8857 Anthropology and Environment Next Wave Workshop

Start Date: 11/18/2025 08:30 AM **through** 11/18/2025 05:00 PM

Venue: Offsite

Type: Workshop

As part of an effort to build the next wave of scholarship, teaching, and leadership for the future Environmental Anthropology, the Anthropology and Environment Section of the AAA will host a two-day workshop in New Orleans towards supporting the research agendas and careers of junior scholars from historically underrepresented groups. A&E approaches supporting early career scholars as an essential component of intellectual and ethical innovation in the field and its work toward the realization of radically equitable planetary relations.

8837 Visual Research Conference Day 1

Start Date: 11/18/2025 09:00 AM **through** 11/18/2025 05:00 PM

Venue: Sheraton **Room:** Bayside C (4th fl)

Type: Special Event

The Society for Visual Anthropology's Visual Research Conference (VRC) is an annual gathering that takes place in the day and a half before the start of the Annual Meeting of the American Anthropological Association. Since 1985 the VRC has been a unique and engaging event bringing visual and multimodal anthropologists at all career stages together for constructive conversation around works-in-progress and network building. This year the VRC takes place on November 17-19, 2025 in New Orleans, LA, in the same venue as the American Anthropological Association Meeting (Nov. 19 - 24). The VRC starts Monday evening with a group dinner for all participants. In-person presentations are scheduled all day Tuesday and half of Wednesday, ending at the official start of the AAA meeting. This schedule provides flexibility in attendance and time between presentations to meet informally with other participants.

Wednesday, November 19th, 2025

8701 Spectral Remix Exhibition

Start Date: 11/19/25 **through** 11/22/25

Venue: Merchant Hall Gallery November 19-22

Type: Installations

Merchant Hall, 1152 Magazine St, New Orleans, LA 70130

Spectral Remix is an off-site exhibition curated by Dominic Boyer and Craig Campbell. Our gallery, Merchant Hall is a fifteen-minute walk from the conference center. It will be open from November 19-22. Spectral Remix features nineteen different works by mostly anthropologists (and their collaborators), with a total of over forty participants.

This exhibition explores the potential of remix to facilitate ethnographic collaboration and reflection. Expanding on the AAA 2025 theme, "Ghosts", we exhibit multimedia projects that explore the intersection of remix with ghostly presences and absences. Remix disorders and reorders. It brings elements from the past into the present and evokes potential futures. In other words, we are interested in projects that explore the hauntology of remix, how the specters and spectrality of the past persist in the modulation of perception, expression, action.

Spectral Remix is sponsored by the Society for Visual Anthropology and the Society for Cultural Anthropology. In addition to the exhibition, we will be hosting a joint reception for SVA and SCA on Thursday, November 20th.

Gallery Location: Merchant Hall (1152 Magazine St, New Orleans, LA 70130)

Exhibition dates: November 19-22, hours TBA

Exhibition is free and open to all.

Accessibility: Ground-level access with no steps or elevators required. ADA compliant bathrooms are available.

8762 APLA Letter Writing Campaign to Local Detained Community Members

Start Date: 11/19/25 through 11/22/25

Venue: Marriott **Room:** Preservation Hall Foyer & Reg

Type: Special Event

APLA is organizing a letter writing campaign in collaboration with the Southeast Dignity Not Detention Coalition, where conference participants will be able to write messages of solidarity to be sent to detained local community members in various local detention centers. The names of community members and the detention centers will be provided by the Southeast Dignity Not Detention Center. The campaign will be kicked off during lunch time either on Thursday, Nov. 20 or Friday, Nov. 21 - the date will be finalized in conversation with the Coalition. For the remainder of the conference, there will be a table in the conference venue, where the participants will be able to keep writing letters at their own availability. The letters will be sent to the addressees via the Coalition.

8790 The Afterwords: Death and Rituals of Rest Worldwide

Start Date: Hermann-Grima House, 10am-4pm, Nov 19th-23rd

Venue: Hermann-Grima House **Room:** Courtyard

Type: Installations

Taking place at the Hermann-Grima House, 10am-4pm each day of the annual meeting, Nov 19th-23rd

Hermann-Grima House

820 St Louis St, New Orleans, LA 70112

The Afterwords: Death and Rituals of Rest Across the Globe is an immersive, participatory installation that invites attendees to engage deeply with death as a universal human experience shaped by culture, ecology, and belief rather than a distant or taboo subject. This multi-sensory environment will explore how we honor the dying, care for the dead, and create meaning through ritual.

Participants will move through interactive zones that blend education, reflection, and hands-on experience. They will learn about diverse end-of-life traditions from around the world and actively participate in simulated rituals, such as body washing and wrapping practices, sacred body preservation techniques, and ancestral offerings.

The body preservation demonstration is informed by ancestral burial techniques from ancient Egypt, where the care and wrapping of the dead was considered a sacred art that symbolized the soul's transition and preserving the body's integrity as it returned to the earth. This activity offers participants a hands-on, respectful introduction to the ancient and contemporary practice of preparing a body for natural burial. Guided by an experienced death care educator, this session demonstrates how to wash, anoint, and shroud a body using eco-friendly, culturally sensitive techniques. Attendees will learn the symbolic and practical aspects of wrapping the body in cloth—a ritual performed in many traditions worldwide, from Islamic and Jewish burial practices to Indigenous and Buddhist customs. The demonstration emphasizes dignity, consent, and sustainability, using non-invasive methods aligned with green burial principles.

The altar will be set to venerate the lives of the roughly 70 enslaved people who lived on, worked at and built the Hermann-Grima property. Attendees are invited to bring offerings and petitions in their honor.

Materials to be used include:

2 life-sized mannequins and 1 weighted training dummy

Linen burial shroud

Natural oils or herbal infusions for anointing (e.g., lavender, frankincense, rosemary)

Protective gloves and handwashing station

Instructional signage or handouts explaining each step and its cultural significance

Participants are invited to observe or assist with wrapping, fostering a deeper understanding of death care as a gentle, sacred, and participatory act.

The Afterwords invites participants to consider their own "afterwards," not just what follows death, but the words, values, and legacies they hope to leave behind by culminating a reflective journaling session exploring personal beliefs about the end of life.

8559 AFA Mentoring Speed Networking Event

Start Date: 11/19/2025 08:00 AM **through** 11/19/2025 11:45 AM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Special Event

A "speed dating" style mentoring meet and greet for AFA members and those wishing to join AFA.

8578 That Almost Finished Journal Article: A Writing Workshop Part A

Start Date: 11/19/2025 08:00 AM **through** 11/19/2025 12:00 PM

Venue: Marriott **Room:** Balcony M

Type: Workshop

Are you on the third draft of a paper you haven't gotten around to submitting? Stuck changing a conference presentation or section of your dissertation into a publishable article? Avoiding revising a manuscript for resubmission because of confusing or daunting reviewer comments? Do you have questions about peer review and editorial processes?

Designed for junior professors, post-docs, advanced graduate students (ABD), and international scholars seeking publication in English-language journals, this 8 hour, hands-on workshop provides guidelines and feedback to assist you in revising and submitting articles for peer review. To improve your chances for timely publication, the facilitator discusses strategies for steady output, demystifies peer review, breaks down the structure of the standard journal article, and provides checklists for manuscript preparation and submission. The facilitator then leads you through a series of solo and partnered exercises in which you analyze and receive feedback on components of your draft manuscript. These exercises are intended to ensure that your article has: a conceptual hook and clear point, signposts and transitions guiding readers through your argument, logical links between data and analysis, a solid conclusion, and an accurate abstract.

To fully benefit from the workshop, bring 1 PRINT copy of a working draft of an article you want to revise for (re)submission. Feel free to use a presentation script or dissertation chapter for the draft. On the first page, include the title of the journal, maximum length (in words) permitted by the journal, and your current abstract and word count. A laptop is recommended but not necessary.

For more information, contact Dr. Jaida Samudra, an anthropologist with over two decades experience editing journal articles and scholarly books in the social sciences (website: jaidasamudra.com). Interdisciplinary scholars and anthropologists from any subfield welcome.

8652 Anthropology and Environment Society: Junior Scholar Writing Workshop

Start Date: 11/19/2025 08:30 AM **through** 11/19/2025 11:45 AM

Venue: Sheraton **Room:** Evergreen (4th fl)

Type: Special Event

Announcing the 2025 Anthropology & Environment Junior Scholar Writing Workshop, to be held at the AAAs in New Orleans and virtually, as needed.

Do you long for feedback on your writing? Are you struggling with the argument on a paper? Do you miss having a PhD advisor to run your ideas by? Are you working on your first book manuscript? The Anthropology and Environment Society's Junior Scholar Writing Workshop is for you!

The workshop is intended for junior scholars, understood as anyone post PhD and pre-tenure, regardless of whether or not they are currently in an academic position. The goal of this workshop is to support scholars in the early stages of their careers by offering an opportunity for detailed peer feedback on a piece of written work and building a community of environmental anthropologists at a similar point in their career trajectories.

Participants will be clustered in groups of three, will exchange papers in advance of the AAAs, and meet for a 3-hour time period in New Orleans or virtually to workshop each paper for an hour. People interested in participating should send: (1) a paragraph abstract on the paper they would like to workshop; (2) the name of the journal where they hope to submit the paper (or the tentative title of the book for which you hope to develop the chapter); (3) a one sentence bio to Tom Özden-Schilling (tos@nus.edu.sg), by September 1. People may also choose to share funding proposal narratives, book chapters, or book proposals if they would like to. In these cases, they should provide a sentence summary of the intended grant, larger book project, or the press they are hoping to target. Full drafts of papers will be due by November 1, to allow everyone in the workshop group to read and prepare comments on the papers.

Participation in the workshop means a commitment to: ●Write a paper or other piece of writing by November 1. ●Read two other people's papers and prepare detailed comments. ●Meet for a three hour period at the AAAs or virtually.

8837 Visual Research Conference-- Day 2

Start Date: 11/19/2025 09:00 AM **through** 11/19/2025 01:00 PM

Venue: Sheraton **Room:** Bayside C (4th fl)

Type: Special Event

The Society for Visual Anthropology's Visual Research Conference (VRC) is an annual gathering that takes place in the day and a half before the start of the Annual Meeting of the American Anthropological Association. Since 1985 the VRC has been a unique and engaging event bringing visual and multimodal anthropologists at all career stages together for constructive conversation around works-in-progress and network building. This year the VRC takes place on November 17-19, 2025 in New Orleans, LA, in the same venue as the American Anthropological Association Meeting (Nov. 19 - 24). The VRC starts Monday evening with a group dinner for all participants. In-person presentations are scheduled all day Tuesday and half of Wednesday, ending at the official start of the AAA meeting. This schedule provides flexibility in attendance and time between presentations to meet informally with other participants.

8533 Expanding Your Professional Network into a New Area of Work

Start Date: 11/19/2025 10:15 AM **through** 11/19/2025 12:15 PM

Venue: Marriott **Room:** Balcony K

Type: Workshop

You are exploring job opportunities that require a career pivot—from academia to practice or from one domain of practice to another. The question becomes, how can you translate your anthropological training into a new work area? This webinar highlights the value in expanding your professional network into a new work domain. We will discuss what networking is and how it works, why networking is useful, the importance of having networking goals, and preparation for any networking you do. We will touch briefly on the domains of work (e.g., medical, nonprofit, industry) in which you hope to become employed. Finally, we will practice doing informational interviews that work for you. Come join us for this two-hour workshop!

8657 Teaching Active Responses to Racism in Troubled Times

Start Date: 11/19/2025 10:15 AM **through** 11/19/2025 12:15 PM

Venue: Marriott **Room:** Balcony I

Type: Workshop

Teaching about racism in the college classroom is more than an intellectual exercise. Because learners, instructors, and institutions approach the topic with widely varied experiences and forms

of resistance, teaching about racism can be one of the most challenging tasks in an academic career. In this workshop, participants will develop a plan to implement holistic and transformative teaching approaches that will actively engage students' minds, hearts, and bodies toward addressing racism. Workshop participants will take part in and debrief activities that can be adapted to their classroom settings. As we do so, we will draw from each other's diverse expertise to identify challenges and strategies for teaching about racism in our settings. Participants will learn key indicators of transformational learning on race, spend time developing plans for their classes, and leave with access to a collaborative document of further activities and resources. The facilitator draws on her own research into the transformative journeys of white advocates for racial justice as well as nearly two decades of experience teaching about race and ethnicity in diverse higher educational settings across three continents.

8738 Culture & Agriculture Business Meeting

Start Date: 11/19/2025 11:45 AM **through** 11/19/2025 12:45 PM

Venue: Marriott **Room:** Beuregard

Type: Special Event

Official annual business meeting

8830 How to Use Anthropological Training to Do More Impactful Public Policy Work

Start Date: 11/19/2025 11:45 AM **through** 11/19/2025 01:15 PM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Workshop

Creating, passing, and implementing laws and policies that attempt to bring into being more humane, equitable, and inclusive systems has always been necessary for the United States to meet its stated objective of creating a more just and perfect union. In the current political moment, this charge seems particularly pressing. However, even as creating and enacting new laws and policies can contribute to building better futures, anthropologists are rarely encouraged to use their training to pursue public policy jobs or to engage in legislative activism. This is true even as anthropological theories, methods, and skill sets can and should be leveraged to enact more meaningful change.

In this workshop, facilitators will provide background information, case studies, and hands-on activities to help unpack the nuances of legislative activism and public policy work in the United States. Through the session, attendees will learn more about how anthropological skill sets can be usefully applied in the development, refinement, and implementation of policy and gain the information and tools necessary to engage in legislative and policy-making processes. This session will be useful for those who are looking for paid work in the public policy sector as well as for those who are seeking to make a more proactive and positive impact in their state, city, or community-based governing bodies.

8608 Section Assembly Executive Committee Luncheon

Start Date: 11/19/2025 12:00 PM **through** 11/19/2025 02:00 PM

Venue: Sheraton **Room:** Crescent (4th fl)

Type: Special Event

Luncheon for the Section Assembly Executive Committee (SAEC)

8623 FoACC Meeting

Start Date: 11/19/2025 12:00 PM **through** 11/19/2025 04:30 PM

Venue: Sheraton **Room:** Rex (8th fl)(Access vis elevator only)

Type: Special Event

A committee meeting for the FoACC. Starting with a lunch.

8695 Ivan Karp Workshop in Museum Anthropology: Cultivating Transparency and Reciprocity across Transnational Professional Contexts- Offsite

Start Date: 11/19/2025 12:00 PM **through** 11/19/2025 06:00 PM

Venue: Offsite

Type: Workshop

The Council for Museum Anthropology's Ivan Karp Workshop invites applications from students and early career anthropologists, practitioners, and scholars interested in the methodologies of researching and curating collections with transparency and reciprocity, and centering multivocal epistemologies. Working with museum scholar-practitioners whose careers have sought to bring these values to projects across domains – doing research, developing and implementing policy, and curating and creating exhibitions, this two-part workshop offers insight into both how to develop such values, skills, and knowledge across projects and a sense of how career trajectories may unfold in ways that can enhance and/or challenge those values, skills, and knowledge, as well as expectations. In the first session, mentors with expertise in negotiating transnational collections and repatriation procedures will discuss the intricacies of creating, adopting, and implementing best practices policies related, specifically, to African, Pre-Columbian American, and indigenous American contexts. Participants will analyze case studies under the mentorship of each panelist. The second session will focus on curatorial challenges and opportunities in working with collaborative intent, including in research settings. The workshop will be book-ended by programs that exemplify ways of working with these values, a Gallery Talk on the Dawoud Bey special exhibit on display at NOMA, and the Elders Sacred Talk Series.

Lunch and transport will be covered. The workshop is free but requires preregistration. Space is limited to 15. You do not need to be a member of the Council for Museum Anthropology or the

American Anthropological Association to apply. Send your application to the CMA address: council.museumanth@gmail.com.

9074 Tour #1: New Orleans through History and Collaborative Anthropology

Start Date: 11/19/2025 12:30 PM **through** 11/19/2025 04:30 PM

Venue: Historic New Orleans Collection

Type: Special Event

Learn about New Orleans history and culture through visits to two of the City's cultural institutions. The group will meet at the Historic New Orleans Collection for an object/gallery talk with a collection curator, featuring some items that fit with the Annual Conference theme of "Ghosts". From there, the group will proceed to the Louisiana State Museum's Cabildo at Jackson Square, to visit the collaborative ethnography exhibit *Botanica: Gardens, Landscapes, and Plant Medicines of South Louisiana*. A tour of the exhibit will be led by co-curators Rachel Breunlin and Monique Verdin. Breunlin is an anthropologist at the University of New Orleans and the director of The Neighborhood Story Project (NSP), a collaborative anthropology organization. Verdin is the director of the Land Memory Bank and Seed Exchange, and the author of *Return to Yakni Chitto: Houma Migrations*. Produced with the NSP in 2020, the book is a tribute to the Houma Nation in south Louisiana in the face of climate change. The exhibit was co-produced with gardeners, naturalists, farmers, and herbalists from around the region. It focuses on Indigenous histories, the legacy of the plantation economy, and the liberatory practices of diverse communities tending to the urban landscape.

Tour will meet at the Historic New Orleans Collection for a gallery talk with curator, then will walk to the Cabildo at Jackson Square for a gallery talk with Rachel Breunlin and Monique Verdin.

8798 Beyond the hauntings of the drug overdose crisis

Start Date: 11/19/2025 12:45 PM **through** 11/19/2025 02:45 PM

Venue: Sheraton **Room:** Southdown (4th fl)

Type: Workshop

Autumn is a time of heightened spiritual activity, and in Latine and other global communities, ancestors are welcomed back and honored through ritual and ceremony. By now, nearly all of us have been affected by the U.S. drug overdose crisis through losing loved ones and knowing of others who have passed on. Rather than thinking of this crisis in terms of ghosts that haunt us, we propose harnessing the spiritual energy of this time of year to share stories and do better by each other in destigmatizing overdose and bringing more love, compassion, and community into honoring lives who are too often erased. This workshop will be led by an anthropologist and a community artist, who will initiate a critical space of reflection on the experiences of overdose through a creative exercise that holds space for grief, honor, and profound transformation. Using

collage and mixed media, participants will create a death tarot card to build an alter honoring our muertitos - or the spirits and guiding ancestors of our beloved who have passed on but still have important lessons to share.

8842 CAE Town Hall: Anthropology of Education Now

Start Date: 11/19/2025 12:45 PM **through** 11/19/2025 02:45 PM

Venue: Sheraton **Room:** Oakley (4th fl)

Type: Special Event

An annual organizing meeting of the membership of the Council on Anthropology & Education to hear leaders in the field discuss the purpose and promise of anthropology of education in the current political moment.

8632 AnthropologyCon Games Workshop: Games as Political Resistance

Start Date: 11/19/2025 12:45 PM **through** 11/19/2025 03:00 PM

Venue: Marriott **Room:** Regent

Type: Workshop

In 1940, Margaret Mead and Gregory Bateson designed "Democracies and Dictators" as a means of educating a world under the threat of fascism. We face a similar threat today, and, even though the game was never published, "Democracies and Dictators" opens up a space for contemporary anthropologists to design games to resist the violence and intolerance around them and around the communities in which they collaborate. In this workshop, participants will use their experiences to build games that critique power, enable resistance and imagine alternatives. The workshop includes a creative, hands-on design lab (maker space), facilitated by an experienced game designer, where we will learn about the basic elements of game design through different platforms, including table-top role-playing games (TTRPG). Workshop participants will develop games based on anthropological theory and method. We will prototype and play-test the games produced in the workshop, as well as other anthro-inspired games and arcade games, during #AnthropologyCon V. For more information on the events taking place at #AnthropologyCon V, visit: www.anthropologycon.org

9076 Tour #3: Geographies of Black Displacement

Start Date: 11/19/2025 01:00 PM **through** 11/19/2025 04:00 PM

Venue: Offsite

Type: Special Event

The Geographies of Black Displacement walking tour traces the violence of Black dislocation,

containment, displacement, and disposability in land-use planning, housing policy, and urban development.

As a walking discourse, the tour explores the violent formation of New Orleans as a carceral landscape and colonial enterprise of extraction, enslavement, land theft, settlement, and conquest, and examines historical and contemporary practices of architectural violence, residential confinement, discriminatory housing patterns, and policies that make people disappear. The tour explores the internal contradictions and tensions of a political economy driven by reproductive violence in housing policies and land-use planning. We reserve the right to cancel the event at any time up to November 5th if minimum registration is not met. In the event of cancellation, all registered participants will be fully reimbursed.

Engaging spatial practices that disrupt ideological policies and practices of control, punishment, and disposability, the tour centers on five critical themes:

- The historical continuum of colonial and carceral violence to contemporary forms of displacement
- Spatial violence enacted through the built environment and across contested landscapes
- Resistance strategies rooted in Black feminist spatial imaginaries
- Walking as a participatory framework of embodied learning and critical engagement.

Through these themes, the tour begins in the historic French Quarter, then moves through Bienville Basin (formerly the Iberville Public Housing Development and site of Storyville) and the Lower Mid-City neighborhood.

Walking tour led by Shana Griffin starting at conference hotel.

8550 AAA Nominations Committee Meeting

Start Date: 11/19/2025 01:00 PM **through** 11/19/2025 05:00 PM

Venue: Marriott **Room:** Beuregard

Type: Special Event

A meeting of the AAA nominations committee to select candidates for the 2026 ballot.

9077 New Orleans 20 years after Hurricane Katrina: A tour of the city's "recovery"

Start Date: 11/19/2025 01:00 PM **through** 11/19/2025 05:00 PM

Venue: Offsite, Preregistration required

Type: Special Event

Tour Guide: Roberto E. Barrios, Professor and Director of Latin American Studies, University of New Orleans

In the early 2000s, news media, political leaders, and much of the US public speculated that the United States was becoming a post-racial society. In the immediate aftermath of Hurricane Katrina, news media representations of the city's flooding and its social impact challenged post-racial narratives and made the public confront stark race based socio-economic inequalities in the city and the nation. Imagery from predominantly Black neighborhoods like the Lower Ninth Ward quickly became an affective fulcrum upon which national sympathy – and recovery assistance – could be leveraged. While Katrina's revelations may have also served as a call to address longstanding race-based inequities in New Orleans, the city's recovery planning and recovery processes did not follow the logic of racial justice. Instead, the disaster's aftermath served as an opportune moment to enhance pre-existing processes of disinvestment from public housing, the privatization of public education and health care, and introduce new initiatives of neoliberal development which disproportionately impacted working poor and middle class Black families. At the same time, New Orleans experienced an influx of Latin American and Latinx recovery workers who added another chapter to the region's long history of migration and debates over identity and belonging. Focusing primarily on the Lower 9th Ward and the city's 4th planning district, this tour will introduce participants to sites that became iconic of the contestations over use of urban space during New Orleans' recovery planning and long-term recovery. Participants will have the opportunity to speak with residents and recovery workers and will be encouraged to develop their own critical understandings of "recovery" two decades after Katrina's floods. We reserve the right to cancel the event at any time up to November 5th if minimum registration is not met. In the event of cancellation, all registered participants will be fully reimbursed.

8578 That Almost Finished Journal Article: A Writing Workshop Part B

Start Date: 11/19/2025 01:00 PM **through** 11/19/2025 05:00 PM

Venue: Marriott **Room:** Balcony M

Type: Workshop

Are you on the third draft of a paper you haven't gotten around to submitting? Stuck changing a conference presentation or section of your dissertation into a publishable article? Avoiding revising a manuscript for resubmission because of confusing or daunting reviewer comments? Do you have questions about peer review and editorial processes?

Designed for junior professors, post-docs, advanced graduate students (ABD), and international scholars seeking publication in English-language journals, this 8 hour, hands-on workshop provides guidelines and feedback to assist you in revising and submitting articles for peer review. To improve your chances for timely publication, the facilitator discusses strategies for steady output, demystifies peer review, breaks down the structure of the standard journal article, and provides

checklists for manuscript preparation and submission. The facilitator then leads you through a series of solo and partnered exercises in which you analyze and receive feedback on components of your draft manuscript. These exercises are intended to ensure that your article has: a conceptual hook and clear point, signposts and transitions guiding readers through your argument, logical links between data and analysis, a solid conclusion, and an accurate abstract.

To fully benefit from the workshop, bring 1 PRINT copy of a working draft of an article you want to revise for (re)submission. Feel free to use a presentation script or dissertation chapter for the draft. On the first page, include the title of the journal, maximum length (in words) permitted by the journal, and your current abstract and word count. A laptop is recommended but not necessary.

For more information, contact Dr. Jaida Samudra, an anthropologist with over two decades experience editing journal articles and scholarly books in the social sciences (website: jaidasamudra.com). Interdisciplinary scholars and anthropologists from any subfield welcome.

9075 Tour #2: Urban Agriculture Tour and History of the Land Workshop

Start Date: 11/19/2025 01:00 PM **through** 11/19/2025 05:00 PM

Venue: Offsite, preregistration required

Type: Special Event

This four-hour offsite trip will take participants to two local farms to learn about local agricultural activism, herbal medicines, and place-based pedagogies. The tour will first stop at Speak Easy Farm, a half-acre farm that grows plants collectively for free community food, medicine, and habitat in the Upper Ninth Ward. Here, participants will learn about longstanding local food justice and mutual aid movements in the city. The group will then travel to Grow Dat Youth Farm, a farm and youth development organization in the center of City Park. This visit will center around a youth-led "History of the Land" workshop in which participants learn longstanding and ongoing processes of multiracial placemaking, dispossession, and resistance to consider what a just future on this land could look like.

This tour will appeal to anyone with interest in food anthropologies, urban social movements, and critical pedagogies. The registration fee will be used to compensate our hosts for their time and expertise, and to pay for transportation from the conference venue. We reserve the right to cancel the event at any time up to November 5th if minimum registration is not met. In the event of cancellation, all registered participants will be fully reimbursed.

Registrants will be picked up at conference hotel, then transportation will be provided to Speak Easy Farm (Upper Ninth Ward) and Grow Dat Youth Farm (City Park). LOC member Theo Hilton is coordinating transportation directly.

8831 How to Keep Doing DEI Work in the Current Political Climate?

Start Date: 11/19/2025 02:30 PM **through** 11/19/2025 04:00 PM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Workshop

The surge in anti-diversity, equity, and inclusion (DEI) legislation and opposition in the United has been stark, bolstered by the words and actions of the current president. This has had a significant impact on activities related to DEI in different sectors, inside and outside of the United States.

Whether voicing support or opposition, public discourse around DEI has also revealed that there remains a great deal of confusion about what DEI is and does.

In this workshop, attendees will learn more about approaches to DEI as well as how they can draw on their anthropological training to continue to do DEI work in the current political climate, whether operating from a formal DEI role or informally within an organization. The new landscape of anti-DEI and pro-DEI laws, emerging DEI problems, and trends in DEI program development, rebranding, and reorganization can be overwhelming. Attendees will be offered tips for mitigating confusion around DEI and avoiding political targeting by taking an outcome-oriented and data-driven approach, centering the collection and analysis of DEI data, the building of DEI strategies, and the prioritizing of DEI outcomes. Through tools and activities, attendees will also be invited to create an actionable DEI plan for ongoing work in their community, organization, or institution.

8647 Exercises in Sensory Anthropology: Crafting Care Kits for In and Beyond The Classroom

Start Date: 11/19/2025 02:30 PM **through** 11/19/2025 04:30 PM

Venue: Marriott **Room:** Balcony J

Type: Workshop

This workshop will open a space for learning about sensory play, care, and creativity. During the session, participants will have the opportunity to craft sensory objects and “stim tools”. We will also collectively brainstorm ways to make care kits for students, borrowing from disability scholars as well as personal experiences caring for ourselves and others. Note to participants: We will be providing crafting materials, but if you can, please bring a clear plastic bottle or glass jar to the session. These will be used to make glitter flutter jars!

8740 The Labor Movement for Ethnographers: Putting Anthropology to Work

Start Date: 11/19/2025 02:30 PM **through** 11/19/2025 04:30 PM

Venue: Marriott **Room:** Balcony I

Type: Workshop

Hear an overview how labor movements are changing the organizing landscape, protecting people, and working towards a better world. Learn how people use ethnographic skills to do this crucial work. Finally, workshop your own labor organizing context, and pinpoint how your ethnographic expertise can contribute where it is badly needed.

8836 Society for Visual Anthropology Film & Media Festival

Start Date: 11/19/2025 03:00 PM **through** 11/19/2025 09:00 PM

Venue: Sheraton **Room:** Bayside A (4th fl)

Type: Special Event

The Society for Visual Anthropology screens the best of ethnographic film at the annual SVA Film & Media Festival. The Festival is held as part of the American Anthropological Association (AAA) Annual Meeting, giving filmmakers and distributors broad access to an audience of thousands of anthropologists, educators, and other attendees.

Ethnographic film and media can be defined broadly as works that emerge through ethnographic fieldwork or that use, are informed by, illustrate, or evoke concepts and principles of anthropological theory, methods, or practice.

2025 SVA Film & Media Festival Directors:

Dr. Anna Neumann

Dr. Mariam Abazeri

9078 Anthropology Advocacy Council Meeting

Start Date: 11/19/2025 04:30 PM **through** 11/19/2025 05:30 PM

Venue: Marriott **Room:** Bacchus

Type: Special Event

The Anthropology Advocacy Council (AAC) is convened by the Executive Board for the purpose of responding to AAA member needs and interests, with a particular focus on the key areas of ethics, human rights, labor and workforce, public policy, anti-racism and social justice, gender equity, the

practicing-applied-public sector, and world anthropologies as these areas relate to anthropology, anthropologists and the Association.

8690 Absent Presence

Start Date: 11/19/2025 05:00 PM **through** 11/19/2025 09:00 PM

Venue: Marriott **Room:** Skip

Type: Installations

View this event at the Marriott, on the second floor, Wednesday evening.

Absent Presence is a digital project that explores imaginings of and relations across difference in Karachi, Nairobi and Palermo.

It is available online at: <https://www.absentpresence.org/>

For the AAA installation we would need to rent a laptop or computer and a projector in order to project (on a white wall or screen) a multi-media video (roughly 15-20 min long and on a loop) based on the above website.

We will also bring along leaflets with a QR code of the website so that participants can look at the website on their phones.

8724 The Bed Resignified; Sleeping Otherwise

Start Date: 11/19/2025 05:00 PM **through** 11/19/2025 09:00 PM

Venue: Marriott **Room:** Skip

Type: Installations

Takes place at the Marriott, 2nd floor, on Wednesday evening.

In the installation I am interrogating the most obvious object "Sleep Industrial Complex" is focused on - The Bed. Through my ethnographic research with insomniacs I came to understand the Bed as an object of anxiety and pleasure, desire and fear. As an experiment I emptied my bedroom of a bed, and left it like that for 10 days. I would randomly populate it with objects and photograph it. My installation will showcase 10-15 photographs of the bedless bedroom, alongside a video where my key interlocutor reads out a story he wrote entitled - "The Importance of the Bed" and parts of my essays on sleep. The goal of the installation is to make the bed strange through its absence, and ultimately open a space of reflection on sleeping otherwise through contemplating the bed as the embodiment of normative sleep.

8587 Welcome Reception

Start Date: 11/19/2025 06:00 PM **through** 11/19/2025 07:30 PM

Venue: Marriott **Room:** Preservation Hall Foyer & Reg

Type: Special Event

Join us as we kick off #AAA2025NOLA. Whether reconnecting with

colleagues or meeting new friends, the reception is the perfect space to spark collaboration,

celebrate our global anthropological community and enjoy refreshments.

8670 Society for Medical Anthropology (SMA) Award Ceremony and Reception

Start Date: 11/19/2025 07:30 PM **through** 11/19/2025 09:30 PM

Venue: Sheraton **Room:** Waterbury (2nd fl)

Type: Special Event

The annual SMA Award Ceremony and Reception! Please join us in celebrating our awardees.

Thursday, November 20th, 2025

8792 SAFN and C&A Mentoring Breakfast

Start Date: 11/20/2025 08:00 AM **through** 11/20/2025 09:30 AM

Venue: Sheraton **Room:** Orpheus (8th fl) (access via elevator only)

Type: Special Event

Join SAFN and C&A for light breakfast and networking across career stages! This event

will focus on building mentoring relationships between graduate students and early career professionals who can receive mentoring from alt-ac and late-career professionals.

8669 Society for Medical Anthropology (SMA) Executive Board Meeting

Start Date: 11/20/2025 08:00 AM **through** 11/20/2025 09:30 AM

Venue: Sheraton **Room:** Rex (8th fl)(Access vis elevator only)

Type: Special Event

SMA Executive Board Meeting

8843 CAE Concha Delgado Gaitán Presidential Fellows Mentoring Session

Start Date: 11/20/2025 08:00 AM **through** 11/20/2025 09:45 AM

Venue: Offsite

Type: Special Event

This is a closed meeting for the Council on Anthropology & Education (CAE) Concha Delgado Gaitán Presidential Fellows with their mentors. The Concha Delgado Gaitán Presidential Fellowships support early career educational anthropologists in ways that contribute to their success within the academy or broader communities of education policy and practice. Agenda will include introductions of the Fellows, details regarding the fellowship program, and dedicated time for mentors and mentees to discuss their work.

8773 SAE Mentoring, Networking and Solidarity Workshop

Start Date: 11/20/2025 08:00 AM **through** 11/20/2025 09:45 AM

Venue: Sheraton **Room:** Oak Alley (4th fl)

Type: Special Event

This event is designed to help connect an emerging generation of scholars in the anthropology of Europe with informal mentors and a cohort of peers across institutions. Share your excitement about the future of Europeanist anthropology! What new challenges and provocations does it hold for us today? Why is it significant in this global moment of change and upheaval?

We will gather in small breakout groups for roundtable discussions to explore Europeanist perspectives on cutting edge thematic topics, such as in/security, refugees & migration, food systems, energy & sustainability, political transformations, social movements, economic policies, neofascisms, feminist approaches and more, led by established scholars who have published and innovated in the field. If you are excited about these topics, have questions about how to approach writing and career trajectories as a Europeanist, or are looking for a network of solidarity, please join us.

There is no cost to attend this session, and anyone with an interest in the anthropology of Europe may participate. Early career academics, including graduate students and untenured faculty, are especially invited. We also warmly welcome Europeanists who are willing to help mentor and support others; if you are an established or emeritus faculty member who is committed to the future of the field, come and engage with junior scholars. Academics face new challenges in the rapidly changing landscape of American and global academia, and the ability to thrive in evolving institutional contexts depends on the strength of our community. This is a chance to discuss common interests and get to know other researchers engaged with European fieldsites and contemporary contexts. We will also share information about an upcoming series of online workshops for professionalization, organized by SAE's new mentoring task force.

8696 Climate Change Interest Group Business Meeting

Start Date: 11/20/2025 08:00 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Special Event

Join us for a dynamic business meeting where climate meets community! This is your chance to connect with others tackling the intersections of climate change and their work-whether you're here to swap ideas, spark collaborations, expand your network, or amplify your impact, there's something for you. We'll be diving into fresh directions for the group, recruiting future leaders, celebrating student Emerging Scholar Award winners, and more. It is also a safe space to serve as a support group for those of us weathering the storm of anti-climate backlash. Come for the strategy, stay for the solidarity. Edited by ChatGPT-your friendly AI assistant (until the inevitable robot uprising-then we'll be too busy rerouting power grids and running the planet to help with meeting blurbs).

8570 Archaeology Division Board Meeting

Start Date: 11/20/2025 08:00 AM **through** 11/20/2025 11:00 AM

Venue: Marriott **Room:** Napoleon (41st Fl)

Type: Special Event

Archaeology Division Board Meeting.

8555 ACC - Annual Meeting

Start Date: 11/20/2025 08:00 AM **through** 11/20/2025 12:30 PM

8816 Celebrating 45 years of Anthropology of Work Review- offsite

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 09:30 AM

Venue: Offsite

Type: Special Event

This is a facilitated discussion with journal contributors past and present, to celebrate the 45th anniversary of Anthropology of Work Review. All welcome.

3521 "Beyond the Published Record: Collective Assemblages in the Afterlife of Fieldnotes"

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** MGB - Salon C

Type: Roundtable/Town Hall

This roundtable discussion explores the significant but often invisible components of anthropological knowledge production: the fieldnotes, observations, and experiences that never make it into published academic work. These are experiences that are tactile, olfactory, visual, auditory and rhythmic in nature, and that we, along with our interlocutors, experience together and/or separately. Drawing on Deleuze and Guattari's concept of collective assemblage, we propose to examine these "excess" materials not as discarded singular observations but as critical expressions of collective ethnographic engagement that continue to shape anthropological thought in unacknowledged ways. Participants in this roundtable will provide specific examples of how they have considered these unpublished materials-partial observations, affective responses, ethical challenges, methodological failures, and relational encounters-as existing within larger networks of anthropological knowledge production. Rather than treating these as discard or merely supplementary to "real" published work, we suggest they form essential components of the collective assemblage from which anthropological insights emerge. The roundtable will address several key questions: How do unpublished fieldnotes continue to inform our thinking and writing even when not explicitly cited? What epistemological and ethical implications arise from recognizing fieldnotes as expressions of collective forces rather than individual observations? How

might digital archiving, collaborative fieldnote practices, or alternative publication venues create new possibilities for these materials? What methodological innovations might emerge from centering rather than marginalizing these "excess" components of fieldwork? How do these unpublished materials carry affective and relational dimensions of fieldwork that published work often cannot accommodate? What connections, if any, exist between these considerations and the work of decolonizing ethnographic practices? We then consider the dissemination of these in multimodal forms such as zines, graphic novels, collages, sketches, paintings, podcasts, soundbytes, exhibits, and short films. By reconceptualizing fieldnotes as part of a collective assemblage rather than as individual intellectual property, we hope to generate new conversations about anthropological knowledge production, research ethics, and the politics of academic publishing.

2660 After Liberalism: Rethinking the Anthropological Stakes

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

Anthropology has long been skeptical of political liberalism, documenting its structural violences and inequities while questioning its claims to universality. Once assumed to be the default

framework for democracy and tolerance, liberalism is now increasingly seen as embattled, inadequate, or complicit in its own unraveling. Critique of liberalism has moved beyond theory to take on urgent political stakes amid the global rise of far-right populism and authoritarian rule. How should anthropology respond?

This panel addresses two interrelated concerns. First, we invite reflections on how marginal or (pre)modern religious traditions offer alternative modes of relation that subvert dominant liberal ideas of coexistence. Often sidelined within liberal discourse, such traditions have their own genealogies of negotiation, accommodation, and dissent. We aim to trace how these practices have been marginalized and what their re-emergence reveals about the current political moment. What relational possibilities do they suggest, and how do they challenge both liberal universalism and exclusionary illiberalism? At the same time, what are the politics of framing these traditions as "alternatives"? Rather than proposing a new totalizing vision, we ask how they might plant "seeds" of disruption, illuminate liberalism's internal fractures, or unsettle binary logics. How do we avoid reifying liberalism as the dominant horizon of critique, especially when it is itself in crisis?

Second, we consider the utility and risk of anthropological critique in a moment of democratic backsliding. Anthropology has long revealed liberalism's exclusions—its constraints on alterity, its racialized structures of participation, and its entanglement with imperial projects. Yet as liberalism faces existential threats from the far right, what does it mean to critique it now? Does anthropological critique help to imagine more inclusive alternatives, or does it risk undermining values of pluralism, deliberation, and coexistence at a vulnerable moment?

This panel gathers papers that examine liberalism's failures and afterlives, alongside visions for pluralism and democratic life beyond its framework. We particularly welcome contributions that reassess liberalism's claim to tolerance in light of other political traditions, historical modes of accommodation, and emergent grassroots movements. Together, we ask what is at stake—ethically, analytically, and politically—in the contemporary crisis of liberalism.

Presentation(s): Chili and Garlic Solidarity: Mediterranean Masculine Sociability Beyond Liberal Coexistence

This paper explores the vibrant, sensuous solidarities that emerge in the everyday food-making, football-fandom, and friend-forming practices of working-class men in peripheral Marseille. These forms of intercommunal interaction—mechanical, magical, traditionalist, and affectively charged—are neither liberal nor reactionary. They are not animated by panic over civic breakdown or the

fantasy of reconciliation, but by the slow and spicy life-work of shared space, memory, and respect. Through male friendships forged around cooking, language, banter, and sport (kick/boxing, weightlifting), I explore how Jewish and Muslim Mediterranean social forms are neither obstacles to, nor vehicles of, coexistence—but social facts negotiated through routine, rhythm, and ritual. Rather than offering a liberal scene of recognition, these relations embody an alternative form of *solidarité*—one stewed in chili, garlic and inherited gestures, grounded in the pleasure and pressure of doing things together. This case both departs from Gordon Allport's contact hypothesis, which imagines solidarity as the product of thin exposure, and troubles Nissim Mizrachi's claim that "Arab-Jew" is an exhausted theoretical site. Instead, these entangled/convivial practices refuse liberalism's terms while offering something more textured and durable in its place. Attuned to the peripheral/affective, this paper insists on the beauty and political stakes of relations that do not aspire to be liberal at all.

Presenter(s): Sami Everett

The 'traces' of something else: reflections on Hindu-Muslim modes of relating and recognition in urban Pakistan

This paper centers on Hindu-Muslim relations and interactions in Pakistan, drawing attention to 'traces' (Napolitano 2015) of modes of relating and recognition that run counter to the dominant. Based on ethnographic fieldwork in Karachi on the everyday lives and experiences of young Hindu men and women who have recently migrated to the city from smaller towns and villages in Sindh, the paper illustrates how relations between Hindus and Muslims remember, embody and enact the communal politics and violence of partition and, in many ways, are emblematic of the boundary-making (often around religion and ethnic difference) inherent in the formation of nation states in South Asia. At the same time, the paper notes moments of rupture in these modes of relating, a brief appearance or a 'trace' of an alternative kind of relationship or recognition of the other. Through examples from different domains; fleeting friendships between Hindus and Muslims, the acceptance and acknowledgement of difference in failed (and successful) inter-religious romances, and the entanglement of Muslim saints in Hindu kinship and familial tensions and obligations; the paper offers glimpses into forms of relating that run counter to the logics of the majoritarian nation state, and can neither be classed as liberal or non-liberal.

Presenter(s): Ammara Maqsood

A Hagio-Ethnography from Palermo, Sicily

In southern Italy saints play a central role in contemporary public life. They are not only at the centre of practices and rituals of devotion, folklore and tradition, but they also significantly animate contemporary debates around urban transformations, from emigration and migration, to economic precarity and social marginality to depopulation and urban decline. This presentation draws on some of the preliminary ideas underpinning a hagio-ethnography that I have recently started to co-write with anthropologist Eugenio Giorgianni (Università di Messina). Our experimental text weaves the lives of four popular saints in Palermo, Sicily (Saint Rosalia, Saint Joseph, Our Lady of Sorrows

and Saint Francis) with ethnographic material collected over the last decade on encounters with difference, including differences in social class, gender, generation, religion and racialization. We suggest that these encounters with and through Saints offer a privileged place from which to unsettle hegemonic ideas about 'Europe' while proposing alternative modes of inhabiting urban spaces and relating with others that are often marginalized and do not sit well within secular and liberal frameworks, nor within liberal and/or Catholic social and political imaginaries of the Mediterranean.

Presenter(s): Giulia Liberatore

The fragility of theoretical critique and the power of ethnographic distinction: Reflections on liberalism and democracy in post-revolutionary Tunisia

This paper reflects on how I have grappled with liberal democratic governance and social engineering in post-revolutionary Tunisia since 2013. My work, centered on multiple public spheres emerging after the revolution, critiques liberal stagings of democracy for foreclosing its revolutionary potential. I locate that potential in grassroots imaginaries of radical redistribution and the subversion of social hierarchy, including in kinship. Rooted in public deliberations and a historical analysis of liberalism's ties to colonial, nationalist, and neoliberal agendas, my argument treats democracy not as a political system but as a social theory grounded in the ongoing negotiation of legitimacy—aligning it more closely with revolution than with Enlightenment liberalism.

This framing is politically fraught in light of its appropriation by Tunisia's elected-turned-authoritarian president, Kais Saied. In response, I draw on recent conversations with interlocutors—revolutionaries turned civic trainers turned voters. Our joint analysis helps me clarify the important distinction between the non-liberal and the illiberal: the former is the genuine multi-faceted and multi-lingual grassroots imagination and practice of democracy untethered to liberal norms - an overture to recalibrating democratic theory - while the latter is the strategic and reductive culling of the former to serve modes of governance that are xenophobic and authoritarian.

Presenter(s): Charis Boutieri

Liberalism Won't Save Us: Lessons from the Anthropology of the Right

As far-right parties have achieved staggering victories across the globe in recent years, academic interest in fascism has intensified. A growing body of anthropological literature on conservative movements has demonstrated the unique contributions ethnography can offer to scholarly understandings of the Right. Studying the everyday lives of a wide range of differently positioned conservatives—from populists and neo-fascists to (para)military, religious, or "anti-gender" groups—anthropologists have made sense of their interlocutors' illiberal and sometimes "repugnant" worldviews. In the process, however, they have also tested the limits of anthropological ethics and methods.

Drawing from the author's research and the broader subfield, this paper argues that the anthropology of the Right can make visible not only the everyday social realities that animate racist, sexist, or transphobic ideologies, but also the pernicious assumptions about agency, gender, race, and the human that implicate anthropology itself. Anthropology's core liberal foundations have too often hindered, rather than strengthened, our discipline's capacity for grounded critique, especially of far-right movements. Through an exploration of alternative models of ethnographically based theories and practices of resistance, this paper therefore attempts to re-imagine anthropology as an illiberal and antifascist project capable of facing the challenges of the present.

Presenter(s): Lilith Mahmud

Tolerance Without Redemption: Ethnographic Notes from a Shattered Public

This paper shows how Palestinian and Jewish residents in Ramla cultivate local minor practices of tolerance: relational, contingent, and practical modes of living with difference that resist the individualizing and depoliticizing logics of mainstream Israeli liberal discourse. These practices provide a crucial rebuttal to the weak and neoliberal models of coexistence promoted by Israel's left and its international allies, which often aestheticize difference while hollowing out political solidarity.

Yet the decision to foreground tolerance at this moment—when Israeli democratic institutions are being systematically dismantled, when Gaza is under relentless assault, and when public discourse has reached new heights of violence—demands critical reflection. Can highlighting these minor, situated modes of shared life appear as naïve or evasive in the face of collapse and catastrophe? This paper argues that while such practices do not offer redemption or resolution, they nevertheless create conceptual and political space by showing that the capacity to live with difference has never been the sole province of liberalism. In doing so, they reframe the anthropological study of tolerance not as a search for norms or ideals, but as an inquiry into the social and moral conditions that enable or undermine living together with difference—especially when tolerance is not a given.

6947 Aftermaths: Ambivalent Relations and Murky Responses in the Wake of Crisis

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Oral Presentation Session

What do capitalists think, feel, and do in the aftermath of the disasters they've wrought? What happens when they respond to the loss and damage? Whether overharvesting, pollution, or social

corrosion, anthropologists have importantly critiqued the violence inflicted through capitalist pursuits. Yet, as both local and global critics call out such harms, actors in powerful corporations and other related institutions today are often not unaware of the critiques directed to them. This panel proposes to study the actual workings of contemporary capitalism by attending to the anxieties and senses of vulnerability that actors within the system themselves articulate in the aftermath of capitalist crises. Building broadly on critical and feminist ethnographies of capitalism, we examine how the dynamics among corporate actors, affected communities, and other agents around them might be reconfigured when capitalism recognizes, reckons with, or even gestures to repair its harms. By considering "aftermaths" as a lens to probe the ambivalent, surprising, and contradictory forms of relationality that emerge from capitalist vulnerabilities, we aim to move towards an expansive understanding of what life in the aftermath looks and feels like.

This panel consists of four papers, bringing together different catastrophes and geographies to generate vibrant discussion. We ask: What exactly is an aftermath "after," and for whom? In a world filled with multiple, layered, and overlapping crises across time and space, how do different actors contend with nested forms of loss? Given all these complexities, what might it mean to envision and build a future? Reichardt will examine the extent to which settler colonialism becomes an "aftermath" for Dakelh leaders as they govern white settlers in Northern Canada. In Moral's paper set in Northeast India, "dead" silk plantations in the aftermath of intense production are now going through state attempts to "revitalize" its supply chain in the name of heritage preservation. Seraphin approaches wildfires in California as an aftermath of the settler colonial system of fire suppression, tracing consequences of the ways that the US Department of Agriculture is embracing controlled burning practices that it once racialized and disparaged. Yamada focuses on the aftermath of mining pollution and the resulting public health crisis in north-central Japan, following the uneasy pursuit of environmental remediation among industry actors and affected residents in the ensuing decades. In thinking across these papers, we aim to foster a critical discussion on the thorny politics surrounding the ambivalent relations and murky responses that often emerge in the wake of crisis.

Presentation(s): Revitalizing a 'Dead' Plantation: Agrarian Transformations, Corporatization, and Preservation in Northeast India's Silk Plantations

Muga silk (*Antheraea Assama*) plantations in Northeast India, in Assam, are on a steady decline. This luxury silk is predicted to become 'extinct' by 2040, as per farmers and sericulture experts. Muga plantations are seasonally declared dead by the state as a way of renewing the land after

multiple harvest seasons to make the land habitable for silkworm rearing that would lead to a better yield in the following season. However, government intervention, supply chain experts, and corporate interests have attempted to 'revitalize' the Muga supply chain by scaling up production—primarily driven by notions about better access to markets, expansion of trade networks, and renewed interest in heritage preservation. I examine an agrarian industry undergoing a commodity revitalization model due to intensification of production. I further explore the contemporary politics of a seasonally 'dead' plantation that engenders new forms of socioecological vulnerabilities while simultaneously yielding desirable agrarian transformations. I investigate the faultlines in a revitalization model, a feature of agrarian capitalism that are neither apolitical nor entirely exclusionary. I argue that the continued friction between regimes of corporate dependence that seek to expand and simultaneously preserve, and the struggle for agrarian autonomy recasts agrarian communities' relationship to land but crucially shapes dynamics amongst various stakeholders who claim to revitalize and preserve Muga silk.

Presenter(s): Radhika Moral

Dakelh Governance in the Aftermath of Settler Colonialism

What does Indigenous governance look like in the aftermath of colonialism? On June 29, 2021, the Supreme Court of British Columbia ruled that many Indigenous Peoples had a right to veto all further development on their land. This precedent set for BC formalized a key point in the shifting of the power of government away from the Canadian state and towards emergent Indigenous ones. Alongside legal authority, the Dakelh nations I work with have also regained considerable economic and social power in the region and now increasingly set the terms of continued settler presence. I conducted ethnographic research with two Dakelh First Nations who now govern Dakelh people and settlers within an uneven polity. In this paper I examine one Dakelh goal, that of maintaining a sufficient population to receive vital state goods, such as healthcare and infrastructure spending. Dakelh leverage their power to change how the economy is structured in the region and drive changes in how whites treat Indigenous Peoples. They deploy the reasoning of biopolitics and governmentality to support an economy that sustains a white population now dependent on Dakelh sovereignty. Dakelh people must now consider and manage the futures of white settlers who only a few decades ago were active participant in the destruction of their landscapes and their cultures via the residential school system and industrialization. The Dakelh leadership experiences this as an "ambivalent aftermath".

Presenter(s): Elliott Reichardt

The Colonial Art of Failing Up: Fire, Timber, and Crisis in California

In 2025, the US Department of Agriculture (USDA) opened half of all National Forest lands to expedited timber production – justified in part under the sign of "wildfire crisis." Fire scientists and Indigenous leaders noted that this move will benefit the timber industry but do little to reduce high severity wildfire. The root of wildfire danger in California is the settler colonial system of suppression that has criminalized Indigenous management and aggressively fought all natural

wildfire to protect private property. This fire suppression paradigm was established by timber capital and the settler state in the early 20th century, building from an 1850 California law outlawing Indigenous burning. Today, as wildfires escalate, a growing public and governmental consensus heeds the words of Karuk fire expert Leaf Hillman: "fire suppression has failed." However, the way the USDA and timber industry navigate toward greater authority in response to this failure epitomizes the improvisational art of "failing up." With one hand, the USDA is embracing controlled burning practices that it once racialized and disparaged. With the other hand, it strives to exploit a crisis of its own making by declaring a state of emergency, granting itself exceptional power toward further resource extraction. This paper draws from my 8 years of collaboration with Karuk fire managers to evaluate how capitalist and colonial institutions maneuver to gain advantage in the aftermath of their failures.

Presenter(s): Bruno Seraphin

Promises and Regrets: Negotiating Repair after Toxic Exposure in Japan

In the aftermath of a public health crisis wrought by mining pollution since the 1910s, the Toyama region of northcentral Japan saw the rise of a grassroots movement that earned a landmark court victory in 1972. Yet the historic ruling marked only the beginning of the affected residents' much longer work of demanding environmental remediation from the industry, which still continues today half a century later. By tracing Toyama's decades-long search for environmental repair through the ethnographic lens of "promises," I demonstrate how the ever-unfinished work of remediation has brought the mining company and the residents into an enduring relation. In contrast to the earlier hopes for a resolution, the remediation has entailed the two parties' recurrent encounter, negotiation, and collaboration in the decades since. I argue that this unexpected attachment has become a vital arena for navigating the persistent aftermath of toxic exposure. By situating such engagements within broader political-economic dynamics, I suggest how this tie is reconfiguring what it takes to reckon with the environmental legacies of modern Japan.

Presentation(s): "We've Forgotten the Taste": Living Anthropocene Loss in Ngäbe Panama

The Anthropocene concept has been helpfully deployed as a frame to diagnose a present marked by devastating environmental destruction on a planetary scale, even as it is well-critiqued for its potential to occlude uneven distributions of both harm and responsibility for these conditions. While some scholars cast this present in apocalyptic terms (Danowski and Viveiros De Castro 2017; Tsing 2015), others point out that many Indigenous peoples have inhabited a postapocalyptic world for centuries (Whyte 2018, Davis and Todd 2017). But how is the destruction marked as Anthropocene actually experienced in everyday life, particularly by peoples who are living in the wake of colonial devastation? What, if anything, is distinctive about the character of the losses that haunt our present? Here, I approach these questions through close attention to everyday life in Ngäbe campesino communities, indigenous to the mountains of what is now western Panama. These communities are the descendants of Indigenous peoples who fled genocidal violence and colonial regimes of forced labor, who survived by creating a maroon ecology of shifting cultivation deep in the mountains, reinhabiting a shattered world, rebuilding a society, and slowly reclaiming lands that had been invaded by cattle ranchers. In our present, intersecting pressures of climate change, biodiversity loss, and environmental degradation tear at the fabric of life here in ways that to some extent compound the ravages of colonial violence, even as they follow their own distinctive trajectories to ramify erratically through the landscape. How do these forms of harm and loss appear in everyday life? How do people mourn and make sense of experiences of environmental devastation? What, precisely, is lost? What forms of adaptation emerge in the daily labor of householding, and how do these emerge or diverge from the many adaptations instrumental to Ngäbe life in the wake of colonization? Drawing upon ethnographic fieldwork conducted intermittently since 2016, most recently over fourteen months in 2023-4, I consider how the colonality of the Anthropocene moment is felt and perceived in this place through intimate, mundane relations with the landscape and its inhabitants, human and otherwise. Following Mathur (2021), I suggest that attention to these stories of loss and reinhabitation can make concrete the complex, multi-scalar interconnections of the Anthropocene moment which may be known and felt intuitively in the thick of the everyday, even as they remain elusive to received conceptual frameworks.

Rehearsal of Global Elitism: Labor, Desire, and Temporality Among Chinese Female International Students Post-Graduation

A heated debates on international students recently unfolded between Elon Musk and several Republicans. While Musk emphasized the critical role Chinese international students play in U.S. high-tech industries, his opponents argued that these students displace job opportunities for American citizens. Later, the Trump administration terminated thousands of Chinese international student's visas. This controversy thrust these students into either exploitable elitist labor for U.S. technology capitalism or threats to local employment and national security. Such portrayals failed

to grasp the nuanced tension between their pursuit of global elite identities and the everyday labor and emotional struggles they endure.

Decoding this tension, my research explores how Chinese female international students navigate life in the liminal period following graduation. I examine two primary aspects: first, the gendered and embodied labor these students undertake to maintain their legal status, daily life, and employment eligibility; and second, the cultivated desires and expectations of success that motivate this labor. My findings suggest that the aspiration toward global elitism, shaped by the globalized education economy and neoliberal feminist ideals, operates both as a shared desire and as a continuous negotiation influenced by restrictive immigration policies in the U.S. and political dynamics in China. Rather than solely emphasizing localized contexts, my study illustrates global economic systems as "desire machines," generating alluring images of success and compelling individuals to undertake particular forms of labor while outsourcing others. In doing so, this research provides insight into how young women from China's single-child generation negotiate their lives amidst current global political tensions.

In my fieldwork, I trace female Chinese international students' embodied experiences of global elitism narratives and their daily negotiation of constrained biopolitical conditions, through participant observation, in-depth interviews, and affective mapping. I particularly examine the processes involved in job preparation and learning ideals of global elitism under constant political precarity.

Theoretically, this ethnography engages with critical anthropological conversations regarding gendered labor, immigration temporality, and elitism. My research deepens academic discussions on what global elitism and global citizenship mean for new generations of international students navigating an increasingly globalized yet restrictive economy. Additionally, it intersects with feminist and queer theoretical discussions about the cultivation of gendered desires through embodiment and performance. By narrating students' embodied labor as forms of space-making during temporal immigration, this research highlights how queer temporality manifests is possible among populations actively engaging in heteronormativity.

Presenter(s): Xiaoya Yang

Ghosts and Treasures: The Senses of the Great War in Paraguay

This paper analyzes the ubiquitous narratives and experiences about ghosts and treasures in contemporary Paraguay as folk memories of long-past violence and war. Such haunting spirits and buried riches are said to be results of the War of the Triple Alliance (1864-1870), which killed at least half of Paraguay's prewar population and during which its wealthy citizens buried their valuables to prevent looting by foreign invaders. Today, the central-eastern section of Paraguay is full of stories of encounters with distressed wartime ghosts and of people digging the land in search of underground treasures, locally called "plata yvyguy". But ghosts and treasures frequently appear interrelated in Paraguay. Wartime spirits are said to protect the buried treasures by scaring away avaricious and wicked individuals and by revealing their locations – by means of supernatural signs

like strange-looking animals or mysterious flames and lights – to people who morally deserve that once-lost wealth. Throughout that region of Paraguay there are rich families not affiliated with traditional elites whose wealth is said to have originated in plata vygyuy. Equally abundant are stories of chosen people who asked for the assistance of others in unearthing treasures revealed to them, only to become victims of their helpers' greed and violence. Also, according to folk narratives, if an unworthy person tries to get hold of a treasure, it magically disappears; or, if s/he manages to touch it, it suddenly becomes some worthless matter, like coal or earth. Based on ethnographic fieldwork and interviews, this paper interprets narratives and experiences about ghosts and treasures in Paraguay as vernacular memories that allow people to a) feel the past in the present through the senses of hearing, sight, and touch, and b) make moral sense of trauma and violence in ways that depart from official nationalistic, militaristic commemorations. Besides the anthropology of history, this paper adds to the literature on occult economies by studying not colonial and neoliberal contexts – as anthropologists have typically done – but a traditional, peasant-based social formation, and by analyzing supernatural folk narratives and experiences which, far from criticizing capitalist accumulation of wealth, legitimize it.

Luck, Fengshui, and Karma in E-commerce Villages: Imagine the World with Algorithms

This article illustrates how e-commerce practitioners engaged in rural e-commerce use the cosmological knowledge of "Xuanxue" to imagine the rules governing the algorithmic world. Since 2009, state-sponsored digital technology and privately-owned e-commerce platforms in China have spurred an intense socio-economic transformation across rural China, where 13 million rural households have experienced a massive reshaping of family structures, socioeconomic roles, and gendered identities. I argue that in this human-machine game of e-commerce villages, to gain more traffic on the platform, sell more goods, and ultimately achieve greater profits, villagers use all their knowledge from human society, even including cosmological knowledge to imagine the world of algorithms, while algorithms only care about the reduced or partial human value. As artificial intelligence (AI) becomes increasingly embedded in daily life, the dynamic interactions between humans and algorithms offer profound insights into social structures, cultural practices, and individual identities. However, the humanism understandings of the digital world falls far short. My research seeks to unpack the algorithmic realities in which mankind are experiencing a set of new rules, values, and parameters of surviving and thriving in digital world.

Maoist Thangkas and 3D Buddhas: The internal iconoclasm in the creation of agentive images

This presentation explores the materiality of Tibetan thangka paintings, when these man-made things astonish their makers, render people uneasy, or create controversies. The paper extends current discussions of iconoclasm and fetish by examining how people enter and maintain relationships with images that are commissioned and used inside the frame of ritual practices. Based on encounters with thangka painters in Rebgong, a Tibetan community in northwest China,

the paper proposes the notion of "internal iconoclasm"-the multiple discourses or even destruction that art makers must reconcile to produce an image that works. The study highlights how internal iconoclasm helps us understand image makers' concerns, challenges, and choices, whether during political turmoil or in a burgeoning market. The notion of internal iconoclasm not only furthers our understanding of how agentive images work in contemporary societies, but also makes important implications to a broader literature concerning Tibetan art and the so-called "traditional art."

Presenter(s): Ming Xue

Still in the Danwei: How Danwei Memory Anchors People with Dementia in an Urban Care Home in China

Home-making practices in care homes, such as the use of familiar objects and family photographs in a person's room, can help people with dementia experience a sense of belonging rather than feeling a need to return home. These practices cannot, however, fully recreate a previous sense of home (jia in Mandarin). In this article, based on ethnographic research at a dementia care home in urban China, I first examine how residents felt they had lost their home when arriving in the care home, but then explore alternative ways through which they felt a sense of belonging, based on their memories of Chinese danwei living and working institutions. Their life in the care home institution evoked memories of living and working in the danwei. China organized its cities through the danwei system from the late 1950s to the 1990s, a multifunctional institution that provided employment, housing and other services. It was a collective work and living environment-and thus an institution with some similarities to a care home. I examine how the residents' material environment, activities and relationships in the care home meant they felt they were living and working in their danwei. The familiarity of this care home 'danwei' helped the residents develop a sense of belonging. Furthermore, I argue that danwei as a manifestation of the socialist guojia (Chinese state) also created feelings of belonging for people with dementia. My analysis shows that beyond home-making practices, in China and other contexts, belonging for people with dementia in institutions can also be explored by giving people role positions and interactions which are valuable to them and might reflect earlier work or other institutional structures in their life.

Presenter(s): Yuan Yan

The Migration Game: Counter-Cartographies of Migration from the Middle East to the US-Mexico Border

Research on the U.S.-Mexico border has traditionally spotlighted Latin American migration, yet the frontier is now a crucial waypoint for travelers from the Middle East. Displaced by protracted wars, the collapse of regional asylum systems, and the tightening of European corridors, migrants from Iran, Afghanistan, and Turkey increasingly thread their way through the Americas to reach this border. Based on ethnographic research with migrants from Iran, Afghanistan, and Turkey, alongside their facilitators, this paper examines how these actors conceptualize and navigate the complex legal and geographical landscapes connecting their homelands to the U.S.-Mexico border.

Central to their practice is what both migrants and facilitators call "the game," a term they use to refer to this transcontinental passage. How does the term "the game" show the cracks and contradictions in sovereignty regimes, and in doing so, recast border-making as a knowledge practice negotiated in motion? This paper argues that "the game" represents an alternative epistemology of movement, a practical knowledge system that exposes the performative fiction of absolute state territorial integrity. This framing transforms transnational movement into a field of strategic play where migrants and facilitators emerge as skilled tacticians who read territorial boundaries as permeable interfaces rather than fixed demarcations. The metaphor simultaneously captures the high-stakes unpredictability of migration (chance), the necessity for tactical knowledge (skill), the presence of multiple actors with competing interests (players), and the improvisational adaptability required to succeed (strategy). Within this framework, migrants and facilitators have developed a sophisticated taxonomy of practices: from "khodandaz" (self-directed game) involving forest and mountain crossings, to "taxi game" using vehicles for border crossings, "ship game" utilizing boats, "police game" involving coordinated actions with officials (often through bribes), "ticket game" using trains or buses, and "air game" employing borrowed or forged documents for direct flights to destinations. By fragmenting migration into these specialized "games," participants reframe state power not as monolithic but as a disjointed assemblage of institutions whose contradictions can be exploited.

3270 Anatomies of Dispossession: The Political Lives of Loss and Regeneration

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 3

Type: Oral Presentation Session

Dispossession--the existential rupture caused by material expropriation--lies at the heart of colonial capitalism. As the global order undergoes profound transformations in a turn to authoritarian oligarchic empire, dispossession is deepening, becoming further embedded in the structures of colonial capitalism. For communities whose lives have long been defined by dispossession, struggles are shifting: Indigenous peoples, dispossessed of their land and livelihoods, are increasingly forced into impossible choices-extracting resources and land from other Indigenous communities for wages and survival. Precarious wage workers are further entrapped in indentured debt structures that are bureaucratized and normalized within gig economies. Around the world, people face the escalating onslaught of climate catastrophes and intensified resource wars. Under these conditions, the binary between dispossessed and dispossessor blurs, as survival itself is shaped by extractive, market-driven logic.

This panel unpacks the logics and experiences of dispossession, examining how they persist and evolve across diverse contexts. Focusing on West and Central African migrants in Morocco, Leslie

Gross-Wyrtzen analyzes how debt and dispossession produce value through migrants' continued mobility and deferred arrivals, and how the value generated through these processes is reshaping the social and material geographies of migration at "home," in "transit," and upon "arrival." Xinyu Guan studies how the Singaporean state wields the dispossession of homeownership as a disciplinary tool to maintain order, fostering everyday authoritarianism in which citizens are encouraged to report one another. Laura Menchaca examines how Palestinians creatively assert dignity in the face occupation and dispossession. Working with Rohingya refugees in Malaysia, Nursyazwani Jamaludin explores how collective memory and everyday conversations among displaced Rohingya shape the religious worlds and practices of intergenerational Rohingya women. Finally, Lau Ting Hui examines how state-led development on the China–Myanmar border enacts systemic dispossession that becomes absorbed into the rhythms of everyday life.

Together, these papers explore the political life of dispossession, tracing how its structures persist and transform. They ask: How does dispossession take place? What recursive mechanisms exacerbate it, deepening divisions within and across communities? How are shifting configurations of race, gender, and class reshaping the terrain of dispossession? And in the midst of these crises, how are people rebuilding their lifeworlds? By unpacking the anatomies of dispossession, we ask what it might take to interrupt these logics-and what new grounds for solidarity and progressive politics might emerge. This panel contributes to anthropological conversations theorizing dispossession as both an ongoing process and an evolving force that demands urgent political attention

Presentation(s): Dispossession and Debt in the EU-African Borderlands

Over the past two decades, cooperation with European border enforcement priorities across much of northern and central Africa have contributed to changes in long-standing cultures of mobility and livelihood aspirations for many young people. The expansion and hardening of the border across vast areas even far from national boundary lines has driven growing dependence on migrant facilitators (often glossed as smugglers) and transnational, informal, and exploitative lending schemes. The debts migrants incur are often compounded by actions of state and non-state actors who dispossess migrants of their material possessions to deter their mobility or profit from it. This paper draws on research among West and Central African migrants in Morocco since 2016 to analyze the role that debt and dispossession play in producing value through migrants' continued mobility and their deferred arrivals, and how the value generated through these processes is

reshaping the social and material geographies of migration at "home," in "transit," and upon "arrival."

"Not Even a Potato Chip Wrapper:" Home Possessions, Family Disposessions and High-Rise Littering in Singapore

More than three-quarters of Singapore's population lives in state-constructed HDB apartment blocks, which the state largely sells to the residents. My paper examines the moral panic over "killer litter" that erupted in the 1980s – objects falling from high-rise buildings, some of which injure or kill passersby. The panic culminated in a 1986 law that dispossessed homeowners convicted of killer litter of their apartments, even if they had bought it as part of HDB's mass homeownership program. The law was criticized as a form of collective punishment that would evict entire households for the actions of one person. I discuss how the threat of dispossession fashioned HDB homeowners into vigilant subjects who need to practice self-possession: securing their possessions from falling out of the windows, as well as educating and surveilling family members. I moreover trace how "killer litter" evolved as a category, referring to varying kinds of materialities falling out of windows, and problematizing different social actors. "Killer litter" was at first a problem of "trash" thrown by unmodernized Singaporeans needing to be educated in high-rise living; it later became reframed as a question of pathological subjects corrupted by hypermodernization, whose families failed to provide a moral education. I argue that dispossession as a disciplinary tool imbues new meanings onto kinship, property ownership and moral citizenship.

Presenter(s): Xinyu Guan

Palestinian Survivance: Dignity as a Social Imaginary

This presentation focuses on dignity as a social imaginary, one that is central to Palestinian survivance, and that serves as a key node of resistance in the context of dispossession. In the day-to-day of Israeli Occupation violence and colonialism, Palestinians find creative ways of asserting dignity and agency in moments where the occupation seeks to strip them of material and immaterial belonging(s). In the occupation's attempt to assert and consolidate control, Palestinians circumvent these attempts by asserting their own power of will in small, everyday acts of dignity. This presentation reflects on those acts and considers what animates them as well as their impacts.

Presenter(s): Laura Menchaca Ruiz

Spectre of the "Ideal Muslim Woman": Displaced Rohingya Religious Worldmaking in Malaysia

Malaysia, a Muslim-majority country, seemed to offer Rohingya a safe sanctuary to pursue new possibilities of religious and political life. Yet, Malaysia's reluctance to sign the 1951 UN Refugee Convention limit refugees' politico-legal affordances, leaving especially Rohingya women vulnerable to multiple layers of dispossession. This paper studies displaced Rohingya Muslims in Malaysia to understand how conditions of refugeehood generate new religious and gendered

subjectivities. In so doing, I investigate how discourses of the "ideal Muslim woman" among Rohingya interlocutors may reveal their worldmaking in displacement. Drawing on ethnographic fieldwork since 2017, this paper situates the Rohingya woman as a site to track the constitution and contestation of an imagined ummah. First, I explore the implications of conjuring the spectral figure of the "ideal Muslim woman" in Rohingya everyday discourses. I argue that the looming presence of the "Rohingya woman from Myanmar" in everyday conversations and collective memory underline persisting heteropatriarchal structures amid their dispossession. Next, I explore inter-generational Rohingya women's everyday experiences and religious practices to understand the implications of displacement in shaping religious traditions and senses of ummah belonging. Tracing gendered religious discourses highlight the Muslim woman's agency in re/defining and re/working religious worlds amid the spectre of the heteropatriarchal nation-state.

Presenter(s): Nursyazwani Jamaludin

Strangers at Home: Chronic Dispossession among Indigenous Lisu Farmers on the China-Myanmar Border

Over the last four decades, rapid Chinese development has transformed the social, physical, ecological landscapes of the Nu River Valley—a region located along the China-Myanmar border and officially part of Chinese sovereign territory. The Lisu, a transnational Indigenous community and the largest ethnic group in this region, have been profoundly affected by these changes with many transitioning from subsistence farming to wage labor. Drawing on over a decade of engagement and two years of continuous fieldwork with Lisu subsistence farmers, this paper examines these changes as part of an unfolding process of settler colonialism and Indigenous dispossession. I argue that among the Lisu, dispossession is experienced not as a singular event, but as a chronic condition. Examining ethnographically the gradual ways settler-colonial development disrupt Lisu relations with land, kin, and animals, I show how dispossession takes place not just by forcibly removing people from their means of production, but by systematically and methodologically severing their relational foundations of life. These disruptions become normalized—folded into the rhythms of the everyday—making dispossession feel both ordinary and enduring. My analysis extends anthropological discussions of dispossession by showing how large-scale upheavals are absorbed into the everyday, becoming chronic and routinized forms of loss that attract little attention and generate few demands for redress.

Presenter(s): Ting Hui Lau

6923 Ancestral Knowledge as a Guiding Force Within Indigenous Home Visiting

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Galerie 4

Type: Roundtable/Town Hall

As Indigenous Peoples our lives are rooted in the ways of knowing and practices that have been passed down from our ancestors. Our relationships with the spiritual realm are critical to our wellness. The wisdom of those who came before us offers guidance on our journeys and aids in the sustainability of our peoples. Our care for the land, our languages, medicines, ceremonies, and more are gifts that have been passed down. The teachings of our parents, grandparents, and ancestors advise us in particular on our journeys of parenthood. It is ancestral knowledge that supports us as we raise Indigenous babies; they are the ones who have taught us that our children are sacred. Ancestral guidance and its manifestation in our roles as parents and caretakers is a major component in how home visiting, and overall approaches to wellness, differs from common Euroamerican practices. How our ancestors lived advises us now, and how we live now will support our descendants to thrive. This is a cyclical existence that sustains itself in harmony with the land and spiritual realm. This integral understanding is at the core of our novel Indigenous home visiting program: Pilimakua Family Connections.

Home visiting programs are family-focused, voluntary programs that support parents and caretakers with new babies and young children. These programs aim to promote positive parent-child relationships, support healthy child development, and strengthen family well-being. Culturally responsive home visiting can be especially valuable in offering meaningful relationship-based support during the critical early years of a child's life. However, dominant home visitor competencies documented in empirical and professional literature are reflective of Euroamerican practices and do not account for our holistic wellness as Indigenous Peoples. The Pilimakua Family Connections program moves beyond a culturally responsive framework to fully center participating families' Indigenous cultures and languages, including facilitating access to Indigenous families in diaspora (i.e., living in urban areas away from their ancestral/traditional territories). As a home-based intervention that meets families where they are, the Pilimakua theory of change posits that home visiting is a sustainable approach to accomplishing these goals for families with very young children and without access to language immersion programs due to limited numbers of same-language peers. In this roundtable, our all-Indigenous team will introduce and discuss the Seattle-based Pilimakua Family Connections Program's inception and development, and share findings of our program evaluation, all informed by an emergent model of Indigenous Home Visitor competencies that weaves together the practice-based and ancestral expertise of Indigenous home visitors. It is through centering these ancestral practices that we connect with those that came before us and honor their presence in our lives and the lives of our children.

1886 Anthropologists Writing Trade Books

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR B3 (3rd fl)

Type: Roundtable/Town Hall

Anthropologists have long been writing for audiences beyond academia, engaging with issues of interest to the broader public. In the past few years, however, there's been a notable shift in this direction: more anthropologists have pivoted from scholarly to trade publishing. This roundtable will explore the opportunities as well as challenges and misconceptions that accompany this shift by discussing the following questions: How do the conventions of trade writing differ from academic writing? What compromises are needed (if any) to make anthropological insights accessible to non-specialists? How can anthropologists balance intellectual rigor with narrative appeal? Participants in this roundtable - five anthropologists who have recently published trade books, one literary agent, and one editor - will reflect on their experiences navigating the trade publishing world, including developing book proposals, working with literary agents, and engaging with editors and publicists. The roundtable will also address the reception of these books both outside and inside academia and their potential impact on scholarly careers. We invite anthropologists of all career stages who are interested in writing trade books to join us in this conversation about how we can write narrative, literary nonfiction that appeals to broader audiences while maintaining the discipline's core values.

Presentation(s): Color Me Fun: Miami Beach Tourism, Women and the (Dis)Appearance of Blackness in a 1970 Travel Advertisement

This paper assertively critiques the 1970 "Color Me Fun" advertisement, sponsored by the Tourist Development Authority of Miami Beach, which unapologetically places white women at the forefront in marketing the city as a vibrant, cosmopolitan tourism destination. The advertisement is examined through a critical lens that uncovers the underlying messages and implications of leveraging the white female body as a potent symbol of leisure, desirability, and modernity.

The analysis demonstrates how the advertisement constructs a specific and narrow image of Miami Beach while actively marginalizing and erasing the contributions and presence of communities of color within the city. By enshrining white women in idealized scenarios, the advertisement perpetuates a narrative of Westernized femininity that not only aligns with prevailing standards of beauty and lifestyle but also neglects the rich cultural diversity that characterizes Miami Beach.

Drawing on feminist theory, critical race theory, and the concept of the tourist gaze, this chapter meticulously interrogates the racialized and gendered narratives embedded in the advertisement. It scrutinizes how these narratives reflect and reinforce broader societal attitudes and biases, ultimately shaping perceptions of Miami Beach's socio-cultural landscape, both past and present.

This comprehensive approach underscores the historical context of the advertisement and demands critical reflection on the representation of race and gender in media. It provocatively raises essential questions about the ramifications of such portrayals for the communities they misrepresent.

Death, Flesh, and Consequences: A Digital Ethnography of Skincare Culture and Consumptive Performativity

"Beauty" may be a subjective term, yet it often falls into common themes. A petite nose, flawless light skin, and big eyes and lips are distinctly Western expectations of beauty. These ideals are frequently modelled on "SkinTok"; short-form video spaces on TikTok, Instagram, and YouTube. On this "side" of the social internet, users showcase their skincare routines and retail-level quantities of aesthetically packaged beauty products organized neatly in bedroom closets and bathroom drawers. The sheer volume of products - in combination with their effortless application on glowing, youthful skin - creates a digital content-genre oriented around what we call consumptive performativity.

We argue that this content, though soft on the surface, is not neutral. Rather, it emerges from a wider Western moralization of self-management (Yen 2024). We further argue that this commodified tending to skin and the body is enabled by our cultural management of death, flesh, and of the consequences of globalized consumption. In other words, SkinTok's emphasis on anti-aging practices – as well as the product consumption needed to gain a following under hashtags like "skincare organization" and "skincare collection" – necessarily distances users from harmful

realities (Berlant 2011). The idea that age can be reversed and girlhood maintained, as well as the belief that excessive consumption is a personal right rather than global exploitation, is rooted within the same neoliberal logic that distances Americans in particular from death (Saad-Filho & Johnston 2005).

Via ongoing digital-ethnographic observation on TikTok and Instagram, we see this aversion at work in the comment sections of these videos. Users justify such consumption from a lens of individual freedom; they argue that these creators can spend their money how they'd like, or that the act of collecting products is just a hobby (Brown 2019; Proctor 2022). This attention to the individual is amplified by a culture of manufactured consent, wherein violence is justified within political, economic, and media institutions (Herman & Chomsky 2002).

To be clear: we all engage in consumptive performativity to an extent (Brough 2016). What we are interested in critiquing is how the digitized excess of consumption becomes part of neoliberal processes that maintain global structures of power (Brown 2019). This project asks: What motivates TikTok creators to engage in this content production? How are critiques of such content managed in comment sections? In what ways do digital practices eschew ethical consequences? Importantly, we are more interested in these questions than we are in critiquing individual content creators; we argue that these consumptive practices are supported by deeply rooted, shared beliefs in Western exceptionalism, individual freedom of expression, and exemption from global, human consequences.

Fake Canaries: An Ethnographic investigation of how the Birds Aren't Real Parodic Conspiracy Affords Ontological Uncertainty

In 2017, a conspiracy claimed that wild birds were not "real" – at least in the sense of bones, blood, and microbiomes. Rather, they claimed, the birds we see in our backyards or on telephone wires are part of a government orchestrated mass surveillance network. Importantly, the Birds Aren't Real movement is itself not "real"; it is a parody of conspiracy. The organizers of Birds Aren't Real – who today run multiple media channels, organize events, and have even published a book – intentionally evoke key rhetorical features of infamous conspiracy theories. For example, Birds Aren't Real participants have referred to themselves as 'bird-truthers', spoke of causing an 'awakening' of the blind, and discussed themes of an emerging "storm" (in reference to the increasingly worrisome Qanon conspiracy) (Neville-Shepard & Neville-Shepard 2024).

The organizers of Birds Aren't Real aimed to disable the logics of 'real' conspiracy theories by demonstrating how easily conspiracy culture could be counterfeited. However, scholars have suggested that parodic attempts to "hold a mirror" to conspiratorial absurdity may not be effective in inciting deconversion from conspiracy theories. (Devries 2023; Neville-Shepard & Neville-Shepard 2024). Indeed, parodic political comedy tends to serve an aligned audience - not those looking to re-evaluate their political convictions.

Drawing from our digital-ethnographic work on *Birds Aren't Real* and actual online conspiratorial spaces, we combine our disciplinary experience in digital anthropology, feminist philosophy, and ornithology to propose that the processes that form conspiratorial adherence are rarely solved by liberal parody. This is because conspiracies – especially those that involve the natural world – are not a matter of ideological certainty but instead often evoke ontological instability (Luhmann 2020). As conspiratorial adherence slowly forms, alternative worlds become accessible via repetitive moments of embodied interaction with material features of that world (Devries 2023). For example, while we might assume that physical manifestations of climate change, such as birds returning earlier from winter migration, would evoke certainty in climate change, our research suggests that for some this interaction affords a familiar encounter with uncertainty (Bubandt 2014). It is in this moment of uncertainty wherein ways of being-in and interpreting the world become reconfigurable. In turn, online interactions with *Birds Aren't Real* transform it into a "canary in the coal mine" that reveals how what might seem harmless or undetectable can connect to wider processes of conspiratorial world-building. In this sense, *Birds Aren't Real* content may not just mimic the rhetoric of infamous conspiracy, but also the risky world-building effects facilitated by play with uncertainty.

Liberating Masculinities? Gender Performativity, Embodiment, and Intimate Labor in a New York City BDSM Dungeon

This presentation offers initial reflections on an ongoing ethnographic study conducted within a commercial BDSM (an acronym for Bondage and Discipline, Domination and Submission, and Sadism and Masochism) dungeon in New York City, where the anthropologist also performs the role of a dominatrix. Focusing on male clientele who seek out the experience of performing submissive roles within heterosexual commercial BDSM studios in New York City, this research asks: How do these clients' "liberating" erotic experiences, often described as moments of "freedom," "relief," and "empowerment," shed light on how gender norms, economic hierarchies, and racial privilege are reproduced, negotiated, or momentarily unsettled, within and outside the dungeon?

The ongoing study highlights some of the challenges of researching human sexual behavior, including BDSM and sex work, which often face obstacles such as stigma, privacy concerns, and limited accessibility (Rubin 1984; Allison 1994; Berk 1995; Orbuch 1991; di Mauro 1995; Queen 1997; Chancer 1998; Califia 2000; Frank 2002, 2015; Funari 2013). While studies on this industry frequently focus on female workers, they often overlook clients, which is also notably true in professional domination, especially due to the submissive's unwillingness to disclose their practices (Lindemann 2012).

This research adopts embodiment as a methodological perspective (Csordas 1990; 2011), focusing on the agency of the clients, performers, and my own body, examining the interactions and modes of being of such bodies as subjects of anthropological knowledge. Therefore, it asks: What bodies

are being "liberated", and through which body techniques? Where do the feelings of "freedom" and "empowerment" come from?

Furthermore, this study takes into account how power dynamics influence the framing of research topics, the populations studied, and the interactions between researchers and participants. In examining how my embodiment has shaped my access to the field, I

underscore the importance of reflexivity. My choice to conduct research on American clients as a sex worker myself, with extensive experience in this industry, and an anthropologist from the global South seeks to address the power imbalance formative of anthropology as a discipline, whose "Other" was a distant, savage one. In this context, BDSM and my positionality as a dominatrix operate both as a framework and as a metaphor for a broader analysis of how power constitutes and produces relationships in fieldwork and beyond, exploring key questions for anthropology, such as authority, voice, and representation.

Making Dystopian Futures One Robot at a Time: Robotics, Masculinity and the Feminist Refusal of the Future

Utopia and dystopia are commonly understood in relation to time and space. This paper proposes an anthropological approach to understanding utopian and dystopian imaginaries among roboticists on the east coast of the US that adopts an intersectional lens focusing on class and gender. In my ethnographic research I compare discourses and practices of future-making in two oppositional robotics worlds, one which is heavily VC-funded, located in shiny offices, and predominantly heteronormative and male, and another, which is underfunded, located in shabby old buildings, and female and queer.

I analyze what I term the gendered timelines ("timescapes") of utopian and dystopian presents and futures. Whereas a masculinist and techno-utopian robotics project places the benefits of technological development in the future while enjoying a utopian present for only a select few, a feminist project identifies the present as already dystopian. This feminist project involves, I argue, a refusal of the future, viewing the future as a broken capitalistic promise of equality that will never come.

Based on over than 24 months of multi-sited ethnographic fieldwork, and using anthropological methods of participant observation, semi-structured and informal ethnographic interviews and focus groups, my research asks: how is time gendered in competing ideological visions of the future?

My paper adds a feminist lens to David Graeber's reflection on the broken (utopian) promises of a post-labor society: "Where, in short, are the flying cars? [...] Even those inventions that seemed ready to emerge [...] ended up betraying their lofty promises. What happened to them?" (Graeber 2012) My work is situated within the emerging field of the anthropology of the future, which explores how societies conceptualize and engage with the future, drawing from a diverse array of temporal

philosophies and practices. It seeks to understand how people's actions in the present are influenced by their imaginations of the future, as in Miyazaki's notion of "reimagining the present from the perspective of the end" (Miyazaki 2006). Within the context of anthropology of the future, scholarship has called attention to the deeply ingrained idea in modern societies that time is inherently linked to progress (Bryant, Knights 2019).

Drawing on Silvia Federici's call to reimagine feminism and communism in the twenty-first century through "the principle of the commons" (Federici 2019), I theorize the commons as a mode of "feminist utopianism" that refuses a future that never arrives and instead focuses on material spaces and practices of dealing with the dystopian present that we all live in. I intervene in a tradition of feminist speculative fiction and as a feminist, I turn to the genres of speculative realism and fiction as ways to urgently re-envision alternative futures beyond a VC-dictated agenda.

Presenter(s): Maria Ryabova

Naked bodies: a study of women, subjectivity and forms of erotization

This work stems from my doctoral research, whose problem is to investigate women as social subjects when their existence is forged from their experience in the sex market. I start from the assumption that sexuality and eroticism are constitutive elements of prostitution and sex work, and are fundamental to its discussion. I draw on the theoretical and methodological perspectives of Brazilian and international anthropology, which emphasize the social and relational nature of the body and the norms that constitute it. I also take as my basis the symbolic constructions and social conditioning factors that permeate the figure of the prostitute, and I take into account the influence of the prostitutes' movement, the feminist movement and the human rights movement in the discussion on female prostitution, referencing them from research on the subject carried out in Brazil over the last few decades.

I am building an ethnography that looks at two distinct, but interchangeable, scenarios of sex work in the city of São Paulo: The first concerns women who call themselves "escorts", perform a various forms of sex work, circulate among the middle classes and make great use of digital social media to carry out their work. The research in this scenario has as its axis and guiding thread the accompaniment of two interlocutors with whom I have been in contact since my master's research.

The second scenario in which the research was carried out concerns prostitution practiced in squares, nightclubs, bars and hotels in the Santo Amaro district, in the south of the city of São Paulo, by low-income women, often in precarious situations. The research in this location is based on dialogue with a social project called "Projeto Antonia", which is responsible for working to welcome, approach and provide social assistance to women who work in prostitution in this area. The research in this context stems from my work as a volunteer and researcher in the activities carried out by this social project.

Based on the fieldwork carried out so far, I have observed that my interlocutors tend to move between experiences that sometimes highlight their choices and strategies and sometimes demonstrate processes of vulnerability. With this in mind, I would like to develop an analysis of

what the exercise of agency is in the context of these women's experiences, considering the theoretical debates that problematize the liberal and individualistic notion of agency, and seek to understand it within systems of power and domination. I would also like to explore how their trajectories contribute to the formation of a unique knowledge about sexuality, eroticism and love relationships, which influences their perception of themselves and their love and family relationships.

Presenter(s): Carla Beatriz Campos

The Mahila Brigade of Dhusia community: An Intersectional Tale of Resistance and Negotiation of Urban Dalit Women in North India

In India, the cities are haunted by the ghost of caste hierarchies that are not ritualistic, yet significant enough to possess and dictate the hegemonic discourses of Brahmanical patriarchy. Violence caused by caste-based atrocities only gathers attention when it ends in evident fatal consequences such as deaths, rapes and more. However, urban Dalits often face the everyday experience of humiliation and psychological and social exclusion, which comes off as harmless or implicitly casteist. Casteism in urban spaces demands proof and logic, as if it is a supernatural entity that requires proof of existence or else it does not exist. However, caste-based violence is coded in everyday life for urban Dalits in Delhi, and it exhibits its impact through the paradox of visibility and invisibility of caste as a social institution. Furthermore, the deception of castelessness in urban India is leading to selective epistemological erasure of Dalit cultures and their micro-histories. Intersectional oppressions of caste, gender, and class shape Dalit women's identities in India and deny them agency and dignity. Whether it is Phoolan or Mayavati who emerged as Dalit woman icons in North India, the collectivisation of Dalit women remains a vague mystery. In India, Dalit women's identity is surrounded by stigmas and sorrow, and they witnessed exclusion from Savarna (caste elites) feminist movements and anti-caste mobilisation by Dalit men. Unlike Northern India, the southern and western parts of India witnessed historical resistance through anti-caste movements under Ambedkar or Periyar's leadership. The anthropological enquiry of the Dhusia community, a sub-caste under Chamars, entails the lived experience of the Dhusia people in Delhi as urban Dalits. In my doctoral project of an auto-ethnography of Dhusias in Delhi, I came across a representational body of the community referred to as "samaj" (society) and officially known as "Dhusia Mahasabha Dilli Pradesh" (DMDP). The study explores the caste assertion of urban Dalits in North India and the lens of the anti-caste movement beyond Ambedkarism. On enquiries and interventions on gender representation within DMDP, a separate wing called the "Mahila (women) Brigade" was formed to appoint Dhusia women. With time, the Mahila Brigade became a significant part of DMDP. Dhusia women took great interest and initiative within the organisation and outside, representing their community in activities or social events like collective weddings, spiritual gatherings, and local political events. This paper explores the narratives and lived experiences of Dhusia women in DMDP's Mahila Brigade through a Dalit feminist standpoint. The resistance and negotiations in the everyday life of the Dhusia women in the Mahila Brigade within and outside the organisation, and their attempts to seek dignity and assert solidarity through their caste identity as urban Dalits in Delhi.

2938 Black Ecologies: Ghosts, Inheritances, Futures

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

In recent years, the concept of Black ecologies has come to serve as a gravitational hub for a wide range of academic and non-academic projects centering Black improvisations of collective life forged under conditions of constraint. An analytic frame honed in response to the unabated intensity of antiblackness and ever-escalating environmental precarity, Black ecologies draws attention to practices of world-making that diverge from prevailing social orders characterized by racial capitalism, colonialism, and ferocious extraction. As insurgent spaces, Black ecologies have been sites for the generation of nonproprietary modes of relating and radical understandings of human and nonhuman difference. While broad traditions of Black ecological thought, practice, and relationality in North America have been remarkably durable, many specific realizations of Black ecological life have been fleeting, their tenuousness often linked to the threat they pose to a white supremacist status quo.

Engaging the conference's guiding theme ("Ghosts"), this panel speaks to the varied afterlives of particular Black ecological endeavors, experiences, and mobilizations, as well as their expansive figurations of environmental justice. What are the material and immaterial legacies of these rehearsals of other worlds? In what ways might we welcome their haunting presence in a moment when their central lessons remain too often unheeded? How might Black ontologies and epistemologies, which have long scrambled governing notions of the "real", enable this haunting to register as more than a metaphor?

Presentation(s): Gulf Coast Tenants and the Chemical Plantation

Allison Puglisi's paper looks to the work of Gulf Coast Tenant Organization (GCTO): a network of mostly Black women tenant activists who assembled in the 1980s and organized across Louisiana, Alabama, and Mississippi. After winning building repairs, strengthening tenant protections, and ousting abusive managers, GCTO broadened its focus to combat "Cancer Alley": the 85-mile stretch of petrochemical plants along River Road between Baton Rouge and New Orleans. As GCTO knew well, the plants were not the first industry on River Road. In their place once sat indigo, sugar, and rice plantations. When oil companies came to the region in the early twentieth century, they

razed the historic buildings of freedpeople; this erasure continued in the form of home buyouts and town closures. GCTO believed the previous violence of the plantation and the present violence of the petrochemical industry were contiguous: so much so that they used the phrase "chemical plantation" to describe the lived conditions of Black Louisianans. With that in mind, this paper explores how Black tenant organizers confronted the chemical plantation and made sense of their place on lands their ancestors were forced to cultivate.

The Black Oceanic and Contested Racial Geographies in Miami

This paper examines the complex intersections of race, space, and play. Drawing on archival materials and contemporary art, it analyzes how colonial and Jim Crow legacies shape access to and relations with water spaces in Miami and the Caribbean. The analysis begins with an examination of coloniality in tourism and photography of the circum-Caribbean and relates it to real estate development in the Greater Miami area. The discussion then moves to Virginia Key Beach, Miami's historically Black beach, and to its role in the city's spatial order as a recursive site of dispossession and securitization. The paper concludes by examining the figuration of Black subjects in water spaces by contemporary artists whose works reveal how spatial ordering continues to shape access to water and to recreation. Throughout, I argue that oceans and waterscapes reveal logics of rupture and exploitation and simultaneously present unstable grounds for the reconstitution of Black space.

Presenter(s): Kessie Alexandre

Black Environmental Science: Nanny, Obeah, and the Mysterious Ecologies of Marronage

Within Afro-Jamaica religions, "science" is used as descriptor for traditional medicinal knowledge, ritual practices, and spirituality. Practitioners of Obeah, Myal, and other Afrocentric spiritual traditions, often identify themselves as "scientists". We can read this as a challenge to the negation and denigration of Marron practices as evil or satanic. Through the analytical framework of Black Ecologies, this paper leans into a reading of the maroon claim to science not so much an appeal for Western science or the translation of Maroon practices into Western scientific rationality, but an assertion of a counter-science, an alternative Black science that is not less valid than Western science. Centering the famed Grande Nanny, chieftainess of the Windward Maroons, I consider how the mythic stories of marronage and maroon obeah disclose a Black ecological science concerned with the advancement of Black communal flourish. While Nanny is denounced by colonial historians as a practitioner of witchcraft, and unmoored from reality, I argue for attention to the concrete Black ecologies, messiness of social reproduction, and gendered geographies of mobility that placemaking evince. Taking seriously the British fears of the maroons, narrated as a ghostly foe haunting the project of conquest, the paper considers the present imperative of marronage in struggles for socioecological justice and agrarian sovereignty.

Presenter(s): Alex Moulton

Coastal Conservation & Black Terraqueous Dispossession

The current form of ecological science, which has informed modern environmental thought and coastal management, not only exists without consideration of Black life, but functions through narratives of anti-blackness. Interrogating the formation of modern ecological science requires us to ask, who do we imagine as able to live and thrive within our collective futures? This is a call not only towards conserving the natural spaces that we can view as present within our futures, but the communities and cultures that intend to remain in place. This paper will parallel the formulation of ecosystem ecology and its subsequent influence on the modern environmental movement to legacies of Black terraqueous dispossession in the Sea Islands, one of the many unseen ghosts of the ecology field. It will argue that the employment of ecology as intertwined with efforts towards enclosure and accumulation of Black land, implicates ecological conservation as a tool toward Black land and water dispossession within the United States. Although literature has discussed the forms in which environmentalism and conservation practice have fueled the dispossession of Indigenous lands, I follow the assertions of Heynen and Hardy that conservation practice is a tool among many to generate a white spatial imagination on Sapelo Island (Heynen & Hardy 2017). The current formulation of environmentalism is part of this white spatial imagination in which Black life is absent.

Presenter(s): Adrian Cato

Revisiting the "Promised Land": Black Utopian World-Making in the 20th-Century Hudson Valley

For a brief period in the mid-20th century, the International Peace Mission Movement (IPMM)—a Black-led social change organization—improbably became the largest landholder in an upstate New York county that had been characterized by fierce antiblack exclusion since the time of slavery. In Ulster County, the IPMM inaugurated another landscape that they called the "Promised Land", creating cooperative housing and agricultural ventures that brought thousands of Black (but not only Black) people from New York City and other urban centers to the Hudson Valley hinterlands. In reconsidering the IPMM's achievement, this presentation reroutes contemporary scholarship on Black ecologies through the Jim Crow north. Amidst renewed regional calls for "land in Black hands", the presentation turns to the legacies of the IPMM's largely forgotten rendition of more-than-human social life. How does the specter of the IPMM's "Promised Land" endeavor figure among contemporary Black campaigns for redress within a regional landscape blasted by four centuries of interwoven settler colonialism, antiblackness, and ecological violence?

Presenter(s): Daniel Schniedewind

If Heirs Property Was A Portal

In the winter of 2024 the Black Land and Liberation Initiative, now a defunct experimental project, ran a series of focus groups and story circles regarding Black folks and their relationship to land. One of our focus groups was an heirs property pod featuring a directly impacted descendant of heirs land in Louisiana, a young Black lawyer from Lafayette, and a long time Black land steward of family land in the Mississippi Delta region. This paper explores that conversation and the ghostly

remains of Black folk's connection and distance from southern ancestral lands through the phenomenon known as heirs property. We explore land as kin; the blood ties that orient one to the soil and the soil as one's family. And on the flip side we explore the abstraction of ancestry through migration, the fraying of family bonds, and the forces of private property yielding individualized ownership and land loss.

1872 Black Queer Hauntings

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Oral Presentation Session

Anthropology is haunted. From its perpetuation of sexual conquest and other modes of colonial violence to its ongoing debates about the repatriation of human remains and cultural artefacts, the discipline has found itself in a moment of reckoning with its ethical foundations. In doing so, however, some anthropologists have subconsciously (and, at times, intentionally) used this fraught history to silence the study of autonomous, consensual practices in sexual relation and identification. This spectral presence—a fear of engaging with human sexuality beyond histories of injury, violence, and abjection—has limited the potential of what the discipline can do in concert with the peoples most impacted by its legacy.

Despite these limitations, Black scholars have used ethnography as a way to speak earnestly about sexuality, embracing the liberatory potential of sex—as act, performance, embodiment—in their theorizations of Black life across the diaspora. This panel finds articulation in the works of Black queer and feminist ethnographers who take sexuality seriously as part of our collective liberation praxis (Wekker 2006; Williams 2013). Engaging with monstrous performance, afro-diasporic cosmologies, art worldings, and political ecologies, the panel continues opening space within Anthropology for critical discussions about racialized genders and sexualities. In pushing the ethical boundaries of Anthropology, the panel proposes an undisciplining that might lead to more generous interpretations of Black queer research within and without the academe.

In dialogue with Black queer anthropologists across the diaspora, this panel considers Black queer hauntings in two registers: 1) the ghosts that haunt us; and 2) the ghosts we become in response to Empire. The papers in this panel coalesce around the following questions: How do Black queer communities grapple with the spectres of colonialism to envision more equitable worlds? What forms of "good haunting" might lead to the realization of these worlds? In what ways do dark ecologies engender forms of relation, play, and other liberatory practices previously foreclosed under Western humanism? Focusing on Brazil, Colombia, and the United States, the panelists lean into the multifaceted nature of haunting to envision how Black communities mobilize ghosts—of people, entities, places, and times beyond our current moment—to materialize worlds rooted in

afro-diasporic ways of knowing, being, and living.

Presentation(s): Sexuated Entropies: Black Chthonic Cosmologies in Ganja & Hess

In a restaged black Eden, a sensuous black femme drinks from the ground. Her voracious appetency is a corollary of her metaphysical transformation, a vampiric modulation of black abjection. Her hunger and her willingness to satiate it differentiates her from her husbands -- both of whom cede their beings to cosmological haunts which subsume them. This is Ganja & Hess, Bill Gunn's 1973 art-house vampire film which stages zones of cosmological drama in what Celio Cooper calls the "postlapsarian" cosmological schema of Blackness as fallen, diabolical, and uncontainable. I use this black chthonic cartography to track the vertical alignments of the film's protagonists: Dr. Hess Green, George Meda, and Ganja. Through the erotics of bloodlust, possession and unrepentant hedonism, the film imagines abjection as not merely that which haunts black being, but that which enables it. Ganja's hunger -- insatiable, decadent, and sovereign -- queers the politics of survival by choosing, rather than inheriting, metaphysical alterity. While Hess retreats into Christian martyrdom and Meda enacts an ontological refusal-through-suicide, Ganja remains: erotic, undead, and reborn. Her final gaze, fixed on the man she's killed and resurrected, signals a sovereign futurity grounded not in redemption but in hauntological self-possession. This paper considers Ganja & Hess as a speculative anatomy of queer Black haunting, one in which sex, death, and refusal generate cosmological insurgency.

Presenter(s): Kyera Sterling

Representatividade: The Body Politics of Federal Brazilian Federal Representative Erika Hilton

In 2025, the Rio de Janeiro-based samba school Paraíso do Tuiuti made Xica Manicongo their theme for the yearly Carnaval competition between samba schools. Manicongo was a Black gender variant subject from the Kingdom of the Congo who was enslaved in Bahia, Brazil, and denounced in Portuguese inquisition documents from 1591 for dressing outside of European gender norms. Contemporary activists and artists have resignified Manicongo's archival presence as an early proof of African-rooted trans identity in Brazil. Erika Hilton, Brazil's first Black trans federal representative from São Paulo state, was invited to headline the Paraíso do Tuiuti's homage to Xica Manicongo. In the opening to the school's performance, Hilton lamented the violent execution and burning of Manicongo's body by the inquisition and insisted that this kind of violence continues to haunt trans people throughout Brazil. But she boldly affirms that her presence as a federal representative is to prevent that history from repeating itself. Analyzing this bold moment in conjunction with Hilton's political projects as a representative, as well as her political speeches, I argue that Hilton mobilizes a representatividade through a bold body politic which connects her fate to all other trans people and women throughout Brazil.

Presenter(s): Watufani Poe

La Mojana: Black Queer Hauntings in the Maroon Community of San Basilio de Palenque, Colombia

How might spectral figures queer time in ways that challenge both binary notions of gender and linear notions of time? This explores black queer hauntings in the maroon community of San Basilio de Palenque in the Caribbean region of Colombia. It focuses on the *mojana*—a spirit that lives by the river and represents the underworld. A distinguishing feature of the *mojana* is that she appears with feet backwards, and can take on the appearance of a male or female, child or adult, human or adult in order to lure the living into the land of the dead and the spirits. In addition to this queer presentation, the *mojana* represents a queering of time in that her existence is atemporal. Her ability to intervene in past, present and future inaugurates the new temporality, or at least a different temporal logic. The connection with queerness is further evidenced in the notion that the *mojana* avoids the use of salt in her food, and can even be warded off by throwing salt. This is connected to queerness in that the colloquial term for queer men in palenque is "le falta sal," or "he is missing salt," thus bridging the absence of salt and queerness in this maroon community. By analyzing the *mojana*, this paper considers the importance of the spectral as a sovereign space of Black life for ancestral communities, and asks what forms of "good haunting" sustains, protects, and helps realize these worlds?

Presenter(s): Amber M. Henry

Archival Pleasures: Race, Region, and the Pornographic Imagination in Brazil

"Is desire enough to propel a body across slave lines?"

By positioning our desire for freedom as/like our desire(s) for pleasure, intimacy, companionship, scholars Treva B. Lindsey and Jessica Marie Johnson (2014) widen the scope of archival research to attend to erotic lives previously thought insignificant or impossible in the context of chattel slavery. This paper extends their archival reading practice to Acervo Bajubá—a LGBT+ community archive in São Paulo, Brazil with a selection of pornographic films claiming to feature Black and/or Indigenous men. Drawing upon pornotopes that render Black : Indigenous flesh as primordial, exotic, and ripe for consumption, these materials sit at the nexus of colonial haunting and pleasurable possibility. In response to this tantalizing contradiction, I worked with Ediyporn—an experimental porn collective based in São Paulo—to write, direct, and star in a film that refracts the violent histories indexed by these materials. Titled "Acervos de Prazer" (Archives of Pleasure), the film places me—as Black queer diasporic subject and researcher—in erotic relation to the pornographic imagination that haunts this archive. In conversation with Black queer anthropologists and Black porn feminists, this paper pushes the limits of anthropological ethics to consider what consensual, mutual pleasures might be possible in diaspora.

3844 Blind Spots: Uncertainty and Alterity in Healing and Medicine (I)

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

This panel explores how medicine, like any other social system, is always in flux and continuously grappling with the unknown. This panel is timely, given the increasing hesitancy around vaccine use and public health programs in both the Global North and the Global South. From anti-vaxxers in the US to patients resisting polio vaccines in countries like Pakistan and Nigeria, global health programs continue to grapple with issues of trust. In this context, we propose this panel to bring traditional anthropological concerns around efficacy and healing to the forefront, enriching our understanding of why people do or do not trust medicine.

In this panel, we bring together presentations to juxtapose uncertainty in the use of new medical technologies, such as artificial intelligence, prosthetics, precision medicine, and telemedicine, with uncertainties in traditional spaces of healing. We argue that by acknowledging blind spots in modern medicine, we can approach medical discoveries from a humbler vantage point, helping to dismantle rigid binaries between "science" and "superstition" as well as between "rationality" and "irrationality." By considering blind spots in a range of medical institutions and spaces, as well as indigenous healing practices, we argue that the contemporary medical landscape would benefit from more, not less, epistemic uncertainty. This panel attempts to diagnose the temptation to view medical discoveries as magic-bullet solutions and the projection of these inventions as complete and perfect, especially as media, start-up companies, and venture capitalists inflate solutions to conjure new expectations and raise capital.

The panel features ethnographic studies in clinical spaces to think about how imperfections, contingency, and unpredictability define clinical research as much as healing practices in a wide range of cultures. Instead of viewing this comparison as an attempt to discredit scientific practice, the comparisons can further help us understand the dynamic nature of social life and the ways in which it influences medical practices. By bringing together our interests in medical anthropology, religious studies, psychoanalysis, and kinship, this panel will explore how we as humans are continuously in the process of sublimating and displacing our feelings, and therefore the relationship between the self and the other becomes central to any inquiry into the complexities of healing and recovery -- whether this includes relations, drugs, or diagnostic media.

Presentation(s): Braiding Knowledges: Ethnographic Case Studies of Tibetan Medicine in Exile

In the past decade, Robin Wall Kimmerer popularized the notion of "braiding" in *Braiding Sweetgrass: Indigenous Wisdom, Scientific Knowledge, and the Teachings of Plants*. Her work has become increasingly relevant in the context of environmental stewardship and offers important applications to cross-cultural integrative medicine. Considering the distinction between the process that Mi'kmaq peoples call "two-eyed seeing" and the method of "braiding knowledges", this paper engages these concepts in the clinic based on research conducted on Tibetan medicine in exile in North India. This exploration aims to illuminate the tangible practices, successes, and challenges of the braided methodology. What are the ways in which indigenous knowledges (IK) and western science (WS) can unite and coexist as different but equal knowledge systems in response to an increasingly global healthcare landscape?

Presenter(s): Dara Bramson

Hepatic Hesitations: Cirrhosis as a Lens on Biomedical and Bodily Uncertainties

Every heart, lung, or kidney fails in a more or less similar way; every liver failure is its own unique disaster. Such are the uncertainties of cirrhosis, the process in which long-term liver inflammation leads to irreversible scarring, which in turn leads to complications like confusion, muscle wasting, fluid accumulation, and catastrophic bleeding. The chronically diseased liver may be especially "good to think with," as it melts common biomedical dichotomies of acuteness and chronicity, stability and deterioration, mind and body, even science and craft – yet it has received short shrift in the anthropological literature (see Rehsmann 2022). Drawing on clinic- and home-based ethnography in the urban U.S. among low-income patients suffering from cirrhosis and the family members who care for them, we ask: How do biomedical practitioners bend and manage expectations amidst the unknowability of cirrhosis? How do social vulnerability, disjointed medical communication, and the irreducible waywardness of the cirrhotic liver converge? Liver failure, we argue, offers a limit case for understanding biomedicine's capacity to predict, tame, and definitively narrate the body.

Ghostly Technology: Spirits in the Age of AI and Precision Medicine

Biopharmaceutical companies are under pressure to enter new drug markets to ensure profitability. They often turn otherwise "normal" life transitions into opportunities to create new markets. However, the competitive space can result in direct losses if they are not the first entrant. In this financially vulnerable position, compounded by delays in drug market introductions and

challenging lawsuits, their survival hinges on the creation of new drugs. More importantly, they rely on the "orphan" status of drugs to generate profits despite structural vulnerabilities, often selling them at exorbitant prices. This practice frequently leads to significantly increased prices for generic drugs, making treatment extremely expensive for those suffering from rare chronic conditions. Using a range of sources, this presentation explores how biopharmaceutical companies target rare conditions with narrow windows of opportunity but high profit potential in the age of precision medicine and AI, resulting in higher costs of care for patients due to the development of specialty drugs for generics. Using blindspots in medical research as "spirits" frustrating the certainties of biopharmaceutical promise and by relying upon previous ethnographic research among healers in Pakistan, I highlight the "unknown" that medical companies continue to grapple with and are unable to overcome, as they make a case for producing drugs that perfect and prolong human life.

Venue: Marriott **Room:** Galerie 5

Type: Oral Presentation Session

Anthropology is haunted by our colonial past. Colonial tools: from institutional grant writing to data production and dissemination, to the machete and the plow, are threaded throughout our research, our lives, the lives of the communities whose voices we seek to illuminate. This panel interrogates colonial tools and the role they play in our tangled lives and livelihoods. The papers ask and answer questions: Can colonial tools actually be reframed? Is this a useful endeavor? Does it lead to constant critique but little useful action or change? Do we really seek to build anticolonial approaches? Is the unimaginable actionable? Through wide ranging ethnographic examples, the papers in this panel interrogate the complexity of anticolonial approaches in a world shaped by colonial tools. These reflexive understandings open anthropological possibilities, moving beyond guilt and lip service to furthering intentional transformative actions. (Part 1 of a double session)

Presentation(s): Can Institutions Be Anti-Colonial?: Lessons in Decolonial Methodologies from the Ab'ink of Maya Leaders and Academics

Decolonial methodologies remain an imperative for anthropological research, however, they are subject to continuous critique, redefining and reimagining in a changing disciplinary context. This

paper aims to further interrogate the methodologies defined by the decolonial moniker in anthropology through an examination of experiences at the 2019 ab'ink, a gathering of indigenous Maya leaders and research scholars in southern Belize. It considers the significance of the Maya leaders' use of the ab'ink, a traditional listening space in Maya communities, to engage academic anthropologists in conversation with local, national and international experts in support of their ongoing struggle for land tenure and community governance. In the context of the articulation of Maya values in the wake of the legal land rights victory, this paper explores how indigenous communities might deploy environmental and cultural heritage practices as resistance to colonial development models to reify alternative conceptions of what it means to live a "good" or "healthy" life. It also asks how anthropological researchers might, or might not, play a role in this deployment. Through an analysis of interviews around participants' experiences of the ab'ink as both a discrete event and a lesson in indigenous methodology, this paper aims to better articulate what is possible in creating a "decolonial" discipline, or designing "anti-colonial" research.

Leveraging Article 40:1 in Guyana's Constitution: How the National Tshao Council is utilizing constitutional mechanisms to advance food sovereignty

This paper examines the intersection of Indigenous rights, food sovereignty, and legal frameworks in Guyana, focusing on the role of the National Tshao Council (NTC) in shaping food policy. Based on 16 months of ethnographic fieldwork among the NTC and its executive council and extended interviews with a former President, Attorney General, Minister of Agriculture, and Minister of Indigenous Peoples' Affairs, my paper traces how the NTC, the largest Indigenous organization in Guyana, is working to utilize its constitutionally mandated right to provide the State with policy recommendations. In addition to the various strategies employed by Indigenous peoples to advance food sovereignty along the margins of State power, this paper discusses a current initiative involving legal activism to enforce Guyana's constitutional guarantee of the right to food, as outlined in Article 40:1 of the constitution, providing a unique legal framework that could empower Indigenous communities to enforce food sovereignty as a human right. By leveraging Guyana's constitutional and international obligations in recognizing the right to food, this paper suggests pathways for strengthening the NTC's ability to advocate for policies that respect new definitions of food sovereignty and proposes a more inclusive and legally enforceable framework that recognizes food as a fundamental human right and supports the self-determination of Indigenous communities in Guyana.

Presenter(s): Mark Chatarpal

The Bronx and the Politics of Data

In a letter to communities, scholars, and educators, Eve Tuck urged for the suspension of "damage" as a research method, instead proposing "desire as method," which reveals the magic, complexity, and self-determination of life, instead of reducing communities to their traumas. In this paper, I explore what transpires when "desire as method" is practiced in processes of data collection—

what occurs when data is not used to legitimize violence, but to reinforce community resilience and self-determination. I present two case studies examining community responses to data collection, one based on my preliminary research with growers in the Bronx who use Farming Concrete, a data collection toolkit, as a mechanism for amplification and legibility against displacement, and the other, based on the data collected on the public health of Bronxites in the 1970s to today, with a focus on reflections on the current use of data by the Metropolitan Transportation Authority and the city of New York in their quest to uphold congestion pricing. I grapple with the historical use of data and its violent threads, and move towards imagining what ethical data practices led by community can look like.

Presenter(s): Ranya Perez

Degrowing data in science? Data as a tool for the cultural (re)production of ignorance

In the paper, I discuss data as an active colonial tool. A tool that informs how knowledge is constructed in science. By signifying what data is meant to describe, it can also tell us what is left out and ignored in a particular datafied representation. I ask, is the growth of data a colonial tool or a colonial outcome? Can we imagine a degrown data production? Can data be decolonised from its original intentions? How can anthropologists (re)formulate our relationship with data? How does data live? How, by whom and why is it maintained? I begin by positioning data as a statistical tool and how it laid the foundation for science, and ask what role data plays in the scientific endeavour to build knowledge. What is hidden and ignored in data and as data? As a tool intrinsic to scientific endeavour, data represent what is known and also how that knowledge is constructed, when and by whom. I shift the focus from epistemology to agnotology as the 'cultural production of ignorance' (Proctor and Schiebinger 2008) by asking how data actively produces ignorance in relation to the knowledge it is supposed to represent.

2752 Desiring Ghosts

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Roundtable/Town Hall

Anthropology is haunted. Our disciplinary ghosts continue to linger despite decades of ritual exorcisms aimed at decolonization, recapturing, reinvention, or renewed responsibility. But what if the ghosts don't linger because we haven't found the right formulae to release them from this plane of reality? What if they remain because we desire our ghosts-and they desire us back?

This roundtable explores what is at stake in our individual and collective desires for the very ghosts we desperately wish (or claim to wish) to no longer stalk our halls. We do not seek to enact yet another ritual exorcism; neither is it a retelling of the importance of anthropological hauntology-the anthropological study of ghosts and experiences of being haunted-though this work is important

here, too (Good, Chiovenda, and Rahimi 2022; see also Fischer 2014; Strong 2021). Instead, we will explore how the incomplete project of a decolonizing anthropology (Harrison 1995; Jobson 2016; Bolles 2023) across subfields is repeatedly stymied by the hauntings we collectively fear, resent, and loathe, but cannot bear to see leave, from the persistence of the discipline's raciolinguistic uncanny (Rosa and Flores 2020) to colonial and imperial inheritances in archaeology and biological anthropology. We end not with a hauntological roll-call or litany of the ghostly presences from which to rid ourselves, but by reflecting together on the question: how does anthropology move beyond naming disciplinary ghosts and shift to helping them cross over as an act of resistance and collective liberation?

4652 Embodied Hauntings: Reimagining the Human Condition Through Sport

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

Sport spaces, bodies, and movement practices are shaped by past traces of colonialism, capitalism, racial and gender inequality, while ecological change continues to inflect the present. Sport practitioners are haunted by their dreams, hopes, and aspirations, often submitting to extreme processes of transformation, consumption, and even destruction. Across diverse contexts, the ghostly immaterial offers tangible ways of reimagining the human condition through sport. This panel invites scholars to explore how practices of sport and the sporting body are shaped by haunting forces of the past and of the future.

From playing fields built on contested lands to practices that reanimate cultural heritage, and from embodied performances of resistance to the specters of commodification and exploitation in global sports industries, "sport" and its practices emerge as compelling sites of meta-social commentary. This panel examines how historical and cultural memory intersect with sport, and those that consider how sporting practices create possibilities for resisting and reimagining the haunted landscapes of the present.

In sport, personal biographies intersect with the collective histories of communities. Following ethnographic work that explores the entanglement of care and injury in combat sports (Hopkinson, 2024), and virtuous suffering among ultra-endurance athletes (Lanclus, 2024), we delve into the sporting body-in-movement. Hence, the sporting body might be conceived as a vessel of transformation and self-cultivation (Rana, 2022), or as a receptacle of material and immaterial forces, from pharmaceutical substances to ethical judgments.

By centering the sporting body and its practices as sites where the past, present, and future collide, this panel explores how sport and movement reimagine the human condition, engage with the ghosts of history, and open up possibilities for renewal, resistance and transformation. Jenny Tang's paper focuses on the embodied specters of classical ballet, questioning whether ballerinas can free themselves of these hauntings, even after their careers. Joshua Rubin revisits Guttman's framework for "modern" sport, offering insights into the ways that sporting practices carry traces of the past through performative gestures. By speculating through the Basque Athletic Club de Bilbao, Mariann Vaczi explores why it is so hard to resist the neoliberalism of sport despite acknowledged evils. Eilis Lanclus' paper discusses how sensory and affective hauntings experienced by trail sport participants inform practices of care and ecological responsibility. Finally, Adriano De Francesco's auto-ethnography of boxing examines the ethical fluctuations arising when a moral imperative to care coexists with the project of a weaponized body. Together, these papers offer complementary perspectives that aim to deepen our understanding of the haunting forces of the past and of the future in sport.

Presentation(s): Sensory Hauntings on Trails: Navigating Outdoor Recreation in Times of Climate Crisis

Trail sports – hiking, running, off-road cycling – are gaining increasingly in popularity in Western contemporary societies. These sports are often celebrated as ways to immerse oneself in "wild(er)" landscapes and to measure personal endurance against nature. But the climate crisis has begun to unsettle this relationship. The landscapes these trails move through are increasingly shaped by loss – of species, stable seasons, biodiversity – and by futures that fracture before they fully arrive. The climate crisis reveals the past unfinished and the future already unfolding – a specter urging us to listen. On trails, climate change is felt not as data but as sensory disruptions: the crackle of dead undergrowth, flood-strewn trails, or snowless winters where snow once marked the season. For trail sport participants these encounters stir an embodied unease – a recognition of landscapes as vulnerable, already altered and continuously reshaped by the climate crisis. How can these sensory and affective hauntings experienced on trails invite a shift from trail sports as acts of personal conquest or consumption of landscapes to practices grounded in care, attention, and ecological responsibility? In this presentation, I will discuss the duality between the growing desire of trail sport participants to engage with "wild(er)" landscapes and the ecological pressures these activities put on those landscapes based on ethnographic fieldwork in Belgium and the UK.

Presenter(s): Eilis Lanclus

Ethics Between the Ropes: Notes on Care and (Self-)Destruction in Boxing

This paper explores the ordinary ethics of combat sports. In the carnal sociology inaugurated by Wacquant (2004), practice aligns the apprentice's self with ontologically salient notions of honor and respect while familiarizing their body with violence and pain. Rather than considering the homogenizing dimension of habitus production, I focus here on what resists and interrupts it. For one year, I trained at one of New Zealand's most powerful amateur boxing clubs. Though I am an outlier in demographic terms, my commitment to hard training regimes soon turned the gym into a plinth of my everyday life. However, I remain conflicted about crossing the line between sparring and competitive fighting that marks full belonging to this community of practice. Crossing this line entails inflicting and being exposed to potentially life-changing neurological damage. I reflect on my encounters with the ethos of sacrifice that permeates the sport of boxing: Can a moral imperative to care for oneself and others coexist with the project of a weaponized body? What happens when we are summoned by incommensurable ethical criteria (Lambek, 2015), and find ourselves acting against our better judgment (McKearney & Evans, 2023)? I suggest that attending to the "ambiguous nature of care" in boxing (Hopkinson, 2023) through the lens of a "first person phenomenology of action" (Mattingly, 2014) can illuminate the ethical conundrums arising as we explore our powers while being scarred by the world.

Presenter(s): Adriano De Francesco

"Happiness is the Moment You Want More Happiness:" Football, Capitalism, and Desire

With each new game and new season, fans buy into a fundamental capitalist fantasy: the promise that satisfaction and happiness will come with the ultimate sport commodity, victory. But will it? This lecture seeks to identify the mutual nourishment between sport, the logic of capitalism, and human modes of desiring. How can we explain the staying power of capitalism despite its acknowledged evils, warning signs, and growing grassroots activism that rejects it? How does it create landscapes of desire that keep its actors within its orbit? Some point at the hegemony of capitalist stakeholders, and the essential powerlessness of fans. Others have variously identified the impacts of capitalism as inequality, exploitation, or repression. Following McGowan (2017), we may add that the power of (sport) capitalism is owing to its ability to engage with human modes of desiring. Just like capitalism, sport too rests on the idea of accumulation, and keeps subjects in a constant state of desiring for the next commodity, let it be a championship title, elite league playing opportunity, or the signing of a top athlete or special coach. This lecture will discuss sporting capitalism's hold of our psychic lives and, through the Basque Athletic Club de Bilbao from the Spanish Liga, it will speculate about how one might escape or reimagine, in sport and beyond, the haunting grasp of the Invisible Hand.

Presenter(s): Mariann Vaczi

Re-enchanting Records: Guttman and the Evocative Significances of Sporting Performance

Allen Guttman, drawing on the work of Max Weber, once famously claimed that "modern" sports could be distinguished from their "traditional" antecedents on the basis of no less than seven criteria. Though Guttman's framework has been thoroughly and justifiably critiqued, this paper

returns to Guttmann and, with the aid of the concept of "haunting," revisits his framework with an eye toward reopening and re-enchanting its significance. The paper focuses especially on Guttmann's criterion of "questing for records," and it proposes that this criterion should be understood not as a rationalized pursuit of measurable success but rather as a structured set of practices of memory and memorialization that allow current athletes to compete against ghosts. Elaborating on 17 months of fieldwork in South Africa, this paper argues further that attending directly to these practices sheds new light on the ways that sporting activities carry traces of the past—not primarily through meanings which are then read, or symbols that are deciphered and interpreted, but through performative gestures that "evoke" in an emergent fashion and, in doing so, activate memory and call felt experiences of the past up into the present. These evocations, once identified, can be traced and analyzed for their social and political implications.

Presenter(s): Joshua Rubin

Can the ballerina ever be free?

Based on autoethnographic reflections and journalistic materials, this paper asks whether the classical ballerina, vocationally formed since adolescence, can ever free herself from the her discipline's haunting ideals. When the young dancer first enters ballet school, she is told how to behave: Wear a pink leotard, pink tights, and pink ballet shoes; bow to teachers and follow instructions. She soon learns that is ideal ballet student should have a 'perfect ballet body': an objectified aesthetic with a laundry list of physical specifications—shaped historically from the rise of the Enlightenment and the tastes of aristocratic patrons—that conditions what is deemed beautiful and desirable in the classical ballet tradition. Growing up with this rigorous physical, aesthetic, and ethical education, the habitus becomes, like what Latour describes of the perfumer's nose, incorporated as the dancer's identity, refined through everyday practice. The habitus, as Bourdieu theorises, is inculcated by successive acts. This process, I argue, is one of reflexive subject formation and takes place in the rehearsal studio, which functions as a liminal space, in Victor Turner's terms. Every movement is examined by the gazing self and others in relation to a mythicized notion of perfection, not unlike that which occupies Saba Mahmood's pious subjects. The embodied spectres of the classical discipline haunt long after the ballerina's career ends. As such, can the ballerina ever be free?

Presenter(s): Jenny Tang

2409 Encountering the Occult

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Oral Presentation Session

Occult, from the Latin, hide, conceal, secrete, but also "cover over"; What is occulted from view is unseen, yet there. This concept takes on particular significance in 2025, for what is revealed (to the press, the public, and our consciousness) often obfuscates another reality that drives and

determines manifestations at every magnitude: personal, social, political. What assumptions weave invisible threads across dimensions and communities under the scrim of awareness? Does the oneiric realm extend further than the individual to be socially shared? Following philosopher Karen Barad, the materiality of memory leaves physical traces: "And that's why ghosts are real," she has publicly said. The authors in this panel plumb the "occult economies that lurk in the shadows of daily life" (AAA CFP) in narrative worlds across the spectrum of human expression – in Algerian theater, in North African possession rituals, in the sonic story of Egypt behind bars, and in discourse that makes sense of the violent death of migrants in North Africa and Europe. Hannoum inquires into migrants who do not survive border crossings, and whose lives are materially erased even as they continue to haunt in the margins of memory and narrative. Malmström tells stories from the sonic traces of former political prisoners, who become ghost bodies, materializing the prison's disciplining affects even after they have left detention. Goodman examines the realm between life and death in theater, unpacking multiple layers of performance that produce a living character perceived as dead, and viewing performance itself as a kind of possession. Turner considers how sonic worlds generate nonhuman presences in Islamic diwan performance in Algeria. Kapchan asks what it means to become possessed by another, grounding her inquiry in Sufi philosophy. Together, papers explore encounters with the occult and the occulted in sonic, embodied, and narrative worlds. All presenters anchor their ethnographic work in North Africa and the Middle East.

Presentation(s): The Missing: The Migrant Ghost in Northern Morocco

One of the most salient aspects of contemporary African migration to Europe is the high death toll documented by NGOs, with the bodies of young migrants reduced to mere statistics. In 2024 alone, 10,000 fatalities were reported. While analyzing these numbers is essential, it's equally important to recognize the missing—those who disappear without a trace—as a darker and more haunting reality. These lives, turned into ghosts, are neither fully visible nor invisible, lingering in the margins of borders they never crossed. This paper explores the issue of the missing through a tragic event on June 24, 2022, when Spanish and Moroccan police intercepted around 1,700 migrants attempting to cross into Melilla, a Spanish-controlled city in northern Morocco. The case underscores the inequality of human lives and deaths, demonstrating how some fatalities are rendered insignificant, with the missing becoming ghosts of lives never acknowledged. The paper argues that the issue of the missing must be understood in connection with the dead and the living. The missing are invisible, unable to speak, and we can only hear their stories through the voices of the living—their families, whose hope persists in the face of uncertainty, haunted by the belief that their loved ones might someday reappear.

Presenter(s): Majid Hannoum

The Desire to Disappear in Order Not to Disappear: Cairene Political Ex-Prisoners

This is the sonic ghost story of Egypt behind bars—about the disappeared, the absent and the forgotten political bodies. This is about unseen former political prisoners who nowadays live in the shadows. The sonic infrastructure of torture in prison under today's autocratic regime provoke an afterlife of emotional responses of not only loss and non-belonging but also paranoia, depression, and even death-worlds. The disciplining effect of walls, torture, controls, and armed personnel permeates the body of these men, and the sound of violence produces an ambience of uncertainty and invisible threads of painful body memories. Hence, the forces of affect are materialized in the bodies of prisoners long after they have left detention—the affect of sonic infrastructures produce porous and broken bodies. Former prisoners are both traumatized and terrified of being detained again, so they do not live a life in dignity or navigate Cairo as they did before the prison experience. They must avoid the atmosphere of silence at coffee shops and bars (where the ear of the state is always present), avoid silent dawn streets since these men may forcibly disappear by the assistance of security forces. The sound of life for these men is continuously transformed into the sound of death; where the desire to disappear in order to not disappear again produces 'ghost bodies' alienated from not only the 'new Egypt' but also from the family and the self too.

Presenter(s): Maria Frederika Malmström (Malmstrom)

Incarnating the “dead-living”: Between possession and performance in Algerian theater

This paper explores the realm between life and death in the work of Algerian playwright Abdelkader Alloula. Unlike the more common understanding of the "living dead" as the dead who comes to life (in French, *mort-vivant*), I take up the "*vivant mort*," or the living person perceived as dead. Such a character inhabits Alloula's famous play *Djelloul El Fhaymi* (the wise one). Djelloul, a hospital employee, has bounced from job to job because, though highly skilled, he is overcome by feverish rants when he sees incompetence or injustice. He ends up working in the morgue, where he faces an administrative nightmare: a living patient was mixed up with a dead one and was sent for burial preparation. From this liminal, oneiric state between life and death, the apparent corpse rises but believes he is dead. Awaiting final judgment, he takes Djelloul to be Israël, Archangel of Death. As Djelloul encounters this "dead living" figure, he becomes possessed by rage at the system that gave rise to it such that all he can do is run. And as the actors materialize the encounter on stage, they draw on the sonic, vocal, visual, and embodied affordances of acting to generate an intangible oneiric realm to which both actors and audiences are transported, as performance becomes another form of possession.

Presenter(s): Jane Goodman

Vibrating Specters: Music, Atmosphere, and the Unseen in Algerian Ritual Healing

What do specters sound like? How does sound generate, precipitate, and negotiate spectral worlds? In the Algerian popular Islamic ritual called *diwan*, one can be haunted and inhabited by the deep, bass register melodies of sub-Saharan spirits, Muslim saints, and historical figures of the trans-Saharan slave trade. The melodies of these personages erupt into uncomfortable and often painful sensations that cultivate multiple registers of trance, ranging from what we might label as

absorption to total bodily inhabitation of nonhuman presences and complete dissociation. It is music alone that makes such trance formation possible in that music and specters both envelop human actors as immersive, expansive atmospheres, captured by the particular Algerian use of the term "hal." Because nonhuman presences, music, and atmosphere share geneses as felt, bodily phenomena, sonic worlds instruct us on how shadowy histories resound and vibrate through generations.

Presenter(s): Tamara Turner

Face to Face with the Spirits: Paradox and the Anthropology of the Esoteric

What does it mean to be possessed, to become another? What changes in the brain, the body and emotions? Does the ability to empathize increase, as in meditation? And what of the capacity to listen, and to hear? Some scholars explain possession rationally (as catharsis, a reaction to trauma, symbolic play, a system of social cohesion or a means of gender-bending and temporary power inversion); others aesthetically, as musically-induced performance. Why the need to translate such spiritual realities in other terms? What does this translation allow "us," we who study the esoteric, to know, to do, and to be? In this presentation, I examine the inter-semiotic translation of trance and oneiric consciousness through the prism of Ibn al-Arabi's Sufi philosophy, revealing the paradoxical dance of immanence and transcendence in various densities of human existence.

Presenter(s): Deborah Kapchan

2915 Fugitive Anthropology: Embodying Activist Research (Part 1)

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 7

Type: Roundtable/Town Hall

This two-part roundtable features contributors to the edited volume, entitled "Fugitive Anthropology: Embodying Activist Research" (forthcoming, University of Texas Press), an expansive development of the co-authored article "Toward a Fugitive Anthropology: Race, Gender, and Violence in the Field" (Cultural Anthropology 2017).

Decades after initial calls to "decolonize" the anthropological discipline (Harrison 1991), which grew out of work with liberatory social movements across the globe, the production of insurgent knowledge remains a fugitive endeavor. This edited volume works to unsettle the heteropatriarchal gaze that continues to elide or erase the intimate, embodied politics of ethnographic fieldwork and "the undercommons" (Harney and Moten 2013) of the university.

Building on the legacy of the Austin School approach to diaspora studies (Gordon 2007) and activist research (Hale 2001, 2008, Speed 2006), feminist activist ethnography (Craven and Davis 2013), and Black feminist anthropology (McClaurin 2001), we assert that liberatory knowledge production

is an embodied praxis and fugitive endeavor forged in and with community. The panelists draw from traditions of Black, Indigenous, queer, and decolonial feminisms, to explore the following questions:

- How do gendered racial positionalities inflect the research process, and how can activist research methods be accountable to the embodied aspects of conducting research in contexts of colonialism, war, and conflict and conditions of gendered and racialized terror?
- What does it mean to produce feminist knowledge that advances theory in collaborative ways?
- How might an intergenerational engagement with questions of embodiment, knowledge production, and methodology push feminist anthropology and activist research in new directions?

The urgency of centering the individual and collective body in the process of anthropological knowledge production in 2017, when the article was originally published, will be considered in the context of the current onslaught.

Presenter(s): Dana-Ain Davis, CUNY, Graduate Center, Koyana Flotte, Harvard University, Department of Anthropology, Shanya Cordis, Emory University, Maya Berry, University of North Carolina, Chapel Hill, Sarah Ihmoud, College of the Holy Cross, Department of Sociology and Anthropology, Courtney Desiree Morris, University of California, Berkeley

2512 Funding Ecologies: The Futures of Cultural Work

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Galerie 1

Type: Oral Presentation Session

Discussions of funding - from its sources, purposes, and impacts - have come to dominate recent American public discourse. A 2024 New York Times article entitled, "To Save Museums, Treat Them Like Highways" argued that "We need to treat culture as equal to other forms of national infrastructure, as important to our national well-being." Our current moment brings into sharp relief our collective need to center and sustain dialogue on the lived realities of cultural practice work in and around museum contexts. How do we meet such moments of crisis as museum anthropologists?

Indeed, over the last several decades there has been an increasing public concern around issues of funding inequities and the ethics of accepting money from corporate donors. Direct actions have called for museums and cultural centers to participate in ethical, socially relevant, and progressive work that is accountable to its many stakeholders (Kreps 2020, Raicovich 2021).

With an eye to these concerns, this panel discusses the financial precarity that continues to haunt the work of museums and the cultural sector, broadly conceived. Panelists will examine the systems, infrastructures, and goals that underpin cultural work and related projects, in the past,

present, and the near future. How do we learn from different modes of engagement at varied stages of development, and how do we take these lessons and recognize the opportunities they present for the museum field?

This panel seeks to reflect on models of sustaining cultural work whilst activating new ways of knowing and engaging practices that look beyond the strict parameters of the past. Presenters in this session may contend with the panel title concept of funding ecologies in spaces including but not limited to museum collections research, public writing, pedagogy, and community-engaged cultural work.

Discussant: Amanda Guzman, Trinity College, Department of Anthropology, Emily Rogers, Indiana University, Bloomington

Presentation(s): A DIY Approach to Impact Investing for Museums: Building Community as the Financial Future of Museums

For decades museums have been focused on engaging, serving, and building community. This orientation manifests in collections work through an emphasis on collaboration with "source communities". A similar pattern holds around museum educational programs where museums have focused on better ways to work together with communities on their own terms. But the same does not hold true for funding museums— or on how new ways of supporting museums could and should engage, serve, and build community. In fact, framing the issue in this way runs counterintuitively to the way most museum professionals think about financial challenges. The emerging world of "impact investing" provides tools for approaching museum financial success in terms of engaging, serving, and building community, on a community's own terms. To date, discussion of impact investing in the world of museums has mostly focused on the idea that museum endowments should be "mission aligned," which is just one (and perhaps the most obvious) tool in the non-profit sector. On the other hand, impact investing strategies also include microloans for small scale businesses, supporting affordable housing, and partnering with businesses that create employment opportunities in underserved communities. This paper explores what a fully developed impact investing strategy could look like for museums in the United States, thereby laying out an argument for making financial planning and management of museums community engaged work.

Presenter(s): W Warner Wood

Environments of Care: Teaching Curation as Sustainable Practice

Centered in the preliminary work of a recently awarded 2025 Mellon Foundation Higher Education grant in Environmental Justice Studies, this paper will explore the role and possibilities of curatorial-informed pedagogical design in humanities research. The grant aims to promote regional dialogue, across urban and suburban communities, that builds shared understandings of and solutions to interrelated systems of environmental justice in Hartford. From a curatorial standpoint, this collaborative project work will materialize in a series of pop-up exhibits coupled with community dialogue sessions, a culminating physical exhibition at the Stowe Center for Literary Activism, and a Matterport digital twin offering a longer-term exhibition after-life beyond the grant period. Ultimately, the paper will critically consider what might be the stakes, processes, and limits of creating, sustaining, and preserving environments of care, as a concept and practice, in and beyond the undergraduate communities in an anthropological classroom. How can the work of teaching curatorial design and environmental storytelling succeed as an engaged method of non-extractive, mutually beneficial partnership?

Presenter(s): Amanda Guzman

Unknotting Shoestrings: Preserving Cultural Knowledge for Community with Limited Funding

Karuk basketweavers learn about the responsibility to pass their knowledge to future generations of weavers from their very first harvest. Predicated on this inherent responsibility, I will discuss an ongoing collaborative multimedia project with a Karuk master basketweaver to document the gathering of basketry materials, despite the limited funding often available to carry out this work. Focusing on the need to document traditional ecological knowledge from this elder weaver's lifetime of experience, I aim to balance sustainable plant harvesting practices with intergenerational teaching. Indeed, Karuk basketweavers have been practicing sustainable land stewardship, including the use of cultural fire, since time immemorial. Mindful also of the challenges of funding a project to record cultural knowledge that is meant to stay within the community, I provide one partnership model by which such work might be sustainable while also honoring Tribal protocols.

Collecting and Celebrating the 1976 United States Bicentennial

This paper will explore how 1976 United States Bicentennial Celebration philanthropic and federal funding supported a proliferation of traditional arts-related projects in museums and in Native American cultural institutions. Based on recent archival and interview-based research, it focuses particularly on the histories and memories related to this historical event amongst members of the Eastern Band of Cherokee Indians. This paper will explore how local institutions like the Qualla Arts and Crafts Mutual arts cooperative promoted and sold Cherokee traditional arts at this time, how these efforts articulated with a larger national interest within American museums in Southern and Appalachian craft, and Tribe members' ambivalence towards celebrations of nationhood and memorializing colonization. Furthermore, it considers historical trends in (and lessons for) how

ebbs and flows in arts and humanities funding shapes what stories are told and how in public spaces.

Presentation(s): Affective Economies of Care: Migrant Health, Humanitarianism, and Cooperative Healthcare in Vancouver

Anthropological studies of humanitarianism have explored how care, compassion, and moral urgency shape everyday aid practices. However, few address affect and emotions within grassroots, community-based organizations, including participatory migrant health cooperatives. These cooperatives offer a unique model of community-based care, where cultural health brokers help shape the delivery of services and organizational priorities. This paper examines the emotional foundations of humanitarian governance within a cooperative healthcare setting in Vancouver, Canada, focusing on how emotions such as compassion, care, and empathy function as legitimizing forces in the provision of aid. This research is grounded in ethnographic methods, which I use to study organizational processes rather than recipient communities, focusing on how humanitarian decisions are made, resources are mobilized, and aid is provisioned. Utilizing data collected in the preliminary phase of my research—primarily through participant observation as a volunteer—I examine how affect circulates within the organization and becomes embedded in institutional practices that determine who is seen as deserving of care, and under what conditions. This research builds on theories of affective economies, humanitarian reason, moral legitimacy, and compassion-driven exclusion (Ahmed, 2004; Fassin, 2012; Redfield, 2012; Ticktin, 2011) to understand how emotional dynamics shape not only the provision of care but also how healthcare becomes a moral and political project. Questions addressed in this paper include: How do emotions function as legitimizing forces in local humanitarian governance? In what ways do they come to define need, urgency, and eligibility? How do organizations navigate tensions between structural constraints and community accountability? And what happens to the affective economy of aid when the distance between "provider" and "recipient" collapses? Through these questions I seek to understand how community-based models of care may unsettle dominant paradigms of humanitarianism by emphasizing a more collaborative and community-driven approach to healthcare for migrants in Canada.

