavut communities, this paper explores the question of how transport infrastructures influence opportunities for socio-economic sustainability in the short and long term. Presenter: Katrin Schmid

Iqaluit infrastructure in a rapidly shifting environment: The permeance of infrastructure is being called into question with the current climate crisis. In a region like Nunavut, which has countless core community infrastructures nearing their end-of-life stages, we are seeing the combined impacts of decades of underfunding and rapidly increasing warming. In 2020, Nunavut Tunngavik Incorporated released the most comprehensive report on infrastructure in Nunavut to-date. This report highlighted what many Nunavummiut already knew, the quality of the territory's infrastructure was far below the Canadian national average and this gap was widening. The state of Iqaluit infrastructure has been highlighted in national news due to repeated water crises, but true long-term solutions are limited. The climate crisis is pushing us to collectively act in the face of an extensional threat, this can be felt through Federal policies that are pushing energy transitions in

the North. If we are interested in a just transition than our approach needs to intentionally understand and address the systemic issues embedded in our current systems. Largescale infrastructure projects imposed on communities are not benign and centring community narratives surrounding past, current, and future infrastructures is essential for shifting away from the interactional nature of infrastructure to more relational ways for sustainable community development. Presenter: Kaylia Little (University of Waterloo)

3-730

Navigating enclosure and implosion: pathways to biosocial collaboration?

4:15 PM - 6:00 PM

TMCC - 714 B

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Sahra Gibbon (University College London, Department of Anthropology)

CHAIR:

Taylor Riley (University College London, Department of Anthropology), Ann H. Kelly (King's College London)

PRESENTER:

Elizabeth Roberts (University of Michigan), Mike Anastario (Northern Arizona University), TATIANE MUNIZ (University College London, Department of Anthropology), Sahra Gibbon (University College London, Department of Anthropology)

DISCUSSANT:

Agustin Fuentes (Princeton University, Department of Anthropology), Carola Tize (University College London, Department of Anthropology)

DESCRIPTION:

In the post-genomic era, biomedical research has partially let more of the world in. At the same time life scientists' efforts to understand how the social world 'gets under the skin' remains reductionist with its continued focus on the individual human body. As Roberts argues within their research ecologies, 'life scientists can only keep cause small,' reinforcing causal enclosure (2022). Attempts to address health disparities leads to further causal enclosure that ignores structural inequities. While critical social scientists tend to focus on the structural forces and/or implode objects (Dumit 2014) it continues to be challenging to dislodge casual

enclosure within interdisciplinary collaboration across the life and social sciences. Can we chart a path that recognises both the need, at times, for reductionism, while also 'imploding' casual enclosure without destroying the necessary scaffolding for collaboration? In this roundtable we invite a range of anthropologists, both established and early career researchers, who work across the broad spectrum of disciplines and who engage with and/or examine emerging fields of biosocial research, to reflect further on how they have experienced and what they consider the major theoretical and methodological obstacles and opportunities for charting a path toward a more effective collaboration outside of anthropology. Together we will reflect on imploding the differences between the life and social sciences in navigating this terrain. How and where can situated and structural understandings of the 'social' in evolutionary and ecological theory become a resource for collaboration? How necessary and sufficient is the recognition of partial and provisional association in the movement towards a biosocial collaboration? What is the work of translation required at this interface? What forms of 'epistemic humility' can or should be undertaken? What does compromise do, how is it achieved and what are its consequences? roundtable participants will discuss one detailed concrete case study from their own work, that has helped them navigating better in doing biosocial collaboration.

DESCRIPTION:

Mangrove forests constitute a unique ecosystem that covers up to 136,000 square kilometers of coastlines, estuaries and deltas worldwide. The biodiversity of this ecosystem has given it a central role in the life cycle of many plant and animal species, thereby also becoming central to the livelihoods of coastal communities in the subtropics since prehistoric times. While the ecological impact of mangrove destruction has been well publicized, the social impact of mangrove decline has remained little explored. To understand the social impact of mangrove ecosystem health, it is essential to examine the long-term human entanglements with these transitional ecologies. Unfolding over time, coastal communities worldwide developed adaptive practices to respond to and engage with mangrove forests. Such ways of working with mangrove environments ranged from near-coast and tidal fishing, mollusk collecting, and hunting, to the collecting of timber. Equally, religious practices, as part of communal views onto the world, often put particular emphasis on these fluid environments. The continued dependency on and interaction with mangrove ecosystems then resulted in deep connections, likely becoming part of communal identity. These deep connections are archaeologically, ethnographically, historically and even ecologically attested, through lines of evidence showing the long-term continuities of mangrove relationships to human communities. Ethnographic research provides an understanding of current involvements with mangrove landscapes, allowing for integrated perspectives of mangroves both as a driver for human action, as well as being dependent on the impact of human activity. Equal to in the present-day, in the past also the maintenance of mangrove ecosystems is marked by a delicate balance. Understanding how this balance is maintained over time and recognizing the importance of local ecological knowledge then holds the potential for future policy making for mangrove conservation at the intersection of anthropology, ecology and heritage. Covering topics ranging from subsistence practices, climate adaptation, governance, traditional knowledge, to multispecies relationships, this symposium aims to enable anthropological and archaeological referentials for the investigation of the multiple facets of human-mangrove relationships. Through these diverse methodologies, this symposium explores how mangroves forests have shaped human communities past and present.

Mapping the Roots of Mangrove-Human Ecology: Long-Term Perspectives on Lagoon Ecosystem Health : Modern mangrove forests and lagoons emerge from social and environmental processes operating at various chronological scales. These legacy effects have been well demonstrated in terrestrial ecosystems but have been tracked in only limited ways on coasts. With a unique ability to document the outcomes of long-term processes, archaeology is well positioned to provide insight into how climate and human decision-making create downstream effects on vital coastal ecosystems that people today and in the future must ameliorate. This paper focuses on the past millennium in the Indian River Lagoon (IRL) of Atlantic Florida (at the northern end of mangroves' range). Formerly home to coastal foragers with dense settlements on the barrier islands and mainland, the IRL is today a threatened ecosystem facing a range of challenges related to urban development and climate change. To characterize change within this ecosystem over the past 800 – 1000 years, we developed a novel, interdisciplinary approach to describing lagoon ecosystem conditions that deploys archaeological data within ecological network modeling. We contextualize changes to the aquatic community of the lagoon and mangrove forest in terms of human subsistence and governance. Recognizing that lagoons emerge from bundled relations among living beings, geological and atmospheric conditions, and human technologies, actions, and institutions, this paper offers a preliminary map of the entities that have, over time, generated the Indian River Lagoon of the 21st century. Presenter: Sarah Barber (University of Central Florida, Department of Anthropology)

Mangroves as a social-ecological system (SES) of diverse identities and dynamic interdependencies: Located throughout tropics and subtropical areas worldwide, mangroves refer to a complex social-ecological system and intertidal zone tree species that is uniquely adapted to anaerobic soils, tidal fluctuations, varying levels of salinity. These unique coastal systems evolved over millions of years to develop an “innate resilience” to extraordinary levels of stress, environmental variability, and extreme weather events. Now largely recognized as one of the world’s most threatened forest types, many studies of mangroves have focused on the biophysical dimensions of this system, considering human activity as an anthropogenic stressor. Fewer studies have examined human adaptations and the long history of human-ecological coevolution within these swampy, coastal forests. This paper explores how people have lived, shaped, and defended this unique system from global drivers of degradation by drawing on case studies from Ecuador and Bangladesh over the last several

centuries. We examine the dynamic interdependencies between diverse species and the livelihoods that depend on them to advance a framework for understanding mangroves as a social-ecological system. We present contemporary ethnographic data on mangrove associated small-scale fisheries and other livelihoods supported by these systems, and how they have changed over time. We further examine contemporary tensions between local and global interests underlying the governance of mangrove systems at multiple scales from local to global. Presenter: Christine Beitzl (University of Maine)

Mingle in the mangroves? Modernity and hydrosocial lifeworlds in the Gulf of Fonseca, Honduras: In this paper, we combine ethnographic observations from the past 50 years with recent archaeological data to examine the changing agency of mangrove wetlands in the construction of precolonial and contemporary social identities and socio-cultural landscapes in the Gulf of Fonseca, Honduras. Through everyday practices, island and coastal communities continually renew human engagement with these transitional environments. Since the introduction of commercial shrimp farming in the 1980s, mangrove forest cover is rapidly declining in southern Honduras (Dewalt et al. 1996; Chen et al. 2013). Along with anthropogenic landscape modifications, climate change and industrialization have changed the way local communities engage with mangrove forests. Exploring the variety of engagements that these environments have invited over time enables an assessment of the significance of mangroves in shaping and maintaining social networks and cultural memories. To this end, we approach mangrove forests of southern Honduras through the notion of ‘hydrosocial lifeworlds’ (sensu Krause 2018) – cultural landscapes with variable agency in relation to human identities among island and coastal communities. We use ethnographic interviews (n=30) with fishermen and mollusk collectors from two islands in the Gulf of Fonseca to explore how daily practices shape individual hydrosocial lifeworlds in mangrove environments. Using this concept, this paper aims to shed light on the fluid relationships between human imaginations, practices and the materialities of water past and present in the mangrove wetlands of the Gulf of Fonseca and address how climate changes and modernity are shifting hydrosocial lifeworlds away from the mangroves. Presenter: Marie Kolbenstetter (Leiden University)

Four centuries of mangrove and swamp cover change in Caguanes, Cuba.: Because of their transitional nature between aquatic and terrestrial environments,

mangrove and swamp forests perform key functions in coastal protection and provide essential resources to human communities. Mangroves in particular constitute buffers against intense wave activity, winds and hurricanes. In this presentation we explore changes in the cover of mangrove and swamp forests in Caguanes, National Park, Yaguajay, Cuba. Relying on historical ecology tools (analysis of sources, maps and spatial imagery), focus groups, and semi-structured interviews (n: 30) we identify anthropogenic and ecological processes over the past four centuries. Findings indicate the existence of four periods with varied levels of habitat use which include different types of environmental modification such as practices of slash and burn, ranching, deforestation, drainage, and intensive sugar cane agriculture. We also identify potential tipping points and recreate vegetational profiles. Results are of value to ongoing restoration and climate change mitigation efforts which seek to protect the 9% of remaining wetlands in Cuba. Presenter: Victoria Ramenzoni (Rutgers University)

Mangroves, Local Ecological Knowledge, and Human Well-being: The Mangrove Civilizations of Puerto Rico: Mangroves and associated coastal forests, including the coastal fisheries they support, are among the most biodiverse and productive ecosystems on Earth. AC Diegues (1995, 1999) has used the term “Mangrove civilizations” (civilizações do mangue) to describe human populations that have developed a close relationship of dependence with mangroves and mangrove resources in Brazil. This paper presents results of long-term research with the “mangrove civilizations” of Southern Puerto Rico (SPR): communities with traditions of Local Ecological Knowledge, subsistence, foodways, cultural identities, and cultural models of human well-being, based on their relationship with these ecosystems. Coastal policy that fails to protect productive mangrove landscapes or hinders community access to these resources runs the risk of degrading human well-being around the coast. We discuss the implication of our findings for coastal policy in mangrove forest dependent regions such as SPR. Presenter: Carlos Garcia-Quijano (University of Rhode Island, Department of Sociology & Anthropology)

TMCC - 701 A

Oral Presentation Session

REVIEWED BY:

Association for Queer Anthropology

ORGANIZER:

Boni Richardson (*)

PRESENTER:

Nayan Prabha, Boni Richardson (*), Anton Blackburn (Duke University)

DISCUSSANT:

Jenny-louise Van der Aa (University of Amsterdam)

DESCRIPTION:

This panel takes up 'transition' as a queer processual movement. While centering 'trans' as identity, the papers also think about spatiotemporal movement that cross national and political boundaries and that involve changing narratives as a sort of queer 'subjectless' critique (Eng et al. 2005). The explorations on this panel of the unequal (economic) relationships between Haitian migrants and non-migrants, the demands for dignity in claiming rights to a home by transgender persons in Mumbai, familial networks and the politics of 'coming out' in Appalachian Pennsylvania, and the ongoing life and breath of a popular trans musician in the UK after her death mark different forms of transition. These manifold readings of change and movement make possible imaginaries of new queer politics and socialities. Eng, David L., Judith Halberstam, Jose Esteban Munoz. 2005. 'What's Queer About Queer Studies Now?' *Social Text* 23 (3-4, Fall-Winter): 1-17.

Transitioning to (wards) dignity? : An enquiry into citizenship claims and state projects of 'rehabilitation' for transgender persons in India: Post the legal recognition of the transgender identity by the Supreme Court of India in 2014, legislative discussions and policy formulation within state sites ensued with the aim of the 'inclusion' of transgender persons and communities into the 'mainstream'. In November 2020, following the Transgender Persons (Protection of Rights) Act 2019, the Ministry of Social Justice and Empowerment launched 'Garima Greh', a shelter home project for transgender persons, being run in collaboration with community-based organizations (CBOs) across 13 Indian cities, which seek to provide residence to transgender persons in need and impart skill development training and educational opportunities. While previously, the emphasis was primarily on recognition, in the contemporary context, Garima, literally meaning dignity, underpins the claims to and deployment of citizenship by both the transgender persons and the state. Greh, meaning home, on the other hand, succinctly brings to

the fore the question of housing which remains one of the central concerns for trans persons and communities in India. During the parliamentary discussions around the TG Bill, usage of the term 'rehabilitation' instead of 'housing rights' was questioned, however, it was retained. The policy frameworks of shelter homes in general are located in the rehabilitative discourse. In this paper, I attempt to move away from the larger discourse of rehabilitation to focus on the ideas of 'home' and 'housing' that emerge from these locations. Drawing on my fieldwork in Garima Greh in Patna, Bihar, and Baroda, Gujarat, I explore the everyday practices through which the experience and idea of dignity get framed and reframed in these 'rehabilitative' spaces. Citizenship and dignity in these institutions, I argue, are contingent on several intersecting factors, importantly including that of regionality and temporality, which I intend to examine. The geoeconomics in which these institutions are spatially embedded determines the nature and quality of access to spaces and resources. For instance, the Garima Greh in Gujarat which has close ties with the royal family of Baroda provides an important vantage point to explore the relationship between citizenship and patronage. Moreover, the meaning of the place itself changes for its residents owing to the nature of spaces that are allotted for the shelter home. In Bihar, Garima Greh, located in a government school building, adopts the nomenclature of being a hostel, while in Gujarat, located in an apartment building, it becomes home. Lastly, I focus on the temporally liminal nature of these spaces which evoke varied meanings for its residents, and what conditions of possibility it generates towards the making of a home, within and outside of the heteronormative conceptions of home and family. Presenter: Nayan Prabha

Queering in Appalachia: Communities, Transitions, and Reimagining: In this anthro-performance (Harrison, 1990), I share testimonios of queer/trans children, tweens and families in rural, Appalachian Pennsylvania. I do this to hold the contradistinctions of their anti-genderqueer, white supremacist Appalachian political climate, alongside their healing, hoped-for futures. Inspired by queer/trans storytelling traditions (e.g., Blaise & Taylor, 2012; Silin, 2017; Sullivan & Urraro, 2019). This performance-presentation aims to illustrate the transitions of our and other queer/trans families' stories in rural Appalachian communities. Through these stories, I explore and highlight transitions and engagements with school, church, and local formal and informal community networks (family networks) that carve out and disrupt barriers of hate to help shape the

lives and communities of the queering young children and their families as a new route is created that is more inclusive, sustainable and offers healing through education and activism. 'Coming out' impacts more than one individual. 'Coming out' impacts the family and the communities. Situated around my family and others in a central Pennsylvanian community, these stories are slices of living queer as a family in rurality. This liminal space fosters unique troubles and obstacles of daily living with pockets of support, love and acceptance hidden beneath the surface for local LGBTQ+ families and their co-conspirators. The stories fluctuate between moments of the joy and horror, giving glimpses to the double lives and lifeworlds of queer children, youth and families as they live and move among the white supremacist, heteronormative, evangelical, patriarchal structures. The shared stories aspire to illuminate the needs of the imagined lives and everyday realities of queering families in rural, Appalachian communities. These stories are important considering the limited scholarship focused on the LGBTQ+ children and youth in rural areas (Capello, 2021), with much of the available scholarship painting an overly deterministic image that overwhelmingly focuses on anti-genderqueer, white supremacist spaces. I aim to give recognition to the entire covert network of queering families working to improve resources, education, and communication between queer families and the community at large while taking note of the impact media can play in these 'tucked away in the mountain' spaces. This familial network offers support, belonging and safe places for those who may not be comfortable coming out to biological family or local community. I use the word 'family' not only to refer to one's lineage and ancestral belonging, but also families chosen and built through 'coming out'. In preliminary conversations with LGBTQ+ families, I learned these networks assist with the transitions of the political landscape and bring for the potential and resources for change through education, resources, and support in multiple forms. The shared stories aim to help blaze a new path bringing forth equity, belonging and life in Northern Appalachia. They provide springboards for further reflection of ourselves, our biases and our way of being as well as for expanding larger discussions about action to provide education, resources, and equity for queering children, youth and families living in rural, central Appalachia. Presenter: Boni Richardson (*)

Transaurality: Sophie's Breath, Afterlife and Afterdeath: This presentation thinks through breath as a threshold that makes uncertain the limits of the body, of life, and of death. 'Transaurality' is developed as a mode of

listening that is both relational, operating across and between, and beyond, on the other side of events. Such a mode of listening seeks to problematize a common-sense beginning and ending of life marked by breath. I argue that how we listen to, for, and with breath – for-itself and for-others – generates an inscription which resides, a ghostly flesh that continues to resound after-life and -death. It is often thought – in medical and vitalist anthropology – that breath brackets aerobic life, from the first breath one takes to the last. Are breaths, if this theorisation is sustainable, really the punctuating parentheses sounding the beginning and sealing the end of beings? Or does listening to, for, and with breath constitute a social career of breath, one which extends a 'being's' processes of becoming? I approach breath, life, and death through a consideration of the social lives of breaths in music, what happens to them in the 'afterlife' when a posthumous body's specters remain of this world, haunting our listening experiences across and beyond a here and now. In particular, the problematic of breath is acutely refined in this paper to focus on breath in a recorded popular song by the late Sophie Xeon, who was an influential figure in both the transgender community in the United Kingdom and, more broadly, contemporary popular music in the UK and US. Due to her centrality and visibility, Sophie's death sent the British LGBTQ+ community into collective grief and mourning. In my preliminary fieldwork within LGBTQ+ nightlife scenes in London, it became clear that Sophie does indeed 'live on,' and the breathiness of her sounds seems integral to this transmutation of the body beyond a life-death binary. Building on Lisa Stevenson's (2014, 2017) profoundly sonic work on care, death and mourning in Inuit communities of the Arctic Bay, I want to reflect on the relationship of breath sounds to the imagination of Sophie 'we hold in our mind's eye,' as well as 'the hold they both have over us' (Stevenson 2014, 40). Indeed, this paper will contend that a transaural listening to Sophie's breath sounds generates a worldly 'afterlife' for the trans community, one in which haunted listening – listening between grief and mourning – holds and connects us to a being which 'no longer exists' (Stevenson 2014, 41) and thus produces what Freud (2005, 204–205) termed 'hyper-investment.' How, when listening to breaths of the dead, does a communal hyper-investment sustain a mythopoetic encounter with Sophie's afterlife, one which conjures her within a transgender imaginary? How does recorded sound, finally, produce an interstitial gap between conventional separations of life and death? The life of death, beyond a metaphysics of presence and non-presence, might be most anthropologically challenging

in the realm of music. Presenter: Anton Blackburn (Duke University)

DISCUSSANT:

Chiara De Cesari (University of Amsterdam)

DESCRIPTION:

The ongoing debates around decolonizing the museum have not only taken on dominant regimes of representation but have increasingly interrogated the material basis of the museum, that is the ways in which collections have been amassed, accumulated, and subsequently mobilized in the knowledge production on cultural heritage. The struggles for the restitution of artworks and historical objects have been pivotal in these developments, and, perhaps for the first time, in the wake of the global Black Lives Matter Movement/Movement for Black Lives have been able to galvanize broader publics in favor of acts of return. While some high profile restitutions from European institutions have been celebrated in the realm of diplomacy, the larger political conditions and legal frameworks within which current acts of return are conducted are still in need of critical examination. At the same time the idea of the universal or encyclopedic museum continues to retain its power, be it in national or international politics. It does so by trying to recuperate the language of decolonization and of diversity (often a used as a stand-in for social justice) in ways that seem to indicate a shift from the paradigm of 'preserving the past' (long a discursive bedrock of the museum) to one of 'preserving the museum' itself. Indeed, we are witnessing the simultaneous acceleration of restitution demands and the integration

of the terminology of decolonization into European cultural policies in ways that stabilize both geopolitical power relations and the institution of the museum in its modern form. Taking restitution as a vantage point to dismantle the workings of colonialism and imperialism in the field of cultural heritage, this panel examines this shift and explores how restitution debates hold the potential to transform the very ways of producing knowledge on cultural heritage and art. The contributors offer conceptual contemplations on dispossession, ownership, inheritance, inclusion, preservation, and protection. We ask what imaginations of different ways of knowledge-making in the museum as well as in the complex of cultural heritage might look like when we start questioning these concepts that are central to the field of cultural heritage from perspectives that are committed to decolonization. The speakers are drawing on their ethnographic case studies that examine how human remains can be honored through and throughout acts of return and the ways in which both repatriation initiatives and museum institutions are put in service of contemporary border regimes. Others have examined how cultural heritage continues to be mitigated through notions of legal possession, and how lost artworks have shaped the writing of art history. The interventions in this debate cover geographical locations ranging from Hawai'i to Germany, Turkey, Libya, and Palestine in dialogue with collections in North America, and especially Western Europe.

Anthropology), Leanne Williams Green (University of Cambridge), Jacob Hickman (Brigham Young University)

DISCUSSANT:

Suma Ikeuchi (University of California, Santa Barbara)

DESCRIPTION:

Our panel questions the relative absence of discussions of class in recent works in the anthropology of religion, asking why anthropologists have been so silent about the class composition of the religious groups they study. We propose that the issue of class has always had an 'awkward' relationship in the anthropology of religion, but we suggest that it is time to revisit class power, struggles, and consciousness in the organization of religious life. Furthermore, we argue against reducing religious life to either tools of class antagonisms, false consciousness, or 'the sigh of the oppressed.' Instead, we consider ways in which religious categories may heighten the contradictions of contemporary capitalist realism or offer means to class critique. Does religion foreground or obscure class consciousness? How does class struggle intersect with religious affiliation? In what ways is it used to consolidate class power, heighten class antagonisms, or inspire renewed class consciousness? As anthropologists of religion, we seek to reinvigorate an anthropological sensitivity to class that does not reduce it to a caricature of populist movements. The papers in this panel take a more ethnographic approach, asking how class appears and why or when it matters to religious practitioners.

'Mining is a Trick,' and Other Lessons on Class Consciousness from Sunday School in Papua New Guinea: What if religion was not merely the sigh of the oppressed, the handmaiden of capital, or the imperialist's hammer? What if religion was a catalyst for workers' class consciousness? This paper argues that religion is not only epiphenomenal to the exogenous workings of capital but can heighten the contradictions of capital and awaken workers to their nature of their labor relations. In making this argument, I draw from the single case of a strike action organized by mine workers on the island of Misima, Papua New Guinea, during the Misima Gold Mine's operation. The impetus for this singular event was that the mining company refused to hold Pentecostal worship at the mining site during work hours. Because the mine refused to sanction what they understood as wages without work, Misiman mine workers organized a strike demanding the mine embrace Christian values. In the days that followed, a robust public debate began over the nature of previous agreements with landowners, the nature of the alienated labor of mine workers, and the analogous

extraction of gold to the extraction of surplus value from mine workers. This awareness of mine workers' class interests, the emergence of a new petite bourgeoisie, and the extractive nature of mining activities led to a politics centered on class conflict that is alive and well on the island today, long after the closure of the Misima Gold Mine. Presenter: Jordan Haug (Brigham Young University, Department of Anthropology)

Upwardly Mobile French Muslims Critiquing the Moral Consequences of Consumerism: I examine the ways practicing members of a Muslim community in a small town in France engage in religiously rooted critiques of capitalism. The community I study is made up primarily of Turkish, North-African, and West-African immigrants who came to France seeking improved economic opportunities, as well as their descendants who continue to pursue upward economic mobility through entrepreneurship, education, and skilled labor. This upward mobility has contributed to an emergent class consciousness through transnational interactions with kin and others in their countries of origin, as well as through broader French society's rejection of the full integration of Muslims. In addition to the development of class consciousness, I argue that my Muslim interlocutors' pursuit of a better life in France has also made them particularly aware of certain ill-effects of capitalism. Specifically, my interlocutors criticize members of French society (including other Muslims) who they say are unable to be properly moral because they are distracted by materialism and consumerism. I describe the various ways that my Muslim interlocutors in the first, second, third, and fourth generation since immigration critique capitalism in both discourse and practice, including religious speech linked indexically to Western anti-capitalist philosophy and the framing of waste avoidance as a religious act. Thus, I argue that juxtaposing the morality of a pious Muslim personhood against the immorality of a secular, capitalist personhood allows my interlocutors to seek recognition as moral persons in a broader society that has largely denied them full citizenship despite their upward economic mobility. Presenter: Clayton Van Woerkom (University of Michigan, Ann Arbor, Department of Anthropology)

The Religious Specificities of Class Consciousness: Being a middle-class Baptist in Harare, Zimbabwe: This paper is motivated by uneasy tensions around the relation between being middle-class and being a Baptist Christian in Zimbabwe's capital city, Harare. Among Zimbabwean urbanites, social inequality and relations of

material dependence take specific cultural forms, and are not viewed as inherently immoral. In recent decades, however, members of Zimbabwe's middle class have found themselves persistently facing downward mobility despite the privileges of material resources and social capital. For my Zimbabwean Baptist interlocutors this raises troubling questions about the apparent correspondence between being middle-class and being Baptist. Drawing on long-term ethnographic fieldwork, I suggest that the religious adherence of this group offers them a particular language in which to assess their own class positionality, social mobility, and their simultaneous identification with "Africanness" and "multiculturalism". If religion can, then, offer adherents a mode of class critique, does it also produce a distinctive class consciousness? The practices of reflexivity and critique fostered in Zimbabwean Baptist Christianity offer a set of discourses in which the anxieties of middle-class belonging are made available for evaluation, but I argue that it does so in the terms most valued by the group themselves. Treating class consciousness as both culturally and religiously distinctive continues a move away from viewing religion as epiphenomenal, and towards a renewed conversation about the complex relation between class and religion. Presenter: Leanne Williams Green (University of Cambridge)

What is deprivation, anyway?: On religion, class, and the End of the World: Millenarian activists face the problem of having to convince people not only that the world is not what it appears to be, but that a total transformation of the world as we know it is both inevitable and desirable. Outsiders commonly conclude that these activists and their outlooks are "irrational" and therefore discount the cosmological frameworks of these groups. Deprivation theory canonizes this understanding of millenarian movements—spanning apocalyptic and utopian cosmologies—asserting that these should be understood in terms of (or should even be reduced to) political and economic positionality. This view is most succinctly summarized in the title of Lanterari's classic, *The Religions of the Oppressed*. This pervasive framework underpins everything from academic to journalistic to law enforcement approaches to millenarian religious groups, reducing religion to class (among other dimensions of socio/economic/political positionality). There are good reasons to reject this reduction (Hickman and Webster, *In Press*; Hickman 2021); but this is not to say that class and positionality are not meaningful dimensions of millenarian theology and action. This paper draws on Hmong millenarian movements across the now-global diaspora (including

Southeast Asia and the United States and France) to pose the question of how one can account for sociopolitical and economic positionality in understanding these movements, without reducing their theologies and cosmologies to that positionality. A class-analysis of both leaders and acolytes in these Hmong religious movements reveals nuance that both questions deprivation-style reductionism, but also reveals how class consciousness factors meaningfully into millenarian cosmologies. Presenter: Jacob Hickman (Brigham Young University)

DESCRIPTION:

Nazi Sluts promising postwar affluence if we return to pearls, pies and the patriarchy; massage studios' postcolonial economies of desire; no-fap activists selling consultations in stoic masculinity... contemporary issues in language, gender and sexuality show how questions of sex(uality) and desire are always also ones of power, politics, and economy. In this panel we explore new directions in Language, Gender and Sexuality in taking up the call of recent feminist and critical race scholarship for an increased historicised and embedded intersectional research, which, as this panel argues, also means returning to work in language and political economy (Gal 1989) that moves beyond identity to understand language and gender in terms of power (Lakoff 1973) and oppression, and desire and desirability in terms of economy, agency and submission (Hall

1998), in order to find ways of understanding larger historical and tenacious structures and practices of oppression (Heller & McElhinny 2017). To do this, this panel has several aims. First, it brings together scholars who share an interest in desire and sexuality (i.e. its discourses, ideologies, semiotic practices) as ways to explore the intersections and articulations of language, gender, race and political economy. Thereby, it aims to bring together research on language and gender, race or sexuality which has traditionally primarily focused on identity, with broader questions of structures of power and political economy – conversely challenging the general lack of attention to gender, race, and sexuality within the current scholarship on language and political economy or on language and work. Secondly, in bringing political economy (back) to studies of language, gender, sexuality, it also brings together scholars from linguistic anthropology (especially in raciolinguistics and language and gender), with scholars from sociolinguistics (especially in language and political economy). In a similar vein, the panel aims to bring together trends in North American linguistic anthropological research with current sociolinguistic scholarship from other geographical, cultural and political contexts. In this intersectional paradigm, the contributions to this panel ask a set of different questions, which are related, e.g., to the role of sexuality and desire in/for racial capitalism (Robinson 1983), in colonial enterprises, and/or in gendered voice design. Then, if desire is deeply embedded in economic infrastructures, how might this show that economic activity has always been both a raced and gendered question, and a question of desire and embodied/voiced desirability? How might broader social phenomena – in particular colonialism – anchor explorations of race, gender, and sex in a political economic context? How, for example, was, and is, colonial exploitation cast as imperial desire? Finally, in this panel we ask how we might use linguistic research to articulate questions of desire, power, and oppression, with questions of race, gender, and political economy.

Discourses of Desire: Language, Labor and Racial Capitalism: In this paper, I will explore negotiations of affect and discourses of desire in the context of Thai Massage on the basis of a critical sociolinguistic ethnography, in which Thai massage therapists regularly recounted explicit formulations of (sexual) desire by clients and passers-by/callers enquiring about the nature of their massage services. In narrating these occurrences, strategies of rejection were discursively highlighted, which reactions ranging from resignation to crude humor, at times even insinuating physical violence. On the other hand, in conversations with me

male clients negotiated their confusion as to whether desire was an intended outcome of the embodied practice of massage. Such narrations and negotiations are treated as socially patterned and distributed (Wetherell 2011) – rather than individual expressions or experiences – and as embedded in a framework of racial capitalism (1983), which fundamentally understands race as labor distinction and in which “bodies are racially indexed for use” (Tran 2022). These patterns and indexes are enmeshed in discourses of desire and desirability that delineate ethnosexual frontiers (Nagel 2003) and are thus framed by post-colonial and capitalist power structures, which subjectifies the Asian-read body (i.e. the exoticized and eroticized Other; Said 1978) – to the male White gaze and, ultimately, its consumption (bell hooks 1992). As a result, these women find themselves in “sexually troubled workplaces” (Nagel 2003), which is exacerbated by language integration policies restricting access to regularized residence status and the labor market.

Presenter: Mi-Cha Flubacher

‘Capsule collections’ for a convivial collective: On the materialities of globalised LGBTQ pride: This paper aims both to expand upon sociolinguistic and anthropological research examining the imbrication of LGBTQ rights discourse with neoliberal political economy, and to further examine the production, and everyday circulation of ‘wearable texts’: the increasingly prominent (and valuable) marketplace for language inscribed on t-shirts, tote bags, and other apparel. The transitory, ‘trend-setting’ world of fashion is defined as much through globalised (and profoundly unequal) supply chains as by individualist styling. Recent commentary within the industry and elsewhere notes how fashion has (purportedly) become a more activist, socially-aware landscape, with a marked uptick of ‘positive vibes’ on display: adornment about ‘feeling good’ as well as ‘doing good’, including in clothing that is designed by/for marginalised LGBTQ communities. During pride season, crowds burst with colourful, prideful, playful slogans – hopeful affects on display through manufacturers’ ‘capsule collections’. In this paper, I use discourse-ethnographic, commodity-driven methodological approaches to describe the ideological aspects of the design and marketing of such ‘wearable pride’. Analysing advertising, social media, and interview data with prominent apparel producers, I argue that critical scholars must question the negative material consequences of this outpouring of feelgood affect – as environmental impact, but also as ideological achievement. What does the mediaised and market-driven circulation of prideful slogans do in the world?

What does it ignore? My paper thus seeks to chart new explorations of/for studying texts and/as commodities: exploring how desires to purchase and ‘perform’ altruistic personhood overlap with desires to celebrate identity and to inhabit a loving, more secure world.

Presenter: Joseph Comer

What’s in a Letter? Filipin(x), Gendered Postcolonialism, and Political Economies of Authenticity: This paper explores a Facebook thread in which discussants on the Facebook page Filipino American respond to a posted article titled, “‘Just use Filipinos: San Diego Comic-Con Page Draws Flak for Using Filipinx’ Term.” Similar to claims being made with regard to the identity label Latinx, participants in this thread debate the impact of colonialism on language, specifically whether the identity label Filipinx is LGBTQ-inclusive or an Anglophone imposition that has resulted from U.S. cultural imperialism. Participants who argue against everyday uses of Filipinx see themselves as making objective arguments about linguistic authenticity in relation to the Filipino nation-state, in which it is said that Filipino, as the so-called default or gender-neutral term for a Philippine national, properly reflects the “Hispanophone” roots of Filipino language (e.g., Tagalog). Others who insist on retaining the identity label Filipino to refer to Philippine nationals and to culture, language, etc. argue that “this [issue] has no affect on moving the needle in making a positive impact (economically and socially) to improving the lives of FILIPINOS in their country or anywhere else in the world.” Yet participants who contend with anti-Filipinx positioning note both the erasure of the impact of Spanish colonialism on Philippine language(s) and culture(s) and the denial of personhood to LGBTQ-identifying Filipina/x/os. As one discussant notes to anti-Filipinx proponents, “we are clearly not Filipino enough.” Using semiotic discourse analysis (Wortham and Reyes 2015, Gal and Irvine 2019), I analyze how the article and discussants on the thread link uses of Filipinx and Filipino to broader issues of (post)colonialism, gender, and sexuality (Stoler 1998). I argue that LGBTQ-centering language debates figure centrally in how participants make sense of, reproduce, and contest the gendered and sexualized political economy of postcolonialism and nation-making. Presenter: Jennifer Delfino (University of Illinois, Urbana-Champaign, Department of Anthropology)

Profiting from bad feeling: Affective entrepreneurship and the far right: Research on white and male supremacy online has highlighted the key role played by affect in affirming and stoking an in-group sense of

marginalization, disadvantage, and resentment. Adherents of far-right social movements adopt the interpretation of 'mainstream' news and culture offered by ideological entrepreneurs who both problematize the supposedly subaltern status of white men and offer masculinist and ethnonationalist political imaginaries as viable solutions. In digital media ecologies the logic of the attention economy places these reactionary influencers in direct competition with one another for likes, views, and follows. Online attention is in turn directly monetized on platforms such as YouTube to sell products from self-help guides and nutrition supplements to 'masculine' shower gel and 'right-wing' coffee. Affect is commodified, and ideologies elaborated in response to this affect, in search of profit. This paper analyses these process in the YouTube videos of The Golden One, a Swedish bodybuilder, masculinist, and neo-Nazi. Developing distinctive linguistic/semiotic styles is an important element of building an online following, and a sociocultural linguistic approach to 'affective entrepreneurship' is thus adopted. Linguistic and semiotic variation are intimately tied up in the production not only of social but also of material value. The Golden One's online businesses selling fitness advice and nutrition, leisure and sport apparel, coffee, and books deploy complex sequences of stylistic bricolage and enregisterment to valorize the consumption of the products he is selling as masculine, European, and "based". The analysis shows how the articulation of the 'right' way to be a white man – which involves a regimen of specific foods, exercises, and the practice of 'NoFap' (abstention from masturbation and pornography) – is circumscribed by neoliberal subjectivity, which in turn embraces wholesale the aestheticization of politics. Presenter: Scott Burnett (Pennsylvania State University)

3-735

Storying Otherwise: On the Possibilities of Creative Ethnographic Writing, Session 4 of 4.