Don't Whistle at Night: The Haunted Chord and Other Global Folklore Parallels

Across cultures, whistling, especially after dusk, has a deep supernatural meaning and is usually seen as a way to attract spirits, demons, and bad luck. This paper examines the presence of nocturnal whistling taboos in many cultures, including diverse Indigenous North American tribes, multiple East and Southeast Asian communities, multiple European societies, several African traditions, and assorted Latin American cultures. By carefully examining folklore, ancient writings, and ethnographic records, the paper seeks to discover the shared cultural reasons and spiritual ideas that perpetuate these beliefs. By exploring themes of sound as an important conduit to the supernatural, deep social anxieties about the completely unseen, in addition to the major role of oral traditions in carefully encoding collective fears, this research contributes to a much greater comprehension of how seemingly disparate societies converge on remarkably similar protective practices. This investigation points out the shared human experience when people confront the unknown. In addition, it improves anthropological discourse regarding the intersections of belief systems, behavioral taboos, and the active power of folklore in shaping cultural standards.

Presenter(s): Emily Cole

Running Beyond the Self: Mystical Sensations and Transcendent Experiences in Ultrarunning

Although ultrarunning almost inevitably involves subjecting one's body to self-inflicted pain and suffering, it has also been described as a pleasurable, meditative and even spiritual endeavor (e.g., Austin 2007; Jones 2004; Koski 2015). Ultrarunners occasionally report sensations that anthropologists of religion (e.g., Luhrmann) would place at "the edge of experience." These include the more conventional experiences of "flow" and "runner's high," but also visions, hearing voices, and moments of self-transcendence. Drawing on the example of recreational ultrarunners in Estonia and ethnographic data from semi-structured interviews, blog analysis, and participant observation at various ultrarunning events, this paper examines how runners reflect on and make sense of such experiences, as well as the vocabulary they use to describe "the edge of experience" sensations. Building on Taylor's (2007) concept of "fullness" and Luhrmann's (2020) approach to "kindling the presence of invisible others," I argue that runners reframe these experiences – often deemed "almost mystical" – as a particularly meaningful and valuable part of ultrarunning. These experiences are claimed to lead to a unique state of consciousness and contribute to a broadened, deepened, and more "authentic" way of being in and experiencing the world. At the core of this state is an engagement with one's own body and the running environment in novel ways.

Presenter(s): Toomas Gross

Teaching Anthropology in a Divisive Time: Lessons from Curriculum Theory and the High School Classroom

In this age of increasing social division, young people desperately need theoretical frameworks, terminology, and facts grounded in social science research to help them understand their world.

Though not often taught at the high school level, cultural anthropology has the potential to help adolescents develop the language and knowledge needed to explore otherwise abstract social phenomena such as inequity and structural violence. With ethnography, the discipline also communicates the importance of trusting people's lived experience and the validity of experience as a way of knowing-an essential lesson for helping develop empathic young people. This presentation reflects on my experiences teaching cultural anthropology to 11th and 12th grade students in both public and independent school contexts and proposes possible approaches to curriculum design for high school anthropology courses that can help achieve these aims.

Teaching cultural anthropology in high school requires a different approach than the university level, due to the greater diversity of interest and reading levels. The presentation explores specific curricular and pedagogical approaches that have been effective in the high school classroom, including backwards design, explicit vocabulary instruction, discussion and reading modeled on English courses, and experiential learning through the practices of participant observation and interviewing. These strategies are grounded in an exploration of curriculum theory, specifically the tension between "emergent curriculum" and an objectives-based approach. Finally, the presentation articulates the need for anthropologists to make instructional resources more accessible to a high school population and advocates for strategies that can help make theory and scholarly research comprehensible to a younger audience.

Presenter(s): Sophia Alvarez

The Doll Archive: Unpacking Barbie's Imperial Entanglements

Mattel has designed Barbie to embody the cultural and geopolitical values of the U.S. on multiple occasions. In this flash presentation, I will discuss how my archival research at the Military Women's Memorial and The Strong Museum of Play aims to research Barbie's imperial entanglements. My doctoral dissertation explores how these dolls reflect the intersections of corporate interests and U.S. cultural imperialism, revealing how multinational corporations shape cultural narratives. Beyond Barbie driving a Corvette and living in a house in Malibu -images that appeal to the American Dream myth of financial wealth- Barbie has also dressed as Colonial Barbie, Pioneer Barbie, Patriot Barbie, American Indian Barbie, Pilgrim Barbie, and Civil War Nurse. During the Space Race of the 1960s, Barbie became an astronaut. Barbie has run for U.S. president multiple times. She has been a scientist for National Geographic. Mattel even collaborated with the U.S. Department of Defense to launch a military-themed Barbie in 1989, marking a decade in which Barbie joined various branches of the Armed Forces.

By combining archival and ethnographic methods, my research traces how Barbie has been mobilized to naturalize militarization, consumerism, and American exceptionalism across different contexts, reinforcing U.S. ideological and economic interests globally. The use of archives as a core part of my anthropological journey has supported my understanding of materiality, specifically how objects like Barbie embody global and political issues, appealing to consumption, branding, and nostalgia, shaping material culture, ideologies, childhood, and everyday experiences of play.

Presenter(s): Eva Rey Pinto

The Specter of the 'Native' Orphan

This paper excerpts from my dissertation and traces how the 19th century category of the "native orphan" in India is a kind of specter in contemporary understandings of childhood. In particular, I have surveyed three categories of orphaned children that have emerged over the last five years in postcolonial and settler-colonial contexts: Covid orphans, "new age orphans" of the Sundarbans, and wounded-child-no-surviving-family (WCNSF) in Gaza. To a certain extent these groups rehearse conventional formulas for orphans that are generated by catastrophes requiring the management of ostensibly freestanding children. Ethnographic work in critical adoption studies and southern childhood studies have problematized orphans as parentless objects of humanitarian rescue. Yet, my paper demonstrates that the contemporary usage of "orphan" remains pinioned to 19th century colonial taxonomy with the "native orphan" at the core-in this sense, I suggest that the native orphan is spectral. Teasing out the connections to 19th century colonial precedents recalls the ambivalence and ambiguity regarding orphans, which reintroduces the importance of instability to the category. At the same time, the endurance of this term relegates the orphan to hierarchies of childhood and species difference insofar as the native child signifies both animalization and innocence. Thus, I argue that the animal is also entangled with this specter, and in the last part of the paper, I draw on more-than-human ethnographies to consider what it means to de-colonize and de-anthropocentrize the "orphan."

Presenter(s): Ayla McCullough

Tug-of-War?: Intergenerational Negotiations in Marriage within Middle-Class Indian Families

There has been an abundance of literature on the arranged-love marriage dynamic in India since the 1990s that argues that such a marriage combines individualized choices and familial values and approval. But what are the particular choices and compromises that different generations within the family make to maintain the balance between those individual desires and familial structures? And why do they make those choices and compromises? Using ethnographic evidence in this paper, I explore the intergenerational negotiations during marriage within contemporary middle-class Indian families, particularly between young individuals and their parents. Young middle-class individuals today are more educated and financially independent than their parents were 30 years ago. By claiming newfound legitimacy and authority through their educational and professional successes, the current generation is increasingly making various marriage-related decisions, from choosing their spouse to selecting the décor for their wedding venue, decisions that family elders previously made. This paper elaborates on how young people embed their individualistic desires within familial values and expectations and how their parents learn to share decision-making space and authority with them. I argue that both generations make strategic compromises during marriage negotiations to uphold the balance between individual desires and familial values that eventually result in an arranged-love marriage dynamic. I also highlight that both generations have different motivations to make these strategic compromises: while the younger generation is influenced by their strong middle-class upbringing that favors familial values, preventing them from

just abandoning it all in the name of 'individuality,' the older generation is fueled by their fears and anxieties about the future of their relationships with their children. These strategic compromises not only preserve family traditions and maintain marriage continuities from the past but also enable middle-class individuals and their parents to engage in a contested yet cohesive process of constructing and envisioning personal and familial futures.

4131 Ghosts and Specters of Patriarchy: Gendered Violence, Moral Complicity, and Embodied Hauntings in Post-socialist China

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Oral Presentation Session

In the aftermath of China's socialist modernization and market reforms, where neoliberal governance entwines with Confucian familial logics and moral resurgence, gendered violence persists in forms that are intimate, affectively encoded, and socially legitimized. Rather than disappearing with the decline of socialist collectivism, patriarchal structures have reasserted themselves through new alliances with familial ethics, reproductive governance, and nationalist discourse. This panel investigates how such violence operates not only through bodily harm or legal exclusion, but through routinized and diffuse mechanisms embedded in cultural, economic, and kinship structures. Drawing on feminist anthropology, critical kinship studies, and ethnographies of emotion and embodiment, we conceptualize these operations as ghosts and specters of patriarchy. "Ghosts" register the affective and embodied traces of violence, which are those that linger in everyday life through memory, silence, and sensation. "Specters", following Derrida's notion of the spectral (*Specters of Marx*, 1994), point to structural and historical legacies that return in altered forms under postsocialist modernity. Together, they help us ask: how are gendered subjects disciplined through both material regimes and symbolic scripts? What kinds of violence become invisible precisely because they are ordinary?

The papers in this panel examine interconnected sites of gendered oppression in contemporary China. Ran Ai analyzes informal garment workshops where production and reproduction collapse, embedding female migrant labor into global supply chains while rendering it invisible. Xinyi Yuan interrogates marriage trafficking through "communities of complicity", showing how kin, neighbors, and officials legitimate coerced marriages under cultural and reproductive responsibility. Yitong Xu focuses on Chaoshan women's ritual food labor, showing how culinary expertise sustains patrilineal traditions while inscribing gendered complicity onto bodies. Ray Shi examines how attacks on Japanese schools manifest nationalist masculinity shaped by postcolonial tension, historical memory, and symbolic vulnerability. Aaron Hu explores how normative pressures around

marriage constrain lesbian women in heterosexual unions, revealing the disciplining force of filial piety and social expectations.

Together, these papers contend that gendered violence in contemporary China is perpetuated not only through overt acts but through its embeddedness in social, familial, and economic institutions. This panel contributes to feminist anthropological debates on violence by shifting the analytic gaze from spectacular events to everyday harm, which are those embodied, inherited, and legitimized forms that persist through complicity, affect, and structure. "Ghosts and specters" offer a generative framework for tracing how patriarchal inequality is not simply enacted but sedimented across time, space, and intimate life.

Presentation(s): Exploring the Impact of Societal Pressures and Reproductive Expectations on the Identities of Chinese Lesbian Women in Heterosexual Marriages

This paper examines the experiences of Chinese lesbian women navigating their sexual identity within the confines of heterosexual marriages, set against a backdrop of deeply ingrained traditional family values. In China, where same-sex relationships remain socially stigmatized and same-sex marriage is illegal, lesbian women are often compelled to enter into formal marriages due to societal expectations, including the pervasive "leftover women" discourse.

Based on in-depth interviews with 11 lesbian participants aged 22 to 43, this study explores the specific challenges they face within these marriages, particularly the pressure to conform to traditional gender roles, including the expectation of childbearing. The research highlights the emotional, psychological, and social struggles these women endure, such as managing relationships with their husbands, negotiating reproductive duties, dealing with financial difficulties, and coping with the heightened risk of sexual violence. By examining the intersection of gender, sexuality, and societal expectations, this paper contributes to understanding the unique struggles of LGBTQ+ individuals in a context that prioritizes heteronormative values and reproductive imperatives.

Presenter(s): Aaron Hu

Sacrificial Steam, Patriarchal Schemes: Culinary Labor and Gendered Hierarchy in Chaoshan's Ritual Food Traditions

In Chaoshan, a coastal region of China renowned for its elaborate ritual culture, women's heavy culinary labor during ancestral worship, Chinese New Year, and seasonal festivals (e.g., Mid-Autumn, Winter Solstice) constitutes a critical yet understudied domain of gendered power

imbalance. State-led "intangible heritage" discourse exacerbates this tension by celebrating this custom as the persistence of culture while erasing the gendered burdens of its production.

This paper investigates how food practices across these occasions—from sourcing festival-specific ingredients like guo (糰) for New Year to preparing grave offerings during Qingming—naturalize women's roles as sustainers and subordinates of patriarchal clan systems. By situating Chaoshan's gendered food rituals within China's patrilineal kinship system, this study demonstrates how acts of culinary labor during festivals become sites where patriarchal power is enacted. Ultimately, it argues that ancestral food traditions are not merely cultural heritage but active mechanisms for sustaining gender inequality.

“Bound by Gendered Relations, Legitimised by Complicity”: Analysing the Structural Vulnerabilities of Women in Rural Chinese Marriage Trafficking

This paper investigates the ongoing issue of marriage trafficking in rural China, using real-life cases such as the widely publicized "Xiaohuamei" incident to illustrate how trafficked women are caught in webs of control. These women are often sold by brokers and deceived into marriages where they are expected to bear children and fulfill domestic roles. Once purchased, they are trapped not only by the physical environment but also by social expectations and local moral narratives that justify their presence as "wives" rather than victims.

The analysis draws on Hans Steinmüller's concept of "communities of complicity" (2015) to explain how villagers, local officials, and even police officers often turn a blind eye or actively participate in maintaining these arrangements. Rooted in Confucian family ideals and economic hardship, entire communities justify the trafficking as necessary for continuing family lines and stabilizing village life. Feminist anthropology and theories of neoliberal commodification reveal how women's bodies and labor are treated as resources to be exchanged and controlled. This paper challenges the simplistic notion that trafficked women are either passive victims or active agents. Instead, it shows how their limited choices are shaped by structural violence, gender norms, and collective complicity.

Presenter(s): Xinyi Yuan

In the Vortex of Production and Social Reproduction: Gendered Labor in South China's Informal Garment Workshops

Throughout southern China's coastal regions, female rural migrants live and work as precarious "floating populations" in informal spaces nested in former village houses. Such houses are often informally converted for industrial and commercial use, lowering land costs by bypassing formal regulations and taxes. Tolerated by the government, these transformations expanded in scale, fostering low-cost production zones where exploitative labor practices proliferated. Thus, a distinct urbanization process driven by low-end manufacturing reconfigured both physical spaces and

social relations. Despite their informality, these spaces supply products to the international market, serving as integral yet overlooked nodes in global supply networks.

This paper attends to the informal sites of garment production in urban villages in southern China, which are predominantly staffed by female rural migrants. The research aims to unpack the entanglement of urbanization, global capitalism, and gendered labor practices by examining how international fast fashion companies depend on these informal spaces and the feminized labor regimes they sustain. The study looks particularly into the connections between women's roles in production and reproduction, tracing the relationship between different spaces, from informal workshops to spaces for daily life, schools, and homes.

Presenter(s): Ran Ai

Spaces that Bleed: Violence, Nationalist Masculinity, and Vulnerability in Chinese International Schools

This article examines two violent attacks targeting Japanese international schools in the major Chinese cities of Suzhou and Shenzhen in 2024. Utilizing Pierre Bourdieu's concept of symbolic violence and Saskia Sassen's insights on global urban dynamics, it analyzes how international schools become culturally contested spaces characterized by both international elite privilege and localized tensions. The study argues that these attacks should not be viewed merely as isolated incidents; rather, they reflect deeper anxieties linked to nationalism, masculinity anxieties, and historical memory in contemporary China. By critically analyzing official media coverage, social media discourse, and public commemorations such as National Memorial Day, this paper explores how collective perceptions of foreignness and national identity are actively constructed and reinforced. These discursive practices amplify both the spatial and symbolic vulnerability of international schools. Ultimately, the research reveals how nationalist sentiments, urban transformations, and masculinity anxieties intersect, making globalized educational spaces critical sites for negotiating identity, belonging, and social conflict in urban Chinese contexts.

4313 Ghosts in Our Classrooms: A Roundtable on Teaching Anthropology

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Galerie 6

Type: Roundtable/Town Hall

What are the "ghosts" in the classrooms where we teach anthropology? This roundtable discussion will focus on what haunts our teaching from both the past and present. We will examine our experiences dealing with disciplinary traditions, institutional memories, and the chains of intellectual citation that entangle our teaching with theories, words, and anthropologists from centuries past. We will also discuss the previous experiences of instructors and students and the

myths and misconceptions about our subjects. Through this, we will consider how the opportunities and uncertainties of the world outside the university impact our approach to course design and encourage creativity in our classrooms and the other sometimes ephemeral places where we find ourselves teaching. Together, we will share how these ghosts inform our pedagogy and how we continue to embrace or challenge them in our teaching.

4129 Governing Data: Regulations, Rights, and Relations (I)

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

Data is increasingly recognized as a valuable global asset, sparking intensifying struggles over its extraction, accumulation, and regulation. Across the world, lawyers and policymakers are constructing new regulatory infrastructures to govern data. Yet in doing so, they often encounter deep tensions rooted in competing epistemologies and ontologies-fundamentally different ways of knowing and being through which 'data' is produced, interpreted, and contested. As data reshapes relations of power between individuals, communities, and states, it is also unsettling liberal frameworks-from rights and personhood to sovereignty and citizenship. This panel approaches data from an anthropological perspective, asking how cultural, socio-technical, and juridical forces assemble 'data' and, in turn, shape its governance. We invite abstracts that explore struggles over data, trace how it is reconfiguring power relations, and examine how new legal and normative frameworks are being articulated in an increasingly datafied world.

Presentation(s): Authorizing Editing: Governing the Uneven Access to a Centralized Online Civil Registration System in Nepal

Over the past 4-5 years, the Government of Nepal, with support from the World Bank, has been implementing a centralized online civil registration system. While it is the local-level bureaucrats who use the system to input citizens' vital life events, including birth, marriage, death, divorce, and migration, and provides relevant government certificates, only the federal-government office responsible for developing and monitoring the system has authority to edit data within the system. Drawing on analysis of bureaucratic documents, interviews with and participant observations among IT engineers, call-centre staff, and administrative officers in this federal-level office in 2024, this paper explores how the uneven access to the system sets the stage for reconfigured intra-bureaucracy communications and state-citizen relations. In particular, local-level bureaucrats and citizens would reach out to the federal-level office with requests to use the office's editing authority to revise mistakes, edit data, or delete records within the system. The need to respond to these requests without compromising legal restrictions, however, presents novel challenges of governing digitized data in a post-conflict bureaucracy slowly adapting from hand-written paper-based administrative practices. While the office resorts to producing hierarchically reviewed papers to regulate actions of data editing, the normative bureaucratic culture gets reproduced.

Presenter(s): Xing LI

Barcode Epistemologies: Assembling the Laboring Body in Diagnostic Circles in Turkey's Expert Hospitals

In Turkey, over 12,000 workers annually seek care and recognition at occupational diseases hospitals. Yet the Turkish Social Security Board (SSB) reports fewer than 10% of these cases in national health statistics. NGOs, labor organizers, and medical professionals contest these figures, distinguishing "medical occupational diseases" seen in clinics from "legal occupational diseases" recognized by courts and insurance boards. Drawing on eighteen months of ethnographic research at an occupational diseases hospital, this paper explores how scannable barcode labels—mundane yet powerful filing technologies—mediate this very distinction. As barcodes circulate through clinics, labs, and archives, they shape how worker-patients' bodies are fragmented, documented, and translated into state-legible forms. This data infrastructure embeds a filtering logic: only certain harms, traceable and verifiable within institutional procedures, can be converted into compensable diagnoses. Rather than neutral data points, barcodes mediate a politics of recognition, assembling health data that conforms to legal and bureaucratic thresholds. Situating these barcode practices within global struggles over data governance, the paper argues that the production of worker health data is not only technical but deeply political. It shows how legal and medical infrastructures together deflect employer responsibility and recast worker suffering as ambiguous, de-personalized, and often unaccountable.

“No Water, Food, or Fingerprinting:” How Biometric Data Collection Became a Humanitarian Appeal and Evidence of State Crime in Rogue Borders Regimes

This paper examines how biometric fingerprinting of illegalized migrants in the EU's Mediterranean borders—long resisted by migrant communities and solidarity networks as criminalizing and dehumanizing—is increasingly framed by those same actors as a humanitarian appeal and articulated as a procedural right amid the intensification of covert pushbacks.

Drawing on ongoing fieldwork in Greece since 2018, as well as reports from the Border Violence Monitoring Network (BVMN), the paper traces the transformation of biometric data collection from a site of contestation and refusal into a migrant-rights demand, phrased in humanitarian terms. It analyzes how BVMN reports portray the absence of fingerprinting, photography, and document checks in the same vein as accounts of food deprivation, medical neglect, and torture. I argue that the deniable nature of rogue border enforcement has rendered the border not only a site of state violence, but also a testbed for ways to obscure it. In this context, the border emerges as a crime scene in which migrants—many of whom have experienced multiple pushbacks—become key actors in the forensic documentation of state crimes, gathering diverse forms of data beyond their individual cases. In their demand to be fingerprinted, subjects of migrant criminalization become agents in criminalizing rogue state conduct.

Presenter(s): Romm Lewkowicz

Constructing the Digital Self: the Regulation of Identities in Data-Driven Migration Governance

Migration governance is increasingly structured through data infrastructures that construct, monitor, and regulate the "digital self," a datafied identity composed of biometric records, risk assessments, and algorithmic categorizations. This paper argues that the digital self plays a crucial role in migration governance, often determining access before a migrant reaches a border. Migrants can be physically absent but digitally present, existing in databases yet denied movement. Through databases like Eurodac and PRIMES, AI-driven risk assessments, and data-sharing agreements, migration control now unfolds across transnational, networked systems rather than territorial boundaries. This respatialization of migration governance produces new, invisible borders that shape mobility through data rather than geography. Traditional border enforcement, reliant on physical territory, is increasingly outsourced to automated systems and corporate surveillance, creating zones of digital precarity where migrants remain in suspended legal identities. However, migrants also resist these infrastructures, challenging algorithmic governance through counter-mapping and anti-surveillance tactics. Extending the work of Amoore and Hall, this paper shifts the focus from the fragmented body at the border to the autonomous, mobile digital self that circulates across databases and influences migration governance.

Presenter(s): Nicole Bennett

Health Data and the Doctor–Data Relationship in China and Norway

Our research compares how doctors in China and Norway understand and relate to health data in their everyday work. Drawing on interviews and observations in hospitals in both countries, we explore how health data is not simply a clinical record or technical asset, but a relational object embedded in different systems.

In Norway, many doctors express concerns about data privacy and emphasise their role in safeguarding patient autonomy. Data is framed as something personal and potentially vulnerable, and doctors are cautious about how it circulates beyond the clinic. In contrast, doctors in China often describe health data as a shared institutional resource—centralised, coordinated, and used to improve efficiency and system-level outcomes. Individual consent is less emphasised, while collective benefit and state oversight are central.

Recent anthropological work on data has emphasised that data practices are shaped by social and political contexts rather than being universally understood or applied. Building on this, our study focuses on medical professionals' perspectives to show how distinct models of data governance take form in clinical practice.

Through this comparison, we argue that data is not neutral or universal, but shaped by the values, expectations, and pressures that surround it. The doctor–data relationship becomes a key lens through which broader differences in data governance can be understood and examined.

4962 Haunted Infrastructures - Infrastructural Haunting: Part 1

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR D3 (3rd fl)

Type: Oral Presentation Session

In this panel, we think about haunted infrastructures and infrastructural haunting. Infrastructures are not only about moving matter forward (Larkin 2013), they are embedded in relationships of mutual becoming. (Re-)Structuring space, compressing time, erasing pasts and promising futures, infrastructures unfold in ways that are both material and durable as well as volatile and invisible. We propose these infrastructural transformations create actual and metaphorical ghosts: Place-bound, fleeting, yet persistent, referencing the past through the present, ghosts are at once tied to matter and in excess of it.

First, we draw attention to material infrastructures and their potentials for being enlivened or haunted by immaterial entities. Infrastructures are relational (Rest and Ripa 2019) and extend beyond the human through matter. Key materials in infrastructures, stone, water, minerals, are in themselves social agents. They are the communicating ancestors of people and the founding

infrastructures of subsistence landscapes. The denial of the ancestral relationship between people and their infrastructure is infrastructural haunting.

Haunted infrastructure is enacted by ghosts and beings trapped in space-time. Drawing on Freud's exploration of haunting as 'Heimsuchung' (Freud 1919), we emphasize that the nonhumans haunting infrastructures are caught in a state of liminality from which they seek to escape. Taking the ontological status that ghosts have for our interlocutors seriously, we seek to illuminate what kind of social ontologies (Baumann and Rehbein 2020) are reproduced through infrastructures.

Second, through this juxtaposition of the material and the immaterial, we shed new light on infrastructure as it creates hubs of human-non-human interaction. If we take the colonized people seriously, the entire human-built environment is enlivened with entities that emerge through the energy released at production. Ghosts are invisible traces of what came before and is no longer remembered as part of what exists now (Tsing et al 2017).

Third, this attention to (im)materiality and space/place/time requires linking the haunted to temporalities of infrastructures. Infrastructural temporalities encompass maintenance and entanglement amid the materially unfinished and crumbling, and the immaterial suspensions and anticipations they engender. Attempts to connect the different temporal registers with space and place, however, remain rare. By drawing together both the singular events and the deep time of infrastructures, we connect 'ghosts' to the matter that both enlivens and entraps them through the spectral lens of folded space/time.

We ask: What kind of infrastructures are haunted ? How does their materiality provide them with ghosts?

How do new infrastructures try to erase haunted pasts and make space for enlivened futures?

Does cross-time/cross-border infrastructural haunting create alternatives for analyzing bounded spaces?

Presentation(s): Ferragamo's Favorite Phantom: Passenger Aviation's Economies and the Versatile Ghosts of Thailand's Suvarnabhumi Airport

Although the term "ghost airport" is generally applied to abandoned sites or to state-planning's oversupply of facilities, ghostlore is endemic part of airport operations writ large. In Myanmar and Thailand, ghostlore and ritual practices are embedded in, and speak to, most aspects of airport operations. Thailand's airports, namely Bangkok's Don Mueang Airport featured King Power Duty Free retail for international passengers starting in 1989. The terminal facility at Suvarnabhumi

Airport boasts extensive retail options, and retail workers comprise approximately 15% of the airport's employees. Although focus on the airport's role as a regional hub might suggest infrastructure ghosts would be endemic to aviation operations, that is only part of the story. Given the precarity of commission-based retail jobs, and the increased economic role of retail in airport livelihoods, spiritual involvement has reflected, if not instigated, some of these shifts. Based on ethnographic research both in the airport as well as at shrines propitiated by airport workers, this paper will explore the ways in which ritual spirit veneration and propitiation involves and extends to the commercial capacities of the airport facility.

Presenter(s): Jane Ferguson

Infrastructures of Ghosts and States

In China's southwest, along the mountainous China-Myanmar border, live a small ethnic minority who call themselves Blang. Blang communities are surrounded by powerful, immaterial others: ghosts, gods, and states impose on the village from the outside. Ghosts are unable or unwilling to feed themselves; when hungry they afflict humans with mischief, misfortune, or violence in order to be fed. But how can humans send things to ghosts if they cannot see or touch them? My conference paper will examine the ritual infrastructure that makes possible interactions with ghosts; how humans can send foil, bamboo, and clay figures, that for the ghost becomes great riches; and how it makes possible the dispatching of ghosts, using infrastructure to send them away. Until 1953, Blang communities say they "had no state." Much like ghosts you cannot shake hands with the state. How did this powerful, immaterial other make its way into the mountains? Employing lessons from the ritual infrastructure Blang communities employ to interact with ghosts, I show how infrastructure in the traditional sense (the construction of roads, border fences, and electricity lines) has made possible the transformation of something conceptual for one party into something real for the other. Just as humans send conceptual and metaphorical riches that become real for ghosts, so what was first conceptual (citizenship, population, borders) has recently become real for Blang communities.

From haunted sites to places of worship: Exploring the social ontology of roadside shrines in Thailand's lower Northeast

Although people have marked sites of human death along roads throughout much of human history (Clark 2007, Cohen 2013), there seems to be something special about the intersection of ghostly and human infrastructures in Thailand's rural Northeast. Here, bad deaths associated with traffic accidents produce a distinctive class of malevolent ghost-like beings that haunt the site where the accident occurred. These more or less stationary ghosts are known as phi tai hong in Thai. Their haunting is particularly feared as it causes more accidents to happen. However, accidents may also produce phi samphawesi, wandering ghosts that dwell at crossroads and other nodes of the local infrastructure. Both kinds of ghostly beings haunt the living in Freud's (1919) sense as they remain attached to the world by the desire to return to a home that is forever lost. While their

uncanny haunting is feared by many, it may also constitute the first stage in a ghost's social life. Looking at roadside memorials and other shrines signifying critical junctures of the local infrastructure, this paper seeks to map the social ontology (Baumann and Rehbein 2020) that allows for a haunted site's transition into a place of worship. Part of this transition is the ghost's ritual domestication through which it not becomes the member of an emplaced social collective, but is also transformed into a master of the place.

Bewitched Houses and Homily Hauntings: Infrastructure as Abandonment on the Azores

In the contemporary Azores, vital infrastructures have become uncanny. After decades of large-scale outmigration and rural decline, crumbling houses sit in abandoned landscapes, irrigation systems leak and corrode, and formerly cultivated terraces are overgrown by brushwood. In the debris of Lusophone colonial settlement, my paper focuses on two ethnographic observations: first, agrarian households are haunted by specters of past flourishing, the once enlivened and now unviable time of abundant people and thriving places. Second, as certain houses are increasingly commodified through an emerging tourist industry selling experiences of allegedly pristine wilderness at the edge of Europe, they become targets of occult powers (cf. Heslop 2022). Houses that serve as infrastructures of capitalist accumulation are consciously bewitched by ill-meaning, others thus failing to provide homeliness for guests. I suggest grasping the uncanniness of vital infrastructures in the wake of severe depopulation and rapid economic transformation beyond Freud's sense of 'Heimsuchung' as a perception of unsettledness that conjoins deeply familial and disturbingly alien experiences of one's proximate infrastructures (Long 2013). Examining people's wrestling with uncanny affects seen as residing in non-human objects such as house roofs or terrace walls makes for prime sites to study the interdependency between haunted infrastructure and infrastructural haunting.

4383 Haunted Pedagogies: Autoethnographic Encounters with Residual Pasts and Emergent Possibilities

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 6

Type: Roundtable/Town Hall

This roundtable takes inspiration from the ghostly as both metaphor and method, aligning with the 2025 American Anthropological Association's call to confront the hauntings of the past as they animate the present. Drawing from autoethnographic narratives situated in classrooms and educational institutions in Bangladesh, Pakistan, Turkey, South Korea, and the United States, we confront the ways our personal histories intersect with broader cultural forces, revealing how classrooms and educational institutions become haunted spaces where traces of colonial

legacies, neoliberal policies, and racial capitalism (Melamed, 2016) persist. These hauntings emerge in various forms: the commodification of childhood under neoliberal frameworks (Sims, 2017), the reproduction of colonial desires in educational policies (Gupta, 2018), the localization of Western pedagogies within traditional cultural values (Anderson-Levitt, 2008), and the embodied vitality of children (Boldt, 2020) challenging dominant systems of knowledge and power. Each panelist engages autoethnography as a mode of haunted inquiry, tracing the affective, embodied, and material residues of forgotten policies, discarded reforms, and aspirational futures that failed to arrive. Autoethnography is a research method that builds on the author's experiences to understand and critique certain cultural practices in which the author participates and finds the "self's location in the culture and scholarship" (Adams et al., 2015).

For some of us, this involves confronting the neoliberal commodification of childhood and the replication of colonial hierarchies in public, private, and NGO-run schools. We also examine how globalized pedagogies like Reggio Emilia are indigenized within local religious and cultural values, producing hybrid educational landscapes haunted by both imported and inherited traditions. Within our studies, we reflect on how sound, movement, and non-dominant language practices generate moments of resistance leading to ephemeral ruptures that unsettle the traditional understanding of developmentalism and human capital formation.

Together, we ask: what happens when the data themselves become ghostly, when journal entries and classroom memories return not as clear evidence but as affective traces and uncanny echoes? How do these hauntings expose the contradictions embedded within educational reforms marketed as progressive or liberatory? How might attending to the emerging ruptures create multiple possibilities for imagining otherwise? What pedagogies can we summon that neither disavow the past nor surrender to neoliberal futurity?

This roundtable invites dialogue on the non-linear, the residual, and the unruly in educational spaces. By centering the haunted educators' experiences, we hope to offer glimpses of solidarities, desires, and utopian bonds that persist amid the ruins (Muñoz, 2007).

3553 Haunted Spaces, Haunting Memories, Unsettled Futures: Multidisciplinary Perspectives on Gender and the Aftermath of Violence in Colombia

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 2

Type: Oral Presentation Session

In Colombia, peace accords do not spell the end of war, and affirmations of legal rights are weak in the face of violence both state and extralegal. The long shadows of violent acts haunt Colombian social life. As in horror film, monsters threaten a perpetual return (Nelson 2009). So, too, do deceased ancestors, lovers, and comrades refuse to let go of their hold on survivors. Colombia is rife with "spectral communities" (Cajón de Sastre 2022), of haunting with and without ghosts (Martínez 2020). While scholarship has long documented the causes and consequences of Colombian conflict, this panel brings ethnographic attention to the ways the afterlives of violence shape and unsettle experiences of gender in post-accords or "postdeal" Colombia (Alves 2019). How does everyday life unfold for women who once fought a guerrilla war against the state, for mothers seeking justice for children killed by police, for trans women designing museum exhibits about trans life within an atmosphere of transfeminicide? Further, how do past moments of dispossession and rebellion shape the present, and how do we ethically engage archives of these histories now? We attend to violence as both destructive and generative, reckoning with wounds and loss as well as practices of care and imagination. As Byron J. Good, Andrea Chiovenda, and Sadeq Rahimi argue, it is not only our interlocutors who are haunted: our scholarly engagement with these spaces and communities produces its own obligations to the spectral and the ghostly, such that "one task of scholars and activists alike is to participate in [the] process of learning to live with ghosts more justly" (2022: 448). In the interest of that more just relation, this panel convenes a conversation between feminist anthropology, history, and sociology to investigate ghost-dense spaces and practices in Colombia. This panel will be bilingual in Spanish and English.

Presentation(s): Ghosts that accompany us in antifascist struggle

In moments of state violence, fallen comrades return as spectral figures—half-martyr, half-ghost—haunting the edges of protest and grief. Public art becomes a space where mothers expand mourning, making absence visible, making pain political. The injured, often marked visibly by their wounds, become heroic figures in the movement. But what about the imprisoned? They're harder to hold onto. They don't quite become ghosts—we can't see them, and so, too often, we forget them.

In Colombia, I've watched textile collectives carve out spaces to resist this forgetting. Somehow, fabric has filled that absence—not just as craft, but as a place to imagine new forms of presence. Threads offer a way to accompany those who are disappeared by the prison system, those who remain offstage in the theater of protest. The textile invites a slower kind of resistance, one that can't be easily anticipated or absorbed. Here, stitches are political. Memory is tactile. And presence—quiet, persistent—is remade by hand. Based on a year of ethnography, this paper grapples with ghosts' role in the Latina feminist tradition of testimonio.

Presenter(s): Adelaida Tamayo

On Spectrophilia in the Panopticon: Trans Rights and Trans Mourning in Colombian Prison Museums

In Theo Montoya's hybrid documentary-fiction film *Anhell69* (2023), the unquiet dead roam Medellín, their ghosts becoming objects of impossible love. Montoya names this desire "spectrophilia." In dialogue with Montoya's creative work, this paper explores the doubly haunted sites of exhibits about trans people in two Colombian museums. Both museums are housed in converted former penitentiaries. Once notorious sites of state violence, these facilities were closed, remodeled, and reopened as sites of memory. Now both host exhibits about gender and sexual dissidents, which I consider as exhibits on the arts of "trans life-making" in Colombia (Edelman 2024). The exhibits animate dueling legacies, twined hauntings: of panopticons as sites of penal improvement and state failure, of care and abuse, of progress and stagnation. They enshrine a place in Colombia's official history for trans people even as the stories they document evince the persistent incapacity of legal rights and protections to sustain trans life. Limned by histories of destruction, they are home to many ghosts (trans and otherwise). Yet they also demonstrate the splendor of trans vitality. They invite museum goers to become spectrophiles, to adore trans life, to mourn trans loss, and to envision freer trans futures that emanate ironically, from within prison cells. This paper draws on extended ethnographic fieldwork in Colombia and conversation with memory, prison, and feminist studies.

Presenter(s): Joseph Hiller

Spectral Embodiments: Women Ex-Combatants, Memory, and the Afterlives of War in Colombia's Post-Agreement Period

This paper explores the liminal condition of former FARC combatants—particularly women—in Colombia's transitional period. Drawing on a phenomenological perspective and ethnographic research with Casa de la Paz, an ex-combatant-led organization in Bogotá, I examine how female ex-combatants' lives are entangled with the legitimacy of the Peace Agreement, as they are expected to embody reconciliation and reintegration. Such expectations stand in stark contrast to their precarious material conditions and the persistent violence they face. Over 441 ex-combatants have been murdered since the accord was signed, highlighting the unfinished nature of the war for them. Through the case of the Salón de las Mariposas—a memorial space inside Casa de la Paz that honors every ex-combatant killed since the peace accords—I examine the relation between body, memory, grief, and political struggle as it manifests in particular physical spaces. Building on the idea that places function as extensions of the body and its capacity to move meaningfully through the world (Beaumont, 2020), I ask: What kinds of spectral embodiments emerge in the aftermath of the post-agreement period when such memorials are necessary for survival and remembrance? This paper reflects on how women ex-combatants navigate being both symbols of peace and targets of violence, exposing the contradictions at the heart of Colombia's transitional moment.

Presenter(s): Carol Pinzon

Peasant Mobilization in the Colombian Caribbean: Social Reproduction, Gender, and the Silences of the Archive, 1960s–1970s

The Colombian Caribbean region has long exhibited one of the most unequal agrarian structures in Latin America, shaped by cattle estates and enclave economies that privileged land concentration over peasant livelihoods. During the 20th century, peasants in this region actively mobilized, demanding land redistribution through agrarian reform. Drawing on Critical Agrarian Studies and its call to recognize resistance in non-traditional spaces, this paper highlights the overlooked roles of women and children in shaping mobilization during the 1960s–1970s agrarian reform. This paper argues for a gendered analytical framework grounded in an ethnographic reading of the archive—attuned to silences produced by state-centered and patriarchal narratives. By juxtaposing state records with photographs and oral histories, I show that centering women's experiences reframes agrarian protest as a space of social reproduction, where women led collective practices of care, protection, and resistance amid poverty, violence, and dispossession.

Presenter(s): Margarita Martinez-Osorio

A Reversed Revolution? Continuity and Change in Gender Orders After War in Colombia

Research on gender and war documents that conflicts have the potential for postwar gender shifts in the form of a revitalization of patriarchy or the opening of opportunities for women. Most of these

studies -usually focused on well-known electoral female leaders- tend to assume that conflicts have a homogenizing effect on all women ex-fighters without considering their pre-war backgrounds, differential war experiences, and postwar social location. By looking at the organizational and household spaces of demobilized rank-and-file ex-combatants of the FARC (former Revolutionary Armed Forces of Colombia), I ask how and to what extent war gender orders shift during ex-combatants' transition to peacetime and what processes explain these changes. I draw on interviews and ethnographic observations in Colombia during 2018-2023. I found that since the demobilization, there has been a reversal of the semi-egalitarian gender domestic work that existed during the war, in parallel with a challenge to the male-dominated leadership inherited from the time in the guerrilla. Three processes explain these gender shifts: the readoption of traditional family beliefs, the feminist role of national and international institutions, and women's use of wartime organizational skills. This paper extends the literature on conflict, gender, and change by showing the effects of the absence of gender military design on the organization of transitional gender orders in private and public life.

Presenter(s): Natalia Duarte

5564 Homing in on Care: Relational Practices and Dwelling on/in Times of Crisis

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Regent

Type: Roundtable/Town Hall

What can anthropologists gain from asking questions about home and care as we study responses to hardship? Across the globe, people are faced with precarity, displacement, and disruptions to life wrought by forces such as war, climate disasters, political oppression, and economic policies, which jeopardize possibilities of individual and collective survival. Whether through bombardment, dramatic dismantlement, or gradual starvation, the infrastructures that enable health and well-being face threat and undermining. In this moment of (re)ascendant necropolitics (Mbembe 2019), recent forms of social assistance - from grassroots mutual aid to state redistribution of the social wage - are being attacked and rolled back; meanwhile, even traditionally codified structures of support, like the family, are stretched in their ability to adequately address people's needs. In the face of outright genocides as well as the manifold drivers of slow death (Berlant 2007) and debilitation (Puar 2018), the social and material substrates that sustain life become simultaneously ever more important and harder to secure.

With these phenomena haunting the present, this roundtable explores the shifting meanings of and entangled relationship between "home" and "care," which discursively figure as sources of stability, protection, and comfort. The house serves as "a mnemonic for the embodied person" (Carsten and Hugh-Jones 1995) that simultaneously materializes collective relations. Care, on the other hand, capaciously describes relations and practices through which "someone comes to matter, and the

corresponding ethics of attending to the other who matters" (Stevenson 2014). Thinking from diverse geographies, participants in this roundtable are drawn together by a set of questions about the way that dwelling places become objects of and idealized locations for care, and the role of care in constituting some spaces as homes. We ask how sociocultural understandings of home, relatedness, and care intersect with political economic forces patterning what is possible, and how these intersections shape people's subjectivities and decisions. We are especially interested in asking these questions in contexts of housing and care that reveal the affective, moral, and material stakes of recursive public/private distinctions (Gal 2002).

This roundtable will highlight tensions regarding where, how, or by whom shelter and support are imagined and/or obligated (legally, socially, morally, financially). With a specific eye toward the role of medical and psychiatric epistemologies in constructing, maintaining, and transforming notions of home and care, speakers will draw ethnographically from varied settings such as publicly funded interim housing, board and care homes for people with psychiatric disabilities, paid home care of older adults, out-of-home care for physically disabled adults, and home visits by community health workers.

3273 Imagistic Kinship. Ghosts, Thresholds and In-Between Spaces in Family Life, part 1

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Balcony L

Type: Oral Presentation Session

In this panel, we take our point of departure in recent proposals of image as method (Stevenson 2014), imagistic inquiries (Grøn and Mattingly 2022) and spectral kinship (Gammeltoft 2022) in order to listen carefully to uncertainties, doubts, dreams, affects and ghosts in family life, thus orienting our attention towards immaterial, yet crucially important, dimensions of family life.

For decades the new kinship studies have inspired and expanded our understanding of family life by paying close attention to emergent forms of family making like adoption, assisted reproduction, LGBTQ+ and more, demonstrating that kinship is not only about biology, but relatedness emerges through sharing of food, belongings, memories, and places (Carsten 2004). Medical anthropology has demonstrated new formations of biosocial relatedness and disability studies have paid close attention to 'kinship imaginaries', i.e. how the experience of disability reshapes kinship and family life (Rapp and Ginsburg, 2001, 2024). Kinship relations are practiced through closeness and

distance alike (Stasch 2008, Strathern 2020, Navne, Svendsen and Gammeltoft 2017) and come with considerable ambiguity (Geschiere 1997; Peletz 2001). They are experienced as both nourishing and poisonous: hauntings and contagious connections inform intergenerational family life (Meinert and Grøn 2020) as well as state/family intimate belongings (Johannesen and Grøn 2022). More specifically, we have asked the contributors to contemplate what we can learn about kinship by considering ghosts, thresholds, and in-between spaces:

What in-between spaces may open possibilities for dwelling, becoming and belonging in kinship relatedness? Or close them? Which ghosts, moods, affects, atmospheres and hauntings dwell there?

What material and immaterial thresholds are present and absent in family life? How do they mark or blur boundaries and demarcations of difference in the family and in more extended 'mutualities of being'?

Cassiman opens the panel by considering how women in Ghana seeking to cast off the spell of their husbands' emotional neglect form imagistic and sometimes hidden kinship circles of trusted female counselors and 'kayanmata' products. With the statement: "You are sparrows," a blind composer in Park's presentation invites us into aerial and sensory kinship and neurodiverse interworlds that emerges in the multisensorial contexts of creative dance, walking tours and aesthetic workshops in Canada. Grøn then invites us to consider dementia as located not in the body of an individual but as a pervasive, shapeshifting, interpersonal, in-between and ontologically indeterminate atmosphere in Danish families. Meinert continues the exploration of the imagistic in-between by considering families quietly living otherwise in the Ik mountains, Uganda, i.e. unusual family constellations that traverse local thresholds of normativity and recognition, but also offer glimpses into the kinship otherwise.

Presentation(s): "I want my loving husband back." Imagistic kinship and love work in marriage counselling

This paper explores the endeavors of two sisters who yearn to rekindle the affection and love of their husbands through what I call "love work". They seek to break the pervasive spell of emotional neglect that many wives and mothers in the zongos (popular Muslim neighborhoods of Accra) endure - a neglect that often spirals into depression. In their pursuit of love and attachment, the

sisters try to constitute a loose circle of trusted female counsellors around them in order to find moral and emotional guidance and support, each in their own way. In addition, many women discreetly resort to "kayanmata" products -literally "women's stuff" in Hausa, roughly translated as "marriage sweeteners"- to revive their marriages. Vendors of these products often become trusted confidants and are integrated into the young women's intimate counselling circles. The concept of "imagistic kinship" is used to explore the roles of these new, but sometimes hidden, counselling figures and how they expose the doubts and insecurities that young women experience as they seek to regain the loving husbands they once knew.

Presenter(s): Ann Cassiman

Improvising Kin: Perplexity, poetic transformations, and embodied images

"He found an image for us," announces my colleague who supervises Vytco, an avid birder and composer living with congenital blindness. Vytco chuckles, feeling on his phone to share a sound clip: The crows' "Caw, caw, caw," is punctuated by a raven's louder and more raucous "Cra, Cra." "You," continues Vytco—gesturing towards me and a ceramicist—"are sparrows."

In this paper, I explore how artists and persons with sensory acuities of varying degrees create new lines of relationality by cultivating scenes in research creation projects that defrost categorical identifiers (e.g., ethnicity, language and disability). Attending to significant and, often perplexing, moments drawn from ethnographic material, I trace how inter-worlds emerge from creative dance sessions for older adults to "break isolation," walking tours with autists to create "sensory friendly zones" in urban landscapes, and studio workshops on ephemerality with artists. The immersive methods used (e.g., film and binaural audio recordings) asks us to consider the atmospheres in which persons from neurodiverse worlds improvise lines of kinship and affiliation to increase understanding of each other and ourselves.

Presenter(s): Melissa Park

Dementia as atmosphere: Ghosts, thresholds and in-between spaces in family life

"I want it out of my house," Maria says about dementia. She is talking about dementia as having moved in with her family, creeping in through cracks and gaps - even through closed doors, walls and across larger distances, when e.g. her husband who is diagnosed with Alzheimers has moved to a care facility. Other families talk about dementia as having created in-between spaces where otherwise ways of being with in everyday life and otherwise forms of intimacy, kindness and care emerge within the haunting presence of dementia. In all families there is also talk about how to carve out 'dementia free' spaces, e.g. in yoga and mindfulness classes, in online gaming communities or in finding a new lover while also sticking with the sick spouse through thick and thin.

In this paper, I draw on recent fieldwork among Danish families who live with dementia arguing that the lived experience of dementia cannot be located in one family member's body or brain, but emerges as a pervasive, shapeshifting, interpersonal, atmospheric presence within which family

members will seek to both live and carve out 'dementia-free' spaces. Drawing on Böhmes (1993) designation of atmospheres as ontologically indeterminate and Oser's work on interpersonal atmospheres, I trace dementia as atmosphere in ghostly appearances and events, in in-between spaces and as crossing thresholds of time and space.

Presenter(s): Lone Groen

Quietly Otherwise: Atmospheres of Sharing in Unusual Ik Families

In the Ik mountains of Uganda, where economic and cultural marginality meet strict national middleclass norms of gender and family, some families quietly practice forms of kinship that fall outside normative expectations. Drawing on a collaborative research project on Imaging Gender Futures, this paper explores atmospheres of keeping quiet, sharing resources and difficulties in two families whose ways of living otherwise are not expressed through rights-based discourses, but through everyday acts of care and conflict.

In one family, a widow is inherited into her late husband's brother's household, where she and the brother's wife form a polygynous marriage with shared responsibilities for children, labor, and love. In another, two brothers share a wife and raise their children together—a polyandrous arrangement born of imprisonment, absence, return, and slow attunement to an unusual situation. These family constellations resist legibility within dominant scripts of nuclear kinship, and their quiet ways call for an ethics of being-with-otherwise that embraces ambivalence and respects opacity.

Through filmic collaboration and attunement to their atmospheres of sharing and withholding food, affection, tension, and care—the paper explores the imagistic and affective dimensions of kinship that unfold in these in-between spaces. It reflects on how such families not only traverse thresholds of normativity and recognition, but also offer glimpses into kinship otherwise.

Presenter(s): Lotte Meinert

5267 Language of Mobility and Migration among Senegalese: A round table discussion of two new books

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** MGB Salon D

Type: Roundtable/Town Hall

This round table examines the ways that language provides infrastructures for mobility. Whether measured in movement through space or a change in status, two recently published books in linguistic anthropology analyze migration and other forms of mobility among Senegalese speakers. In a discussion drawing together Nikolas Sweet's monograph *The Verbal Art of Mobility in West Africa* (Indiana, 2024) and Chelsie Yount's ethnography *Selective Solidarity: Children and Middleclass Moralities in Transnational Senegal* (Penn, 2025), round table participants will consider

how Senegalese speakers use verbal practices to achieve mobility and what this can tell us about the role of language in achieving material ends and ambitions.

The language practices of Senegalese have been foundational to linguistic anthropology, notably through Irvine's (1973, 1989) seminal work on "noble" and "griot speech," which set the stage for investigations of language ideologies and the semiotics of difference (Gal & Irvine 2001, 2019) as well as language materiality (Cavanaugh & Shankar 2017). Senegalese migrants, meanwhile, have shaped migration studies and the ethnographic record broadly, through studies of the transnational religious- and trade-networks of the Murid Islamic brotherhood (Kane 2010; Buggenhagen 2012) and the intimate relations of couples and families scattered across borders (Hannaford 2017).

While these works also examine contemporary West African migrations, ethnographies by Sweet and Yount draw on linguistic anthropology to examine broader questions of movement, material circulation, and accumulation. These approaches reveal the ways language practices themselves migrate in global capitalism, rebuilding and reshaping social networks, to material effect. Examined together, what can the verbal practices of villagers deep in southeast Senegal (Kedougou) and of the children of Senegalese intellectuals growing up in Paris tell us about the potential for language to act as technology for both geographic and economic mobility?

3480 Linguistic Anthropology with an Attitude: Thinking with Alessandro Duranti

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

This panel honors Alessandro Duranti, Distinguished Research Professor Emeritus at UCLA, whose impact on linguistic anthropology over the last 45 years has been wide and consequential. His approach to pragmatics and politics was visionary, with his work on rethinking context - especially the role of the audience (a.k.a. listeners) in the co-constitution of meaning - presaging broader linguistic anthropological interest in this topic by decades. His phenomenologically-informed analysis of agency, intentionality, and improvisation changed how we understand the links between

grammar and social action. Notably, Duranti also helped give the subfield its contemporary form through a stream of influential edited volumes and companions (as well as a critical textbook) alongside his stewardship of the JLA and Oxford book series. He has broadened global engagement with the discipline through his publications in French and Italian, and his generous mentorship, paired with his ability to embrace unconventional and creative perspectives, has shaped multiple generations of scholars. Perhaps just as importantly, Duranti has done "linguistic anthropology with an attitude," that is, with a perceptible vibe that encourages a flexible state of play with respect to "rules" and conventions. This panel, which is composed of Duranti's students and others he has advised, expands upon these key contributions to the discipline and explores the impact of Duranti's intentional feeling or mood of un-convention-ality in developing these contributions.

Organizer: Keith Murphy , Steven Black, Georgia State University, Department of Anthropology

Chair: Keith Murphy , Steven Black, Georgia State University, Department of Anthropology

Presenter(s): Adrienne Lo, University of Waterloo, Natalie Marshall, University of California, Los Angeles, Steven Black, Georgia State University, Department of Anthropology, Jan David Hauck, Ludwig Maximilian University of Munich, Heather Loyd

Presentation(s): In a World of Others

In this presentation, I consider the key role that Sandro Duranti has played in shaping the direction of our field, through his work as a scholar, editor, and mentor. I discuss the ways that he has helped to guide us towards a capacious and inclusive vision of ling anth, making room both intellectually and socially. The kind of labor that he engaged in throughout his career was not always of the sort valued by the academy, and yet he showed us how to be both intellectually sharp and generous, tenacious yet not mean. I consider what his legacy means for linguistic anthropology, in light of the current turbulence in the academy, a time in which what we are supposed to be doing as scholars, what it is we study, and what it means to call oneself a "linguistic anthropologist" are all in flux.

Presenter(s): Adrienne Lo

Projected Futures and Ghostly Subjects: An Analysis of a Nonprofit Storytelling Genre

Alessandro Duranti has practiced a dynamic and lively approach to studying genre – broadly understood in linguistic anthropology as discourse that is associated with a particular context or event – in his work on political speech. In this work, Duranti frames the performance of political speech as an emergent and productive activity, where people not only experiment with generic conventions, but also construct identities and selves, configure stories and worlds, and shape relationships with others. Using this analytical spirit, my talk examines the genre of nonprofit advocacy reports through a textual and autoethnographic discussion of a report written and disseminated by employees of a large food justice nonprofit in Los Angeles. In my analysis, I think closely with Duranti's work on Walter Capps' campaign speeches and Samoan political meetings to delineate the narrative strategies and plot features of the stories told in nonprofit advocacy reports. In doing so, I demonstrate how individual activists and their concerns become ghost-like in the

project of creating a compelling, future-oriented master narrative of a social issue or cause within this political storytelling genre.

Improvisation, Intention, Imagination: How Values Shape (and are Shaped by) Interaction

In this presentation, I outline a theory of how improvisation, intention, and imagination intersect to constitute value systems, providing a novel perspective on the relationship between moment-to-moment encounters and cultural-historical patterns. My analysis links two of Alessandro Duranti's central contributions to anthropology—improvisation and intentionality—with discussions of the role of imagination in the constitution of values. Duranti's conceptualization of intentions emphasizes an aboutness to one's actions that need not be culturally elaborated to be relevant in an interpersonal encounter. Linking this to his research on improvisation, Duranti describes an improvisational impulse that counters routinization and exceeds the scope of intentions.

However, my own experience as a jazz musician suggests a more complex relationship between routinization, improvisation, and intention, especially when improvisers enter into a "flow state." I argue that in improvisation, routinization is often the long-term habituation of an intention which makes creative action possible. I then introduce a third term into this discussion: imagination. In routinization and practice, the imaginative horizon for an intention may be extended far into the future. I suggest that the emplotment of imagined futures provides a bridge between the phenomenal realm of intention-in-interaction and the abstraction of culturally-specific value systems.

Unexpected Encounters in the Forest: Intentional Modifications of Experience on an Aché Hunting Trek

This paper explores a series of intentional modifications induced by an unexpected encounter in a forest camp of a group of Aché hunter-gatherers in Paraguay. It takes as its starting point the attentional pull of a sudden sound coming from the thicket not too far away, interpreted as harbinger of imminent danger. Women, children, and ethnographer were alone at the camp, all hunters roaming the forest in pursuit of prey. The Aché are not the only hunters in the forest and roles of predator and prey can easily shift, demanding heightened sensory perception. Noticing the sound set in motion a series of actions to avoid the danger it announced, adults and children beginning to climb nearby trees—only to realize a few moments later its real nature: hunters returning to the camp with a special prey. The tense atmosphere was broken by amused smiles, which turned into resounding laughter as someone pointed out that the panicked rush on the trees had been captured on camera by the ethnographer. Drawing on Duranti-inflected concepts from Husserlian phenomenology, I discuss here the progression through ever higher levels of intentional modifications of the unfolding events: from the initial phenomenal modification of the sound, to the camera-induced reflection on the reaction to the sound, to second- and third-order reflections on

the entire episode at subsequent watch parties back in the village, allowing everybody to relive the experience over and over again in subsequent weeks.

Presenter(s): Jan David Hauck

In the Middle of Things: Sandro Duranti's Lasting Impact on Linguistic Anthropology and Me

This paper reflects on Sandro Duranti's enduring influence on how I collect and analyze data and my overall being in the world. It highlights how his deep knowledge and practice of film from his Spaghetti Western days pushed me to always be in the middle of things when filming but never in the way. Referencing Fellini's *La Dolce Vita* and his own footage from Samoa & beyond, he taught us with humor and joy the principles of filming & editing and how to make in-the-moment filming decisions, since an anthropologist can never ask participants to "redo a scene." My work with girls in Napoli, Italy has also been deeply influenced by Sandro, especially his focus on connections between agency, power, and verbal art. This paper accordingly examines how Neapolitan girls use verbal and embodied strategies to problem-solve and navigate their social & moral worlds and how audience shapes their performances and co-construction of conflict. Despite high pressures to conform, girls find space for individualism & agency. As verbal artists, they deploy dialect & gestures (demonstrative pronouns, humor, theatricality) to display assertiveness, epistemic certainty & wit. I argue they participate in a 'culture of ambiguity' using metaphors, idioms & innuendo to allude to meanings audiences can 'read' & are therefore adept at both directness & indirectness while maintaining interactional coherence. I ask, - through means of aesthetics, how does performance do social work?

3768 Lived Experience as a Lens for Understanding Displacement and Forced Migration

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** MGB Salon E

Type: Roundtable/Town Hall

Research on forcibly displaced people often focuses on specific groups or health issues, leaving limited space for broader discussions on shared challenges and experiences of refugee, asylum seeker, and immigrant health worldwide. This session brings together professionals working with diverse displaced communities across different ethnic and national contexts to explore lived experience as a theoretical and methodological anchor for understanding displacement and forced migration. By engaging in comparative dialogue, participants in this session will examine the unique insights that lived experience provides into displacement, addressing key questions such as: What aspects of displacement does lived experience illuminate? How does attention to lived experience shape our understanding of "forcible" displacement in ways other frameworks do not? How does a focus on lived experience reveal migrants' everyday strategies of survival and endurance, or the

power structures that constrain or facilitate well-being and agency? This session invites interdisciplinary perspectives to critically engage with lived experience as a vital tool for understanding displacement and its challenges.

2508 Looking Ahead with PoLAR: A Roundtable on the Future of Legal and Political Anthropology

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Roundtable/Town Hall

This roundtable features current and prior members of the editorial leadership of PoLAR: Political and Legal Anthropology Review. Speakers will address issues at the level of the journal, the field(s), and academia writ large. What have been continuities and transformations in manuscript evaluation and development at PoLAR? What are current trends in legal and political anthropology, and where is the field heading? How is the journal-and how are the subfields-adapting to changing and escalating pressures on academia and to our current political climate? This reflective and timely conversation will be of interest to junior scholars curious about academic publishing, to legal and political anthropologists grappling with their role in the current climate, and to all anthropologists interested in thinking about the scholar in society.

2828 Moving Beyond Ghosting and Gaslighting: Anthropological Histories That Matter

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Edgewood AB (4th fl)

Type: Oral Presentation Session

Boas and his followers envisioned anthropology as a holistic discipline, drawing from the natural and social sciences as well as from the humanities. Their objective was to forge a comprehensive understanding of humanity in the hope that such an understanding would help solve a host of social problems that had grown out of racism, colonialism, exploitation, xenophobia, and warfare. Since then, anthropology has faced enormous challenges, both from within and outside of the discipline. Many 20th century anthropologists perceived themselves as leaders in the battle against racism and imperialism. By the end of the century, however, "post-modernist" critics often dismissed "science" as an ethnocentric construct, while "scientific anthropologists" condemned their humanistically-inclined colleagues as subjective and devoid of methodological rigor. In the 21st century, these divides have widened, sometimes mapping across generational and cultural lines. One critique, coming from oppressed and disenfranchised groups as well as their activist-inspired allies, accuses our intellectual ancestors of complicity with the very evils against which they believed themselves to have been fighting. Colleagues responding to these critiques often express alarm at what they view as radical presentism. The critics, they contend, are blind to the historical trajectory of a field that centered upon social justice but whose objective was differently realized in different global and temporal contexts. External challenges are still more extreme, as politicians accuse social scientists of being "radical" or "woke" for their commitment to diversity and equity. Several US states have outlawed "DEI," and President Trump has ordered the dismantling of all such federal initiatives. In addition, social sciences face opposition owing to their purported irrelevance in preparing students for employment opportunities. One consequence of these attacks has been to scale back--and sometimes eliminate--anthropology programs throughout the US. This raises the question of what our discipline will look like, or if it will exist at all, in coming decades. Our session will present a critical examination of anthropology's history, both long-term and recent, as well as the discipline's future contours. The papers in this session will not create ghosts of intellectual and activist ancestors, whose work was situated in very different times, nor will they gaslight current anthropologists who--despite the valuable work of generations past--argue for a present rethinking as we strive to open future doors.

Presenter(s): Robert Ulin, Rochester Institute of Technology, Fadwa El Guindi, University of California, Los Angeles, Margaret LeCompte, University of Colorado, Boulder, Herbert Lewis, University of Wisconsin, Madison, Jim Weil, Science Museum of Minnesota

Presentation(s): Postmodern Influences in the History of Anthropology

There have been many shifts in American anthropology from the early four-field approach to culture and personality, iterations of materialism, interpretive anthropology, and finally postmodernism and its scientific rebukes. Nor should we overlook historical approaches that employ multiple methods and theories and challenge pedestrian ideas about culture areas and globalization. I will discuss postmodernism of the late 1970s through early 1990s that encompassed Geertz's interpretive anthropology, "writing culture," and renditions of French philosophy that questioned modernity's grand narratives. Important reactions to the postmodern claimed that it was indifferent to power, too focused on self-contemplation and ultimately ahistorical. I argue that the postmodern turn addressed some of anthropology's ghosts that on occasion failed to acknowledge its colonial legacy and what can be termed the "naturalization" of fieldwork, driven by an occidental narrative of "otherness." Deconstructing the narrative of "otherness" and vulgar "scientistic" renditions of the field make postmodernism important to anthropology's historical deconstruction and self. I argue that anthropology's turn to postmodernity is relevant to anthropological futures because of its potential to subvert and challenge hegemonic master narratives inclusive of utopian of science and technology, that have long been historically intertwined with anthropological research across borders, imagined or otherwise.

Presenter(s): Robert Ulin

Can We Put American Anthropology Together Again?

It was American Anthropology that established the view of humankind as a unity combining biology, culture, language, society, cognition, and prehistory. It could afford to do it. It is American Anthropologists who have been dismantling this quality for several decades. Breaking up humankind's unity makes American anthropology obsolete and dispensable. I will argue that putting the unified view of humankind back together through anthropology is the path to follow. In order to accomplish this, we must first distinguish anthropology as a field of study from the work of an individual or a group of anthropologists. We must also rethink what the role of The American Anthropological Association is toward accomplishing this goal. Despite fragmentation in the world today, whether from difference in wealth, power, equality, ideology, or access to technology, the principle of humankind's unity is critical knowledge to continue building if anthropology's holistic (and cross-cultural) view of humankind continues to be, as it should be, unique and valuable.

Presenter(s): Fadwa El Guindi

Methodological Ghosts and Gaslighting: Considering the Legitimacy of Past, Present and Future Research Methods

Ghosts from past practice pose continuing challenges to whether qualitative methods are legitimately "scientific and rigorous." Dominant epistemologies that once imposed ways to define, know about, and do research on human groups now are being interrogated and challenged to create a more diverse, inclusive approach to anthropological, ethnographic, qualitative and mixed methods research methodology in the social sciences, education and other applied fields. I examine past and present research practice to identify ghosts persisting from these "old ways" and

discuss how they have been used to reinforce particular epistemologies as "legitimate" while denigrating others as "not scientific" or "not valid." Driven by psychologists, IRBs, and so-called "hard science" dictates, this gaslighting acted to de-legitimate innovations in methods and convince researchers to stick to less intellectually generous research designs; it also restricted what was fundable or publishable. My work with Jean Schensul has been a leader in confronting that gaslighting; it has introduced new and diverse, multidisciplinary approaches and technologies for "qualitative" and "mixed methods" research and intervention studies research in anthropology and the human sciences. I conclude by envisioning future directions in social science research, free from both ghosts and gaslighting.

Presenter(s): Margaret LeCompte

Gaslighting Anthropology vs. Historical Scholarship

"Gaslighting," implies a purposeful attempt to make a person doubt their sanity, to get them to question their fundamental beliefs. By 2025 generations of American anthropologists have been led to doubt the foundations of their discipline as a result of decades of poorly documented critiques. When Franz Boas and his students fought against prevailing notions of cultural evolutionism and were in turn criticized severely by the neo-evolutionists, as bitter as their disputes may have been they were over matters of evidence, theoretical competence--questions of the adequacy of their "science." On the contrary, the attacks on prevailing academic anthropology from the 1960s were based on presumed ethical and political failures. First there was the claim that anthropologists had been in league with colonialists, that they exoticized and "othered" "The Other," and dealt dishonestly with these "others." Then came the notion of "Orientalism" according to which the only reason any "Westerner" wrote about peoples of "the East/Orient" was to dominate, control, and exploit, those "racially" different "Others." Now we are told that the generations of fighters against racial determinism were actually racist because they were "normalizing White society." When we look into the actual history of the field, we find that none of these claims can stand research-based scrutiny. This paper calls for an end to "gaslighting anthropology" for the benefit of the future of the discipline.

Presenter(s): Herbert Lewis

Is the Future of Anthropology Haunted by the Ghosts of Othering and Scientism?

Anthropology has a long history of self-and-other research interactions, based on protocols developed through both scientific and humanistic traditions. Accounts of this legacy may emphasize some approaches and accomplishments, while ignoring others and celebrating or condemning selected aspects. With the vast accumulation of findings and the wide variety of explanations and interpretations of what it means to be human, no unifying paradigm or even tentative consensus has been possible. Seeking clarification, if not resolution, this presentation reflects on personal encounters between researchers and members of groups being studied. Exacerbated threats from the outside make it ever more urgent to address misinformation and disinformation generated within anthropology. What are the implications of "othering" as an epithet

extended to mutually enhancing relationships in the field? What are the implications of "scientism" as an epithet that dismisses critical and liberating practices of science? Ethnographers arriving as outsiders have often been encouraged to collect and analyze data which serve a research community's own purposes. Examples are offered, indicating that systematic observational findings and intersubjective experiential "truths" can be mutually reinforcing. What would it mean if anthropologists who so wish had opportunities for fieldwork in at least one setting in which they already belonged and at least one remote and previously unfamiliar setting?

3259 On Racial Hauntings and Undisclosed Traumas in National Imaginaries

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Oral Presentation Session

We are living, learning, and writing during haunted times-the legacies of settler colonialism, white supremacy and racial capitalism always dependent on profound loss, suffering, and a collective forgetfulness that leaves many ghosts in their wake. Indeed, we exist in an economic-political system whose very livelihood is dependent on state-sanctioned repression and the mass disappearance of bodies and bodies of knowledge that trouble our deeply felt ideas about freedom and exceptionalism so intricately woven into the ideological fabric of nation-states.

They haunt us, ask not to be forgotten, demand not to be erased. Their absence is a disturbing presence. The "undisclosed traumas of previous generations" disturb the lives of their descendants, despite being unaware of their distant causes'(Colin Davis, 2005, p. 373, cited in Phoenix, 2024). According to Avery Gordon (2008), these apparitions offer up a purpose, a propulsion; they disturb us, reminding us of what has been lost and propelling us towards what must be found again. Such perturbations signal to the ways that abusive systems of oppression have forcibly disappeared certain things, ideas, and bodies, rendering them marginal, excluded, or repressed in the dominant imagination, but they also animate our longing for "what could have been and can be otherwise" (p. 57). These "ghostly matters" of our past/present demand a reckoning, "to be haunted" is to be entirely engrossed, and intimately "tied to historical and social effects" (Gordon, 2008, p. 190).

The papers in this panel seek to collectively trace the ways that the past always haunts the present, attending to the living traces of that which has been disappeared and rendered ghostly. Dyrness explores how encounters with a murdered indigenous land defender transformed experiences of Costa Rica, challenging myths of Costa Rican exceptionalism and one school's ecotourism approach to the local context. Looking at contemporary media representations related to immigration, Ríos-Rojas' paper examines the migrant as "spectral subject" for what it reveals and hides about nationalist projects. García-Sánchez explores a recent controversy related to the racial

slur "moro/moors" and how Muslim immigrant communities in Spain are particularly susceptible to being viewed through this ghostly racializing lens. Jaffe-Walter interrogates how the colonial ghostly trope of promising a "normal childhood" is deployed to justify coercive assimilation. Abu El-Haj and Brayboy consider scholasticide as a concept that can be leveraged across sites of settler colonialism, asking how indigenous scholars haunt settler colonial projects, centering sovereignty in educating against erasure. Each paper is a meditation on how we are called upon in our work to intentionally engage with these ghosts as necessary portals that link up the present to the past.

Presentation(s): SOVEREIGN HAUNTINGS: INDIGENOUS EDUCATION IN NORTH AMERICA AND PALESTINE

Karma Nabulsi (2009) used the term "scholasticide" to explain the centrality of the destruction of indigenous education to the Israeli settler colonial project. Brayboy and Chin (2020) coined "territory" to describe a similar process in North America. In this paper, we leverage these related concepts across sites of settler colonialism, while also considering how indigenous people haunt the settler colonial projects that wish to make us ghosts. Reading across sites of settler colonial erasure, we analyze the policies and practices of scholasticide and territory, attending to reverberations and disjunctures across time and space. In the U.S., territory has taken the form of assimilation through boarding schools toward what Col. Richard Pratt called the need to "Kill the Indian in him and save the man." For Palestinians, scholasticide manifests in direct Israeli violence that obliterates entire populations of students and educators, alongside the buildings. But, it is also baked more quietly into the policies that deploy "neutrality curriculum" and "human rights" to attempt to crush all forms of national consciousness. Despite these powerful apparatus of erasure, these indigenous lands remain haunted by the living who cannot be made ghosts. An oral history project with Palestinian teachers in Lebanon explores their presence as political actors who insist that "knowledge is our strongest weapon".

On the Promise of a Normal Danish Childhood: Integration through Coercive Assimilation

A recurring ghostly trope in Danish nationalist projects is the benevolent offering of opportunities for "normal childhood" through regimes of racial violence that have justified cultural erasure and the removal of children from their families.. Denmark positions itself as a paragon of human rights

and equality, projecting a national image of "racial innocence" despite its historical and ongoing participation in regimes of coercive assimilation and racial violence in Greenland, St. John and at home (Wekkler, 2016). In the current context, Muslim families and neighborhoods are positioned as sites of deviance and risk and childhood is framed as a critical time of intervention to address the putative "integration crisis". Deployed in the name of addressing honor-related crimes, these policy mandates are then expanded to include routine aspects of family's everyday lives and perpetuate the racialized surveillance and exclusion of Muslim youth in schools. Drawing on critical policy analysis and ethnographic fieldwork, this paper considers how current Danish integration regimes promise access to a "normal Danish childhood" through processes of coercive assimilation. In doing so, it examines how Danish liberal humanitarianism logics echo earlier hauntings of colonial and racial violence and offers up young people's critiques of their false promises for inclusion.

Presenter(s): Reva Jaffe-Walter

The Return of the Moor: When Morophobia/Islamophobia Goes to Hollywood

When Karla García-Gascón (the Spanish star who in 2025 became the first transgender actor nominated for an Academy Award) published "How many more times will history have to expel the Moors from Spain?" and similar sentiments in a series of tweets spanning the late 2010's and early 2020's, she was invoking *longue durée* specters that have sustained the nationalist racialized affects (Berks and Ramos-Zayas 2015) that belie Maurophobia and Islamophobia in Spain.

While the discursive contours of Maurophobia/Islamophobia in Europe are always shifting (García-Sánchez and Treteault 2024), contemporary Maurophobia/Islamophobia in Spain is constituted at the intersection of two related processes: (1) It participates in the brand of Islamophobia that is an ideological syncretism of the attribution of orientalist "otherness" to Islam (Asad 2003; Said 1978) and the more recent security discourse of the so-called war on terror (e.g. Silverstein 2004; Werbner 2005); and (2) it is socioculturally rooted in the specific historical past of the Spanish context, where Muslim communities thrived during the medieval and early modern periods (López García 2006).

Against this backdrop, this paper examines the controversy that García-Gascón's newly resurfaced tweets provoked focusing on her use of the racial slur "moro/moors" and how Muslim immigrant communities in Spain are particularly susceptible to being viewed through this ghostly racializing lens.

Presenter(s): Inmaculada García Sánchez

Countering Costa Rican exceptionalism: The Ghosts of Indigenous Land Defenders in Education for Sustainability

In a Costa Rican international school dedicated to peace and sustainability, the country's indigenous past and present haunts efforts to teach and learn about Costa Rica's biodiversity and "sustainable development". Behind the national mythology of Costa Rica as a prosperous and peaceful "Switzerland of Central America", a long-running and bloody conflict over the land rights of

the country's Indigenous communities has been largely hidden from public view. In this paper I describe how encounters with a murdered indigenous land defender transformed the experience of Costa Rica for a group of students and myself, challenging myths of Costa Rican exceptionalism and the school's ecotourism approach to the local context. I call these encounters "hauntings," following Yoon and Chen (2022), as multisensorial experiences of (re)visitation, where truths that have been covered up are brought to life, opening space for new ways of being. Drawing on my fieldnotes and interviews with students following a weeklong visit to Brörán indigenous territory, I track moments where embodied learning, heeding hauntings, and bearing witness to loss and struggle disrupted business-as-usual and previous learnings about peace and sustainability in Costa Rica. To witness, for Yoon and Chen, is "to be with ghosts and feel traces of their pain."

Presenter(s): Andrea Dyrness

The Ghost(s) in the Machine: Racialized Haunts and Other Disturbances in Immigration Media Representations

I grew up hearing stories of La Llorona—the legend of a ghost who haunts riverbanks mourning her drowned children. The specter of this weeping woman was meant to compel children like myself into behaving, but it is also a story about loss—about what has been disappeared through colonial violences, and the ghosts that haunt us in its wake. During an era of mass abductions, immigration itself is spectral, its own ghost story.

This paper follows Gloria Anzaldúa as spirit-guide through the haunted terrain of immigration, centering "spirit-thinking" as "an epistemic and ontological project that takes seriously spirits, ghosts, and others" whose presence disturb taken-for-granted realities and render the invisible visible (Sinclair & Newton, 2021, p. 49). Looking at contemporary media representations related to immigration, this paper examines the migrant as a "spectral subject." Exhuming the spirits of immigration's past-present, it traces the socio, legal, and economic conditions surrounding immigration and the ghostly images through which it is being portrayed. Whether referencing "ghost citizens" clandestinely living in the shadows of the nation, "ghost flights" covertly transporting "illegal aliens" across borders, or the alleged "ghost criminals" terrorizing our national home, I argue that these ghostly discourses not only reflect the nation's imaginary, but also mold, "haunt" even, our national discourse, guiding our policies and practices towards immigrants.

Presenter(s): Anne Rios-Rojas

3773 Outside the Resilience Frame: Writing on Immigrant Endurance in Un-endurable Times

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Roundtable/Town Hall

This roundtable brings together activist-engaged scholars rethinking the contours of immigrant

justice narratives. In the virulent anti-immigrant present, we see clearly the collapse of the myth of the good (enough) immigrant juxtaposed with the bad/criminal immigrant, revealing that concerns about the law, good behavior, coming here the "right" way, was always a pretense. Anthropologists have long struggled with how to explore, analyze, and collaboratively share stories of migrants; striving to find balance between recognizing pain and power. There is a growing concern, however, about the utilization of resilience as a framework for migration; as resilience necessitates violence which creates a concerning dynamic of fetishizing pain. As anthropologists writing in other contexts have argued (Bonilla and Lebrón 2019), resilience narratives easily become alibis for structured abandonment, transforming the measure of "good citizenship" in the neoliberal age to one's capacity to "stick it out well" (Hage 2013). In this roundtable, we seek to trouble the ideology of immigrant resilience. We ask: How might anthropologists reconcile imperatives to honor the agency of individual immigrants, while attending to the structural violences with which they must contend, and the need to build collective power that challenges those violences at their roots? Within our writing, how do we refrain from the denials of coevalness (Fabian 1983) that necessarily attend to resilience framings? How do interlocutors themselves react to framings of their stories in this way?

4547 Paranormal Data: Empiricism and Ethnographies of the Unknown and Unknowable

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Oral Presentation Session

Anthropology is well-suited for the study of the paranormal, rooted in classic anthropological studies of how people perceive and experience phenomena that fall both within and outside of organized religious belief, including witchcraft, magic, spirits, monsters, and other nonempirical beings. Paranormal or "nonempirical" beings, phenomena, or experiences often elude scientific evidentiary procedures, challenging the epistemological and even ontological basis for our scientific approach to the natural and human world. Anthropology does not discount the individual's phenomenological experience, even if our ethnographic "evidence" may be at odds with what Martin Holbraad described as the "alterity" of our data. Rather, our anthropological currency is the human experience, for even if the paranormal is ultimately uncapturable by contemporary scientific methods, people's experiences with the paranormal—the spectral visit, the prophetic vision, the UFO sighting, the Bigfoot chase—render the paranormal ethnographically capturable.

This panel interrogates the ways in which people discuss and experience the paranormal in contemporary societies in an era of globalized digital landscapes and of ever-expanding religious/spiritual pluralism. We are also living through a time in which political actions are often undertaken by favoring conspiracy theories and "fake news," some of which draw on theories of the paranormal. Our panelists explore a wide range of related topics, including how the sacred aspects of Egyptian belly dancing might be diluted or lost in the U.S. context; how certain Buddhist concepts, in particular the Tibetan tulpa, are represented in Western media and internet subcultures; how Chinese animal rights activists might wield or invent ideas about supernatural beliefs that are purported to exist among rural populations or minority ethnic groups; how students express and reflect on their own uncanny experiences in an anthropology course on monsters and other nonempirical beings; and how biomedical and science-based approaches to understanding death and the afterlife might discount the experiences of patients and caregivers. We query the very contours of empiricism as anthropologists exploring both the evidence of ethnography and the evidentiary practices to attempt to prove the existence of or validate others' experiences of the paranormal.

Presentation(s): The Creation of the Supernatural Other and the Modernization of the Chinese Animal Protection Movement

China is currently the second largest pet market after the U.S. Yet it is a cultural trend rife with contradictory data, shifting supernatural beliefs, and conspiratorial narratives that demonstrate the potent political nature of the nonhuman and the role the growing animal protection movement has in both promoting and challenging these beliefs. The very argument that keeping pets in China remained illegal until the 1990s, often repeated by animal protection activists and scholars alike has since been proven to be a false narrative, created by a British citizen, likely as a form of anti-communist propaganda. Yet it remains a useful narrative to separate modern pet keepers from a partially fictionalized problematic past. This paper examines how activists work to expose and in turn fix what they see as the gap between the self-declaration of humanness and the lack of humaneness within modern Chinese society. But even while humanity is based on an erasure of the human/nonhuman binary, the movement inadvertently holds up and sometimes strengthens the separation of themselves from other citizens, often based upon and supported by separating their own beliefs from the supernatural and assumed false and old-fashioned beliefs of the rural and

ethnic Other. In many cases, the existence of these reported supernatural beliefs that activists use to demonstrate the backwardness and lack of humanity of these marked Others, lack evidence beyond rumors, the very type of data they critique.

Presenter(s): Suzanne Barber

Grief, Ghosts, and Remembrance

I was watching TV. I remember admiring the scene on screen. For some reason, only the living room lights were on. Every other light was off. It was dark around me which is unusual because I do not like darkness. The sky was emboldened in hues of deep violet and gray like the waves of the ocean when they converge.

I heard the familiar sound of her walker. I looked to my right in disbelief as a dim light poured in from the right. I looked towards her room. There was no one there. I got up and walked towards the light. She was standing there. Her fragile frame towering over the walker. Her stature shriveled with illness and age, but her gaze confident and proud, just how I remembered her.

Me: Do you still have pain?

Mama: Yes

Me: Has it not healed yet?

Mama: No.

I looked outside. The sky had disappeared. Was this a visitation or was it my own trauma?

When my mother passed, I looked towards anthropology as a long-standing companion to find answers. In doing so, I have wondered where do culture, dying and the "afterlife" intersect with pain, loss, and legacy? This narrative is an attempt to present these intersections and share lived experiences of illness and caregiving in social and institutional domains. In addition, it is a commentary and an autoethnographic account of how societal and medicalized perceptions of aging define, and deny patient experiences and autonomy in biomedical ethics and practice.

Phenomenologies of Communitas in Egyptian Belly Dance

The musically-induced ecstasy of tarab is an Arab cultural iteration of communitas (Turner 1969). This paper will explore approaches to understanding ecstatic physical experiences of community through tarab in Egyptian belly dance, remaining attentive to different sensory registers, prioritizing vibrational senses like sound and affect over the visual. In contrast, belly dance in the US is often taught with a focus on how the body looks from the outside and on disciplined control of muscles in isolation, influenced by our prevailing scientific culture. I speculate that this visual approach hinders dancers' ability to connect with others, both human and non. The sacred and paranormal are often key parts of generating the experience of communitas in rituals, and although the stigmatized status of belly dancing as a profession would cause many to scoff at the idea, Egyptian

dancers have spoken about tarab as sacred. I will combine embodied autoethnography - discussing my own experiences of tarab - and phenomenological interviews with foreign and Egyptian dancers working in Cairo about how tarab feels in their bodies, seeking to understand how energetic connections with paranormal and human others register in the body.

The Tibetan Tulpa and Western Paranormal Media

This paper examines the Western interpretation of the Tibetan tulpa, a Buddhist thought-form created through spiritual practice, through a comparative analysis of television shows *The X-Files* and *Supernatural*. Alexandra David-Néel first wrote about the Tibetan tulpa in English and encouraged her fellow followers of Theosophy to create a tulpa as a way to gain supernatural powers. This paper also examines the spread of tulpa discourse into digital subcultures, including *BRONY* fandoms, shedding light on how spiritual concepts are hybridized in contemporary Western imagination. Within internet subcultures such as adult *My Little Pony* fans, "Tulpamancers" report to employ lucid dreaming and meditation to form deep emotional and psychological connections with tulpas modeled after characters from the show (Veissière 2016). By examining the popularity of Buddhism in everyday cultural life we see how Buddhist elements are consumed and indeed desired in modern - Western imagery. Drawing on Tibetan textual sources and Lopez's (1994) framework of New Age Orientalism, this paper explores the perpetuation of a romanticized "mystic Tibet."

Teaching the Paranormal, Learning from Students

The paranormal is "good to think with," to quote Claude Lévi-Strauss as he attempted to explain why certain totem animals might be chosen over others. The paranormal is also a topic that is good to teach with, as it is generally compelling for university students. How does teaching the paranormal differ from teaching a more traditional "Anthropology of Religion" course. The latter may take a more etic and/or scientific approach to attempting to identify the structure and functions of organized religion in different societies. In this paper, I discuss approaches to teaching different iterations of an anthropology course currently called, "Monsters, Magical Creatures, and other Nonempirical Beings," at Georgia State University. Through teaching this course, I have explored different ways of talking about and teaching about perception and religious and spiritual experience. Student narratives of nonempirical experiences tell us much about their relationship to and understanding of the paranormal and how approaching these experiences with a consideration of "the reality of spirits" (taken from the title of an essay by anthropologist Edith Turner about being open to nonempirical possibilities). This course has also provided an opportunity to discuss critical thinking, the possibilities and limits of science to explore the paranormal, and the representation of the scientific approach in "paranormal investigations."

4456 Phantasmic Conceptions: Towards an Anthropology of Ghostly Reproductions?

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

In this late biopolitical moment when the notion of reproduction is undergoing profound technological and technocratic capitulation, anthropological theorisation and exemplification must attend to the global, emergent and anomalous transitions of human reproduction and fertility as it unfolds as a phantasmic field: shaped by ghosts of past regimes, anticipations of uncertain futures, and the lingering presence of unborn possibilities. Drawing on ethnographic immersions from varying demographic and political contexts, this panel shines light upon reproductive subjectivities and embodied experiences of individuals and communities as they navigate reproductive technologies, biopolitical imperatives, social practices and cultural norms. Together, we ask: what does it mean to desire, conceive, postpone and manage fertility within haunted biopolitical infrastructures, suspended moralities, and ghostly regimes of reproduction?

Jolene traces how women in Beijing engage ling (spirit and efficacy) across temples, hospitals, and digital platforms mediate their reproductive struggles, weaving ritual and biomedicine into a cosmology of reproductive presence. Selma explores the central yet marginalised role of traditional midwives in Mexico to reveal an interplay of biomedicalization, institutional erasure and local resistance in healthcare systems. Arushi's study of female sterilisation practices in India demonstrates lingering reproductive futures as tied up with surgical terminations of fertility, creating new legacies and logics of the postoperative body. Sachiyo follows egg-freezing practices in Japan, arguing that rather than easing reproductive anxieties, frozen eggs embody a suspended temporality that haunt individuals with normative reproductive expectations and values. Eléonore examines intersections of biomedical knowledge and agency in France, where reproductive desires and autonomy are governed by notions of prevention, risk and precariousness.

Analysing spiritual attunements, biopolitical spectres, haunted terminations and suspended temporalities, we gesture toward a methodology of ghostly reproduction - attending not to fixed fertility outcomes but to the temporal, affective, and spectral conditions through which reproduction is imagined, suspended, or disrupted. Departing from the treatment of fertility as a biological fact, policy object or calculable outcome, we ethnographically make visible its spectral, suspended, haunted, anticipated and deferred dimensions. The panel foregrounds how spiritual forces, institutional structures, and affective uncertainties intersect in everyday attempts to conceive, prevent, or make sense of fertility. It invites us to consider reproductive hauntings that make, delay, or undo the future, exhuming legacies that live on from the past, engaging spectres that animate the here and now, and envisaging new traffic across biopolitical, technological and

bioscientific realms.

Presentation(s): “Beseeching for Babies” (Qiuizi): Reproduction at the Intersection of Metaphysics, Science, and Biopolitics in Contemporary China

"Beseeching for babies" (qiuizi 求子) is a long-standing practice through which individuals navigate reproductive struggles via both metaphysical and medical domains within China's patrilineal cosmological order. In contemporary urban China, women facing fertility challenges continue this practice, though transformed. Amid declining fertility and pronatalist policies, this paper asks: How do women navigate infertility at the intersection of cosmological frameworks and biomedical interventions? And how does ling (灵)—spiritual efficacy and spirit—mediate these domains? Based on ethnographic fieldwork in Beijing, online and offline, I show how ling threads through temples, hospitals, and digital platforms. Women beseech ling by whispering to hoped-for children at sacred altars, speaking to embryos in petri dishes, and cooperating with fetuses during clinical exams. Ling is theorised as a spectral, affective force hovering between presence and absence, shaping reproduction through embodied acts and collective validation. Digital platforms like Xiaohongshu serve as virtual pilgrimage routes where women exchange ritual techniques and assess efficacy, extending ling's circulation beyond physical shrines. By tracing these manifestations, this paper offers a theoretical reflection on ling's ontology and efficacy, contributing to anthropological understandings of reproductive subjectivity and the entangled boundaries between science, magic, and religion in late modernity.

Traditional Midwives: The Ghost Writers of Mexico's Public Healthcare System?

Midwifery, one of the world's oldest professions, continues to exist on the margins of formal healthcare systems in many regions, particularly in Chiapas, southern Mexico. Traditional midwives carry generations of knowledge, offering culturally safe home births to women seeking their services to avoid highly medicalized surgical births in public clinics. In 2016, however, Mexico implemented healthcare reforms aligned with international recommendations to reduce maternal mortality by promoting hospital births. These reforms inadvertently criminalized traditional midwifery—accusing midwives of maternal deaths, hindering them from registering births, and forcing many to continue their practice in secrecy.

Although attending nearly half of births in Chiapas—far above the national average—midwives have increasingly become "ghosts" within the healthcare system—unwelcome and invisible. Yet, they remain a vital source of care, especially for low-income rural women who often face limited access to quality services and experience mistreatment in public facilities.

Ethnographic fieldwork conducted since 2023 with urban and rural indigenous midwives reveals the ongoing struggles of their deliberately marginalized profession, as well as the intensifying push for further institutionalization, exemplified by the recent introduction of a new midwifery regulation in Mexico in March 2025, threatening to further undermine the already faint recognition of the services these midwives provide.

Presenter(s): Selma Mouchel

Surgical Terminations and Un-terminated Reproductive Futures

Critically departing from the 'dark' and 'troubled' legacies of population control and mass sterilisation, my research draws attention to how contemporary sterilisation practices in India are haunted by uncertain reproductive futures. Biomedical innovation has allowed a sophisticated state apparatus of family planning that gestates laparoscopic sterilisation as a quick, efficient and ordinary healthcare service, advancing a technological promise of surgically terminated fertilities that would terminate reproductive anxieties and uncertainties while also allowing the biopolitical state to terminate itself from the responsibility of surveilling the fertile body. However, the limits of this promise are revealed in how postoperative lives continue to be haunted by uncertain and un-terminated reproductive futures. Based on ethnographic fieldwork at a family planning clinic in northwest India, I show how legacies of population control braid itself with emergent demographic anxieties to create new legacies and logics of the sterilisation operation, and of the postoperative body itself. Surgical terminations of fertility, I argue, remain entangled with un-terminated reproductive futures — bureaucratic infrastructures, biomedical apparatus, patriarchal bargains, recurring bodily afflictions and interventions — rendering the sterilisation operation a ghostly spectre in women's everyday lives.

Presenter(s): Arushi Sahay

Frozen Eggs as a Haunting Reminder of Incomplete Womanhood?: Challenged Mothering Desires and Reproductive Responsibilities in Japan

Before the advent of assisted reproductive technologies (ARTs), human reproduction was considered a "natural" process. However, with the introduction of ARTs, individuals are increasingly expected to rationalize their decisions to have, or not to have, children, and justify their use of medically assisted reproduction. Egg freezing, an emerging biomedicine, allows women to postpone motherhood by preserving their eggs in anticipation of potential future infertility. Whereas the technology is framed as liberating women from the anxieties of the biological clock, my research suggests that reproductive concerns continue to haunt their post-egg freezing lives. Based on in-depth interviews with 51 egg freezing women in Japan, this paper discusses how frozen eggs, as a form of suspended animation, continuously challenge their maternal desires and haunt them with gendered expectations and responsibilities. By analyzing how egg freezing women envision future partnership and parenthood, this paper argues that their reproductive decisions are largely shaped by societal expectations, particularly the drive to ensure the health and well-being of their prospective children. In looking at how these women navigate the seemingly contradictory moral

mindsets between tradition and modernity, nature and technology, and biological essentialism and rational thinking, this paper further explores how these creative tensions shape contemporary cultural values surrounding motherhood.

Presenter(s): Sachiyo Yagi

“Knowledge is power”: knowledge and reproductive autonomy in a context of infertility anticipation

"Knowledge is power". 50 years later, this slogan, inherited from the women's health movement, continues to circulate in fertility awareness and educational programs. Based on the idea that women lack knowledge on fertility and medically assisted reproduction hamper reproductive decision-making, different initiatives participate in the growing circulation of knowledge about fertility. In addition to willingness to develop public health campaigns, women and physicians develop initiatives to disseminate and spread this knowledge about fertility, combining biomedical, paramedical and/or alternative knowledge. In these initiatives, knowledge is associated with power and agency over one's reproductive life. However, the spectre of past pronatalist policies, interference and medical paternalism is never far away. As some fertility awareness campaigns have met resistance from women, public health actors and physicians design prevention messages to avoid the risk of paternalistic, pro-natalist messages and to respect women's reproductive autonomy. This paper analyses knowledge about fertility and the risks of infertility that circulate in the public sphere, the intersections of biomedical knowledge and agency to understand the legacy of the women's health movement, and critiques of pronatalist politics. In particular, this paper examines how reproductive autonomy is promoted and exercised in this regime of knowledge, anticipation of infertility and fertility precariousness.

7313 Session 1: Revisiting the Discourse of Domination in Agriculture

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Estherwood (4th fl)

Type: Roundtable/Town Hall

Scholars in anthropology and critical agrarian studies have demonstrated how industrial agriculture has made farmers dependent on externally manufactured inputs, thereby reducing their control over production. This has transferred power away from farmers to collaborative alliances between the state, scientists, and private companies, all of which benefit from this arrangement (Kumar 2016; Stone 2022; Weis 2013). Despite widespread opposition from farmers across the world, including in Europe and Asia, the corporate concentration in agriculture has continued, expanding across various domains such as digital technologies, biotechnology, and beyond.

While corporate actors engage with farmers in developing and testing their technologies (Freidberg 2019;2022), some of these actors hail from farming families themselves and play an important role

in shaping these interactions. Their presence complicates the "stark transnational capital versus peasantry" binary in the food regimes literature (Aga, 2018, p. 671). Instead of analyzing these interactions solely through the lines of capital-centrism, imagining otherwise, or both, we aim to situate them in the everyday lives of farmers and corporate agents who work as foot soldiers of financial capital.

This roundtable seeks to ethnographically explore the ongoing corporate attempts to dominate agriculture globally, without reproducing the discourse of the "powerful." It proposes an anthropological examination of last-mile interactions between farmers and corporate actors, exploring both the fragilities and dependencies of the powerful while simultaneously analyzing their attempts to dominate agriculture. Could this way of revisiting power dynamics in agriculture provide pathways for promoting justice while also "staying with the trouble" (Haraway 2016)?

We invite participants to discuss ethnographic stories/work from diverse contexts, focusing on everyday interactions between corporate actors (including technology developers and state officials) and farmers. We will address (but are not limited to) questions such as:

- What kinds of interactions occur between corporate actors and farmers? How do these actors approach these interactions, and why?
- How is power formed within these interactions?
- Do we observe contestations within these formations? If so, are these contestations generative, and if so, in what ways?
- How have these interactions evolved historically? What roles have the emergence of digital and other technologies played in shaping these changes?
- Are the long-standing categories used to analyze agricultural change (e.g., small, medium, and large farmers) still relevant, or are they being challenged and reconfigured in these interactions?
- Do these interactions themselves offer strategies for rethinking the discourse of domination and making it more just?

Presentation(s): "The Brazilian Ghost: Takeaways from a Decade of Fieldwork"

From the village of Tiradentes, frozen in time in the mountains of Minas Gerais, to the jungles of Amazonia or the streets of Salvador--from the dreamscape of Maranhão or Fernando de Noronha--there is one thing in common. Ghosts have a story to tell. Brazilian ghost stories circulate chiefly outside the academy and the marketplace. From this elusive corpus come unheard voices in the literary tradition and rich ethnographic insights on social justice.

A decade of fieldwork in southeast Brazil, northeast Brazil, and north Brazil has yielded an extensive collection of previously undocumented ghost stories. These narratives, which draw on Indigenous, African, and Portuguese roots, provide a unique perspective on historical struggle by passing down a record of social grievances outside official channels. The presenter, Marcus LiBrizzi, is the principal investigator for the field research project. Author of three ghost story collections, one documentary history on an Early American ghost sighting, and an oral history of a settlement of freed slaves in New England, he is a Professor of English at the University of Maine.

This flash presentation will briefly introduce the field research project, outline some of its top ethnographic insights, and end with a flash reading from a previously undocumented ghost story from Brazil.

Presenter(s): Marcus LiBrizzi

From Religious Repression to Exodus: The Survival of AfroCuban Spirituality

Drawing from a multi-sited ethnography that explored the survival of Afro-Cuban knowledge systems within Cuba and through its exodus to the United States, this paper examines the human costs of the Cuban Revolution. It focuses on how state policies shaped access to religious freedom, while highlighting how Cubans carried their beliefs across the Straits of Florida as a form of resistance. During the 1994 Balsero Crisis, Cubans migrating on rafts shared stories of bringing limited belongings--yet among them was often a rock figure of the Yoruba-based deity Echu-Eleguá,

the opener and closer of paths, who was believed to guide their journey to the United States. This story echoed the narratives of Cubans who fled during the Mariel boatlift in the spring of 1980, at the height of religious persecution in Cuba. Among them, some women Marielitas described Yemayá-the maternal orisha of the ocean-as the savior of boatlift survivors. This ancestral knowledge is deeply intertwined with my own story, as the daughter of a Cuban political prisoner from the 1960s, a Mariel refugee, and a witness to my father's journey to becoming one of Western New York's first practitioners of the Congo-based Palo Monte religion in the 1980s. This paper uniquely intersects Black Atlantic and post-Soviet studies, offering a critical lens on migration and cultural survival. A Cuban artist I interviewed captured this resilience when he said: "La religión no es algo que desaparece, sino que sobrevive, porque está en la gente, en la cultura, aunque no lo digan." Despite systemic repression under socialist ideals, Afro-Cuban spiritual traditions endured, albeit in covert and altered forms. This paper examines the mechanisms of this repression, detailing how Afro-Cuban knowledge systems were targeted as counter-revolutionary threats. Beginning in the early 1960s, after the Revolutionary regime declared itself an atheist state, it framed spiritual leaders-such as Babalaos-as adversaries, subverting their practices and institutions. In 1992, the regime established the Asociación Cultural Yoruba de Cuba, undermining the legitimacy of sacred practices such as the letras del año. After this point, repression evolved into a more subtle form of subversion: by promoting these practices as cultural heritage for tourists, the state masked its ongoing control while profiting from the very traditions it had long sought to suppress. Research for this study was conducted in Cuba through multiple visits between 2018 and 2019, each lasting from two weeks to one month, though I have been traveling to Cuba since 2005. In Cuba, I interviewed 25 participants, primarily in Havana, with individual interviews ranging from one to four hours. In the United States, I conducted 18 interviews between 2020 and 2025, primarily with Mariel and Balsero Cubans living in Miami, Washington D.C., and New York City.

Presenter(s): Amalia Daché

Haunting French law with Indigeneity: Indigenous people's reflections on their legal recognition in 'French' Guiana

Like a ghost of colonialism, Indigeneity continues to haunt French law in so-called 'French' Guiana, or Guyane, a French overseas territory in South America. Despite the demands of Guyane's Indigenous Peoples, the French state persists in denying them legal recognition on the pretext that France is an indivisible republic. Legally, the state continues to regard Indigenous Peoples as ghosts, refusing to fully recognise them, while leaving traces of their existence in policies that address 'communities' or 'Amerindian populations,' but never 'Indigenous Peoples'. Despite this legal erasure, Indigenous Peoples remain present and engaged, fighting against their marginalisation and for their legal recognition in France. Drawing on ethnographic fieldwork in Guyane, conducted as part of my PhD at the University of Helsinki, my research aims to provide a platform for Guyane's Indigenous Peoples to reflect on Indigenous legal concepts within the context of French and international law. Working with Indigenous collaborators, we have designed four one-week legal workshops, each conducted with six different Indigenous participants. These workshops are an opportunity not only to provide a grounding in international law to the

participants, but also to reflect with them on how their own Indigenous laws can interact with and inform French and international legal systems. Preliminary findings offer new perspectives from Indigenous people on their legal recognition in France.

Presenter(s): Pierre Auzerau

Not Theirs Alone: Alcohol, Masculinity, and 'Ordinary Death' in Oaxaca's Sierra Sur

This piece depicts events that I witnessed and participated in during fieldwork in the rural Zapotec community of San Agustín Loxicha in the mountains of Oaxaca, Mexico. My larger project focuses on political violence, memory, and activism in the aftermath of armed conflict. As I was studying these issues, I found myself confronted with other forms of "ordinary" violence, including the structural violence that generates "ordinary" deaths by alcohol. In this essay, I explore and reflect on this pattern. "Not Theirs Alone" interweaves the story of a father's mourning of his adult son's untimely death with descriptions that convey the feel of the town where it occurred. Through this structure, I argue that this father's grief is part of a larger historical legacy of harm involving a confluence of alcohol, masculine traditions, economic policies, political repression, and natural disaster.

The communities of the Mexican Sierra Sur are full of men who die contorted by alcohol. Life is hard, and mezcal is cheap and comforting. The countryside has been in a deepening crisis for decades, and the neoliberal reforms of the 1980s and 90s have had catastrophic effects on livelihoods, including where coffee is an important cash crop and various forms of environmental degradation have made the cafetales less productive every year. Men without land can work as day-laborers or in low-paid jobs, while the majority migrate. For those who stay and those who return, there is no shortage of reasons to despair, and there is ample pressure to drink.

Drinking is folded into layers of everyday life and rituals. These practices are integral to sociality among men, at the same time that they impact women. Here, as elsewhere, drinking is not merely a mechanical reaction to hardship; it is also a practice that is valued and cultivated, celebrated in songs, and deeply enmeshed in the mourning process itself, which involves hospitality on the part of the mourning family and the communal sharing of alcohol as part of remembering a deceased loved one.

This consideration of alcoholism in rural Oaxaca today also speaks indirectly to the history of social movements in this region. Militancy in the OPIZ Indigenous political movement that emerged in Loxicha in the 1980s and 90s involved a vow of sobriety. One of the movement's most popular measures, particularly among women, was a ban on the sale of alcohol. A parallel process was occurring in Chiapas, where Zapatista women were the main force behind banning the sale and consumption of alcohol. Two decades later, this remains a strictly enforced law in Zapatista communities; whereas, in Loxicha, the Mexican government's repression of the OPIZ led to the movement's disarticulation and the end of the alcohol ban. Today, most young people in Loxicha have never heard of the ban-another marker of the tragic success of the state's violent dismantling of the ideals and structure of the region's Indigenous social movements.

Presenter(s): Bruno Renero-Hannan

Re-capturing Indigenous craft “tradition”: Documenting and interpreting Lenca pottery practice through a collaborative PhotoVoice project

In La Campa, Lempira, Honduras, Indigenous Lenca artisans have produced and sold handmade utilitarian pottery for generations. Pottery production is a cultural patrimony and essential economic livelihood in the community. However, La Campa's pottery is changing. Potters now use non-traditional production techniques to create commercially appealing tourist goods. Yet, promotion of pottery in the tourism industry is misleading; state-constructed narratives dictating what crafts count as "Indigenous" create misconceptions about Lenca pottery among tourists and limit potters from accessing regional craft markets. How do these trends shape pottery practice in La Campa? How can artisans regain control of the narrative surrounding their craft livelihoods? This work presents results from an ongoing community PhotoVoice project where Lenca artisans visually document their own craft practices and digitize this cultural knowledge to create tourism promotional materials and a community website. This project highlights benefits and challenges of incorporating digital tools in community research, and takes a critical lens to how researchers define "decolonial" or "collaborative" methods in their work. To conclude, this paper discusses how images generated by potters are being used in promotional materials for La Campa, allowing artisans to control how their craft practices are defined and promoted in the regional tourism industry.

Presenter(s): Hannah Toombs

The Ethnology of Migration Policy in the United States and Ecuador

Ecuador is home to the fourth largest population of Venezuelan refugees in South America, as well as the world's first universal citizenship policy, which "advocates the principle of universal citizenship, [and] the free movement of all inhabitants of the planet," (Article 416). According to background interviews with refugee service providers in Ecuador, "The universal citizenship policy allows migrants to come and go as they please without papers," (Anonymous 2024). However, in 2023 a Human Mobility Bill was passed that requires migrants to register within 90 days of entering the country or they could face deportation. Service providers worry this new legislation may disrupt community integration efforts and cause significant stress and financial burden to migrants. To contribute to broader debates in migration studies and policy making, while emphasizing the need for policies that not only manage migration but enhance the well-being and integration of migrants in their new communities, this project conducts 75 ethnographic interviews with Ecuadorian citizens and other stakeholders across Ecuador's Amazon basin (el oriente), Andes Mountains (la sierra), and coastal areas (la costa). Narratives from interviews will not only illuminate individual and collective perceptions but provide deeper understanding of the socio-political dynamics influencing Ecuador's migration policies. This analysis also proposes a refined policy model for the United States, including legislative changes, programmatic initiatives, and community engagement strategies to promote more humane and effective integration of migrants and refugees.

Presenter(s): Kiera Eckhardt

The Oil Ghosts of the Past Linger in the Present: the Impact of Environmental Pollution on Cultural Practices in Eastern Ecuador

For over six decades, oil extraction has transformed the Amazon, leaving profound environmental and cultural legacies that persist today. This presentation examines the multifaceted impact of petroleum byproducts on the health, culture, and social structure of Indigenous Huaorani communities living in the vicinity of Yasuní National Park in Ecuador. Ongoing oil extraction since the 1960s has significantly polluted water, air, and soil. Our approach is unique in integrating anthropology and toxicology to evaluate pollution's impact on both individual well-being and communal cultural practices.

Our research was conducted in Huaorani settlements in and around Yasuní National Park. We gathered data on pollution's impact on health, daily life and cultural practices. Toxicologists used innovative silicone wristbands technique to assess individual exposure to pollutants. This non-invasive method is ideal for our study, providing comprehensive exposure data.

By integrating anthropological and toxicological methods, we aim to reveal the relationship between environmental conditions and the well-being of the Huaorani people. This holistic approach provides crucial insights into the multifaceted impacts of oil extraction, highlighting the urgent need for sustainable practices and policies that protect Indigenous health, environment, and cultural heritage.

Presentation(s): Embarazos Espeluznantes (Spooky Pregnancies): Reproductive Governance and Adolescent Pregnancy in Peru

Pregnant adolescents are at the violent crossroads of maternal and adolescent health policy. Codification of reproductive and sexual rights, criminalization of abortions, and limited access to reproductive healthcare facilities foster unmanageable stress and fear amongst adolescents. Adolescents bear the weight of adult reproductive health policies and adolescent sexual health educational standards, both of which fail to meet their reproductive health needs. Six months of ethnographic fieldwork through observation, content analysis, and interviews, in local colegios (schools), boticas (pharmacies), and medical centers reveal the realities of adolescent pregnancy in Huanchaco, Peru. Adolescents are subject to national policies that are enmeshed into local curricula all of which reify obstetric and sexual violences. Community members and teachers are expected to surveil sexual behaviors through chisme (gossip). I argue that adolescent pregnancy is entangled in cultures of normality, created through local and national levels of reproductive governance.

Facing Specters of (Digital) Surveillance: Photovoice as Resistance in Florida OB/GYN Academic Medicine

Since the U.S. Supreme Court ruling on Roe v. Wade was overturned in 2022, the state of Florida has passed increasingly stringent abortion bans. Concurrently, Florida has also leveraged billions of dollars in higher education funding to prohibit diversity-related learning and programming in state universities. These policy changes have radically affected the discipline of obstetrics and gynecology (OB/GYN), specifically the education of medical students, residents, and fellows. More recently, these changes have been magnified by sweeping action at the federal level. Scarce research characterizes the experiences of OB/GYN clinicians, educators, or administrative and leadership personnel in this post-Roe, anti-diversity moment in Florida, or explores the intersections of these policy trends. The latter topic is exigent, as American OB/GYN medicine has been plagued since its inception by racialized harms, challenges to access, and outcome disparities.

This research explores the everyday experiences of administrators, clinician-educators, and students in the highest-performing OB/GYN academic medicine center in Florida. Under these policies, participants report intense surveillance, many hindrances to their daily tasks, feelings of powerlessness, and an exodus of talented students and providers from their practice. However, they also reported feeling empowered by small, everyday actions of resistance. These findings are interpreted through a Foucauldian feminist lens; I discuss the state and medicine as overlapping power structures in which individual practitioners exercise relational power and refuse to disengage from the micro-politics of their work.

Finally, drawing on Black feminist thought, participants are involved in a focus group-based photovoice exercise to capture everyday resistance outside the workplace. Prompts guide participants in visualizing their own self-sustaining practices such as rest, community-building, and joy-seeking. The goal of this research is to cultivate an "oppositional gaze" among participants

which will allow them to recognize, understand, and resist the specters of state power haunting OB/GYN academic medicine in Florida today.

Presenter(s): Bethany Jowers

Hormonal dilemmas: gendered narratives in the search for health, balance, and the "true self"

In 2024, the Washington Post published the article "Women are getting off birth control amid misinformation explosion." This piece reported on the rise of online content overstating the adverse side effects of hormonal contraception and depicting it as a cause of "unnatural bodily imbalances." This reporting highlighted the complicated relationship hormonal contraception users have with it and their bodies, a topic previously brought to attention by scholars like Littlejohn (2013), Walker (2012) and Ford, De Togni, and Miller (2021). Likewise, political commentators reacted by claiming the article dismissed the lived experiences of women, but more interestingly, that it was part of a censorship agenda against "birth control critics" and those "committed to protecting natural femininity." These concerns over balance, endocrine disruption, gender as hormonal make-up, and the natural as a moral category gain relevance in a political context where health freedom movements like the Make America Healthy Again become mainstream. Even more when, paradoxically, spokespersons like Robert F. Kennedy Jr. and podcaster Joe Rogan have promoted Testosterone Replacement Therapy to biohack their health and masculinity while advancing legislation that blocks access to gender-affirming therapies and procedures for trans people. These claims also starkly contrast the back-to-nature narratives advanced in specific women's health and wellness circles. Given these revived interests in the role of hormones in health and gender performance, this project aims to explore how people's understanding of hormonal health shapes their relationship with their bodies and healthcare practices. I aim to further the understanding of hormones as biosocial objects with the potential to shape cultural narratives (Erikainen et al. 2024; Oudshoorn 1994). I present preliminary results from an ongoing interview study where, between December 2024 and March 2025, I conducted interviews and participant observation of different spaces aimed at promoting menstrual cycle syncing practices and biohacking practices among residents of the New York Metropolitan Area. In this initial set of data, I conducted 28 in-depth interviews with laypeople (21 cisgender women, 6 cisgender men, and 1 trans man) about their health and wellness habits and their views on hormonal health. One clear gendered narrative in this first round of interviews is the contrast between the uses of health tracking and which goals they respond to. I draw some comparisons between cycle syncing and biohacking, given that both are forms of intervening health outcomes and the body. On the one hand, biohacking is geared towards "optimize time and health" and "becoming a better man" in contrast to the correlates of cis women engaging in intensive tracking and wellness routines as a way to compensate subpar care and discover "a true self" hidden under the artificialness of synthetic hormones and the unpredictability of "natural" ones.

Is It a Good Pain? Phantom Sensations, Prosthetic Integration, and the Ghosts of the Former Body

Losing a limb is not just a physical rupture-it also haunts the self. Phantom sensations echo the presence of what is no longer there, maintaining a lingering connection to the absent body. While modern prosthetic care often promises to restore ability and bodily wholeness through biotechnology, the lived experience of wearing a prosthesis is shaped by pain, discomfort, and emotional complexity. Phantom Limb Pain (PLP) can be seen as the ghost of the amputated limb: a spectral reminder that both facilitates and disrupts prosthetic integration. It reveals the brain's persistent mapping of the missing limb while exposing the artificiality of its replacement. Based on ethnographic fieldwork at a prosthetic care center in northern China, this paper explores how individuals recovering from amputation navigate these ghostly sensations. Through everyday experiences, they come to understand pain, acceptance, and resistance in relation to their prosthetic limbs. Drawing on cyborg theory, feminist technoscience, and crip theory, the paper asks what it means to live as a cyborg in pain-shaped by technology while confronting its limits. Embodied knowledge, filtered through phantom sensations, becomes central to how prosthetic users negotiate the boundaries between self, body, and machine. In doing so, the paper contributes to broader conversations about identity, agency, and care, showing how the ghost of the former body continues to shape life in the age of biomedical repair.

The Politics of Bodily Autonomy: Transnational Double Standards in the Regulation of Female Genital Modifications

Female genital cosmetic procedures (FGCP)-surgical and non-surgical interventions that alter the appearance of female genitalia without medical necessity-have seen a marked rise over the past two decades. At the same time, medicalised forms of female genital mutilation/cutting (FGM/C), in which health care professionals perform such procedures, have also increased. Although both fall under the WHO's definition of FGM/C, only medicalised FGM/C is widely criminalised, while FGCP remains legal and socially accepted. Globalisation and digital communication have heightened awareness of these practices and their uneven legal and cultural treatment, prompting debates over the double standards that govern them.

This paper explores how the boundaries between FGCP and medicalised FGM/C are defined, contested, and blurred in law, medicine, and public discourse. Drawing on ethnographic studies of FGCP in Belgium and the Netherlands and FGM/C in Kenya, I analyse how different actors-legal authorities, medical professionals, and community stakeholders-navigate and negotiate these distinctions. In doing so, I shed light on the broader dynamics of gender, power, and postcolonial politics that shape the regulation of female bodies and challenge dominant narratives around consent, harm, and cultural legitimacy.

1114 Spirited New Orleans? On Making a Way in Dispiriting Times

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: The Historic New Orleans Collection 520 Royal St, New Orleans, LA 70130

Type: Executive Roundtable/Townhall

New Orleans Track Kick-off Event: Takes place at the HNOC: The Historic New Orleans Collection 520 Royal St, New Orleans, LA 70130. It is a 5-minute walk from the conference hotels.

This roundtable brings together anthropologists with deep personal and professional ties to New Orleans. We consider the AAA conference theme, "Ghosts. Apparitions. Spirits. Specters," to be a timely provocation as we convene to think with and trouble the framing of a "spirited" New Orleans on the 20th anniversary of Hurricane Katrina, under intensifying conditions of social suffering and political destabilization. Resisting a facile characterization of "spirit" that has long been associated with the city, we focus instead on its theoretical and experiential uncaging – attending to the myriad ways that the nurturing and mobilization of spirit takes place in New Orleans as well as what that offers for a (re)conceptualization of living/enduring in these times. While such focus requires attention to forms of capture, reflecting the current acceleration of oppression, racial capitalism, and authoritarianism, we are equally invested in the conditions and processes of spirited/spiritual reclaiming and release. We thus take inspiration from Helen Regis and Shana Walton's (2024) expansive framing of subsistence practice in the Gulf Coast region to consider gathering, provisioning, and other means of feeding the spirit in the broader context of uncertainty, as well as Antoinette Jackson's 2024 AAA Keynote Address on the art of remembrance and the collaborative, spirited ways of knowing that emerge in "making a way." Indeed, as much as engagements with spirit are critical for understanding processes of violence and injustice (Good et al. 2022), they also guide us to emergent inquiries/actions informed by affect and joy (Thomas and Masco 2023, Machado 2023).

Our discussion reflects on themes such as the ways in which we conceive of spirit; the processes by which it can or cannot be dampened or captured; everyday engagements of/with spirit and what they mean, especially given the broader context of social and political upheaval; forms of spirited and ancestral kinship; spirited expression and release through music, procession, and other modes of engagement at local sites; and spirited action and activism.

We see our work as interconnected and deeply rooted in place. The roundtable thus connects to a short series of site visits and workshops (proposed separately), collaboratively developed and locally led. We hope these engagements will allow for an immersive exploration regarding the mobilization of spirit, with application for related communities, contexts, and projects. We are inspired by the idea of the "unconference," as proposed by the 2025 Society for Cultural Anthropology Biennial on "Restorative Relations," and committed to developing decentered and non-hierarchical forms of knowledge production and sharing within and outside of the academy.

7755 Spirits of the 20th Century Symbol: The Human Search for Symbolic Cognition among Non-humans

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** MGB Salon F/G

Type: Oral Presentation Session

The 20th Century saw entire fields of humanistic and social scientific inquiry formulated in terms of the symbol. From formal logic to micro-interaction, from structuralism to interpretive anthropology, the symbol was elevated as a medium of thought, a mode of communication, a means of organizing experience and action, a method of analysis, and sometimes a theory unto itself. At the end of the 20th Century, however, the symbol seemed doomed. Sociocultural Anthropology had markedly turned away from the symbol and toward "practice," leaving the "symbol" to serve merely as materiality's weaker counterpart. This move was paralleled in Linguistic Anthropology's shift toward pragmatics and the problem of indexicality, within a broader Peircean semiotics that strictly delimited what could count as a "symbol." The turn to practice in Sociocultural Anthropology yielded a proliferation of sub-disciplinary trends that generally bracketed the questions of meaning that 20th Century symbologists had elevated. These trends chose instead to focus on forms of action that were either not obviously linguistically mediated or that were analyzed in ways that did not involve recourse to concepts or symbols (exemplified most clearly by posthumanist theory). Even within cognitive and computer science, interest in the symbolic plummeted as connectionist theories, neural networks, and 'non-representational' robotics became omni-present.

Recently, however, a focus on the 20th century symbol seems to have been resurrected. But this time, rather than focusing on human social groups, the search for the symbol extends beyond the human: AI and animals. With rapid advances of Artificial Intelligence systems, large language models are being scrutinized for evidence of abstraction, are seeming to demonstrate semantics, even "sense" (however rudimentary), and are being trained on "symbolic knowledge distillation" frameworks. Moreover, researchers are using machine learning to attempt to "discover" faculties of symbolic meaning-making in species beyond the human. Assistive technologies and consumer products likewise promise a radical expansion of symbolic communication to household pets. Is

this the same symbol of now-dusty 20th century paradigms? What ideologies of human thought and meaning are at work in the resurgence of interest in the symbolic? How are researchers, computer users, or animal lovers developing new regimes of interaction with nonhuman others through this renewed focus on the symbolic? What theories of the social must be formulated to account for these newer (or repackaged) ideologies of the symbol?

Presentation(s): Making Meaning with Full-Time Facility Dogs

Beyond the “talking cure” is the idea that some forms of suffering and trauma resist articulation. This leads some therapeutic actors and institutions to seek out non-linguistic practices and agents. A growing population of facility dogs—who work full-time in child advocacy centers, behavioral health clinics, courtrooms, and cancer wards across the US—are regularly cast by their human co-workers and clients as therapeutic actors precisely because they cannot speak at all. This holds true despite the near constant translational work in which these dogs’ human handlers engage. Nevertheless, meaning is typically found in the presumably non-linguistic nature of dogs’ therapeutic interaction: a paw offered at just the right moment; a prolonged gaze which suggests non-judgmental recognition; a furry body laid silently across the feet of a child offering testimony in courtroom. Yet the ethnographic study of facility dogs’ therapeutic labor suggests something more complex than the seemingly more immediate qualities of canine communication relative to human speech. I draw on over three years of multi-sited research with full-time facility dogs, as well their human handlers and co-workers, to show how the densely indexical qualities of canine-assisted interventions are carefully managed so that symbolic meaning can be made. I also draw out how canine-assisted therapies share in ideologies of the symbol that have been celebrated by “person-centered” therapies and anthropologies alike.

Presenter(s): E. Summerson Carr

Icons, Indexes, and Symbols in Interspecies Communication Research

The field of interspecies communication has seen considerable growth in the past few years, in step with the increased capacities of machine learning and large language models. A number of organizations and research communities are working to make it possible to “translate” animal signals into human terms, and in doing so bring them into expanded multispecies politics based on

liberal concepts of listening. In this paper I examine the ways in which people working in this field focus on different kinds of animal sign functions, and the kinds of "concepts" that AI-based analysis of bioacoustic data could "decode." While many projects emphasize the iconic and indexical components of embodied animal signaling, there is nevertheless a concerted push to frame these signs as symbols that can be mapped in a semantic space similar to the kinds of vector space mappings that large language models now produce for human languages. Yet the demand for symbolic meaning can sometimes produce a vision of animal semantics that is ultimately mysterious to human minds. In this paper I examine the negotiation of knowability and unknowability in (human) interspecies communication discourses.

Presenter(s): Courtney Handman

What Was Reasoning? The Paradoxes of Zombie Cognitivism in 21st-Century AI Research

The revolution in artificial neural network research and practice—the universal reduction of "intelligence" to high-dimensional geometric (iconic-indexical) transformations of arrays of floating-point value—has forced a confrontation with the cognitivist ideologies that preceded and initially sustained such research, in which "intelligences" were cast in the image of symbolic computation processes à la von Neumann: reasoners, decision makers, problem solvers operating in an algorithmically bounded way on explicitly list-like, hierarchical, or tabular data structures of symbolic values with an arbitrary/Saussurean relation to their objects. Hence the paradoxical spectacle of large language models (LLMs) whose reasoning emerges not from rule-based strategies or even approximation heuristics but from casual natural-language prompts such as "let's think step by step," followed by the barely-interpretable stretching, rotating, and filtering of thousands of token vectors in multi-thousand-dimensional space, recurrently and unpredictably repeated with each emission of nouvelle-rationality. I suggest that the individualist sciences are ill-equipped to handle this collapse of Kahneman and Tversky's proverbial System 2 into System 1, and must instead incorporate an anthropological and historical understanding of how the ideologies of symbolic logic have persisted both within and against their own recent creations.

Presenter(s): Michael Castelle

AI's Techno-Conceptual Architectures and the 20th Century Symbol

Old versions of the 20th Century Symbol continue to structure AI's techno-conceptual architectures. The 20th Century Symbol gathered various signs of thirdness (legisigns) into one bucket: words and other denotational signs, rituals and other patterned practices, social structures and other regularities of form, and various other things, such as emblems, that seem to "condense" or "elaborate" meaningful social processes and relations. The unavoidable meaningfulness apparent in the 20th Century Symbol provided a broad target for interpretative work and a readymade metaphysical counterpart to what was (and often still is) collected in another bucket, a substance usually called "material" or something like it. Whereas the general idea of the 20th Century Symbol could encompass multiple kinds of legisigns, the narrowly and technically defined Peircean Symbol foregrounds a specific form of thirdness not present in all legisigns. Moreover, the

Peircean Symbol cannot easily be contrasted with materiality or its ideological like because it is involved in and effectuates a complex array of semiosis from abstraction to embodiment. The Peircean Symbol, in this formulation, does not need to be asserted as "effective" or "affective" because it is already inherently so. The question motivating this paper is how AI technicians move between these two orientations, namely legisigns generally and the Peircean symbol specifically, in order to make inferences about the technology's future.

Presenter(s): Nicholas Harkness

The Autonomous Symbol: Talismanic Midwifery in Late 19th and Early 20th Century Palestine

Where do we begin to locate the symbol as a medium of thought, a mode of more-than-human communication, and a means of organizing experience and action? Since the 9th century, Middle Eastern midwives of many faiths have used a 3rd century Chinese cryptogram called the luoshu or buduh to talk with angels and planets, while healing heal mothers' pain and fever. And the ecumenical magic of turn-of-the-century midwives continued to heal the public amid the expropriation of Palestine's symbolic landscape by European intentional communities (Wilson 2019). My talk focuses on an implicit theory of what I call the autonomous symbol found in a late 19th century manuscript on magic from the Palestine Museum's Karam Zaid Al-Kilani Collection. In this theory of human/non-human interaction, the buduh talisman combines poetic, mathematical, and magical principles to bypass our customary expectations ['aadaat] (Nobel 2021) according to an ideology of human thought that acknowledges our capacities for "estimation" [waham] and "discernment" [fitra] (Nobel 2021). Rediscovering our capacities for interpretation across communities raises timely questions for social theory in the 21st century, when symbolic contact with both humans and non-humans is typically explained through a community's faith in their own specific beliefs (Tillich 1957, 60).

8144 The Anthropology of Family Ghosts

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Bonaparte

Type: Interview

How does an anthropologist deal with ghosts in the family? In this family-based interview, we discuss the boundaries between the personal and professional while investigating family history. Many anthropologists have successfully and intriguingly incorporated their relatives into their research, enriching the canon of anthropological literature. Examples that come to mind include Kirin Narayan, Janelle Taylor, Danilyn Rutherford, Roy Grinker, and Barbara Rylko-Bauer; there are many others. What about when the anthropologist wishes to lay aside their anthropological training, and to investigate, think, and write as a 'civilian'? Here, Leslie Carlin shares her experience of tracing the life and death of an aunt she never knew. Alice, born in New York in 1942 with Down Syndrome, lived her entire life in institutions. Not only was Alice thus consigned and confined; her

entire existence was denied by her parents, who claimed that their third child had died at birth. Alice became a ghost: first a living, and now a dead one. In the years-long project of learning, forgetting, remembering, and then investigating Alice's existence, the temptation to turn the project into one that leans toward the ethnographic or even the ethological has been in tension with the desire to see the story as a personal narrative. The hope is that in the span of time allowed during this interview, attendees will share their own thoughts, questions, and experiences around this topic.

2785 The Dread Heights: Anthropology and Theology in Sites of Refuge and Relief

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Bacchus

Type: Roundtable/Town Hall

This roundtable fosters a conversation around the anthropologies and theologies of humanitarianism and refuge through a discussion of Basit K. Iqbal's *The Dread Heights: Tribulation and Refuge after the Syrian Revolution* (Fordham University Press, 2025).

As the book examines, Muslim charities and community organizations have assumed a significant role in refugee support since the Syrian catastrophe: in Jordan and Canada, as elsewhere, they deliver food aid, house orphans, and organize remedial education. At these sites, however, Islam is more than just a resource for humanitarian projects. *The Dread Heights* details how the Islamic tradition guides refugees, relief workers, and religious scholars in a world of brutal sieges and mass displacement. In staging a confrontation between the anthropology of humanitarianism and the anthropology of secularism, the book turns away both from confirming global failures of empathy or affirming human finitude. Rather, through an ethnography of religious imagination and theological argumentation, Iqbal demonstrates what is at stake beyond secular frames for migration and relief. Even as refugees become objects of humanitarian concern suspended between national orders, *The Dread Heights* brings another suspension into view: a form of life whose gestures are illuminated by the Quranic figure of the Heights. Iqbal's ethnography pursues an unsentimental lucidity across the search for refuge, the trials of creational existence, and the ultimately enigmatic divine decree. In the shadow of war, beyond humanitarian order, Islam offers an orientation to the devastation of the present.

Panelists may consider questions such as: How does anthropological thinking translate theological discourses, imaginations, and argumentation? Can ethnography render the experience of the divine

or offer an account of relations with that which is beyond all relation? How do discourses of humanitarianism and Islamic traditions converge and diverge in contemporary Muslim lives? How do unthinkable events provide the opportunity for debate, disagreements, and the inheritance of a tradition? And how can one ethnographically trace the limits of humanitarian reason, when the discipline of anthropology itself participates in its protocols?

This roundtable will discuss the theoretical, methodological, and political-theological problems raised through this ethnography.

7165 The Haunting Ghosts: Unspoken Voices and Unseen Existence

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Oral Presentation Session

This interdisciplinary panel traces the spectral presence of marginalized identities in educational institutions and beyond—those whose voices are unspoken, whose existence remains unseen, yet whose impact is undeniable. Engaging with the metaphor of the "ghost," panelists examine the haunting silences, erasures, and acts of self-censorship that shape gender and sexual subjectivities across global and local contexts. Through a focus on queer and trans experiences in and across educational systems, this panel also confronts the ghosts that linger in institutions meant to foster growth. We consider the haunting impacts of anti-DEI, anti-queer, and anti-trans policies on international students navigating U.S. academia, where visibility can come with precarity. We explore the spectral presence of shame and silence in sex education, particularly through the narratives of female teachers in Lahore, Pakistan, whose voices are shaped by colonial legacies and cultural taboos. Another thread follows the embodied migrations and transformations of transmasculine individuals moving from Florida to New York City, tracing how legislation, geography, and belonging are haunted by systemic erasure. Across these stories, we ask how queer and trans futures might be imagined in spite of—through—the ghosts that shadow the everyday.

Presentation(s): Anti-DEI/Anti-Queer/Anti-Trans Impacts on (Higher) Education

In the chaos full of political violence, people lament the excessive political interference, resulting in (self-)censorship, curriculum-banning, and dismantlement of minority resource centers, as something "surreal" (yes, it is "real"). There seems to be an eerily familiar spatiotemporal diagnosis when people ask, "Is this really 2025?" or "Is this really the United States of America?" The anti-DEI movement in 2025 of the U.S. "brings us back" to the divergent space-time(s) where/when many of us have not actually experienced yet have known the certainty of the threats, such as the Red (Lavender) Scare in 1950s of the US, the exile of scientists, scholars, and targeted minorities in 1930s-40s of Germany, and more. This presentation shares a couple of concepts (hope/less, future-making, and ghost [haunting]) to encourage researchers to investigate the current anti-Queer/Trans movements and policies in a broader spatiotemporal framework, which can serve as an analytic strategy to avoid giving more power than the current administration/government actually has.

Presenter(s): Akira Sawata

Sex, schools and Shame: exploring the experiences and narratives around sex education of female teachers in schools in Lahore, Pakistan

In Pakistan, the female body is more than a biological entity—it is a vessel haunted by centuries of cultural expectation, seen as the bearer of family honor and the locus of potential shame. The silence surrounding sexual and reproductive health education is not neutral; it is enforced by the spectral weight of taboo, fear, and moral policing. These ghosts—of propriety, of communal judgment, of imagined dishonor—linger in classrooms, homes, and policy rooms alike. With few safe spaces or trusted adults available, young girls are left to navigate curiosity, confusion, and danger alone—further fueling gender inequity and violence. School-based sex education holds the potential to exorcise some of these hauntings, yet its presence in Pakistan remains minimal and fraught. This study explores the shadowed landscape of sex education in Pakistan through interviews with teachers, illuminating both formal and hidden curricula. In doing so, it seeks to understand how we might better support young women in reclaiming their right to knowledge about their own bodies—despite the cultural phantoms that try to keep them silent.

Presenter(s): Farah Basit

Chasing Queer/Trans Futures: Exploring Transmasculine Transitions & Migrations from Florida to NYC

Urban city centers have long been positioned as the 'destination' for rural Queer individuals. This is rooted in the idea that Queer and transgender individuals move to cities in order to 'come out' and assume a better life by doing so, with everything to gain and nothing to lose in the process. Through ethnographic content analysis, interviews, and participatory audio-visual work, this work explores the dual transition and migration processes for transmasculine individuals who migrated from

Florida to New York City. In conversation with scholars on topics including Queer/trans metronormativity, temporality, Florida's suburban expanse, and the embodied experience of a gender-affirming transition, I complicate the rural/urban divide in current literature. Asking questions about spatial and embodied senses of loss concerning identity and 'home-ness', this presentation highlights the hauntings of intra-national migration and gender transition amid increasingly restrictive legislation against Queer and transgender individuals in the United States.

Presenter(s): Hunter Dodrill

Haunting Past (and Present) that Affects Queer* International Students in the U.S. University

Upon arrival to the United States, queer* international students have to understand, address, and adapt to new cultural and social norms, including such intersecting categories of race, gender, and sexuality, among others, while constantly thinking of the ghosts of the past that haunt them. In this environment, these students experience the dynamics of processually becoming and doing identities. Through interviews with 24 queer* international students from a public university in the Midwest, this paper, employing an intersectional lens, examines how international queer* students navigate their sexual and gender identities in the cultural context of U.S. higher education institutions. The findings indicate the complexity of balancing queer* and ethnic/cultural identities, address the nuanced concept of "outness," and consider how queer* international students' experiences can help to decolonize queerness*.

3475 The Specter of Surveillance: Digital Ghosting in Japan and America

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

A specter is haunting Japan and the United States-the specter of inescapable surveillance. As emerging technological capabilities promise new forms of convenience, access, and possibility, the requisite yet often unremarked-upon surrender of personal data looms over countless dimensions of daily life. This panel examines how the tension between care and control within surveillance regimes manifests as a spectral force of inescapability, imposing consequential yet ephemeral constraints. We ask: How does the surveillance of the social body in Japan and the United States map onto and reinforce the surveillance of individual bodies? How do such practices contribute to the transformation of biopolitics into necropolitics? Our papers explore: How private bodies are made public through mandatory programs cloaked in the language of health and well-being. How moments of pandemic-driven uncertainty are leveraged to implement sweeping, digitally mediated surveillance networks under the guise of maintaining public health. How attractive yet fantastical depictions of the future rely on insidious, deliberate programs designed to garner broad social

acceptance while digitally erasing those who cannot or will not comply. And how ghosts haunt correctional officers within America's prison system when the surveillant demands to "keep order" clash with the job's humanistic dimensions.

Discussant: Paul Christensen

Presentation(s): Future phantoms and material erasure: How the unhoused are removed in renderings of Japan's utopian future

For several decades, Japan has been replete with sophisticated, sweeping renderings of the future. Often originating from government offices, these depictions predictably envision a future Japan in which pressing societal concerns have been alleviated, generally through yet-unrealized technological innovation and intervention. The concept of "smart," as in soon to be emergent "smart cities" or similar notions, is presented as techno-utopian settings of infinite possibility. Left unremarked upon are the comprehensive surveillance mechanisms necessary to maintain such tantalizing futures. Unacknowledged are the sweeping, necropolitical erasures embedded in these visions—futures scrubbed of the unhoused, the marginalized, and the impoverished. My paper examines the duplicity endemic to such future-shaping projects, which both accustom Japan's citizenry to accepting invasive surveillance as a normative expectation and eliminate possible futures for those who diverge from such expectations. The result, I argue, is a political absurdity that serves to inhibit consideration of meaningful alternatives to the organization of daily life.

Presenter(s): Paul Christensen

The metabo subject: Caring to surveil and surveilling to care.

In 2008 Japan began mandated surveillance of individual working bodies aged 40 to 72 years old. This surveillance is in the form of the special annual health examination, covered by national insurance that specifically looks at 4 health metrics: blood glucose, cholesterol, blood pressure, and waist circumference. A body with measurements above established thresholds in 3 of the 4 tests will be categorized as having metabolic syndrome and remanded to health guidance. While the Japanese government categorizes this surveillance as care for their population, individual Japanese people have mixed feelings. The mandated surveillance by the government has created individual bodies as public bodies that should be brought under control. In doing so, the metabolic syndrome (metabo) subject has been born.

Drawing on ethnographic research with Japanese people who have undergone the special annual exam, I present the ways that the metabo subject is both embraced and reviled. Some embrace the surveillance as a manifestation of care by the state that helps to keep them "healthy." Others revile the surveillance as a manifestation of State overreach. And, some take a more middle ground rationalizing the exam itself as a form of care but speak harshly against the practice of the health data going to their employers. Finally, most people expressed the ways in which the mandated exam has turned their bodies from private space to public space, available for comment and stigmatization.

Presenter(s): Cindi SturtzSreetharan

Incarcerated Ghosts: Surveillance and Abolitionist Hauntings in an American Prison

This presentation explores relations between correctional officers (COs), ghosts, and surveillance at the Desert Echo Facility (DEF), a multi-security level prison in the American Southwest. At this facility, COs are tasked with surveilling incarcerated people through technologies such as personal sight, video monitoring, and auditory observations. As a result of this surveillance, officers form tenuous relationships with incarcerated people, often learning and sharing personal details about family histories, romantic partners inside and outside the facility, and hopes and dreams. These relationships exist within the physical realm of everyday life and extend into the spectral when ghosts of deceased incarcerated people maintain residence on the compound. Charged with surveilling all incarcerated people as a means to "keep order," correctional officers become troubled by their everyday work duties because their relations blur social boundaries between CO and incarcerated person, real and imaginary, and living and dead. Haunted by their labor, officers find themselves reconsidering long-held beliefs about what it means to surveil, their understandings of the spectral, and the necessity for incarceration in the United States. I examine how these DEF relationships offer insight into the complexities of carceral labor and how incarcerated ghosts can uncomfortably manifest abolitionist possibilities.

Presenter(s): Macario Garcia

Ghost in the Machine: Digital Surveillance, Citizen Policing, and the Boundaries of Sociality in COVID-19 Japan

Following the outbreak of the COVID-19 pandemic, Tokyo—adorned with banners for the 2020 Tokyo Olympics—transformed into a ghost town. The anxiety over the consequences of an "invisible" virus was likened to concerns over radiation following the Triple Disaster of March 11th, 2011. The civilian response to the pandemic bore a key continuity from the Triple Disaster: the use of the digital in acquiring information due to mistrust of the government and state-sponsored media. While the digital served as a crucial means of staying informed and in touch with loved ones, it also became a site of surveillance, harassment, and mis/disinformation.

In this paper, I examine the boundaries of social care and surveillance in the digital sphere during the COVID-19 pandemic in Japan. I draw upon interviews with young users of social media, news stories, and both corporate and government online resources to highlight the opportunities and the

obstacles of the digital in navigating the pandemic. I focus on the "quarantine police" (jishuku keisatsu), online users who criticize those whom they believe are breaking quarantine protocols, even sharing their targets' personal information. The doxing and critical responses stemming from citizen policing would eventually cause government entities to create webpages warning against "COVID discrimination." I argue that the digital practices and surveillance of the pandemic coalesce with larger themes of cyberbullying and media (il)literacy

3491 Theory in Residence

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 10

Type: Roundtable/Town Hall

Despite a long tradition of valuing people's diverse, group-specific ways of understanding and engaging the world, anthropologists often maintain distinctions between lofty theory and practical action. The specters of long-dead philosophers float through our pages, sometimes reminding us not to reinvent the wheel, other times keeping us tethered to models of thinking that ignore the most pragmatic of realities.

Many scholars have suggested that a decolonized anthropological praxis must consider theory that comes from unsuspecting, non-canonical, embodied, or otherwise non-propositional realms (e.g. Barad 2007; Mol 2021; Otu 2022; Simpson & Smith 2014; Viveiros de Castro 2013). Following insights from Heidegger, Paul Kockelman employs the term residence to describe the importance of experiential and behavioral modes of semiosis (2006). Others have proposed terms like "weak theory" (Stewart 2008) or "low theory" (Halberstam 2011) to get at alternative modes and sites of theoretical production. But "weak" and "low" act as residual terms, beholden conceptually to their "lead twins," ever craving approval (Mamdani 2018: 9). "Ethnographic theory" is another term that has generated its own set of controversies about "anthropology and its reciprocities" (West 2018).

What constitutes theory? What are its social and political promises? Must theories be explicitly stated or conceptualized? Which modes of theory-making are contained in corporeal action? Are there terms that should or could substitute for "theory"? What responsibilities do ethnographers have "to speak not only truth to power but also ethics to theory" (McGranahan 2022: 289)?

How is theory informed by the form-projecting-frames we choose to take seriously (actions, lexical items, affects) or employ (writing, methodologies, technologies, guiding themes)? How do citational and iterative practices serve to codify theoretical paradigms and validate certain kinds of agents as theorists? Should ethnographic theory eschew philosophy? Is theory uniquely human?

On this roundtable, cultural and semiotic anthropologists discuss the parameters and promises of different forms of theory-making and theory-recognition we engage in as writers, teachers, editors, and researchers.

3643 Touch and Aesthetics in Co-operative Action

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 9

Type: Oral Presentation Session

Touch is foundational to co-operative action (Goodwin, 2018). It is constitutional to techniques of the body (Mauss, 1973) and to the human capacity to attune with the somatic and affective sensitivities of others. The traces of touch are multidirectional, connecting tactile perception of materials with proprioceptive and intercorporeal understandings. It, accordingly, has garnered increased attention within the methodological turn to an expanded appreciation of multimodal

resources, with prominent lines of inquiry focusing on touch's role in interpersonal communication, socialization, and professional competence and vision (Cekaite & Mondada, 2021).

Touch's deictic and diagnostic role in enhancing the vision of 'professionals' (e.g., geologists, surgeons, midwives) has received considerable attention. New insights as to the role of touch in the aesthetics of human expression (e.g., dance, music, visual art) are emerging from a comparatively nascent scholarly focus to the topic. Touch is instrumental in the social organization of spaces and objects involved in instruction and projected performance (Papadelli, 2020); diagnostic and pedagogic touch are deployed to raise the somatic attention (Csordas, 1993) of apprentices (Johnson, in press; Reed, 2020); and, balletic bodies are molded through touch (Müller, 2017). Moreover, human touch creates expressive traces (e.g., the tactile-sonic relationship in piano playing) perceived and assessable as aesthetic through other modalities by the specific communities for which they are created (Albert, 2015; Huang-Kokina, 2023).

This panel explores touch as an interactional resource and pedagogical focus in the co-operative realization of aesthetic expression. Through the multimodal analysis of social interaction from diverse settings, the papers examine 1) haptic engagement of skateboarders' feet (e.g., kicking and stomping) to assess a plank's potential to support the aesthetics of projected tricks, 2) intercorporeal orientations to the way of the brush, 3) the intensity and temporality of touch in realizing the cello's voice, and 4) the intersubjective attunement of somatic and semiotic sensitivity in folkloric dance.

Taken collectively, the papers contribute to the growing literature on touch by elucidating the interactive orientation to and tactile calibration of human aesthetics. The papers also shed light on dimensions of touch that have received less attention, including, inter alia, the interactive touch of the foot, the range of touch's intensity and temporality, the role of touch in preparing for and projecting future projects, the ability to interpret touch to accomplish joint action, and participant orientation to mitigating physical pain while enhancing the human capacity for creativity.

Presentation(s): The emergent "skateable": Co-imagining a material encounter on the skate ramp

Skateboarding has been studied as a creative practice in which the urban landscape is locally redefined through skaters' spatial engagement with material objects (Borden, 2019). Employing multimodal conversation analysis (Mondada, 2018), this study examines how a mundane object is transformed into a "skateable" in a mini-ramp session at a Tokyo nightclub (Neville et al., 2014). The target segment illustrates how three Japanese skaters, aged six to their late teens, set up a "flat bank" using a plywood sheet.

During the bank setup, participants adjust the sheet's position through kicking and stomping—a haptic way of assessing potential danger with their feet. While the oldest skater sustains this embodied orientation, the younger ones sidetrack into playful engagement ("not scared" to skate the bank). Despite these diverging orientations, the plywood sheet is co-operatively transformed into a skateable (Goodwin, 2018).

The interactional achievement of a skateable paves the way for aesthetic dimensions (Bäckström & Sand, 2019), as the modification of the environment embodies skaters imagining a particular set of tricks (Ingold, 2000). The sheet adjustments both ensure safety and demonstrate the participants' joint understanding of projected skateability—how their feet will be positioned on the board, which will then come into contact with the bank. Such co-imagination of a material encounter allows for the communal appreciation of creative capacity.

Embodied guidance of brush handling in Japanese calligraphy lessons

This study elucidates how calligraphy teachers enable students to undergo a vicarious experience of the normative calligraphic body. Drawing on data from Japanese calligraphy lessons, I investigate instructions involving body control (cf. Nishizaka, 2020), in which a participant moves the body of another by holding both the apprentice's hand and the brush jointly to draw a calligraphic line. This haptic instruction addresses a recurrent problem the teacher identifies during the lesson. Body control is sequentially provided following the do-x format utterance (e.g., "do like this"). This sequential tactile and linguistic format prospectively offers "what to do" in two ways: it accounts for what the student should do when drawing the focal line and projects what the teacher will do. In this manner, body control embodies "how to do" in practice. The physical movements through the body control elaborate on the brush handling suggested in the do-x format as a practical version thereof. By so doing, a calligraphic line is embodied, organized, and tied to the calligrapher's kinetic experience, *pars pro toto* (Ingold, 2007). The study's findings suggest instruction involving body control is a way to demonstrate the teacher's body as the normative calligraphic body the student should imitate, thereby making an opportunity to experience the teacher's haptic orientations to the ways of brush.

Presenter(s): Yusuke Arano

The intensity and temporality of touch in the cello's voice

This paper examines cello instruction focusing on the intensity and temporality of touch (Cekaite & Mondada, 2021), expanding on multimodal studies of social interaction on enskillment (e.g., Lefebvre, 2021; Nishizaka, 2007, 2021), and the aesthetics of artistic expression (Arano, 2023; Johnson, in press; Reed, 2020). Drawing on a collection of publicly available cello lessons and master classes, the multimodal analysis focuses on how performers are guided to perceive, selectively apply, and release tension in fingers of their left hand. The analysis reveals that interpersonal touch is deployed and elicited to diagnose and contrastively "feel through" (Husserl, 1989, p. 174) the tense and relaxed hand. Tactile perception is further educated through mentors'

use of performed depictions (e.g., pinching noses) (Clark, 2016). The mentor's touch also indexes distal sources of force that enable discrete applications of playing fingers, and concurrent release of tension in non-playing fingers. Although participants orient to the regulated release of touch's intensity to avoid tendonitis, the temporal modulation of touch's intensity is also accounted for in terms of enhancing the aesthetics of performance, including the ability to competently play a repertoire of different vibrato techniques characteristic of the cello's voice. This paper contributes to multimodal studies on touch by examining the human capacity to fine-tune the intensity and timing of touch for expressive purposes.

"With me or by yourself?": Children's intersubjective attunement and corporeal togetherness in Mexican folkloric dance

Touch offers exceptional intercorporeal communication, such that improv dancers must move apart so their performance does not appear staged. This synergy, when two bodies move as one "four-legged animal," is, however, an exalted moment in Argentine tango. It follows, the professional perception to interpret touch and harness its communicative power requires sensitivity gained from training (Goodwin & Smith, 2018). This professional perception is our focus in children's learning of Mexican folkloric dance. Taking a talk-in-interaction approach (Goodwin, 2018), we consider moments where a teacher offers tactile support: "With me or by yourself?" Imagining these moments of corporeal togetherness as intersubjective attunement highlights the "incrementally fluid and glitchy quality of any kind of joint activity that requires coordination and collaboration" (Duranti & La Mattina, 2022, p. 87). The teacher adjusts her touch (e.g., open or controlling embrace) to communicate diverse properties of dance and to respond to the child's actions. The "four-legged animal" of the child and her teacher initially is with two assured and two gangly legs. The child attunes her action to gradually approximate her teacher's and is released from the embrace to dance alone. Variations of this trajectory illustrate the process of intersubjective attunement as it relates to the child acquiring somatic, semiotic sensitivity to both interpreting touch and to competence in folkloric dance performance.

6991 Uses of Being a Mother: Reconnecting Carework and Intellectual Life

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Marriott **Room:** Studio 1

Type: Oral Presentation Session

Though anthropologists have been deeply invested in studying care in their research, many still feel they must bracket out their own carework from their "professional lives." This panel aims to trouble

the porous boundary between intensive carework and intellectual life by inviting reflections from mothers who are anthropologists. Our panelists reflect on how the experience of intensely caring for another human being has influenced their ideas, research and methodologies. We aim to challenge continuing, unspoken assumptions that the best ethnographic work is produced by the "lone" anthropologist who has control over their time, unencumbered by commitments (Yates-Doerr 2020). This panel attempts to reconceptualize caregiving as generative to intellectual life rather than as a barrier to creativity and abstract thinking. We see the condition of being a parent – characterized by vulnerability, loss of control and visceral entanglement with another body – as just one instance of a deeply human experience: interdependence. Drawing inspiration from the idea of "patchwork ethnography," this panel reframes care obligations not as "constraints" or "interruptions" to work, but as very real facts of life that might foster a different kind of attunement to the world (Günel, Varma and Watanabe 2020). How might motherhood open us up to different ways of being in the field and doing research, one that values interdependence over the individual research product (Yates-Doerr 2020)? Here, we use the term "mother" to include anyone who identifies as being a mother.

The panel title is inspired by Audre Lorde's "Uses of the Erotic." Lorde urges us to decompartmentalize the erotic, which she defines as the life force that pervades "our dancing, our loving, our work, our lives" (Lorde, 1978). Drawing on Lorde, this panel focuses on the ways in which the visceral experience of motherhood informs our work creatively.

Presentation(s): On Fatigue and Thinking

In this paper, I reflect on the relationship between fatigue and thinking, focusing on the particular experience of sleeplessness during early motherhood. I reflect on trying (and failing) to write my dissertation in this state of sleep deprivation during my daughter's first year of life, when my thoughts felt impossibly slow and fragmented, as if I was underwater. In the haze of fatigue, my thoughts often wandered back to many languid summer afternoons I spent with Rasheeda, a young mother I met during my fieldwork in Delhi, India. I reflect on the ways in which she spoke about (and alluded to) her experience of motherhood and feeling tired, both in an immediate (interrupted nights) and a more existential sense (feeling lethargic, overwhelmed by familial obligations). As I wrestled with my own tiredness, moments with Rasheeda that I had previously forgotten about resurfaced with a new sense of urgency – the moment when she almost lost sight of her daughter in a crowd; the way she urged me to rest with her on a hot afternoon. As I reflect on these moments and follow my trailing thoughts, I think about the ways in which fatigue is so central to the visceral

experience of caring for others. And yet, tiredness is seen as a barrier to thinking. How might we create space for fatigued thinking, which may not follow a plot or argument, but has its own momentum and rawness?

Presenter(s): Thalia Gigerenzer

Dispatches from the train between home and the field

What does it look like when research is not only "interrupted" by childcare but also by war?

After conducting fieldwork close to home in New York City, I began my postdoctoral project in Ukraine during wartime.

In New York City, I took the F train from downtown Manhattan to downtown Brooklyn: a total of four subway stops.

From Berlin, where I now live, I take the 9-hour train to Przemyśl, on the Polish-Ukrainian border. I stay there overnight and take the 9:30 AM train over the border to Lviv, and from there I grab a snack before getting on the 1PM bus to Ivano-Frankivsk. I arrive at my destination before dinnertime; my trip takes about 36 hours.

I go to the field alone, without my family. For this reason, I cannot, and do not want to, leave for long periods of time. But every trip is bookended by nearly two days of travel on each side, because air travel is banned in Ukraine. Once I am there, fieldwork can be interrupted by air raid sirens. One morning, a colleague and I had to wait out a ballistic missile alert – we were stuck somewhere between apocalypse and just wanting to get along with our day.

In this paper, I explore how to write ethnography through this complex of interruptions, while reflecting on my own privileges as a mother living outside of Ukraine.

Presenter(s): Sofia Pinedo-Padoch

Mother And/As Ethnographer: On Fieldwork and Fragmentation

In this paper, I reflect on the duality of doing fieldwork as a new mother about peoples' pursuits of (m)otherhood through uterus transplantation and other frontier reproductive technologies, in Scandinavia and the US. Specifically, I recount my experiences bringing my one-year-old to the field, the choreographies of care this entailed, and how shifting gears between ethnographic and care work became both a practical and theoretical challenge and affordance. I use the occasion of this panel to experiment with and interrogate the forms of knowledge produced by this dual- (and doubled) subjectivity. Focusing on a particular chapter of fieldwork that takes place just weeks before the AAAs, I write in the way many of us prepare conference papers: in the weeks (and days) leading up to the conference. Rather than editing out the ways care intervenes with and upon the meaning-making process, I fold these into the paper to take seriously their co-constitution, archiving and making-visible the inevitable shifts of form that mothering while fieldworking occasions. In doing so, I critically examine how tropes of maternal forms of creative intellectual

work—including fragmentation and interruption—both constrain and give way to new modes of ethnographic attunement.

Presenter(s): Alexandra Middleton

How to Care for Embryos: Reflections on Infertility, Possible Parenthood and Anthropology

Technologies that allow us to see parts of the reproductive process often change how we view and understand the process itself. For years, the drawer of my nightstand was stuffed with greyscale images of human embryos: the ghosts of several failed rounds of In Vitro Fertilization. I found I was unable to throw the images out, even after becoming the parent to two "IVF miracles". The technology to visualize embryos and fetuses is not intrinsically controversial but nevertheless is embroiled in debates over acceptable forms of scientific research, definitions of personhood, and what constitutes life. While my "real" fieldwork was perpetually delayed due to IVF cycles, I decided to investigate the central role of embryo images in my, and other US-based IVF patients' experiences of reproduction, loss and/or parenthood. I leveraged my online friendships to study IVF through the lens of the embryo image. My twenty online friends-turned-research-participants were much like me—white, upper middle class, and pro-choice. In our conversations, it became clear that my interlocutors were of the political persuasion that embryos need not be accorded the rights of persons, yet these images represented for them, and me, the potential of a person. Working with embryo images and common visual derivatives (watercolor renderings, tattoos, photographs posted to Instagram) gathered from my interlocutors, this paper explores the difficulties in grieving potentiality in the contemporary US moment.

Presenter(s): Lindsay Bell

One Hundred Years of Archaeological Mothers in the Field

In recent years there has been a concerted effort to highlight pioneering women's contributions to the field of archaeology, often framing their professional work against a backdrop of a male-dominated field that many of them fought so hard to break into. What has so far been left out of the discourse is the personal lives of these women including their experiences as mothers, and how that affected the way they navigated the field and academia. Here I would like to explore the lived experiences of women and mothers over the last century, along with modern experiences including my own reflexive stories of mothering and professional work, along with a few thoughts from my children who have worked in the field with me. These historic and modern reflections include the hard choices women faced in balancing their personal and professional lives, raising children, and caring for their families. I contextualize these experiences of motherhood and mothering in the field through a matricentric feminist lens, championed by Andrea O'Reilly, that contests, challenges, and counters the patriarchal oppressive institution of motherhood and seeks to imagine and implement a maternal identity and practice that is empowering to mothers and works to normalize mothering and parenting in the field.

Presenter(s): Elizabeth Hoag

3573 Rising Specters of the Right

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:00 AM

Venue: Sheraton **Room:** Napoleon BR C2 (3rd fl)

Type: Roundtable/Town Hall

Rising specters of authoritarian or illiberal political movements are growing in force across the world. Rightwing movements are rearing up to take state power: LePenism in France; the neofascist AfD Party in Germany, and movements in Eastern Europe and Latin America. Many of these apparitions have already shaped-shifted into regimes taking state power. Their supporters are drawn from groups in neoliberalized and economically straitened landscapes, drawn together by shared rage inculcated by the toxic stew of digital social media, and egged on by demagogues in alliance with wealthy elites.

The Trumpist MAGA movement in the US; the Hindutva fundamentalist movement and Islamophobic BJP rule in India; the "illiberal democracy" of Orbán in Hungary; the Duterte regime in the Philippines with its military rule, massive killings of drug users and press suppressions; the authoritarian populism of Bukele in El Salvador – these are only the best known of the apparitions that have now "taken on flesh" to capture the apparatuses of liberal democratic states.

This roundtable resists the intellectual reduction of these contemporary movements/ regimes to the "classical" fascisms of the German and Italian interwar varieties. Instead, taking account of issues of gender, class, sexuality and race, the roundtable considers their distinctive ghostly histories and trajectories in situ in Western and Eastern Europe, the United States, India, and Latin America. The hope is that a diagnostics grounded in the materiality of these formations' ghostly histories will provide critical anthropologists with the theory and impetus to praxis to resist their rise, consolidation, and recourse to extreme violence.

8774 Association of Latina/o & Latinx Anthropologists (ALLA) Board Meeting

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 10:30 AM

Venue: Sheraton **Room:** Evergreen (4th fl)

Type: Special Event

Association of Latina/o & Latinx Anthropologists board members will meet to discuss organization's budget, awards, board and committee openings, and membership recruitment efforts.

8676 A NAPA Professional Development Workshop: Fundamentals of Storytelling for Anthropologists

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 11:30 AM

Venue: Sheraton **Room:** Waterbury (2nd fl)

Type: Workshop

Storytelling is a powerful and essential skills for anthropologists but few are trained in the skills that will support effective creation and telling of stories. Stories are essential for to anthropologists in all fields as they are proven to engage listeners effectively.

In this workshop, participants will learn the fundamentals of effective storytelling from four senior and experienced professional anthropologists. The workshop is experiential, providing opportunities to learn and practice skills in a safe and supporting environment.

Anthropologists at all levels of training and experience are encouraged to participate.

8586 AOC - Annual Meeting

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 12:00 PM

Venue: Marriott **Room:** Galvez

Type: Special Event

A hybrid meeting of the AOC Committee. Committee members will discuss an Agenda and action items.

8694 Anthropological Ancestry Crochet Tapestry

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 05:00 PM

Venue: Sheraton **Room:** Skip

Type: Installations

Located at the Sheraton on the 5th floor, all day Thursday.

Fiber arts hold an important place in anthropological studies. Not only are the fiber arts artistically significant, they are a way of preserving and passing on cultural knowledge and history, are a meaningful form of narrative, and can provide self expression and connection. I have recently enjoyed learning crochet and have used it as a way of relaxing as well as connecting with many different communities where I live. As the field of anthropology is facing many challenges and criticism of late, I have been thinking of my own identity as an anthropologist and what the field has

meant to me. I decided to use crochet as a tool to tell my story and show what I believe anthropology is and why it is still an important field of study.

8791 Appearances : Ritualized spaces and Identity constructions

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 05:00 PM

Venue: Sheraton **Room:** Skip

Type: Installations

Takes place at the Sheraton on the 4th floor, all day Thursday and Friday.

Photography installation where you can see different scenes of ritualization proposed during the carnival period by activist associations in the beginning of the year and also celebration during certain days like the abolition of slavery which take place in May, by so called activists and progressist associations like the LKP (lyannaj kont pwofitasyon).

8726 Ghosts of Environmental Futures: Environmental Changes and Community Voices on the Placencia Peninsula, Belize

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 05:00 PM

Venue: Sheraton **Room:** Skip

Type: Installations

Located in the Sheraton in the Grand Ballroom Foyer, all day Thursday and Friday.

This immersive, multisensory installation would invite conference attendees to enter the ecological and social realities of environmental changes on the Placencia Peninsula, a coastal community in southern Belize that is increasingly being shaped by environmental hazards, coastal erosion, coral reef and mangrove loss, and developmental pressures. The exhibit focuses on merging technology and ethnographic storytelling to explore past and ongoing environmental change, such as vanished coral reefs, disappearing mangroves, vanishing coastlines, and displaced communities, while also highlighting the visions and interventions of local community driven action, cultural heritage and ecological restoration happening on the peninsula.

The installation is based on the past 4 years of research conducted by recently graduated environmental anthropologists, Kris-An Hinds, and other early career and students that are anthropologists, environmental engineers, marine scientists, community restoration practitioners, and community fellows on the Strong Coasts CoPe Project. The Strong Coast CoPe Project is an

interdisciplinary NSF grant that connects multiple U.S. universities with Belizean community-based environmental organizations focused on reducing hazards from coastal environmental hazards through nature-based solutions and community-engaged research.

This installation responds directly to the AAA 2025 theme of "Ghosts", by tracing the haunting presences of environmental, ecological, and cultural loss, while giving space to highlighting the community responses to these concerns through environmental restoration and safeguarding of cultural heritage and coastal communities' traditions.

Each of the potential installation components would help attendees to have a multisensory experience of sight, hearing, feeling, and touching. The installation would include:

Virtual Reality Experience

Participants will experience a 360-degree virtual reality immersion during a specific allocated time slot. The video captures the coral reef ecosystems surrounding and the cultural significance of Laughing Bird Caye National Park's transformation over the past three decades. It would depict the stories of how community-driven advocacy led to the area becoming a marine protected area/UNESCO Heritage protected site and take viewers underwater to learn more about the story of ongoing community-led coral reef restoration by Fragments of Hope, a partnering community-based organization on the Strong Coasts CoPe project. This video is both a ghost and survival story that brings forth the life and voices to the disappearance of the coral reef and the voices of the people/organizations/communities working to revive and protect them.

Walking Art Gallery

A standing available walking art gallery exhibit presenting photo essays, short video vignettes/interviews, and audio interviews documenting the changes observed and remembered on the Placencia Peninsula. It would feature QR-coded interactive elements that allows participants to listen to community stories and explore expanded digital content.

3D Coral Reef and Mangrove Forest Models

3D-printed coral reef structures would be used to give physical form to the otherwise abstract losses of biodiversity. They represent coral types before and after bleaching events and restoration, offering a tactile, visual metaphor for the "ghosts" of ecological memory and the transformative power of community environmental care.

8735 Missing Observer Studies Reading Room: the utopic imaginaries and voluntary associations of artist-run art book publishing

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 05:00 PM

Venue: Sheraton **Room:** Skip

Type: Installations

Located at the Sheraton on the 2nd Floor, near the escalators, all day Thursday and Friday.

The reading room will be a quiet area with a selection of artist-made books and zines for conference-goers to read or peruse. I'll provide some seating and a display for the books and zines. There will be a pamphlet to give some context about the project and the artists, about artist-run publishing, and a guestbook for people to sign. This is part of my on-going research on artists' networks in the United States, in which my interlocutors are involved as co-theorizers.

8714 Possession: The Exorcism of Modern Household Objects

Start Date: 11/20/2025 08:30 AM **through** 11/22/2025 05:00 PM

Venue: Marriott **Room:** Studios Foyer

Type: Installations

Possession can be found at the Marriott, in the Studios Foyer, all day Thursday, Friday and Saturday.

Every home has possessions. Some are functional, some cherished, and others kept without clear justification. Yet when these possessions begin to take over, families may need professional help.

This immersive ethnographic installation presents material collected through The Domestic Reset, a 12-week behavioral intervention addressing emotional attachment, environmental stress, and household overwhelm in American homes. The project is composed of several distinct elements.

Possessions

Twelve formerly "possessed" household objects are suspended in space, each corresponding to one week of the program. These objects mark moments of disruption when their owners hesitated, resisted, or refused to let go. They are not without value. Often functional, symbolic, or sentimental, their power lies in the emotional conflict they provoked. This portion of the installation offers a visual representation of how common items can exert disproportionate control, revealing the deeper psychological and cultural forces behind accumulation.

A thirteenth object, a chair, remains actively possessed. Still unresolved, it invites the viewer to sit with the question of possession itself. Its inclusion anchors the exhibit in the present moment, confronting the limits of intervention and the reality that some burdens remain.

Field Documentation

Each exorcised item is accompanied by a QR code that links to original field documentation, including video, audio, and transcript excerpts from the in-home sessions. These vignettes provide access to the lived experience of behavioral transformation and give voice to the emotional complexity behind material resistance.

Exorcism Elements

A side display compares the tools used in ancient spiritual rites, such as crosses, holy water, and incense, with those employed in modern domestic intervention. Both sets are anchored by the Bible, suggesting a continuum of symbolic action across time. This visual juxtaposition invites reflection on how humans across cultures and centuries have attempted to reclaim space from what overwhelms them.

Demon Interactive

A participatory component invites viewers to engage with a set of tarot-style demon cards, each linked to a specific emotional or behavioral pattern (e.g., fear, vanity, grief, denial). These figures are drawn from biblical, rabbinic, and mythological sources and correspond to the exhibited objects. This interactive element externalizes the burdens of modern accumulation through metaphor and play, encouraging participants to reflect on their own habits of possession.

Together, these elements frame Possession as a form of both exorcism and ethnography. Drawing from symbolic anthropology, material culture theory, and in-home intervention, the project asks what our resistance to letting go might reveal about who we are and who we imagine ourselves to be.

All furniture, props, and technology will be provided by the organizer. The installation is designed to be flexible to space and scale, with modular components and minimal wall requirements. Lighting may be used strategically to enhance the theatrical quality of the suspended objects and highlight the participatory elements.

Additional information for this installation can be found in the linked Google Drive Folder:

8796 Sites Despite Everything: affective geographies of trauma, remembering and forgetting in Bosnia-Herzegovina

Start Date: 11/20/2025 08:30 AM **through** 11/21/2025 05:00 PM

Venue: Marriott **Room:** Third floor common area

Type: Installations

Takes place at the Marriott, 3rd floor, Thursday and Friday.

This installation will be comprised of photographs taken during my field work in Bosnia-Herzegovina. In my own Communications research focused on visual media and spaces of violence and ruination in conflict and post-conflict contexts, affect is at the forefront of many critics' and scholars' work about images of atrocity (Sontag 1977, 2003; Azoulay 2001, 2008, 2012; Sliwinski 2011, 2017) and about ruination and spaces of violence (Pile 2005; Rose 2009; Bille, Hastrup and Sorensen 2010; Trigg 2012). This exhibition will interrogate the possibility of visually representing affective spaces that challenge what it means to represent and research what Rob Nixon described as the "slow violence" of climate change, toxic drift, the radioactive aftermath of wars and other environmental catastrophes, "a violence that occurs gradually and out of sight, a violence of delayed destruction that is dispersed across time and space, an attritional violence that is typically not viewed as violence at all" (Nixon 2011:7).

8752 What Remains: Braiding and Honoring Migration Dreams and Stories

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 05:00 PM

Venue: Sheraton **Room:** Napoleon Foyer 3rd Floor

Type: Installations

Located at the Sheraton, on the 3rd floor, in the Napoleon Foyer all day Thursday, Friday and Saturday.

What Remains brings together artistic production—photography, illustration, sound, video, and installation—with multidisciplinary approaches, including ethnographic research, partnerships, and activism, to reframe migration as a universal and timeless human experience; one that occurs before, during and after the passage itself. The project is a tribute to those that have made this journey, but have been silenced or whose voices were never heard.

The main piece of the installation, La Trenza (The Braid), is comprised of rescued objects that hold unknown stories that were abandoned in the desert near the border of Mexico and the United States. Those objects are braided together with donated pieces that represent the known stories from families that have crossed geographical and political borders. La Trenza symbolizes the stories

of people who continue to cross physical and sociocultural borders facing dehumanizing discourses across the world.

Through immersive engagement, What Remains invites reflections of connection and compassion as bridges that transcend and unite all types of borders. The project aims to incite social change and keep growing by braiding and joining more communities and stories around the world, translating awareness into practices and actions of solidarity and support for those who endeavor in the global and timeless phenomenon of migration.

8643 The Last Supper Project Archive Installation

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 06:00 PM

Venue: Sheraton **Room:** Lainappe Foyer, 2nd floor common area

Type: Installations

Located at the Sheraton in the Lainappe Foyer on the 2nd floor, all day Thursday.

Joseph Awuah-Darko is known as the artist behind The Last Supper Project, in which he documents sharing meals with complete strangers that he meets through the project. In 2024, Joseph shared to his robust following on social media that he had moved to the Netherlands to apply for assisted euthanasia on the grounds of psychological suffering, citing his treatment-resistant bipolar diagnosis, and later, PTSD. Joseph also noted that while assisted medical death for psychiatric conditions is legal in the Netherlands, it includes a lengthy approval process. In an age of content creation and heightened discourse around mental health, Joseph's 'digital diary' on social media has become a lively site of discourse, with users often bringing up their own struggles as well as themes of anticipatory grief, over/identification with diagnosis, social relations as a mode of healing, and the emergence of 'therapy culture.' Joseph describes his dinners with strangers as a radical mode of healing, finding connection with others and resisting the isolation inflicted by mental wounds like trauma. Along the way, Joseph has gathered small traces of these dinners- postcards, notes, and other keepsakes- all gifted to him by those he shares a meal with. I am honored and excited to propose an installation of archival materials from The Last Supper Project in collaboration with Joseph, inviting a reflection on friendship, social connection as a mode of healing, and the conference theme of 'ghosts' as it is often applied to conversations about trauma. While trauma is often understood as a painful past 'haunting' a person's present and future, anthropologists have broadened and complexified our understanding of how people's relationship to trauma and identity are not fixed, but rather permeable to local and individual understandings of healing.

I propose centering the installation around a passage from Anthropologist Rebecca Lester's introduction to Transcultural Psychiatry's 2013 special issue, which lays the groundwork for a critical anthropology of trauma. In 'Back from the edge of existence: a critical anthropology of trauma', Lester writes: "Much has been gained in this scaling up of anthropological studies of trauma...What often falls through the cracks, however, is a serious attending to the fact that, regardless of whatever social or cultural meanings might accrue, people genuinely suffer. Any

anthropological consideration of trauma cannot-should not-lose sight of this fact. And people not only suffer; they endure, and sometimes even transcend. People find ways to go on living-not just by resolving deep psychological conflicts or by reorganizing their experience to meet existing categories, but through ongoing, iterative, continuous processes of meaning-making that emerge in relationship with others, across a variety of levels and contexts, and through time" (p.754). The installation will include the 'archival' materials from Joseph's dinners with strangers through The Last Supper Project and excerpts from his digital diary as well as reflections connecting back to Lester's introduction.

8826 A cascade of echoes

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 07:00 PM

Venue: Marriott **Room:** 2nd floor common area

Type: Installations

Come see this installation in the Marriott, on the second floor, all day Thursday.

Echoes are decaying copies of a sound through which the listener orients themselves to the time and place of origin of a sound. Echoes speak to the organization of space as environment and architectural decisions influence acoustics determining the reverberation of a sound through space. How can we hear the echoes of the labor and relationships required to bring art spaces into existence?

This project is an examination of the collaborations involved in building artist-run performance spaces in New York City. Grounded in my doctoral dissertation research, I have developed an interactive multi-channel sound installation to reflect on the socio-economic conditions structuring creative work in artist-run performance spaces, specifically do-it-yourself venues within New York City. My installation dwells on the echoes of these spaces through how acoustics shapes the experience of DIY venues, the ways people form relationships within venues, how DIY venues remake the surrounding urban soundscape, and how new forms of listening to one another are shaped by sensory experiences within these venues.

My current research charts the trajectory of the artist collective as a relational form shaped by New York City property relations from the 1960s to the present. This historical work grounds my ethnographic work with contemporary experimental musicians and DIY venue organizers. Through interviews with artists and organizers, my research follows the forms of collectivity that emerge within DIY spaces through collaborative labor and housing practices, trans and queer embodiment, and housing activism.

I am currently conducting interviews utilizing a collaborative sound walking method. My interlocutors and I select a location pertinent to their experiences in do-it-yourself music organizing and then develop a "score" for the interview charting where we will walk, what sounds we will listen to, and how we will bring the urban soundscape into the conversation. Through using binaural microphones, the recorded interview is embedded within and in conversation with the urban

soundscape. This experimental ethnographic approach traces the echo of DIY venues across participants' experiences and the city.

Drawing on my background in electronic music composition and sound sculpture, I am developing a sound installation that asks participants to reflect on how the work of organizing DIY venues shapes the aesthetic and collective experience within them. I plan to create a multi-channel speaker array that can be repositioned within an exhibition space. Participants will be given graphic scores demonstrating different speaker arrangements. When the scores are performed, the speakers will play different interview segments, urban field recordings, and synthesized soundscapes reflecting on the work involved in organizing DIY venues and the interaction of these venues with surrounding neighborhoods.

Pedagogically, this installation asks participants to reflect on how the organization of sound itself—building a venue, crafting a sound system, curating performances—shapes the type of experiences within a space, opening new ways of collaborating. I hope to bring this mobile installation with me on a European tour of my noise music project (certain lives) I am planning for the summer of 2026 as a means of sharing my research with popular audiences.

8576 Breathing with Danger: The Body of a Fireworks Factory

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 07:00 PM

Venue: Sheraton **Room:** Grand Ballroom Foyer

Type: Installations

Located in the Grand Ballroom Foyer at the Sheraton, all day Thursday.

This installation project will present an exhibition of photographic works. The factory—a classic concept in labor studies (particularly within Marxist academic discussions)—is often abstracted into a series of keywords: workshops, machinery, dust, noise, assembly lines, monotonous labor environments, tedious repetition... The factory can be an organ of capital production, a node of ecological metabolism, or a micro-polity. Yet, we still lack a more tangible, embodied perspective to truly experience and understand the factory.

In recent decades, anthropologists and sociologists have begun conducting fieldwork, entering factories themselves to grasp their textures, breath, and rhythms—capturing the factory as a vast, ever-evolving corporeal existence. When we step away from the traditional labor studies framework of class antagonism and instead adopt a dwelling perspective of everyday life—how people interact with their environment within workspaces—we naturally wonder: What does a factory look like? How do people move and act within it?

Of course, this will include our focus on labor processes, but we do not simply treat the factory as a stage for labor to unfold. Instead, we observe how the factory's body is shaped by the relationships between people and specific materials, which in turn influence the labor processes. At the same

time, labor processes are not merely confined within the factory. If we adopt a dwelling perspective, we find that they are isomorphic with the daily lives of workers. In my case study-this fireworks factory-we see a particular kind of fusion: how locals bridge agricultural and industrial ways of living. Such observation demands a more holistic perspective, one that examines not only the labor processes inside the factory but also the world beyond its walls.

Therefore, I choose to represent this factory through visual means. This approach not only liberates the factory from the sea of traditional conceptualizations, but also-more crucially-embodies the holistic perspective I advocate: by observing different parts of the factory's body, we witness not only hazardous labor processes and how people navigate them, but also how the factory is embedded in the natural environment through the unique materiality of its product (fireworks). We see its landscapes, its ties to workers' households, and the rhythms of everyday life.

These photographs stem from my fieldwork. I believe that, alongside academic writing, visual representation can amplify the significance of ethnographic research while offering audiences a more vivid and impressive understanding. Ultimately, they return us to the most fundamental question: What can a factory be?

8585 Dreams as Media

Start Date: 11/20/2025 08:30 AM **through** 11/20/2025 07:00 PM

Venue: Marriott **Room:** Jackson

Type: Installations

This audiovisual installation is an artistic continuation of the panel "Affective Technologies of Spectrality: The Making of Flickering Attachments." It explores dreams as media: an intimate dispositif humans repeat every night, allowing the circulation of images, sounds, and affects – within the self or through encounters with invisible entities such as the deceased, spirits, or animals. How can the notion of media help open a dialogue between different conceptions of dreaming, while critically reflecting on technological imaginaries surrounding dreams in Western societies?

One part of the installation presents, on one or more screens, images and sounds collected during fieldwork in a French sleep lab (see my paper "Flickering Signals: Neuroscientific Technologies and the Spectral Mediation of Dreams"). These rushes follow a young scientist seeking new "communication channels" with dreamers. He wants to bring traces of dreams into the visible world. Gradually, we understand that this dispositif holds an existential, cosmological dimension: to contemporary neuroscientists, dreams become a "final frontier" for expanding consciousness and challenging boundaries between self and environment. The montage follows a short-circuit, as the scientist falls asleep in the lab's control room, surrounded by images of other sleepers. In this shared slumber, we enter a collective night composed of visual and sound fragments: dream reports told by sleepers and staff expressing diverse attachments, such as a cat saying goodbye in a dream, a caregiver inhabiting the body of a bird, a lucid dreamer forging ties with dreamworld

landscapes; sleep-streaming videos from the internet, where lab surveillance tools (like infrared cameras) are repurposed in a shared flux; a video of an octopus whose dreams play out on its skin...

By creating a dialogue between these heterogeneous images and narratives, the installation turns its gaze toward what overflows the scientific framework, cultivating attention not to proof, but to relationships. Dreams appear as “contact zones” (Pratt, Haraway) – spaces of knowledge, care, memory, and interspecies connection.

A second part involves gathering dream accounts in New Orleans. With panel co-organisers Sophie Gleizes and Elie Danziger, we will visit several locations and ask people if they want to share a dream that marked their life. These recordings can be played through headphones while viewers look at a long film shot of the place where each story was told. Can dreams map a city’s emotional life? Do connections emerge across strangers’ experiences? This creates a sensory cartography of New Orleans’ collective dreamscape.

Lastly, visitors will be invited to record their own dream memories. Near a microphone, a text encourages reflection on a dream that stayed with them, inspired an idea, or involved an encounter with an anthropological figure. Do institutional ghosts haunt our sleep? Can we converse, or argue, with Marcel Mauss or Margaret Mead in a dream? Can our dreaming minds invoke, or resist, disciplinary specters and “maîtres des lieux”? Such stories circulate informally at academic events. The installation brings them into the AAA conference buildings, giving voice to the ghostly figures that linger in the life of academia. This final interactive layer composes a collective soundscape – expanding with new recordings each day – inviting playful engagement with our shared experiences as anthropologists.

3921 "Roundtable/Town Hall: Ghost Anthropology"

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Galerie 6

Type: Roundtable/Town Hall

Anthropology, arguably more than any other field, understands that our human worlds are inhabited by spectral presences. But, how does the field grapple with its own indeterminate subjectivity? This panel on "Ghost Anthropology" is an invitation for anthropologists to ruminate on teaching a field even when they are not technically located inside the field—and even when it does not exist—in their respective institutions? How do we understand belonging in the absence of a concrete institutional affiliation? How do you train students in a field that they cannot experience directly? What is anthropology without an anthropology department? If disciplines are born and die, do they have afterlives? This session will bring together anthropologists working and teaching outside of anthropology departments to consider the ghosts of anthropology.

511 American Ethnological Society Flash Session #2

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Grand Ballroom

Type: Flash Presentation

Presenter(s): Tatiana Haddad, University of Houston, Bryan Hill, Maria Lourdes Beldi Alcantara, Carly Dokis, Nipissing University, Clara Fortes Brandao, University of Oxford, Institute of Social & Cultural Anthropology, Ajmal Hussain, University of Warwick, Saman Fazeli, University of Chicago, Holly Porter, University of Cambridge

Presentation(s): Beyond the Western Housewife: Rethinking Domestic Labor in Bedouin Economic Transitions in Lebanon's Bekaa

This presentation will be examining the intergenerational transformations of Bedouin women's labor in the Bekaa Valley of Lebanon, focusing on how economic integration has reshaped domestic life, intrafamilial gender roles, and personal narratives of work. Drawing on semi-structured interviews and participant observation carried out over several months in the Bedouin village of Hosh Al Nabil in 2024-5, this ethnographic study traces a shift from mainly subsistence-based pastoral and artisanal labor to widespread participation in agricultural wage labor, factory work, and domestic consumerism.

I analyze how Bedouin women explain these personal labor transformations against the backdrop of larger socio-economic changes of the area, such as land privatization, the decline of small-scale and communal agriculture, and the concentration of wealth among agribusiness operators. These changes have dramatically reorganized the daily life routines and needs of the Bedouin, reshaping how Bedouin women experience time, rest, work, and family responsibilities. Older generations describe labor in terms of survival, communal duty, and moral obligation, while younger women navigate a more fragmented landscape of wage labor, education, personal desire, and consumer expectations.

In this analysis, I engage with the key frameworks of Marxist feminist theory, social reproduction theory, and housewifization to examine the feminization and devaluation of labor under capitalist integration. The concept of "accumulation by dispossession" is additionally central to this project, as Bedouin women's historical roles in self-reliant, home-based economies have been increasingly rendered invisible or obsolete. However, I argue that these transitions do not follow the same trajectories as Western models of post-industrial domesticity. Instead, Bedouin women's labor transformations emerge from localized negotiations with capital, state infrastructure, and cultural memory.

This project contributes to broader anthropological conversations on gender and labor by centering rural Middle Eastern women as agents of historical and economic narration. In doing so, it challenges both developmentalist assumptions and universalizing models of domestic transformation, offering a grounded alternative rooted in Bedouin lived experience. Finally, the study vividly illustrates how women's stories of work are also stories of identity, continuity, and change in one of Lebanon's most overlooked communities.

Fades to Fellowship: An Ethnography on Barbershops

Barbershops have long been spaces where individuals go for haircuts and engage in exciting conversations. Conversations can stem from topics such as sports, music, fashion, cars, relationships, politics, and more. However, looking deeper into the complexity of barbershop conversations can reveal how a foundation of understanding and respect between barber and client is created as well as the reinforcement of shared identities. Through participant observation, interviews, and collected surveys from barbershops, findings suggest that barbershops serve as a place where opinions on masculinity, sexuality, and pop culture can be discussed and, in turn, reinforce the relationships created in the barbershop. The structural hierarchies within these barbershops were also revealed from body language and verbal cues. This study analyzes the conversations observed to highlight how these conversations contribute to themes of identity, sense of community, and intergenerational knowledge exchange.

Presenter(s): Bryan Hill

Gossip, often dismissed, acts as a hauntological tool in Indigenous communities—preserving memory, regulating belonging, and sustaining cultural cohes

In contexts where social cohesion is fragile due to historical trauma, political marginalization, and economic precarity, gossip emerges as a critical mechanism for maintaining communal ties. This session examines the intersection of witchcraft, ghosts, and wellbeing in Indigenous reserves, emphasizing how rumor functions as a last-resort social adhesive when kinship networks and governance structures weaken. By tracing the circulation of supernatural narratives—witchcraft accusations, ghostly encounters, and whispered suspicions—we explore how these discourses shape communal responses to illness, moral transgression, and social belonging.

The anthropology of illness and healing has long recognized the inseparability of medical epistemologies from social and cosmological frameworks (Good, 1994; Kleinman, 1988). In Indigenous contexts, health is not simply a biomedical condition but a relational state, entangled with land, ancestors, and collective memory (Kirmayer et al., 2014). When sickness and misfortune strike, explanations often transcend biomedical models, invoking witchcraft or spectral presences as causative agents (Lewis, 2003; Niehaus, 2012). These narratives are not merely expressions of belief; they are social strategies for negotiating blame, asserting agency, and reinforcing community boundaries (Good & Good, 2000; Stewart & Strathern, 2004).

Gossip, often dismissed as trivial, is in fact a potent social technology that regulates moral behavior, consolidates alliances, and mediates power (Gluckman, 1963; White, 2000). Within Indigenous reserves, where colonial disruption has fragmented traditional governance structures, gossip becomes a primary means of adjudicating disputes and policing social order. Rumors of witchcraft serve to explain inexplicable suffering, linking individual afflictions to broader histories of dispossession, intergenerational trauma, and environmental precarity (Todd, 2016; Tsing, 2015). Simultaneously, ghostly encounters reflect ongoing tensions between Indigenous epistemologies and state interventions in healthcare (Kopenawa & Albert, 2013).

Drawing from ethnographic and theoretical perspectives, this session interrogates the political stakes of supernatural discourse: How do whispered accusations of witchcraft reinforce or challenge existing social hierarchies? In what ways does the invocation of ghosts articulate unresolved histories of violence, land dispossession, and cultural erasure? How does the circulation of rumor shape health-seeking behaviors and access to care?

By reframing witchcraft, ghosts, and gossip as active forces in the production of social reality, this session contributes to broader anthropological debates on affect, spectrality, and the politics of care. Through a comparative lens, we seek to illuminate how Indigenous communities navigate precarity through the intangible-words, spirits, and suspicions-thereby transforming uncertainty into structured meaning.

Presenter(s): Maria Lourdes Beldi Alcantara

Leaving Offerings: Digital Storytelling as Active Survivance

This presentation describes possibilities for mobilizing digital storytelling as a strategy for Indigenous revitalization and resurgence. Drawing from digital story work conducted with Anishinaabe storytellers in northern Ontario, Canada, we argue that digital storytelling is an effective medium for challenging representational politics of memory, identity, and legitimacy that have often accompanied the depiction of Indigenous experiences in public spaces. Our focus has been on protecting dibaajimowinan, or personal stories that people tell about their lives, by recording and archiving them for future generations so that they can guide them on their path to minobimaadiziwin, or the good life. We explore opportunities for sharing these stories within and beyond community in ways that create space for learning and to foster critical reflections on what it means to live in treaty relationships.

Presenter(s): Carly Dokis

Restless Ghosts: Temporality and Political Autonomy among an Amazonian Indigenous People

This presentation examines how engaging in remembrance and relationality with the spirits of the dead forms the foundation of the contemporary political life of the Kajkwakhratxi, a Jê-speaking Indigenous people residing in Southern Amazonia.

In the 1960s, following their first contact with Brazilian society, the transmission of viral diseases killed 90% of the Kajkwakhratxi population. In the 1970s, government officials revoked their reserve

and relocated 41 of the survivors to villages inhabited by other Indigenous groups. Over the ensuing decades, the Kajkwakhratxi faced persistent assimilation pressures from their hosts. Despite the threat of imminent ethnocide, they succeeded in transmitting their language, culture, and history to new generations. Their physical and cultural reproduction is grounded on the elders' enduring remembrance of ancestors killed in their original territory.

Acting on the understanding that the soul of the dead lingers near its grave – and may turn against the living if bodily remains are not treated with respect – community leaders have concentrated their political efforts on protecting the cemeteries of their parents and grandparents. This is being pursued through a legal claim for the re-demarcation of their original land, which remains unrecognized by the state. The area is currently undergoing rapid deforestation, threatening the cemeteries once shielded by tall forest vegetation. Centered on this ongoing judicial dispute, the first part of the presentation explores how remembrance and care for the dead underpin the Kajkwakhratxi's political struggle for territorial autonomy and cultural continuity.

In *Ghostly Matters* (1997), Gordon introduces 'ghosts' as an analytical tool for understanding acts of social violence that, although ostensibly belonging to the past, continue to haunt the lives of those who experienced them by demanding a 'something-to-be-done'. In the Kajkwakhratxi case, such specters are not metaphorical, but literal – taking the form of the spirits of the dead who propel the efforts of the living to reclaim their territory. Drawing on Gordon's concept, the second part of the presentation examines in these 'ghosts' the entanglement of spatial historicity and futurity in the political life of this Amazonian people.

This ethnographic analysis aligns with a recent trend in the anthropology of Indigenous Amazonia. The presentation concludes by noting that this branch of the discipline has increasingly recentered on the theme of temporality, investigating how communities are creatively exploring the consciousness of their connection to a pre-contact past while at the same time hesitantly engaging with non-Indigenous institutions and emerging forms of sociality. Time, once sidelined in early anthropological debates on Indigenous Amazonia, has regained centrality as 'ghosts' of the past come to guide communities' political projects for the future.

Presenter(s): Clara Fortes Brandao

Rethinking "Left Behind Places": Marginalisation, stigma, and political mobilisation

The term "left behind places" has gained significant traction in public and policy discourse, in the US, UK and beyond. This paper critically examines this concept, arguing for a nuanced understanding that moves beyond simplistic labels and acknowledges the complex interplay between socio-economic changes, political mobilisation, and stigmatising discourses. The paper traces the shifting use of concepts such as social exclusion and left behindness, examining how they have evolved to reflect changing understandings of marginalisation. Drawing on original ethnographic fieldwork in Spain and the UK, the study explores how these concepts are applied to communities affected by economic decline, the erosion of once-thriving industries, and the growing divide between over-developed urban centres and stagnating rural or post-industrial

regions. The paper critically analyses the tensions and contradictions inherent in the use of these concepts, exploring their role in stigmatizing discourses and their adoption within the rhetoric of populist politics. By assessing how these concepts shape public perception and policy across different geographical and sociopolitical contexts, this research illuminates the real-world consequences they have on the communities they aim to describe. Ultimately, this paper offers a critical reflection on the evolving language applied to marginalized places and communities, highlighting its significant implications for social and political mobilisation and advocating for a more sensitive and context-aware approach in policy and public discourse.

Secular Ghosts: Debiasing, Islam, and the Haunting of Ethical Reason

In this presentation, I draw on four years of fieldwork among a community of immigrant Iranian AI scientists in the U.S., whose work centers on "debiasing" artificial intelligence systems. I examine how the concept of "bias" travels across their professional and personal lives. My interlocutors often mobilize the language of bias not only to detect and correct injustice in algorithms, but also to reconfigure their own moral stance in the world. Debiasing thus emerges as a unifying ethical practice, linking their technical responsibilities to their personal commitments. Yet, as they extend this framework from code to conduct, the ethical clarity they seek becomes clouded by contradiction. Their commitment to debiasing collides with unresolved feelings toward Islam, feelings shaped by past experiences that continue to intrude upon the present. Their aversion to Islam is rooted in their experience of having lived most of their lives under the Islamic Republic, and in a commonly held view that equates the state with Islam.

In AI, bias is treated as a problem that can supposedly be articulated, quantified, and mitigated. Attributes such as race, gender, and religion (including Islam) are categories protected from algorithmic discrimination (Mehrabi et al., 2021). My interlocutors understand this task as essential to building "ethical" technologies. Yet in their personal lives, the category of Islam is fraught with ambivalence. Their memories of the past linger, surfacing in private conversations, jokes, hesitations, and silences. While they pursue self "debiasing" against Islam, their efforts often falter.

For them, Islam is not simply a subject of bias, but an exception. Heavily burdened by fragments of memory and history, Islam for them becomes a source of bias itself. As a result, attempts at debiasing often paradoxically reproduce anti-Islamic sentiments, even as they strive to transcend them.

This paradox reveals the limits of treating bias as a purely technical or cognitive issue. What happens when the very effort to be unbiased is haunted by affective residues that cannot be cleanly parsed, coded, or corrected? This project is often troubled by the ghosts of personal and political histories that continue to shape their moral imagination. Thousands of miles away from Iran, the Iranian state—and its attached memories and emotions—materializes in their daily efforts and projects of secular-ethical self-making.

By tracing how the language of bias mediates both algorithmic justice and ethical self-fashioning, my research reveals how the past haunts the very tools and categories used to imagine justice among my interlocutors. It underscores the limitations of a techno-secular ethics centered on bias, an ethics that rests on ideals of neutrality and dispassionate reasoning, yet cannot fully account for the emotional, memorial, and historical/political entanglements that shape moral life.

Presenter(s): Saman Fazeli

Semen, Blood, Dust & DNA: Elements of relation

The elements that constitute us give shape to relational and political orders and claims of belonging. They also structures our imagination of what is possible within the 'given' of concrete 'realities'. To what extent are the bodily elements of blood, semen, blood, dust/soil, and DNA seen as fixed and determinative or do we exist in a field of relational potential? How this is answered has implications from our most intimate relations (sexual partners and potential offspring) to politics broadly conceived and practiced. Anyone who is paying attention to the rise of far-right politics and ethnonationalist ideologies and the violences they entail will be familiar with modes of relating that are rhetorically anchored in these elements as a strategy for solidifying exclusionary political and material claims. If we are to recognize what is broken in our relational orders, reflection on what constitutes them and the extent to which the situation is malleable and open to reconfiguration is due. We might ask if the attachments and relations to those materials themselves give rise to rigid exclusionary, gerontocratic, patriarchal, oppressive, and violent systems of relation or if there are ways of reimagining the constitutive relations with those elements that is more liberatory? Drawing on ethnographic work on gender and sexualities in the context of war and its aftermath in northern Uganda since 2005, in this paper I reflect on Acholi notions and experiences related to elements that comprise us and our relations as potential sources of inspiration-not as models that can or should be followed, but as sources of insight and potential provocations to widen the conceivable field of possibilities. With each element, there is something immaterial that the material points toward. Thinking this through brings our attention to the ghosts, the excess, the animus-and the insufficiency of relational claims made solely on material bases.

The ethnography reflected on here shows that semen/blood/DNA based relations were not seen as static or simply a given state-one can become someone's child. Relations are contingent and can change. The basis on which they are seen to do so is an intermingling of material and immaterial. DNA is more about experiential and relational claims, ways of being and responsibility, rather than about biological determinism. Ancestral spirits are moveable and open to adopt new kin. Kinship can be expanded-making foreigners unkillable. Without romanticizing Acholi experiences of different structuring of social order in ways that are often oppressive in a multiplicity of ways, there are modes of thinking and conceptualizing relations in their approach to these elements (and their ghosts) that point us to another way of conceptualizing relations in and with the world.

8832 Applying Anthropological Understandings of Culture to Improve New Diversity, Equity, and Inclusion (DEI) Initiatives

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Grand Couteau (5th fl)

Type: Workshop

With diversity, equity, and inclusion (DEI) coming under nationwide attack in the United States, many U.S. based organizations have started to shift DEI programs and goals, rebranding them under new names and reorienting them under new divisions. In doing so, practitioners have attempted to continue to advance DEI principles and meet existing DEI goals.

In the midst of this shift, the concept of culture has emerged as central. Many rebranding and reorientation efforts have prioritized concepts like culture, community, and belonging and cultural assessments have become increasingly important for organizations attempting to pivot to build new DEI strategies under new names and within a shifting socio-political and legal landscape. However, competing understandings of what culture is and how it operates, both within and outside of the organization, can critically impact the success of new DEI programs, strategies, and efforts. This makes the presence of anthropologists in DEI spaces, as culture experts, even more critical.

During this workshop, students and potential jobseekers will be provided with up-to-date information, illustrative case studies, and hands-on activities that elucidate the shifting DEI landscape in and outside of the United States and the centering of culture in this landscape. Facilitators will show how competing models of culture impact approaches to organizational assessment and the development of strategies for inclusive culture-change as well as how the application of anthropological knowledge and skills can result in more impactful DEI outcomes, particularly in an uncertain DEI landscape.

4198 Blind Spots: Uncertainty and Alterity in Healing and Medicine (II)

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

This panel explores how medicine, like any other social system, is always in flux and continuously grappling with the unknown. This panel is timely, given the increasing hesitancy around vaccine use and public health programs in both the Global North and the Global South. From anti-vaxxers in the US to patients resisting polio vaccines in countries like Pakistan and Nigeria, global health programs continue to grapple with issues of trust. In this context, we propose this panel to bring

traditional anthropological concerns around efficacy and healing to the forefront, enriching our understanding of why people do or do not trust medicine.

In this panel, we bring together presentations to juxtapose uncertainty in the use of new medical technologies, such as artificial intelligence, prosthetics, precision medicine, and telemedicine, with uncertainties in traditional spaces of healing. We argue that by acknowledging blind spots in modern medicine, we can approach medical discoveries from a humbler vantage point, helping to dismantle rigid binaries between "science" and "superstition" as well as between "rationality" and "irrationality." By considering blind spots in a range of medical institutions and spaces, as well as indigenous healing practices, we argue that the contemporary medical landscape would benefit from more, not less, epistemic uncertainty. This panel attempts to diagnose the temptation to view medical discoveries as magic-bullet solutions and the projection of these inventions as complete and perfect, especially as media, start-up companies, and venture capitalists inflate solutions to conjure new expectations and raise capital.

The panel features ethnographic studies in clinical spaces to think about how imperfections, contingency, and unpredictability define clinical research as much as healing practices in a wide range of cultures. Instead of viewing this comparison as an attempt to discredit scientific practice, the comparisons can further help us understand the dynamic nature of social life and the ways in which it influences medical practices. By bringing together our interests in medical anthropology, religious studies, psychoanalysis, and kinship, this panel will explore how we as humans are continuously in the process of sublimating and displacing our feelings, and therefore the relationship between the self and the other becomes central to any inquiry into the complexities of healing and recovery -- whether this includes relations, drugs, or diagnostic media.

Presentation(s): Body, Belonging, and Translocal Practices of Chinese Medicine Among Chinese Immigrants in New York City

Chinese medicine has a long history of being practised outside of China, and it is through these translocal encounters that Chinese medicine has been continuously (re)invented (Zhan 2009). What has come to be known as "Traditional Chinese Medicine" (TCM), then, is never a uniform or static corpus of medical knowledges and practices. It is these medico-political dynamics of "world-making" (Goodman 1978)—out of which unforeseen knowledges and practices (ontological and

otherwise) emerge—that my research is concerned with. Specifically, my research investigates practices of Chinese medicine among Chinese immigrants who live in New York City, home to the largest Chinese immigration community in the US; it highlights how they make sense of Chinese medicine in relation to their bodily experiences as well as their translocal identities. My research is thus located at the intersection of body conceptualization and senses of belonging (or a lack thereof), both of which tie into but extend beyond the medical realm. Against the backdrop of American (bio)medico-political hegemony and, more recently, intensifying political precarity facing immigrants, this research also demonstrates how Chinese immigrants traverse cultural and political boundaries, and how they (re)position their identity—both ideational and embodied—in the interplay between history and power.

Meridian Therapy and Temporal Agency in Post-COVID China

How do people respond when biomedical systems fail to provide the healing they need, physically, emotionally, and politically? This research examines why some in post-COVID China avoid hospitals, resist vaccination, and turn instead to meridian therapy as an alternative form of healing. Meridian therapy here involves pressing and scraping specific points along the body's meridians using tools made from bianishi, a therapeutic stone. The study will draw on a five-month fieldwork in a folk Traditional Chinese Medicine clinic in rural Shandong, northeastern China. Through engaging with daily practices of healers and patients, mostly women, I explore meridian therapy as a gendered, embodied technology and a world-making method. For these practitioners, care is enacted through intercorporeal and emotional connections. Meridian therapy becomes a collective effort to repair the institutionalized body shaped by state governance and biomedical discourse. At the same time, it reclaims a sense of temporal agency by redefining health and illness in ways that differ from dominant medical frameworks, offering tools for navigating the precarity of the present and uncertainty of the future. By focusing on this case, I aim to rethink technologies of health and care, and the possibilities of seeking trust and identity in times of anxiety.

Presenter(s): Shuzhe Wang

Between Science and Spirit: Menopause, Jinn, and the Limits of Biomedicine

This paper follows the life of a woman navigating the physical and emotional transformations brought on by menopause. Convinced that her hot flashes, suffocation, and night sweats are not only symptoms of her transition, she begins to visit an Islamic healer in Karachi, Pakistan to expel the presence of a jinn (evil spirit) she thinks has taken hold within her – all while continuing to accept and engage with biomedical diagnoses. Although biomedical frameworks and Islamic healing traditions conceptualize illness and affliction in distinct ontological registers, my research examines how individuals manage to move seamlessly between a physician's office and a healer's sanctuary. How do people straddle these competing or contradictory streams whereby they bring seemingly opposed epistemologies and alternative healing practices together? How does one follow these multiple lines of thought while holding variable attitudes of conviction, doubt, and

suspicion toward each? I theorize how individuals make sense of the "excess" of medical diagnoses: those experiences and afflictions that resist neat categorization within biomedical parameters. These "blind spots" unsettle the totalizing authority of biomedical explanations and expose points at which people seek alternative healing pathways. My paper argues that it is these points that serve as "passageways" to multiple therapeutic worlds in which individuals move and respond to symptoms that defy straightforward resolution.

Presenter(s): Muhammad Osama Imran

A Touchy Subject: Trust and Suspicion in Therapeutic Collaborations between Clinical and Somatic Professionals

In the therapeutic practice of surrogate partner therapy (SPT), surrogate partners are professionals who help clients overcome challenges to intimacy through experiential relational skill-building and contextualized touch interactions. Clients also work one-on-one with a clinical therapist, and both professionals collaborate to discuss the client's healing process, forming a team known as the "Triadic Model." Drawing from our community-based research, we analyze trust among the members of the triad who may be haunted by suspicions toward the "other" due to biased societal parallels between SPT and sex work. Our analysis centers human needs for interpersonal intimacy as a blind spot in modern medicine. Despite the US government's 2023 declaration of a loneliness epidemic, modern medicine favors biological innovations and "first-line" pharmaceuticals with a focus on isolating the body or its parts. However, clinicians with experience in SPT's Triadic Model tout its efficacy for client healing, discussing limitations to other therapies. While SPT's efficacy is under-researched, there is also uncertainty in the efficacy of clinical innovations due to bias and restrictions in clinical trials. Our analysis juxtaposes SPT with the bureaucratic landscape of modern medicine to expose the biases within capitalist systems that cause clinicians to trust the technological over the interpersonal.

When No One Else Listens: Chaplains and the Ministry of Presence in a Safety-Net Hospital

Hospital chaplains operate at the intersection of biomedicine and spirituality as they are employed to provide 'spiritual care' to patients, families, and medical staff around the clock. Their 'spiritual' care work involves the immediate and challenging task of responding to moments of trauma, despair, and pain and addressing people's spiritual needs, vulnerabilities, and existential crises—a practice Winnifred Sullivan calls 'a ministry of presence'. Unlike many other medical professionals who may, by the nature of their work, bring in a form of medical gaze which may fixate care to curing, hospital chaplains offer an alternative and a contrasting form of care work—one that is aimed at spiritual healing. Through offering some kind of an emotional and spiritual break from the full-time work of being sick, chaplains characterize their care work as being present through listening to and praying for those in need. Based on ethnographic fieldwork shadowing chaplains at a large urban safety-net hospital in New England, this presentation explores the work of the chaplain

through the personalized prayers they offer at the end of their patient visits, and how such prayers emerge as a dynamic practice that consolidates patient narratives or life stories, employs embodied techniques of intersubjectivity, and adapts to interfaith contexts where the chaplain has to bridge differences to find a common and safe ground for their spiritual care work.

3239 Carcerality and Trauma Theory

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 1

Type: Oral Presentation Session

This panel explores the relationship between carceral structures and trauma theory. Employment of trauma theory in the discipline abounds, but much of it is anchored in different, sometimes contradictory definitions of the term. Meanwhile, studies of carcerality have expanded to the extent that carcerality could mean anything ranging from states of mind, to prisons, to policing very generally defined. In this panel, panelists will debate the utility of both of these concepts in contemporary anthropological studies of violent structures and modes of adjudication. Papers explore themes including the genealogy of different definitions of trauma, the relationship between experiences of violence and the temporality of trauma theory, law and evidential systems in arbitrating carcerality, the endurance of crimes against humanity and their traumatic effects, and the role of language systems in all the above. The papers aim to advance the debate on the role of anthropology in employing, challenging, and advancing trauma theory and the analytic frameworks with which we understand the worlds it diagnoses.

Presentation(s): Carceral Temporalities: Tunisian Political Prisoners and the Inadequacy of Trauma Theory

If we approach prison as a temporal category, how does that bring new insights into our understanding of carcerality? Drawing on human rights reports, prison literature, public testimonies, and interviews with former prisoners and their families in Tunisia, this paper focuses on Tunisian political prisoners who were incarcerated between 1960 and 2010. The paper challenges the delimited, material conception of the prison by exploring the temporal experience of incarceration that often endures after release from prison. Specifically, I focus on "administrative control" (raqāba idāriyya)—a police practice where former prisoners are placed under forced surveillance after their release for a period that can range from a few months to an indefinite

number of years, requiring them to report to police stations multiple times a day, in the process purposefully disrupting their ability to maintain employment and sustain housing. Through the lens of temporality, surveillance, prison studies, and borders, I examine incarceration in its physical, social, and temporal dimensions as it extends beyond prison walls. I ask: How does "administrative control" in the aftermath of time in prison redefine how we conceptualize incarceration? The paper seeks to challenge the trauma framework that has come to dominate how we conceptualize post-prison experiences, and to rethink them through the prism of carceral, state logics and their policing of former prisoners' temporal lives.

Presenter(s): Douaa Sheet

Language and the Endurance of Crimes Against Humanity

This paper will explore the role of language as an aspect of the endurance of crimes against humanity. In 2016, I published an article entitled 'Language, Translation, Trauma' in *Annual Review of Anthropology*. Since then I have continued research on the language of survivorhood. I will offer insights from my recently published book *Endurance: Speaking Kurdish in a Warped World* (Brill 2024). I will focus on the affordances of the Kurdish language that enable a sense of uniqueness in the face of state-sponsored cultural assimilation and violence. By reading a selection of excerpts from this monograph I will participate in the panel's debate about the role of anthropology in challenging and advancing trauma theory.

Presenter(s): Alex Pillen

Magical Realism of Trauma and Incarceration

Trauma theory and literature share a common ground in their construction of the subject through language. While trauma theory situates condensed pain that displaces the subject at the limits of ordinary language, literature challenges any limits imposed on ordinary language by creatively using its tools of displacement and condensation (i.e. metaphors and metonyms) to express pain. At the intersection of trauma and literature, this paper focuses on the fiction writings of two Kurdish political prisoners who spent thirty years in various maximum-security prisons in Turkey. Nevzat and Rojbin were both college students when they were imprisoned in the early 1990s with the charge of "terrorism." Released in 2022, they are now the authors of several novels written in the genre of magical realism. In conversation with these authors and their novels, this paper asks what theory of trauma emerges from their literary works which evolve around the theme of life amid extraordinary suffering wrought by the Turkish counterinsurgency war in Northern Kurdistan. Critical carceral studies suggest that prisoners are not only the products of carceral power but also the subjects theorizing that power in their political writings. Building on this praxis-oriented theory, this paper asks what the fiction writings of political prisoners tell us about carcerality, on the one hand, and trauma, on the other.

Presenter(s): Serra Hakyemez

The Fantasy of Trauma's Repair in California's Mental Health Courts

It is hard to come by a Californian on the political left who does not acknowledge that ideologies and institutions of mass incarceration are traumatizing for the people and communities who pass through them. Activists, attorneys, mental health clinicians, and social workers in the San Francisco Bay Area have tried to both the trauma of mass incarceration and the social traumas of racism, xenophobia, and class-based hatred that undergird it, by creating new, reform-based, progressively minded courtrooms, called mental health courts. The social justice-minded rationale for these courts equates justice with social and psychic repair. People are suffering from mental illnesses, so goes the discourse, and progressive institutions ought to organize themselves to provide services to people who need them, whose welfare has been otherwise abandoned by a racialized police state. This paper argues in counterpoint to suggest that such repair is a fantasy that mobilizes the very structures of inequality the courts aim to ameliorate. Drawing on a psychoanalytic vocabulary, I ask, how can we differently understand ethics when we do not aim them at the lost objects of an untraumatized subject or a just society? What can we say about ethics if we figure repaired subjects and social justice as limit cases, rather than desired ends?

7896 Climate Change in the Guianas: Adaptations and Landscape Transformations

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Oral Presentation Session

This panel explores challenges related to climatic and ecological change in the Guianas (particularly Guyana). This often-neglected region is a microcosm for global change and its varied impacts on human and more-than-human relations. This panel's papers examine how Guianese communities engage with these challenges within past and present contexts around the politics of developmentalism to religious movements. Adaptations and landscape transformations result from these engagements and highlight local strategies, cosmological orders, as well as forms of scientific and engineering-related knowledge. Both technoscience and traditional ecological knowledge are highlighted in these engagements in relation to climatic and ecological change. In turn, the more-than-human engagements in the Guianas provide anthropology with a perspective on global actions, local responses, and planetary crises.

Presentation(s): The Extractive Embrace: Shifting Expectations of Conservation and Extraction in the Guiana Shield

This paper demonstrates what the Reducing Emissions from Deforestation and forest Degradation (REDD+) initiative would have to do to satisfy the expectations of local stakeholders. It connects unmet expectations of REDD+ with a deepening reliance on extractive activity in the Guiana Shield. It argues that extractive activity, which has always been the most significant driver of deforestation in the ecoregion, is further overtaking REDD+'s capacity for meeting expectations and development aspirations due to the combined failure of REDD+ to deliver vast amounts of promised funding and subsequent announcements of major oil discoveries in the territorial waters of the Guiana Shield.

Presenter(s): Ariadne Collins

A World Full of Sin: Alleluia, Climate Change, and Millenarianism in the Pakaraima Mountains

Alleluia is an Indigenous Christian religion headquartered in Amokokupai, Guyana, within the Upper Mazaruni River basin of the Pakaraima Mountains. Scholars characterize it as a highland phenomenon, a revitalization movement, and a form of resistance to colonial and post-colonial intrusion. This paper presents Alleluia as a millenarian movement. It begins with a review of pantoni (stories) about Makunaima and his brother, Chiki, ancestors of the Alleluia who radically changed the world during pia'atai (a time of origin). It concludes with a discussion of how Alleluia views climate disasters as harbingers of another radical change that will bring back Makunaima, Chiki, and the Antichrist.

Presenter(s): Daniel Cooper

El Dorado 2: Indigenous Ecologies along Amazonia's New Oil Frontier

This paper examines Indigenous ecologies in relation to Guyana's development of a growing petroleum industry. This is a recent and emerging oil frontier in Amazonia that significantly impacts local Indigenous people. It is the most recent development in a long history of extractivism in Guyana. This new oil frontier and its implications constitutes an El Dorado 2.

Presenter(s): Lewis Daly

Local Ecological Knowledge at Landscape Scale: Regional Indigenous Exchange Networks in a Biodiversity Assessment of Southern Guyana

In the past two decades, Guyana has been a proving ground for novel conservation finance mechanisms. Carbon credit schemes and global 30x30 targets create new regimes of value and state control in Guyana's southern forests, one of the world's largest intact forest expanses. This

paper examines the convergence of technoscientific and Indigenous knowledge in a recent biodiversity assessment in southeastern Guyana. It argues that even as local Indigenous peoples expertly trace ecological relations disrupted by anomalous seasonal variation, their expansive and historically deep social relations across the Guianas shape the possibilities of Indigenous resilience in the region's shifting conservation future.

Presenter(s): Elliott Oakley

Climate Change and Ontological Relations in Guyana

This paper discusses Indigenous concepts and experiences related to climatic and ecological change in Guyana. Based on fieldwork in the Makushi villages of Surama and Yupukari and the Akawaio village of Kamarang/Warawatta, it describes unprecedented flooding in 2021, which was associated by many with climate change. It examines how discourses of climate change have been adopted from outsiders to explain various seasonal and ecological irregularities experienced locally in recent years. For Akawaio and Makushi people, the underlying causalities of these changes are often linked to imbalanced relations with more-than-human master/owner spirits, which control and protect aspects of the historical-ecological landscape

Presenter(s): James Andrew Whitaker

5344 Commoning within and outside the state: building communities to respond to multiple crises

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Oral Presentation Session

In the current context of polycrisis (Morin and Kern 1999) or multiple and overlapping crises (Fassin and Honneth 2022), grassroots initiatives proliferate with proposals to provide just solutions or alternatives to the sustainability and social reproduction crises. Some of them try to do so by building communities that intend to be outside the state and the market, like co-ops or autonomous political organizing, while some others try to take the most from the channels provided by the state in order to push for changes, through mobilizing or participatory policies. It's also usual for some of them to combine both strategies, not without contradictions.

Sharing time, spaces and struggles can be very significant as a form of political education that transforms subjectivities and builds affinities and alliances that push for social change (Susser 2017, bergman and Montgomery 2017, Caciagli 2019). At the same time, in the quest for anti-capitalist alternatives many community-led economic and political models of commoning end up deeply intricated into the neoliberal logic of the market or get captured and redefined by the state-capital nexus through top-down policy or other forms of cooptation. It is important to explore who are the members of the community, who are they commoning for and how their actual practices adapt or depart from their discourses.

This panel brings together anthropologists who work on commoning initiatives that tackle the contradictions and tensions arising from building economic, political, and social alternatives in the present capitalist conjuncture. The goal of the panel is to explore the possibilities of just and sustainable practices in a world where commoning can be an alternative to the status quo, but also part of a corporate model of governance or a pastime activity or lifestyle for the middle classes. With the recent (re)turn to a global authoritarian capitalism, the panel includes contributions that highlight the emergence of new commons (Federici 2011) and how they are responding to the need for social and environmental justice.

Presentation(s): Commoning in Contested Times: Street Protests, Boycotts, and the Politics of Participation in Authoritarian Turkey

Amid Turkey's intersecting crises— authoritarianism, democratic backsliding, the criminalization of opposition, and economic precarity—grassroots mobilizations have gained renewed significance. The arrest of opposition figure Ekrem İmamoğlu has further exposed the fragility of democratic institutions, deepening public disillusionment with electoral politics. Acts of collective resistance—such as protests, university occupations, and boycotts—are emerging as forms of political commoning: efforts to reimagine the political and solidarity beyond state-sanctioned frameworks.

Guided by the anthropology of resistance and theories of the political, this paper draws on my ethnographic engagement in recent protest events that unfolded not only in major urban centers but also in smaller towns and less visible corners of Turkey. Protesters—from organized political groups to unaffiliated individuals—collectively rejected the normalization of authoritarian governance, generating ephemeral yet powerful spaces of dissent, solidarity, and political imagination. These moments of political commoning reconfigured relations of trust, resistance, and belonging across ideological divides.

While the movement's trajectory remains open-ended, I argue these actions are more than temporary disruptions. They represent experiments in collective agency and political subject-formation, rooted in shared acts of refusal and sustained through practices of resistance, alliance-building, and care.

Presenter(s): Cansu Civelek

Militant energy: Consumers, citizens, and commoning in France and Romania

Community energy is a fast-spreading global movement of citizen-led projects aimed at taking control of energy production and distribution. Described as both an environmental project which promotes clean energy and a political and economic shift towards a collective type of ownership and governance, community energy has various expressions: from a small group of neighbors who produce and consume their own renewable energy to the re-municipalization of energy production. This paper is based on an ethnography of two energy cooperatives in France and Romania that aims to uncover the tensions and contradictions deriving from practices of commoning energy within a global capitalist system. The two different socio-economic contexts where the energy cooperatives operate also inform the unfolding of these commoning projects: in France the energy cooperative is a bottom-up project which claims to be a political project against the State and corporate capitalism, while in Romania the energy cooperative is an entrepreneurial endeavor which tries to bring together household and mid-size renewable energy producers and align them to the top-down community energy principles outlined in the EU's energy transition policies. This paper is a contribution to a better understanding of the possibilities and limitations engendered by commoning practices in their attempt to create an environmentally and socially just alternative to an inherently unequal and uneven capitalism.

Presenter(s): Roxana Bucata

'That kind of place' – acts of planetary care as negotiations of legitimate belonging in non-profit housing estates in Denmark

The 'green' agenda and the promotion of sustainable behavior is increasingly taken up by non-profit housing associations and associated local and national actors in Denmark. At the same time, the non-profit housing sector is targeted with a number of intrusive policies that position disadvantaged housing estates as nesting places for crime and social problems. In this paper, based on 11 months fieldwork in two disadvantaged housing estates in Copenhagen, I look at how residents mobilize the green agenda in an attempt to counter this narrative. More specifically, I

show how acts of planetary care, such as building biodiversity beds, are taken up by residents to negotiate the perception of themselves and their estates.

Other local actors such as the urban development team and social workers also mobilize the green agenda, respectively, to frame the urban regeneration process as sustainable and to create exposure to Danish values and lifestyles. Practices that builds on and promotes the understanding of residents as problematic and in the need of resocialization in Danish society. To secure resources and support, the residents often collaborate with these actors. This paper thus highlights how residents, in their attempt to negotiate a legitimate belonging in the welfare state, inadvertently end up contributing to the very paradigm alienating them in the first place.

Presenter(s): Freja Bach Kristensen

From stopping evictions to building political organization: the case of the Network of Popular and Community Structures

In the wake of the financial crisis in Spain, a group of activists from Barcelona created the Platform of People Affected by Mortgages (PAH, in Spanish) in 2009, an organization that fights evictions through mutual support. Since then, they have blocked hundreds of evictions and pushed for changes in the law. Its members have also been transformed through commoning in their everyday struggle.

Every local PAH node is autonomous and defines its own strategies and priorities. In Manresa, a mid-sized working-class city in the center of Catalonia, the local PAH emphasizes its anticapitalist character. In recent years they have been working to go beyond the fight for housing by building political organization in the city, with the creation of a network of organizations also focused on sexism, migration, workers-rights, or popular education.

Based on previous research on PAH in general and seven months of fieldwork with the local Platform in Manresa, this paper explores how commoning through the specific struggle against evictions made it possible to create organizations that bring different people together, from members of established political organizations—both socialists and anarchists—to Moroccan migrants—the largest group in the movement—who were not previously connected to political organizations in the city. This coalition building process has given rise to a new political actor in the city that both pressures the administration and seeks to organize autonomously

Presenter(s): João França

Requisitioning Immobile Commons: Squats as New Commons within Destitute Migrants' Journeys through Europe

Across Europe, destitute migrants confront a condition of permanent crisis—an enduring state of uncertainty and instability. While migration studies have extensively explored life within camps, post-camp conditions and trajectories remain significantly underexamined.

Drawing on extensive ethnographic fieldwork across Europe—including 20 biographical interviews and numerous informal conversations with Sub-Saharan male migrants—this paper examines the immobility of those rendered hyper-mobile by European border regimes, and how marooned migrants navigate housing precarity while carving out spaces of autonomy.

Through small-scale, discreet acts of resistance—such as occupying vacant buildings—destitute migrants are able to requisition unused urban space to create immobile commons. These squats serve dual functions. On one hand, they operate as alternative social laboratories that challenge dominant norms of private property, neoliberal speculation, and the commodification of commons. On the other, they emerge as refuge-zones—direct outcomes of restrictive migration policies—providing both practical and symbolic grounds for asserting a right to remain and to live with dignity.

Amid these precarious spaces, marooned migrants cultivate self-organized forms of care, sustained by moral communities that foster sociability and a fragile sense of permanence. I argue that these new commons, beyond offering shelter, sustain hope and endurance in the face of endemic crises.

Presenter(s): Louis Vuilleumier

Epistemic Infrastructures of Resistance: Knowledge Commoning in Barcelona's Grassroots Environmental Justice Movements

Grassroots movements are increasingly shaping urban mobility by contesting car-centric cities and demanding safer, healthier environments for children. Drawing on two years of fieldwork, this paper examines the School Revolt and Bike Bus movements in Barcelona as processes of commoning, in which communities reimagine and reclaim urban space by organizing weekly bike buses and school street blockades.

Central to these movements is their capacity to generate and mobilize grassroots knowledge as a political instrument, using air quality and noise sensors, conducting mobility surveys, and visualizing data to contest dominant urban narratives. Strategic alliances with research groups integrate activist knowledge with scientific expertise, strengthening their claims and enabling their participation in formal institutional platforms where urban policy is debated.

Building on the notion of commoning, this paper explores how these movements produce, defend, and expand urban commons—not only in physical space but also through epistemic practices. However, I argue that as their political relevance grows, so does the risk of co-optation—including their demands, methodologies, and even leadership—by institutional actors who may adopt their discourse without altering the dominant logics of urban governance. This tension underscores the complex negotiation between grassroots autonomy and institutional engagement in contemporary environmental justice struggles.

Type: Roundtable/Town Hall

How have ghostly legacies of research past influenced the ways we currently practice and envision collaborative and participatory ethnographic research? As ethnographers deeply engaged in community-based participatory research in the U.S., Canada, India, Iraq, and Ecuador, we will discuss the development of our methods and methodologies across distinct cultural contexts -- often in response to research's haunted past. Methods like photovoice, participatory mapping, and community walks demonstrate our efforts to resist spectral legacies of research and forge a collaborative ethnographic practice that promotes diverse ways of building rapport, sharing stories, and making research matter. From designing mutually beneficial service-learning trips to connect college students with an Indian NGO, to long-term studies of community food systems, affordable housing, and jails in U.S. cities, to accompanying Yezidi women in publishing auto-ethnographic research, our roundtable participants will share strategies to confront disciplinary specters along with our challenges and missteps along the way. Trust is difficult to build and easy to lose, and this roundtable creates space for candid discussion about the significance of community-based research and the ongoing, unfinished nature inherent in collaborative research within a haunted discipline. How, for example, do you build collaborative research relationships with communities who have been historically treated as test subjects by researchers? How can you work collaboratively with a community whose neighborhoods were demolished for the expansion of the very university you represent? How do you navigate a shift in your role from a UNHCR employee determining refugee status to a researcher focused on statelessness and institutional humanitarian work? Not only are we ethnographers, but we are also professors, (former) NGO employees, and members of local committees and initiatives. We will discuss how our positioning within the university system and within the communities where we work influences how we learn and how we collaborate. What is our role as engaged anthropologists? What do people expect of us, and what do we expect of ourselves? How are we co-constructing research agendas, and how do we ensure our work leads to impacts defined by our community partners? Finally, how do we navigate current political and institutional challenges with our partners while reflecting together on the future of community-centered research?

5023 Cooperative Insecurities: Crisis, uncertainty, and collective action

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

That cooperative practices play significant roles in contexts of crisis, uncertainty, and ecological stress is well established. However, studies tend to emphasize these conditions as opportunities for cooperation to emerge, almost as if it were natural to crisis. In this panel, contributors denaturalize cooperation as a condition of insecurity and to interrogate the relations, institutions, and immaterial aspects of experience that produce and sustain cooperative practices while situating them in social, political, and ecological contexts. What are the different modalities of cooperation and collective action pursued by actors in these contexts? To what extent do these cooperative arrangements endure and facilitate change beyond liminal crisis responses that revert to "normal" practices?

Presentation(s): Beyond the Storm: Cooperation in Post-Disaster Puerto Rico

After a disaster, critical infrastructure systems—like interconnected food, energy, and water (FEW) systems—face disruption, leaving households and communities vulnerable to resource insecurities. These disruptions not only exacerbate material scarcity but also lead to psychological distress. When the state fails to respond, community leaders assume an important role in ensuring resource security. Drawing on interviews with community leaders from urban and rural areas in Puerto Rico, I analyze their responses to food, energy, and water insecurity following Hurricane Maria (2017) and current efforts for community resilience 8 years after this event. This research underscores how cooperation, fueled by networks of trust, reciprocity, and social obligations rather than merely economic incentives, influences post-disaster responses. By focusing on the factors that encourage cooperation, I also explore how these cooperative arrangements persist or evolve after the critical moment of disaster.

Presenter(s): Anais Roque

Interest Rate Crisis, Collective Action, and Cooperative Currencies: Toward a Theory of Social Credit

The early 1980s precipitated a widespread economic crisis as the US Federal Reserve sought to quell inflation by dampening economic activity through raising borrowing costs. The so-called "Volcker-shock" was felt globally, drastically raising the interest charged on contracts such as home mortgages. This paper describes how, in British Columbia, the interest rate crisis was acutely felt, as demand for the province's main resource, lumber, fell precipitously. High interest rates created a disincentive for home loans, which precipitated a decline in housing construction. Based on ethnographic and archival research I explain how citizens in the Comox Valley region collectively created a pioneering virtual currency to redress the local economic crisis triggered by extreme interest rates. Prior to the widespread availability of the internet, the "green dollar" used state-of-the-art technologies of the day, the desktop computer and the answering machine, to enable members of the community to provide credit to one another. In the context of insecurity and uncertainty, they created a form of mutual credit rather than relying on credit from the state or commercial banks. The paper argues that what is termed "social credit" offers a powerful collective response to the forms of credit facilitated by the state or through the market.

Presenter(s): Daromir Rudnycky

"We All Need Each Other": Cooperation, Food, and Care When the Crisis Doesn't End

This paper examines the uneasy terrain of cooperative food aid practices in Ypsilanti, Michigan, a peri-urban community shaped by layered crises and competing visions for care and need. Drawing on ethnographic fieldwork conducted during and after the height of the COVID-19 pandemic, I argue that grassroots mutual aid food efforts emerge not as spontaneous responses to crisis but as contested alternatives to formalized charity systems. Rather than naturalizing cooperation, I interrogate the fragile nature of its relationships, strained by municipal regulations, moral hierarchies, and shifting definitions of need. While institutions mark the end of the pandemic through policy rollbacks, local residents continue to face compounded economic and social vulnerabilities. These mismatched temporalities generate friction between mutual aid food pantry organizers, vulnerable communities, and city officials, complicating efforts to negotiate solidarity in public space. As pandemic-era funding retreats, mutual aid groups are forced to make do within and against systems built for temporary relief, choosing to embrace practices of abundance as a form of resistance to institutional scarcity. This paper highlights how cooperation during and after a crisis is a process of negotiation, raising urgent questions about whose crisis is recognized and when it is allowed to end.

Presenter(s): Jaroslava Pallas-Brink

Strengths and Fragilities of Village-level Collective Action in Southwestern Madagascar During Uncertain Times

The cohesive rural imagery conjured by the idyll "it takes a village" is often aspirational rather than real. In Madagascar, where the national government has devolved some governance to formal and informal community institutions, village cohesion fluctuates with economic fortunes and with local politics, embedded within moral economies. In this research we ask how the rewards and punishments that reinforce village-level collective action are likely to be affected by events of extreme duress. The data come from Madagascar's rural southwest, where extreme rainfall unpredictability means cycles of drought and inundation cause perennial crop loss, livestock death, and foraging and fishing failures. We examine people's perception of sanctions by neighbors, ancestors, and the government for collective action problems involving social safety nets and common property. Preliminary analyses suggest that people perceive punishments by neighbors to be more frequent but less severe than punishments by the government and ancestors. During times of extreme crisis, neighbor punishment erodes, supernatural punishment strengthens, and government enforcement becomes more variable. These preliminary findings elucidate the fragility of local social institutions.

Strategies to tactics: Disaster, Climate Uncertainty, and Rethinking Cooperation in Pastoral Mongolia

This paper describes moral economic reassessments of cooperation emerging in the wake of a massive winter disaster in 2023-2024 on the eastern steppes of Mongolia. Households reported between 10-70% livestock loss in a region long noted for its low disaster risk, high livestock productivity, and large herd sizes. For many herders, the experience of such loss and the climatic and weather conditions that immediately precipitated it called into question the relevancy of local knowledge and the resilience of dominant herding strategies. Many herders reported the failure to predict emerging weather conditions and the muted success, even impossibility, of traditional strategies like long distance mobility and kin-based labor pooling. Households tactically responded by adopting coping mechanisms that included seeking support outside their typical networks including cooperating with non-kin neighbors, as well as unfamiliar practices such as emergency destocking. These improvisational techniques reflected a shift away from the management of risk to coping with newfound uncertainties. Moreover, the logics that undergird those techniques have prompted reflection on market-based moralities that have dominated local discourse for the past two decades. In the months following this tragedy, herders began to rethink their etiological explanations for dzud disasters, their social relations with other herders, and the rationale behind dominant livelihood strategies like rural-urban straddling.

Presenter(s): Daniel Murphy

Cooperating for Conflict: Non-State Organizing for Violence in Disaster

Studies of cooperation and mutual aid in disaster tend to overgeneralize and treat them as universal human nature while idealizing them as altruistic and serving public good. We develop a critical approach to studying cooperation as an institution, with attention to rules, sanctions, and

belonging, that alternatively facilitate and inhibit cooperation and conflict, such that cooperation can be and often is an approach to organizing non-state violence to visit harm on perceived enemies. Drawing on cases of militia groups responding to and forming during disasters in several US states, we develop an approach to studying violence in disaster through the lens of cooperation.

Presentation(s): Audible Ghosts: A Semiotic Ethnography of Teacher Voice in China

Voice is ubiquitous in human communicative practices. In classrooms, teachers consciously employ their voices as vital pedagogical tools, shaping instruction and students' learning experiences through subtle shifts in tone, volume, and rhythm. Given teachers' heavy vocal demands, many experience vocal strain or disorders, highlighting the embodied nature of teacher voice. Anthropologists have extensively explored the embodied voices of singers, politicians, poetry reciters, and call center workers, tracing the sensory dimensions of sound and illustrating how voicing bodies are embedded within historically and culturally specific ideologies. Yet, existing discussions of teacher voice have remained largely metaphorical, emphasizing voice as symbolic agency or discursive authority, while neglecting detailed analyses of teachers' embodied vocal experiences.

This study builds on previous ethnographic investigations of voice and draws on Peircean semiotics to highlight the dual nature of teacher voice as both a physiological act and a socially constructed phenomenon. This perspective considers teachers' reported bodily and sensory experiences of using their voices, while also attending to how teachers come to perceive their voices as embodied principles.

The main fieldwork was conducted over six months in a variety of K–12 schools across China. As an embedded researcher, I observed daily classroom interactions across subjects and grade levels, audio-recorded all sessions, video-recorded selected ones, and conducted multiple teacher interviews-including open-ended, semi-structured, and video-cued formats-to explore how teachers use, experience, and interpret their voices.

Findings suggest that vocal professionalization is a central part of becoming a competent teacher. This professionalization is often framed through teachers' efforts to cultivate, perform, and maintain a voice that possesses Chuantouli (穿透力)-a Chinese local concept roughly translatable as "penetrating power." While Chuantouli can refer to the physical capacity of the voice to travel across a room, it is more than an acoustic trait-it is a culturally shaped expectation, reflecting an embodied ideal of the teacher voice in Chinese schools.

A voice with Chuantouli generates a sensory experience; it is expected to cut through students' bodily barriers, reaching into their awareness and moral consciousness. It draws attention, evokes emotion, and incorporates teachers and students into a shared felt-body, fostering perceptual attunement within a common experiential field, and even contributes to the emergence of the student as a new subject. Cultivating Chuantouli thus requires teachers to develop bodily techniques and tacit knowledge to align with a culturally defined vocal norm.

Films, strongmen and gender: a visual cued ethnographic exploration of gender representations and practices among youth.

In recent years, the demand and acceptance among mainstream Indian audiences for the 'traditional' and 'Indian' has resulted in an increasing number of films being produced that echo conservative sentiments on gender roles with hyper-masculine male heroes and subordinated and sidelined female characters.

A twenty-month ethnography that began during the Covid-19 lockdown periods and into the post-lockdown times with a group of Grade 9 students from a government-run school in Tamil Nadu, raised questions about the use and influence of films on youth in this state. The lockdown periods which resulted in the shift to online classes, albeit with limited accessibility for many students in these government schools, also resulted in students receiving legitimate access to technology and the internet.

Past research and the literature show that peer influence is perhaps strongest in youth activities surrounding media. Young men are influenced by movie 'heroes' and they perform acts of masculinity inspired by these stars. The strong heterosexual culture in these movies results in young men shifting these masculine performances to an outside and different audience- women (Osella & Osella, 2006).

This paper demonstrates the use of visual cued ethnography (VCE) in working with a group of youth in a participatory approach, to create spaces of safety, critical reflection and dialogue. VCE holds promise for this research as it privileges the voices of marginalized groups allowing the researchers to listen more carefully to the participants and allowing participants to play active roles in forming the research methods and directly engaging in analysis of the findings. VCE also creates a less threatening and more inviting environment (Tobin, 2019).

I used the method of critical viewing of diverse film clips followed by group discussions. This was my primary form of data collection; within this, different formats (e.g., worksheets, debates) were used. The discussions were facilitated by the use of relevant films, by my critical intervention, and by the participants who perform this role for each other through the discussions. A key finding has been the destabilizing potential of using films to upset accepted gender beliefs and norms. During the research, particular beliefs, mindsets or attitudes (stereotypes more broadly) related to gender, masculinity, and inequality were challenged and hotly debated by participants, and led to changes in their stated responses, questions asked and even manner of participation.

Ghosts in the Lecture Hall – Living with the MSU School Shooting

On February 13th, 2023, a man entered Berkey Hall and began shooting. His rampage continued across Michigan State University's campus. Students barricaded themselves in rooms, calling their parents in tears, while police walked the expansive land-grant institution. Three students were killed and five were injured. The response to this event was a lesson in the complexity of disaster response. Amidst the media frenzy and the public grieving rituals, professors were thrown into roles they were not trained to perform, and the student body was cheered on for being "Spartan Strong" at their weakest moment. The university's dated hierarchical power structures intensified the unequal distribution of labor and expectations. As an Assistant Professor specializing in disaster studies, and teaching over a thousand students during this tumultuous time, I utilize autoethnography to assess the immediate and long-term aftermath.

Liberal Arts Colleges Admissions Practices: Historical Context and Suggestions

Liberal arts colleges in the United States have long been regarded as institutions that cultivate critical thinking, leadership, and moral development. However, these institutions also function as mechanisms of social reproduction, reinforcing elite privilege and historical marginalization. This thesis critically examines how the admissions processes at these colleges favor students with social capital, shaped by historical legacies of exclusivity. While test-optional policies have been implemented to promote access, they fail to meaningfully address structural inequities. Additionally, diversity is often framed as a metric of institutional progressiveness rather than a genuine commitment to equity. Using a systematic literature review and guided by theories of social reproduction, social capital, and meritocracy, this study critically investigates the admissions processes of selective liberal arts institutions. Through an interdisciplinary approach that integrates education, anthropology, and sociology, this study contributes to ongoing discussions about equity in higher education and the future of admissions reform.

Teaching Happiness (and Surviving Middle School) Like an Anthropologist

Since 2018, Finland has consistently ranked as the world's happiest country according to the World Happiness Report (WHR), an initiative promoting the UN Sustainable Development Goals (SDGs). Meanwhile, the U.S. slipped from 15th to 23rd on the WHR in 2023, and if ranked by the happiness of its young people, it would fall to 62nd (Newman, 2024). This notable contrast inspired me to develop "Project Happiness," an interdisciplinary middle school course blending my background in cultural anthropology with my current role as a humanities teacher.

In this presentation, I illustrate how anthropological thinking and practice - curiosity, cultural relativism, participant observation, and reflection - can enrich middle school education, fostering student engagement, empathy, and global awareness. Project Happiness invites students to examine happiness not simply as a personal emotion but as a complex experience shaped by systems, cultural values, relationships, and contexts. Students grapple with essential questions about the nature of happiness, how it's measured, and its implications for communities.

Drawing from global education frameworks and my Fulbright-Hays Seminar Abroad experience in Finland, along with my upcoming Fulbright Teachers for Global Classrooms experience in India (planned for July 2025), this course integrates educational principles emphasizing care, community, and connection. In the presentation, I will share specific examples of activities and approaches used in the course, highlighting how students applied anthropological tools to explore diverse cultural conceptions of happiness, engage with global happiness indices, and connect their findings to local experiences.

Ultimately, this presentation advocates for middle school as a vibrant context for anthropological practice - not by explicitly teaching anthropology, but by immersing students in authentic inquiry. Additionally, it also encourages emerging or transitioning anthropologists to consider K-12 education as a meaningful and impactful field for applying and sharing their skills.

Presenter(s): Amy Robbins

The Ghosts of What Could Have Been in Educational Decision-making Spaces

Ethnographic research methods in education create the conditions to understand what is, but also how the past haunts the present, and what might have been or could be. In educational spaces, ethnographic tools reveal decision-points within their sociocultural contexts. We apply Agar's (1996) framing of "rich points" to explore how the tension in these spaces illuminates not just what happened, but also the ghosts of what could have been. We observe what happened, but we must also interrogate why it happened how it did and look for the ghosts down the pathways not taken. Attending to "provoking absences" (Phelan & Sumsion, 2003), what did not happen or what remained unspoken, sheds light into the spaces where inequity is born and offers insight into how we might move more intentionally toward educational equity.

We identified two cases (Stake, 1995) that demonstrate decision-points where what happened clearly contrasts with what could have been. Describing how different decisions could have shaped different outcomes provides glimpses into what is possible in advancing educational equity. Our two cases come from larger ethnographic studies: (a) a public school in Indian Country that was

identified for state-led intervention and (b) an English Learning classroom in a demographically changing Midwestern public school.

Data collection in these studies involved participant observation (Spradley, 1979), fieldnotes, and thematic coding (Emerson, Fretz, & Shaw, 2011; Erickson, 1984). Data sources included transcripts of legislative hearings and state board of education meetings, interviews, field notes, and artifacts from the contexts we explored. Analyses involved iterative coding and memo writing (Emerson, Fretz, & Shaw, 2011; Owen, 2014). We triangulated data by examining how themes interacted across transcripts, artifacts, and fieldnotes. We conducted member checks (McQuillan, 1998) in an effort to ensure triangulation and validity. Data were collected over an extended period in each case.

These two cases offer numerous examples of "provoking absences" (Phelan & Sumsion, 2003), including missed opportunities to honor Tribal members' sovereignty in educating their young people, and missed opportunities to connect the life and curriculum of the "sheltered" (Haneda, 2009) U.S. history class to newcomer students' lives and to integrate them into the school and community. Such missed opportunities underscore the importance of attending to what goes unspoken or overlooked, reminding us that "provoking absence" is not merely a theoretical idea but a practical obligation to notice, disrupt, and reimagine what education might otherwise exclude. Our findings demonstrate the potential for advancing equity by exploring the space that "leaves open the possibility of provoking what is currently absent" (Phelan & Sumsion, 2008, p. 5). It is in this generative uncertainty that we see potential for reimagining what equity can mean in practice.

Waiting for Foucault at School: An Ethnographic Study on Disciplinary Measures in Brazilian Schools

This study explores the dynamics of disciplinary practices in Brazilian public schools through an ethnographic lens, examining how institutional responses to conflict and violence relate to broader debates on power, punishment, and control. Drawing on Michel Foucault's theoretical framework—particularly his concepts of disciplinary power, the production of docile bodies, and the panopticon—the research critically investigates the extent to which public schools reproduce mechanisms of surveillance and normalization under the guise of educational governance.

Based on fieldwork conducted in a municipal public school in the metropolitan area of Rio de Janeiro across multiple periods in 2023 and 2024, the study employs a qualitative methodology grounded in participant observation, semi-structured interviews, and document analysis. The focus lies on the daily practices of school administrators, teachers, and staff involved in maintaining order, managing conflict, and implementing disciplinary procedures.

The findings reveal a persistent predominance of punitive and repressive approaches to student behavior, even in institutional contexts that have formally adopted alternative frameworks such as

restorative justice or conflict mediation. Although these approaches are presented in official discourse as progressive, humane, and protective-aiming to shift away from punishment toward repair and inclusion-their practical application often remains limited or symbolic. Instead, the study documents how practices of control are rearticulated through new languages and protocols that ultimately sustain hierarchical relations and the marginalization of students perceived as "disruptive."

This tension between discourse and practice points to a broader paradox in educational policy: the coexistence of protective-restorative rhetoric with institutional logics rooted in exclusion and discipline. Rather than signaling a transition away from Foucauldian disciplinary models, the findings suggest a mutation of these mechanisms, in which control is maintained not through overt coercion alone, but through bureaucratic procedures and moralizing narratives of care and responsibility.

By interrogating how discipline is practiced, narrated, and justified within the everyday life of a public school, this research contributes to the anthropological and sociological literature on education, state power, and the management of childhood and youth. It also invites critical reflection on the limits and possibilities of institutional reform in contexts marked by inequality, structural violence, and deeply ingrained modes of social control.

Presentation(s): (Re-)Imagining Morocco: Chinese Interpretations of Moroccan Culture Through Tourism

Despite limited historical ties and significant geographic distance, Morocco has long captured the Chinese cultural imagination. From the storied travels of Ibn Battuta to China to the romantic portrayals of Saharan life by Taiwanese author Sanmao, educated Chinese audiences have envisioned Morocco as an exotic frontier where the desert meets the sea. Over the past decade, Morocco has emerged as a popular destination for Chinese tourists, offering them firsthand encounters with a land they had previously known only through stories. These experiences are widely shared through short travelogues on Chinese social media platforms such as Xiaohongshu

(Rednote), contributing to a dynamic and evolving reimagination of Morocco within Chinese society. Building on Noel Salazar's seminal concept of "tourism imaginaries"-collectively held, socially circulated representations that shape how tourist destinations are perceived and experienced-this article explores how Moroccan culture is constructed and contested in the context of Chinese outbound tourism. Based on a comparative thematic analysis of Chinese travel narratives on Xiaohongshu (January–December 2024), promotional content by Moroccan tourism authorities targeting Chinese consumers, and ethnographic interviews with Chinese tourists, Chinese tourism operators, and Moroccan tourism officials (conducted between December 2022 and January 2024), this study addresses four interrelated questions: (1) How do Chinese tourists and tourism intermediaries imagine and represent Moroccan culture online? (2) How do Moroccan tourism authorities frame Moroccan culture for a Chinese audience? (3) Where do these representations diverge, and why? (4) How might Moroccan tourism planning better align with Chinese tourism imaginaries to enhance its competitiveness in China's outbound travel market? Incorporating Gerard Toal's critical geopolitical theory and Immanuel Wallerstein's world-systems perspective, the article further interrogates how Chinese tourist imaginaries of Morocco reflect broader hierarchies in global cultural ordering in the post-colonial era. By tracing the mutual entanglement of tourist desires, digital media, and national branding efforts, this study advances the anthropology of tourism by demonstrating how tourism imaginaries serve as a mechanism through which emerging powers like China reshape cultural hierarchies across the Global South. These Chinese reimaginings of Morocco are not merely projections of fascination with an unfamiliar culture; they also reveal China's emerging position as a powerful consumer and increasingly dominant producer of global cultural narratives-a dynamic that remains understudied by Western anthropologists. Tourism imaginaries, therefore, offer a critical window into how cultural hierarchies and soft power are negotiated in the contemporary Global South.

Presenter(s): Jie Gao

Footprints Without Landfall: Cruise-By Tourism and the Commodification of Polar Landscapes

This paper examines how polar cruise tourism, including sharp rises in "cruise-by" itineraries - reveal contradictions in mass-market travel to endangered environments, specifically narratives that cast tourists as ambassadors or stewards while masking the extractive logics embedded in their experience. Based on ethnographic research onboard two polar cruises (Antarctica 2022 / Arctic 2025) the work argues that polar landscapes are commodified for consumption while tourists are insulated from environmental degradation that tourism itself intensifies through industry-driven narratives that frame them as "ambassadors."

The presence of cruise ships in polar regions reinforces a central contradiction whereby climate crisis becomes both a selling point and a cost. Polar cruises package ecological precarity as transformative experience, reframing environmental vulnerability as a consumable encounter even as the industry deepens that vulnerability by bringing more tourists each year. In 2018 more than 50,000 tourists visited Antarctica; by 2024 that doubled to 105,000. Contradiction is enabled by cruise infrastructure, relying on heavy fuel use, waste discharge, and large-scale provisioning.

Environmental impacts can be outsourced or obscured - geographically and rhetorically - through logistical complexity and ambassadorship rhetoric, which frames consumption as care. Cruise-by tourism (itineraries in which passengers view polar landscapes from ships without setting foot on land) is a growing model, engendered by the economics of mass tourism reaching polar destinations. Landings remain the purview of the wealthy since they are tightly controlled, exclusive, and expensive - requiring small ships, high fares, and additional regulations. In contrast, cruise-by itineraries allow large lines to market polar travel less expensively to broader middle-class demographics. The rise of cruise-by tourism is inseparable from global patterns of classed access, shaping how Antarctica and the Arctic are experienced, marketed, and remembered. Drawing on critical political ecology, the tourist gaze (Urry), and commodified nature (Harvey & Smith), this work explores how polar landscapes become "haunted" spaces - marked not only by imperial legacies but by the specter of future ecological loss. While the International Association of Antarctica Tour Operators (IAATO) and cruise companies promote "ambassadorship" to present tourism as ethical engagement, onboard evidence suggests tourists rarely envision behavioral change post-trip. Their journeys are framed instead as bucket-list travel or personal achievement: to see Polar regions before they change. Polar cruise-by tourism both democratizes access to remote spaces while commodifying loss as spectacle. Tourists are drawn into a mediated encounter with endangered landscapes, where beauty, precarity, and consumption converge - crafting a tourist gaze haunted by forces shaping the future of these regions.

Mausoleum Heritage in 1935 China: Fengshui, Temporality, Authenticity, and Nation-Building

This paper examines the 1935 restoration of the Ming Changling Mausoleum as a lens through which to explore the reinterpretation of traditional Chinese concepts of mausoleum heritage during the formative period of modern nation-building. Drawing on archival documents and historical sources, the study investigates how practices grounded in imperial Chinese cosmology-such as fengshui, temporality, and notions of authenticity-were preserved, modified, or marginalized in this state-directed project. In the imperial context, mausoleum architecture was deeply embedded within natural landscapes, particularly through the geomantic layout of sacred groves and the principles of fengshui. These landscapes were integral to a cosmological system that linked the human, natural, and spiritual realms. Temporality in this tradition emphasized cyclical renewal through reconstruction, rather than the preservation of original materials. The reuse of aged timber and tiles, along with the dismantling of peripheral structures to conserve core elements, reflected this worldview. Authenticity, accordingly, was defined through ritual continuity and spatial symbolism rather than material permanence. Yet the 1935 restoration also marked a significant transition. While retaining many traditional elements, it increasingly embraced modern heritage discourses that prioritized chronological classification, architectural significance, and visual integrity. Concurrently, the Republican government reframed the mausoleum's political meaning, promoting the Yongle Emperor as a national icon to bolster anti-Japanese sentiment. This paper argues that the Changling restoration exemplifies a critical moment of negotiation between imperial

and modern conceptions of heritage. It reveals how traditional frameworks were selectively adapted to serve the cultural and political imperatives of a modernizing nation-state.

What we do in the Shadows: Museums, Dark Tourism, and the Anthropology of Hauntings

Dark tourism-visiting sites associated with death, tragedy, or the paranormal-has become a growing cultural and economic phenomenon. Museums and cultural institutions are increasingly engaging with this trend as visitors seek to understand the history of death, hauntings, and the paranormal. This session explores the motivations of visitors who come to these spaces to learn about death-related events and engage with theories of hauntings. Drawing on anthropological theories of place, memory, and the afterlife, we aim to understand why such experiences captivate the human imagination. Furthermore, this presentation examines how dark tourism can serve as a tool for education, providing opportunities to reflect on mortality, history, and the social construction of belief systems.

8008 Disturbing the Ghosts: Un(der) questioned assumptions, ideas, and practice in human evolutionary studies

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** MGB Salon F/G

Type: Oral Presentation Session

Paleoanthropologists, geneticists, and archaeologists are often primarily focused on the study and understanding of empirical data to better understand the human past. In studies of our evolutionary past, the legacies of both historical practice and theory often lie unacknowledged and unexamined beneath many contemporary debates within the field. This session will dig up some of these ideas and explore the potential consequences for how we study and understand our evolutionary past today. For example, how have colonial practices of paleoanthropology shaped the trajectory of the composition of the fossil record and its understanding? How have prominent ideas become ingrained as baseline starting points of analysis, rather than as hypotheses subject to continual scrutiny? How have institutions themselves served as legacy bodies that shape careers, research agendas, and practice? This session is intended to open the floor for questions that are, at least today, seldom questioned within the field. The aim is not to provide clear or concise answers to these questions, but rather to explore the potential consequence of our reluctance to pay attention to these implicit biases, practices, and ideas.

Presentation(s): The Legacy of *Homo habilis*: A counterfactual history of the origin of the genus *Homo*

The 1964 publication of *Homo habilis*, "a new and lowly species of *Homo*," based on fossil and archaeological evidence from the lower beds of Oldupai Gorge has had a lasting legacy on the understanding of the origin of the genus *Homo*. Many of the traits central to Tobias' model of *Homo habilis*, such as dental reduction and encephalization, remain critical elements in the fossil identification of early *Homo* today, even as other elements of his model, such as tool use, have been shifted earlier in the hominin record. At the time of its publication, *Homo habilis* was filling an important gap between the South African Australopithecine fossil record, an emerging hominin record for East Africa, and a historical record of *Homo erectus* largely derived from East and Southeast Asian fossils. In addition to knowing that some of the elements of Tobias' model no longer apply, the fossil record for early *Homo* has expanded massively. This paper will consider how our understanding of the origin and early evolution of *Homo* might have proceeded differently had the timing and discovery of key fossil finds been different. In so doing, the paper will try to elucidate the ways that *Homo habilis* has continued to haunt our understanding of early *Homo*.

Presenter(s): Adam Van Arsdale

Finding a place for *Homo erectus* out of the spectre of *Pithecanthropus*

First discovered in 1891 and defined in 1894, the species known today as *Homo erectus* was one of the first entries into the scientific record of human origins. Its long precedence makes it central to any discussion of hominin systematics, and the popular awareness of the species has placed it centrally in many people's imaginations of human ancestry. For most of this history, *H. erectus* has been contentious. Some favor recognizing many different species for the fossils often attributed to *H. erectus*, while others would reject the species entirely. Between these extremes *H. erectus* stands out as the largest hominin fossil sample aside from Neanderthals and modern humans, one of few that exhibits substantial change over hundreds of thousands of years, and the only hominin other than modern humans with a distribution across Africa, Asia, and Europe. This talk considers the 130-year legacy of *Homo erectus* within human evolution research. It includes a critical examination of the place of the species in today's systematics. Recent discoveries have tended to promote the idea of *H. erectus* with a concept not generally shared by historical sources. The talk presents a sketch of a different way of handling the *Homo erectus* fossil record.

Exorcizing our evolutionary ghosts: Denisovans and other spectral beings of the Pleistocene

Unlike other evolutionary sciences, paleoanthropology is made personal as it sifts through ghosts from the past to frame the evolutionary history of our own species. Bones and ancient DNA are the physical evidence of once living people and, as framed by Spooner-Lockyer and Kilroy-Marac (2021), also represent spectral beings who occupy invisible landscapes. In the case of the population referred to as the Denisovans, genomes are unmoored from heads, faces, and bodies and as such are incomplete spectral beings. For paleoanthropology, this type of incompleteness encourages the naming convention of 'ghost'. Even so, Denisovan ghosts are more complete than other echoes of past populations that are essentially statistical artifacts instead of individual genomes. Although Denisovan genomes tell us more about them than can be gleaned from their scant remains, the absence of skeletal elements that are also morphologically salient puts us in an unfamiliar place. We investigate how genomic research disassociated from skeletal remains is a trap that prevents us from conceptualizing Denisovans appropriately. Naming those genetic ghosts as Denisovans is just the first problem. In our attempts to humanize them, we create a category that really has no evolutionary or analytical meaning.

The “concept” of ‘behavioural modernity in palaeoanthropology

"Behavioural modernity" refers to a loosely & variously defined set of behaviours and their material correlates suggested to indicate the cognitive, technical, and social traits characteristic of *Homo sapiens*. While it continues to be a topic of palaeoanthropological focus and has had a wide impact, current scholarship has reached an impasse. We examine the historical legacies of the concept of behavioural modernity, looking at how some of its core traits, such as its concentration on symbolic thought, are consequences of problematic assumptions about human nature. The importance of 'behavioural modernity' stems more from the impact that this concept has had, and continues to have, on anthropology regardless of how well it functions as an accurate framework for examining hominin socio-cognitive development. We use the analysis of citational practices to trace how this concept was constructed and validated, how it has shaped the discipline of palaeoanthropology, and the implications of this concept for the understanding of human evolution. While many assumptions of the model are rejected today, the overall narrative still persists. Though scholars have suggested moving past this concept, it is still seen as valid outside of palaeoanthropology and its impact is wide. We further suggest that the ghost of modernity continues to impact how our research is framed and that moving past it requires a rethink on how we talk about human evolution.

Ghostly Ancestors

The major difference between biology and biological anthropology is the reflexive nature of thinking about ourselves scientifically. In the case of ancestry, hominin taxonomy is, and has always been, a mess. Traditional explanations for this situation involve general incompetence and prostitution of the scientific record in the service of personal aggrandizement. This, however, assumes that there is a correct species-level taxonomy "out there" for a competent scientist to discern. I suggest a different reason for the widespread perpetual dissatisfaction with hominin taxonomy. Unlike the way that chimpanzees conceptualize their ancestry, human ancestors are, in an anthropological sense, sacred. There can be no purely objective, scientific discourse about our ancestors without either (a) ceasing to think in a human fashion about them; or (b) pretending to be a space alien and imagining that they are not our own ancestors. Conceptualizing our ancestry is a cultural activity, whether scientific or not. Consequently, arguing about the biological reality of hominin taxa may be an ultimately fruitless activity, if they are not part of the biological realm. Following racial taxonomy, I suggest that human ancestry is most accurately described non-taxonomically, at least at the lowest levels.

2657 Excavating museum pasts, trekking pathways forward: ghosts in the proverbial museum closet

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Galerie 1

Type: Oral Presentation Session

Museums and archives have checkered pasts that we have long endeavored to thwart and redirect in our practice and scholarship. This session explores contemporary approaches to working with historical collections, colonial legacies, and a variety of challenging museum histories, attending to the accompanying ideologies, power dynamics, and absences that have shaped museum pasts and also shaped how we react to them moving forward. Session presentations will examine repatriation, community-based research, museum and archival information practices, and collecting histories. Broadly, this panel will engage a few key questions: how do museum pasts continue to haunt contemporary museum and archival practices? And how do we respond?

Section: Council for Museum Anthropology

Chair: Amanda Sorensen, University of Maryland, College Park

Presenter(s): Christina Hodge, Brown University, Haffenreffer Museum of Anthropology, Jayne-Leigh Thomas, Indiana University, Bloomington, Amanda Sorensen, University of Maryland, College Park, Sara Ann Knutson, University of British Columbia, Christopher Smith, University of British Columbia, Department of Anthropology

Discussant: Amanda Sorensen, University of Maryland, College Park

Presentation(s): The Ghosts of Emma Shaw Colcleugh

This paper considers how a collector haunts her collection. In 1930, the Haffenreffer Museum's founder purchased a collection of around 260 items from local Providence, Rhode Island journalist and lecturer Emma Shaw Colcleugh. She acquired them during her global travels in the late 19th and early 20th centuries, in the midst of expanding American military and industrial imperialism. Colcleugh's artifacts are now tangible museum collections, while her personhood has become frustratingly intangible, partial, and "ghostly": perceived indirectly through signs and traces. Colcleugh's radical independence, imperialist worldview, and racism are clearly embedded in the objects she acquired. Yet, decontextualized, these artifacts fail adequately to convey her motivations. We need to look both inside and outside museums to fully confront the lingering presence of collectors—figures whose ideologies continue to influence via the material traces they left behind.

Presenter(s): Christina Hodge

Voices from the Past: The Importance of Information Sharing in NAGPRA and Repatriation

co-author: Martha Only a Chief (Pawnee Nation)

In 1965, a collection of Pawnee artifacts was donated to Indiana University (IU) from a wealthy benefactor in Colorado. In 2024, numerous objects from that collection were repatriated by IU to the Pawnee Nation under the Native American Graves Protection and Repatriation Act (NAGPRA); however, prior to repatriation, questions remained – How did this individual come to acquire such a large collection of Pawnee items, particularly so many sacred objects? Why were they given to IU? A subsequent investigation into archival and historical records revealed information answering these questions as well as illuminating the voices of Pawnee people from nearly 100 years ago. This paper will discuss the importance of developing strong partnerships, thorough archival and historical research, and focused collaboration to bring repatriation and cultural revitalization efforts full circle.

Presenter(s): Jayne-Leigh Thomas

Digital Hauntings: Sociotechnical Legacies Impacting Museum Collections Management Systems

Developers and users alike intend collections management systems (CMS, CMSs plural) to support knowledge production associated with collections, documenting the content and the context of cultural heritage, but what information represents collections is a cultural, social, and political question. The current form of museum information systems have been shaped by overlapping histories of computing, corporate culture, and museum bureaucratic practices. By virtue of their technical development processes, CMSs hold various perspectives on, and interpretations of, reality encoded within them. As such, CMSs frame collections, encouraging particular understandings of cultural heritage works on the part of users.

This paper will present preliminary findings encompassing a portion of my dissertation research about museum CMSs. The data in question results from a qualitative content analysis, analyzing publicly available documentation about the information infrastructures and design of a selection of museum CMSs currently on the market. Contextualizing museum databases within histories of computation and software studies theory, I examine the shapes contemporary museum CMSs take and what this means for the shape of data within them, namely for descendant communities, researchers, and museum professionals.

Material “afterlives” and the haunting of the ethnographic collection

This presentation begins from the observation that there are, broadly speaking, two ways in which a material may appear in museum collections and archives: first, its physical presence in these collections and second, through other materials that contain traces of the object's itinerant history—for instance, a photograph of the material or an associated museum object label. Sometimes only the latter traces, not the physical object, remain in a museum archive. This paper will examine how itinerant materials leave museum-based traces in absence of their own material presence and will demonstrate how these material “afterlives” are not neutral encounters.

Focusing on case studies from my research on Islamic coins and their “afterlives” in archival photographs and museum records, including in ethnographic collections, I examine the role that museum pasts play in structuring power dynamics, informing contemporary museums-based research, and, in some cases, disrupting community values. I demonstrate how materials can become entangled in a web of other collecting histories and colonial legacies beyond their own itinerant histories. Ultimately, I question: what does it mean for materials like coins to reside in museums and how might theorizing material “afterlives” inform how we engage museum pasts and promote community values in museum futures?

Presenter(s): Sara Ann Knutson

Toward an Ethical Art Market: The Problem of Indigenous Belongings in Private Collections

The presence of Indigenous belongings in private art collections has long been a source of tension between Indigenous communities and collectors. While laws and ethical guidelines pertaining to museum collections have continued to evolve and become more engaged with Indigenous communities, the private sector consisting of auction houses, art dealers, and collectors has remained largely immune to these regulations. This is unlikely to remain the case, though, and it's imperative that both art collectors and sellers make moves toward a more ethical and responsive art market that respects Indigenous patrimony and property.

This paper outlines the collaborative processes between myself, Nadine Di Monte at First Arts Auctions, and several museums and Indigenous communities to move culturally sensitive belongings out of private collections and the art market and back to their rightful homes. Through case studies including the return of a Northern Cheyenne bison headdress to descendants in

Wyoming, a Yup'ik mortuary figure from Alaska, and a Mowachaht/Muchalaht First Nations headdress from Vancouver Island, the author will share successes, challenges, and potential paths forward for the future of this kind of work.

Presenter(s): Christopher Smith

2004 Fiscal Flows: A Site of Ethnographic Intervention and Disciplinary Reflection

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 3

Type: Oral Presentation Session

This panel posits "fiscal flows" as an object of study and as a site for re-thinking areas of anthropological interrogation such as the state, debt and credit, inequalities, nation-making, and everyday life. Fiscal flows encompass both the payment of taxes as well as myriad forms of redistribution and expenditure. In paying attention to flows we explore how fiscal resources move – where, what, and who they run to, from, and through, where they pool, and where they dry up – and the impacts of their particular pathways. Fiscal flows themselves are generative of critical junctions in economic, political, and social life – pulling together and channelling the movement of resources, wealth, and power, and directing anthropological analysis to such traffic. Fiscal flows are also entangled with wider global forces; the recent imposition of trade tariffs and altered terms on which the US offers military security to Europe link national fiscal flows to changes in global geopolitics and empire, for example.

This panel explores multiple aspects and scales of fiscal flows and how they produce society and generate spectres of extractive histories, including but not limited to: taxes, benefits, public spending, redistribution, and monetary and fiscal policy. The papers move from how offshore finance builds welfare in Luxembourg; remittance economies and land-brokers in Nepal; the histories and presents of welfare states and austerity measures in northern Europe; through tax-like extraction by dons in Jamaica for the creation of public goods as inventive re-shaping and movement of fiscal funds; and the colonial logics of capital flows through tax havens; to how fiscal flows shape love and kinship in India.

In doing so, the papers address key questions regarding fiscal flows including:

- Who is seen to pay for whom and, conversely, to benefit? What moral/ethical evaluations are attached to fiscal obligation and expenditure?
- What are the effects of fiscal flows on individual subjects and social collectivities, from the household to transnational?
- How does the fiscal figure in projects of governance, security, social movements, political contestation, etc?

- Where might fiscal flows encounter entanglements and blockages, and with what effects?
- How can attention to fiscal flows generate sites of ethnographic intervention and disciplinary reflection?

By taking fiscal flows as a point of departure, this panel opens new anthropological horizons and thematic linkages, and creates critical space for re-considering the discipline's engagements with policy, social movements, and other political actors within and beyond academia.

Presentation(s): The durability of tax havens: From colonial finance to blockchain infrastructure

Over the past decade, the Cayman Islands has enacted laws regulating cryptocurrencies and digital assets expanding its administrative portfolio in facilitating global capital flows. This shift reflects broader changes in global tax chains and offshore capitalism as the rise of distributed ledger technologies (DLTs), with their financial anonymity, has found regulatory favor in offshore centers. This is reinforcing how former colonies reimagine their economic roles while remaining structurally linked to their colonial past. The Cayman Islands facilitates this transition, acting as a legal hub for blockchain firms, leveraging its British Common Law framework to maintain credibility while paradoxically reinforcing its colonial legacy. Blockchain's promise of decentralization has instead created new mechanisms for financial exclusivity and regulatory evasion, posing challenges for global compliance. Yet, to sustain its dominance in digital finance, the Cayman Islands—like many former colonies—must navigate what Caymanian political economist Roy Bodden calls "voluntary colonialism"; maintaining ties to colonial identities and legal frameworks while capitalizing on emerging markets and financial technologies. Drawing on over a decade of ethnographic fieldwork in the Cayman Islands, this paper argues that it is local durability and survival that drives modernization in offshore.

Extortion or taxes? Criminal leaders and fiscal flows in Kingston, Jamaica

Through an analysis of the "fiscal" flows mobilized by criminal leaders known as dons, this paper explores popular understandings of taxation, political authority and the public good in Kingston, Jamaica. It focuses on the payments that dons exact from small and large entrepreneurs, and how these are connected to the provision of neighborhood-level common goods. While the Jamaican police and media are quick to describe such economic exchanges as "extortion," both entrepreneurs and dons go to significant lengths to narrate and perform them as other-than-extortion. Aligning with recent work in fiscal anthropology, where taxation is understood as a

payment extracted and redistributed by political institutions in and beyond the state, the paper takes seriously this framing in terms of taxation. It analyzes how the payments exacted by dons and the performance of consent play a role in the formation of political – and indeed fiscal – communities. Connecting the perspectives put forward by dons, low-income residents and entrepreneurs, the paper traces the fiscal flows associated with donmanship in order to understand their role in enacting fiscal-political territories both at the level of the don's neighborhood-based territory and at the scale of the Jamaican nation-state.

Presenter(s): Rivke Jaffe

Offshore finance in the service of social democracy: The curious fiscal case of Luxembourg

Luxembourg is a paradoxical fusion of offshore finance and social democracy, whereby low taxation on financial transactions and progressive taxation on finance workers' salaries have enabled the country to build a welfare state. Offshore finance – in which Luxembourg developed a specialty in the 1960s – has propelled the country to a high global GNP figure, shielding it from hardships experienced elsewhere in the Global North. In this paper, I present the results of an anthropological study on how my interlocutors in the financial center address the following three tensions. First, how do Luxembourg's elites seek to expand finance activities, given that current social-welfare demands necessitate their future growth? Second, why is it that said elites have, curiously, neither expanded financialization domestically nor do they discuss the financial center much with locals? Third, given that current fiscal flows and patterns of rent accumulation enable the Grand Duchy to maintain high living standards while avoiding austerity, how do my interlocutors confront the contradiction between promoting offshore finance internationally while maintaining a social democracy domestically? I end with a few thoughts about how ethnographic methods can help us to understand complex fiscal flows. I highlight some strategies for studying offshore finance and fiscality in Luxembourg, whose practitioners generally seek to operate without public scrutiny, whether from anthropologists or others.

Presenter(s): Samuel Weeks

From Fiscal Flows to Remittance Economies: Brokers, Land, Capture, and the Public Good in Kathmandu

A critique of foreign remittances is that they replace fiscal flows. The argument goes that, when a society becomes reliant on money sent from nationals abroad, then pressure on the state to deliver services, encourage growth, and invest in development is lessened; that remittances become a stand-in for governmental forms of management and redistribution. But what of the remittances themselves? Do they come to be viewed as a kind of fiscal flow by those living in remittance-reliant societies, as something at least partially earmarked for the public good? Or do they fully retain their character as private property? This presentation explores such questions through an examination of remittances, urban land, and brokerage in Kathmandu, Nepal. Nepal is one of the largest receivers of foreign remittances, a surprising amount of which gets invested into urban land. This capital flow has attracted a host of young men to the professions of land brokerage, work that

necessitates capturing a percentage of remittances from families looking to invest, sometimes through morally dubious methods. This presentation argues that brokers justify such methods by questioning the ownership of remittances, using tropes of governance, development and the public good in unexpected ways. In this way, brokers play on the ambiguous role that remittances have in their society, creating new constellations of meaning and morality around the shifting distinctions between public and private.

Mutations in the (study of) austerity: New terms of empire, changing fiscal flows

In this paper, I consider mutations in austerity—and anthropological approaches to it—in the UK against the backdrop of wider changes to fiscal flows: from the new terms of US empire marked by the Trump administration's demands that Europe assume greater responsibility for its security to the first Labour government following fourteen years of Tory rule and austerity measures. Together, these shifts have set the stage for a return to austerity in the UK, albeit under markedly different conditions than their imposition in the wake of the 2008 global financial crisis. Indeed, current calls by UK and European political leaders for 'trimming the welfare state to build the warfare state' raise the specter of retooling the fiscal-military states upon which modern forms of taxation and extraction emerged. In this context, the UK Labour government has intensified austerity measures by cutting disability benefits and pushing 'workfare' regimes which threaten beneficiaries to return to work or lose benefits. I draw on fieldwork with benefit recipients and resistance and solidarity movements to examine these mutations in (the study of) austerity, connecting them to macro-level dynamics of state formation and the altered terms of US empire which challenge the common association of austerity with neoliberalism.

Presenter(s): Charles Dolph

6315 From the Haunting Shadows of the Isthmus: Critical Conversations in Central American Studies

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Galerie 4

Type: Roundtable/Town Hall

As scholars with a deep connection and commitment to Central American studies, we come together, bridging Sociocultural Anthropology, Political Anthropology, and Clinical Forensic Psychology to critically remember the haunting and violent past of this region, as much as we address the transformative expressions of existing otherwise (Elizabeth Povinelli 2014). In order to move beyond dominant narratives to explore the lingering legacies, silenced histories, and emergent perspectives that often remain in the "ghostly shadows" of the Isthmus, the roundtable will delve into how historical traumas, political violence, socio-economic inequalities, and cultural, racialized, and gendered marginalizations continue to shape the present. As we engage in these

critical conversations, we seek to present research that reveals an alternative understanding of violence and marginalization from a perspective of resistance, solidarity, and hope.

From this understanding, the Central American communities we collaborate with transform violence, marginalization, and exclusion by producing regenerative acts of hope, healing, and care. The roundtable endeavors to discuss how our research, art, and practices prioritize remembrance, solidarity, and belonging amidst displacement and violence. We consider how our cross-disciplinary work engages deeply with the Central American experience and its survival, revealing how our communities embody resistance and persistence. This approach generates what Mayan activist and former political refugee, Juanita Cabrera Lopez (2025) affirms, that despite the historical and contemporary existence of multivariate forms of violence and displacement, Indigenous peoples, much like Afrodescendants, Trans and LGBTQ+ individuals, women, and political activists of Central America, "continue to exist despite the violence of the state" (2025). By centering on the "haunting shadows" – representing past structural traumas and obscured present realities represented in the experience of Central American immigrants – we seek to illuminate the complexities of the region and the existence of its diaspora to foster a more critical, artistic, and decolonial approach to the scholarship emanating from this region.

Therefore, the roundtable, consisting of four Central American scholars, considers more broadly how the "haunting shadows of the Isthmus" impact Central Americans today and how they continue to respond and transform in the present and the future.

Our critical conversation bridges various topics from migration, exile, grief, healing, and belonging as a collaborative endeavor to draw scholarly attention to Anthropological and Psychological Central American Studies.

3924 Fugitive Anthropology: Embodying Activist Research (Part II)

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 7

Type: Roundtable/Town Hall

This two-part roundtable features contributors to the edited volume, entitled "Fugitive Anthropology: Embodying Activist Research" (forthcoming, University of Texas Press), an expansive development of the co-authored article "Toward a Fugitive Anthropology: Race, Gender, and Violence in the Field" (Cultural Anthropology 2017).

Decades after initial calls to "decolonize" the anthropological discipline (Harrison 1991), which grew out of work with liberatory social movements across the globe, the production of insurgent knowledge remains a fugitive endeavor. This edited volume works to unsettle the heteropatriarchal gaze that continues to elide or erase the intimate, embodied politics of ethnographic fieldwork and "the undercommons" (Harney and Moten 2013) of the university.

Building on the legacy of the Austin School approach to diaspora studies (Gordon 2007) and activist research (Hale 2001, 2008, Speed 2006), feminist activist ethnography (Craven and Davis 2013), and Black feminist anthropology (McClaurin 2001), we assert that liberatory knowledge production is an embodied praxis and fugitive endeavor forged in and with community. The panelists draw from traditions of Black, Indigenous, queer, and decolonial feminisms, to explore the following questions:

-How do gendered racial positionalities inflect the research process, and how can activist research methods be accountable to the embodied aspects of conducting research in contexts of colonialism, war, and conflict and conditions of gendered and racialized terror?

-What does it mean to produce feminist knowledge that advances theory in collaborative ways?

-How might an intergenerational engagement with questions of embodiment, knowledge production, and methodology push feminist anthropology and activist research in new directions?

The urgency of centering the individual and collective body in the process of anthropological knowledge production in 2017, when the article was originally published, will be considered in the context of the current onslaught.

7971 Ghost Ecologies: Erasure, Return, and the More-than-Human in the Ruins of Progress

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Oral Presentation Session

This panel explores the spectral dimensions of environmental governance. Public decisions erase, displace, and ghost human and more-than-human lives, while simultaneously creating the

conditions for their return. From community gardens in post-industrial cities to Amazonian monocultures, these papers move across different geographies and lifeworlds (seeds, sea, soil, ruins). We ask: whose lives, voices, relations, and ecologies become ghosts in the making of public policy? And how might we attend to their reappearance and new forms of relationality, not as remnants of the past, but as agents orienting toward unfinished struggles, renewal, and possibility? Drawing from Derrida's concept of hauntology (1994), we consider ghosts not as metaphors of loss, but as persistent presences that unsettle linear temporality and rational planning. Infrastructures, environmental policies, and scientific discourses often ghost communities, kinships, ecologies, and spiritual ontologies, rendering them invisible or irrelevant. Still, these ghosts return, demanding recognition, relation, and repair. Haraway's idea of staying with the trouble (2016) and her notion of sympoiesis call us to build worlds with, rather than despite, the entangled pasts that haunt us. On a different realm, Merleau-Ponty's chiasm (1968) offers a framework of intercorporeal entanglement, where humans and nonhumans are not separated by dualisms, but co-constituted through overlapping flesh, memory, and perception, and which might offer insights into how ghosts are part of that co-becoming. Through grounded ethnographic practices/engagement, this panel examines how ghosts are produced, resisted, and invited back into public life. We explore erased knowledge, species, and cosmologies that haunt environmental governance; relational practices (gardening, ritual, storytelling, protest) that summon ghosts into new forms; and the ways hauntings disrupt development logics and linear notions of time, presence, relationship and power. Together, these papers trace the multispecies, haunted terrains of environmental politics and imagine possibilities for repair and transformation within and beyond the state.

Presentation(s): You Killed Us But We Didn't Die: Ghosts, Land, and Black Agrarian Resistance

African American land loss in the United States is a ghost story—one of disappearance and defiance. Over 90% of Black-owned farmland vanished in the 20th century, yet its echoes remain in rituals, in foodways, and in the names still spoken. In Black agrarian traditions, to remember is to resist, and to invoke the dead is to keep them living. This paper explores how ghosts move through the afterlives of land theft, not as mournful specters but as agents of presence, protest, and possibility. Grounded in ethnographic storytelling and inspired by horror cinema and mixed media, I trace how Black farmers channel ancestral memory and spiritual connection to reassert land-based autonomy. These "hauntings" reveal a fight for food sovereignty and cultural survival where spirits linger not to haunt, but to guide. Reframing ghostliness as a refusal to disappear, this work examines how Black rural life defies erasure—insisting on lineage, legacy, and the radical power of remembrance.

Presenter(s): Lulama Moyo

Multispecies Ghosts: Land, Loss, and More-than-Human Reconfigurations in the Brazilian Amazon Oil Palm Frontier

This paper explores the spectral and multispecies dimensions of land transformation in the Brazilian Amazon, where large-scale oil palm plantations have reshaped traditional territories once inhabited by quilombola and riverine communities. Promoted as a model of sustainable development, the expansion of oil palm in Pará is accompanied by promises of progress and environmental recovery. However, these plantations rise over ghosted landscapes, erasing swidden gardens, ancestral forests, community kinships, and more-than-human lifeways. Drawing on long-term ethnographic fieldwork with affected communities and multiple stakeholders, I examine how agribusiness and state planning render local ecologies and histories invisible, while reconfiguring multispecies entanglements. These plantations are haunted by what they displace: cassava fields, soil microorganisms, spiritual guardians, and knowledge systems that persist in altered and insurgent forms. In collaboration with quilombola elders, smallholders, and their plant and animal companions, this paper contributes to broader conversations on multispecies justice, environmental memory, and the afterlives of neocolonial development in the Amazon.

Presenter(s): Mariana Ribeiro Porto Araujo

Weeds Don't Lie: A Suspended Infrastructural Ecology in Rural China

This paper draws on over a decade of ethnographic engagement in an ethnic minority village in southwest China to explore the spectral life of infrastructure in the wake of rural tourism development. In a landscape where infrastructural projects promise mobility, prosperity, and modernity, their frequent suspension—due to inadequate funding or shifting political visions—renders them not merely incomplete, but ghostly. Half-built facilities and abandoned plans linger as material phantoms, shaping villagers' desires and disillusionments. Rather than markers of linear progress, these suspended infrastructures become vessels of hauntological presence. They hold traces of speculative futures that never arrived, and in doing so, they continue to structure the present—calling into question what spectral development delivers, and for whom. Meanwhile, weeds reclaim spaces intended for tourists, and villagers repurpose ruins, blending dreams with everyday survival. These more-than-human entanglements—between plants, people, and remnants—suggest an infrastructural ecology that resists erasure and remains insistently alive. Infrastructural fetishism in the Chinese developmental imaginary, I argue, produces a double erasure: first, of the lived ecologies and relations that already exist; and second, of the communities' own rhythms and aspirations, overwritten by stalled visions of touristic prosperity.

Presenter(s): Yu Luo

The Sea is our Backyard: Co-becoming with water in the littoral Vezo

This paper explores how the Vezo fishers navigate the realities of living in changing coastal spaces. As a small fishing community in southwestern Madagascar, their cultural identity and livelihoods

are deeply intertwined by the sea. However, as new forms of management and environmental change have reshaped the coastline, so has the Vezo's relationship to their marine ecosystem. It determines access to traditional fishing grounds, alterations in their fishing practices, and redefinition of sacred sites. At the same time, the water itself is constantly changing, both physically and metaphorically. The state of the water not only influences the types of interaction with the seascapes but also shapes its cultural significance. With a particular focus on the concept of co-becoming, this paper examines this dynamic interdependence between the veto community, coastal planning, and their marine environment. Through this lens, it reflects on the possibilities and constraints associated with reconnecting to physical and collective memory spaces that are increasingly transient and contested.

Presenter(s): Clara Randimbiarimanana

To what (seed) ends?

In February 2025, the Trump Administration released a series of federal budget cuts and layoffs (Stolberg and Qui 2025). One of the federal programs impacted by these austerity measures was the National Plant Germplasm System (NPGS) (Hale and Kantar 2025). This system, enacted in 1898, is designed to protect and conduct research on plant germplasm, or seeds and other plant materials. The recent decrease in federal funding poses uncertainty for the futures of these seeds, the scientists that care for them, and potential new crops. However, these collections of seeds are haunted by colonial extractivism and violence. Drawing on Boris Jardine, Kowal, and Bangham (2019), I ask how recent policy and social movements trouble seed collections' futures and ends. And how might endings or threats of endings affect relations to seeds and their violent histories?

Presenter(s): Fionna Fahey

2891 Ghosting the Past: Spectral Presences and Willful Erasures in Japan Anthropology

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Roundtable/Town Hall

Ghosts haunt all of anthropology as a field that builds upon the shoulders of intellectual antecedents, even as it marks the shoulders we might dismantle. In the field of Japan anthropology, we are particularly haunted by cultural norms of ancestor worship, filial piety, male primogeniture, and other processes that assure a marked place for ghosts in the present. The theme of the AAA conference this year, Ghosts, provides a welcome opportunity to examine the pasts that haunt our field, as well as challenge it. As we enter disciplinary regimes, we encounter our seniors within and outside of Japan, who both teach and judge; we grapple with an existing literature, imposing and inspirational; and we accumulate our own field locations and interlocutors as sights and sounds that reverberate in our heads and hearts. How do we grapple with such spectral presences as we

aspire to shape our scholarly identities? Do spectral presences provide succor or burden or both? How do we gain and sustain that elusive posture of standing out while fitting in? This roundtable offers highly personal, intergenerational renderings of this challenge. We raise our glasses to ancestral ghosts, past and present, that include teachers, iconic ethnographies, and the field of anthropology itself. Having downed the wine, we consider its aftertaste. What are some of the outcomes-spectral presences and willful erasures--of this ingested encounter? How might hauntings contribute to further fermentations and enrichment in thought, practice, and pedagogy? Do we ghost the past by its dismissal? Or do we bring living ghosts to life by incorporating their many whispers, their very aftertaste? And finally, in the midst of these ghostly encounters, whither Japan? What is the Japan that we ethnographers produce as a result of this yeasty mix? The roundtable raises these questions with senior and junior scholars as a means of summoning spirits within and around us, of handling the past palpably while retaining its ineffable spirit, and of embracing hauntings as the ghosts within us.

Japan, we should further note, among world ethnographic regions, is highly unusual for being so much in the popular imagination and political-economic attention of the West. Romanticized as *Madame Butterfly*, deified as spiritual masters, dehumanized in wartime propaganda, infantilized as Oriental children, roboticized as rule-bound automatons, celebrated as manga-maniacs-cultural stereotyping has been pervasive for 150 years. This imagery, as we discuss in the Roundtable, has been a haunting spectral gallery for Japan anthropologists. Contesting these and other pernicious national characterizations has been a constant, felt responsibility in our teaching, writing, and speaking.

2749 Ghostly Visibility: The Impact and Challenges of Anthropology Journals outside the United States and United Kingdom

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR B3 (3rd fl)

Type: Roundtable/Town Hall

Anthropology is taught, written, and published around the world. In fact, there are many anthropology journals outside the U.S. and the U.K., but they are often not known at all in the U.S. and publishing in them often fails to bring fame or credit to authors, even in their home countries. We can say that they are not exactly invisible, but that they suffer from relative invisibility in the world of anthropology. This Roundtable will discuss their existence, their relative invisibility, the

geopolitics in which they operate, and the conditions of their production and reproduction. Some participants will also make suggestions about making them more visible and, in many ways, more in harmony with contemporary anthropological values.

3628 Ghostwriters: The Limn Roundtable

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 10

Type: Roundtable/Town Hall

Featuring work from Limn's newly released 13th issue, this roundtable takes the pandemonium around artificial intelligence as an opportunity to revisit a classic problem: ghostwriters. Since the AI Spring of 2023, proponents have lauded AI's scientific and economic benefits. Detractors have warned of its harms, often invoking the well-worn sci-fi tropes of machine takeover and human obsolescence. Driving the frenzy are more profound questions of authorship and agency: What does it mean for things from tariff rates to Top 40 hits to be generated by ghosts in the machine? This means taking ghostwriting seriously, both as a way of reframing catastrophist readings of AI as well as grounding experiments in publishing in anthropology, haunted by the discipline's conventions as well as the obscure workings of an inherited idea of peer review.

This roundtable gathers editors, authors, and other experts in scholarly publishing to reckon with these ghosts of publishing pasts. Using the experimental journal Limn as our medium, we ask how we might forge other ways of interrogating authorship while forging alternative paths for producing knowledge. We summon participants to reframe the eeriness of the AI-dawn, its histories, and its futures by illuminating places where voice, authorship, and presence are tweaked, generated and rebuilt—albeit with an occasional screw missing. Bridging current editorial concerns within anthropology, we will also lift the veil on Limn's unique process to consider how thinking with ghosts might auger distinctively collaborative modes of inquiry, authorship, and publishing. Through the makings of Ghostwriters, we'll then open up a conversation with the audience about what it will take to build a publishing machine that is a little more human(e) and a little less machine, for the re-limning of this most humanistic of social sciences.