4:15 PM - 6:00 PM TMCC - 707

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Humanistic Anthropology

ORGANIZER:

Susan Frohlick (University of British Columbia, Okanagan, Department of Community, Culture and Global Studies)

CHAIR:

Laura Meek (University of British Columbia, Okanagan,

Department of Community, Culture, and Global Studies), Susan Frohlick (University of British Columbia, Okanagan, Department of Community, Culture and Global Studies)

PRESENTER:

Celia Tuchman-Rosta (Denison University), Jennifer Riggan (Arcadia University), Priya Chandrasekaran ,Derek Pardue (Aarhus University, School of Culture and Society), Tanzeen Doha ,Adrienne Lagman (University of Michigan, Department of Anthropology)

DISCUSSANT:

Alexandrine Boudreault-Fournier (University of Victoria, Department of Anthropology)

DESCRIPTION:

This roundtable will explore the burgeoning genre of creative ethnographic writing with a focus on storying otherwise. We take inspiration from McKittrick's (2021) insistence that stories are themselves interventions with world-making potential, prompting us to inquire if storying otherwise might create possibilities for telling different stories and thus for potentiating and enacting different worlds. This question requires us to first recognize the ways in which disciplinary norms around knowledge-making and dissemination are entangled with anthropology's colonial histories and presents; the academy's neoliberal orientation; the imperial impetus behind state investment and funding; racialized, gendered, and heteronormative department cultures; differential distributions of risks and harms; and the non-innocent ways in which all these inhere in our body-minds. It also means that the choice of which stories we tell and of how we tell them matters, with stakes that are at once political, epistemic, ethical, and ontological (Hunt 2014, Meek and Morales Fontanilla 2022). Through storying otherwise there lies the potential to disrupt long-guarded boundaries including those between scholarship, politics, and creative writing. Reworking disciplinary practices around writing, this roundtable will explore storytelling as a form of speculative thinking-with-care (Puig de la Bellacasa 2012) that is committed to feminist, anti-racist, queer, and anticolonial worldmaking. In today's neoliberal academy, we face increasing demands for 'data,' in the form of objectified, rationalized, disciplined facts (Harvey and Moten 2013). Yet the work we do-- as fieldworkers, activists, teacher-scholars, community collaborators, and co-thinkers with myriad others--often unfolds in ways that resist and refuse the dictates of data-making (Tuck and Yang 2014). Such excesses may reside as ellipses, questions, disconcertments, or half-thoughts that populate our fieldnotes but never make it

into the structuring form of journal articles (Frohlick 2022). A story, on the other hand, can remain open, unresolved, and unsettling. This roundtable thus experiments with storying otherwise to disrupt enclosure and to harness the creativity, willfulness, and possibilities of stories that, through their refusal of reductive and instrumentalizing logics, 'do' other things. This roundtable will engage with these possibilities in a wide variety of ways. Panelists will reflect upon excesses in our fieldwork and fieldnotes to ask what storying these moments might potentiate. We will offer a critique of writing conventions that is performed through storying otherwise-- such as reading a partially 'cooked' poem or a narrative that has been stitched across/between 'raw' fieldnotes. Our roundtable will also consider how storytelling reworks prevailing epistemological frameworks, ontological certainties, and disciplinary norms; how telling certain stories in certain ways (and perhaps, opting not to tell others) facilitates ethical, interpersonal, and community obligations; and the possibilities and limitations of deploying stories in various registers-- as knowledge making, public engagement, or worlding practices, to name a few. Together we explore how storying otherwise brings knowledge, entities, relations, worlds into being through its enactment and how this endeavor might move anthropological 'work' into public audiences and spheres beyond the academy.

3-680

Systems, Cells, and Sacred Objects: Discussions of Embodiment

4:15 PM - 6:00 PM TMCC - 205 D

Oral Presentation Session

REVIEWED BY:

Association for Feminist Anthropology

ORGANIZER:

Nala Williams (Yale University, Department of Anthropology)

CHAIR:

Nala Williams (Yale University, Department of Anthropology), Manon Lefevre (Yale University, Department of Anthropology)

PRESENTER:

Samantha Archer (University of Connecticut), Samara Brock, Manon Lefevre (Yale University, Department of Anthropology), Nala Williams (Yale University, Department of Anthropology)

DESCRIPTION:

The disciplines of feminist anthropology and science and technology studies (STS) have long focused on the body as a site of meaning-making and power, and have theorized embodiment as a process through which the body comes into being in relation to others. Donna Haraway famously wrote that the body extends well 'beyond the skin' (Haraway 1990). Recognizing that this literature is vast, the scholars in this panel draw in particular on recent work on the body: as multiple (Livingston 2012; Mol 2003), knowing (Murphy 2017; Myers 2015), systems or assemblages (Agard-Jones 2013; Lock and Farquhar), material (Olsen et al. 2012), as well as discursive (Butler 2011), and non/human (Barad 2007; Bennett 2009; Franklin 2007; Haraway 2008; Jackson 2020). We build upon these scholars (along with many others) in our own works to consider how different kinds of bodies emerge through their intra-activity, simultaneously subject to yet resisting ongoing modes of power. The papers in this panel expand upon these scholarly conversations about the body/embodiment by bringing together perspectives in anthropology of science and reproduction, Black studies, gender studies and genetics, and systems studies. In particular, this session brings together four projects: Samantha Archer on how the historiography of feminist studies, feminist archaeology, and feminist anthropology might give us a new genealogy for a feminist science; Samara Brock on how bodies are differentially enacted by diverse actors working to transform the future of the global food system; Manon Lefèvre on how human embryos are enacted in the IVF lab and enter into relation with many non/human actors; and Nala Williams on archaeology as a case study to explore networks of care between Black women and artifacts. The stakes of this collective work are to illuminate the multitudinous ways in which bodies are disaggregated, mobilized, and enter into relationships with non/human others at multiple scales: from the microscopic worlds of the Petri dish and the DNA extraction lab, to the cemeteries of the African diaspora, to the macroscopic scale of food system visioning. The bodies with whom we think in this panel are im/material, non/living, and deeply politicized.

What in the Gayle Rubin?: Women's studies, queer studies, and anthropology have strained relationships with one another (Bolles 2016, Weiss 2016). To anyone familiar with all three disciplines this is well known, and yet there is still a persistent lack of understanding as to why this is so. In this paper, I argue that the specter of lesbian sex-radical feminist anthropologist Gayle Rubin is that which haunts the tense and strange relationship

between the three disciplines. Rubin's work, most specifically "The Traffic in Women" (1975) and "Thinking Sex: Notes for a Radical Theory of the Politics of Sexuality" (1984), is arguably the backbone of both feminist theory and sexuality studies. Rubin herself has reflected upon the enormous influence anthropology and anthropological thought had on her thinking in both articles (Rubin 2011), and yet while we claim the existence of feminist anthropology and queer anthropology within the AAA, there remains a sense that they are all somehow at odds with one another. If feminist theory, sexuality studies, and queer studies all have a genesis in lesbian feminist anthropological thought, how can it be that the three disciplines remain estranged from one another? What is it about "the stories we tell" (Hemmings 2011) that disallow an acknowledgement of the ways in which women's studies, queer studies, feminist anthropology, and queer anthropology are deeply indebted to lesbian feminist anthropological thought? And how does the endurance of the stories we tell obscure possibilities of a genealogy of a feminist (social and biological) science that, as I will argue, stretches back to the 1950s? I will suggest a new genealogy of the relationship between anthropology, archaeology, queer studies, and women's studies that will allow us to see anew how feminist theory, from the moment Simone de Beauvoir's *The Second Sex* hit American bookshelves in 1953 advertised as a biology textbook, has, from its inception, always been about science. Presenter: Samantha Archer (University of Connecticut)

"You are Either a Stakeholder or a Steak Eater": The role of bodies in food system transformation: Drawing from 24 months of fieldwork with foundations, NGOs, farmers, Indigenous groups, corporations, policymakers, and others engaged in transforming the future of the global food system, this paper highlights two distinct approaches to how the body is framed: body in the system and body of/as the system. These framings give rise to radically different approaches to transformation. Body in system leads to a focus on solutions such as dietary choice, education, and biohacking. In this view the body, though linked to the world, is ultimately an atomized individual to be disciplined/tricked/educated/hacked. Body of/as system, on the other hand sees the body as a set of relationships spanning space and time. This understanding leads to a focus on undoing colonial legacies as well as practices of dispossession and discrimination that manifest through bodies (Yates-Doerr 2015, Haraway 2016, Murphy 2016, Moran-Thomas 2019, Holmes 2013, Guthman 2011). Eating

has increasingly been theorized as central to how humans come to be in and of systems (Bennett 2010, Landecker 2011, Heldke 2018, Mol 2022). How do these theorizations of human-system match up or collide with how experts working to transform the future of food systems understand the role of bodies? How are bodies seen as sources of legitimate knowledge or not? What bodies are ignored? What bodies are targeted as a means to transformation? Finally, what does this mean for how bodies are enacted and subjectivities shaped through efforts to transform systems? Presenter: Samara Brock

Molecular embodiments and posthuman performances: How embryos come to 'matter' in the IVF lab: Human embryos have long been considered cultural icons (Morgan 2009) and microscopic political actors (Latour 1988). They have also been the subject of much scholarly attention within anthropology and STS (Cromer 2019, Ehrich et al. 2008, Franklin 2006, Landecker 2016, Svendsen 2011, Thompson 2013, van de Wiel 2016, Waldby and Squier 2003). Following the Supreme Court's 2022 decision to strike down Americans' right to abortion, it is perhaps more important than ever for anthropologists of reproduction and science to scrutinize not only how embryos are politicized and enculturated (Landecker 2007, Bharadwaj 2012), but how they come to 'matter' (Barad 2007). Accordingly, this paper locates two moments during which embryos are differently 'enacted' (Mol 2003) in the IVF lab, produced (as unborn children, potential life, or balls of living cells) through embodied/bodily relations with the non/humans with whom they are 'alongside' (Latimer 2013). I draw on 12 months of ethnographic research in an IVF lab and clinic in the northeast U.S. First, I trace embryologists' 'body-work' (Myers 2008, Helmreich 2009) as they monitor incubating human embryos, using their bodies to 'become-with' (Haraway 2008, Wright 2014) the embryos they grow and come to know in the lab, and speak of the cells under their care as lively, living entities (Myers 2015). Second, I describe the moment at which a five-day-old human embryo is transferred into an awaiting patient's uterus, and undergoes a profound ontological transformation from potential life growing in a Petri dish to an unborn child growing inside her—an embodied experience that reconfigures the body as "multiple" (Mol 2003). Together, these moments allow me to consider how embryos, patients, physicians, and embryologists perform shifting ontological choreographies (Thompson 2013) that extend from the cell outward. Presenter: Manon Lefevre (Yale University, Department of Anthropology)

“We could touch each other in the spirit if not in the flesh”: the Black Feminist (In)corporeal: In 1991, the discovery of the New York African Burial Ground marked an intense moment of conflict between the local descendant community, Black Americans from New York, and the federal government. The descendant community were critical of the excavation, the destruction of burials, and the U.S. General Service Administration’s response to their concerns (Blakey 2010; Harrington 1993). Clinton and Jackson (2021) argue that federal contractors were ignorant of African American spiritual traditions, which further alienated the Black community. These non-Christian African American spiritual traditions have been demonized. However, scholars across cultural anthropology (Fairley 2003), archaeology (Samford et al. 1999), art history (Frohne 2015), and religious studies (Coleman 1997) have demonstrated the endurance of West African practices of ancestor veneration in African American communities related to burials and objects associated with deceased kin. Throughout coverage of the New York African Burial Ground Black people, both in and outside of the academy express a connection between respect for their ancestors through the treatment of their remains and grave goods. This paper, grounded in discussions of the human/non-human in Black Studies, object-oriented ontologies in science and technology studies and archaeology, takes seriously Black women’s affective, discursive, and archaeological engagement with artifacts. I argue that Black archaeologists’ working largely in African diaspora cemetery contexts recognize the spiritual connection between artifacts and enslaved ancestors. Their archaeological methods enact Black seek to recognize the humanity of enslaved ancestors through the care of artifactual materials associated with their lives. Further, through analysis of ethnographic interviews conducted with Black women archaeologists over 13 months, I explore how care practices trouble Black women’s already fraught perception as valid knowledge producers. Presenter: Nala Williams (Yale University, Department of Anthropology)

The Creative Ethnographer’s Notebook: A Transdisciplinary Roundtable and Workshop

4:15 PM - 6:00 PM **Virtual - Room 2**
Roundtable/Town Hall - Virtual Live

REVIEWED BY:

Society for Humanistic Anthropology

ORGANIZER:

Kristina Jacobsen (University of New Mexico)

CHAIR:

Kristina Jacobsen (University of New Mexico)

PRESENTER:

Peter Sutoris (University of York), Sara Hopkins (Western Carolina University), Jay Hammond (Georgetown University), Melisa (Misha) Cahnmann-Taylor (University of Georgia), Kwame Phillips

DISCUSSANT:

Debra Spitulnik Vidali (Emory University, Department of Anthropology), Fiona Murphy

DESCRIPTION:

How and when do anthropologists, educators, sociologists and other social scientists innovate with the arts and ethnography? How does one get started to think, write, draw, sing, photograph or perform with data? What is the result of these innovations? Ethnographers are often trained to understand theory, document keen observations and make sense of human patterns, yet they are not often trained in the arts of representation. Creative practices are usually left up to each individual social scientist who may be lucky enough to have an artistic practice they keep silent or on the side of more 'official' work. Yet these practices can make felt differences in the impact, depth, and reception of a piece of scholarship. Thus, a diversity in formats-and learning the art of each format-opens anthropology up to not only a broader set of voices, but broader and more effective and affective ways to interpret data itself. With contributions from emerging scholars as well as leading creative ethnographers working in various social science fields (e.g. anthropologists, educators, ethnomusicologists, political scientists, geographers, and others), this volume offers readers a variety of creative exercises that ethnographers have used in their own work and classrooms to deepen their ethnographic practice. The contributions foreground different approaches in creative practice, broadening the tools of multimodal and multisensory ethnography as one designs a study, works with collaborators and landscapes, and renders ethnographic findings. This roundtable features seven contributors from the forthcoming book, *The Creative Ethnographer's Notebook: Exercises for Writing, Visualizing, Sounding and Performing Data* (Routledge 2024; eds. Cahnmann-Taylor & Jacobsen), where we will present and teach our prompts as a hands-on session for attendees. Presenters are geographically and nationally diverse, and are at a wide range of stages in

their careers ranging from graduate students to full professors; presenters hail from the Czech Republic, Ireland, Britain, and across the continental United States. Each presenter, however, is both an artist and an anthropologist and teaches the integration of these fields in their respective classrooms. Prompts offered during the session will offer hands-on ways to integrate filmmaking, songwriting, bilingual poetry, sketching, deep listening, soundscape recording and ethnographic creative non-fiction into ethnographic practice and fieldwork methods. Contributors include Peter Sutoris (University of York, U.K.), Sara Snyder-Hopkins (Western Carolina University), Debra Vidali (Emory University), Fiona Murphy (Dublin City University, Ireland), Jay Hammond (Georgetown University), Organizer and Co-Chair, Kristina Jacobsen (University of New Mexico), and Co-Chair, Melisa Cahnmann-Taylor (University of Georgia). This roundtable focuses on the sense of experimentation and play that can emerge from the transitional space between the creative arts and anthropology. As such, it offers a present-based, sensory and experimental approach to public anthropology, challenging not only the historical privileging of theory over practice, but the division between what is considered 'art' and what is considered as 'ethnography.' Emphasizing transdisciplinarity, translanguaging and transliteration as a central part of ethnographic practice, we hope to open up a space for mindfulness and creative practice at the AAA 2023 meeting

The force of the river in the lives of humans: A discussion of Naveeda Khan's *River Life and the Upspring of Nature*

4:15 PM - 6:00 PM TMCC - 604

Oral Presentation Session

REVIEWED BY:

American Ethnological Society

ORGANIZER:

Clara Han (Johns Hopkins University, Department of Anthropology)

CHAIR:

Clara Han (Johns Hopkins University, Department of Anthropology)

PRESENTER:

Steven Caton (Harvard University), Jerry Zee (Princeton

University), Eleana Kim (University of California, Irvine, Department of Anthropology)

DISCUSSANT:

Danilyn Rutherford (Wenner-Gren Foundation), Naveeda Khan (Johns Hopkins University, Department of Anthropology)

DESCRIPTION:

In *River Life and the Upspring of Nature*, Naveeda Khan invites us to engage with the life of char dwellers who are inhabiting constantly shifting land amidst the forces of water, at the delta of the Jamuna River in Bangladesh. Chars erode and reappear. Houses move. Seeds are planted but with the knowledge that floods may move them and where they might end up. In this flux of river life, Khan asks us to reconsider the way in which nature is knitted into the social: 'Nature is not that which has to be overcome and mastered, or with which to be reconciled, but that which springs up within us and which we offer our attention and receptivity, and activity and passivity as a response' (15). How does Khan's description of the char dwellers' repositioning questions regarding the ways in which rocks, sand, silt, grasses, waters, the beating sun, and rains gain expression within and through humans? Khan writes of humans, not in terms of 'humanity', but as those concrete others who are embedded in kinship relations, contend with disputes over property and engage in local politics, and whose stories are continuously sedimented within the ever-changing river, such that histories and myths recess and sometimes become available. Recent literature on the anthropocene has asked anthropology to pay attention to 'more than human' worlds by tracking multispecies entanglements. Yet, by offering a different picture of the human, which is discovered and not defined in advance, *River Life* opens a description of the impersonal force of the river and the temporal depths of the lives of those for whom this force surges up in their lives. The papers on this panel all engage various threads in Khan's ethnography, including: the implications of temporal concepts for anthropological engagements with water worlds and environments; the mutual imbrication of imagination and nature that offers a description of flux as a counterpoint to calls for extreme adaptation in a context of global environmental catastrophe; the ways in which shifting sediments are caught within geopolitics and wealth generation; and finally, the implications that engaging nature has for anthropological method. By bringing scholars who work with ecological milieu in a range of political and intellectual contexts - such as water within the Arabian Peninsula, the ecologies of the Demilitarized Zone marking the two Koreas, weather systems in and across

China, and geopolitical violence of the Eurocene - this panel also seeks to bring connective and comparative perspectives on the ways in which the flux of a milieu gains expression within the social and presents core challenges to anthropological thinking. How has the challenge of describing the ways in which nature springs up in the lives of humans repositioned the study of regions and the ways in which anthropology engages problems of scale and relationality?

Of Time and the River: I take the title of my paper from a novel by the early twentieth century American author Thomas Wolf, and I intend it as a provocation for thinking about the place of time in Naveeda Khan's splendid book, *River Life and the Upspring of Nature*, not to mention thinking about time in relation to rivers and nature. First, what do I mean by time? I have in mind four temporal concepts: duration (as understood by Henri Bergson and drawing from my own work); event history (Marshall Sahlins); memory/forgetting (Paul Ricoeur); and the chronotope (Michael Bakhtin). This paper asks whether time in any or all of these four senses is apparent in Khan's book, and what difference it might make to her analysis if they were made more explicit. More ambitiously, the paper asks whether time is inherent to the "nature" of rivers (as Khan seems to understand the Jamuna) and whether it is an "upspring of Nature" as Khan understands this, drawing from Friedrich Schelling and Johann Wolfgang von Goethe. What might be the theoretical implications of answers to the second question for anthropologists interested in both time, water, and the environment? Presenter: Steven Caton (Harvard University)

Entrainment: The Generativity of Disappearing Landmass: This talk explores real estate development, money laundering, and the geopolitics of anxious Chinese money as they reshape the hydrology of islands across the Pacific Rim. Taking cues from Naveeda Khan's meditation on entrainment as a figure of life drawn into the traction of fluid water and earth, the talk poses Chinese-funded construction not only as a work of storing liquid and foreign wealth as concrete, but as part of the generative power of shifting patterns of sediment deposition in western Canada. In thinking with the disappearance of landmass not as a mode of vanishing, but as a mode of generation - of territory, of geopolitical relation, of land that yearns to be water - I suggest that Khan's work offers important reorientations for rethinking the relationship between history, landscape, and wealth. Presenter: Jerry Zee (Princeton University)

Reflections on Anthropological Knowledge Practices and the Upspring of Nature: This paper responds to Naveeda Khan's *River Life and the Upspring of Nature* with a focus on the methods by which anthropologists come to "know nature." What are the methodological and epistemological means by which anthropologists not only produce knowledge of nature, but also come to know it as experienced by our collaborators? Khan locates a shortcoming in contemporary theoretical approaches to naturecultures that "do not go far enough in making nature a felt reality both cognitively and existentially" (14). I reflect upon this provocation by drawing upon my own fieldwork practices and ethnographic writing that attempted to draw closer to the felt reality of nature among South Korean ecological researchers in the Korean Demilitarized Zone. Presenter: Eleana Kim (University of California, Irvine, Department of Anthropology) Discussion: Discussant: Danilyn Rutherford (Wenner-Gren Foundation)

The New Politics of Community Mobilization in Latin America

4:15 PM - 6:00 PM

TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Society for Latin American and Caribbean Anthropology

ORGANIZER:

Patrick Clark

CHAIR:

Patrick Clark

PRESENTER:

Susan Vincent, Rudi Colloredo-Mansfeld (University of North Carolina, Chapel Hill, Department of Anthropology), Patrick Clark

DESCRIPTION:

The New Politics of Community Mobilization in Latin America This double panel explores the legitimacy of 'the community' as a vehicle for political, sociocultural, and economic transformation in the current moment. When referring to rural Latin America, 'community' is a nearly ubiquitous, yet vague term. It is seldom examined to see how and why communities continue to be used as vehicles for achieving broader political change and meeting livelihood needs in particular moments. In the current moment of crisis and conflict in

Latin America, the media and official discourses often discount community political mobilization throughout the region (e.g., Ecuador, Peru, Bolivia, and Panama) with offhand statements such as 'they only participate in the protests because their communities will fine them.' By contrast, sympathetic analysts often presume that the pursuit of collective well-being is a cultural reflex characteristic of rural communities. Both positions (i.e., coercion by local elites or the cultural subordination of the individual to the collective) take for granted the active and changing production of communal legitimacy and the conditions of possibility for communal mobilizations. Thus, this panel will address a series of questions: (1) What do community structures and ideals look like today, particularly in the face of rural-urban migration and rapid cultural change? (2) What shapes contemporary commitments to those structures or ideals among rural peoples (e.g., material aims, like irrigation or tourism; social ties; or cultural identities; etc.)? (3) To what ends do people participate in communal mobilizations? In other words, where lies the legitimacy of the community as an institution and, in turn, a vehicle for change?

The changing role of a Peruvian *comunidad campesina*: From defense of livelihood to place of leisure?: Similar to other communities in the Peruvian central highlands, Allpachico became a legally recognized peasant community (*comunidad campesina*) in the 1930s on the basis of combined activities in small-scale farming and male waged labour in the mining sector. This joint identity prevailed over most of the 20th century and was the basis of vibrant political activism organized through the *comunidad* in the 1970s. However, as extractive industry moved to other areas of Peru, many Allpachiqueños migrated farther and more permanently in search of income. Currently, *comunidades* in regions close to the new mines have become more politically engaged, while Allpachico's political fervor and population have both declined. Allpachiqueño migrants' interest in the community is now more as a place to retire or have a second home, than a place to seek a livelihood. The *comunidad* structure has become strained, expected to meet the needs of a few who farm, a rising proportion of aging residents, and migrants who see Allpachico as a place for relaxation rather than work. In the context of decision-making over how to allocate state funds for local development, this paper examines the tensions between the legal polity of the *comunidad* and the competing iterations of "community" in the daily lives and life aspirations of the people. Presenter: Susan Vincent

REBELLION, REFUGE, AND RIVALRY: COMMUNITY FORCES IN ECUADOR'S NATIONAL UPRISINGS, 2019-2023 : "Without community, Indigenous peoples would be the wayra apamushkas, those carried by the wind, without history and without future," writes the Indigenous scholar Dr. Luis Alberto Tuaza (2022). His and others' research has documented the threats of de-communalization, of the winds of social change now blowing in the rural Andes: the mass migration of young families to Ecuador's cities, youth rejection of family farming for a chance at formal jobs, and the emigration of men and women abroad. Yet, even as the list of threats they face grows, rural and Indigenous communities across Ecuador demonstrated remarkable tenacity in anti-government protests in 2019 and 2022. Under the leadership of the national Indigenous movement (CONAIE), community leaders mobilized their members to sustain general strikes for weeks, forcing the government into negotiations and concessions. In an era of migration and urbanization, what material interests, social ties, or cultural identities among rural peoples reinforce community commitments? To what ends do people reproduce the authority of the peasant *comuna* as an agent of change, not just in Indigenous lives but in the life of the nation? This research draws on fieldwork in three highland provinces realized from the June 2022 mobilization through July 2023. The authors analyze material gathered from ethnographic interviews, meetings with community councils, and observations of the results of recent local elections. New evidence reveals the ways councils reinforce their political relevance by giving voice to the specificity of one community's needs and interests in distinction from—and at times in competition with—neighboring communities. In addition, the recent experience with the COVID pandemic provided members with a period of closer engagement with their communities and an experience by which to calibrate the value of a rural home as place " Presenter: Rudi Colloredo-Mansfeld (University of North Carolina, Chapel Hill, Department of Anthropology)

'Community', Political Reform and Left Politics in the Andes: A Comparative Historical Approach: This paper considers the relationship between the concept of Andean indigenous/ peasant 'community', state power, social mobilization, and the practice of Left politics in the Andean countries of Bolivia, Peru and Ecuador in historical context. It begins by presenting a conceptual framework that contrasts different philosophical and analytical conceptions of 'community'. It then considers the way the concept has been instrumentalized by the

political Left in the three countries from the beginning of the twentieth century to the present. Here, the ideas of Peruvian Marxist theorist Jose Carlos Mariategui, his idea of Andean indigenous community as an embryonic form of socialism, have cast a long shadow over the theory and practice of Left politics in the region. Andean community has indeed been an important ideational and material force in Ecuador and Bolivia in the cycles of anti-neoliberal mobilization that were led by the Indigenous movement in Ecuador in the late 1990s and early 2000s as well as the mass protests in Bolivia that preceded the election of Evo Morales to the Presidency in 2005. The ouster of Pedro Castillo from Peru's Presidency in December 2022 catalyzed national-level protests, many of which have been rooted in communal social organization, and in this regard parallel the forementioned historical episodes in Ecuador and Bolivia. However, I contend that the comparative historical lessons from the cycles of popular mobilization that helped catalyze the political reforms implemented by the Pink Tide governments in Ecuador and Bolivia suggest the prospects for political reform in Peru, such as a constituent assembly, a more unlikely outcome. Here, I emphasize the comparative differences between Peru and the other two cases, in particular the legacies of the 1980s civil conflict and the destruction of national-level popular social and peasant organizations in the 1990s during the authoritarian transition to a neoliberal political economy under Alberto Sendero: Patrick Clark

The Role of Affect in Language and Social Justice Engagement: Transitions across Reflexivity and Action

4:15 PM - 6:00 PM TMCC - 711

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Netta Avineri

CHAIR:

Patricia Baquedano-Lopez (University of California, Berkeley)

PRESENTER:

Robin Riner ,Patricia Baquedano-Lopez (University of California, Berkeley),Netta Avineri ,Laura Graham (University of Iowa, Department of

Anthropology),Inmaculada García Sánchez (University of California, Los Angeles)

DISCUSSANT:

Bernard Perley (University of British Columbia),Ana Celia Zentella (University of California, San Diego)

DESCRIPTION:

Over the past few decades, there has been a significant body of work in the anthropology of emotions (Lutz & White 1986; Rosaldo 1984; Schweder & Levine 1984) and the linguistic anthropology of affect (Besnier, 1990; Goodwin, Cekaite, & Goodwin, 2012; Irvine 1993; Ochs 1986) In *Towards an Anthropology of Self and Feelings* Michelle Rosaldo invites us to consider how anthropological work draws from and engages with emotions. Blurring the lines between thought and feeling (and as a critique of rationality, cartesian dualism) Rosaldo notes: Emotions are the 'embodied thoughts, thoughts seeped with the apprehension that 'I am involved'' (p. 143) -- that is, a sense of being engaged and implicated. A parallel line of inquiry and action in linguistic anthropology has focused on the connections between language and social justice (Avineri, Graham, Johnson, Conley Riner, and Rosa, 2019; Garcia-Sanchez, Riley, & Perley, forthcoming), challenging scholars and researchers to transition from reflexivity and observation to critique and action (Avineri & Baquedano-Lopez, forthcoming) within politicized contexts of inequality and oppression. In this roundtable, we will build on the notion of emotion as engagement as a lens to situate LSJ methods as both driven by and generating embodied emotion, for example, the empathy or rage when noticing and responding to language and social justice issues (LSJIs) (Avineri & Baquedano-Lopez, forthcoming). This roundtable convenes scholars whose work has been shaping an applied linguistic anthropology of language and social justice (Avineri & Baquedano-Lopez, forthcoming), its theorizations and its methods, around this core question: What possibilities emerge when we recognize affect as part of our language and social justice engagement? We will explore the ways that emotional responses to LSJIs are private and public expressions of one's recognition of engagement and implication in one's social world. Though emotion and affect are at the core of many language and social justice engagements (e.g., addressing the denigration of Indigenous people in sports team mascot names, humanizing immigrants through work with media organizations moving away from the word 'Illegal', counteracting deficit ideologies of youth and parent language as embodied in the 'language gap' discourse), they have not been as overt or explicit in our theories

and methods. How, for example, is outrage part of noticing and observation - and also part of action, embedded in the histories of racialized and marginalized individuals and groups? In this way, we will explore how LSJ engagements humanize the experience (case studies, issues) and the researcher. We will unearth multiple affective modalities, including emotional, sensorial, ideological and semiotic, taking into account the practices of individuals and also their participation in collective activities. Roundtable participants will discuss specific examples of the affect/language and social justice interface through their research, pedagogy, advocacy, and activism with Latinx and Indigenous communities, language reclamation contexts, legal settings, youth and adult language socialization, and immigration in the Global South, the Americas, & Canada. This roundtable is therefore an invitation to expand the conceptual and methodological boundaries of affect as well as language and social justice by fostering dialogue and imagining collective possibilities.

3-595

Transforming Structural Vulnerability Research: Integrating Ethnographic and Biocultural Approaches

4:15 PM - 6:00 PM **TMCC - Hall G - MI**
Executive Roundtable/Townhall - In-Person

REVIEWED BY:

AAA/CASCA Executive Program Committee

ORGANIZER:

Meredith Marten (University of West Florida, Department of Anthropology)

CHAIR:

Katie Miller Wolf (University of West Florida, Department of Anthropology), Allysha Winburn

PRESENTER:

Jason De Leon (University of California - Los Angeles (UCLA), Department of Anthropology), Benjamin Burgen (University of West Florida, Department of Anthropology), Iván Sandoval Cervantes (University of Nevada, Las Vegas, Department of Anthropology), James Quesada (San Francisco State University), Paula Tallman, Jennifer Byrnes (University of Nevada, Las Vegas, Department of Anthropology), Jaymelee Kim (Wayne State University, Department of Anthropology)

DESCRIPTION:

The COVID-19 pandemic and the 2020 murder of George Floyd can be envisioned as the kind of transformative, 'exceptional episodes' (Klenk 2019) that inspire ethical reckoning across many domains of public and academic life regarding racism, injustice, and social marginalization. The discipline of anthropology has a long history of investigating links among race, racism, and the structural determinants of health. Yet, in the wake of these exceptional episodes, emphasis on the forms and mechanisms of structural vulnerability experienced among marginalized populations has sharpened among biological anthropologists and particularly forensic anthropologists-the latter of whom have traditionally been slow to interrogate their own disciplinary histories and often-implicitly deterministic approaches. Recently, works by Byrnes and Sandoval-Cervantes (2022), Moore and Kim (2022), and Winburn, Miller Wolf, and Marten (2022) have advocated for strengthened interdisciplinarity in biocultural investigations of structural vulnerability, advocating for increased engagement with cultural anthropology and ethnographic methodologies to better understand and identify the structural causes of excess morbidity and mortality among individuals who disproportionately become forensic cases. We propose this roundtable to interrogate emergent biocultural linkages among forensic anthropology, bioarchaeology, and cultural and medical anthropology to better identify and understand structural vulnerability and the embodiment of social inequality. Rooted in the conference theme of transitions, we welcome the opportunity to take time-sensu Adams, Burke, and Whitmarsh's (2014) 'slow research'-to pause, reflect, and constructively think through the opportunities and challenges ahead as these collaborations emerge. Gathering a group of scholars from subdisciplines across anthropology, we aim to discover shared goals and avenues of opportunity and partnership, focused on questions including: What are some ways in which inter-subdisciplinary approaches have been successfully used in contemporary research, and what can we learn from those experiences? What new ideas can these collaborations illuminate, and how can we use that knowledge for more impactful public practice? What might cultural and medical anthropologists learn from these explorations in forensic anthropology, and how can cultural anthropologists' expertise be better integrated into these discussions? How might we work against the institutional pressures that prioritize scientific over humanistic research questions and approaches? What challenges can we anticipate in applying structural vulnerability perspectives to diverse

contexts, including medicolegal death investigations and report-making to the State? How might we correct for them? What examples-such as structural competency training-can we envision as possible outcomes? And above all, how can we translate these works into meaningful and tangible action intended for the broader public? As Cabana et al. (2022) describe, the promise inherent in the 'big tent' of anthropology is exciting and aspirational, but nature/culture 'boundary crossing' presents numerous challenges: methodological, epistemological, and institutional. Within the larger conference theme of transitions, we anticipate working through these challenges and highlighting opportunities centering the unique capabilities of our discipline toward creating a more just and humane future.

3-745

Transforming The Role of the Fieldworker For Environmental Justice

4:15 PM - 6:00 PM TMCC - 716 A

Roundtable/Town Hall - In-Person

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Rasmus Rodineliussen (Stockholm University)

CHAIR:

Camelia Dewan (University of Oslo, Department of Social Anthropology)

PRESENTER:

Sophie Chao ,Rasmus Rodineliussen (Stockholm University),David Bond ,Carole McGranahan (University of Colorado, Boulder, Department of Anthropology),Camelia Dewan (University of Oslo, Department of Social Anthropology),Lukas Ley (Max Planck Institute for Social Anthropology)

DESCRIPTION:

The participants of this Roundtable will focus on the question: Who is the fieldworker in the field today? This is done in a time when anthropology as a discipline is transforming its involvement in the world; acting as policy advisors, activists, and more. Following trends of 'Fieldwork Activism' (Harmanşah 2020), we seek to understand transitioning modalities of fieldwork that hope to do 'some good,' rather than simply avoiding to 'do harm' to those among whom we work (Podjed and Gorup 2021: 7). Acknowledging that different fields and contexts allow for different types and extents of involvement, the participants will dive head down into a

discussion of how the role of the fieldworker can, and perhaps should, be changing. We seek to explore the 'what' and 'how' of fieldwork in the current era of climatic changes, extractivism, the multispecies violence of plantations, pollution, land grabbing, and biodiversity. Environmental anthropologists are increasingly entangled in the politics of contestation arising from capitalist natures. How do we as 'theoretical storytellers' (McGranahan 2015), also ensure that we can give back to our fields? To what extent is it even possible, and what strategies can we adopt? This roundtable will seek to discuss the complexities of transforming the role of the anthropological fieldworker for environmental [multispecies] justice. This includes contesting oil refinery pollution in the Caribbean (Bond 2022), flooding in Indonesia (Ley 2021) and the violent multispecies entanglements of oil palm plantations in West Papua (Chao 2022). To efforts towards achieving multispecies justice (Chao, Bolender, Kirksey 2022), and how to address the health-damaging effects of the same toxic shipbreaking in Bangladesh that local workers depend on (Dewan 2022), and citizen-led efforts to clean Swedish lakes from toxicants through diving (Rodineliussen 2021).

3-695

Transitioning Capitalisms/ Capitalisms in Transition

4:15 PM - 6:00 PM

TMCC - 203 A

Oral Presentation Session

REVIEWED BY:

Society for Economic Anthropology

ORGANIZER:

Laurel Zwissler (Central Michigan University)

CHAIR:

Laura Cochrane (Central Michigan University, Department of Philosophy, Anthropology, and Religion),Laurel Zwissler (Central Michigan University)

PRESENTER:

Laura Cochrane (Central Michigan University, Department of Philosophy, Anthropology, and Religion),Alejandra Gonzalez Jimenez ,Laurel Zwissler (Central Michigan University),Sarah King (University of Ottawa),Rachel Smith (University of Aberdeen),Farah Qureshi (Colby College, Department of Anthropology)

DISCUSSANT:

Nora Haenn (North Carolina State University, Department of Sociology & Anthropology)

DESCRIPTION:

How do people resist, adapt, and leverage colonially imposed forms of capitalism to their own ends? Economic anthropology has long demonstrated that capitalism is not a single, hegemonic thing, often understood to be imposed on communities, rather than developed (eg Rofel and Yanagisako 2019; Naylor 2019). Approaching capitalism as a coherent whole leaves room only for questions about the morality of the imposition and the success of its adaptation within specific contexts. This panel investigates ways that specific communities reposition themselves in the face of global economics, their transitions, and their consequences. Following calls to incorporate material culture, micro-level practices, embodied performance, and indigenous language sources in analyses of economy (eg Covington-Ward 2016; Lesorogol 2022; Ngom 2016; Brodtkin 2000) panelists complicate the notion that 'capitalism' means any one particular thing and refocus on individual and community negotiations with capitalist systems, adaptations to their own values, needs, and relational expectations. Drawing together scholars working in diverse geographic and cultural contexts, we explore examples of capitalisms in transition. We share an interest in afterlives of colonial economic models and their relationships to broader value systems, including religions and kinship responsibilities, categories that are themselves often intertwined. Looking beyond analyses of resistance to and accommodation of economic systems allows for more nuanced pictures of resilience and creativity than such theoretical dichotomies provide. In each of our cases, communities' responses to challenges, including climate change, imposed state systems, and global economic forces, reveal locally developed ingenuities.