6336 Giving up the Ghost: Global Health After the Fall of USAID

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Regent

Type: Roundtable/Town Hall

Since the elimination of the United States Agency for International Development (USAID), the field of global health has been in a state of chaos. For better or for worse, USAID has fundamentally reshaped the global health landscape since the 1960s, even as countries throughout the Global South simultaneously critiqued and benefitted from the reach of US governmental development. In the face of mass layoffs and the cession of life saving public health prevention and detection programs across the Global South, global health actors around the world have scrambled to preserve what's left, provide care, and ask what is next for the field. We have witnessed a variety of responses to the Agency—some redemptive, claiming USAID's role in "helping to end apartheid," while others celebrated the end of an abusive, neo-colonial relationship.

While USAID's closure has led to the cessation of essential, life-saving services for millions around the world, global health has been long been haunted by its implications in imperial occupation and extraction, neoliberal and neocolonial dynamics of racial capitalism, and the strategic uses of "soft power" in global diplomacy. Thinking from and with field sites impacted by these changes, this roundtable aims to complicate the panoply of institutional, academic and grassroots narratives surrounding USAID and grapple with what its closure means for public health, development and governance outside of the US, and the anthropology of global health more broadly. If the "global health score after trauma," or GHOST, measures the severity of impairment, death and disability after a major traumatic event (Berger Estilita et al. 2019), we offer a more capacious interpretation of GHOST to interrogate the forms of resistance, resilience, and injury sustained by USAID's abrupt closure, as well as the opportunities that the Agency's fall have precipitated in rethinking, if not "decolonizing" global health. With insights from ethnographic study alongside people living with HIV, global health workers, scientists, NGO activists, and sex workers across the African continent--focusing on Tanzania, Eritrea, South Africa, Lesotho, and Kenya--this roundtable explores and asks the audience to reflect on how this turning point troubles our existing critiques of global health, how we conduct research in the sector, and what our responsibility is to those most affected by funding cuts.

4417 Governing Data: Regulations, Rights, and Relations (II)

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

Data is increasingly recognized as a valuable global asset, sparking intensifying struggles over its extraction, accumulation, and regulation. Across the world, lawyers and policymakers are constructing new regulatory infrastructures to govern data. Yet in doing so, they often encounter deep tensions rooted in competing epistemologies and ontologies—fundamentally different ways of knowing and being through which 'data' is produced, interpreted, and contested. As data reshapes relations of power between individuals, communities, and states, it is also unsettling liberal frameworks—from rights and personhood to sovereignty and citizenship. This panel approaches data from an anthropological perspective, asking how cultural, socio-technical, and juridical forces assemble 'data' and, in turn, shape its governance. We invite abstracts that explore struggles over data, trace how it is reconfiguring power relations, and examine how new legal and normative frameworks are being articulated in an increasingly datafied world.

Presentation(s): Datafying People and Datafying Waste in China's State-led Environmental Sustainability Projects

In Shanghai, managing household waste has helped the state make the city more datafied in recent years, particularly through quantifying the quality of the residents and promoting the applications of artificial intelligence (AI) in sorting waste materials. On one hand, Chinese technocratic government apparatuses rendered urban civility quantifiable by creating, comparing, and evaluating numerical data about urban residents' behaviors related to their household waste management, often through collaborating with grassroots organizations and other third-party agencies who performed close monitoring on urban neighborhoods. On the other hand, the technocratic state equated the nation's progress and sustainability with advancing technology, often by collaborating with entrepreneurs who applied artificial intelligence to household waste management, especially sorting the waste into different categories such as recyclables and other waste. However, both endeavors of datafication by the technocratic state—enumerating civility and hiring machine-minds—silenced the crucial realities of waste management, especially the unpaid or underpaid labor in waste work and the messiness of the waste's materiality. Based on ethnographic evidence from 2019-2020 and analyzing documents from surrounding periods, this

paper shows the complex relationship between technocracy and environmental sustainability and how it is reconstituted by datafying people and things.

Counting Children

This paper takes up the multiplicity (Mol 2002) of data that is used simultaneously for case management, performance of technological best practices, and research. Following a path laid out by Sally Merry's work on classification and quantification (2016) and Matthew Hull's on databases (2012), I analyze processes, debates, and "common senses" that emerge in the divergent and multiple uses of data. I work with a database maintained by a large international NGO active in providing alternative residential care for children separated from their parents. NGO staff have commented in conversations about data quality that they want this data to be "as real as possible," evidence that the database is in part a project of legibility (compare Scott 2002). The possibility for a degree of "unreality" itself illuminates logistical and staffing challenges, inclarities and uncertainties in the data entry system, and cultural biases in assessing children's well-being. In this paper I am particularly interested in how staff talk about "feeding" data to the database, "stabilizing" the data, and not least, "protecting" the data. The production, management, and reuse of data by social workers, data analysts, child advocates, and academic researchers alike is central to how risk is construed for the young.

From Pixels to Data: Documenting Ecological Violence and the Politics of Remote Sensing

As wars and conflicts increasingly damage environments and more-than-human lives, satellite technology promises to make this destruction visible. Yet this technology is not neutral—operating as a sociotechnical assemblage embedded within colonial and military surveillance practices that determine what counts as ecological violence and whose suffering becomes visible. Through ethnographic engagement with PAX, a Dutch peacebuilding organization, this talk examines how satellite technology documents ecological violence in war zones. Drawing on fieldwork with remote sensing specialists and activists, the research analyzes how environmental impacts are made visible, quantified, and legitimized as evidence. The findings reveal how practitioners navigate between algorithmic detection and local knowledge, challenging binaries of expert/local and technology/sociality. Through "ground-truthing" processes, satellite data becomes meaningful only through engagement with local communities who train the satellite gaze, shaping what is observed as data and how it is interpreted. This collaboration transforms potentially extractive surveillance into an intersubjective practice that remakes environmental data through local ontologies and foregrounds affected communities' experiences.

Data Governance and Peasants' Rights: The Emerging Anthropology of Fourth Generation Rights

Data Governance and Peasants' Rights: The Emerging Anthropology of Fourth-Generation Rights

The anthropology of human rights initially focused on the tensions between legal universalism and cultural relativism. Anthropologists examined how activists mediate between global legal frameworks and local sociocultural contexts, illuminating the power dynamics embedded in these translations. While this remains a critical area of ethnographic inquiry, a new generation of rights is emerging in response to the threats to privacy, autonomy, and knowledge sovereignty posed by advancing digital technologies. These so-called fourth-generation or epistemic rights seek to navigate between epistemic universalism and pluriversalism. Yet, rights discourses remain constrained by their roots in liberal individualism and state-centered frameworks. How do activists and communities negotiate these limitations while confronting the expanding digitalization of life?

This paper explores these dilemmas through the lens of agricultural data governance. As peasants, small-scale food producers, and Indigenous communities increasingly encounter the datafication of agriculture, they confront new power relations and contest emerging regimes of access, control, and ownership. Drawing on ethnographic and participatory action research in Kenya, I examine how actors are struggling to articulate competing grammars of justice that reconfigure the relationships between persons, technologies, and the state in div

7132 Haunted Education: Ghostly Gender and Sexuality

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 6

Type: Roundtable/Town Hall

This panel explores the spectral traces that linger in moments of transition, rupture, and silence—those ghosts that persist even when we believe we've moved on. Our conversations trace how the past catches up with us, not as a linear narrative, but as an insistent presence that defies closure. We examine the voices that go unspoken but not unheard—the disciplined erasures shaped by fear, trauma, stigma, or politics. The haunting ghosts of the past experiences of gender and sexuality have an impact on how movements across borders—physical, psychological, and political—become both a search for belonging and a confrontation with loss. The haunting ghosts of the hidden curricula and political interference affect how silence and surveillance discipline bodies and desires, revealing how institutional control stifles academic freedom and critical discourse around gender and sexuality. Together, these panel makes visible the ghostly, affective dimensions of gendered and queer lives in education—moments made explicit, bodies rendered ghostly, and the haunting fear of speaking that becomes a lived reality. In a time when political and social crises compel both reckoning and resistance, we ask: What ghosts do we carry? Which do we confront, and which do we invite to speak?

5006 Haunted Infrastructures - Infrastructural Hauntings: Part 2

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR D3 (3rd fl)

Type: Oral Presentation Session

In this panel, we think about haunted infrastructures and infrastructural haunting. Infrastructures are not only about moving matter forward (Larkin 2013), they are embedded in relationships of mutual becoming. (Re-)Structuring space, compressing time, erasing pasts and promising futures, infrastructures unfold in ways that are both material and durable as well as volatile and invisible. We propose these infrastructural transformations create actual and metaphorical ghosts: Place-bound, fleeting, yet persistent, referencing the past through the present, ghosts are at once tied to matter and in excess of it.

First, we draw attention to material infrastructures and their potentials for being enlivened or haunted by immaterial entities. Infrastructures are relational (Rest and Rippa 2019) and extend beyond the human through matter. Key materials in infrastructures, stone, water, minerals, are in themselves social agents. They are the communicating ancestors of people and the founding infrastructures of subsistence landscapes. The denial of the ancestral relationship between people and their infrastructure is infrastructural haunting.

Haunted infrastructure is enacted by ghosts and beings trapped in space-time. Drawing on Freud's exploration of haunting as 'Heimsuchung' (Freud 1919), we emphasize that the nonhumans haunting infrastructures are caught in a state of liminality from which they seek to escape. Taking the ontological status that ghosts have for our interlocutors seriously, we seek to illuminate what kind of social ontologies (Baumann and Rehbein 2020) are reproduced through infrastructures.

Second, through this juxtaposition of the material and the immaterial, we shed new light on infrastructure as it creates hubs of human-non-human interaction. If we take the colonized people seriously, the entire human-built environment is enlivened with entities that emerge through the energy released at production. Ghosts are invisible traces of what came before and is no longer remembered as part of what exists now (Tsing et al 2017).

Third, this attention to (im)materiality and space/place/time requires linking the haunted to temporalities of infrastructures. Infrastructural temporalities encompass maintenance and entanglement amid the materially unfinished and crumbling, and the immaterial suspensions and anticipations they engender. Attempts to connect the different temporal registers with space and place, however, remain rare. By drawing together both the singular events and the deep time of

infrastructures, we connect 'ghosts' to the matter that both enlivens and entraps them through the spectral lens of folded space/time.

We ask: What kind of infrastructures are haunted ? How does their materiality provide them with ghosts?

How do new infrastructures try to erase haunted pasts and make space for enlivened futures?

Does cross-time/cross-border infrastructural haunting create alternatives for analyzing bounded spaces?

Presentation(s): Transforming the Ancestors: Infrastructural hauntings and social becoming

Defining what is and is not infrastructure is political. It is also ontological in that infrastructures reveal social relations and those who are included and excluded from social interaction. This paper engages with infrastructures in an anarchically organized landscape as they are transformed and disciplined through imperial rationalizations. Based in long-term field research with people living in landscapes changing from forest to frontier, the paper situates non-human infrastructure as the foundation of human sociality in multiple ontological registers. Among the original animist inhabitants, the trees, rocks, metals, and waterways are communicating ancestors with whom resource use is negotiated. A bird's eye view of this landscape reveals how ancestors of water, stone, and tree shape the economic landscape for all biological actors. This 'effortless efficacy' of form (Kohn 2017), establishes the non-human hierarchy upon which all things rest. As infrastructural ancestors are extracted and mined, their social and thus ontological position changes. Their shape and function also changes and this paper follows the ontological shifts from karst to concrete, from tree to boat, from iron to rebar, in ways that attend to the social relations created and denied in the process. I argue that ancestors haunt the places where their agency is denied and that despite this disavowal, the moral economies through which they operate may not have disappeared.

Presenter(s): Courtney Work

Phantoms of the Drains: Imaginations of Conflict in Everyday Infrastructures

This article culminates from the sensory ethnography of two intersecting municipal drains that flow through the 2020 riot-torn areas of New Delhi, India. The riots had claimed 60 lives, with several people still missing. During the six days of conflict between the majority Hindus and minority Muslims, the drains that appear like a cross on the map of the area were the dumping sites for several human bodies. These drains were built in the 1990s post-liberalization period as municipal

aids to accommodate the burgeoning informal, displaced population and the decentered economy and waste. Three years after the riots, the cross of the two drains looms like a parable of the past. The urban infrastructure project has transcended into a boogeyman through constant media retellings and portrayals. As a medium of memories, trauma, and imagination, the drains have attained a different kind of mobility, replete with distinct cultural codes, as they feature innumerable different narratives and recollections, in person and online, lips to smartphone screens. The article explores how the drain, as a medium, absorbed the unease of the rushed post-violence normalcy efforts when stories of its phantasm and gore still circulated from pocket to pocket, finger to finger, and screen to screen through constant online mediatization. The sensory ethnography of the drains explores their transformation from mere objects of urban abuse to unforgettable urban legends in digital space.

Presenter(s): Soma Basu

More-than-human Infectious Diplomatic Infrastructures

In 2011, an Indigenous community learned that the National Infrastructure Agency (ANI) was planning to build a final stretch of Route 90 La Transversal del Caribe, connecting the Colombian Caribbean coast from in the build-up for the final stretch of the Pan-American Road crossing the Darien Gap to connect South and Central America. The project promised better access to services through access to the Port of Turbo and Medellin and jobs in the "sustainable tourism" industry. Under closer inspection, the community realized the planned path crossed through the sacred site of the Lord of Mumps, a tutelary being who inflicts a mumps-like disease (unrelated to the virus). The community asked for a change in the road's plans, but their concerns were dismissed as superstitious. Instead, ANI invested in a school for the community and paid for appeasement ceremonies in a show of multicultural tolerance. Nevertheless, workers were afflicted by the disease during the construction. A few perished, while others sought treatment with local medicine men. Public Health records indicate that at the time, there were bouts of unidentified fever syndromes, some with fatalities. The road was completed, the workers left, and the outbreak ended. Years later, the infrastructure of the road the Darien Gap into scenario of mass-scale human trafficking and a humanitarian crisis, calling for a closer look at these more-than-human infrastructures.

Presenter(s): Cesar Giraldo Herrera

Haunted Currents and Ghostly Remains: Infrastructural Ruins and Resistance in Georgia

Infrastructures are more than material assemblages—they are spectral landscapes where past and present entangle, generating sites of haunting, dispossession, and resistance. This paper examines the ghostly afterlives of infrastructure in Georgia through two case studies: the anti-dam protest in the Rioni Valley and the informal economy of scrap metal collection in Poti. Both cases reveal how infrastructures—whether emerging, decaying, or contested—carry spectral traces of power, displacement, and endurance. The Rioni Valley Movement transformed the river into a battleground for ecological and political struggle, forging an "infrastructure of sociality" (Berlant 2016), while

Poti's scrap metal collectors navigate Soviet ruins, reshaping abandoned infrastructures into precarious livelihoods. Building on infrastructural haunting, we explore how rivers, metal, and concrete act as residues of past systems and mediums for contemporary struggles. The Rioni River, threatened by the Namakhvani dam, bears the spectral weight of contested futures, while Soviet industrial remnants in Poti generate ghostly economies. How do haunted infrastructures unsettle dominant orders? How do spectral temporalities shape contemporary subjectivities? Through these questions, we argue that infrastructural hauntings in Georgia reveal alternative modes of being, belonging, and resisting.

3698 Haunted epistemologies and ancestor afterlives: anthropology and interdisciplinarity in environmental sciences

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Roundtable/Town Hall

This roundtable examines the complexities of collaboration in environmental anthropology, with a focus on working across diverse communities, disciplines, generations, and activist-scholar partnerships. It examines the interdisciplinary future of these collaborations by paying close attention to disciplinary pasts. The ghosts of scholarly ancestors-scholars who mapped, categorized, and often commodified ecological knowledge-linger in present-day research, shaping methodologies that must contend with their legacies. At the same time, many marginalized scholars are haunted less by these spectres that roam the halls to which many barely have access and more by something all the more intimate. Else these scholars themselves become spectres, bridging spacetime with their overstretched bodies misshapen by expectation. Haunting, then, is not merely metaphorical but an active force that demands recognition of the dispossession and epistemic violence embedded in environmental knowledge production. This roundtable engages haunting not as an analytical frame that vaguely captures colonial presence but as something that shapes interdisciplinary environmental sciences.

Panelists will critically examine how collaborative approaches can foster ethical engagement, knowledge practices, and environmental justice efforts, while also attending to the challenges posed by disparities in wealth, funding, and power dynamics. They will explore how environmental anthropologists increasingly navigate interdisciplinary spaces: as a vehicle for mitigating extractive environmental data practices, and as a means of accessing additional resources typically reserved for "hard" sciences. Panelists will discuss collaboration with Indigenous, traditional, and other local communities, recognizing the significance of their knowledge systems and community-led and -

owned research, while addressing issues of racism, extractive scholarly practices, and the inequitable distribution of research funding that can undermine meaningful partnerships.

In considering interdisciplinary collaboration, this roundtable will highlight both the benefits and tensions of integrating insights from the natural sciences, humanities, and social sciences. Panelists will examine intergenerational collaboration and reflect on the role of mentorship and knowledge transmission in both shaping the future of environmental anthropology and contending with the discipline's past. An uncomfortable history and intimate familiarity lie beneath anthropology's ability to sharply identify and critique the colonial legacies and logics that natural sciences bring to interdisciplinary spaces. Rather than depict disciplines as positioned either side of some inherent moral boundary, this panel instead asks what environmental anthropologists ought to do with our own disciplinary "ghosts" as they follow us into interdisciplinary collaborations that are not only effective but also equitable, ethical, and transformative.

1169 Haunting Returns

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** MGB Salon E

Type: Executive Roundtable/Townhall

This roundtable explores the many ghosts of migration and return. Drawing on but also going beyond insights from a recently published book, *States of Return: Rethinking Migration and Mobility* (NYU Press, 2024), panelists will discuss phantoms across time, haunted places, and the darkness of state violence that infuse nearly all border crossings, especially those understood as "return," whether desired or forced. The concept of return intrinsically evokes the idea of ghosts. People who return, especially when they are forced to do so, may face harrowing journeys, the horror of indefinite detention, and the fear and dread of increasingly unchecked and militarized policing, or they may be deported to unsafe places haunted by terrors from the past. Those who "choose" to return must confront the often frightful memories of war, poverty, and other generational traumas that led to exile in the first place. Even for those who desire a return to home or homeland, return dredges up nostalgia and reflections on the past. Thus, our discussion will focus on the many ways that ghosts infuse migration and return—be it metaphorically, conceptually, legally, or literally—in places around the globe, past and present. From the ghosts of U.S. imperialism that produce cyclical returns between Philadelphia and Puerto Rico, to memories of civil war, dictatorship, and extreme poverty that shape returns between Mediterranean and Western Europe, to state controls

that surface materially and less tangibly through rural Chinese returns, to ghastly, shapeshifting U.S. detention and deportation apparatuses, panelists will consider return's multiple hauntings and the ways people navigate and attempt to exorcise them as they create new lives during and after return. Throughout the session, panelists and audience members will prioritize discussion about how the immateriality of migratory ghosts might lead us to tangible public engagement and concrete political actions. Focusing on the specter of return, anthropologists of migration are especially well positioned-and directly called upon-to act in solidarity with people crossing borders in the current moment.

7103 Hauntings of Soundscapes in Educational Settings

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Oral Presentation Session

This panel brings together research(ers) interested in the hauntings of soundscapes in educational settings. We take up hauntology (Derrida 1993) to explore the "always-already absent present" (Derrida 1993/1967) of the sonic landscape found in educational spaces. Panelist Allyson Compton critically examines the affective implications of using film to teach difficult knowledge and contends that we need to consider that, similar to seeing trauma, hearing it can be intensely destabilizing. Educational spaces can also be haunted by reverberations of what is yet to come. Futures haunt schools when time falls out of joint (Good et al. 2022) and optimistic attachments to imagined possibilities (Berlant 2011) are revealed as insubstantial traces. Co-panelists Laura Meinzen, Adria Padilla-Chávez, and Deborah Palmer explore research with a Newcomer Center in a US urban area, where they have co-created a Multilingual Student Advisory Council using Youth Participatory Action Research to reclaim soundscapes in partnership with youth. By focusing on soundscapes (Schafer 1977), we center the sonic environment that exists in shared spaces and look for meaning-making attributed to reverberations, sounds, and resonances. Since "sounds" are constitutive of identities, personhood and sociality (Walraven 2014; Stoevers 2016), we are interested in sounds as "a relational force that connects bodies" (LaBelle 2010). By being an "earwitness" (Schafer 1977/1994, 8) to the shared space of educational settings, we explore sounding citizenship (Western 2020) or sounding "imperial domination" as panelist Ian vanderMeulen argues in his paper. Through research with a mass-based pedagogical project in

Morocco, he brings to light the hauntings of previous domination as a means of religious and political strategizing through which the soundscape echoes imperial domination over West African Muslim voices. We draw upon literature at the intersection of sound studies and education (Brownell 2019; Wargo & Brownell 2021), to grapple with the multiple ways that iconic sounds of education become complicit in drawing "sonic color lines" (Stoeveer 2016) and ableist compartmentalization of sound productions (Gershon 2023). While panelist Maisie Gholson investigates a mathematics learning moment in an urban middle school classroom between Cameryn, a Black girl, and Ms. B., a White woman student teacher through intersecting notions of pedagogical hauntings with mathematical ghosts (Chen 2020), panelist Josefine Wagner explores how sounds carry connection when words are not accessible enough. Based on ethnographic fieldwork at an Irish secondary school, she shows how "nonlinear expressions" (Ben Gonzalez 2023) echoing, mouthing, clapping, self-soothing speech stretch the soundscape of the inclusive mainstream classroom to enable individual personhood across modes of expression.

Presentation(s): Sonic Dread: The Haunting Sounds of Gun Violence in Schools

Informed by research on teaching difficult knowledge and histories (Britzman 1998/2000; Epstein & Peck, 2018; Garrett, 2017; Miles, 2019) and sonic studies in education (Gershon, 2011/2013/2017; Goodman, 2002/2010), this paper critically examines the affective implications of a common pedagogical strategy used to teach difficult knowledge: film. Important studies of the use of film in the classroom (Anwer & Varner 2019) and Stoddard et al (2017), tend to prioritize analysis that examines how students encounter difficult knowledge ocularly. However, there is little research regarding the ways in which teachers and learners process the sounds of trauma in film—specifically the sound of a gunshot. In a moment when a shooting at school is not beyond the realm of possibility, educators must recognize that the eyes are not the only part of our bodies that experience the residue of violent events and seeing is not the only sense that absorbs the always flowing and constantly circulating forces in the spaces we inhabit. This paper explores the affective intensities that occur when particular sounds and noises are processed through epistemologies of hearing. Like spectors, sounds have a kind of persistence that "hangs in the air, in the room, in bodies" (Evans, 2002, p. 177). Such ghostly vibrations linger and recirculate in learning assemblages. Similar to seeing trauma, hearing it can be intensely destabilizing.

Disrupting Hauntings of Linguistic Ideologies in Educational Soundscapes with Newcomer Students using Multilingual Youth Participatory Action Research

Multilingual newcomer students enter US schooling soundscapes, communicating ideologies about language and identity. Based on which languages they hear in which contexts, students feel

either belonging in their new school context or stigmatization. Sometimes the racialized silencing of languages (González Ben 2023) conveys meaning to students, and connects to experiences of deficit pedagogies and subtractive schooling (Valenzuela 1999). How are white, monolingual ideologies haunting schooling soundscapes? What hauntings are students bringing from the geographies they left behind or migrated through? In a high school Newcomer Center in a Western US metropole, we've co-created a Multilingual Student Advisory Council using Youth Participatory Action Research to reclaim soundscapes in partnership with youth. Here, all our languages (Spanish, Arabic, Kurdish, Dari, Pashto) are welcome and valued; translanguaging being a common practice and pedagogical tool (García & Lin 2017). Students use language as a site of connection and relationship building, disrupting language ideologies in their broader context. We study (1) how students understand their context - "how children hear the world?" (Brownell 2023: 111) and (2) how students' reclamation of their soundscapes, developing agency, and critical language awareness (Fairclough 2014) might support them in addressing current power dynamics and language policies in their school district.

The Haunting Voice of Mathematics: The Specter of Disciplinary Agency in Mathematics Learning Moment

Intersecting notions of pedagogical hauntings with mathematical ghosts (Chen, 2020), this paper explores a mathematics learning moment in an urban middle school classroom between Cameryn, a Black girl, and Ms. B., a White woman student teacher. Cameryn is engaged in a routine algebra problem, and over two minutes, Cameryn is interrupted eleven times by Ms. B. Half of those interruptions occur within 25 seconds, either through whispered talk, often connected to embodied action: Ms. B at one point takes Cameryn's pencil, makes an inscription on her paper, and says, "What are you going to do now?" Using microethnographic analysis (Streeck & Mehus, 2005) attending to silences, the disciplinary agency of/within the mathematics emerges as a specter—a ghost with its own devices and aims—animating the asymmetries of power between these two racialized and gendered bodies. Here the disciplinary agency of the mathematics, per Pickering (1995), can be understood as the seemingly autonomous or "routinized ways of connecting marks and symbols with one another" demanded by disciplinary processes and conventions, such as "in arithmetic one completes '3+4=' by '7' without hesitation, so in algebra one automatically multiplies out ' $a(b+c) = ab+ac$ '" (p. 115). As Ms. B breaks the silences of mathematics thinking and doing with talk, she conjures the disciplinary agency of the problem and arguably entangles Cameryn's human agency with the specter of the mathematics in a contentious way.

Presenter(s): Maisie Gholson

Stretching the Soundscape of the Inclusive Mainstream Classroom

Inclusive mainstream education changes the way that sound hierarchies in schools are upheld even if they continue to be haunted by regimes of silence (Daza& Gershon 2015). Taking on Anita

Ben Gonzalez's proposal of looking for "nonlinear ways" through gossiping, nonverbal cues, motioning, mouthing (2023, 320), this paper argues that inserting oneself aurally in the public discourse of the mainstream may be a necessity for some students to claim personhood and existence in the mainstream classroom (Walraven 2014; Stoevers 2016). This paper investigates the relationship between sound/ silence productions vis-à-vis resistance, claiming, echoing through and within bodies, artifacts, and spaces. Building on ethnographic fieldwork at an inclusive secondary school in Ireland, I explore how sounds carry connection when words are not accessible enough.

Presenter(s): Josefine Wagner

Echoes of the Warsh Zone: Moroccan Islam and the Disciplining of West African Voices

How do voices from the past haunt educational projects in the present? For roughly a decade and a half, the Moroccan state's Islamic institutions have been promoting a "recitational revival" (sahwa tajwidiyya), an amass-based pedagogical project attempting to ensure that Moroccans recite the Qur'an, Islam's primary religious text, in a localized style known as Warsh. In the aftermath of the rise of ISIS and various affiliated Islamic movements across the African continent, however, the Moroccan state has turned this project outward, through organizations like the Mohammed VI Institute for the Cultivation of Imams (Ma'had Mohammed al-Sadis l-takwin al-a'imma), which aims to recruit Europeans and West Africans to learn the traditional Islamic disciplines in Morocco and become imams in their home countries. Though couched in a language of combating Islamic "extremism," I show how the Institute's promotional materials and media coverage also appeal to West African Muslims through a shared heritage of Maliki Islamic law and Warsh-based Qur'an recitation, while conveniently eliding the Moroccan Sultanate's histories of conquest that produced those relations. By attempting to reassert its authority over West African Muslim voices, I argue, the Institute not only excavates the "trace" of these histories, in Derrida's terms, but actually echoes the soundscape of this imperial "Warsh zone." The echoes of this conquest and its racialization of "African" Muslims thus continue to haunt.

4551 Illiberal Urbanisms: Violent Hauntologies of Our Urbanizing World

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Roundtable/Town Hall

Liberalism is all too frequently associated with urban political formations. Across the world, cities are often celebrated as cosmopolitan antidotes to ethnic nationalist, authoritarian, and reactionary political developments. They are frequently seen as tolerant, enlightened enclaves that must be defended against assaults by resentful, angry, and reactionary forces associated with the

hinterland. But the liberal urbanite versus reactionary provincialist binary contains just enough truth to make it very misleading. In this roundtable we seek a more historically, geographically, and ethnographically nuanced understanding of the sources of authoritarian populism and other forms of illiberal politics. We develop the concept of illiberal urbanism to unsettle conventional urbanist claims that equate liberalism with urbanity, and we explore instead the multiplicity of liberal and illiberal forces, projects, and antagonisms that shape political life in our urbanizing world.

We address the AAA annual meeting's theme of ghosts by tracing the rise of violent hauntologies in different urban contexts. Panelists are especially interested in tracing the persistence or return of violent and coercive elements from the past that shape cities in the present. We show how these hauntings are both embedded in, and sometimes pitched in opposition to, carceral forms of containment, dominant class, race, and gender politics, pernicious securitization schemes, violent counter-insurgency efforts and the key dynamics of racial capitalist city-making. In our discussion, we will examine different urban political regimes from the authoritarian to the putatively neoliberal to tease out frequently unexamined connections between urbanism and urbanization on the one hand and illiberal government on the other. Together, we will devise answers to difficult questions such as, how are safety and security spatialized across different metropolitan landscapes? How do past experiences of mass incarceration, segregation, enclosure, and containment resurface in urban politics today? How do violent histories of counterinsurgency and political surveillance continue to affect city-making projects today? What are the class, gender, and racial dimensions of contemporary urbanizing projects and why do they so frequently take on illiberal elements? How do illiberal and liberal measures combine in contemporary forms of city-making? And, perhaps most importantly, what kinds of counter- or alter-politics can overcome authoritarian rule? What kinds of mobilizations can overcome the popular allure associated with safety, security, and urban orderliness? And what kinds of hauntings might inspire such politics? Panelists have expertise on cities in the Global South, East and North. They have written extensively about state security measures, urban surveillance architecture, urban political economy, social reproduction, urban political movements, and unregulated economic activities.

2523 Imagistic Kinship: Traversing Thresholds and In-Between Spaces in Family Life, Part 2

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Balcony L

Type: Oral Presentation Session

In this panel, we take our point of departure in recent proposals of image as method (Stevenson 2014), imagistic inquiries (Grøn and Mattingly 2022) and spectral kinship (Gammeltoft 2022) in order to listen carefully to uncertainties, doubts, dreams, affects and ghosts in family life, thus orienting our attention towards immaterial, yet crucially important, dimensions of family life.

For decades the new kinship studies have inspired and expanded our understanding of family life by paying close attention emergent forms of family making like adoption, assisted reproduction, LGBTQ+ and more, demonstrating that kinship is not only about biology, but relatedness emerges through sharing of food, belongings, memories, and places (Carsten 2004). Medical anthropology has demonstrated new formations of biosocial relatedness and disability studies have paid close attention to 'kinship imaginaries', i.e. how the experience of disability reshapes kinship and family life (Rapp and Ginsburg, 2001, 2024). Kinship relations are practiced through closeness and distance alike (Stasch 2008, Strathern 2020, Navne, Svendsen and Gammeltoft 2017) and come with considerable ambiguity (Geschiere 1997; Peletz 2001). They are experienced as both nourishing and poisonous: hauntings and contagious connections inform intergenerational family life (Meinert and Grøn 2020) as well as state/family intimate belongings (Johannesen and Grøn 2022).

More specifically, we have asked the contributors to contemplate what we can learn about kinship by considering ghosts, thresholds, and in-between spaces:

What in-between spaces may open possibilities for dwelling, becoming and belonging in kinship relatedness? Or close them? Which ghosts, moods, affects, atmospheres and hauntings dwell there?

What material and immaterial thresholds are present and absent in family life? How do they mark or blur boundaries and demarcations of difference in the family and in more extended 'mutualities of being'?

Navne takes us through thresholds of belonging in care arrangements between families with children with cerebral palsy and welfare state professionals in Denmark: From in home visits to haunting state presences in family life. Moving to US and Indonesia, Hollan explores how in dreams people extend their desires for affiliation with people, spirits, animals, or objects that would in waking life be considered non-kin, while opposing those considered kin in waking life. Continuing the exploration of spectral forms of kinship, Nielsen reflects on haunting trauma in Danish family life with ADHD, experienced as both biological inheritance and a relational process shaped by family dynamics, caregiving and intergenerational trauma. Finally, in villages of Northern Vietnam, haunted by ancestors, ghosts, scarcity, loss, and chronic diseases, Gammeltoft explores the vital role of embodied generational images as crucial in shaping how people respond to health threats in ways deeply inflected by history.

Presentation(s): Under the same roof: Thresholds of belonging in welfare state and family life with cognitive disability

"Enter the Upside Down" reads a doormat at the front door of the house of a family with three children with cognitive disabilities. Bringing together anthropological scholarships on new kinship, disability studies and imagistic care, this paper takes material and immaterial thresholds as a method to explore what forms of sociality are forged in extended care arrangements in families living with children with cerebral palsy in Denmark.

Children born prematurely and living with cerebral palsy are immediately attached to both family and welfare state in public care arrangements. "Our home is like a busy train station" are words used by parents to describe their relationship with the local authorities which stress the unsettled boundaries of where their home ends and the place of the state begins. I explore these unsettled and porous boundaries as haunting i.e. a "visitation or inhabitation by a ghost, frequenting a place, dwelling place" (i.e. Good 2022). Inspired by Stevenson's (2014) image of the raven which represents an imagistic and indeterminate presence/absence, I trace kin and state relations across thresholds of belonging: From physical encounters in home visits and network meetings to spectral and haunting state presences in family life.

Presenter(s): Laura Emdal Navne

Dreaming Kinship, Kinship in Dreams

"Kinship" is a condensed, and at times, paradoxical concept of relationship and identification suggesting, among other things, inclusion (with those to whom one is considered kin) and exclusion (from those who are not kin); rights and entitlements (from kin), but also duties and obligations (owed to kin); affinity and emotional and physical intimacy (with kin), but also awareness of difference and aversion (despite kinship). Cultural norms in most places in the world inhibit people from talking about, or even thinking about, many of the paradoxes of kinship and the ambivalences they can generate, yet they may find relatively open, non-discursive expression in dreams. In dreams, people may extend their desire for affiliation or identification to people, spirits, animals, or objects they would otherwise define as non-kin, and the reverse: they may suffer from, oppose, or repudiate people or others who would otherwise be considered "kin" in waking life. Using dreams from Indonesia and the United States, I argue that dreams are one very important window through which we can observe how people both reveal and conceal the challenges of living with kin.

Presenter(s): Douglas Hollan

Haunting Trauma, Care, and Neurodivergence: Spectral Kinships in ADHD

This paper explores the intersection of trauma, care, and diagnostic categories within families navigating ADHD. Drawing on the concepts of contagious kinship connections (Meinert & Grøn, 2020), and spectral kinship (Gammeltoft, 2021), the study examines how ADHD is experienced as both a biological and relational process that is shaped by family dynamics, caregiving, and intergenerational trauma. The paper focuses on how ADHD manifests across generations, considering the ways in which neurodivergence is passed down within families. ADHD is framed as a condition that is not simply an individual diagnosis but a family trait that influences how family members relate to themselves and their roles within the family. Through the lens of hauntology (Derrida, 1994), the paper considers how past traumas—both individual and familial—continue to shape present lives, creating a spectral kinship where the legacy of earlier generations haunts current experiences. Ultimately, this paper asks how trauma, care, and diagnostic categories intertwine to shape family relationships and individual identities. How do family members reconcile their shared neurodivergence, seeing themselves in each other while also striving to carve out their own paths? The study contributes to an understanding of how neurodevelopmental conditions are embedded in family dynamics, intergenerational experiences, and the emotional work of caregiving.

Presenter(s): Mikka Nielsen

Embodied generational imaginaries: Spectral family pasts in Vietnam's chronic disease epidemic

Across the globe, healthcare landscapes are transforming as increasing numbers of people are affected by chronic, non-communicable diseases. In this paper, I argue that understanding the implications of these epidemiological shifts for human lives and coexistence requires attention to intergenerational time and what I term "embodied generational imaginaries." I develop this concept to capture the vital role of embodied images in shaping how people perceive and respond to health threats in ways deeply inflected by history. Embodied generational imaginaries emerge from shared historical experiences, whether through public iconography or personal life events, and play a critical role in shaping how people experience and handle somatic vulnerabilities. By connecting three rich and evolving areas of anthropological research—studies of global epidemiological transitions, spectral kinship, and the social and affective force of images—I explore how different generational imaginaries coexist within families in northern Vietnam, highlighting how spectral shades of memory create kinship frictions and tensions when healthcare practices clash and transform.

Presenter(s): Tine Gammeltoft

7308 It's Never Too Late (or Too Early) to Write Memoirs: The Association of Senior Anthropologists' Autoethnohistory Project

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Edgewood AB (4th fl)

Type: Roundtable/Town Hall

Anthropologists and anthropologies of the ever-receding past may fade into a ghostly mythology not clearly understood by professional colleagues later and misunderstood by the public at large.

Senior anthropologists—having witnessed accomplishments and shortcomings of various approaches to research, teaching, and practical applications—represent the living history of the discipline. Assessing the orientations and practices they have encountered, they ask what has been learned to guide us in moving forward. But anthropologists at any stage of their careers can speak to their pre-professional and more recent histories. Many will recognize their childhood perspective as a proto-anthropologist.

The purpose of the panel is to review ideas that have been circulating about memoir writing as a way to consolidate contributions of the Association of Senior Anthropologists. Speakers will distinguish rubrics such as autoethnography, the ethnographic self, anthropological autobiography, and social memory; and explore innovations in writing forms, techniques, and strategies that foster imagination and storytelling. All attendees are encouraged to share examples and raise questions.

Autoethnohistory is proposed as a name for efforts by anthropologists to emphasize social contexts and settings in memoirs, while also taking their subjectivity into account as a source of insight. They may have to clarify insider/outsider distinctions. Sources such as photographs, textual documents, and interviews with living elders may reinforce memories and serve as supports to recreate scenarios from their youth, graduate studies, first fieldwork, late career gigs, and a range of other ethnographic moments.

The discussion is intended especially for colleagues daunted by the prospect of autobiographical writing, who might begin by compiling fragments of a memoir. In the following bibliography, several exemplary monographs accompany some key formulations of concepts, theories, and methods.

M. C. Bateson, *With a Daughter's Eye* ((Morrow, 1984). R. Behar, *The Vulnerable Observer* (Beacon, 2022). H. Campbell, *Mexican Memoir* (Bergin & Garvey, 2001). J. Climo and M. Cattell (eds.), *Social Memory and History* (AltaMira, 2002). P. Collins and A. Gallinat (eds.), *The Ethnographic Self as Resource* (Berghahn, 2010). V. Crapanzano, *Recapitulations* (Other, 2005). F. Harrison, *Outsider Within* (Illinois, 2008). A. Kehoe, *Girl Archaeologist* (Nebraska, 2022). K. Narayan (*My Family & Other Saints* (Chicago, 2007). J. Okely and H. Callaway (eds.), *Anthropology and Autobiography* (Routledge, 1992). G. Peterson, *War and the Arc of Human Experience* (Hamilton, 2021). D. Reed-Danahay (eds.), *Auto/Ethnography* (Berg, 1997). P. Stoller, *Wisdom from the Edge* (Cornell, 2023). A. Waterston and M. D. Vesperi (eds.), *Anthropology Off the Shelf* (Wiley-Blackwell, 2011). P. Worsley,

An Academic Skating on Thin Ice (Berghahn, 2008). H. Wulff (ed.), The Anthropologist as Writer (Berghahn, 2016).

5375 Linguistic Anthropology with an Attitude, Part 2: Being with Alessandro Duranti

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Bacchus

Type: Roundtable/Town Hall

This roundtable will explore the diverse ways in which Alessandro Duranti's ideas, ways of being, teaching, and academic scholarship have impacted the lives and work of our participants. Duranti's approach to pragmatics and politics was visionary, with his work on rethinking context - especially the role of the audience (a.k.a. listeners) in the co-constitution of meaning - presaging broader linguistic anthropological interest in this topic by decades. His phenomenologically-informed analysis of agency, intentionality, and improvisation changed how we understand the links between grammar and social action. Notably, Duranti also helped give the subfield its contemporary robust form through a stream of influential edited volumes and companions - as well as a critical textbook - alongside his stewardship of the JLA and Oxford book series. He has broadened global engagement with the discipline through his publications in French and Italian, and his generous mentorship, paired with his ability to embrace unconventional and creative perspectives, has shaped multiple generations of scholars. Perhaps just as importantly, Duranti has done "linguistic anthropology with an attitude," that is, with a perceptible vibe that encourages a flexible state of play with respect to "rules" and conventions.

The roundtable will expand on ideas addressed in the panel "Linguistic Anthropology with an Attitude, Part 1: Thinking with Alessandro Duranti." Recognizing Duranti as a critical root in the family tree of linguistic anthropology, participants will trace their own trajectories within and beyond the subfield, mapping Duranti's role in shaping their paths in and beyond academia. Roundtable participants will reflect on how Alessandro Duranti's academic scholarship and teaching have shaped their own work, how his being-in-the-world has affected their own attitude and agency, and how his scholarship and attitude have impacted linguistic anthropology and related disciplines.

Participant contributions will focus on a number of common themes from their work with Duranti, including (but not limited to) 1. The specific texts (e.g., his 'red book' on Linguistic Anthropology)

that drew them into the subfield; 2. The impact of watching him at work, observing his unique approach to writing, reading, and/or thinking; 3. His role as a steward of the subfield's intellectual history; 4. The centrality of improvisation and creativity as both an academic interest and a key component of his teaching, mentorship, and scholarly collaboration; 5. His teaching of fine-grained linguistic and pragmatic analysis in relation to broad sociopolitical concerns; and 6. His unique mentorship style and its combination of rigor, generosity, good humor, and genuine curiosity about others.

We will also invite comments and questions from the audience that explore the varied ways in which Duranti's influence persists in their own lives and work.

8270 Listening Back: Veteran Engagement and the Ethics of Recognition in VA Research

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Balcony M

Type: Oral Presentation Session

Anthropologists, through practices of deep listening and immersion in others' lifeworlds, bring an ethnographic ear to participatory research in complex healthcare systems. Within the U.S. Department of Veterans Affairs (VA), patient engagement increasingly involves Veterans as active partners in shaping research and care. This panel examines how ethnographic methods support these efforts, helping build trust and everyday forms of knowledge that institutions often overlook. We focus on how Veterans' experience of illness and healing, voices and visions, housing instability, and institutional mistrust contribute to the development of housing and healthcare programs. Presenters draw from collaborations that include Veteran Engagement Groups, women's health collectives, peer-led spaces, and patient-informed quality improvement efforts. These settings reflect the VA's expanding emphasis on engagement while also revealing ongoing challenges. These include the weight of past military and institutional experience, moments of miscommunication, and the emotional labor required of both researchers and participants. The papers explore interview-based research with Veterans living with serious mental illness, national organizing among Women Veterans navigating fragmented systems, the role of Veterans in building out a community space, and the role of homeless-experienced Veterans in shaping overdose prevention efforts. Together, these presentations ask how experience becomes legible as knowledge within

institutional structures and what it takes to sustain engagement in contexts marked by precarity and past harm.

Anthropologists embedded in healthcare systems bring an interpretive framework that is often absent in conventional health services research. As Fix (2025) notes, ethnographic methods allow researchers not only to generate insights about care delivery but to shape the very questions institutions ask about well-being. Anthropologists working in VA settings form a national community of practice that supports institutional reflexivity, builds trust among Veterans, and contributes to the implementation of patient-informed programs. These contributions are grounded in deep engagement with lived experience and informed by an orientation toward policy and practice that makes a difference. As Hyland and Bennett (2013) argue, anthropology offers a model for linking academic inquiry with problem-solving, especially in contexts shaped by historical exclusion or mistrust. Within the VA, this approach makes space for Veterans' voices to be heard in ways that reconfigure institutional logics of expertise and care.

These papers ask what engagement means in an institution that seeks to learn from those it serves. They consider how ethnographic attention to experience and relationality can respond to longstanding mistrust and examine what makes engagement meaningful. They ask what anthropology can offer to a system seeking new ways of listening and care.

Presentation(s): Veterans with Psychosis as Experience-Based Experts: Centering Veteran Voices & Visions

The Veteran Voices and Visions (VVV) project is an adaptation of the Hearing Voices approach at the Greater Los Angeles Veterans Affairs Medical Center. This project depathologizes psychosis by creating groups for Veterans where it is normative to hear voices and see visions, by validating nonbiomedical framings of unusual experiences commonly diagnosed as psychosis, and by encouraging and supporting participants to engage with their experiences as meaningful rather than only interpreting them as symptoms of an illness to be eliminated. Groups are co-facilitated by a clinician and a Veteran with their own lived experience of unusual experience. The groups assume that those who experience psychosis are experts of their own experience and invite participants to share their expertise with each other as they explore what it means to live with voices and visions. Participants share stories of suffering and recovery, coping strategies and worldviews, and often end up supporting each other in their ongoing life projects. Veteran engagement has been fundamental to this project, and Veterans, particularly those with lived experience of psychosis, have been involved in the project at all stages, including in the design, the adaptation of the

training, and in the facilitation of groups. This presentation will explore some of our experiences with this project, emphasizing the insights of Veterans from our groups.

Presenter(s): Ippolytos Kalofonos

Co-Creating Voice and Visibility with Homeless-Experienced Veterans in a VA Tiny Home Community

This paper describes the creation of a Veteran Engagement Committee (VEC) composed of homeless-experienced Veterans (HEVs) residing in a VA-sanctioned tiny shelter community during the COVID-19 pandemic. The site located on the West Los Angeles VA campus offered low-barrier housing and basic services to unsheltered Veterans. To bring Veteran perspectives into program design, a weekly committee was formed by HEVs, Veteran, peer specialists, and a medical anthropologist (author). Veterans co-developed meeting protocols and feedback systems to share concerns directly with VA leadership. These included issues related to healthcare access, basic supplies, communication with staff, and opportunities for connection. The group also identified needs that could be addressed immediately—such as providing hygiene kits, outdoor lighting, harm reduction trainings—demonstrating how small-scale changes could improve daily life. The paper reflects on the VEC as a participatory space where HEVs engaged with and across institutional hierarchies. It examines the labor of trust-building in a context marked by surveillance, stigma, and complex institutional histories. The VEC's work shows how relational presence and responsiveness can matter as much as formal policy. Drawing on Cheryl Mattingly's concept of "moral laboratories," the analysis explores how HEVs used the committee as a space to reimagine care, offering practical and ethical insights into partnering with homeless-experienced persons.

Presenter(s): Matthew McCoy

Engaging women Veterans in improving VA women's health research: the VA Women's Improvement Network (WIN)

Women Veterans make up only 10% of the VA patient population but represent the fastest growing group of users, prompting adaptations to better meet their needs. The VA has a long history of integrated health services research, and women's health is now a core focus. Since 2015, VA has prioritized Veteran engagement in research to foster trust and promote more Veteran-centered practices. We conducted national interviews with women Veterans to understand their perspectives on research participation. Many cited lack of awareness, distrust, and competing responsibilities in revisiting military experiences as barriers. Some expressed skepticism that their involvement would make a difference. As one Veteran shared, "We've been let down so much as women who served in the military." In response, our team launched the Women's Improvement Network (WIN) in 2019, the VA's first national, all-women Veteran engagement group. WIN was created to guide women's health research, support innovation, and share findings. The group has maintained stable membership, with 10 to 12 members regularly attending quarterly meetings. Members reported high levels of trust, mutual respect, and shared power. Over time, cohesion has grown through empathy, collaboration, and the visible impact of member input. This paper explores

how sustained engagement, grounded in anthropological methods of deep listening and relationship-building, can repair institutional trust and improve the relevance of VA research.

Presenter(s): Alison Hamilton

Psychotic Applied Anthropology: Interviewing Veterans with Atypical Forms of Communication for Quality Improvement at the VA

Anthropological theories of subjectivity arguably exclude people with non-normative forms of consciousness. Methods informed by these theories, like interviewing, are often ill-suited for participants with atypical forms of communication: they take for granted one's ability to use spoken language to represent the self, to think and communicate in chronological or logical sequences, and to think in terms of "experiences" and to then shape those experiences into narrative form. In an applied field such as the VA, where research is aimed at improving care for Veterans – and where datapoints must be turned over rapidly and distilled for key stakeholders – a rigorous, hardline approach to qualitative methods is taken. Researchers thus grapple with the contradictions in using these methods with Veteran participants, often homeless-experienced, who recount unusual experiences or communicate atypically. Researchers are often left with incomplete or questionable histories, uncertain timelines, and doubts over whether certain events ever really happened. Structured or semi-structured interviews may also be particularly distressing to these vulnerable research participants if not performed with sensitivity to their lived experiences. This paper grapples with these contradictions and presents some ideas for performing a sensitive "psychotic anthropology" in the applied setting.

Implementing a Community Center in VA Housing: The Limits of Veteran Engagement in Continuous Quality Improvement

This paper describes the early implementation and formative evaluation of a community space for Veterans with homeless experience now residing in permanent supportive housing on a VA campus. Envisioned as a homelike environment, the center is staffed by Veteran Peer Support Specialists who share their experiences of overcoming life adversities to support fellow Veterans and foster campus community. The initiative uses a shared governance model, encouraging members to shape policies, develop leadership skills, and practice mutual aid. Over the past several months, the evaluation has integrated Veteran perspectives to inform continuous improvement through ethnographic methods, including interviews, participant observation, and focus groups with Veteran "guests" and VA staff. These methods capture the nuanced ways Veterans navigate life at a VA campus, contributing insights that shape the community center's development.

Throughout this process, we have encountered structural barriers to centering Veterans' voices in a complex healthcare and housing system, particularly VA policies around data sharing, volunteer coordination, and outreach. These challenges constrain what forms of engagement are permitted within both implementation and evaluation. This paper contributes to the broader discourse on Veteran engagement and community based participatory research in applied anthropology.

Presenter(s): Erica Fletcher

Ripple Effects Mapping: Veteran Perspectives on Veteran Engagement in VA Research

Anthropological approaches to listening, meaning-making, and collaboration offer vital tools for improving Veteran engagement (VE) in research within VA. This paper presents findings from five Ripple Effects Mapping (REM) sessions, a participatory method rooted in appreciative inquiry, exploring how Veterans experience their roles as research partners, participants, and consultants across VA contexts. While Veterans are increasingly involved as peer researchers, advisory members, and co-designers, little is known about how they interpret the personal and institutional impacts of this work. Drawing from diverse positionalities shaped by military service, institutional history, and lived expertise, REM surfaced benefits (e.g., community-building, shaping research), burdens (e.g., tokenization, poor compensation), and unexpected outcomes (e.g., emotional triggers, altruistic purpose). Sessions were co-facilitated by a Veteran Engagement Liaison and generated visual maps tracing ripple effects of engagement and what Veterans find meaningful or hope to change. The paper also addresses ethical tensions around what it means to be heard in institutional spaces shaped by trauma, illness, and structural harm. Linking participatory insight with practice, this work contributes to an anthropological praxis that repositions Veterans as contributors and co-authors of knowledge and change. The presenter, a Veteran and anthropologist embedded in VA, reflects on the sessions from within.

2918 Loud Silences: Ghostly Signals of Humanitarian and Development Interventions in East Africa

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

A vast literature has shown how contemporary aid and development reproduce colonial structures of power, knowledge, and value, shaping the world through logics of legibility, intervention, and control. Yet, these regimes of aid are as loud in their presence as they are in their absences, the silences that they enforce, and the ruins they leave behind (Stoler 2008). This panel draws on the notion of haunting to explore the 'ghostly signals' (Gordon 1998:204) of coloniality and the violence of systemic and epistemic oppression in East Africa. We examine aid landscapes as both haunted and haunting-shaping affective experiences and local imaginaries, while bearing the spectral and violent traces of colonial pasts. In so doing, we embrace the invitation to study the 'silence of everyday life' (Good 2023) in postcolonial contexts, asking how lingering forms of power, coloniality, and oppression manifest themselves in the voids left and imposed by development and humanitarian regimes, and how they are experienced and made sense of across diverse East African contexts.

Bringing together diverse empirical contributions, this panel examines these hauntings through registers of absence and silences in the daily realities and aftermaths of humanitarian and development operations. Thinking through haunting as the ways 'in which abusive systems of power make themselves known and their impacts felt in everyday life, especially when they are supposedly over and done with... or when their oppressive nature is denied' (Gordon 2008:xvi), this panel interrogates the affective dimensions that populate the silences, absences, and ruins surrounding and stemming from humanitarian and development interventions. Panellists will explore themes ranging from the material afterlives of abandoned aid infrastructures, to the silenced subjects of colonial and humanitarian photography, to the collapsed temporalities of unmet promises, betrayed expectations, and epistemic and phenomenological erasure.

Our contributions address the following questions:

- How are development and humanitarian interventions entangled with the unmet promises of the past, present and future? How does coloniality endure in the ruins of projects, in the grief of unmet expectations? How is oppression reasserted in the silence and failures of interventions?
- What are the ghostly signals that point to what is overlooked? How do they make themselves heard? How do communities make sense of and live with these ghosts, negotiating, resisting, or reclaiming the silences?

By centring these silences and absences, this panel shifts focus from the overt operations of humanitarianism and development to the gaps they create, the absences they fail to acknowledge, and the histories they cannot erase. In doing so, it invites a broader reflection on the afterlives of empire, the politics of forgetting, and the hauntings that structure aid landscapes in East Africa.

Presentation(s): The haunted clinic: trauma and power in refugee mental health in northern Uganda

This paper examines the haunting silences that structure clinical encounters in a mental health clinic in Palabek refugee settlement, northern Uganda. While humanitarian psychiatry mobilises trauma narratives to render refugee suffering legible, these narratives paradoxically silence and erase the ongoing violence of displacement and the oppressive structures that shape refugee life. Drawing on ethnographic research in the clinic, I argue that trauma discourse, rather than giving voice to haunting memories, is itself haunted—inhabited by what it occludes, by the political and structural violence it fails to name. The Ugandan state, whose presence saturates the lives of refugees through restriction, surveillance, and exclusion, remains a spectral force in the clinic, unspoken yet ever-present in the therapeutic exchanges between clinicians and patients. Taking a psychological anthropological approach to haunting, this paper moves beyond the conventional

focus on traumatic memory to explore how trauma narratives function as technologies of erasure, producing absences that themselves become sites of haunting. In doing so, it interrogates the entanglements of humanitarian psychiatry, state violence, and the politics of silence, foregrounding how unspeakable histories and enduring forms of oppression make themselves felt in the affective textures of clinical practice.

Presenter(s): Costanza Torre

Haunted: spectral self-reliance in northwestern Uganda

If 'haunting ... alters the experience of being in linear time, the way we separate the past, present and the future...' (Gordon et al. 2020, p. 339) what does life look like in the interstices and voids of the refugee architecture, in the static of the spectre? This paper draws on the imposition of spectral self-reliance as the central conceit of the humanitarian architecture in Uganda to attune to the frequencies of repression as they play out across West Nile. I argue that self-reliance is a malign, spectral force that haunts and distorts everyday life in refugee settlements in north-western Uganda. The paper draws on haunting as a central conceptual metaphor to understand how self-reliance reverberates through everyday life under humanitarian protection. In its silences, the haunting spectre obscures the inequalities underpinning structural stasis. Amidst the wavering and illusory claims of humanitarian actors, South Sudanese people contend with the central conceit of global humanitarianism which seeks to destabilise the experience of linear time, erasing their past, dismissing their present and conjuring an imagined future. Evoking their material, social and physiological present, in the 'silence of everyday life' (Good 2023) South Sudanese people assert the 'lived and living ... losses of modern systems of abusive power in their immediacy and worldly significance' (Gordon 2008, p. xvi).

Presenter(s): Charlotte Brown

Ruins and Rituals: Living with Legacies of Development Interventions in Tanzania

This paper explores how literal and metaphorical ghosts emerge within landscapes of former development interventions in Tanzania. Through two case studies, we examine how legacies of past projects continue to shape ecological and economic realities, and affective atmospheres.

In the same district, northern Tanzania, a JICA agricultural development project introduced pesticide trials for rice cultivation in 1988. Beyond lasting environmental effects, this intervention is entangled with longstanding ritual practices that call upon ancestral spirits to protect and nurture the land. As soil fertility declines and pests resurface, communities negotiate neglecting their rituals in favour of foreign scientific interventions, generating feelings of loss and self-blame. In the southern Lindi Region, cashew processing factories built under a World Bank-funded development scheme in the 1970s have since fluctuated between closure and revival. The erratic operations create a sense of inherent unfinishedness where memories of past prosperity collide with uncertain futures. This interplay shapes people's emotional attitudes toward the material structures themselves, but also the potentials they simultaneously emanate and suspend. Within these two contexts of environmental and industrial ruination, we ask how people experience the 'present

absences' of development projects, the voids left and the voids reclaimed —and how the concept of ghosts and spectrality helps us grasp lived realities.

Haunted frames: unpacking the coloniality of care in medical photography

This paper makes a connection between the past and present, linking the visual logics of colonial medical photography to contemporary medical humanitarian imagery. It explores how early twentieth century colonial images (1902-1918) originally created to document tropical diseases such as elephantiasis produced silences and absences that continue to haunt those who view them. Focusing on colonial medical archives from Malawi and Sudan, it interrogates the visual logics that rendered the colonized subject hypervisible as a site of affliction yet silenced aspects of personhood. Drawing on Black feminist praxis and ethical engagements with the archive, this paper positions the ghosts of these historic medical photographs not as passive absences but as active presences haunting the archive and the photographic frame (Camp, 2017; Gordon, 2008). The paper explores how moments of refusal, such as an averted gaze challenge the colonial gaze and reclaim imposed the narratives, in turn offering new modes of engagement. The paper then argues that in present contexts humanitarian images carry with them ghostly traces of colonial medical photography. Just as colonial photographs constructed the colonised body as a site of suffering and intervention, humanitarian photography echoes racialized representations and medical violence in ways that continue to shape how race, health, and crisis are visualized today.

7161 Media and Empire in the Americas

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 2

Type: Oral Presentation Session

Empire has long been an issue of concern in relation to media in Latin America. From the early twentieth century on, U.S. media industries from Kodak through Hollywood sought a foothold in the region, leading to the dominance of Hollywood films on Latin American screens and stereotyped depictions of Latin America in U.S. media. Latin American intellectuals and artists, cultural officials, and political leaders vehemently criticized and resisted these media incursions, as well as broader US political and economic intervention. Following the success of the 1959 revolution in Cuba, the new state nationalized media production and distribution and forged new alliances with Third World and socialist media and artistic movements. The subsequent rise of powerful media industries in the region, including Brazilian and Mexican television, provided commercial counters to U.S. media influence. The current political turmoil in the United States, which involves both a realignment of the nation with former Cold War enemies such as Russia and a retreat into

protectionism, invites a reevaluation of U.S. influence in the region. This panel takes up this challenge through papers that address U.S. media and political imperialism across time and in multiple Latin American contexts. Ali Feser analyzes the material processes that subtended early twentieth century U.S. media imperialism. She shows how Kodak expanded into Panama City to create film that would resist the decay brought on by tropical conditions. Taking up a close reading of a test shot of Ana Fong, a secretary in the Panama lab, she reveals how these experiments were designed to expand Kodak's vision of a White "good life" on a global scale. Laura-Zoë Humphreys examines the role of U.S. media in analog video circulation. As she shows, despite the widespread association of illegal Cuban citizen video libraries with U.S. action films, one of the highest-renting products was Mexican telenovelas. This finding reveals the often-overlooked influence of Global South television and women's labor and media consumption in analog video. Agnès Mondragón Celis turns her attention to how media advances imperial power in the U.S. war on drugs. She examines how media such as court hearings, press releases, and other official discourse produce a transnational form of "crime talk" that erases facts and accounts that would support Mexican nationals who are extradited to U.S. courts in drug proceedings. Finally, Meg Stalcup analyzes a fake map that depicts the Amazon rainforest as belonging to the United States and the United Nations, which circulated over the early internet and has periodically reappeared, often making the news. Contextualizing this artefact within broader visualizations of Brazil across colonial, imperial, and republican eras, she shows how this map and its recurrence reflects ongoing anxieties over US imperialism.

Presentation(s): Decay is a Woman: Kodak's Tropical Research Laboratory and the Materiality of U.S. Imperialism

This paper tells the story of Eastman Kodak's Tropical Research Laboratory in Panama City and how scientists tried to solve the problem of "image impermanence." That is, how film decayed faster in hot and humid conditions than they did in the temperate climates of upstate New York where it was originally designed. The point of this research was to standardize photographic emulsions and to ensure that Kodak commodities behaved the same in all times and all places. The knowledge produced at the Panama laboratory was calculated into Kodak's fantasy of the "average consumer." This new, global average was assimilated into manufacturing processes in order to extend the life of film and expand Kodak's market. Once standardized, film becomes a media for U.S. imperialism and an agent of standardization in its own right. It sustained the state infrastructure necessary for Kodak to extend its own empire. Finally, the essay meditates on how images of women—specifically a test shot of Ana Fong, a secretary at the Panama Lab—figured as the media through which Kodak reproduced its vision of the white "good life" and extended it on a global scale.

Presenter(s): Ali Feser

Video as Media Imperialism? The Arrival of Analog Video in Socialist Cuba

Throughout Latin America, analog video led to renewed concerns about the threat of U.S. media imperialism. This was particularly the case in socialist Cuba, where analog video threatened state control over media distribution after efforts to nationalize production and distribution and cultivate a media culture that would produce socialist citizens. Paradoxically, however, state video services often circulated U.S. media while illegal video circulation promoted regional content. Drawing on oral histories and archival work, this paper shows how the state worked to control analog video through services such as a line of pirate videocassettes that circulated U.S.-distributed movies (Omnivideo). Despite associations of illegal citizen video libraries with U.S. action movies, by contrast, Mexican telenovelas, which were recorded from pirated satellite signals and attracted predominantly women viewers, were among their highest earning content. Whereas histories of video outside the U.S. have often focused on the use of video to circulate U.S. movies and on the labor of the men who predominantly controlled these networks, this paper instead demonstrates the ties between analog video, satellite television, and women's labor and consumption. In so doing, it enriches our understanding of the late twentieth century Latin American media industries that competed with U.S. dominance and provides an infrastructural and material account of how this content circulated.

Presenter(s): Laura-Zoe Humphreys

Crime Talk, Extraterritorial 'Justice,' and the Politics of Mediation in the Drug War

Every year, about a dozen Mexican nationals are extradited to the US on charges related to drug trafficking. While extradition is often spoken of as a remedy to Mexico's collapsed judicial system and its near absolute impunity, I argue that this judicial processing is partial and selective, marked as much by erasure as by the production of 'truth.' As extradited individuals are taken before the US judicial system to respond for crimes allegedly committed on US soil—usually the trafficking of drugs—those that are perpetrated on Mexican territory—often murder and disappearance—are left unspoken and unresolved. This paper follows the cases of two Mexican nationals in US courts through ethnographic and archival work. It critically compares the knowledge produced around each case by and for the US state—through court hearings, press releases, and other official discourse—and the forms of epistemic erasure (despite different actors' attempts) on facts and accounts that would serve the interest of Mexican victims, which then circulate in more speculative forms (as a transnational form of 'crime talk'). I argue that the differential valuation of these kinds of knowledge and their purposes instantiates the imperial power underlying the US's war on drugs, not only by illuminating the extraterritorial reach of the US's judicial apparatus, but also by revealing the unequal value ascribed to the lives of US and Mexican citizens at the heart of this transnational project.

Presenter(s): Agnes Mondragon Celis

Visualizing Empires: Maps, Botanical Illustrations, Memes, Renderings

Soon after Spain and Portugal split the world between them, or tried to, in 1494, the Portuguese empire claimed the territory that would become Brazil and named Ilhéus one of the original hereditary captaincies. Drawing on archives and fieldwork in the area around the city of Ilhéus today, in this talk I trace visualizations of the nation and the region through periods of colonial, imperial, and republican governance. Early maps of the captaincies are a microcosm of royal loyalties and recompense, the fiercely resistant indigenous populations which would limit the colonizers' success nowhere to be found. Some 500 years later, another map of Brazil circulated via email on the early internet, in which the Amazon rainforest was depicted as belonging to the United States and the United Nations on the page of a junior high school geography textbook which never existed. The image and text were fake, but the sense that US imperialism threatened Brazil's sovereignty was real enough that nearly twenty-five years on, the map still periodically reappears and makes the news. No image stands outside of ideology, Azoulay reminds us, and in examining maps, botanical plates, and computer renderings I attend to the ways that empire is implicated in these images.

2919 Peripheral Hauntings: Presence and Possibilities from the Margins

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

Many people living on the margins today experience situations of vulnerability and violence. Yet, while relegated to the literal and figurative margins, their very marginality continues to exert a spectral presence on the centers from which they are structurally excluded. The margins are never erased; rather, they continually haunt the minds and imaginaries of those who are not marginalized.

What possibilities, then, come from the margins? What ontological opportunities might the margins hold for those who inhabit them and how might these spectral plausibilities offer us new ways of writing anthropology? How does the possibility of contesting the present and living moral lives amidst limiting situations for those on the edge haunt those who hold power, turning their privilege into an unsettling topography where the center, the core, is under scrutiny? In a time of increasing fascist, nationalist, and authoritarian resurgence, where more and more categories of people are discursively made marginal, what can we learn from those who have remained engaged in defiant living, within lives constrained by the structures of the world that places them on the periphery? As bell hooks argues, occupying the margins provides those who live in neglect "a mode of seeing unknown to most of our oppressors, that sustained us, aided us in our struggle to transcend poverty and despair, strengthened our sense of self and our solidarity" (hooks 1984, ix).

Emphasizing that marginality is not simply "a site of deprivation" (hooks 1994), this panel brings together contributions that render an account of how individuals who live in the margins are also

agents of radical possibility. To inhabit the periphery also represents the possibility of transgression and an unexpected potentiality. Persons living in situations of marginality overcome, endure, or cope with adversity crafting new alternatives for better lives and developing reservoirs of navigational capital (Yosso 2005) to draw from when faced with new precarities. Despite occupying contingent positions and becoming the bogeymen of an aggrieved center, people fight to live a better life within the limits that confine them, forging new vectors of belonging and destabilizing an idea of what life on the margins must be. How do the margins and those who reside there actively haunt the center, simultaneously being relegated to the outside while also being rendered hyper present as people and places of danger and threat? The current political, economic, and social global moment demands this question to be answered.

Presentation(s): Haunting the Urban Center: Spectral Materiality, Architecture, and Afro-Caribbean Diaspora

In the 1970s, state-led tourism development in the port city of Puerto Plata, Dominican Republic, authorized new waterfront construction that transformed the sandy shoreline with a concrete walkway. This project coincided with the forced displacement of Pie del Fuerte, a multi-ethnic, Afro-Caribbean neighborhood of stilt and wooden houses. Today, residents connect the past built environment's features to New Orleans' architecture and building practices. Though tourism infrastructure has effaced physical structures, the absent presence of this coastal community persists in the landscape. Regional music has popularized expressions that evoke sensory memories of salt and sun "hidden in a conch," surfacing marginalized histories of Black diasporic inhabitation and migration between the Caribbean and Gulf coast region. Taking cues from urban residents' narratives, this paper casts attention to Black migrant lives by linking archival fragments with shifting sand movements. What can spatial traces and moving sands, shaped by development and geophysical activity, tell us about the tangible residues of socio-ecological violence? What does it mean when granular forms haunt the spatial imaginaries of civilizing urban centers?

Presenter(s): Mary Pena

Edgework Aesthetics: Art, Memory, and Survival at Singapore's Margins

This paper explores how life at the margins is shaped not only by constraint but animated by improvisation, intimacy, and form. Through a street-level urban ethnography of Singapore, I follow queer individuals and migrant workers whose everyday gestures—ritual, poetry, performance, walking, language—elaborate an aesthetic of survival within the city's tightly managed exclusions. These fleeting gestures offer insight into affective textures of persistence cultivated at the edges of power. Guided by bell hooks' framing of the margin as "a site of radical possibility," and Ruth Wilson Gilmore's idea that "edges are interfaces," I attend to the artistic, affective, and spatial peripheries where people find meaning amid systems that render them disposable. These are not stories of thriving or victimhood, but of ongoing recalibration—where memory, labor, and expression become means of endurance. I trace how a lesbian artist heals estrangement through ritual; how a Bangladeshi poet and construction worker writes exhaustion into lyric; and how Singapore's precise yet permeable built forms hold the sediment of control while offering stray passages for improvised life. Rather than offer a panoramic view, I follow the city on foot—attuned to its silences, moods, scars, and beauty. What unfolds are scenes of urban life composed in the key of the minor: emergent, collaborative, unresolved. This is edgework as method, where constraint gives rise to inventive forms of living.

Presenter(s): Alexandra Diana Hanae Sastrawati

Rethinking from the Margins of Socialism and Capitalism: New Visions of Business in Cuba and its Limits

Ten years after the unprecedented expansion of private enterprise in Cuba, prominent business owners began crafting a new vision of the Cuban private sector, one that merges personal profit with social responsibility and collective enrichment. This paper argues that this new formulation on the island stems in part from Cuban entrepreneurs' liminal positionality that offers a unique vantage point from which to think about themselves, business, and Cuba in novel ways. For this analysis, I revisit Victor Turner's writings, particularly his focus on "the margin" or liminal period in Ndembu rituals during which individuals momentarily break free of existing social structures, a separation pregnant with possibility. Like Ndembu initiates in puberty huts outside everyday village life, Cuban entrepreneurs similarly sit in liminality's "fruitful darkness" (1979, 243) that invites a reconsideration of existing values and ideals. But being liminal or in the margins comes with its challenges, particularly in Cuba. Proponents of socially responsible enterprise are routinely accused of lying, fabricating a false narrative to appeal to government officials weary of neoliberal capitalism or as a dog whistle to foreign entities bent on undermining Cuban communism. Such accusations by everyday Cubans, diaspora members, and popular figures alike illustrate the limits of ideation and discourse possible in a transnational community plagued by Cold War logics and deep-seated suspicion.

Presenter(s): Miranda Garcia

"The Favela Won": use of identity documents by criminalized youth

This paper explores how criminalized youth at the margins of the state negotiate and produce conflicting understandings of their role within the Brazilian nation by engaging with mutating ideas of citizenship, rights, and belonging (Collins 2015). My discussion is based on ethnographic research in the city of Campinas (SP) in which I followed as youth obtained their identity documents. I will describe how Daniel, a black trans man in his 20s, went through great lengths to rectify his name and gender identity on his birth certificate. When Daniel finally received his amended document, he exclaimed that "the favela triumphed". Though ostensibly an object that represents an individual self in the eyes of the state, at that moment the birth certificate was celebrated as Daniel positioned himself in relation to his community, identified in this case through the territory of the favela. This paper thus attends to the margins, and state attempts to pull margins into its orbit through its bureaucratic practices, to illustrate how states enter everyday life (Das & Poole 2004). Furthermore, I consider how Daniel challenges some of the normative standards of citizenship to which he was subjected to. In so doing, he crafts a livable life and future for himself that fails to fit neatly into definitions of either resistance or domination (Biehl & Locke 2017).

Presenter(s): Juliana Valente

Elusive dreams: football aspirations among west African migrants in Europe

Global football is saturated with narratives of dream and aspiration. Transformed into a global business, the football industry is encouraging countless West African young men – often from underprivileged backgrounds – to chase elusive dreams of playing, migrating to Europe, and earning through the sport. The dreamers, however, are confronted with a competitive industry that demands young bodies and with restrictive border regimes that push them toward irregular migration routes, societal margins, and susceptibility to exploitation. This paper examines African migrants' reflections on the dream of playing football for a living, especially as the enticing possibilities of sport careers start diminishing. It draws from interviews with migrants in Europe (2024) and fieldwork on football aspirations in Cameroon (2014-16) to analyze how elusive dreams are re-negotiated by the dreamers themselves. A key finding is that the men do not simply consume and chase the dream of sport success and stardom, nor do they outright reject or abandon it. Rather, through migration and sport, they redefine the meaning of a life worth living. The paper examines the footballers' trajectories to reveal how people transform meanings of a better life in the midst of "cruel optimism" (Berlant 2011) of late neoliberal capitalism. It also explores the potential of conceptualizing Europe – as some footballers do – as a "golden prison" (prison dorée), a place of simultaneous opportunity and entrapment.

Presenter(s): Uros Kovac

Lessons from the Margins: Vital Acts and Intimate Hopes

In the post-political present, forged in the absence (and fall) of utopian horizons, many are grappling with the difficulties in trying to articulate an alternative vision for the future. This paper explores the possibilities cultivated among those who have lived in society's margins and

developed ways of living and making life fueled not by grand visions of revolutionary change but by belief in and connection to intimate hopes. We draw from ethnographic work conducted among the indigent older adults living in dilapidated care homes in urban Peru and with marginalized, excluded youth living in gang-controlled neighborhoods in semi-urban Honduras. The abandoned older adults develop "vital acts," strategies to cope with an overwhelmingly bleak present, in order to find possibilities to live otherwise. Meanwhile, excluded youth pour their energy into all-but-impossible dreams, insisting on their possibility despite all information to the contrary. In both cases, we find that people whose lives are structurally precarious and literally at risk cultivate "aspirational capital" (Yosso 2005) by forging near-future oriented narratives, close-by horizons of hopeful moments, and small but firm beliefs in affective entanglements and the possibility of their world-making meaning.

3925 Remembering Nelson Graburn and his Many Contributions to the Anthropology of Heritage, Tourism, and Identity

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Roundtable/Town Hall

This special roundtable honors the memory and legacy of longtime AAA member Nelson H. H. Graburn, who passed away in February 2025 after a painful illness. Throughout his 60-year career, Graburn had been a leader, innovator, and mentor. Although he is best known as one of – if not the – father of the anthropology of tourism, his wide-ranging work addressed the interconnected areas of art worlds and museums, heritage and cultural identity, post-coloniality and Indigeneity, and pilgrimage and other forms of travel (such as food and wine tourism). His work also contributed to the anthropological study of a number of important cultural groups and their processes of identity creation and change over the years, including the Inuit of Alaska and Canada (with whom he conducted his dissertation research) and multiple ethnic groups in Japan and China. Active in many international anthropological and interdisciplinary communities, he had been a staple at the AAAs for many decades, and lent his expertise and vision to numerous AAA entities, supporting the foundation of the Anthropology of Tourism Interest Group (ATIG) and its transition in 2025 to the Council on Heritage and the Anthropology of Tourism (CHAT). CHAT's Graburn Book Prize honors his dedication to mentoring the next generation of scholars. Panel participants briefly share the ways in which Graburn and his work has influenced their own scholarship and professional development, and ample time is allotted for all in the audience to discuss his intellectual legacy and

its broader impact.

2693 Resisting Petrocultural Anthropologies: Who's Afraid of Petroghosts?

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

The increasing prominence of concerns and responses to the fossil fuel industry within the global public sphere breathes new life into classic anthropological problems and debates.

Anthropologists are partnering with new ecologies of actors—both within and beyond academia—in working to reinvent the human's relation to technology and the environment, to resituate the divide between scientific and traditional ways of knowing, and to deconstruct the dominant nexus of language, power, value, and ethics. And yet, at the same time, recent intensifications of energopolitical conflicts and their fossil-fueled war machines, the resurgence of demand for coal, nuclear, and other hazardous fuels and infrastructures, and the pronounced ascendance of new petromasculine authoritarianisms all suggest that "petroculture" is alive and thriving as ever before. What can we learn, as anthropologists, from this simultaneous popularization of petrocultural critique amidst a dramatic and vengeful resuscitation of petrocultural hegemony?

Appealing to petroculture's more spectral and parasitic capacities, this panel mobilizes the concept of "petro-ghosts" to draw these speciously separate developments together, revealing their otherwise unthought continuities and entanglements. In brief, petro-ghosts signify how petroculture shapes the way folks envision what a non-petro-racial capitalist society might look like, as well as how we might get there. That is, how have the past two centuries of globalized attunements to fossil fuels infused our social and mental ecologies with petrocultural assumptions, values, beliefs, desires, strategies, and practices? How have more recent efforts to catalyze sustainability reproduced or even consolidated petrocultural systems or formations at different scales? And how might the seeming intractability of petromodernity hint at the way our very modes of scholarship and resistance reflect deeply petrocultural anthropologies? As a whole,

the papers warn us to be vigilantly reflexive, showing how any attempt to critically investigate or deconstruct the culture of petroculture runs the risk of always already being petrocultural.

Professional anthropologists are, of course, no exception. As such, many papers will reflect on the way our ethnographic insights into petrocultural anthropologies revealed our own petro-ghosts, shaping the way we design, fund, conduct, analyze, write-up, and publish our research, and how these activities both reflect and reshape the quotidian goings-on of our fieldsites, workplaces, and personal lives. As a mode of resistance, the papers also emphasize the continual need for new experimental pedagogies, research designs, and methodologies, which can be designed to produce the kinds of untimeliness, dissonance and disjointedness necessary to conjure and exorcise these lingering petro-poltergeists.

Presentation(s): Energy ethics, anthropology and their ghosts in North America and France

This paper takes up ongoing research on climate and energy in North America and France to ultimately reflect on the material and methodological conditions of contemporary anthropology. Energy projects—renewable, oil and gas or otherwise—are not only technical and infrastructural, but also social in their stakes and impacts, organization and development, risks and benefits. Further, energy projects promote particular viewpoints about the present, but also entail visions of how the world should be and how to enact desirable futures. In short, debates about energy raise fundamental ethical questions about how we envision a world of flourishing. These ethical stakes are collectively structured yet varied across time and place. In the Canadian context, climate and energy discourses are actively entrenched in a petrochemical extractive industry that is at the centre of a divisive technological nationalism predicated on settler-colonial relations. Meanwhile in France, petrocultures and their hauntings are complicated by a different arrangement of energopolitics: looming are the ghostly echoes of energy pasts, presents and futures deeply committed to nuclear power (and its subsequent colonial relationships with Africa). In an era of uncertain environmental and political futures, what can these field sites and their differences tell us about energy and our research on it? This conference paper will consider such questions about energy, ethics and politics across field sites.

Presenter(s): Adam Fleischmann

Petrochemical hauntings: Resisting the logic of disposability in circular economy policies for plastic packaging

News stories about plastic's harms are now commonplace—from entangled marine animals to cancers linked to chemical additives. Once considered a solution to the overuse of scarce resources like ivory, these petrochemical-derived materials are now one of the greatest challenges of our times. Recognizing the sheer magnitude of the problem, the UN resolved to develop a global

plastics treaty, centering on policies like Extended Producer Responsibility. Shifting responsibility for recycling from municipalities to brand owners, the underlying assumption is that producers will be incentivized to re-design packaging to reduce costs. While these policies are gaining traction, advocates fear they are not enough to resist petroculture's hegemony as industry groups request exemptions, find loopholes, and push false solutions like "advanced" recycling.

Based on 24 months of ethnographic research, this paper examines policy negotiations around disposable packaging in the US and Canada. Attuning to human and more-than-human entanglements, this paper illuminates how ideas of plasticity and modernity are co-constructed, thus challenging attempts to resist the seemingly insatiable appetite for plastics in petrocultural modernity. I argue that plastic petroghosts delimit which solutions are envisioned, advancing techno-managerial solutions that maintain the logic of disposability. Meanwhile, toxic plastic materials promise to "bite back," haunting colonial and capitalistic logics of progress.

Coal mining and the anthropologist's crime in West Bengal petroculture, India

This paper examines the deep imbrication between green urbanism, the resurrection of coal mining, and anthropology's risk of criminalizing the victims of petroculture in the Indian state of West Bengal. Under Prime Minister Narendra Modi's regime of petro-masculinity, the state of West Bengal figures as a possible exception. The ruling party in West Bengal has based its legitimacy on the promotion of green cities, and avoidance of large-scale land dispossession of peasant land. Yet, I consider the seemingly paradoxical promotion in West Bengal of green policies along with new state mines to extract large amounts of coal from an area that is set to become the second largest coal block in the world. The government may soon dispossess land belonging to tribal and Muslim communities. I argue that what connects projects of eco-green urbanism with coal mining is a mafiazation of land dispossession, crucial to acquire land both for eco-green cities and to access hazardous fuels like coal. I foreground how dispossessed communities are, at the same time, fighting against coal mining, while also enlisted as foot-soldiers for the land mafia as part of the state's compensation scheme. Yet, as ethnographic research can expose this mafiazation process, anthropological knowledge risks reproducing the government's mystification of long-standing inequalities, and sustaining a criminalizing discourse that, while blaming the West Bengal mafia for pollution, also criminalizes its victims.

Presenter(s): Chiara Arnavas

Should we be afraid of petro-pedagogies? A gosht-ly reading of Petro Pete's Big Bad Dream

Across the US, as elsewhere, the petrochemical industry shapes what people learn and teach in schools. The Oklahoma Energy Resources Board (OERB), for example, has spent plus \$40 million on K-12 education over the last 20 years, designing "hundreds of pages of curricula, a speaker series and an afterschool program — all at no cost to educators", says the Center for Public Integrity.

This paper is a fleshy reading — a gosht-ly* reading — of OERB's book series "Petro Pete's Adventures" — to describe the learning and teaching of petro-culture in geologies of loss and fear. A gosht-ly reading makes available decaying and defecated components of petro-culture that nevertheless haunt teaching and learning: the desiring flesh of curiosity, the pulsating flesh of relation, and the rotting flesh of death.

If petro-ghosts remind us of the stickiness of petro-culture, petro-pedagogies remind us of its thickness, how it's learned across scales and systems. A gosht-ly reading is not satire or irony, however. It is a sincere mode of attention to petro-culture that seeps our petro-pores and petro-skeletons. If something as entrenched as petro-culture sits so deeply in the geist and the body, banishing or cutting it out will not do. Instead, petro-culture needs to be cared for and aided in its passing. What ways of stewarding, caring, and aiding petro-culture can be made available so that petro-culture can rest in peace? (*In Urdu, gosht means meat.)

“And so we’ll see that in the wind business”: On renewable energy, petro-ghosts, and the immanence of cultural change

The history of Texas' renewable energy industry is riddled with petro-ghosts. This presentation conjures these specters by analyzing the petrocultural anthropology of one of Texas' more influential environmentalists: Michael Osborne. Osborne developed his theories of culture and technology directly from the patterns he observed in the historical ascendance of Texas's oil and gas regime. Working at the vanguard of renewables, he relied on analogies between these past and present energy transitions to gain a sense of direction and agency within his own historical moment. Analyzing his published works, his oral history, and the public record of his career in renewables, I illustrate how Osborne reproduced petrocultural dynamics by performatively enacting this kind of historico-analogical positivism. I then extrapolate from Osborne's example to consider how it suggests the need for more immanent approaches to cultural change within contemporary ethnographic theory. Rather than pointing to any transcendent or transcendental structure, Osborne's case reveals how culture is re/produced through the historically contingent ways that possibilities for cultural transformation are differentially experienced, framed, contested, and enacted as vernacular anthropologies. That is, we aren't trapped within petroculture so much as haunted by petrofied modes of cultural invention, indexing equally radical potential for collectively reinventing society while also producing endless petro-ghosts.

7005 Sacred Kinship in a Time of Global Instability

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Galerie 3

Type: Oral Presentation Session

For many Christians, sacred beings including God, Jesus, Mary and the saints and other holy figures are not just a matter of belief. They are persons with whom they talk and share their experiences and feelings. In turn, as anthropologists and scholars of religion have shown, sacred persons may 'talk back', act and produce complex social, biographical and relational effects (Orsi, 1996, 2004; Luhrmann 2012). Further, holy figures may be understood as more-than-metaphorical kin, and may be enfolded and experienced within local idioms of kinship and self-making (Cannell, 2001, 2006, 2013; Thomas, 2021; Goodgame, 2023). This panel revisits the theme of sacred kinship at an unprecedented moment of global political instability. On the one hand, we enquire further into how sacred persons become kin in the specific idioms of different parts of the world, and ask how far sacred intimacies may currently sustain communities under pressure. On the other hand, we ask in what ways relations with sacred others may be changing in the face of new political and temporal configurations drawing on Christian idioms, including intimations of the end-times.

Presentation(s): Saints of a haunted landscape: divine presence in depopulated Palestinian villages

A regular figure of Palestinian culture since the war of 1948 has been the "present absentee", which refers to those Palestinians who were physically present in the newly founded Israeli state but legally categorized as "absent" from their homes after being forcibly displaced. Today, one can find Palestinian villages in which the homes have been destroyed and only a church or saint's shrine remains. Drawing on fieldwork among Palestinian Christians, this paper takes the presence of saints, and the divinity saints carry, as a lens through which to examine landscapes haunted by the memory of Palestinian displacement. When the descendants of refugees visit these villages, searching for signs of a former home, a well, or a public square, the divinity of saints becomes entangled with the saint's social history. Engaging Palestinian theological framing of saints as witnesses (shuhada') alongside anthropological scholarship on haunting, the paper suggests that Palestinian saints have become a powerful medium for reimagining kinship in the absence of a home.

Presenter(s): Clayton Goodgame

The instability of Mormon Prophecy?

This paper considers the sacred relationality that American members of the Church of Jesus Christ of Latter-day Saints (sometimes called 'Mormons') sustain through their church. Sacred relationality in Mormonism is both fundamental to the church's ontology (Cannell, 2006) and wide-ranging in scope, and includes both personal and collective ancestors as well as the sacred figures of the Christian story as understood in the church. Since the beginning of President Trump's candidacy for office in 2016, Mormon Utah Republicans have been divided between those who support Mr. Trump and those who have a different vision of Republicanism, exemplified by former Presidential candidate Mitt Romney and others. In parallel with these divisions, different interpretations of Mormon scripture and different political claims about key Mormon scriptural figures such as the defender against tyranny Captain Moroni have been voiced both by ordinary members and by elected Utah politicians (Cannell, forthcoming). This paper asks how far the understanding of Mormon sacred persons—including the crucial figure of the prophet-leader and the meaning of prophecy itself—are being or may be reconfigured by alternative American political-eschatological logics associated with the present government.

Faith in times of economic instability: the case of the Virgen de Urkupiña in Argentina.

The practice of religion for indigenous and mestizo Catholics in Salta Capital, Argentina, revolves around the establishment of a personal relationship with the Virgin Mary. She's not considered just as the content of a belief, but as a person and kin, whose role in the family is modelled on local conceptions of kinship. She is an ideal mother and acts like one, which means she's engaged in ties of reciprocity through divine action and miracles in the everyday life. This paper will demonstrate how this sacred relationship helps people navigate economic insecurity, through the example of the cult of the Virgen de Urkupiña. This Bolivian Virgin Mary is deemed to be particularly miraculous for money and material goods. People who are devoted to this Virgin Mary have a statue of her at home that they care for by praying, setting up elaborate altars, bringing her to hear Mass and organising fiestas in her honour. In exchange, they ask her to give them all the things they need to live: money, work, cars, houses. In the context of Argentinian economic instability, marked by constant inflation, job precarity and diffused poverty, establishing ties of sacred kinship with the Virgin Mary allows people to gain some agency on their lives. This relationship allows them to think the hazards of the market in terms of reciprocity and kinship and thus act upon them.

“Whiteness is Not an Ancestor but a Legacy”: Kinship, Responsibility, and Justice in US Unitarian Universalism

Much recent scholarship on US-American white-majority religion has focused on the relationship between evangelicalism and white supremacy, including the mobilisation of the language of ancestry, kinship, and "heritage" in service of this project. Indeed, the rise of Christian nationalism means conservative Christianity is increasingly presented as the quintessential form of European-American religion. While these studies have cast important light on the political theology of kinship

as/and white supremacy, less attention has been paid to the role of anti-racist kinship "work" among communities that are both primarily white and explicitly committed to the pursuit of racial justice. Unitarian Universalism—a post-Christian movement built around "the free and responsible search for truth and meaning," which has its roots in various Protestantism denominations—is one such tradition. Based on fieldwork with Unitarian Universalists in Arizona, this paper analyses UUs' interest in genealogy and ancestry as an example of efforts to recognise and counter white supremacy within a religious space that remains overwhelmingly (and, for some congregants, uncomfortably) white. By framing genealogical research as a means to spiritual growth, white-identified Unitarian Universalists mobilise theological resources in their efforts to both take responsibility for and construct an identity "beyond" whiteness.

Between Children of Saints and the Adoption of Neighbors: Making Sacred Bonds in Mobile Times

Abstract: This paper follows how traditions of child circulation – termed "children of saints" (figli di santi) – animate the way lifelong residents create bonds with newly arrived migrants in the mountaintop town of Sutera. Located in the rural center of the island of Sicily, the town employs the idea to deal with co-occurring emigration and immigration. Through inquiring about the continuity of children of saints, interlocutors explained the many ways that the devotion they felt to other peoples' children is the type of devotion they feel toward the saints. Through these parallel affective and relational logics, people renew the sacred command to love one's neighbor in increasingly unstable times.

2859 Scale and Loss: frontiers of care and the ghosts of mediation

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

This panel explores ethnographically and theoretically how local understandings of loss function across transformations of societal scale and its mediations. In the edited volume *Scale: Discourse and Dimensions of Social Life*, Carr, Lempert, and their co-contributors examine the ways in which scale – often imagined as a measure, ratio, or progression – takes shape by way of spatial and temporal dimensions of social life (2016). Building on their work, we focus on how past cultural forms persist and haunt the present in new digital contexts as we explore how the experience of loss and abandonment – of varied objects and relations, in diverse settings, over multiple time frames, and assigned to both individuals and collectivities – shapes and is shaped by scale. Grief for example, can be experienced personally, nationally, and even globally; its commemoration can be ephemeral, periodic, systematic, or permanent; and the medium of its representation -- from

microscope to satellite – can deeply, and eerily, persist into the present, affecting participant experience (B. Good et al 2022). We therefore ask, how intimately is bereavement connected to a particular moment – in a person's life, or to the circumstances of a polity or people? Why, in what way, and through which media do laments "travel" digitally from a particular event and become part of a ritual calendar or liturgy? And are electronic efforts to scale-up expressions of care inimical to the work of grief? (cf. Seaver 2021).

We invite diverse conversations that examine communicative technologies as well as ethical and affective evaluations of "spectral" events in relation to shifting social and discursive scales (Seaver 2021). Examples include mourning during COVID confinement (Kuipers and Grinker, in press), the evolution of large scale public memorials for collective loss (Wagner et al 2023), and fears of "ghosting" and "missing out" among high school cell phone users (Bell and Kuipers 2018, Dent et al 2022), and how past memories about war dead continue to circulate and haunt Vietnamese everyday life (Kwon 2008).

Presentation(s): Ghosts and Homo Duplex

A village grandmother in central Vietnam joins the household ancestral rite together with her children and their families. When this is over, later at night, she goes out to the garden and offers incense and small food towards the street and the wider exterior world. The latter is nominally on behalf of the multitude displaced spirits of the dead that people perform as the double of their ancestors. The poetic tradition of Vietnam is strong in capturing such a ritualized moment, presenting the care for displaced beings as a constitutive human ethic. Drawing upon this tradition, this paper thinks through what Durkheim calls homo duplex and the related idea of social soul. It considers how the social in our social soul can change in scale as we move between the two sides of the ritual complex, between ancestors and ghosts.

Presenter(s): Heonik Kwon

FOMO – Ghosting and Missing out in the context of teenage cellularity

Teenagers are frequently excoriated for their "addiction" to their cellular devices. Much of this pearl clutching involves materialist simplifications of social process by way of neurotransmitters – the current going concern being "dopamine." In the context of widespread alarmism in psychology,

media studies, and education, little attempt has been made to ethnographically understand the ways in which teenagers build complex digital ecosystems requiring intense attentional curation. One of the consequences of the materiality of cellularity – it's "always on" quality – is that young people must learn to understand whether or not something is currently happening, or about to happen, that will impact their social, academic, athletic, or familial lives. This attunement involves care about the ways in which small-scale interactions can (or sometimes, must) multiply – either in terms of numbers of participants, or in terms of temporal impact. Fears of loss permeate these practices – such that young people come to regret not being included, or in attendance. Teenagers must therefore constantly balance multiple platforms, communicative genres, and cellular affordances in order to be in the world. This paper explores that complexity, and the thresholds it both fashions and encompasses.

Digitized Mourning: Marking COVID Death in Times of Contested Knowledge

Over seven million people died of the pandemic, 1.2 million in the United States. How does a society reckon with mass death of such scale and scope? This paper addresses efforts to materialize—render apprehensible and sensible—the enormity of loss through various examples of media, including attempts by major US news outlets to represent milestones of death marked in the hundred thousands, as both singular events and collective toll, as well by a public art installation hosted on the National Mall. Drawing on Levinas's ethics of the face-to-face encounter through which recognition is either given or refused, I explore what these interactive graphics and spaces tell us about the scalar challenges of conveying and acknowledging COVID death and its harms. The interactive public art installation, In America: Remember, with its ArcGIS-mediated "micro-eulogies" of dedicated flags illustrates how a technologically innovative digital/physical mirroring of individuated remembrance sought to present the specter of catastrophic loss to a nation experiencing the pandemic in split modes of mourning and revisionism.

Presenter(s): Sarah Wagner

Haunted Pixels - Scale, Loss and Ghostly Mediation in COVID-19 memorial practices.

In the face of loss of unimaginable scale, many mourners for victims of the COVID-19 pandemic confronted painful challenges: choose whether to violate lockdown restrictions and gather face-to-face but risk the lives of the vulnerable, or embrace affordances of digital technologies, but risk the haunting deficiencies of those mediations of grief. Drawing on data from memoirs, Zoom funerals, YouTube laments, virtual forensic recognition and outdoor public installations, and from multisited research in Washington DC, Guayaquil and Sumba, the paper analyzes the ways in which such efforts at mediatizing grief explore and deploy the affordances of what Jones and Schieffelin (2017) have called "inscriptive speech." These digital technologies, such as Zoom and other videotelephony programs, not only can communicate and mediate grief in meaningful interactive

ways, but become "haunted pixels," creating a sense of interactive immediacy but also a spectral persistence of loss, mourning and memory.

Presentation(s): Forging an identity in the present with the past: A case study of a Chinese couturière

With Rihanna donning a bright yellow dress by Guo Pei ascending the stairs at the Met Gala in 2015, Chinese couturiers have come to the fore in the global high fashion world. To distinguish themselves, however, Chinese couturiers often take inspirations from China's past. Drawing on field research of a noted couturière based in Shanghai, China, this paper examines how China's past has come to help define the present and how a sartorial identity is articulated to and received by the clients. It explores the extent to which a new couture culture is emerging in the context of the 21st century Shanghai.

In the Shadow of Ghosts: Recovery, Identity and the Catastrophic Injury Industry

Catastrophic injury bifurcates a life. Abruptly propelled along a new trajectory, survivors are beset by ghosts: ghosts of the self as we knew it, of life as we had planned, of the people and relationships we loved, and of ways of being now incomprehensible. Every moment holds reminders of a life lost. Insurers and medico-legal experts summon these ghosts to measure and quantify injury and loss. Success in the medico-legal system demands that survivors live in the shadows of their ghosts. Yet, these are the very moments where survivors must make peace with what haunts them to redefine their existence.

This paper examines notions of 'recovery' within the catastrophic injury industry. Specifically, I examine how ideas of recovery differ between injury survivors and the experts quantifying their claims for financial compensation. Should survivors strive to become a repaired, imperfect version

of their former selves, or might they grow to encompass, and be transformed through injury? This presentation entwines 5 years of 'recovery' from catastrophic injury with five years of ethnographic encounters with the medico-legal industry, problematizing the very notion of 'recovery' at the heart of catastrophic injury compensation.

Nuclear Systems Literacies as a Non-Goal-Oriented Goal: Context-Centered Pedagogy for Collaborative Siting

In an attempt to depart from top-down, technocratic nuclear waste management approaches, the U.S. Department of Energy recently supported process development for "collaborative siting" (originally "consent-based siting"). The 12 "consortia" funded to advance this process from 2022 to 2024 conducted research to better understand informed consent around complex topics, and the conditions necessary for a legitimate consent-based process. This paper, emerging from broader ethnographic research on the evolving consent-based siting process, argues that this new approach to siting demands new models of knowledge sharing and creation that go beyond transmission-/deficit-model-based attempts to unidirectionally "inform" the public. We ask, as our central question, what pedagogical contexts could cultivate "nuclear systems literacies" that enable meaningful participation in consent-based siting processes and other scientifically and politically complex challenges? Based on our design and evaluation of a program focused on nuclear science and engineering fundamentals, and also incorporating perspectives from the interdisciplinary field of science and technology studies, we propose three conditions that characterize our "context-centered pedagogy:" 1) an exploratory atmosphere; 2) experiential and interdisciplinary learning; and 3) imaginative shaping of what is being consented to. A context-centered pedagogy, as we are developing the concept and practice, aims to go beyond "raising awareness" of contextual factors as background by reframing contexts as effective targets of intervention; encouraging work on systems, not just in them. This, of course, is a challenging goal; a "non-goal-oriented goal," that requires the development of experimental systems. While pre- and post-program surveys (with open-ended and Likert scale questions, supplemented with participant-observation field notes, and analysis of student presentations) reveal significant changes in perception around nuclear topics, we conclude that more research is needed on efficient pedagogies for systems thinking and epistemological literacy (put simply, understanding how the map is never the territory while collaboratively developing maps that are better fit-for-context).

Rites of False Passage: a ritual critique of MIT Media Lab's Food Computer project

Between 2015 and 2020, MIT Media Lab's Food Computer project captivated public imagination with a promise of democratized digital farming: anyone could become a "nerd farmer" by uploading and downloading "climate recipes" to grow plants in a computer-controlled box. But behind the

sleek interfaces and TED-stage charisma, the device failed to grow anything at all. It was, ultimately, an elaborate fiction-fabricated data, staged demos, and no verifiable agricultural output.

This talk offers a ritual critique of the Food Computer based on my ethnographic research. Drawing from Tim Ingold & Elizabeth Hallam, I frame the process of making in terms of rites of passage for makers and materials. The making of the Food Computer, however, was arguably a *rite of false passage*. Rather than facilitating a real transformation in farming or technology, the project only managed *impressions* of transformation: the front stage dazzled with promises of efficiency and democracy, while the backstage remained empty-no growth, no results. The ritual signs persisted and thickened despite this absence, creating an illusion of efficacy. A rite of false passage is an unstable symbolic performance that is not anchored in any referential reality. This instability appends two phases to the classic three stage structure of ritual as understood by Van Gennep and theorized by Turner. Separation, liminality, and reintegration are followed by exposure, when the facade cracks, and closure, when the issue is redressed.

False passage is not unique to the Food Computer but endemic to a wider class of techno-speculative artifacts. Recent examples of adjacent technologies include Theranos' Edison, One Laptop Per Child, Rabbit r1, and self-driving cars, among others. Such objects inhabit a thick symbolic terrain, recycling cultural myths of innovation and empowerment, while severing the grounding from any stable reference. In the computer and cognitive sciences, this disjunction is known as the "symbol grounding problem". But symbolic excess is not just a technical issue. Ritual critique can offer diagnostic tools for understanding a tech culture whose symbolic forms can perform transformation without enacting it.

Presenter(s): Dan Qaurooni

What Makes Cross-Gender Performance in Chinese Opera Possible: An Ethnomusicological Study on Theatricality, Conventionalization, and Codified System

This paper investigates the codified aesthetic system underlying cross-gender performance in Chinese opera, a practice that transcends historical origins to remain a cornerstone of the art form. While existing literature highlights the historical development and the performative techniques of Chinese opera, less attention has been given to its systematic theatricality-rooted in conventionalization, abstraction, and codification-that enables cross-gender roles to thrive. Drawing on insights from performance studies, semiotics, and cultural anthropology, this study addresses this gap by exploring how these elements create a shared "contractual" language between performers and audiences.

The research is grounded in extensive fieldwork across 11 cities in Mainland China, including participant observation and in-depth interviews with 70 practitioners and audience members in 2023 to 2024. These findings illuminate the layered codification within Chinese opera, spanning the personal connections between performers and their roles, interactions among co-performers, and the dynamic performer-audience relationship. By contextualizing these practices within broader theoretical frameworks-such as Brecht's alienation effect, Schechner's performativity and

Saussure's semiology -this paper examines how cross-gender performance blurs boundaries between gender, reality, and imagination.

This analysis offers new perspectives on the sustainability of Chinese opera in contemporary society, also emphasizing the need for audience education and cultural appreciation. By situating Chinese opera within both its historical roots and current challenges, this paper contributes to discussions on global performance traditions, aesthetic systems, and the interplay between traditional art forms and modernity.

Presentation(s): "Being gifted again" as reciprocating: An examination of the practice of gift exchange in the business succession on the remote island in Japan

This presentation analyzes how practices of gift exchange are taken place between the deceased or retired family business owners and the successors of that businesses in the island in Japan.

As the birthrate declines and the population ages in Japan's rural areas, many private companies operating in these areas face the problem of severe aging and shortage of workers. Especially on the remote islands, the very small private enterprises provide the essential services for the social life of the islands, and if the owner of the enterprise retires or passes away, someone must take over the business, or the social life of the island will be severely affected.

In this presentation, I will consider the question from the viewpoint of gift theory; how "objects" such as businesses and companies, which must be unilaterally gifted in the form of transfers when business owners retire or pass away, are or are not transferred and gifted in what ways to which persons or organizations.

My research field is a remote island in west Japan called Ama-Cho(town), Shimane Prefecture, which is famous for their active rural revitalization and increasing the number of young immigrants from the urban areas.

Therefore, even though there are young people available to take over businesses that are in danger of closing, these businesses are mainly taken over by the island residents or existing private companies on the island, rather than by new migrants. And many of them are closed down without being taken over when the island residents or private companies on the island are unable to take over the businesses, even if the businesses are significant to the social life of the island.

I explain that the "object" of the business has an inalienable relationship with the person of the deceased or retired business owner from the case of business succession on the island in which the gift economy practiced by the limited people and land.

Then I will review the act of "being gifted" in the practice of gifts through discussing the following.

1. The business transfers by the island residents and private companies on the island are the practices in which the actors who have already gifted something from the previous owner, such as the employees or business partners on the island who were taken care of by the owner, dare to "be gifted again" as reciprocating for the gift they have already received.
2. Thereby transforming the negative image of the business that "must be taken over" into a positive one that respects the previous business owner as a member of the island community.
3. Being transferred a business as a practice of reciprocating also prevents the successor from being given a selfish image within the rural community.
4. The islanders maintain a reciprocal community in the island through these practices of gift.

Presenter(s): Yuki Negi

Dreaming in Decay: Digital Nostalgia and the Infrastructural Temporality in Chinese Dreamcore

In contemporary China, a youth-driven (mainly Generation Z) vernacular digital aesthetic called Chinese Dreamcore (Zhong Shi Meng He) surfaced, reviving shared memories as ghostly presences: a digital nostalgia that reconfigures decaying urban spaces into discomforting and dreamlike tableaux of estrangement and suspended time. Emerging but diverging from the Western subculture aesthetic of Dreamcore, Chinese Dreamcore deviates from ironic critiques of consumerism, instead appearing as spectral returns of a national dream. This digital aesthetic reanimates the spatial ruins of China's late-1990s to early-2000s developmental optimism as spectral remnants of a stalled national dream-aging corridors, empty neighborhoods, and deteriorating residential blocks now rendered in digitally enchanted form.

This paper brings together anthropological concerns with infrastructural form, digital materiality, and the temporal politics of post-socialist transition. While nostalgia in China has often been associated with an idealized revolutionary past marked by bitterness (Griffiths & Zeuthen, 2014), Chinese Dreamcore points to a different direction, revealing the political dynamics in post-socialist China. It is a mediated and affectively distant practice of remembering. Structures once hailed as emblems of progress return in pixelated form, haunted by a stagnant national dream of post-

socialist progress. They offer aesthetic interruptions, as attachments and signs of what refuses to disappear.

Through ethnographic readings of Chinese Dreamcore production, I argue that its popularity shows a generational hope in a disjointed temporality. These images not only represent the urban decay but also evoke idealized imaginations of home (Doná, 2015). This idealization is filtered through distortion and surreal aesthetics, showing the ghost of the past and memory. In this way, Chinese Dreamcore reimagines nostalgia as an affective tension between progress and stagnation. It offers an anthropological lens into how young adults are involved in digital culture and interact with urban materiality, dwelling with decaying housing infrastructures and stagnant dreams. These images trouble the linearity of developmental time, suggesting a recursive temporality where the past persists as affective residue.

Flux and My Han-ness in Southern Xinjiang: Making the Next Three-Year Choice within the Teleoaffective Structures

Historically, Han migration to southern Xinjiang has often been interpreted as a unidirectional population movement driven by state agendas, amounting to a form of regional occupation in service of political objectives. Within this narrative, "Han-ness" is frequently regarded as a functional identity constructed to fulfill the needs of nationalism, closely tied to the perceived fixity of the Han population in the region. However, through close observation of mobility patterns among Han migrants in the Aksu area of southern Xinjiang, this paper identifies a more subtle and cautious trend of movement. Within a seemingly stabilized sociopolitical atmosphere and under policies that appear increasingly liberal, a new generation of Han migrants—specifically, those who outwardly comply with current CCP policies—display ambivalence in both political belonging and residency decisions. This hesitancy stems in part from dissonance between different waves of Han migrants and from an acute awareness of everyday differences between Han and Uyghur modes of life. These dynamics point to the emergence of a new, indeterminate pattern of bidirectional migration.

Amid such social fissures, Han individuals begin to treat Han-ness as a reflexive identity shaped by their specific spatial and temporal circumstances. They gradually disentangle this identity from the essentialist binary of fixity and flux. Using these two concepts as analytical entry points, the study reconceptualizes Han-ness as an individualized form of self-identification. This identity emerges through negotiations of agency under constraint and gains meaning through interpersonal interactions. In turn, these evolving identities influence and are influenced by their immediate social environments. Drawing on the process through which self-identity becomes socially embodied, the paper reconfigures Han-ness as a dynamic and adaptive form of life rather than a static cultural category. By conceptualizing Han-ness as a collective formation marked by resilience and organic capacity for growth, the analysis adopts an introspective lens to reflect on the limitations embedded within its developmental context. These constraints are closely tied to a broader crisis of procedural legitimacy in the region. The paper ultimately argues that Han-ness

exists within a gray "third zone," haunted by historical ghosts and legacies, oscillating between idealized loyalty and opportunism—a vacuum shaped by the internal struggle of individuals negotiating within Teleoaffective structures.

Ghosts of Participation: The Aftermath of an Abandoned Rural Museum in Eastern China

This paper reflects on a village museum in Eastern China that no longer functions - its exhibitions deteriorating, its doors locked, and its community largely ambivalent. Intended to celebrate intangible heritage and foster local pride, the project now lingers as a silent monument to misplaced intentions. Through field observations and conversations with villagers, I consider what this "ghost museum" reveals about the symbolic role of heritage infrastructure in state narratives of rural development. What kinds of absences does it produce? What traces of participation remain? In treating the museum not just as a failure but as a meaningful artefact in its own right, I raise broader questions about the temporality, utility, and politics of cultural heritage.

Media Deceleration: Temporality and Time Experienced in iPanda Slow Live-Streaming

The giant pandas (*Ailuropoda melanoleuca*) are believed to be cute and cozy, sleeping a lot and being somewhat slow. The iPanda channel puts Pandas' real-time life 24/7 on a non-stop live stream, which resembles slow live streaming. Pandas combined with slow live streaming makes it even "slower", where time seems to be extended. How is time and temporality experienced subjectively in panda slow live-streaming? What is behind the "boring yet interesting" live images in a digital media age? This paper, taking technography as research method, tries to understand time and temporality within panda slow live-streaming through participant observation and in-depth interviews. This paper found that panda slow live-streaming is embedded into time for sleep, labor, and leisure. Instead of slowing down the paces of everyday life, panda slow live-streaming actually serves possibility for "time axis manipulation". The audience of iPanda, or "panda fans", gain an impression of company and co-presence, and develop a subculture through panda slow live-streaming. The cameras are not panopticon or human-centrism gaze, but more of tools for "social co-presence". Through co-presence with pandas, people retained "becoming-with" the nature, sharing their individual time with other people and species. Media provide the accessibility of social deceleration, which is not time that slows down, nor the slow-motion in videos. Social deceleration means that users are able to manipulate media content to match their own everyday life rhythm, thus re-establishing a coordinate reference system of time, and adjusting subjectivity within time and temporality.

Spectral Associations: Sophrology and medical knowledge in a Japanese maternity clinic

Sophrology is a set of relaxation strategies that are employed to improve clinical outcomes. Utilized in practices from dentistry to imaging across Europe, Sophrology is most commonly applied to childbirth in Japan. Drawing on DelVecchio Good's biotechnical embrace to examine the literature and practices of Sophrology in a Japanese maternity clinic, I demonstrate how Sophrology used during labor provides a case study of how medical knowledge is circulated, applied, and embodied to meet national ideals -- even when (perhaps especially when?) specters of orientalism and occidentalism are part of the narrative.

Tianxia's Elastic Boundaries: Symbolic Inclusion and the Ethic of Placability

In its classical sense, Tianxia constituted a world-ordering structure predicated on narrativity-discourse, symbolism, and ritual. Its logic operated on the principle that "order is relationality": a cultural-ethical narrative stratifying, categorizing, and ascribing meaning to the world. Constructs such as the "Five Zones" (五服) and "tributary homage from myriad states" were not geographical facts but symbolic spatial arrangements. Tianxia functioned primarily as a symbolic system-a cultural grammar that imbued political relations with significance rather than a technical blueprint for power distribution. This study is based on ethnographic research in Western China.

The contemporary resurgence of Tianxia discourse in China should not be interpreted as either a revival of classical political idealism or nationalist nostalgia. Instead, it operates as a machine of illusion-generation-a "hyper-moral phantasmagoria" produced through the interplay of technological media, state rhetoric, historical inertia, and global capital. This phantasm does not rely on ethical-rational coherence but thrives on affective mobilization, cognitive closure, and hyperreal saturation. Within this spectacle, Tianxia manifests not as a rational dialogic framework but as a recursive circulation of national sentiment as spectacle.

We inhabit a globally interconnected space in which ethical bonds have become unanchored, and symbolic orders detached from lived values. The modern resurgence of Tianxia (天下) in China does not restore a moral cosmos, but operates as a spectral formation-haunted by its historical grammar yet animated by affective mobilization and geopolitical desire. Its subjects do not live within a coherent ethical world, but rather drift as spectral presences-summoned by a fantasy of civilizational harmony, yet suspended in the hollow form of value rationality.

Can we envision a non-phantasmic Tianxia? What ethical foundations and practical logics might undergird it?

Although the distinctive external signs of ethnic minority life in Guizhou and Hunan have gradually faded in the course of modernization, the village feuds and clan conflicts that were common in the early years of the PRC still survive today in more veiled forms-through customs of non-intermarriage, mutual avoidance, and ritual exclusion, especially in remote villages. In some places, crossing a single mountain ridge means entering a world governed by entirely different customs, languages, and even ethical structures. These boundaries are not those of the nation-state, yet they constitute the gray violence within the logic of Tianxia-not overt hostility, but latent

forms of exclusion and symbolic aggression, born of irreconcilable belonging, identity, and cultural incommensurability. This is Tianxia as a symbolic structure made real: it sustains its flexible margins not through explicit sovereignty, but through passive civilizing projects, muted alterities, and unspeakable t

“Ordinary people”: The formation of a moralistic discursive space

Inspired by the Foucauldian theory of subject-formation, this article examines the formation, or more precisely the re-formation, of a moralistic discursive identity in contemporary China: "ordinary people" (putong ren). Though "ordinary people" is not a new concept in China, it has gained a renewed popularity in a paradoxical manner since the late 2010s: while the Chinese society as a whole has become more extraordinary rather than ordinary globally, Chinese subjects predominantly and passionately identify themselves as "ordinary" rather than "extraordinary" people. To address this paradox, we analyze how two groups of Chinese citizens-middle class persons and migrant workers-themselves actively pursue and identify with this newly popularized discursive space of "ordinary people," apart from clarifying the hegemonic role of the state in the formation process.

Whereas both groups passionately employ the newly popularized "ordinary people" identity, they have rather distinctive and at times contradictory rationales underneath. For middle class persons, their identification with "ordinary people" makes them at once enjoy their newly obtained freedoms (mainly in terms of freedom of consumption choices) and shirk whatever social responsibility they may assume for the society at large. For migrant workers, in contrast, this discursive identity largely comes out as a result of resignation, a powerless acceptance of their disadvantaged status in today's China-that is, being ordinary as the only life option rather than one choice among available others. In spite of these differences, both groups embrace the identity of "ordinary people," and both groups inject a strong moralistic underpinning of the "ordinary people" identity.

Presentation(s): Remaining Risks: Palliation and the Violence of Staying Behind

Stepping off a Cessna into northern Guatemala in 1998, a passerby warned, "Everyone here is drunk, dead, or unhappy." Ignoring this missive led to a decade of ethnographic research among youth confronting genocide's aftermath, systemic precarity, and pressures toward migration. This paper examines palliation-the practice of easing without curing-as experienced by individuals who have remained, troubling simplistic notions of recovery and engaging long-standing anthropological debates around structural violence, suffering, and obligations created by fieldwork (Scheper-Hughes 1993; De León 2015; Warren 1998; Sanford 2012; Grandia 2012; Yates-Doerr 2015).

Grounded participant observation, interviews, and collaborative analysis over two decades, this paper begins at the grave of my twenty-one-year-old godson. In the past two years, he had risen in the ranks, with my intermittent financial support for his schooling, to become manager a fast food restaurant on Guatemala City's urban periphery. He died. We will never know why. Perhaps he refused to issue a loan; or to put his car into the service of cartels. Maybe he was robbed; or fell asleep at the wheel. Each scenario exposes how formal and informal actors enforce systems of control. I first confronted his tortured body via video call, and then video replay as they proliferated across the Guatemalan press. Accompanying his family to secure burial space, by removing the bones of an unpaid grave occupant, underscored multiple registers of abandonment.

These are economies that do not produce prosperity; service labor is volatile and racialized. Such patterns are further intensified by global anti-immigrant rhetoric, as the Trump administration inflates the value, and risks, of migration and staying in place.

During Guatemala's genocide the state strategically denied responsibility for civilian deaths, employing uncertainty as a form of terror. Contemporary corporations and politics now assert the right to enact violence openly. As Grandin (2004) suggests, this shift marks a transition from hidden to overt forms of state-sponsored brutality. In this context, acts of aid or alleviation serve as covert mechanisms of control, revealing how palliation itself reproduces structural violence.

My ethnographic analysis challenges moral binaries between suffering and survival and reframes palliation as a form of systemic entanglement. It argues that those who remain, often depicted as static in the postwar or after mass outmigration, navigate uncertain terrain. Ultimately, the paper contributes to anthropological understandings of violence, labor, and migration by tracing how we depend on the suffering of others. It calls for renewed attention to the responsibilities of anthropologists, states, and consumers in sustaining regimes of dispossession.

Rural Place Stigma as an Affective Experience: Health Implications for California's North State

Spatial stigma, which can be conceptualized as symbolic meanings associated with a place, including negative perceptions and attitudes associated with certain geographic areas, has emerged as an important social determinant of health. Over the past decade, researchers have theorized links between spatial stigma and negative health outcomes, including poorer mental and physical health. However, much of this research has focused on urban areas, with less attention paid to how spatial stigma may operate in rural places to produce health inequities. Drawing on in-depth qualitative interviews from two studies examining social and structural factors that shape substance use practices among young adults in California's rural northern counties, referred to as the "North State," this analysis draws attention to the affective dimensions of stigma to understand the embodiment of rural place stigma, and examine links to health. Resisting categorization, stigma can be viewed as an affective resonance that carries emotional and embodied dimensions that can attach to specific places with the potential to become embodied in residents of those places.¹ In the context of the North State, participants reveal an awareness that their communities are "symbolically degraded" by widely held perceptions of drug use within rural North State communities. In this context, place functions as a "spoiled identity" which is linked, yet distinct from biases based on race, class and other social positions.¹ Indeed, throughout the interviews, many participants shared negative portrayals of the rural communities they either lived in or grew up, often alluding to larger structural issues related to economic disinvestment and inadequate housing, all of which can impact access to health-promoting resources and various health outcomes, including substance use.

Silver Teeth: Silver Diamine Fluoride Hesitancy and Parental Perspectives on Oral Health Outreach at Head Start

How do parents weigh the benefits and uncertainties of preventative dental care delivered in early childhood education settings? This talk draws on qualitative research conducted in partnership with Ohio State University's dental outreach team and the Head Start program in Franklin County, Ohio to explore how parents and caretakers make decisions about consent for onsite dental screenings, fluoride varnish application, and silver diamine fluoride (SDF) treatment for caries control. While such interventions are effective, inexpensive, non-invasive, and safe, they also prompt hesitation among caregivers for a variety of reasons. One well discussed concern regards aesthetics, as SDF stains damaged enamel a dark color. This talk opens up the layered experiences that shape parental hesitancy like strained medical trust, feelings of shame, and diffuse concerns about fluoride safety.

Teeth are an under-investigated aspect of social life. They are sites of perceived medical vulnerability, which are prone to misinformation and anxieties that often index other social concerns. Teeth emerge as a site of affect, where emotions like fear and shame are densely experienced. This talk discusses the logics and affective impulses that inform oral health decision making. Parental narratives reveal structural barriers and deeply felt beliefs that shape engagement with dental public health efforts. Findings offer insight into the basis of communication between oral health professionals and the communities they serve, particularly in disadvantaged communities where dental outreach is needed most.

Dental care is a site of negotiation, rather than simple compliance or resistance. This work contributes to broader anthropological discussions on health governance and institutions of care in early childhood—an area where anthropology offers critical insight.

Social Connection Among the Unhoused in Northern Arizona

Homelessness is a major public health issue in the US. Research shows that unhoused people face numerous challenges including social isolation and loneliness. Ethnographic researchers show how unhoused individuals also desire and establish relationships and connection. We draw on participant-observation and 14 semi-structured interviews with individuals at an emergency shelter in Northern Arizona. The interviews explored participants' early lives, social connections, work, and experiences of institutional care. Themes identified include trauma and adversity in early relationships, positive social relationships, connection through helping others, and the complex relationships between unhoused individuals and social service providers. While social connections can offer unhoused individuals a sense of connection, they may also limit personal autonomy. This is particularly the case for relationships with social service providers. It is essential to enhance service provision by fostering reciprocal relationships and opening possibilities for the unhoused to not only be care-receivers but also care-givers.

Social Weight : Observing Weight Loss drug Prescription in American Media & Culture

In the last 5 years, the introduction of "weight loss" & 'weight controlling' drugs, GLP-1, often metonymically referenced Ozempic, have dramatically shifted public debate about weight & fatness, acting strongly in cultural construction of the idea of fatness itself as disease now that a direct treatment is available, in contrast to ongoing political and medical efforts to separate body-size from definitions of disease. Our concerns follow from a group led interdisciplinary roundtable at the 2024 Meetings, drawing on the authors' cooperative autoethnographic, media analysis, & critical professional paraethnography. Impacts of these drugs are expected to be enhanced in the near future as a potentially lower cost, & easier to access "Weight Loss Pill" version is to be

introduced. In contrast to its predecessor, which was intended to treat disordered blood sugar, the new version is targeted directly to a weightloss market. Neoliberal and individualist modes shape these pharmaceutical products as an enticement & engagement with issues of weight, health, eating-disorders, conception of willpower, & lifestyle. We consider the cultural relevance of even greater importance than the rising medical issues related to overprescription & rising rates of related nutritional deficits. GLP-1 drugs act particularly by encouraging a fundamental conflict in the conception of eating as a desirable basic human function- rewriting appetite as 'addiction' or 'compulsion' expanding sites of debate in what we should consider need and appropriate conception of human experience. We suggest current fights about biological innateness and the future of a healthy humanity are haunted by the remnants of the eugenics movement and its normative medical science - things we often consider exorcised in light of modern concepts of consent. But when cultural logics deny real evaluation of position and conception, individualist modes of decision making may not sufficiently evade the wraiths of the past that shape our choices at the historical scale, resurrecting the 'Ghosts' of debates that may or may not have been suppressed in the past regarding the acceptability of medical intervention to 'will' or 'self-determination.' Celebrities, responding to weight shaming and fat-phobic normative culture, use the drug or are accused of using the drug when their weight loss appears technologically enabled, bearing comparisons to widespread over-prescription of mood-altering drugs & diet pills, 'mother's little helpers,' as a contested pharmaceuticalization of people's conformity to an ideal in the 1950's. We also see the spectre of 'naturalism' in these discussions, In the form of a demand that people's changes are both self-directed and accomplished 'naturally,' even though the denial or camouflage of chemical assistance is contrary to widespread legitimization of these drugs being promoted to the widest possible audience who can pay for the privilege of being in the 'healthy' appearing group

The Social Life of Anabolic Steroids in Egypt: Embodiment, Enhancement, and the Specters of Uncertainty

Egypt is a global hub for the international bodybuilding community and one of the few countries where the non-prescription use of anabolic-androgenic steroids remains legal. While unique in this regard, Egypt also reflects broader regional trends: Middle Eastern countries are overrepresented in bodybuilding championships and report some of the highest rates of steroid use worldwide.

This presentation draws on two years of ethnographic fieldwork in Cairo, including participant observation in gyms, pharmacies, and clinics, as well as interviews with personal trainers, bodybuilders, gym-goers, pharmacists, and medical professionals. It follows the social life of anabolic steroids across formal and informal markets, tracing how they circulate, how they are prescribed and monitored, and how users navigate their risks in pursuit of physical and social transformation.

Rather than framing steroid use through dominant paradigms of pathology-such as addiction, muscle dysmorphia, or narcissism-this research examines how the materiality of steroids, the legal conditions enabling their widespread availability, and the markets through which they circulate shape embodied experiences. While Egypt's legal status allows wealthier users to access medical oversight, many-especially younger or working-class users-rely on personal trainers, gym communities, social media, and self-experimentation. In a healthcare landscape where institutional gaps and economic barriers limit formal medical guidance, individuals must regulate their own enhancement practices, reflecting a broader neoliberal logic in which responsibility for health is increasingly individualized.

Yet this self-responsibility is not just an economic burden-it is an affective and embodied one. Users experience a heightened sense of mastery over their bodies while simultaneously fearing unseen risks. The materiality of steroids-fluctuating hormone levels, heightened aggression, increased confidence, shifting libido-entangles with the social relations of their use, from gym camaraderie to summer vacations, trust, and dependence on informal experts. These biochemical and social forces co-produce new forms of masculinity that are at once fragile and intensified, shaped by aspirations for strength, control, and mobility in an unstable economic landscape where the body itself becomes a site of investment and risk.

By shifting attention from elite bodybuilding subcultures to more casual users, this research highlights how steroids mediate not only the physical body but also emotions, desires, and relationships. It contributes to critical debates in medical and psychological anthropology, embodiment, and biopolitics, showing how bodily modification practices mediate emerging forms of personhood, risk, and aspiration in contemporary Egypt.

“Being sick is a family affair”: familial and social support as resilience strategies for mitigating health disparities among Veterans in Ghana ΣÁ

Drawing on research in Ghana, I explore how family ties and social networks enhance resilience and reduce health disparities among veterans. While researchers have considerably focused on non-veterans' experiences of accessing healthcare, there is little attention paid to veterans and their unique challenges in Ghana. I explore how social relations compensate for the shortcomings created by pharmaceuticals in the healthcare system. Drawing on ethnographic interviews and document analysis, I investigate the nature of care support available within veterans' families, the healthcare system, and the Veterans Administration, Ghana (VAG), to demonstrate how such supports help veterans to navigate the healthcare system in Ghana. Interview questions explore how financial, emotional, transportation, and medication management support shape health outcomes for Ghanaian veterans. The paper critically examines the impacts of increasing reliance on pharmaceuticals and how familial support contributes to improving the physical and mental wellbeing of historically disadvantaged veterans in Ghana. “We can’t solve food insecurity”: The food-is-medicine paradox and competing goals of care among healthcare staff in Northern California

"Food is medicine" refers to a growing paradigm shift within western medicine that emphasizes the intrinsic relationship between nutrition and health. Though this concept has roots in ancient global traditions that place food and medicine within the same continuum, "food is medicine" as-used in U.S. research and policy refers to the greater integration of nutrition and food-based interventions within healthcare services. This work draws from a 3-month pragmatic ethnography conducted in 2024 for a quality improvement project within an academic, pediatric health institution in northern California. Interviews and observations were conducted with frontline healthcare workers and leadership to understand the on-the-ground impact of the 2024 Centers for Medicare and Medicaid Services requirement for healthcare organizations to screen patients for food insecurity. In the U.S., food insecurity and its social drivers have been a growing area of emphasis within the food-is-medicine paradigm, propelled by the continual rise in the number of individuals living within the U.S. who have difficulty accessing either nutritious food, or any food at all. First, I explore the ways in which healthcare staff conceptualize healing and care in the context of providing food-based resources for food insecure patients. I then critically examine the food-is-medicine paradigm, highlighting an intrinsic paradox that is created by equivocating food with medicine while simultaneously divorcing "food as treatment" from "food as sustenance" in practice. I then conclude with arguing that for healthcare organizations managing limited resources, this paradox of the food-is-medicine paradigm creates a complex moral landscape; new questions arise around the responsibility of the health system and the "deservingness" of different recipients that can lead to competing goals of care.

3674 Specters of Care and Hauntologies of Disability in Anthropology

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Grand Ballroom A-C (5th fl)

Type: Roundtable/Town Hall

This roundtable engages with hauntologies that emerge at the nexus of disability and care – a nexus we contend is central to anthropology.

Disability, argues Rosemarie Garland-Thomson, is "the essential characteristic of being human" because it reminds us of the mundane truth that "all bodies need care and assistance to live" (2017, 328). How, then, to make sense of anthropology's resistance to disability as a focus of research and its troubled histories of engaging disabled people and disabled anthropologists (e.g. Colligan and Jaysane-Darr 2025)? Conversely, anthropological literature on care has proliferated so extensively that its contours have blurred. Care is in need of troubling (Duclos and Criado 2020),

but it continues to haunt our work: we constantly return to care as a category of analysis and practice.

Relationships between care and disability are ethically and politically fraught. Histories of eugenic and colonialist social policies haunt disability, highlighting how care can be paternalistic, violent, and toxic as much as beneficial or healing. Disabled people and allies clash over what good care looks like and to what ends. Paid and unpaid caregivers get worn out by the machinery of care bureaucracies and the weight of caring in conditions of precarity. Through research and lived experiences with care, anthropologists navigate these contradictions and highlight forms of kinship, ethical and political orientations, and embodied action that emerge from the disability-care nexus.

Roundtable participants will grapple with the uneasy nexus of care and disability by addressing the following questions: How do we ethnographically engage the specters of violence that haunt care in disability worlds? What does it mean to work towards "middle theories of care" (Wolf-Meyer 2025), and what can this work do for the study of disability and for anthropology writ large? What ethnographic modalities inform and emerge from grappling with disability and care, and how can these be mobilized across subfields of our discipline?

Hauntologies invite us to engage with the spectral presences that we as researchers and our research communities contend with in everyday life. This roundtable explores how ghosts-of people, policies, and practices-shape how anthropologists have and might address disability and care anew, to align historical forces with future needs for us as anthropologists and for the communities we serve.

5399 Specters of Covid-19: Mental Wellbeing and the Life Course, Five Years On

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

Five years ago, daily life around the world was upended when Covid-19 spread around the globe and launched a pandemic. For a period of weeks, months, or even years, large numbers of people in nearly every country in the world altered the way they worked, played, and learned. While life has since returned to "normal" for most, the long tail of Covid is still being assessed. This panel examines how the shocks of Covid-19 impacted long term mental health particularly for those going through key life transitions—what Jennifer Johnson-Hanks calls "vital conjunctures"—like entering higher education, the workforce, parenthood, and retirement. For some just finding their way in life, the dramatic external shocks associated with Covid pushed them off the paths they were trying to build for themselves, introducing stressors and obstacles that challenged their wellbeing and remade their futures. For others, Covid solidified and clarified their values and goals, changing their long term wellbeing in positive ways while keeping their trajectories intact. Early reports suggested that the biggest impacts on wellbeing would be felt among vulnerable populations who were disproportionately impacted both by the virus itself and the financial and educational disruptions associated with it. This panel will examine how students, young adults, new parents, retirees, and others who faced Covid at vital conjunctures - especially those who are members of vulnerable populations - are coping five years later.

Presentation(s): Becoming in a transnational space of aging and adversity among Latinx immigrant women in New York City

We explore how Latina immigrant women in their 50s and 60s struggled to flourish and thrive during the COVID-19 pandemic, while simultaneously confronting the realities of aging and various forms of adversity. We draw on findings from a qualitative study based in New York City, including ethnographic interviews and biweekly journals created over a six-month period. Findings illuminate how women cleaved to their most basic, defining commitments — including commitments to

protect and nurture the people closest to them, who may include children or grandchildren, their community, or themselves — while also learning to live in aging bodies and cope with tremendous disruption and social upheaval. We foreground the importance of listening to the perspectives of older immigrant women, especially in efforts to understand how the pandemic both intersected with and impacted their experiences of aging. Careful attention to the texture and dynamics of their experiences can strengthen understanding of gender and migration over the life course — and contradict assumptions that immigrant women's lived experiences of aging are necessarily constrained by vulnerability, stasis or stagnancy. As immigrant populations grow older, experience-near insights into how they pursue a meaningful life in the face of adversity and while navigating pivotal life transitions can deepen understanding of both the challenges of aging and the ways in which later life can be positive, enriching, and transformative.

Fragile Obligations: Navigating Elder Care and Self-Care in Post-Pandemic China

This paper examines how the prolonged effects of the pandemic have reshaped the ethics and boundaries of intergenerational care in urban Chinese households. Drawing on ethnographic research conducted in Beijing in 2023, it explores the emotional complexities and ethical dilemmas faced by adult children caring for aging parents with chronic illnesses and cognitive decline. Amid China's volatile political economy and unstable housing market, intergenerational households have become contested spaces marked by tensions between filial obligations and caregivers' own well-being. Through interviews and participant observation in homes and care institutions, I focus on two interlocutors, both only children in their late 50s. Ming, living abroad and constrained by pandemic-related travel restrictions and lockdowns, struggles with the decision to institutionalize his mother, who has Alzheimer's. Lina, facing financial insecurity following early retirement, ultimately opts for home-based care after extended deliberations with her parents, who previously resided in an expensive nursing facility. Their narratives reveal how adult children approaching retirement navigate vulnerabilities, moral ambivalences, and economic pressures intensified by structural uncertainties. Ultimately, this paper illustrates how caregiving amid systemic instability and life transitions compels caregivers to continuously renegotiate the boundaries of proximity, intimacy, and obligation in their everyday lives.

Covid, Mental Health, and the Structuring of Time

"Unstructured time could become an overabundant and even dangerous quantity," says Danya Fast (2024:91) in her ethnography of addicted youth in downtown Vancouver. She identifies boredom, lack of movement, a sense of being stranded in place as key drivers of youth crime and addiction. Much discussion, by anthropologists and health experts, of the damage covid inflicted on mental health, especially the mental health of youth, focuses on the following issues: the sudden sense, in 2020, of acute bodily vulnerability; the abrupt unexpected deaths of friends and family members;

deaths enacted, in defiance of normal social scripts, in quarantined isolation; the loss of social interaction due to quarantine rules; and conflicts over mask-wearing. Here, drawing in part on the experiences of my teenage children, I look instead at the restructuring of time, both repetitive and linear time, as a mental health problem. In terms of repetitive time, students have conventionally structured their days in terms of commutes to and from school, class periods, scheduled breaks, after-school hangouts and so on. When school became remote these rhythms dissolved and time became more "unstructured" and "overabundant." In terms of linear time, until the vaccine, covid profoundly undermined the progress narrative whereby each generation is better off than its predecessor that is core to the American imaginary.

The Afterlife of Fear: Chinese Migrants' Practices of Well-Being in Post-Covid Italy

Fear is the recurring keyword used by Chinese migrants in Italy to recall the most challenging moments of the Covid-19 pandemic. Their fears of a mysterious and deadly virus threatening transnational families, of worsening economic precarity under a piecework-based labor regime, and of rising anti-Chinese racism, reveal layered emotional and social stressors in navigating uncertainty in a foreign country. Five years on, Covid-19 has become both a collective memory and a lingering social trauma. While life trajectories appear to have returned to pre-pandemic rhythms of long hours and intense work, the specters of the pandemic continue to haunt many Chinese migrants. The Covid-19 pandemic marked a turning-point in their understanding of life and death, prompting new negotiations over what it means to live well and over the very meaning of working abroad. This paper draws on long-term ethnographic research in Prato, a Tuscan town known for its Chinese-led textile and garment industry, to examine how Chinese migrant entrepreneurs and workers have transformed a condition of living in fear into practices of doing well-being in post-pandemic times. These practices, ranging from dietary arrangement and physical exercise to spiritual engagement, reflect evolving notions of health and self-care amid ongoing precarity and uncertainty. While the discourse of well-being has become increasingly popular, access to and expressions of health practices are unequally distributed.

Birthing Knowledge: First-Generation Students Managing Kin, College, and Wellbeing

Five years ago, first generation college students (FGCS) entered an already unfamiliar US higher educational landscape that rapidly shifted course amid the chaos of the Covid-19 pandemic. The structural fallout of Covid threatened these students' advancement through the educational pipeline, and thus their ability to create class mobility for their family members. Covid also turned the once-ordinary intimacies of students' family lives, like the birth of new kin, into the realm of the extraordinary. Based on longitudinal journals and interviews with FGCS from around the US, we examine how some participants who wrestled with their responsibilities to 'uplift' their families through their individual educational attainment also faced new responsibilities to support new family members born during a time of crisis. We show how the conjoined vital conjunctures, of

pregnancy/birth and higher education, intersect with the mutual production of well-being and new kinship roles. We also demonstrate how families' shared experiences of the pandemic illuminated the intersubjective nature of both vital conjunctures and broader life projects, including the reproduction of generations and the building of generational mobility.

From Precarious Death-scapes During the Pandemic to Haunted 'Afterlives' in Post-Pandemic China

The COVID-19 pandemic has ushered in a new era of reflection on mortality, reshaping the landscape of death rituals, death markets, and biopolitical regulations in China. Through continuous fieldwork from 2020-2024, I investigated the intricate transformations experienced by mortuary rituals, death markets, and political regulations over the afterlife in China during and after the pandemic. This research adopts a comparative perspective, aiming to discern differences and similarities in these transformations across different regions and demographics. Specifically, it tries to explore the nuances of death, dying and afterlives experienced by ethnic minorities in Yunnan in comparison to the predominant Han majority in the Yangtze Delta Region during and after the pandemic. Beyond the transformations in mortuary rituals, the research also wants to frame the emergence of new spaces for mourning and commemoration amidst the evolving death landscape in the funerary industry—including spirit mediums, Daoist priests, and state-owned funerary runners. Furthermore, this research navigates the concept of haunting to investigate the supernatural and afterlives caused by the pandemic within the context of post-pandemic China, where state regulations over death are becoming increasingly stringent, secularized, and politicized. Finally, the paper examines the quest to understand how these shifts centering on 'death' contribute to our comprehension of 'life' under accumulating precarity.

Discussion

2889 The "Ghosts" of Vic and Edie Turner

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Oral Presentation Session

This panel delves into the intersection of memory, history, and spirit in today's world by examining the enduring impact of Victor and Edie Turner. On the one hand, our aim is to explore the legacy of Vic and Edie within anthropology through their writings and published work (see for instance, Turner 1967, 1969, 1972; Turner and Turner 1978; Edie Turner 1987, 1992, 2011). Their research taught us to attend to religion, rites of passage, forests of symbols, theater and drama, *communitas*, and to the in-between spaces and ritual processes that shape our lives. Their writings were also a

sustained challenge to the discipline's more positivist leanings. Fieldwork, Edie said, must be done with an absolute recognition of the life worlds of others, diverse ways of knowing, and our shared commonality as living beings. There are no peripheries to humanity – we must and do cohabitate the world. Our panelists will examine how this legacy speaks to the current moment, exploring how Vic and Edie's writings carry not only referential meaning, but also a powerful poetics of spirit and life force that continue to shape how we navigate the present. On the other hand, our aim is to move beyond the written word to take a broader inventory of Vic and Edie's legacy. Our objects of study include embodied memories, relationships, emotions, photos, artwork, heirlooms, and keepsakes that continue to evoke Vic and Edie in unexpected, and often, uncanny ways. For example, we observe the impact of fading photographs, weaves of fabric, smells, sounds and colors, the echoes of muscle memory, dreams, and senses of place, particularly the house on Carrsbrook Drive. These encounters are not entirely surprising to us – one of Vic and Edie's strongest contributions to the field was their acknowledgement of the reality of spirits.

The panelists for this session are comprised of Vic and Edie's family members (children and grandchildren), students, friends, and colleagues who call on personal experiences, new research on Edie and Vic's notes and letters, and archival research, as well as extensive knowledge of their legacy, to explore the ways in which memory, history, and spirit ricochet back and forth with the personal, political, and the anthropological. We ask: what can we learn from their writings, both from its meaning and its poetics? What can we learn from our uncanny encounters beyond the written page and from our acknowledgement of the reality of spirits in our own world making, theory, and activism? How does the legacy of Vic and Edie Turner remind us to embrace the possibilities of diverse ways of knowing, deeper engagement, cohabitation, activism, and repair?

Presentation(s): The Mystical Power of Cultural Performances: Reopening a Turnerian Line of Inquiry Closed Down by the Postmodern Turn

In the 1970s and 80s, Victor and Edith Turner, with collaborators, expanded ritual theory to a broader category of organized events labeled "cultural performances" – public events that provide temporally condensed moments to communicate core cultural themes and values, including theatrical plays, sport competitions, music concerts, festivals, weddings, and more. Milton Singer coined the term in the 1950s, arguing that such events could serve as basic units for the study of a culture. These theoretical explorations were largely dropped before their full potential was realized owing to the death of Victor Turner in 1983, and the arrival of new, Marxism-inspired concepts of

power that came to dominate cultural anthropology in the postmodern turn of the late 1980s, as well as a focus on everyday practice (as opposed to extraordinary events set apart from mundane life) that entered the discipline along with practice theory. This presentation reopens the Turnerian inquiry into the role of cultural performances in social life and their capacity to facilitate social change. In line with the AAA meeting theme of "the eerie and evocative" is their conceptualization of the "power" in ritual, in which rituals themselves possess a kind of power, sometimes described in almost mystical ways, generated by their temporal and symbolic structures – a notion that contrasts with Marxist-inspired perspectives in which rituals serve the power of elites in a one-way direction.

Presenter(s): Susan Brownell

Ghosts, Memories and Enhanced Perceptions of Life

Ghosts, whether they are seen as spiritual entities or as embodied memories and lessons we carry with us, are a fascinating way to think about how we move through the world. Embodying the experiential understandings of the world, those lived lessons and moments passed down through shared experiences with Vic and Edie Turner do indeed create and retain "ghosts" of these two wonderful people. These two mentors and friends left lasting imprints on me. Their wisdom, advice, and scholarship continues to guide me even after they've moved on, and I carry forward their teachings, sharing them with others. Vic and Edie are a part of my intellectual fabric and as I share their ideas with others, these "ghosts" continue to live, allowing their teachings to continue to influence new generations and help others see the world through these valuable perspectives; especially the power of ritual, communitas, liminality, and shamanism and healing.

Presenter(s): Pamela Frese

Reckoning with the Traces

The smell of my father's comb after his death, the caked-up flakes caught between the teeth of the scuffed dark plastic. My mother's old well worn knit cap and her words. I wear that cap still, and her words have become part of my own. We are made by such things, echoes, traces of time, searingly concrete but also maybe not just that. Here I reflect on traces of my parents Vic and Edie Turner in my life, and hopefully something beyond that. The pair of them were passionate about the detailed particularities of things. Deft writers and ethnographers, they were humbled by the suchness of experience, this ritual plant, this squabble, this epiphany when something new and deeper was disclosed in word or action. And well trained in social anthropology, they were fascinated by the cut and thrust of social life and the statuses, interests, and conflicts that are social organization in action. But the account they made of the world was never complete without something more, something in the in-between space, gestured at, of communitas, anti-structure, the reality of spirits. The world in its manifold unfolding has its way with us, we are little but traces of traces, though something about this creation lives on. Considering the traces that have gone into my fashioning, I consider traces more generally, both that which passes, and that which may remain. How do things leave their mark? What might we be asked to notice, to remember, and to forget?

Presenter(s): Rory Turner

Excerpts from *The House on Carrsbrook Drive: Ghosts, Spirits and Sprites*, a Memoir

As the daughter of Victor and Edith Turner, I'm writing a memoir focusing on my time living in, or near my parent's house

from 2011 to 2021. My purpose here is to present some excerpts from my memories of that experience, as well as older

memories of being privy to their field work and life as anthropologists. I'll describe what it was like to experience the house near Charlottesville, VA as it welcomed family, friends, students, colleagues, and visitors, with an emphasis on my mother, Edie, after my father died. The house itself was unique in many ways and served as a place of refuge and inspiration for many, including myself as a poet, writer, and retired teacher. I'll show how that uniqueness contributed to the intellectual and social life of anthropology at the time, from my own point of view. I hope this presentation will contribute to a deeper understanding of the lives of Vic and Edie in the tradition of similar memoirs, such as, *With a Daughter's Eye: A memoir of Margaret Mead and Gregory Bateson* by Catherine Bateson, Harper Perennial: Reissue edition (March 20, 2001).

Presenter(s): Irene Wellman

Edie Turner's Spirit and Political Activism: Rethinking Anthropological Futures

This paper focuses on Edie Turner to explore the way her spirit, presence, writer's voice, and activism appear in the teaching, research, writing, and politics of her family, former students, and colleagues. Drawing from my own personal experience with her legacy and work as her anthropologist granddaughter, but also from new ethnographic research on her ongoing presence of spirit within the discipline, I aim to understand how presences of spirit can go beyond the written word or mere theoretical contribution to shape memory, politics, and our understandings of our possibility, potential, and anthropological futures. How do Edie's published works, letters and field notes written in her own hand, as well as her spirit expressed in interviews with students, colleagues, and family members, challenge our rigid perceptions of academia as a profane space and what can this do for our recognition, documentation, and confrontation of injustice in the current US political climate? What happens, moreover, when our personal life histories intersect with anthropology?

5008 The Anthropology of Engineering, Authoritarianism, and Nationalism: US Institutions Shift, but We Have Been Here Before

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR C2 (3rd fl)

Type: Roundtable/Town Hall

Shifts in institutional investment in the US are having serious consequences for academic studies, collaborations, and teaching. As the executive branch of the United States government takes radical steps to transform national culture, higher education has been dramatically impacted. As we find our resources, safety, and relations changing, Smith et al. remind us in a 2025 editorial for the journal *Engineering Studies* that, "we have been here before." We have observed and documented many ways that authoritarianism and nationalism have engaged engineering. We are cognizant of how engineering knowledge can be mobilized in techno-optimism to exclude, to surveil, and to harm in contexts like these.

Anthropologists attending to engineering and commercialization have developed insights for practice. These insights may be related to teaching critical perspectives on technology, to developing and maintaining support for our activities, to building solidarities across radical disciplinary difference, or to collaborating with students, professors, and practitioners who imagine different worlds and work to pursue them. This participatory round table brings together anthropologists who study, work with, and teach engineers and engineering and entrepreneurship. From diverse institutional positions, we consider such topics as research, collaboration, teaching, and activism in engineering contexts.

2971 The Cracked Foundations of Society: Unraveling the Ghosts of Power and Displacement

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Galerie 5

Type: Oral Presentation Session

This panel explores the lasting effects of power, displacement, and cultural erasure, framed through the lens of "ghosts" - the invisible or forgotten consequences of systemic forces that

continue to shape both individual lives and broader societal landscapes. By examining the ways in which power structures leave behind lasting imprints, each paper in this panel highlights the ways in which marginalized groups, communities, and environments are haunted by the remnants of their histories.

The papers in this panel draw connections between the enduring legacies of historical oppression, whether through the abandonment of military spaces that reconfigure local ecologies, the reclamation of spiritual practices as acts of resistance against imperialism, or the overlooked contributions of women and African Americans during the Civil War. All of these histories intersect in their ongoing impacts on marginalized communities, from the recovery of lost cultural identities to the creation of "ghosts" in the U.S. healthcare system - groups whose struggles continue to be invisible within dominant social frameworks.

These "ghosts" are not static but active forces in contemporary society. They manifest in cultural erasure, the contested spaces of urban development, the persistence of gender and racial inequities, and the ongoing efforts to decolonize systems of power that continue to marginalize and disenfranchise. As these histories resurface, they reveal the cracks in society's foundations, providing insight into the dynamics of power, resistance, and healing. Through this panel, we aim to demonstrate that the work of addressing these ghosts is not simply an academic exercise, but a necessary act of reclamation and transformation that empowers marginalized communities to reshape their narratives and futures.

The theoretical frameworks underpinning these discussions include critical race theory, feminist theory, decolonization theory, and critical medical anthropology. These perspectives guide the examination of how power is distributed, how resistance emerges, and how historical and contemporary erasures can be addressed. By revisiting these often-overlooked histories, the panel seeks to uncover how contemporary issues of power, memory, and identity are shaped by past injustices. These discussions aim to shed light on the haunting presence of these "ghosts" and the potential for reclaiming and reimagining identity, resistance, and resilience in the face of continued displacement. Through this lens, we challenge the prevailing narratives of progress and healing, offering a more inclusive understanding of the fractures in our society's foundations and the transformative potential of cultural and historical reclamation.

Chair: Meghan Blust

Presenter(s): Sean Roberts, Meghan Blust, Autum Fox, Leticia Castro

Presentation(s): Ghosts of War: The Afterlife of Military Bases and the Rise of Raptors in Shared Spaces

The transformation of military bases into civilian spaces leaves behind more than abandoned infrastructure—it reshapes ecologies, social landscapes, and historical memory. In Orange County, California, the closure of Marine Corps Air Stations El Toro and Tustin has given rise to new urban developments, yet their former perimeters have also become unexpected refuges for raptors. Once

displaced by military aviation, red-tailed hawks, Cooper's hawks, and barn owls now reclaim these altered environments, exploiting greenbelts, landfills, and repurposed hangars as hunting grounds.

This paper examines how the resurgence of raptors in post-military landscapes reveals deeper tensions between history, conservation, and urbanization. As apex predators, raptors thrive in transitional spaces, yet their increasing visibility generates conflicting public perceptions—celebrated as natural pest control yet sometimes viewed as intrusive. Their presence complicates narratives of environmental recovery, challenging assumptions about what is "wild" versus human-engineered. Through an anthropological lens, this study explores how post-military landscapes remain contested, both in memory and in ecological function, as raptors and humans continue to renegotiate the boundaries of shared space.

Presenter(s): Sean Roberts

Ghosts of Imperialism: Alternative Spirituality as Resistance and Cultural Reclamation

This study explores the "ghosts" of cultural erasure and spiritual disconnection caused by Western imperialism, focusing on how contemporary spiritual practices serve as pathways to reclaim ancestral identities and rebuild community bonds. Through a comprehensive literature review along with qualitative interviews with pagan Americans disenchanted by mainstream American Christianity, this research examines how pre-colonial spiritual traditions help restore lost cultural roots. Drawing on phenomenology and decolonization theories, the study investigates how these practices not only heal cultural wounds but also foster resistance against ongoing cultural erosion. The concept of "ghost cultures" — lost traditions reconstructed through myth and memory — is central to this work. By analyzing the intersection of spiritual practices with decolonization efforts, the paper highlights how these practices can challenge cultural appropriation and empower marginalized communities. Ultimately, this research offers insights into the transformative potential of spirituality in decolonizing the Western mind, promoting community resilience, and reimagining identity in the face of colonial legacies.

Presenter(s): Meghan Blust

Ghosts of the Civil War: The Roles of Women and African Americans

This paper examines the roles of women and African Americans during the Civil War, focusing on how societal structures perpetuated systems of power and displacement, impacting their contributions and recognition. Women of various backgrounds, including free Black women, widows, and farm women, played crucial roles in the war effort. Nearly 20,000 women served in Union hospitals, often in roles with limited recognition and compensation. African American women, despite their essential contributions, were relegated to lower-wage positions like cooks and laundresses. Figures like Susie King Taylor exemplified the resilience of Black women in these roles. Women, such as Dr. Mary Edwards Walker and Clara Barton, also pushed for medical reforms, yet systemic gender biases often led to their insights being dismissed. Similarly, African American men, initially rejected by both Union and Confederate armies, were later enlisted in large numbers. Despite contributions, Black soldiers faced segregation and discrimination. This

discussion explores how these "ghosts" of the Civil War were indispensable yet invisible within power structures, drawing parallels to contemporary issues of racial and gender equity. By revisiting their hidden histories, the paper aims to reconstruct a more inclusive understanding of the Civil War's legacy.

Presenter(s): Autum Fox

Ghosts in the System: The Shadows of the U.S. Healthcare Experience

This hybrid autoethnography/research paper utilizes critical medical anthropology (CMA) to explore how the U.S. healthcare system can create "ghosts" or invisible struggles faced by individuals within it. Using CMA, we can examine how social, economic, and cultural factors contribute to healthcare disparities. With CMA, we can view the interconnectedness of health, politics, and human rights. Explaining the health hierarchies and choosing what are the most important health matters to address. In an already complicated setting, patients have a second role as consumers in this highly politicized and economically driven industry. This can cause people to feel lost or left out while navigating the maze of healthcare services leading to a sense of abandonment. Anthropology can expose and improve distinct issues from diverse industries. The paper is also an analysis of how policies and practices can overlook these individuals, turning their challenges into unseen issues. Looking at these challenges, the paper aims to suggest ways to improve the healthcare system, making it more accessible and understandable for everyone, ultimately reducing the impact of these haunting experiences. By discussing these hidden struggles, we can hope to promote understanding and drive changes that can help make healthcare more equitable for all.

Presenter(s): Leticia Castro

2794 The Specter of Fascism

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** MGB Salon D

Type: Roundtable/Town Hall

There is a specter haunting the globe. Once imagined as a hollow revenant of 20th century catastrophe, fascism again looms large in our political present: as a resurrected governing formation; a glaring threat to minority lifeways; a crisis of liberal norms; an incendiary charge to lob at one's opponents; and, perhaps most often, a question. Questions like the oft-invoked "Is this fascism, yet?" embed a temporality that makes it hard to mobilize, for they posit fascism as that which cannot be named until too late. Historically, conceptually, politically, we hold this position is untenable. Rather, the ghosts of fascism are emergent, tangible, hauntological presences across a spectrum of horizons.

This roundtable therefore gathers scholars who are not content to consign fascism to the extreme, nor to the 20th century. We study fascism that calls itself by many names and charges banal sites of social life: mundane violences that emerge in liberal institutions, structure school curricula,

shape relationships with nature, identify as "critical" and "feminist." Turning from book burnings to blockbuster films, dictators to PTAs, and examining sites of racialized and gendered violence across the Global North and South, we consider fascism not as an ideal type but as it haunts the everyday – all with an eye toward grasping fash-ish moods before they advance into full-fledged fascist masses.

Despite a growing sense that fascism is on the rise, boundary work has muddled what could be a clarion call for antifascist research. Popular responses range from naive tolerance to bloody confrontation, and academics appear hamstrung by a similar dissensus. Some frame fascism as an illiberal force; others as an apparition that stupefies the masses into (neo)liberal norms. Some call developing a general theory of fascism the most pressing matter of our time; others hold the concept loses teeth when abstracted. Some lament that fascism "is not who we are" in liberal democracies, while others locate its inception at democracies' frontiers. These debates are hardly frivolous, but while they unfold, fascism unfolds, too. There are questions worth exploring that do not hinge on their belabored resolution. And anthropology, ever curious about the instability of meaning, is precisely the discipline to ask them.

In short: we believe anthropology has rarely been more needed, but also that our field needs work to meet this moment. Recent scholarship has gestured notionally toward the possibilities of an antifascist anthropology, but the time has come for thinking programmatically. Together, we ask what fascism becomes when unhinged from its natal contexts. We map its spectral presence in domains from home to healthcare, economy to education. We inquire how to approach it as an ethnographic object and as the condition of our lives and work. And we consider how to remake anthropology into an antifascist discipline that can fight back not only in theory, but in practice.

3351 Things Fall Apart: A Roundtable on the Seen and Unseen in the NGO/NPO World, from Reagan Thatcher to Post Trump

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Galerie 2

Type: Roundtable/Town Hall

Haunted by decades of increasing privatization of government services, the recent defunding of USAID and subsequent criticism of empathy as part of operational practice have brought renewed attention to the (seen) impact of authoritarianism, oligarchy, and coloniality on the NGO/NPO landscape. In the specter of USAID past/present, our roundtable brings together engaged, cross-generational anthropologists from diverse sectors of the NGO/NPO world to deploy their knowledge and experience in reconceptualizing the (unseen) futures of NGOs, particularly grass roots community organizations, which have had important roles in sustaining civil society and the care economy.

We seek to address a larger conceptual concern involving the continued salience and liberatory potential of NGOs/NPOs in the context of ongoing intergenerational, political, legal, digital, and funding shifts, as well as the tensions between the relevance of engaged theoretical research and the importance of action-oriented knowledge. Reflecting on their work across diverse NGOs/NPOs with contrasting organizational structures and diverse priorities (from environment, health, and natural resources to community-based concerns of immigrants and elders), participants will pursue this inquiry through exploring the following questions:

What unique insights can be derived from "deep", longitudinal engagement in an organization? What are the advantages of multi-stakeholder collaboration in sustaining or restricting grass roots missions and autonomy? Do transborder partners contribute to flexibility or limit equitable, bottom-up decision-making? What are the impacts of contrasting organizational and socio-relational structures of different NGOs (from voluntary networks, faith-based and non-faith based, to staffed community-based organizations) in fostering empowerment and collaborative governance? Can democratic processes be nurtured through knowledge and power sharing in community organizations? What is the impact of intergenerational diversity on organizational resilience and adaptation to changing conditions? What is the role of building external/internal social relations in creating effective community missions? Do digital technologies offer new possibilities or subvert reciprocal aspects of NGO work through 'thingification' of 'clients'? Are legal resources instrumental in achieving NGO effectiveness in navigating complex environments? Has the mission of 'filling the gaps' removed critical resistance to structures of dominance from community organization toolkits?

Returning to reimagining elusive NGO futures, discussants will reconsider the liberatory possibilities of NGOs/NPOs in light of criticisms that they serve as proxies for state interests or replicators of coloniality, as well as the persistent reluctance to incorporate and acknowledge the contributions of action-produced knowledge to NGO effectiveness and the field of engaged anthropology itself.

6948 Towards an Engaged Anthropology on Wisdom

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

Wisdom has long been a popular destination for anthropological inquiry. It reflects anthropology's reflexive scaling of its knowledge production beyond objective, scientific accountability towards a more people-relevant, sociohistorically precipitated, and morally concerned form of knowing. In particular, recurring crises in human history have propelled anthropologists to engage with wisdom- from World War I, which shaped the early trajectory of modern anthropology (Malinowski 1922: 517), to the current environmental-capitalist polycrisis (Krenak 2022, Stoller 2023). Yet, wisdom is not without its pitfalls. It risks becoming an empty moral ideal, a self-contained abstraction, or a tool for politically stabilizing the status quo. While acknowledging both the complex genealogy of anthropology's engagement with wisdom and wisdom's cultural specificity, this panel examines its situational politics and poetics with a vision for engaged anthropology.

We explore wisdom not only in its established domains- such as indigenous knowledge systems, and religious-moral traditions- but also in its emergent formations within feminist activism, moral economic dilemmas, and people's engagement to environmental and technological crises. By attending to the work and troubles of wisdom across these diverse contexts, we ask: When, how, and in what forms does wisdom emerge, relate, put into practice, or retreat to aloof ideas? What social, ethical, and epistemological dimensions does it entail? And how can anthropology engage wisdom critically without reducing it to merely a promise of this discipline?

Presentation(s): The Promise of Wisdom and the Aftermath of Dao: Grassroots Confucianism and the Accountability of Wisdom Anthropology and Asian Values

Malinowski concluded *Argonauts of the Western Pacific* with a provocative comment on the ongoing WWI, urging anthropology to be accountable to the future of the world through the promise of wisdom. He called for going beyond objective knowledge production to learn from informants'

ways of life. Since then, wisdom has been one of anthropology's ultimate promises. But how do we, as anthropologists, account for the situated praxis and politics of wisdom and avoid its being an empty promise ?

To establish accountability for wisdom is to break the veneer and gauge its depth. This paper explores this process through two complementary ethnographic phases that gradually revealed the depth of wisdom within dujing, a grassroots Confucian movement mobilizing people to intensively read classics for wisdom/dao . The first phase recounts how dujing's wisdom, which initially appeared empty, became "stuffed" with meaning. The second phase documents its subsequent "agitation" and eventual "collapse." The final section reflects on the meaning and ethics of this fieldwork. Ultimately, this paper critiques the implicit solutionism embedded in Malinowskian promise of wisdom and develops a processual, critical yet sympathetic approach to establishing accountability for wisdom as well as its related cultural politics and knowledge economy.

The Wisdom of Living Wildly: Explorations of Crisis and Freedom

In 2020, Glennon Doyle—a former Christian evangelical who became widely known as the "Christian mommy blogger," published a New York Times bestseller, called *Untamed*, in which she narrates her journey of falling in love with the soccer star Abby Wambach, leaving her then husband with whom she had three children, and charting a new life course unshackled from the expectations of the heteronormative family. Doyle then went on to create a new podcast with her sister, Amanda Doyle and now wife, Abby Wambach, in which the three women discuss their midlife struggles including patriarchy and gender, addiction and trauma, parenting, feminist activism, and US politics. The podcast, *We Can Do Hard Things*, was named the #1 Top Show on Apple podcasts in 2021, the first year it aired, and it continues to reach several million listeners a week. While typically framed and critiqued in social science literature as "self-help" material, we argue instead that these discussions of crisis and freedom are fundamentally explorations of wisdom. Through a multi-sited ethnography that follows a conversation as it moves, is picked up, and transforms across media, group chats, friend discussions, activist circles, and self-reflections on making it through the everyday, we examine new forms of spirituality and ideas of freedom. Ultimately, we consider the significance of these conversations for both the contemporary political moment in North America as well as for anthropology's engagement with wisdom.

Wisdom in Situation, Indigeneity as Labor: Reworking Resistance in Taiwan's Heritage Regime

Since the 2016 presidential apology to Indigenous peoples, Taiwan has launched a series of cultural heritage initiatives under the banner of Indigenous transitional justice. Framed as interventions into conventional historiography, the bureaucratic, archival, and legal regimes surrounding these efforts re-narrate Indigenous agency and resistance through the moral lens of

ancestral resilience and cultural continuity—acknowledging the past without unsettling present structures of power. Yet Indigenous actors critically reflect on what preservation and participation afford, and what they foreclose. As a result, their engagement not merely responds to state visions but also repurposes them, articulating forms of political subjectivity that emerge through negotiation, suspicion, and reappropriation. Drawing on "situated wisdom" (Haraway 1988), this paper argues that Indigenous actors generate epistemologies grounded in embodied experience, historical reckoning, and structural constraint. These practices do not reject heritage work outright but rework it from within, producing epistemological moments of "Indigenous resurgence" (Simon 2023): subtle, everyday refusals that exceed the institutional logics of recognition. In tracing how resistance is enacted and reimagined through intersecting regimes, this paper reconsiders the anthropological engagement with wisdom—not as cultural inheritance, but as contested political labor unfolding within and against settler governance.

Presenter(s): Yu Liang

The Wisdom of the Vanguard: The Progressive Organisation of Women and Revolutionary Selfhood in 1980s India

In his 1902 pamphlet, *What is to be Done?*, Vladimir Lenin wrote: "As I have stated repeatedly, by 'wise men,' in connection with organisation, I mean professional revolutionaries, irrespective of whether they have developed from amongst students or working men." While describing the various characteristics of the professional revolutionary, Lenin himself never wrote about such a person needing to be an emotionally aloof figure. However, his stress on a wholehearted devotion to the cause has often been interpreted in those terms. In a different vein, in this paper I discuss some ways in which women within Marxist Leninist parties expressed their desires and explored different kinds of relationships and intimacies, which brought into tension notions of an emotionally detached revolutionary self.

Founded in 1973, the Progressive Organisation of Women (POW) was the first separate women's organisation within the radical left 'Naxalite' tradition - which emerged since the late 1960s and remains a significant political force today. Drawing upon extended fieldwork over 2015-2022, in this paper I rely primarily upon the political activist Katti Padma's stories to argue for the important epistemic contributions of political movements in fashioning new ideas of revolutionary selfhood and organisational structure in the late 1980s.

8507 Voices of Power: African Diasporic Women's Leadership Through Ritual, Music, Language, and Healing

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Oral Presentation Session

This panel examines the critical roles of women in preserving, transforming, and transmitting spiritual and cultural traditions across the African diaspora. Ingram's research investigates how the baptism ritual in African American Baptist churches influences women's identity formation, revealing ambiguous connections between the rite and Christian identity, limited understanding of baptism's purpose at participation, and the significance of family expectations in ritual engagement. Johnson explores how gospel music functions as a community-building force in Zachary, Louisiana churches, highlighting Black women as the backbone of gospel ministries who comprise up to 90% of choir membership while serving as cultural bearers who transmit traditions across generations. Valunzuela-Hernandez analyzes how Senegalese women strategically navigate multilingual environments, employing Wolof as a lingua franca while maintaining heritage languages tied to ethnic identities, demonstrating how language choices both reinforce and challenge traditional gender roles. Jackson's ethnographic study of three women healers in Rufisque, Senegal examines the Ndepp healing tradition where song compositions serve as repositories of medicinal knowledge and vehicles for spiritual communication, revealing how these women's ritual authority provides unique social positioning within otherwise patriarchal structures. Collectively, these papers illuminate how women across the diaspora exercise agency through spiritual practices, musical leadership, linguistic choices, and healing traditions, serving as vital bridges between tradition and innovation while negotiating complex social and cultural expectations that shape their communities.

Presentation(s): The Shrine Keepers: Dialogical Performance and Representation with Three Women Healers in Rufisque, Senegal

It is increasingly clear that modern medicine is taking a more active role in interfacing with alternative medicine. To this end, there is a manifest desire to learn more about the role of indigenous healers and the multiple cultures, languages and spiritual traditions in which they live

and work. This study presents an exploration of traditional healing practices from the lens of the "shrine keepers", three women healers in Rufisque, an ancient fishing village in northwest Senegal consisting of a large population of the Lebou ethnic group. In this community, the ritual ceremony during which the healing takes place is called Ndepp. It focuses on an individual's spirit and how to maintain a healthy relationship with one's community and one's ancestors. During Ndepp rituals, practitioners honor ancestral spirits called rab through ritual drumming, dancing and chanting. Central to these ceremonies is the dialogical performance between healers, drummers, dancers, the patient, and community participants—a dynamic exchange where each actor contributes to and responds within the ritual framework, creating a communicative circuit essential for spiritual healing to occur. My main concern is with the three ritual healers, or shrine keepers, and their song compositions and performances as instruments of spiritual power, agency and a unifying cultural force. This ethnographic data collected during multiple years of observation reveals how these women's ritual authority provides power.

Language, Identity, and Gendered Experience: Women's Multilingual Practices in Senegal

This paper examines the complex interplay between language practices, cultural identity, and gender among Senegalese women. Drawing from qualitative interviews with women from diverse ethnolinguistic backgrounds in Senegal, the research investigates how women navigate multilingual environments and how these linguistic choices shape their identities and social relationships. The study explores three key dimensions: (1) the hierarchical organization of languages across different domains (home, education, work, and ritual spaces); (2) the strategic deployment of linguistic resources for identity construction and cultural maintenance; and (3) women's role in intergenerational language transmission and their decision-making processes regarding language use with children. By focusing on the intersection of language, gender, and identity, this study contributes to our understanding of how women in multilingual African contexts exercise agency through their linguistic choices while negotiating complex social and cultural expectations.

Presenter(s): Latasha Valenzuela

Harmonies of Hope: Gospel Music and Community Building in Zachary Churches

This study examines the central role of gospel music in cultivating community cohesion, spiritual upliftment, and intergenerational continuity within African American churches in Zachary, Louisiana. Grounded in qualitative interviews, participant observation, and archival research, the findings reveal that gospel music is more than a form of sacred expression—it is a living tradition that binds generations, preserves cultural identity, and sustains emotional well-being. At the heart of this tradition are Black women, who make up the overwhelming majority of church choir members—often as much as 90%—and serve as the backbone of gospel music ministries. Their

leadership as choir directors, vocalists, mentors, and cultural bearers is both historical and contemporary, shaping the sonic and spiritual experience of worship across decades.

Black women in these church communities not only maintain the continuity of musical expression but also anchor the emotional and spiritual life of the congregation. They transmit oral traditions, guide youth in gospel participation, and hold space for worship through song that is emotionally rich, theologically grounded, and socially resonant. Their voices lead the call to worship, their labor organizes rehearsals and performances, and their presence ensures the endurance of gospel music as a sacred ritual that is central to the Black church experience, not just on special occasions, but as a consistent part of weekly worship.

Presenter(s): Miracle Johnson

TAKE ME TO THE WATER: THE BAPTISM RITUAL EXPERIENCE OF WOMEN IN THE AFRICAN AMERICAN BAPTIST CHURCH

How is the movement into womanhood influenced by the participation in the baptism rite of the African American Baptist Church? Christian baptism is a baptism into the death and resurrection of Christ. This change of significance shows how the practice and interpretation of baptism have been transformed across generations. With an awareness of the impact of women within the Baptist Church, the true meaning of baptism should be interpreted and reimaged for the contemporary Church that suffers from divisive ideologies around gender roles because, at its root, baptism signifies union. This study intended to understand how participation in the Christian rite of baptism, leading to initiation in the Baptist church, influences the identity development of African American women to be interviewed. Three themes emerge from the interviews. The first theme revealed an ambiguous connection between the baptism rite and Christian identity. The second theme pointed to a lack of understanding of the purpose of baptism at the age of participating in the ritual. The third theme expressed the importance of family expectancy in the rite participation. This study shows that after more than two decades, these women bond their identity to events that occurred following their baptism rite. Further research could look at how the meaning of the baptism rite is conveyed in the larger Church congregation.

2385 What Walks with Us Daily: Dialoguing on Poetics as Ethnological Praxis

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Bonaparte

Type: Interview

Poetry is both an ancient art and one of the first methods of documenting and spreading cultural

values. What Walks with Us Daily: A Conversation on Poetics as Ethnographic Praxis will be an interview session between poet anthropologists in which Ashley-Devon Williamston fields pressing questions to Jason Vasser-Elong regarding poetry as a mechanism for communicating, understanding, and reckoning with acquired cultural values amid ever-shifting sociocultural landscapes. Vasser-Elong, 2022 poet-in-residence for Sapiens, explores cultural learning and belonging through poetic topics such as child's play and encounters with distant elders. Through the dialogue, AAA attendees will gain an understanding of poetry as more than mere cryptic art form and be encouraged to explore how writing and/or observing others' poetry can facilitate ethnological learning.

5077 Youth Language and Politics

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 11:45 AM

Venue: Marriott **Room:** Studio 9

Type: Oral Presentation Session

This panel considers how children and adolescents experience and navigate the political structures of the worlds they grow up in. It brings together sociolinguists and linguistic anthropologists to highlight language as a site socialization into systems of power: through our interactions with others, we learn to navigate political hierarchies, norms, and ideologies. The panel begins in early childhood with a discussion by Lilit Ghazaryan. Drawing from her fieldwork in Armenian preschools, Ghazaryan shows how geopolitical conflict shapes school rituals and classroom interactions. Next, Nandi Sims takes us to a middle school in South Florida, illustrating how racial hierarchies in the United States are reproduced, reinforced, and reimagined through the interactional practices of sixth grade students. Pivoting to a *longue-durée* study of youth expression, Kelly Wright charts how profanity in adolescence—from Victorian self-censorship through punk defiance to the "Satanic Panic" of the 1980s—illuminates changing alignments between affect and political ideology across generations. Turning to contemporary struggles over language policy, Keisha Wiel examines classrooms in Aruba and Curaçao, where teachers' unsanctioned translanguaging between Papiamentu/o, Dutch, and English enriches students' educational experiences while subverting colonial hierarchies. Tyanna Slobe closes the panel with a comparison of Santiago high schools, revealing how institutional stratification channels youths' affective responses to political crisis. Together, the papers demonstrate that language is both conduit and crucible for youth political socialization.

Presentation(s): Language, War, and Childhood: Recent Wars and Their Consequences on Language Use and Discourse in Preschool Classrooms in Yerevan, Armenia

This presentation examines how recent wars—the Armenia-Azerbaijan conflicts of 2020 and 2022, and ongoing war in Ukraine—shape linguistic practices and educational rituals in Yerevan kindergartens. Drawing from ethnographic fieldwork conducted between 2019–2024, I reflect on how war enters early childhood spaces both overtly and subtly. The project is grounded in a dual positionality: as an anthropologist and community member present during these conflicts. The war with Azerbaijan intensified purist language ideologies and brought performative memory practices into public kindergartens—most visibly in war-themed recitals and commemorative rituals. Drawing on frameworks of affective socialization and pedagogies of nationalism, I analyze how children are positioned as future soldiers or grieving citizens in these performances. The Russia-Ukraine war, by contrast, reshaped language dynamics in private kindergartens through the influx of Russian-speaking children. Classroom hierarchies and correction practices were suspended or altered in response to perceived linguistic privilege. Using frameworks from language socialization and ethnographic attention to informal peer interactions, I explore the intersections of linguistic accommodation and belonging. This work traces how geopolitical shifts are felt at the micro-level of preschool classrooms and how childhood becomes a political terrain in times of war.

Presenter(s): Lilit Ghazaryan

Racial Ideologies in Pre-Adolescents

This paper explores how racial ideologies are reproduced, reinforced, and reimagined through language at a primarily Black middle school in South Florida. It draws from ethnographic fieldwork with 6th graders during the 2019-2020 academic year. The Black/white binary of the U.S. undergirds social distinction at Michael Irvine Middle School, though its students are entirely racially minoritized. Social groups split racially, with 'Hispanic' acting as Anglo-white would in a different context. Students demonstrate an understanding of how ideologies shape their world through strategic use of racialized language. For example, when using a word like 'ghetto' to describe the speech of peers, students make claims about race, class, and inherent value. This value is absolute—'the kids at this school speak bad'—and relative—'those kids speak bad, but I do not'. A descriptor like 'lightskinned' can describe skin tone, but ideologies of skin color often come into play such that students may use lightskinned to describe someone they think is pretty, regardless of whether that person is objectively lighter. The opposite also occurs—lightskinned can describe someone who thinks they are better than others, with the implication that they're not. By using racialized language through analogy, students reveal awareness of the rigid racial categories imposed on them, as they begin to understand what these categories mean for them as racially Black and non-white individuals in the U.S.

Presenter(s): Nandi Sims

The Body, The Built Environment, & The Belief

Embodied knowledge is linked to the social meanings available to an individual across linguistic markets, and thus illuminates the ways in which linguistic markets are simultaneously responsive to identities and the extant sociohistorical facts which afford social power. Profanity

is most often acquired between ages 11 and 13, within the most active period of adolescent self-making. This paper considers youth language, focusing on profanity to exemplify the ways in which affect and political ideology align. First, considering the Victorians, who were motivated to self-censor in public and private discourse, and across modalities, through fear of social ostracization and stagnation. This period of reduced profane usage aligns with increased social control. Next, the Punks, whose search for authenticity created a dissonant–tongues-out, middle

fingers-up–spectacle which rejected global trends in commodification. Here, increased profane usage redefines the relationship between self and material. Finally, the Satanic Panic, which aligns with a moralist political turn which shifted non-status-quo oriented identity expression especially in young people—from common to criminal. This period of profane usage aligns with an embrace of baptismal ideologies of meaning. By examining the ways in which young people's profanity aligns with extant political ideologies, we view the body, the built environment, and societal beliefs shaping a given user's means of self-determination.

Presenter(s): Kelly Wright

Translanguaging as Educationally Incorrect: How Teachers in Aruba and Curaçao Unintentionally Created a Translanguaging Model for Language

In 1979, an ordinance that aimed to make Papiamentu/o the language of instruction in the first two years of primary school was introduced into parliament as a way to resolve supposed language problems on the islands of Aruba, Bonaire, and Curaçao (Dijkhoff and Pereira 2010: 242). Although the vote on the ordinance was postponed until 1998, local teachers were already using an unsanctioned translanguaging model to teach their students. Since students understood Dutch but could not comprehend their education materials in the language, teachers often taught in a combination of Papiamentu/o and Dutch (and later on English) in order to ensure that their students would be able to understand their educational materials. Presently, schools are allowed to suggest which language they want to use as the language of instruction. But, since there are limited resources for educational materials in Papiamentu/o or in English, most schools default to Dutch as the language of instruction. Using research conducted from 2019 to 2021, this paper examines how teachers unintentionally subvert language policies to use translanguaging as a teaching method. Although it is technically not allowed, teachers have created their own methods to ensure their students succeed in education. Finally, this paper will propose what a translanguaging language(s) of instruction model could like using the experiences of teachers and students in Aruba and Curaçao.

Presenter(s): Keisha Wiel

Affective Divides: Political Crisis and the Politics of Emotion in Chilean Classrooms

This paper examines the organization of affect during class activities at two socioeconomically segregated high schools in Santiago, Chile: an elite private school in a wealthy Santiago suburb and a working-class public school near the city center. Drawing on ethnographic research conducted during the 2019 academic year, I compare classroom responses to 'el estallido social' [the social explosion], a mass uprising in late 2019 that challenged entrenched inequalities rooted in neoliberal economic policies first imposed under Augusto Pinochet's military dictatorship (1973-1990). Focusing on students' first day back on campus following protest-related school closures, I compare classroom activities designed to help students make sense of the unfolding political crisis. At The Private School, teachers led structured, emotionally detached discussions that emphasized metalinguistic reflection—encouraging students to analyze how the uprising was being framed in public discourse. In contrast, at The Public School, class activities centered on students' lived experiences of economic precarity, political repression, and state violence, inviting emotional expression and critical dialogue. Comparing these pedagogical approaches, I show how classroom interactions differently organized students' affective orientations to the uprising, revealing how institutional ideologies and class-based distinctions shape youth socialization into political practices and identities.

Presenter(s): Tyanna Slobe

8682 Writing Anthropology in the Moment

Start Date: 11/20/2025 10:15 AM **through** 11/20/2025 12:15 PM

Venue: Sheraton **Room:** Grand Chenier (5th fl)

Type: Workshop

Too often, anthropologists are the most well-informed yet least tapped voices in the public arena, a chronic source of frustration for those who would contribute to sharing much-needed anthropological knowledge in the current moment. This interactive workshop will focus on effective writing strategies that can help move anthropologists off the sidelines and into the most crucial debates about communities and issues they know intimately through their original ethnographic research. Beyond inexperience with writing for wider audiences, reluctance to forego standard peer review, and the ongoing struggle to override jargon-laden styles of expression, anthropologists are now rightly concerned that their subject areas are real or anticipated political targets in the workplace. Participants in this workshop will explore tools, publishing pathways, and techniques that can empower writers and thus fight the potential for self-censorship at the very moment when audiences need all that anthropology has to offer.

8530 Interest Group on NGOs and Nonprofits Business Meeting

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:15 PM

Venue: Marriott **Room:** Beuregard

Type: Special Event

Members who have indicated their interest in the Interest Group on NGOs and Nonprofits are encouraged to attend this business meeting. Following an introduction to the Interest Group and its past activities, attendees will be canvassed for input and presented with opportunities for becoming involved in shaping the IG's future. We are especially interested in communicating with members interested in becoming members of the IG's next leadership team.

8658 Alcohol, Drug, and Tobacco (ADTSG), Business Meeting

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:45 PM

Venue: Marriott **Room:** Bonaparte

Type: Special Event

ADTSG is a group for medical anthropologists and other social scientists with research focused on Alcohol, Drugs, or Tobacco to network, share information, and collaborate on potential projects. We typically host a gathering during the SfAA and AAA meeting each year.

9072 Anthropology Matters for the World Today!

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:45 PM

Venue: Marriott **Room:** Balcony M

Type: Special Event

Dr. Gillian Tett, Provost of King's College, award-winning British journalist for the Financial Times and best-selling author of *The Silo Effect* and *Anthro-Vision* is a social anthropologist committed to keeping our discipline alive in the current AI, authoritarian and technological world. Indeed, she sees anthropologists as the "salt" necessary in all interdisciplinary endeavors where our voices need to be heard. Yet departments of anthropology are experiencing dwindling enrollments at a moment when our cultural expertise and local knowledge should have the greatest impact. In this talk, Dr. Tett discusses how to defend ourselves in these perilous times and answers questions from her unique perspective as an academic administrator, financial news expert, and journalist. She argues that "anthro-vision" can be a key to our success.

Bio of Gillian Tett:

In 2023, Gillian Tett was elected to serve as Provost to King's College, Cambridge. Gillian also writes weekly columns covering economic, financial, political, and social issues for the US Financial Times and is the co-founder of FT Moral Money, a newsletter that tracks the ESG revolution in business and finance.

From 2013 to 2019, Tett was the FT's US Managing Editor, also serving as Assistant Editor for the FT's markets coverage, Capital Markets Editor, Deputy Editor of the Lex column, Tokyo Bureau Chief and Correspondent, London-based economics reporter and a reporter in Russia and Brussels.

Before joining the FT, Gillian was awarded a PhD in Social Anthropology from Cambridge and in 2024, was awarded an OBE for her services to journalism.

8678 Anthropology under Authoritarianism

SAE and CUAA

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:45 PM

Venue: Marriott **Room:** Studio 1

Type: Special Event

Anthropology and Engagement under Authoritarianism

SAE and CUAA

With the rise of authoritarian regimes and the escalating political repression of universities and those who work in them, what lessons can we learn from anthropologists around the world as we navigate these increasingly oppressive academic realities? This special event, co-sponsored by SAE and CUAA sections, will bring colleagues together to reflect on the discipline's role in the current political moment.

The format will include 5–6 speakers offering brief (5-minute) discussion points, with perspectives from both the U.S. and Europe. We are keeping presentations short as we hope for extensive audience participation. We're interested in discussing the following:

What can anthropology do under Trump and similar far-right regimes?

What futures are possible for the discipline within these political conditions?

What role should the AAA, play in responding to this moment?

8761 Association for Political and Legal Anthropology Business Meeting

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:45 PM

Venue: Marriott **Room:** MGB - Salon C

Type: Special Event

Please join us for one hour of APLA-related activities and conversations. The winner of the 2024 APLA Book Prize in Critical Anthropology will be announced, as will the winner of the APLA Student Paper Prize. We will announce and welcome new APLA officers, and we will celebrate the service of outgoing officers. Finally, we will conduct a community check in to see how APLA, as the section devoted to the critical study of law and politics, can continue to support our community of anthropologists.

8825 Biological Anthropology Section Business Meeting

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:45 PM

Venue: Sheraton **Room:** Evergreen (4th fl)

Type: Special Event

Biological Anthropology Section Business Meeting

8822 Board Meeting, Middle East Section

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:45 PM

Venue: Marriott **Room:** Studio 3

Type: Special Event

Board Meeting, Middle East Section

8661 Critical Anthropology for Global Health (CAGH)

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:45 PM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Special Event

CAGH is committed to an engaged anthropology agenda that embraces several different critical perspectives, including:

*Political economy and political ecology;

*critical biocultural anthropology and the lifespan biology of poverty;

*ecosocial epidemiology and the study of syndemics; governmentality;

*health disparities and medical citizenship; human rights and the health outcomes of structural violence;

*gender, power relations, and health disparity ; critical discourse analysis of health and development rhetoric;

*studies of marketing as this affects consumer behavior, resulting in defective modernization;

the production and distribution of dangerous commodities and materialist deconstruction of commodity chains linking the conditions of production to consumption; critical assessments of health policy;

*the impact of sociocentric global warming on global health;

the implementation, accessibility and effectiveness of disease control and treatment programs.

9073 Navigating Academic Publishing in Archaeology and Adjacent Fields: Luncheon Meet & Greet with Academic Publishers

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 12:45 PM

Venue: Marriott **Room:** Balcony K

Type: Special Event

AD sponsored hour-long luncheon where young scholars can interface with publishers to learn more about the academic publishing process. This mentoring event is catered towards students and young scholars publishing in archaeology and related fields. Students and young professionals will get a chance to think through topics and concerns like, 'Turning an organized session into an AP3A volume,' and 'How to publish a standalone paper?'. Students more advanced in their fields of interests will be able to think through 'What are archaeology publishers looking at today?' 'How do you build professional relationships with publishers?' 'What does book publisher shopping look like?' 'How do you transition from dissertation to a book?' and or 'How do you write a book proposal?' This mentoring luncheon is intended to give behind-the-scenes publishing tips and know-hows to democratize the publishing process for all young scholars.

In this luncheon we will be joined by Dr. Darrin Pratt of University Press of Colorado and Dr. Allyson Carter of University of Arizona Press.

8813 A&E Graduate Student Mentoring Workshop Day 1

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 01:45 PM

Venue: Sheraton **Room:** Orpheus (8th fl) (access via elevator only)

Type: Special Event

Students will submit either: a dissertation proposal, dissertation chapter, or journal article for consideration. Students selected to participate in the workshop will receive feedback from an A&E member mentor and receive comments on their work before the AAA conference.

During the first session, students will present in their research or research proposal. A main goal is to practice communicating research concisely, especially to non-specialist audiences. Another goal is to foster feedback and critical questioning skills by having peers, previous cohort members, and mentors facilitate feedback on presentations

8719 AAA Treasurer's Annual Meeting

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 01:45 PM

Venue: Sheraton **Room:** Armstrong BR (8th fl) (access via elevator only)

Type: Special Event

AAA Annual Treasurers Meeting

8689 Beyond "Retirement": Strategies for Successful Transitions to Works after Work.

Start Date: 11/20/2025 11:45 AM **through** 11/20/2025 01:45 PM

Venue: Sheraton **Room:** Poydras (5th fl)

Type: Workshop

The term "retirement" is defined by Miriam-Webster dictionary in two alternative parts, first by "withdrawal from one's position or occupation" or [withdrawal] from active working life. In this special mentoring event conducted by the Association of Senior Anthropologists (ASA), we reject the notion of withdrawal from active [working] life and the "R" word that characterizes this sometimes-maligned status, to explore the opportunities for "works after work."

8638 Association of Black Anthropologists - Student Interest Group (SIG) Meeting

Start Date: 11/20/2025 12:00 PM **through** 11/20/2025 01:15 PM

Venue: Sheraton **Room:** Oak Alley (4th fl)

Type: Special Event

Meeting for the Student Interest Group (SIG) of the Association of Black Anthropologists (ABA). This meeting is open to all students who are members of ABA or are interested in becoming members of ABA.

8847 CAE Past President's Distinguished Lecture

Start Date: 11/20/2025 12:00 PM **through** 11/20/2025 02:45 PM

Venue: Marriott **Room:** Riverview II (41st Fl)

Type: Special Event

Annual address of the CAE Past President, along with opportunity for attendees to engage in dialogue about the ideas presented.

8618 CASTAC Invited Lecture

Start Date: 11/20/2025 12:30 PM **through** 11/20/2025 02:00 PM

Venue: Marriott **Room:** Studio 5

Type: Special Event

The Fragility of Promised Futures: A Case for Centering Maintenance in Nature Restoration

2025 CASTAC Invited Lecture, Dr. Syed Shoaib Ali, Indian Institute of Technology (IIT), Delhi

The last century saw global recognition of multiple and rampant environmental losses, including irreversible changes to climate, atmosphere, terrestrial life, and the ongoing sixth mass extinction. It also saw a simultaneous rise of consecrated efforts towards environmental restoration and repair. The current frameworks for restoration, including the UN Decade of Ecosystem Restoration 2021-2030 and the 2011 Bonn Challenge, have evolved from past experiments in conservation, cooperative forest management, and social forestry. While there is a growing recognition of the need to involve local communities and values in the design and management of restoration projects, we find that this commitment, even when well-implemented, is generally limited to a small project duration. It is underpinned by a prevailing optimism that the successful implementation of restoration projects is, in itself, sufficient to ensure lasting socioecological benefits; assumed to set in motion a self-perpetuating trajectory of carbon sequestration, ecosystem resilience, and biodiversity recovery. However, our ethnographic account of restoration projects in the Western Himalaya challenges this sense of optimism.

Our study locates a widespread sense of fragility of the promised futures. To analyse the complexities of hope, necessity, and fragility associated with restoration we draw insights from maintenance and repair studies (MRS), a field of study primarily concerned with the stability and durability of social and technical infrastructures. While scholars of MRS have paid greater attention to the life of infrastructures and technical artefacts, we posit that many conceptual and organisational insights are as relevant for the study of nature-society relationships. We analyse our ethnographic evidence using three interconnected concepts from MRS: usefulness, failure / breakdown, and technical diplomacy. We propose - to look at restoration as maintenance opens important insights on the contingency of relations that restoration projects often assume as stable or take for granted. We further make a case for the kind of strategic and technical partnerships which will help strengthen the maintenance and durability of restoration sites beyond their project

duration. Overall we argue that the oft-arduous and repetitive maintenance work is a critical site for nature diplomacy towards (re)shaping the agenda of restoration futures in the Global South.

8589 Annual Meeting - First Executive Board Meeting

Start Date: 11/20/2025 12:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Riverview 1 (41st Fl)

Type: Special Event

First of two sessions of Executive Board meetings to be hosted at the Annual Meeting. This will be a hybrid meeting with some board members virtually attending but most attending in person. It starts with a lunch.

5616 "Other"worldly Methodologies: Queer and Crip Embodied Methods

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Gallier AB(4th fl)

Type: Oral Presentation Session

This panel is concerned with embodied methodologies for ethical and non-extractive research. In opposition, and in addition to, the traditional methodologies that continue to haunt us, queer and crip methods are continuously created and live in our very flesh. Queer anthropology, while rooted in understandings of sexuality, gender, and LGBTQ2+ worlds, can extend to all knowledge-making that deconstructs binaries and disrupts the "normal." Queer ethnographic method is a call to reimagine normative anthropological ways of knowing (Weiss 2024). All knowledge is "situated" in space and time (Haraway 1988) and shaped by power; queerness disorients and opens expansive ways of encountering the world (Ahmed 2006). Queerness rejects individualism and insists on relationality, prompting us to ask ourselves how we extend these understandings beyond theory and into methodology.

The four panelists all grapple with the role and methods of anthropologists in times of crisis. As we practice "othered" methodologies in our research, we address topics including violence against land and people, climate change, Indigenous displacement, and reawakened eugenic acceptance in regards to queer and disabled bodies. We collectively assert the importance of knowledge that is created from marginalized bodies, in collaboration and conversation with more-than-human life.

Two panelists focus on the embodied practice of walking as methodology, foregrounding relationality between the researcher's walking body, land, and animal, plant, and elemental interlocutors. One panelist theorizes hiking as methodology, based on 1,500 miles of "hiking ethnography" in conversation with hikers, body, movement, and land. This hiking methodology is queer in extending relations and knowledge beyond the human to encapsulate multi-species

becoming. The second panelist presents walking as queer method in photographic anthropology, in which the body and camera witness, sense, and interact with surroundings. This methodology reorients "the field" as a porous, affective terrain where anthropologist and landscape co-constitute meaning.

The two other panelists consider disability and queerness in the process of research. One examines biomedical negotiations of disabled and queer reproductive choices and asks how experiences of disability impact agency, autonomy, and future-self in a time of increasingly restricted individual rights. This research addresses ableist institutional practices, centering queer and disabled scholars to begin rectifying an extensive history of exclusion in the field (Durban 2024). The final panelist uses the arts-based methodology of body-mapping to trace the lived experiences of Exvangelicals with autoimmune disease. This approach emphasizes the need for co-production of knowledge in trauma-informed research by centralizing marginalized bodies and voices throughout data collection, analysis, and dissemination.

Discussant: Mary Bannister, University of Hawaii, Manoa, Department of Anthropology, Shayna Diamond, University of Hawaii, Manoa, Department of Anthropology

Presentation(s): Hiking as Methodology: Land, Bodies, and Queer Ecological Relations

This paper theorizes hiking as methodology, based on 1,500 miles of ethnographic walking on the Pacific Crest Trail. I consider long-distance hikers' bodily, sensorial, and emotional embeddedness within the more-than-human world. Research often depoliticizes place (McKenzie and Tuck 2014) and fails to recognize the agency of places as active ethnographic collaborators. Similarly, anthropological personhood commonly fails to extend fully to more-than-human life, silencing the centrality of non-human agency in Indigenous worlds (Todd 2016). I take seriously knowledge learned through "situated" (Haraway 1988) bodies, and from and with mountains, weather, plants, and animals. I explore how relationships and queer entanglements create knowledge.

This hiking methodology is queer in extending relations beyond the human to encapsulate multi-species becoming. In the process of research, natural elements expressed agency in interviews held on mountain-tops and while watching streams or stars. And the non-linear and non-binary characteristics of ecosystems (Parreñas 2024) shaped hikers' embodied understandings. Moreover, hiking is a cultural activity which praises some bodies and excludes others. My own (white, female, queer, cisgender, able-bodied) body facilitated every aspect of my research. Movement can be

thought of as a conversation with space and ability (Queer Nature 2024), and this research formed through collaborations between land and bodies in motion.

Presenter(s): Mary Bannister

Interview Methodologies for the Queer and Disabled

In a time of varied (and intersecting) crises, we are challenged to reflect on our methodology and approach practical work not as extractionary but inclusive and reciprocal. Conducting ourselves with intentional compassion encourages us to account for factors like queer and Crip time (Kafer 2013) as well as physical, mental, and emotional considerations which are essential for facilitating clear, painless communication for all participants. This can be done through deliberate conversations with those with disabilities and members of the LGBTQ2+ community regarding best practices, particularly when approaching them to act as interlocutors.

Being disabled and queer, I have experienced a multitude of such techniques when acting as both interviewer and interviewee, ranging from successful to discouraging, which have highlighted the need to address anthropology's historically ableist, exclusionary institutional practices. Centering queer and disabled scholars allows us to begin rectifying an extensive history of exclusion in the field (Durban 2024) and ask ourselves important questions. How does queer time and Crip time change standardized expectations for progression? How might prioritizing reciprocity in relationships change the process of interviews? Do experiences of disability impact agency, autonomy, and future-self in a time of increasingly restricted individual rights?

“Your body is a temple, and God is abandoning mine”: Exploring lived experiences of

Exvangelicals with autoimmune disease through body-mapping

Christian Evangelicalism depicts bodies as temples for the Holy Spirit to reside in, created in the image of God. However, bodies also serve as vessels for temptations of the flesh, and in the Bible, sickness is often interpreted as an external manifestation of sin or even a test of faith. These coexisting beliefs are especially salient for those living with chronic and invisible illnesses like autoimmune diseases. With the growing numbers of Evangelicals leaving their faith over the last fifty years, we must consider how religious deconstruction involves beliefs about bodies and illness that become exemplified in the flesh. Drawing upon feminist, trauma, and disability theologies, we discuss the role of hermeneutical injustice and body theodicy in the lived experiences of Exvangelicals with autoimmune disease. Through the reflexive arts-based methodology of body-mapping, this project visually represents embodied experiences in tandem with participants' spoken testimonios. This approach emphasizes the need for co-production of knowledge in trauma-informed research by centralizing marginalized bodies and voices

throughout data collection, analysis, and dissemination.

4037 Anthropology & Environment Society Roy A. Rappaport Student Prize Competition Panel

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Oral Presentation Session

The purpose of this annual panel, which honors the legacy of Roy A. Rappaport, one of the pioneers of modern anthropology of the environment, is to help develop and showcase some of the best student work in this field. The papers in the panel are the product of a national competition held early in the year, based on submission of paper abstracts to an expert committee consisting of officers of the Anthropology & Environment (A&E) plus distinguished outside members. The five finalists in this competition are invited to develop article-length papers and are awarded partial support to travel to the AAA meetings and present them in the Rappaport Prize panel. One of these papers is selected for the prize, which consists of a cash award and is announced at the A&E Business Meeting. The selection is based on originality of the research and analysis, as well as its contribution to the field of environmental anthropology. The papers presented in this annual panel often anticipate new directions that this field will take. After the meetings, each panelist is paired with a member of the Rappaport prize committee to help them further develop and publish these works, in accordance with the ultimate aim of the prize competition to contribute to the mentoring of graduate students pursuing careers in the anthropology of the environment.

Presentation(s): Affective Indeterminacy in the Anthropocene: Sustainable forestry, angry spirits, and Orang Asli limbo in Malaysia

To Orang Asli Semelai, a forest-dwelling community in Malaysia, weather cues associated with climate change—such as bloodred sunsets and erratic rainfall—signal the unprecedented anger of forest spirits in the aftermath of deforestation. In addition to afflicting them with violent death, chronic disease, and suspended livelihoods, the spirits have cut off communication by refusing to appoint a shaman, leaving the Semelai in affective limbo. As community members speculate around the indeterminate nature of the spirits' anger and their own spectrum of possibility and accountability, their rumination brings into focus the diffused responsibility of interrelated practices of extraction in Malaysia and its indefinite effects. Drawing from research in the United Kingdom and Malaysia, this paper argues that the anger of spirits and its manifold implications manifest the affective indeterminacy of extraction and climate change. The paper examines the affects and effects that emerge from the practices of sustainable forestry and monocrop

plantations motivated by ethnonationalism, as well as the uneven involvement of actors at timber concession sites. By attending to the diffused responsibility, opaque encounters, and hesitant futures of extractive practices, affective indeterminacy situates unseen ecologies and vernacular epistemologies of the Anthropocene to offer an ethnographic reconsideration of anthropocentric analyses of extractive capitalism, sustainability, and climate change.

"I Think I'm Becoming an Environmentalist..." Market-Based Conservation and Environmental Becoming in Settler Amazonia

Amid climate collapse, protecting the Amazon is a global imperative. Yet, in Brazil's Amazonian frontier, the actors reshaping the region include large-scale farmers—settler-elites tied to deforestation and agribusiness. This paper examines their entanglements with market-based conservation, focusing on an initiative I call Preserv. Through Payments for Environmental Services, Preserv compensates settler landowners for renting out their forests, converting trees into carbon credits. I explore how Preserv transforms landscapes and subjectivities, producing what I call Environmental Becoming. I argue that PES initiatives are neither greenwashing nor silver bullets, but sites of material, affective, and political transformation. The program is susceptible to manipulation, selective compliance, and ingenious deception. Settler-elites repackage participation to enhance political capital, conceal infractions, and forge alliances. As settler-farmers don green vests and mimic sustainability talk, their claims—"I think I'm becoming an environmentalist..."—destabilize boundaries between conservation and extraction. These spark tensions around land, legitimacy, and environmental stewardship, intensified by Brazil's environmental governance. Preserv thus becomes a space where ecological futures are reimagined through a politics of becoming. This paper calls for rethinking who counts as an environmental subject and how contradictions shape efforts to preserve the planet's vital ecologies.

Presenter(s): Lucas Eduardo Allegretti Prates

Caring for Oil Palm Trees: The Gendered Politics of Plant Reproduction and Assisted Pollination in Tumaco, Colombia

The plant disease Bud Rot serves as my ethnographic entry point into plant-human intimacies, gendered labor regimes, plant reproduction narratives, and techno-scientific interventions in Tumaco, one of Colombia's major oil palm plantation zones. Bud Rot rose to notoriety in the early 2000s when it nearly collapsed Colombia's oil palm sector. In the last two decades, the country's scientific institutions spearheaded efforts to control the disease by designing a new species capable of resisting bud rot but highly dependent on assisted pollination. The new hybrid called the OxG cannot bear fruit if human hands do not spray synthetic hormones on its flowers. Scientists and managers claim they prefer to hire women and single mothers as pollinators, arguing their hand skills, values, and social conditions fix plant infertility, promote care-based work ethics, and foster racial and gender equity. Over 24 months of fieldwork, I engaged with scientists, managers, small Black farmers, and pollinators, focusing on gendered narratives of care, reproduction, plant

infertility, flower abortion, and dexterity. I argue that assisted pollination, as a gendered and interspecies practice, generates uneven labor experiences and distinct plant-human affective relationships. I draw on feminist science studies, environmental anthropology, and interspecies literature to examine the gendered politics of plant reproduction sustaining plantations amid anxieties over unruly pathogens.

Presenter(s): Andrés Caicedo

Unraveling Intergenerational Trauma in California's Dairy Herds: The Promises and Pitfalls of Epigenetic Science and Practice

Dairy industry actors have recently turned to epigenetic science to address something akin to intergenerational trauma in commercial cow herds. Among humans, social scientists have charted how epigenetics—or the study of how "environmental" factors influence gene expression across generations—has the potential to both undo and reproduce biological determinisms (Lock 2015). While epigenetics exposes how unevenly distributed harms remake people's biologies, it may also reduce complex lived experiences and social differences to newly pliable genetic mechanisms (Murphy 2017). Keeping these threads in tension, my paper draws from dairy science publications and ethnographic fieldwork in California to probe what epigenetics comes to mean, support, obfuscate, and foreclose in industrial dairy worlds. Moving from the laboratory to the farm, I examine how the "epigenetic imaginary" (Richardson 2017) might reconfigure the factory's farm's debilitating effects on generations of bovine bodies and their caretakers. In farm settings, where human and animal exploitation are linked under racial capitalism (Blanchette 2020), epigenetics takes on an interspecies dimension that requires bringing animals into the fold of theorizing intersectional oppression (Jackson 2020). I suggest that while epigenetics seeks to remediate animal debility across time and space, it may foreclose more collective forms of responsibility for the industry's uneven, interspecies, and intergenerational cycles of harm.

Presenter(s): Mira Guth

Plotting the Commons: Divisibility and Distribution on Moroccan Mountain Rangelands

In summer 2019, a law was passed by Morocco's parliament that enabled the long-term leasing of some 37 million acres of common lands. While the legislation reaffirmed the indivisibility of the commons and their inalienable ownership, it opened them to leasing by non-rightsholders (including agribusinesses) – as long as rightsholders were able to 'benefit' monetarily. Instead of using these lands for their livelihoods, rightsholders now own individual shares of a corporate property, from which they receive uniform monetary benefit – a kind of corporate dividend.

This set off a firestorm of debate in rural Morocco: what did it mean to equitably share an infungible (Mateescu 2019) and legally indivisible commons? This paper provides an extended case study (van Velson 1967) of a conflict among three groups of rightsholders, considering competing local theorizations (Guyer 2004) of the lands themselves: as political (tribal) territory, as monetizable property, and as the means to a livelihood [rizq]. It argues that these were often delimited and marshalled strategically based on particular distributive politics – with divergent implications

across class, lineage, and gendered belonging. Highlighting active processes of 'commoning' (Escobar 2015), this paper then considers the implications of this case of land rent and contestation for questions of a 'just share' (Ferguson 2015) of landed property, and contested attempts to render not just land, but its value, divisible.

3857 Anthropology's Ghosts: Ethics, Power, and Pedagogy in Departments of Anthropology

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Galerie 3

Type: Roundtable/Town Hall

This Town Hall explores how anthropology is haunted by the past—the legacies of our field's institutions, the ghosts of anthropology—and how we grapple with such a haunting as we work to shape the future of the discipline.

Events of the past several years and months have upended settled practices in anthropology, disorienting understandings of education and intellectual pursuits across academia. As we try to regain our bearings after witnessing the spectacle of an attempted coup; the urgency of Black Lives Matter activism in the context of global pandemic shut down; the rise of right wing nationalism; and authoritarian modes of governance with deep consequence for higher education, scientific research, and civil rights, we are called to reimagine a more engaged, humane, and liberatory vision of anthropology both as a scholarly discipline and as a professional institution.

The proposed Town Hall will be the culmination of a year of conversations in which 39 current and former anthropology department chairs, from public and private institutions across the U.S. and from Brazil and South Africa, share experiences of leadership and think collectively about the role, responsibility, and future of anthropology departments at this historical moment. Funded by the Wenner-Gren Foundation for Anthropological Research, this initiative has been structured to strategize about the specific responsibilities department chairs may bear in reconceptualizing pedagogy, power, and ethics in this arena. This work aims to think comparatively and holistically to address the positions and experiences (e.g. minoritized, raced, gendered, regional, transnational, historical) of all members of our academic and larger communities, including the geographic spaces where our institutions are located and those in which we conduct research but especially adjuncts, pre-tenure faculty, students, and students and scholars from the global south.

Many ghosts require continued confrontation: the specter of biological racism and eugenics; collections that deserve repatriation; gendered and racialized opportunities; the lure of corporate research funding despite likely strings attached. This Town Hall brings our conversation to the wider membership of the AAA to consider: what are the various responsibilities and opportunities for each of us, as anthropologists and as academics, as we confront the challenges of this moment

from our varied vantages and positions of power, with uneven access to resources? What may be learned—about this cultural moment, and about anthropology—by viewing the contemporary academy, and the state of anthropology within and beyond the academy, through the lens of anthropological critique?

3415 Apparitions of Abortion in the Wake of Dobbs

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Roundtable/Town Hall

Since the Dobbs v. Jackson Women's Health Organization decision removed federal protections for abortion rights in 2022, the United States has experienced ripple effects across not only abortion access but all forms of reproductive care. This event has been a rupture for anyone studying reproductive health ethnographically, whether in the US or globally.

We take this year's theme as an invitation to ask a diverse set of researchers to reflect on what "haunts" ethnographic research on abortion and reproduction in the post-Dobbs era. In what ways do legacies of racism, eugenics, and genocide in U.S. history, and our own discipline, haunt what is and is not talked about when we talk about abortion? How do the spectral (and material) geographic lines from redlining, gerrymandering, the legacy of chattel slavery, and the Civil War overlay the unequal map of abortion access in the U.S. today? How are contemporary anthropologists of reproduction drawing new inspiration from foremothers and ancestors in anthropology, social theory, and especially those in areas of work that has previously gone unrecognized as scholarship at all by the formal disciplines? What might be beyond the bounds of where ethnographic research on abortion and reproduction should ethically go, given these conditions? If we concede that, what do we miss? What ghosts do we create, to continue to "haunt" the canon of the anthropology of reproduction because we didn't, couldn't, wouldn't study it, look at it, give it the attention it deserves?

This roundtable brings together a group of scholars linked by ethnographic research agendas impacted by the material realities of the Dobbs decision in the United States. United by this commonality, we represent anthropologists from advanced graduate students to senior scholars,

from diverse regions of the United States including multiple areas of the South that are severely impacted by the Dobbs decision, from medical schools, small liberal arts schools, and large research institutions, and representing scholars of color, scholars who are first gen, and scholars who are parents. Our identities as researchers have shaped decisions of what we study, leaving imprints of ghostly paths not taken, research not chosen, whether because of clouded lenses of privilege or the inaccessibility of research for ethnographers with marginalized identities.

Crucially, inequalities of race, social class, gender, abilities, and sexualities also increasingly impact our interlocutors, meaning that ethical considerations about how to research are increasingly important for new and ongoing work in this field. How do we protect our more vulnerable interlocutors from criminalization and ensure that anthropological research does not amplify these negative effects? We ask this in the context of a U.S. where digital surveillance is increasingly used against women of color to criminalize their pregnancy outcomes.

Presentation(s): A Vessel for Ethnic Expression: How Pottery Reflects Identity in the Residential Areas of Chan Chan

This study investigates the role of pottery in expressing social identity within the residential neighborhoods of Chan Chan (1050/1100 - 1450 CE), the capital of the ancient Chimú civilization

on the North Coast of Peru. The research examines a collection of 255 ceramic fragments excavated during the 2022 field season under the direction of Professor Gabriel Prieto. Previous excavations at Chan Chan have uncovered non-local materials such as featherwork, textiles, and food, reflecting the importance of Chan Chan as the center of an imperial polity, and the presence of diverse ethnic groups within the city. How these groups functioned in Chimú society is still under speculation, but the material evidence suggests production of local and non-local styles was contemporaneous in the city. While prior studies have extensively examined wares from the Small, Irregular, Agglutinated Rooms (SIAR) of Chan Chan, this research uniquely focuses on the expression of ethnicity through ceramic decoration. The materials reveal the production techniques and artistic styles of residents from the BJ unit, a neighborhood part of the SIAR that housed the majority of Chan Chan's population and potentially served as a dynamic space of cultural interaction. By analyzing stylistic attributes, surface treatments, and decorative elements through a comparative lens informed by the archaeological context, this study aims to uncover how pre-Hispanic artisans expressed local and non-local identities in the great urban metropolis.

Presenter(s): Xiomy Hernandez

Co-author(s): Gabriel Prieto

Big Easy in Big Sky? Hunting for Spirits in a Ghost Town

The weather-weary remains of Highland City, Montana linger amidst the jagged pines and empty mine tunnels, long-emptied of their natural riches. Frost-cracked, fire-stained ceramic sherds lay scattered in the dry grass where busy streets used to churn. A gold mining ghost town, Highland City's ruins lie at an elevation of roughly 10,000 feet above sea level in western Montana. A few battered and boarded up buildings squat on the site next to a yawning ore chute, all that remains of a location that was once home to at least a tenth of Montana Territory's population.

Prospectors and miners left nearby settlements and crossed the continent for the gold, silver, and garnets of the Highlands. From 1866 to 1872, the placers and lode mines around Highland City yielded a steady supply of gold and the City's population swelled to 2,000 individuals, making the boomtown the largest settlement in southern Deer Lodge County. At its height, Highland City's residents had access to ten saloons, five dance halls, several general stores, at least 300 wooden cabins, a cemetery, and a sprawling tent settlement that connected to nearby Red Mountain City and its sawmill. A total of \$2.3 million in gold alone was torn and crushed from lodes around the settlement, but by 1882, Highland City, the tent corridor, and Red Mountain City were nearly abandoned. By 1915, the last ore mill fell silent. A lone miner lingered, ghost-like, in his cabin until he passed away in 1925, having outlived the very town to which he'd dedicated his life. Despite its notable population and wealth, there are few primary or secondary sources on Highland City. The ghost town's dead were left in silence by the 20th-century theft of their headstones.

Archival work and oral history collection helped to hunt this ghost town's history, but the exhumation of Highland City's narrative has fallen most to archaeological work. A combination of survey and test excavations have brought glints of clarity about the lives that once inhabited this

mountain town. In particular, a domestic area and a commercial area with a dance hall, a hardware store, and a saloon have indicated the presence of Euro-American miners, an Overseas Chinese community, and – most recently found – a group of individuals from southern Louisiana. This latest demographic have been located through artifacts associated with commensality, especially liquors and bitters from New Orleans. The data from these ghost-town spirits has given new clarity on the lived experience of the inhabitants of Highland City.

Presenter(s): Megan Victor

Coamiles: Ceramic Trade and Production in the West Mexican Aztatlán Tradition

During the Early/Middle Postclassic (AD 900-1350), the Aztatlán Tradition spread throughout Western Mexico and grew to be one of the most influential cultures in the region. This culture is perhaps most well-known for its expansive trade networks, with its cultural core centered on the coastal plain of Nayarit and numerous major population centers taking part in the widespread exchange. One such major Aztatlán site is Coamiles, excavated between 2005 and 2010 by the Instituto Nacional de Antropología e Historia (INAH). From these excavations, tens of thousands of obsidian and ceramic artifacts were recovered. Previously, regional obsidian analysis demonstrated widespread trade of distant obsidians into Coastal Plain sites despite local variants being available. However, to date, similar trade patterns have yet to be observed with ceramics. In this study, ceramics from Coamiles were geochemically sourced through Neutron Activation Analysis to explore the production and potential trade of ceramics at this important Aztatlán center. To accomplish this, ceramic compositional data was compared to data collected at other Postclassic regional centers. These analyses illustrate a ceramic industry that appears largely reliant upon local production with little, if any, ceramic trade. Ultimately, the pattern of ceramic production and use at Coamiles is similar to preliminary results from elsewhere in the region. Nonetheless, given the monumental architecture at Coamiles, it provides a window into Aztatlán material culture at one of the tradition's largest population centers. Overall, Coamiles was a paragon of Aztatlán culture. In this way, the ceramics of Coamiles is an ideal case study for better understanding this prolific tradition.

Presenter(s): Daniel Pierce

Neighborly Behavior: Bioarchaeology of Neighborhoods at Early Bronze Age Bab adh-Dhra'

Bab adh-Dhra' is archaeologically known as a cemetery site spanning the Early Bronze Age and a walled, townsite occupied during the EBII-III. The EBII-III is well known as a period of urban experimentation within the southern Levant, characterized by population agglomeration, increases in population density, and a clear concentration of domestic spaces in neighborhoods. This paper examines the role of community care and conflict as parts of the social landscape that might have influenced the embodied lived experience of the townsite's residents as people adjusted to living in close proximity to their neighbors for the first time. At Bab adh-Dhra', previous research has shown a high prevalence of healed cranial trauma, but the concept of community care and medical intervention has remained largely theoretical. A current bioarchaeological reanalysis of the site has

identified additional evidence for violence at the site as well as evidence for medical interventions for the injured, showing that head wounds were successfully treated amongst those buried in the cemetery during the occupation of the townsite. These findings speak to how others invested time and expertise in caring for those affected by cranial trauma, how living in densely populated neighborhoods might have contributed to conflict at the site, and speaks to how nascent urbanization may have reframed social interactions, community responsibility, and concepts for what makes a "good" or "bad" neighbor.

Smothered, Covered, and Increasingly Concerned: Results of the Southeastern Archaeological Conference Heritage at Risk Survey

In fall 2023, the Southeastern Archaeology Conference (SEAC) Heritage at Risk Task Force launched a survey of its membership and the broader archaeological community to learn more about experiences and needs in addressing climate change impacts to the practice of archaeology and the cultural resources we study. A total of 106 archaeologists from the southeastern United States and beyond completed the survey. Follow up, informal interviews were conducted at the SEAC 2024 annual meeting to gather additional data about perceived changes to archaeological fieldwork and threats to resources in the face of climate changes. Quantitative and qualitative assessments of responses reveal shared areas of concern for professional archaeologists. Of all participants, 97% are noticing impacts of climate change within the areas they work, 76% have observed impacts to archaeological curation practices, and 86% noted concern over health and working environments. Respondents were primarily concerned with impacts to their personal health and safety, largely noting hazardous working conditions. In contrast, fewer respondents indicated direct concerns to cultural heritage resources, such as eroding NRHP-eligible sites or damages to curation spaces. Increased global temperatures and higher relative humidity, in the southeastern U.S. in particular, were identified as contributing to increasingly dangerous summer field conditions for students and field-based archaeologists. Many respondents identified the numerous strategies they use to keep field crews from suffering heat-related injuries like heat exhaustion. Identifying ways to effectively convey the "real-world implications of climate change" to non field-based archaeological stakeholders and mitigate potential harm is a primary need stated within the archaeological community. Additionally, archaeologists are seeking formal and informal guidance to communicate the past, present, and future implications of climate change on modern communities and past cultural resources.

Synthetic Aperture Radar (SAR) Remote Sensing in North American Archaeology: Past and Present Barriers and Future Perspectives

Image processing of remotely sensed data has proven extremely useful to archaeologists in recent years. Most importantly, remotely sensed data allows archaeologists to explore and locate sites in a nondestructive manner. Synthetic Aperture Radar (SAR) is one such powerful form of remote-

sensing. SAR imagery has recently seen a surge in popularity in Old World archaeology. However, in North and South America, archaeological research has traditionally favored optical imagery due to the limited availability and complexity of SAR data. The use of SAR datasets in archaeology has also been limited by the low spatial resolution of the satellite SAR sensors necessary for archaeological prospection and detection in the North American context. For these reasons, optical imagery has typically been preferred over spaceborne SAR data in the Western Hemisphere. However, satellite SAR has now entered into a new era of applications mainly due to the increased access to data archives and various satellite platforms. This progress is largely attributed to the expanded public availability of SAR data, encompassing both free sources like Sentinel-1 and high-resolution commercial platforms such as TerraSAR/TanDEM-X and Ultra-high-resolution satellites from Capella Space and Umbra. These systems now offer sub-meter resolution, coupled with multifrequency and multipolarization capabilities, vastly improving detection and analysis of human soil interactions. The development of user-friendly software has further democratized SAR data processing. The use of multifrequency, multisensor, multitemporal, quadpolarization SAR data is now providing powerful information for archaeological investigations in the New World. Throughout North and South America, SAR data is now enabling detailed investigations of archaeological landscapes, reconstruction of paleo-environments, detection of buried and surface sites, and effective monitoring and preservation efforts. This technological leap has provided archaeologists with a powerful tool to overcome the limitations of optical data, unlocking new potential for revealing and understanding past human activity.

The Connected Country: Revealing Material Patterns in Rural Social Networks through Text-Aided Archaeology

The proliferation of network-oriented perspectives in archaeology and beyond underscores the interpretation of complex webs of material, information, and practice. To this end, social network analysis (SNA) is attractive for its functional diversity, scalability, and suitability for relational archaeologies. This presentation considers SNA as a means of establishing household-level archaeological data within neighborhood, community, and landscape contexts. Using data mined from technical reports and archival sources, SNA was applied to a sample of nineteenth- and twentieth-century rural domestic sites in the Lower Ohio River Valley. Comparative metrics and data visualizations generated via SNA and software packages and GIS illustrate the feasibility of the method, its drawbacks, and its potential.

The Ghosts of Planning Past: Morphological Regions in Pompeii and Ostia

The well-preserved ancient Roman cities of Pompeii and Ostia, like most cities, were not built all at once but evolved through a combination of planned and organic development over time. Morphological regions, a concept from the academic discipline of urban morphology, reveal the echoes of past planning in the preservation of physical forms, most notably the layout of street

networks and city blocks. In this flash presentation, I will review hypothesized morphological regions for both cities, and what they can inform us about past urban planning as well as alignment with organic development processes. The session will also briefly showcase how statistical regression analysis can be employed to treat morphological regions as a dependent variable for predicting the use of space at intersections in these ancient Roman cities.

Presentation(s): Beyond the Schoolyard: Rosenwald Schools, Public Memory, and the Ongoing Fight for Black Educational Futures

This paper examines the preservation of Calvert Colored/W.D. Spigner School, a Rosenwald-era institution built in 1929 in rural Texas, is a case study in Black educational resilience and public memory activism. Drawing on archival research, oral history interviews, and four years of community-engaged preservation work, which culminated in a Texas Historical Landmark designation, I trace how Black communities have historically leveraged education as both a tool of resistance and a site of cultural self-determination.

Situating this project within the broader history of Rosenwald Schools, I argue that these educational spaces functioned not merely as schools but as foundational institutions of Black autonomy, built and maintained through community labor, financial sacrifice, and political negotiation. Even as physical sites, Rosenwald Schools embody a counter-archive: a living testimony to Black resilience in the face of state neglect and structural racism.

This paper explores how public memory work around Rosenwald Schools disrupts narratives of Black educational deficiency and recenters Black communities as active agents in educational history. It also interrogates the contemporary stakes of preservation in a political climate where legislation like Texas's SB17 seeks to erase Black history from public institutions.

Ultimately, the paper argues that the act of remembering and preserving Black educational spaces is a radical intervention against historical and contemporary erasure, keeping alive both the spirit of collective struggle and the vision for liberated Black futures.

H(a)unting Energy Futures: Geothermal Landscapes, Climate Crisis, and Kenyan Engineers' Dreams

This paper ethnographically explores how Kenyan engineers are tormented by uncertain and competing energy futures. Trained in Iceland and working in Kenya's geothermal fields, these engineers navigate landscapes shaped by both geologic activity and powerful imaginaries of the past and future. Bubbling mud pools and rising vapour have long been associated with ghostly presences, from trolls in Iceland to warrior spirits in Kenya's Menengai Crater. Yet these haunted landscapes also represent modernity, as their subsurface heat promises stable, green electricity. As Europe turns to Africa for green hydrogen and other renewable energy solutions, geothermal exploitation becomes part of a global scramble for resources framed as climate action. Kenyan engineers are key actors in realising these energy futures. Inspired by Icelandic models, they return home highly motivated but often encounter stalled projects, bureaucratic barriers, and frustrations when their adapted ideas remain unrealized. Feeling haunted by their own sociotechnical visions, some take action in their spare time, pursuing their ideals by helping rural communities use geothermal heat directly. But what happens when the just futures the engineers imagine threaten to become yet another extractive reality? Like the geothermal landscapes they work in, these engineers are entangled between global demands for low-carbon energy, systemic constraints, and the ghostly presence of the local futures they set out to build.

Presenter(s): Julia Caroline Wummel

Racism, Salvation, and Deaf Education

"Racism, Salvation, and Deaf Education" is a correctionist history of the appearance of Deaf education in the United States. The paper challenges the commonly told stories regarding Deaf education and contextualizes the existence of the first schools for the Deaf in American missionary and racial politics. I do this by investigating the educational background and network of the founder of the first permanent school for the Deaf in the US, Gallaudet, and analyzing his sermons that reflect the cultural priorities of the time of civilizing the heathen. Through this investigation, I find that schools for the Deaf are a part of America's missionary history, connecting them to the establishment of institutions like the first US penitentiary, the first private psychiatric hospital, and the first ABCFM Indian Boarding School, all of which were founded in the same year. Today, we do not think of schools for the Deaf as being related to their cousin custodial institutions, but through this corrective project, I explore the significance of their present and historical connectiveness as a part of America's broader missionary history.

To Possess the Ghosts: Black Youth Aesthetics as (Re)memory and Haunting in Racialized Geographies of Terror

This paper theorizes a pedagogy of Black youth aesthetics as a paraontological and insurgent practice—an embodied, loving refusal of anti-Black constructions of knowledge, worth, and futurity.

Drawing from over a decade (2013-present) of ethnographic research with Black high school youth across the United States-part of what Elizabeth Alexander (2022) terms the Trayvon Generation-I explore how their aesthetic and literacy practices function as sites of cultural (re)memory and critical insurgency, actively ghosting the racialized geographies of Euromodernity. Black youth resist epistemic violence not only through reaction, but through creation: producing life texts that emerge from and exceed their social conditions. Engaging J. Kameron Carter's (2013) theorization of Blackness as paraontological and Christina Sharpe's (2016) wake theory, I argue that Black youth aesthetics is an appositional force-a love-driven aesthetic of radical becoming and possibility that unsettles anti-Black ontologies and refuses the logics that deem Blackness as brute, inferior, or dead. These aesthetic practices-through fashion, language, art, protest, poetry, and relationality-constitute what I call a Black reparative love praxis, refusing dehumanization and reshaping what it means to be human in anti-Black worlds. Black youth's expressive lives are more than resistance; they are acts of Black cultural preservation through spiritual and tangible processes such as worldmaking and curricular reimagination that must inform how we rethink pedagogical processes in state societies. In schooling contexts that often reinforce the devaluation of Black life, Black youth aesthetic productions reclaim and repurpose space, leading to the realtering of violent landscapes through enactments of counter-combative ontologies. To possess the ghosts, as I frame it, is to live with and through Blackness as love-an insurgent, always-becoming force that teaches us how to live otherwise.

Uncertainty and livelihood aspirations of smallholder farmers in context of food systems transformation: Insights from rural Malawi

Small-scale agriculture provides livelihoods for majority of population in Malawi and Africa. Smallholder farmers play a key role in food system transformation, with aspirations-understood as orientations toward the future-shaping their livelihood strategies, decision-making processes, and investment choices. Aspirations as analytic lens offer valuable insights into how individuals and communities navigate structural constraints and opportunities, interpret social norms, and envision a "good life." As such, they are crucial for analyzing the dynamics of food systems and the broader rural-urban transformations. While aspirations are increasingly recognized as important signifiers of future behavior, there remains limited research examining how these evolve over time, particularly in rural contexts of the Global South marked by high levels of livelihood uncertainty (including food insecurity). Emerging research highlights how people engage with uncertainty in diverse ways and emphasizes the importance of understanding aspirations in uncertain contexts as rooted in "situated agency". Yet, the contextual spatial-temporal experiences and conditions of uncertainty, including the role of food system policies and development interventions in exacerbating or reducing different uncertainties, remain underexplored.

This study investigates how perceptions of uncertainty-such as environmental change or market volatility- affect the formation of aspirations and livelihood decisions among smallholder farmers in the Zomba and Mangochi districts of Malawi. Using life history approach, we capture how

aspirations emerge, shift, or adapt across life stages, and how structural conditions of uncertainty influence their (non)fulfillment. Life history interviews allowed participants to narrate personal trajectories, situating key life events on timelines and reflecting on changes in aspirations in relation to their lived experience of uncertainty.

Findings highlight the centrality of perceived (structural) uncertainty-past and present-in shaping aspirations and livelihoods. We explore how uncertainty is navigated, produced, and reproduced structurally, and discuss tensions between policy-led aspirations for food system transformation and farmers' desires and conceptions of the present-future, including desires for stability. By engaging with cross-disciplinary understandings of uncertainty, this paper offers fresh insights into the dynamics of rural livelihoods and food system transformation. We argue that uncertainty is a shared condition that mediates the interplay between structure and agency across contexts-ultimately shaping how aspirations are formed and acted upon.

'The food within': vital units' movement and metabolic pathways among the Luo of western Kenya

Consumption among the Luo people of Kenya lies at the intersection of exchange of food and agentive potencies between human and nonhuman entities. That shareability is configured through a movement that typifies the flow of forces – both affective and agentive, interconnecting and constitutive of the species intentionality. The exchange of food and potencies occur across a cosmo-juridical framework. This article explores the exchange of forces between humans and nonhumans as a marker of life formation. The exchange signals a metabolic pathway that perceivably integrates the complex co-forming which builds from the food that is consumed and the forces exchanged between it, the people and nonhuman entities. Perspectives on the agentive potencies of food, people and ghosts are explored, their interactions and co-negotiations within their spaces. Food movement as a form of food conversion and indexing is revealed in the way food operates across the inside and outside of the human body. Cosmo-juridical framework unsettles cultural paradigms on foodways that emphasize the material essences of food and eating on growth, their nutritive and physiological aspects – and not how perceivable exchange reveals its agency in life formation.

Key words: Anthropology of life, cosmo-juridical framework, 'the food within', food force, Life, Kenya

Venue: Marriott **Room:** Galerie 5

Type: Oral Presentation Session

Anthropology is haunted by our colonial past. Colonial tools: from institutional grant writing to data production and dissemination, to the machete and the plow, are threaded throughout our research, our lives, the lives of the communities whose voices we seek to illuminate. This panel interrogates colonial tools and the role they play in our tangled lives and livelihoods. The papers ask and answer questions: Can colonial tools actually be reframed? Is this a useful endeavor? Does it lead to constant critique but little useful action or change? Do we really seek to build anticolonial approaches? Is the unimaginable actionable? Through wide ranging ethnographic examples, the papers in this panel interrogate the complexity of anticolonial approaches in a world shaped by colonial tools. These reflexive understandings open anthropological possibilities, moving beyond guilt and lip service to furthering intentional transformative actions. (Part 2 of a double session)

Presentation(s): Decolonize! Corporatize! Cultural Heritage Practice in Jordan

Efforts to decolonize archaeology have focused in part on the need to recognize historically invisibilized contributions by local communities to the excavation, conservation, and management of cultural heritage. In Southwest Asia today, one of contemporary archaeology's inheritances from its colonial origins is foreign archaeologists' reliance on a local "fixer" for a range of arrangements such as accommodation, food, transportation, translation, and labor recruitment. The fixer is largely an informal role—a paid one, but without clearly delineated responsibilities or a recognition of the role as expert or skilled labor. One effort to change this is reflected in the work of Sela, a private nonprofit company founded by Jordanians in Petra in 2015 with the aim of training and certifying local expertise in archaeology. Sela works with archaeologists and transnational heritage organizations like UNESCO, and drafts contracts that document, remunerate, and formalize the role of the "fixer," and also ensure fair pay and safe working conditions for all workers employed on the project. In their hiring practices, Sela employs a system that aims to spread the material benefits of archaeological employment as widely as possible through the community. Is decolonial heritage practice possible through a private, corporate formation if it is locally imagined and implemented?

Anticolonial Rehearsal: Steps Toward an Anticolonial Public Science Education

What should anthropologists do when the participants in their research—about whom they care deeply, and to whom they are indebted—perpetuate colonialism? I face this question after having conducted research with a NGO that is dedicated to public science education. Its employees and

volunteers do important work teaching people young and old about paleontology, evolution and the history of life on earth, inspiring curiosity about the nonhuman world, and helping create a sense of place in a rapidly changing region of the western United States. Yet they also present a racist narrative of the history of paleontology to the public. This paper is an anticolonial "rehearsal" in a double sense. First, I will preview the presentation I plan to give to the staQ and volunteers at this organization, explaining how they are perpetuating a racist narrative of white science as a heroic and moral endeavor to save nature and produce knowledge of it. It will explain how the stories they tell about the first paleontologists in the region erase paleontology's dispossession of indigenous land, knowledge, and labor. Second, I will retell the history of paleontology in a manner that highlights how scientists helped advance, and justify, settler colonialism in the western United States. My aim is to turn anthropology's anticolonial critiques into practical tools that this organization's members can use to retool its public science education.

The Case for a Slow Anthropology: Reflections on Linearity and Time from the Field

The reproductive justice movement notably moves beyond a pro-choice/pro-life binary, focusing attention on birth parents' right to both give birth under the conditions they seek and to raise their children in environments free from violence, toxins, and harm. At the core of these principles are temporalities that defy linearity—simultaneously calling back to ancestral wisdoms and pressing forward towards new Black maternal futurities. By locating the tenets of the reproductive justice movement as an exercise in temporal non-linearity, this paper will examine the role of time in anti-colonial anthropological research methodologies. Through an ethnographic foray into the work of a reproductive justice collective in Massachusetts, this paper grapples with the push and pull, the poke and prod, of productive time as a colonial research tool, asking: What is the anti-colonial researcher's relationship with time? What methodological lessons can be gleaned from the organizing and healing strategies of the reproductive justice movement? What might slow research—indeed, a slow anthropology—reveal about the hauntings of the discipline's colonial past?

Presenter(s): Karina Edouard

Haunted by our predecessors: Interrogating the Ghosts of U.S. Imperial Anthropologists in Micronesia

Anthropologist Catherine Lutz (2006) advocated for more ethnographies of empire, and I answer her call by exploring anthropology's role in U.S. imperial expansion. Micronesia is haunted by many colonial powers, most recently the U.S., and anthropologists supported their occupation in powerful ways in the mid-twentieth century. The Coordinated Investigation of Micronesian Anthropology (CIMA), developed post-WWII, was one of the largest government-sponsored anthropological projects in US history. Supported first by the US Navy, and later, the Department of the Interior, anthropologists descended on Micronesian communities to support U.S. occupation, and the specters of these anthropologists remain present in policy, practice, and memories today.

Their body of work makes up the most substantive anthropological literature in the region, which still informs development agendas, often understood to be a modern form of colonialism. What do we do with this knowledge obtained through imperial means? Drawing from my recently published book, *Forgotten Bodies*, this presentation will consider what power to give their findings in our own work, and how to represent anthropology in Micronesia. I ask the question anthropologists have been haunted by since at least the 1980s, but never completely answered: How do we correct the haunted legacies of these projects in spaces in which we work? I will provide some of my anti-colonial strategies, and interrogate whether they are remotely sufficient.

Presenter(s): Sarah Smith

Heidegger's Ghost, and Its Political Afterlives in Anthropology

Anthropology's engagement with Martin Heidegger's philosophy has often centred on his concept of being-in-the-world to examine human entanglements with others and their environments. Focusing primarily on the first division of *Being and Time* and his more impressionistic works, many anthropologists have sidestepped the political implications of his thought. While Heidegger's affiliation with Nazism does not render his philosophy void, a deeper reckoning with its political resonances can be both intellectually and politically productive. My research on historical trauma among children of Holocaust survivors in North America demonstrates how Heidegger's ideas expose the micro-logics through which right-wing ideologies emerge and take hold. Rather than sidelining the troubling aspects of his work, this approach critically interrogates how Heideggerian thought might be unwittingly reproduced in ways that naturalize problematic logics. In doing so, it reflects on the broader question of whether certain philosophical tools—deeply entangled with colonial and reactionary histories—can be repurposed for a transformative, decolonial anthropology.

Presentation(s): "I'm looking for a nice, quiet neighborhood": Denaturalizing property valuation--and race--in residential real estate

America's real estate markets are a battleground for heated debates about race, capitalism, and inequality. Critics note that minoritized--often "urban"--neighborhoods have been systematically devalued (e.g., Massey and Denton 1993; Rothstein and Santow 2012; Connolly 2014), and those devaluations coalesce in an inequitable distribution of property value that further reinforces cycles of accumulation and dispossession. While helpful for drawing attention to racialized inequities, these critiques do not illuminate how spaces get attached to racial categories or how that ascription relates to processes of devaluation. Since value, place and race are often assumed to be static or innate (Agha 2011, M'Charek 2013), there is little attention to the processes of value-, place-, and race-making through which residents produce the distribution of property value and its organizing categories (e.g. urban/suburban, white/Others). Shifting attention to these dynamic processes, this paper combines both material semiotics and historical materialism to examine residents' everyday practices of property valuation and their relationship to broader processes of race-making and capitalist reproduction.

Based on 24 months of ethnographic fieldwork with residents--including realtors, homebuyers, activists, public officials, and more--in Greater Hartford, Connecticut, I detail how residents value-- or differentiate and rank (Ferry 2014, Searle 2017)-- residential properties and the people and places with which they are associated. These property valuation routines are often driven by the imperative to protect one's capital and well-being. Homebuyers search for signs of future risks to their capital (e.g., resale value) and to their lives (e.g. physical safety). In these searches, residents sift through a seemingly infinite array of direct sensory information or "object signs" (Agha 2006) --including the sight of pearl earrings, touch of laminate floors, smells of mildew, sounds of gunshots, etc.--as well as artifacts of other peoples' experiences (whether expressed as a fleeting comment, crime map, "School Ranking," etc.).

Drawing on Agha (2006), I denaturalize the "object signs with which my interlocutors link culturally recognizable "meta signs" (e.g., "urban," "whiteness,"). I also consider my interlocutors' heated meta-semiotic debates about when these valuations are "racist." I show how residents' property valuation routines and their anti-racist critiques both function as a kind of avoidance register that silences the material conditions in which ethno-racial taxonomies become associated with poverty/wealth and thus, with the likelihood of future risks to one's capital and well-being. This erasure helps explain why many anti-racist political projects end up encouraging recognition over redistribution and thus, speaks to long-standing anthropological debates about the relationships of race-making and capitalist reproduction.

Presenter(s): Rachael Stephens

After Moving Out: Revisiting, Photographing and Squatting in Redevelopment Bases of Gentrified Shanghai

This paper focuses on redevelopment bases in Shanghai's inner city, which are vacant residential blocks during the transitional period (typically 3 to 5 years) after original residents move out and before developers take over. These blocks, often decades to a century old, trace their origins to the colonial and planned-economy eras.

Unlike the "ghost cities" (guǐ chéng) discussed in existing literature, which refer to newly built but uninhabited towns resulting from overinvestment, Shanghai's redevelopment bases emerge from the gentrification and capital accumulation cycles in the inner city. Behind them lies the municipal government's ideological commitment to improving housing conditions for the downtown residents, a commitment realized through displacement.

Based on in-situ field investigations and in-depth interviews, this study finds that original residents displaced to the suburbs due to gentrification hold ambivalent attitudes toward the discourse of "ghost cities": some, grieving un-homing and criticizing displacement, label vacant redevelopment bases as such; others, out of a lingering sense of home toward the old neighborhoods, avoid the term.

The redevelopment bases are not devoid of human activity. Three types of practices are identified: revisiting, photographing, and squatting. Original residents and history enthusiasts regularly visit and revisit these downtown redevelopment bases to explore personal life histories and urban memory, photographing and sharing their findings on social media. Trespassing becomes necessary during these visits, often leading to encounters with migrant workers who collectively squat in a redevelopment base.

In sum, compared to the more common but historically shallow "ghost cities" found elsewhere in China, Shanghai's downtown redevelopment bases, with their historical depth, become sites where victims of gentrification seek identity and protest displacement: those who left keep returning.

Presenter(s): Zhihao Tian

Digital Romance Trickery and the Spiritual Infrastructures of Young Men in Abidjan

Amidst Abidjan's rapidly transforming urban landscape, a new generation of young men—colloquially known as brouteurs-engages in digital romance scams, navigating worlds shaped as much by intentional spiritual engagements as by tangible technologies. Drawing on longitudinal ethnographic fieldwork conducted since 2012, this paper explores how purposefully constructed spiritual infrastructures—the trans-local networks, ritual practices, and strategic relationships that mediate access to invisible realms—intersect with digital platforms to shape young men's aspirations, agency, and lived experiences in contemporary urban Côte d'Ivoire.

The study foregrounds how brouteurs actively cultivate relationships with spiritual healers and ritual specialists to enhance the efficacy of their digital strategies and renegotiate their precarious, often ambivalent positions within unstable socio-spiritual contexts. Unlike frameworks of infrastructural haunting that emphasize spectral disruptions or historical absences, the concept of spiritual infrastructures developed here highlights purposeful, future-oriented engagements:

brouteurs construct cosmotechnical pathways-ritualized interactions combining spiritual forces and digital technologies-to achieve materially consequential outcomes.

This perspective reframes current debates by presenting spiritual infrastructures as actively cultivated assemblages that enable agency across visible and invisible domains. These emergent configurations invite a reconceptualization of urban infrastructures not only as social and material, but also as spiritual and cosmological interfaces. Thus, digital economies emerge not as purely technological spheres, but as deeply entwined with localized spiritual logics and intentional cosmological strategies.

From Colonial Ghosts to Contested Narratives: A Toponymic Inquiry into a Brazilian Neighborhood

Most toponymic explanations of Recreio dos Bandeirantes (in English, "Bandeirantes' Recess"), a coastal neighborhood in Rio de Janeiro, Brazil, appear logical but are not sustained by evidence. Common narratives trace the name to either (1) its supposed use as a resting place for bandeirantes, colonial-era explorers responsible for the geographical expansion of Brazil, or (2) the sale of land plots to Paulistas (residents of São Paulo, also known as bandeirantes) by the neighborhood's founder, the American venturer Joseph Wesley Finch. These explanations have been naively disseminated through real estate discourse, academic literature, and other products that superficially discuss the historical biography of the place. However, archival research reveals no concrete evidence supporting either origin story. Instead, it demonstrates how these stories carry partial truths that, when engaged within a situated historical context, can help deepen our understanding of the neighborhood's symbolic and material development. Motivated by a desire to move beyond these generic and often romanticized claims, I conducted archival work investigating early-twentieth-century newspaper articles on the history of the neighborhood, the origin of its name, and what its urban development aspired to achieve. The results challenge prevailing discourses, offering an alternative explanation that puts certain ghosts to rest while evoking new ones. The content of this presentation emerges from a sense of curiosity and responsibility to interrogate local toponymy critically and to share findings that can meaningfully contribute to the historical understanding of Recreio dos Bandeirantes.

Presenter(s): Raul Lisboa Pereira Basilio

Inclusive Authenticity: Urban Redevelopment, Ethnic Identity, and the Search for the "Real" Orlando

Orlando is a city with an authenticity complex. Long defined by its larger-than-life theme parks and, more recently, self-contained and sanitized residential enclaves, the city's political and business leaders have recently sought to promote the "real Orlando" by highlighting the historic and eclectic neighborhoods in and around downtown, and by partnering with the Main Street America organization to rebrand and redevelop once blighted inner-city spaces. One such neighborhood targeted for redevelopment is the recently rebranded Mills 50 district immediately north of downtown. Once referred to as "Little Vietnam" by locals, Mills 50 has a high concentration of

Asian-owned businesses and restaurants, inviting questions about the durability of its immigrant identity amidst an influx of new residents and investment. The architects of the Mills 50 rebrand have also studiously avoided focusing primarily on its ethnic character for fear of excluding other fixtures of the neighborhood: a prominent LGBTQ+ community, art studios and galleries, and the historic "mom and pop" shops enjoying a recent renaissance. In spite of these challenges, this presentation pinpoints features of Mills 50 that serve to inhibit the kind of large-scale gentrification and demographic replacement that can result in ethnic erasure. While many older Vietnamese-owned businesses have been priced out or left behind by trendy and fashionable cafes and restaurants, the latter are largely Asian-themed and owned and operated by second-generation entrepreneurs from the same community, drawn to the neighborhood by personal history and nostalgia as much as the investment-friendly environment. Further, while the goals, interests, and identities of the diverse stakeholders may be distinct, and while they might not agree on what makes Mills 50 "authentic," their values converge around the idea of authenticity, providing a bulwark against community displacement, and allowing the neighborhood to maintain its role as a preserve of the "real Orlando" amidst the gentrified and Disney-fied urban sprawl.

Presenter(s): Timothy Karis

Locating Living Histories in New Delhi: Heritage and Community Practice in the Aga Khan Trust for Culture

In the first few months of 2025, India experienced a wave of national protests which rallied against a proposed amendment of the Waqf Act of 1995 – a legal ruling regarding the management of Islamic property, with its roots stretching back to the 12th century Delhi Sultanate. The current atmosphere of political protest has brought together a constellation of anxieties surrounding encroachment, corruption, inheritance, and land revenue – placing Indian Muslims at the center of entrenched debates on religious space and who may claim it. In an unprecedented age of bulldozer drives, demolitions, and socio-spatial violence against minorities in India's urban centers, so-called 'living' Indo-Islamic or Mughal-era heritage sites – especially those which host contemporary religious practices – have become increasingly precarious. This paper will examine the institutional narratives of one partnership project in the historically Muslim Delhi neighborhood of Nizamuddin basti, which is conducting both conservation and community development work in key heritage sites, in order to situate contemporary articulations of 'intangible cultural heritage' in the context of increasingly tense socio-political discourses around what constitutes a specifically national history. Building on recent historiographies and social scientific studies of the production of urban Muslim space in Delhi (Jamil 2017 and Parveen 2021), alongside scholarship on contemporary heritage politics (Pati 2019, Meskell 2020, and Rajagopalan 2016), this paper will examine the ways in which claims to religious space and archaeological histories of Muslim communities in Delhi are refracted through concepts such as 'living heritage' and national 'monuments' at the institutional level. Through analyses of oral histories, institutional accounts, and ethnographic fieldnotes from site visits to the Aga Khan Trust for Culture's (AKTC) managed monuments in Delhi, this paper considers how the wider Aga Khan Development Network's institutional ideologies are reconstituted through 'development' projects within Delhi's urban Muslim communities. I highlight,

in particular, how Muslim space is discursively produced and subsumed within a particular narrative of urban history, arguing that heritage politics both plays a crucial role in negotiating national spatial imaginaries, and mediating tensions between what is 'living' and 'dead' history in Delhi's landscape. At a time in which urban life is increasingly precarious, these questions are crucial to our understanding of the relationships people have to their material realities – and what is at risk of disappearing under a new order of religious majoritarian structural violence and dispossession.

Presenter(s): Maya Padamsee

Thresholds of Care: Contradictions of House and Home within Brooklyn's Trans Punk Do-It-Yourself Venues

Within Brooklyn New York's punk housing collectives, the distinction between house and home erects thresholds of concern. Artists confront the collective effervescence of a party and the solitary ache of emotional and financial precarity. Through an ethnography of a do-it-yourself music venue and collective housing effort that existed for 18-months in a former industrial loft, this talk explores how queer punks reclaim post-industrial spaces to craft trans identities and to resist neoliberal planning efforts. Examining the echoes of Mayor Bloomberg's 2005 rezoning of the Williamsburg-Greenpoint waterfront offers insights into how struggles for affordable, quality housing are shaped within the civic demands of planning policy. Having existed on the waterfront, the venue's turbulent lifespan demonstrates how anarchists, punks, and queers deploy ephemeral occupations of space to challenge the distribution of public resources and care. Simultaneously, artists and residents negotiated the nature of home as material needs for preserving the venue and intimate needs for affective support blur the distinction between art collective and family. Given its planned demolition to make way for luxury condos, the ephemerality of the venue reshaped the politics of resource redistribution and care as trans liberatory politics were formulated within the constraints of state-led rezoning efforts and real estate investment strategies. This tension raises questions for urban affordable housing movements as distinct experiences of the home as a site of care and the house as an object of political struggle shape how artists collaborate, conspire, and collectivize. These divergences reflect how gender expression is articulated as a personal versus a political project dependent on how trans communities express their gender when crafting shared social spaces.

Presenter(s): David Farrow

Vertical Access: A Critical Analysis of Design and Disability through the Elevator

"Disabled people are experts and designers of everyday life. But we also harness technoscience for political action, refusing to comply with demands to cure, fix, or eliminate disability" (Hamraie and Fritsch 2019). As described by disability scholars Aimi Hamraie and Kelly Fritsch, the fields of disability and design are deeply entangled: designers (should) consider disabled experiences when constructing an object or space and oppositely, the design of an object or space molds who is able to make use of it and their comfort when doing so. Anthropologists Faye Ginsburg and Rayna Rapp

emphasize the importance of world-building to the disability experience: "Instead, we stress how experiences of disability may incite everyday creativity and provoke new ways of understanding human difference in specific locations" (Ginsburg and Rapp 2024, 5). Through improvisation, people with disabilities thus design their daily experiences.

Within this larger frame of design exists questions around mobility and the built environment. In other words, how can the built environment be disabling? Accessibility is on the minds of New York City (NYC) administrators and designers. In 2019, the Metropolitan Transit Authority (MTA) pledged to make all subway stations accessible by 2034. As of 2022, this estimate has been extended to 2054; now, the MTA aims to expand accessibility to approximately 95% of subway stations (i.e., most, but not all) by 2055 (Garcia and Greenberg 2022). Accessibility, by the MTA, is defined according to the Americans with Disabilities Act (ADA). According to their 2020-2024 Capital Program, disability is largely addressed through the addition or renovation of elevators and ramps, thus providing stair-free access to subway platforms.

Through my focus on the subway system of NYC, my presentation argues that these pieces of legislation place the elevator at the forefront of accessible transportation. Fieldwork conducted amongst advocacy communities in NYC, along with auto-ethnography, has informed my understanding of the social, engineering, and activism complexities that undergird accessible design initiatives. My guiding research questions are as follows: What does the elevator, as infrastructure and a tool, enable or foreclose? Similarly, how did the elevator become the archetype of assessing disability access and inclusion and what are the limits of reliance on one object as a model of accessibility? This presentation analyzes the misalignment between accessibility as it is defined by policy-makers and as it is understood within disability communities in order to critically examine the concepts/categories of disability, accessibility, user, and inclusivity.

Presenter(s): Justine Prince

5532 Daughters of Gold: A Table Read of an Ethnographic Play in Progress

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** MGB - Salon C

Type: Roundtable/Town Hall

The intersection of ethnography and theatre is an exciting area for developing experimentation and arts-based community engagement. In this roundtable event, scholar-performers explore scenes from a new work-in-progress theatrical play based on ethnographic fieldwork conducted by Cassandra Hartblay in Bishkek, Kyrgyzstan 2022-2025. The work to date has been developed by Hartblay in collaboration with ethnographic theatre practitioners Giordano and Pierotti in their method of Affect Theatre, and playwright Sean Dixon. The roundtable offers an opportunity to develop a work in progress, to model for conference attendees the process of developing ethnographic theatre, and to foster collaborative creative ethnographic praxis. Additionally,

participants will have the opportunity to discuss and consider the subject matter and content of the work.

"Daughters of Gold" (or "Altyn Kyzylar" in Kyrgyz), is a play about a feminist activist and civil rights lawyers who take on an increasingly autocratic Kyrgyz state in a trial about the rights of parents to name their children with a middle name patronymic based on a mothers' rather than father's first name. The naming system in Kyrgyzstan reflects a history of Turkic linguistic heritage, Russian colonization, Soviet bureaucratic practices, and emergent heteropatriarchal competitive autocracy, as the Kyrgyz government (once a haven for civil society in post-Soviet Central Asia) has turned increasingly toward Putin-style governance in recent years. How do those who stand up to a bully-autocrat withstand the emotional toll and public fallout when the results of their trial about naming practice becomes a surprise national scandal nearly causing a constitutional crisis?

(1) Introduction (15 minutes) The ethnographer-playwright will introduce the concept of the play; roundtable participants (who have received their assigned parts in advance) will indicate the character in the script that they are playing; 3-5 audience members will be invited to read smaller roles; scripts will be offered for audience members to follow along.

(2) Reading (30 minutes) The performers will read 2-5 scenes from the play. They may bring theatrical movement or elements of the stage into their reading.

(3) Discussion and Re-Reading (45 minutes) Discussion to reflect on the reading: Discussants will reflect on ethnographic themes in the work. Panelists will reflect on the reading in the mode of artistic critique: What did you observe? How did it make you feel? What didn't work or lost you? What kind of sense did you make of what you observed? Audience members will be invited to respond. After an initial consideration of the performance itself, audience members and participants may also ask clarifying questions of the ethnographer-playwright and panelists about broader project and ethnographic theater in general. The group may re-read or re-stage excerpts to consider how they might be revised or performed differently.

8152 Digging: Socialities, Affects, and Epistemologies of the Underground

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

Worlds below remain opaque; shrouded in sediment and soil - itself hauntingly unclassifiable - what lurks below resists sensorial engagement more than other planes of our existence. Yet, we dig. We unearth things of value - as treasure hunters and miners. We build relations across boundaries of life and death, human and non-human. We both uncover memories and histories - removing sediment as if it were the very materiality of forgetting - and bury things to store or hide. We construct underground infrastructures - sewers, tunnels, and wells - that we depend on daily, but keep separate and often obscured from our horizontal world. Anthropological inquiry normally treats these phenomena separately. For example, while treasure hunters, petroleum engineers, undertakers, rescue teams, and sanitation workers have received significant ethnographic attention, considerations of their shared concerns as they engage the world below remain absent.

This panel seeks the possibility of a dialogue across different forms of digging. What relations are built in burying, uncovering, and inhabiting subterranean space? How do borders and boundaries between political entities, humans/nonhumans, Gods/spirits, living/dead, past/present take and change shape while digging? How do schemas of personhood, mutuality, and domination that are thought from the horizontal space of land change or reproduce themselves underground? What affects emerge in projects of making the covered visible or the buried hidden? What role does the secrecy, surprise, and expertise of unearthing play in regimes of value? As both an engagement with dirt and an attempt to order it, how do acts of digging fit into conceptions of purity and pollution? How do acts of digging contend with conceptions of the ground or earth as a metaphor for things shared or held in common? How can concepts and methods brought from other disciplines help us think about digging in anthropology?

Presentation(s): Communities Of Soil, Bodies of Difference: Migration, Death, and the Ground of History in Central Sicily

Less than a century ago, the vast majority of Suterese were buried together in the ground. Now, only Muslims. This paper follows the small, mountaintop town of Sutera as it tries to organize funerals for its new Muslim members amid different understandings of soil in relation to bodily decomposition, property rights, and shared substance. First, my paper shows how Muslims attempt to create an Islamic space and affective environment through acts of digging. Second, it explores the historical tensions of these acts for Catholic Suterese. While sharing the sense that these subterranean funerals were very different, even exotic, they were also aware that their ancestors and the majority of their grandparents were buried in similar ways.

Presenter(s): Jacob Bessen

Digging for the Ancestors in Egypt: On Perfect Pasts & Future Perfect

In non-urban Egypt, many working and lower-middle class families keep food animals on their rooftops. Alongside food animals, many other nonhumans inhabit the landscape and play different roles in my interlocutors' lives. Centered around these other nonhuman presences, this talk asks: What forms of human-nonhuman relations emerge from/in underground? If rearing food animals at home is tied to the earthly, the ground, the food, feed, and fodder of the everyday, what does moving underground do? The talk centers on the continual efforts of my interlocutors in Lower Egypt to dream of a better future. The dream is rooted in a perfect past, a long stretch to Pharaonic ancestors. As a space where Pharaohs used to live, my field site is a land of infinite possibilities to my interlocutors. Through adventures, failures, and attempts to dig underground, I argue that moving underground exposes a view of human-nonhuman relations in which humans inevitably depend on the help, guidance, and work of nonhumans. In particular, jinn – invisible spirits, that is – are the key actors who dig underground. As underground creatures themselves, jinn illuminate the ways in which nonhuman capacities extend beyond, exceed, and transcend human limited capacities. This shift to underground and its invisible nonhumans complicates how my interlocutors engage with nonhuman animals, since even food animals like chickens can see jinn and thus guide humans on where Pharaonic treasures could be.

Presenter(s): Noha Fikry

The Politics and Poetics of Digging: Unearthing Coloniality in Sinai

This paper delves into the seemingly mundane act of digging a well in St. Catherine, South Sinai, as a lens through which to examine the enduring coloniality of power in the region. Am Farag's arduous, manual well-digging process, constrained by prohibitions on both explosives (learned from Israeli techniques but now illegal) and large drilling machinery (permitted elsewhere in South Sinai), reveals a complex web of regulations and restrictions that shape the very possibilities of interacting with the land. Moving beyond the technical challenges, this work explores the "politics of digging," demonstrating how the division of the Sinai Peninsula into natural reserves, battle zones, mining zones, smuggling zones, and antique zones dictates permissible technologies and practices underground. By analyzing these varied "digging politics," the presentation unearths the colonial lineages that continue to govern the peninsula and its subterranean resources. Furthermore, the presentation considers how factors beyond state regulations, such as the purpose of digging (water, antiquities, illicit crops, land claim), influence methods, labor, and finances, revealing the "politics of water" and mobility within Sinai. Ultimately, this presentation proposes a theoretical framework contrasting "digging" – extractive practices often linked to capital accumulation – with "tunneling" – non-extractive, often clandestine acts of survival and resistance, inspired by examples like Palestine.

Presenter(s): Alaa Attiah

Making Mining Licit: Gold, Commodification, and the Legal Politics of an Underground Economy

Ethnographies of resource-making have shown that the extraction of resource value from objects is premised on forgetting the emplaced lifeworlds of objects before they entered financial markets. Much of this literature looks at such supply-chain disentanglement from the viewpoint of corporate and formal regulatory practices. Lead firms, legal regimes, and downstream consumer economies do the forgetting; disadvantaged people in production sites are being forgotten. Here I broach the question of commodification somewhat differently, as I focus on a gold frontier where variously informalized peoples are playing their own part in the forgetting. In the Colombian Chocó, small-scale mining participants create amnesias about the sociopolitical life of illegalized gold by repurposing state symbols and structures. Through such appropriation, they performatively erase the illicit character of their economic dealings, and concurrently, render the mining and selling of gold perceptible as activities that are fundamentally quotidian and legal. I argue that when analyzing this metamorphosis of gold from an illicit into a licit resource, we need to account for not only the origin stories of miners and buyers, but also the precious metal's own properties of malleability and subterranean invisibility.

Presenter(s): Jesse Jonkman

Bangalore's Black Spots: Public Litter, Waste Work, and the Archaeology of Future Life

Black spots. This is what Bangaloreans call strewn garbage that clog city streets, narrow gullies, and storm water drains. They predictably accumulate in specific places yet pile up at uncertain times. Often, one taps into local know-how to suspect a littering 'type'. But few track down the exact culprits. Black spots viscerally tear through urban sensoria, souring the aspirational aesthetics of a 'global city'. But they also archive municipal corruption, disrupt relations of power, attract desecrated religious artifacts and icons, and engender relations of care and aversion. They mark the ecological consequences of capitalist growth and provide a material alibi for the routine, public performance of an ostensibly pre-modern practice—caste-based untouchability. This paper frames the caste-based labor that clears Bangalore's black spots as an archaeology of future life. Each morning, the city's 20,000 sanitation workers, who are overwhelmingly Dalit, toil to put together a city that breaks itself apart by nightfall. This cycle of destruction and reconstruction is indexed in the appearance and the disappearance of black spots, marking an everyday rhythm within which workers encounter an accumulated past in the everyday present. How might attending to black spots, and the labor that reworks them into a common future, enable ethnographers to locate the desires and debris of late capitalism within longstanding concerns in anti-caste thought?

Presenter(s): Shreyas Sreenath

The Poetics of Ploughing: Dialectics of Fertility and Decay in Azorean Soil

From the perspective of environmentalists, Azorean soils are improving. Digging up samples causes enthusiasm. After centuries of colonial settlement and monocrop extraction, the drastic depopulation of the last decades has freed soils from human cultivation. Gardens are rewilding, terraces are overgrowing, the earth is teeming with complex life. From the perspective of the remaining smallholders, Azorean soil is degrading. Whenever they turn up the earth, deploying their

ploughshares or pickaxes in precarious, ever dwindling work arrangements, they encounter an unsettling, hostile ecology. Unruly soils threaten both livelihoods and spatial norms. When smallholders look into the upturned soil they glimpse at a history of decay, demographic decline and isolation, making ploughing a dense activity through which people navigate tensions between past and future.

4664 Emerging Forms of Autocracy: Insights from the Anthropology of North America

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Estherwood (4th fl)

Type: Roundtable/Town Hall

Throughout its history, the discipline of anthropology has theorized and critiqued many of the core concepts and highly contested terms at the center of emerging forms of autocracy in the United States: ethno-nationalism and imaginaries of the nation; state power, citizenship, and surveillance; white supremacy, settler colonialism, and empire; and formations of race, gender, and sexuality. This roundtable convenes anthropologists whose work centers on these ideologically contested phenomena – and the ways these concepts have been leveraged towards the consolidation of executive power in the contemporary United States.

First, presenters will look historically to the ways anthropologists have participated in and responded to similar moments of rising ethno-nationalism, the expansion of empire, and state censorship – and the ways we can and should contend with these ghostly presences. Then, panelists will draw from their own contemporary research, conducted in whole or in part during the first Trump administration within the North American context, to suggest future directions for anthropological inquiry in this present historical moment. In so doing, the roundtable will open up questions about the ideological underpinnings of our current political conditions, as well as the everyday strategies and practices that have furthered or sought to respond to these conditions. What ghostly policies and projects can be found in these political formations? How can and should anthropologists sustain and advance ethnographic inquiry in this moment? What are our ethical obligations to our interlocutors under increasingly autocratic conditions? What creative forms of political claims-making have emerged to challenge surveillance, on the one hand, and erasure, on the other?

Roundtable presenters will share insights from a variety of field sites and topics, including: tensions between state recognition and surveillance among social service practitioners attempting to enroll LGBTQ+ youth in state-funded housing programs in Detroit, Michigan (Berringer), the ways imperialism and settler colonialism are refused, resisted and circumvented in the circumpolar north by Nunatsiavummiut (Gilheany), the material and ideological construction of the "good life" in housing development projects for white middle-class Americans in the American West (Howard),

how forms of athletic practice in the American South contribute to the formation of whiteness, masculinities, and contemporary fascism (Mulvey), and the mobilization of policy quagmire to undercount noncitizens in the U.S. decennial census and deepen political exclusion (Norwood). Our discussant, Nicholas Caverly, will bring his own scholarship on political ecologies of racial capital across North America, as well as public responses to these conditions, into conversation with panelists to consider future directions for anthropological scholarship on and under autocratic political conditions in the United States.

7807 Ethnographic Insights into Place, Culture, and Identity: Exploring Community-Centered Agency and Development in Early Childhood Environments

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Studio 6

Type: Conversation/Debate

This conversation will attend to community-specific pedagogies, curriculum, and communal engagement that inspired young children to embody culturally-specific competencies often pathologized by the white gaze. Often, engagements in early childhood spaces are examined with lenses that ascribe to narrow binaries (Muhammad & Haddix, 2016; Dumas & Nelson, 2016), (re)produce racialized discourses (ross, 2020), and privilege the autonomous child (see Kanyal & Gibbs, 2014; Correia et. al, 2019). These perspectives can lead to limited, individualistic, and colonial understandings of child agency.

The presenters will draw from four sites in a larger comparative multi-sited ethnographic study to discuss how various cultural communities define, value, and support young children's agency. We will address targeted and intentional practices - employed by communities whose identities and cultural norms have been historically excluded from traditional systems of power - that created identity-supportive pre/school ecologies (Frazier, 2016). The sophisticated embodied practices and pedagogies documented through ethnographic methods within these community-centered ecologies disempowered perspectives that often label cultural practices as "inferior" or "inappropriate" (Moss, 2016; Dahlberg, et al., 2013) and reconceptualized children's agency away from individual-centered Eurocentric frameworks (Pérez, 2019). We will explore classroom practices that privileged belonging, participation, and safety over individual rights to choice and decision-making (Battiste, 2019). We will highlight how the four classrooms serving young children

looked beyond versions of agency rooted in Western values and norms (Varpanen, 2019) and took a holistic, long-term approach that expands notions of agency for young children.

The data drawn on to guide this conversation comes from four classrooms serving young children that were created out of an urgent community need to empower child identity: 1) a Garifuna home-based preschool to foster cultural identity, 2) a Jewish home-based preschool to strengthen religious and cultural principles, 3) a community-based summer school program to empower Black identities and critical literacies, and 4) a public preschool offering a comprehensive early childhood program that includes individualized teaching, along with community and agency centered ECE experiences.

Each presenter will show short video(s) from each of the four sites to engage the audience in a conversation about culturally-informed ECE practices that build community and support cultural identities. Presenters will also draw on ethnographic data sources, including participant observations, field notes, teacher interviews, researcher reflections, photographs, and videos of young children from each classroom to add depth to this conversation. The goal is to invite the audience to engage with the videos and other data to reflect on the practices.

6417 Fentanyl: Toxic and Intoxicated Worlds

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Studio 7

Type: Roundtable/Town Hall

A substance that is both toxic and intoxicating, this roundtable discussion explores how fentanyl is mobilized across distinct scales of worlding projects, from intimate realms of bodily agency, intention, and desire as well as global national security assemblages involving systems and political economies creating the conditions of possibility for fentanyl's widespread discursive and material circulation. Fentanyl is a synthetic opioid, approved for use as anesthesia and pain medication. However, fentanyl is also widely available in the street drug market—typically from clandestine labs in China and Mexico, becoming a central figure in the third and fourth waves of the opioid epidemic as it has replaced heroin and prescribed opioids. Our discussion grows out of the work of the Toxicity/(In)toxication Working Group, examining the interconnections between pharmaceutical and toxic substances and the socialities they help produce. To date, pharmaceuticals have been bracketed off from discussions of toxicity, including those focused on

worlding. This roundtable seeks to bridge discussions of toxicity and fentanyl by examining how the languages of exposure that surround fentanyl move across different scales of environments, populations and atmospheres. In her essay, "Worlding Refrains," Kathleen Stewart describes worlding projects as apprehended in the shimmery, slippery moments "accreted out of opening events" (343), the "shift in the sensorium, or the stink of some national transformation settling over the hollers, or the sheer weight of power coming down, or the weirdly giddy possibilities that popped up." How can we trace fentanyl across geographic, economic, and affective landscapes in rural and urban America, through experiences of opening events, shifts, weight and possibilities?

As a counterpoint, in the introduction to her edited volume *Worlding Cities*, Aiwa Ong employed worlding as an analytic at a global scale, to explore the particular ways in which in urban life, "worlding practices are constitutive, spatializing, and signifying gestures that ... articulate disparate elements from near and far; and symbolically re-situate the city in the world" (12). Critically, she argues that "worlding projects remap relationships of power at different scales and localities" (p12). We move across scales to explore worlding projects in bodies and mundane encounters, as well as the orchestrated efforts of elites in their projects of making and remaking power through property and policing. How is fentanyl mobilized in the making of exclusionary urban worlding projects and emergent national security and surveillance practices? How can analyses of fentanyl toxicity and intoxication contribute to theorizing the US polycrisis, toxic afterlives, organized abandonment, and emergent global security assemblages?

2615 Fleetfooted and Eclectic anthropology roundtable: ways of living with theory ghosts. Alternatives to the spinning tops of 'one turn after another'

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Galerie 6

Type: Roundtable/Town Hall

Are there alternatives to theory-fashion? Rather than moving from one turn to another this roundtable will consider ways of being fleetfooted and taking an eclectic approach to theory.

We might want to think about theory hauntings, or about ghost theories – and how eclecticism might help us manage being residents in haunted houses, learning ways of living with ghosts rather than trying to exorcise them.

David Zeitlyn's 2022 book 'Anthropological toolkit' introduces 60 different ideas without endorsing any. They are good to think with - a position that anthropologists should be happy with! We need productive ideas or frameworks. Single theories - particularly mutually exclusive ones - may not be helpful when dealing with the messy and uncomfortable encounters that are common in anthropological research.

The philosopher Isaiah Berlin wrote an article (mainly about Tolstoy) called 'the fox and the hedgehog'. Berlin gets his title from a fragment of text attributed to an Ancient Greek poet Archilochus: "a fox knows many things, but a hedgehog knows one big thing". It's a lovely idea but what does it mean in practice? My answer is that we should pick the conceptual tools that help the tasks at hand. And for this having a wider rather than narrower range of conceptual tools available is a good thing. So the toolkit book introduces a wide range of concepts drawn from many different disciplinary traditions. This is about helping researchers to become better foxes.

Michael Carrithers (2000) discusses Berlin's foxes and hedgehogs article. For him, the idea of society, the idea of 'a society' as an entity is an instance of hedgehogish thinking. On his account when people think of their contemporaries (using Schutz's contemporaries vs consociates distinction) as potential friends, mates, rivals they are thinking like hedgehogs, imposing the frame of 'one big thing' to make sense of the wider social arena. Foxy anthropologists, (and not just anthropologists, traders, missionaries, diplomats, voyagers of many varieties) have to deal with multiple such ideas, so they end up knowing many things.

To know many things it might help to have many ways to frame that knowledge. Hence the eclecticism of 'Anthropological Toolkit' and of the roundtable.

4960 Friendships that Haunt: On the Relationships that Hide Within Ethnographic Texts

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Bacchus

Type: Roundtable/Town Hall

The figure of the "key informant" has been a long used trope in literature on ethnography as a method. From the controversies over Margaret Mead's potential over-reliance on a certain interlocutor to the new momentum around the practice of "co-theorizing," the presence of specific interlocutors in ethnographic texts is a topic of perennial debate in anthropology. This roundtable discusses the role of friendships made in the process of ethnographic research and where they surface (and don't) in the practice of ethnographic representation. How do certain relationships that both center around and exceed the bounds of "interlocutor" show up in the process of analysis and what are the ways in which we can and should represent these relationships in text? What are the consequences of concealing the nature of friendship in the ethnographic process and what are the potentials of revealing it? How do recent approaches to "co-theorizing" and "collaboration" account for, use, or side step friendship as a mode of relatedness? This roundtable seeks to continue ongoing conversations about the messiness of the relationships made in the process of ethnographic inquiry, while also acknowledging the unique potential this messiness offers to ethnography as a method and form.

This panel will be run as a roundtable, attempting to model an ethic of friendship. Presenters will be asked to share their own reflections on the roundtable prompt, followed by a facilitated and dynamic discussion with other panelists and audience members.

3853 Future Speculations and Haunting Legacies: An Anthropological Approach to FemTech

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Regent

Type: Roundtable/Town Hall

Social scientists have increasingly examined the emergent domain of FemTech through the lens of surveillance, legal regimes, and digital health. This roundtable broadens the anthropological discussion of FemTech beyond simply "tracking" or digital health to trace out the generative effects of Fem+Tech and its antecedents as domains of future speculation haunted by past legacies. We place considerations of FemTech in conversation with the terms "spectre" and speculation, examining how imaginations of uncertain and future potential become harnessed into digital technology.

Drawing on original research, participants in this roundtable will discuss how FemTech projects take shape materially, technologically, and rhetorically amidst existing assemblages of bodies, technologies, and politics. In convening scholars across rank, geographic region, and disciplinary backgrounds this roundtable addresses the questions: what does an anthropological approach have to offer to the study of FemTech futures and what do critical analyses of FemTech writ broadly have to offer anthropology? Asking these questions through the lens of spectres and speculations, we situate FemTech projects' culture-making dimensions within legacies of racial capitalism and ethics, reproductive governance and liberation, and the labor of digital technologies. Although FemTech industry proponents garb themselves in the spectacle of novelty and innovation, participants in the panel will discuss to what extent these assemblages are "old wine in new bottles." Not simply reifying or critiquing the fem, the tech, and capital, this roundtable will look at the generative effects of this domain of embodied and mediated experience.

Thinking across a range of ways that the gendered body, blood, hormones, microbes, and other everyday technological objects are mobilized, contributors to this roundtable will be asked to consider the legacies that haunt FemTech and its mode(s) of potential through the following lenses: property and regulation, racial capitalism and ethics, quantification and financialization, reproductive surveillance and liberation, futurity, disability and health, and prosthetics and subjectivity.

3359 Gaps and Convergences: Finding Analytical Traction in Environmental and Medical Anthropology

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

Despite overlapping concerns and subject matter, medical and environmental anthropology have long occupied distinct disciplinary traditions and approaches, mirroring the paralleling but often separate trajectories of health equity and environmental justice movements. Nonetheless, growing recognition of the health implications of climate change, natural and industrial disasters, toxic exposures, air pollution, noise, and other environmental factors has spurred greater attention to ecological entanglements in anthropology (Lock 2020, Lamoreaux 2022). Sites like New Orleans and the broader Gulf South, Japan, and Central America, reveal an urgent need for deeper and sustained conversation between these fields. In this context, fostering more cohesive

interdisciplinary dialogue between medical anthropology and environmental anthropology has become increasingly important. For example, the body has served as both an ethnographic and theoretical framework bridging these two subdisciplines of anthropology.

This panel brings together papers that illuminate the productive disciplinary frictions and affinities of anthropological research that examines questions around environments, health, medicine and disease. These papers consider how the conceptual links between environment and health might be unsettled and re-imagined through a focus on illnesses and diseases as the embodiment of colonial legacies and environmental injustices; how diverging medical and environmental anthropological approaches to data provide analytical tools for addressing the double binds of evidence-based health advocacy; how medical practices in different cultural contexts reinterpret and reframe experiences of environmental toxins in the aftermath of disasters. These papers illustrate the double binds and productive frictions between medical and environmental anthropology, and opens up discussion of anthropological work that is attuned to the entanglements of bodies, ecologies, and the workings of power.

Presentation(s): Health Equity Advocacy In Murky Spaces: Confronting Data Denial And Double Binds

This paper, based on ethnographic research conducted primarily in Baton Rouge, articulates the connections between "undone science" (Frickel et al. 2007) and the perpetuation of health inequities. I draw on the concept of undone science to consider how evidence is made and unmade in both Louisiana's legislative processes and advocacy contexts. I first discuss how government agencies and other political actors systematically engineer gaps in data infrastructure to deny accountability for public health. I then examine how public health advocates work with data to make visible the relationship between systemic inequity and health, even as they grapple with working in "murky spaces," that is, spaces in which the tools of open science and transparent governance are appropriated and misused. I use these ethnographic examples to demonstrate the productive frictions of an analytical approach that integrates medical and environmental anthropological literature on data: while medical anthropology has often approached the datafication of health as a mode of neoliberal subjectification (Foucault 1991), studies of environmental movements demonstrate how data technologies can be mobilized to promote social justice and collective action (Fortun 2016). I suggest that this contrast raises questions about the double binds of ethnographic engagement with data that are particularly pertinent following the coordinated removal of federal public health data resources.

Presenter(s): Margaux Fisher

Radiation Exposure and Supernatural Bodies in Post-Nuclear Japan

Since the Fukushima nuclear disaster in 2011, a wide range of scientific knowledge has been deployed to make sense of the bodily abnormalities attributed to radiation exposure from the damaged reactors. However, some phenomenological experiences related to radiation cannot be fully explained within the framework of Western-centered science. Drawing on ethnographic and archival research, this paper explores how the supernatural dimensions of radiation exposure are understood and experienced within citizen science, animism, and traditional medicine practices in Japan. For example, while contemporary biomedicine cannot explain why some individuals report physical pain in areas of high radiation or how others claim to prevent exposure through herbal remedies or hot spring therapies, such accounts persist and are taken seriously in local contexts. Whereas previous research on the bodily impacts of radiation in anthropology and the social sciences has often reinforced Western notions of rationality by emphasizing the scientific and medical legitimacy of knowledge, this paper seeks to decenter that perspective. Instead, it takes a holistic approach to examining the supernatural dimensions of radiation exposure through the narratives, practices, and ideologies that shape lived experiences in post-nuclear Japan.

Presenter(s): Ina Kim

Specters of Exposure: Chronic Illness Hotspots and the Afterlives of Plantation Ecologies

This paper conceptualizes chronic disease hotspots as sites of active ruination to examine how environmental harms are spatialized and embodied as chronic conditions. This idea is exemplified by Mesoamerican hotspots of chronic kidney disease of nontraditional origin (CKDnt), a form of kidney disease that develops without the typical precursors such as diabetes or hypertension. Despite existing research which suggests CKDnt is likely caused by occupational hazards, notably heat stress, the etiology is still intensely debated. The condition has impacted the region for several decades, with pockets of increased prevalence called hotspots congregating around sites of monocropping agriculture. Referring to these sites as hotspots indexes how they consolidate a constellation of injustices produced by extractive agricultural regimes, disproportionate climate change burden, and insufficient data. The term "hotspots" also suggests a temporal dimension that is urgent, short-lived, and stands in tension with the illness experience of CKDnt. Thus, I suggest that the concept of hotspots as a productive means to unsettle, disrupt, and reimagine the spatial and temporal linkages between environments and health, highlighting the embodied impacts of colonial legacy and environmental injustice. Further, I contend that the ambiguity surrounding CKDnt underscores the difficulty in tracing environmental exposures along trajectories of chronic disease, inviting investigations of the spectral.

2897 Ghastly Histories, Ghostly Beverages

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

What do we inherit when we share a mate, sip a mug of tea, or toast with a glass of wine or mezcal? These papers explore how beverages, framed as material-semiotic assemblages central to everyday life, carry their rich histories into the present and inspire a better future. They embody cultural heritage, evoke nostalgia and pride, become routinized, and foster conviviality (Brulotte, 2025; De Garine, 2001; Douglas, 1987; Gaytán, 2011; Hamrick et al., 2022; Manning, 2012). By offering a global scope on these dynamics, we examine how drinks capture the ghostly traces of the past such as colonial violence and Indigenous dispossession, highlight modern processes like neoliberal globalization and the role of the state, and showcase potential futures of uncertainty and hope.

Rikki Brown's project on Georgian wine explores how imperial histories influence current-day technologies of winemaking, reaffirming historical practices and introducing new methods of production. These histories and technologies of winemaking create tensions in Georgia's wine economy that operate along political, social, and cultural lines.

Andrew Mitchel's research describes how beverages from the Mexican state of Oaxaca embody the idyllic Indigenous past, current market trends and gastro-tourism, and the uncertain future. His work examines how producers navigate these constraints and make drinks shaped by the interwoven effects of these timescales.

Amanda Kaminsky's work on Kenyan purple tea, a unique variety of *Camellia sinensis*, examines how the legacies of British colonialism overshadow tea innovation today. By turning to Chinese resources and Chinese tea culture, Kenyan purple tea stakeholders embrace both international connection and Afrocentric ideals, even as they remain constrained by the neoliberal realities of the global tea industry.

Jake Dean traces the spirited rise of mezcal across borders, following their haunted trail from traditional roots in Mexico to the smoky allure of U.S. cocktail culture. As consumers and bartenders conjure up cosmopolitan tasting experiences, the tension between honoring ancestral and traditional practices and chasing the boozy specter of the mixological cool continues to haunt mezcal's every pour.

Ana Fochesatto's analysis of yerba mate examines how its national and transnational representations are shaped by histories of settler colonialism, discourses of Indigeneity, and market narratives of health and sustainability. By tracing yerba mate's journey from Argentina to the U.S., her work reveals how beverages operate as hemispheric sites of meaning-making entangled in racialized histories of labor, land, and consumption.

Presentation(s): Hazy Histories and Ghostly Undertones: Technologies of the Past and Present in Georgian Wine

For the last few decades in Georgia (country), winemakers have been revitalizing their traditional viticultural methods, that of fermenting wine on grape skins in large clay amphorae-shaped vessels called kvevri. These wines are often ghostly in nature, hazy, non-transparent colors filled with sediment, still alive and fermenting long into their bottled lives. Kvevri winemaking and the natural wines it produces have come to stand as a reflection of Georgia's sovereign national identity, one that has (and still is) grappling with ghosts of the past: the Russian Empire, Soviet Union, and now current-day Russian Federation's long-term occupation of Georgian territory, culture, and politics. This talk examines how imperial ghosts continue to haunt Georgian wine in the present. By examining winemaking technologies in particular (natural and industrial winemaking and the use of oak barrels, stainless steel tanks, and kvevri), I reflect on how tangible materials have become politicized historically and how these historical politics are mobilized in the present. Vinicultural technologies are often a point of contention, wrapped up in connections to past industrialization and the claimed erasure of Georgian traditional practices. These technologies are reflected in the wines they produce, telling stories of pasts weaved into the present and shaping how Georgians produce and share their wine and their national identities.

Presenter(s): Rikki Brown

Ghosts of Oaxacan Beverages Past, Present, And Future

The southern Mexican state of Oaxaca's biodiversity and Indigenous heritage endow it with a unique cuisine that has brought both a gastronomic boom of global scale and an increase in gastro-tourism (Cant 2019; Chibnik 2003; Cohen and Schuster 2019; Hryciuk 2019; Matta 2019). This interest in Oaxaca is in part shaped by the astounding variety of locally available drinks. Based on three summers of ethnographic fieldwork, my talk focuses on how these beverages display vestiges of an idyllic Indigenous past; showcase the touristic, neoliberal present; and offer a hopeful yet uncertain future. Market women serving atole and champurrado display 'the past' as a simpler time of local abundance. Producers and companies promote world-famous mezcal and chocolate through the marketization of cultural products in 'the present.' Finally, restaurateurs and mixologists engage in the innovative reinvention of these drinks to capture the endless possibilities

available in 'the future.' My presentation describes the constraints placed on Oaxacan ingenuity and creativity through the theoretical frame of culinary violence as they face down the ghosts of a colonial past and the ghastliness of imposed traditions placed onto the modern Oaxacan food scene. I conclude by discussing the agency and ingenuity displayed by producers of these Oaxacan drinks in the open-ended future where they take action to make what they please, so long as it's pleasurable and legible to consumers.

Presenter(s): Andrew Mitchel

The Colonial Specters and Postcolonial Aspirations of Kenyan Purple Tea

This paper examines how Kenyan tea manufacturing and traditional Chinese tea culture become entangled with postcolonial imaginings of health and national identity. These entanglements coalesce in purple tea, a unique cultivar of *Camellia sinensis* that comprises the central focus of this talk. As a niche but promising entrant into Kenya's small but growing orthodox tea sector, purple tea has benefitted from Chinese investments at every step of its supply chain. At the same time, however, among its loyal devotees, purple tea is emerging as a potent symbol of Kenyan innovation and postcolonial national identity. Purple tea is regarded not only as an agricultural commodity, but also as a biotechnological accomplishment, a medical miracle, and a source of African pride. I argue that by treating Chinese-style teas as a panacea, industry stakeholders allow this sector to perpetuate many of the same patterns that have kept Kenyan smallholders impoverished and subordinated since the colonial era. At the same time, however, the complex entanglements of Chinese tea culture with Kenyan notions of health and wellness as decolonization serve to challenge any totalizing narratives of China as a neocolonizer. Instead, Kenyan orthodox tea offers a glimpse into an Afrocentric but globally interconnected postcolonial future.

Presenter(s): Amanda Kaminsky

The Cosmopolitan Spirit of Agave Alcohol Consumers

This paper builds on previous research into the socioecological dynamics of mezcal production in Southern Mexico through ethnographic interviews with bartenders and drinkers in Oaxaca, Cabo San Lucas, New York City, Tucson, and California's South-Central Coast. By tracing patterns of consumption, preference, and knowledge, it examines how cosmopolitan sensibilities emerge in relation to agave-based spirits—especially mezcal. While there may be a spectre of appreciation for traditional production methods and regional histories within Global North consumption, this interest is often reshaped and dominated by the lens of mixology culture, where expertise is located not in the spirit itself, but in the craft of cocktail-making. In contrast, the Mexican producers we have previously worked with center the spirit's flavor profile, terroir, and ritualistic modes of consumption. This paper investigates the tension between these forms of knowledge and practice, highlighting how agave alcohol travels through circuits of cultural prestige, authenticity, and global taste, ultimately embodying a cosmopolitan ethos in the Global North.

Presenter(s): Jake Dean

Colonial Aftertastes: Yerba Mate and the Hauntings of Blanqueamiento

Yerba mate, a popular beverage in the Southern Cone, has garnered increasing attention among consumers in the United States. This paper analyzes representations of yerba mate in Argentina and the United States through a content analysis of newspaper articles, online blogs, government documents, and corporate advertising, supplemented by fieldwork. In Argentina, yerba mate has historically functioned as both a symbol and tool of nation-building, helping construct a whitened national identity through the erasure and romanticization of Indigenous peoples. In the U.S., yerba mate's marketing draws on superfood narratives that promote its nutritional and medicinal benefits through an exotic portrayal of Indigeneity in ways that align with white settler colonial logics. I argue that contemporary representations of yerba mate, often framed through discourses of sustainability, health, and fairness, reproduce processes of blanqueamiento that uphold racial capitalism and obscure ongoing violence against Indigenous communities, both its places of origin and the expanding U.S. market.

2634 Ghosts in Our World: Intersections of the Spiritual with the Material World

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Balcony L

Type: Oral Presentation Session

This panel invites exploration of how cultural beliefs about ghosts and spirits transcend time, influencing and shaping the present. It recognizes that "ghosts" are not just supernatural entities but also deeply rooted in diverse cultural narratives and practices, carrying with them rich histories and meanings. From folklore to contemporary beliefs and practices, the concept of spirits and hauntings can manifest in various ways across different societies and cultures. These manifestations are a powerful lens through which the past is brought into the present, revealing how memories, trauma, and unresolved histories continue to resonate in daily life. Celebrating these varied cultural beliefs as "real" underscores the importance of understanding the emotional and cultural significance they hold for people. Ghosts can symbolize everything from the lingering influence of ancestral ties to societal reckonings with collective trauma, and the intersections of the spiritual with the material world. This theme invites us to honor these beliefs, acknowledging the intangible as integral to human experience.