Integrating ancestral heritages and economic strategies in Senegal: In Senegal's delta region, people have faced enormous, and often destructive, external pressures

while making decisions about agricultural land use. In the nineteenth century, the French colonial occupation forced not only the peanut cash crop, but also a cash economy tied to European exports. Fully adopting this colonial form of capitalism threatened land management systems that had sustained semi-arid agricultural land for centuries. Instead of adopting the cash crop completely, delta region farmers integrated it into their own systems of land management, under the direction of both customary authorities and ancestral spirit guidance. This strategy buffered the eventual environmental and economic crises that neighboring regions faced (Fall and Ngaido 2016; Richard 2019). The delta region continues to draw on this history of mediating capitalisms, as local collectives negotiate challenges that come from the effects of climate change and the impositions of a global market. This paper will combine recent historical research and ethnographic interviews with farmers, fishermen, and women's groups. While participating in regional and global capitalisms, they design their economic ventures with principles drawn from their ethnic and religious heritages. Following scholars who focus on local collectives that practice indigenous strategies within capitalist contexts (such as Antrosio and Colloredo-Mansfeld 2015; Masquelier 2019; and Lesorogol 2022), the paper will argue that heritage-based strategies are both a means of community organizing and economically effective. Presenter: Laura Cochrane (Central Michigan University, Department of Philosophy, Anthropology, and Religion)

Cultures of Work: Colonial Legacies in Transnational Car Production: In an era of standardized production, people, values, and know-how circulate back and forth between factories owned by the same transnational corporation. Drawing on fieldwork at Volkswagen in Puebla, 130 kilometers south of Mexico City, this paper focuses on how Mexican engineers transform themselves into 'bridges' (puentes)—mediators and translators between different "cultures of work." These Mexican engineers are sent to Germany for short periods of time for the explicit purpose of cultivating a "German work culture"—supposedly characterized by discipline, efficiency, teamwork, and punctuality—to overcome a "Mexican work culture"—supposedly characterized by wasting time, idleness, non-cooperativeness, sentimentality, and carelessness. By focusing on such processes of becoming, the aim of this paper is two-fold. First, it situates "cultures of work" within the repertoire of Othering regimes that ascribe qualities and characteristics to people and that are central to capitalist and colonial projects of labor-force

creation (Amrute 2016; Brodtkin 2000; Fanon 2008; Lowe 2015; Stoler 2002). Second, it explores the ways in which the embodiment of cultural capital—education at a German university, skills and habits, German and English language competence—are an asset in, and central to belonging to, a market- and technology-driven world and how they are vehicles for social mobility (Bourdieu 1986; Rofel and Yanagisako 2019). By examining both aspects of this form of global circulation, this paper illuminates how cultural differences are being mobilized today to reproduce racialized Others (Stolcke 2021) and, at the same time, how overcoming these differences open forms of inclusion in a market economy. Thus, this paper shows the ways in which legacies of colonial capitalism are reproduced and simultaneously appropriated and reconfigured. Presenter: Alejandra Gonzalez Jimenez

Good Enough: Fair Trade Certification as Cultural Transliteration: What stories become obfuscated by a “fair trade” label? Advocates of fair trade emphasize the movement’s potential to ameliorate the risks of global capitalism for small-scale producers (Jaffee 2014, Lyon and Moberg 2010). Fair-trade projects rhetorically inject moral responsibilities into global economic transactions and attempt to redeploy capitalism in the service of social justice, rather than further reinforcing historical wealth inequalities. Much important work on fair-trade relationships highlights ways that pragmatic challenges in supplier communities sometimes undermine Western partners’ project goals, for example for increased gender equality or housing parity (Lyon 2006, Besky 2014, Naylor 2019), or ways that Western marketing projects for fair trade items can perpetuate the same stereotypes that drive economic imperialism (Berlan 2008, Zwissler 2017). In conversation with these crucial critiques, this paper conversely focuses on ways that the fair trade concept sometimes fails to capture the fullness of supplier accomplishments. Here I consider negotiations that a supplier group must engage in order to fit their diverse, community-care projects - often related to climate-change disaster recovery - into fair trade model offered by Western distributors. Drawing on multi-sited fieldwork with an artisan group that supplies hand-knotted rugs from Pakistan to the retailer, Ten Thousand Villages, this paper explores the overlapping but divergent meanings that fair trade may carry for customers, retailers, and suppliers. This analysis demonstrates that the term serves as a kind of cultural transliteration, making multifaceted mediations of capitalism legible within the North American marketplace, but also collapsing divergent projects into

a single model. Presenter: Laurel Zwissler (Central Michigan University)

Just Transitions and the Ghosts of Colonial Economies: In the face of unprecedented global environmental change, many international actors argue for a ‘just transition’ towards sustainable jobs and economies (ILO.org; UNIPCC). Despite the rhetorical emphasis on collaboration, for many local communities such a transition is externally imposed and driven. For example, The language of ‘just transition’ comes from global economic actors – International Labour Organization/trade unions, whose ideas were taken up and imbedded in the preamble to the Paris Agreement at the United Nations Intergovernmental Panel on Climate Change (COP-21). Therefore, in some ways, the just transition model can be seen as global capitalism seeking an afterlife, the ghost of the colonial economy. On the other hand, the just transition framework comes out of very real assessments of the social and ecological impacts of our globalized (post)colonial economies. This paper explores the challenges and opportunities that rural and remote Canadian First Nations communities navigate in the just transition model. Drawing on the existing wealth of ethnographic research on Indigenous peoples that centers Indigenous perspectives, the author interrogates: 1) discourses around ‘social values’ in the creation of sustainable jobs/just transition; 2) impacts of broad, national rhetorics in which Indigenous peoples have been constructed largely either as models for traditional resource management or recalcitrant obstacles to economic progress (King 2014); and 3) the ways in which Indigenous communities both negotiate with this discourse and make it their own, using Indigenous foodways as an example (Robidoux and Mason 2017, Borish et al 2022, King 2011 & 2015, Kimmerer 2013). Presenter: Sarah King (University of Ottawa)

Kava Futures: Vernaculars of Investment in the Vanuatu’s ‘Green Gold’: A literature on ‘vernacular capitalism(s)’ (or ‘indigenous’ capitalisms) have highlighted how regional and local economic practices deviate from abstract economic theory and, and remain at least partially embedded in localized or informal practices, including corporate kinship relations (e.g. Birla, 2013, 2009; Upadhya, 2020; cf. Preda 2004). This article builds on this literature to focus on —what is termed here – Ni-Vanuatu ‘vernaculars of investment’, which surround the production and distribution of kava (a root crop consumed as a soporific beverage across the Pacific islands). Burgeoning international markets means demand for this commodity has soared, and kava

is now widely spoken of as 'green gold' by rural farmers in the small island nation of Vanuatu, where it has recently become the main export commodity. Even rural farmers with little formal education, and often no bank account, speak of it as an 'investment' and come up with innovative ways of marketing kava 'futures'. Drawing on 6 months' multi-sited ethnographic fieldwork and interviews with kava growers, vendors and exporters across Vanuatu, I show how vernaculars of investment like these may diverge from, and sometimes challenge, prevailing assumptions about the desirability of foreign investment and 'financial inclusion' for economic development. Presenter: Rachel Smith (University of Aberdeen)

Navigating Uncertain Business: Financial Technology Entrepreneurship in Kenya: This paper explores the difficulty and risk faced by entrepreneurs navigating financial technology cultures and expectations in Kenya today, responding to both macro- and micro- political and economic pressures to innovate. Peterson (2014) describes this concept as "derivative life", where people are forced to navigate multiple and often unexpected dimensions of infrastructural development. As Simone (2011) explains, "everyday life becomes intensely experimental" in entrepreneurial life. Ethnographic work has revealed how technology entrepreneurs face continuous resistance from investors, in line with ill-defined neoliberal economic growth expectations. In a world of aggressive judgment from fickle investors, where business proposals are often shot down, these entrepreneurs consistently reconsider what forms of platforms would receive greater recognition and success. Counter to these expectations, research suggests that applying universally accepted logics and discussions of entrepreneurship paradoxically diminishes the navigational logics of business creation. Instead, I argue that diverse forms of "hustle" adopted by entrepreneurs are an additional attempt at value creation. By attempting to create a business which can be liquidated as wealth through investment and sale, entrepreneurship in Kenya offers an insight into how citizens are navigating the constantly changing pressures of "neoliberal" economic markets. Presenter: Farah Qureshi (Colby College, Department of Anthropology)

Transitions in Cultural Exchange: Problems, Possibilities, Potentialities

4:15 PM - 6:00 PM TMCC - 202 D

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Jane Goodman

CHAIR:

Michelle Bigenho (Colgate University)

PRESENTER:

Michelle Bigenho (Colgate University), Gabriela Vargas-Cetina, Jane Goodman, Elliot Leffler, Jill Carter

DESCRIPTION:

This panel envisions new models of cultural exchange through the arts. Past and existing models, often state-driven and/or state-funded, carry with them the structures of inequality that characterize such polities and their internal organization of differences. Countering these well-worn yet problematic initiatives, this panel considers alternatives through which the arts may become a vehicle to generate intercultural dialogue, collaborate more equitably, and build new, dare we say restorative or reparative alliances. Historically, cultural exchange programs have entailed performers from one country or subculture producing their traditions for consumption by audiences from another. This model of exchange, rooted in the world exhibitions of the 19th century, has informed US-based initiatives from the 'Good Neighbor Policy' of the 1930s to today's Center Stage program. At the domestic level, cultural differences continue to play out in unequal ways at points of purported artistic exchange. However well-intentioned, such programs bear the traces of their colonial underpinnings. Our panel seeks to envision new ways of imagining cultural exchange through the arts with an eye toward mutuality, reciprocity, and respect. We ask: How can we imagine more collaborative forms of artistic exchange? What might such engagements look like? We take inspiration from the work of contemporary scholar-artists engaged in cross-cultural creative encounters such as devising new plays or stories, composing songs, or staging other kinds of collaborative artistic events. The panel critiques neocolonial legacies of international orders and on-going settler colonialism within nation-states, considering how both have used cultural exchange to reinforce rather than eliminate hierarchies and exclusions. The panel itself instantiates experimentation and exchange, as we bring together scholars and scholar-artists from institutions based in Mexico, Canada and the United States and experiment with new presentational forms. All panelists foreground new forms of relationality and partnership through the arts.

Bigenho, an anthropologist-musician who has long performed with Bolivian troupes, draws on those relationships to team-teach a course in playing Bolivian music that foregrounds new forms of collaboration and learning. Vargas-Cetina develops a co-ethnography of the fiesta-based soundscape in the Spanish city of Seville via an innovative audio-postcard dialogue with her Spanish interlocutors. Leffler takes up process-based theater making to explore how theater facilitates intercultural dialogue between Black Baptist and Reform Jewish youth in the Chicago suburbs. Goodman considers an experiment in bilingual co-production by French and Algerian theater troupes in which actors stage a play together while performing in their own languages without translation, as they seek possibilities for meaning making that transcend the linguistic. Carter reflects on a devised form of theater to explore how shared stories between Canada's Indigenous and non-Indigenous peoples can open new, more equitable possibilities of relationship building and intercultural collaboration. As a whole, the panel explores how the arts can anchor and inspire collaborative work that aims to restore justice and right historical imbalances. We have intentionally structured the panel with five rather than six presenters to allow additional time for discussion.

From Consumption to Relationality: Performing and Teaching Bolivian Music : In international encounters, Bolivian musicians' performances are received as folklore and as stagings of cultural difference, even as performers resist this cultural cornering. This paper explores an alternative form of cultural exchange, not based on the idea of touring Bolivians performing for consuming foreign audiences, but on a model of musicians who, in an intensive course, teach US college students how to play Andean panpipes. "Performing Bolivian Music," is unique in its aperture to any student--not just music students--, and in its bilingual teaching, even though the course carries no Spanish language requirement. Through the course, students learn what it means to work in inextricable interdependence with others—an ethos that contrasts with what one finds in many US college classrooms. I team-teach this course with Bolivian musicians and our social contract rests on multi-decade relationalities between an anthropologist/musician and the founder/director of a Bolivian music ensemble. Taking cues from Native American and Indigenous Studies' and feminist scholars' focus on the concept of relationality (Cattellino and Simpson 2022), I suggest that such a course moves out of a consumptionist model of cultural exchange and towards a model that emphasizes relationality--among

the instructors, among the students who become involved in playing Bolivian music, and also--perhaps most significantly--in relation to the new values assigned to the knowledge of performing Bolivian music. Knowledge of playing Bolivian music gains distinct value as it assumes a place within a credit-bearing course of the university's curriculum. Presenter: Michelle Bigenho (Colgate University)

Audio Postcards from the Seville Soundscape: A Co-Ethnography: I have been doing fieldwork in Seville, Spain, on and off, since 2017, and in 2022 my husband (also an anthropologist) and I took our sabbatical at the University of Seville as visiting professors. This longer stay helped us strengthen our relations with older acquaintances and make new ones. In 2023, while teaching a course on the Anthropology of Sound at the Autonomous University of Yucatan, I created three audio postcards with short descriptions of the sources they featured. I then sent them to local people in Seville who are involved in what I have been researching: Seville's festivities, including the annual Feria (local Fair), Catholic processions and the music accompanying them, as well as to friends in academia and in the fashion world. Several of my local friends made immediate observations, while others asked to let them think a bit longer to give me more nuanced feedback. Through their responses, I learned what local people in Seville thought about my understanding of the local soundscape, and particularly those sound textures, words, and phrasing used to describe what goes on through Seville's "Fiestas". Through their comments and my revisions in the sound compositions and textual descriptions, I expect that my ethnographic notes would better represent audible and describable Seville, from their point(s) of view. Here I focus on my co-ethnography regarding my Seville data, and especially the data related to Seville's soundscape. I am writing up my research data with the guidance and help of my local friends in Seville. Presenter: Gabriela Vargas-Cetina

Intercultural Play: Experimenting with Bilingual Theatrical Performance: In 2016, the Algerian theater troupe Istijmam toured the United States with Center Stage, a cultural exchange program of the US State Department, performing the Algerian play "Apples" in English for US audiences. They left a few lines in Arabic, wanting the sounds of the language to resonate into the performance space to create what they called a bilingual production. The Istijmam troupe is now building on this effort, working with the French theater collective GENA to produce the Algerian play "El Ajouad/Les Généreux/The Generous Ones" (by

playwright Abdelkader Alloula) in a bilingual manner in which some characters speak French and other characters speak Arabic, without translation. Their hope is that spectators – many of whom will not understand both languages – will produce meaning from sound, rhythm, gesture, vocal color, mise-en-scène, and perhaps most importantly, their own imaginations. Among the actors' motives is the desire to open up the meaning-making process, going beyond textual semantics to see what they can convey through affective or visceral dimensions of the play. Yet the same time, the actors attend with great care to their translation of Algerian Arabic into French, hewing closely to their understanding of the playwright's intentions while also creating the play as an entirely novel production. This paper takes up their "bilingual" translation process as a site that opens new possibilities for cultural exchange, as the actors experiment with how to make meaning across and between languages. Whereas translation has long been a vital component of cultural exchange, this paper focuses on what kinds of exchanges can open up in the absence of translation. Presenter: Jane Goodman

Bibliodramatic Encounters Among Black Baptists and Reform Jews: This presentation examines how process-based theatre-making – that is to say, theatre-making with very little emphasis on performance in front of an audience – can facilitate intercultural dialogue, assessing both the unique opportunities and limitations. It examines a group of Black Baptists and Reform Jews in the Chicago suburbs, who engaged creatively and critically with one another in the context of a nine-month artistic project organized by their houses of worship. They used an artistic process called Bibliodrama – a method of studying Biblical texts by enacting them. By engaging with one another in this Bibliodramatic context, these groups were able to nurture a unique intimacy with one another, and also to explore divergent perspectives on high-stakes topics, such as racial inequity, patriarchy, and generational trauma. In so doing, I argue that they managed to move beyond what I call the "choreography of consonance:" the social norms that often limit intercultural contact to polite but superficial engagement. However, only rarely did these participants manage to acknowledge their own relative positions of power in their society. Thus, even while theatre-making seems to have promoted intimacy, it seems to have deferred reflexivity. While this presentation does not argue that all theatre-making processes necessarily share these assets or limitations, it does suggest that these kinds of outcomes may be common ones. Presenter: Elliot Leffler

'Playing' in (the Eighth) Fire without Getting Burned : Encounters at the Edge of the Woods (2019) is a devised show—commissioned by Hart House Theatre to open its centenary and to mark one century of theatre-making on Indigenous land while excluding Indigenous voice. The creation of Encounters necessitated the curation of fluid spaces in which Indigenous participants and non-Indigenous allies would be able to address the history of ongoing colonial predation and consider a tangled and delicate project of relational repair. This paper considers the process of relationship-building and intercultural collaboration in the wake of many valiant (albeit, infelicitous) attempts to forge efficacious Eighth Fire productions—attempts that predate Encounters by as much as four decades (see Yvette Nolan's 2015 *Medicine Shows: Indigenous Performance Culture* published by Playwrights Canada Press). In this paper, I hope to contribute to existing scholarship around such collaborations and to begin to address Melissa Poll's call for "studies that articulate and compare protocols within Indigenous-settler rehearsal processes" on Turtle Island ("Towards an Eighth Fire Approach: Developing Modes of Indigenous-Settler Performance-Making on Turtle Island," *Contemporary Theatre Review* 31:4 July 2021, p. 394). Transitions in Residency

4:15 PM - 6:00 PM

Virtual - Room 1

Roundtable/Town Hall - Virtual Live

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Aaron Thornburg

CHAIR:

Graham Pruss (National Vehicle Residency Collective), Aaron Thornburg

PRESENTER:

Ellie Cleasby ,Graham Pruss (National Vehicle Residency Collective), Aaron Thornburg ,Vanessa Vanzielegem (Carleton University, Department of Sociology & Anthropology)

DISCUSSANT:

Katie Kilroy-Marac

DESCRIPTION:

This Roundtable event will explore recent transitions in trends of residency in the United States from an anthropological and interdisciplinary perspective. In line

with the conference's theme, 'Transitions,' the participants will detail trends in residency that deviate from habitation in the increasingly large single-family homes considered to be part and parcel of the 'American Dream.' Topics to be addressed by participants will include the Tiny Home Movement (and applications of tiny homes as a form of temporary shelter), Van Life, and Vehicle Residency (including increasingly common parking programs being initiated around the country). The session will provide a venue to question whether these forms of alternative residency are disrupting standard housing markets and practices, serving as an intervention to homelessness, questioning current cultural norms and expectations regarding housing and 'the American Dream,' and more. Participants might also question whether these increasingly common forms of residency may at times serve to reinforce existing hierarchies and inequalities that are already present in the particular communities in which they are found? Can living in tiny homes, vans, and/or other vehicles constitute an anti-hegemonic 'movement,' or do these practices more often reify social marginalization that is inherent in late-Capitalist America. What are people's, perhaps varied and multiple, motivations for practicing these forms of residency? The use of tiny houses, van living, and vehicle residence as transitional housing will also be explored. Presenters and discussants will include graduate students as well as junior and more-senior faculty in the fields of anthropology, design, and geography for a holistic and varied survey of the topic.

3-705

Work in Transition through Policy and Pandemic

4:15 PM - 6:00 PM TMCC - 206 B

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Work

ORGANIZER:

Michaela Knot

PRESENTER:

**Michaela Knot ,Matthew Keracher ,Kathleen Inglis
(University of Victoria)**

DESCRIPTION:

This session explores the complex nature of contemporary employment and labor, looking at shifts in labor due to advancing technologies, global pandemic, and complex national policy. These ethnographic examples demonstrate the breadth of disruptions, transitions, and risks involved in both the

local and global processes seen re/structuring work. Examples include: authorship and peer review in US anthropology as in/visible forms of labor disrupted by the COVID-19 pandemic; shifts to remote working in rural Norway, concomitant with the transition to Web 3.0; Canadian federal accessibility legislation and workers experiences of career transition; and the necessary and imposed risk of working as a personal shopper in Canada during the COVID-19 pandemic.

CoDesigning Sustainable Career Transitions for Individuals with Sensory Disabilities in Canada: In 2019, Canada inaugurated its first federal accessibility legislation. Canada is considered to be an early adopter of a human-rights based approach to employment equity. Nevertheless, employment rates for persons with disabilities. In 2019, Canada inaugurated its first federal accessibility legislation Bill C-81. Despite being a forerunner in taking a human-rights based approach to employment equity, the situation for persons with disability has not witnessed the same progress, protections and research interest as other equity seeking groups in Canada. The employment realities for persons with disability are shaped by multiple intersecting forces and dynamics, such as age of onset, severity of disability, type of disability as well as socioeconomic characteristics. As part of a larger project related to the development of universal design in employment, we will examine the career transition in relationship to the context of sensory disability and implications for sustainable career journeys and employment trajectories. Two co-design sessions were held virtually along with one-to-one interviews. We will explore how different forces and choices individuals negotiate during this period in their life, seeking to identify what supports and barriers emerge. We will explore how technology, organizational change, personal capacities alongside other factors shape individuals' experiences of career transitions and job change. Our work shows that understandings of meaningful employment and sustainable careers are shaped by access to equal opportunity, ideas of scarcity, uncertainty and competition. remain lower to their able-bodied traditionally, and highly impacted by intersectional factors as well as external factors. Canada is lacking national infrastructure for disaggregated data to understand the longitudinal and life course career trajectory for individuals with disabilities. As part of a larger project related to the development of universal design in the employment life cycle, we will examine the career transition in relationship to the context of disability and implications for sustainable career journeys and employment histories. The project is

based on 2 co-design sessions, held virtually and one-to-one interviews. We will explore how different forces that impact movement in employment and the job market, as well as the barriers individuals encounter in Canada. We will explore how technology, organizational change, personal capacities alongside other dynamics shape individuals experiences of career transitions and job change. Project Team: Dr. Mahadeo Sukhai, Ainsley Latour, Markku Laamanen, Ahsan Zaman and Opneet Sandhu. Presenter: Michaela Knot

Working Remotely in a Norwegian Village: Making things with code in Web 3.0: The transition to Web 3.0 has captured the imaginations of multiple publics. Understood as a generational rupture in how the internet happens, there is considerable disagreement over what it means. For some, Web 3.0 is a shift in how social relations are mediated and data is recorded; that is, away from centralised platforms and towards innovative decentralised alternatives - most notably the blockchain. At the same time, social actors like Mark Zuckerberg or Elon Musk, who owe their central positions within Web 2.0 to a certain set of relations between users, developers, content and data, make rhetorical moves to hold onto their power. But beyond the 'metaverse' or the 'digital town square,' their rhetorical ambitions attempt to maintain their powerful position over developers as well as users. With the redistribution of institutional competencies across decentralised networks, new ways of remote working with people and of making things with code are emerging around the world. At the same time as Elon Musk is elevating 'hardcore' workers, a generation of young professionals who make things with code, but who are also trying to make a stable life for themselves and their families, are refusing these terms, and other conditions. Remote working is often seen as antagonistic to physical workspaces and local scales in favour of virtual workflow environments that connect people between their homes at a global level. Based on preliminary fieldwork in a rural Norwegian village, this paper explores how the shift to remote working, concomitant with the transition to Web 3.0, has enabled a generation of software developers to make a life for themselves by returning to the remote places they grew up in. But in Sogn og Fjordane, new community offices are places where neighbours work for global companies but from a Norwegian place. These new ways to return home hold open the promise of, but also problematise, the reproduction of Norwegian village life in the 21C. Presenter: Matthew Keracher

Gendered disruptions in academic publishing during COVID-19: Uncovering invisible labor at an anthropology journal: Jelena Golubović (co-presenter, author), Kathleen Inglis (co-presenter, author), and Cheyanne Connell (author). The COVID-19 pandemic severely disrupted work patterns in academia. There is mounting evidence across disciplines that men's publishing productivity increased while women's decreased, but there is very little systematic research on the gender dynamics of publishing in anthropology during the pandemic. This is particularly important given that anthropology is a feminized discipline with gendered professional hierarchies, where questions of gender inequity matter all the more. In other disciplines, most studies of this phenomenon have analyzed authorship and peer review data separately, without considering their interrelationship. We conceptualize authorship and peer review together as visible and invisible forms of labor, a lens that connects service work to other forms of gendered unpaid labor. We explore how COVID-19 disrupted the gender dynamics of academic publishing at *American Ethnologist* by analyzing the journal's editorial data from 2014 to 2021. We blend quantitative analysis with qualitative insights from our positions as the journal's editorial assistants during the pandemic. From the close-up perspective of our day-to-day editorial work, none of us could have foreseen the trends that emerged in our quantitative analysis. We find that in 2020 women performed staggeringly more service work than men relative to their rates of manuscript submission. Our findings disrupt the discourse of 'a return to normal,' which ignores the differential effects of our collective pandemic experience. Our findings also provide actionable insights for other peer reviewed journals, as we found that a major source of gender inequity during the pandemic stemmed not from external factors beyond our control, but from our own undetected editorial practices. We hope that our paper can be used by precarious and women-identifying scholars to advocate for themselves by making visible their invisible labor. And, we hope it sparks a broader conversation about gendered professional hierarchies and invisible service burdens in our discipline and beyond. Presenter: Kathleen Inglis (University of Victoria)

AAA Annual Business Meeting

6:15:00 PM - 7:30:00 PM

TMCC - Hall F

Plenary

DESCRIPTION:

The Business Meeting provides an opportunity for AAA members to present resolutions or make motions for

consideration and potential adoption by the Association. Resolutions are written statements of position or action, typically dealing with matters of substance and/or complexity. The meeting also provides an opportunity to hear reports from the President,

Officers, and different Committee Chairs on actions the association has discussed during the previous year. The AAA by-laws require that a quorum of 250 members in good standing be present to transact official business at the Meeting.

Saturday, November 18

“Betwixt and Between”: Suspended Transitions in the Lives and Languages of Newcomers

8:00 AM - 9:45 AM TMCC - 802 B

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Paul Hansen (Akita University)

CHAIR:

Susanne Klien (Hokkaido University)

PRESENTER:

Paul Hansen (Akita University), Hiroaki Kawamura (University of Findlay), Susanne Klien (Hokkaido University), Judit Kroo

DISCUSSANT:

Nancy Rosenberger (Oregon State University)

DESCRIPTION:

The title of this panel is an obvious nod to Victor Turner (1967). As the call for papers to the conference highlights, theories of liminality have focused on aspects of 'structured, ritualized, and signaled moments of communal transition'-from adolescence to adulthood or from civilian to soldier for example-with the key notion being the crossing of a known and shared community threshold. But what happens when this moment of transition, the crossing, the *communitas*, continues on; when new a new normative community does not form but fragmentation results, with some members returning to their former status, others becoming part of a new community, while still others opt or are forced to remain in a liminal state indefinitely. This panel focuses on what has been called, at least tentatively, 'liminal liminality' (Hansen 2020; Klien 2020) a condition whereby transitions are sustained for an unforeseen and unknown duration. Paul Hansen focuses on a

community in Hokkaido, Japan and the often suspended transition for newcomers to decide whether they will leave or to remain. Hiroaki Kawamura focuses on 'third space' as an embodiment of liminality in Japanese rural tourism. Susanne Klien discusses the reluctance of her interlocutors to adapt to local social surroundings, remaining more bound to other locations and relations via social media despite where they reside. Finally Judit Kroo examines lexicon as a site of sustained transition as young Tohoku newcomers develop language that is precariously or tentatively local while remaining bound to roots outside the community.

“Should I stay or Should I Go now?: Liminal Limbo in a Rural Community”: After three decades of population decline, the rural central Hokkaido community I call ‘Gensan’ seems to be rebounding, with a modest net growth of registered residents since the onset of the Covid 19 crisis. However, many of the migrants into the area, old and new, are uncertain, even decades into their life in the location, if they will or want to stay. This paper maps an assemblage of people I have come to call “lo-siders”, individuals who are not considered insiders or outsiders in the district, but remain in perennial transition on the periphery of the community. While they have low levels of involvement in local affairs, often with no or few local friends, family or affiliations, they concomitantly have no plans to leave or inexorably waffle between staying and going. They remain, I suggest, in transition, in a suspended or liminal liminality, for a broad spectrum of idiosyncratic reasons—personal, ideological, or environmental. One individual residing in Gensan may be driven by the affective draw of the landscape while for another it might be the idea of freedom or independence. In many such cases, transition is not a simple move from one point to another or from one set of relations to another, but a perpetual state; a condition of feeling and being ever between people and places. This paper, rooted in an emerging research project on One Health and rural well-being, is an attempt to understand how perpetual ambiguity and contingent belonging are central for

some individuals. Presenter: Paul Hansen (Akita University)

'Rural Communities as Third Space in Japanese Tourism': Many rural communities in Japan are facing grave challenges. In addition to the persistent population decrease, rapidly progressing ageing adds even more urgency. Many rural communities are forced to redefine themselves in terms of basic services (e.g., transportation, trash sorting and collection) and community life (e.g., religious festival, funerals). They are desperately trying to find ways to revitalize their communities. One of the strategies many rural communities are exploring is tourism. Analysis of tourism in a rural setting reveals interesting features of liminalities. Tourism requires a certain level of comfort and convenience for visitors who mostly come from the urban areas. At the same time, visitors from urban areas expect something they do not have in their urban living environment. These conflicting expectations create what Bhabha (2004) calls "third space" in the tourism industry of rural communities in Japan. Bhabha theorizes Turner's (1992) "liminality" as "third space" in the context of postcolonialism. Postcolonialism provides a useful framework to examine the ways rural communities define themselves in relation to the powerful urban marketing industry. Rural communities constantly go through complex branding processes as hybrid places. This presentation will use Fukui prefecture as a case study. Fukui presents a timely case since the Hokuriku Shinkansen (bullet train in the Hokuriku region) is scheduled to connect Fukui to the Kanto region in 2024. Anticipating an influx of tourists from the Tokyo metropolitan area, Fukui is currently going through rebranding processes with many different agencies competing for the ability to define "Fukui." Fukui is clearly "third space." Presenter: Hiroaki Kawamura (University of Findlay)

'Belonging on the go?: Lifestyle migrants and returnees in Japan Between Adaptation and Disconnect' : In this paper, I explore lifestyle migrants who have spent several years in their new places of relocation; their narratives suggest that on the one hand, they feel that they have blended in and become members of the community. However, on the other hand, they also sense a feeling of not quite belonging there. Drawing on Hansen's concept of "liminal liminality" (2020), I examine the factors contributing to this condition between integration and disconnect and the moments of tension between them. I am particularly interested in teasing out the moments of oscillation between these poles from their daily lives and narratives. I introduce lifestyle migrants in the northern part of Japan

(Hokkaido) who I have followed for five years or more who portray the challenges of being accepted in a small rural town as single males. Engaging in several jobs and often working regardless of weekday or weekend, these mobile individuals indicate that they feel a sense of loneliness, yet struggle to establish social networks with locals, especially individuals of a similar age. Their lack of local friends often comes hand in hand with heavy reliance on social media through which they maintain relations with friends from their places of origin or other locations or other forms of digital entertainment. What emerges from their narratives is a multilayered picture of simultaneous adaptation to and rejection of their new place of residence. Another group of individuals I wish to examine are Japanese returnees who feel somewhat estranged after living overseas; having a sense of being out of place seems a permanent condition. I argue that these two diverse groups share common features that afford insights into the dynamics of belonging and disconnect in contemporary Japanese and global societies. Presenter: Susanne Klien (Hokkaido University)

'Our Crazy Language': Focusing on rural communities in the Tohoku region of northern Japan, this paper explores the potential for zones of social and ecological instability to be productive of sociolinguistic change. Data comes from ongoing ethnography-informed linguistic analysis of the speaking styles of diverse groups of 'newcomers' to the Tohoku prefectures of Akita and Fukushima. Even as these areas are confronting multipronged crises of depopulation and economic instability that exacerbate extant socioeconomic and socioecological precarities, they are loci of multiple forms of migration including migration of younger adults from urban cores. Analysis of the narratives and linguistic styles of these newcomers suggests that they are active participants in re-constituting extant linguistic styles, incorporating local dialect forms and intonational patterns but in ways that remain distinct from long term residents. While the newcomer rural communities analyzed here are monolingual, newcomers described their initial experiences of local linguistic styles as the gradual comprehension of what had been completely 'foreign': "when I got here, I didn't understand what people were saying at all". Integrating these styles into their speech, newcomers' speech is marked by overlapping use of non-dialect and dialect styles in ways that mimic the translanguaging (Otheguy, Garcia, and Reid 2015) practices of bilinguals. I show how what one informant refers to as this 'crazy mix' speaks to newcomers' emphasis on the construction of alternative

communities that are built from the people who constitute it, which is to say communities without a sense of a standard against which alternatives are defined. I argue that just as practices of the new community emerge from whoever constitutes the new community, so too do its linguistic practices resulting in a stylistic mix that absorbs and remakes the social meaning of the linguistic elements from which it is constituted. Presenter: Judit Kroo

Between Revolution and Stagnation: Empirical Examinations of Innovation and Knowledge Growth in Anthropology and Adjacent Sciences

8:00 AM - 9:45 AM TMCC - 203 A

Oral Presentation Session

REVIEWED BY:

Society for Anthropological Sciences

ORGANIZER:

Werner Hertzog (University of Zurich)

CHAIR:

Luke Matthews (Rand Corporation), Werner Hertzog (University of Zurich)

PRESENTER:

Luke Matthews (Rand Corporation), Dmitry Arzyutov (Ohio State University)

DISCUSSANT:

Werner Hertzog (University of Zurich), Luke Matthews (Rand Corporation)

DESCRIPTION:

Anthropology, we all know, is unique in its openness to diverse ideas. Positioned between the humanities and the sciences, the discipline has, historically, tackled a far wider breadth of topics than other fields.

Anthropologists are frequently ahead of the curve, developing innovative research methods and studying societies and problems neglected by other social scientists. While this lack of standardization has helped us to remain creative, it may have also inhibited anthropology's ability to build a cumulative body of knowledge as compared to adjacent social sciences. Do the continuing anthropological 'turns' act as processes of intellectual renewal, or do they only result in what Eric Wolf (2001, 387) called 'intellectual deforestation'-the continuous slashing and replacement of paradigms? How do we foster knowledge accumulation in the scientific sense while avoiding theoretical over-specialization and groupthink? What is the balance of

theory, methods, and data acquisition that produces the greatest gains in knowledge growth? This panel seeks papers that will take an empirical approach to examine how the social sciences-anthropology in particular-balance these at times competing goals to achieve scientific progress. The papers here include, but are not limited to, the topics below: - Drivers of disruption and knowledge growth in anthropology and other sciences. - How theory, method, and data collection do or do not drive scientific progress. -

Social factors that promote or inhibit scientific innovation. - The role of evolutionary, cognitive, materialist, or other scientific theories to knowledge accumulation in anthropology. - Bibliometric analyses of publishing trends in the social sciences. -

Teaching structured data collection methods in anthropology departments. - The effects of collaboration versus independent research on scientific discovery. - Conducting scientific research at a time of increasing polarization between groups that mistrust or are overconfident in science. - Historical approaches to ethnographic methods and evidence-making in anthropology - Indigenous groups and indigenous rights in relation to the broader project of anthropology - The idea of 'progress' References: Wolf, Eric R. Pathways of power: building an anthropology of the modern world. Univ of California Press, 2001.

The Importance of Magicians, Cranks, and Crackpots to Scientific Progress: Magic and science share in common a goal of manipulating observable reality to practical ends. While scientists purport to understand the causal mechanisms of these manipulations, practitioners of magic expressly purport not to understand them. Science, however, also seeks new understandings that, by definition, must be outside known causal machinery. Perhaps for this reason, interest by scientists in magical, occult, paranormal, anomalistic, and strange phenomena historically are well-documented sources of scientific discovery. Recent quantitative analyses have suggested that scientific innovation is slowing. Is this the result of a finite reality in which there is less to discover, or the result of social processes that are disincentivizing magical and anomalistic thinking by scientists? This paper presents a new thematic analysis of 150 years of scientific publications to empirically document patterns of magical and anomalistic reporting in context with major scientific discoveries. Presenter: Luke Matthews (Rand Corporation)

Thinking with Formulae and Charts: Visual/Algebraic Exposition of Ethnicity in Eurasian Anthropology: The present paper deals with the role that diagrams, charts, and formulae played in forging the theory of ethnos in

the late Russian Imperial and Chinese émigré anthropology. Based on the works of anthropologist Sergei Shirokogoroff (1887-1939) and theoretical takes from the history of science (Nasim 2014) and anthropological critique (Candea 2019), we aim to contextualize the illusiveness of race which as a rigid biopolitical notion gained its currency in world anthropology at that time. As we show, such theoreticians as Sergei Shirokogoroff constructed an alternative visual and algebraic language of describing the relations between dynamic physical characteristics and ethnic migrations. By blending multiple properties of the social and the biological, he drew by hand and tried to mathematically prove what we call the race “nebulae”, an imagined space which was able to respond to multiple theoretical questions within that-day anthropology and to be read as highly plastic and relativistic metaphor of identity and also as a metonymy of race and racialization in Eurasia. DESCRIPTION:

Above all, the COVID-19 pandemic has highlighted the necessity of thinking through issues of multispecies relationalities, health, migration, and the overt and covert forms of violence that take root within prolonged conditions of crisis. At the core of these issues are bodies - how they navigate shifting terrains, the forms of control they are subjected to, and the ways in which their movements across state borders and taken-for-granted boundaries challenge entrenched structures and hierarchies of power. Bringing together a series of investigations around the materiality of various human

and nonhuman bodies, we ask how bodies are involved in transitional pivots within the liminal spacetimes that characterize periods of uncertainty. More specifically, the papers presented on this panel aim to interrogate how, in various ways, bodies in motion threaten territorial distinctions, and profoundly disrupt material and conceptual boundaries - those between natural and artificial, host and pathogen, human and animal, democracies and dictatorships, as well as sovereignty and self-determination. We trace the pathways through which the bodies of refugees come to be configured as threats to the body politic, and the ways that forced migrations undermine social relationships, catalyzing both communal forms of violence but also the creation of new modalities of care. We further explore how transformations in animal consumption obfuscate the political-economic drivers of environmental crises, and how the protected movements of certain animals impede anthropocentric dominion over life and land. Drawing on work that spans sites in Chile, Uganda, the Middle East, and the United States, we more broadly engage with ongoing explorations surrounding political agency, resistance, and struggle, trying to tease apart the nuances, specificities, and potentialities found in both reactionary and revolutionary political projects. Central to our analyses, then, is also a curiosity about the different visions of futurities that are being imagined – and fought for – within the messy, contingent, and transitional entanglements of everyday life.

No Country for New Wolves: Gray Wolf Reintroduction and Right Wing Mobilization in Rural Oregon: This proposed paper aims to examine Oregon’s longstanding political antagonisms surrounding gray wolf reintroduction and conservation programs. Throughout the last 20-years, wolf conservation has been a keystone culture war issue across Oregon as the state’s predominantly rural right wing has fervently opposed ‘elitist urbanite and big government agendas’ to ‘destroy rural lifestyles’ through ‘rampant’ predator populations. As reintroduced wolves cull ungulate populations and depredate livestock, a minority coalition of right wing cowboys, farmers, and hunters have accused the state government of overseeing economic and environmental degradation in rural sectors of the state. As this paper shows, the reintroduction of wolves into Oregon has triggered a certain kind of existential response by the state’s rural right wing. For them, the very existence of wolves directly challenges the hegemonic modes of relationship that have been foundational for settler colonial monopolizations of land and life throughout the state’s history. In this way, anti-wolf rightists actively

recognize the species' agentic capacities as a threat to their private property, potentialities for perpetual capitalistic growth, and dictatorial oversight of environmental stewardship. The fact that the wolves are protected by the liberal state further drives a deep-seated political animosity toward 'urban elitist utopians' and 'big government'. The bodies of wolves, then, become catalysts for ideological and material contests which are fought through local, state, and national politics. Engaging with political anthropological and nonhuman geographical frameworks, this paper asserts that these wolves, as unbounded and entangled subjects, have become crucial political actors in reconfiguring anthropocentric and capitalistic territorializations which, in response, triggers reactionary political mobilizations around politics of resentment. Presenter: Calvin Edward (CUNY, Graduate Center)

Effective Altruist Paradox: Political Economies of Vegan Activism & Empty Promises of Cultured Meat: Extensive media coverage and industry hype has led to billions of dollars of investment in over 50 cell-cultured meat startups, stoking hope among many activists in vegan and animal protection circles that cultured meat could facilitate a rapid transition away from the global food system's increasing reliance on animal farming. However, other than one small pilot program in Singapore, cultured meat is not available for sale anywhere in the world, and it's not clear when it ever will be. Indeed, a recent techno-economic analysis of the industry concluded that without a substantial increase in funding for research and development well beyond the over \$3 billion in private equity and corporate funds already invested in these companies, they'll be incapable of effecting a significant transition within the next 20 years. Yet, driven by "effective altruism," a utilitarian movement with an outsized influence on animal charity funding, cultured meat has been positioned as a grand solution to the problem of animal agriculture's disastrous impacts on animal wellbeing, human health, and the environment. This has reconfigured the financial and strategic landscape of vegan activism, channeling significant funding streams away from vegan outreach and other strategies and into investment in these companies. Informed by four years of fieldwork on the cultured meat industry, this paper argues that the prioritization of market solutions has effectively transformed a broad segment of vegan activism into an engine for venture capitalist fundraising. Further, this strategy reinforces the same capitalist system that produced the current crises of mutually intensifying ecological and social disasters in

the first place, raising the question of whether it is essentially an activism Ponzi scheme, funneling wealth and resources into market- and consumption-oriented "solutions" that actually serve to sustain the political-economic system that drives the very crises it seeks to solve. Presenter: Elan Abrell (Wesleyan University)

"Sujetos no Objetos": Animals in the Chilean Constitutional Struggle: As a result of widespread protests against social inequality in the country, on October 25th, 2020, Chileans overwhelmingly voted to replace the current constitution, written under the Pinochet dictatorship, with a new constitution that would be drafted by a publicly elected constitutional convention. Following trends in Latin America that view nature as a legal subject, as has happened in Bolivia and Ecuador, a coalition of animal rights groups in Chile formed to advocate for the inclusion of animals in the new constitution. As the law stands, there is no possibility of an animal entering a constitutional discussion because of their status as "movable property." However, Chilean legal scholars have argued that a "mere declaration" on the rights of animals would be more than just a symbolic act and could "permeate the entire national legal system" (Beroiz Díaz and Briones Rodríguez 2019). Based on ethnographic fieldwork conducted in Santiago, Chile, this paper focuses on how activists mobilized to change the status of animals from property to sentient beings with constitutionally protected rights. The efforts of these activists resulted in the passage of an article declaring that animals are "subject to special protection measures...with the right to live a life free of mistreatment." This vote was highly contested among right wing factions of Chilean society. Chilean cowboys, known as huasos, descended on Santiago with their horses to oppose this measure, resulting in direct confrontations with animal rights activists. This paper further analyzes how the inclusion of legal protections for animals contributed to the rejection of the proposed constitution in a national plebiscite on September 4, 2022. Presenter: Lindsay Parme

Transformations of Violence: HIV, Violence, and the Sacred: Circulating in the spheres of multiple refugee crises around the world, violence, disease, and the meanings to which they are attached are intertwined with notions of purity and contamination, host and pathogen, and, ultimately, deservingness and disposability. In this paper, I trace the connections between HIV transmission and violence, exploring how both are inextricably related to historical, social, and political economic forces in refugee settlements in

Uganda. In contrast to prevailing discourses in global health and development research that identify a paucity of “local knowledge” as a significant barrier to HIV prevention and treatment, residents in these settlements seem well-informed about HIV. What people find more concerning is a lack of control over their risk of HIV exposure due to the frequent occurrence of sexual and gender-based violence against young women, emphasizing longstanding questions about why violence converges on certain groups at certain times, and how it becomes folded into the relations of everyday life. Taking seriously the contention that our current era of racial capitalism constitutes “The Age of Human Sacrifice” (Gilmore 2022), I revisit eminent theories of sacrifice in anthropology and beyond, re-reading them through the lens of Black radical feminist scholarship and abolitionist frameworks to put forth the tentative suggestion that women emerge as “sacrificial victims” amidst the militarized transitions and crises that occur in conflict and post-conflict zones. Finally, by way of conclusions, I consider how political agency and resistance are configured in settlements, exploring the ways that, rather than relying on and reproducing carceral logics of policing and punishment, the practices of care organized and enacted by residents are oriented instead towards a transformation of the very systems and structures of power that perpetuate harm and violence in the first place. Presenter: Maya Latif

Drag Dictatorships: Drawing on feminist theory, queer theory, and visual analysis, “Drag Dictatorships” is a paper that contends with pinkwashing migratory policies and interrelated conceptions of queer imperialism within Western humanitarian apparatuses. Specifically, I aim to illustrate and interrogate how such refugee policies are ‘dragging’ queer migrants from one set of ‘drag dictatorships’ that are conceptualized as being located in the Middle East to another one that, as I argue, is operating in the United States. This piece will examine the mechanisms through which the perception that queer migrants’ sexual and gender identities and practices are “better” protected in the United States, the U.K. and Canada is generated, in spite of the fact that homophobic and transphobic perspectives and policies are noticeably gaining momentum across in each of these areas. Finally, this piece will also explore how the political performances of conservative and reactionary politicians who support and promote homophobic and anti-trans legislation and policies can be construed as themselves enacting a form of political drag, as well as the reasons why power is being concealed within the performance of drag and how this

all, in turn, contributes to global expressions of homo- and transphobia, Islamophobia, and xenophobia.

DISCUSSANT:

James Mizes

DESCRIPTION:

Capitalism has been widely blamed for both the global environmental crisis and widening social and economic inequality, yet the belief that capital can be harnessed to provide innovative solutions remains established in political and business circles, where, instead of the invisible hand of the market, the 'visible hand' of innovative finance is invoked in the name of the common good. Cross-sectoral partnerships increasingly use capital markets to pursue social and environmental goals, in line with an intergovernmental mandate for promoting socially inclusive green growth. If the exploitation of finite natural resources and human labour gave rise to the present predicament, the narrative goes, then the financial sector should stimulate socially and environmentally responsible enterprise to offer ways out of it. As growing numbers of successful investors and business consultants claim to have experienced 'awakenings' to the possibilities of investing in public, social and environmental goods, leading business schools worldwide have launched impact investment programmes, and top business school graduates are

aspiring to work in the growing 'impact' sector. Underscoring this moral turn in finance (Dal Maso, Tripathy and Brightman 2022), religious organizations are openly promoting impact investing, especially since religious leaders have begun to extend their moral concerns to ecological problems. The business-friendly, socially and ecologically progressive moral thrust of 'sustainable' finance appears broadly in line with a liberal mainstream challenged by multiple social movements. Yet it is also an expression of the emerging network economy, of South-South collaboration, and of devolved, decentralized approaches to change. Experts in global social and economic inequality and in environmental studies argue that radical political and material changes are necessary for a global transition to sustainability, such as degrowth, community energy production and the fostering of social and biological diversity. Impact and 'responsible' investing have emerged out of an overwhelming recognition of the unsustainability of today's global economic system, but are only partially or superficially aligned with other social and ecological movements. Are they merely opening new frontiers for financialization and deepening the political crisis of the developed world, or can some of their iterations support radical transitions? We invite papers that explore the human dimensions of sustainable finance and impact investment across the spectrum of relationships between risk and ethical action, and more-than-human ecologies, thus approaching financial instruments as devices for ordering and re-ordering the world. Which different actors are brought together through impact bonds and what kind of relationships do bonds produce between them? How are different actors' visions of sustainability encoded and enacted through financial instruments? To what extent is finance amenable to contributing towards social and environmental sustainability? Themes may include (but are not limited to) ecological and financial temporalities, ethics and responsibility, critical accounting and accountability, indicator literacy, value, political ecology, the anthropology of the 'good', elite capture, climate and environmental justice, multispecies, decolonial, feminist and queer ecologies.

Transitioning to value+s: the uses of time in social and impact investment : This paper aims to shed light on the ways time and timeframes are mobilized within socio-technical arrangements engendered by social and impact investments – investments aimed at pairing financial and non-financial outcomes – by symmetrically considering discourses and practices of investors and investees. If time, particularly future, plays a central role in financial understandings and

operational logics, in impact and social investments promoters' discourses the 'time of impact' seems to be ethereal and ever shifting between present and differently located futures. However, the 'calendrics of repayment' (Guyer 2007) of credit/debt, set dates anchoring imaginaries and discourses to the production of outcomes and the rules of capital movements. In such processes time and timeframes come to be mobilized by planners (investors and investees) of impact interventions to make sense of both their roles, and of 'impact' itself. I will unpack such processes through the analysis of investors' discourses and through the case study of a social enterprise, SustAgric-Africa (SSA), whose aim is to lift smallholder farmers in rural Ghana out of poverty through sustainable agriculture. In following temporal horizons in their journey from discourses to project implementation, I will show how, in a sinusoidal movement, the urgency to act 'now' to tame what are framed as 'crises' constantly transitions in the transposition of impact generation in undefined futures, potentially adumbrating uncertain attainments of social and environmental outcomes. Presenter: Claudia Campisano

Sustainable finance from the south: hierarchies of expertise in Ghana's emergent "alternative" bond: Sustainable finance has become a global industry of expertise and knowledge production. From finance consultancies advising companies on alternative asset classes to think tanks and universities in the Global North setting up research teams on measuring impact, the global "sustainable finance assemblage" (cf. Schwittay 2011) has emerged as an aspirational space to harness financial capital for a more sustainable future. This paper approaches the sustainable finance assemblage from the perspective of global hierarchies of expertise, drawing on fieldwork on initiatives to establish green and social bond markets in Ghana. The reports, public debates, and experiences of private sector finance professionals in training sessions on green bond markets organized by Ghana's Securities and Exchange Commission reveal the contests of value over rightful expertise. Ghanaian government agencies approach "alternative" bond markets as innovative mechanisms for development financing, while sustainability is framed as a value emanating from the global north – hence, expertise on sustainability becomes the exclusive attribute of foreign financial institutions. Ghanaian private banks are assigned the role of intermediating partners that must receive requisite training in order to participate in these markets. From debates of German consultancies contracted to conduct feasibility studies to frustrations

of Ghanaian finance professionals over their government's lack of respect for their expertise, this paper sheds light on the discordances between public and private stakeholders in making sense of sustainability as both a value and subject of expertise. These tensions point towards emergent anti-imperial political visions of expertise that the global sustainable finance assemblage engenders. Presenter: Anna-Riikka Kauppinen (Geneva Graduate Institute)

Carbon (un)chained. Blockchain, Voluntary Carbon Markets and the pursuit of responsibility: Despite continued criticisms of Proof-of-Work's energy consumption and money laundering, international organizations at COP21 endorsed blockchain-based solutions as tools for achieving carbon neutrality. Blockchain and cryptocurrencies, which were initially conceived as libertarian tools, are also designed to lower transaction costs and increase transparency, making them suitable for use in green finance. In fact, these markets continue to lack transparency and trust, particularly the unregulated ones like the VCM (voluntary carbon market). One of the pioneers in this market is KlimaDAO, a decentralized autonomous organization that issues a token backed by 'bridged' carbon offsets, or credits that have been digitally transformed and added to a blockchain. The required technology framework is provided by Toucan Protocol. This ecosystem was launched during October 2021 but the token crashed after a dramatic soar, leaving suspicions on the founders. Journalistic investigations also questioned KlimaDAO's environmental impact because questionable carbon credits ended up offsetting off fresh emissions. A dispute erupted between Klima/Toucan and Verra, one of the top VCM certificate issuers. In a back-and-forth exchange, the former accused the latter of engaging in shady business while the latter asserted that it was not their job to evaluate the quality of a carbon credit. None of them, however, questioned the reliability of the present market systems. Moving on from this episode, we will demonstrate in this paper how blockchain technology, rather than enforcing transparency and trust or funneling suspicious funds, is simply enforcing Arendt's bureaucratic 'rule of nobody' and fits mainstream market approaches that leave untouched climate change's underlying causes. Presenter: Riccardo De Cristiano (University of Bologna)

Funding racial justice: philanthroactivism in Asian America: Since the onset of the COVID-19 pandemic, Asian American nonprofit and community-based organizations have mobilized to speak out for the Asian

American community — first against the anti-Asian hate spurred by the pejorative “China virus” and then, increasingly, toward race-based political empowerment. One key angle that Asian American activists take is highlighting and addressing the imbalance in philanthropic funding that supports Asian American wellbeing. In this paper, I explore what I call Asian American philanthroactivism, which I conceptualize to be a complex, dynamical system that seeks to achieve racial justice via the redistribution of capital. While studies of philanthropy and its relationship to humanitarianism and social movements have tended to be critical, either focusing on philanthropy as a laundry for wealth amassed through exploitation or the nonprofit sector as a willing participant in the so-called nonprofit-industrial complex, I argue for a processual approach that centers the immanence of the operations that capital performs within the activism context, as well as the operations performed upon capital. With ethnographic data from fieldwork with nonprofits, community organizers, and their grant-makers, I discuss the material, political, and affective dimensions of philanthropic capital, both on the scale of its circulation as quanta of value and on the level of tedium and mundane encounters. Thinking in philanthroactivist terms reframes the analysis of social finance and other capitalist tools by refusing to uphold particular ethico-political commitments as “good” (e.g., anti-capitalist) and others bad (e.g., “greenwashing”), attending instead to the agonistic unfolding, through and from capital, of sometimes incompatible visions of a better world. Presenter: Wei Gan (Princeton University, Department of Anthropology)

Budgeted Harm: Wetland Restoration and the Politics of Harmful Algal Bloom Mitigation in Lake Erie: Each summer, several hundred square miles of Lake Erie's southwest basin are covered in a living toxic pea-green slime that threatens drinking water supplies and wildlife. These increasingly common and disruptive events are referred to as harmful algal blooms (HABs) and have been historically associated with the leaching of nutrient fertilizers applied to farm fields in northwest Ohio. Today, HAB events in Lake Erie are compounded by both nutrient run-off from increasingly intensive farm operations as well as dwindling wetlands throughout the region. This talk details recent investments by the state of Ohio to develop a sustainable nutrient monitoring program of Lake Erie's watershed that policy makers argue is necessary to assess the cost effectiveness of various HAB mitigation strategies, notably wetland restoration. Wetland ecosystems have been observed to remove nutrients

from waterways and retain such nutrients within vegetation and sediment at scales amenable to HAB mitigation, however, little is understood about how specific material arrangements within wetlands impact nutrient retention. This talk details how wetland ecologists account for such unknowns in their nutrient monitoring efforts and the political consequences of a budgetary conceptualization of wetlands in Ohio more broadly. More specifically, it details how competing wetland management interests and more-than-human temporalities get folded into individual wetland nutrient budgets through the use of algorithms and watershed-scale modeling. The talk considers such budgetary logics, and the data that animates them, as emergent inscriptions of state power within a landscape long-haunted by legacies of settler colonial terraforming and environmental degradation. Presenter: Gebhard Keny (Rice University, Department of Anthropology)

4-030

Carceral Escapes: Carceralities inherent in escapes from, into and across life transitions

8:00 AM - 9:45 AM TMCC - Hall F

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Naseem Jivraj

CHAIR:

Naseem Jivraj

PRESENTER:

Taku Suzuki (Denison University), Tobin Hansen (Oregon State University), Naseem Jivraj, Emma Backe (George Washington University), Hatim Rachdi (Northwestern University in Qatar), Kenneth MacLeish (Vanderbilt University), Jennifer Long (MacEwan University, Department of Anthropology)

DESCRIPTION:

Carceral Escapes: Carceralities inherent in escapes from, into and across life transitions How can we interrogate the carceral in people's complex lived experiences and their escapes into, from and across life transitions, institutions, and geo-political spaces? Scholarly engagement with the carceral conventionally studied penal systems. By contrast, this panel understands the carceral more broadly: as the subjective lived experiences of detriment and harm, including the confiscation or loss of opportunity or potentiality, felt by the subject. Carcerality requires an analysis of intent –

the agent(s)' (be it legal, state, family, employer, medical, or otherwise) intentions to cause harm and restriction. Moreover, the carceral requires an examination of spatiality – spaces where carcerality is achieved (the city, country, street, home, institution, detention centre, borders, body, imaginations), at any scale. It also requires investigation of the diverse (im)material techniques and technologies through which detriment is experienced, contested, and resisted. The framework of 'Carceral Escapes' extends the analytical gaze, foregrounding the ways in which the carceral is embedded in people's complex lives to consider what happens when they (attempt to) escape. All too often, an apparent 'escape' from the carceral can actually involve being subjected to new regimes of carcerality. The concept of 'Carceral Escapes' illuminates the way in which the carceral is seeped into the fabric of escapes whereby repercussions of the preceding carceral context are carried into the next. It allows us to think through the carceral as embedded and experienced in and across temporalities spanning multiple geo-political, institutional, familial, social, economic, medical, and legal spaces and across life transitions. Using the framework of 'Carceral Escapes' this panel will interrogate the carceral across a range of different contexts, such as familial and intimate relationships, legal and social institutions, immigration, asylum, and transnational border controls, as well as within concepts like Whiteness and Cis heteronormativity. It will illuminate the carceral practices, meanings and subjectivities that are articulated in legal, social, medical, and economic institutions that people repeatedly live in, escape from, escape into, and escape across. It will question the effects of such carceral experiences and escapes on people's everyday subjectivities and quality of life. Importantly also, it will shine light on the implications these insights can have for our own conceptual understandings, as well as policy and practice.

Prison without walls: Provisionally released asylum seekers in Japan and their spatiotemporal tactic: The paper examines how asylum seekers in Japan, whose applications for refugee recognition have been denied or are pending, survive while being prohibited from working, accessing healthcare, or moving outside of the municipality of their residence. After providing a brief overview of Japan's asylum policies that uphold the principle of incarcerating all asylum seekers, it portrays the acute challenges faced by those asylum seekers who are "provisionally released" from the migrant detention centers. With the ever-present threat of incarceration and deportation, indefinitely temporary legal status, and

severely restricted spatial and socioeconomic mobilities, many of these asylum seekers describe their situations as living in “a prison without walls.” Based on my ethnographic fieldwork conducted in 2021-22, during which I interviewed provisionally released asylum seekers and their Japanese supporters, the paper portrays how those provisionally released asylum seekers manage to survive, sometimes for decades, in Japan. It argues that while they don’t entirely escape from the Japanese state’s spatiotemporal control over their lives, they can and do create their individual and communal spaces and personal timelines by cultivating a network of support and aspiring for their futures. If a state’s primary means of control over its vulnerable subjects, such as rejected asylum seekers and undocumented migrants, is subjecting them to indefinite waiting and threat of incarceration, I argue that surviving one day at a time, trusting strangers who are willing to help, and maintaining hope for a better future, in themselves, are radically subversive acts against the state’s spatiotemporal violence. Presenter: Taku Suzuki (Denison University)

“Deportation to Mexico from U.S. Prisons: Socialities and (Post-)Carceral Escapes”: What influence does the crafting of socialities after prison and deportation have on post-carceral transitions? This paper examines ways in which men deported over the northern Mexico border remake intimate social lives and seek to make place in the aftermath of release from prison. It draws on the notion of subjective experience, or detriment (Moran et al. 2018, 677), to examine the portability of carceral socialities—from inside prison walls, out to local communities, and across national boundaries. In post-prison and post-deportation contexts, forcible displacement to countries of formal citizenship—places of political and legal belonging—may engender multiple forms of out-of-placeness: social, economic, and psychological. Forging ties of interpersonal intimacy provides one resource for achieving contingent stability. Based on ethnographic research in the city of Nogales, on Mexico’s northern border, this paper illuminates traces of the carceral in placemaking projects of long-time U.S. residents who migrated from Mexico as children and, years later as adults, were incarcerated in U.S. prisons and expelled to Mexico to encounter other deported pintos [formerly incarcerated people]. Making use of U.S. national and prison identifications and ways-of-being to identify interpersonal affinity facilitates social connections and the circulation of information, material goods, and affective care. While forcible return signifies rupture as well as discontinuity, emergent socialities inflected with carceral experiences made

subsequently provide possibilities as social organizers, symbols of alliance, material repositories, and sources of contingent interpersonal belonging. Presenter: Tobin Hansen (Oregon State University)

‘Carceral Escapes’ recurring confinements experienced by UK South Asian brides in broken transnational marriages: The framework of “Carceral Escapes” offers important new perspectives on the multiple challenges faced by transnational brides, ranging from arranged marriages back home, and delays in spousal visas, to experiences of domestic abuse and stringent immigration rules in host countries post-marital breakdown. Moving away for the conventional use of the carceral which studied penal systems, it follows anthropologists and geographers who employ a broader understanding of the carceral as an intent by agent(s) (legal, state, family, employer, medical, or otherwise) to cause detriment, harm, or restrictions, and to confiscate or cause damage of opportunity or potentiality, within specific spaces, across life events. As well, it opens vistas to see how all too often, an apparent ‘escape’ from one challenging context can involve subjection to new regimes of carcerality. It illuminates the carceral seeped into the fabric of escapes and how the repercussions of the preceding carceral context can be carried into the next. This paper applies the carceral escapes framework to person-centred ethnography of South Asian Muslim women living in the UK. It reveals new anthropological insights on gender, migration, broken transnational marriages and stringent immigration policies by illuminates the repeating carcerality embedded across temporalities spanning multiple geo-political, institutional, familial, social, economic, medical, and legal spaces and across life events experienced by spouses in broken transnational marriages, both back home and in the UK, in interconnecting ways. Presenter: Naseem Jivraj

“You Putting Yourself in Jail”: The Intimate Carceral of Domestic Violence : Adopting a more capacious understanding of the carceral (Moran et al. 2018), this paper considers the experiences of “capture,” “imprisonment” and “bondage” that survivors of intimate partner violence (IPV) articulate in their intimate relationships in Cape Town, South Africa. The feelings of entrapment and “intimate terrorism” (Johnson 2008) that can accompany IPV results in some survivors articulating abusive relationships in carceral terms likened to “putting yourself in jail.” Yet in the broader carceral landscape of gender-based violence (GBV) “justice” in South Africa, survivors attempting to exit abusive relationships must often go through the

criminal justice system, risking the arrest and imprisonment of partners with whom they share children, or on whom they depend for housing and financial support. Even President Cyril Ramaphosa's declarations around fighting the "scourge" of GBV primarily focuses on punitive models of prevention and response, emphasizing longer and harsher prison sentences for perpetrators as a "deterrent" to violence. Within these overlapping carceral circles, I consider how survivors articulate the kinds of surveillance, coercive control, and entrapment exhibited by current or former intimate partners, and how the limited modes of "escape" are accompanied by different carceral logics rarely align with the social, material and structural needs of survivors. These different kinds of carcerality are also attendant to broader debates over the limits and problematics of carceral feminism, which invest the state and criminal justice system with the task of "policing" gender-based violence, begging the question of what an alternative justice and freedom might look like for survivors. Presenter: Emma Backe (George Washington University)

"iiala Mataa" : Cis-heteronormativity and The Everyday Production of 'The Carceral Continuum': The "carceral continuum" (Moran et al., 2017) has been recently explored as a useful analytic to account for the enmeshment of mobility and immobility in migration studies, yet its "epistemological cisheteronormativity" (Ritholtz, 2022) goes unchallenged. In this paper, I explore how gender and sexuality shape the "carceral continuum" in the context of migration between the Middle East and Europe. I suggest that queer refugees enact what I refer to as 'intensified gender and sexual performance' - that is, deliberately and strategically exaggerating normative gender and sexual expression - in their attempts to navigate "confinement in motion" (Balaguera, 2018). Relying on three months ethnographic field work in Athens, I analyze the impact of Iraq-Greece's cis-heteronormative carceral geographies on the life of Ziri, an Iraqi trans woman stuck in limbo. While tracing her (im)mobility trajectories through time-space, I focus on her relational encounters with (1) border police and flight attendants at the airport-prison, (2) humanitarian workers and refugees at the camp and NGO accommodations, and (3) smugglers at borders. I argue that Ziri futilely mobilizes masculinity and/or femininity as "carceral escapes", which in turn shape her gender subjectivity. My study thus brings together and contributes further knowledge to debates on carcerality in geography and queer migration, by queering the carceral continuum as both a gendered and relational experience that is not

necessarily bound to place. 1Translates to "until when" which is an expression that Ziri used when describing her experiences. It is also the title of a song by an Iraqi poet, Kadem al Saher, dealing with the economic precarity in Iraq and youth 's political resistance. Presenter: Hatim Rachdi (Northwestern University in Qatar)

Race, Empire, and the "Criminal Veteran": The law-breaking US military veteran is a figure of both sympathy and fear in US public discourse. This figure is firmly embedded in a moral economy of civilian "support" for veterans and a presumed causal linkage between military service, psychological trauma and mental illness, and law-breaking behavior. Programs from treatment courts that support veteran rehabilitation to Veterans Administration outreach services have emerged over the course of the US's post-9/11 wars. But efforts to mitigate criminological punitiveness for veterans are largely detached from broader critiques of carcerality. Veteran offenders instead are cast as exceptional figures: vulnerable, sympathetic, and deserving within a carceral system where they are presumed not to belong. Veteran exceptionalism thus offers an escape from carcerality and its simultaneous reinscription. Drawing on ethnographic fieldwork with the participants and staff of a veteran treatment court in a military community, this paper explores how veteran offenders do not escape carcerality, but come to inhabit a veteran status defined in the wake, and even the anticipation of, disordered behavior and criminological involvement. Veterans are obliged to embody a continuous racial logic of domestic carcerality and global empire, but also become critics of the coercions and contradictions of these dynamics. The paper tracks the instability of normative racialized citizenship across veteran justice literature and advocacy and in the experiences of veterans themselves, identifying moments in which the exceptional power of military whiteness and exalted citizenship is affirmed, contested, or loses coherence under the coercions and humiliations of judicial supervision. Presenter: Kenneth MacLeish (Vanderbilt University)

The Carcerality of Whiteness: Exploring how White folks address the 'active entity' of whiteness: Whiteness stumps White folks as a lived experience due to its normative and relational (rather than corporeal) nature. After three years of participant observation and over 80 interviews with White Albertans on the topic of whiteness and white racial identity, it became apparent that my participants struggled to identify and reflect on

past and present examples of White privilege and 'whiteness at work' in their everyday lives. The 'carceral escape' framework provides a unique conceptual lens to view participants' "imprisonment" in whiteness and their reflective attempts to unearth and come to terms with their own racial advantage with the ultimate goal of escaping 'the whiteness project'. In this presentation, I describe what I understand to be the 'golden handcuffs' of whiteness with its sticky and recalcitrant nature that resists reflection on one's privileged existence. In this analysis, I will explore the 'conditions' of whiteness as a carceral mechanism to identify its work as a detriment, an intention, and as a spatial framework. Whiteness can only function as a carceral mechanism due to the superior positioning of white racial identity in the hierarchical framing of Canada's multicultural context. This presentation reveals how my participants experienced whiteness and explores the possibility of 'escape' to gain insight into whiteness at work in social, economic, legal, medical, and state spaces and, to address colourblind (white liberal) approaches that maintain the racial status quo.

Communities of Consumers, Structures of Consumption

8:00 AM - 9:45 AM TMCC - 713 A

Oral Presentation Session

REVIEWED BY:

Society for the Anthropology of Food and Nutrition

ORGANIZER:

Ariana Gunderson (Indiana University, Bloomington, Department of Anthropology)

PRESENTER:

Rachel Kingsley (University of South Florida, Department of Anthropology), Ariana Gunderson (Indiana University, Bloomington, Department of Anthropology), Carolyn Mason (Southern Methodist University, Department of Anthropology), Yu Han, Miguel Pastor

DESCRIPTION:

The rules regulating how we eat, what we eat, and why we eat are framed by the communities we belong to. This session tackles the nature of these structural engagements in shaping food consumption within 'communities' whether those are conceived of as academic, legal, racial, national, or medical. The papers

here seek to uncover how these community structures shape how undergraduates learn about food, how recipe circulation is managed to produce value, how food access is shaped in minority communities, and how growth standards interact with cultural ideas about children's bodies.

Community-Engaged Learning: Centering Anthropology in Undergraduate Education: Community-engaged learning (CEL) is a 'hands-on' approach to introducing undergraduate students to anthropological methods and theory in local contexts. CEL bridges academic theory and real-world practice by 'promoting student's academic learning and civic development while simultaneously addressing real-world problems, community needs, and interests' (Boyer, 1990). This presentation will discuss how community-engaged learning was utilized in an undergraduate anthropology class at the University of South Florida in the summer of 2022 and 2023. By applying anthropological methods and theory, students examined food insecurity and inequity in the Tampa Bay area. In addition, this presentation will also discuss the process of creating community partnerships for CEL, student feedback and reflection about their CEL experiences, lessons learned from students and instructors, and future recommendations for integrating community-engaged learning into undergraduate anthropology courses. Community-engaged learning (CEL) is one way to introduce undergraduate students to social inequities and inequalities in a local-context. Community-engaged learning is broadly defined as a 'structured learning experiences within the context of a community' (Rosenstock et al., 2011). CEL bridges academic theory and real-world practice by 'promoting student's academic learning and civic development while simultaneously addressing real-world problems, community needs, and interests (Boyer, 1990). In addition, CEL emphasizes collaboration between students, stakeholders, and their communities. Studies have highlighted the benefits of CEL in undergraduate education, including developing critical thinking skills, communication and problem-solving skills, cultural awareness and competency, and increased interpersonal skills (O'Connor et al., 2011). The Tampa Bay area faces significant social and structural barriers that contribute to food insecurity, including a lack of reliable transportation, cost of living increases and inflation, unemployment, and low wages (O'Donnell, 2020). In predominantly Black neighborhoods in Tampa, almost 40% of children are living in poverty and are unsure where their next meal will come from (O'Donnell, 2020). Working in a community food garden

and neighborhood food distribution, students examined a variety of social, economic, and environmental conditions in the Tampa Bay Area that influence food insecurity and inequity. For example, students examined how living in a 'food desert' with a lack of reliable and affordable public transportation creates a lack of healthy and affordable food options, which increases the risk for a variety of health conditions, such as diabetes, childhood obesity, and high blood pressure. There were several learning outcomes for the students' CEL experience, such as increasing the understanding of social issues through participation in the community, understanding the importance of offering culturally appropriate food at the neighborhood food distribution, examining how food insecurity is created and perpetuated by structural, social, and racial barriers in the community, and using participant observation, interviews, and their CEL experiences to create 'mini ethnographies' Finally, students were required to attempt to create possible solutions to food insecurity in the Tampa Bay Area. This presentation will also discuss a future recommendations in an attempt to provide the best possible CEL experiences. Presenter: Rachel Kingsley (University of South Florida, Department of Anthropology)

IP Law and Honor Codes: How to Prevent Recipe Theft: A recipe captures in neat prose a method of cooking, fixing a particular way of food preparation into text. People often grow fond or even possessive of a particular recipe, claiming it as theirs after tinkering with and perfecting it, and companies like Coke claim profitable recipes as proprietary. When a person or company identifies strongly with a recipe, they might take action to control its circulation and protect it from theft. Drawing on fieldwork conducted in the US and in Germany, in this paper I will outline and analyze common strategies for preventing recipe theft: Coca-Cola employs rigorous security to protect its recipe from would-be copycats; cookbook publishers copyright books and factory foods are produced under patents; freelance recipe developers on deadline follow an 'honor code' to walk the narrow line between finding inspiration for their next SEO recipe and pilfering another's work. These strategies manage a recipe's circulation to produce value: perhaps by profiting from cookbook sales (in the case of high circulation) or by burnishing a reputation for having the best chili that no one else can seem to make quite as well (in the case of no circulation). The legal and institutional apparatus arranged to prevent recipe theft speaks to the immense value to be wrung from these words about food, as recipes are transformed from common knowledge into

private property. Presenter: Ariana Gunderson (Indiana University, Bloomington, Department of Anthropology)

The Change We Wish To See: How Food and Community Are Intertwined: Food deserts, or areas without reliable or close access to grocery stores and fresh produce, are phenomena that occur across the United States, with significance to medical anthropology and food studies. These areas are constrained by the lack of healthy foods available to them, which also affects the health and nutrition of these communities. The lack of self-sufficiency in local food systems, part of the global movement toward a capitalist world food economy, has exacerbated this situation (Friedmann 1992). Areas without these industrialized food sources are left without other options for food under this new system, leaving the individuals within them vulnerable to the health effects of lack of access to quality food such as malnutrition and diabetes (Borras and Mohamed 2020). This is especially true for minority communities, which often overlap with identified food deserts because of historical and social processes that economically disadvantaged them (Reese 2019; Li and Yuan 2022). The effects of these situations, including negative health outcomes, have sparked national initiatives to address food deserts. However, these efforts often focus on policy rather than existing community initiatives. Purely policy-based interventions ignore how minority families and communities, especially in African American neighborhoods, often rely on each other for food and monetary aid to maintain their health, not only as individuals but as a whole (Stack 2008; Reese 2020). I will observe two locally run organizations that rely on community support to address food deserts in South Dallas, identifying and sampling community stakeholders for interviews. These interviews will ask about methods of supporting their community and how they relate that to community health. This paper acknowledges the reliance on community as strength, rather than a constraint on Black people, in order to understand the transitional work done as communities affected by food deserts shift how they can access food and perceptions about the capabilities of Black community organizations. Constructed or Perceived? Sensory Ethnographic Approaches to Understand Urban Consumers' Evaluation of Food and Waste: While sensory ethnography has been utilized in recent sociological and anthropological studies of everyday life, it remains relatively new in the study of food consumption and waste issues. This project investigates the complex relationships between urban consumers' perceptions of food value, edibility, and the generation of food waste during consumption stages, with a focus on Kunming, a bustling and ethnically diverse city in China. The research uses participants-generated photographic diaries to gather visual information about food, as well as walking interviews conducted in the year 2022 at various Kunming middle-class neighborhoods and food consumption locations, such as homes, canteens, and wet markets. The fieldwork with around 31 households reveals that Kunming consumers' perceptions of food are shaped not only by scientific communication but also by national, regional, and ethnic cultures. It resonates with Mary Douglas' concepts of waste as a valueless by-product of social ordering. However, configurations of senses in food also play a crucial role in influencing consumers' evaluation of food products as zero-value food waste, either independently or in coordination with socio-cultural dimensions. For instance, participants' reluctance to consume leftovers due to concerns about bad taste, undesirable textures, or hygienic conditions reinforces their beliefs on the socially given information on products' packaging and labelings. Moreover, sensory experiences help build up consumers' agency in recognizing the values and edibility of food, creating tensions between the laypersons' (i.e. consumers') knowledge and experts' (e.g. advertisers and suppliers') claimed values of food. Overall, this project contributes to the anthropological definition of waste, arguing against the constructivist approach by which food waste is purely socio-culturally defined, but instead recognizes the importance of physical properties and consumers' subjectivity in identifying food waste. Meanwhile, it advances the use of sensory ethnography by combining visual diaries and in-situ interviewing. It highlights the importance of sensory experiences in understanding food waste in

urban food consumption practices, providing insights into how waste management interventions can be tailored to specific contexts, especially during the COVID-19 pandemic. Presenter: Yu Han

Beyond Physical Metrics: a Cultural Approach of the Biomedical Categories of Child Growth Standards: The World Health Organization's Child Growth Standards (CGSs) are tools to measure child development through the biomedical gaze. They provide biomedical evidence that young children from different regions experience, on average, similar growth patterns when their nutritional needs are met. Nevertheless, the concept of the body in Indigenous communities is influenced by the cultural values and categories of the social environment in which children are born and grow. This suggests in other words, the bodies of children cannot be exclusively contained explained or understood in terms of biomedical categories used to measure growth and nutritional status. This article compares, contrasts, and discusses the biomedical conceptualization of the bodies of children with their cultural conceptualization among a specific Maya group in Guatemala. Through a case study that investigates the Indigenous Maya language K'iche' in a sociolinguistic approach, I argue that the categories of the bodies of Maya children are based on cultural concepts and pragmatic language that do not align with the nutrition-centered biomedical gaze. This analysis seeks to understand how cultural values come to shape body concepts of children, and demonstrates that the biomedical gaze of the CGSs neither sufficiently nor accurately accounts for the range of culture-oriented concepts of children's bodies. Community-collaborative archaeology and countering colonial legacies

8:00 AM - 9:45 AM TMCC - 206 D

Oral Presentation Session

REVIEWED BY:

Archaeology Division

ORGANIZER:

Dawn M. Rutecki (Grand Valley State University)

CHAIR:

PRESENTER:

Dawn M. Rutecki (Grand Valley State University),Lisa

Overholtzer (McGill University), Maxime Lamoureux St-Hilaire (Mount Royal University)

DESCRIPTION:

Archaeology in the 21st century is increasingly focused on countering the legacies of colonialism, moving away from extractive, exclusionary projects and toward collaboration with Indigenous and other descendant communities. Talks in this session demonstrate various ways in which this is being done, from returning control over archaeological heritage and ensuring that the benefits of archaeological research reach descendants, to repatriation, restitutive justice, and the protection of Indigenous lands and livelihoods.