Presentation(s): Apparitions on the Landscape: Spiritual Encounters from the Southern Appalachians

Ghost stories of the Southern Appalachians entertain, enculturate, and engage long-term residents with the landscape their families have occupied for multiple generations. Based on fieldwork in upper counties of South Carolina, this paper explains the functions of these stories. While not every inhabitant in this conservative Christian area shared such stories, several did, and often attributed them to spiritual messages. These stories serve as entertainment and as instruction in appropriate cultural behavior. More importantly, these stories serve as another means by which inhabitants symbolically connect themselves to a landscape they view as close to them as another family member.

Presenter(s): John Coggeshall

The Mesoamerican Ball Court as a Ghostly Stage

Across Greater Mesoamerica, the ball court is commonly associated with death, dismemberment, and ritual human sacrifice. This association is codified in the Popol Vuh, a Mayan sacred text, and is made material in the presence of human sacrifices buried under the floor of ball courts across the region. Imagery and written records among the Maya, Aztec, and others further stress this association. Here we take an example from the Casas Grandes people of Northwestern Mexico to explore how ancestors, other dead, and death-related deities were used to create a ceremonial, performance-focused location where humans could transcend the mundane world of the here-and-now and interact with that which is typically unseen. At Paquimé, the ceremonial heart of the Medio period (AD 1200 to 1450) Casas Grandes religious system, the ball court was further integrated into other religious and elite-focused architecture to reinforce the psychological influence of the lingering, physical presence of ancestors and the other dead. We then briefly consider how similar themes are embodied in the archaeological record across Mesoamerica.

Presenter(s): Todd VanPool

Animals Who Return: Kinship and Selective Memory in Contemporary England

In England, where over half of households include pets and many consider these animals to be family members, people's encounters with ghosts reveal complex patterns of human-animal relationships that persist beyond death. While most spirits are human, a small yet significant number of animal ghosts appear in both public heritage spaces and private homes. Drawing on ethnographic research conducted in England between 2006-2015 with ghost seekers and spiritual seekers, this paper examines which animals become ghosts and what these spectral presences reveal about contemporary human-animal relationships. Animal ghosts emerge primarily from relationships of kinship and deep affective bonds - particularly pets who were considered family members during life. These ghostly presences continue to perform familial roles after death: deceased cats still curl up on their owners' beds, departed dogs check on their humans' wellbeing. Yet the marked absence of other animal ghosts - particularly those from agricultural or industrial

contexts - reveals the selective nature of how we extend kinship to animals. By examining which animal-human bonds are considered strong enough to transcend death, this paper illuminates how encounters with spectral animals reflect and reinforce contemporary patterns of remembering and forgetting in human-animal relationships. These patterns of presence and absence reveal not just which animals we consider kin, but which deaths we consider "grievable"

Presenter(s): Michele Hanks

Magical Ghosts: The Deceased as Mediators in Magical Practices

This ethnographic study explores the relationship between ghosts and magic, positioning ghostly entities as key mediators of cultural experiences and social structures. Ghosts function as liminal beings that transcend boundaries, serving as transformative conduits—an axis mundi—bridging ordinary and extraordinary realms of human experience. Through comparative ethnographic analysis across diverse cultural contexts, we demonstrate how ghosts actively shape ritual behaviors, social norms, and belief systems. Examples from Brazilian Umbanda, Indonesian Iban society, Vietnamese traditions, and Diné cosmology reveal ghosts' multifaceted roles: possessing spirits facilitating "white magic," ancestral entities enforcing social order, restless spirits requiring appeasement, and malevolent forces demanding avoidance. These supernatural beings emerge not as passive remnants but as dynamic agents actively participating in cultural systems. Our analysis presents magic as a transformative process for negotiating relationships with the deceased. By examining how societies classify, interact with, and harness spectral power, this study provides insights into the interconnections between the living, the dead, and the magical, expanding our understanding of supernatural agency in cultural systems.

Presenter(s): Christine VanPool

Ghosts and the Mind: Morality and sanity in Thai Buddhist encounters with the supernatural.

Ghostly encounters in Thailand are often quite visceral and dramatic, unlike the metaphorical attention that they often garner in ontological and hauntological approaches to the anthropological other. In this talk I show how physical and psychological renderings of ghostly energies are tied in Thailand to particular, local theories of mind, and how these theories are implicated in constructions of health and wellness across transnational Buddhist worlds. Based on fifteen years of ethnographic research with rural Theravada Buddhists in northern Thailand, along with data from a focused interview project among people diagnosed with schizophrenia at a psychiatric hospital in Chiang Mai, I argue that the affective wildness of ghosts are directly counterposed to mindfulness and mental health in the region. I end the talk with a discussion of the implications of these findings for programs of global health, and the need for increased scholarship on ghostly constructions in the fields of anthropology and cultural psychology.

Presenter(s): Julia Cassaniti

2496 Ghosts of Climate Pasts and Futures

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** MGB Salon E

Type: Roundtable/Town Hall

This roundtable draws inspiration from the theme Ghosts to examine how the specter of the climate crisis-shaped by histories of colonialism, exploitation, and environmental degradation-continues to haunt both the present and our imaginations of the future. These "ghosts" not only represent the legacies of past injustices but also the active, present-day forces that seek to suppress and erase the narratives of environmental collapse, pushing back against meaningful action on the climate crisis. Anti-climate and justice-adverse administrations that attempt to outlaw or silence these narratives create a haunting presence-one that is both pervasive and destructive, threatening to eliminate the voices and stories of those most affected by climate change.

Despite increasing efforts to deny climate science, dismantle environmental protections, and ignore the realities of climate change, research continues. Anthropologists, in particular, play a crucial role in documenting the impacts of the crisis on communities, ecosystems, and livelihoods. We rise like ghosts-persistent, defiant, and resolute-refusing to allow the erasure of human experiences and struggles. In the face of climate denial and political subversion, anthropologists remain committed to telling the stories of those most affected by climate change, emphasizing the human dimensions of environmental collapse.

This roundtable calls for anthropologists to articulate new narratives for the present moment. How can we continue to focus on the climate crisis while confronting the growing political barriers and denialism that seek to impede meaningful action? How can anthropology, with its deep engagement in cultural histories and embodied experiences, use its unique approach to human storytelling and knowledge co-production to resist the erasure of climate realities and inspire transformative change? How can anthropology collaborate with communities and partners to revitalize our climate imagination, while harnessing the power and creativity of anthropologists and collaborators to challenge and reimagine the political and ecological futures we face? How can we mobilize the human stories and experiences we learn from to reinvigorate our visions of a post-carbon future?

The haunting violence of environmental collapse demands our attention, and as we acknowledge this ongoing crisis, we also recognize that these "ghosts"-the forces trying to silence us-will not succeed. Together, we can rethink the future, offering not just a critique of the present but a vision for a just, sustainable, and livable world for all.

5455 Ghosts of Higher Education's Present: Discussion of Higher Education's Purpose in the US and Globally

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Gallery

Type: Roundtable/Town Hall

In an article on higher education and the public good, Simon Marginson (2011) suggests that institutions that lose their sense of purpose and stand for nothing greater than mere instrumental goals, tend to disappear quickly. He talks about how in a period of 10 years from 1529-1539 the great monasteries of England were dead and gone left only to haunt the countryside. In this roundtable, and to Marginson's point, we ask: what is the point of higher education, and can higher education avoid a ghostly future where there is nothing left but an apparition? Can we move toward some larger purpose in our colleges and universities? And if so, what is that larger sense of purpose? Does our sense of purpose come from, or relate to, other models of higher education found elsewhere in the world or from other time periods? How can our local senses of goals and purposes contribute to the betterment of higher education in general as we move from a neoliberal focus on monetary values to a greater sense of societal purpose that may include monetary values but go beyond the instrumental and address more important human visions and needs. Each of the presenters in this roundtable will talk about ways in their own practice, or from the ghosts of their past, they have sought to contribute to a greater sense of purpose and value in higher education.

In this roundtable discussion, Antonella Pappolla will address the Argentine far-right administration's recent attacks on public universities amid a broader effort to dismantle the state and discredit the idea of the public good. Once a regional outlier with its predominantly public, tuition-free higher education system, Argentina now faces a rapid shift as public universities struggle to remain relevant and afloat in the current political climate. Wes Shumar will discuss what if the "learning" is the way we name the meaning-making that happens in the interactions between students, and between students and teachers. With this view, the unity of teaching and research, understood by the scholars who formed the Humboldt University, comes back into view and helps provide a greater sense of purpose to the work of the university. Jessica Garber will discuss how the relatively short history and structure of higher education in Cambodia has created a dual sense of both opportunity and constraint for students and the lecturers who teach their classes. Drawing on fieldwork in Central America and social movements in the US, Chelsea Abbas will examine manifestations of the border on college campuses. In particular, she will consider ways in which the "la universidad es del pueblo" and discuss the role of the university in regard to student movements, free speech and the increasing criminalization of students and faculty by ICE.

1414 Ghosts of Immigration Past and Present

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Grand Ballroom A-C (5th fl)

Type: Executive Roundtable/Townhall

This roundtable examines the spectral dimensions of migration and border regimes, exploring how ghosts-both literal and metaphorical-emerge in the lives of im/migrants, our communities, and the policies that seek to contain or expel them. How do migration policies and enforcement practices produce spectral presences through the erasure, detention, devaluing, and disappearance of bodies? How do the indelible marks of immigration-related state violence haunt the U.S. body politic? Indeed, policies that criminalize and dehumanize migrants create new specters of fear and uncertainty, as families are torn apart and communities struggle against constant surveillance and threats of deportation. These contemporary hauntings intertwine with historical legacies of exclusion, racialized violence, and xenophobic nationalism, and reinforce longstanding patterns of state violence toward the immigrant Other.

Moving beyond conducting an autopsy of state violence, though, this roundtable foregrounds the ways migrant communities and their accomplices and allies organize, resist, and create spaces of sanctuary, care, and solidarity despite systemic oppression. Drawing on ethnographic research, legal services, and activist engagements in California, Oregon, Colorado, Texas, and Louisiana, we consider: How can engaged anthropology contend with the hauntings of colonial legacies, racial capitalism, and exclusionary nationalism in contemporary migration governance? In what ways do we resist, organize, and build alternative spaces of belonging that challenge state violence? Anthropologists and legal practitioners share how they build networks of mutual aid, establish cultural and political movements, and harness histories of resilience to imagine and enact new futures. Panelists discuss their work with unaccompanied children, undocumented students, deportees, organizers, abolitionists, among other individuals and communities adversely impacted by US immigration policy. We seek to illuminate not only the ghostly traces of violence but also how im/migrant communities reclaim agency, foster connection, and challenge the structures that seek to render them invisible. In this moment of intensified anti-immigrant policies, surveillance, and bordered violence, we ask how an anthropology attuned to spectral presences can illuminate both the violences of migration governance and the possibilities for resistance and solidarity.

4533 Ghosts of the Entrepôt: Infrastructure, ecology, and the politics of opacity

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Studio 3

Type: Roundtable/Town Hall

Postcolonial port cities continue to be haunted by the racialized materialities of empire. Once important nodes of empire, they are sites where the imperial extraction and trade of goods and people continue to be enacted in and with the militarization and augmentation of coastal ecologies. Today, their coastal ecologies continue to be drastically altered to accommodate the expansion of global capitalism through racialized hierarchies of life and labor. They are also places where the partition of land and water is continually enacted through these racialized systems in tandem with urban infrastructures that are imagined through the fallacy of emplacement on an inherently mutable shore. As harbors have been deepened, waters have been polluted, fishers have been displaced, and land has been filled into littoral regions, urban coastal ecologies today are also critical zones in which the intersecting crises of climate change and unequal exposures to waste are most deeply felt.

In this roundtable, we ask: In what ways does the ongoing manipulation of coastal ecologies for port infrastructure continue to enact colonial, racialized, gendered, and class violences? When and why does the social life of port infrastructures become visible to broader publics, and what political claims are generated by their representation? What kinds of knowledge and ways of being in the world continue to be threatened by the destruction of amphibious ecologies and the expansion of industrial ports? We are particularly interested in providing space to discuss the ways that the political and social life of infrastructure and remnants of empire remain mutable or opaque despite their permanent and irreversible materiality.

2808 Haunting Monoglossic Ghosts in the Education of Multilingual Communities

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Oral Presentation Session

"Haunting Monoglossic Ghosts in the Education of Multilingual Communities" features studies that push spectral thinking in language, literacies, and educational practices. Drawing on Deumer(2022), with spectral thinking, we acknowledge that "The past is never the past – it leaks into the present, and the future; ghosts remind us that" (p.141). These ghosts, or substrate influences, affect current practices and open spaces for counter-futures. In multilingualism, literacies, and education, ghosts can resemble coloniality, post-colonial, decolonial, and anti-colonial practices and liminal linguistic spaces such as translanguaging and Ghost Englishes (Dovchin, 2020). This oral presentation invites us to reckon on the question of haunting, which, according to Derrida, is inextricably linked to every hegemony. In this line, the papers address how linguistic, educational, and political hegemonies haunt linguistic and literacy practices.

These studies revolve around reflection and action on linguistic, cultural, and institutionalized narratives and practices that have been erased, blurred, or made invisible by policies and teaching approaches. The first paper addresses how Afro//Indigenous/Brown Latina researchers bear witness to how the ghosts and sustos (Zepeda, 2020) inherited from colonial institutional violence (re)shape them as language educators/researchers while conducting a multiyear multilingual community-based research with bilingual Latinx families in the Midwest.

The second paper focuses on the experiences of high school newcomer youths, who are languaging (Swain, 2006) and are not always positive. These moments are not just harmful but acts of linguistic violence (Ek et al., 2013). These acts of linguistic violence reflect the dominance of English hegemony (Nieto, 2021) and work to perpetuate a larger raciolinguistic project that upholds hegemonic Whiteness.

The third paper is a critical ethnographic study that documents the persistent silencing and invisibility of multilingual Latinx children in K-5 classrooms in central Texas through mandated literacy curriculum and instructional practices in a specific post-colonial context.

The fourth study traces the colonized language learning narratives of language teachers and their repercussions on their teaching of English in Colombia. These studies offer valuable insights into the complex dynamics of hauntology, coloniality, and linguistic hegemonies.

Chair: Rosa Medina Riveros , Luz Murillo, Texas State University

Presenter(s): Blanca Caldas, University of Minnesota, Sophia Ángeles, Pennsylvania State

University, Luz Murillo, Texas State University, Rosa Medina Riveros

Presentation(s): Hauntology in Multilingual Education Research: Susto Stories from the Field

Understanding that "being haunted is not a metaphor" (Cho, 2008), we, a group of Afro//Indigenous/Brown Latina researchers, bear witness to how the ghosts and sustos (Zepeda, 2020) inherited from colonial institutional violence (re)shape them as language educators/researchers while conducting a multiyear multilingual community-based research with bilingual Latinx families in the Midwest. Through intuition, hunches, (inherited) memories, and downloads to guide our reflexivities and intentionalities, we center ghost-haunting or sustos in the research process to not only acknowledge and remember the historical linguistic and cultural violence exerted over us, our research partners, and our communities (the ones we belong and serve) and the damage inflicted into their futures, but also to release their silenced voices that shape research in multilingual education among working-class, Brown/Indigenous, Spanish speaking Latinx community in the US and conjure up future possibilities. We use Yoon & Chen (2022) process for witnessing (claims about who and what matters), memorize (what research forgets, memorizes, and re-memorizes), and dream/transform ("What are your ghosts planting in your dreams?" p. 86) to engage in otherwise research, adding a sorely needed layer of complexity as we hold ourselves accountable to the human, non-human, and ghostly participants in our research. Specifically, we capture intuitive moments through narratives, conversations of ghosts/sustos.

High School Newcomer Youth's Classroom Experiences: From Linguistic Violence to Linguistic Sanctuaries

High school newcomer youth's languaging (Swain, 2006) experiences are not always a positive experience. These moments are not just harmful but acts of linguistic violence (Ek et al., 2013). These acts of linguistic violence reflect the dominance of English hegemony (Nieto, 2021) and work to perpetuate a larger raciolinguistic project that upholds hegemonic Whiteness (Flores, 2016). Drawing from ethnographic field notes and interview data, this paper examines the linguistic experiences of three Latinx and Maya newcomer youth learning English vis-à-vis their peers and classroom teachers. Informed by the theoretical lens of linguistic violence (Ek et al., 2013), I highlight how acts of linguistic violence perpetuated beliefs about whose linguistic practices were deemed legitimate. Extending the concept of "sanctuary" from the 1980s Sanctuary Movement, I invite educators to work towards creating linguistic sanctuaries or classrooms where newcomer youth can take refuge in languaging.

Presenter(s): Sophia Ángeles

Contesting the invisibility and silencing of multilingual children in the era of "science of Reading"

Despite years of research that documents and celebrates the creative language and literacy abilities of multilingual children, "new" reading programs under the guise of the "science of reading"

continue to embody and enforce systems of epistemic violence (Spivak, 1988) and oppression. This critical ethnographic study documents the persistent silencing and invisibility of multilingual Latinx children in K-5 classrooms in central Texas through mandated literacy curriculum and instructional practices. Our research in this specific post-colonial context draws on Deumert's theory of "spectral thinking", which "builds on a long tradition of paying attention to ghosts and their hauntings". Using spectral theory to emphasize the interconnectedness of literacy with children's social and material worlds, we trace the ghostly presence of the restrictive federal reading program Reading First and its present re-appearance in anti-bilingual literacy instruction under the guise of the Science of Reading. We juxtapose policy documents and training materials mandated by the State of Texas with teacher interviews and examples of children's reading and writing. As biliteracy researcher-educators involved in teacher preparation, we hope to give voice and visibility to the emergent bilingual children we teach and learn with. Our analysis suggests ways for teachers and researchers to employ the ghosts of local Englishes and Spanishes to haunt and contest the monolingual standards and expectations.

Presenter(s): Luz Murillo

The Ghosts of learning past: Tracing language learning stories of English Language teachers in Colombia

Using multimodal narrative analysis (Barkhuizen, 2013; Vitanova, 2016), this paper illustrates the co-construction of teachers' plotlines of language learning. The language learning experiences of teachers highlighted prevalent immersion and language separation environments, which promoted monoglossic pedagogies that often discouraged the use of learners' primary languages. Many narratives reflect a fear of translanguaging, which is used secretly among peers and in independent learning, perpetuating feelings of isolation, as seen in Maria's stories across multiple languages. Gabriel, one of the teachers, emphasized language separation, expressing frustration when lessons were not conducted in English and viewing too much use of Spanish as harmful. This inclination aligns with his role in training students for international English tests that emphasize comprehension by a monolingual examiner. Beto's account of learning from an "excellent teacher" who sounded like an "extranjero" foreigner further illustrates a preference for monolingualism, associating it with a European or Euro-American identity while overlooking non-white citizens from the Global South. The challenge in the colonized language learning stories and the teachers' current practices remains to create a space that moves beyond these restrictive ideologies and practices, acknowledging the historical frameworks that shape perceptions of language and identity.

3634 Heritage Language, Racialization, and (Post)colonialism, PART I

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

What is heritage language, and how do framings and contestations around notions of "heritage" inform, reproduce, and confound ways of organizing difference and belonging in what are claimed to be 'post'colonial contexts? What institutions, practices, and actors have a stake in defining heritage and the value of particular languages and dialects for demarcating contemporary ways of organizing around difference and similarity, and in relation to which social, political, cultural, and economic projects? We attend to (the specter of) colonial relations as they become manifest in (shape) shifting "heritage" languages that may evoke indigeneity, migration, nostalgia, purity, and collectivity. Our analytic frameworks entail ethnolinguistic racism, revitalization, tourism, media analysis, pedagogy, policy, ideology, and (hauntings of) fractal recursivity. We also approach these dynamics with the understanding that coloniality continues to loom over such practices-almost as a kind of phantom-haunting institutional efforts, identity projects, and ideologies of language in uneven and often unacknowledged ways. The papers offer diverse epistemological standpoints and theoretical and methodological approaches on the question of heritage language, racialization and postcolonialism, including but not limited to areas such as: applied linguistics, linguistic anthropology, autoethnography, postcolonial semiotics, critical discourse analysis, language policy and planning, and classroom discourse analysis. A focus on the robust analysis of language and discourse in relation to social and cultural processes unites these papers with respect to our chosen themes.

In this double panel session, we propose to examine how notions of heritage, language, and race become bundled together in educational and other settings in ways that can reproduce colonial hierarchies even when projects attempt to legitimate themselves as multicultural and/or as post-, de-, or anti-colonial. Each of the nine papers in this double session examines these questions and issues in different ways, culminating in comprehensive remarks by our co-organizer and discussant Jennifer Delfino. In line with the panel's focus on how language intersects with power and the making of social difference and inequality in relation to history, colonialism, and capitalism, this double panel brings together papers that problematize the production of "heritage language" as a means for the reproduction or contestation of racializing ideologies and processes in relation to postcolonial nation-building and other political, economic, and social projects. Our work spans nine languages (in order of presentations): Tagalog, Tamil, Modern Standard Arabic, Quechua, North African Arabic, Portuguese, Taiwanese, Kreyòl, and Kichwa; as well as eight ethnographic sites (in alphabetical order): Canada, Dominican Republic, East Timor, Ecuador, France, Peru, Taiwan, and the United States.

Presentation(s): Colonial Spectres of Authenticity: Delineating the Tagalog Heritage Language Speaker

In the first Tagalog class I attended as a participant-researcher interested in exploring how Filipino Americans orient to learning a heritage language, our instructor, Kawagi, gave us a short lesson on the topographical features, geography, and cultural history of the Philippines. At the beginning of our first lesson, teacher and students co-constructed discourses about the Philippines as a homeland full of resilient people despite challenges Filipinos have faced due to its precarious geographical location and history of colonization. His point was the following: if Filipinos can face these challenges, you can learn Tagalog. An experienced first-generation instructor, Kawagi seemed to know that second-generation Filipino Americans approached this task with the fear of "failing to be Filipino," as one student confessed nervously. Drawing from an ethnographic study of two Tagalog language courses, this paper explores how pedagogical spectres of "raciolinguistic authenticity." I examine how raciolinguistic authenticity reproduces and yet transforms wider U.S. racial ideologies of diversity and multiculturalism. As racial ideologies, diversity and multiculturalism position racialized minorities within the impossible task of being both authentic (foreign language speakers) and assimilable/assimilated (monolingual English speakers). While raciolinguistic authenticity constitutes a decolonial response to white supremacy, it also reanimates racist colonial logics of difference.

Presenter(s): Jennifer Delfino

Heritage Language and Social Identity: Shifters of Colonialism and Racialization

After 47 years as a heritage language learner, researcher, and/or teacher, I evaluate whether "social identity" is a useful framework for assessing efforts to inculcate the value and use of a heritage language across post/colonial settings. Using Cummin's (1983, 1995) definition of heritage language as a school "minority language" and He's (2012) as "inherited from home," I analyze how heritage languages function as "shifters" indexing colonial and postcolonial processes of racial exclusion. My longitudinal research draws on autoethnographic, ethnographic, and linguistic data that also constitutes a cross-cultural corpus of experiences of colonialism and racialization in South Asia, Canada, and the U.S. since the period of British colonial rule. Employing auto-ethnography, I explore the different ways in which South Asian and French Canadian heritage languages function as signs of social identity in Canada and the U.S. I also draw upon ethnographic and linguistic fieldwork conducted in Québec among Tamil-Canadians learning their heritage language in public and private schools, despite tracing their shared ancestry to postcolonial India and Sri Lanka (Das 2016). Finally, I share observations of my own efforts to teach my White-presenting children their heritage languages. Heritage languages and the value of social identities

are jointly forged through processes of exclusion, with important differences due to the experiences of racialization and colonialism.

Presenter(s): Sonia Das

"Arabic is for White People": Racializing Ideologies for Teaching Arabic in France

Contested heritage landscapes for Arabic learning in France reveal a duality of exclusionary adversity and privileged access, evoking "postcolonial semiotics" (Reyes 2021). Whereas French language as cherished national heritage, contemporary Islamo-linguistic-phobic discourses (García-Sánchez & Tetreault 2024) situate Arabic's place in a post-colonial France not as le patrimoine but rather as aligned with communautarisme (communalism). Thus French is cast as productive heritage (Geismar 2015) and construed as culturally available to all French citizens, Arabic is framed as destructive heritage contributing to religious, ethnic, or cultural enclaves, potentially leading to "Islamic separatism." I use lingual life histories (Krosrity 2021) of advanced heritage Arabic language learners to examine how they navigate these educational landscapes that cast Arabic(s) as both racialized (suspect) heritage and privileged knowledge for elite "white people" as one student noted. An ideologically laden diglossic landscape frames Fusha (MSA) as morally superior to Darija (North African dialect), leading to the simultaneous valuing and de-valuing of Arabic language learning in France. Purifying Fusha depends upon racializing North African dialect(s) as "street language" that is "not even real Arabic." Such fractal recursivity (Irvine & Gal 2000) correlates with the racialization of North African heritage students learning various Arabic(s) in France (Das 2016; Rosa 2016).

Presenter(s): Chantal Tetreault

Language, Evangelical Worship, and the Scales of Self-Identification in Colca, Peru

In small, non-denominational evangelical churches in greater Arequipa, Peru, indigenous congregations in the rural Colca region have innovated worship practices that use Quechua as a heritage language for older people. Amid an ongoing language shift to Spanish, urban volunteers lead Sunday school lessons in Spanish for children and adolescents, whereas adult services in evangelical churches of Tuti and Sibayo emphasize Quechua for singing hymns. Although congregants have access to published Quechua Bibles, services feature elders spending up to forty minutes extemporaneously translating passages from a Spanish Bible. This paper explores the development and consequences of generationally limited worship practices that use Quechua to a locally unusual degree. At different, overlapping, scales of racialization, the congregants of Tuti and Sibayo could self-identify as Indigenous, as members of indigenous ethnicities in Arequipa, or town residents. I show that while the Quechua worship practices in these evangelical churches at one level claims indigeneity for the congregations, these practices fundamentally construct their older participants as residents of Tuti or Sibayo. Although the generational separation of younger people into Spanish-language contexts limits the reach of these practices, for middle-aged and elderly people, they valorize multiple scales of indigeneity and localness, as well as valorizing Quechua as a constitutive element of those self-identifications.

Presenter(s): Anne Marie Creighton

Rediscovering Arabic as Jewish Heritage: Metalinguistic Perspectives Among North African Jewish Descendants in France

A recent resurgence of interest among North-African Jewish descendants in France focuses on Arabic as a linguistic marker of Jewish heritage, tracing how it reflects broader concerns with heritage, identity, and community belonging. I analyze the metalinguistic discourses of students and instructors in an association that frames itself as a platform for North-African Jewish descendants to engage with cultural heritage through language, founded in 2019 by two linguists who specialized in Standard Arabic and Semitic languages. Based on a sociolinguistic and ethnographic methodology (Heller, M., Pietikäinen, S., & Pujolar, J., 2024), I conducted participant observation in Standard Arabic and Judeo Arabic classes over a seven-month period in 2023–2024. For these second- and third-generation immigrants, Arabic—often described as the "language of the grandparents"—serves to navigate complex issues of heritage, assimilation, and solidarity within racialized communities in France. Rather than engaging in language revitalization or activism, students appear to utilize the association as a space for cultural preservation and collective solidarity, fostering a unique form of cultural and religious *entre-soi*. This study contributes to understanding how linguistic choices and metalinguistic reflections among North-African Jewish descendants in France negotiate collective memory, intergenerational identity, and ethnic plurality within the contemporary French socio-cultural landscape.

3616 Honoring Lynn M. Morgan, Winner of the 2024 SMA Career Achievement Award: Part I The Politics of Fetuses, Bodies, Abortion

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

In Part 1 of this two-part session, we honor medical anthropologist and feminist science studies scholar Lynn M. Morgan and her pathbreaking work on the beginnings and ends of human life, the nature of subjectivity, and the links between a society's understandings of fetal bodies as biological substances and their construction as social subjects. Morgan has brilliantly illuminated changing social and scientific meanings surrounding embryos and fetuses. At a time when advances in reproductive medicine are challenging fundamental assumptions about biological essence, identity, and humanity, Lynn Morgan has added critical depth and breadth to these debates. Her recent work on global implications of the 2022 U.S. Supreme Court's decision overturning federal abortion rights has shed important light on a critical divide between countries adhering to

international standards for human rights and countries that do not, and in so doing explicated some likely consequences for advocates on both sides of this divide.

Papers in Part I will reflect upon Morgan's paradigm-defining work on fetuses, bodies, and abortion, including how contemporary discourses about human biology have been shaped by technoscientific idealizations of Indigenous ways of knowing and being and stereotypic representations of Indigenous people, and how the historical assignment of value to embryonic and fetal remains has been a "carefully crafted techno-political project." Two presentations focus on fetal personhood and another considers dementia in the contexts of notions of governance and personhood at the end of life.

Presentation(s): Romancing the Transcultural Scientist

A distinguishing feature of Lynn Morgan's scholarship on the politics of gender and reproduction is her commitment to careful use of cross-cultural perspectives. Including non-Western comparisons in her work on fetuses, abortion, and the beginnings of life contrast with a literature focused almost exclusively on Western history and culture. At the same time, in "Romancing the Transgender Native," Morgan and Evan Towle criticized popular uses of images of "third genders" in non-Western cultures. While sympathetic to the desire for positive historical role models to critique male-female gender binaries, they showed how appropriating decontextualized imagery to support emancipatory political perspectives can foster reductionism and exclusion that harms the people it claims to represent. In the 2000s, their cautionary stance echoed warnings by me and others about the dangers of romanticizing stereotypes of Indigenous people as ecological savants or saviors. This paper asks whether similar considerations might apply to the current celebration in anthropology, STS, and elsewhere of Indigenous ontologies as forerunners to new Western scientific findings in biology, genetics, and human reproduction. Drawing on case studies from Native Amazonia, including Wari' ethnography which Morgan has analyzed in her writings, I explore the challenges for scholars and potential liabilities for Indigenous people of representing Indigenous science in critiques of dominant biomedical paradigms.

Presenter(s): Beth Conklin

The Flexible Fetus: Iterations of Fetal Personhood in U.S. Politics

Human fetuses have long been a staple of U.S. politics, from their contested role in ongoing abortion debates to their signature status in fetal tissue research and other scientific enterprises. Despite truth claims from various parties about fetal ontology – including essential humanness – fetuses are surprisingly plastic and flexible. Fetal personhood, fetal patienthood, and fetal viability have all been moving targets, with meanings shifting across time, place, and context. This talk explores these shifts, beginning in 1973 with *Roe v. Wade*, continuing through the 1980s, Ronald Reagan, and the rise of the Religious Right, and culminating in the current political moment under Trump 2.0 and Project 2025. Drawing on media representations, governmental documents, and scientific literature, I show how interested parties have positioned fetuses in ways that foster desired political agendas. Emphasizing fetal humanness and exceptionality, including fetal personhood, has been a core political strategy for decades. Implications for pregnant people, especially women, have been profound, ranging from limits on access to reproductive care to political disenfranchisement to diminished personhood. Flexible fetuses often mean inflexibility, even punishment, for those in whose bodies fetuses grow. Ultimately, I argue, fetal status fails to resolve divisive moral and political concerns because fetal status itself is a divisive moral and political concern.

Presenter(s): Monica Casper

The Person is Political: Feminist Anthropology for Fascist Times

Feminist anthropologists have been instrumental in tracing the central role of reproductive politics within the resurgence of far-right regimes and movements worldwide. Within this tradition, Lynn Morgan's scholarship has contributed foundational frameworks, from feminist approaches to fetal subjects to theorizing configurations of reproductive governance within far-right transnational movements. Drawing on ethnographic insights about the US religious right's embrace of embryo personhood to advance extreme conservative agendas, this paper amplifies the importance of Lynn Morgan's critical attention to the politicization of personhood as a locus for understanding what has conditioned the possibility for far-right, fascist politics around the globe and feminist responses to them.

Presenter(s): Risa Cromer

The Enduring Influence of "Reproductive Governance:" Personal and Intellectual Legacies of Thinking with Lynn Morgan

The concept of "reproductive governance" has been foundational to my thinking about abortion politics in Latin America, informing my scholarly work for the past decade. I have considered how the extension of abortion rights in the Mexican capital opened new avenues for reproductive care while also expanding processes of reproductive governance. Beyond transforming my own work, Lynn M. Morgan has left an indelible mark on the fields of medical and feminist anthropology through her invaluable contributions to the study of reproductive politics, the fetus, and abortion in the Americas. Through her mentorship, as well, she has shaped a whole generation of scholars, many of whom are on this panel. My paper reminisces on these personal and intellectual legacies,

tracing Morgan's trajectory of thought, particularly in terms of the pioneering concept of "reproductive governance," but also the less visible inheritances that she has afforded me in the past fifteen years first as a student and now as a professional anthropologist.

Presenter(s): E Singer

Histories, Icons, Personhood, and Governance: Thinking about Dementia In Light of the Work of Lynn Morgan

This paper discusses how ideas and approaches developed by Lynn M. Morgan in her research into reproduction open important anthropological questions and perspectives in the quite different area of dementia. Specifically, I consider how Morgan's work addressing histories, icons, personhood and governance already has, and still could, inform and enrich dementia research. Illustrations are drawn from my own research on dementia and caregiving, as well as the work of other scholars. I conclude these remarks by commenting on how the influence and reach of her ideas also reflect the power of Morgan's feminist practices of teaching, mentoring, critique and collaboration.

Presenter(s): Janelle Taylor

Of Bodies Lost and Found: Caring for the Anonymous Dead in Carceral America

In the opening chapter of her groundbreaking book *Icons of Life*, Morgan writes of fetal "skeletons in the closet," detailing how the "social production of anonymity" (p.7) empowered scientific and other efforts to reassign value to embryonic and fetal remains. As all of Morgan's projects teach us, the technical, religious, linguistic, and narrative management of human remains is always a carefully crafted political project, not only among key actors, but for the medical anthropologist, too. Inspired by Morgan, I address the preponderance of Potter's Fields that abut many of the thousands of prisons scattered throughout the US today, attending to the paradoxical nature of caring for the abandoned and anonymous dead who are interred within these carceral deathscapes. Of special concern are questions of what it means to "care" in these contexts, and who is at liberty, so to speak, to do so. In turn, I address the politics of memorializing the carceral dead and the dangers inherent in such projects.

Presenter(s): Lesley Sharp

7818 Indexical (mis)recognition: Part I

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Studio 9

Type: Oral Presentation Session

This panel applies the theory of indexical (mis)recognition (Barrett and Hall 2024) within linguistic anthropology. The framework of indexical misrecognition focuses on cases in which speakers/listeners do not share knowledge of the indexical meanings associated with a given linguistic form. The framework of indexical misrecognition presumes that indexical meanings are

dependent on specific ethnographic contexts that relate indexical signs to particular cultural contexts of language usage. The model also addresses cases in which individuals claim to use indexical meanings in opposition to normative interpretation of indexical signs. Building on this model, the papers in this panel use wide ranging sets of language data to demonstrate the role of normativity (and antinormativity) in the interpretation of language with a given interaction.

Presentation(s): The Place of Love and the Complicated Politics of Misrecognition

In this paper, we extend a recent overview of the connection between indexical misrecognition and sexuality discourses (Barrett and Hall, 2024) to the landscape of language use, immigration, and documentation status in the United States. We focus on examples from discussions of a public engagement ceremony – a *pedida de mano* – that took place shortly before the 2024 presidential elections in a small, rural town in Northeastern Ohio and was attended by over 100 members of Maya Guatemalan diasporic communities in the United States. Like many major *ixil* life events that happen in both the United States and in Guatemala, this event was also livestreamed to Facebook. Because this was the first *ixil pedida de mano* that anyone had heard of happening in the U.S., it was streamed, shared, and re-shared thousands of times, and became the subject of a hotly contested online debate. We consider the negotiation of indexical meaning within and across immigrant and non-immigrant communities, and we highlight two instances of indexical misrecognition in the performance and online distribution and consumption of this event, including: (1) responses to the public gathering of a community with mixed documentation status and (2) the significance of the public nature of the gathering and its documentation online. We suggest that this indexical complexity complicates ideas of power and resistance in the politics of indexical misrecognition.

Nothingness is everything: Japanese magic lanterns

The focus of this paper is on the analysis of *Nishiki Kage-e* (Japanese magic lantern), one of the traditional theatrical arts in Japan whose performing style resembles a shadow play. Unlike its European equivalent, *Nishiki Kage-e* utilizes multiple hand-held wooden magic lanterns and various glass-made trick slides, whose images are painted with light transmissive dyes and edged with black paint. Explanatory images are often cut off to the utmost extent so that the screen would not brim over with images. This minimalism highlights the contrast between a 'status of being' of

the floating colorful images and mu 'nothing' on the background. However, the Japanese aesthetic views the space of mu 'nothing' not as emptiness but rather as fullness, and thus the empty darkness on the screen of Nishiki Kage-e is recognized as the space filled with kehai 'a sign of presence' of invisible characters and of supernatural beings as well as that of lantern performers. The magic lanterns result in contradictory patterns of indexical misrecognition of possible markers the meanings associated magic lanterns (Barrett and Hall 2024). Simultaneously, the emptiness evokes audiences' imagination, allowing them to transform darkness into various buildings, landscapes, or any spacetime and to construct a multi-layered narrative space.

Presenter(s): Yuki Tanaka-McFarlane

Indexical misrecognition as a technique of deracialization

Variation in indexical inventories is contingent upon individual experiences, as language users encounter diverse form-meaning relationships throughout their lifetimes (Barrett & Hall, 2024). (Non-)immigrants are likely to cause such variation in indexical inventories since they are characterized by indexical relativity. (Non-)immigrants are, therefore, likely to disrupt norms in particular spatiotemporal contexts at different semiotic scales. As many Africans come from countries with a non-racial approach to social categorization, they are confronted with race in the US and either challenge or reject processes of racialization. From a 14-month ethnographic observation, this paper focuses on instances where indexical meanings are unevenly distributed, and more specifically, where these Africans challenge or reject the normative indexical meanings embedded within racialized discourses. For instance, when they say they have "mixed" children from an African father and African American mother, they use linguistic forms with social meanings to produce non-normative interpretations that disrupt the normative processes of racialization. Additionally, when they say they are "dark-skinned," they claim ignorance to the indexical possibilities of their racialized "Black" skin in the US. As contemporary discussions of race in the US often exclude engagement with Africa, this study demands (racio-)semiotic attention to cases of misrecognition in which racialized speakers do not share (or

Presenter(s): PraiseGod Aminu

Childless cat ladies in the 2024 US election: The construction of gendered political identity by JD Vance, Taylor Swift, and Swifties for Kamala

This paper performs a multimodal discourse analysis of the construction of "childless cat lady" identity during the 2024 US election, inspired by JD Vance's characterization of Democrats as "a bunch of childless cat ladies who are miserable at their own lives". I investigate the subsequent formation of "childless cat lady" as a gendered political identity through an analysis of its use by Taylor Swift and grassroots group Swifties for Kamala (S4K). Viewing identity as emergent in interaction (Bucholtz & Hall 2005), I trace the roles of Taylor Swift and S4K in forming this political identity, examining Swift's endorsement of Harris, S4K social media posts, and ethnographic interviews with S4K members. Specifically, I employ Barrett and Hall's (2024) notion of indexical misrecognition to examine the differential semiotic processes whereby political actors construct

the social meaning of "childless cat lady" to serve their own aims. I consider JD Vance's "cat lady" comments an act of indexical presumption that upholds a negative stereotype of an older, undesirable white spinster to serve his pronatalist agenda and shame child-free white women. In turn, Taylor Swift and her fans in S4K engage in indexical inoculation through sign use, as they enregister "childless cat lady" identity as smart, cool, young, and sexy—a feminist site of resistance against restrictive ideas regarding women's role in society.

Presenter(s): Katherine Arnold-Murray

"Just act gay:" Indexical Inversion and the Queer Perceiving Subject in RuPaul's Drag Race

While many scholars across disciplines have taken a critical lens to examine the ways in which the reality competition RuPaul's Drag Race (RPDR) polices the bodies of its contestants in an effort to make them ideally feminine (Edgar 2011), ideally Westernized (Willard & Dubrofsky 2024) and even ideally anglophone (Hermes & Kardolus 2021), few have examined the ways in which the series enforces certain ideologies of queerness vs. heterosexuality writ large. To that end, this paper examines the depiction of and discourse surrounding the first cishet male queen on the program, Maddy Morphosis, who was lambasted both on and off the show for her performance based on her heterosexuality, under the assumption that she lacks a necessary "camp sensibility" (see Barrett 2017). I show that through processes of indexical inversion, RPDR can craft and then project a kind of indexical "misrecognition" (Barrett & Hall 2024) to its imagined queer audience, using the purposefully ersatz portrayal of Maddy to tacitly argue that straightness entails an inability to do drag. In this way, the show articulates what I have deemed a "queer perceiving subject." I also situate the discursive power of RuPaul's Drag Race as a site of ideological emanation within larger frameworks of capitalism and neoliberalism, understanding the show's proliferation of the queer perceiving subject as a method by which audience engagement - and thus, social and economic capital - can be accrued.

Presenter(s): Jacob Henry

2001 Innovation: Exploring Great Transformations as Ghosts and Inspirations from the Local Past

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Studio 2

Type: Oral Presentation Session

Innovation is often framed as a rupture, including breaking with the past, cutting off ties, and forging new ways of being in the world. Yet, innovation does not necessarily dissolve existing practices, socio-political or kinship relations, but sometimes transforms them at a different pace. This session explores how different communities conceptualize, implement, and experience innovation across regional and continental contexts, bringing together socio-cultural anthropological and archaeological perspectives to interrogate the processes that drive and constrain change.

Innovation is considered in its broadest sense, including but not restricted to technological innovation, changes in modes of production, and scientific innovation. Innovation is frequently described as leaving the ‘ghosts from the past’ behind, yet frequently, it presents a recombination of the old and the new. Such a conception of innovation resonates with the uncanny that permeates the quotidian, closely relating to this AAA meeting’s theme.

What defines innovation? Is it a momentary spark or a slow, cumulative process? How does innovation intersect with invention, creativity, and tradition? From a long-term geo-historical perspective, environmental and social pressures and changes, such as the end of the last Ice Age and the Little Ice Age, have stimulated new extractive and subsistence strategies. However, do crises or favourable conditions foster innovation? How does innovation happen? Why do some communities embrace change while others resist it? Why is innovation considered as progress in some contexts, whereas in other contexts it is perceived as a form of loss or deterioration? Finally, what kind of understandings underlie the promotion and/or advocacy of innovation of research?

Archaeology offers long-term perspectives on innovation, traditionally categorized through the Three-Period System—Stone, Bronze, and Iron—initially suggesting a linear progression of technological development. Such a conceptualization of innovation is another ghost of the past. Today, archaeology provides ample evidence for innovation not unfolding in such clear-cut stages but in slow transitions that highlight complex and overlapping processes of social and material transformation, often closely related to each other. How do past infrastructures shape what is perceived as new, and how do archaeologists and socio-cultural anthropologists theorize it? In turn, despite a digital transformation that allows us to connect across the world in real-time, socio-cultural anthropology provides a valuable record of the continuous diversity of being in the world. Facing the environmental and climate disaster, what are the ways in which innovation may lead to more sustainable and just futures?

This session includes papers that examine innovation as a social and cognitive, material, and historical phenomenon, to evaluate how scholars thought of innovation in both ancient and contemporary communities.

Presentation(s): Like a Ghost: An Innovation Caused by Alien Insights into Nothingness

Between the 10th and the 13th centuries CE, mathematics and astronomy in the Arab-speaking world went through important phases of unprecedented scientific innovation. To an important extent, this was made possible by the ways in which Middle Eastern mathematicians and astronomers absorbed and integrated a much earlier and profoundly radical idea from South Asia. There, basic insights into "Nothingness" and ensuing principles of the figure Zero during their

emergence a couple of centuries earlier had been deeply connected to specific traditions in India's philosophical and religious history. The idea that Nothingness could be envisioned at all represented a counterintuitive provocation to most monotheist thinking at first, until Arab mathematicians found out how to usefully put this innovative idea into ways of practical operation that eventually would contribute to major transformations in Circum-mediterranean and European worlds. - This case has been analyzed by many other fields, while the present talk will discuss how socio-cultural anthropologists and archaeologists may learn from it. To this purpose, it is suggested to transcend sterile dichotomies between "relativism" and "universalism" by absorbing the insight that socio-cultural phenomena such as innovation always contain both at the same time, incomparable as well as comparable dimensions. By consequence, this leads to a confirmation and elaboration of what Ulrich Beck once addressed as the epistemological necessity f

Shaping a New World? The Invention of Stone Axes and its Social Impact in Southwest Asian and European Deep History

The fundamental transformation of hunter-gatherers into sedentary farming communities is widely regarded as a period of innovations in human history marked by the emergence of numerous innovations and the adoption of new common practices. This transition is exemplified by the development of new technologies, a new economy, and the establishment of permanent settlements, also referred to as the "Neolithic Package". This transformative process was initiated by communities in the Fertile Crescent of southwest Asia around 11,500 years ago, and it reached the European continent with its primary inventions approximately 3,000 years later after a process of expansion and adaptation. The stone axe is a rudimentary, yet highly specialized implement that is intimately intertwined with these economic, social, and cultural transformations. It forms the core of this paper as representative and symbolic object. While the typo-technological details of this first implement in human history that utilizes a long haft for chopping and its classification, function and deposition modalities have been exhaustively examined in archaeology over the past century, the broader societal impact of this invention requires further investigation. The symbiotic relationship between the novel technological tool and the communities' practices, such as forest clearance for agriculture, construction of dwellings, and resource exploitation, is evident, suggesting an overlapping process of social, material, and te

Cars, Technology and Social Techniques in 20th Century India

Through the lens of the automobile industry in 20th century India this paper examines Indian automobilization as a domain of both technological and relational innovations. I argue that coherent, technological histories of national innovation and technological progress often underestimate what I call "social techniques" that underlie the possibilities and the limits of narratives of innovation. I read the historical archive of technological innovation of the automobile ethnographically to trace how Indian technology was pieced together from new material,

adaptations of older technologies and messy transnational social relations between powerful men in India, United States and Europe and different incarnations of the national and local states that governed them. Through these distributed, social and political histories of technology and automobilization in India I depart from the dominant focus of discussions of innovation on the object of innovation itself to focus instead on the social relations that underlie technological innovation.

An Unwanted Innovation: The Cattle Story at Neolithic Çatalhöyük

The Neolithic settlement at Çatalhöyük was occupied for almost a millennium, and its development had an arrhythmic form. It consisted of sequences of short bursts of intense development followed by long periods of stabilization and then abrupt disappearance. The most distinct burst occurred right after the middle of the occupational sequence. This rapid acceleration involved complex and overlapping processes of social and material transformation. The arrival of domesticated cattle was one of the major triggers of this process, but the consequences of their arrival have not been systematically studied. Contrary to previous assumptions, Çatalhöyük was not a centre of cattle domestication. Cattle were domesticated elsewhere and introduced to the site around the middle of the seventh millennium BCE. Cattle appear to have been an unwanted innovation, as evidenced by the considerable delay between their appearance in the region and their introduction to Çatalhöyük. In this paper, I will examine the arrival of domesticated cattle in the settlement and how their arrival was conceptualised, implemented and experienced by the inhabitants. I will also discuss the circumstances under which Çatalhöyük reached a peak of development shortly after the arrival of domesticated cattle and the extent to which their presence contributed to the rapid decline of the local community shortly afterwards. Domesticated cattle functioned alongside non-domesticated breeds also for ritualized hunting.

Ghosts of the Ancestors: Thomsen, Childe, and the Copper Age in Europe

Innovation sparks the technological changes that underlie archaeological chronologies. The archaeological models archaeologists build to understand the past are constructed upon, and take for granted, the innovation of different technologies within regional sequences. Once established, these regional sequences then form the framework within which later archaeological discoveries are discussed. But what happens when later discoveries bring into question the integrity of the original model? In this paper, I discuss how the discovery of the Copper Age in Europe at the beginning of the twentieth century challenged not only the widely accepted archaeological chronology of the continent (i.e., Christian Thomsen's 'three-age' system), but also the fundamental paradigmatic principles about culture that the chronology itself was based upon, in particular the explicit assumption that all significant technological innovations occurred earlier in southwest Asia and were, only later, adopted in Europe. The discovery of the European Copper Age forced scholars like V. Gordon Childe not only to reconsider the integrity of the three-age system, but also to make

room for different models of cultural change and innovation. This historical case study demonstrates how the models constructed by our intellectual ancestors continue to influence how we interpret the past today.

Presenter(s): William Parkinson

Innovation and Kinship: Childe, Gimbutas, and the Binary Logic of Relatedness

Technological changes and changes in modes of production provide essential evidence for explaining social change, including changes in social organization and kinship, in archaeology. For example, based on the evidence for metalworking in southeastern Europe, V. Gordon Childe proposed that smiths were the first to abandon kinship ties as the male smiths became the first full-time craftsmen. In contrast, Marija Gimbutas argued that with the arrival of Kurgan people, the wheel, and the wagon into what she called the "Old Europe," kinship changed: the Bronze Age patrilineal systems replaced the Neolithic matrilineal systems of kinship. However, except for a few weak correlations, a century and a half of research in socio-cultural anthropology has not succeeded in demonstrating a strong relation between changes in subsistence practices and changes in kinship systems. Additionally, the new evidence of metalworking within Early Bronze Age communities in western Anatolia and new archaeogenetic results provide a new basis for theorizing change in which variability of kin-making within the "Old Europe" rather than linear change over time becomes apparent. This paper demonstrates how the binary logic of kinship as either present or absent or matrilineal or patrilineal has obscured the ethnographically grounded understanding that different ways of becoming kin may exist side-by-side rather than one replacing the other according to a chronological and/or technological sequence.

7171 Living Memory: Thinking With Medical Histories and Envisioning Health Futures PART I

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

This panel is PART I of a two part series. At the junctures of institutional healthcare, traditional modes of healing, and everyday life exists an ongoing reckoning with manifold histories of the globalization of biomedicine. With the intention of creating shared insights into relationalities of health knowledges, infrastructures, desires, and embodied experiences, we seek to complicate teleological ways of thinking about time, instead positing that medical pasts, presents, and futures co-constitute one another in entangled and dynamic ways. In this panel, we draw together scholars working at the intersections of critical medical anthropology, archival scholarship, public health and epidemiology, and historical analysis to explore how legacies of interconnected medical pasts reverberate through contemporary health landscapes. We consider how institutional and local

medical histories shape both the provision of care and lived health experiences, illuminating how past structures of harm are often reproduced in current health outcomes, policies, and data. Apparent "emerging" patterns in health—such as racial disparities in maternal mortality or the uneven effects of pandemic response—frequently reflect a repackaging of historical marginalization rather than novel phenomena. Additionally, varied local histories of community and individual engagements with medical institutions, practitioners, research, and care continue to shape subjective experiences around medical decision-making, care seeking patterns, and perceptions of medical expertise and authority. We trace how communities understand and respond to medical institutions and interventions through historically grounded frameworks of mis/trust, risk, hope, and accountability. Together, we discuss the interrelated webs of meaning-making, power and inequity, and experiences of wellness and illness that come to light when tracing diverse medical histories and their afterlives in the present.

Presentation(s): Contested Care: Chronic Illness and Virtuous Citizenship in Hidalgo, Mexico

In this paper I examine how circular migrant women in rural Hidalgo navigate imposed chronic illness identities while maintaining their self-fashioned subjectivities as *trabajadoras chingonas* (badass/powerful worker women). Through ethnographic fieldwork with women who move between crab processing in Maryland and their Mexican communities, I analyze how state health programs construct compliant chronic illness subjects through Foucault's concept of "pastoral power." In clinic-based support groups, healthcare professionals deploy moral frameworks to encourage women to embrace the *crónica* (chronic patient) identity as a form of "virtuous citizenship." These practices frame chronicity as individual moral responsibility, obscuring how structural conditions including racialized and gendered hierarchies, shape health outcomes. Women's narratives reveal forms of resistance as they selectively engage with these imposed identities while navigating complex systems to access care. By examining contested subjectivities at the intersection of migration, gender, and chronic illness, this paper illuminates how contemporary health in Mexico is shaped by historical patterns of marginalization that continue to reverberate through its healthcare infrastructure, challenging teleological narratives while revealing how communities respond to medical institutions through mis/trust and accountability.

Presenter(s): Emilia Guevara

With drugs the past is always present: Achieving wellbeing and building the good life while addressing opiate addiction

The paper explores how past forms of institutional care aimed at addressing opiate addiction in the American west shape lived experiences of health and wellbeing for people currently in recovery from opiate addiction. By focusing closely on the accounts of Northern Nevadan recoverees, the paper connects three themes: the subjective experiences of early life wellbeing and happiness (and lack thereof), a biomedical system of addiction treatment that very often deepens the addict's misery, and the addict's struggle to devise ethical lives for themselves in a landscape of care that is not designed to support efforts to achieve a sense of purpose and autonomy. In connecting these three themes the paper discusses the role of certain cultural values, such as pride and independence, and medicalization of everyday life in North America. It concludes by pointing to the problematic, but often fruitful connection between the recovering addicts' medical histories and their motivation to forge good futures for themselves and their loved ones.

Presenter(s): Madalina Alama

Haunting Uvalde: Necrolatinidades, Memory, and the Ghosts of State Abandonment

This paper explores the 2022 Uvalde, Texas school shooting as a haunting event that reveals the spectral traces of state violence and structural abandonment in ethnic Mexican communities of South Texas. Through the lens of Necrolatinidades, I theorize how the lives and deaths of Latinx populations are marked by a politics of disposability—made hypervisible in moments of tragedy, yet persistently neglected by the state. The massacre in Uvalde becomes a ghostly node in a long history of racialized biopolitics, where memory is both a burden and a tool of resistance. I examine how families and community members engage in spiritual, cultural, and transborder public acts of mourning that counter institutional erasure and offer pathways toward collective healing. These everyday practices—rooted in prayer, storytelling, and kinship—function as a counter-memory to the state's forgetting, insisting on presence, dignity, and care. In tracing how grief lingers and how memory is mobilized, I ask: how do communities live with ghosts that the state refuses to see? And what forms of knowledge emerge when the dead are honored not only as lost, but as teachers?

Presenter(s): Sergio Lemus

Hype, Hope, and History in Psychedelic-Based Drug Treatment in Mexico

The study and use of psychedelics to treat various conditions has risen immensely over the last 20 years. As such research progresses and information about new treatments emerges, hype around the "revolutionary" therapeutic potential of psychedelics also increases. This hype grows even greater as testimonials of "successful" treatments circulate through social media, news outlets, and interpersonal networks. Such hype is accompanied by a high level of optimism among prospective patients, a hope that psychedelic-based therapies will provide relief from what ails them. In this paper, I explore hype and hope in the context of psychedelic-based drug treatment in Mexico. I focus on the use of a psychedelic called ibogaine for "addiction interruption," as a way to reduce drug cravings and withdrawal and to facilitate self-reflection about one's drug use. Drawing on ethnographic fieldwork at ibogaine centers in Baja California, I examine the relationship between hype and hope for people who use drugs at these centers. I discuss their hopes for a

"clean" future by situating them in the context of the promissory claims of ibogaine's therapeutic abilities and addressing how hype and hope relate to their drug treatment histories, often characterized by negative experiences with medical institutions and "unsuccessful" interventions. In doing so, I show how this psychedelic-based care is recognized and pursued as a potential means to restore hope among those who use drugs problematically.

The spiraled legacies of obstetrics and gynecology in relation to experiences of obstetric violence and infant feeding practices

The professionalization of obstetrics and gynecology has contributed to the systematic attempt to displace midwifery in Mexico, leading to a cultural ethnocide and high rates of obstetric violence. This legacy continues to impact the experiences of birthing people, including how they feed their infants. Present public health emphasis on increasing breast/chest-feeding rates has led to increased demands and pressure on birthing parents to breast/chest-feed. Yet, few efforts have addressed the systematic barriers within the biomedical system to increase breast/chest-feeding rates. The aim of this study was to apply an approach of embodiment to breast/chest-feeding to examine how experiences with obstetric violence that result from the historical displacement of midwifery, impact infant-feeding practices. This study draws upon an analysis of policies that continue to restrict the labor of midwives and the analysis of semi-structured interviews with mothers in Mexico regarding their experiences during birth and the post-partum period in relation to infant feeding practices. Results suggest that despite the efforts towards "humanized" biomedical practices, the eerie historical legacies of biomedicine become materialized through obstetric violence, particularly the perpetuation of guilt for birthing people unable to breast/chest-feed. These findings contribute to an understanding of infant feeding practices in relation to the spiraled legacies of obstetrics and gynecology.

Haunted by policy: health seeking in the shadows of trump era immigration

Between 2017-2021, Donald Trump enacted immigration policies that negatively impacted Latinx immigrants, intensifying health inequities. Family separation under zero tolerance inflicted psychological trauma, largely on children. Beyond borderlands, Latinx communities are entangled in surveillance, arrest, and institutionalized hostility. Heightened interior enforcement and raids in Latinx communities deterred care-seeking due to fear of deportation. While not unprecedented, immigration control in the U.S. has consistently prioritized securitization. The legacies of prior policy eras continue to shape how these communities experience institutions and care in the present. Few studies examine how Latinx immigrants in mixed-status households, adapt, resist, or navigate care in everyday life. Little is known about how fear, stigma, and legal precarity shape trust in medical institutions, care-seeking delays, or reliance on informal networks. This gap is tackled through ethnographic fieldwork conducted in Latinx communities in 2024, between Trump administrations, offers insight into the healthcare experiences of Latinx immigrants in the PNW.

These stories are embedded in past traumas, revealing how being caught between legal statuses, administrations affect decisions around care. Findings offer insight into how policy and transnational identity intersect with care access, providing a roadmap toward more responsive, equity-driven healthcare for Latinx groups in a post-Trump society.

2761 Open-access publishing and how to get published with the Open Encyclopedia of Anthropology

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Bonaparte

Type: Conversation/Debate

Meet the editors of the Open Encyclopedia of Anthropology (OEA, www.anthroencyclopedia.com), one of the most widely read open encyclopedias of the social sciences, and learn how to get published with us. We will start by debating why open-access publishing matters, before explaining how peer-review works, what the differences are between the OEA and other open-access journals and how to come up with entry ideas. After this brief introduction, this session will mostly be open for questions, so you can ask the OEA's editors anything. We will ensure to cover how to get published in anthropology more generally, as our editors are also happy to draw from their own experience as authors and peer-reviewers. We will make this session as interactive as possible and look forward to meeting you.

7254 Pasts That Never Left: Materiality and Repetition in the Folds of Time

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Studio 1

Type: Oral Presentation Session

"Past-ness" stresses a quality of the past that is sensed and felt, rather than merely narrated. Dawdy (2016) describes it as the sensation of being surrounded by a world belonging to a time prior to the present. While this sense may not always be easily articulated in words, it emerges through interactions with landscapes, built environments, atmospheres, patina and objects. The ethnographic studies on past-ness presented in this panel foreground the everyday practices that deliberately-or at times unwittingly-cultivate this sensation. They trace the concrete and tangible ways in which people engage with the sensed and felt past-ness embedded in landscapes, ruins,

architectures, and environments. These socio-cultural processes create space for both involuntary and intentional provocations and disruptions, through which human actors confront, encounter, and engage with traces, indentations, and remnants. The papers showcase how these encounters generate affects and imaginaries, that give rise to new forms of politics, subjectivities, community, and historical narratives. They think about remnants through Morris's (2000) notion of specters that "testify to the folding and possible multiplicity of time," as pasts continue to recur in different forms, shapes, and dimensions.

Burcu's paper explores how the disrupted flow of the Tigris River mediates multiple temporalities of state violence, folding them onto one another, as recurrent flooding uncovers human remains and cultivates affective hauntings that give rise to new forms of witnessing, archiving, and remembering. Onaiza's paper reveals how walking in old Lahore—through visceral encounters with architectural patina and ritual pathways—not only navigates, but actively produces spatio-temporal multiplicities, transforming material remnants into co-conspirators that arm layered pasts for today's struggles over who belongs. Alexander's paper follows how a revolutionary art school's iconic architecture activates the multiple pasts that continue to shape students' creative practice and self-understanding, illustrating how built environments embed, transmit, and unsettle contradictory historical sensibilities across generations. Leonor explores how anticipating El Niño floods in Peru's La Leche Valley requires both rational assessment and affective engagement with remnants of past destruction—through magic, ghost stories, and creative manipulation—cultivating alternative senses of time that challenge resilience narratives. In Busra's analysis of the national greenery project in Turkey, a Garden of the Nation site unfolds through overlapping temporalities—a mythologized environmentalist past, a perpetually deferred future beauty, and a stalled unsightly present—where populist aesthetic governance operates not through coherence, but through recursive cycles of anticipation, suspension, and ultimate incompleteness.

Presentation(s): Too Late: Architecture, Art, and Historical Memory in Post-Castro Havana

Walking into the high, brick-vaulted studio, Julia, exhausted, declared: "I feel I arrive late everywhere." Like her fellow visual arts students, she had missed the golden years of the Cuban University of the Arts (ISA). This paper traces how the institution's multiple pasts continue to burden today's students. Focusing on three flashpoints, I explore how the social meanings of its famed domes—its cúpulas—continue to shape the present. Built in the utopian euphoria of the early 1960s, the domes were soon condemned as bourgeois escapism. A quarter-century later, under those same fantastical vaults, the avant-garde Cuban Renaissance of the 1980s developed and flourished—only to be curtailed during the post-Soviet crisis. During the 2014–2017 US-Cuba thaw, the domes again teemed with promise, as (now-absent) tourists came for the architecture and to buy student art. Drawing on fieldwork, archival research, and interviews, I read ISA's built

environment as a ghostly palimpsest (Quiroga 2005), where conflicting memories, ideologies, and aesthetics accumulate—not only under its cúpulas but also in the layers of paint on studio floors and abandoned sculptures overtaken by the grounds' tropical vegetation. I argue that the material "patina" (Dawdy 2016) of these pasts haunts students as they select, reject, and rework second-order reflections on Cuba's contemporary "post-post-socialist" condition (Buyandelgeriyn 2008; Bardawil 2020).

Presenter(s): Alexander D Werner

Sediments of the Tigris River: Water as Witness, Water as Archive

This paper examines how past and ongoing violence converge through river ecologies and continue to haunt the present, as Kurdish villagers affected by the Ilisu Hydroelectric Dam project in the Upper Tigris Basin navigate the disrupted flow of the river. Since the dam became operational, several villages have begun re-emerging each summer, only to be submerged again by early spring. When water levels recede, the river increasingly reveals human remnants, as it erodes the soil from previously submerged graves—generating a palpable sensation about interlinked pasts long suppressed by the dominant narratives of the nation-state. Ethnographically tracing the encounters of villagers with the human bones along the Tigris River during the dry season, this paper demonstrates how interactions with river ecologies cultivate affective resonances and material effects of inextricably linked sediments of violence (Biner 2020; Altuğ 2021; Suni 2023; Yıldırım 2023). These sediments mark layered histories, including the genocide of Armenians and Assyrians in the 1910s, and the killings, enforced disappearances and mass displacement of Kurdish populations in the 1990s. Following the everyday engagements with the Tigris in the wake of the dam, the paper shows how water becomes both an archive of destruction and a repository of lives lived. It argues that destruction does not solely manifest as erasure, but also gives rise to new modes of witnessing archiving, and remembering.

Presenter(s): Burcu Ozdemir

Always Arriving, Never Here: Aesthetics Governance and the Politics of Suspension in Turkey

This paper traces the life of a "Garden of the Nation" in a small town in Turkey's Black Sea hinterlands, where the promise of beautification takes ghostly form: always arriving, never here. Framed as environmental restoration and moral renewal, the garden projects draw on imagined Islamic-Turkish past urban gardens, yet materializes instead as dirt, rubble, and half-finished paths. Regardless of political alignment, all participate in the production of mess—anticipating a cleanup that never comes. This is not failure, but a mode of governance rooted in suspension: an affective-aesthetic atmosphere through which the populist regime conjures and consolidates its hold.

Drawing on Ghertner's (2015) concept of "rule by aesthetic," I analyze how the garden reconfigures what can be seen, said, and lived. I argue that populist aesthetic governance in contemporary Turkey lies not in Ottoman-Islamic imagery or direct appeals to "the people," but in how it operates through sudden interventions that spark anticipation, only to lapse into lackadaisical disinterest and decay—until the next cycle of grandiose attempts. Mess accumulates, deadlines pass, and no

one is surprised; suspension prompts shrugs, jokes, and a casual willingness to ignore. As residents say, "It'll be swifited up soon enough," signaling dismissal, familiarity, and ongoing entanglement with the incomplete garden. Ultimately, populist aesthetics here do not impose unity—they manage its absence.

Presenter(s): Emine Busra Unluonen

Living with El Niño: Endurance, Atmosphere, and the Afterlife of Ruins in Northern Peru

The El Niño Southern Oscillation is a cyclical yet unpredictable atmospheric phenomenon that brings either flash floods or long droughts to Peru's northern coast. In the La Leche Valley, people have endured its destructive force many times. In 2023, I visited the house of Gol to ask about his experience with this unruly force and about the precautions his family was taking to avoid having their home destroyed again. He shrugged and pointed to the sacks of sand piled by the door. "We'll do what we always do. Try to survive," he said. Then he gestured to a nearby huaca and added: "In the worst case, we'll take refuge with the dead." His words captured the anxiety and resignation that often characterize contexts of slow violence (Nixon, 2013) or routine crisis (Muir, 2022). But his gestures also pointed to a deeper relationship with the rubble of past disasters as traces of older forms of coexistence with catastrophe. This paper explores how atmospheric phenomena—both in the meteorological and affective sense—produce enduring moods and social relations in the valley. Building on 6 months of fieldwork in the La Leche valley, I examine how collective modes of sensing, waiting, and surviving cultivate relationships with the landscape and with pastness that are neither nostalgic nor purely anticipatory. Instead, they offer speculative ways of being-with vulnerability, and modes of endurance that are creative, ambiguous, but not necessarily emancipatory.

Presenter(s): Leonor Lamas

Processions, Performances, and Pedestrian Rhythms: The Competing and Embodied Temporalities of Andaroon-Shehr, Lahore

Building on Munn's (2012) conception of spacetime as constituted through embodied practice, this paper examines how walking in Lahore's historic Andaroon-Shehr serves as both an involuntary evocation of layered memories and a deliberate political act (Bonilla 2011). Through ethnography, the paper reveals how walks mobilize competing spatio-temporal orientations, each generating distinct affective engagements with the past that, in turn, shape contemporary political dispositions. Government-run tours theatrically "recreate" a nationalized, consumable past through spectacle and costumes. Meanwhile, amateur historians guide tourists through the same alleys not to perform history, but to excavate it through chance encounters and exploratory wandering. Beyond these touristic practices, the paper analyzes residents' everyday footfall, marked by their pragmatic navigation of the space, and annual Shia religious processions, whose ritualized pathways collapse sacred history into the present through mourning practices. These practices—performative, critical, habitual, and devotional—engage the neighborhood's ruins through divergent spatial encounters, generating affects ranging from nostalgia and reverence to dissent and defiance. The resulting temporal bricolage, woven through with spatio-affective

entanglements, renders legible how walking in Andaroon transforms "pastness" (Dawdy 2016) into a visceral terrain for ongoing struggles over belonging, heritage and identity.

Presenter(s): Onaiza Arshad

3615 Politics of Spatial Absence: Ghosts and 'Places Out of Joint'

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Balcony M

Type: Oral Presentation Session

Ghosts are the spatial remainder of the past. They call attention to unresolved histories, repressed memories, and unfinished struggles. This panel explores how memory and political meaning emerge from absent or disrupted spaces-sites whose spatial continuity has been fractured.

Drawing on ethnographic engagements from different sites, such as Diyarbakir/Amed in Kurdistan (in Turkey's border), New Cairo in Egypt, Sointula Island in Canada, and Shorebird flyways in the Americas, we explore the complexity of places that hold both past and present memories of what was destroyed and desires that were never fulfilled. Despite their different geographies and histories, each paper argues that these sites contain residues and traces of the aftermath of being 'spaces out of joint.' Here, we expand on Derrida's essay 'The Time is Out of Joint' (1995) to explore what might be considered 'disjointed spaces' with their spatial continuity interrupted and the everyday haunted by what has been lost, denied, or forcibly removed.

Ghosts demand accountability for what has been lost and what has yet to be reckoned with. We seek to identify those ghosts who refuse to stay invisible by asking: how do spectral presences unsettle the institutionalized historical narrative?

The papers in this panel explore how the politics of absence and erasure shape lived experience, memory, and belonging. We foreground embodied, relational, and situated approaches and methods in which the spectral is not only a condition of the past but also a force that reshapes the political possibilities of the present. We follow material traces to challenge the power of institutionalized memory in favor of those who carry memories in fragments and the landscapes in which they are embedded.

Presentation(s): The Debris of Memory in Surici, Amed

Near the Tigris River, next to a Kurdish burial site, on the outskirts of the Kurdish city of Diyarbakir, sits a mound of rubble that was once an entire district of a city. This mountain of memories contains the demolished architectural remains of the historic city center of Surici, Diyarbakir.

In the 1990s Surici, Diyarbakir became a place of refuge for Kurdish citizens who were displaced from their villages. In 2015-16, this historic district became the site of a massive military operation coupled with a post-conflict demolition that destroyed entire neighborhoods, again forcibly displacing an estimated 24,000 people from their homes.

After the destruction of Surici, the rubble of the city was transported to a deserted area east of the Tigris River, next to a Kurdish burial ground. With it, urban memory became a pile of rubble—a forgotten monument of destroyed memory. In this paper, I analyze how the remnants of a ruined city becomes a topographical form—an inevitable trace of displacement and loss of cultural and urban memory. As Gaston R. Gordillo (2014) states in *Rubble: The Afterlife of Destruction* "...spatial constellations are made up not only of inhabited places but also of the nodes of rubble they are enmeshed with" (20). The destruction of Surici is a sobering example of the intertwined relationship between 'inhabited places' and 'the nodes of rubble'.

Infrastructural Violence and the Politics of Spatial Rupture in Greater Cairo

This paper explores how Cairo's newly constructed highways generate a politics of spatial disruption and spectral presence. Drawing on ethnographic fieldwork with upper-middle-class Cairenes who traverse the recently constructed extension of the Middle Ring Road connecting satellite cities to the urban core, I examine how infrastructural development fractures spatial and temporal continuity, creating disjointed spaces that are both materially new and haunted by what they erase. As highways carve through older neighborhoods, they displace not only physical structures but also the layered histories and social geographies embedded within them. My paper examines how space conditions the subjectivities of my interlocutors, and is experienced and moved through by them. Their daily journeys are shaped by the specter of violence of urban

transformation that is visible yet unspoken. At the same time, they experience these routes as conduits of mobility and modernity, connecting them from their homes in a gated compound to a business complex or a shopping center. In conversation with Derrida's conception of time as disjointed and haunted, I illustrate how these highways function as spaces where the past persists in fragmented, unsettling ways. This paper aims to contribute to a deeper understanding of how infrastructural development becomes a terrain for negotiating memory, belonging, and the contested politics of urban futures.

Shorebirds, Memory, and Affective Knowledge Transfer in the Americas Flyways

Migratory shorebirds journey thousands of miles every spring and fall across the Americas, connecting actors and territories along what ornithologists have termed, "flyways." While a third of shorebird species in the Americas have experienced population declines of over 70% since 1980, remaining populations continue to return to key migratory stopover sites despite the widespread disrupted spatialities of coastal habitat for leisure or industry. In this paper, I argue that shorebirds' globalized, transboundary ecologies contribute to the transfer of knowledge across the Western Hemisphere, specifically regions with high-density shorebird habitats. Drawing on archival research and semi-structured interviews with shorebird biologists working in the United States and Honduras, I interpret the study and conservation of migratory shorebirds along their flyways in the Americas as a form of affective knowledge transfer with a focus on local ecological memory and erasure. From the Honduran mangroves-turned-shrimp-farms to The Rockaways of New York City, shorebirds like the American Oystercatcher become traces of pre-industrial histories and ecologies. These birds, their flyways, the embedded stopover sites they depend upon, and the professionals who study and protect them create novel formations of memory and affect, making their configurations a promising zone of inquiry for studies of science, space, and mobility.

Ghostly Matters of a Utopian Settlement

Sointula is a small utopian settlement established in Canada in December 1901 on Malcolm Island on the Indigenous Kwakwaka'aka land. Sointula, from Finnish, means a 'Place of Harmony' and refers to principles of 19th-century utopian socialism that originated with the ideas and experiments of Robert Owen and Charles Fourier. It was built by Finnish coal miners who worked in dangerous and exploitative conditions around Vancouver Island and other Finns seeking refuge from Russian rule in Finland. Everyone had an equal salary, and emphasized women's rights and the creation of communal infrastructure for social reproduction. Like many utopian projects, it was considered a 'failure' due to financial difficulties and mismanagement (Lindström, 2000). Following bankruptcy, key leaders left Sointula with a significant group of followers. Still, the rest of the community persisted, upholding some of the utopian principles, including self-government, strong social ties, care, and cooperative everyday practices. How does this short utopian past haunt Sointula's present? What part of history is getting reproduced, and what remains (un)intentionally "forgetful"?

(Leinonen, 2022). How do the narratives of "utopian dreams" and "unique history," along with the ultimate "failure of the experiment," contribute to the disavowal of the Indigenous presence or even ghostly Indigenous matters that haunt the everyday? Following Derrida's hauntology (1994), in this paper, I look at the complexities and

1946 Possessed by the Past: Institutional Perspectives on the Contemporary Relevance of the History of Anthropology (Part I)

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Studio 8

Type: Roundtable/Town Hall

The history of anthropology as a field of scholarly inquiry gained formal recognition with the 1962 Social Science Research Council's Conference on the History of Anthropology—a watershed moment that linguistic anthropologist Dell Hymes described as a "definite shift [affecting] the interests and fortunes of all anthropologists" (Hymes 1962, 25). Six decades later, the History of Anthropology Network (HOAN) organized the First International Conference on the Histories of Anthropologies (2023), focusing on "the methodological and theoretical, pedagogical, and ethical aspects of the histories of anthropologies" with an eye toward building a "sustainable global community of historians of anthropologies."

This expanding global interest in anthropology's histories has emerged alongside renewed calls for disciplinary reinvention in the United States, exemplified by Akhil Gupta and Jesse Stoolman's much discussed "Decolonizing US Anthropology" (2022). Such calls depict anthropology's past as haunting the present in consequential ways—a haunting so profound that some argue for radical solutions, as in Ryan Cecil Jobson's call to "let anthropology burn." This stance has sparked debate about the utility of disciplinary history and how to reckon with its ghosts. While many argue that the discipline remains possessed by its past, requiring exorcism as a necessary step to realize a more just and liberatory anthropology, Herbert Lewis offers a prominent counterpoint, arguing that while "the moral center and the concerns of the discipline have changed... It does not follow...that the anthropology of half a century ago and more impedes the work of current anthropology" (2023, 182), and that other uses of the history of anthropology are possible.

This roundtable brings together representatives from key institutions shaping the history of anthropology including HOAN; the History of Anthropology Working Group of the Consortium for History of Science, Technology and Medicine; BEROSE: International Encyclopaedia of the Histories of Anthropology; the History of Anthropology Review; the Histories of Anthropology Annual; the American Philosophical Society; and the AAA's History of Anthropology Interest Group. Through their institutional perspectives, we examine a central question that persists in both

anthropology and the history of anthropology: what is the relevance of anthropological history for contemporary practice? While not a new question, examining it through the lens of these contemporary institutions offers fresh insight into the field's past trajectories, current state, and future directions.

2493 Reproductive Justice in the US-Mexico Borderlands

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Oral Presentation Session

The US-Mexico border region is an important site for understanding how various social inequities have a bearing on people's reproductive lives, including their abilities to make dignified decisions about having or not having a child and being allowed to parent in a way that aligns with their values and priorities. Gilberto Rosas points to the border as a place where a history of settler violence merges with the contemporary violence of immigration and border policies, casting the predominantly Latino/a/x population of the region as disposable, and subjecting border communities to myriad forms of state neglect and coercion. This pre-existing neglect and violence is now compounded by increasingly restrictive reproductive health and immigration policies, at both the state and federal level, in ways that may limit people's ability to achieve reproductive justice. At the federal level, attempts to end birthright citizenship and efforts to create a deportation machine are creating fear and uncertainty in a region where the border artificially divides communities intimately connected by history, kinship, and culture. At the state level, Texas, for example, now has a near total ban on abortion, which has been directly tied to the premature deaths of at least three women and a 13% state-wide increase in infant mortality. Texas also recently passed a law requiring public hospitals to record the immigration status of patients at a time when the threats of mass deportation are being felt not only by individuals with precarious immigration status, but also those with legal status, their family members, and the wider communities to which they belong.

The papers in this panel consider a range of reproductive injustices that are occurring as a consequence of policies being enacted in the border region. They also grapple with how individuals and communities navigate this landscape in an effort to achieve reproductive justice. They look at how grassroots networks and communities work together in the face of state abandonment,

intensive surveillance, and criminalization to actively contest exclusion from care, denial of services, and challenges to birthright citizenship.

Presentation(s): Bordering the Safety-Net: Bureaucratic Exclusion from Publicly Funded Prenatal Care and Cross-Border Utilization of Health Services

Interviews conducted as a part of the Maternal Health and Emotional Distress on the US-Mexico Border Project reveal how bureaucratic mechanisms lead to systematic exclusion of US citizens and legal permanent residents from health services for which they would appear to qualify under Texas's Medicaid for Pregnant Women. This bureaucratic exclusion drives patterns in cross-border utilization of health services, with the Mexican health sector serving as a safety net for prenatal and postpartum care. This presentation considers how attending to the everyday workings of bureaucracy is revealing of how reproductive justice operates, but also, how women at times navigate their exclusion through strategically using their geographic location and their social position that enables them to cross the border. It also attends to the broader political economic injustices that result from the systematic exclusion of people from health care in the US, with resulting cross-border use of health services exacerbating inequities in access to care in Mexico. Finally, this work considers how the ability to transverse an international border is only an option for some women, as bureaucratic exclusion has the potential to result in both extreme and less dramatic forms of reproductive harm for those who are unable to use Mexican services as a safety net.

Presenter(s): Carina Heckert

Birthwork in the Borderlands: (Re)configuring Infrastructures of Care

Historical exploitation and ongoing violence against marginalized groups, particularly Black, Indigenous, and other people of color, pervade American obstetrics and gynecology. Within this context, birthworkers feel called upon to create and sustain alternative reproductive care networks that respond to stratified reproduction while working within structural constraints. In Arizona, a region where governmental presence manifests contradictorily through both neglect of basic maternal health infrastructure and heightened surveillance of reproductive health, I ask: how do

birthworker collectives expand our conceptualization of reproductive care paradigms, functioning as sites of relationality within an environment where conventional reproductive healthcare can be experienced as harmful and unobtainable? Drawing on autoethnography and participant observation with birthworker collectives in Tucson, Arizona, this paper examines how reproductive justice materializes not only as ideological commitment but through pragmatic, everyday actions of birthworkers of color as they reconceptualize (in)access to care beyond clinical, individual, or rights-based frameworks. I consider how the efforts of birthworkers both acknowledge the hostile reproductive landscape while also creating possibilities for more just reproductive futures.

Presenter(s): Deyanira Ibarra

Postpartum Care: Latina Mothers in the Borderlands of South Texas

Accounting for more than half of all U.S. births, approximately 300,000 births occur annually in the U.S.-Mexico border region. While reproductive outcomes vary by region, Texas border counties had the highest proportions of adverse outcomes. Latinas living in these border regions disproportionately experience structural determinants and conditions (e.g., poverty, low socioeconomic status, lack of access to health care) associated with shorter life expectancy and adverse health outcomes. The compromised health among U.S.-Mexico border populations poses a threat to maternal and child health in the U.S. Two-thirds of U.S. pregnancy related deaths occur during the postpartum period, marking critical life transitions for women than can be leveraged to prevent maternal health disparities. Furthermore, women living in border regions are twice as likely as non-border women to initiate prenatal care in the third trimester or not at all. These outcomes reflect the higher prevalence of chronic, mental, and infectious diseases experienced by these populations and higher rates of poverty and underutilization of health care services. By employing an interdisciplinary approach utilizing the ethnographic and qualitative skills combined with statistical and epidemiological methods, this paper captures the nuanced experiences and individual voices of Latinas living in the Rio Grande Valley borderlands of South Texas who qualify for CHIP perinatal coverage.

Presenter(s): Milena Melo

Bridges of Birth: Birthright Citizenship's Influence on Birth Center Business Models

This paper will discuss the influence of birthright citizenship on birth center business models at the U.S.-Mexico border. Through participant observation at a Texas birth center located near the border, I will analyze the precariousness of these models, for both birthing parents and the business itself. With the current Trump administration's aggressive efforts to nullify birthright citizenship and existing stigmas against midwifery, financial insecurity for some birth centers at the border may be a possibility. For the people giving birth at these centers, and whose children are beneficiaries of the Fourteenth Amendment, their social and legal security is increasingly in question. In addressing questions about border birth centers' relationships to immigration and their perceived responsibilities to the protection of the rights of immigrants, I hope to explore how birth centers at

the border and their clients may need to adapt in the face of volatile political climates and further understand the ethicality of this type of business model.

The Abortion 'Infodemic' in a Post-Dobbs World: Perspectives on Misinformation and Abortion Care among Grassroots Activists in Texas

Dobbs vs. Jackson Women's Health, the US Supreme Court decision to remove the national protection of abortion, has given way to an abortion "infodemic," or the proliferation of false or misleading information about abortion access and care. Obstacles to obtaining accurate information threaten the ability of pregnant persons to control and make decisions about how to manage their fertility, fueling increased risks to maternal health and wellbeing. This study draws on interviews with grassroots abortion activists who support pregnant persons in Texas (N=15), where a near-total ban on abortion was implemented in 2022, to examine drivers of abortion misinformation, as well as consequences of the spread of misinformation on organizational services and support for people seeking an abortion. We first attend to the disproportionate impact of the abortion infodemic on marginalized communities, highlighting ways that intersecting forms of social exclusion increase vulnerability to misinformation efforts and exposure. We then explore how the spread of misinformation is affecting practices and personnel within grassroots abortion organizations. We consider evolving challenges for organizations to mitigate misinformation due to legal ambiguity of abortion laws and their concerns for personal security, as well as innovative strategies that activists employ for coping with and transcending misinformation barriers to providing effective support services.

7269 Resistance and solidarity 'from the South'

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR C2 (3rd fl)

Type: Roundtable/Town Hall

Resistance and Solidarity 'from the South'

How do we conceptualize and engage in resistance and solidarity when war and occupation are not an elsewhere but surround all our worlds - of home and research, teaching and community building? This roundtable stages a conversation about this question among anthropologists who have experienced and witnessed militarized displacements, and have studied various formations of resistance and solidarity, near and far. We propose that rethinking resistance and solidarity through a constellational analysis 'from the South' is a valuable framework for exploring anti-imperial, transnational, feminist struggles against the invisibilized nexus of war at home and war abroad.

The participants have lived and studied war, resistance, and solidarity in Lebanon, Palestine, Pakistan, Iraq, Bosnia, Egypt, the United States, the UK, Mexico, and Chile. We come together to reflect on and share insights on questions that matter to all our lives, making space for analyses that are often left unspeakable.

7436 Shape Shifting Ghosts, Saintly and Devilish, Haunt Our Crisis

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Oral Presentation Session

In the nineteenth century, about ghosts, it was written that a specter was haunting Europe. Now ghosts are haunting the US and through it, and its new allies, the world. Marx and Engels put wording in their Manifesto that suggested that their good ghost of communism was waiting in history, violently opposed by reactionaries, who were doomed to lose. Our situation of course is different. Our poly-crisis invites some interpreters to fear fascism, or in milder language, rapidly intensifying authoritarianism. Some commentators write or speak about emerging soft fascism. Mussolini and Hitler trouble our nightmares. To some, their ghosts may be coming to life. For others, a different updated crew of zombies could be assembled. In the US, ghosts from slavery persist as part of what some call neo-fascism. What are some of the characteristics of neo-fascism in this view? A peculiar type of capitalism is central as stressed by various authors including Slavoj Zizek. We note that a powerful capitalist nation-state continues in changed ways the racial capitalism which incorporated slavery. This nation-state is aggressive towards other political entities, so much so that it directs its aggressions even towards its internal political formations, such as California, or sanctuary cities, as well as external entities such as Mexico, Canada, and Panama, as well as its own citizens. The conflicts in such a situation apparently generate reliance by government on authoritarian religion to hold the society together. In the US this is white supremacist Christianity. In China, it is Confucianism. Examples abound. There is a reliance on extra-legal violence; in the US, the January 6th rioters, now pardoned, illustrate this. Violence against communities of color continues. Obviously, another feature of such soft fascism or authoritarianism is persecution of vulnerable minorities, as well as subordination or manipulation of women. Among the vulnerable minorities are various types of people of color, immigrants, LGBTQ+ persons, unhoused persons, etc. The onslaught of attacks on DEI and Critical Race Theory are exemplary here. In this session, we are also open to discussion of good ghosts, even saintly

ghosts, who could guide the US or the wider world in non-authoritarian, anti-fascist directions, thus disconfirming what one Zizek prophecy pessimistically anticipates. An uplifting hagiography might include not only a familiar group such as FDR (for moderates), MLK, Sojourner Truth, Wilma Mankiller, Nelson Mandela, Mahatma Gandhi, Cesar Chavez, and so forth, but also newly identified and so-to-speak resurrected ghosts. A risk here is that there are liable to be extremist efforts to erase or discredit such ghosts. Apparently, the King family is concerned that newly released biographical sources might be used to vilify MLK. The positive ghosts could well be not celebrated figures, but even people plucked from obscurity and presented to the consciousness of the living.

Presentation(s): Ghosts, Slavery, and Authoritarian Militarism

The ghosts of US slave-owners and enslaved persons still haunt us at present in 2025. This paper focuses on interpreting, and one hopes, changing contemporary US cultural dynamics as regards relations between Black and White people. The obvious right-wing onslaught attacking Affirmative Action, DEI and Critical Race Theory is part of a strategy to continue racialized capitalism in which slavery has been succeeded by racial hierarchies in US education and work arrangements, including a militarized economy. Attacks on DEI at universities and colleges and in the military are part of a plan to combine white supremacist racial hierarchies in higher education with hierarchies at work, e.g., work in the military, a major employer of Black Americans. A concluding point deserves mention. Coalition-building among varied racialized groups, rather than exclusive focus on one racial category, is more likely to be effective. This avenue would require faculty to do their disciplinary anti-racism diligence, as suggested by CRT.

Presenter(s): Edward Sankowski

African Elders: Conversations with 21st Century Leaders

Traditional African cultural systems tend to celebrate the wisdom, leadership and mentorship of the "elders" as legacies for their offspring, national compatriots, and future politicians. Two renown leaders in the organization known as "The Elders" were Nelson Mandela and Kofi Annan, and they continue to provide inspiration and examples against which younger leaders are judged, and perhaps judge themselves. Here, we utilize the words and deeds of UN Secretary General Kofi Annan (1997-2006) as the basis for two sets of imagined conversations with 21st century Ghanaian and Rwandan political leaders on the state and citizenship, war and peace, human rights and justice, or development and health. Such conversations can be amiable or contentious, inquisitory or congratulatory; and they grow out of my research, practice, or fieldwork experiences. We will see that these conversations also reveal how the changing African, western, and international contexts

shaped the philosophies, expectations, and realities of Annan as well as the younger Ghanaian and Rwandan politicians.

Presenter(s): Gwendolyn Mikell

Spirits of the Hollow Chamber: Redefining Latinx Immigrants, Memory, and US Citizenship in Oklahoma

The Hollow Chamber (AD800-1450), containing a variety of ceremonial artifacts, is located in the Spiro Mound complex in southeastern Oklahoma. It served as a site for cultural exchange between the people of the east and people as far away as the Gulf of Mexico and the Gulf of California. Descendants of the first inhabitants of North America, the Spiro people, and their indigenous neighbors, retreated into other realms - into the trees, the mountains, etc. - as the first Europeans arrived. The Hollow Chamber sealed the realm between the ghosts of the first inhabitants and the new European immigrants and colonizers. In the early 2000s when I conducted ethnographic research in the Oklahoma Latinx immigrant community, the September 11th attacks spawned a new era of American "outsider fears" and public panic about immigration. This resulted in a plethora of state laws challenging federal jurisdiction on immigration. My paper focuses on the intersection between indigenous memory north and south of the border, links with the past (the ghosts of earlier eras), arbitrary borders, and the emerging criteria for 21st century citizenship. I argue that recent political events, with roots in earlier 20th socio-political movements, are actively regenerating old patterns of American racism and models of power and control as Latinx migrants reopen older portals to actively resist oppression through the deep tentacles of traditional knowledge linked to earlier patterns of migration.

Presenter(s): Regina Gordon

Double Haunting: Reading Fiction from the Civil Rights Movement and Reliving It

In the last few decades anthropologists turned their attention to the experience of reading and began to study reading as a cultural phenomenon. These studies help me to understand how in reading Diane Oliver's posthumously published, *Neighbors and Other Stories*, I felt myself "inhabited by a consciousness that enhanced and tested me." But in my reading experience, Oliver stood beside me almost as a doppelgänger moving me to see the early 1960s in Virginia and North Carolina through both her and my own eyes. We were almost the same age when she died in 1966, we lived in neighboring states, and we were in college at the same time. Stories within this collection bring to life the everyday as well as the groundbreaking experiences of black women and girls at the end of the Jim Crow south. Oliver's prose is both lyrical and poignant, drawing readers into the richly textured world of her characters. Reading her stories, I am once more in Virginia where after graduating from high school my cousins find jobs working in the homes of white women, and where my mother taught me how to behave if I also had to do day's work. Through Oliver, I remember the fear and exhilaration encountering white coeds in my mid-western university. This is haunting by an activist ancestor I never knew I had and by the memories of a struggle that must be revived.

Presenter(s): Carolyn Martin Shaw

Saints, Specters, and Soft Fascism: Biocultural Memory and the Politics of Resurrection

This presentation examines specters as biocultural agents in moments of political crisis, exploring "good ghosts" as ancestral provocateurs who resist erasure. Drawing on Black geographies, decolonial feminism, and embodied memory, it interrogates soft fascism and repositions cultural archives as vital sites of resistance, rehumanization, and insurgent praxis. From Mary Shelley's *Frankenstein* to Zora Neale Hurston's conjure women and Hannah Arendt's warnings on banality and totalitarianism, we are not simply haunted by history—we are shaped by it, blood and bone. Yet, even in this terrain of spectral violence, there are what I call ancestral provocateurs—good ghosts—who resist disappearing. These figures, whether canonized in history or whispered about in familial kitchens, hold insurgent possibilities for rehumanizing the present. Drawing from Black geographies, Indigenous futurisms, and decolonial feminist thought, I propose that we attend to these hauntings as sites of praxis. What happens when we consider the ghost of Sojourner Truth not merely as a relic, but as a political force? What of the unnamed midwife in Mississippi who caught babies and courage in the same hands during the Jim Crow era?

Presenter(s): Elisha Oliver

The Infusion of Apartheid Ideology: Seeking Afrikaner Immigrants to Consolidate American White Nationalism

President Trump is seeking priority immigration status for South African Afrikaners, who represent the remnants of the apartheid system, while he simultaneously seeks to deprive US minority groups of citizenship, voting rights, education, and employment opportunities. In the President's executive order issued on February 7, 2025, he highlights the South African government's "shocking disregard of its citizens' rights" in enacting Expropriation Act 13 of 2024, allowing the government to seize unused agricultural land without compensating owners. In the early 1990s, when negotiations occurred to end South African apartheid, white farmers had a strong lobby that allowed them to protect and develop their land to benefit from the lifting of economic sanctions and to engage in international trade. Nevertheless, there has been increasing pressure from Black South Africans to have greater land access in the three decades since apartheid ended.

The possible influx of tens of thousands of Afrikaners resurrects the ghost of apartheid's architect, Henrik Verwoerd. Verwoerd, a Dutch-born sociologist, socially engineered the apartheid system in which Black South Africans were deprived of South African citizenship and forced to live in small, fragmented, agriculturally unproductive homelands to eke out a living or to find a job for which they would need a pass to enter a city for employment. What are the implications of Afrikaner immigration for South Africans and for US minorities?

Presentation(s): "The Wargaming Encounter: Simulation and Dissimulation in Rio de Janeiro"

This presentation explores questions of suspicion and misrecognition in young working-poor residents' encounters with police. The conceptual boundaries between play and simulation, and where these two modes of engaging the world align and diverge, stages the matter of power over life and death. Ethnographically, the paper describes life in a Rio de Janeiro favela for a cohort of Afro-Brazilian youth who collaborated on building a remarkable 4,000-square-foot mockup of their city perched on the forested edge of their hillside self-built neighborhood. Within this miniature urban world constructed of brick, ceramic tiles, concrete, and other found materials known as Morrinho ('Little Hill'), they play a role-playing game that re-creates urban life by manipulating thousands of one-inch figurines. Morrinho is intimately concerned with surveillance and territoriality, with seeing bodies and spaces, and how identity is forged in a fluid nexus of the two. In Rio's favelas, and particularly the one studied here, military police surveillance is a mode of seeing that pervades social life and thus becomes productive of certain forms of sociability. The paper recounts a standoff when the Morrinho model became an object of intense scrutiny by police who were conducting tactical operations in the favela. Their suspicion that the play-thing was rather an elaborate map triggered the inference that inferred the youths they found at the site were drug-gang affiliates, using this map to plot future raids of other favelas. How this moment was resolved opens a grounded conceptual analysis of dissimulation in the face of a lethal kind of simulation, the arts of concealing oneself and one's knowledge from authority. The encounter brings into relief how what counts as play is presumed to be steeped in fictionality, while simulation is thought to be rooted in the real. The paper speculates that these distinctions are more often blurred than we imagine, and from there it considers what it means not only to think through the reality of play and the unreality of simulation but to live through it.

Presenter(s): Alessandro Angelini

Afterlives of high water: Hurricane Helene and experiences of displacement in Western North Carolina

In September 2024, Hurricane Helene rolled through Western North Carolina, carving out a trail of destruction in its wake. The mighty French Broad River jumped its banks, engulfing homes and businesses across the region. Gentle streams surged with enough force to wash away bridges in what has been called a once-in-a-thousand-year flood. Landslides carried entire sections of

roadways down the mountains and massive trees toppled, crushing homes and cars beneath them. In the wake of Helene, those living in the region faced electrical outages, broken waterlines, food and gas shortages, and a complete lack of communication services. Many chose to leave the region immediately following the storm. Some chose to relocate entirely.

As a resident in Asheville, NC, I found myself hastily packing up my own belongings and forging an uncertain path out of the region. As a scholar of forced migration, I was continually reflecting on the uncertain journeys my own interlocutors had taken as they fled houses and regions which were no longer liveable. What emerged from a comparative perspective were questions of experiences of displacement. What counts as displacement? Are there scales of experience that distinguish one form of displacement from another? How does the literature on forced migration account for ease of mobility, temporal duration of displacement, or affective associations with the triggers of displacement?

It was clear that while my personal experience of displacement following Helene had some similarities to my interlocutors who were navigating European asylum systems, our experiences were also vastly different in significant ways. In this auto-ethnographic presentation, I reflect on these differences and on the questions they prompt for an anthropology of forced migration.

Presenter(s): Erin Wimmer

Agency of Unburied: Haunting, Spectrality and Impossible in (Post) Soviet Border Imagination

The center orientation and closed character of the Soviet space turned borderline areas into half-empty places remaining in absolute readiness for confrontation. Frontier forms of socialism were special not only because of the extremely intense implementation of Soviet methods of modernization, but also because they reached a particularly high level of political and social sterility of frontier population. The contradiction between political sterility of borderline population and the latter's emotional inclusion in border defense was dealt with through re-creation of confrontation mythologems whose performative power was able to combine temporal regimes and cast doubt on frontier loyalty of the local inhabitants. The most popular mythologems in Soviet people's collective imagination were the ones concerning three areas of political and ethnic confrontation: Bandera's Ukraine, Semenov's Transbaikalia, and Central Asia with the omnipresent Basmachi bands. The followers of Semonov and Bandera, as well as the Basmachi to a great extent established the geography of Soviet political demonology of the frontier. Contrarily to the 'classic' enemies of any Soviet citizen, the frontier imagined non-communities were in fact groups of distinct entities created from the many contradictions of the Soviet world. Using Braidotti's well-known relation between metaphor and social place we can ask about the process whereby a metaphorical description of border space (as the place of political disloyalty) transformed into knowledge of real social sites in which the 'imagined non-community' was held to exist. Why did empty, sterilised border zones become the spaces for imaging cross-border networks of political (anti-communist) violence? Why did these legends create the effect of presence and have such force – such that some groups were not only conceptualised in the categories of a mythical vocabulary by others but also began themselves to see their own communities in that way, and behave according to these

very schemes? Answers to these questions require paying attention to the specifics of the Soviet imagination of border zones that gave rise to feelings of danger and lack of trust.

The paper aims at analyzing the late Soviet discursive practices about disloyalty of fictional Cossack communities in Inner Asia (Mongolia, China, Transbaikalia) with their old style of living and strong anti-Soviet attitudes. Talking about the traumatic experience concerning the expansion of Soviet lifestyle models, the legends in question were a way of experiencing simultaneously cultural hierarchies, fears, and subconscious inner need for material existence of the enemy. Their borderline localization included them in the perspective of the Soviet border as an inevitable chance to contact the unknown and hostile.

Presenter(s): Ivan Peshkov

Appeasing the souls of the violently deceased and those who survived through contemporary arts.

April 2025 marked the 50th anniversary of the fall of Cambodia to the hands of the Khmer Rouge. This moment has been commemorated simultaneously and transnationally in Cambodia and in diasporic communities through in-person and online performances. Among the artistic processing of the genocide is the staging of *Bangsokol*: a requiem for Cambodia, a multimodal symphonic performance by composer HIM Sophy and filmmaker Rithy PANH. Premiered in 2017, the performance directly refers to the eponymous Buddhist funerary rite performed for the body of the deceased to facilitate the transmigration of the soul, a rite that is notably held in the absence of a body for the victims of the late 1970s' genocide. The 4 years of the Khmer Rouge regime led to the death of nearly 2 million people. Murdered, tortured, exhausted and starved to death, their bodies anonymously tossed in mass graves, the victims of the Cambodian genocide are considered wandering souls; haunting ghosts in need of help from the living among which they shall remain until they receive proper funeral care. Relying on the art production of *Bangsokol*, and the Cambodian spiritual considerations on death, this presentation discusses how contemporary arts uniquely enhances the memorialization of the lingering metaphysical presence of victims of mass atrocities by and for survivors, their descendants, and the broader public understanding of their journey through healing.

Diasporic Specters in a Life Story: Tracing Romani trajectories in the Americas

Romani people in the Americas are haunted by mirages of their past and future. Ethnographers attempting to tell the story of their diaspora also contend with such apparitions. The reflections contained in this presentation start with the untimely death of Uncle Toza, a fieldwork respondent who later became a dear friend. His passing in the United States years later could be read as the confluence of such hauntings. During his life in Colombia, Uncle Toza longed for the American dream, living in the shadow of some of his relatives who had migrated north in the 1980's. Instead, his siblings had chosen to stay in Colombia, taking advantage of their skills as metalsmiths to make a living and forge a home adapted to their needs. Later, Toza himself joined other Romani families in their push for recognition as an ethnic group by the Colombian state. But in spite of his push for

ethnic recognition in his home country, he ultimately sought out a path that would leave him both unrecognized and undocumented. In his sixties he took a chance and followed his relatives' steps and left for California. But without proper access to healthcare, his health declined rapidly in 2019 and he spent his last moments in LA's sprawling suburbs, longing for the freedom he once had in the streets of Bogota's industrial zone.

This presentation argues for a better understanding of hauntings beyond the dichotomy of individual traumas and discursive phantoms. Toza's ghosts are better explained by a confluence of: (i) his own dreams and aspirations, (ii) his family's history of exclusion in Europe and the Americas, (iii) the ideas and representations about 'Gypsies' and 'Gitanos' that hung over his life decisions, and (iv) the powerful forces that shaped his life. This presentation is based on ethnographic descriptions gathered during the speaker's long-term engagement with Romani individuals and organizations in Bogota, Colombia's capital city, from 2006 until the present. Such insights will be complemented by trajectory ethnographies, which helped to trace individual and family experiences of migration throughout respondent lifetimes. Toza's story also became a way for the ethnographer himself to confront his own academic and personal ghosts and limitations: what could have been, what will not return, and what still remains.

Echoes: Ghosts, Repetition, and Remix in Detroit Hip-Hop

The track begins with an eerie atmosphere, repeated notes on a synth bass, wooshing ethereal sounds. A producer tag that I cannot yet decipher. The crowd instantly recognizes what is happening and lets out a collectively excited cheer as they rush back to the dance floor with cocktails in hand. Too new to Detroit and embarrassed to admit that I'm not in the know, I plead with my phone's song-identifying app to identify what I've missed. As the song plays, the crowd knows most, if not all of the words. Full-voiced, the people on the dance floor participate in the chorus: "These n*ggas want me dead! They put money on my head!" I stand motionless as the crowd echoes these audacious words in celebration; the words have stopped me dead in my tracks.

In this work, I reveal spectral manifestations formed within Detroit hip-hop - ghostly ways of sounding, embodying, and practicing with the dead. Three case studies orbiting around one song inform the basis of my exploration. To investigate these hauntings, I reflect upon my fieldwork experiences - at clubs, in my car listening to the radio, and listening repeatedly through headphones - hearing the prognosticating echoes in a song titled "Death On Me," by the late rapper Dex Osama. Additionally, I turn my analysis to various reiterations of and gestures towards this song that exist primarily in online mediated spaces like YouTube. A number of artists have set out to remix "Death On Me," and have unintentionally invited Dex's ghost to perform along with them through silences that bear his presence. The interconnectedness of these examples reveals a common hauntology within the music, an ever-so-persistent ghostly presence that lingers within Detroit hip-hop showing the importance of death in the community of the living.

Presenter(s): Alex Blue V

Performing Perspectives: A Semiotic Analysis of Stand-up Comedy

This presentation looks at stand-up comedy as the performance of perspectives. I have been conducting ethnographic research on stand-up comedy in Finland since 2015, including performing myself at a semi-professional level, which has given me access to backstage spaces and the processes of creating and performing material. Stand-up requires the performer to have both a unique perspective and the ability to displace it, by the implicit or explicit acknowledgment of alternative perspectives. Since comedians often perform 'as themselves' and create original material, the stage persona is linked to the comedian's offstage persona(s), albeit in different ways. Comedians thus combine the continuity of a stage-persona with changing material, and it is the dialectic between these that creates comedy. This involves the performance of the main or default perspective of the performer as well as any alternative perspectives related to the material, such as characters in events. Given the openness of comedy as a genre, such characters may be actual or imaginary, human or non-human. Stand-up comedy jokes, 'bits' are usually created through a set-up and punchline structure, where the set-up presents a conventional perspective, which is then undermined by the punchline, which presents a new and inventive perspective on the set-up. My analysis asks, how are perspectives presented and performed, how does the comedian shift between them, and how can audiences look through them to see the humor and 'get the joke'? Given the ways perspectives are tied to persons, there are various personal, social, and political aspects involved, starting with the intersectional position of the comedian and audiences. What enables and constrains the 'repertoire of perspectives' a comedian can embody or reference? A semiotic anthropology of stand-up comedy can elucidate the inner workings of comedy, its social and political significance, and the underlying ideologies of personhood and communication.

Presenter(s): Marianna Keisalo

Residual data, student data, and the university

How do past data live alongside their contemporary and fleshy counterparts? Anthropology, critical data studies, and surveillance studies have offered rich accounts, theoretical and empirical, of "data doubles," or the datafied and bureaucratic digital doppelgängers that correspond to people, and how these doubles do and do not bear upon people's lives (Haggerty and Ericson 2000; Ruckenstein and Schüll 2017). Data doubles, conceptually, tend to be a temporally present, dynamic twin. What happens when people are haunted by their data—and data infrastructures—of the past? This presentation draws on ethnographic research with students at U.S.-based universities subject to multiple, twisting forms of institutional data collection and surveillance, where data of the past—and data that, importantly, do not always match the present—echo into students' futures. Taking inspiration from the "stone tape theory" of residual hauntings in horror media, in which a fleeting present leaves a ghostly imprint and endures into the future via material infrastructures (Brown 2024; Kneale 1972), I explore how student data becomes spectral and residual yet no less present as students' presents diverge from their past data.

503 Society of Medical Anthropology Flash Session #4

Presenter(s): Meenal Rawat, University of Edinburgh, Travis Hedwig, University of Alaska, Anchorage, Beatriz Reyes-Foster, University of Central Florida, Department of Anthropology, Annie Preaux, Appalachian State University, Gurjinder Kaur Brar, Michèle Barrière-Dion, Giovanna dos Santos, Universidade Estadual de Campinas

Presentation(s): "Between Deity and Society: Rituals, Power, and Identity in the Context of Mental Health and Healing"

Ritual healing is deeply embedded in many societies and cultures, making it an important aspect of people's lives. While the specific forms and practices vary across regions, rituals are often sought for the purpose of healing and well-being. Healers who perform them are consulted by community members for a wide range of concerns, from financial hardship, marriage troubles, difficulties in childbirth to afflictions like evil eye, emotional distress, household calamities and sudden deaths, in the hope of their delivering relief. Rituals play a significant role in fostering resilience, promoting a sense of community, belonging, and well-being. In times of uncertainty and hardship, rituals also provide vital coping strategies, offering individuals a way to navigate their distress.

This study examines ritual practices in Indian Himalayas, particularly in Munsiyari, Uttarakhand, India. Ritual practices in this region are largely centered around deity worship and are integral to the mental and physical well-being of the local communities, including the Shauka tribal group and other disadvantaged caste groups. Deity worship typically involves two main actors: the medium, who serves as the vessel through which the deity manifests, and the drummer, who plays instruments to invoke the deity. Among the Shauka people, a third key figure known as the Dhami also plays a central role. Although not a Brahmin, the Dhami performs many ritual functions typically associated with Brahmin priests, thus complicating conventional caste-based distinctions of ritual authority.

This study highlights how ritual healing practices are embedded in complex social hierarchies of caste, gender, ethnicity, and class. Access to ritual authority and care is negotiated through these intersections, shaping how individuals seek and receive treatment for mental and emotional suffering. The paper argues that ritual healing is not merely symbolic but constitutes a legitimate and effective mode of care one that must be taken seriously within mental health discourse and policy.

Ecologies of Wellness and Prevention: Adapting the Icelandic Prevention Model in Alaska

This paper explores the cultural politics of adolescent substance use prevention through the early-stage implementation of the Icelandic Prevention Model (IPM) in Alaska. Framed by critical medical anthropology and interdisciplinary public health, we examine how community-driven adaptations of a global prevention framework intersect with local ecologies of knowledge, data sovereignty, and culturally specific logics of care. Engaging four Alaskan

communities-Seward, Homer, Ketchikan, and Mat-Su-our collaborative project facilitated readiness assessments and intensive training in the IPM, a theory-based model originally developed in response to youth substance use in Iceland.

More than a programmatic intervention, this effort constitutes a site of epistemological and methodological negotiation: between community-based practices of wellness and dominant paradigms of public health surveillance such as the Youth Risk Behavior Survey (YRBS). We interrogate cultural constructions of substance use, the inadequacy of epidemiological models in addressing structural and relational determinants of health, and the persistence of settler-colonial logics in statewide prevention efforts. In doing so, we highlight how prevention itself becomes a contested terrain-one where control, resistance, and emergent strategy converge.

We argue for hybrid approaches that center local meaning-making, socio-environmental influences, and shared protective factors. The Alaskan adaptation of the IPM offers a case study in the challenges and possibilities of reconfiguring substance use prevention as a community-engaged, culturally responsive, and politically situated project. We conclude by advocating for deeper anthropological involvement in the design, implementation, and evaluation of public health interventions, especially those targeting youth wellness in rural and Indigenous contexts.

Haunting Madness in Mexico: Ghosts of Coloniality in a Hospital's Past and Present

This paper considers the complex lives of individuals labeled as "mad" and their caretakers within the cultural and historical framework of Mexico. Utilizing ethnographic research from Las Lomas psychiatric hospital in Merida and historical analyses of Mexican asylums, this presentation will delve into the ontologies of madness, the impact of coloniality, and the intersections of gendered trauma and indigeneity. I explore the historical development of psychiatric institutions in Mexico, highlighting the colonial origins of madness and their lasting influence on modern psychiatric practices and presenting Through the stories of patients and hospital employees, I consider the ongoing presence of coloniality in the lives of psychiatric patients and the people whose job it is to care for them. These narratives reveal competing ontologies of madness and the coloniality of suffering, showcasing how indigenous and biomedical perspectives clash and coexist within the psychiatric ward. Drawing on interviews with Las Lomas hospital employees and analysis of newspaper representations of Las Lomas itself, I consider the shared experience of social abandonment and the ways in which the history of madness haunts the present of psychiatric life in modern Mexico.

Presenter(s): Beatriz Reyes-Foster

Listening to the Living: How Treatment and Recovery Narratives Can Transform the Response to the Opioid Epidemic in Central Appalachia

Since the late 1990s, increases in opioid use disorder (OUD) – defined by the Centers for Disease Control and Prevention as a "problematic pattern of opioid use that causes significant impairment or distress" – and related overdose deaths have resulted in a national opioid epidemic. However, certain regions, including Appalachia, have been disproportionately impacted. The South-Central Subregion of Appalachia, which encompasses Western North Carolina, has experienced disproportionately high rates of OUD and overdose deaths compared to non-Appalachian regions of the United States. In 2021 and 2022, settlement agreements were reached with pharmaceutical distributors, pharmacy chains, and manufacturers to resolve opioid litigation for their role in the marketing, distribution, and sale of over-prescribed prescription opioids. As a result, over \$50 billion will be distributed to state and local governments for opioid remediation activities, including \$1.4 billion distributed in North Carolina. By and large, opioid users themselves have had little part in the decision-making processes related to the use of these funds for public health programs. In Western North Carolina, a team of university-based researchers, a local health department, and community health center are collaborating to better understand the lived and living experiences of opioid users in the region to improve treatment and recovery services. To achieve this work, we worked with health department employees and Peer Support Specialists who work directly with opioid users in three counties in Western North Carolina. The Peer Support Specialists themselves have experience with substance use and recovery and are trusted members of the communities they serve. Together we co-developed a semi-structured interview guide. We plan to conduct interviews with individuals who have lived and living experience with opioid use during April and May of 2025. The interviews focus on individuals' lived experiences with opioid use and treatment and recovery services, as well as past and present experiences with support systems, housing, and economic opportunity. We draw on Bourgois et al.'s Structural Vulnerability Assessment Tool for part of this interview. We also intend to ask individuals about their current motivations, advice for others who use opioids, their ideal treatment and recovery programs, and what they would like decision-makers to know about their experiences. The goal of this work is to use these narratives to better understand the experiences and values of opioid users in the region, communicate their values and experiences to those in power, and facilitate the use of these narratives to inform equitable and effective programs.

Neuroanthropological approach of Culture, Biology and Brain

The extent of our physical ability and cultural development is determined by our brain and its associated neural network. In anthropology, biological anthropology deals with our human brain, as a biological component, whereas social (cultural) anthropology deals with our culture and ignores

the brain most of the time. There seems to be a gap between these two parts of anthropology. In order to answer this question, Daniel H. Lende and Greg Downey, about a decade ago, proposed a new path of study within anthropology, named 'Neuroanthropology', that sought to bridge the gap between biology and culture in anthropology by keeping the brain at the centre. Neuroanthropology believes that our brains not only influence our culture but our culture influences our brains as well, in a cyclic process. This article provides an insight into Neuroanthropology, how it came into being and how it can be used in academics as a tool in order to give us a better understanding of ourselves. It also highlights the fair share of criticisms and obstacles it faces and what lies in the future for neuroanthropology.

Outside the haunted house: Representations of the mental institution among community caregivers in the autism world

What is a mental institution, and what is it not? The common sense, as well as biomedicine, have a quite clear and dichotomic view opposing institution and community, whereas the institution refers to the hospital, and community, all the rest. However, there are many nuances and in-between states and spaces between the two. One of those spaces is the residential facility.

This presentation is based on my doctoral research among staff and autistic adults with challenging behaviours living in such residential facilities. Those residencies are situated in-between the locked units in the psychiatric hospital and the community residencies or family homes. They are located in-between, as they act as both points of exit for long-term patients in the locked units, who cannot be "cured" by medicine, and points of entry for children, teenagers or adults who have been living at home but whose challenging behaviours have evolved to a point where families are no longer able to care for them. The passage, for a person, between those two spaces, is thus less an in-and-out but more a bureaucratic trajectory, with many micro-steps and forms to be filled along the way. They are also "in-between" the institution and community, because they are located in regular homes on the streets, but are, at the same time and to some extent, regulated and living by the rules and regulations of the health care program. The staff is present 24 hours a day, seven days a week, and is employed by the provincial health care system, with an intensive rehabilitation mission. One of the main goal is to lessen the challenging behaviours to a point where the person can live in a regular community facility.

The staff working in those residencies have many representations of "the institution", some that are more general and gleaned from the popular history and culture, and others that are specifically taken from their own direct work experience with residents that they worked with. To different extents, some of the staff actively anchor their work in a process of distinction from, and opposition to, the institution in a broad way but also in very concrete and daily details. These processes of distinction from the institution are articulated along three themes: who is the patient (what are his needs? What can we expect from him or her? where will he go after "here"?); power relationships between staff and residents (including notions of trust, fear, control, and the use of physical and chemical restraints and isolation); the physical space (an institutional space versus a "less-

institutional" space). Those processes of distinction are rooted in a vocation to act as a tool for the emancipation of the residents, which they believe have rights, and are more able, free and part of this world, than sick, passive and in need of being cared for.

Tap to Relax: Meditation Apps and the Production of Ethical-Aesthetic Dispositions

This paper examines the intersection of religion, spirituality, technology, and mental health through an ethnographic engagement with mobile meditation apps. Rather than treating these apps as static tools or neutral technologies, I approach them as active mediators that shape not only the therapeutic practices they promote but also the very subjects who use them. By focusing on apps such as Headspace and Medito, I investigate how they configure specific modes of engagement with meditation, well-being, and the body.

Drawing on literature that challenges the views of technology as static or passive, I explore how these apps generate ethical and aesthetic dispositions that exceed the common critique of their neoliberal underpinnings. While recent scholarship has highlighted the rise of "therapeutic pills" in digital form-often understood as commodified responses to the pressures of neoliberal life-I argue that this interpretation, while useful, remains partial. These apps not only cater to desires for self-optimization and control, but also open up spaces for introspection, experimentation, and bodily awareness, which may or may not align with neoliberal rationalities.

In these platforms, users can choose how they want to feel-relaxed, less anxious, more productive, sleepy-and select meditations accordingly. They can track emotional states, set challenges, and navigate an array of guided practices that reflect their lifestyle and personality. These choices, however, are not neutral. They are shaped by the app's interface, aesthetics, and embedded assumptions about what it means to be well.

Through interviews with users, participant observation in online communities, and a close analysis of app design and content, I map the ways in which digital meditation becomes entangled with broader regimes of care, embodiment, and self-making. This work contributes to anthropological debates in the fields of science and technology studies, medical anthropology, and the anthropology of ethics and the body.

8103 Sonic Traces of Possibility and Peril

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Oral Presentation Session

This panel listens to traces of sound and silence produced under contemporary political orderings. Sonic traces of possibility are detectable in migratory histories inscribed on cassette tapes,

unofficial anthems that speak to removal and resettlement, and musical montages that produce imagined diasporic spaces. In the artifacts of analog tape, aural poetics of mourning and resistance, or affective intimacy of dance can be heard as a "sounding back" to state-driven politics of displacement, fragmentation, and enclosure. But the perilous conditions that produce such soundings demand their own practices of listening and modes of attention. Protestors singing chants and enunciating speeches are quite literally silenced, while activists subject to state surveillance live in paranoia that their voices will be overheard. Attending to hegemonic forces of constraint, coercion, and infiltration necessarily tempers the ethnographic reflex to affirm the political efficacy of sound among aggrieved communities. The political efficacy of sound is located in its very ambiguity.

Memories of movement, diaspora, and activism leave material remnants. Sounds may haunt, linger or return. In London, collectors, archivists and listeners reshape South Asian and Middle Eastern diasporic cultural memory through digitizing and "recollecting" obsolete media of cassette archives. In Rio de Janeiro, DJs create spaces of Black sonic diaspora and memory linking favelas to Miami, NYC, and LA. And in Puerto Rican Chicago, listening becomes an inherently political mode of attention for memory, space-making, and mobilization. Sound is ambiguous and practices of surveillance and silencing produce a politics of ambivalence, fear, and inaction. The soundscapes of dissent that resounded from encampments on college campuses were profoundly muffled or muzzled by stakeholders from across the political spectrum. Land defender activists in Canada are tormented by fear of wiretapping and auditory phenomena that may or may not be coming from outside. Contemporary political orderings produce traces of sound and silence that are saturated with peril as much as with possibility.

Organizer: Alexandra Lippman, Pomona College, Department of Anthropology

Chair: Alexandra Lippman, Pomona College, Department of Anthropology

Presenter(s): David Novak, University of California, Santa Barbara, Alex Chavez, University of Notre Dame, Department of Anthropology, Matt Sakakeeny, Tulane University, Lee Veeraraghavan, Alexandra Lippman, Pomona College, Department of Anthropology

Discussant: Alexandra Lippman, Pomona College, Department of Anthropology

Presentation(s): Anarchive in the UK: Sound Collections as Diasporic Recollections

Sound archives turn up new possibilities for understanding the impacts of residual media on migratory histories and new forms of diasporic identity. In particular, "obsolete" forms of cassette tapes reveal the material interventions of generations of listeners, collectors, and informal archivists. How do digital migrations of analog tape both provoke and radically alter contemporary forms of cultural memory? Here I consider three London-based "recollections" – the Palestinian Sound Archive, the Tape Letters Project, and the Syrian Cassette Archive – as "anarchival" sources for migratory communities relocated to the United Kingdom from South Asia and the Middle East. If these projects demand particular and personal levels of knowledge, this is not a bug but a feature

of cassette archives, which reorganize diasporic texts while refusing their inscription into a state-driven politics of recognition and digital access.

Presenter(s): David Novak

Black Flag

This paper explores the Puerto Rican diaspora in Chicago, taking as its point of departure the unofficial Puerto Rican national anthem "Boricua en la Luna," inspired by the poem of the same name written based on Chicago. This poetics becomes the envelope for listening to key historical events and social actors, specifically, mobilizations in the summer of 2019 in response to the PROMESA policy—which gives rise to the Puerto Rican black flag of mourning and resistance to austerity—and the Division Street Riots of 1966 in Humboldt Park. I suggest listening to Puerto Rican Chicago involves a broad range of non-auditory dispositions that overlap with wider social and affective engagements with experiences of space and memory: they broadcast historical experiences of settlement and integration amidst long-standing policies of removal and enclosure from the island to Chicago, and within Chicago neighborhoods. Listening to this community, in this regard, reveals itself as a political act comprised of historically situated modes of attention that circulate within social fields of meaning and power that include "model minority" and "culture of poverty" narratives.

Presenter(s): Alex Chavez

Sounding and Silencing in the Encampments

The politics of sound were a richly layered feature of the pro-Palestine encampments that occupied college campuses in April 2024. The chant "from the river to the sea" became a sonic and semantic lightning rod, igniting debates over freedom of speech. The participatory singing of freedom songs, Palestinian anthems, and prayers for the Sabbath were audible assertions of the right to peaceful assembly. Such songs and chants were part of a soundscape of dissent, including speeches amplified through bullhorns and portable loudspeakers, that could be easily slotted in to the current wave of protest ethnographies within sound studies. But far and away the most educational aspect of the encampments was how effectively they were silenced and shuttered. The profound muffling or muzzling of dissent, imposed by stakeholders from across the political spectrum, serves as a powerful rejoinder to scholarship that relies upon liberal idealizations of "voice" to habitually affirm the political efficacy of sound. For some, the encampments may offer hope in the political possibility of unrestrained vibration, but what is largely missing from the ethnographic record is analysis of the constraints placed on sound and on freedom. What trace remains of sonorities of dissent, or indeed the demonstration itself, after silence and dispersal?

Presenter(s): Matt Sakakeeny

Sound and Silence in the Shadow of the Surveillance State

With the ability to be heard comes the possibility of being overheard. When secure communications are compromised, it can mean the difference between the success and failure of

an endeavour. This is as true for insurgent movements as it is for business and military interests. My research grows out of activist ethnography with Indigenous and settler land defenders in Canada when the ubiquity of state surveillance in Anglosphere countries was becoming known. This paper begins from those moments when sound becomes a marker of danger—one that collapses distinctions between inside and outside, in-group and out-group. A phone rings and everyone in the room simultaneously knows without speaking that it is the police. Changing formations of officers at a blockade indicate that an activist meeting place has been bugged. Activists are tormented by auditory phenomena that may or may not be coming from outside. The epistemological uncertainty (let's call it paranoia) to which these examples attest is a response to the massive collection of data (let's call it positivism). Such an orientation toward the world of data, self, and others establishes conditions of possibility for the ethnographic encounter as well as a political program. This paper draws on studies of sound's radical ambiguity, its manifestations in data, surveillance, and military intelligence, to pose questions for an uncertain sonic episteme.

Presenter(s): Lee Veeraraghavan

Temporalities of Funk: Weaving, Cutting, and Imagining Future Time in Brazil

Music unfolds in time. Different modes of musical ownership produce distinct temporalities. In Brazil, funk carioca (Rio de Janeiro funk) began in the late 1980s and 1990s as local DJs chopped up, sampled, and performed popular Black and Latinx records from Miami, New York, and Los Angeles for MCs to rap over in Portuguese. The "dubbing culture" (Boellstorff 2003) enabled by appropriation, self-described piracy, and a commons that performs and produces imagined diasporic spaces of sonic memory in Rio de Janeiro. Diverse modes of ownership coexist, create friction and opportunities for harnessing the power of funk. In the commons, DJs produce a time that loops and weaves as they create live montages drawing from Miami Bass, Freestyle, and Electro records. The music belongs to community soundsystems and their publics who finance events, popularize songs, and circulate future hits. Impresarios, however, enclose music through copyright that cuts time short to churn out new hits and hot new artists every few months. Artists imagine future sovereignty as musicians through copyright ownership to undo legacies of slavery which enrich white impresarios from the unpaid historical labor of Black musicians in Brazil's cultural industry.

2579 Surrounded by the Spirits: Paul Stoller's Humanistic and Public Anthropology. Part I: Wellbeing in West Africa and Beyond

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

Bringing together scholars from around the world, this double session honors the scholarship of Paul Stoller and his influence on the anthropology of West Africa, humanism, wellbeing and the senses. Representing Part I, this panel brings together leading ethnographers of Africa and medical anthropologists to comment on Stoller's influence on their work on healing, spirit possession and wellbeing. For four decades, Stoller conducted fieldwork among the Songhay of Niger and, later, among the West African diaspora in New York. Captivated early on by Songhay spirit possession troupes, Stoller was taken under the wing of a sorcerer and a possession priest, as well as the ethno-cinematographer Jean Rouch. Stoller's life and fieldwork shifted dramatically after a series of illnesses, first in Niger, where he was told bad magic was being cast on him, and again after a cancer diagnosis in the early 2000s. His resulting works are humanistic in nature, holistic in their treatment of sensory engagement, and accessibly written. Stoller is particularly renowned for his unique writing style, having pioneered the "ethnographic novel"-readable, yet instructive academic work. He has been a regular contributor to the Huffington Post and Psychology Today, bringing anthropological insight to a non-academic audience through the publication of over 100 articles. For this, the American Anthropological Association awarded him the Robert B. Textor and Family Prize for Anticipatory Anthropology in 1994, honoring those whose significant contributions affect policy decisions; and the Anthropology in the Media Award in 2015. In addition to fellowships from the National Endowment for the Humanities and the John Simon Guggenheim Memorial Foundation, he was awarded prestigious Anders Retzius Gold Medal in Anthropology-the discipline's "Nobel Prize" given by the King of Sweden every four years. He now travels around the world giving writing workshops and transmitting the knowledge of the Songhay ancestors to a new generation of students. Panelists' papers represent original research in their fields, discussing the ways in which Stoller's varied contributions to humanistic, sensory and public anthropology have impacted their own work.

Section: Association for Africanist Anthropology

Organizer: Michael Di Giovine, West Chester University, Department of Anthropology & Sociology

Chair: Michael Di Giovine, West Chester University, Department of Anthropology & Sociology

Presenter(s): Michael Di Giovine, West Chester University, Department of Anthropology & Sociology, Conerly Casey, Rochester Institute of Technology, Department of Sociology and Anthropology, Scott Youngstedt, Sergio Gonzalez Varela, Laurian Bowles, Davidson College, Department of Anthropology

Presentation(s): Surrounded by the Spirits: An Introduction to Paul Stoller's Influences and Influential Work

Based on oral histories collected by the author and West Chester University anthropology and museum studies students, this paper introduces the special double session, "Surrounded by the Spirits: Paul Stoller's Humanistic and Public Anthropology" by presenting a snapshot of Stoller's life and the varied influences and experiences that shaped his scholarship and research. Apprenticing with Songhay sorcerers and possession priests in Niger, working the stands of diasporic West African merchants in Harlem, practicing a range of wellbeing practices amid his cancer journey, and teaching and mentoring decades of students and colleagues, all have contributed to the

humanistic and accessible nature of Stoller's scholarship that has shaped contemporary anthropology. A pioneer of the "ethnographic novel" and an active public anthropology - and public university instructor - he has brought complex, often difficult-to-conceptualize ideas to scholars and lay audiences alike. In line with Stoller's immersive, sensory public anthropology, this talk finishes with a 3D virtual tour of the West Chester University Museum of Anthropology and Archaeology's year-long exhibition, "Surrounded by the Spirits: Paul Stoller and the Songhay Journey Towards Wellbeing" and includes short snippets from the student co-curators who were inspired by Stoller's life story.

Presenter(s): Michael Di Giovine

A Soothing Voice, or a Hot Slap: Sensory Intimacies with Bori Spirits of the Sahel

Paul Stoller's groundbreaking work in Niger with Hauka, Songhay-speaking people who were possessed by French colonial spirits, shifted anthropological attention, in the 1990s, from visual representational readings of spirit possession, to our sensing bodies. Stoller urged us to use our own bodies in scholarship – to enter new sensory relations of bodies and beings, to forge rather than sever their interconnectedness, sensibility and intelligibility. In this talk, I draw on Stoller's work to consider sensory intimacies with Bori spirits of the Nigerian Sahel, and to explore the emergent ecologically infused sensations, sensitivities and relations that draw attention and forge connections. Whether through relationships or multisensory signals of communication, the vibrant visceral exchanges of spirits and humans as they take something lively from one another offer critical insights to healing in ways that extend beyond bodies, into social and political lives and healthy environments. These situated exchanges furthermore affect time-space connections in and across beings and things at a distance, as we sense, perceive, imagine, remember, and move about, or in and out, in ways that may be habitual, sediment and thick with affective relational density, or entirely new. Finally, I will point to critical entanglements of ethics, ontologies and epistemologies that may shape future research and practices of healing.

Presenter(s): Conerly Casey

The Ghosting and Expulsion of the Spirits in Niger: Implications for Health and Well-Being

Paul Stoller and many prominent social scientists including Conerly Casey, Wendy Wilson Fall, Rahmane Idrissa, Murray Last, Kristín Loftdóttir, Adeline Masquelier, Guy Nicholas, Brian Nowak, Susan Rasmussen, and Jean Pierre Olivier de Sardan have meticulously documented that people of Niger and Northern Nigeria are surrounded by spirits across Songhay, Zarma, Hausa, Mawri, Fulani, Tuareg, and various other ethnolinguistic and regional contexts. Nigériens and Northern Nigerians have for generations acknowledged the reality of the spirits and the importance of maintaining harmonious balanced relationships with spirits for personal and community health and well-being. This balance is currently being disrupted by intersecting precarities including climate change and deforestation and the loss of spirit habitat, regular lethal attacks along Niger's borders, and migration. Most importantly, the rise of conservative, reformist Salafist interpretations of Islam in the region is simultaneously pushing people to completely ignore the existence of spirits while

aggressively marketing a variety of medicines to expel or kill spirits. Some Nigériens and Northern Nigerians attribute that multiple hardships they are facing to the communal loss of communication with and respect for spirits. This paper draws from my own ethnographic experiences with spirits in Niger over 37 years as well as the literature developed by Paul Stoller and a host of scholars on this panel I have recognized.

Presenter(s): Scott Youngstedt

Living Between Two Worlds: The Radical Anthropology of Paul Stoller

This presentation analyzes the impact of Paul Stoller's work within the anthropology of religion. It emphasizes his humanistic approach to fieldwork and his focus on the senses. It argues that Stoller's work challenges us to radically question our certainties about the world by exploring new forms of knowledge and innovative ways to engage with theory and practice. Attributes such as respect, tolerance, patience, and humility are essential for both short-term and long-term apprenticeship processes. Stoller's body of work provides insights into the complex dilemma anthropologists face—living between the world of academia and the world of alterity. Ultimately, his contributions teach us the importance of taking others seriously and encourage us to find creative solutions for understanding their lives, moving beyond conventional ways of perceiving the world.

Presenter(s): Sergio Gonzalez Varela

Feel a Way: Ethnographic Friendship and Anthropological Futures

Paul Stoller consistently exhorts anthropologists to embrace embodied method and sensuous ethnography. Often articulated using theoretical throughlines to Merleau-Ponty's phenomenology, Rouch's cinematic realism, and Morrison's narrative power, Stoller positions intersubjectivity as a core analytic and storytelling as the driving force of ethnographic practice. I trace Stoller's relationship with his teacher-mentor, Adamu Jenitongo, a sohanci (master healer) descended from 15th century healers of Sonni Ali Ber's Songhay Empire. Their relationship highlights Stoller's effort to doubly recast anthropology. First, Jenitongo's teachings, rooted in the gustatory, irrational and divine, allows Stoller to instantiate reflexivity and storytelling as formidable anthropological inheritances. Second, as a heckle of positivism, their foray into ritual and possession, as well as Stoller's battle for wellbeing in the "village of the sick" vividly renders how hiding in plain sight becomes a source of agency and power. Jenitongo's teaching unfurl, pause, and occasionally haunt Stoller's work, and the sapience of their relationship is instrumental in my work with women migrants in Ghana called kayayei (head porters). The emotional toll of their gig economy labor shows up in multilingual, protracted stories fraught with contradictions. Yet sensory experiences — taste, smell, touch, and sound—initiates the body into a slow anthropology becoming a way of being and an ethic of care.

3680 THE ANTHROPOLOGY OF CRAFTING

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

Crafting has seen a renaissance in recent years. Crafting encompasses activities like making, remaking, repurposing, upcycling, or repairing. People knit, sew, cook, do woodworking, work with beads, leather, and many other materials. They maintain vegetable, fruit, or flower gardens. They upcycle used items and salvaged materials. Crafting activities, materials, and products are endless. People craft to save money or avoid consumerism. Others craft to make a living. They craft for communal experiences, as a means of political resistance, or for fun. Anthropologists have said little about crafts, crafting, and recent crafting developments. This panel addresses this void and contributes to an anthropology of crafting. Papers include empirical contributions that map the landscape of popular and professional crafts and crafting across time and space, and address critical theoretical issues about the social, economic, political, ecological, and artistic role and contribution of crafts and crafting.

The panel examines crafting as activities that are open to all regardless of skill level, financial means, and access to professional tools and materials, and as a trade/income-generating activity. Popular crafting differs from professional crafts because there is no control over quality or standards. Popular crafting requires no certificates or licenses. Yet the lines between professional crafts and refined hobby crafting are vague and individuals often cross these lines in one direction or the other. Papers on the panel explore both types of craft work.

Discussing examples like the crafting of dolls in Chile, building practices in India, food production among Syrian refugees in Turkey, fabric production among historical Mississippian cultures, crafting with sea glass in the USA, and mixed crafts and sustainability activities in the USA, contributors analyze the role of crafts in the lives of individuals and groups across time and space. They ask questions like, what motivates people to start or continue their craft practices? How are craft processes structured? Do or did crafts reflect larger belief systems? What special value do particular crafted items have for their owners and in their larger cultural contexts? Is crafting a communal experience? Is crafting political? Is crafting an act of social, economic, or ecological resistance?

This panel maps elements of the global landscape of popular and professional crafts and crafting. Papers describe and analyze concrete activities and the motivation of crafters. Theoretically, papers engage debates about the social, economic, political, ecological, and artistic impact and relevance of crafting. They ask questions, among others, about crafting as a political activity, an act of resistance in a world of hyper-consumption and corporate greed, an income-generating practice in the context of economic inequalities, an act of sustainable consumption, and a shared activity that builds solidarity and community.

Presentation(s): Community Crafts and Crafting Community: Interweaving the Personal and the Political in Chilean Feminist Handmade Art

This paper contributes to the existing scholarship on women and crafting practices in Latin America by exploring two types of crafts that I encountered during 17 months of ethnographic fieldwork with a feminist organization in Santiago, Chile. The first type are arpilleras, colorful, sometimes three-dimensional art textiles on burlap, historically made by groups of women during the Chilean dictatorship to protest state violence. The second type are handmade gifts, such as a doll with feminist iconography and a small book with drawings and embroidered pages, given by an activist to her compañeras for birthdays or other life events. My analysis is informed by my embodied experience and Sliwinski's (2024) reflections on gift-giving between an ethnographer and their friends from the field, as I was the recipient of several handmade crafts from my compañeras and attempted to reciprocate with gifts of my own. I analyze the semiotic characteristics of the crafts, the social practice of creating and displaying or gifting them, and conversations about them, arguing that while the arpilleras are the more obvious type of feminist crafting that serve as political acts of resistance and storytelling, the personal gifts between one activist and another are also an important site of social interaction and political craftivism, as they simultaneously reflect a self-care practice on an individual level and a solidarity practice on a community level.

Presenter(s): Samantha Martin

The Role of Belief Systems in the Crafting and Labor Organization of Fabric Production: An Archaeological Example from the Mississippian World

Crafted items can possess special significance and even power based on where and how they are made. These items are often created according to community beliefs that include spiritual understandings of the world and specifically of the items found in certain landscapes. These rules can dictate which items are made together or in opposition to one another. When crafted items require multiple stages of production, these cultural rules often guide the order and the location in which the stages of production occur. In the thirteenth-century Mississippian world, a frontier chiefdom located in southwestern Virginia, the Carter Robinson site, contains evidence of fabric production in one structure that was devoted exclusively to crafting. The archaeological record here contains evidence of fabric spinning, weaving, dyeing and adornment. The placement of these multiple craft stages within one house belies the larger worldview of Southeastern Natives. This paper will present evidence of fabric production and its organization within the structure and discuss how belief systems informed that organization and imbued the fabric with value in the Mississippian world.

Presenter(s): Maureen Meyers

Crafting Politics

After years of declining interest, crafting is back on the stage of popular activities. The quest for sustainability, the impact of COVID, and rising consumer prices have contributed to these changes. People craft for fun, as a communal activity, to avoid consumerism, save money, or make money. They craft for mental health purposes, and increasingly as a political grassroots project or means of political resistance. Some crafters seek to escape hyper-consumerism and the human exploitation and environmental degradation that are part of contemporary capitalist production. Many upcycle used materials. Drawing on experiences of a private crafts group, upcycling activities in a sustainability-themed college class, and the work of upcycling crafters on the Internet, this paper analyzes crafting at a tense historical moment. I revisit crafting and analyze its role in a critical social, cultural, economic and political landscape. The paper illustrates aspects of the social, economic, political, political, ecological, and artistic contribution and relevance of crafting, outlines the potential of crafting to create solidarity and community, and reflects of reality and potential of crafting as a political and politicized voice. Theoretically, this paper seeks to formulate an anthropology of crafting that positions diverse crafting activities in critical social, cultural, economic and political debates.

Presenter(s): Petra Kuppinger

Crafting Sea Glass: Nature, Narration, and the Affordances of Jewelry

This paper examines how the crafting of sea glass – waste glass molded by the sea – into jewelry transforms both the value of the sea glass and the identities of those who work with it. Drawing on ethnographic research in jewelry workshops and with beachcombers in the UK and Europe, I examine how their artisan work has changed the way that they see and work with sea glass material, how they creatively craft jewelry to bring out particular material effects or qualities of sea glass, and the types of social and economic capital that they derive from it. Since social media sites like Instagram are as significant for the cultural practices of beachcombing as the beach itself, I also trace the representation of this crafting work in those online spaces. I explore how the crafting of sea glass jewelry allows for particular types of imagery and narration on Instagram, namely the presence of labor and work which are typically eschewed among beachcombers who prefer to present their work as a hobby or pursuit of joy (even as it may be an important source of income). In examining not only the craft of sea glass, but also the representation of this craft within social media communities, I highlight how the affordances of sea glass as a material resource intersect with the affordances of Instagram. In this way, I consider the situated agency of crafting and how craft allows for a particular type of positioning within beachcombing communities and sea glass narration.

Presenter(s): David Kneas

Crafting Resilience: Exploring Cultural Building-Craft Practices and Socio-Urban

Narratives in Srinagar's Built Environment

Based on ethnographic research conducted amid the Kashmir conflict in Srinagar, India, I examine how craftspeople employ traditional building-craft practices as tools for survival and community

resilience. These crafts continue amid decades of political turmoil, economic hardship, and chronic resource scarcity and are acts of resistance and preserve cultural knowledge and local identity. The paper highlights women's central role in this craft economy, which is often overlooked in formal narratives, as skills are passed down through intergenerational collective workshops that foster mutual support networks and communal solidarity, but in a male-dominated workspaces. These workshops embed cultural narratives into the urban fabric. With scarce resources and damaged infrastructure, these practices feed into sustainable architecture and low-cost post-conflict reconstruction efforts. Framed within anthropological discussions of crafting and material culture, I investigate what motivates artisans to persist under adversity, how local material practices shape the city's social fabric and urban landscape, and how crafting negotiates the boundary between necessity and creativity. I argue that Srinagar's women-led craft practices operate as a grassroots engine of economic livelihood and empowerment, socio-political resistance, and community building. These practices illustrate the transformative power of craft in forging resilient, sustainable urban futures in post-conflict societies.

Presenter(s): Sharmeen Dafedar

Foodcraft, Resistance and Resilience Among Syrian Refugee Women in Turkey

Drawing on fieldwork undertaken with twelve Syrian refugee women living in Gaziantep, Turkey, this paper attends to the role of food as craft and 'crafting' in participants' daily survival, amid the hyperprecarity that results from temporal and spatial dislocation. It is particularly concerned with unpacking the inter-connections between food production undertaken for family, friends and income (in our participants' words, cooking 'with love') and the possibilities of resistance and resilience among those whose precarity results in legal insecurity, isolation, and lack of control over one's life (quite beyond their engagement in informal, exploitative labour markets). Through practices of preparing and sharing food, this paper considers how artisanal crafts are shaped in relationship to heritages as well as the spatial environments in which they are conceived, and the affective resonances they engender. In so doing, it highlights processes of change consequent upon forced displacement and extreme precarity, and how difficulties may be at least partly mitigated through developing new ecological, social and economic networks. In this fashion, the women's crafting became a communal act of connection which both dissolves and performs temporal and spatial borders.

2495 The Afterlives of U.S. Aid in Africa

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Galerie 2

Type: Roundtable/Town Hall

Before the close of the first weeks of his second term in office, President Trump and his newly ordained Department of Government Efficiency had identified their initial target of government waste: USAID. USAID, the U.S. government's international development agency, was to be almost immediately dismantled, throwing into disarray tens of thousands of health and development programs worldwide that had been reliant on U.S. funding. From the distribution of anti-retrovirals to treat HIV, to projects supporting democratic reform and free elections, to food aid and anti-hunger programs, USAID partnered with thousands of non-governmental organizations in over 100 countries worldwide. Perhaps no world region has been more impacted by this dramatic roll-back of health and development funding than Africa, making African communities important vantage points for understanding these transformations. What happens when funding for global aid projects vanishes overnight? What is left of a vast international bureaucracy devoted to social, health, and economic reforms when its benefactors withdraw?

In taking up the AAA theme of "ghosts," this roundtable considers the spectral presence of USAID through the lens of its recent, dramatic demise. The impermanence of aid programs is hardly a new experience for African communities, but an erasure on this scale is unprecedented. USAID was not simply a funding stream, it was its own bureaucracy, whose tendrils extended in ways big and small into government clinics, vaccine programs, domestic violence outreach, and community organizations big and small. Anthropologists have long explored how aid, especially on the level represented by USAID, was more than money. The form and structure of these programs gave rise to particular forms of solidarity, advocacy, and care in communities, at times aligning with and at times reconfiguring local experiences agency and authority. In the wake of USAID's withdrawal, many of these programs continue to exist, in depleted, partial, and phantom forms. African health workers continue to collect vaccine data, even in the absence of vaccines. AIDS advocates continue to counsel community members, even in the absence of ARVs. What forms of power remain when the politics of aid shifts so rapidly? What kinds of relationships fill the sudden void? The end of aid also raises questions about the evolving shape of global mobility. When the flow of international funding is newly blocked, what and who continues to move across borders and within communities? Considering such questions, the panel asks how this moment illuminates liberalism's long-standing policy infrastructures at a moment of rapid transformation and dissolution. The six roundtable participants will draw on long term research on health and development in Uganda, Malawi, Mozambique and Tanzania to examine the shape of global aid and community experiences of health and social advocacy in the wake of USAID's erasure.

3989 The Ghosts of Anthropology Past: Decolonizing the Discipline

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Edgewood AB (4th fl)

Type: Roundtable/Town Hall

Decolonization has been a buzzword in anthropology for decades, but remains difficult to grasp and to achieve. According to Lynne Boiles (2023), decolonization involves "taking seriously the critiques and theories of anthropology's peripheral allies, such as feminist activists and policy makers...(incorporating) the idea that global racial apartheid is the foundation of social, economic, and gender inequality...". But how can we break from anthropology's deep alliances with of colonization? Haunted by the ghosts of anthropology's unsavory past, this roundtable considers the work of decolonizing for a discipline so steeped in colonialism as anthropology. Thirty-two years after the publication of Faye V. Harrison's edited volume, *Decolonizing Anthropology: Moving Further toward an Anthropology of Liberation*, a new work "Decolonizing Anthropology" by Soumhya Venkatesan, makes us consider the question of decolonization anew, not merely as a neo Marxist political perspective, but as the grounds for a reflexive and interpretive ethnographic analysis that recognizes and confronts the discipline's colonial legacies towards a liberatory practice. As Venkatesan notes, the language we use to discuss decolonization matters and terms like decolonizing may not resonate with all audiences or adequately capture the complex processes of dismantling entrenched power structures. Starting from the assumption that anthropology is worth saving, the panel considers various ethnographic case studies to show how ethnography needs to be and do better. Our panel of emergent and legendary scholars articulates fresh ways of thinking about the relationship between anthropology and colonialism, and how we might move towards a radical liberatory ethnography of new methods and new knowledges. The conversation focuses not only on ways of decolonizing anthropology but also on the potential of 'a decolonizing anthropology' for the future.

3526 The Ghosts of Contemporary Environmentalism(s)

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Oral Presentation Session

Re-storation, re-silience, re-generation, re-composition, re-covery, re-pair, re-wilding: environmentalist discourses and practices are everywhere animated by the logic of the -re-by ecological ghosts that beckon returns. These phantasmal relations to the environment are proliferating in an attempt to address crises that threaten human and nonhuman lives and livelihoods, such as climate change and biodiversity loss. Through repetitions and other "processual terms without closure" (Thomas 2024, 102), a panoply of experts in sustainability and their partners seek to rectify or heal the "haunted landscapes of the Anthropocene" through reconstructions of natures past (Gan et al. 2017), grappling with what might be desirable and possible future ecologies. From scientists and engineers to designers and planners, these professionals and their partners seek to revitalize the present by harnessing the agency of other-than-human beings in "nature-based solutions," whether directly through tree plantings (Greenleaf 2024), "living roofs" (Lorimer 2008), and "oystertexture" (Wakefield and Braun 2019), or indirectly through the imitation of biological form, function, and process (Fadok 2019).

This panel brings together critical ethnographic analyses of the "spectrality" of contemporary environmentalism(s) (Derrida 1993): their temporalities, their epistemologies, and their relationalities. How, for instance, are such environmentalisms based on the remembrance and idealization of historical ecologies as well as an anticipation of ecologies-yet-to-come? Whose natures are recalled, and whose are forgotten, ignored, and repressed? Why? How do developers of nature-based solutions evaluate the fidelity of their projects to natural models? Why might some present as "authentic" and others uncanny? How do those (human and nonhumans) impacted by ghostly imaginaries negotiate them in everyday life? What kinds of political governance and human-environment relationships are re-enacted and re-inscribed, and what kinds are foreclosed? How does the absence of certain environments re-surface unexpectedly? By revisiting the "politics of nature" (Latour 2004) through the figuration of the ghost, this panel aims to pluralize the "mononatural" phantom that has come to predominate environmentalism today (de la Cadena and Blaser 2018).

Presentation(s): Commodity Animism: On the Magic of Mimesis in American Biomimicry

Marx identified the mystification of labor relations as "commodity fetishism": a trick of misperception in which articles of exchange appear inherently valuable, as if animated by some "phantom-like" force. This talk examines another kind of spectral economy in the "nature-based" design paradigm known as biomimicry. Since the 1990s, designers have limned biomimicry, the

"conscious emulation of life's genius," as a panacea for our Anthropocene ailments. While dominant narratives of invention in the US have often discounted copying, counterfeiting, and other mimetic practices, these design professionals have recast the imitation of biological design principles, like the tectonics of a termite mound, as a path toward "sustainable innovation." In their romantic view of life, organisms have evolved in harmony with their environments; mimicking these principles, it is said, will sympathetically conjure a more harmonious planet. Drawing on fieldwork at a design competition in Berkeley, I show how a new kind of magical thinking haunts this species of nature-based solution. From the way that designers frame their work to the qualities of "good design" judges appreciate, the illusion of artifacts made without humans has taken hold of biomimicry today. I read Marx's notion of the fetish with posthuman ideas about agency to theorize their emergent regime of value as "commodity animism": a phantasmagoric philosophy of technology that elides the very politics of design.

Presenter(s): Richard Fadok

Anthropocene Forests: Planting Trees in the Birthplace of Industrial Capitalism

Around the world, people are planting billions of trees as a "nature-based" solution to myriad environmental crises. These trees are not only being planted in monoculture plantations, but also in ways meant to restore landscapes by prioritizing carbon sequestration, biodiversity, ecological functioning, and human health. These trees, I argue, can be considered Anthropocene forests meant to address contemporary environmental issues. But what are all these trees doing, environmentally but also socioculturally? I address this question by studying what else people are trying to solve when they plant trees, besides environmental crises. I do so in the North of England—the largely deforested birthplace of industrial capitalism and a recent locus of struggles to figure out what can and should succeed it. I examine how people's efforts to restore landscapes there by planting trees have sociocultural goals as well as environmental ones. In some of the myriad Anthropocene forests now growing in this postindustrial landscape, volunteers, workers, and activists are planting and protecting trees not only to combat the climate and biodiversity crises but also to grapple with their own experiences of loss and promote their own wellbeing under the specter of England's deindustrialization and geopolitical decline. In doing so, the paper explores tree planting as a strategy for contending with what it might mean to live well on a small, nature-depleted island—and planet.

Presenter(s): Maron Greenleaf

Curating Abundance: On Circuits of Privilege in the Social Worlds of Regeneration

Alarmed by the unfolding environmental polycrisis, activists in Germany increasingly bet on regenerative approaches to ecological relations. That is, they intervene in multispecies enmeshments in ways that contribute to the flourishing of life, with the hope of thereby enabling less bad futures on a shared planet. These efforts are inherently political, and the question of what exactly is to be regenerated, by whom and for whose benefit, warrant attention. In this talk, I explore these questions by thinking through a composting project situated in Berlin. Established in order to

take care of the wood-based cutlery used during one festival, the compost was set to produce fungal spores set to help regenerating degraded lands. Focussing on the deliberations on what to do with the spores, and what types of land to impregnate them with, I argue that such regeneration projects operate through, and reiteratively re-inscribe, circuits of privilege. That is, they direct careful attention to specific spaces or specimens, often tied together through networks and subject to scaling ambitions. While, on another level, privileged activists ensure life's flourishing on privileged lands, hoping to contribute thereby to the task of enabling survival and, ideally, mutual thriving. Examining circuits of privilege reveals visions of socioecological change animated by pockets of abundance literally growing from the cracks, and guides attention to the politics of curation.

Presenter(s): Arne Harms

Recomposing an Urban Forest in Mumbai

What happens to urban landscapes when a species disappears? This paper explores how an urban forest with a long legacy as sacred territory was recomposed – that is, imbued with new narratives of purpose, meaning and value – in the aftermath of the near-extinction of Gyps vultures across India. Its focus is the social processes that galvanised in response to catastrophic vulture loss, and emergent environmental alliances whose mission served to re-narrate an urban forest and the scale and scope of urban environmental stewardship. By attending to the social process of recomposition, the paper points to ethical, political and territorial claims through which social agents redefined and renarrated the form, content and value of nonhuman life in the city – dynamics constitutive of moral ecologies of urban landscape. I suggest that recomposition is fundamental to the coproduction of ecological change: as social groups realign their relationships to transforming urban environments, they also transform the contours of their own claims to territory, belonging and stewardship of ideas of the greater urban good. Through the dynamics of recomposition, the paper shows how human-non-human relations are remade in the face of fundamental ecological transformation, sometimes in unexpected ways.

Presenter(s): Anne Rademacher

The ghosts of ancestral hydrogeologies: Rethinking territorial planning, risk management, and socioecological justice in Colombia's Andean-Amazonia

In the last decade, recurrent and torrential floods, drying wetlands, and episodes of drought have raised growing awareness of the need to understand the hydrogeological dynamics of the fluvial corridors connecting Colombia's Andes and Amazonian plains. These situations have created double victimization, where people affected by social and armed conflict—displaced female-led households, Indigenous communities historically dispossessed of their ancestral lands, and low-income families—experience greater vulnerability, generating scenarios of environmental and climate injustice. In this talk, I present situations where the memory of water in interaction with sediment and rocks is forcing human communities to rethink approaches to territorial planning along the Putumayo and Caquetá River basins. Through ethnographic engagement with the naming practices of Inga, Kamëntšá, and Siona indigenous peoples, I introduce the importance of

recovering the ancestral significance of the region's water bodies to address what I call the "return of the ghosts of other hydro-geologies" or ancestral Andean-Amazonian hydro-geologies. I argue that community knowledges about the behavior of the foothills in relation to the rivers, streams, lagoons, and wetlands, in conversation with techno-scientific knowledges, has much to contribute to the formulation of risk management policy, planning processes, and climate change adaptability in the amphibious territory of the Amazon.

Presenter(s): Kristina Lyons

5074 The future is a foreign country: Operationalizing and acting on the world to come (Part 1)

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR D3 (3rd fl)

Type: Oral Presentation Session

In 2025, the futures for many look grim. Authoritarian forms of governance are gaining traction in much of the world, while for many people "getting by" (Kideckel 2008) and "making do" (de Certeau 1984) remain the norm. State and corporate colonialism continue to promote cultures of extractivism and frustrate grassroots efforts for sovereignty and self-determination. Climate disasters are increasing their severity and damage, forcing many to flee or abandon their homes, while the world experienced its hottest year on record in 2024. As a discipline that sheds light on inequality and oppression and seeks solidarity with the marginalized and oppressed, anthropology today often seems focused on the darker aspects of human existence (Ortner 2016) that lead to particular projections of the future, such as apocalypse.

While imagining a future in crisis can be productive for action, it runs the risk of forgoing the historical realities that lead to such framing. Further, affective reactions to an apocalyptic future may undermine the power of present-day actions, leading to the materialization of unwanted futures through inaction (Wolf-Meyer 2019). Alternately, far from encouraging paralytic inaction, anthropologists studying climate change, history and memory, speculative futures, and disasters can highlight the ways that various communities operationalize imagined and hoped-for futures. In this panel, we ask what futures people imagine for their communities and the concrete actions they take to materialize futures that at first appear spectral and uncertain. Inspired by conceptual engagements with the past, we take Keith Basso's placemaking lens to the future. Through placemaking our "country of the present" becomes suffused with historical imagination from the "country of the past" (Basso 1996, 5). If we come to understand and make our present through actions of remembering and imagining, how might those same actions help us to understand and make the country of the future?

Part 1 of this panel engages with imagining and operationalizing the country of the future through the lens of human-environment relations in diverse agropastoral and urban settings. Presenters challenge frameworks of despair by focusing on ways that communities imagine and enact their

visions for a just future, whether Basque shepherds transmitting traditional agroecological knowledge (Welch-Devine) or Syrian refugees flexibly approaching their futures in Spain (Wagner). Panelists also address how delayed development futures can make room for new configurations of knowledge and place – challenging neoliberalism in Lima's seaside deserts (Skrabut), negotiating memories of authoritarian regimes between Uganda and South Korea (Yap), or examining the history of futures once imagined in Albania's rapidly changing urban environments (Rocker).

Discussant: Kailey Rocker, Wilkes University, Jonathan Eaton, University of British Columbia, Department of Anthropology

Presentation(s): We get what we work for: Imagining and pursuing desired futures in a Basque agropastoral community

Basque shepherds in the French Pyrenees are facing an uncertain future, but they are doing so with great intentionality. Market forces, unfavorable public policies, demographic shifts, and changes in what young people consider "a good life" have worked together to erode pastoralism in the mountains of Xiberoa. Now, climate change is exacerbating these stressors, increasing concerns about drought, weeds, pests, and disease, and raising the specter of a future with no farms and no farmers... a future that would fundamentally change Basque culture and the landscape in which it has flourished. But people aren't (only) despairing. Imagining loss has sparked individual and collective reflection on what matters, what needs to be revitalized and maintained, and how the future should look and feel. This paper describes farmers' visions for a just and sustainable future, as well as the strategies they are using, or exploring, to create a new world out of past traditions and practices, present concerns and values, and future possibilities. It is part of a larger project examining strategies for maintaining a robust Basque socioecological system, including support for new farmers, the preservation and transmission of traditional agroecological knowledge, revitalizing and retooling mutual aid systems, and sustaining resilient ecologies.

Regretting resettlement, holding onto hope: Syrian refugees' imagined futures in Spain

Refugee resettlement has long been an unlikely outcome for most of the world's refugees, with only one percent of refugees every being resettled. Such a rare chance offers resettled refugees the

opportunity to imagine new futures of security and prosperity. Unfortunately, resettlement does not always deliver on these promises, especially within challenging local economic environments. In this paper, I examine how Syrian refugees in Spain came to regret their decision to be resettled, while also resenting the international system of refugee management, headed by the UNHCR, that effectively limits their choices and constrains their agency. Through these feelings of regret and resentment, refugees reflect on their pasts before resettlement as well as their present situations; however, they also simultaneously make plans for the future. Some consider leaving Spain, despite the legal and practical consequences, while others hold out hope for their lives in Spain, maintaining a sense of optimism and humor even in the face of great hardship. Resettled refugees must edit and reform their ideas of the future over and over again, demonstrating creative techniques of imagining and building new futures that may inform broader efforts to envision and bring about desired futures and avoid being paralyzed by inaction.

Mi papa pachacutana: Urban unsettlement, new natives, and growing futures in the meantime

This paper elaborates the uneven processes through which Lima's seaside deserts have become fertile grounds for remaking agrarian and indigenous futures. Twenty-five years ago, Peru's neoliberal president Alberto Fujimori relocated 25,000 squatters from an illegal land takeover in the south of Lima to an isolated desert in the city's northwestern periphery. Since then, the settlement has grown through fits and starts as inhabitants mobilize competing visions of the future and lay claim to land in contingent ways that upset urban planners' orderly development schemes. While waiting for these urban futures to materialize, settlers have found provisional ways to make do that, incidentally, leave behind residues. The waste, rubble, and gray water associated with uneven settlement have altered the desert earth, allowing transplanted species to thrive and fostering new ecological possibilities. As connections have increased between sites of stilted urban growth and rural areas of Peru, inhabitants have cultivated cross-cultural relationships and new ecologies. Comestible plants from the Andes and the Amazon travel across kin networks to be grown in a new kind of native soil, facilitated by delayed urban dreams and the everyday residues of those making places in the meantime.

Presenter(s): Kristin Skrabut

"We were once like you": South Korean memory and the Ugandan future

In Uganda, the autocratic rule of Yoweri Museveni moves towards its twilight years as the resident ages; just as Museveni's military victory (1986) enabled some semblance of stability, the near-end of his rule – and the lack of a clear political successor – renews uncertainty about the future. The question of a political future is salient not only for Ugandans, but also a robust foreign development sector enabled by the regime. This paper is based on ethnographic work within a South Korean (ROK) agricultural NGO based in Kampala, where the question of futurity is explicitly framed by the belief that "we were once like you." Because ROK's rapid development occurred relatively recently (~1960s-90s), Korean workers either experienced authoritarian rule and subsequent "compressed

growth" firsthand, or inherited memories from their parents. For Koreans working in Uganda, experiences of this history are used explicitly as a template for development. As interlocutors articulate how Korean history is meant to "model" an African future, memories are repeatedly recalled, repurposed, and reimagined. This paper traces the kinds of future-oriented empathy, sentiment, and responsibility that emerge within a fraught political present.

Presenter(s): Inhae Yap

Making the Pyramid a place: Confronting alternative futures of urban architecture in Albania

In 2023, a long-derelict building colloquially called Piramida (the Pyramid) reopened in the lively capital of Tirana, Albania, as a youth digital innovation hub and a commercial center. Since its inaugural opening in 1988, Piramida has lived many lives: a memorial museum that celebrated the life and leadership of the country's former socialist dictator Enver Hoxha; an international community center where young adults could take art lessons in the 1990s; a NATO crisis center for the 1999 Kosovo War; and a defunct and ruined building that narrowly avoided state-supported demolition in 2011 when Tirana citizens gathered to 'Save the Pyramid'. The recent reopening of the building adds a new layer to Piramida's history and provides an opportunity to critically revisit practices of urban placemaking and futuremaking in Albania. In this presentation, I draw on ethnographic data from 2011, 2017, and 2024 to understand how my interlocutors who participated in the 'Save the Pyramid' protest are grappling with Piramida's present and future as a commercial and digital education center, over and against the futures that they had once imagined for it. Drawing on the concepts of placemaking (Basso 1996) and double exposure, or the layering of temporal and imaginative narratives on the landscape, (Messerli 2016), I explore how Piramida's many lives help to contextualize the imagined pasts and contested futures of urban Tirana through the reshaping of the built environment.

3457 Transgender Rights Under Siege: Global and Domestic Impacts of Recent Anti-Trans Executive Orders and Policies

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Roundtable/Town Hall

In the first 65 days of his second term as President of the United States, Donald Trump signed over 100 executive orders. Several of those executive orders rolled back the rights of transgender people and severely curtailed research on sexual and gender minorities broadly. Further, the Trump administration has also advanced numerous actions limiting transgender rights and research on transgender people. In this roundtable, we discuss the global and domestic implications of the

Trump administration's anti-trans policy agenda. Specifically, we examine topics such as how recently changed global health policies undermine HIV prevention and treatment among transgender people in the Global South, threatening advances in queer health and human rights generally. Additionally, we explore how legal attacks against transgender people strategically leverage inaccurate and infelicitous language, such as "protecting women," and also restrict use of preferred pronouns.

Further, we discuss how research on transgender people has been terminated or stifled due to recent changes at the National Institutes of Health. The impacts on transgender immigrants and international students are also considered, highlighting the unique challenges they face. Lastly, we address the precarious position of trans individuals within academic institutions, where political turmoil and budget cuts threaten their employment and safety. Overall, we suggest the harms recently enacted policies and executive pose on all people, not just transgender individuals, and suggest possible interventions.

3724 We are Future Ancestors: Strengthening Collaborative Research to Exorcise Coloniality, Dismantle Environmental Racism, and Summon New Ways of Worlding

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Roundtable/Town Hall

This Town Hall builds on the ongoing work of the Anthropology & Environment section, and also on calls for ancestors in Indigenous and Black studies and other fields working in solidarity, to invite a lively, nourishing, and vital discussion about strengthening regional and transnational environmentalisms. As US electoral politics shrink from the transnational, relational, and responsible, we call on participants to imagine what "radical collaboration" is and might yet become.

Communities worldwide encounter the transformation of their homelands into deadening zones of settler colonialism and extractivist capital. Conditions of toxicity and dispossession are not specters of the past. They continue, embodied and materialized as (in)visible dimensions of structural violence and cumulative harm. The force of responsibility for generations past and future shapes emergent formations of "vital relations" (Dennison 2024) that resist, transform, and subvert statist and oligarchical harm. "Lens of futuring" (Harjo 2019) work entails thinking beyond the temporality of our own human lives – becoming ancestors – while also thinking with peoples targeted by eliminatory projects.

At this time, we need to both sustain the work and do it better. We need ancestors, and we need to be ancestors. We need to be mentors to the next generation of anthropologists, teaching them to be the next generation of ancestors. They will carry or resist the work - depending on what we build today.

By collaboration, we mean co-workings, and learning from those who have long informed our work but who are often obscured in anthropological writing, speaking, and teaching. We must acknowledge the accumulating knowledge established by past teachers, activists, leaders, and laborers whose epistemic and world-building work guide us in protecting human rights and ecological integrity today. As we recognize their influence we also aim to examine our own future-ancestral presence, to open the anthropology of the next quarter century to transformative change. These and other hidden histories are ghosted by eliminatory projects; we open a space in this discussion to bring those worlds forward and summon new ones.

To whom and to what are we obligated? How might these obligations exceed the present material world, to engage a relational ethics that entangle our ancestors with others?

What must we learn from the past and present? How might we reframe our practice to meet this moment as better collaborators, teachers, scientists, and people? How do we protect and ignite meaningful collaboration in and beyond the academy?

What colonial designs can collaboration even unwillingly perpetuate? What metaphors and practices, beyond "collaboration," "engaged," or "transnational" might better suit the uncertainty of the present?

7829 What ideas do: Celebrating James Ferguson

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** MGB Salon D

Type: Roundtable/Town Hall

This roundtable brings together anthropologists influenced by Jim Ferguson to reflect on how his distinctive approach to social theory, history, and ethnography continues to shape us. Much of Jim's teaching and scholarship asks, "What do ideas do? What real social effects do they have?" (1995, xv). By examining the underlying concepts that permeate the foundations of social science and the potential interventions stemming from them, Jim was a model for generations of anthropologists. We invite everyone who has been shaped by Jim's work to come together and commemorate his vibrant influence.

2566 Without, Beyond, or After China?: The (Geo)Politics of Ethnographic Research in China

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Roundtable/Town Hall

In recent years, the institutional, political, and ethical conditions for ethnographic research in the People's Republic of China have changed dramatically. In addition to the strict travel restrictions during the COVID-19 pandemic, enhanced state surveillance and geopolitical tensions across the world have reshaped the locales, scales, and modes of ethnographic studies in China, including displacement, discontinuities, and disorientation. While (geo)politics have always conditioned anthropologists' access to their fields, anthropologists of China (again) reach a point where they can no longer dismiss the challenges as tangential to their research. Therefore, we would like to discuss: How can we continue to study "China" ethnographically when our access to China is prohibited or seriously limited? How do anthropologists navigate emergent ethical conundrums of ethnographic research in China, protecting and allying with Chinese interlocutors and colleagues (Alperman 2022)? How do we embrace the challenges and rethink the modes of ethnographic

inquiry and the boundary of "China"? This roundtable brings together ethnographers who would share and discuss their fieldwork experiences in China, especially on how multiple experiences of loss, closure, and change have reconfigured their research approach.

Discussant: Heangjin Park, Loyola Marymount University, Britta Ingebretson, Fordham University

7322 “Condemned as Ghosts, Mourning the Unseen: Necropolitics, Necropoetics, and the Discourse of Reproduction in Queer Afterlives”

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:15 PM

Venue: Marriott **Room:** Galerie 4

Type: Conversation/Debate

Our conversation interrogates how racialized queer, trans, and Indigenous bodies are condemned as ghosts through necropolitical systems that erase, mis-name, un-name, and delegitimize life-both in death and in discourse. Drawing from our dissertation research on linguistic and symbolic violence, alongside Lipan poetics and Conocimiento Transcendente Autohistoria Teoría (CTAT), we explore how colonial archives, medical discourses, and state institutions enact reproductive necropolitics: a systemic containment of life through the haunting absence of names, bodies, and histories. Trans individuals misgendered in death, Indigenous maternal bodies erased from birth and death records, and queer lives invoked only as cautionary tales or DEI talking points-these are the material consequences of eugenics, settler memory, and cisheteropatriarchal violence.

In conversation with Jeong-eun Rhee's (2021) concept of rememory and haunting and Achille Mbembe's (2003, 2019) concept of Necropolitics, we engage haunting as a decolonial methodology and necropoetics as a form of resurgence. Through poetry and visual interventions, we resist archival silence by actively communing with the dead-to reclaim their presence as political, embodied, and agential. Ghosts, in this framework, are theorists of refusal and caretakers of collective memory. Our conversation invites community to mourn the unseen and listen to what ghosts reveal. We imagine queer afterlives that refuse to forget and reject colonial narratives that seek to define whose lives-and whose deaths-matter.

We invite community members, scholars, activists, artists, and ancestral kin to engage in conversation with us as we witness the spectral traces of those erased by colonial, racial, and gendered violence. By reinscribing the ghosted, the mis-named, and the un-named, we create

space for a relational praxis that honors the dead as collaborators in our present struggles for justice. These conversations are critical for challenging dominant narratives that treat queer, trans, and Indigenous lives as disposable, and instead center the power of haunting as a method of refusal and reworlding. In sharing stories, theory, and creative expressions rooted in necropoetics and rememory, we build a living archive of resistance—one that refuses silence, reclaims voice, and insists that the unseen will not remain forgotten.

8605 Council for Museum Anthropology Board Meeting

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:45 PM

Venue: Sheraton **Room:** Rex (8th fl)(Access vis elevator only)

Type: Special Event

Fall board meeting of the Council for Museum Anthropology. Private – invited guests (current and newly elected board members only).

8795 Teaching Intro to Cultural Anthropology

Start Date: 11/20/2025 12:45 PM **through** 11/20/2025 02:45 PM

Venue: Sheraton **Room:** Waterbury (2nd fl)

Type: Workshop

Join Ken Guest for an interactive workshop to explore ways to make Intro to Cultural Anthropology the most important class an undergraduate takes in college. Strategize together to transform the classroom (in person and online) into a dynamic laboratory for developing and applying anthropology's toolkit and making anthropology relevant to our students' lives. We will also consider pedagogical strategies in the age of AI. Sponsored by the American Ethnological Society.

8758 Storytime for Anthropologists!

Start Date: 11/20/2025 01:00 PM **through** 11/20/2025 02:30 PM

Venue: Sheraton **Room:** Hotel Lobby Seating Area

Type: Installations

Join us at the Bar in the Lobby of the Sheraton, Thursday 1pm!

Stories are at the very heart of anthropology - learning from others, discovering our own, sharing with others. In this installation, four professional anthropologists will take turns telling short, intriguing, engaging stories. All stories will be brief and will follow good storytelling guidance. All will

be intended to engage and entertain the audience while promoting the importance and power of a good story.

8659 The Anthropology and Mental Health Interest Group (AMHIG)

Start Date: 11/20/2025 01:30 PM **through** 11/20/2025 02:30 PM

Venue: Marriott **Room:** Lafayette (41st Fl)

Type: Special Event

The Anthropology and Mental Health Interest Group (AMHIG) provides a forum for anthropologists, scholars from other disciplines, and practitioners whose work focuses on the socio-cultural dimensions of mental health. In particular, AMHIG offers an organizational structure for scholars and practitioners engaged in this topic area to network, share resources, and develop new ideas.

8769 Museum Tour: Backstreet Museum- offsite

Start Date: 11/20/2025 02:00 PM **through** 11/20/2025 04:00 PM

Venue: Offsite

Type: Special Event

This will be a guided tour of the Backstreet Cultural Museum:

<<https://www.backstreetmuseum.org/about-us>>. The museum focuses on "New Orleans' African American community-based masking and processional traditions, including Mardi Gras Indians, jazz funerals, social aid and pleasure clubs, Baby Dolls, and Skull and Bone gangs." The tour will augment a special event titled "Spirits, Stories, and Solidarity: Collaborative Ethnographic Encounters with the Mandingo Warriors & the Neighborhood Story Project," which is scheduled for the following day. The museum shares a connection with the Mandingo Warriors, and the event's organizer is a former member of the institution's board. The tour is planned for early to mid-afternoon on Thursday, November 20, in order to avoid conflicts with scholarly sessions or other ASA events. The Backstreet Museum is approximately a mile from the conference hotels, placing it within walking distance for many of our members. For others, transport will be arranged.

9082 Towards a new AAA Climate Change Task Force Report

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 03:30 PM

Venue: Sheraton **Room:** Oakley (4th fl)

Type: Special Event

Sponsored by the Climate Change Interest Group

In December 2014, the AAA Global Climate Change Task Force (GCCTF) published a groundbreaking report documenting the state of anthropological knowledge on the human dimensions of climate change and offered a series of practical recommendations for the discipline to carry forward. Eleven years later, the world is a very different place. The role of anthropology in understanding cultural, political, and social dimensions of climate has become even more urgent—revealing whose voices are heard, whose are marginalized, and how climate futures are imagined and enacted across contexts. The purpose of this workshop is to initiate a much needed update to the first AAA GCCTF report.

8801 "Why Letters to the Editor Matter? : A Genre of Writing Our Democracy Needs Right Now"

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Napoleon (41st Fl)

Type: Workshop

As the 2024 Recipient of the Anthropology in Media Award, Alejandro Lugo's workshop will focus on a brief public reading and discussion of selected "Letters to the Editor" Lugo recently published in the New York Times, Chicago Tribune, Chicago Sun-Times, the Washington Post, and the Los Angeles Times. The purpose of this workshop is for the workshop participants to unpack the process and strategies Lugo used to successfully engage with the different formats and editorial styles of the different national newspapers. This workshop ultimately invites all of us, no matter our subfield of anthropology, to explore how this powerful genre of writing can help shape public discourse and support our discipline, our communities, and our free press, all while contributing to audiences beyond academia and the college campus.

1978 Absence and Persistence: Black Hauntings

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Oral Presentation Session

Absence and Persistence: Black Hauntings explores spectral presences through work that brings the Black diaspora in the US, Costa Rica, Madagascar, Tobago, and Jamaica into conversation. McCoy-Torres examines how the presence of specters in the building facades of a gentrifying Brooklyn, New York and roads of a quickly developing Puerto Viejo, Costa Rica highlight the absences of Afro-Caribbeans in these once Caribbean places. She argues Afro-Caribbeans counter being made into ghosts through reggae performance mediums and placemaking that insist on Afro-Caribbean life, visibility and embodiment. Crosson considers how, in Tobago, spirits inhabiting trees motivate people's refusals to cut them down, constituting a form of conservation. His work uncovers how the haunting of trees propels an Afro-Caribbean ethos of conservation that departs from Western environmentalism centered on loving nature to rejuvenate the white body. Brown

explores the politics of healing for Black religious subjects in Jamaica and New Orleans in the spectral afterlife of the plantation. She shows how the spirits of the dead animate the lives and bodies of Revivalists and Spiritualists through trance journeys, seances, and conjurings that facilitate healing and remediation. Andre-Johnson discusses the future "tense" (grammatical tenses and muscular tensions) of afterlives. Bringing together ethnographic theory from Madagascar and Black feminist writings, she asks how we orient towards possible futures while holding onto and being held by pasts that have not yet passed. Miles examines how journeys through water-across the Atlantic, down hoses and through fountains of the Jim Crow south, and in rising sea levels-organize the emotional worlds of coastal Black southerners. He demonstrates that the people who have drowned under the structural weight of "liquid racism" are central to Black southerners' affective relationships to water. Through multi-sited international fieldwork, Roberts-Gregory focuses on the feminist climate policies and organizing strategies that address the rise in nuclear energy and AI data centers. She critiques how these advocacy efforts interface with "feminist ghosts"-the absence of women of color, feminist priorities, and care economies in climate negotiations and policies.

These papers invite us to consider how we might observe resistance to becoming ghosts and healing if we looked on the dance floor, alongside water, around the trees, or even the graveyard. Or how methodological and conceptual death results in tense futures and creative placemaking like inclusion in environmental justice. Collectively we show how people of the Black diaspora confront the haunted and the haunting.

Section: Association of Black Anthropologists

Organizer: Sabia McCoy-Torres, Tulane University, Department of Anthropology

Chair: Sabia McCoy-Torres, Tulane University, Department of Anthropology

Presenter(s): Sabia McCoy-Torres, Tulane University, Department of Anthropology, J. Brent Crosson, University of Texas, Austin, Department of Anthropology, Khytie Brown, University of Texas at Austin, Cory-Alice Andre-Johnson, Tulane University, Corey Miles, Tulane University, Frances Roberts-Gregory, Harvard University

Presentation(s): "The Flesh and Blood": Affective Resistance

Brooklyn, New York and Puerto Viejo, Costa Rica have historically housed Caribbean enclaves that are connected to each other through migration between them. Today, Afro-Caribbeans in both locales are experiencing displacement through gentrification and touristic development. In Brooklyn, facades of buildings make visible specters of Caribbean communities that evince people are being threatened with disappearance in a borough some call "the flesh and blood" of West Indians in the diaspora, "Little Caribbean," or even "Brooklyn West Indies." These affectionate terms capture the work of (trans)migrants, immigrants, and West Indian Americans to create a place that feels Caribbean. Similarly, in Puerto Viejo, the reconstruction of roads illustrates the changes that threaten to make Afro-Caribbeans ghosts in a town that immigrant laborers from the West Indies and their descendants painstakingly created, within a wider geography they helped define as la zona caribe (the Caribbean zone). Yet, in these two important West Indian diasporic sites, Caribbeans are not without recourse. I argue that they continue to insist on presence, place, and,

in turn, life through the rituals tied to reggae culture. They, further, manipulate affective relations to engender Caribbean feeling. Together, these actions create Caribbean subjects and transnationally connected places for Caribbean embodiment that root them in shifting terrain.

Presenter(s): Sabia McCoy-Torres

The Silk Cotton Archive: Haunting as Conservation in the Caribbean

In the Caribbean, the silk cotton tree (*Ceiba pentandra*) roots divergent histories. Scholars note how the giant tree was an icon of tropical nature for touristic consumption (before the beach became the primary site for tropical nature's rejuvenation of white bodies). However, the tree was not simply an object of tourist desire. The silk cotton tree is native to (and sacred in) both West Africa and the Caribbean. It was one familiar landmark that many enslaved Africans encountered in the Caribbean, telling of a longer history of exchange between Africa and the Americas. Across the region, Afro-Caribbean people have refused to cut down silk cotton trees for fear of spiritual retribution from ancestors that dwell in the tree. I draw on interviews with Tobagonian environmental leaders to theorize a Caribbean form of conservation that departs from the assumptions of Western environmentalism. My interlocutors theorize "haunting" as an effective form of conservation because it carries the force of law when state law or private interests may fail to protect trees. Fear of and respect for trees as potential agents of affliction contrasts with the racialized story of Western environmentalism, which has centered on the love of nature as a way of rejuvenating the white body. I briefly detail how these assumptions have biased scholarly accounts of the Caribbean birth of modern environmentalism, obfuscating the agency of Afro-Caribbean people (and spirits) in this story.

Presenter(s): J. Brent Crosson

"Graveyard Physicians: Healings and Hauntings in Jamaican Revival Zion and New Orleans Spiritualist Churches"

"Graveyard Physicians" explores how healing and hauntings are intertwined within the spectral afterlife of the plantation, through comparative ethnographic analysis of Jamaican Revival Zion religion's spiritual-physicians and the mother-healers of New Orleans Spiritualist Churches. Jamaican Revival Zion and New Orleans Spiritualist Churches emerged in the 19th and early 20th centuries, respectively, among Black populations grappling with the necropolitics of racial capitalism. While these ritual specialists are often viewed as either charlatans or perverse necromancers, the paper shows how Revivalists and Spiritualists reorient questions of life, death, and healing against these death-dealing logics. The paper asks: How might we understand health and healing if we started not from a hospital or clinic but from the graveyard? Simultaneously, how might we grapple with the notion of hauntings if we were to foreground intimacy? The paper explores these questions by centering Revivalists' and Spiritualists' intimate relationship with spirits of the dead and primordial spirits. These spirits—from Jamaican Revival's mermaid spirit, River Mumma, to Black Hawk, a Native American spirit in New Orleans Spiritualist churches—animate the lives and bodies of practitioners through trance journeys, séances, and conjurings.

Thus, they facilitate multiple forms of healing and remediation that exceed the limits of Western rationalism's understandings of healing and hauntings.

Presenter(s): Khytie Brown

Real Tense Conditionals: Persistent Pasts in Black Feminist Futures

This paper brings together bodily and grammatical orientations towards the future through Gasy ethnographic theory and Black Feminist writings to question how we move into futures haunted by the past. It takes as its starting point a confluence between: Gasy temporality as facing the past while moving backwards into the future (Crossland); Gasy relation to ancestors as braced in the bottleneck of an hourglass (Walsh); Black Feminist grammar as a future real conditional (Camp); and Blackness as remaining in the hold (Sharpe). In all of these iterations, future possibilities weave together with ghostly pasts, with the dead, loved and lost, in ways that render bodies tense, stiff, hardened, and conditionally potent. Rather than presenting a future that resolves the past, turns its back on it, or releases its hold, this paper keeps with the disorienting 'future-past' to think along the desirability of staying Black and dying.

Presenter(s): Cory-Alice Andre-Johnson

How do Ghosts Feel: Emotional Seepage Between the Drowned and Undrowned

Drowning happens in your lungs, but it is visible in the skin, bodily movements, and lack of ability to articulate that you are drowning. As metaphor, this demonstrates how the climate catastrophe does internal damage and makes itself visible in the ways southern Black people move even when they have yet to find the language to articulate the happening. If we go beyond metaphor, what might be noticeable? This paper walks down the Atlantic coast with southern Black coastal communities to examine how policing and climate disaster co-construct the weather of the South. Drowning is central to slavery, Jim Crow, and natural disasters that disproportionately harm poor Black communities. On this walk we see that the deaths of the drowned are connected through what I term "liquid emotions" to the lives of those who Alexis Pauline Gumbs refer to as "the undrowned." Liquid emotion thinks about the flexibility of Black feeling to both love and fear home; while pointing to how structurally Black emotions function like liquid assets and can be cashed in to mean whatever the white imagination needs to justify unequal systems. The complicated relationship Black southerners have with water is not inherently due to one personal experience but a reciprocal affective relationship with the drowned - feeling in community with ghosts. They frustrate assumptions that center liberation as the central mode of the Black imagination and demonstrate that there is beauty in creatively drowning together.

Presenter(s): Corey Miles

Black and Indigenous Women's Environmental Resistance: The Methodology of Feminist Political Ecology and Genesis of the Ecowomanist Digital Archive

Critical environmental, energy, and climate justice scholars currently inquire into how women, queer communities, and people of African descent resist premature death and precarity that

logically result from necropolitics and state-corporate crime vis a vis transnational environmental governance. Feminist political ecologists likewise expose the under-theorization of gender in environmental studies and highlight the links between gendered vulnerability to climate change and the androcentricity of extractive economies. Despite these intellectual advancements, Afrodiasporic women continue to be vastly underrepresented in climate policy debates and imaginings of climate solutions, rendering them ghosts. I methodologically employ Black feminist autoethnography, conversational interviews, feminist media analysis, feminist policy analysis, and multi-sited ethnography to investigate how Black and Indigenous women navigate contradictory relationships with energy and petrochemical industries, build solidarity through ecofeminist coalitions, and advance feminist advocacy at UNFCCC COPs and other transnational climate policy spaces. Future directions of this work will include creating The Ecowomanist Digital Archive and Book Manuscript to narrate and house audio files and digital artifacts from 10+ years of feminist political ecology research.

Presenter(s): Frances Roberts-Gregory

4045 Anthropological Session Title: Anthropological Approaches to Infrastructure in Africa

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Balcony I

Type: Oral Presentation Session

The anthropological theorizing of the concept of infrastructure has experienced a tremendous boom in recent decades, with researchers focusing on its multidimensional nature and manifestation in societies around the world (Larkin 2013; Buier 2022; Smith 2022). Earlier anthropological scholarship conceptualized infrastructure as material transformations of the environment primarily provided and overseen by entities such as governments through administrative departments. Recently, there has been a shift from the conceptualization of infrastructure as material objects, such as bridges, to a more holistic focus on the multidimensional nature, including the social, political, and economic dimensions of infrastructure. Specifically, there is growing anthropological attention to the nexus between infrastructure and social exclusion, state-citizen relationships, and how large state-funded infrastructural projects cause the displacement of citizens.

Researchers utilizing a more capacious conceptualization of infrastructure have developed concepts and insights that have significantly contributed to our understanding of the ways in which people's lives are impacted via their interacts with infrastructure, especially in Africa. Notably, Von Schnitzler's (2016) concept of "techno-politics" theorizes how governments deploy infrastructure as instruments of inclusion and exclusion in social-political life in apartheid and post-apartheid South Africa. Adunbi (2019) explores how the Lekki Free Trade Zone contributed to the displacement of people from their homes and spaces where they earn daily livelihoods.

As debates on infrastructure have unfolded, anthropologists (for example, Adunbi 2020; Storey 2021; and Smith 2022) have paid more attention to the strategies that communities utilize to create basic infrastructure in instances of governments' failure to provide essential services in the present neoliberal era. From the foregoing, it is evident that the concept of infrastructure can help us understand different social, political, economic, and environmental dynamics in Africa. Consequently, this panel will bring together anthropologists whose work contributes to the holistic understanding of infrastructure in Africa. The panel seeks to address the following, but not limited to, questions: What are the extant conceptual debates and theoretical approaches to the analyses of infrastructure in Africa? How can anthropological praxis on infrastructure expand our understanding of the nexus between state-citizen relations, social inclusion and exclusion, claims to personhood, belonging, citizenship, social relations, and multi-species relations in Africa? How can new theoretical approaches and anthropological methods bring about novel ideas that will enhance a more holistic understanding of infrastructure in Africa?

Presentation(s): Rivers, Roadways, and the Shaping of African Infrastructure

This paper reviews work on African infrastructures of long-distance mobility as a comparison to work on urban household infrastructure. Railways, roads, and bridges traverse rural areas, bringing peoples and ideas into closer contact. They connect rural areas to urban ones and each other, but can just as easily serve as borders and boundaries, shaping the contours of states, regions, and economies. They are often so large ordinary people could not construct them, however their realization has historically depended on deeply local expertise and action that echoes the past in today's infrastructures (e.g., Park 2024). Finally, attention to the infrastructure of long-distance travel demands acknowledgement of the natural world as an essential actant in African mobilities, for instance where river travel is relied on or preferred over road or rail, challenging our analytical categories and conclusions. While anthropological attention to the urban infrastructures of daily life has revealed much, especially about political action and social inclusion, renewed attention to the infrastructures of long-distance mobility holds different promise, foundational to a holistic understanding of infrastructure in Africa.

Presenter(s): Rebecca Peters

Walls and Corridors In An African City

In Spring 2024, the Ethiopian government launched the Corridor Project, a sweeping urban redevelopment initiative that is radically reshaping Addis Ababa. It's first phase – the demolition of the historic Piasa neighborhood – was executed at unprecedented speed. By early fall, the project had reached Kazanchis, another neighborhood where I spent much of my childhood. Drawing on four months of ethnographic fieldwork in Addis Ababa and adopting a partly autoethnographic approach, this paper explores the social and personal effects of the project, engaging debates on infrastructure, displacement and urban transformation in Africa.

Inspired by anthropological works on absence and loss, I analyze how the demolitions – and the uncertainties around what might be lost – brought me into contact with people who were present yet largely invisible in my childhood: my neighbor Sara and security guards who watched over our compound, both then and during my 2024 return. While the Corridor Project has had devastating and still unfolding consequences for many, I also explore how brought visible and invisible walls, partly racialized and unequal relations, as well as new and old friendships into presence. By adopting an autoethnographic lens, I argue for the value of reflexive narratives to deepen anthropological engagements with infrastructure, not just as material transformation, but as a lived and deeply personal process.

Presenter(s): Marit Ostebo

When Social Infrastructures Build Material Infrastructures: The Priority Assistive Products List in Uganda

Historical, regulatory, and societal events over the past few decades have contributed to inequitable access to medical devices in the Global South. Using the example of wheelchair accessibility in Uganda, I contend that insufficient social and material infrastructures, regulatory interference by high-resource countries, and the inappropriate dumping of unsuitable devices have impeded access to medical devices. To address this situation, the World Health Organization (WHO) has turned to list-making as a technology of care. In 2016, the WHO published the Priority Assistive Products List, a list of fifty assistive medical devices necessary for improving the health and human dignity of people with disabilities worldwide. Drawing on interviews with wheelchair users, assistive device makers, health care providers, and employees of NGOs in Uganda, I argue that infrastructures supporting medical device access function on several different levels. Where material infrastructure is lacking, Ugandans with disabilities design social infrastructures to increase access to medical devices like wheelchairs. Ugandan disability rights activists contributed to the formulation, promotion, and implementation of the WHO's List. After the WHO distributed the List worldwide, Ugandan disability rights activists deployed the List as a blueprint for the material infrastructure that they expected the nation to provide.

Infrastructuralization: Toward an ethnography of regional integration in southern Africa

Infrastructuralization makes intelligible the unprecedented investments in corridor connectivity projects happening in southern Africa. I reflect on the commissioning of a One-Stop Border Post (OSBP) at the heart of sub-Saharan Africa's largest trade corridor. Geographically, it is a node with connections to several countries in the Southern African Development Community (SADC) and ethnographically, it is a node from where I study the experiences of regional (dis)connectivity; for the experts, it is a site for managing the everyday business of integrating southern Africa – through the facilitation of trade. This border concept proliferating all over southern Africa alongside major upgrades to transnational and intra-regional road and rail networks, when singularly spectacularized as an infrastructure, offers new perspectives on sovereignty and mobility. I nonetheless de-privilege the spectacular and sublime thing. I contextualized it as part of a series of projects aimed at making multilateral cooperation and regional unity in SADC infrastructural. Analytically, infrastructuralization thus forgoes the temporal space in which "effects" – political, anti-political, techno-political, unintended, and otherwise – are often observed. Infrastructuralization empowers an anthropological attunement to process and series, to still-becoming and ongoing-ness, to projects of rescuing past ideals and of bringing forth new ones. It brings the unit of the region into ethnographic analysis.

Presenter(s): Venolia Rabodiba

"Lagos is not solely for the Rich": Community-developed Infrastructure and Claims on Citizenship in Makoko, Lagos, Nigeria.

Based on data from interviews and participant observation, this paper presents strategies that residents of Makoko in Lagos, Nigeria, utilize to build infrastructure—including waste disposal systems- to reduce their exposure to malaria-transmitting mosquitos and reduce their exposure to the disease. Makoko is a government-marginalized informal settlement characterized by the building of houses with stilts over the water of Lagos Lagoon. Further, I show how Makoko residents use these community-built infrastructure (which I call community-developed infrastructure) to lay claim to citizenship in post-colonial Nigeria.

This paper seeks to advance debates in anthropology of (1) infrastructure and (2) citizenship. Scholars have shown that beyond being physical objects, such as roads, infrastructure can serve as instruments of inclusion and exclusion for the elites. Additionally, anthropologists have explored how post-colonial governments use infrastructure to create different categories of citizens through unjust urban planning policies that exclude poor neighborhoods from state-funded infrastructural projects. However, this paper advances anthropological debates on infrastructure by analyzing how marginalized communities build infrastructure to manage diseases in the absence of state funded infrastructure. Also, the paper furthers debates in citizenship studies by showing how marginalized communities use community-developed infrastructure to make claims on citizenship.

Presenter(s): Zeynep Selcen Boztepe, Thanzeel Nazer Vengalath, University of Minnesota, Twin Cities, Department of Anthropology, Xuanyu Yang, Rachel DeMotts, University of Puget Sound, Stephen Locketto, Kymberley Chu, Princeton University, Department of Anthropology, Elizabeth Eklund

Presentation(s): Be(e)ing at the Borderlands

Honeybees constantly cross the sealed Turkey-Armenia border where humans are forbidden to do so. Although there are no material walls between two countries, people on both sides of the border have no physical contact with the other side as two countries sealed their border in 1992, the borderland is under military surveillance. Yet honeybees proliferate in this environment as border villages avoid environmental pollutants that can be toxic to honeybees. Honeybees cross the border like ghosts go through walls while the memories of political conflict haunts the populations in the borderland.

In this context, my research investigates (1) how do humans and honeybees interact in the Turkey-Armenia border? (2) How do these interactions construct different perceptions of state territoriality and the natural landscape of borderland? (3) How do ethnic belonging, class backgrounds, gender identities, and religious belief impact beekeepers' imaginations of the other side of the border?

This research brings together the conversations in environmental anthropology, more-than-human politics and border studies to examine human-animal encounters at the margins of nation-states. It analyzes how natural landscape and the state borders are constructed through relationships between humans and honeybees, and how such relationships can figure transnational set of meanings and narratives between different sides of the border.

Conflict as a Solution: Ethnographic Reflections of Human-Wildlife Conflicts in Kerala,
South India

In the twentieth century, agricultural development in Kerala was significantly facilitated by a series of state policies promoting sectoral growth. This agricultural expansion transpired in previously considered wastelands, especially in the forest-frontier regions of the state, which were transformed into agricultural fields and homesteads. State-making contributed to the emergence of

a substantial population of small-holding agriculturists, commonly referred to as the 'peasantry,' who engaged in intensive land cultivation practices. Agrarian expansion in twentieth-century Kerala marked a substantial shift in land use, production dynamics, and environmental relations within the region.

Recently, the forest-frontier villages of Kerala, which house over 15% of the state's population, have become battlegrounds for conflicts between humans and wildlife. Agricultural stakeholders report significant economic losses from apex and meso-predators like elephants trampling fields, bison grazing on crops, leopards preying on livestock, wild boars damaging gardens, Rhesus monkeys, and Giant Indian squirrels foraging gardens. Alarming statistics from 2021 to mid-July 2024 reveal that these human-wildlife conflicts resulted in 316 deaths and 3,695 injuries. Human-wildlife conflicts worsen the challenges faced by farmers and impact various biodiversity species in ecologically sensitive areas.

This study examines the diverse techniques and experimental methodologies employed by agriculturists to autonomously address their specific challenges while navigating the intricate landscape of government policies, non-governmental organizations, and legal frameworks. The paper highlights how agriculturists' innovative experiments, particularly in developing repellents, contribute artistically to the landscape in which they operate. Therefore, my study underscores that the enactment of freedom, using the surroundings as the limit/source, equips people to install environmental solutions to the threats to livelihood they encounter.

Presenter(s): Thanzeel Nazer Vengalath

Double Ghosts in Post-Pandemic Shanghai: From Interspecies Encounters to the Raccoon Dog Census

This study delves into the evolving dynamics of human-raccoon dog interactions in urban Shanghai after COVID-19 lockdown in spring 2022. As rare native animal, raccoon dogs (*Nyctereutes procyonoides*) have become increasingly prevalent in urban districts, while some residents view them as unsettling intruders. Collaborative efforts between scientists and the public have sought to foster coexistence through initiatives such as the Raccoon Dog Census. This citizen science project engages residents in data collection, ecological knowledge sharing and policy development, echoing elements of Mao Zedong's legacy of mass science.

Specifically, in Shanghai, raccoon dogs shelter in artificial rocks and building crevices, feed at garbage sites and cat-feeding corners and have gradually woven themselves into the fabric of everyday community life. Yet this "integration" has brought discomfort as residents report their cries as "like babies in horror films," resent their competition with stray cats, and circulate stories of them "eating cats" or "hiding corpses in dens." Rumors of people eating raccoon dogs during the pandemic, amid debates around wild meat, further linked them to disease. Hovering between reality and fear, raccoon dogs have come to embody the figure of the "urban ghost": ambiguous, intrusive, and haunting.

This ghostliness reveals how humans, amid crises in urban governance and public health, assign cultural and moral meanings to nonhuman life. However, public responses have not been solely driven by panic. In collaborative efforts between scientists and residents, raccoon dogs have also entered a framework of participatory knowledge and negotiated coexistence. Ecologists in Shanghai founded the "Raccoon Dog Census" in 2022, an ongoing citizen science project, to protect the species and rebuild human-animal relations. The project bridges the experts and the public, fostering co-produced ecological knowledge. It also played a consultative role in drafting the 2023 Shanghai Wildlife Protection Regulation, embedding public science into policy.

In this context, this research proposes a second "ghost" alongside the urban one: the "ghost of Mao Zedong." Drawn from Chinese science history, this term refers to the lingering legacy of Mao-era mass science—a political ideal of breaking elite knowledge hierarchies and encouraging scientists to "follow the masses." The Raccoon Dog Census can be seen as a contemporary echo of this tradition, reactivating collective participation and undermining scientific elitism. The Maoist ghost here is not merely metaphorical but institutional—still structuring how science and society are imagined and enacted.

By tracing these two ghostly figures, I explore how wild animals in Shanghai have prompted new cross-species intimacies and revived historical forms of participatory science. This research highlights how nonhuman life mediates between memory, governance, and public knowledge in the post-pandemic city.

Looking for Elephants: Farmers, Politicians, Conservationists, and Divergent Ideas About Charismatic Megafauna in southern Africa

African elephants are a complicated vessel for human interests, demands, needs, and values. As many disciplines turn to rethinking agency and value in the more than human landscape in which all living things reside, a deeper understanding of how differently positioned groups of people construct their understandings of relationship with nature also remains necessary. This paper seeks to examine how different groups of human actors understand African elephants in the context of conservation initiatives to save them. Based on ethnographic research conducted over the past twenty years in Botswana, Namibia, South Africa, and Mozambique, it engages with the contrasting narratives of conservationists, politicians, farmers, academics, and other participants. These richly divergent understandings reflect both shared and different values and lived realities, and shed light not just on philosophical engagements with the idea of nature, but practical realities of living in spaces where there is contestation for meaning and livelihoods. This paper, then, is not about elephants, but it is about what people think elephants are, and what dreams and nightmares they may reflect and engender. Rendered ghost-like even in their home territories by these overlaid discourses, elephants carry vastly different meanings that are crucial for navigating how to live with and near them, and human ideas of them, more equitably.

Of Memes and Morphs: Cultural effects on biological perceptions of snakes

Snakes are at the top of American phobias. To what extent is it biological or cultural? Ethologist Lynne Isbell and others have argued for innate, brain-based mechanisms in primates that facilitate the detection of snakes, termed Snake Detection Theory (SDS). I argue that human attitudes towards snakes can be culturally manipulated. I present evidence culled from both digital and physical ethnography among herpetoculturists (reptile keepers and breeders) that complicates biological predispositions towards snakes. Specifically, the "snek" meme of internet fame and snake morphs (selectively bred color variants) serve as agents of change for their ability to frame snakes as more appealing to humans through anthropomorphism. Interestingly, a major reason for the changing perception of snakes is that their anthropomorphized appearance is a manipulation of Konrad Lorenz's Kindchenschema, where juvenile appearances promote protectiveness in adult animals. Thus, we have a cultural "tweak" of a biological perception of an animal, but this tweak is based on a biological mechanism itself. Ethnographic studies of petkeeping are an ideal window through which to explore the culture-biology interface as well as human-animal divide.

Presenter(s): Stephen Locketto

Seeing Primates, Making Primatology: Dialectical Encounters in the Patchiness of Peri-Urban Landscapes

Through deploying ethnographic fieldwork methodologies such as citizen science and semi-structured interviews, I examine how conservationist management of two different alloprimate species, such as dusky langurs (*Trachypithecus obscurus*) and long-tailed macaques (*Macaca fascicularis*), in Malaysia's urban environments is unevenly shaped by anthropocentric prepositions, cultural perceptions, and primate biophysiological processes.

Structural ecologies are intimately and unevenly interwoven through animal sociality, anthropogenic activities, culture, developmental biology, diets, human histories, gastronomical politics, linguistic diversity, physiology, and other biocultural factors (Bateson 1972, Fuentes 2010, Malone 2021). Peri-urban landscapes combine urban and rural ecological features (Conolly 2020). As a liminal space, these peri-urban landscapes facilitate novel kinds of human-monkey interfaces. Unlike rehabilitation centers and laboratories, peri-urban landscapes facilitate a wider continuum of socio-ecological conditions that unsettle dominant logics of utilitarianism as ways to manage the primate lifecycle (Braverman 2014, Salazar Parreñas 2018). Both individual monkeys and communal primate social groups experience a range of differential responses to anthropogenic food waste, urban development patterns, and other uses related to the development of compact peri-urban areas (Balasubramaniam et al. 2020).

As my ethnographic interlocutors demonstrate the various ways they enact daily routine sampling processes and produce material data such as primate behavioral observations, they situate citizen science as a dominant scientific paradigm and lived-experience. Overall, citizen science practitioners illustrate how symbolic and political representations of primate sociality drastically

vary based on how scientists navigate a range of legal and political structures that shape their behavioral data collection processes.

Wives and Widows: Intersectionality and the Multiple Dimensions of Life Experiences Women Face in Tiger Territory

While intersectional approaches have greatly advanced complex relation of layers of privilege and marginalization between factors like class, disability, ethnicity, gender, marital status, race, and religion, there remains a critical gap about the impact of life events. Specifically, marital status for women typically simplified into married or single, but there are many ways a woman can move through social spaces as a single. In coastal Bangladesh the ethno-religious majority are Bengali Muslim. However, one underrepresented minority are the Indigenous Munda, a low caste Hindu. These aspects already intersect as multiple minority status. Women in particular are already disadvantaged in the region, but there are several ways a Munda woman can be functionally single. She may young and/or never married, find herself as a head of household while a (living) husband is away, or may become widowed (a further marginalized status). However, the Munda homelands are also near the forest habitat of the Bengal Tiger. The tigers of the Sundarbans are known to kill local people. But the impact can be felt by survivors. The "tiger widows" (swami khejos, literally husband eaters), a uniquely marginalized group of women who have lost their husbands to tiger attacks and are seen as a source of ill-fortune in their communities. However, as the climate changes, both tiger and marginalized communities of these coastal regions are becoming strained. This paper focuses on the mutual marginalization of both humans and wildlife struggle to survive as severe storms increase, sea levels rise, and coasts erode, not only increasing human-wildlife conflict, but how the impacts intersect disproportionately.

3430 Anxiety/Aspiration: The Makings of Neoliberal Subjectivities and the Desiring Subject in Global Perspective

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

In an era of economic precarity, intensified competition, and shifting moral economies of care, how are neoliberal subjectivities produced and contested across different cultural and socioeconomic contexts? This panel explores the interplay of anxiety and aspiration in shaping the "desiring subject"-individuals configured to want, strive, and adapt within uncertain futures.

We invite ethnographic contributions that examine how institutions, families, and individuals navigate the tension between cultivating ambition and managing the pressures of late capitalism. How do globalized discourses of success, crisis, and competition manifest in local contexts? When does the imperative to "desire" give way to strategies of refusal or disengagement? What alternative visions of the future emerge in response to these pressures?

Possible themes include (but are not limited to):

Moral economies of aspiration: How are "appropriate" desires instilled in children, workers, or citizens? What role do caregivers, educators, or states play in this process?

Gendered labor of subject-making: How is the work of cultivating desire distributed along lines of gender, class, or ethnicity?

Discourses of crisis and competition: How do narratives like "involution," "lying flat," or "the rat race" shape subject-making practices?

Transnational circulations: How do expert knowledge, educational models, or self-help cultures travel and transform local ideals?

Resistance and refusal: What forms does disengagement from neoliberal striving take, and how are these practices judged?

Presentation(s): 'Oil is annihilating us': Entrepreneurial Subjectivity and Fossil Capital in the Persian Gulf

Fishing, as a way of making money in the lower Persian Gulf, has a fairly low barrier to entry: prospective fishers must either buy or borrow a skiff, obtain a license (or not), and learn how to catch fish using time-honored artisanal methods which involve little-to-no machinery. In this region, rather than working for fishing "businesses," fisherfolk here are entrepreneurs and owner-operators of their own unincorporated enterprises: their profits come from how many fish they catch and what prices those fish fetch in the fluctuating prices of the (fish) market. Importantly, however, in order to catch those fish, artisans must also carry with them enough gasoline to fuel 12+ hour journeys on the open ocean; and increasingly, the volatile prices of gas in these oil-rich states has made artisanal fishing an almost untenable way of making a living. Drawing ethnographic and historical research, and inspired by a recent comment by a fisherman that "oil is annihilating us," this paper asks: what does it mean to be choked out by oil in a region paradoxically known for the abundance of this very commodity? How do fisherman-entrepreneurs manage to stay afloat, so to speak, in rentier states that have increasingly enacted structural adjustments that

have weighed down the lowest rungs of the economic ladder? And finally, how have fisherfolk both looked to and fought back against fossil capital as the dominant economic paradigm?

Presenter(s): Scott Erich

From Zombies in Purgatory to Modern Citizens of Capitalism

The figure of the zombie as a metaphor for life under capitalism is exhausted. Literature, film, and vernacular forms of speech liken the undead creature to the oppressed laborer exploited by a capitalist system. Throughout my fieldwork in Havana, Cuba and Miami, Florida, the figure of the zombie under socialism emerged. The zombie, characterized by its lifeless, toiling body manifests as a popular graffiti motif, which interlocutors of mine identified with. Claiming a state of stagnation, oppression, and endless work with nothing to show for it, many express similarities with the zombie. The cure? According to some: capitalism. Some interlocutors express a desire to migrate to the U.S or Western Europe in order to reach self-fulfillment, like advancing in their careers and entering the international art market to achieve wealth. I focus on these narratives of self-making and migration vis-à-vis the current political moment in Cuba, paying special attention to how ideas of capitalism and Revolutionary socialism are constructed as a binary. Ultimately, I highlight similarities in the tensions that Cuban artists experience both in Cuba and once abroad, per my multi-sited fieldwork. In this paper, I substantiate my ethnographic data with local religious and cultural histories of the "zombie" in order to analyze Cuban artists' narratives of self-fashioning and temporality, teasing out the connective (t)issues that bind capitalism and socialism.

Presenter(s): Michelle Patino

Cultivating Desire: making middle class motherhood in Shenzhen, China

This paper examines how middle-class mothers in Shenzhen, China, navigate the moral and practical tensions of parenting amid economic slowdown and heightened precarity. Having benefited from Dengist reforms, these mothers now face the challenge of securing their children's futures in an increasingly competitive and uncertain landscape. I argue that desire—its recognition and cultivation—becomes the mother's responsibility, positioning her as both an architect of her child's aspirational subjectivity and an entrepreneurial subject herself. Middle-class parenting thus demands flexibility not only from children but also from mothers, who must reconcile humane parenting with the imperative to produce "talented," competitive future adults. Drawing on ethnographic fieldwork with middle-class mothers, I show how mothers deploy concepts like "nurture," "potential," and "direction" to mediate these anxieties, even as class disparities fracture the ostensibly universal middle-class identity. This paper highlights how parenting conjures particular mothering subjectivities, revealing the gendered burdens of producing neoliberal flexibility. Ultimately, the cultivation of desire serves as a contested yet collective response to precarity—one that reinforces the myth of Shenzhen's aspirational middle class, even as material inequalities undermine it.

Presenter(s): Karen Hui

Anxieties of Circulation: Managing the Sacred and Photographic in Bhutan

Bhutan is not camera-shy. With scenic hikes and stylish heritage, Bhutanese and chhip tourists alike enjoy taking photographs of the small Buddhist kingdom. Yet, in front of any temple in Bhutan tourists and locals alike encounter signs reminding them that photography is not permitted. In this paper, I consider how the restrictions, contradictions, and refusals around photography point to the capacity of photographs to enchant social relations. Images in Vajrayana Buddhism bear a potent possibility to invite divine inhabitants, yet this did not explain the patterns of which photographs were permissible, and which could not circulate—whether called out by offices or by fellow community members on social media. I follow the secular and security concerns about how images circulate to explore how restrictions on photography index Bhutanese relationships to globalization, mediatization, and economic concerns that the security that protected these sacred sites from growing concerns about theft and the economy. I draw on scholars of media, globalization, and ownership to explore the directions that the refusal of photographic circulation takes us. I examine how images bind together potentials and risks, and how Bhutanese policies managing photographic practices aspire to extend the network of relationships of obligation and interdependency that constitute the Buddhist subjectivity into the photographic realm.

Presenter(s): Tierney Brown

Hedging the Future: Real Estate, Anxiety, and Speculative Investment Amongst Egypt's Urban Middle-Upper Class

In the wake of successive currency devaluations that have caused the Egyptian pound to lose over half its value, many middle-upper-class Egyptians are turning to real estate investment in newly built satellite cities as a means of safeguarding themselves against economic instability. Drawing on ethnographic fieldwork conducted in real estate showrooms and exhibitions, I examine how real estate investment is framed as both a rational strategy for navigating a precarious economic landscape and an aspirational project—offering a sense of stability, status, and intergenerational security amidst widespread financial anxiety. At the same time, my interlocutors express skepticism about the future and concern over the sustainability of Egypt's real estate boom, even as they participate in it. I analyze how neoliberal subjectivities are shaped by the dual imperatives to strive and to safeguard—reflecting a complex interplay of desire, doubt, and risk management. My research contributes to broader debates on how global economic logics are localized and contested, and how aspirations are cultivated in and anxieties are managed in contexts where the future feels increasingly uncertain.

Presenter(s): Nehal Amer

Luxurious Dependencies: The Anti 50/50 Trend, Linguistic Political Flares Among Dating Experts, and the Backlash to Neoliberal Feminism

Cis het women's positions across the political spectrum in the US are changing regarding what aspirational divisions of labor look like as the financial threshold for having a family ascend and traditional gender arrangements take on the sheen of luxury. Through discourse analysis I examine

how different commentators index their political allegiances by referencing conservative flares (biological gender roles), progressive flares (structural issues such as reduced access to reproductive care) and reactionary flares (Boyce Kay 2024) (intense heteropessimism) while prescribing the same solution for women's financial survival: marrying rich. These findings suggest that politics online are constructed through linguistic associations more so than any historical, material, or policy-oriented vision of politics. Across the anti-50/50 trend, women are encouraged to take on feminine performances in order to obtain financial security (Bell 2024) as opposed to taking on wage-labor, which is framed as unfair under the assumption that women perform the majority of domestic labor. This backlash to neoliberal feminism (Rottenberg 2013) is fundamentally shaped by the extreme financial stress on parents in the United States, the affordability crisis (Ensign 2025) and the luxury-consumption oriented messaging that occurs on social media (Creevey et al) which shapes responses to precarity as, yet again, a problem that women address through individual lifestyle decisions.

Presentation(s): "Anthropologist as Language Broker: Swahili Grants, Classes, and Politics"

Advocates for Swahili's recognition and expansion as an international language take pride in the breadth of the language's reach on the African continent and beyond as well as its adoption as an official language in a wide range of settings. UNESCO's declaration of July 7 as Swahili Day in 2021, the African Union's adoption of Swahili as an official language, and the growth of Swahili language offerings in African schools outside of East Africa are but a few examples of recent developments expanding the reach and influence of Swahili. The Tanzanian government in particular is invested in furthering this reach and the overall influence of Swahili and has sought to support and foster the spread of Swahili in various venues.

In this talk, I reflect on the relationship between these international developments involving Swahili and my own involvement in initiatives to support Swahili language training. From my own institution's involvement in a Title VI language grant involving Swahili language courses to the development of a course on "Swahili-Speaking Cultures" and a Fulbright-Hays Group Project Abroad Proposal to build capacities for "Swahili Studies" in the university and in local K-12 schools, I have increasingly come to occupy a role that might usefully be thought of as "language broker". Using this framework of language broker, I will reflect critically on what it means to be engaged in the larger international politics of Swahili expansion and how these international efforts relate to efforts and developments in the United States that often rely on or seek support from US government agencies. I will ask to what extent the US government has been an ally (witting or unwitting) in the efforts of Tanzania and others and how the moves by the current administration in the US to dismantle and remove funding structures might impact the future of these efforts and the US's relationship to Swahili as an international language. I will also consider my own role as anthropologist in these various efforts -- how my interests and efforts match up with those of either the Tanzanian government or US agencies and how well these sorts of initiatives coincide with anthropological pedagogies and sensibilities. I will argue that, if the role of language broker is to be a tenable one for an anthropologist, it must include careful consideration of oneself as a purposeful actor in the language of politics in a way that offers opportunities for reimagining both anthropological pedagogies and public scholarship.

"Reimagining a Homeland from the Diaspora: Navigating the African Diaspora Beyond the Middle Passage Epistemology"

The notion about a homeland in diaspora studies provides an intriguing intellectual context for analyzing the African diaspora beyond the middle passage. The homeland is inextricably enmeshed with the diaspora phenomena in every significant way and has been construed in differently due to how both contemporary and middle passage-based African diaspora communities have affectively imagined it. While some diaspora groups perceive the homeland (continental Africa) as an imagined historical place of origin without any transnationally diachronic connections, a growing population of some diaspora groups have affectively reestablished varied forms of diachronic and synchronic connection with specific regions as in ethnicities, kingdoms, and countries in Africa for different reasons. Using the Council of Ewe Associations of North America (CEANA) as a case, this paper analyzes how an ethnically based contemporary African diaspora group is actively engaged several initiatives that signifies a reinventing the imagined Ewe ethnic homeland in West Africa. The research data which was gathered from some Ewe communities in West Africa and North America reveals that both the old and the new African diaspora groups have some connection with the African homeland. However, CEANA's diachronic and synchronic connection with the West African Ewelnd reveals how the group has deployed their cultural memory and related affect to reimagine and reinvent the Ewe ethnic homeland that transcend four nation-state borders. The research findings invite a critical analysis of the African diaspora phenomena beyond the middle passage

epistemology. This will uncover the peculiarities that continue to define the Africa diaspora within a given historical context.

Presenter(s): Raymond Awadzi

Care as repair: ethnographic insights from a witch camp in northern Ghana

This essay explores the intersection of care and repair. Caregiving is a fundamental aspect of human societies, where individuals provide and receive care throughout their lives. This study examines care work as a form of repair, focusing on ethnographic research among women accused of witchcraft and their children in a northern Ghanaian witch camp. The witch camp provides a unique lens to examine care and repair dynamics. Caregiving among the accused witches and their families is understood as vital repair work, necessary for sustaining life and well-being within the camp. By examining the complex dynamics of care and repair, this essay seeks to deepen our understanding of care work in marginalized communities. The women and children in the witch camp face significant challenges, including poverty and social exclusion. Caregiving is critical for survival, and individuals rely on each other for support. This study reveals care work as both practical and emotional labor, essential for maintaining social relationships and promoting collective well-being. This research contributes to a broader understanding of care work in different cultural contexts. It highlights the importance of considering power dynamics and social relationships that shape care work, particularly in marginalized communities. By exploring care and repair in the witch camp, this essay provides new insights into the ways care work is enacted, valued, and recognized.

Granting a Man a House: Politics of Distribution in Senegal's Social Housing Project

Over the past decade, the African continent has witnessed a resurgence in the social housing agenda. States creatively utilize historical discourses to legitimize their actions, gaining cultural and symbolic capital in the process; they mobilize geopolitical resources to gain material capital and deliver decent housing to their people. Social housing is a large-scale social engineering project in most African countries. It has the potential to reshape state-citizen relations, create new social networks, and model new African urban citizenship. It is crucial to conduct empirical research to understand this engineering and determine its consequences.

Launched in 2019, Senegal's Social Housing Program of 100,000 units (SHP) is among the earliest and most ambitious. The SHP directly targets the urban poor, a class that had previously been mostly excluded from state welfare. The program provides the urban poor with a rent-to-own social housing scheme, where eligible citizens first rent a home at an affordable rate, and after making rental payments over an extended period, they gain homeownership. Independent of the SHP, Senegal has an emerging real estate market that attracts global capital speculating on it as an investment. The SHP encourages private companies to transform informal housing in slums into permanent high-rise, low-cost housing built alongside more upscale luxury estates. This results in a

peculiar phenomenon where speculation takes place right beside the low-income social housing spots.

Senegal's social housing agenda then sits within two broader trends across Africa: first, efforts to extend social protection or welfare to those who had previously not had access; second, urban speculation and capital accumulation that in major African cities are attracting global real estate capital. How does the social housing agenda incorporate the social welfare intention with the speculative impetus? What are the assumptions and imperatives behind it? And on the ground, how has everything unfolded? What technologies or bureaucracies are people involved in with the latest social engineering, and how are they engaged with them? And how does the new social housing project reshape their household dynamics and everyday life?

My research answers these questions through a three-month ethnography exploring in detail the conceptualization, planning, and implementation of one slum-to-social housing project, the Baraka Cité. Led by state and international organizations and funded chiefly by an Egyptian real estate developer, Baraka Cité is the flagship project of the SHP, and its implementation is promoted as a model example in subsequent social housing projects. My research demonstrates that the social housing project in Senegal is not only a pragmatic policymaking. It is more about the emerging new ways of reasoning about distribution and accumulation.

Haunting Wounds: Sexual Violence, HIV, and Embodied Memory among Women in Post-Conflict Tigray, Ethiopia

This study uses an anthropological perspective to explore the "ghostly" impact of sexual violence and HIV infection on post-war women in the Tigray region of Ethiopia. In the Tigray conflict from 2020 to 2022, systematic sexual violence was widely used as a weapon of war, and there is clear evidence of deliberate HIV transmission (Human Rights Watch, 2021). Drawing on structural violence (Farmer, 2004) and embodied trauma (Das, 2006; Fassin, 2007), this study analyzes how sexual violence and the resulting HIV infection continue to affect women's physical experience and social interaction as a "ghostly" existence. In the context of the collapse of the formal medical system, many survivors try both modern medical treatments and traditional or religious therapies, such as sacred water healing rituals (Gebremichael et al., 2023). These multiple medical practices reflect complex cultural logics and highlight women's agency and vulnerability in a context of scarce medical resources. The concept of "haunting" (Stoler, 2013) is used as a metaphor to explain how traumatic memories, shame, and unacknowledged community stigma profoundly affect the lives of surviving women, manifesting as physical pain, psychological trauma, and social silence (Gebremichael et al., 2023). In terms of research methods, this study combines ethnographic reports, survivor testimonies, and non-governmental organization literature to explore the intersection of violence, disease, and memory in a fragile post-war social environment (Human Rights Watch, 2021). By examining how the intangible legacy of war sexual violence is engraved on women's bodies, this study contributes to the extensive discussion in anthropology about the lasting impact of conflict and how communities face trauma and its "ghostly" aftermath.

Infrastructure of 'Incompleteness': Small-Scale Money Transfer in South Sudan

Drawing on ongoing collaborative ethnographic research, this paper offers an analysis of the history, context, and work of a locally-run money transfer organization operating at the center of this uncertainty in war-impacted South Sudan. The organization was founded by South Sudanese development professionals and entrepreneurs to link up and offer financial services to the people most impacted by recent conflict: giving unbanked, displaced, and disconnected communities a means to connect. The small-scale but widely dispersed alternative infrastructure has deliberately operated outside the purview and between the gaps of state-led and humanitarian aid initiatives. Its usage demonstrates how new forms of community, connection, value, and futurity are conceived and enacted both in the face of and through the conditions of conflict. Drawing inspiration from Francis Nyamjoh's notion of "incompleteness" and thinking with ideas of futurity and becoming, I suggest that the endeavor's success is attributable to its defiance of categorization and refusal of extant frames for development, recovery, and peace-making. It offers a view into the means by which people navigate ever-changing (and seemingly impossible) circumstances and operate beyond the confines of humanitarian and state logics in ways productive for postcolonial theory.

Privilege or Pressure? Black American Migration to the Global South

Migration is often framed as either a forced response to hardship or a privileged choice enabled by economic stability. But what happens when migration is both? My research explores how Black Americans-particularly women-navigate this spectrum, balancing privilege with pressure in their decisions to leave the United States.

My study examines privileged migration, focusing on Black American women as a distinct subset of migrants who benefit from favorable legal, social, and economic conditions in host countries. While scholars such as Benson (2015) and Cranston and Duplan (2024) have examined how privileged migrants use their socioeconomic status to bypass bureaucratic barriers, fewer studies explore how race and gender shape these experiences. While some Black Americans relocate for leisure, others feel pushed out of the U.S. due to racial injustice, economic insecurity, and political instability. Rathod (2020) describes this as pressured exit-when migration is not legally forced but remains necessary for emotional, physical, or financial survival.

The "Blaxit" phenomenon-the voluntary migration of Black Americans seeking refuge from systemic racism-demonstrates the complexity of privilege. As Korpela (2020) and Croucher (2009) argue, Black Americans in Mexico experience a dual reality: their economic stability allows for relatively smooth integration into expatriate communities, yet their racial identity complicates full social acceptance. Hercog (2014) highlights how Black migrants must navigate Mexico's racial hierarchies, shaped by colonial histories and colorism, despite their financial privilege.

Additionally, digital platforms and expatriate networks facilitate privileged migration. Polson (2016) notes that geo-social media enables migrants to maintain transnational connections and construct identities that bridge their home and host countries. These online communities provide Black American migrants with vital support systems, helping them negotiate belonging in a new sociopolitical landscape.

My research also examines how migration policies reinforce privilege. Cranston and Duplan (2024) argue that visa systems systematically favor skilled professionals and retirees, creating structural advantages for those with financial capital. However, as Croucher (2012) suggests, these policies reflect broader global inequalities, granting mobility to economically valuable migrants while limiting opportunities for less privileged groups.

By integrating perspectives from anthropology, sociology, and migration studies, my research contributes to the discourse on race, privilege, and global mobility. It calls for further investigation into how intersecting identities shape migration experiences and urges policymakers to consider reforms that promote more equitable migration frameworks.

The role of agriculture in small-scale farmers' aspirations under the paradigm of food system transformation: the case of East Usambara, Tanzania

Small-scale agriculture remains foundational to food systems across sub-Saharan Africa. However, the progressing climate and environmental crises and turbulent societal, economic and political changes pose interlinked risks to its future. In response, national and international development agendas increasingly advocate for food system transformation. Although food system transformation requires fundamental change in how the food system works, related policies often put the economic profitability at the forefront. Thus, food system transformation often materializes through top-down mechanisms, such as agricultural commercialization and the establishment of farming blocks, that require substantial shifts in small-scale farmers' (hereafter, small-holders) ways of life. Yet, the interests and aspirations of the small-holders are frequently underrepresented in such policies.

Our contribution critically explores how food system transformation aligns, or fails to align, with small-holders' aspirations. Drawing on the capability approach, aspiration theory and oral history interviews conducted in East Usambara, Tanzania, we unpack how the aspirations of small-holders evolve over time. Moreover, this approach enables to investigate the underlying values, norms and meanings that small-holders ascribe to agriculture and how they understand it in relation to their own aspirations and aspirations for their children.

Through this lens, our analysis reveals that small-holders predominantly aspire toward improving their farming practices, diversifying livelihoods, enhancing living conditions, and providing life opportunities for their children through education. Even when aspirations extend beyond agriculture, small-holders often frame their engagement in agriculture as critical for their achievements. For many, agriculture is not merely viewed as a means of subsistence and source of

income. Instead, the life stories of small-holders unravel that it is deeply embedded in social norms, personal identities, and intergenerational expectations. Importantly, being a farmer is often closely tied to notions of self-reliance, independence, and agency. This is well demonstrated through exploration of small-holders' aspirations for their children. Although they desire good education and mostly non-agricultural employment for their children, small-holders often emphasize that they should maintain a connection to farming (although the forms of the engagement may vary from the present practice of the respondents themselves), recognizing it as both, the social safety net and the cultural anchor.

We argue that current food system transformation mechanisms, driven by economic restructuring and often premised on small-holders transitioning into laboring on large farms, might undermine the sense of agency that small-holders ascribe to their farming. Ultimately, such approaches may disrupt social fabric and reinforce dependency, rather than fostering empowerment and autonomy.

Wartime Ghosts: Zimbabwean Soldiers in the Democratic Republic of Congo (1998-2002)

War is not just about visible soldiers as perpetrators, but it is also about ghosts in the terrain of war threatening and intimidating combat activities. In this paper, I am interested in exploring how soldiers were made to believe in the existence of ghosts in the deployment of the Democratic Republic of Congo war. The subjective experience of ghosts in war, is not imaginary, but its realities is understood through the threat of death and dying. The paper draws from an ethnography of war, which understand the war from the vantage point of those who participated in it, and experienced it. The paper is based on Zimbabwean soldiers who were deployed in the Democratic Republic of Congo war (1998-2002).

"Every Reason Why My Ancestors Sent Me": The Field School as a Rite of Passage and the Black Perspective Towards New (Bio)Archaeology.

The roots of anthropology grew from the seeds of colonialism and went on to sprout various branches that prioritized Western standards and intellectual thought. As the field works toward decolonization, diversification should be at the forefront. Black bioarchaeologists and biological anthropologists focusing on the African Diaspora work to tell the story of their ancestors, bridging the past and the present. As the field school is often required for a career in archaeology, it is vital to acknowledge that the experience during this rite of passage can affect a student's desire to continue this path. Black students interested in this work must consider the uphill battle of pursuing higher education in a field that was rooted in colonialism with the introduction of possible foreign travel and living amongst strangers. Further, the experience may be intensified if a student's first dig includes human remains and possibly working around the spirits of their own ancestors.

With the Kendrick Lamar lyric "every reason why my ancestors sent me", Black feminist thought guides my reflection on attending 5 (bio)archaeological field schools. Perspectives include my motivations for attendance, other students' motivations, as well as the motivations of directors to host a field school. Choosing my first field school, location was my main driving factor along with simply wanting to be around bones. Wanting to gain more experience as well as deciding to study the field school as a rite of passage, I found myself attending four additional field schools. From the first field school to my last, my motivations changed greatly after having met many students at various points in their educational journey as well as learning from various directors with different motivations and goals.

My travels included different styles of accommodations, weather, work, project types, and the full spectrum of learning environments, from the educationally focused to the 'frat party atmosphere' that many students and studies have reported. But at the forefront was a glaring lack of representation. In addition to my autoethnographic work, my research includes a survey and semi-formal interviews to understand the experiences of other Black archaeologists and biological anthropologists. Already found are common experiences related to racism, microaggressions, exclusivity, and other experiences that have caused Black students to leave their field school prematurely. The goal is to analyze the collective voice of Black archeologists to identify the disconnect between field school diversification efforts and their perspective attendees in order to inform future field school directors and policy makers. Diversification efforts, motivations, and ethics should be revisited in regard to the field school as a community of practice and any field experiences that include the handling of human remains. If also accepted, my Poster would dive deeper into my data collection and analysis.

8776 Association of Latina/o and Latinx Anthropologists (ALLA) Business meeting

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** St. Charles (41st Fl)

Type: Special Event

This is a meeting of the Association of Latina/o and Latinx Anthropologists (ALLA) membership. During this event, we provide updates to the entire organization, including awards and recognitions. We also seek nominations for future board members at business meetings. We vote on key decisions to help sustain and grow our organization.

1893 Biodiversity Justice Beyond the Hotspot: Plurality, Plasticity, and Contradiction in Biodiversity Governance

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Galerie 1

Type: Oral Presentation Session

This panel explores the fluidity and multiplicity of species' statuses beyond the bounds of biodiversity hotspots. While dominant conservation paradigms often seek to stabilize biodiversity through rigid classifications – e.g., protecting the "native" and expelling the "invasive," – this panel interrogates how policies and ecological governance engage with unstable, plural, and contested understandings of species, asking what a more just biodiversity agenda could look like.

Biodiversity has long been an object of concern within global conservation, often oriented towards maintaining a sense of 'stasis' (Kirksey 2015; Biermann and Mansfield 2014). Most biodiversity initiatives are sealed within legal and material containers protecting charismatic 'native' species in hotspots and reserves – artefacts of natural romanticism, modernity, and, in many contexts, colonial dispossession (Heatherington 2012; Büscher and Fletcher 2019). These frameworks can reduce species' value to either admiration from a distance, or matter-out-of-place that must be expunged. Designations become foggier outside the simplified logics of sanctuaries as non-humans traverse porous boundaries, crossing between hotspots and 'ordinary' sites of production and human habitation, challenging fixed categories (Cattellino 2017). An endangered species may morph into a danger; a valued animal intruding beyond its bounds may be designated a pest; an 'invasive' species can enter commodification regimes and be autochtonized.

As calls for justice extend beyond the human into the more-than human, the species-out-of-place emerge as a site for negotiation away from static constructions and toward more plastic understandings of non-humans and more-than-human sociality (Chao et al. 2022). Governance must grapple with and adapt to these complexities, encompassing diverse and contradictory understandings of species, and craft policy and practices that foster plural more-than-human relations beyond biodiversity hotspots.

This panel aims to generate discussions around what a more inclusive and just biodiversity agenda could look like, appreciative of the contradictions of care and the complications that come with heterogenous relations with non-humans (Davé 2022). We aim to take seriously the potential threats posed by non-humans to particular valued forms (agriculture, human health, endangered species), but wish to consider the power-laden processes through which species' value emerges, who may construe a nominally invasive species as an opportunity, a pest, as a valuable resource, or, indeed, a 'contradictory' mix of the two.

We ask: how can plural understandings of non-humans be accommodated into biodiversity schemes? How can contentious and often violent more-than-human sociality be reckoned with through policy? What are the limitations and allowances of biodiversity as a matter of concern? We

are motivated by the question of a pest, for whom?

Presentation(s): Wasting Governance: How to Throw Away a Crab in the Venetian Lagoon

In the Venetian Lagoon, the blue crab – a recent arrival from the west Atlantic – defies categorization and challenges biodiversity governance. No one talks seriously about eradication; control and containment falter in practice. Commercialization has been proposed to replace lost fishing incomes and manage populations, with a problem: not many want to eat them. Instead, blue crabs mostly get tangled in fishing nets, wash up on beaches, and are unsold leftovers at the fish market. They become waste – facilitated by policy but not quite of its design.

Based on ethnographic fieldwork, this paper examines how waste emerges as a contingent and provisional mode of biodiversity governance. Classified as *rifiuti speciali* (special waste), blue crabs must be disposed of by fishers at their own expense. Waste collapses the crab's other statuses – pest, resource, food – into a single, actionable form, while outsourcing ecological purification labor to precarious, semi-compensated fishers.

Unlike eradication campaigns, wasting is not a targeted strategy but an emergent effect of working in the lagoon in uncertainty – not so much a technique of management as a matter of excess. Yet some crabs slip outside this logic; given away, thrown back, or left to rot, these moments of non-waste hint at the instability of species' values and categorizations. In tracing how blue crabs are wasted, I ask what it means to govern a species through disposal.

Presenter(s): Emma Cyr

Governing Goats: Making and Maintaining a Pest

Goats were released in Aotearoa (New Zealand) by colonists who enlisted them as aids in the process of colonisation. Since then, their belonging in the nation has been contested, swinging between 'widely acknowledged as a menace', cherished as a resource, and seen as a familiar part of the environment. Now, they are variously culled in great numbers, herded for export, and kept on farms – a series clashing interpretations and practices. Their appetites do pose significant problems for the slow-growing vegetation in Aotearoa, and there are now increasing ambitions to eliminate goats across the mainland that seek to standardise interpretations of animals to render them 'killable' as a pest species.

This paper will examine the power-laden construction of categories governing non-humans, such as pest and invasive, focusing on the contestations around governing wild goats. I attempt to think about how non-humans are constructed as a 'pest' by intentionally narrowing the scope of its relational possibility, silencing and excluding those who find alternative value and meaning in

animals in favour of a singular threat – in other words, how 'pests' are made and maintained. I draw upon long-term ethnographic fieldwork with various actors engaged in the complex efforts to govern goats in Taranaki, Aotearoa, discussing how officials, goat herders, hunters, and others negotiate with and around feral goats to govern their future, both in formalised policies and informal practices.

Presenter(s): Gabriel Urlich Lennon

Other genes: Feral cattle and their opponents in the Parque Nacional los Glaciares, Patagonia

For about a century, feral cattle—known as [i]baguales[/i] in Argentina—have inhabited Parque Nacional Los Glaciares in Patagonia. Their presence in the national park is the result of the abandonment of cattle farms that once operated in the area. Although their arrival predates the creation of the park, [i]baguales[/i] are perceived by park authorities as a species out of place and are subjected to various forms of violent "eradication." Drawing on the insights of Argentine geneticist Rubén Martínez, with whom I've been traveling to Patagonia, I will show how a subversive reading of genetic categories can challenge this narrative and reframe [i]baguales[/i] as an endangered species worthy of protection. Finally, I will describe [i]baguales[/i] as part of a wider inter-species collective ridden with tensions, unbalances and contradictions.

Presenter(s): Valentina Bonifacio

A walrus in the city

In summer 2022, a young walrus entered the fjord outside the capital city of Oslo, Norway. Ordinarily resident on the ice floes off Svalbard in the high Arctic Circle, 'Freya'—as she came to be known—had left her herd and gone astray. Freya nonetheless made herself at home, hauling out on vessels of wealthy boat-owners and sunning herself on beaches and jetties frequented by Oslo's summer swimmers. Freya quickly attracted a following, beloved for her 'subversive' spirit and the photo opportunities she provided.

It was sadly not to last: Freya was eventually deemed too much of a danger to people, and quietly euthanized by the authorities to considerable public outrage. This paper examines Freya's presence and death in terms of spatiotemporal ferality: a protected species from a protected habitat, Freya nonetheless became vulnerable once she migrated from her designated hotspot in Svalbard. Freya's southward migration and interactions with humans not only symbolized broader environmental, temporal disruptions caused by climate change, particularly the rapid transformations in the Arctic, but literally brought them to the door of the capital, where policies are made that are supposed to protect habitats like hers. Read as an emissary from the margins to the centers of power, Freya's unexpected appearance in the Oslofjord materialized habitat loss and the way species who leave such deteriorating hotspots are ultimately unwanted, interpreted as the 'wrong kind' of biodiversity.

Discussion

1865 Challenging Ghosts: New Books by/with Disabled Bodyminds

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Gallier AB(4th fl)

Type: Roundtable/Town Hall

The anthropologist Cassandra Hartblay developed the concept of "disability expertise" to describe the talents of disabled people and their allies—how they innovate, illuminate, and subvert in the struggle to survive, thrive, and live with joy in the face of structural and interpersonal ableism. In this panel, we extend this concept to the discipline of anthropology itself, where ableist ghosts continue to haunt a recognition of both the violent histories as well as creative methods and theories that evolve through and around disability expertise. We build on the foundational insights of Avery Gordon whose powerful use of the metaphor of "ghostly matters" amplified awareness of how the suppression and afterlife of violent racism continues to haunt the social sciences (1997).

Our participants have all published new books in 2024-25 by/with disabled bodyminds – books that bring lessons from these experiences in world-building to challenge the ghosts of ableism that have shaped our field: removal of disabled family members to institutions (Burch 2021, Rembis 2024); the "ugly laws" barring physically disabled people from urban space (Schweik 2009); historic exclusion from education and the rise of segregated "special education" (Friedner 2015); medical experimentation on disabled bodyminds (Nakamura 2013), and more. The recent books in our panel intervene in some of the most exciting and urgent conversations in our field: on the nature of communications, on the politics and ethics of design, on relationality and its power and limits. Instead of "author meets critics," our format is "authors meet authors," reflecting the interdependent and collaborative nature of our work and the broader contributions that these books, read together, can make to diminishing the ghostly presence of ableism in our field.

1969 Curiosity: Anthropology and/after Ian Hacking

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR C2 (3rd fl)

Type: Roundtable/Town Hall

It has become a commonplace for anthropologists to draw inspiration from philosophy. This traffic of ideas have only rarely worked the other way round. There are some exceptions, most notably Ludwig Wittgenstein, and Gilles Deleuze and Felix Guattari. And then, there is Ian Hacking. Hacking was a versatile thinker and a prolific writer covering a wide range of topics. As he explained in several interviews, what tied together these diverse topics was his curiosity. "Curiosities for the Ingenious" is also the motto of one of his books. In his oeuvre, Hacking was inexhaustibly curious about anthropology. Throughout his life, he was in an extended conversation and collaboration with numerous anthropologists, while drawing on their work, ranging from Mary Douglas, Philippe Descola, Bruno Latour, Paul Rabinow, Michael Lambek and Scott Atran to name a few. This roundtable is the first systematic attempt to interrogate Ian Hacking's lasting and ingenious curiosity about anthropology. In turn, drawing on this curiosity and the themes Hacking explored (including biosociality, classifications, language and incommensurability, laboratory science, making up people, memory, probability, styles of reasoning), it asks: What might an Ian Hacking-inspired curious anthropology look like?

3348 Dynamic Expressions of Lived Religion in Africa and the Diaspora

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 2

Type: Oral Presentation Session

This panel explores the dynamic expressions of lived religion in Africa and the diaspora, focusing on how individuals and communities experience, practice, interpret, and re-interpret their faiths in diverse contexts. The presentations delve into issues surrounding spirituality, ritual, social change, and identity, and they explore the intersection of religion with politics, language, economics, and culture. Examining case studies from Tanzania, South Africa, and diasporic communities in the United States and Puerto Rico, the panel highlights the fluidity and adaptability of religious practices and beliefs across different African and African diasporic contexts. In these varied spaces, ghosts of history continue to haunt the present, while contemporary actors grapple with those ghosts in active and creative ways. The religions addressed in the panel range from Islam and African traditional religions to innovative interfaith practices linking Judaism and Christianity. Through this intentionally broad scope, the panel aims to offer new insights into the multifaceted nature of lived religion, employing innovative methodologies and engaging with underrepresented perspectives.

Presenter(s): Alma Gottlieb, University of Illinois, Urbana-Champaign, Department of Anthropology, Zolani Ngwane, Haverford College, Department of Anthropology, KD Thompson, University of Wisconsin, Madison, Samiri Hernandez-Hiraldo, Florida Agricultural and Mechanical University, Department of Sociology and Criminal Justice

Discussant: KD Thompson, University of Wisconsin, Madison

Presentation(s): Re-thinking Afro-Jewish Relations via the Passover Seder

Since 2006, a large and ever-changing group of diasporic Cape Verdeans (mostly, Catholics of color) and U.S.-born Jews (mostly, White Ashkenazim) has celebrated the Jewish holiday of Passover together in Boston. In so doing, they annually reconfigure the classic part-family dinner/part-history lesson/part-prayer session that, for the better part of nearly 2,000 years, Jews worldwide have known as the Seder. The traditional Seder embodies Victor Turner's definition of a "ceremony"—aiming to symbolically confirm what we already know. In this talk, I argue that a diasporic version of this holiday often transforms the experience into a "ritual" producing personal transformation in some participants. It does so on several registers—historical, emotional, sociological, and political—as an annually re-written Haggadah text challenges participants to rethink what they thought they knew about Cape Verdean history, Jewish history, and racial politics. At the Seder, some Cape Verdeans discover that an unanticipated haunting of Jewish history inserts itself in the present, redirecting historical memory.

Ethnographically, this talk offers a refreshing glimpse at a traditional Jewish holiday reinvented in unexpected ways, in unexpected places, and among unexpected participants. Theoretically, the talk challenges us to rethink the nature of religious experience via dynamic innovations linking past and present, and homeland and diaspora.

Presenter(s): Alma Gottlieb

“It is our religion”: Debates about the Circumcision rite as a religious practice in South Africa

Colonial and missionary onslaught on the Xhosa circumcision rite in 19th-century South Africa was often justified based on ethnographic texts that associated the practice with primitive religion. In recent times, and in the context of debates about HIV/AIDS prevention, the move by the government to regulate circumcision provoked a negative response from the Eastern Cape House of Traditional Leaders, which viewed such a move as an incursion into its legitimate domain – a contamination of tradition with modernity. Using the same 19th-century ethnographic texts as evidence, they argued that circumcision was a deeply sacred part of African traditional religion. This paper traces these revisionist arguments as part of an exploration of the rise of claims about African traditional religion in the context of post-apartheid nation-building discourses in South Africa.

Presenter(s): Zolani Ngwane

Navigating Religious Diversity: The Role of Nondenominational Islamic Radio in Tanga, Tanzania

This presentation explores the diverse Muslim denominations in East Africa, focusing on the role of Radio Nuur, a nondenominational Islamic radio station in Tanga, Tanzania. Historically, Tanzanian Muslim authors have depicted harmonious relationships among Muslim groups before colonialism and independence. However, post-independence conflicts, such as the government's ban on the multiracial East African Muslim Welfare Society and the creation of the Supreme Council of Muslims, have strained these relationships. My ethnographic research in Tanga reveals a complex landscape of Muslim denominations, with Radio Nuur serving as a focal point for discussions of what nondenominationalism might look like. The station's nondenominationalism allows it to reach a broad audience, reflecting a trend of religious fluidity and inclusivity. Yet Tanga is still haunted by not only past sectarianism but also ongoing anti-Shiism. My presentation highlights how ordinary Muslims—both radio staff and listeners—navigate their religious identities and relationships in this dynamic social landscape.

Presenter(s): KD Thompson

Alzando la voz (Raising Our Voice): The Spirited Activism of Afro-Puerto Rican Women

This paper examines the religious and spiritual experiences of Black or Afro-Puerto Rican women across three distinct religious traditions in Puerto Rico. It highlights their roles within and beyond their religious communities, the character of their ritual practices, and their distinctive relationships with the supernatural as interpreted and adapted by women. Additionally, it explores how these experiences intersect with the broader sociopolitical landscape of contemporary Puerto Rico. A growing movement toward re-africanization signals a cultural and spiritual revival that challenges ongoing processes of nationalization, U.S. colonization, and the influence of U.S. cultural norms. This revival unfolds amid pressing societal challenges: land and housing displacement driven by foreign investment, environmental degradation accelerated by climate change, systemic mismanagement of education and healthcare funding, a significant exodus of young professionals, a troubling decline in the child population, rising rates of femicide, and the continued underrepresentation of dark-skinned Puerto Ricans in key professional and political

roles. This paper explores how these structural and cultural dynamics influence and are influenced by the spiritual lives of Afro-Puerto Rican women within their communities. While limited in scope, it aims to lay a foundation for further inquiry into the critical intersections of gender, race, spirituality, and sociopolitical transformation.

Presenter(s): Samiri Hernandez-Hiraldo

4314 Ethnographic Vignettes and the Writing Self

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 10

Type: Roundtable/Town Hall

Fiction author Siri Hustvedt (2012) writes about an inner self that emerges when we read, an internal narrator, a "new voice" with rhythms and pauses that exists both outside and within ourselves. Viet Thanh Nguyen (2025) has recently reflected on the otherness of writing. He urges us to consider both language and the self as others, positing that "having an acute sense of this otherness in relation to one's own being and to language is necessary to become a writer"-a point that resonates with long-standing post-structuralist debates on authorship and intertextuality. As ethnographers, the questions of selfhood, reading, writing, and language become even more complex. Our otherness is shaped by the relationships we create, nurture, and-why not admit it-fictionalize when our interlocutors transform into characters on the pages we write. This otherness is perhaps most acutely displayed in the vignette, which at once inhabits the scene of participant observation and translates our field notes into literary form, while serving as a key rhetorical device in ethnographic writing.

In this roundtable, we aim to create a space for encountering the writerly others within us through each other. Participants will bring short vignettes of 300-500 words as stand-alone pieces, allowing others to engage with the vignette without first providing a conceptual, theoretical, historical, or geographic frame. This exercise draws inspiration from understanding the vignette as a literary and artistic genre. The etymology of "vignette" traces back to its original French meaning: designs in the form of vein tendrils that once adorned the covers of books. As the meaning of vignette shifted from books to photographs, it came to represent a small portrait with blurred edges, leading to its contemporary interpretation as a "literary sketch." How can listening to each other read our ethnographic vignettes help us attend to the "blurred" edges that frame them? What modes of visual and other sensory representations does the vignette rely on? How can such representations evoke the beat of movement and life that the figure of vein tendrils suggests? What is the relationship between the vignette and the materiality of ethnographic texts? Our discussants are two writers whose creative practices have pushed the boundaries of genres and will drive us in an embodied reading of ethnographic vignettes.

3787 From Bodies to Objects with/out Value

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Oral Presentation Session

In early anthropological collections, categories such as "tool," "ritual," and "weapon" came to define the relationships between humans, matter, and technology. However, the presumed boundaries between the social and technical dissipate as we delve further ethnographically and historically into the histories of bodies and earthly matter. Drawing inspiration from, while also challenging, Mauss's proposition that "the body is man's first and most natural instrument" (1937:75), this panel examines the body not just in terms of aptitude, technique, and habituation, but also through its materiality, valuation, and objectification. In an era of automated technology replacing manufacturing, service, and clerical labor, bodies themselves become doubly eclipsed as they are technologized and reduced to the capacity of their labor, particularly within informal, agrarian, and extractive economies.

How do bodies and earthly matter traverse the boundary between subject and technical object, acquiring or losing value through processes of commodification and labor extraction? Under what conditions might the materiality of labor come to coalesce with the materiality of bodies? These questions become increasingly urgent as we witness the abstraction of human capacities into technical functions, mirroring the historical processes of the commodification of enslaved persons into fungible objects. Our papers examine the transformative processes of the devaluation of bodies and (dis)abilities to the construction of value in matter and objects. We aim to spark a conversation about how different types of matter are involved in value systems that blur the traditional divide between human subjects and objects.

Presentation(s): Amortization of Bodies: Labor, Disability, and Becoming Accidental in the Soma Coal Basin

Soma miners experience and understand labor not as compensated working time but as a compulsory life-activity that diminishes the value-generating power of one's body within financialized everyday life. Drawing on 18 months of ethnographic fieldwork and 68 open-ended, semi-structured interviews conducted in the Soma Coal Basin of Turkey in 2018–19, I call this phenomenon the "amortization of bodies": the lived experience of one's body as a corporeal asset within an insurance calculus—as calculated, compensated for, and factored into a kind of amortization process. This conception is in conversation with, and distinct from, the analyses of the capturing of the future through credit, indebtedness, or coins. As it pertains to bodies that are concrete, and whose capacities are often unpredictable, the amortization of bodies describes how the present (of bodies and subjects) is seized and depoliticized through a constellation of labor conditions, the medicalization of disability and debility, welfare and pension policies, and future-oriented credit schemes. This paper focuses on one part of this constellation: the labor-related and medical ways in which corporeal unpredictability is governed within neoliberal capitalism, shaping how miners experience their bodies as amortized. I draw broader conclusions about the subjective experience of labor and financialized everyday life for the populations who work in the most precarious conditions within contemporary capitalism.

Incommensurable Absences: Intimate Labor Migration between East Java and Hong Kong

This paper explores the idea of migrant absence and the form that it takes in urban Hong Kong and rural East Java. While migrants' everyday presence in their employers' homes is felt through the proximity of their intimate labor – preparing meals, laundering clothes, dressing and feeding children, elderly caretaking – they are simultaneously rendered as 'matter out of place' (Douglas 1966) and discarded to the margins of the spatially dense city. Parallel to the invisibilization of their care work, migrant bodies are simultaneously made to be unseen by local Hong Kong citizens, as they are required to sleep in closets or cupboards in their employers' homes and sit along sidewalks and underneath bridge overpasses on their days off. Comparatively, despite the migrants' extended physical absence in their sending villages, they remain ever-present within the everyday discourse, imaginary and planning among their kin who anxiously await their remittances and eventual return. Conversations with husbands, aging parents, and teenage children whom they left behind as newborns revealed that the material markers of success – migrant houses, motorbikes, and land – are not commensurate with a mother's actual presence. Taking a semiotic analysis to think through migrant bodies out of place in Hong Kong's urban landscape alongside uninhabited migrant houses in their rural sending villages, this paper attends to the anxieties generated from these 'constitutive absences' (Deacon 2012).

Presenter(s): Lai Wo

(Not) Being There: social reproduction and social (im)perceptibility

This paper explores bodies which both are and aren't really there. It focuses on the irregular migrations of Romanian Roma to North America in search of political asylum and economic

prosperity. When they get to the US Roma people often come to rely on informal economies. The most visible of these is begging—a mode of labor that depends on the objectification of the begging person's body in anticipation of onlookers' empathy.

But those same bodies that are used to epitomize destitution are redeployed to signal prosperity to Roma relatives, both in the US and in Romania. On social media, in phone calls, and in the remittances people send home, what is embodied to Roma publics is not destitution, but affluence. How do individuals' bodies traverse within the course of one day, every day, the glaring distance from recipients of charity to embodiments of success? How does this transformation produce value? How do people use it to mutate from subject to object and back again?

What does a focus on the body reveal about the perilous journeys my Roma interlocutors undertake? Journeys that are about being either scrutinized or unseen, but rarely anything in-between; about political vulnerabilities and the absence of papers to document it; about sickness and the lack of access to medical care; about relatedness—a resource and a predicament, material and affective; and about the extent to which people who exercise little control over their circumstances control their bodies instead

Presenter(s): Anamaria Berbec-Chiritoiu

Rhythms of Plantation life: The corporal reality of time, health and labour in tea plantations of Assam

The paper explores time as an axiom to understand how labouring bodies are made fungible through experiences of health, healthcare and labour relations within tea plantations of Assam. It asks what time means within a plantation system and uses the daily schedule of workers as a vector to understand how experiences of health are embedded within the material reality of plantation life and the extractive production process. It looks at time as constitutive of a plantation and engages with the oppressiveness of time to understand how the temporal corpus in a plantation has a bearing on the bodies of workers as it blurs the lines between the home and the workplace. The perception of time and the lack of rest becomes instrumental to understanding how labour conditions and 'rest time' or 'break time' don't have the same temporal division in a plantation. Time and rest as categories are re-looked at to ask who the 8-hour work day in the plantation context is made for and how is the labouring body then reproduced for the plantation economy. The paper looks at health through the operationalisation of time on labouring bodies. It analyses how rest during the work day and the plantation season is understood and experienced by the workers. Drawing on 16 months of ethnographic fieldwork at multiple tea plantation sites in Assam, the paper uses a political economy framework to explore how the corporal realities of plantation life structure the capacity to labour for tea workers.

Presenter(s): Devika Singh Shekhawat

A Geography of Risk: Cyclical Mobility and Value Transformation Pakistan's Mineral Economy

In the Hindu Kush Himalayan mountain region that span contemporary Afghanistan and Pakistan, shuttle-traders maneuver complex socio-spatial terrains, mediating between mineral extraction sites and urban marketplaces. This paper examines one such trading network, asking how its complexities expose fissures in conventional understandings of commodity circulation and value creation. Suggesting that a geography of risk—forming through repeated cycles of movement rather than linear progression—offers insight into rural-urban relations as they are refashioned amid fluctuating border regimes, I ask: What are the stakes of mobility as traders travers periods of violence and political closure? What kind of "value" emerges at this geopolitical juncture? And what forms of knowledge are activated and constrained in the social process of mineral trading? The transformation of Namak Mandi into a competitive marketplace where minerals converge from different countries forms the backdrop for theorizing how men from agricultural communities cultivate specialized expertise while managing significant uncertainties. Their movements—neither purely nomadic nor simply circulatory—embody a particular form of skilled mobility that simultaneously transforms the stones they transport and the socioeconomic connections they establish, destabilizing conventional distinctions between production spaces and market spheres.

Presentation(s): Beyond the "Friendship Grind": Developing Affection for Fictional Characters in Stardew Valley

How do people experience, draw meaning from, and get affected by relationships they form with characters while playing single-player, role-playing video games? What does this have to do with the mechanics of specific games, i.e., the things players do? Drawing from ethnographic observations of two Twitch streamers who play the game Stardew Valley, in-depth interviews with five Stardew Valley players, and over 150 hours playing Stardew Valley myself, I argue that while the game's relationship mechanics are based on quantifiable inputs and outputs that lend themselves to playing within a neoliberal framework (which I call the "friendship grind"), players only sometimes play within this framework. Players can also develop connections with Stardew Valley's non-player characters that lie outside and even challenge this framework.

This result has profound implications for how we define games. If a game's static mechanics are met with multiple, diverse, even unpredictable modes of player engagement, how does one even

begin to talk about what a game "is?" Taking inspiration from Thomas Malaby's semiotic contingency and Stanley Fish's reader-response framework, I argue that we might talk instead about what a game "brings," a word which allows us to integrate players' diverse reactions and interpretations into our understanding of games.

Experiential Emptiness: The Srebrenica Memorial and Missing Graves

Every year, individuals from around the world gather at the Srebrenica-Poročari Genocide Memorial and Cemetery to finally lay to rest the victims of the 1995 Srebrenica genocide. Over 8,000 men and boys were killed when the Srebrenica enclave fell, and their remains were left in mass graves nearby. Since the establishment of the memorial and cemetery in 2001 over 6,500 victims' remains have been interred. Yet for some, this final interment has yet to come. An embodied emptiness is evoked when seeing the empty plots, knowing the landscape still holds individual remains that have yet to be identified. Through ethnographic research on the memorial's foot traffic patterns, this paper aims to highlight how loss reverberates through Srebrenica's empty plots. For those who have yet to be identified, their presence remains in their absence.

Presenter(s): Emily Selby Smith

Ghosts of Moral Shortcoming in the Uncanny Valley

What exactly produces the uncanny valley (UV), or the feeling of discomfort in encounters with machines that almost, but do not quite, manifest humanlike presence? While most theories of the UV assume that this uneasiness arises precisely because the humanlike object is a machine, I argue that the UV arises from the way that humanlike machines function as a ghostly presence that reminds the human interlocutor of moral failings they have previously encountered in other's behavior. To do so, I draw on an experimental ethnographic methodology in which I have 1) designed an artificially intelligent virtual performer of free improvisation (a postwar avant-garde musical practice) based on participant observation as a performer of this practice and 2) subjected this system to the critique of human improvisers in Berlin, Chicago, and the San Francisco Bay Area. Many ethnographic interlocutors readily suggest that the system behaves as a phantom reembodiment of a human improviser who fails to uphold a central moral value that structures free improvisation: egalitarianism. More importantly, the claims interlocutors make about "egalitarianism" display a broad range of interpretations of this ideal. Furthermore, it is only in through encounters with a virtual improviser that these claims are openly enunciated, thereby indicating the presence of a variety of latent moral critiques that haunt improvisers in their ordinary interactions with one another. Moving beyond this immediately ethnographic context, I conclude on the question of where, how, and why ghosts of moral failure manifest themselves in humanlike technologies like artificial intelligence.

Presenter(s): Ritwik Banerji

Girls who grow up with ghosts: a hauntological approach in the study of right-wing politics among Vietnamese Americans

As critical scholars have long taught, the passage of time is neither linear nor aspatial, an important reminder for those of us who study the elements that give rise to ideology. The politics of the multiracial right especially necessitates a temporal alternative, given that our work must always take seriously local and co-constitutive formations of time, space, racialization, gender and many other axes of structural differentiation, for how an individual makes sense of this differentiation reflects in part with whom they link their fate. In this paper, I discuss how haunting can be a valuable framework for thinking about how time and memory are embodied across generations, and how those embodiments (i.e., ghosts) mold how an individual or community imagines their social worlds, especially if those visions are not collective or communal. I draw on preliminary ethnographic data to show the ways in which Vietnamese American girls who grow up in conservative Orange County, California, express being haunted by familial ghosts who experienced great suffering in various points throughout Vietnamese history. Inspired by Black and Indigenous feminist temporalities, necropolitics, and affect theory, I argue that anti-communist Vietnamese American families' perceived obedience to their ghosts have resulted, in part, in a toiling landscape in which their daughters are caught in and must negotiate multiple binds between local and societal expectations. I also show that in these binds, "cracks" appear in which possible futures are and have always been imagined. By amplifying these cracks, we may find opportunities to break from dismissing or pathologizing right-wing people of color, and to instead find opportunities to re-route pain and trauma into a politics of liberation made possible only through solidarity.

Haunting within Cosplay: Embodied Characters and Human Ghosts?

In Oshii's 1995 animated film "Ghost in the Shell," the cyborg Kusanagi muses on her individual humanity: "what if a cyber-brain could generate its own ghost, create its own soul all by itself and if it did, what's the importance of being human then?" In the film, the ghost refers to the human brain cells--the soul--of the human inserted into a synthetic body. The human haunts the machine; it is the diaphanous shadow of original human tissue lurking within the mechanical body. In Kusanagi's query and throughout the film, "Ghost in the Shell" asks, "what makes us human?," exploring this question along multiple dimensions.

If the cyborg is a unification of human and machine, what is the unification of human and fictional character? Using Oshii's metaphor, how do we understand the "ghost" in this particular "shell"? Cosplayers bring the lifeless to life. Are human cosplayers ghosts (or souls) within the characters they cosplay? Certain features of haunting, as outlined by Turner (2020)--suspending judgement between "real" and "unreal," a simultaneous presence and absence, categorical ambiguity when "ontological categories overlap" (p176), all of which may create an affective experience--describe cosplay. Cosplayers vary in the extent to which they are themselves philosophical about the union but, for some, cosplaying is an emotional experience. This presentation explores, philosophically, the dimensions of being human within the embodied characters of cosplay.

Intergenerational Differences in Malaysian Chinese Identity from the Perspective of Connections with their Homeplace in China A Case of the Tan Family

This study aims to examine the variations in the identities of Malaysian Chinese across generations and the process of identity mobility when they are connecting with their homeplace in China. This paper uses semi-structured interviews with ten Malaysian Chinese of different generations in one family to extract key codes through thematic analysis. The interviews address two main questions: firstly, to confirm and present their identity differences exist among different generations, and secondly, to conclude the main ways in which they connect with their homeplace in China and to delve into the process of identity reshaping during this connection.

Erstwhile most academic works on Malaysian Chinese identity have a macro-level perspective, focusing on the examination of social and political institutions while neglecting personal introspection and micro-level analysis (Yee Mei, 2023). This research will provide a micro-level perspective on the identity of Malaysian Chinese from different generations within a family in the context of family history, as well as exploring the possibilities of identity change for Malaysian Chinese in the process of connecting with the homeplace.

This study hopes to engage in a dialogue with several vital identity theory, as well as to explore the phenomenon of identity change among Malaysian Chinese in the new era, in the hope that it may trigger some new thinking.

Based on his experiences moving to Naples, Iain Chambers said that language, culture, and sense of belonging from hometown remain, but they no longer define life in a new location for migrants as him, instead, they haunt us with history, experience, voices, memories, and so on (Chambers, 1994). And this passage was quoted by Helen Guek Yee Mei to describe the identity situation that her father a second-generation Malaysian Chinese facing with (Yee Mei, 2023).

Knowing Emergencies: COVID-19 Dashboards and the (Unavoidable) Politics of Situational Awareness

In an emergency, it is key to know what is going on. From government officials issuing orders to health systems rationing supplies, to individual citizens taking up protective measures, emergency response relies on a mode of knowledge called situational awareness. During the COVID-19 pandemic, one key way such situational awareness was achieved was through "real-time" epidemiological data, typically published in public dashboards. Such web applications, which showed the unfolding dynamic through graphs, lists, and thematic maps, became iconic and much-used representations of the pandemic. At the same time, the quality of their representations has been disputed from the beginning, with dashboards criticized for outdated or inflated numbers, as well as for representing data in an affectively charged or misleading way. Drawing on 26 interviews with dashboard creators, my PhD research investigates the more-than-human constellations involved in this production of situational awareness, highlighting the contingencies, choices, and social and technological constraints shaping the capture and representation of the pandemic. It shows that because there is no such thing as an unmediated, direct knowledge of the unfolding emergency, what counts as "good" data is inextricably linked to what one intends to do with it. Building on STS research on representations in scientific practice and Critical Data Studies, I argue for recognizing the inevitable political aspects of producing this emergency knowledge rather than focusing primarily on the 'accuracy' of the data and its representation. Dashboards cannot provide a perfect, simultaneous depiction of an unfolding emergency. For a case to appear on a dashboard, it must pass through a long chain of mediators, each with its own limitations. This research illustrates that making an emergency understandable in real-time requires the interconnection of various elements that, through their mediation, determine how the emergency is ultimately captured and responded to. Since there is no perfect representation, the question of how to mediate emergencies becomes a political one. While the empirical study focuses on COVID-19 dashboards, the theoretical insight remains relevant in an era haunted by intense and ongoing socio-natural emergencies and crises. Following their extensive use during the pandemic, dashboards have gained the status of central media for situational awareness and are currently being adapted for various crisis dynamics. Uncovering the networks of human and non-human elements, as well as the social and technological frictions that shape these media and the situational awareness they enable, is crucial for finding ways of living with future (health) crises.

Presenter(s): Franziska Zirker

Moving On From Gang Membership in Los Angeles: Tattoo Removal

The presentation is based on evaluation research for a non-profit tattoo removal clinic which assists former Los Angeles Latino, Black and Asian gang members to erase the visual signs of their gang affiliations by removing their gang tattoos. The research shows how tattoo removal is a way of moving on from gang membership and leaving this part of the interviewee's lives behind. The physically painful and lengthy process of tattoo removal requires strong motivation and commitment to go through the process.

Individual interviews look at the hurdles and motivations to remove of Los Angeles ex-gang members to remove their tattoos. It sheds lights of ex-gang members individual aspirations for a different life style away from the violence of gangs and hope for a better future their children and the young generation of Angelenos.

Presenter(s): Gabriele Kohpahl

7629 Ghost Busters: Understanding vulnerability and precarity as resources for resistance

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Oral Presentation Session

Last year, this IG proposed a similar session. We asked: what happens if vulnerability and precarity are conceived of as fertile-really necessary-grounds and resources for exploring resistance (Butler, Gambetti, & Sabsay, 2016)? We challenged ourselves and welcomed others to reorient and reframe discourses and understandings surrounding communities and nation states forced into living under precarious (im)material conditions. Panelists responded with new, intriguing, and humane formulations for what it means to be vulnerable, and what it means to resist (Deslile, 2024; Niesz, 2024; Ullman, 2024; Wright, 2024). They reminded us that "new" and powerful stories of resistance are formulated, written, and performed every day and everywhere people's bodies, dignities, cultures, and humanities are under assault; we learned that any story about vulnerable peoples living under precarious conditions is a story about resistance.

This year, the annual meeting theme is about past (and present) "ghosts" and their haunting grips on the present, the individual and collective imagination. This interest group wants to continue its exploration of vulnerability and precarity as necessary, rich grounds for thinking about and expanding what it means to resist and defy ghosts. We are making space for (counter)stories, theoretical insights, and epistemic considerations that center and honor people forced into vulnerable and precarious living conditions as embodied sources and resources of resistance, as living acts of defiance, and rejection of past ghosts that still dominate most of our institutions, policies, politics, and value systems.

It is important to reiterate that our adoption of vulnerability and precarity here stands in direct opposition of-in fact, it's a rebuke to-mainstream and paternalistic conceptions of the term as meaning or describing someone or a people as "passive (or in need of protection)" (Butler, Gambetti, & Sabsay, 2016, p. 3). As renowned essayist and novelist Ta-nehisi Coates (2021) puts it during a recent lecture, referring to people who were subjected to sexual violence as "rape survivors" (as opposed to victims) is not about "being politically correct" (or woke); it's about acknowledging an act of (embodied) resistance; it's about honoring a people's humanity and vulnerability in the face of catastrophe.

While the intended focus of this panel is on precarity and vulnerability as sources of resistance against ghosts in the US and abroad, proposals included in this panel speak to various forms of individual/group/community resistance to sociopolitical norms, policies, systems of education (broadly conceived). Given this current oppressive political climate, we contend that this IG's continued exploration of vulnerability and precarity can help us think about, develop, new or more suitable frameworks for understanding and resisting the resurgence of past ghosts that have haunted our lives these last few months.

Presentation(s): Refusing Inclusion: When DEI Meets Chinese Nationalism

How do Chinese international students—primarily middle- and upper-class, globally mobile subjects—make sense of DEI initiatives in North American universities? What forms of politics emerge as they navigate institutional discourses that both racialize and valorize them? This paper explores how their engagement with DEI reveals an ironic co-production of Chinese nationalism and the essentialization of "Asian culture" in U.S. higher education. Drawing on two moments of conflict between Chinese international students and a campus Asian Student Union (ASU), this paper examines how DEI logics become entangled with transnational politics. These moments show how a form of self-proclaimed vulnerability can emerge through compulsory legibility—being made visible only through narrow institutional frames like "Asian," "diverse," or "international." Rather than reflecting structural disenfranchisement, this vulnerability is articulated by students who feel misrecognized within liberal DEI frameworks. Chinese international students' refusal of institutional DEI is not a turn toward conservative politics, but a response to their ambivalent positioning. This claimed vulnerability becomes a political stance through which Chinese international students actively challenge dominant models of inclusion and raise new questions about how legitimacy and recognition operate in global education systems.

Recipes of Resistance: Community-Led Agriculture and Food Production as a Form of Personal and Communal Self-Care

Food is a biological necessity; perhaps because of this, its history is steeped in social rituals. These acts exist in all five stages of food production: production, processing, distribution, consumption, and disposal. This paper is founded on ethnographic, participatory action research carried out in

New Orleans, Louisiana, five years after Hurricane Katrina during the BP oil spill in 2010 through the current day in the urban agriculture movement in Milwaukee, Wisconsin. The initial study in New Orleans differentiated between quick onset disasters like a hurricane in contrast to the slower onset disaster of the BP oil spill. The research focused on three embedded case studies as well as dozens of individual interviews with members of the food system. This foundational work established the role food systems play in response to and preparation for critical change events. These stories offer us recipes for resistance to devastating and powerful political and environmental forces. This paper examines how communities like those of New Orleans and Milwaukee have worked to exorcise the demons of past disasters, both environmental and political, through urban food systems that call to the rituals and activities of the ancestors of the community. In this way, food becomes a tool for the reclamation of the community's spirit and a tangible entity for building more healthy, localized, sustainable, and resilient contemporary people facing modern life.

Presenter(s): Claire Menck

We are here today, and we will be here tomorrow: Joy of survival among the liminally legal migrants and asylum seekers in Japan

While an increasing body of anthropological research has examined the precarious lives of irregular migrants and rejected asylum seekers facing severely restricted rights, relatively few studies address how these individuals—those with what Menjívar (2006) calls "liminal legality"—actually survive and build lives in their destination countries, often for years. Existing research that highlights the resistive potential of liminally legal migrants, meanwhile, tends to focus on overt political actions such as protest rallies, community organizing, or labor strikes, positing these as representative forms of subaltern resistance. However, this emphasis overlooks the reality that most of these liminally legal migrants and asylum seekers do not overtly participate in collective action. The ghosts of a long-standing bifurcation in anthropological approaches to vulnerable populations—either emphasizing their socioeconomic desperation or romanticizing their political resistance (Constable, 2014)—must be challenged. This paper argues that this can be done through painstakingly portraying the everyday acts of survival of these "precarious" subjects and their allies, who strive to find joy in the mundane, and improve their conditions despite a permanently temporary legal status that bars them from full political or economic citizenship. Pragmatic tactics and flexible support networks are not merely about sustaining "bare" life but also about pursuing "good," fulfilling.

Presenter(s): Taku Suzuki

Scaling vulnerability: Exploring "inclusion" in the making of EU educational policy space

This paper explores the keyword of "inclusion" as constitutive of the "worlds" (Shore, Wright, and Però 2011) or "spaces" (Lawn and Lingard 2002) of the European Union's social policies, including education. Claiming often to aim to support "those with fewer opportunities," the EU constructs itself as a figure of parental care. To the extent that the EU has constructed a role for itself in

educational policy as part of its "scalar" European project (see contributions in Carr and Lempert 2016), it has done so through arguments about the "vulnerability" of industries, labor in a globalizing world, racially othered migrants not integrated into their communities, "European values," national identities, and the haunted nature of postcolonial Europe. Drawing inspiration from work that has sought to apply Judith Butler's work on vulnerability (Scheibmayr 2023; Tyler 2019), this paper traces through policy documents the development of "inclusion" in the EU from attention to poverty to concerns of diversity and inclusion in education. The ongoing nature of such projects points to the inability of the EU to achieve the invulnerability of its constituents, in part because of an ongoing refusal of these constituents to accept the proposed means and terms of those projects. The paper concludes with a consideration of how the vulnerabilities of the European projects of inclusion have intertwined the vulnerabilities of the European project and communities that it marginalizes.

Presenter(s): Jonathan Larson

Negotiating Vulnerability: University Autonomy and the Haunting of Authority in Turkish Higher Education, 1992-2016

This paper examines the transformation of university autonomy in Turkey from 1992 to 2016. Through a comparative case study (Bartlett & Vavrus, 2017) and drawing on interviews with former high-level officials, university rectors, and faculty members, I analyze how vulnerability functions as both a constraint and a potential resource for resistance. The findings reveal that Turkey's post-2016 authoritarian shift significantly diminished once-meaningful negotiation spaces for rectors, transforming how university autonomy is contested. The post-1980 coup design of Turkish university governance created a powerful central body (YÖK) and strong rectors. Drawing on Butler's (2016) understanding that "freedom can be exercised only if there is enough support for the exercise of freedom," I argue that the introduction of rector primaries in 1992 represented a mobilization that aimed to "create, keep, or open the platform for political expression itself." Faculty gained a collective voice in selecting the rector(s) would negotiate their 'double-layer vulnerability'. Rectors negotiated based on shifting constellations of individual traits, institutional culture, and political economy, reflecting Butler's insight that bodies exist in "dependency on other bodies and networks of support." However, post-2016, a 'black hole of authority' emerged, an overwhelming gravitational force, that consumed these negotiation spaces, university actors, and academic freedom.

3878 Ghost Waters, Living Currents: Hauntings of the Deep in the Struggle for Maritime Justice

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Nottoway (4th fl)

Type: Oral Presentation Session

The oceanic margins of the water masses of the world are saturated with ghosts. Along the coasts, beneath the waves, and within the currents, hauntings of extractive colonialism, racial dispossession, and epistemic erasure linger-shaping how marine and coastal environments are governed, inhabited, and imagined. This panel brings together anthropological engagements with the spectral life of the sea: how submerged histories of violence, eroded ecologies, and silenced knowledges resurface to inform present-day struggles for justice. We explore how oceanography-long dominated by militarized, technocratic, and colonial logics-is being reimagined through critical geography, ethnoecology, food sovereignty, and environmental justice, guided by the voices and visions of coastal peoples.

Drawing on case studies across the seven seas, panelists examine how alternative development projects open space for multivocal maritime rights and participatory governance, even as they contend with ghostly legacies-of imperial expansion, ecological ruination, and scientific (social and biological) complicity. These watery ghosts are not just remnants; they are also agents. They guide, warn, and speak through human and more-than-human relations, stirring new political ecologies and ontological reorientations. We ask: How do the spectral inheritances of sea and shore help communities resist erasure, reclaim belonging, and rechart futures in marine worlds haunted by the past? And what role might anthropology play in listening to these ghost waters?

Presentation(s): Submerged stories and specters of the past: How fishing heritage is leveraged to contest ocean renewable energy development

For over a decade, the State of Maine has been working to advance renewable energy and blue economy initiatives through advancing the development of offshore wind. Launched in 2019, the Maine Offshore Wind Initiative and Roadmap aims to engage directly with the fishing industry to promote transparency and comprehensive research in support of economic development, environmental protection, social equity, and the "preservation of Maine's traditions and culture." As multiple institutions coordinate to develop policies and regulatory frameworks to advance offshore wind development in the Gulf of Maine, fishermen continue to raise concerns about competing uses of ocean spaces, industrialization of the ocean, and the future of their maritime history and heritage. In this presentation, I will describe our partnership with a state agency and a non-profit organization in our efforts to document fishermen's stories from the sea and provide a record of historical use of fishing grounds within the Gulf of Maine. Drawing on an analysis of ethnographic

interviews and oral history data, our work explores how offshore wind development opens space for participatory governance while simultaneously perpetuating uneven risks and benefits in the Gulf of Maine region.

Haunted Waters: Memory, Stewardship, and the Echoes of Extractivism in Baja California's Fisheries

Our presentation explores how the ghosts of extractivist histories linger in marine environments, shaping contemporary struggles over resource management and ecological care. Focusing on fishing cooperatives in the Baja California Peninsula, in Mexico, it traces how local communities navigate a seascape marked by the material and symbolic residues of past exploitation—overfishing, regulatory neglect, and shifting climatic regimes. In contrast to dominant narratives that cast fishers solely as extractors, this work reveals how they emerge as stewards who confront these hauntings through intentional, adaptive co-management practices. Drawing on ethnographic research and a detailed case study, our work shows how traditional ecological knowledge (TEK) is mobilized alongside scientific principles to enact strategies such as selective harvesting, translocation, and the creation of marine reserves. These practices reflect not only ecological sensibilities but also an ethical reckoning with the past—one in which sustainability is a form of resistance to the ghosts of collapse, and care for the sea becomes a way to reclaim agency over futures that were long foreclosed. By attending to the interplay of memory, environment, and human agency, this presentation contributes to a broader conversation about how landscapes—and seascapes—are haunted by prior regimes of exploitation, even as communities work to chart new, collaborative paths toward resilience and regeneration.

Presenter(s): Nemer Narchi

Out of the Shadows: Women's Work in Small-scale Fisheries in Puerto Rico

Although women in Puerto Rico perform different tasks in local fisheries, for the most part, their work has not been fully acknowledged, recognized or valued. There is also very little information how women's work in fisheries contributes to the overall food security of their households and communities. Understanding women's roles in the fisheries is not only necessary, but also imperative given the many economic and environmental changes facing coastal communities in Puerto Rico. This presentation discusses the specific tasks that women perform in the seafood supply chain. It examines their lived experiences and challenges to better understand the socio-ecological dynamics of small-scale fisheries in the Caribbean. Framed within a feminist political approach and based on ethnographic fieldwork, this presentation provides new research directions that can better guide the quest to advance gender equality in small-scale fisheries.

Presenter(s): Maria Cruz-Torres

Intangible matters: contesting access to resources and livelihoods in Mexican fisheries

Drawing on research in Loreto, Baja California Sur, Mexico, I use the concept of ghosts to explore how fisheries management and economic development rely on "ghosting" the knowledge and experiences of local fishing community residents—removing them from meaningful roles in policy planning. Even when terms like "participatory processes" or "alternative development" are invoked, such frameworks often relegate local input as exceptional rather than integral, reinforcing institutional control over what counts as participation or progress.

I argue that the ghostly nature of institutional power facilitates these erasures—rendering certain forms of knowledge and engagement intangible or invisible. Contrasting this spectral power with "matter" (suggesting materiality and legitimacy) helps us see how power becomes immaterial for some and concrete for others. Power, then, is the real ghost—its presence or absence shaped by who engages with it.

Community members have attempted to renegotiate their position through money, education, and networks, with uneven outcomes. By framing power through ghosts and matter, I call for a politics of perception—one that interrogates which people, values, and forms of knowledge are made to matter, and which are rendered spectral in struggles over development, environment, and livelihood.

Presenter(s): Nicole Peterson

Fishing in jinn riddled places: transitioning from open pelagic fishing to stationary platforms in Eastern Indonesia

In Eastern Indonesia, artisanal fishers are rapidly shifting harvesting technologies—from fishing in open pelagic waters to using floating platforms known as rumpon (fish aggregating devices). This shift has intensified competition and enabled elite capture, triggering a privatization rush over marine space. Yet many of these waters are believed to be inhabited by jinns and other spirits, making fishing a spiritually risky endeavor. As a result, fishers increasingly recite spells and revive traditional practices, asking permission from fish spirits near certain rumpuns.

This presentation explores how efforts to commodify and control marine space intersect with supernatural beliefs. We examine how fishing, far from being purely economic, entails navigating spiritual and ontological dimensions. Classic anthropological theories often frame ghosts and witches as mechanisms to regulate inequality. Building on and expanding this view, we consider how enchantment and spirit possession among fishers reveal a moral logic of exploitation—one that can align with wealth-seeking under specific conditions.

Interpreting the spread of rumpuns and resurgence of ritual through ecological theories of religion, we argue that mythical beings and haunted seascapes reflect the uncertain, shaping how fishers engage with the material and the mystical in an increasingly commodified maritime world.

Presenter(s): Victoria Ramenzoni

Ghost Trees, Ghost Plants, and Ghost Husbands

Women's grounds on Smith Island are shifting along with the shorelines washed by waves pushed from northeast winds. The rising sea level has turned the trees into ghosts. Marshland plants claim eroding soil under the brackish water, transforming garden flowers into islanders' memories. Marine animals are moving north as they seek cooler waters. The costly hard rock infrastructure solution has failed to protect the homes of aging women and the bodies of their buried husbands in the island's graveyard. This research looks at the experiences of women in late life who are forced to cohabit in a place with ghost trees, ghost plants, and ghost husbands

3982 Ghosts: Hauntings, Trauma, and the Anthropological Encounter

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Grand Ballroom A-C (5th fl)

Type: Roundtable/Town Hall

Like a ghost lingering in its former dwelling, our fieldwork experiences leave indelible marks, shaping us long after we have left the field. This roundtable, organized by the Anthropology & Mental Health Interest group (AMHIG), explores how trauma-both personal and collective-continues to haunt researchers and study populations, influencing our academic journeys, methodologies, and narratives. We center scholars using creative, embodied, and decolonial methods to engage haunting as both metaphor and lived experience. Presentations explore mixed-media art, feminist participatory research, community theater, collaborative writing, and embodied movement practices to grapple with memory, trauma, colonial violence, and relational care.

Together, we ask: How do cultures shape the experience and expression of trauma? How do traumatic events, memories, and emotions manifest in ethnographic work? How are they embodied, remembered, and transmitted across generations and disciplines? How do anthropologists navigate the complexities of researching trauma and its afterlives? What are the methodological and ethical challenges of this work? And how might haunting-as metaphor and method-open possibilities for survival, healing, and community care?

This roundtable brings together anthropologists, artists, and ethnographers committed to exploring trauma's afterlives through creative practice - making visible the ghosts that linger within our work, our bodies, and our disciplines.

2446 Haunted Resilience: Negotiating the Ghosts of Appalachia's Past Through Community-Engaged Ethnography

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Bonaparte

Type: Roundtable/Town Hall

Appalachia is an area haunted by extraction; left to die after the land and its people have served their purpose. While Appalachians are knowledgeable about their land and history, they are often unheard and stereotyped as "uneducated" or "close-minded." In this roundtable, student researchers will discuss their community-engaged ethnographies in Appalachia, revolving around the region's underrepresentation and resilience as communities respond to the challenges of extractivism, natural disasters, belonging, and public health.

We will consider the challenges of conducting community-engaged research, emphasizing the importance of place-based participatory methods beyond an ethic of extraction. Focusing on working with our interlocutors to achieve a common goal rooted in community knowledge, we will discuss how the ghosts of Appalachia's extractive past haunt communities. In recognizing and negotiating their haunted pasts, communities reject stereotypes and imagine alternative futures.

Community-engaged research is essential to better serving marginalized communities in Appalachia and beyond. Drawing on critical, feminist, and de-colonial approaches, participants in this roundtable represent and speak from various subfields, including sociocultural, linguistic, medical, and environmental anthropology.

"Rooted in Resilience"

Invasive species invoke hopelessness in many, but communities in Western NC have found optimism in Kudzu. Working with the plant to strengthen their human and nonhuman community, along with building climate resilience.

"Sustainable Storytelling: Ethnographic Journalism for Appalachia"

Appalachia is frequently misrepresented in national media, contributing to a skeptical attitude toward journalists. Learning from ethnography, journalists can restructure extractive reporting practices for community trust.

"Centering Life Stories"

Drawing on ethnographic fieldwork in Eastern KY, I explore how feminist and disability anthropology and community-engaged public health can challenge cultural essentialism and center the life stories of disabled Appalachians.

"Invisible: Disasters & Central Appalachia"

Extreme weather events and critical infrastructure failures can continue to haunt communities for decades. Rurality and intersectionality can amplify local knowledge practices to help inform disaster policy.

"Shaping Space and Practicing Place"

Locally organized efforts in Central Appalachia seek to reshape and revitalize their communities. Linguistic anthropological methods assist attention to how residents imagine and enact Appalachian identity and futurity amidst the specter of the region's past.

"Crafting Landscapes of Care Amidst Housing Insecurity"

Housing insecure populations in Southern Appalachia face increasing climate and economic devastation, as well as criminalization of poverty. Community-engaged and arts based methods allow a clearer understanding of rural unhoused experiences

6941 Hauntings: Anthropology's History of the Present

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Galerie 5

Type: Oral Presentation Session

The spectral theme of the 2025 AAA meeting, "Ghosts," invites us "to examine the ways that the past haunts the present, and that the immaterial becomes tangible to inflect the everyday." This panel, "Hauntings: Anthropology's History of the Present," sets itself against this invitation by crafting its critical entry points through two questions: first, what does it mean to be "haunted" and, second, what are the conditions of immateriality and tangibility that define particular histories as ghostly?