Restitutive Justice in Archaeology: Moving past metaphor: This paper is co-authored by Dawn M. Rutecki and K. Anne Pyburn. Postcolonial calls to action have limited direct impact on 'business-as-usual' archaeological research. Even as community-engaged and community-based work is emphasized in impact statements and memoranda of agreement, these changes do not address the centuries of harm wrought directly and indirectly on communities. Drawing on the critical work of Tuck and Yang (2012), this paper highlights the disparities in archaeology between inclusion in archaeological rhetoric versus the practice required for restitutive justice. The future of the discipline of archaeology depends on our ability to move beyond acknowledging past errors to working actively and politically for a just future. Presenter: Dawn M. Rutecki (Grand Valley State University)

Drawing a Crowd: Community-Collaborative Archaeology through Children's Literature at Tepeticpac, Mexico: Since 2017, the community-collaborative PACT project has worked to reconstruct ancestral history and everyday lived experience at Tepeticpac, Tlaxcala, Mexico. The project aims to address seven themes identified by the descendant community: community history and social identity; their ancestors' relations with other communities, including the Aztec empire; ancestral foodways and cuisine; how they made pottery and other goods; how they built their houses; changing ritual practice; and the meaning of settlement on the hilltops. This talk will describe the first community outreach targeted at children—the creation of coloring and story books, inspired by the work of Sonya Atalay, John Swogger, and others, and in collaboration with Tepeticpac artist, educator, and expert in sustainable tourism, Ormuzd Ivings Méndez Rivera. The talk will discuss our approach, tailored to the specific needs of the community; our collaborative process and the use of

excavated artifacts; and challenges and lessons learned. Presenter: Lisa Overholtzer (McGill University)

Slow Archaeology and Collaborative Knowledge Production in the Maya World: Paper by Maxime Lamoureux-St-Hilaire (Mount Royal University) and Rubén Morales-Forte (Tulane University) **Abstract:** Traditional (or 'fast') archaeology begins work quickly without much concern for the history of heritage communities or involving them in research design. In contrast, slow archaeology deemphasizes efficient data collection & deliberately creates time to study the human landscape of archaeological sites while promoting a shared production of knowledge & heritage preservation. In this paper we present the results of our first season of ethnographic work with the heritage community of Dolores, Guatemala. We investigate the rapport between Doloreños & archaeology by studying their rich history of involvement in ancient Maya research, their relationship with academics, & their interest in developing a local archaeological project. By slowing down the pace of archaeology, we are laying down foundations to build a sustainable & community-engaged project. Through this process, we hope to make a small contribution towards decolonizing the field of anthropological archaeology. Presenter: Maxime Lamoureux St-Hilaire (Mount Royal University)

Cradles to Graves: Anthropology of Life Cycles

8:00 AM - 9:45 AM TMCC - 205 C

Oral Presentation Session

REVIEWED BY:

Society for Cultural Anthropology

PRESENTER:

Anne Aronsson (Yale University), Jocie Osika (Wayne State University, Department of Anthropology)

DESCRIPTION:

From elder care in Japan to adoption 'marketplace' to aging out of child welfare in the US to death rituals in India, this panel examines transitional moments in life cycles.

Professional Women and Elder Care in Contemporary Japan: Anxiety and the Move Toward Technocare: The elder population in Japan is increasing drastically, causing a number of issues that have not yet surfaced in most Western countries. Demographic data from Japan reveal that the Japanese have the longest lifespan globally, resulting in the world's highest population of older adults. Concurrently, the country has a rapidly

declining birth rate. As the population ages, the workforce is shrinking and leaving a high number of elders with fewer caregivers to meet their needs. At present, the Japanese government is developing robotic care solutions to overcome the elder care labor shortage and implementing a new agenda to introduce social robots into the field. This presentation discusses professional women in Japan and their burden of caring for aging relatives and how introducing robotic care devices might reduce current anxieties regarding the provision of elder care. It analyzes the elder care strategies of 12 white-collar professional women in their forties and fifties and examines the extent to which gendered, expected at-home caregiving affects their professional commitments and associated anxieties. The findings provide crucial insight into the most effective strategies that can be used by Japanese women to balance their careers with responsibilities to care for older relatives, particularly when it is impossible to predict the intensity of caregiving in the future. Presenter: Anne Aronsson (Yale University)

Reframing the Adoption “Marketplace” and Surfacing Symbolic Hierarchy: A 'marketplace' metaphor is commonly used to selectively frame domestic and international adoption discourse in terms of adoption costs, adoption rates, and differential adoption costs and rates as they correlate with culturally marked child characteristics (Raleigh 2012; Raleigh 2016:506; Skidmore, Anderson, & Eiswerth 2016). For example, lower adoption costs of Black children are sometimes attributed to the overrepresentation of Black children in the system and the higher demand for white children (Bell et al. 2021). While this metaphor frames adoption well in terms of costs and rates, it problematically submerges the social and moral while dehumanizing and commodifying children. A deeper interrogation of the sources of differential costs and rates, inequalities, and hierarchical structures performed in and reified through the adoption system is needed. In this paper, I work to denaturalize the adoption 'marketplace' metaphor through exploration of the descriptive categorization of children, implicated social hierarchies, and the symbolic attachments between the two. Focusing on transracial adoptions (Mariner 2019), qualitative analysis of interviews with adoptive parents and social workers and virtual ethnographic observations of discussion threads in online adoption forums was conducted. Four key themes emerged. Major themes included: (1) acceptance and rejection of the system as a marketplace, (2) how child characteristics are hierarchized within and between characteristic categories of abledness, age, and race, (3)

how parents go from seeking 'the perfect child' to accepting 'any child,' and (4) how social and cultural capital are employed to circumvent the boundaries of the hierarchy. This denaturalization of the 'marketplace' metaphor and exploration of alternatives is valuable in creating a dynamic foundation upon which stakeholders can build conversations regarding child and family rights and safety. A final discussion will explore how research on adoption might change under a new non-market framework. References Bell, Sarah Beth, Rachel Farr, Eugene Ofose, Eric Hehman, and C. Curating transformative experiences from research to pedagogy: consciousness, embodiment and transitions

8:00 AM - 9:45 AM TMCC - 202 D
Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Psychological Anthropology

ORGANIZER:

Nicholas Long (London School of Economics)

CHAIR:

Nicholas Long (London School of Economics)

PRESENTER:

Samuele Collu (McGill University), Meghan Rose Donnelly, Nicholas Long (London School of Economics), Leslie Sabiston (McGill University, Department of Anthropology), Aidan Seale-Feldman

(University of Notre Dame, Department of Anthropology)

DISCUSSANT:

A. George Bajalia (Wesleyan University, Anthropology Department)

DESCRIPTION:

This roundtable brings together scholars working at the interface of psychological anthropology, the anthropology of consciousness, and performance ethnography to discuss how transitions – more specifically, transformative experiences – can be curated. People in our fieldsites often seek to induce particular kinds of experience in others (and sometimes themselves) with a view to changing how they inhabit and act in the world. As educators, anthropologists often hope that our students will find their studies similarly transformative, and may attempt to foster transformative experiences in the classroom. How can such transitions be 'successfully' curated? What dangers surround attempts to elicit transformative experiences in others, and how can they best be navigated? What concepts and theories are most helpful for understanding how transformative experiences are effected (theories of ritual? Play? Consciousness? (De)subjectification?) How might the outcomes of experiential experiments be used to refine and develop such theories? How does what we observe during fieldwork shape our understanding of what we might do in the classroom, and how do pedagogical experiments open up new research possibilities? Roundtable participants will address these issues by drawing on their own research and teaching, and by curating experiences for the audience, inviting collective reflection and discussion. Collu will draw from his research on the affective experience of binge-scrolling on TikTok to explore the tensions between hypnotic forms of experience and algorithmic curation. Mobilizing the anthropology of rituals and spirit possession, Collu proposes a 'cybernetic exorcism' to address the contemporary curation of the user's non-conscious life. Long will share how Indonesian hypnotic teachers manipulate 'brain waves' to make pupils 'better learners' and 'better people', examining how and when how experiments in curating transitions empower, and when they lead to forms of deception, misunderstanding and non-understanding. Seale-Feldman will address psychedelic technologies of self-transformation and the limits and possibilities of psychedelic identity shift in the clinic and beyond. She will also discuss how teaching about multiple models of mind and modes of desubjectification becomes an opportunity to curate experiences of openness,

reflection, and transformation. Sabiston will examine the classroom as a ritual space where we can not only repetitively analyze social arrangements intellectually, but strive for creating new sensibilities in which we can interrupt existing modes of relationship and, hopefully, generate new (re-cathect?) repertoires and possibilities of relation in our discipline and beyond. Following Dumit's call to 'wake up to not noticing', Bajalia will discuss new modes of sensory, experiential ethnography, grounded in non-extractive storytelling. Calling attention to the classroom as a space but also a time of transformation, he will explore how anthropology can learn from approaches to sensorial attentiveness and transformative ritual in contemporary art, curation, and performance. Finally, Donnelly will play with performance ethnography's capacity to unlock aspects of embodied consciousness unfolding between people. Building on experiments conducted alongside Catholic nuns in Indonesia, she will explore how performative curation can catch us in communal moments of personal transformation.

4-050

Decolonizing the Teaching Profession and the Multilingual Classroom: Power and Possibilities

8:00 AM - 9:45 AM TMCC - 715 B

Oral Presentation Session

REVIEWED BY:

Council on Anthropology and Education

ORGANIZER:

Patricia Venegas-Weber

PRESENTER:

Enrique Sepúlveda ,Ryan Lafferty (Northern Burlington County Regional Middle School),Brian Tausel (University of Washington),Cory Buckband

DESCRIPTION:

These five papers examine power dynamics in teacher education programs and/or the classroom and attempts to decolonize the teaching profession. The first paper, Critical Witnessing in Teacher Education, advocates for decolonizing Whiteness in teacher education programs. By acknowledging power issues and engaging in shared dialogue about these issues among White and BIPOC, the goal is to create vulnerable spaces for counternarratives, inclusive of multilingual language awareness of teacher educators. The second paper, The Rise of Mexican Farmworker Children to Liberal Institutional Power in a California City and the Education of a Chicano Teacher, takes a critical look at the advent

of Chicana/os as the new face of Western forms of liberal capitalist representation and governance in Woodland, California. This paper interprets the racial, ethnic, and cultural integration of public schools and other liberal institutions as both the outcome of attempts of communities of color to humanize themselves while lessening the harsh reality of white supremacy. The third paper, *Middle School Teacher Methods for Cultivating Student Autonomy*, captures the transitional teaching experiences to hybrid, remote and ultimately in-person teaching of middle school teachers during the COVID-19 pandemic to document their experiences on how autonomy shifted throughout these transitions. Themes include performativity, teacher authenticity, social and emotional learning, professional learning communities as professional development, motivation, constructivism, metacognition, among others. The fourth paper, *From Deliberation to Dialogue*, explores a dialogue-based program of teacher professional development, aimed at enhancing teacher capacity for culturally relevant civics instruction with immigrant youth to democratize discourse and re-distribute power in the multilingual civics classroom. In the process, opportunities for critical a transnational curriculum are examined. The last paper, *Being 'Poch@' in an Elite Trilingual School*, reveals the strategic agency of a Latinx English Language Arts teacher in a K-6 trilingual immersion charter school. In the context of a monoglossic language policy that separates languages into distinct classrooms and content areas, the teacher asserts her agency, while reaffirming her own hybridized racial-ethnic and language identities as 'poch@' and welcomes children's fluid language use in ways that transgress the school's language policy.

The Rise of Mexican Farmworker Children to Liberal Institutional Power in a California City & the Education of a Chicano Teacher: A Critical Reflection: For much of the 20th century the education of Mexican children has been a key site in the struggle for social justice for many Chicana/o activists. Many of these activists either became teachers or deeply influenced generations to become educators in important numbers throughout the southwest on the heels of the Chicano movement of the 1960's-70's. In many places like Woodland, CA., they arrived demanding reform and their rightful place in decision making processes. And, in no small measure, Chicana/os came armed with their own radical pedagogies, sociopolitical critiques and an understanding of history outside of Euro-American frameworks. After many decades of organizing against an exclusionary racial order, the Chicana/o community

in Woodland, CA. has finally achieved significant political victories and advances within white mainstream institutional spaces in terms of political power, representation and key programmatic offerings and services such as bilingual education and the hiring of bilingual personnel of color. The community's ongoing political pressure for most of the 20th century opened-up institutions; and once impenetrable obstacles to institutional reform have now been overcome. Chicana/os are now the mayors, city council people, school board members, superintendents, community college presidents, and school principals. A common electoral contest within the city these days is between two or more Chicana/os of various political persuasions. This paper asserts that the advent of Chicana/os as the new face of Western forms of liberal representation and governance is not a completely new radical break but a continuation and simultaneous presence of neo-colonial structures undergirded by capitalism. A new configuration of power has indeed replaced an older form of state power, at least at local levels of political governance, under the guise of liberal discourses of diversity and progress, but there is also a high degree of continuity in the exercise of power. Breaking with past liberal capitalist forms of governmentality isn't new phenomena in western modernity. In shifting the terrain from previous forms of liberal capitalist power and control (racial apartheid) to newer ones (multicultural liberalism and inclusion), gives way on the form but allows for a new neo-colonial arrangement to ensure the substance of its power & configuration. My work here interprets the racial, ethnic and cultural integration of public schools and other liberal institutions as both the outcome of communities of color attempts at humanizing themselves and lessening the harsh reality of white supremacy from the ground up as well as the strategic attempt by reformers of white liberal society from the top echelons of power to shift the political terrain away from a racial order once marked by blatant, violent and coercive forms of total assimilation toward softer forms of accommodation, recognition and inclusion of its racialized and culturally different minoritized subjects. In this paper I intend to offer a critical reflection at this historical conjunctural moment to interrogate the possible implications of Chicana/os becoming the new face of liberal capitalist power and governance. Presenter: Enrique Sepúlveda

Middle School Teacher Methods for Cultivating Student Autonomy: A PLC Case Study During COVID-19: The purpose of this PLC-informed qualitative interview case study was to explore middle school teacher methods for

cultivating student autonomy and the rationale behind their instructional choices. Here, student autonomy was defined as learners taking ownership of their academic performance and scholastic responsibilities (Holec, 1981). The unforeseen emergence of COVID-19 impacted the study format and provided a rare opportunity for a six week, nine-member professional learning community (PLC) comprised of middle school teachers discussing the topic of student autonomy and how it changed during the transitions between remote, hybrid, and the ultimate return to in-person instruction. A survey questionnaire, PLC transcripts, and 30-minute semi-structured qualitative exit interviews underwent thematic coding analysis to place teacher responses in the context of predominant voices found in academia today. Themes are examined from a leadership perspective, through the social justice lens of critical pedagogy (Freire, 1970; Giroux, 2011; McLaren, 2015). This study evolved to capture the teachers' lived experiences during the pandemic in order to gain their perspectives on how autonomy shifted along with the traditional means of instruction during this time of seismic change. Discussed are themes of performativity, teacher authenticity, social and emotional learning (SEL), PLCs as professional development (PD), motivation, constructivism, adaptive expertise, and metacognition, along with several others, nesting teachers' practical experience in the rich context of pedagogical theory, specifically when navigating new roles in remote and hybrid instruction. This study was originally conducted and presented as a doctoral dissertation at Rowan University's Educational Leadership Ed.D Program. Presenter: Ryan Lafferty (Northern Burlington County Regional Middle School)

From Deliberation to Dialogue: Examining Discourses in U.S.-based Democratic Education with Transnational Youth: Recent scholarship on civic discourse in secondary classrooms focuses largely on deliberative pedagogies: approaches aimed at instructing students in consensus-based decision-making. The field is particularly concentrated on critically re-examining classical deliberation, and developing alternate models for socializing youth into collective decision-making. However, the overwhelming focus on deliberative pedagogies, even critical pedagogies, obscures patterns of disparity facing many multilingual immigrant and refugee youth in civics classrooms. I contend these patterns will continue raising chronic equity issues until the field attends to dialogic pedagogies with the same interest it pays to deliberative pedagogies. In this study, I explore a dialogue-based program of teacher professional development, aimed at enhancing teacher

capacity for culturally relevant civics instruction with immigrant youth. Dialogues with students surfaced rich moments of learning, for the teacher and student alike. Cognitive dissonance, puzzlement, and heightened curiosity – akin to Jaffee-Walter's 'breakdowns' in researcher understanding of participants' social worlds (2020) – stretched the teacher's notions about valuable classroom discourse, raising two key questions in the process: In what ways do dialogue-focused activities democratize discourse and re-distribute power in the context of a multilingual civics classroom? And what do dialogues with immigrant youth reveal about opportunities for a critical transnational curriculum (Bajaj & Bartlett, 2017), centered on controversies, power arrangements, and funds of knowledge that would sustain students' transnational memberships and aspirations? Using community nomination and phased-selection criteria, I partnered with an early-career civics teacher in a six-month practitioner inquiry project. Nine day-long observations provided a continuum sampling of her teaching practice with diverse immigrant and refugee youth. In fourteen interviews, totaling 11.5 hours, we discussed aims for instruction, students' funds of knowledge, and surprises in the dialogues. We recorded six seminar-style after-school group dialogues, totaling 8.5 hours, with seven newcomer student volunteers. Data were analyzed through an inductive coding scheme focused on moments of teacher reflexivity, which mirrored high-interest passages of group meaning-making. Through a lens of Discursive Positioning and philosophical communities of inquiry, four key findings emerged. First is that dialogue sparked the teacher's attention around students' language use, negotiation of meaning, and concept attainment. Data also revealed qualitative and quantitative differences in student comments during dialogue activities versus other moments of classroom discourse, with clear implications for elevating students' voices. Third, linkages between the teacher's aims, biography, and conceptions of successful classroom discourse came together in ways that influenced her instructional repertoires, impacting students' opportunities to speak and be heard in class. Finally, dialoguing with students expanded the teacher's understanding of transnational funds of knowledge. It deepened her ability to envision how dialogic practices could be taken up across her practice, re-calibrating power and social locations in her civics classroom, with students setting the agenda for how civic and political issues are framed, and which topics merit community attention. Presenter: Brian Tausel (University of Washington)

Being a “Poch@” in an Elite Trilingual School: A Critically Conscious Latinx Teacher’s Trilingual Border Pedagogy: Derived from a larger critical ethnographic study with a K-6 trilingual immersion charter school in Arizona (Spanish, Mandarin, English), this presentation will illuminate the strategic agency of one Latinx English Language Arts teacher whose translanguing instruction transgresses a policy of language separation that (re)produces the spatial, symbolic, and geopolitical borders demarcated between the school's three instructional languages. In this school space, borders or boundaries are drawn around multiple languages through a monoglossic language policy that separates languages into distinct classrooms and content areas. Informed by the pedagogy of border thinking (Cervantes-Soon and Carrillo, 2016), this paper highlights how the teacher reaffirms her own hybridized racial-ethnic, sociocultural, and linguistic identities and practices as a 'poch@', a derogatory term for second generation Mexican-Americans who embody cultural hybridity and 'speak Spanish with anglicisms' (Zentella, 2016, p. 336). Data for this paper are gathered from 10 months of classroom observations, two semi-structured interviews with the teacher, and written responses to a translanguaging journal activity with her 3rd and 6th grade students. Guided by a pedagogy that builds on teachers' and children's subaltern knowledges, this critically conscious multilingual educator (Palmer et al., 2019) rejects the liminal positioning of racially and linguistically minoritized bi/multilinguals and embraces their flexible language practices. As a result, her instructional approaches and language use challenge the rigid definitions of multilingualism that undergird the school's separative and monoglossic language policy. The teacher reasserts her agency and takes on the role of language policy arbiter (Johnson & Johnson, 2015) in her classroom to model and welcome children's fluid language use in ways that may transgress the school's language policy of separation. In doing so, she counters local and global language ideologies that reproduce the symbolic dominance of English and that devalue not only Spanish and Mandarin, but also children's other minoritized heritage languages such as Diné/Navajo, Cantonese, Arabic, and African American Language. This paper extends Cervantes-Soon and Carrillo's (2016) pedagogy of border thinking to the unique context of a trilingual school in the U.S. Southwest borderlands that is shaped by colonizing and neoliberal ideologies which marginalize the language practices of racially and linguistically minoritized teachers, students, and families. By illuminating this teacher's resistive language policymaking in her classroom, this paper highlights how her identity as a

'poch@' guides her to integrate translanguaging (Ossa Parra & Proctor, 2022) into her pedagogy. A translanguaging pedagogy embraces the users' full linguistic repertoire and does not endeavor to separate languages into distinct spaces, functions, or domains (Wei, 2022). This mode of languaging is very much aligned with the centering of 'critical, hybrid identities' and 'straddling' or 'navigating multiple cultural worlds' which are cornerstones of a border thinking pedagogy (Cervantes-Soon & Carrillo, 2016, p. 287). In these ways, the teacher's own embodiment of translanguaging, her integration of it into her instruction (the journal activity), and her expression of a critical, hybrid identity are visible and important components of her own trilingual pedagogy of border thinking. DISCUSSANT:

Andrea Flores (Brown University), Gabrielle Oliveira (Boston College)

DESCRIPTION:

This two-part panel examines how education figures into young people's projects of social and spatial mobility across a variety of contexts. Our papers center the perspectives and experiences of students as they transition between institutions, across borders, and through conjunctures in their lives as they pursue aspirations for class mobility, citizenship status, and social recognition via education. Building on scholarship within the anthropology of education on class and on migration, we ask questions such as: How do youth conceptualize mobility as it relates to narratives of

educational opportunity? What discourses and resources do they draw on to make sense of and navigate the transitions that occur as they move through education systems? How do they develop and act upon critiques of institutions and policies that reproduce inequalities? How do students' various positionalities differentially shape their trajectories? Educational trajectories are the outcome of complex negotiations that require young people and their families to make various kinds of evaluations about the feasibility of their aspirations and the possibilities to achieve them. They also require individuals and those supporting them calculate suitable investments to make in education in consideration of potential returns, weighing the worth and value of different credentials, or even figuring their own self-worth. We consider how mobility is intertwined in evaluations about possible futures and their feasibility, and how youth and their families value the potential benefits. In particular, we explore young people's ambivalence about education and mobility. While many of the youth we worked with expressed optimism that education can open up possibilities for them in the future, some of them simultaneously recognized that structural inequalities embedded into education systems can foreclose opportunities to young people based on their class positions, histories of migration, and other intertwined factors. In various ways, our papers examine how students experience this ambivalence in regards to education and mobility. It can elicit feelings of anxiety if they are concerned that their investments into education may not lead to desired results. Yet students may also develop a critical consciousness that encourages them to challenge oppressive structures. Part 1 of this two-part panel is explicitly focused on youth who move across national borders, working to understand how spatial mobility in relation to education is embedded within various national hierarchies and shaped by class aspirations. Specifically, our concern is on the ways in which youth themselves understand and experience this transnationalism and the possibilities and pitfalls it offers. The case studies explore the experiences of Central and South American migrant youth in US schools, elite Indonesians seeking higher education in Singapore, Mexico-US transborder youth, and Chinese immigrant families in Luxembourg.

Toeing the Line: Migrant Youth Educational Experiences in the United States: This paper, co-authored with Gabrielle Oliveira, contributes to the growing literature on migrant youth, transnationalism, and anthropology of education. We focus on the experiences of youth from Central and South America who have migrated to

the United States with their families. As young people undergo transitions across geographic spaces and citizenship status, we ask how youth conceptualize their im/mobility as it relates to narratives of educational opportunities, honing in youth's paradoxical elaborations of education as promise and peril in the US. To do that we draw from two ethnographic projects focusing on: 1) Migrant families from Brazil who were detained and or separated at the border in 2018 as part of the 'zero-tolerance family separation' policy and then released 2) Honduran young people and their families who endured 18-24 months in transit, as part of the Migrant Protections Protocol (MPP) policy, and were granted entry to the US in 2022. Together, these data capture young people's experiences in transit and in several states in the US, as they reflect on life in their countries of origin and through cross-border movement. We center youth's experiences in schools, their narratives about migration, (dis)placement, and their articulations of the possibilities that open and foreclose through mobility. While caregivers hold youth as the beneficiaries of their sacrifice, youth provide a multidimensional understanding of their role in the migratory process. They elaborate on the active roles they play in seeking asylum, their understanding of transnational inequality, and the dominant unidimensional label of English Language Learners (ELLs) in US schools. Young people position their future transitions to adulthood and full citizenship as contingent on their access to and experiences in schools. However, they complicate the straightforward notion of linear success and assimilation by critiquing what opportunities actually mean for them in the US. Presenter: Michelle Bellino (University of Michigan, Ann Arbor)

Indonesian Students in a Singaporean University and Their Lessons in Evaluating Self-Worth: Most Indonesian students attending the National University of Singapore declare that they couldn't have hoped for a better opportunity: gaining admission into what they cite as the number one-ranked university in Asia is a celebrated achievement for them and their families. The majority of these students come from Jakarta and typically have advantaged class backgrounds which have positioned them well through competitive secondary education in working toward their university, and eventually professional, aspirations. However, students feel that the transition from high school in Indonesia to university in Singapore is a difficult one which requires them to evaluate and often question their own self-worth. Upon arriving in Singapore, many young people experience a difficult transition period that makes them

question their own intelligence and reassess their priorities. This case study, in its focus on intra-Asian educational migration, sheds light on how this educational mobility subjects students to various hierarchies and focuses on the ways that young people respond to them. Indonesian university students in Singapore report feeling inadequate both in relation to other Indonesians on campus (assumed to be only the best and brightest from Indonesia) and Singaporean students, whose world-class educational system presumably prepares them well to attend university there. Students deal with their experiences of a high-pressure academic environment in various ways. Some decide to re-evaluate their expectations in the name of mental health, and others intensify or shift their study strategies to continue aiming for maximum possible achievement. Among these religiously diverse students, some also cite a strategy of deepening religious engagement as a way to both thank God for their opportunity and manage the pressure they experience in this transition. Presenter: Erica Larson (National University of Singapore)

Undocumented Status and Youths' Critical Consciousness Across Borders : This presentation draws from two ethnographic studies with transborder students from mixed-status families, one conducted in Mexico and one in the United States, to center the perspectives and experiences of high-school seniors whose lives and learning were shaped by immigration experiences. Transborderness is a decolonizing approach that normalizes the multidirectional mobility of life across borders that seeks to center youths' subaltern knowledges for navigating misaligned institutions, borders, and hierarchies that typically exclude them and their ways of knowing. In this talk I focus on the experiences of transborder youth whose lives and schooling intersect with the realities of undocumentedness on both sides of the Mexico-U.S. border to theorize critical consciousness formation for and with students from families with mixed documentation status. Through careful attention to how young people recognize inequity, critique it, and engage in a range of actions to counteract it, I argue that transborder youth draw upon personal experiences with undocumentedness to critique and take action in ways that differ from the political engagement centered in most development-oriented critical consciousness scholarship. I demonstrate how transborder youth engage in interpersonal (eg. interrupting discriminatory talk), communal (eg. planning for potential deportations, joining organizations to advise teachers on how to respond to inequities) and political (eg.

extending citizenship rights) action to change oppressive realities locally and across imposed borders. Presenter: Sarah Gallo (Rutgers University)

A Hierarchy of Educational Aspirations and the Unequal Futures of Chinese Immigrants in Luxembourg: How immigrants frame their futures through enacting differential aspirations is undertheorised in migration and diasporic studies. This ethnographic study presents three groups of Chinese immigrants in Luxembourg and their differential engagements with education as part of the aspirational project of future making: second-generation youth born into upper-middle-class professional families, second-generation youth with blue-collar restaurant parents, and 1.5-generation youth who arrived during childhood or adolescence. Building on Appadurai's (2013) notion of the 'capacity to aspire' and Bourdieu's (1977) theorisation of capital and habitus, the paper examines the divergent ways immigrant youth and families negotiate an unequal terrain of educational possibilities and articulate future aspirations. While upper-middle-class professional families are compelled to pursue a future around individual distinction, those of working-class backgrounds engage in less risky credentialing strategies to secure social mobility. 1.5-generation youth and their families, on the other hand, exhibit immigrant pragmatism to obtain stable future livelihoods. Chinese immigrants' divergent aspirations are intertwined with class, race, transnational connections, and family strategies to shape the possibilities of future. The study contributes to the understanding of educational mobilities of Chinese immigrants, and illustrates the multiple aspirations, negotiations, and educational futures within a rapidly stratifying Chinese diaspora. Elements in Agriculture (Part I): Chemical Symbols

8:00 AM - 9:45 AM TMCC - 206 F

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Janita Van Dyk (University of Toronto, Department of Anthropology)

CHAIR:

Alyssa A. James (Columbia University, Department of

Anthropology), Janita Van Dyk (University of Toronto, Department of Anthropology)

PRESENTER:

Mythri Jegathesan (Santa Clara University, Department of Anthropology), Jayson Maurice Porter, Alyssa Paredes (University of Michigan), Cameron Butler (York University, Department of Anthropology)

DESCRIPTION:

What is agriculture for? The answers to this question are in transition. From foodstuffs to carbon capture, from biofuels to financial derivatives, elements in agriculture and landscape become a crucible of action and problem-solving. This panel examines the way agricultural elements, chemicals, and matters contribute to the transformations of relationships among people, the state, landscape, and history. We see these elements as matter or forces, simple or foundational substances formally or informally regarded as constituting the material universe. Elements encroach on or are repurposed in agricultural practices and sites, including fire, water, fertilizers, minerals, pesticides, DNA, and many others. Our efforts to think through the elements in agriculture are not in service of theorizing the elemental itself, but rather to imagine how thought in reality spaces itself out into the world (Glissant 1997). The elements may de-familiarize thought associated with agriculture as solely a site of reproducing lively relations-or life itself. Thus, turning to elements means deferring and thinking through the material and meaningful ways that agriculture may not only be in service of life itself, but a myriad of other kinds of social, political, and environmental projects. This panel owes its orientation to the work of Vanessa Agard-Jones (2012), who examines how sand-from its microscopic particles, its composition and mixture, its changes and traces, and its movement through space and time-can be a repository for reading the traces of history on landscapes. We invite authors to engage Agard-Jones' work and consider how grappling with an element in their sites, practices, and histories of agricultural landscapes can crystallize new methodological and theoretical orientations. Such orientations might further commit the work of conceiving the agricultural landscape with Black and Indigenous environmentalisms. This panel queries: How does one write a story through elements? How do such elements link time and place? In what ways do the elements in agriculture allow people to narrate material and social histories and/or struggle? Unpacking the polysemy of the element, this panel will speak not only to the valuable chemical substances that constitute matter, but also how wind, rain, and fire can make and unmake the

land, food, sovereignty, and meaning. To explore this further, we invite contributors to explicate an element related to their work. We will ask that authors take inspiration from these elements and explore what we might learn or unlearn about the land, farming, production, cultivation, and food. The authors in this series should follow Agard-Jones' lead and expand on anthropological and Black feminist efforts to take inspiration from the world, rather than produce reflections about the world. What transformations/transitions for theory or method can we cultivate through the materiality of such agricultural elements? What might our attention to such elements foreclose?

Beyond the Sluice and in the Soil: Finding Water in Sri Lanka's Northern Province: Between 1956 and 1986, Malaiyaka ("Hill Country") Tamils from Sri Lanka's South-Central tea and rubber plantations migrated and resettled in the island's Northern Province in search of land and life beyond the plantation. Multiply displaced over a twenty-six-year-long civil war and decades of majoritarian rule and ethnonationalist violence, most Northern Hill Country Tamils in Northern Province today live without land deeds but cultivate home gardens as daily wage agricultural workers. Following Vanessa Agard-Jones' call to "pay equal attention to the rooted" (2012), this paper asks how water, in the ground's sands and soil, reveals Northern Hill Country Tamils' struggles for livelihood and undocumented histories of land attachment. Ground and surface water are coveted elements of Sri Lanka's agricultural landscape. They are diverted and controlled by sluices and infused with agrochemicals. On the plantation, their capacities to contain disease and waste produce intimate technologies of surveillance within workers' living spaces to ensure the industry's profits. In Northern Province, groundwater runs deep below in and through sands and soil, while surface water collects within tank bunds fed by international funding and fantasies of militarized development. This paper uses archival and ethnographic evidence to explore water's scarcity, uneven distribution, and unknown qualities alongside Northern Hill Country Tamils' experiences of debt and landlessness in Northern Province. In doing so, I suggest that desiring water beyond the plantation's shapeshifting tactics demands methods and narratives of rootedness that trouble the spatiotemporal politics of transitional justice in postwar Sri Lanka. Presenter: Mythri Jegathesan (Santa Clara University, Department of Anthropology)

White Arsenic, White Violence: Race, Toxicity, and Agricultural Expansion in the US and Mexico: Arsenic (As) is one of the most recurrent elements on this planet. It is about as common as the word “as” is in the English language. Thirty-three on the periodic table, between phosphorus and antimony, is where arsenic is situated in the nitrogen group that is so essential to plant evolution and growth. Before agricultural formation thousands of years ago, arsenic influenced geological, geo-biochemical, and even biological changes on earth for millions of years. Geologic time has weathered arsenic from the earth’s crust into our oceans, atmospheres, plants, and bodies. Many plants and animals would not exist and could not survive without it. However, humans associate arsenic with death rather than life. Since its “discovery” in 1250, people have consistently used arsenic’s acute potency to poison and hurt each other. Moreover, the elusive nature of arsenic as odorless and tasteless has allowed people to hurt each other in secret. Nineteenth-century mining and plantations changed the scale of arsenic use. It also changed the color of arsenic. As a byproduct of mining and smelting, especially in Mexico, white arsenic became an important input for plantation economies struggling with the pest problems associated with monoculture. Without forcibly enslaved Black people to pick and kill every insect or clear new lands after an infestation, white planters came to rely on white arsenic to maintain power in cotton-growing regions. Coupled with monoculture and whiteness, white arsenic was a very different poison than naturally occurring arsenic. This paper will discuss how white arsenic became toxic through its chronic and racialized relations with white supremacy, capitalism, extraction, and the early industrialization of agriculture. Presenter: jayson maurice porter

Sucrose and the Search for Non-Fungible Life in Highland Mindanao: Japan is the only place in the world where bananas are sold and priced by cultivation altitude. In the late 1980s, Japanese plantation management operating in Philippine Mindanao discovered a correlation between plantation altitude and sucrose content. The higher up one grew, the sweeter the bananas became. The farther one’s plantation was up Mindanao’s mountainsides, the closer one could recreate the desired sweetness of colonial Taiwanese bananas, a taste lost in the transition to Philippine supply in 1963. I recount this history as the transformation of a “fungible” commodity into a “non-fungible” product. Tiffany Lethabo King, engaging Hortense Spillers, Saidiya Hartman, and I argued that fungibility was the central organizing

relationship between the human and the natural world, setting the planter’s purchase over captive bodies by rendering them abstract and empty vessels. This paper argues that with the introduction of non-fungibility in the Philippine-Japan banana industry, what we see is not the reversal of fungible life on the plantation but rather its continuation. Alongside retailers’ marketing of the highlands as a commercial idea, agriculturalists physiologically produced sweetness through new temporalities of extraction. These strategies emptied out the Mindanao highlands, the ancestral domain of the Indigenous Lumad, of their sacred meaning, and imposed an industrial agricultural vision no different from the settler-dominated lowlands. Taken this way, this paper reframes an otherwise unusual development, easily attributed to Japanese gustatory particularities, as a reflection on how tensions between fungibility and non-fungibility lie at the heart of a broad swathe of commodity production today. Presenter: Alyssa Paredes (University of Michigan)

Managed Geologies: Phosphate Fertilizers and Runoff in Southern Ontario: This paper traces the element phosphorus around southern Ontario farms to consider how industrial agriculture creates wider worlds of extractive management through spatiotemporalities of excess and deficit. Based on multi-sited fieldwork in southern Ontario at a proposed phosphorus wastewater recycling facility and a fertilizer production plant, I consider how the management of phosphorus within the wider agribusiness value chain produces distinct geographies of material and social relations in Ontario in order to sustain farm production. On one side, the depletion of soil phosphorus from intensive agriculture is addressed through fertilizers that are sourced from phosphate rock reserves outside of Canada. Concentrated phosphorus “excesses” elsewhere flow into Ontario soils to create “ideal” levels for maximum production. On the other side, phosphorus is lost from the farms in the form of runoff which results in eutrophication, a phenomenon where excessive phosphorus levels in water systems result in explosive algal growth that kills other aquatic life. The recycling facility has been proposed to address this increasing issue of excess phosphorus in the Lake Simcoe watershed, by capturing dissolved phosphates to recycle back into fertilizers. In thinking about these two sites in relation to each other and the farms around which they are oriented, I argue that southern Ontario farms produce global racialized capitalist geologies through localized concerns around phosphorus management. The farms draw the world into themselves, and extend themselves out into the world, through webs of transnational labor regimes that attempt to subsume

phosphorus mineral cycles into capitalist cycles of production. Presenter: Cameron Butler (York University, Department of Anthropology)

Engineering Equity: The New Pragmatics of Global Health Innovation

8:00 AM - 9:45 AM TMCC - 206 A

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Ann H. Kelly (King's College London)

CHAIR:

Alice Street (University of Edinburgh)

PRESENTER:

Ann H. Kelly (King's College London), Ramah McKay, Alice Street (University of Edinburgh), Emilia Sanabria (National Centre for Scientific Research (CNRS)), Manjari Mahajan, Alex Nading (Cornell University, Department of Anthropology)

DISCUSSANT:

Peter Redfield (University of Southern California, Department of Anthropology)

DESCRIPTION:

This panel explores alternative models of global health innovation that seek to engineer equity into the development, design, material sourcing, quality management, manufacturing, and regulation of global health goods. As a normative project and humanitarian enterprise, Global Health emerged out the ravages of the HIV pandemic and the scandal of pharmaceutical exclusion (Hardon and Sanabria 2017; Tousignant 2013). The rearticulation of health as a right of access to life-saving technologies, prompted major shifts in the funding of international development, mobilizing new public private partnerships and market-based financing strategies, which have radically altered the political ecology and institutional architecture of international health assistance (Ruckert and Labonté 2013; McKay 2018). The COVID-19 pandemic exposed the structural vulnerabilities of the global economy, and in so doing, the radical inadequacy of an approach to health provision dependent upon philanthropic sentiment, corporate social responsibility, and North-South technology flows. In the wake of supply chain breakdown, resource shortages and stockpiling, 'equitable access' to life-saving technologies was no

longer merely a problem of political will, but a feature of a geographically constrained and uneven research and development (R&D) ecosystem (Kelly, Lezaun & Street 2022). Could global health equity be imagined as something more than access? This panel seeks to explore efforts to redistribute, reimagine and reroute global health interventions, embedding technological, organisational and social innovation in local infrastructure. These efforts, summed up by John Nkenengasong as a 'new public health order' (Nkengasong 2022), shift attention away from the integrated, self-contained, and mobile 'commodity-device', with its humanitarian and developmental claims (Collier, Cross, Redfield & Street 2017), to emphasize the processes, relationships and geographies through which a variety of forms of innovation are done. In contrast to 'delivery', 'roll out' or 'scaling up' of commodities (e.g., Biehl 2016; Cross and Street 2021; Redfield 2016), papers will consider how access could be more concretely levelled through situated processes of product design, manufacturing, collective ownership, and regulation (e.g., Gil 2022; Jensen, Barry & Kelly 2022; Nading and Fisher 2018) and through investments in people as infrastructure (Simone 2021). Moving beyond calls for 'global health solidarity', this panel examines the key actors, normative techniques, socio technical assemblages and forms of labor through which equity can be done and, critically, made differently. Collectively, we explore the promise of a global health value chain that could ultimately be decentralized rather than distributed and measured not merely in 'lives saved' but in infrastructures extended, institutions strengthened, and public assets generated: a model of innovation that may ultimately give way to more radically democratic public health projects.

The Humble Brick: Firing New Foundations for Global Health : What kind of global health solution is a brick? The most common building material in the world, earthen structures are cheap, durable, reusable and low-maintenance, providing thermal resistance. Brickwork operations also come with a heavy environmental and health costs, emitting toxic fumes and leading to top-soil loss and degradation. This paper describes a collaborative effort to re-engineer the 'humble' brick as a tool for global health. With architects at the Universities of Dar es Salaam and North Carolina at Charlotte, and in collaboration with researchers at the Ifakara Health Institute in Tanzania, an institution renowned for its frontier work on mosquito control, we have developed a series of prototype bricks, designed to provide comfort and protection throughout the highly-incremental processes

that characterises local household construction. Rather than a self-contained solution, the brick acts as a scaffolding: a locally sourced, affordable and aesthetically pleasing material that can be removed and re-fitted as the home comes into being. Following the brick's trajectory from studio drawings into the masons' firing pits and semi-field laboratory settings, we weigh its shifting value as both commodity and infrastructure, raw material and health technology, and the epistemic burdens those transitions entail. The legibility of the brick as a disease control intervention raises a more fundamental set of questions about how aspirations for development becomes articulated within the global health enterprise, and the degree to which a market-based model of innovation circumscribed by a humanitarian commitments can effectively lead to social progress. Presenter: Ann H. Kelly (King's College London)

Engineering origins: place, safety, and regulation in and beyond "access to medicine": How are place, safety, and regulatory practice brought together in the making and selling of pharmaceuticals? Situated at the intersection of intellectual property regimes, geopolitics, chemical constitution, and practices of prescription, consumption, and caregiving, pharmaceuticals are key objects of anthropological analysis. Thinking across two examples – the use of digital technologies through which global health claims to and about drug safety are made visible and reproductive rights campaigns promoting access to misoprostol and mifepristone – the paper asks how efforts to facilitate pharmaceutical access and pharmaceutical regulation become sites for debating, engineering, and materializing medical safety. Drawing from fieldwork with manufacturers, importers, and distributors moving medicines between Indian factories and East African markets, the paper suggests that digital practices of drug regulation, inspection, and surveillance offer important sites for understanding what access to safe medicine means in and beyond global health contexts. Practices of selling and regulating pharmaceuticals, these sites show, entail the production not only of medicines but also narratives of safety, risk, trust, and essentialized notions of industrial origin. Promising transparency, these technologies also build on situated knowledge of institutional and industrial relations in ways that build histories of place, race, and national origin in to pharmaceuticals. In so doing, they shape a variegated landscape of drug quality while also redistributing industrial harms. Yet this landscape of regulation is also dynamic. Thinking efforts to engineer drug safety beyond and outside of the state, this paper asks what these examples can reveal about

the limits of "access to medicine" and the potential for new health solidarities? Presenter: Ramah McKay

After access: designing diagnostics and rethinking relations for global health equity: The portable, affordable, point-of-care diagnostic test is an archetype of device-focused global health innovation frameworks that are driven by an overriding concern with enabling access to life-saving technologies in under-resourced settings. The Covid-19 pandemic exposed the many inequities built into this innovation model, from the precariousness of supply chains that are predicated on North-South technology flows to the absence of extended-producer-responsibility for the huge volumes of diagnostic waste that remain in places of use once the pandemic is over. This paper explores the efforts by two biomedical engineers, one based in the USA and one in Scotland, to build greater equity into engineering practices through a radical rethinking of the relationships involved in innovation, the reimagining of diagnostic infrastructure, and the re-spatialization of education, design and manufacturing. From the development of modular, non-proprietary, tests to the design of assay-preparation platforms that can be locally manufactured; from collaborations with laboratory technicians in Honduras to visits to maker-labs in Senegal; and from efforts to democratize engineering education to the building of a truly global 'frugal diagnostics network', this paper charts the emergence and challenges of a new paradigm of equitable engineering in the universities of the Global North, reflects on the nature of anthropological 'critical participation' (Downey 2009) in engineering practices, and experiments with conceptual vocabularies to describe the development of near-equitable materialities. Presenter: Alice Street (University of Edinburgh)

Brazil – A Psychedelic Nation? (with Pietro Benedito, CNRS): A new spate of studies on the therapeutic potential of psychedelic substances has garnered spectacular international attention. Most of this highlights work carried out in the USA, Canada or Western Europe. Brazil has been a major contributor to the psychedelic renaissance, conducting the first ever double blind randomized controlled clinical trial with the Amazonian herbal brew ayahuasca, for example. Brazilian research into psychedelics spans botany, neuroscience, pharmacology, and research on animal models, and includes a vibrant social science research community with longstanding ties to communities of psychedelic practice and expertise. This paper draws on ethnographic work conducted alongside actors of

Brazilian psychedelic science and explores the importance of public funding for universities, (made evident by their termination under the Temer and Bolsonaro administrations), the role Brazilian community mental health played in shaping Brazilian psychedelic science and the specificities induced by extra-university alliances with drug policy reform social movements which all contributed to pushing Brazil to the forefront. It dwells on how Brazilian psychedelic scientists see the dominance of North American and Western European agendas, framings and citation practices as simultaneously shaping and invisibilizing their own research. It reflects on how questions of equity and access are diffracted across nation states that do or do not have systems of public health in place and concludes with some of the results of a series of speculative exercises conducted to collaboratively imagine #PsicodelicosNoSUS (psychedelics in the public health system). Presenter: Emilia Sanabria (National Centre for Scientific Research (CNRS))

Nursing Democracy: The Gates Foundation and Building Public Health Systems in India : Equity, like democracy, does not have a universal, self-evident conceptualization. It can be defined, enacted and produced in ways that can be deeply unsettling, contested and contradictory. This paper explores some of the complexity inherent in engineering equity by examining a nurse mentoring program, Amanat, that was implemented over the last decade in the state of Bihar, India. Amanat was funded by the Gates Foundation, and conceptualized and implemented through a close collaboration between the Bihar state government and the international NGO CARE. Its goal was to build capacity within one of one of the poorest states in India which has among the highest rates of maternal mortality in the world. In its design, the program sought to address what have been familiar critiques of global health programs – instead of simply delivering quick-fix technologies, its intention was to strengthen public health systems; instead of focusing on doctors and urban, tertiary hospitals, most of the efforts were targeted at nurses, midwives and community health workers in primary health care centers and district hospitals in rural, often isolated, locations; rather than fixating on new technologies, the emphasis was on training workers in everyday practices of hygiene, diagnosis, and respectful care. Amanat produced some positive impacts in the near term, as measured by CARE and the Gates Foundation. And yet, those initial results have been difficult to sustain over the years. The experience of Amanat raises a set of questions of the work involved in building equitable

public health systems and more fundamentally, how to conceptualize and produce democracy Presenter: Manjari Mahajan

Commoning and co-becoming in two Nicaraguan cooperatives (with Joshua Fisher, Western Washington) : Cooperatives produce commons, but how they do so—and what kinds of commons they produce—cannot be known in advance. Two cooperatives in Ciudad Sandino, Nicaragua illustrate how distinct cooperative assemblages actually take shape through particular patterns of commoning. First, members of a women’s sewing cooperative called the Fair Trade Zone refuse open-membership. Claiming kinship as the logic of their membership, they describe the cooperative as “like their child”. Second, members of Ciudad Sandino’s Recycling Cooperative defy cooperative principles for rules-in-use, maintain a flexible and fluid membership, and refer to their collective organization as their “ant-hill” (hormiguero), reflecting its adaptability to changing conditions. These two case studies highlight the diverse subjects, practices, socioecological relations, political-ethical reasonings, and other resources from which cooperatives and commons are assembled. They also illustrate the multiplicity of organizational forms that communing can produce. Ultimately, the two case studies show that cooperative models are not recipes but historically generated and immanent projects that shape particular cooperativisms. Institutional approaches to commons and cooperatives fail when they impose a single form. We do not know what commoning and cooperating will become. In order to develop a language for expressing diverse modes of cooperating, then, we must start not with the recipe but with the concerns that particular cooperators find relevant. Experimenting with the Visual– Pushing the boundaries

8:00 AM - 9:45 AM TMCC - 203 C

Oral Presentation Session

REVIEWED BY:

Society for Visual Anthropology

ORGANIZER:

Andrea Bordoli

PRESENTER:

Andrea Bordoli ,Aneta Kopczacka ,Camilo Leon-Quijano (National Centre for Scientific Research (CNRS))

DESCRIPTION:

This session brings together a discussion of various new methods and ways of utilizing objects, websites, audiovisual methods to expand and experiment with fieldwork methodology. These papers give an interesting look at current methods – photo elicitation and vernacular photography to looking at manipulated images and meaning making. This session offers insights into multimodal and experimental ways of approaching ethnography.

Lichens, Dust and Iron : Audiovisual explorations of extractivism in Schefferville and Matimekush – Lac John, QC: 'It matters what matters we use to think other matters with; it matters what stories we tell to tell other stories with; it matters what knots knot knots, what thoughts think thoughts, what descriptions describe descriptions, what ties tie ties.' Donna Haraway, *Staying with the Trouble: Making Kin in the Chthulucene*, 2016

This paper explores of the extractive landscape surrounding the mining town of Schefferville and the adjacent Innu community of Matimekush – Lac John, located at the northern provincial border between Québec and Labrador, Canada. One of the primary goals of this proposition is to convey a sense of how extractive operations have impacted and continue to impact this complex territory simultaneously inscribed by histories of indigeneity and colonialism. To do so, this paper draws on the concept of extractivism to define the 500-year-old colonial and imperialist history of a mode of accumulation whereby raw materials were removed from colonized landscapes to enrich the centres of the world economy. As some researchers have recently stressed (Yusuff, 2019; Povinelli, 2016; Tsing, 2015) working in and on extractive landscapes often requires experimenting with a renewed perception and unconventional methodologies, as well as prioritizing local indigenous knowledges, and engaging with creative thinking. In this paper I will employ these approaches and strategies to access the submerged and silenced histories that lie underneath what Macarena Gomez-Barris calls the 'extractive zone' (2017). Following these lines of investigation, this paper will present a multimedia methodology built on images, sound, and text that narrate a sensory and imaginative engagement with the landscape itself and with some of its human and nonhuman inhabitants. This intervention will focus on three entities composing Schefferville's landscape – lichens, dust, and iron. Together, these function as an entry point to discuss the diverse impact of the extractive operations, especially by re-establishing the complex web of relations that the latter often silence and threaten. In a broader sense,

however, this paper also proposes an expanded reflection that aims to question settler capitalist representations of landscapes. More particularly, it proposes to critically engage with the processes of visual extractivism employed to mark out territories and reduce life to capitalist resource conversation. Thus, by proposing a critical reflection on the constant re-making of the extractive zone - largely operated through the work performed by the science of geology and its visual regimens - and by foregrounding a submerged vision of the landscape informed by multispecies attentiveness and indigenous knowledges, this paper aims to narrate Schefferville's territory against the grain of geology and the other instruments employed in the creation and maintenance of its extractive nature. Presenter: Andrea Bordoli

The Mirror of Society - Examining the Role of Public Institutions in Integrating Vernacular Photography into Polish Culture and Identity: At the time when the discussion about the value of vernacular photography and its place in art museums was being started in the United States, Polish society was undergoing a comprehensive transformation – political, economic, cultural, and identity-related. A country whose social structure was transformed by World War II and 45 years of communism and Soviet influence had to redefine its identity and rewrite its history. Today, artists, academics, and museologists are increasingly willing to explore this new history, looking for what has been left out and who has been excluded from it. Vernacular photography, which seems to be a handy tool for emancipation, is also becoming increasingly popular. The popularity of community archives and the awareness of the value of grassroots stories are increasing. Polish museums do collect vernacular photographs, but they are only just starting to explore them as counter-images, as images of emancipation, and as territories for confronting the difficult past. In my work, I examine whether and how vernacular photographic collections are being incorporated into mainstream Polish history and the history of Polish photography by public institutions and what kind of institutions are incorporating them. In my presentation, I will present the most interesting recent Polish projects that use vernacular photography. Presenter: Aneta Kopczacka

Transmedia ethnography of tourism in Lisbon: a multimodal website: This presentation proceeds from a main suggestion: multimodal approaches allow us to reconsider the relation to ethnographic experiences by reflecting on the narrative construction of public anthropology. Drawing on the example of the São José website <https://saojose.huma-num.fr/>, this proposal

explores the boundaries of visual and sensitive ethnography through the notion of transmedia. In cultural studies, this concept has been invoked to examine fictional media objects, with the idea that a new narrative experience can be crafted by articulating an original story through different media (Jenkins 2012). Following this lead, this presentation describes the multiple forms of narrative engagement that unfold within a multimodal ethnography (Collins, Durnington, and Gill 2017) to explore the numerous citizen experiences of tourism in Sao José, a Lisbon neighborhood. Emerging from the EU project COESO, this experiment uses citizen sciences tools to explore visual practices' performativity in urban settings. Doing so, it explores the forms of presentation and creative arrangement of images in anthropological multimodal digital narratives. More concretely, I will introduce sound, photographic, and film experiments deployed within the transmedia website to explore the frontiers of transmedia storytelling in an open-access platform for the publicization of anthropological knowledge. DESCRIPTION:

The logics of finance are now deeply entangled with the global development agenda (Johnson 2022). Under the banner of 'financial inclusion,' a wide variety of products

and programs have emerged offering 'micro' banking, credit, and risk management services to marginalized populations. These projects range from more explicitly entrepreneurial ventures based in Silicon Valley to social protection programs with their roots in development and academic institutions. They often mobilize an idea of the social that both justifies a need for them (development finance products are described as playing the role of a social safety net) and explains why they will be profitable (for instance, the distribution of microloans through social networks is supposed to guarantee their repayment). Yet this social is often more imagined than described, a fact which is reflected in the broader literature on such projects: scholarly assessments often focus more on the ideas and practices of financiers and development practitioners and less on how users and others engage with the products 'on the ground.' In response, this panel examines how such projects hit the ground. Speaking to the diverse locations and products that constitute finance at its margins, the papers reveal the ways that financialized development becomes entangled with already existing social and financial-economic projects (Ballesterio et. al. 2023). They consider financial inclusion, development finance, and popular finance from multiple perspectives, 1) recognizing that the 'clients' or 'target populations' of financial inclusion are already engaged in financial practices; 2) showing how new technologies and knowledges build on older ones; and 3) considering how power asymmetries shape the way that financial products are introduced and appropriated (Yamahtta-Taylor 2019). We thus ask not just how these products are being mobilized but how they encounter existing forms of knowledge, risk management, social relationality, and regulation: what forms of social and work relationships pre-exist and emerge in relation to these products and their financial entanglements? What kinds of temporal and spatial imaginaries shape and are shaped by these products? What sorts of personal and political projects do they enable or disable?

When Scientists Do Financial Work Andrew Moon, New School for Social Research: The paper explores the proximity of earth science to reinsurance (i.e., insurance for insurers). Drawing on field research across sites in Indonesia and Singapore, it asks: how does earth science inform the design of reinsurance services and technologies that create and transfer risk? What relations and boundaries of liability and insurability are set in motion? And how do these engagements rework and establish techniques to observe and value environments as transforming concerns? More

reflexively, how does the paper's focus on services expand anthropological inquiry in ways that loosen the efficiency of social science assessments of commodities, data, infrastructure, and assets? In place of locating this paper as an example of financial inclusion in the global South, I demonstrate how the earth sciences in Southeast Asia have become central to the interoperability of emerging risk transfer financial service networks. The paper intervenes at a time when the design and utility of social safety nets, such as reinsurance, are being reexamined due to extreme environmental and climate change, shifts in credit reporting standards, and an unrelenting search by institutional investors for novel sites to allocate capital and extract yield. Presenter: Andrew Moon (The New School for Social Research, Department of Anthropology)

'Building a Life' in the Urban Economy: Exploitative Proximity in Expanding Dar es Salaam: Formalization of the economy and promotion of financial services are core to national development strategies across East Africa. The everyday social arrangements through which most people earn their livelihoods, however, present different models of agency and market subjectivity than those promoted by development policy makers. On the ground, financialization driven by global capital confronts the dynamic systems of accumulation and differentiation through which people situate their engagement with each other and the economy. This paper investigates the intimate relations driving low-income urbanization in Tanzania, a country with high economic and urban growth. Conceptualizations of economic agency oriented towards 'building a life' center on houses built over many years without recourse to formal sector financial institutions. Residential housing has become a platform for diverse enterprises, including rental accommodation, which fuel further urban expansion. Densification also prompts diversification in urban enterprise, from birthday cakes to pedicures, as small traders strive to supply new products and services. Innovation in financial services equally takes place at the micro scale rather than through large providers: small companies providing "blood drying" loans requiring daily repayment adapt organizational models from micro credit and savings groups to provide new ways of financing everyday survival in Tanzania's growing cities. These types of loans are enabled through the relations of exploitative proximity that characterize Tanzania's low-income housing economy. An abundance of cheap labor for construction and other enterprises and the supply of rents from casual laborers facilitates ongoing

investment. The paper thus argues that intimacies of proximity and relations of interpersonal exploitation create spaces in which new financial forms can flourish. Presenter: Maia Green

Moving Through Indebted Empires: Mutual Aid Financing for Eritrean Asylum Seeking: This talk focuses on Eritrean forms of collective fundraising through voluntary mutual aid networks called equb/mahber to understand the ways that debt transfer is used to finance the movement of Eritrean asylum seekers toward asylum granting countries. Hawala debt transfers that facilitate the movement of money in equb and mahber fundraising networks have been criminalized by European states as financing human trafficking when indebtedness is understood as an indicator of coercive exploitation. Meanwhile, European states end up exposing migrants to coercive exploitation when they enact border externalization and financially support migration management in former colonies like Libya and Sudan. Interrogating the neocolonial registers of border externalization in the Friendship Treaty between Libya and Italy through the language of reparations for colonial wrongs is also to think through the registers of Tendayi Achiume's political claim for migration as decolonization through an economic lens. This talk thus considers how community-based fundraising enables asylum seeking and how financial support for externalized borders succeeds in exposing Eritrean asylum seekers to increased risk by foreclosing their movement to asylum granting countries. Presenter: Carla Hung (University of North Carolina, Asheville, Department of Sociology and Anthropology)

The dialectics of appropriation: a case of airtime exchange and mobile money in Africa: Against the ubiquity of mobile money in Africa, it is easy to overlook the legacy of informal practices such as airtime exchange where mobile telephony users traded airtime and made settlements in cash. This informal practice varied in name and significance, but its enclosure into mobile money has been lauded by telcos, governments, development entities, and other dominant groups in the financial inclusion circuit as a natural if not inevitable progression. This paper advances a dialectics of appropriation to challenge this teleological 'just-so story' of progress. By documenting the unfolding of mobile money across ecologies of mobile telecommunications in Africa, we argue that this progression was one set of possibilities against many others. We first show that the emergence of the mobile telecommunications sector in Africa constituted an act of 'appropriation,' as telcos retrofitted a global system

of mobile communications (the GSM standard) that was never designed for Africa in the first place. The GSM's rapid and phenomenal uptake in Africa has been described as an 'unintended consequence.' We next propose the concept of 're-appropriation' to show the unique and creative ways users have appropriated mobile telecommunications infrastructure. Finally, we show how telcos engage in 'reverse appropriation,' leading to the enclosure of informal practices and relations to develop products such as mobile money. In articulating this dialectics of appropriation, we affirm the maxim in Marx's Grundrisse that production is simultaneously consumption as consumption is simultaneously production. In other words, production and consumption are co-constitutive, and they are not reified ontological orders; telcos are consumers just as users are producers. Importantly, we account for power asymmetries in mobile money orbits. In revealing these asymmetries, we may then begin to carefully map policy and design implications appropriate to mobile money histories and futures. Presenter: Daniel Mwesigwa (Cornell University)

DISCUSSANT:

Juan Castillo-Cocom

DESCRIPTION:

This panel interrogates whether there might be ways of conceptualizing touristification beyond its negative effects. The extraordinary extent to which the Riviera Maya has been commodified for and through mass tourism (Pi-Sunyer/Daltabuit 1990) makes the region

particularly suitable for an anthropological analysis of transitions. Previous studies have argued that such 'touristification' constitutes a point of rupture in history: a transition from imagined 'pristine' to 'developed' spaces (Azcárate 2020), altered nature-culture relations (Latour 1993), and increased contact between Indigenous populations and (inter-)national travelers. Under the 'tourist gaze', the area has been transformed into a 'tourist paradise' (Urry 1990). From this perspective, the cultural history of the Maya and the beauty of biodiverse Caribbean beaches has been upstaged by commercially curated tourist experiences (Leatherman/Goodman 2005). These developments are far from being 'completed' or 'finished.' They are constantly evolving, permanently undergoing phases of stabilization and destabilization, accompanied by shifting power relations, social allocations, and re-configuring economic sectors. This begs the question: If transitions are never actually finished, are they only marked by rupture and destruction? Following Lazar (2014), people position themselves within a collectively constructed historical time, through which they may retrospectively define a time before or after a transition—rather than transition representing an objective reality. In many cases, change and continuity are inseparable in the experiences of those experiencing struggles. Thus, touristification is both an event and a process, defined as much by moments of rupture as by the potential for openings. We will discuss which 'openings' tourism generates, and ask: Who is defining and shaping transitions, how and to what end? Which roles does tourism play in the dynamics we observe? Which practices are (de-)normalized, what is constituted as an event and why, who and what is (not) considered normal? We perceive transitions as processual, shaped by different actors against the backdrop of climate change, political unrest and shifting local and global interests. We argue that while transitions often occur in response to destabilization, it is all the more important to shed light on how transitions are performed to maintain stability. By shedding light on these dynamics, we can understand transitions as nuanced, ongoing processes. The panel, thus, focuses on changes in the region and the creative ways of dealing with them or of bringing them about, illustrating that transitions are actively shaped by different actors. For the Tourists, Or For Our Kin? Transitions in the Politics of a Mesoamerican Ballgame Tournament: Recently, the Mesoamerican hip ballgame (pok-ta-pok in Yucatec Maya; ulamalitzli in Nahuatl), is being revitalized across Mesoamerica and the American Southwest. This presentation will discuss how an international tournament at Playa del Carmen, Quintana Roo, Mexico, marked a transition: from a touristic spectacle towards an everyday sport. The founders of an international ballgame league, themselves Maya, cultivate a highly aesthetic and athletic performance for the daily consumption of large audiences at the Xcaret theme park, which claims to represent the ballgame authentically. Some performer-athletes also play and revere the ballgame as a sacred sport. When the league had the opportunity to hold their international tournament at Xcaret in November 2022, the organizers faced a difficult choice: Should they play in the spectacular, custom-built Maya-style ballgame court? Or should they switch to a regular sports location, the Poliforum, and play on basketball courts, to make the tournament accessible to everyone, including their families? This example shows that the spectacular does not exclude the normal, the sacred, or the authentic; however, this requires prioritizing the honoring of one's relations. Indigenous actors can harness tourists' appetite for the spectacular presentation of their ancestral heritage to advance their own goals, including to gather resources and publicity. However, realizing their goals means opening towards routinized everydayness—towards their kin. This research is part of an ongoing ethnographic project. Presenter: Catherine Whittaker

Beyond Spectacle: How Mexico's Tourism Industry Seeks to Redefine Paradise in the Anthropocene: The Mexican Caribbean is often viewed as 'paradise'. Massive landings of brownish Sargassum algae, a form of anthropogenic environmental change, have begun changing the long-established imaginary. That has entailed massive transformations – both ecological and economical – since 2015. The latter is exacerbated by how tourists communicate about these transformations: They warn others against vacationing in the Mexican Caribbean on social media, and some cancel their

vacations. They post photos of brownish-looking beaches, of suffocated fish, of brown tide. These dynamics represent an economic threat for a region whose economic performance depends significantly on tourism. Based on ethnographic fieldwork carried out in Mexico (2019-ongoing), I demonstrate how the arrival of Sargassum was initially understood as a spectacle and treated as a one-time event by the tourism industry. Gradually, however, it appears that Sargassum is being accepted as the 'new normal'. The algae are increasingly viewed and communicated as being part of the Riviera Maya, with, for example, signs installed on beaches informing travelers about Sargassum, or the mascot Sargazin approaching travelers and educating them about climate change. My presentation demonstrates how local actors, such as hotel operators or tour guides, appropriate this transformation of the coast and reclaim ownership over what is said and shown about the Riviera Maya. In de-spectacularizing the algae and recognizing its normality along the coast, the consequences of climate change become discussable, posing the question of what constitutes paradise in the Anthropocene. Presenter: Laura Otto

Extracting Value from Tourists in the Maya Riviera: In Mexico's tourism zones, scholars have developed the concept of extraction to describe how processes of capitalist value creation come at the expense of environmental transformation and destruction, the expropriation and commodification of local indigenous cultures, and the exploitation of workers. This essay describes a fourth site of extraction, visiting tourists. In the Maya Riviera, local residents and transnational corporations have become adept at extracting value from tourists. Foreign and national vacationers are overcharged for services, tricked by large and small companies into spending frivolously, nicked and dined by vendors, scammed, stolen from, and sometimes even coerced into paying bribes. While on occasion scandalous accounts of tourist abuse are reported by the domestic and international press and complaints from tourists identifying these extractive practices can be found across travel websites and social media pages, tourist arrival numbers continue to grow. This essay argues that the normalization of tourist extraction practices at various parts in the tourism value chain explains this outcome, suggesting that local policymakers' and business leaders' warnings that widespread abuse of tourists will drive them to vacation elsewhere may be misguided or rest on outdated assumptions about the amount of consumer choice tourists possess. In concluding, I compare extractive practices in the Maya Riviera to Jovan Scott Lewis's

thesis that Jamaican call scams should be interpreted as a form of reparations. Extracting wealth from residents of the global north may be compensatory, I claim, but as a form of reparative justice, it raises more questions than answers. Presenter: Brandon Hunter-Pazzara (Georgetown University, Department of Anthropology)

“Ya viene el tren”: Rising and Receding Tides of Tourism in the Maya Riviera’s Periphery: In 2004, Yucatan opened a new road between State Highway 295 and the archaeological zone of Ek’Balam. The opening of the new road meant that the entrance to the archaeological site was also moved, making the previous route that meandered through the village of the same name obsolete. The ramifications of this rupture were felt in the community for years as they strategized to recapture the promise of tourists—and their economic activities—for local benefit. By 2010, in preparation for the impending end of the Maya calendar in 2012, Cultural and Tourism Services of Yucatán (CULTUR) invested in a beautiful new entrance to the zone and hope of revitalizing the “old road” and opening a second entrance to the site faded. Since then, Ek’Balam has become the second most visited archaeological zone in the state, after Chichen Itza. A decade later, as the completion of the Maya Train project draws near, the community of Ek’Balam finds itself in negotiations with CULTUR and the National Institute of Anthropology and History (INAH) on opening a second entrance to the archaeological zone, accessed via the “old road.” While conversations about the closure of the “old road” dominated conversations in the summer of 2004, visits in the summer of 2022 began with “ya viene el tren” (“the train is coming”). This paper discusses these iterations of new roads and revitalizations of old roads that serve as pathways for tourists, labor, cultural trends, and resources to flow between the Maya Riviera and its periphery. Presenter: Sarah Taylor (California State University, Dominguez Hills, Anthropology Department)

Future Forests//Ghost Forests (I)

8:00 AM - 9:45 AM TMCC - 718 B

Oral Presentation Session

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Kevin Burke (University of Pennsylvania)

CHAIR:

Rebecca Zarger (University of South Florida)

PRESENTER:

Courtney Addison (Victoria University of Wellington), Jeongsu Shin, Elliott Reichardt (Stanford University), Sasha Tycko (Emory University, Department of Anthropology), Rebecca Zarger (University of South Florida)

DESCRIPTION:

This panel is about the relationship between the speculative and the spectral in the making, unmaking, and transitions of forest worlds. It asks about the ways that speculative forests of modernist programs of perpetual development coincide with spectral ruination. Attending to future forests and ghost forests requires that we notice the ways that absences shape the present and the ways that dispersed sets of relations are made in and remake particular places. It requires that we attune to the various, nonlinear, and entangled durations of human and more-than-human infrastructures (Mathews 2018), the polyphonies of life cycles (Tsing 2015), and the silences of extinctions (Chao 2022). Tracing the speculative and the spectral in forest worlds foregrounds the simultaneous generation of markets and ghosts and the generations of kin. It demonstrates the ways that the booms and busts of forests industries, the promises of emerging markets, and the limited horizons of financial returns endure in the form and composition of forest landscapes. It also highlights the affective ecologies (Hustak and Myers 2012) of hope that sustain these projects or the dread that follows in their wake. Studying the co-production of futures and ghosts also points to the ways that forest projects are always spaces of cosmopolitical contestation over what forest relations endure (see Stengers 2004). That is, studies of ghosts always entail questions about justice (see Derrida 1993). This panel is in conversation with the growing literature on 'haunted landscapes of the Anthropocene' (Gan, et al. 2017; Toso, et al. 2020) and the 'anthropology of being haunted' (Good, et al. 2022). Drawing on Mathew's (2018) studies of 'ghostly forms' in forest worlds, these papers demonstrate multiple, overlapping Anthropocenes embodied in forests. What is the relationship between the biopolitical and necropolitical in future forests? That is, how does the speculation and accumulation return as the spectral and decay? The forest landscapes discussed in this double session range from urban forests to industrial timber plantations, from abandoned landscapes to sites of biodiversity conservation. In these panels, we see projects of mapping and counter mapping, movements of trees and

people and capital, contestations over land use, memory, and violence.

Mapping the multispecies sensorium of Aotearoa's native forests: The multispecies order of Aotearoa New Zealand is held in place by a fragile necropolitical regime of species management (Addison 2023). Conservation workers around the country set trap lines and fill bait stations to snare or poison introduced predators like possums, stoats, and rats. These species predate upon vulnerable native birds and eat the forests' canopy cover and seed matter, generating ghostly echoes of species already extinct, and those that may soon follow. Indeed, the trees in these forests, like the New Zealand lancewood, stand as cenotaphs to species like the megafaunal moa that evolved to browse them before being made extinct (McCorristine and Adams 2020). One of the most important but controversial tools used to control pests in Aotearoa is a poison called 1080, which is tucked into bait stations or scattered from helicopters across swathes of inaccessible country. Opponents of 1080 will tell you that after a drop the bush falls silent; proponents, that a 1080 operation brings the bush back to life, resplendent with birdsong. This paper explores the multispecies sensorium (Chao and Enari 2021, see also Myers 2017) in Aotearoa, in which people appeal to and mobilise sound and silence, and visual markers of forest health, in affect-laden debates over 1080 and conservation more widely. Amateur audiovisual footage and technical bioacoustic monitoring all enter an evidentiary fray over the state of native fauna and flora species; in doing so, they come to summon possible forest futures as well as the spectres of multispecies forests past. Presenter: Courtney Addison (Victoria University of Wellington)

Social Lives of a Camelia Forest: Reconstituting Identity and Memories: This paper delves into the natural and social history of the Giving Forest, which is the largest evergreen forest of South Korea. The forest has become a nature preserve since the 1960s and is part of UNESCO Natural Heritage, Geopark, and Ramsar wetland. In October 1948 – at the beginning of the Cold War -the village's communal forest became the site of massacres of more than 250 village members as part of anti-Communist government repression targeting Jeju Island. I focus on the narratives of lived history of survivors and families of victims of the massacre are articulated as part of entangled history of the forest. While hiking, the affective materiality of the evergreen Giving Forest provides the ghostly field of suppressed memories. In this way, Giving Forest project became the preservation and interpretation of memories. This paper will

demonstrate how Giving Forest relations carry the politics of memory and the inheritance of in/justice of the past, present, and future in conservation efforts. Presenter: Jeongsu Shin

Reconciliation Capitalism: relations between Indigenous Peoples, loggers, and forests in Canada: Around the world, many colonial states are attempting reconciliation processes with Indigenous Peoples harmed by colonization. Colonial states, like Canada, have implemented top-down approaches that mandate or incentivize consultation or collaboration between resource extractive firms and the Indigenous stewards of the land. The sawmills of Northern British Columbia—the most powerful branch of the timber supply chain—now preferentially hire and pay logging firms with Indigenous ownership or partnerships. Drawing upon 12 months of ethnographic fieldwork with logging contractors, First Nations, and forestry officers, my work examines how medium sized settler-owned logging contractors attempt to improvise new shared ventures with the First Nations whom they had previously ignored. Central to these firms' efforts to secure these partnerships with First Nations is trust based on shared values. These logging firms are altering how the forest is cut down (at greater cost) and insist their values have changed. These firms assert that these sustainable practices will generate healthier future forests, that will nurture and sustain generations to come. They argue that these practices make them stewards of the land and hence viable First Nations partners. Yet, the First Nations they are attempting to profit-share with interpret these interactions with skepticism and ambivalence, as it neglects their deep relationships with specific forests and not abstract future forests. I argue that these novel contracts, altered forest practices, and relationships between the First Nations and the logging contractors constitute an important site where "reconciliation" is vernacularized and locally implemented. By studying shifts in forest harvesting practices, contracts, and relationships anthropologists can examine how these new formations are co-produced and how abstract concepts like "reconciliation" are made relevant in daily life. Presenter: Elliott Reichardt (Stanford University)

Abandoned Landscapes: Desire Paths, a Prison Farm, and a Protest Camp in the Atlanta Forest: In 2021, political opposition to a city government plan to clear-cut an urban forest for a new police training academy in Atlanta led to a two-year occupation of the forest (still ongoing), with activists living in treehouses and tents, under the slogan, "Defend the Atlanta Forest." The 400-

acre early successional forest grows on the abandoned site of a 20th-century prison farm. Before the prison farm, the land held an antebellum plantation. The forest flourished in the wake of abandoned agricultural fields, becoming an unofficial refuge from the city for walkers, bikers, drinkers, amateur naturalists, and many others. These feral subjects left their trace in the many desire paths that cut through the forest. The landscape that archives these layered histories now harbors a forest defense movement that opposes both ecological devastation and the expansion of urban policing. Representatives of the city government and police foundation deploy a disputed conservationist framework (Hall 2005) to stress the young age and weedy ecology of the forest as a justification for its destruction. This paper poses the question, what does it mean to value and defend a “weedy” landscape (Tsing 2017)? In this paper, I work with a notion of the landscape as a record of past dwellings (Ingold 1993) to argue that the abandoned landscape of the Atlanta forest is valuable, not simply as an ecological phenomenon, but as the record of a social history of transformation in the relations of bondage and freedom in the American South. This paper draws on nearly two years of ethnographic fieldwork in the forest, including a landscape study with ecologists, participant-observation with activists occupying the forest, and oral history with longtime neighbors. Presenter: Sasha Tycko (Emory University, Department of Anthropology)

Live Oaks and Dead Oaks: Pasts/futures of Urban Forest Worlds in Florida: Co-authors: Kira Rib and Shawn Landry This paper considers the ways urban forests are being simultaneously remembered, lost, and re-envisioned in a coastal city as city-dwellers, planners and foresters confront a changing climate and intensifying risks, as well as possible futures that include trees. Drawing insights from a forest ethnography of tree canopy loss in Tampa, Florida, we trace recent and rapid loss of urban trees, due to intensifying housing development, reflecting historic red-lining and infrastructural injustices, as well as how that intersects with speculative futures for our coastal city. We consider how city dwellers remember and continue to mourn a variety of “ghost” tree — narrating the voids left behind as hundred-year-old live oak trees and other trees are removed from the city. We ask in what ways ‘ecologies of hope and dread’ emerge from living with trees in a city with rising temperatures and intensifying severe storms, and how that is shaping urban forest projects across different city neighborhoods. Analyzing the ways varying practices of (dis)investment, inequity, neglect, and care for trees over time and plans for the

future allows us to consider the ways urban forests may or may not constitute “forest worlds.” Presenter: Rebecca Zarger (University of South Florida)

Language at the Boundary of the Human

8:00 AM - 9:45 AM TMCC - 501 A

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Eve Danziger (University of Virginia, Department of Anthropology)

CHAIR:

Lise Dobrin (University of Virginia, Department of Anthropology)

PRESENTER:

Lise Dobrin (University of Virginia, Department of Anthropology), Nicholas Harkness (Harvard University, Department of Anthropology), Martin Schoenhals (Appalachian State University, Department of Anthropology), Courtney Handman (University of Texas at Austin), Webb Keane (University of Michigan, Ann Arbor, Department of Anthropology), Lydia Rodriguez (SUNY, Potsdam, Department of Anthropology)

DISCUSSANT:

Eve Danziger (University of Virginia, Department of Anthropology)

DESCRIPTION:

Eve Danziger and Lise Dobrin, co-organizers. Anthropologists routinely appeal to language as one of the most important factors differentiating humans from other animals, including our immediate evolutionary ancestors. But this view is not a cultural universal. How then is language construed across cultures in relation to understandings of the human? What categories emerge if we shift our focus to sharedness of language and away from commonality of species as a diagnostic criterion? Each paper in this panel explores how language troubles the boundary between human and non-human. For example, that boundary becomes a seat of anxiety when the capacity for language is ideologically extended beyond our biological species. We see this in recent moral panics over the idea that artificial intelligences which ‘speak’ have come too close to being human, or when Arapesh people of Papua New Guinea express disappointment in their dogs, who fail to live up to the promise suggested by the fact that speech with them

resembles speech with people who speak a foreign language. In colonial attitudes to New Guinea pidgin, in the glossolalia of Korean Protestants, in the powers conceded to Mayan forest-spirits when one engages in conversation with them, and in secrets ostensibly kept by chatbots, our authors extract and examine some of the criterial features that give speech its humanizing quality. The boundary of the human is also unsettled by beings who have the appearance of humans, including full language capacity, but who are denied fully human status. From dehumanizing attitudes across ethnic boundaries in Southwest China, to the demonization of non-Christians over historical time in the Mayan rainforest, we trace in these cases the criterial aspects of humanity which for each individual case are taken as diagnostic, sometimes in contradiction to the evidence of language. Taken together, the papers ethnographically explore the role of language in demarcating fundamental categories of sociality and alterity across a wide variety of cultural contexts. In so doing they expand our understanding of language and of humanity itself.

“This is the Road that the Dog Made”: Acquiring New Interlocutors on the Arapesh Coast. : In the Coastal Arapesh villages of northern Papua New Guinea, humans frequently express disappointment in their dogs, noting that the animals are lazy, not good hunters, or otherwise should be better helpmeets. However, in Arapesh narratives both traditional and emergent, dogs frequently appear as superbly helpful friends to their human owners. The narratives also reveal the semiotic source of the high expectations placed on dogs: although dogs cannot use human speech, they often communicate using bodily signs and movements that signal a desire to connect. This mode of communication aligns dogs with the exciting category of newly encountered foreigners who may become ‘road friends’ (Mead 1938), trading partners, and even eventually kin. But although the humans with whom one communicates by signs eventually move into these highly-valued roles as one learns their languages and they one’s own, dogs never make this transition. The many Arapesh narratives that dramatize human-dog communication covertly underline a thoroughgoing cultural anticipation that with those who are new, foreign, or ‘not (yet) quite like us’, a fuller, more rewarding sociality may yet come. Presenter: Lise Dobrin (University of Virginia, Department of Anthropology)

Reflexive Animacy, Thresholds of Language, and the Limits of the Human: Raymond Williams’s smooth adage

that “A definition of language is always, implicitly or explicitly, a definition of human beings in the world’ has thorny analytical, hence methodological, corollaries. At the highest level: the boundaries of the human and the boundaries of language are jointly drawn; evidence of the faculty of language is central to defining the category of the human and its limits (and vice versa); and definitions both of humans and of language are produced via language and thus uttered by speaking humans. One significant problem is the fact that both “speech/language” and “human” constitute highly specific semantic categories across languages that are expressed morphosyntactically. So we can expect the category of “speech/language” to be expressed through reported speech forms and the metapragmatic calibration of deixis between clauses (e.g., as in tense or evidential systems). Likewise, we can expect “humanness” to be expressed linguistically through word order, case marking (or dropping), and other syntactic features specific to animate agents that are sufficiently human or humanoid. This paper addresses the intersection of speech and the human through linguistic and ethnographic data on glossolalia, a.k.a. “speaking in tongues,” from South Korea, where it is practiced widely across Protestant denominations and congregations. Glossolalia is an especially generative site for addressing this intersection, because (a) it is speech behavior practiced at the limits of language, (b) its purported range of possible agents include animate agents that regularly cross and complicate the threshold between human and non-human, (c) it anchors a broader semiotics of reflexive animacy that shape theological boundaries and other explanatory paradigms for defining the human. Presenter: Nicholas Harkness (Harvard University, Department of Anthropology)

The Real and the Fake: Language, Sincerity and Self-definition among the Yi of China : The Yi, an ethnic minority group of around nine million people in the mountains of southwest China, understand themselves as ontologically distinct from the Han Chinese, who fall outside the Yi caste system. There is a biological distinction between the two ethnic groups in that the Yi are made of one set of bones (the word used for heritage), while the Han, whom the Yi formerly enslaved, are of a completely different set of bones. Yet the notion of bones is not absolute; the Han are recognized as human and not a different species derived from a remote separate ancestor. What does radically distinguish the two groups has to do with language. Yi people say that while they themselves are candid (tanshuai) and truthful, the Han – who will smilingly

praise you while secretly undermining you – are fake (jade). The value Yi people place on speaking sincerely follows from ambiguities of caste. It is not always clear who is fully a member of the aristocratic Black Yi caste and who is White Yi, a caste whose heritage is impure due to previous liaisons with Han or due to descent from Han who were enslaved in the past by Yi slave owners. Hence being who you say you are, while a Yi virtue, is not easily attained. Defining the Han as ‘fake’ symbolically constructs them as the antithesis of the Yi, clarifying the boundary between the two ethnic groups by dehumanizing the Han. Analysis of the Yi case allows for a wider perspective on sincerity as a topic of ethnographic interest. Sincerity is not an exclusively Western value, and the Yi case makes for an interesting comparison between the genesis of Yi sincerity and the origins of an emphasis on sincerity in the West.

Presenter: Martin Schoenhals (Appalachian State University, Department of Anthropology)

Language at the Limits of the Human: Deceit, Invention, and the Unshared Symbol: Both the theories coming out of the linguistic turn and those moving away from it have placed special emphasis on human language as a matter of shared meanings. Yet there are other histories that link language and humanness through invention, deceit, and secrecy rather than through shared meaning and publicness. These alternate models have been used as diagnostic of humanness in a range of contexts, from the colonial past into the technologized present. I examine here the ways in which the unshared, non-public symbol has stood at the center of different contexts in which the humanness of speakers of novel languages are put in question. Both older, colonial racial discourses about plantation pidgin and creole languages on the one hand and contemporary panics about AI chatbots like GPT-4 or Chat-GPT on the other share a similar sense of doubt about whether speakers are speaking a language as such, and, if so, whether that language can be analyzed and understood like other human languages are. For popular commenters across these contexts, the diagnostic moment at which observers deem the speakers of these languages as properly moral or sentient agents is the moment when observers start to worry that those speakers are keeping secrets. I look at the discourse around secret registers of Tok Pisin, an English-based pidgin of 20th century Papua New Guinea, and compare that with the discourse around discoveries of potential secret languages used by current AI chatbots and image models. Observers only start to recognize in these speakers a sense of subjective depth when they feel that symbols are being kept from them, rather than shared with them.

Presenter: Courtney Handman (University of Texas at Austin)

AI and Spirit Possession: The Semiotic Ideology of Moral Panic: Social media, robots, algorithms, and other manifestations of AI are drawing people into new forms of social relations with their devices, with other people, and, arguably, with themselves. What are the ethical consequences? This talk reviews some of the claims that have been made about the ethical effects of people's relations with, and by means, of new technology, and the moral panic those claims often express. Ethical questions about life with devices probe the edges of the human. Do personal devices and social media estrange us from ourselves, from others, or in other ways alter our ethical sensibilities? Can the robot become an ethical subject or a proper object of ethical concern? Do algorithms distort our capacity for self-knowledge, rob us of agency, alienate us from our moral intuitions, or undermine the very meaning of the ethical? What moral obligations do algorithms impose on the humans who benefit or suffer from their effects? What vision of human flourishing does life with algorithms propose? Empirical research on how people live with new technology tempers some of the worries and claims these questions raise. The ubiquitous human propensity to project agency onto both inanimate things and transcendental subjects has very deep roots, as does the associated fear--and hope--that these entities will displace human self-mastery. As with other boundary figures like spirit mediums, automatons, and domesticated animals, problematizing the places adjacent to what seemed to be securely 'human' can be a source of ethical discovery. Presenter: Webb Keane (University of Michigan, Ann Arbor, Department of Anthropology)

Talking to Monsters in the Maya Rainforest: Language and Personhood in Mopan and Chol Narratives: Co-authors Eve Danziger and Lydia Rodríguez. The Chol and Mopan Maya speak distinct Mayan languages but have been in close contact with one another for over a millennium. At the end of the 17th century, the two groups underwent a common experience of Spanish missionization by Dominican friars originating in Guatemala City. As elsewhere in Latin America, Indigenous converts were re-settled into nucleated villages, while those who rejected Christianity remained in scattered forest settlements. Over time, these forest-dwellers were seen more rarely by Christian villagers, and a semantic shift took place such that today the borrowed Spanish word *cristiano* (“Christian”) denotes simply ‘human being’ in both Chol and Mopan. The

word is used without reflection on its origins to cover all humans of any faith. It is routinely used, for example, to contrast humans with dogs or other animals. Meanwhile however, the non-Christian 'beings of the forest' remain vividly present in the narratives of both communities. Mopan and Chol believe that humans who venture into the forest risk encountering dangerous cannibal creatures. (In colonial times, cannibalism was frequently attributed to non-Christianized Indigenous people). Mopan stories explain that the cannibal che'il ('forest-beings') speak the Mopan language. This observation allows us to trace through 17th c. Spanish documents the historical transformation of the che'il from non-Christian humans into non-human monsters. In Chol accounts, the non-humanity of forest-dwellers is signalled by the fact that engaging in conversation with them (whether in fluent or broken Chol) brings humans under their power and into grave danger. The stories make clear that for both Mopan and Chol, the forest retains its status as a space in opposition to the "Christian" village. As the word cristiano has changed its meaning, the forest has shifted accordingly: from a place inhabited by non-Christians to a place inhabited by non-humans. Veronica Sousa ,Sarah Richardson

PRESENTER:

Gorkem Aydemir-Kundakci (University of Calgary, Department of Anthropology & Archaeology),Alexandra Schwell ,Courtney Wittekind (Yale University),Eugenia Kisin (New York University),Marcos Mendoza (University of Mississippi, Department of Sociology & Anthropology)

DISCUSSANT:

Daniel Knight (University of St Andrews)

DESCRIPTION:

In a time of pandemics, unending wars, and the climate crisis, 'uncertainty' has become an ever-present if ambivalent term in our lives. But what does it mean to live in 'uncertain times'? Is uncertainty experienced in the same way everywhere, by everyone? What are the consequences of experiencing and navigating uncertainty as a routinized, protracted condition? Uncertainty has long been part of anthropological narratives characterizing various situations and contexts, or our 'lifestyle' conditioned by indeterminacy and a steady stream of declared crises. It has described the experiences of 'critical events' (Das 1995) such as wars, disasters, and regime changes, and analytically has been aligned with risk, danger, and crisis. The question of uncertainty has also addressed contexts in which states of instability, violence, and unpredictability have gained ordinariness, and generated particular forms of experience and governance. Concepts of slow violence (Nixon 2013), slow death (Berlant 2007), abandonment (Biehl 2013), quasi-events (Povinelli 2011), and social disappearance (Gatti 2020) have captured the everyday workings and insidiousness of protracted uncertainty and precarity. They have shown that uncertainty is not only a feature characterizing certain contexts of instability but also a perpetrator of violence and tool of governance (Jusionyte 2015). Anthropology has also approached uncertainty as a generative space in which 'alternative social projects' (Povinelli 2011) and modes of resistance can flourish. Such an approach has shown us, for example, how people develop skills and tactics to navigate the uncertain terrains of war zones where violence has become part of the everyday (Khayyat 2022; Lubkemann 2008; Stamatopoulou-Robbins 2020; Vigh 2006); and how they anticipate (Bryant and Knight 2019) the erratic rhythms of uncertainty (Archambault 2015) and struggle for predictability when their lives are trapped 'in the meantime' (Jansen 2015). They have demonstrated that people are not passive, depleted receivers of violence and precarity; on the contrary, they are creative agents and improvisators even under debilitating conditions or collective inertia. As an analytical lens, how does uncertainty intersect, counterpose, extend, or offer balance among frameworks of suffering (Han 2013; Robbins 2013), damage (Tuck 2009), and agentic efforts of living (Povinelli 2012) that have perplexed social research methods and representations? In this panel, we seek to explore uncertainty, and its consequences, in various situations from decades-long conflicts and state violence to narco-power and cancer 'previvorship.' If we live in 'uncertain times,' what kind of uncertainties do we live in? What are the cumulative effects of living

uncertain lives? What might certainty look and feel like? What can uncertainty reveal as an analytical and ethnographic lens? How is it different from precarity, crisis, risk, and contingency? By asking these questions, we bring together anthropologists who consider the question of uncertainty in different contexts and stimulate a discussion on one of the most common keywords of our 'transitory' time.

Freezing the Conflict: Protracted Uncertainty and Un/eventfulness in Georgia's Disputed Borderland: This paper examines a decades-long struggle for uneventful lives in a zone of "frozen" conflict. Scholars and policy makers have categorized the series of conflicts in the space of the former USSR as "frozen," by which they mean characterized by a situation of stalemate and protracted uncertainty. The Georgia-Abkhazia conflict is one of them. It is a conflict that materializes as an unrecognized yet militarized borderland where a community of displaced Georgians from the Gali region have constructed mobile lives by navigating the conflict and its turbulent landscapes. Focusing on the cross-border mobility of the Gali population, this paper shows that the Georgia-Abkhazia conflict zone is anything but "frozen." It is animated by the continuous movement of people and things, and by contingent events generated by arbitrary military towers, unannounced border closures, or unpredictable water levels of the river as well as occasional crises caused by a range of actors, from a Russian delegation in Abkhazia to a stinkbug infestation. In such a context of pervasive and exhausting uncertainty, uneventfulness is more than an insidious perpetrator of "slow violence" or political invisibility as often problematized in situations of long-term uncertainty and precarity. In the disputed Georgia-Abkhazia borderland, uneventfulness is a fragile state of living and a political condition that the people of Gali actively maintain by tempering, or "freezing," a capricious conflict on daily basis. Presenter: Gorkem Aydemir-Kundakci (University of Calgary, Department of Anthropology & Archaeology)

Darkness Everywhere: Urgency Politics and the Blackout: The paper explores how Austrian state agencies create a sense of urgency about the threat of a Europe-wide blackout – "when the lights go out." A blackout, experts and politicians warn, will bring society to the brink of collapse within a few days due to supply, communication, traffic, and other failures. For security scholars, urgency is a key yet so far under-researched concept. Urgency is an essential element of (in)securitization processes that present imagined threats as imminent. As a political practice, it is crucial to mobilize insecurities and fears. Blackout

preparedness campaigns provide an illustrative case of (in)securitization and the emotional mobilization for a disaster that is politically powerful simply by being invoked and imagined. As an integral element of popular culture, the Blackout is flexible and adaptable for emotional mobilization. It is the paradigmatic event that embodies failure in complex, networked societies. The Blackout functions as a litmus test for the social bonds of society. It is imagined as the ultimate endpoint of a flawed present, ending the current urban-industrial hubris and enabling a potentially better future. Against this background, I argue that the imagined future Blackout scenario in Austria has acquired cultural relevance in political and public discourse; it has become a social phenomenon that permeates specialized organizations, state agencies, and everyday life worlds. It invokes a national community, the imagination of which is embedded in a larger cultural discourse revolving around an anti-modernist, anti-elitist vision characterized by deep mistrust, unease, and uncertainty about the future, change, and urbanity. Presenter: Alexandra Schwell

Betting on the Future: Spatial Fluidity and Temporal Marginalization in Southwest Yangon's New City: This paper examines the challenges of planning for the future in Southwest Yangon, Myanmar, where a proposal to transform 20,000 acres of peri-urban farmland into an ambitious "new city" has produced profound uncertainty for the region's agrarian population. Ambiguity as to whether and when the new city will be built makes planning for the future a difficult task in Yangon's margins—and one not uniformly accomplished by those residents impacted by the faltering urban expansion plan. Successive crises—including a global pandemic and Myanmar's 2021 military coup—have sparked repeated construction delays, upending residents' attempts to speculate on the project's eventual completion. In extending timelines for compensation processes, resettlement programs, and pending land sales, such delays threaten to produce disastrous results, especially for those most invested in the "exceptional" time and space of a city in transition. Foregrounding interlinkages between political transition, everyday future-making, and the new forms of marginalization produced when promised futures repeatedly go unrealized, this paper argues that spatial and temporal exclusions jointly impact the way that transition is navigated by those living in the shadow of a city yet-to-come. This argument raises important questions about who benefits from large-scale infrastructural projects, who loses when dreams of development dissipate, and how much. As such, this

paper highlights the risks and rewards of planning amid instability and illuminates the complex relationship between deferral and uncertainty in shaping perceptions of political and economic change. Presenter: Courtney Wittekind (Yale University)

Vulnerable Makers: Repairing Cancer's Vital Forms: In a time of colliding ecological and social crises, much is made of curation's roots in "cure" and "care"—a lineage that casts curatorial practice in a reparative mode. Such care-based approaches have been extraordinarily generative for both practice and theory, emphasizing shared and uneven vulnerabilities as they tend to, contest, and remediate forms of slow violence and the toxic residues that accrete in human (and nonhuman) bodies. Proceeding from site-specific, immersive, and experiential forms of "slow curating," what does curating-as-repair illuminate, and what might it obscure? This talk approaches these questions of care in art through a work of contemporary bio-art and its material demands: artist Lyndsey Walsh's *Self-Care* (2021), a queer wearable that houses and feeds BRCA1 mutant cancer cells as autoethnographic response to the risks, uncertainties, and knowledge of cancer "previvorship" in the United States. Foregrounding the role of genre in illness narratives, and specifically the potential of feminist horror tropes to render uncertainty and dread, this talk will consider what it means to metaphorize cancer in writing ethnographies of risk. Moving from critical to practical and ethical considerations of bio-art—how to feed and care for these vital forms—I consider how this work and its materiality might contribute to discussions of freedom and accountability in contemporary art and autoethnography. Presenter: Eugenia Kisin (New York University)

Political Aesthetics, Territorial Reclamation, and Narco-Power in Mexico: This paper considers the difficulties of living with uncertainty and insecurity for rural communities in Mexico affected by the war on drugs, narco-power, and the crime-state nexus. The scholarship on narco-aesthetics has largely focused on political messaging between criminal groups (narco-mantas, propaganda videos, and public violence), culture industry products related to organized crime (films, music, television), consumer lifestyles that draw upon narco-styling, and tourism venues selling proximity to narco-spectacle. What has rarely received close attention is how populations have developed their own everyday aesthetic responses to organized crime and the drug trade that highlight the territorial politics of reclamation. Based on ethnographic research in the

Mexican state of Michoacán, this study investigates a rural community's efforts to develop territorial reclamation projects articulated in the face of indeterminacy and uneven fields of risk exposure. Focusing on the mountain village of Ucareo, I highlight the agency of Ucarenses (the people of Ucareo) in: 1) building religious shrines that articulate themes of crime prevention and liberation that memorialize a popular uprising in 2015; and 2) creating a *pueblo sin policía* (a community without police) to assert communal authority over internal security. I argue that Ucareo's struggle is indicative of a wider strategy of enclave self-rule in which Mexican pueblos have erected barriers—material, semiotic, imaginative—that separate them from surrounding exclusion zones. Ultimately, enclaves of self-rule reflect vibrant experiments in constituent power that have emerged to contend with widespread public insecurity. Presenter: Marcos Mendoza (University of Mississippi, Department of Sociology & Anthropology)

Making the Invisible Visible: Using Digital Technologies, Counter-Discourses, & Multispecies Ethnography to "See" Agriculture Differently

8:00 AM - 9:45 AM TMCC - 205 A

Oral Presentation Session

REVIEWED BY:

Culture and Agriculture

ORGANIZER:

Megan Styles (University of Illinois Springfield)

PRESENTER:

Xiyao Fu , Ana Badue

DESCRIPTION:

The papers in this panel explore the ways that digital technologies (e.g., drones and digital satellites), counter-accounting methods, and state discourses are used to make specific aspects of agriculture legible while obscuring others.

Biodiverse 'chaos' as an agriculture of resistance: a multispecies ethnography from the field to the kitchen with Dai people in Menglian, Yunnan: In Southwest China, 71.8% of regional crop varieties has been lost from 1956 to 2014. Although Yunnan is home to Asia's largest seed bank and numerous community seed banks, legal and policy measures for in situ agrobiodiversity conservation are largely absent in

China. With a humid subtropical climate and wide elevation range, Menglian Dai, Lahu, Va Autonomous County in Yunnan, bordering Burma's Shan State, is documented to have over a thousand medicinal plants, diverse wild fruits, high forest cover, and a tradition of foraging among its 28 ethnic minorities. Inhabiting the river valley and lowland, Dai people distinguish themselves from the hill ethnic groups by their long history of irrigated rice cultivation and elaborate culinary traditions. My research challenges Scott's dichotomy between irrigated rice as 'obedience agriculture' and root crops as 'escape agriculture' by suggesting that that rice farming in the mountainous region of Southwest China and Southeast Asia shares similar logics with swidden agriculture: maximizing yield per unit of labor through agrobiodiversity. Based on in-depth interviews and on-site observation with Dai cultivators and culinary artisans from the field to the forests, from the market to the kitchen, I will analyze an agriculture of resistance in the context of expanding state-sponsored plantations and high-yielding modern varieties, framed in part in terms of the biodiverse 'chaos' of minority Dai gardens versus the geometric aesthetics of the majority Han fields. Presenter: Xiyao Fu

Seeing farms from above: how drones and satellites digitize industrial agriculture in Brazil: Agricultural startups, also known as agtechs, develop technologies that can be applied in different steps in the food and agricultural commodity chains, from seeds and inputs to retail and consumption, passing through farm operations, commodity trade and logistics. In each of these steps, agtechs digitize existing objects and processes. With ethnographic data from Brazilian startups that develop remote sensing technologies using satellites and drones, this paper examines the algorithmic devices that digitize the work that nature does in springing seeds and producing sugarcane and soy plants. I observe how these technologies codify the sprouting of crops into data points. The lenses of satellites and drones, associated to statistic models, use time, weather, temperature, color of leaves, and soil coverage as variables to measure the productivity of farms. Although these variables have been widely used in agricultural sciences for decades, digital technologies take a step further. When they enable seeing farms from above, they produce massive amounts of data, and convert such data into binary digits. Based on 24 months of ethnographic fieldwork with startup founders, tech developers, agtech investors and agricultural corporations in Piracicaba, Brazil, my research found that tech creators promise that digital

tools promote a full legibility of crops. This presentation, then, asks: how do they proceed when expecting to remove plants from their imperfect material realities, and perfect them through electronic devices? What kind of capitalist fantasies do digitized crops engender? This paper argues that digitization is a set of technological and epistemic processes that attempt to erase from crops anything that exceeds its existence qua object of exchange, transforming everything like plant variation and flaws in the soil, into potentially quantifiable data. When startups propose to digitize a crop, they promise to scan every single object or process that happens in the space and over time, converting them all into digital information that can both generate information to accelerate industrial farming processes, or be sold to corporations. The consequence is that digital technologies create more than a commoditization of data, but instead produce a datafication of the commodity form. When drones and satellites see the farms through digital lenses, they (re)create monocrops as a computational universe. In this universe, when everything becomes digital, any relation and any process entailed in a farm could be finally reduced to an empty, quantifiable and exchangeable form. This paper contributes to critical agrarian studies, scholarship on plantation, and STS, by suggesting that drones, satellites and similar algorithmic technologies further the extractivist model that predominates in Brazilian agricultural landscape. Startups and the entire innovation ecosystem that works alongside them promise to resituate agricultural landscapes within screens, in which all the work that humans and nature do to cultivate the land are digitally legible through the grammar of exchange, taking the taming of nature to a next level. Misconceiving Misconceptions: Reproductive health beyond "myths"

8:00 AM - 9:45 AM TMCC - 501 B

Oral Presentation Session

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Corinne Hale (University of Wisconsin, Madison)

CHAIR:

Corinne Hale (University of Wisconsin, Madison), Taryn Valley

PRESENTER:

Taryn Valley ,Corinne Hale (University of Wisconsin, Madison),Allie Reichert (Vanderbilt University, Department of Anthropology),Lynn Selby

DISCUSSANT:

Nicole Berry ,Elyse Singer (University of Oklahoma, Department of Anthropology)

DESCRIPTION:

Panel Abstract: This panel will explore the contradictions and misconceptions that arise in the pursuit of reproductive health care within historically marginalized communities. This panel offers fresh perspectives on age-old webs of entanglement that trace the complex paths people take in creating meaning within the context of reproduction in Latin America and the Caribbean. Handwringing around health-related misconceptions and 'myths,' particularly about biomedical care, clutters global health literature and pervades globalized health policies (Berry 2010). But anthropologists have the methodological and analytical tools to dig beyond individual responsabilization to understand the structural violence (alongside and within structures of care) that underlie people's reproductive opinions, beliefs, and actions (Farmer 2006). In this panel, scholars will challenge reductive attitudes regarding 'myths' to engage with programmatic realities, family matters, and women's understandings of their own reproductive well-being and priorities. Papers should focus on sexual and reproductive health in Latin America and the Caribbean, or related diaspora, and may focus on any aspect of reproductive health including menstruation, pregnancy, contraception, gender-affirming care, menopause, abortion, sterilization, or infertility. This panel will discuss questions of subjectivity, choice, and behavior to better understand the contradictions enmeshed in reproductive health care. Reproductive coercion, violence, and hope in Indigenous Guatemala: My research in one Kaqchikel Maya community in highlands Guatemala details women's reproductive health decisions within a healthcare system built on a foundation of systemic reproductive coercion and family-based violence. Since

the formal end of Guatemala's civil war in 1996, ethnographers have documented the ongoing violence undergirding women's everyday lives. This violence results from, and perpetuates, post-genocide divestment, neoliberal reform, and economic crisis, in healthcare and nationwide. I draw from over 50 interviews with women and men, healthcare workers and lay community members, leaders and young people as well as participant observation in multiple health systems serving Indigenous communities in highland Guatemala. Within a failed state with few healthcare options, women and families navigate poverty, sexism, and racism. Many who wish to use biomedical contraception struggle to find it; those who do often hide their contraception use, and underlying family-building goals, from their husband and in-laws. The incentive structures of global health funding push hesitant women towards long acting or permanent reproductive control. Racist ideas of development and progress weave across Indigenous, Ladino, gringo, and government approaches to reproductive healthcare (and lack thereof). Where then do women and families find hope to regain control of their futures? My work spools from the medical anthropology of reproduction, gender, and power, but hinges on questions of agency and hope. I ask Kaqchikel community members not only what constrains them but what they yearn for. Neither redemption nor suffering on their own, despite these narratives' widespread use, sufficiently explain the enacted, provisional, shifting assemblages that Guatemalan women and families negotiate. My work explores how Indigenous families interweave Christian and Indigenous ideas of love to "lucharse siempre" to imagine and reproduce hybrid and dynamic "ideal" families. Presenter: Taryn Valley

Birthing Realities Among Haitian Women in the Bahamas: Haitian women in the Bahamas are experiencing increasing rates of poor maternal health outcomes. Haitians arriving on Bahamian shores without documentation are at particular risk. The Commonwealth of the Bahamas is one of the many popular landing spots for Haitians fleeing social injustice, financial precarity, and economic instability. Haitians have been landing on Bahamian islands for decades but continue to deal with xenophobia, stigma, and biases. Through semi-structured interviews, group gatherings, and observations, this paper presents birth narratives of young Haitian mothers in Nassau, New Providence Island of the Bahamas as they articulate the challenges of bearing children in their non-native country. Data collected during a two-month fieldwork stint in 2022 suggests misunderstandings between

Bahamian healthcare providers and Haitian patients seeking maternal care may prevent Haitians from receiving timely support. Mutual misconceptions rooted in diverging ideas of fear perpetuate frictions between Bahamian providers and Haitian patients, which may lead to Haitian women receiving less than optimal reproductive care at local hospitals. This analysis seeks to elucidate the social significance of displacement coupled with the harsh realities of pursuing reproductive health care as a migrant. Presenter: Corinne Hale (University of Wisconsin, Madison)

“Communal Pushing” as “Minga”: How Kichwa Midwives Generate Allyu-Centric Intersubjectivities: This paper will explore how Kichwa midwives in the Ecuadorian Amazon create spaces for birth that generate new subjectivities in the face of obstetric violence. Looking to Cohen Shabot (2021) and La Change Adams and Burcher (2014), I consider how “communal pushing” and “intersubjectivity” become redefined in the Amazonian Kichwa birth context. Drawing on the Kichwa community model, or “allyu,” alongside community work, “minga,” Kichwa midwives generate new forms of communal pushing rooted in Kichwa ideals of togetherness, Pachamama, and resilience in the face of biomedical initiatives designed to make their work obsolete. State-funded biomedical programs termed “intercultural,” create the conditions for obstetric violence to occur by medicalizing birth spaces and denying room for the multispecies collaboration, interdependence, and community that Kichwa birth demands. In this context, I argue that this situation challenges traditional understandings of obstetric violence as a rightsbased attack on the autonomous individual and rather, as a moment where intersubjectivity is denied and interdependence destroyed. In the Ecuadorian Kichwa context, I articulate how obstetric violence should be understood not only as an attack on the individual, but rather, as a lack of access to birth spaces that center the multispecies, allyu-centric community. And further, in the face of this, I demonstrate how midwives, both in rebellion to the state and separate from it, create space for intersubjectivity to be generated. In doing so, they draw on concepts of “minga,” “allyu,” and “Pachamama” to bring multispecies communities together as subjects in the co-creation of birth. Presenter: Allie Reichert (Vanderbilt University, Department of Anthropology)

Political transitions and the location of Haitian traditional birth attendants in global health: 'Where are my fellow matwòns?' asked a member of a traditional birth attendant popular organization during a two-day

meeting in 2008. She and other members were critiquing the different ways their maternal health labor, spiritual work, and community roles were engaged, vilified, or ignored by progressive local doctors, a nearby medical humanitarian project, and the Haitian state. This paper takes its point of departure in their experiences in the upper reaches of Martissant in the Port-au-Prince metropolitan area during a period of democratic transition. To provide further context, I mobilize a transdisciplinary textual analysis of sources from the 1970s to the present to address the following questions, 'What has historically been the role of matwòns in difficult to access urban neighborhoods? How have local doctors engaged with these healers? What position has the Haitian state taken vis-à-vis the cultural patrimony of traditional maternal medicine? How have global health projects interacted with matwòns in their efforts to reduce maternal mortality?' In a time- and place-bounded response to Margaret MacDonald's intervention regarding the waxing and waning role of traditional birth attendants in maternal health, I elaborate how Haitian political transitions and ideological shifts among medical professionals and their allies in global health have located matwòns in relationship to larger maternal health systems. I interrogate the contradictions and inherent extractive quality of valorizing and applying traditional medical knowledge and practices to contemporary maternal health care and further elucidate the conditions of possibility for a decolonial alternative. On Voids, Ruins and Other Spaces of Absence: Part 1

8:00 AM - 9:45 AM TMCC - 604

Oral Presentation Session

REVIEWED BY:

General Anthropology Division

ORGANIZER:

Melanie Ford (Rice University)

CHAIR:

Pablo Aguilera Del Castillo (University of Pennsylvania, Department of Anthropology)

PRESENTER:

Lee Cabatingan (University of California, Irvine), David Divita (Pomona College), Melanie Ford (Rice University), Elisa López (KTH Royal Institute of

Technology), Genese Sodikoff (Rutgers University, Newark, Department of Sociology & Anthropology)

DESCRIPTION:

Reexamining negative space as heterogeneous spaces (Foucault 1986), this two-part panel foregrounds ethnographic research that frames voids, ruins, and other spaces of absence as explicitly produced locations with incomplete or hidden histories, and seeks papers that will ethnographically sharpen the analysis of these spaces as strategies for political elucidation. Voids are often characterized in ambiguous spatial contexts, as negative space, whose boundaries remain unclear and location uncertain. Yet, voids are common spatial forms, whose emergence can be traced to contemporary practices of territoriality and to particular political projects (Gordillo 2014). Similarly, ruins (Stoetzer 2018) bring various types of decay to the center of our analysis, forcing us to reexamine how different processes of destruction are capable of producing unique spatial formations with historic particularity. The spatial components of voids, ruins, and other patterns are produced in juxtaposition to their own material non appearance. They materialize in metaphors and atmospheres that indirectly narrate absences through quotidian and common receptions of space (Schwenkel 2017). Both voids and ruins signal a shift toward the development of 'negative methodologies' with which to interrogate the aftermath of violence (Navaro 2020). As pretended absence, they exist in spite of total accounts of a place and as evidence and traces of history that are to be expected in the aftermath of violence and destruction (Weizman 2017). This session invites papers that present accounts of voids, ruins, and other spaces of absence by analyzing the histories, politics, and the design of their constitutive elements to reconsider the possibility of undoing the silences of the past (Trouillot 1995). Together, this submission of essays examines voids, ruins, and other spaces of absence as a way of interrogating the practices that make these spaces materially possible, discursively potent, and politically significant. Collectively we ask: What kind of designs, patterns, or logics do we encounter in these spaces of absence? How do particular aesthetics and politics animate each other? In what ways does absence determine the boundaries or edges of a given site? How do these places resist fixation, delimitation and even erasure, expanding into their own kinds of excess? And finally, what histories emerge when absences are encountered and resignified through 'negative methodologies of research'? What theoretical affordances does the space of absence offer us?

Ruins as a Resource: Decay and the Constitution of Communal Ownership in Barbuda: The dry, rugged landscape of Barbuda is speckled with ruins: a corroding shipping container off the cliff of Spanish Point; a rusty remnant of a fence buried in the bush; and crumbling homes, overgrown foundations, and front doorsteps that lead to no door at all. There are "historical" ruins, too. The Codrington family, who leased the entire island to use as a plantation, left the remains of their home in the highlands, and the Government House that served as the residence for "island wardens" following the Codrington's departure, sits eroding in the middle of town. In this paper, I consider these ruins as resources that Barbudans and others enroll to assert different claims of landownership. Drawing from legal geographer Nicholas Blomley, I show how these ruins find renewed life through their conscription into performances of property. Take the rusty remnant of the barbed wire fence that once divided Barbuda into three zones: agricultural, pastoral, and residential. This barely-there fence, I was told, provides valuable evidence that the whole island had been used by Barbudans communally across time; it was proof that communal landownership exists. Unfinished foundations, taken over by vines and seemingly abandoned, on the other hand, have been enrolled by proponents of a private property regime. They represent, I was told, dashed hopes and unfulfilled dreams—a Lockean nightmare of inefficient and unproductive land use. These ruins, therefore, do less to unsilence the past of Barbuda than they do to shape the politically-charged present for those who live there. Presenter: Lee Cabatingan (University of California, Irvine)

Unmaking a mausoleum: Resignification and the material remains of Spain's authoritarian past: The Valley of Cuelgamuros, until recently known as the Valley of the Fallen, lies about 30 miles outside of Madrid. Inaugurated by the dictator Francisco Franco in 1959, this landmark comprises a vast underground basilica and houses the mostly anonymous remains of 34,000 Spaniards who died during the civil war (1936-1939) and its repressive aftermath. Since the early 2000s, the Valley has been a political lightning rod in a country that has long struggled with how to address the legacies of its authoritarian past. Ongoing debates among politicians, scholars, and journalists have revolved around the possibility of the Valley's "resignification"—a process exemplified in 2019 by the exhumation of Franco's body from a tomb behind the basilica's main altar. In this paper, I perform critical discourse analysis on public texts that have emerged in these debates to distill the notion of resignification and

to highlight its entanglement with conflicting historicities about Franco's regime. Drawing on social-semiotic theory in linguistic anthropology, I shed insight on the complexities of recent efforts to transform the landmark through material and linguistic interventions. I also present ethnographic data collected at the Valley since 2018 to trace the multiple meanings generated by the monument's ongoing resignification that now circulate among members of the general public. My analysis suggests that the calculated creation of absence at a site of "negative heritage" (Meskell, 2022) can serve to unsettle dominant historiography from the past, even as its proponents wrestle with the temptation of a totalizing narrative themselves. Presenter: David Divita (Pomona College)

Properties of the Void: Land reclamation and urban ecologies in Guatemala City: In response to Gordillo's (2013) argument that voids are expressions of the limits of territoriality, this essay seeks to ethnographically sharpen the spatial properties of voids as well clarify them as spatial patterns consequential of property-making politics. In Guatemala City, "voids" (vacíos) are more than sunken terrain or emptied space in the pastoral landscape. They are verbal shorthand for gaps in the legal record that generate opportunistic ambiguity in important territorial matters. While voids are encountered in all parts of Guatemala City's mosaic development, they are most often found within the city's ravines. Consisting of nearly forty-two percent of city territory, ravines are grand, forested canyons whose varied topography has historically held low economic value. However, at the turn of the century, a public revaluation of ravines as sites of ecological importance returned attention to their geography, recentering the demand for private property in urban conservation initiatives. In this essay, I intervene in the history of urban development characteristic to studies of Latin America, and more closely Guatemala. By responding to legal scholars' call for explicit attention to property's obvious volumetric dimensions (Babie 2013), I argue that voids are not arbitrary or spontaneous spaces but rather political patterns of place that emerge in long relation to colonial histories of land tenure. I examine the current socio-political tensions that concern the urban conservation of Guatemala City's ravines through a case study of one particular void: the management of a public park on unknown and—at the same time—occupied ravine land. Presenter: Melanie Ford (Rice University)

Living With "The Pit": On the Production/Destruction of Space in Kiruna, Sweden: In 2004, the Swedish state-

owned mining company LKAB announced that mining deformations in Kiruna – Sweden's northernmost city and home to the world's largest underground iron mine – were gradually destroying the city center, necessitating the displacement of 6,000 inhabitants, the demolition of the city center, and relocation of most businesses, schools, and other services. Resettlement of residents has since been ongoing, and in September 2022, the New Kiruna City Center and resettlement area officially opened to the public. Based on a decade of ethnographic fieldwork in Kiruna, most recently during New Kiruna's inauguration and in January-February 2023, this paper examines diverse ways residents negotiate living alongside a growing sinkhole (in Swedish, *gropen*, or "the pit") caused by continued deep mining, razed former neighborhoods, ruination of inhabited neighborhoods, and ongoing demolition, while also forging links between the "Old City" and the New. Noting that space, following sociologist Henri Lefebvre (1974), is a social product, I show how local socio-spatial representations, concepts, and practices are central to sustaining residents and their ties to the city amid large-scale demolition and ruin. Furthermore, I argue Kiruna's "urban" or "societal transformation" – the term LKAB uses to describe this local form of mining-based displacement and resettlement – exemplifies a glimpse into a process anthropologist Gastón Gordillo (2014) terms "destructive production": a negative form of capitalist space production through destruction of social, cultural, and physical space. Presenter: Elisa López (KTH Royal Institute of Technology)

The Cornerstone of the House of the Dead: Plague and Absent Ancestors in Madagascar: In Madagascar's central highlands, families inter their dead in subterranean tombs oriented by a sacred astrological system. Tomb interment for the deceased ensures the cohesion and reproduction of descent groups. When bodies that should be entombed cannot be, the family will erect an upright stone (*vato fehizoro*) engraved with the names of the missing ancestors. It is a "cornerstone" that establishes the frame of a symbolic house. The use of the *vato fehizoro* is common for families who have lost relatives to bubonic plague outbreaks. Since the colonial period, the state has prohibited the plague dead from being interred in the tomb for at least seven years. This policy, though meant to protect the public health, continues to cause turmoil for families because it disrupts Malagasy understandings of kinship obligation and the moral universe. In conjuring a house, the *vato fehizoro* resonates with Claude Lévi-Strauss' formulation of the "house society," a model that has

inspired studies of the material house and kinship, including investigations of the “multispecies house” in the context of zoonosis. By marking the absence of plague victims from the tomb, the presence of the vato fehizoro makes a political statement as it links the physical house, the locus of zoonotic infection, to the representational house of the Lévi-Straussian type, a symbol of the descent group refracting through various scales in Madagascar, all the way up to the heavens. It is this latter type that explains why plague policy has confronted fierce resistance by rural Malagasy.

Permanently Polluted Worlds? Anthropological Engagements with Per- and Poly-fluoroalkyl Substances (PFAS)

8:00 AM - 9:45 AM TMCC - 712

Roundtable/Town Hall - In-Person

REVIEWED BY:

Anthropology and Environment Society

ORGANIZER:

Daniel Renfrew (West Virginia University, Department of Sociology and Anthropology)

CHAIR:

Thomas Pearson (University of Wisconsin, Stout, Department of Social Science)

PRESENTER:

William Alexander (University of North Carolina, Wilmington, Department of Anthropology), Thomas Pearson (University of Wisconsin, Stout, Department of Social Science), Darren Ranco, Colleen Linn (Wayne State University), Sonia Monet Saxon (University of Illinois, Chicago)

DISCUSSANT:

David Bond, Daniel Renfrew (West Virginia University, Department of Sociology and Anthropology)

DESCRIPTION:

After twenty years of regulatory inaction, and with decades of growing scientific knowledge about human exposure and severe health hazards, in 2023 the Environmental Protection Agency (EPA) finally took steps to address the widespread contamination of drinking water in the United States from per- and poly-fluoroalkyl substances (PFAS). Remarkably, this is the first time since the 1990s that the EPA has moved to regulate any new chemical in public water systems.

PFAS describes a class of several thousand synthetic chemicals commonly found in nonstick cookware, stain-resistant and water-proofed shoes, clothing, carpeting, and other fabrics, specialized firefighting foams, paper and packaging materials, personal care products and cosmetics, and a range of other consumer goods. PFAS, intriguingly, can be thought of as both 'legacy' and 'emergent' pollutants, originating in the 1940s but only drawing public health scrutiny in the 2000s. Dubbed 'forever chemicals' due to their capabilities to resist degradation and bioaccumulate in organisms, in recent years the discovery of groundwater contamination near industrial facilities and military installations has driven increasing media, scientific, and regulatory attention. Beyond localized contaminated communities, because of their persistence and mobility, PFAS are now routinely detected in groundwater and surface water, including the Great Lakes, and in soils, air, and food, and they are currently found in a majority of biological organisms across the planet, presenting significant risks and harms to human and more-than-human health and wellbeing. PFAS represents one of the most complicated environmental public health crises of the 21st century and embodies the dilemmas of life in the chemical Anthropocene. Research on the socio-cultural dimensions PFAS and their chemical harm are still in the early stages. Anthropologists and social scientists in recent years have begun critically examining the social life of PFAS, the history of scientific knowledge production related to PFAS, the decades-long social production of ignorance, uncertainty, and inaction regarding PFAS hazards, emerging public debates and controversies surrounding PFAS chemical exposures, the socio-cultural factors shaping perception of PFAS risks, the experience of PFAS contaminated communities, and new forms of community-based activism and public policy advocacy surrounding PFAS. In this roundtable, anthropologists working on PFAS in diverse forms and in various U.S.-based geographical contexts discuss the contributions of ethnography and social science in illuminating public debates over risk and harm, environmental justice, community activism, expert and lay knowledge production, and the roles and potentials of anthropological public advocacy.

Power, Body, and Beauty in China and South Korea

8:00 AM - 9:45 AM TMCC - 606

Oral Presentation Session

REVIEWED BY:

Society for East Asian Anthropology

ORGANIZER:

Chun-Yi Sum (Boston University)

PRESENTER:

Ke Ma ,Seungmin Seol

DESCRIPTION:

This panel examines the intersections of power with bodily practices and concepts of beauty in China and South Korea. Racialized notions of beauty have led to a demand for white-looking foreigners who migrate to China as short-term laborers to work in the Chinese fashion industry. In South Korea, colonial, imperial, and sociopolitical forces shape the landscape of aesthetic norms and the practice of cosmetic surgery. In China, singleton daughters contemplating childbirth must consider the impact of the competitive educational system and the cost of raising children, as well as their general anxiety of an uncertain and risky world after the pandemic. In South Korea, atopic dermatitis patients deal with their negative self-images and experiences of the medical system through online community forums. Finally, in South Korea, Korean Medicine and biomedicine have collided due to differences in sources of knowledge and styles of knowing. This necessitates an understanding through a topography of Korean medicine.

Trading Beauty, Making Race: Whiteness in China's Fashion Modelling Industry: While racial politics in the fashion industry has been the subject of anthropological studies, the role of transnational mobility in such politics has thus far not received much scholarly attention. This article investigates the social enactments of race in China's fashion industry, where an increased demand for white-looking fashion models has created a thriving job market for white-looking foreigners to migrate to China as short-term laborers. Drawing on my ethnographic fieldwork conducted between 2021 and 2022 in Shanghai's modelling agencies, this article examines modeling agents' practices, such as selecting foreign models, facilitating models' migration to China, and selling their looks to local clients. I demonstrate that while a global racial hierarchy of beauty remains in its place in the China's modelling industry, this racialized labor is shaped by more than ideas about models' looks. The Chinese state's classist and racist border control during the COVID-19 pandemic and the changing popular perceptions of the Chinese Self vis-à-vis differentiated foreign Others also play indispensable roles in upholding and contesting white superiority

within this context. Finally, the article also proposes to move away from an essentialist approach to race by focusing on how race achieves its significance through various forms of relationships. Presenter: Ke Ma

The Body Multiple in East Asian Medicine: Enacting reality in Korean medical practices: Korean Medicine, as one of the range of East Asian medicines, has played an important role, along with biomedicine, in the South Korean dual health care system. However, Korean Medicine and biomedicine have ceaselessly collided, often due to misunderstandings, related to theoretical and terminological differences. More precisely, differences stem from sources of knowledge and styles of knowing. Philippe Descola's 'Plural Ontologies' provide a new account of the incommensurability of the two medicines regarding the ontological underpinnings each medicine relies on. To investigate East Asian ontology in medical practice, this study draws from my anthropological fieldwork, while applying Annemarie Mol's discussion in [i]The Body Multiple[/i] to Korean Medicine clinical sites. In Mol's delineation of the multiple body, disease and world, by unbracketing practicalities, anatomy, as an important topographical language, represents the 'specificities of practicalities'. Korean Medicine exhibits more blurred lines between bodily objects and enactments than in the case of biomedicine. For example, the innermost thing of the body, 'Five Organs(Ojang)' is not described as 'what it is'. Instead, it is explained by 'how it practices'. Materiality in East Asia does not exist in an exclusive status with fixed objects which precede surrounding enactments. Rather, it situates side by side with other enactments. As a result, the topography of Korean Medicine unfolds in a different way. Illustrating the enacting reality in Korean Medicine, this paper will exemplify East Asian understanding of objects and practices. Presenter: Seungmin Seol

Precariousness in times of uncertainty: thinking vulnerability and violence after a year of the full-scale invasion of Ukraine

8:00 AM - 9:45 AM TMCC - 707

Roundtable/Town Hall - In-Person

REVIEWED BY:

Society for Medical Anthropology

ORGANIZER:

Dafna Rachok (Indiana University, Bloomington)

CHAIR:

Maryna Nading (Luther College, Department of Anthropology)

PRESENTER:

Jennifer Carroll (NC State University, Department of Sociology & Anthropology), Polina Vlasenko, Dafna Rachok (Indiana University, Bloomington), Emily Channell-Justice (Harvard University), Catherine Wanner (Pennsylvania State University)

DISCUSSANT:

Sarah Phillips, Maryna Nading (Luther College, Department of Anthropology)

DESCRIPTION:

The Russian full-scale invasion of Ukraine has brought destruction, displacement, disruption, and devastation. As a result of this illegal and unprovoked aggression, more than 13 million people have been displaced (UNHCR 2023) and one out of ten hospitals has been directly damaged (DeVos et al. 2023). The invasion of Ukraine has reverberated across the planet, exacerbating vulnerabilities within Ukraine and worldwide and damaging the very 'foundations of livelihood' (Petryna 2023). This experience of violence also led to sudden realizations of one's fragility and vulnerability and foregrounded the importance of mutuality and care, prompting creative adjustments and adaptations that reshape subjectivities and ways of healing and remake networks of solidarity and support. Building upon the theme of transitions, this roundtable seeks to explore how experiences of vulnerability and precariousness prompted new webs of care and solidarity in Ukraine during the time of uncertainty and unsettledness that is war. Ukrainian resilience inspired scholars to ponder the importance of self-organization (Channell-Justice 2022; Nading 2022) and ad hoc volunteer networks (Dunn and Kaliszewska 2023), rethink the notion of sovereignty (Carroll 2022) and the politics of who belongs (Wanner 2022), and document the stubborn 'refusal to die' (Phillips 2022) of the marginalized and the vulnerable. Building on Butler's notions of precariousness as human condition (2004; 2010), this roundtable brings together scholars of Ukraine to explore how the all-out war and violence facilitated the emergence of new subjectivities and networks of care and led to rethinking of solidarities and possibilities of collective action. Focusing on the experiences of disability, displacement, living with HIV, addiction and the topics of reproduction and care, this roundtable considers how vulnerability and precariousness facilitate political subjectivity and help create new networks of solidarity to resist violence and

oppression. Butler, Judith. 2004. Precarious life: the powers of mourning and violence. London: Verso

Problematizing Psychiatric Diagnosis and Psychotherapy: From DSM-5 to Local and Non-Western Therapeutic Interventions

8:00 AM - 9:45 AM TMCC - 709

Oral Presentation Session

REVIEWED BY:

Society for Psychological Anthropology

ORGANIZER:

Stephanie Leguichard (Florida Atlantic University), Joao Biehl (Princeton University, Department of Anthropology)

CHAIR:

Joao Biehl (Princeton University, Department of Anthropology), Nikhil Pandhi (Princeton University, Department of Anthropology)

PRESENTER:

Stephanie Leguichard (Florida Atlantic University), Christopher Chapman (University of Oxford), Emily Bailey, Nikhil Pandhi (Princeton University, Department of Anthropology), Angela

Garcia ,Joao Biehl (Princeton University, Department of Anthropology),Laurence Ralph (Princeton University),Lucas Bessire (University of Oklahoma)

DISCUSSANT:

Yana Stainova

DESCRIPTION:

This session offers critical analysis and ethnographic inquiries of both psychiatric diagnoses and therapeutic interventions. While the USA Diagnostic and Statistical Manual of Mental Disorders (DSM) added in its 5th edition (2013) a section titled 'Cultural Concepts of Distress' its interpretations of cultural influences on mental illness remain severely limited and replete with cultural bias. Further, we need to further problematize psychotherapy by looking into non-Western therapeutic interventions, including local adaptations of Western psychotherapies, its new applications, and its alternatives. The papers thus offer a Foucauldian critical reading of DSM-5's concept of 'culture;' how clinical psychology is applied in Japan and cross-cultural reshaping of care; the culture and politics of digital mental health through a case study of Know Yourself which serves as a platform of therapeutic culture in today's China: and, examining an adaptive workplace program for autistic youth using TEACCH (Treatment and Education of Autistic and Related Communication Handicapped Children) methods.

The DSM-5 and Western Psychiatry's Appropriation of Anthropological Discourse: A Critical Analysis: The field of anthropology has historically had a complex relationship with the biomedical model of Western psychiatry reflected in the American Psychiatric Association's (APA) Diagnostic and Statistical Manual of Mental Disorders (DSM). Although Western psychological anthropologists have problematized the DSM's history of pathologizing 'normal' behavior and the biological essentialism and reductionism inherent to the biomedical model, some have nevertheless retained a Western psychiatric lens in examining mental illness in non-Western cultures. In accordance with anthropological and cultural critiques, the APA has revised their official perspectives, as reflected in updates to the DSM and the elimination of problematic diagnoses such as hysteria and homosexuality. However, the DSM-5, published in 2013, remains replete with cultural bias. The DSM-5 attempts to remedy the ethnocentrism of the biomedical model by incorporating a section titled 'Cultural Concepts of Distress' and discussing 'culture-bound syndromes,' but its interpretations of cultural influences on mental illness remain severely limited and overly simplistic. This

paper applies a Foucaultian lens to analyze the DSM-5's approach to culture-bound syndromes and cultural concepts of distress by applying the concepts of biopolitics and regimes of truth to determine how Western psychiatry has attempted to legitimize itself through the appropriation of anthropological discourse. It compares non-Western understandings of culture-bound disorders with the DSM-5's interpretations, problematizing Western psychiatric conceptions of mental illness through the lens of neurodiversity and cultural relativism. Finally, it argues that anthropologists have the ethical responsibility to challenge the imposition of reductionist Western 'truths' about mental illness and disability. Presenter: Stephanie Leguichard (Florida Atlantic University)

Yuri's Story: Innovation and (Self) Care in Japanese Clinical Child Psychology: Clinical psychology is a thriving health profession in Japan, and in recent years the field has seen further growth through national licensure. Transformations also come from the adoption of therapeutic interventions from the United States and United Kingdom. Through a yearlong, multi-sited study of child welfare in Japan, I engaged with mental health professionals to better understand the delivery and cross-cultural reshaping of care. In this paper, I explore how clinical psychologists working in child protective services envision innovation and employ new therapeutic tools like art therapy and trauma-focused cognitive behavioral therapy. Writing with a close, person-centered analysis on narrative and intersubjectivity, I discuss how the therapeutic process may not only be beneficial for patients, but healers. I argue that innovation and improvement may not be solely a matter of new psychotechnologies, but locally reshaped morals and affectations. Reflecting on these inner and interpersonal processes offers new insight into contextualizing care and the professional ethos of mental health care. Presenter: Christopher Chapman (University of Oxford)

'C'est nos vies': TEACCH mediated communication in an autistic workplace: The proposed paper is based on preliminary ethnographic fieldwork conducted at an adaptive workplace program for autistic youth using TEACCH (Treatment and Education of Autistic and Related Communication Handicapped Children) methods. Informed by Dorothy Holland et al.'s discussion of Vygotsky, I argue that the TEACCH artifacts employed by café participants serve as transition objects which allow participants to enter into a 'figured world.' Through ethnographic examples, I will demonstrate how entering into this figured world

produces a shift in perceptions and expectations of autistic communication which allows participants (autistic and non-autistic) to successfully understand each other, regardless of previously identified communication differences. Presenter: Emily Bailey

Dalit : Fugitive Pieces: Radical theory-making, Sylvia Wynter reminds us, takes place outside existing systems of knowledge. How do stories and storytelling compel us to carve, create and channel frequencies of these insurgent elsewhere? What is at stake in translating between the stories of radical lifeworlds of color, crossing geohistories of caste and race and summoning what Katherine McKittrick calls 'interhuman relationalities'? How do stories shore-up fugitive affinities between seemingly incommensurable worlds of debility by disrupting epistemological enclosures, allowing poetic socialities to proliferate as modes of collective action and accountability? How do stories that resist dispossession and dehumanization also intensify the transformative witnessing of collective suffering as liberation? Drawing on long-term ethnography in northern India with Dalit-feminist creatives and humanists who story caste pain and terror through literature – as also Dalit-Bahujan bodies dying of caste - this paper chronicles the ways in which literature lays the grounds for revitalizing caste into livingness and recalibrating the agonistic grammars of structural casteism into a planetary coda of affinity. As a queer of color anthropologist, my own storytelling praxis combines Dalit, Black and queer-feminist ways of knowing to issue a clarion call for anti-caste/anti-racial alliances in the capacious quest of theory-making through storytelling. At another level, I also call for humanistic co-presencing through reparative refiguring, breathing life into the term 'Dalit' (meaning 'broken' and 'ground down') using the aegis of what W.E.B. Du Bois calls 'fugitive pieces'. Presenter: Nikhil Pandhi (Princeton University, Department of Anthropology)

Writing the Sense of Life: According to Jean-Luc Nancy, writing should seek to "identify life with writing and writing with life." This paper considers the implications of Nancy's provocation for ethnography. Drawing on Clarice Lispector's *Água Viva*, it asks: what would it mean to write in a way where writing and life are inextricably intertwined? What words and forms best approximate themselves to the sense of the living present? To address these questions, I reflect on research conducted among marginalized youth in Mexico City who engage in a genre of storytelling known as *desagüe* (draining). I show how *desagüe* is profoundly connected to the mode of existing at the time of its

creation, and that it is aware of its own inadequacy to life. Nevertheless, this genre of storytelling (like Lispector's fiction) persists in the endeavor to write the sense of existence and, in doing so, fashions a critical space to address the unfolding relationship between writing and life. Presenter: Angela Garcia

The Poetry It Is Possible Not To Write: How can we excavate the in-betweenness of lives lived elsewhere and deaths deferred to elsewhere from the sediments that come to us through the figural? In this paper, I reckon with and seek to story the living, breathing archivings of my unlettered ancestors: from poor farmers' *viva voce* prayers and reminiscences to the nurturing of herbal gardens and usage of forest medicinal products to communal vital registries and home burials in Brazil's southern settler frontier. Forged against the specter of death, these homespun traces-of-what-one-does-not-know exceed the racialization and necropolitics conjured by the ruling classes and speak to people's emplotment in nature and relationships to the departed—"a secret [anti-colonial] order among syllables" (M. NourbeSe Philip)—which storytelling animates time and again. For the nonknowledge carried in language's brutal materiality has also been passed on with the trust that the visions and losses that preceded and followed its accompanying traces would be inherited in such a way that a possible justice could be imagined and a mysteriousness to existence sustained, then and now. Presenter: Joao Biehl (Princeton University, Department of Anthropology)

Black Cargo: This paper builds upon the work of social scientists and humanists, such as Michael Dawson and Elizabeth Alexander, who have explored the ways in which people who are racialized as Black feel their fate is bound up in a system of domination in which they carry the memory of state-sanctioned violence with them. Thinking through the way memories of Black victimization become embodied, disproportionately impacting the long-term health consequences of Black Americans, I build here a case for a collective memory that draws from the present moment, but that is constructed by historically informed storytelling in which highly publicized episodes of police violence become one's own actual experience. While the prevailing sociological scholarship of the 1980s once confidently predicted that African Americans' social identity would realign around the interests of the greater society, incidents of state violence continue to form the basis of group identification well into the new millennium. Still, when I refer to the experience of state violence, I am not just referring to the act of being

victimized by the police. I am including in this experience, the act of witnessing police violence and sharing the stories of what one has witnessed. On a deeper level, I am referring to watching a retelling of state violence, and then carrying the cultural memory of that retelling with you. This is the true energy of Black cargo. It is the human action behind social transformation—the catalyst that can help us understand how a larger movement that unites people around human dignity is cultivated. Presenter: Laurence Ralph (Princeton University)

The Plains Interior: Why do literary anthropologies matter today? What sort of genre can account for those domains whereby the traces of past destruction blur into present depletions and the affective force of absences to come? Can ethnographic narratives cross the contradictory entrenchments that continue to divide us from one another, ourselves and more inhabitable futures, in the context of the endless US culture wars? This essay explores those issues in reference to personal engagements with resource depletion on the southern High Plains. It experiments with narrative form in order to interrogate the conditions under which ethnographic genre experiments may convey, reproduce or disrupt hegemonic orthodoxies during an age of political, ecological and social delirium. Presenter: Lucas Bessire (University of Oklahoma)

Yana Stainova

DESCRIPTION:

Ever since the early twentieth century writings of Zora Neale Hurston and Ella Deloria, anthropology and its polyphonic ethnographic methods have been steeped in the possibilities of disrupting ordered hegemonies of knowledge, archiving insurgent subjectivities of Black, Indigenous and marginalized communities of color and affirming the capacious power of storytelling. Incorporating elements of folklore, mythology, ethno-poetics and novelistic sensibilities—whilst radically defining the political and aesthetic arc of what might be called literary anthropology—a range of feminist anthropologists were also radically experimenting with form, genre, technique and textuality even before the advent of Writing Culture. If the 'crisis' of representations of the 1980s questioned the discipline's objective truths, its interpretive rhetoric, and its narrative modes, anthropology remained glaringly silent about the work of feminist creatives and peripheral knowledge-making experiments and did not openly call attention to the complex matrices of coloniality, race, gender, and ableism that have inflected anthropological knowledge-making for more than a century. This panel seeks to revitalize the insurgent power of literary anthropology to offer reparative modes of witnessing, sensing, imagining, and storying everyday worldings—whilst keeping anthropology rooted in radical ideals of 'being human as praxis' (in Sylvia Wynter's words) and of social and environmental justice. Drawing from long-term engagement with historically marginalized communities in India, Brazil, Mexico, and the United States, our project of literary anthropology interrogates the intricate art of ethnographic storytelling alongside critical attempts to cross-pollinate diverse intellectual traditions and knowledges that emanate from myriad genres of human becomings. Together, we probe the myriad palimpsests of livingness revealed when literature becomes central to how our interlocutors story their vivid worlds and when stories become the most ethically insurgent rite of response against negation, subjection and abjection. Becoming custodians of stories nested and nurtured within reparative imaginaries of the literary transforms the anthropologist and praxis of anthropology itself. The panel thus also advances our ongoing praxis of theorizing through storytelling, capaciously forging aesthetic/poetic socialities and thereby creating pathways for a hearty anti-colonial anthropology.

The DSM-5 and Western Psychiatry's Appropriation of Anthropological Discourse: A Critical Analysis: The field of anthropology has historically had a complex relationship with the biomedical model of Western psychiatry reflected in the American Psychiatric Association's (APA) Diagnostic and Statistical Manual of Mental Disorders (DSM). Although Western psychological anthropologists have problematized the DSM's history of pathologizing 'normal' behavior and the biological essentialism and reductionism inherent to the biomedical model, some have nevertheless retained a Western psychiatric lens in examining mental illness in non-Western cultures. In accordance with anthropological and cultural critiques, the APA has revised their official perspectives, as reflected in updates to the DSM and the elimination of problematic diagnoses such as hysteria and homosexuality. However, the DSM-5, published in 2013, remains replete with cultural bias. The DSM-5 attempts to remedy the ethnocentrism of the biomedical model by incorporating a section titled 'Cultural Concepts of Distress' and discussing 'culture-bound syndromes,' but its interpretations of cultural influences on mental illness remain severely limited and overly simplistic. This paper applies a Foucaultian lens to analyze the DSM-5's approach to culture-bound syndromes and cultural concepts of distress by applying the concepts of biopolitics and regimes of truth to determine how Western psychiatry has attempted to legitimize itself through the appropriation of anthropological discourse. It compares non-Western understandings of culture-bound disorders with the DSM-5's interpretations, problematizing Western psychiatric conceptions of mental illness through the lens of neurodiversity and cultural relativism. Finally, it argues that anthropologists have the ethical responsibility to challenge the imposition of reductionist Western 'truths' about mental illness and disability. Presenter: Stephanie Leguichard (Florida Atlantic University)

Yuri's Story: Innovation and (Self) Care in Japanese Clinical Child Psychology: Clinical psychology is a thriving health profession in Japan, and in recent years the field has seen further growth through national licensure. Transformations also come from the adoption of therapeutic interventions from the United States and United Kingdom. Through a yearlong, multi-sited study of child welfare in Japan, I engaged with mental health professionals to better understand the delivery and cross-cultural reshaping of care. In this paper, I explore how clinical psychologists working in child protective services envision innovation and employ new

therapeutic tools like art therapy and trauma-focused cognitive behavioral therapy. Writing with a close, person-centered analysis on narrative and intersubjectivity, I discuss how the therapeutic process may not only be beneficial for patients, but healers. I argue that innovation and improvement may not be solely a matter of new psychotechnologies, but locally reshaped morals and affectations. Reflecting on these inner and interpersonal processes offers new insight into contextualizing care and the professional ethos of mental health care. Presenter: Christopher Chapman (University of Oxford)

'C'est nos vies': TEACCH mediated communication in an autistic workplace: The proposed paper is based on preliminary ethnographic fieldwork conducted at an adaptive workplace program for autistic youth using TEACCH (Treatment and Education of Autistic and Related Communication Handicapped Children) methods. Informed by Dorothy Holland et al.'s discussion of Vygotsky, I argue that the TEACCH artifacts employed by café participants serve as transition objects which allow participants to enter into a 'figured world.' Through ethnographic examples, I will demonstrate how entering into this figured world produces a shift in perceptions and expectations of autistic communication which allows participants (autistic and non-autistic) to successfully understand each other, regardless of previously identified communication differences. Presenter: Emily Bailey

Dalit : Fugitive Pieces: Radical theory-making, Sylvia Wynter reminds us, takes place outside existing systems of knowledge. How do stories and storytelling compel us to carve, create and channel frequencies of these insurgent elsewhere? What is at stake in translating between the stories of radical lifeworlds of color, crossing geohistories of caste and race and summoning what Katherine McKittrick calls 'interhuman relationalities'? How do stories shore-up fugitive affinities between seemingly incommensurable worlds of debility by disrupting epistemological enclosures, allowing poetic socialities to proliferate as modes of collective action and accountability? How do stories that resist dispossession and dehumanization also intensify the transformative witnessing of collective suffering as liberation? Drawing on long-term ethnography in northern India with Dalit-feminist creatives and humanists who story caste pain and terror through literature – as also Dalit-Bahujan bodies dying of caste - this paper chronicles the ways in which literature lays the grounds for revitalizing caste into livingness and recalibrating the agonistic grammars of structural

casteism into a planetary coda of affinity. As a queer of color anthropologist, my own storytelling praxis combines Dalit, Black and queer-feminist ways of knowing to issue a clarion call for anti-caste/anti-racial alliances in the capacious quest of theory-making through storytelling. At another level, I also call for humanistic co-presencing through reparative refiguring, breathing life into the term 'Dalit' (meaning 'broken' and 'ground down') using the aegis of what W.E.B. Du Bois calls 'fugitive pieces'. Presenter: Nikhil Pandhi (Princeton University, Department of Anthropology)

Writing the Sense of Life: According to Jean-Luc Nancy, writing should seek to "identify life with writing and writing with life." This paper considers the implications of Nancy's provocation for ethnography. Drawing on Clarice Lispector's *Agua Viva*, it asks: what would it mean to write in a way where writing and life are inextricably intertwined? What words and forms best approximate themselves to the sense of the living present? To address these questions, I reflect on research conducted among marginalized youth in Mexico City who engage in a genre of storytelling known as *desagüe* (draining). I show how *desagüe* is profoundly connected to the mode of existing at the time of its creation, and that it is aware of its own inadequacy to life. Nevertheless, this genre of storytelling (like Lispector's fiction) persists in the endeavor to write the sense of existence and, in doing so, fashions a critical space to address the unfolding relationship between writing and life. Presenter: Angela Garcia

The Poetry It Is Possible Not To Write: How can we excavate the in-betweenness of lives lived elsewhere and deaths deferred to elsewhere from the sediments that come to us through the figural? In this paper, I reckon with and seek to story the living, breathing archivings of my unlettered ancestors: from poor farmers' *viva voce* prayers and reminiscences to the nurturing of herbal gardens and usage of forest medicinal products to communal vital registries and home burials in Brazil's southern settler frontier. Forged against the specter of death, these homespun traces-of-what-one-does-not-know exceed the racialization and necropolitics conjured by the ruling classes and speak to people's emplotment in nature and relationships to the departed—"a secret [anti-colonial] order among syllables" (M. NourbeSe Philip)—which storytelling animates time and again. For the nonknowledge carried in language's brutal materiality has also been passed on with the trust that the visions and losses that preceded and followed its accompanying traces would be inherited in such a way that a possible justice could be

imagined and a mysteriousness to existence sustained, then and now. Presenter: Joao Biehl (Princeton University, Department of Anthropology)

Reassessing Matters: Semiotic Approaches to Value and Commensuration, Part 1

8:00 AM - 9:45 AM TMCC - 203 D

Oral Presentation Session

REVIEWED BY:

Society for Linguistic Anthropology

ORGANIZER:

Kathryn Graber (Indiana University, Bloomington, Department of Anthropology)

CHAIR:

Steven Black (Georgia State University, Department of Anthropology)

PRESENTER:

Daniel Souleles (Copenhagen Business School), Shalini Shankar (Northwestern University), Alessandra Rosen (CUNY, Hunter College, Department of Anthropology), Matt Schneider (University of California, Los Angeles, Department of Anthropology), Kathryn Graber (Indiana University, Bloomington, Department of Anthropology)

DISCUSSANT:

Joshua Reno (SUNY, Binghamton University, Department of Anthropology)

DESCRIPTION:

Anthropologists have long approached value as fundamentally a question of semiosis, from early Saussurean-structuralist theories of linguistic value to Nancy Munn's Peircean analysis in *The Fame of Gawa* (1986). Recently, semiotic approaches to value have been extended as part of 'new materialism,' a reexamination of work by Munn and by David Graeber (2001), and a resurgence of interest in Peirce. Linguistic anthropologists in particular have focused on evaluation as a kind of semiotic-discursive project, examining the talk used in evaluating a good or a practice (e.g., Cavanaugh 2007; Chumley & Harkness 2013) or focusing on how semiotic mediation shapes circulation, such as by promoting and selecting for some qualities over others (e.g., Calvão 2013; Gal 2017). This double session interrogates what happens to value in transition. What happens when the 'same' stuff--a material good, an image, a practice, or a stretch of discourse--is subjected to different criteria and different regimes of value? How do people reconcile slippages and change criteria to suit new purposes? When one mode or system of evaluation 'wins out,' what are its political dimensions and its implications for power (Elyachar

2005)? Papers in this session consider cases in which 'value' is contested and the ways that people grapple with that apparent incommensurability, or force things to be commensurable. At the intersection of linguistic anthropology and economic anthropology, we consider the different conceptions of value that might be at play in a given ethnographic context, including use value, exchange value, moral value, and others. We ask what is at stake in forcing unlike things and unlike systems of evaluation into a commensurable system, or not, as an ethnographic question. Papers in Part 1 examine a global cashmere commodity chain in which the value regimes people are acting on are often at odds, but still they have to meet a threshold of commensurability across the chain to agree that it's more or less the same thing, 'cashmere;' the different ways U.S. political actors are evaluated as 'respectable' or not, via surface markers like their suits and hairstyles; the incommensurability of caste categories transposed from South Asia to U.S. legal understandings of racial categories and civil rights; the role of commensuration and reevaluation in the enactment of the International Labor Organization's Convention for the Decent Treatment of Domestic Workers in Mexico, contra the lived experience and affective ties of domestic workers with employer families; and the ways that the ethically-oriented concepts of 'stewardship' and 'engagement' complicate the economic values associated with asset manager capitalism. Bulger Two Suits and the Meaning of Respect: As a senator or representative, any chance you have of passing laws, affirming policies, and delivering for your constituents comes down to whether or not your colleagues respect you. The problem with respectability, though, is that it is a moving target. This paper will draw on nine months of fieldwork at the Massachusetts State House to illustrate two ways people recognize respect (clothing and hairstyle) in Massachusetts politics and

show how people expand what is respectable by shifting the meaning of a repertoire of iconic, embodied signs. Presenter: Daniel Souleles (Copenhagen Business School)