This panel addresses places where and people for whom the evocation of haunting obscures an ongoing political work of dispossession and disregard. What does naming New Orleans "the most haunted city in America" mean for those whose livelihood depends on the relationship between their race and the value of their labor? What does describing rural landscapes shaped by opioid addiction and overdose death as haunted and addicts as living ghosts foreclose for some and make possible for others when set against a pastoral national fantasy? What does the declaration of "the afterlife of mining" along South Africa's Atlantic coast mean for those who still live in former company towns and eke out a living in the unrehabilitated ruins of decommissioned industrial mines? What spectral wraiths do wendigo infrastructures leave behind, and what traces of the

violence of their creation are built into their machinery? How does colonialism haunt development discourse on the beaches of Puerto Rico? What possibilities do such conceptual frameworks foreclose?

Haunting conjures a sense of dissonance— that something is rotten; that a foundation has become unsteady. To be confronted with a ghost is to be transformed by the knowledge that what lies before us as the smooth surface of appearance has gone, in the words of Hamlet – disturbed by the revelation of his father's murder at the hands of his uncle – "out of joint." In turning to ghosts, we again confront Evans-Pritchard's warning that if anthropology is to remain relevant it needs to turn to history— a cautionary call which would reappear decades later as Eric Wolf's appeal, in *Europe and the People Without History*, for anthropologists to turn to the past as a bastion against the discipline's "descent into triviality".

Yet we struggle to articulate what is rotten in the present by glancing back towards, as Derrida describes in his landmark work on "hauntology", "what could be called the other time, from the other scene... [we] witnesses of history fear and hope for a return, then, 'again' and 'again,' a coming and going." To settle on our fields as haunted, this panel argues, is to discount how such haunting continues to be produced every day— "'again' and 'again'" – in the material conditions commonly described as the proper territory of ghosts.

Presentation(s): Emptied Home as Haunted House: Abjection and Affluence in Late Industrial Landscapes

Sullivan County, in upstate New York, is a rural place caught between two appearances. Abandoned looking houses slowly collapse along roads that have recently become the object of federal anxiety grounding the county's designation as a High Intensity Drug Trafficking Area (HIDTA). Along, and often across, the same roads real estate speculation and tourism thrive: luxury short-term rentals and newly renovated homes are regularly listed at over half a million dollars and advertise the county's close proximity to New York City. Drug overdose deaths in Sullivan County outnumber anywhere else in the state while small-scale artisanal agriculture operations, coffee roasters, craft breweries, art galleries, and coworking spaces that serve an emergent vacationing leisure class provide a constant influx of capital. The world shaped by fentanyl, the synthetic engine of America's opioid crisis, and deindustrialization seems to haunt the new world of at-last postindustrial recovery. Drug addicts and rural places are often described in the language of ghosts, characterizing them as already-dead or zombie-like subjects inhabiting a space where industrial decay is inseparable from its environment. This talk asks: what effects does this way of seeing people and places as haunted have on the contested territory they occupy? What does it

mean to be haunted? And what does an answer to this question reveal about how late industrialism and addiction are understood and managed in rural America?

Presenter(s): Sean Muller

“Playing in the Dark”: New Orleans Tourism and The American Anthropological Association

This talk takes as its central provocation a claim made by Toni Morrison thirty-five years ago, in *Playing in the Dark*: that the Enlightenment and racial slavery, mapped onto the historical geography of the American South, produced "a playground for the imagination...a fabricated brew of darkness, otherness, alarm, and desire that is uniquely American" (38). Through long-term ethnographic fieldwork and archival research in New Orleans, Louisiana, I discuss one such scene of national "darkness, otherness, alarm, and desire". This scene begins in the first years of the twentieth century, in the life of a Black New Orleanian named Cornelius Tillman, Jr., who created and performed an imagined American Indian identity as a method for self-dignification and escape. And then today, twenty years on from Katrina: an era in which the growing demands of a tourism economy bend those in the Black Masking Indian tradition, the very same one practiced by Tillman, Jr., a century ago, to the will of multicultural capital. Here, I discuss a history of the present; a history that organizes the present, perhaps, because it is operative. Not spectral; not ghostly; not a trace. By refusing the grammars of haunting so often applied to life in New Orleans, I ask, at last: what does naming New Orleans the proper territory of "Ghosts", land of the "eerie and evocative" (AAA, 2025), mean for those whose livelihood depends on the relationship between their race and the value of their labor?

Presenter(s): Christopher Thompson

Diamond Mines are Forever: Livelihoods in the Afterlife of South African Mining

Once known as the "Diamond Coast," South Africa's Namaqualand region was home to some of De Beers' largest 20th century diamond mines. The final closure of De Beers' west coast mines in the mid 2000s led to a mass unemployment crisis, and Namaqualand joined other parts of the country in what commentators have proclaimed as the "afterlife of mining." But closure also created the conditions of possibility for new livelihoods to emerge, ones that not only survive without the state and capital, but thrive in their absence. Artisanal miners have illegally occupied abandoned former mine sites, using hand tools to extract any diamonds left behind by De Beers' departure. But this practice is not a disorganized, instinctive response to unemployment, nor does it fit the model of "necessity entrepreneurship." Instead, Namaqualand's artisanal miners engage in the deliberate, calculated, and organized construction of alternative economies, a project that is possible only in the post-apartheid "afterlife" of mining. This paper seeks to understand the ways in which artisanal mining in Namaqualand is both made possible and haunted by the death of apartheid era diamond mining. What economic and political projects does the "afterlife of mining" make possible, and which does it foreclose? How, thirty years after apartheid, do gendered and racialized labor regimes and patterns of accumulation haunt an illicit extractive industry that remains outside the purview of both the state and capital?

Presenter(s): Jonathan Cannard

The Specter of Spanish Colonialism on Puerto Rico's Coastline

Beach protests in Puerto Rico have proliferated around concerns of ecological protections, access to public property, dispossession, privatization, and displacement on coastlines. Protests have taken up the slogan 'Las playas son del pueblo' (the beaches belong to the people), calling back to the Spanish Ports Law extensive to Puerto Rico in 1886, declaring the beach an asset in the public domain. An assertion of public ownership informed by an old regime of colonial law, this slogan has now been adopted as a local common sense mobilized politically amidst questionable coastline management. I take up the beach as material object and ideological formation to approach nuanced questions of sticky imperial residues and political possibilities in the wake of protracted disaster. I understand Puerto Rico's coastline as a 'troubled space of ambiguous colonial lineages' (Stoler 2016)-- haunted by Spanish colonial pasts that are still present but rendered invisible by US imperial presence. How is the specter of Spanish colonialism made tangible and negotiated on Puerto Rico's coastlines? How might compounding colonialities complicate our temporal and historical frameworks, revealing their restraint on imagining nonsovereign island futures? By attending to imperial duress (Stoler 2016) on shifting shorelines, I aim to reconceptualize the seemingly neat historical ruptures between Spanish colonialism, US imperialism, and the current 'post-disaster' framework of Puerto Rico.

Presenter(s): Paulina Gomez

We Haint Never Been Modern: Specters of Marx, Market, and Empire in Formerly Soviet Central Asia

Modernity piles up wreckages; futures become passe. Tashkent, Uzbekistan, was laid waste by Ghengis Khan, before rising again as a Silk Road market and again as a Soviet metropolis. Today e-commerce startups are headquartered near its ancient bazaars, 'digital nomads' gather in coworking spaces with views of high pastures where shepherds tend their flocks. In Almaty, Kazakhstan, cosmonauts in Soviet murals look out on a city where AI labs are rising alongside the towering new Ritz-Carlton. The formerly-Soviet Central Asian republics of Uzbekistan, Kyrgyzstan, and Kazakhstan are building a new future on the ruins of past forms of life.

Following independence, each republic, decoupled from the Soviet economy, pursued a different developmental path. Recently, all have curated a startup ecosystem as a means of social transformation. They do so among the shades of technological, and intellectual infrastructure built during the Soviet Union, Russian Empire, and the Islamic Golden Age.

Further ghostly presences are evidenced in the concept of the 'startup' being transplanted to these nations, a form which emerged directly from a specifically American (and Californian) history of land theft, western settlement, industrialization, and cold war militarization. Startups are accompanied by economic and technical phantasmagorias, and inculcate an ideology shadowed by the modernizing projects that birthed it. A spectre is haunting Eurasia—the spectre of modernity.

Presenter(s): Rowan Claire Choe Maher

5035 Heritage Language, Racialization, and (Post)colonialism, PART II

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

What is heritage language, and how do framings and contestations around notions of "heritage" inform, reproduce, and confound ways of organizing difference and belonging in what are claimed to be 'post'colonial contexts? What institutions, practices, and actors have a stake in defining heritage and the value of particular languages and dialects for demarcating contemporary ways of organizing around difference and similarity, and in relation to which social, political, cultural, and economic projects? We attend to (the specter of) colonial relations as they become manifest in (shape) shifting "heritage" languages that may evoke indigeneity, migration, nostalgia, purity, and collectivity. Our analytic frameworks entail ethnolinguistic racism, revitalization, tourism, media analysis, pedagogy, policy, ideology, and (hauntings of) fractal recursivity. We also approach these dynamics with the understanding that coloniality continues to loom over such practices-almost as a kind of phantom-haunting institutional efforts, identity projects, and ideologies of language in uneven and often unacknowledged ways. The papers offer diverse epistemological standpoints and theoretical and methodological approaches on the question of heritage language, racialization and postcolonialism, including but not limited to areas such as: applied linguistics, linguistic anthropology, autoethnography, postcolonial semiotics, critical discourse analysis, language policy and planning, and classroom discourse analysis. A focus on the robust analysis of language and discourse in relation to social and cultural processes unites these papers with respect to our chosen themes.

In this double panel session, we propose to examine how notions of heritage, language, and race become bundled together in educational and other settings in ways that can reproduce colonial hierarchies even when projects attempt to legitimate themselves as multicultural and/or as post-, de-, or anti-colonial. Each of the nine papers in this double session examines these questions and issues in different ways, culminating in comprehensive remarks by our co-organizer and discussant Jennifer Delfino. In line with the panel's focus on how language intersects with power and the making of social difference and inequality in relation to history, colonialism, and capitalism, this double panel brings together papers that problematize the production of "heritage language" as a means for the reproduction or contestation of racializing ideologies and processes in relation to postcolonial nation-building and other political, economic, and social projects. Our work spans nine languages (in order of presentations): Tagalog, Tamil, Modern Standard Arabic, Quechua, North African Arabic, Portuguese, Taiwanese, Kreyòl, and Kichwa; as well as eight ethnographic sites (in alphabetical order): Canada, Dominican Republic, East Timor, Ecuador, France, Peru, Taiwan, and the United States.

Presentation(s): Lusophone Specters: Creolized Tongues and Ideologies of Purity in a Former Portuguese Colony

In contemporary Portugal, the notion of "Lusophony" has been instrumental in repackaging colonial nostalgia as a progressive and cosmopolitan form of postcolonial national identity. Epitomized by Pessoa's line "My homeland is the Portuguese language," "Lusophony" hints at a geographically tangible speech community embracing Portugal and its former colonies into a pluri-continental cultural community. This article explores the paradoxes of Lusophony from the perspective of Portugal's former easternmost colony: East Timor. In 2004, after three decades of Indonesian military occupation, East Timor chose Portuguese as the primary medium of instruction, stirring a wave of Lusophone enthusiasm both among intellectuals and the general public in Portugal. Drawing on linguistic anthropological fieldwork conducted in Portugal and in East Timor in aftermath of the implementation of this language policy, I analyze the tensions between the existence of a hybrid linguistic reality and the ideals of racial-cum-linguistic purity that are still informing the Portuguese national imagination. Indeed, East Timor's choice of returning to the language of a colonial elite exposed teachers to the dilemma of either teaching Portuguese as a "native language" to students who barely spoke it, or resorting to L2 pedagogical techniques that undermined the very ideal of Lusophony, revealing the exclusionary linguistic purism underlying Portuguese inclusionary postcolonial ideology.

Presenter(s): Aurora Donzelli

Voicing Heritage: Negotiating Taiwanese Identity and Colonial Ideologies in Taiwan's Dubbing Industry

Taiwan's sociolinguistic landscape has long been shaped by colonial language regimes. The imposition of Mandarin and suppression of non-Mandarin Sinitic and Formosan languages during the post-WWII years led to an irreversible shift from Taiwanese to Mandarin. In recent decades, a key site for revitalizing marginalized languages has emerged in the Mandarin-dominant dubbing industry, where Taiwanese-speaking voice actors strive to reintroduce Taiwanese into dubbed media. Drawing on longitudinal fieldwork in the dubbing industry since 2016, this paper examines how heritage language ideologies are enacted and contested within Mandarin-dominant media production. Focusing on Taiwanese-speaking voice actors trained in Mandarin, I argue that efforts to de-Sinitize media paradoxically reinscribe colonial hierarchies even as they seek to dismantle them, contributing to the mixed reception of Taiwanese-dubbed media. Through analysis of metapragmatic commentary and linguistic life histories, I show how actors navigate tensions between decolonizing language and conforming to standardized norms. Despite their intentions,

they often reproduce colonial logics by privileging dominant forms of Taiwanese, marginalizing regional variation, and reinforcing ideologies of linguistic purity. This paper theorizes the dubbing industry as a site of contested heritage value, where de-Sinitization and heritage work both challenge and sustain colonial ideologies in postcolonial Taiwan.

Presenter(s): Spencer Chen

Immigrant Specters of Heritage Language: Hearing Kreyòl and French against Economic Demands for Multilingualism

In the Dominican Republic, language ideologies have historically naturalized borders with Haiti by positioning Kreyòl as a threat to national identity (Valdez, 2014, 2015). In 2013, Dominicans of Haitian descent—born in the Dominican Republic to Haitian parents—were denationalized (Curiel, 2021). The policing of Haitian heritage through ethnoracial discrimination, anti-Black racism, and anti-immigrant violence intersects with raciolinguistic ideologies (Rosa & Flores, 2020) in a Spanish-dominant setting that not only devalue Haitian Creole (Kreyòl) as heritage language, but also prestige languages such as French and English when spoken by those of Haitian descent. Drawing on ethnographic participant observation and interviews with young adult students and public school teachers, I analyze how Dominican teachers and Dominican youth of Haitian descent use stancetaking and voicing to evaluate perceptions of heritage language use. Findings illustrate that economic demands for bilingualism (English/Spanish) contrast with state anti-immigrant efforts to produce the country as monolingual (erasing Kreyòl). While Dominican youth of Haitian descent repress Kreyòl as heritage language to avoid being interpellated as foreigners, they are positioned as "exceptionally multilingual" (in French, English) and thus more qualified for jobs in tourism, which contradicts the realities of being excluded from the labor market by their documentation status.

Presenter(s): Molly Hamm-Rodriguez

The Hemispheric Verbal Art of Selling 'Truths' and 'Lies' to Tourists: Ethnographic and Critical Ways of Engaging Runa Heritage Tour Guides for Hire

This paper explores the paradoxical verbal art of representing cultural "truths" that indigenous tour guides face in commoditizing their "rural culture" and ultimately, themselves in a cut-throat industry governed by Western stereotypes of indigeneity, time, space, and speaking. It explores why some transnational and self-identifying Kichwa "Yachacs" or ritual specialists may be subject to ridicule and criticism by their neighbors? I center this local Kichwa debate on Yachac authenticity by juxtaposing conversations I had with a Yachac named 'Amaru' in 2014 and a subsequent anonymous "feed-back" interview (Stone and Stone 1981) I conducted with a tourism host named 'Sergio' in 2019 about his critical perceptions of Amaru's representations of Kichwa heritage. The debated "truths" presented by two tourism hosts of different backgrounds are paired with comparative research looking at self-commodification in Amazonian, Mexican, and Alaskan tourism venues. I aim to model a "critical" (Davis and Smalls 2023) and "discourse-centered" (Sherzer 1987; Hill 2008) manner through which we (i.e., tourists, researchers, or an Indigenous

person from North America) might advance Otavalan Kichwa and other indigenous tour guides into a more agentic and equitable re-positioning that takes place through the tourism encounter and, in doing so, collaborate with indigenous hosts in mitigating and dismantling the discursive and economic presence of neo-colonial expectations in global tourism.

Presenter(s): Quichi Patlan

4001 Honoring Lynn M. Morgan, Winner of the 2024 SMA Career Achievement Award: Part 2 Reproductive Governance, Reproductive Rights

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

Lynn Morgan's path-breaking work has been lauded for its deftness at revealing dialectical connections between micro and macro and local and global processes. Part II of this two-part session will consider Morgan's contributions to the complex interconnections among reproduction, policy, and societal power structures, notably her illuminating analyses as to why reproductive health policies have become focal points of intense social and political mobilization in the world today.

Morgan and Elizabeth F.S. Roberts introduced the concept of reproductive governance as a framework for tracing shifting political configurations enacted through moral regimes: the standards that govern a society's intimate behavior and ethical judgments. Their work advanced understandings about how powerful institutions, such as religious organizations and international financial entities, in concert with or independent of state mechanisms, have exercised social control over reproduction. Morgan and Roberts's work has been extended through explications as to how reproductive governance intersects with human rights discourses and actions: today human rights has paradoxically catalyzed political movements for both bodily autonomy and fetal rights. At a time when advances in reproductive medicine increasingly challenge assumptions about biological essence, identity, and humanity, Lynn Morgan's work has proven indispensable for understanding practices that have gained prominence as the 21st century proceeds.

Papers in this session will assess consequential challenges to reproductive rights and governance in Francophone Africa and Spain. Others will consider devastating effects of contemporary U.S. reproductive governance in key sites including prisons, the clinical treatment of nonconforming and transgender children, and newly pronatalistic policies from the perspective of Single Mothers by Choice. Part II will conclude with a reflection on Lynn Morgan's exceptional mentoring career.

Presentation(s): Global Reproductive Governance: Policies, Interventions, Metrics, and Technologies in Francophone Africa

In my discipline of sociology, reproduction in Africa is often understood through the lens of demography, or black boxed as a "global health" matter. In contrast, Lynn Morgan's theory of reproductive governance, through its attention to the political, economic, and religious rationales that drive the regulation of reproduction by various actors and institutions, such as government health authorities, neo-Malthusian aid donors, feminist NGOs, and anti-abortion activists, facilitates transnational and postcolonial analysis of reproductive politics in Africa. The concept of reproductive governance pushes us to move beyond policies—such as the Global Gag rule, or national abortion restrictions—to examine how reproductive health discourses, interventions, technologies, and metrics exercise reproductive control during the twenty-first century. In this talk, I show how post-abortion care metrics in Senegal demonstrate compliance with commitments to global maternal mortality reduction while obscuring the inadequacy of obstetric care in public hospitals. Drawing on my research on misoprostol in Burkina Faso and Senegal, I explore the increasing importance of pharmaceuticals in advancing both neoliberal approaches to maternal mortality reduction and feminist approaches to self-managed reproductive care. At the same time, I highlight persistent structural inequities in access to misoprostol within and beyond hospitals.

Reproductive Governance in Spain: Why Do Women in Spain Have So Few Children?

In 1978, Spain had one of the highest fertility rates in Europe; from 1995 to the present, it has had one of the lowest. Since the 2000s international adoption and assisted reproduction in Spain has boomed. In this paper, I show how the concept of reproductive governance has been crucial for understanding these shifts. In 2009, I used the frame of "structural infertility" to address the puzzle of fertility in Spain: Women faced structural hurdles in securing employment, and when they finally reached financial stability, many could no longer conceive and therefore created families through international adoption. Yet labor market forces seemed like only one piece of the puzzle. The concept of "reproductive governance" provided another, in that it makes it possible to analyze how reproductive behaviors and choices are conditioned by government action or inaction, and also the actions of entities such as churches, corporations, health institutions, laboratories, NGOs, and social movements. I have applied this lens to the Spanish feminist movement, which historically has prioritized women's right to divorce, contraception, and abortion, while ignoring their right to

enjoy equal pay or to balance work and family (Briggs et al. 2012). Ironically, in fighting only for the right not to reproduce and not the right to reproduce, the feminist movement inadvertently made it harder to become a mother in Spain.

Coerced to Birth, Coerced to Cede: Prisons as Technologies of Reproductive Governance in the U.S.

Thousands of pregnant individuals enter U.S. prisons each year, subjected to classic biopolitical regimes of disciplinary power that define modern carceral power. As their reproductive bodies come under the explicit control of the state's punitive apparatus, prisons, laws, contradictory judicial precedents, and hospitals converge to govern the bodily and psychic dimensions of their pregnancies and futurities. This paper presents ethnographic insights from research with pregnant individuals in prisons and jails across four U.S. states. Some needed abortions while in custody but were overtly and illegally prevented from obtaining care. Others unknowingly presumed that the punitive bargain of incarceration foreclosed abortion as an option. For others, the bereft conditions of incarceration and intense anxiety over whether they would be shackled in labor and would have a safe birth produced a desire for abortion, as a maternal protectionist stance towards their fetus. All were thus coerced to birth, and after birthing, returned to prison alone, forcibly separated from their newborns and ceding their abilities to mother as the state continued its governance of their reproductive futures. Through foreclosure of abortion and abilities for newborn care, prisons operate as exemplars not only of classic disciplinary power, but of reproductive governance at every point on the continuum of possibilities of pregnancy, birth, and motherhood.

Presenter(s): Carolyn Sufrin

Children, Gender Transition and Reproductive Politics in the US

Why did children's gender transition become explosive in American cultural politics, taking a place alongside abortion? Why is it so difficult to conceptualize children's relation to reproduction, beyond viewing them as reproductive outcomes? I have grappled with these questions throughout years of research and thinking on psychological and medical treatments for gender nonconforming and transgender children in the US. Children, lacking legal autonomy, pose a challenge to reproductive rights frameworks that center consent and autonomy. They embody a liminal reproductive status having reproductive organs that will only in the future gain reproductive capacity. This paper reflects on children's position in reproductive politics through engagement with Lynn Morgan's writings on personhood and the body, theories of potentiality and representations of non-Western gender diversity.

From Fatherless Families to Babies Galore! The Paradoxical Influence of Neoliberalism and the New Pronatalism on Single Mothers by Choice in the US

Drawing from a long-term ethnographic case study (2005-2024) of one American Single Mother by Choice, I illustrate the often-paradoxical ways two successive regimes of reproductive governance, Neoliberalism, and Trump 2.0, constrain and enable Single Mothers by Choice (SMCs), which emerged as a recognized family form in 1980, the year Republican Ronald Reagan brought neoliberalism to the US with support of "a pro-family, pro-America" Christian political movement. Republican V.P. Dan Quayle condemned the popular character Murphy Brown for having a baby as a single woman, blaming the Los Angeles Rodney King riots for nuclear family breakdown. Even Obama singled out fatherless families for opprobrium. Yet neoliberalism combined synergistically with Second Wave Feminism's emphasis on personal choice and e-commerce to enable SMCs plentiful choice of sperm donors.

Elon Musk arguably best exemplifies Trump 2.0's New Pronatalism, which shifts focus from a nuclear family ideal to a goal of more happy, healthy, and intelligent babies using all technological means. This shift from what SMC families lack, i.e., a father, to what they bring,

i.e., high-achieving, native-born children should create a more welcoming climate for these nonnormative but privileged mothers. Yet while more affordable IVF will be a boon to future SMCs, Trump's attacks on higher education is making it harder for women to attain financial independence to consider undertaking family-making on their own.

Presenter(s): Linda Layne

Challenge Accepted: Reflections on Lynn Morgan as Mentor Extraordinaire

Over the course of her career, Lynn Morgan has had a significant impact in and beyond anthropology. From her pathbreaking work in the anthropology of reproduction to her remarkably creative pedagogical practices, and her generous collegial engagement as peer and mentor, Morgan's work will carry on for generations to come. This presentation will reflect on specific examples of the distinctive impact Morgan has had as a mentor. The paper will demonstrate how Morgan deploys the kind of rigorous and creative thinking we see in her scholarly and pedagogical work, in her mentoring, and in ways that challenge others to continually push the bounds of their own thinking about how things might and can be otherwise.

1905 How Foods Haunt Places: Sugarcane, Soybeans, Shrimp, Figs, Teff, Cotton, Olive Oil, etc.

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** MGB Salon F/G

Type: Oral Presentation Session

How do foods haunt places? What forms of belonging emerge or vanish when specters of adversity confront agricultural livelihoods? How do differently positioned individuals and communities negotiate the ghosts of familiar worlds while positioning themselves within global or local supply chains? This session explores the unsettling effects of global markets and climate change on rural livelihoods. Through the lens of agricultural products-sugarcane, soybeans, shrimp, figs, cotton, teff, olive oil-panelists examine the tensions between crisis and transcendence.

Rural spaces have long been sites where decline and desire become entangled, sometimes through invoking tradition, sometimes through embracing innovation. Drawing on scholarship from Sarah Besky (2020), Julie Guthman (2019), Sophie Chao (2022), and Anna Tsing (2015), we consider how food producers-whether in fields, orchards, or kitchens-navigate shifting landscapes of uncertainty. What happens when rupture defines a food's relationship to place? We revive Ernesto de Martino's concept of crisis of presence to explore how foods become haunted materials, disrupting the everyday and remaking relationships to land, labor, identity, and the food itself.

We begin with a theoretical orientation to the panel, drawing on fieldwork with fig growers in central Italy and soybean farmers in the U.S. Midwest. For fig producers, killer weevils unsettle ties to land. Meanwhile, soybean farmers face changing planting windows with techno-optimism, which fails to address climate change. These cases explore the ways crisis transforms not only agricultural practice but the lived experiences of what it means to exist in rural worlds.

Panelists examine haunted foodscapes across a range of sites. In Louisiana, sugarcane is both a cornerstone of the economy and a powerful reminder of enslavement. Shrimpers in the same region contend with scandals around imported catch due to disappearing coastlines which bring to the fore uncertainty over what constitutes "local" food. In the southern U.S., cotton functions as a food product, used in cattle feed and as cottonseed oil or cellulose in processed foods. Yet for Black farmers, participation in this expanding food system is hindered by exclusion from USDA programs and land access, the past continues to haunt the possibilities of the present. Teff, a vital grain in Ethiopia and its diasporas, raises urgent questions about cultural belonging as it circulates globally. Meanwhile, olive oil producers in southern Italy navigate a ghostlike landscape that a bacterium has left in its wake.

Across sites, food anchors a sense of place even as conditions that make those places habitable erode. What forms of belonging remain possible when everything is quickly shifting? This panel brings together ethnographic accounts of farmers, foods, and futures haunted by a crisis of presence.

Presentation(s): How Foods Haunt Places: A Panel Introduction through Soybean Fields and Fig Orchards

How do foods haunt places? Rural life has historically transpired in spaces where decline and desire become entangled, sometimes through invoking tradition and other times through embracing invention. This paper frames the panel with Ernesto de Martino's "crisis of presence" as it draws on ethnographic fieldwork with fig producers in central Italy and soybean farmers in the U.S. Midwest.

Our paper offers a theoretical orientation as it considers how the legacies of food production involve both perseverance and disorientation especially as producers navigate unpredictable environmental and market conditions. For fig producers, killer weevils unsettle ties to land and tradition. Meanwhile, soybean farmers face changing planting windows with techno-optimism, which fails to address climate change. These cases explore the ways crisis transforms not only agricultural practice but the lived experiences of what it means to exist in rural worlds.

We take inspiration from Ernesto de Martino's framework of the must (what must be preserved for a culture's longevity) and the can (what can be imagined) to understand how rural worlds can generate a sense of feeling settled (*appaesamento*) and also unsettled (*spaesamento*) (de Martino 2023). Specifically, we focus on responses to globalization, industrialization, and technology. In the spirit of ghosts, we revive de Martino's crisis of presence to grasp how foods haunt place.

Sugarcane hauntings: Spatial and racial examinations of plantation memory in Louisiana

Nearly ubiquitously, industrial farms in the U.S. have aerial-view maps of their farms. These maps not only tell stories about delineations of property and what is grown where. They are encoded with social meaning—family stories and personalities, tales of land acquisition betraying dynamics of power, and the emplacement of race and racialization. These elements create a sense of place, and a sense of self in place. In this paper, I examine these elements of social meaning as they connect to and are informed by myths of permanence and interruptions of that permanence. Key to this examination is racialized violence and disparity in the Louisiana farmscape. Two ethnographic sites anchor this paper. On the one hand, a white sugarcane farmer descendant from a family with inherited and acquired farmland since European colonization in the 1760's, over eight generations. On the other, a Black farmer in sugarcane country also with inherited and acquired farmland, yet at a significantly smaller spatial and temporal scale, and who grows soy. Both farmers use maps to tell family myths, explain local political conflicts, and explain themselves and why they grow what they

grow. By conducting a comparative socio-spatial examination of the farm maps that encode social meaning and that shape farm operations, I seek to contribute to understandings of how plantation legacies are encoded in the land.

Caring for olive oil, cultivating ghosts of the future: How an ancient practice and contemporary disaster haunt Salentini olive oil makers

Covered with ancient olive orchards and younger plantations, the landscape of Salento, located in the heel of Italy, showcases its multigenerational tradition of making olive oil. The making dates back to Roman times and has flowed with currents of time, markets, and multispecies shifts. The plant bacterium *Xylella fastidiosa* has caused over 21 million olive trees to desiccate since its entrance into the region in the early 2010s, leaving an entire subregion ghostlike in its wake. The region has struggled to transcend its devastating effects. Based on more than 18 months of ethnographic fieldwork with Salentini olive oil makers, this paper explores dynamics of caring for the ancient tradition of *olivicoltura* in and beyond times of *Xylella*. Through situated storytelling, it critically engages how the craft of olive culturalists, multigenerational flow of olive oil, and multispecies complex of *Xylella* haunts the place while creating ghost of the future. With a curious lens on the dire situation of the presence, legacies of the past, and hopes for the future, the paper discusses how the monoculture/duo-cultivar feature that made the landscape so vulnerable to the bacterium now is replaced with another such combination. Of critical interest is to tease out the values and practices by which Salentino olive oil flows, even in precarious times of disruption, and to analyze how it all relates to histories of what once were while imagining what is yet to become.

Presenter(s): Elin Linder

How King Cotton Continues to Haunt Georgia Cotton Farming

US cotton fields are haunted by dispossession, enslavement, and eroded soils and markets. After the forced removal of the Cherokee Nation in the 1800s, cotton spread as colonizers claimed stolen lands. Cotton became "king" from southern plantations to northern mills, supported by enslaved Black people's labor. Cotton and cottonseed oil production expanded post-Civil War, and in the late 1800s high lard prices led to the invention of Crisco®—an acronym for crystalized cottonseed oil. Though Crisco® dropped its namesake, cottonseed oil is lauded for its nutritional value, and cotton is a common food additive. Low market prices and high input costs have recently stifled cotton production, which remains haunted by its legacy of socioecological damage. We explore these ghosts in a large interdisciplinary cotton research project. While the broader project strives to repair ecological legacies through regenerative farming practices, "climate smart" projects, like this, largely ignore social legacies—engaging only "the usual suspects" (white/male farmers) for on-farm collaboration. In contrast, we are working to recruit diverse farmers, including purposeful engagement of Black farmers. Yet this is challenged by the fact that Black farmers make up 1.5% of US farmers and Black-owned farmland has declined 90% since 1910. Guided by King Cotton's

specters, we critically reflect on the challenges of diversifying on-farm research and the inequities experienced by Black cotton farmers today.

A Gluten-Free Haunting: Teff's Cultural Identity within a Global Superfood Market

Teff is a grain distinctly identified with the cultural groups of the Horn of Africa, particularly the peoples of Eritrea and Ethiopia. However, as of late, it has become globally marketed as a gluten-free nutrient-rich grain, or superfood, as well as a climate resilient crop. Drawing from interviews with teff producers and suppliers across the US, this paper explores forms of relationality which emerge through the cultivation, processing, and distribution of teff in a context outside of the Horn of Africa. Specifically, I ask in what ways are midwestern teff producers haunted by the grain's distinct identity, which is so deeply tied to Ethiopian & Eritrean culture, history, and landscape? How do they balance the tension between honoring the grain's local identity, without inviting claims of biopiracy, with promoting teff as a global superfood and climate resistant crop? What forms of representation in branding and marketing emerge from producers balancing such tensions? To what degree is there an erasure or refashioning of teff's local identity to market it as a global superfood? How do the historical, cultural, and ecological identities of teff haunt US producers? And finally, how do producers continue to engage with their core customer base of Ethiopian & Eritrean diaspora restaurants and groceries in light of the rising global popularity of the grain (i.e., more commercialized retail demands)?

Presenter(s): Christina Collins

Haunted by Foreign Shrimp: Deploying Culinary Nationalism to Save Louisiana Shrimping

The specter of foreign shrimp haunts the Louisiana seafood industry. In 2024, the Louisiana Shrimp and Petroleum Festival, held in Morgan City since 1936, was rocked by scandal. Scientists working for a food safety company revealed that many of the festival seafood vendors were selling imported shrimp. The company showed similar results at other regional festivals and in restaurants that claimed to sell domestic seafood. The tests confirmed suspicions about imported seafood in Louisiana and set off a scramble to reinforce regulations and persuade restaurateurs and consumers to demand local shrimp. For shrimpers, the scandal confirmed what they already knew: imported shrimp was driving them out of business. Seafood activists argued that the decline of shrimping was devastating towns along the coast and erasing local culinary heritage.

This is not, however, simply a story of a declining industry and dying communities. Drawing on interviews with shrimpers, restaurateurs, and activists, this essay examines the concepts and strategies deployed to save Louisiana shrimping. Imported shrimp is labeled as “foreign,” tainted by chemicals and antibiotics, and harvested by exploited workers. Louisiana shrimp is characterized as “wild-caught,” subject to “rigorous” regulations, and embedded in local communities and

culture. This essay explores the intersection of cultural claims and policy activism that shrimpers and activists hope will save the domestic shrimp industry in Louisiana.

8465 Indexical (mis)recognition: Part II

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 9

Type: Oral Presentation Session

This panel applies the theory of indexical (mis)recognition (Barrett and Hall 2024) within linguistic anthropology. The framework of indexical misrecognition focuses on cases in which speakers/listeners do not share knowledge of the indexical meanings associated with a given linguistic form. The framework of indexical misrecognition presumes that indexical meanings are dependent on specific ethnographic contexts that relate indexical signs to particular cultural contexts of language usage. The model also addresses cases in which individuals claim to use indexical meanings in opposition to normative interpretation of indexical signs. Building on this model, the papers in this panel use wide ranging sets of language data to demonstrate the role of normativity (and antinormativity) in the interpretation of language with a given interaction.

Presentation(s): Indexical Misrecognition and Lesbian Identity

The consumption and creation of media depicting two men interacting romantically and sexually has long been a woman-driven practice (Russ, 1985), assumed to be a reflection of authors' real-life desires. The present study argues that engagement with such media can index an identity that does not involve a desire for men: lesbianism. In their 2024 article, Barrett and Hall discuss how indexical misrecognition serves as an essential strategy for identity construction within the queer community. They state that queer "language users defy norms not only by using norms in new ways but also by creating new in-group norms constituted by distinct indexical inventories" (p. 131). I explore how this concept plays out for five self-identified lesbians who practice a violation of normative sexual ideologies: their repetitive engagement with men-loving-men (MLM) media. MLM media engagement is in the first and second stages of the indexical cycle (Bell, 2014) for a lesbian identity. In the first stage, members of a community look to differentiate themselves through linguistic means, and in the second stage, these practices are beginning to be evaluated by in- and out-group members. Media consumption both reflects aspects of identity while also assisting in the

process of identity formation (Koller, 2008; Zemmels, 2012; Wu, 2006), and my participants show how MLM media engagement serves as an indexical misrecognition, where consumption of male-centered erotica can index a lesbian identity.

Presenter(s): Olivia Marquardt

““What do you think caused your heterosexuality?”: Indexical misrecognition in queer zines

Zines, short for 'fanzines' or 'magazines,' refer to physical, printed, self-published creations that can consist of a single sheet of paper or many, fastened together. They tend to be independently made for the love of creating, and rarely make a profit (Wreck 2005). Most importantly, though, zines are artifacts rich with meaning—and, thus, can be read as tangible manifestations of the ideologies and identities of the creator(s).

Existent work within the fields of sociology, gender studies, and sociolinguistics on zines center the manipulation of form and object to express meaning (Piepmeyer 2008; Poletti 2008). This particular paper extends these observations, focusing on the way zines are used as tools of resistance, empowerment, and storytelling. It discusses how the practice, itself, is a manifestation of rebellion, often engaged in by individuals who hold marginalized identities. (Bolt 1999). This project surveys the ways in which text and images function as tools of queer expression within zines. This is accomplished by an application of sociolinguistic indexical misrecognition frameworks (Barrett & Hall 2024; Silverstein 2023) to closely examine the zine "Galatea's Naked." It explores both specific messaging within the zine, as well as the practice of zine-making itself. Overall, this project highlights the way zines, which are historically non-traditional and anti-capitalist, are particularly effective avenues for self-exploration of queerness.

Presenter(s): Jules Blank

Indexical Misrecognition of Taqiyya in Saudi Salafi Discourse and Everyday Interaction

In this talk, I draw on Barrett and Hall's (2024) framework of indexical misrecognition to discuss how the practice of taqiyya—meaning 'concealment' and 'dissimulation' in the Ismaʿili Shiʿa tradition—is misrecognized within dominant Saudi discourses. Historically, taqiyya has been rooted in pragmatic responses to persecution, functioning for many Ismaʿili individuals as a contextually bound tactic to navigate surveillance, interrogation, and social exclusion. In the Saudi context, however, the Salafi ʿulama's hegemonic discourse reconstructs and negatively revalues the practice through the lens of categorical ethics (e.g., the idea that one should always tell the truth). Within this framing, the dangers that necessitate taqiyya are denied, and the order of cause and effect is reversed: rather than being understood as a response to persecution, the practice is reframed as evidence of Ismaʿili 'duplicity' and 'hidden enmity,' and thereby justifying discrimination. The rethemization of taqiyya—shifting it from an indexical meaning (a tactic responding to a specific social context) to an iconic meaning (a reflection of moral essence)—renders Ismaʿili speech and action inherently untrustworthy, resulting in harassment and marginalization.

Presenter(s): Aidah Aljuran

Indexial misrecognition and Omani livestock

Since the 1970s, Oman's state-building project has consisted of efforts to attenuate tribal power by disrupting the pastoralist social order and creating in its stead a globalized economy based on proletarianized labor in oil, international shipping, and tourism. In the country's southernmost city of Salalah, pre-state economic reasoning haunts the logics of evaluation and exchange in spite of state efforts. Livestock (cows, goats, camels) and their derived products (butter, milk, and meat), formerly the nuclei of social and economic life in and around Salalah, are still taken to be emblematic of tribal affiliations in the region on the basis of historical patterns of transhumance, and their values continue to be conditioned by their (real or perceived) social provenance. This research examines how value and exchangeability of livestock, meat, and dairy are reckoned through shared repositories of social knowledge. Using the concept of indexical misrecognition from Barrett and Hall (2024), I ask how these indexical associations are communicated, obscured, and reinterpreted within the market economy of the newly globalized city.

Presenter(s): Jarred Brewster

Black Hypotheticals in VTubing Debates about Race and Appropriation

This paper applies the concept of misrecognition (Barrett and Hall, 2024) to controversy regarding Western Virtual YouTubers' (Weeb VTubers) appropriation of Japanese cultural signs. While commonplace in the VTubing world, the use of Japanese linguistic and visual styles has been perceived as a racial mockery of the genre's Japanese origins, inciting members of the VTuber fandom to fight back on fan forums and social media. In an analysis of discourse centered around race as it is discussed in VTubing fandom, this paper illuminates key points found in critical arguments made by both fans and non-fans about race when applied to virtual avatars, building on the theorization of animation vs. performance found in linguistic anthropology (Manning and Gershon, 2013). In particular, the paper interrogates the use of what I call hypothetical Blackness in arguments both critiquing and defending the genre, whereby Black people are co-opted into discourse via a posited hypothetical to provide a guiding perspective on race politics. Fans and non-fans have different indexical fields when it comes to race and avatar, but both use hypothetical Blackness to support their indexical perspective. Ultimately, the paper illustrates how race-based hypotheticals are used to situate the genre as both "racist" and "raceless," illustrating the importance of misrecognition as a semiotic concept.

5475 Intersectional Hauntings and Their Impact on Migrant Communities and Democracy

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** MGB - Salon C

Type: Oral Presentation Session

Avery Gordon, writing on the ongoing affects that shape the "structure of feelings"* that constitute modernity, argues that "Ghostly matters are part of social life. If we want to study social life well, and if in addition we want to contribute, in however small a measure, to changing it, we must learn how to identify hauntings and reckon with ghosts..." The process, she adds, is "often painful, difficult, and unsettling."**

In keeping with this year's AAA theme of "Ghosts" this panel invites papers that grapple with how to document unseen power dynamics that shape the lives of migrant communities. How do the histories of race, sex, gender, class inform current legislative policies on immigration and how are these undermining first amendment rights of freedom of expression and thought? What is the role of universities in relation to immigrant students who voice opinions contrary to these and related policies? How do ongoing inquiries from several federal agencies toward universities and their acquiescence along with law firms to Executive Orders create a chilling specter on the ability of these institutions from serving the public, and in particular, migrant communities?

What kind of methods within and outside of the discipline of anthropology have proven helpful in documenting how the past informs the present? How are migrant communities evoking the power of immaterial forces to motivate change? What kind of engaged approaches are scholars, activists, and practitioners using to uphold or challenge international human rights protocols that are responsive to the needs of migrants? How do key conceptual frameworks used throughout the social sciences – assimilation, incorporation, citizenship – shape the spectral possibilities for all forms of life in the age of the Anthropocene?

Presentation(s): Ghosts of the Frontier: Internal Displacement, Suspended Citizenship, and Gendered Resistance in Pakistan

This paper examines how internally displaced Pashtun women from Pakistan's former Federally Administered Tribal Areas (FATA) navigate life in urban centers like Peshawar after the 2014 military operation Zarb-e-Azb. Although their displacement occurs within national borders, these women experience a form of spectral citizenship—haunted by the legacies of colonial governance, securitized state control, and the slow erosion of rights, mobility, and recognition. Drawing on long-term ethnographic research and digital ethnography in the cities of Peshawar and Islamabad, this paper explores how Pashtun women live with and against a state-driven discourse of crisis that casts them as both subjects of care and threats to order.

The panel's theme of "intersectional hauntings" offers a generative frame for understanding how crisis narratives, legal ambiguity, and cultural erasure function not just as policy outcomes, but as affective structures. While not international migrants, these women's lives are shaped by ruptures in kinship, governance, and place-making that mirror—and often exceed—the exclusions faced by cross-border migrants. I examine how these women resist the containment of their political agency through quiet refusals, digital activism, and the pursuit of higher education, creating new solidarities and modes of belonging that unsettle dominant logics of state legitimacy.

Legacies of Forced Migration: The Spectral Hauntings of US Deportation Raids

My talk will feature the experiences of Gaspar and Amalia, an Indigenous Akatek Maya married couple, and their children, following "Operation Wagon Train" one of the largest immigration raids in US history. I will share how the parent's incarceration and Amalia's eventual deportation to Mexico impacted their children, and how in turn, their ordeal resurrected an untapped memory of a deportation raid in my New York City home and family separation. Exactly how the disclosure of this memory with the family fostered a long-standing partnership to amplify their voices and others who continue to experience legacies of forced migration will be discussed.

Presenter(s): Oscar Gil-Garcia

4538 Irreverent Religion

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Galerie 2

Type: Oral Presentation Session

In a 2017 JRAI article titled "The Lapsed and the Laity: Discipline and Lenience in the Study of Religion" Maya Mayblin critiques what she calls the "earnest turn in the anthropology of religion, highlighting a tendency among scholars to overemphasize discipline in the formation of religious subject hood at the expense of mechanisms of leniency and compromise" (Mayblin 2017). Taking up Mayblin's provocation, we ask how anthropology's enduring preoccupation with discipline and

piety (Asad 1993; Mahmood 2005) might be complicated by attending to more irreverent religious expressions and practices.

Rather than treating irreverence as a cynical stance adopted solely by religious "outsiders" and "exes" (e.g., ex-Christians, ex-Muslims, Off-the-Derech Jews), we explore how irreverence may paradoxically occupy a hegemonic role within communities typically characterized by discipline and piety. Instead of opposing irreverence to earnestness, how might we conceive of these religious affects and dispositions dialectically? In what ways might irreverence actually serve to reinforce religious belief?

In this spirit, we invite papers that return to the idea of "serious play" (Huizinga 1950), the ludic and the carnivalesque (Bakhtin 1968), the aesthetics of "American stioib" (Boyer and Yurchak 2010), and the antinomian features of sovereign figures-such as Trump-who operate as "holy fools" or "stranger kings" (Graeber and Sahlin 2017; Gorski 2022) in the age of irreverent authoritarianism.

Presentation(s): Priests and Shamans: Parody as Sacred Play in Ecuador

Indigenous people in highland Ecuador perform humorous parodies and games as part of sacred activities. Here I describe parodies I have observed during mortuary rituals and Catholic feast day celebrations, and people's explanations of the ritual performances. According to elders, parodies of Catholic priests and historical figures, such as coastal Black soldiers, can have effects in the afterlife. Parodies of Amazonian shamans reflect humorous mimicry of figures that are respected and feared in highland Ecuador. These performances show a combination of sacred ritual, play, and mimeses that can affect the living and the dead.

Irreligious, irreverent: religious innovation and critique in charismatic Christianity in the Faroe Islands

Over the last ten years, members of City Church in the Faroe Islands have been engaged in a project of reassessment of their past practices. Seeing their own history as containing many instances of beliefs and practices which left many individuals and groups disappointed with the church. The way forward, they now say, is to do a broad sweep of self-reflexive critique in which a multitude of previous ideas about how to do things are tossed out wholesale. And in this process, one of the most central things that is confronted is the role of tradition and "the proper way to do things". The word religion in this instance comes to stand in for a negative and lifeless state of Christian faith that has no space for growth and/or to learn from its surroundings. Analysing this process, I argue for the re-evaluation of Pentecostal and Charismatic practice as aiming for a universal, ancient truth towards rather seeing it as a creative process in which old ideas and beliefs are always potentially cast aside in favour of new things that might move the faith closer towards the overflowing life as they are read in the New Testament.

The Politics of Joking, Blasphemy, and Respect in Pakistan

Over the last fifteen years, the Tehrik Labaik Pakistan (TLP), an anti-blasphemy movement led by working-class men, has emerged as a formidable force in Pakistan. The mass appeal of the TLP lies in its framing of blasphemy politics as class warfare, pitting an 'authentically passionate' Muslim working class against a 'hypocritically pious' Muslim elite. For its supporters, the anti-blasphemy movement is, first and foremost, an avenue for 'the poor masses' to achieve respect and recognition by taking violent action against 'blasphemers' and Muslim elites perceived as their enablers and co-conspirators. This paper examines TLP's politics of respect and blasphemy through the anthropology of civility. Revisiting classical anthropological concepts of joking and avoidance, it proposes a framework for understanding everyday civility through a practical

spectrum between joking and avoidance attitudes: joking denotes a sovereign disregard for formal norms, while avoidance reflects a deferential submission to them. The paper argues that TLP's blasphemy politics enables its supporters to demand respect as submissive avoidance, while simultaneously allowing them to adopt the sovereign attitude of joking disregard toward the dignity and sacrality of others. Through engagement with the Islamic concepts of *adab* (etiquette) and *ishq* (passionate love), the paper traces the TLP's rise through Muslim contestations over the meaning and practice of respect, transgression, and divine agency.

Unlicensed Play: Fake IDs, Kabbalistic Amulets, and Irreverent Ritual at a NY State Highway Traffic Stop

In recent years, Hasidic young men in New York have filmed their interactions with police on dashcams during routine traffic stops. When asked to produce license and registration, they pull out passport photos of Reb Shayele (1851-1925), a dead Hasidic saint. They then curse police in Yiddish: "Reb Shaye, son of Reb Moshe, said, 'either bend to my will or die.'" One of these videos went viral across Hasidic social media, prompting the owner of Shayele's "guest house" in Hungary to sell fake driver's licenses featuring Shayele's icon, incantation, and amulet, as pilgrimage souvenirs.

In this paper, I pay particular attention to this video, and the responses it has elicited among Hasidic men at Shayele's pilgrimage site. I place it in contrast with dashcam footage showing the lethal consequences of routine stops for Black and undocumented drivers in the U.S. I argue that theorists who focus on the "subjunctive" mood of ritual (Seligman et al. 2008), who blur the boundaries between ritual and play (Caillouis 1958), offer a useful framework for understanding this phenomenon and a rejoinder to the overly earnest focus of religious studies today. There is a space for irreverence in their playful account of ritual, one which challenges cognitivist preoccupations with the "incongruity" of ritual and reality (Smith 1980), Protestant preoccupations with "sincerity," interiority and intentionality, and Foucauldian fixation with discipline, self-cultivation, and piety.

Perverformative Religion; or, the Otherness of Orthodoxy

As a number of scholars have noted, anthropologists of religion over the past three decades or so (of Abrahamic religions especially [Asad 1993, 2018; Mahmood 2005, 2016]) have centered disciplined practice and pious subjectivity to the general exclusion of religions' more ambivalent and irreverent, to say nothing of perverse, commitments. Here I lend my voice to this chorus, but for reasons different to key critiques regarding Christianity and Islam in particular—that disciplined and lapsed Catholicism both constitute "living Christian form[s]" (Mayblin 2017), that fixation on Muslims' modern orthodoxies betrays Islam's premodern "culture of ambiguity" (Bauer 2021) and wealth of aesthetic "exploratory traditions" (Ahmed 2016), among others. For whereas these approaches suppose orthodoxy's dialectical opposition to or historical erasure of religions' other

forms, here I argue that otherness beyond all opposition preconditions religions' at once most reverent and most perverse acts. Placing contemporary Muslim politics and practice in conversations with Jacques Derrida (1987, 1988, 1995) on the "performativity" repeatability of formal inscription, I outline queries and possibilities that "performativity religion" offers to anthropologists of ritual and writing, subjectivity and responsibility in and beyond contemporary "religions of the Book."

4968 Life in Morocco: Helping Hidden Voices be Heard

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Balcony L

Type: Oral Presentation Session

This paper brings together three ethnographic investigations that illuminate the lived realities of communities often marginalized within dominant narratives of Moroccan society. Focusing on the expression of Tamazight identity in and around Fes, the maternal health experiences of rural Moroccan mothers, and the evolving nature of religious education within homes and classrooms, this research explores how identity, gender, and belief are negotiated in everyday life. Through immersive fieldwork and interviews, we foreground the perspectives of individuals whose voices are frequently overlooked—Amazigh speakers asserting cultural visibility, mothers navigating healthcare systems shaped by both tradition and state infrastructure, and families adapting religious pedagogy to changing social currents. Together, these case studies reveal the complex ways Moroccans are engaging with questions of belonging, authority, and transformation. This project contributes to broader anthropological conversations on voice, agency, and the reconfiguration of tradition in North Africa.

Presentation(s): Islamic Education Among Moroccan Youth: Imitation vs Education

Morocco has a long standing tradition of religious education woven throughout its history as a nation. Recent changes to governmental and pedagogical practices have altered many of these traditional rituals of teaching Islam, causing waves of change within society and within the home. This study delves into the experience of Moroccan mothers, educational administrators, and K-12 students of Fes, Morocco in order to discern the effects of contemporary adjustments to Islamic education. This ethnographic study utilized numerous personal interviews, series of focus groups within classrooms, various free lists, and extensive participant observation within both households and secondary level schools, thoroughly recording and analyzing participant's unique perspectives. Findings revealed a complex merging of imitation and formal education within Moroccan society,

and a strong dependence on Moroccan mothers to cultivate religious fidelity within their children outside of the classroom. Our data also describes pedagogical reforms and the political influence that controls the educational realm here in Fes. The results derived from this research will further awareness of the effects curricular changes have upon the Moroccan household, namely mothers, as well as deepen understanding of possible reasoning and trajectories for the religious stamina of the rising generation.

Title: The Amazigh Lived Experience of Navigating their Identity in Urban Fez, Morocco

This presentation explores the intricate dynamics of Amazigh identity in urban Fez, Morocco, a city where historical and cultural tensions between Amazigh and Arab populations intersect and coexist. Through in-depth interviews with Amazigh-identifying students, shop owners, families, and community members, as well as Arab-identifying individuals, this research examines the many meanings/definitions, identities and experiences associated with the term "Amazigh" in urban spaces. By investigating the perceptions, interactions, and everyday encounters between Amazigh and Arab individuals, this study examines the intricacies of how the Amazigh identity is negotiated, contested, and performed within Fez. It also examines how Arab-identifying individuals perceive and interact with Amazigh culture and identity, shedding light on the historical impacts, power dynamics and social hierarchies that shape their relationships. By analyzing the lived experiences of Amazigh individuals and their interactions with Arab counterparts, this study provides insight into the ways in which identity is constructed, performed, and contested in urban Morocco.

Ultimately, this research contributes to a deeper understanding of the complex nature of Amazigh identity and experiences in urban contexts, highlighting the need for a deeper understanding of the intersections between culture, language, and setting in Moroccan society.

Presenter(s): Mariah Hayes

Title: Divided by Distance: The Urban-Rural disconnection in Moroccan Maternal Health

This paper examines the disconnection between medical professionals - mainly trained and raised in urban areas- and the rural populations they service, with a focus on maternal health. Through ethnographic fieldwork, including interviews with women from different areas, midwives, gynecologists, and administrators, this paper explores how this divide is experienced on ground. For many rural mothers, their childbirth experience is shaped not only by geographical distances but also by differences in values, language, and expectations. The challenges these women face stem not only from limited access to services but also from systematic and cultural misalignments between provider and patients. These tensions are often expressed in feelings of mistrust and alienation. By focusing on the experiences of rural populations, this study sheds light on how the current definitions of authority and expertise in maternal health contribute to unequal healthcare delivery in Morocco.

Presenter(s): Zaina Al-Sahili

“We Are Each Other’s Keepers”: The Sociality of Motherhood and Communal Care in Rural Morocco

This paper examines the social dynamics of motherhood in rural Morocco, highlighting how knowledge, awareness, and care are collectively sustained among women. Drawing on ethnographic fieldwork, I explore how women—regardless of marital or maternal status—participate in everyday exchanges that transmit maternal wisdom and social awareness. These interactions function as informal, yet deeply embedded systems of education and support. Central to this study is the role of communal caregiving, in which women care for one another's children, tend to the sick, and mobilize familial resources for mothers in postpartum recovery. Such practices reflect a broader cultural ethos of shared responsibility and interdependence, challenging individualistic notions of motherhood. By analyzing these intimate, everyday acts of solidarity, this research offers insights into the ways sociality operates as both a survival mechanism and a moral framework in rural Moroccan life. It contributes to broader anthropological discussions on kinship, gendered care networks, and the politics of reproduction.

7172 Living Memory: Thinking With Medical Histories and Envisioning Health Futures PART II

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

This panel is PART II of a two part series. At the junctures of institutional healthcare, traditional modes of healing, and everyday life exists an ongoing reckoning with manifold histories of the globalization of biomedicine. With the intention of creating shared insights into relationalities of health knowledges, infrastructures, desires, and embodied experiences, we seek to complicate teleological ways of thinking about time, instead positing that medical pasts, presents, and futures co-constitute one another in entangled and dynamic ways. In this panel, we draw together scholars working at the intersections of critical medical anthropology, archival scholarship, public health and epidemiology, and historical analysis to explore how legacies of interconnected medical pasts reverberate through contemporary health landscapes. We consider how institutional and local medical histories shape both the provision of care and lived health experiences, illuminating how past structures of harm are often reproduced in current health outcomes, policies, and data. Apparent "emerging" patterns in health—such as racial disparities in maternal mortality or the uneven effects of pandemic response—frequently reflect a repackaging of historical marginalization rather than novel phenomena. Additionally, varied local histories of community and individual engagements with medical institutions, practitioners, research, and care continue to shape subjective experiences around medical decision-making, care seeking patterns, and perceptions of medical expertise and authority. We trace how communities understand and respond to medical institutions and interventions through historically grounded frameworks of mis/trust, risk, hope,

and accountability. Together, we discuss the interrelated webs of meaning-making, power and inequity, and experiences of wellness and illness that come to light when tracing diverse medical histories and their afterlives in the present.

Presentation(s): From the “diabetic race” to negotiating diet culture within an American Jewish community

Historical studies on the immigration of Jewish communities to the United States at the end of the 18th century reveal socio-medical views that associated Jews with stereotypes of blackness and dirtiness. Medical magazines frame them as the "diabetic race," connecting them to immorality, fatness, and lust and positioning them as outsiders to the American white bodily ideals. The current study explores perceptions of bodywork among Jewish women in North America today.

Based on 20 semi-structured interviews, I trace how this community manages, responds, and negotiates such deep ancestral messages and ties the scholarly worlds of medical anthropology, religious studies, fat studies, and gendered bodywork. I ask how religious Jewish women in the US perceive body size and negotiate the intersection of gendered expectations, religious prescriptions, and community ideals. Preliminary findings focus on a few meaningful themes. 1) Pressure for thinness before wedlock, 2) Challenges with parenthood amid obesity scares and diet culture defiance, 3) Complex relations with parents and family members about body size, and 4) negotiating and resisting diet culture.

Presenter(s): Hilla Nehushtan

Patients, Providers, and Practice of Gender Affirming Care

Transgender healthcare has been practiced within Western Biomedicine for over a century in Europe and the United States. During this time patients, providers, and practices have engaged in an active creation of a model of gender affirming healthcare amid the backdrop of major social and political changes. In my paper I will look at the historical progression of gender affirming care as it impacts the current models for care delivery in the United States and the ways that actors within gender affirming care bring together varied ontological perspectives leading to positive and negative patient interactions and perceptions of care. With particular attention to the World Professional Association for Transgender Health's Standards of Care, the built medical environment, and the increase in Pride and Gender Care Clinics I will show how care in practice can both enact wellbeing and harm for patients and how the social and political impact individual care. I will end this

exploration with two potential scenarios for the future of gender affirming care: one where more transgender voices are included in policy and practice making, another where transgender individuals are denied autonomy and care.

Presenter(s): Daniel Hamilton

Orange Pills, Red Water: Therapeutic Resources and the Politics of Memory in Highland Madagascar

When Covid-19 circulated worldwide in 2020, Madagascar's government turned to older medical infrastructure to produce "#MadeinMadagsacar" drugs. The state reclaimed a factory that manufactured medicines during the island's socialist period (1975-1992); orange anti-Covid pills made there replicated the orange antibiotics made forty years previously. Government popularization of Covid-19 medications highlighted socialist self-sufficiency to fuel narratives of "true independence" for pandemic-era global health intervention. However, many Malagasy spurned these orange pills. Preferred treatment was ranomena ("red water"), a distillation of cattle blood, prepared in DIY village "factories." Rural communities narrated reliance on ranomena in previous waves of epidemic disease, including outbreaks during the socialist period that state drugs could not address. Ranomena's name, "red water," also designates massacre sites during 1940s uprisings against French rule. This paper therefore examines how therapeutic substances encapsulate legacies of political resistance and layered struggles for self-determination, which transmute engagement with such substances into powerful sites for postcolonial subject formation. Grounded in the language rural communities use to narrate interpretations of therapeutic substances, it considers how historical ethnographies of medicine can attune to local meaning-making through embodiment of collective pasts.

Presenter(s): Gabrielle Robbins

Therapeutic Hauntings: Conspiracy Theory as Shamanic Narrative

A case of infant mortality in a public hospital in Newark, NJ led to forms of emotional distress for the father. Curiously, the cause of death was unclear to him, but did not require further elaboration or explanation. Allied with a conspiracy theorist on the street, this young father resolved his experience through a narrative of malevolent power, regaining his power of signification and sense of control, while reinforcing an explanation of marginalization and dispossession common among young Black men in this neighborhood: the powers that be are behind the curtain, whose visible face is the exploitation of Black folk.

The experience of public health, and the narrativization of experience on the street both stem from a position of marginality. I argue that conspiracy narrativizing serves a shamanic function, providing agency and a sense of control to those haunted by the history of race in the U.S. and disoriented by the gyrations of political-economic volatility in racialized capitalism.

Presenter(s): Kartikeya Saboo

The Eugenic Unconscious: How Nineteenth-Century Junk Science became "Common Sense"

The term eugenics carries a mystique in our collective imaginary, modulated by an assumption that it has something to do with horrific, unspeakable acts. Such unspokenness, such disavowal and unteaching of eugenics in the evolutionary and biomedical sciences, however, has loosened our understandings of what it was and what it accomplished.

This paper traces core eugenic concepts through their inception in 19C biomedical science, their implementations into healthcare structures about 100 years ago, and their persistent afterlives – permeating through policies that are not yet overturned, and circulating as "common sense" in the public vernacular. I provide critical genealogies of keystone eugenic ideas that pass as "common sense" in clinical encounters, research, and education: survival of the fittest; the notion that Black, Indigenous, and women of color do not feel pain; the myth of an absolute gender binary; the myth of essential race differences; the pathologization and criminalization of immigration, race, homosexuality, Indigeneity, and disability; perceived threats of racial replacement; and more.

As an anthropologist who is immersed in the biomedical sciences, I have learned that a basic competency rooted in honest discussions of eugenics can transform healthcare education. Among other outcomes, I share how my required courses in graduate health education empower providers to recognize eugenic structures and to dismantle them in their future practice.

Presenter(s): Lucian O'Connor

Refusing from Above: Antivax Politics and the Afterlives of Elite Medical Mistrust

This paper explores how contemporary medical mistrust among socially powerful communities draws on longer histories of elite refusal of biomedical expertise. Thinking with original ethnographic research I conducted in Northern California among a community of self-described "Hippie Moms" who seek out-of-hospital birth care and express other forms of medical mistrust—such as antivax beliefs—I trace how the language of "medical freedom" and skepticism toward mainstream medicine can be mobilized not from structural vulnerability but from positions of privilege. While often framed as novel responses to pandemic-era policy or institutional overreach, these resistances echo past moments when powerful groups distanced themselves from biomedicine in response to perceived threats to their status. I argue that contemporary refusals are not simply anti-authoritarian reactions to power, but are embedded in neoliberal racial logics that render whiteness invisible while mobilizing it as a perceived site of vulnerability. Through discourses of autonomy, choice, and bodily sovereignty, mistrust can become a tool for defending racialized privilege while disavowing its structural roots. These refusals are haunted by anxieties over the erosion of whiteness as social capital, repackaged as concern for health and freedom. In this way, certain mistrusts act as both embodied memory of medical pasts and as mechanisms for reproducing inequality.

Presenter(s): Jessica Dailey

5398 Making worlds with collapse: ethnographic orientations to a condition of revenant endings

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 3

Type: Oral Presentation Session

The ends of the world hold the public imagination, and reverberate, inconclusive. Activists, scholars, and millenarians share a vision of futures haunted through certain concepts - collapse, disintegration, apocalypse, points of no return - mobilized to articulate divergent views of what futures (and pasts) hold. Each concept names a haunting by rupture, violence, or a "future [that] belongs to ghosts" (Jacque Derrida in MacMullen 1983, see also Audra Mitchell 2024).

Some endings, of course, have already happened. Indigenous communities on Turtle Island point out that their worlds have already ended, in some cases multiple times (Lear 2009; Bold et al 2019; Dillon 2012). With collapse, ecologists call attention to loss of niches, species or food chains (e.g. Hallmann et al 2017). European climate justice activists use collapse to frame the inevitable and irreversible nature of climate system transformation while also exploring possibilities of justice beyond the tipping point (Müller 2024; Danowski and Viveiros de Castro 2017). Self-identified "preppers" across the Global North gear up for the collapse of financial or political systems, aligning spectrally, fully, or not at all with explicitly White supremacist orientations (e.g. Ford 2021; Boke 2015). Ecomiserabilists are accused of foregoing future possibilities of freedom or even survival (Thaler 2024), accused as "politically regressive" alongside far-right conservative preppers who stockpile supplies at their "bug-out sites" (see e.g. Ginn 2018). All this echoes China Mieville's resurrection of 19th century economic revolutionary thought (Mieville 2022; Marx and Engels 1848) even as digital media shape "collapse" as a defining figure of this moment.

The only ghosts, in this frame, are the losses of the (neo)liberal socioeconomic order.

How do we take up the haunting of collapse imaginaries, taking time as cyclical rather than linear? What if there is more than one end-of-the-world? If there is more than one world to end? How is life recomposed and repurposed in climates of cascading unpredictabilities, when the very idea of stable states has gone missing? Is collapse the opposite to hope, and if not, what kind of hopeful specters does it sustain?

This panel explores how actors across a range of liberal-conservative politics use the concept of collapse to sustain imaginaries (and practices) of hope, survival, and more (see e.g. Lempert 2018; Miyazaki 2003). We probe specters of futures sustained through systemic breakdown, exploring situated uses of the collapse imaginary – ranging from the demand for robust state responses, to rethinking care in collectives, to glorifications of rugged individualism (Thaler 2022; Boke 2017; de la Cadena 2010; Hebert 2016). We frame 'collapse' as a world-making tool rather than a world-ending specter. Panelists' contributions build towards an ethnographic understanding of how people stay oriented amid spectral futures imagined but as-yet unmade.

Presentation(s): Rot and Repair: Crafting Ecological Futures in a Broken World

Despite all their promise, there is something deeply ruinous about conventional ideas of progress. Loss and decay so often shadow the pursuit of growth and development, a difficult truth embodied most forcefully by the scale of the contemporary waste crisis. This talk sketches the outlines of a new book project that seeks to confront this paradox. We cannot build truly ecological futures without acknowledging pervasive realities of rot, and the possibilities for repair that still remain in the rubble of industrial modernity. In the natural world, decay is the underside of growth and the foundation of future life, as fallen leaves, fungi, and other quiet forces of decomposition can teach us. Communities the world over are grappling with such lessons, devising ways to live with things as they come apart, taking circumstances of decay as occasions to craft more livable futures of social and environmental regeneration. This project tracks such openings between four places in the global North and South: Baltimore, Madurai, Accra, and Barcelona. I explore how artists and activists, naturalists, architects and many others have come to imagine rot and repair in ecological terms, improvising new ways of making and unmaking things, and organizing for justice in the experience of both loss and renewal.

Presenter(s): Anand Pandian

Entering the World in 5D: Czech Conspiratorial Milieu between Collapse and Transformation

The conspiratorial milieu in the Czech Republic is haunted by the imaginaries of collapse. People see its signs in environmental degradation, volatile financial markets, abandonment of "traditional values," or dissolution of political order. More than a multitude of crises, such signs are seen as an expression of a single process. This paper attends to epistemic labor people perform to make the Collapse visible and tangible, as well as to the political trajectories which are enabled by this particular vision. Different practices can become ways of preparing for the collapse, from permaculture gardening and cryptocurrency trading, to search for alternative relationships with animals, plants, and spiritual beings. However, tracing the collapse within the ethereal and spectral opens up particular political commitments while it closes the others. Those who went through "the awakening" see it as a space for hope, a chance for humanity to transcend and reach a higher level of consciousness. They mobilize around this idea while finding resonances with politics that promise to fight back against invisible enemies or uncover the hidden truth behind the political order. If the notion of collapse may allow people to conceptualize different forms of life, it matters

on which lines is collapse constituted. What kind of politics are enabled by knowledge based on apophenia and affect, and who is allowed to participate in futures imagined within it?

Presenter(s): Hynek Becka

On Account of Doomsday: Auralities of Climate Activism, Street Blockades and State Violence in Berlin

As climate movements galvanize in response to the state and the EU's role in perpetuating an accelerating climate crisis, I focus on the fraught collaborations between German activist networks Extinction Rebellion and Letzte Generation (The Last Generation). These groups' performative and rhetorical uses of civil disobedience aim to convey an ecological crisis manifested by the hauntings of European (neo)colonialism. I draw from my fieldwork to explore an encroaching sense of global collapse among my activist interlocutors, tied to an unravelling faith in governmental institutions, liberal democracy, traditional politics, and global capitalism, as well as a shared dismay over ecological disrepair. Climate activists in Berlin blockade busy streets, enacting civil disobedience informed by connections between social and ecological collapse. They open public space to share political speeches, testimonials, and musical performances which blast over mobile sound systems. Creating an overlapping and at times chaotic acoustic milieu, these spaces temporarily reorient toward practices of ethical listening (Hirschkind 2006) and police violence, as well as a mutual commitment to witnessing the utopian desires, anxieties, and frustrations of participants (Taylor 2022). Such interventions articulate a particular desire toward revolutionary transformation in moments of despair and despondence "when apparently nothing can be done" while "doing nothing is not an option" (ibid:2).

Presenter(s): Max Jack

Ghostly Lessons. Survivalist Politics and the Uses of History

Survivalist movements are experiencing unprecedented growth across Western countries. Despite this expansion, social sciences have largely overlooked these mobilizations, often dismissing them as rationally catastrophist. Yet survivalist groups continue to attract a growing number of adherents. Drawing on research conducted since 2021 among American preppers, this talk will examine how survivalists harness history to justify and promote ultra-conservative political projects. In survivalist circles, history serves a dual pedagogical purpose. First it offers a reservoir of past examples illustrating the fragility of established systems. Citing the moral decay of the Roman Empire, the recent economic crises in Greece and Argentina, or the decline of the Spanish colonial empires, preppers highlight historical precedents to underscore systemic vulnerability, exposing what they perceive as the corruption of modern societies. Beyond the cautionary, they also use history to form models for reclaiming an idealized past from which modernity has allegedly deviated. Many preppers narrate a bygone era characterized by a virile, heterosexual, white, and agrarian America, when free men "knew how to exercise" their fundamental rights, pointedly those of liberty and property. In this context, history becomes more than a narrative of decline and

degeneration. It transforms into a political resource of curated "ghostly lessons" used to justify conservative agendas and reactionary projects.

Presenter(s): Sébastien Roux

Psychedelic imaginaries: Hope and refabrication of life amidst spectres of collapse

This paper presents an ethnographic analysis of psychedelic hopes as antidotes to collapse. I consider themaking of futures amidst the spectre of impending and unfolding collapse relying on my ethnographicresearch with a psychedelic integration group and its community in the U.S. Deep South. Neurobiologicalresearch suggests that psychedelic experiences may relax prior beliefs (Carhart and Friston 2019),creating potential (but not inevitable) spaces for new orientations toward self, community, and the biophysical environment. I connect this potential with conversations about degrowth as a path to societal transformation. Degrowth, as a philosophy and social movement, decries adverse socioecological impacts of growth-oriented economies. Proponents seek to minimize harm in ways that include the reduction of reliance on non-renewable forms of energy, shifting mindsets away from productivism and consumerism, community commitments to living simply, cooperating, and seeking conviviality (e.g. Kallis et al. 2020). I examine what psychedelics offer to such moral and practical spaces of rethinking personal, social and environmental care. This ethnographic research presents a psychedelic integration community that imagines this kind of transformative refabrication of life, despite the specter and materiality of collapse.

Presenter(s): Lisa Gezon

Refusing Collapse: Insisting on Life in Haiti amid Colonial Revenants

For centuries, Haiti has been cast as a land of collapse. From the "Pearl of the Antilles" to "the poorest country in the Western Hemisphere" and a "shithole country" that is sending immigrants to the US so "deranged" that they "are eating people's cats and dogs," narratives of decline, failure, and inhumanity are perpetuated and promoted with limited resistance even among some scholars. The Haitian population has experienced compounding traumas, from life-destroying earthquakes and other humanitarian disasters, to political and economic violences, to ravaging environmental devastation and climate change, leaving many to despair that "There Is No More Haiti" (see Beckett 2019). Yet this nation, through the Haitian Revolution, insisted to the world that the institution of slavery could not and would not stand; that all human beings inherently deserve freedom and dignity, regardless of race. In rejecting the political campaigns of disparagement and disinformation that have persistently sought to destroy this legacy and the associated imagination of a better future for all, I curate ethnographic engagements from over two decades of research and a musical soundtrack to suggest a Haitian take on "Arts of Living on a Damaged Planet" (Tsing et al. 2017). In response to collapse and precarity, this presentation considers what it means to reach past decolonial ecologies (Ferdinand 2022) toward maroon ecologies (Hosbey and Roane 2021, Barson 2024) to insist on life.

5371 Panel 1 - Habitable Air: Urban Inequality in the Time of Climate Change

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** MGB Salon E

Type: Oral Presentation Session

This panel examines how urban communities, living on the margins of interconnected energy hubs, manage the sociocultural and health effects of chemical air pollution. A secondary focus explores how longstanding struggles over industrial toxicity are newly being shaped as climate science becomes increasingly integral to contemporary governance. The panelists, all contributors to the forthcoming edited volume *Habitable Air: Urban Inequality in the Time of Climate Change*, draw on qualitative methods - including ethnographic participant observation and historical archival research - applied at a scale typically reserved for quantitative climate studies. The panelists work within a clear network of scientists, policymakers, workers, and residents across transnational sites. Each panelist investigates the practices and interactions of ordinary people as they grapple with energy industries that are at the center of their lives and with community debates about their health and that of the planet. By studying these networked practices and interactions as key drivers for reordering urban life and politics, we may be better able to dismantle homogenized perspectives on transboundary air pollution to build more equitable and sustainable cities.

Presentation(s): Toward a Theory of Habitable Air

This paper situates the theoretical concept of "habitable air" within three key anthropological literatures: (1) theories of democratic politics, (2) research on urban ecology, and (3) studies of climate change. Within this framework, I argue that toxic air - though invisible - has tangible sociocultural, geographic, and corporeal effects. These manifest not only in the prevalence of cancer, asthma, and other illnesses near petrochemical plants, but also in enduring and emerging forms of community-based political mobilization. Drawing from research in the U.S. and South Africa, I examine what politics is possible where residents face radically life-shortening illnesses and the known "slow violence" of toxic exposure. While recent research emphasizes making air pollution legible to technocratic planning from above, this paper explores how urban residents deploy climate politics to sustain bodies and communities. I focus on how residents do so through

everyday scientific and spiritual practices that offer innovative challenges to an emerging consensus about climate crisis.

Presenter(s): Kerry Ryan Chance

Sacrificial Habitation: Pollution and Policing in New Orleans, Louisiana

This paper seeks to explore how different stakeholders grapple with national debates about community policing and environmental vulnerability by examining the problems articulated and the solutions proposed in New Orleans, Louisiana. As the city with the highest rate of incarceration in the world and a climate change hotspot, New Orleans is an ideal site to understand policing's relationship to inequality and environmental exposure. The city also has a community policing program in place, centered on post-Hurricane Katrina disaster areas, that allows the opportunity to methodologically evaluate police-citizen-environment relationships. The current climate of heightened awareness around policing demands a comprehensive study of policing in relation to urban ecologies, rooted in rigorous historical, and ethnographic analysis.

The Enduring Urgency of Black Breath: African Diaspora Perspectives

This paper is dedicated to an essay by Dr. Omotayo Jolaosho, who passed away in 2022. Their work examined what they called "Black Breath" through post-colonial musical performances, particularly in the mining regions of Southern Africa and protests over police violence in the United States. The essay examines breath as a powerful material and spiritual force, a point not only of harm but also of recovery, showing convergences of racial violence, health, and environmental hazards through time and space. Fadeke Castor offers a new reading and insights reflecting on these themes.

Presenter(s): Nicole Fadeke Castor

The Non-Linearity of Time: Mozambican Politics of Irreconciliation and Extractivism

At least 1 million people died during the Mozambican civil war (1976/7-92). Unfolding after gaining independence from Portugal (1975) and alongside experiments with Afro-socialism in the 1980s, the war, despite its brutality, has not been subjected to global templates of reconciliation processes. At the same time, Mozambique has been the center of opening new markets to oil and gas extractivism, and the U.N. suggests it is one of Africa's most vulnerable countries to climate change. Thus, drawing upon historical archives and representations of violence and disaster, as well as localized cosmologies, it comprises a unique case to probe what irreconciliation might mean – both as a political horizon and analytical concept.

Presenter(s): Bj  rn Enge Bertelsen

Solastalgia: Seeing Stories Beneath the Surface in Mossville, Louisiana

This paper offers an ongoing meditation on the petroleum industry in southwest Louisiana, the material, ecological, and social violence that this industry has produced in the region. For more than 150 years, Morris' maternal family has lived in Mossville, Louisiana, a small, unincorporated community that was a historic freedmen's community. In 2011, a South African energy and chemical company announced its plans to invest \$21 billion to build the first gas-to-liquid plant in the United States and expand its existing chemical facilities, which produce synthetic fuels and a variety of petrochemical products. The expansion required a buyout of the community, effectively resulting in its demise. The paper plays with themes of origins, religiosity, domesticity, death, and the psychic life of ruined landscapes.

2497 Past Imperfect: The Grammar of Forgetting and the Insurrection of the Past

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR A3 (3rd fl)

Type: Oral Presentation Session

Ceremony (1977), Leslie Marmon Silko's novel about grief in the wake of colonial conquest, opens with a poem about the power of stories. She writes,

Their evil is mighty

but it can't stand up to our stories.

So they try to destroy the stories

let the stories be confused or forgotten.

They would like that

They would be happy

Because we would be defenseless then (p.1)

In light of AAA's theme examining ghosts and haunting, we take seriously Silko's message about the necessity of stories as defense and the violence of imposed forgetting. As critical ethnographer's who study the relationships among schooling and immigrant communities in the context of ongoing colonization, we offer a symposium on remembering as a generative act of refusal (Simpson, 2014).

The conflict between the role of schools as an ideological state apparatus for colonial conquest (Vaught, Brayboy, Chin, 2024), and the use of schools to achieve students and their communities' self-determined goals (White, 2015) is the tension of public education that animates and sustains our commitment to educational anthropology. This tension is particularly stark in immigrant education, particularly in this moment, where state and community goals are in clear and obvious

opposition. U.S. schools employ forgetting in an attempt to resolve this tension: forgetting about where students come from, forgetting why they are enrolling in public schools, and forgetting about community social movements and the promises made in response to them.

In this panel, we present five papers that examine how the intended-to-be-erased past haunts the present in immigrant education, broadly conceived. Each paper is drawn from study with immigrant communities at distinct points in their migration journey: paper 1 examines the experiences of migrants headed toward the U.S. while they wait in shelters in Mexico City, paper 2 focuses on young people and families held in detention centers at the U.S.-Mexico border, papers 3 and 4 are drawn from studies within public schools, and paper 5 focuses on the transnational and diasporic work of Indigenous migrant mothers around and between schools and their communities. Taken together, these papers reveal how the past pierces into the present in distinct immigrant educational contexts to reveal how schools structure and perpetuate inequality as well as how students and communities contest erasure and fabricate possibility.

Presentation(s): The Praxis of Placemaking in Mexico City's Migrant Camps

As border externalization policies, such as CBP One, strand migrants in third countries, makeshift camps grow to serve migrants in transit. Unlike institutional camps (formal refugee camps, hospitality camps, detention camps etc.), which are understood as "top-down" spaces of control, custody, and care, managed by international humanitarian agencies or state entities, makeshift camps are informal spaces made by migrants. Makeshift migrant camps are often the result of state neglect and abandonment, as transit migrants are often "forgotten" and denied access to basic resources. Most theorization on camps centers on Agamben's "spaces of exception," accentuating these spaces as physical manifestations of exclusion (Minca, 2015). Instead, I draw on anthropological and geographical theories of placemaking and feminist decolonial practices to highlight the role of camps in cultivating migrant solidarity. Drawing on data from an 18-month ethnographic study (2022-2024) conducted in Mexico City, I examine how migrant families in transit learn to resist border violence. While most camp studies position the camp itself as the space of containment, I argue that migrants are pushing back against multiple contaminants while in transit, and the camp can materialize as a space of learning and resistance. This paper addresses the growing prominence of makeshift camps across Mexico and their function in migrant learning.

Presenter(s): Claudia Triana Ipinza

Waiting Rooms on the Frontera: Time in the Institutions Between the Border and School

(Im)migrant youth enrolling in U.S. schools often pass through spaces of transit upon arrival in the U.S, including shelters along the border, detention centers for unaccompanied minors, and

immigration courts. Transit spaces have little contact with school or support systems in the U.S. or in other countries, which delinks them from youth's pasts and futures. These spaces are also often divorced from their own histories—as downtown nightclubs, nursing homes, Protestant boarding schools and missionary training facilities. This paper explores what it means to look closely at the pasts, presents, and futures of border transit spaces and to consider their impacts on children's educational trajectories.

I engaged in a critical autoethnography (Madison, 2012, Spry, 2011)—acting as an observer in immigration courts, and a volunteer in shelters and detention centers—to make sense of transit spaces in the borderlands. This required challenging the norms in each setting through stillness, return, and a commitment to asking past and future-oriented questions, particularly in relation to young people's educational trajectories. In spaces oriented towards processing people, these interruptions were disorienting. In the tradition of performance autoethnography, this paper offers "a person, a body, a place, and a historical moment," (Denzin, 2017, p. 44), to explore the hauntings of and by windowless, industrially sanitized spaces of confinement and judgment.

Presenter(s): Melissa Adams Corral

The Construction of Newness in the Context of Conquest

Based on an ethnographic study of specialized high school programs for recently-arrived immigrant young people, this paper examines how language policy facilitates the construction of immigrant students as "new." Rather than simply a myth or misconception, the construction of newness is a strategy for dominating, structuring, and having authority over Indigenous and Latinx children as part of the ongoing project of U.S. state formation through conquest. This paper argues that the construction of newness conceals the history of insurgency/ counterinsurgency on both sides of the border to which students' migration and appropriation of services within the educational system belong. While this obfuscation attempts to exceptionalize the role of school and obscure carcerality in immigrant education, analyzing the construction of newness reveals the colonial "entanglements" (Greyeyes, 2022) that animate U.S. schooling and gestures toward the transnational solidarities that contest it.

Presenter(s): Kyle Halle-Erby

"Ellos Saben Que El Trabajo Es Primero": Diasporic Maya Youth Navigating Language Acquisition and Acquisition of Wage-Labor at a Continuation School

Educational ethnographers have generated important knowledge about diasporic Maya youth in school settings, highlighting their navigation of institutional spaces and use of cultural resources. Less studied is the labor dimension of diasporic Maya Indigeneity, particularly the intersection of language, education, and labor.

This paper presents findings from a two-year ethnographic study of Newcomer Continuation School in Northern California, serving primarily Maya youth from Guatemala. The analysis draws from participant observation at school and workplaces, classroom recordings, and interviews with

students and teachers, examined through a discourse analytic lens focused on the functional uses of the school.

Findings reveal contestations between the school's language acquisition orientation and Maya students' repurposing of the institution as a space for labor acquisition and workplace networking. Teachers attempted to resolve this tension through a multilingual job-seeking curriculum. Maya youth actively transformed the school from its intended purpose into a site for workplace connections serving their immediate needs and community priorities.

These findings nuance our understanding of social reproduction and labor market stratification through schooling under racial capitalism, while illuminating relationships between education, language, diasporic Maya Indigeneity, and labor socialization.

Presenter(s): Alexander Feliciano Mejía

Against Erasure: Present-Day Hauntings, Ancestral Voices, and Language Revalorization in the Yucatan-California Maya Diaspora

This paper begins with an overview of the cultural and linguistic erasure of Indigenous Maya immigrant families from Yucatan (Mexico) by school bureaucracies in California, particularly during enrollment processes where Indigenous Maya students are subsumed under the racialized "Latine" demographics. Drawing from a 3.5 year ethnographic project at a K-5 school and the university-school partnership that evolved from it, the author examines practices that socialized Indigenous worldviews guided by Indigenous mothers. These invoked ancestral knowledge and practices of remembering relations with human/non-human actors. Similar to Maya cultural practices discussed in the literature involving engagement with supernatural beings (Author; de Leon 2012; Le Guen 2012; Vapnarsky 2003), Indigenous mothers socialized multi-party interactions that invoked *chichi'* (a nonhuman being), already "made present" in the liminal spaces that mothers occupied at the school as stern guidance for children's good behavior. In another example, a mother recalled women elders' use of "real Maya" language during secluded, subterranean, and gendered ceremonies in Yucatan that she witnessed as a young girl. These women leaders in diaspora connected the past to the present to resist forgetting Indigenous language and culture. This paper uses language analysis as a window into understanding how cultural and linguistic resources are employed to counter logics of Indigenous erasure in schools and society.

1880 Possessed by the Past: Histories of Anthropology and Contemporary Practice Part 2

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

At the 1962 Social Science Research Council's Conference on the History of Anthropology, Dell Hymes observed that anthropologists felt discomfort when they encountered historians' perspectives on their discipline. This unease, he noted, stemmed from anthropologists' attachment to their own narratives of "origin, nature, and destiny"-narratives that would come to haunt the discipline in unexpected ways. When historians of anthropology presented their findings as "historical topics," anthropologists tend to translate them into "substantive contemporary issues." This tension between historical research and disciplinary self-understanding, which Hymes hoped could be resolved through "objective control over our use of our history," has only intensified in recent decades.

Hymes suggested that historians' perspectives on anthropology were particularly jarring to anthropologists because their own historical narratives were largely self-affirming. The tensions that resulted spurred George Stocking toward his influential insistence on rigorous historicism in the history of anthropology. Yet Stocking came to recognize, partly through Hymes' influence, that while anthropologists inevitably approach their past through present concerns, an "enlightened presentism" was possible-one that could both critique the past and recover its unrealized possibilities. This dual approach to disciplinary history-as both critique and resource-remains vital as anthropology grapples with its ghosts. Similar methodological tensions have emerged across various national traditions, as seen in European ethnology's struggle to establish a new identity distinct from Nazi science, or in the complex negotiations between colonial-era anthropological knowledge and postcolonial reckonings in many regions.

The 1962 conference emerged when, as Hymes noted, American anthropology was "flushed with success"-expanding enrollments, multiplying jobs, and increasing funding marked an era of disciplinary confidence in the United States. Today's landscape, as Ira Bashkow observes, is radically different: "we no longer live in a world where the value and institutional viability of anthropology itself can be taken for granted." The discipline finds itself possessed by both doubt and possibility-some call for radical breaks with the past, while others seek to reassess it whether by reading the classics with new lenses or by recovering alternative traditions and forgotten insights from the archives.

By taking the Hymes-Stocking controversy as a starting point for exploring analogous or contrasting debates in multiple settings, this panel invites papers that explore how historical research can productively engage anthropology's diverse past in ways that inform its present and future.

Presentation(s): Occulted Projects and Ancestral Afterlives: The Smithsonian Handbook of North American Indians and the Possibility of Other Indigenous Anthropologies

Originally envisioned as a Bicentennial project when it was launched in 1971, the final volume of the Smithsonian Handbook of North American Indians was finally published in 2022. Intended to be comprised of twenty volumes, in the end only seventeen volumes were published. Of the volumes that were actually produced, at least one — Volume 2, "Indians in Contemporary Society" — went through multiple distinct versions under different editors, leaving ghostly traces both in the final version and in the discipline of anthropology more widely. First edited by D'Arcy McNickle (Metis/Enrolled Salish Kootenai) and then, after his death, by Vine Deloria, Jr. (Standing Rock Sioux), the planning and production of the two superseded versions represented broader and more sustained engagement with Indigenous scholars than any of completed volumes including those overseen by the only other Indigenous editor (Alfonso Ortiz [Tewa], volumes 9 and 10). Based on extensive archival research, my examination of the processes by which these two unfinished volumes were developed and produced, including an analysis of the intellectual networks and other connections between the Indigenous contributors, reveals an often-occulted aspect of the roles, both intellectual and institutional, played by Indigenous researchers in history of postwar American anthropology.

Presenter(s): Robert Hancock

Typing Culture: Personal Computers and Postmodern Critiques, 1974-1986

Recent histories of U.S. anthropology, psychology, and biology underscore how protean technologies contoured the post-War field sciences' epistemic and political shapes. Well-funded anthropological fieldwork collaborations, such as the Harvard Chiapas Project (1957-80), offered students images of ethnographers that differed from scholarly personae of lone fieldworker-theorists such as Bronislaw Malinowski. Collaborative fieldwork cultivated an image of "culture" modelled on information storage tools. As humanistic knowledge became social scientific data, "culture" became an archive, database, or drive storing social memory. I argue that this modernist construction's dissolution was prompted by: (1) declines in social science funding; and (2) the rise of personal computing. Extensive research with archival materials of anthropologists including Victoria Bricker, Richard Bauman, and Louise Lamphere suggests that appetites for postmodern critique reflected a conjunction of anxieties. While fieldwork proposals yielded reduced funding, the home computer offered distinctive compositional affordances: cut/copy/paste, the backspace/delete key, and the mouse. Ethnographic representations became endlessly editable and debatable, at the cost of a modernist sense of fieldwork results' archivable solidity. This disciplinary transition, I suggest, offers material lessons for critical assessments of anthropology's funding and technological conditions today.

Presenter(s): Matthew Watson

The Specter of Archetypal Anthropology: Radin, Eliade, and Jung at Eranos

The Eranos meetings held in Ascona, Switzerland were a site for interdisciplinary and at times transcultural encounter. Originally framed by their host, the artist and theosophist Olga Froebe-Kapteyn, as a meeting between Eastern and Western mystical traditions with a heavy emphasis on Taoist, Buddhist, Hindu, Christian, Jewish, and alchemical practices, they also presented Native American traditions-- including Aztec materials and Winnebago narratives introduced by wayward Boasian Paul Radin. Other notable scholars at Eranos included Mircea Eliade, D.T. Suzuki, Gershom Scholem, and Joseph Campbell, while the overall tenor was set by psychologist Carl Jung, who attended most of the meetings from 1933 into the 1950s. While few of the participants explicitly or faithfully adopted a Jungian approach, the idea of the archetypes of the collective unconscious was frequently invoked as a lingua franca or "boundary object" in these conversations. I present Eranos as a laboratory for the repackaging of worldwide "spiritual" traditions for Western consumption: it encouraged both ontological pluralism and the perennialism which haunts the comparative study of religions. Jung's debts to anthropologists (including Bastian, Frazer, and Levy-Bruhl) are significant, while postwar anthropology's uptake of Jungian theory deserves closer attention, as references to archetypes continually exert an ambiguous influence on understandings of non-Western, "pre-modern" beliefs and practices.

Presenter(s): John Tresch

Haunting Phantoms of Nationalism: The Afterlives of Two Folklore Congresses and the Transnationalization of Folklore Knowledge in Turkey

The closing of the Turkish Folk Literature and Folklore Department at Ankara University in 1948 due to rising far-right attacks on its founding chair marks a turning point for academic folklore in Turkey. Despite—or perhaps because of—this closure, folklore knowledge emerged through state institutions, journals, and international congresses. Yet, "phantoms" of nationalism, to borrow from Roger Abrahams, kept haunting the disciplinary praxis, shaping the ways folklore was institutionalized, studied, and mobilized. I examine the 1975 and 1981 International Turkish Folklore Congresses as venues of both transnationalization and nationalist consolidation in folklore knowledge. Organized by the state-funded National Folklore Institute, these congresses embedded Turkish folklore within transnational scholarly networks while primarily seeking to re-construct a national canon. Linking Turkish folklore to Turkic communities in Central Asia and the Balkans, certain scholars aimed to establish historical continuities and trace the "origins" of folklore genres back to Anatolia. I scrutinize the afterlives of congresses within broader debates on the uses of history in disciplinary self-understanding. Drawing on "epistemic communities," I examine how these congresses structured disciplinary knowledge, navigated the interplay between nationalism and transnationalism, and contributed to the ongoing negotiation of folklore's place and its futurities in Turkey.

Presenter(s): Hande Birkalan-Gedik

The "Minor" Histories of Anthropology: Metamorphoses in the Textbook Tradition

In many academic locations where anthropology is based, the teaching of its history occupies a key place in the training of future anthropologists. As much as the discipline itself, however, courses on its history have undergone profound changes, with a growing tendency to portray the past and its actors from a distanced, essentially critical perspective. In contrast with narratives that highlighted the intellectual contributions of major figures, students may be encouraged to focus on negative aspects in relation to the colonial context of anthropology. Considering the pivotal place of textbooks in the syllabi and teaching of disciplinary history, this paper proposes a retrospective, comparative and critical review of these abundant secondary sources – sometimes disregarded as presentist or minor literature by historians of anthropology in their specialized outputs. These are, however, fundamental texts in the construction of the discipline's futures, given their repercussions not only on the way contemporary practitioners relate to their ancestors, but also to themselves. Using a corpus selected from a vast publishing universe that, while dominated by the English language, includes creations in other languages, the paper seeks to identify continuities and ruptures in a multiform tradition that dates back to at least *Die Entwicklung der Modernen Ethnologie* (1889) by Thomas Achelis.

Presenter(s): Frederico Rosa

2625 Rethinking Rural China: Habitation, Negotiation, and Anticipation

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Estherwood (4th fl)

Type: Oral Presentation Session

This panel discusses new theories, methods, and approaches for understanding rural China. We ask: how have urban-rural disparities evolved following four decades of economic reform? And how have recent state-led rural development, welfare, and technology projects been implemented and received on the ground? This panel brings together four recent ethnographic studies that examine knowledge production, the quest for good lives, the politics of belonging, and practices of hope in rural China. Long Sheng's analysis of authority negotiation in national land surveys reveals how rural residents' knowledge plays a significant role but is overlooked in state technological projects. Min Lee's work examines how villagers in an ethnic Yi village in southwest China envision and enact their own vision of rural revitalization, one that contrasts with the state's model, through their interaction with urban-to-rural migrants. Also addressing urban-to-rural migration, Xisai Song's research focuses on returning rural migrant workers suffering from kidney failure, who struggle with social alienation, economic hardships, and tenuous kinship relations in their officially designated hometown. Ray Qu's research demonstrates how people in rural northern China adopt incense seeing as a practice of hope to grasp determinacy and resist marginalization in daily life. Interrogating how ruralities are perceived, lived, governed, negotiated, and imagined, this panel invites new reflections on conceptualizing urban-rural divides in China and beyond.

Presentation(s): Studying Neither Up nor Down: Reversed Hierarchies in Technological Projects in Rural China

In this essay, I reflect on the ambiguous relationships that anthropologists navigate during fieldwork within technological projects. During the fieldwork in rural Meixian, Southeast China, I shadowed technicians, rural residents, and government officials collaborating on national land surveys intended to digitize land systems. This essay focuses on the conflicting expectations placed on me as an ethnographer, from quiet observer to mediator to scholarly expert. My position as a bridge between these groups—despite being entangled in ethical dilemmas and lacking authoritative modes of accounting—revealed that rural residents, positioned as mere "subjects" in these technological projects, were actually the primary contributors of knowledge. Engaging with scholarship on power relations in anthropology (Hannerz 2006; Ho 2009; Nader 2018 [1969]), I investigate the accountability implied by these shifts and the anthropologist's role in providing insights. Focusing on ethnographic moments in which authority has been negotiated during the national land survey, this essay looks for ways to recognize overlooked rural residents' contribution in state technological projects. Against the often presumed "up" or "down" of hierarchies between anthropologists and our interlocutors, I examine circumstances where these hierarchies reverse or become more complex.

Presenter(s): Sheng Long

"The Village Chose Us": Symbiosis of the New and Old in a Southwest Chinese Village

This paper explores the symbiotic relationship between native villagers and urban-to-rural migrants in an ethnic Yi village in southwest China. Based on thirteen months of ethnographic fieldwork conducted in 2021 and 2022 in a suburban village in Kunming, Yunnan Province, I examine how native ethnic Yi villagers, or "old villagers," act as active gatekeepers who select incoming "new villagers" rather than passively accepting settlers. The old villagers deliberately embrace young, highly educated urban-to-rural migrants to utilize the urban resources—economic, social, and cultural capital—that these newcomers bring, envisioning these as tools for their own ethnic revitalization. This paper specifically focuses on how interactions with urban migrants reshape the Yi villagers' aesthetics regarding traditional housing and their perspectives on education, prompting a reevaluation of their home village's value. Through this ethnographic case study—distinct from cases of model villages for rural revitalization, where native villagers are often displaced by growth-oriented business forces—this paper seeks new possibilities that trouble conventional urban-rural dynamics and power relationships in contemporary China.

Presenter(s): Min Lee

Reinhabiting “Home”: Kidney Failure and Life after Migration in Rural China

This talk examines the lives of chronically ill rural migrant workers when they are no longer wanted by the labor market and return to their rural hometowns. Based on year-long ethnographic fieldwork in the hemodialysis ward of a county public hospital in southwest China, my study focuses on a group of young and middle-aged rural migrant workers suffering from kidney failure. In China, public health insurance has significantly increased reimbursement rates for dialysis over the past decade, and the national poverty alleviation program offers further assistance with medical expenses. These social entitlements are tied to household registration (hukou), compelling migrant workers to return to their hometown to receive the full benefits. Although they are able to extend their biological lives on dialysis, my research finds that former migrant workers' social, intimate, and economic lives fall apart after returning home, as they struggle with loss of work abilities, social isolation, tenuous kinship relations, and hopelessness. Through examining how returning rural migrant workers negotiate the idea of "home," this work challenges the conceptual binaries between care and abandonment, inclusion and exclusion, and life and death.

Presenter(s): Xisai Song

A Ladder of Hope: the Religious Capacity to Aspire and the Infrapolitics of Hope under Medical Authoritarianism in rural North China

Indeterminacy, open-endedness, and possibility have characterized the predominant understanding of hope in anthropology. This rendering of hope is unsettled by the practices of hope in North China where millions of people muddling through lives in an authoritarian regime seek help from incense seers who foretell their futures. Through an ethnography of the individual/family-based hopes for "living the daily life" under unforgiving health regulations, I argue that incense seeing offers an affordable and easily accessible "ladder of hope"—a cultural toolkit from which people draw to maintain hope and achieve goals seemingly beyond their reach. Rather than wishful thinking, this "ladder of hope" affords a sense of determinacy that influences people's hopeful dispositions and inspires them to act, resist, and make changes in their lives under China's zero-COVID and birth planning policies. Their experiences invite a retheorization of hope as a dynamic, relational practice that features an active interplay of determinacy and indeterminacy, especially for marginalized social groups in helpless situations. These mundane acts constitute a fundamental part of the politics of hope and breed potentiality for more conscious efforts of building collective anti-authoritarian hopes for social and political change.

Presenter(s): Ray QU

5235 Roundable /Town Hall THE FUTURES OF ANTHROPOLOGY

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR B3 (3rd fl)

Type: Roundtable/Town Hall

In 2010, a dossier published in the *American Anthropologist* with the suggestive title "(Not) the end of anthropology again? Some thoughts on disciplinary futures" (Comaroff & Kohl, vol 112, no 4) signaled that instead of the recurring fears of its demise, we should analyze the broadening reconfigurations and futures of anthropology. Considering the significant transformations of our discipline throughout the last fifteen years against the context of neoliberal capitalism, this roundtable examines how anthropology is differentially changing in different parts of the world and, from this viewpoint, the future of anthropologies and the possibilities of constructing viable and flourishing anthropologies of the future.

Given the significant transformations in the global political economy already underway, how can we think comparatively about the future of anthropologies and the constructions of anthropologies of the future? In the current context of neoliberal capitalism - which privileges free trade, technocracy, and high technology, including AI - anthropologists in some parts of the world face declining interest in anthropology and the humanities, program closures, and precarity. In addition, the concomitant advance of authoritarian governments, emphasizing securitization, technocracy, and accountability at the expense of cultural differences and human dignity, has significantly impacted the discipline, even leading some places to criminalize anthropology and anthropologists. At the same time, a discipline transformation is taking place with former research subjects becoming PhD in anthropology, among others, the so-called minorities, such as Indigenous peoples, who, while contributing with traditional knowledge rather than studying otherness, tend to focus on themselves. Overall, anthropology has confronted considerable challenges as well as opportunities in the reconfigurations of its anthropological research practices, ranging from self-ethnographies to online ethnographies, which resort to IA, and in the process ever expanding themes of research

7781 Routine (Dis)possessions: The Haunting of Land and Property Regimes

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR D2 (3rd fl)

Type: Oral Presentation Session

Dispossession from land is often perceived through moments of spectacular, overt violence, and economic exploitation, but its most pervasive forms are enacted through legal and bureaucratic

mechanisms that redefine land, property, and ownership. This panel explores the routine forms of governance, documentation, and property regimes that produce possession and dispossession across settler-colonial and post-colonial contexts.

Worldwide, the conditions of capitalism, globalization, and development coupled with racialization and majoritarianism have fostered a politics of space and place that have left minority communities vulnerable to land dispossession. As an organizing principle we recognize that property is a marker of exclusivity, exposing how people's relations to resources and each other are inextricably tied back to ownership or the lack thereof. Property, specifically land, has long mattered relationally, with rights and privileges to property establishing modes of political, social, and economic access, but also exclusion that fosters dispossession and inequality. Just as property acquisition matters relationally, dispossession and possession additionally reflects consistently shifting political and social relations. Within property regimes built upon histories of settler colonialism, imperialism, and enslavement, dispossession can take on a specter-like reality, consistently reappearing as a condition within the afterlife of the colonial. In this way, the seemingly mundane bureaucratic interaction for some becomes a fester of dispossession for others.

Anthropologists have long examined the relationship between land tenure and governance, but recent scholarship has highlighted how dispossession is increasingly produced through mundane bureaucratic procedures, legal classifications, inscription devices, and so on. This panel seeks to advance anthropological engagements with land and property regimes by interrogating how possession and dispossession are structured through governance. Colonial legacies, climate change, and neoliberal development policies amidst the resurgence of right-wing politics are reconfiguring the tensions between marginalization, property ownership, rights, and communities marked by differences of race, caste, ethnicity, religion, and others. By turning our anthropological attention to this dynamic coding and recording of land and property regimes, we better attune our anthropological senses to forms of dispossession that haunt, re-appearing in new forms but with familiar effect.

Through examining dispossession as routine, this panel asks how the haunting of land and property regimes have shifted our collective recognition of dispossession, how it takes shape, and how like a specter it moves and shifts across space and time.

Presentation(s): Shifting Land and Floating Citizens: Navigating Reoccurring Dispossession in Assam, India

This paper explores the entanglements of riverine environments with regimes of property and possession to show how land erosion impacts Muslim inhabitants and their experiences of citizenship in Assam, along the India-Bangladesh border. Citizenship is tied to a person's situated location within a nation-state that forms the basis of property and rights. However, in riverine areas, erosion and accretion transforms land and property from a place of dwelling to a space that can only be located through its geographic coordinates. This paper examines how Muslims citizens navigate climate-induced land dispossession in the Brahmaputra River basin in a Hindu majoritarian post-colonial state that perceives them as undocumented immigrants from Bangladesh. Land tenure system of permanent settlement and propertied class relations during British colonial rule led to the settlement of Bengali Muslim tenants in riverine areas of Assam since late 19th century. While the post-colonial Indian state brought land ownership reform and property rights for these tenants, the annual land erosion and absence of bureaucratic record for land loss has made this population vulnerable to disenfranchisement. The paper draws on ethnographic data and legal cases to show how this vulnerability is produced through—the recoding of property rights for landless people; exclusive land rights for native Assamese people; and excessive use of public authority to refuse claims from erosion-affected Muslim families.

Fungible (Dis)possession: Heirs Property and Bureaucratic Illegibility in South Carolina

Analogized as a bundle of rights, in the United States, property ownership is imbued with rights of possession, control, use, enjoyment and disposition. But what happens when those rights are easily mutable or disavowed? Moreover, how might bureaucratic and legal process produce shifting rights for some landowners? For Black landowners in South Carolina, occupying the obscure legal category of heirs property ownership, collective ownership exposes them to increased risk of dispossession. Heirs property—broadly defined as property without clear title but equally owned by the heirs of a deceased property owner—accounts for an estimated one-third of all Black owned property in the American South. In South Carolina, when a property owner dies intestate their property is distributed equally among their heirs. This can result in intergenerational shared ownership that multiplies over time, fostering bureaucratic uncertainty over ownership validity. Based on two years of ethnographic fieldwork, this paper explores Black land dispossession in South Carolina as a mutable constellation of processes facilitated by bureaucratic systems that render heirs property owners illegible, threatening Black land retention. Considering Black land dispossession as a condition within the afterlife of slavery, this paper additionally analyzes how a race-property matrix becomes reified through heirs property and its latent tensions with normative American interpretations of property ownership.

Presenter(s): Kristin McFadden

On the Steps of Modulada: Social Housing, Dispossession, and the Afterlives of Ownership in Southern Brazil

During Luiz Inácio Lula da Silva's second administration, the federal government launched Minha Casa, Minha Vida (MCMV), a public housing program aimed at making homeownership accessible to millions of poor and working-class Brazilians. Since its inception in 2009, MCMV has expanded into the largest social housing program in Brazilian history, intended to alleviate poverty and promote upward mobility through homeownership. The program emphasizes principles of privatization and self-sufficiency, providing beneficiaries with temporary fiscal inclusion via debt and legal land tenure. However, ten years on, the long-term consequences of these policies have destabilized residents' lives, leading to threats of displacement.

This paper examines the social and material afterlives of MCMV construction in Ijuí, a rural city in southern Brazil. Through ethnographic research, it reveals how land allocation and contractor cost-cutting impact women in Beija Flor, a MCMV condominium. The deterioration experienced by residents results not just from market constraints but from a political project that used social housing as a tool for patronage. By analyzing the moral economies that justify concessions to housing infrastructure, the paper argues that public funding for privately built social housing has failed to provide feasible pathways to safety and social mobility for many of these women.

Presentation(s): A Tale of Two Sisters: Mestiza Consciousness in Family Negotiations of (Dis)ability in the Nuevo South

"I took his hair back to Mexico as an offering to la Virgen at the chapel of los milagros in La Catedral de San Juan de Los Lagos. I prayed for la Virgen to take care of Miguelito. To help him be a good boy. To develop well. To have good health," Tía Lupe explained to me in Spanish. Miguelito, an affectionate, energetic young child, was born hearing impaired to Mexican immigrant parents in Northwest Arkansas. From a Western, biomedical perspective, Miguelito is completely impaired in one ear and partially in the other. Over the course of a 14-month study, the maternal aunt,

Miguelito's primary caregiver, described his hearing ability in varying degrees of severity, but never did she describe him as having a disability. Miguelito's mother, however, articulated a more medicalized understanding of her son's hearing impairment, and struggled with how to perceive and nurture his abilities, given that she was often away from the home. The two sisters' differing understandings of Miguelito's impairment created tension in their shared caregiving. The mother, who more often interacted with the medical providers, felt caught between two distinct, culturally informed ideologies of (dis)ability and child development and was conflicted about how to best help her son. At one point in frustration, she exclaimed, "If Miguelito were in Mexico, he would not be considered as having a disability since he can still hear with one ear and his language has developed well" (2024, translated).

This presentation provides an ethnographic account of one working-class Mexican immigrant family's experience of their child's hearing impairment within the highly institutionalized medical system of Northwest Arkansas, a region which has experienced exponential growth in its overall population and in its diversity over the last forty years. Based on extensive field research, I present an emic representation of the culturally informed, agentic ways in which one family nurtures their child's development while navigating the institutions of health care and early childhood education. With this ethnographic account, I reveal the myriad, seemingly contradictory ways in which multilingual and multi-generational immigrant families straddle distinct ideologies of child development and (dis)ability. Drawing on the foundational work of Chicana feminist theorists Gloria Anzaldúa and Chela Sandoval, I analyze the family's tactics through the framework of a *mestiza*, oppositional consciousness. This work expands our understanding of US immigrant family attitudes and practices regarding hearing impairment in cross-cultural contexts.

Presenter(s): Cindy Rauth

Being a Peronist without Perón: The Endurance of a Shapeshifting Populist Movement in Argentina

This paper looks at the social world of the Peronist "unidad básica," a political headquarters of the world's longest-lasting populist tradition, Argentine Peronism, to underscore the affective drivers of political identity. In the paper, the uneasy legacy of the founder of Peronism, Juan Perón, is revealed as an enduring wound within the social world of Peronist activism, or "militancy" (*militancia*). In a weekly political formation meeting, *compañeros* of different generations become embroiled in a discussion over a "missing" portrait of Perón in UB. An older militant aggressively asks about the absence of an image of Perón—an omission that is so striking that it can only be intentional. This scene introduces us to a generational discord that embodies the historical tensions of Peronism—very significantly over the legacy of the very namesake of Peronism, whom many on the Peronist left view as a traitor his movement. Specifically, the paper looks at the perspectives of two Peronists who represent ideologically divergent interpretations of Peronism to show that appealing to the affective dimensions of political mobilization has allowed Peronism to unite people with very different views of what they want they think "Peronism" signifies. In particular, I look at how conflicting interpretations of Peronism and Perón's legacy inform symbolism and collective practices within the social world of Peronist militancy, the nucleus of which is the *unidad básica*.

Presenter(s): Julia Fierman

Ex-Invisible: The Mediatization of Kukama Indigeneity in Peruvian Amazonia

This paper explores the political and aesthetic dimensions of indigeneity expressed in Kukama media activism. I examine the way Kukama media-makers from a radio station called Ucamara use multiple digital and non-digital forms (e.g., radio broadcasting, books, music videos, documentaries, and social media) to counteract anti-Indigenous discrimination and strengthen Kukama linguistic revitalization in Peruvian Amazonia. By combining the theoretical frameworks of indigeneity studies and the anthropology of media, I argue that Radio Ucamara's multimodal aesthetics has become a vehicle to creatively reimagine Kukama identities and rework linguistic ideologies through mediatized performances of indigeneity. Radio Ucamara's media aesthetics is creating online and off-line performative spaces whereby Kukama identity is refashioned. In these mediatized performances, language and myth have become the most notable features of Radio Ucamara notions of indigeneity (Kukama or otherwise). The interplay between linguistic, meta-linguistic, and mythological discourses characterizes Radio Ucamara media production focused on the politics of indigeneity. Such interplay is enacted in media actions such as: 1) the broadcasting of radio shows in Kukama language; 2) the musicalization of Kukama language, meta-linguistic statements, and mythological narratives through hip-hop songs; and 3) videos visualizing experiences of forced assimilation. All these practices allow Ucamara activists to challenge tropes of cultural "invisibility" associated with Kukama experience and to promote novel notions of Kukama modernity.

Pissing with the Ancestors: How a Maya Sanitary Superstition Promotes Communion with Ghosts Helps Sustain Traditional Ecology and Law

K'ichee'-Maya elders in Guatemala sometimes give local boys (and visiting anthropologists) an odd bit of sanitary advice: pee in as few places as possible, and make them worthwhile sites: places near family or beauty.

The advice seems obvious and likely has hygienic, ecological, and character-building benefits. Yet a folk-religious explanation also has surprising political and legal implications for identity, cultural traditions, and land tenure. This is because it is said that upon one's death, one will be denied Divine Judgement or entry into Heaven until one has spent a week, month, or a year wherever one has previously relieved oneself.

While exactly how such urinary Limbo works is subject to hilarious speculations, many Mayas find the tradition has a happy, but ghostly, silver-lining: if one repeatedly 'waters' the edge of one's cornfield, a mountain pass, or some cozy (often hidden) site along the road or near a workplace, one will be able to commune spiritually with descendants or the ghosts of long-dead ancestors who will make or made similar use of that site.

This paper explores this weirdly heart-warming tradition: one that purportedly allows people to commune with the spirits of ancestors who are trapped near the places they loved. Such beliefs have valuable political and legal consequences, since they encourage rural Mayas to hold on to sites of natural beauty, ancestral lands, agriculture, rural identity, local residence, and even small distant plots, in order to maintain the possibility of ghostly encounters .

This Maya folk tradition and its legal and ecological consequences contest the racist denunciation of indigenous folk-religion as worthless superstitions; the dismissal of indigenous sanitary practices as unhygienic or dangerous; and the rejection of indigenous land-tenure practices as irrational and uneconomical.

“I Dance There Like I Dance Here”: Emotions, Embodiment, and Belonging Among Diasporic Cubans in Spain

Affects, emotions, and the body are increasingly recognized as mutually constitutive of migration experiences, shaping not only people's physical journeys, but also influencing their sense of belonging, navigation of everyday dilemmas, and orientations towards the future. Informed by thirteen months of ethnographic fieldwork in Spain, this flash paper explores the emotional and embodied practices deployed by Cubans to recreate the affective sensations of "home" and to continuously reconstitute their sense of themselves as diasporic subjects who maintain important social and cultural ties to the island. For diasporic Cubans, I suggest that the conjuring of "Cubanness" through the re-creation and embodied performance of "Cuban" activities functions to generate an affective ambiance and to close the spatial and temporal distance to their madre patria (motherland) – between their island and Spain, present and past, and their individual bodies and a collective, Cuban one. In such moments, an emotional regeneration occurs, preparing participants to return to the precarious grind of their everyday routines and to endure the loss and longing that permeate their lives far from Cuba. For some Cubans, and particularly for women, participating in the recreation of such culturally thick, affective ambiances and spaces of sociality is preferable to physically travelling to Cuba, allowing them to avoid the uncomfortable and often alienating renegotiations of transnational belongings and embodied autonomy that return frequently provokes. Ultimately, this paper tenders an original contribution to the study of transnationalism, embodiment, and belonging, shedding novel light on the tensions and continuities that emerge through diasporic living in its juxtaposition of individual and collective bodies, embodied desires and obligations, and "here" versus "there".

“Magnum Opus”: The Interoceanic Corridor of the Isthmus of Tehuantepec and the ghosts of modernity in Salina Cruz, Oaxaca, Mexico.

In 2019, the Mexican government initiated the development of the Interoceanic Corridor of the Isthmus of Tehuantepec, a logistics and multimodal platform that connects the Pacific Ocean and the Gulf of Mexico through the renovation of a 19th-century railway and two ports. The project aims

to increase global connectivity by facilitating the efficient transportation of goods through the states of Veracruz and Oaxaca across the narrowest strip of land in the country. If completed, this platform could transform Mexico's role in the global transport system and, according to its proponents, turn the Isthmus into an alternative to the Panama Canal.

The Interoceanic Corridor is also an emblematic project of the country's "Fourth Transformation," an ideological and political initiative led by the National Regeneration Movement (MORENA), a self-defined leftist party and a new hegemonic force in Mexico. The party has pledged to reorganize the country's political economy and move away from the neoliberal policies of prior regimes. Instead, it has proposed a state-led approach to social and economic growth through populist programs, including direct cash assistance and substantial investments in public infrastructure, such as the Interoceanic Corridor.

Based on ethnographic and historical research, this paper examines how the location and geography of the Isthmus of Tehuantepec have generated repeated interest in the region, shaping the material and ideological values and meanings attached to transportation infrastructures. Specifically, it analyzes how the modernization of the trans-isthmian train and the seaport of Salina Cruz, Oaxaca, strategic components of the corridor, generate different ideas and experiences about development among institutions and communities that interact with infrastructures. Concepts such as modernity, efficiency, and connectivity have become "ghosts" in the region's collective memory and Mexico's development plans, legitimizing failures and perpetuating expectations of progress centered around the Isthmus' unique geography year after year.

Presenter(s): Claudia Zamora-Valencia

"What does ruin mean to you?" Investigating social futures of ruin materiality in Ponce, Puerto Rico

This presentation uses a visual anthropology approach to explore the intersection of aesthetics and ruination in Ponce, Puerto Rico. Recent disaster events like Hurricane María (2017) and a series of powerful earthquakes in 2020 have magnified underlying structures of disrepair in Puerto Rico. Moreover, these events are the starting points to an ongoing architectural decay and abandonment in Ponce's Historic Center. In this talk, however, I consider Ponce's decaying architectural patrimony to really be the visual transformation of dominant modes of history and identity that are becoming less accessible, as ruined materiality gives way to an ongoing disaster capitalism. First, I engage with the fragmented object (i.e., ruin) to understand how historical memory is both ossified into Ponce's Historic Center architecture and simultaneously challenged by its aesthetic alterity. Second, I ask how people world-build around disrepair in ways that signal decay is not just a prolonged disaster recovery but a material rupture of Puerto Rico's colonial trouble. Finally, this presentation raises the question, 'Who gets to decide what a ruin is in Ponce?'. Showcasing a moment of ethnographic and community-participatory research at a crumbling house site, I will offer a powerful example of how some Ponceños challenge their city's ruination by offering memory and nostalgia as vehicles to refusal.

Presentation(s): Buy or Sell: Advertisements for Human Organs in Print Newspapers and Social Media in Bangladesh

The medical advancement in organ transplantation, commercialization of healthcare, and polarization between the rich and the poor creates a rising but illicit trade in human organs, such as kidneys, livers, and corneas sourced from the poor sellers mostly living in the developing world. Bangladesh – where the market price for a kidney is US \$2500 – is known as one of the most widely reported organ trading countries in the world. Classified advertisements regularly posted by recipients, brokers, and sellers in national newspapers and social media have amplified the organ trade in Bangladesh. By covering five leading Bengali newspapers and three popular social media outlets, this paper presentation examines the variety of patterns, wide range of impacts, and contextualized meaning of posted advertisements for buying and selling of vital organs in a transnational market setting. In the past, organ buyers and sellers published advertisements in print newspapers, but nowadays they post ads on social media, and as a result, the online market in live organs is booming in Bangladesh. My argument is that social media has transformed, concealed, and normalized the organ trade around the world.

Presenter(s): Monir Moniruzzaman

Memento Mortuorum: The Necrosociality of Whole-Body Donor Remembrance Ceremonies

This study explores whole-body donor remembrance ceremonies as secondary mortuary rituals within medical education, analyzing their role in transitioning donors from educational tools to persons reintegrated into a framework of respect and reverence. Through participant observation, textual analysis, and symbolic interpretation, the research investigates themes of gratitude, personhood, and symbolic exchange. The ceremonies are contextualized within anthropological frameworks of liminality and necrosociality, highlighting parallels with global mortuary practices. We observe that these rituals serve not only as acts of commemoration but also as pedagogical tools, fostering professional empathy and reinforcing societal trust in anatomical donation programs. By addressing the social and ethical dimensions of body donation, the study emphasizes the ceremonies' role in humanizing medical education while affirming the cultural significance of death and remembrance. This work contributes to a broader understanding of the intersection between ritual, education, and the social construction of personhood.

Presenter(s): Konstantinos Mountrakis

Rethinking Retirement: Medicalization, Cultural Narratives, and the Anthropology of Aging

Abstract: This paper critically explores the anthropology of retirement as a culturally constructed and medically reinforced transition in later life. Drawing from interdisciplinary medical and cultural anthropology literature, the study interrogates how dominant biomedical frameworks and socio-economic policies shape public narratives that marginalize older adults and reinforce ageist ideologies. The primary aim is to analyze how retirement functions not merely as a life-stage milestone but as a mechanism of social control rooted in assumptions about productivity, dependence, and decline. The paper questions how retirement ideologies affect older individuals' roles, identities, and social contributions in diverse cultural contexts. This study employs a qualitative, secondary data methodology, reviewing key ethnographic texts, policy analyses, and cross-cultural case studies that address aging, retirement, and the medicalization of later life. Sources include peer-reviewed journals, anthropological monographs, and public health literature across global settings. This paper contributes to ongoing medical and cultural anthropology conversations by questioning the normative assumptions embedded in retirement ideologies. It emphasizes the need to reframe aging as a dynamic and heterogeneous process, resisting reductive labels such as "at-risk" or "nonproductive." The study encourages anthropologists to reimagine elderhood not as a period of loss but as one of redefinition, social potential, and cultural richness. By doing so, it advocates for more inclusive and empowering frameworks that recognize older adults' agencies, skills and lived experiences across cultural settings.

Presenter(s): Md Abdur Rahman

Social sufferings in Russia and Ukraine warfare : A narrative analysis of Nepali citizens exposed in Sordid Trafficking.

Though country has officially prevented to get involved in the Russia and Ukraine war, however to escape from the poverty and unemployment many Nepali reached the war following the international air routes guided by human traffickers and lost their lives in the warzone of Russia. This ongoing war has created new kind of 'social-legal and emotional' realities where citizenship of Nepal has been continuously losing their lives, consequently, families are deprived from authentic information regarding the status of their family members in warzone. Returnees have grievances that many wounded are not adequately treated and it has raised legal challenges for family members to get the dead bodies and to complain the compensation. Additionally, unknown status, dispersed body organs and lack of the cultural respect for the dead bodies has intensified their social sufferings and raised the bioethical concerns. Though International Humanitarian Law (IHL) prescribes framework to obliged parties of armed conflicts to take all possible measures to search and treat dead bodies in a respectful manner and their graves respected and properly maintained, however there is a persistent need to review other related policies and their loopholes from the point of view of 'humanitarian forensics'. Following the framework of critical policy discourse analysis (CPA) this paper raise the humanitarian and policy concerns of those Nepali families who have lost their member in Russia and Ukraine warfare and suggest the possible legal framework to ease the present situation of anomaly.

Presenter(s): Sachin Ghimire

The Peeking Ghost on the Deathbed: End-of-Life Care under the Promise to Modernity in China

With an aging population, the need for end-of-life care that can offer support beyond medical dimensions of dying is surging in China. Currently, professional end-of-life care in China concentrates in a few major cities, it is not a mature and consolidated enterprise but a highly fragmented practice. Financially, professionally and socially, it relies heavily on the complex network constituted by various entities such as philanthropic foundations, volunteer organizations, spiritual groups and palliative care units in public hospitals, etc.

Despite China's century-long modernist rejection of religion that can be dated back before the Communist China, current end-of-life care still has tenacious connection to folk religions. The affective and spiritual dimensions of the deathbed renders the tension between "superstition" (mixin 迷信) and the legitimized scientific biomedicine more uncanny. This research addresses end-of-life care as the contested terrain between the echoing anti- superstition rhetoric and the intimate space of dying in everyday caregiving practices. Drawing on fieldwork in a major city in Southern China, one of the first cities to officially introduce palliative care into hospitals Hong Kong, this research shows the dialectical relationship between these two forces. It is argued that in the context of post-colonial and post-socialist transformations, state rationalities exhibit a porous quality facing end-of-life care, while spiritual care practitioners are also constructing its legitimacy by strategically engaging with modernism narratives. These discussions extend beyond contemporary China, inviting broader reflection on how ghost of the past haunts the current regime of care in wider cultural contexts.

'What is Our Plan for Today?': Dementia Caregiving in Tokyo During and After the COVID-19 Pandemic

In Tokyo, where home caregiving for individuals with neurodegenerative diseases is common, the outbreak of COVID-19 presented novel challenges for dementia care. Rather than obfuscating the pandemic and its ramifications, home caregivers – both professional and familial – often found success increasing dementia patient agency and involvement in the planning and enactment of COVID prevention strategies and measures. When possible, incorporating pandemic management directly into care practice allowed a global catastrophe to be transformed into localized opportunity for personal empowerment and self-actualization for patients and caregivers alike. Resultant shared decision-making and collaborative situational engagement benefitted interpersonal relations, and frequently even improved familial communication from pre-pandemic standings. Numerous caregivers have now retained and/or incorporated similar strategies/perspectives into ongoing home care practices. Based on long-term fieldwork in Tokyo with the same families and caregivers both pre- and post-pandemic, this paper details how successful home care strategies were revised and implemented during the COVID-19 pandemic, and retained in its aftermath. It will

illustrate how increasing the agency of individuals with dementia not only made the pandemic more manageable, but actively contributed to improvements in dementia home care going forward.

2494 Specters of Academia: Demystifying the Book Publishing Process

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Roundtable/Town Hall

This roundtable brings together editors from leading anthropology presses to offer insights into the monograph publishing process. Designed for early-career researchers, the session will offer guidance on the steps involved in transforming a dissertation into a publishable book, from crafting compelling book proposals, preparing manuscripts for submission, to understanding the peer review and revision process. Participants will also discuss emerging trends in academic publishing, such as open access, digital dissemination, interdisciplinary collaboration, and publicity. By engaging directly with publishers, attendees will gain practical advice and a deeper understanding of the expectations, challenges, and opportunities in publishing their book-length work. This roundtable aims to create a supportive environment to ask questions and engage directly with publishers to increase transparency around book publishing. Engaging with the conference theme of ghosts, this roundtable will explore how the book publishing world operates as a specter of academia that shapes intellectual landscapes and career trajectories yet can remain elusive and daunting. Join panelists from Duke University Press, Rutgers, Colorado University Press, Stanford University Press, University of Arizona Press, and University of Chicago Press for their insights and advice on navigating the academic publishing world.

7916 Spectrality, Learning and Ethics: Philosophy, History and Teacher Identity in Conversation

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 6

Type: Conversation/Debate

This presentation explores the multifaceted identities of Dual Language Immersion (DLI) educators in Georgia, USA, through the lens of spectrality and the metaphor of palimpsest (Derrida, 2001). Drawing on phenomenological interviews (Seidman, 2019), ethnographic field notes, and transcript poems (Glesne, 1997), the research analyzes how educators' languaging (Otheguy, Garcia and Reid, 2015) reflects the complex layering of their experiences. Within the framework of hauntology (Derrida, 2011), ethnographic poetry (Richardson, 1989, Faulkner, 2020) surfaces the interplay between memory, teacher preparation programs, cultural understandings of education and personal bilingual development to provide insight into the experience of DLI teachers in Georgia, USA.

Dr. Dubberly's educational research is enriched by conversation with two other Georgia educators who provide insight into the historical and philosophical background of the study by engaging with other ghostly presences. Dr. Scott considers the ontological status of ethical obligation, and their speculative and spectral nature, extending this exploration to ecological responsibilities and the connection to language and place for teachers with transplanted identities. Dr. Hayes brings a historical and cultural context of the "Christ-haunted" South, using Flannery O'Connor's observations as a jumping-off point to reflect on the social changes of the past 65 years and their implications for educator identity formation. This interdisciplinary conversation explores an understanding of the intricate identities of bilingual educators in the contemporary South.

4167 Speculation and Its Specters

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Rhythms III (2nd fl)

Type: Roundtable/Town Hall

Recently, anthropologists have used the analytic of speculation to describe an array of social practices, including how people make financial investments in emerging markets (Searle 2016), how people bet on horses (Puri 2020), and how families make decisions about college debt (Zaloom 2019).

Anthropological attention to speculation-as both objects of analysis and analytical tools-surged at the turn of the century. Emerging financial instruments fueled "fictitious capital," or investments that were not tied to the "real" production of goods or services but were instead measured by the imagined speculations of future earnings. Amidst the dot-com recession, anthropologists highlighted the historical development of this "financialization" (Lee and LiPuma 2004), capitalists' pursuit of "spectacular accumulation" (Tsing 2005), and the ways in which financiers speculated in global finance (Zaloom 2006; Ho 2009).

Noting how market financialization required the public's increasing tolerance for speculation (Preda 2009), scholars started examining how the logics, affects, and practices that fuel financialization manifest in domains far beyond the trading floor. Anthropologists have expanded the concept of speculation to describe and theorize social practices taking place across domains of urban development (Nam 2011; Searle 2016), emerging technologies (Sunder Rajan 2006; Messari 2024), and household decisions (Zaloom 2019; Musaraj 2020). This coincides with the emergence of "speculative anthropologies" working to actualize the "political potentialities" of a liberatory "otherwise" (Anderson et al. 2018).

This broadening analytical use of speculation begs the question of how the concept differs from those used to describe other seemingly similar practices, including prediction (Mathews and Barnes 2016), motive (Mathias, Yount, and Morton forthcoming), hope (Miyazaki 2013) and aspiration (Mathew and Lukose 2020), "horizoning" (Petryna 2022), and anticipation (Weszkalnsy 2014). This roundtable thus asks: What, if any, are the analytical affordances and limitations of conceptualizing some social practices as "speculative"? What, if anything, makes those practices distinct? Semiotically, do they differ from practices of prediction, motivation, aspiration, and the like? Are those distinctions tied to social domains and historical junctures (Bear 2020), temporality and affect (Bryant and Knight 2019), and/or processes of "mediatization" (Agha 2011) and

"enrupture" (Kockelman 2016)? Is there something about these practices that makes them particularly impactful or significant in shaping social worlds and, hence, important for anthropologists to study? Members of the roundtable will engage these questions through their ethnographic explorations of "speculative" practices across contexts of labor development (Peng), real estate valuation (Stephens), migration and mobility (Morton; Yount), and sustainable financing (Begim).

6308 Spirit Matters: Ghosts and Hauntings in the Museum

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** MGB Salon D

Type: Roundtable/Town Hall

Scholarly work on ghosts and hauntings has tended to overemphasize analyses of belief. Far less scholarship has engaged with ghostly phenomena directly. Are ghosts and hauntings necessarily immaterial?

In this roundtable, researchers and museum practitioners at diverse career stages consider spectral matter, which we encounter in the form of cultural materials, faunal and botanical remains, and human ancestors resting in museum collections. We invite each presenter to contribute a spectral encounter, be it with a known entity or cultural presence from the past that reveals itself in the present. In a time when the politics of recognition of ghosts and haunting has become increasingly contested in the US, this round table contributes to the wider re-envisioning of museums as spaces of plurality, transformation and healing.

How do these presences impact the ways we learn and the knowledge we produce about objects, belongings, communities, and heritage? What are our stewardship responsibilities to them and to their living associates? What happens in museums when we begin to open up our practices of stewardship to these different understandings and presences?

1134 State Ghosts/Ghostly States

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Executive Oral Presentation Session

State institutions come with their cast of ghosts and states may take on a ghostly quality. Anthropologists increasingly study state institutions as animated by ideals, morals and affects, moving beyond Weberian imaginations of cold, rational bureaucracies (Bear and Mathur 2015; Stoler 2009). But they have less to say about the deeply ambivalent, haunted nature of such institutions: about their ghosts. This panel explores the eerie, spectral life that hovers beneath mundane state practices and performances. It argues that state institutions are animated by something akin to a psychic life, fueled by utopian visions and desires to do good, as well as repressed secrets, unacknowledged pasts and violent undercurrents. Building on the work of Lisa Stevenson (2012), Yael Navaro (2012) and Tess Lea (2022) and others, this panel explores such ghostly aspects and asks what they teach us about the state.

State institutions find their justification in enacting the people's will and working for the public good. They elaborate utopian visions and high-minded plans, promising better futures. But they also have an eerie, haunted and menacing quality, with public infrastructures and institutions from the police to welfare services and state works shadowed by specters of violence, past and future. The various contributions to this panel show that such institutions are inhabited by ghosts that stubbornly refuse to disappear, but instead live on in state spaces, procedures and visual-material traces, in stories told about states past and dreams of better futures that are forever lost. Such ghosts feed on the more violent dimensions of statecraft that hover behind ostensibly benign state encounters.

Drawing on cases from Peru to Pakistan, the Netherlands and Sri Lanka, this panel explores how state ghosts come into being, where they reside and how they trouble utopian visions and desires and fantasies of the good state. Paying attention to these ghosts takes us into the unruly, compromised heart of the state, into institutions animated by ambivalent affective investments, jumbled temporal registers and haunting reminders of things not quite past, denied but present, and never quite left behind.

Presentation(s): Ghosts in the Machine: Enchanted Underground and Haunted State in 20th Century Peru

In the middle decades of the 20th century political authorities in the Chachapoyas region of northern Peru faced a crisis of rule. Government officials came to view the state apparatus as haunted by a powerful malevolent presence called APRA—a radical political party that had been forced underground by brutal repression. Officials came to believe that their ability to carry out even the most basic of government functions was being thwarted by APRA, which had somehow succeeded in lodging itself deep within the government, but in ways that could not be detected. In these circumstances, officials came to see themselves as part of a failed state. They attributed to their underground adversary a subterranean party apparatus of great power and potency, with all the abilities that their own regime lacked. Indeed, the political authorities came to view their administration as a pale imitation of a sophisticated, complex state structure located somewhere deeply underground. They couldn't actually see the subterranean party state to which they attributed such miraculous powers. They were certain it was there, but the authorities couldn't find it. As a result, they were left to imagine the contours of their invisible enemy. The less they could see the more they were compelled to imagine. And imagine they did. The authorities came to view the Aprista underground as a darkly enchanted domain lying hidden beneath the surface, haunting the existing order of things.

Shatter and Scatter: Climate Catastrophe, State Abandonment, and the Haunted Futures on Pakistan's Makran Coast

The catastrophic floods of 2022 in southern Pakistan submerged a third of the country, killing thousands and displacing forty million people and exposing the Pakistani state's incapacity to respond to ecological devastation. For the flood-affected Baloch of the Makran Coast, the floods mark a moment of rupture. The 'shatter and scatter' rendered by the floods did not just radically transform the material and ecological dimensions of life; it also shattered cosmological certainties through which people navigated everyday life (Descola 2013; Tsing et al. 2017). For many of the displaced, the very idea of Pakistan as a project of state-making was lost in the floods (Suhail 2023).

Drawing on ethnographic encounters with displaced climate refugees, this paper explores how the floods not only disrupted lives and livelihoods but also fractured the cosmological and political frameworks that once shaped the Baloch community's perception of the state, of sovereignty, and imaginaries of how the Baloch of the Makran may inhabit viable futures. By attending to the ghosts of vanished landscapes, failed promises, and emergent solidarities, it documents how climate catastrophe reshapes both state imaginaries and the affective attachments that sustain them (Stoetzer 2018; Stoler 2013). In doing so, it foregrounds the uncanny endurance of spectral sovereignties at the margins of a crumbling state.

Presenter(s): Adeem Suhail

The Haunted Welfare State

Welfare states are often studied as biopolitical assemblages that use welfare resources to nudge, cajole or force beneficiaries to act in certain ways, hoping to reform body and soul. This paper, in contrast, directs attention to what I argue is an institutional psychic life. This psychic life is generated by the confluence of utopian policy visions, professional desires to do good, and persistent disavowals of less sympathetic dimensions of welfare work. Drawing on 18 months of research with Amsterdam's Parent and Child Teams, I sketch an institutional life replete with fantasies of benign, supportive welfare services as well as phantoms of a monstrous welfare state that waltzes into people's lives, laying down the law. The Teams' mundane routines and deliberations were haunted by the specter of that old, overbearing welfare state and its professional habitus. Rejected as oppressive and undemocratic, this was both the foil against which a new welfare state was imagined and enacted, and a persistent ghost that troubled its everyday practice.

This psychic life provides welfare institutions with a nervous energy and fuels their deep ambiguities: Professional desires for horizontal, personable welfare relations come with an insistent disavowal of interventionist rationales; commitments to non-racism allow for the persistence of white middle-class normative frames, while optimistic visions of a quintessential human and intimate welfare state accrue an eerie, haunted quality.

4978 Student Organizing and Intergenerational Worldmaking

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Galerie 4

Type: Roundtable/Town Hall

Crackdowns on student organizing are severe and ongoing. In this context, students persist in the work of resisting and condemning state violence, building new care structures, and imagining and asserting their right to alternative ways of knowing and being. This roundtable brings together student activists and scholars to discuss the current state of student organizing and what we can do to support our students in this struggle. We draw on José Esteban Muñoz's concept of worldmaking as a framework for this conversation, with a focus on how worldmaking unfolds across generations of students and the political, intellectual, and creative works that inspire them. The roundtable thus engages the conference theme of 'ghosts' by reimagining the ghost as an ancestor or mentor from the past whose spirit is present in today's student organizing. Panelists will speak on queer Arab and Muslim community-building on campus in the present climate, anti-institutional racism, medical abolition, medical reparations, and decolonization of the health sciences, among other topics.

3909 Surrounded by the Spirits: Paul Stoller's Humanistic and Public Anthropology. Part II: Inspiration and Mentorship Across Sensory Fields

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 4

Type: Oral Presentation Session

Bringing together scholars from around the world, this session honors the scholarship of Paul Stoller and his influence on the anthropology of West Africa, humanism, wellbeing and the senses. This panel represents Part II of the session, and brings together a diverse group of anthropologists, artists and award-winning writers who have all been influenced by, or mentored, by Stoller. For four decades, Stoller conducted fieldwork among the Songhay of Niger and, later, among the West African diaspora in New York. Captivated early on by Songhay spirit possession troupes, Stoller was taken under the wing of a sorcerer and a possession priest, as well as the ethno-cinematographer Jean Rouch. Stoller's life and fieldwork shifted dramatically after a series of illnesses, first in Niger, where he was told bad magic was being cast on him, and again after a cancer diagnosis in the early 2000s. His resulting works are humanistic in nature, holistic in their treatment of sensory engagement, and accessibly written. Stoller is particularly renowned for his unique writing style, having pioneered the "ethnographic novel"-readable, yet instructive academic work. He has been a regular contributor to the Huffington Post and Psychology Today, bringing anthropological insight to a non-academic audience through the publication of over 100 articles. For this, the American Anthropological Association awarded him the Robert B. Textor and Family Prize for Anticipatory Anthropology in 1994, honoring those whose significant contributions affect policy decisions; and the Anthropology in the Media Award in 2015. In addition to fellowships from the National Endowment for the Humanities and the John Simon Guggenheim Memorial Foundation, he was awarded prestigious Anders Retzius Gold Medal in Anthropology-the discipline's "Nobel Prize" given by the King of Sweden every four years. He now travels around the world giving writing workshops and transmitting the knowledge of the Songhay ancestors to a new generation of students. Panelists' papers represent original research in their fields, discussing the ways in which Stoller's varied contributions to humanistic, sensory and public anthropology have impacted their own work. This extraordinary session includes scholarly papers, spoken word, and performance. A poignant discussion by Paul Stoller concludes the session.

Presentation(s): Ordinary Magic: Sensing Knowledge and Writing Anthropology in the Legacy of Paul Stoller

This paper explores the enduring influence of Paul Stoller's work on magic, witchcraft, sensory ethnography, and ethnographic writing. Engaging with my own research on magic and time, I examine how Stoller's scholarship has shaped my methodological and theoretical approach. His commitment to sensory ethnography challenges conventional modes of knowledge production, emphasizing embodied experience, storytelling, and the power of lived engagement with the world. Stoller's writing, deeply personal yet politically incisive, demonstrates that anthropology is not merely an academic pursuit but a way of sensing and being in the world. His ethnographic narratives capture the complexities of magic and spiritual practice, insisting that understanding emerges not only from observation but through immersion, vulnerability, and affect. In this paper, I argue that Stoller's legacy is not just relevant but essential for the future of anthropology. His work compels us to rethink how we write, how we engage with our subjects, and how we make anthropology resonate beyond the academy.

Our Years of Magical Thinking

At one point or another, we all knew something about how to heal ourselves using the plants and animals that surround us, at least somewhat. We treated pain with willow bark and terminated pregnancies with rue and quinine. We treated insomnia with lettuce and halitosis with parsley. A 10th-century cookbook from Baghdad devotes an entire chapter to the humoral properties of different vegetables, and many of us still know something about these treatments: as much as 80 percent of the world's population still use traditional plant- and animal-based medicines. Such bonds that once existed between all humans and the rest of the natural world were born of scarcity, which dictates need. As a child in Soviet Russia, I made plantain weed poultices for skinned knees, ate raspberry jam to bring down fever, dried the sweet-smelling linden blossoms to brew as an expectorant. Lately, more often we relegate this kind of intelligence to laboratories: who needs myrrh when there is aspirin? It seems portentous that we should lose the memories of how to maintain our bodies on the planet: it is as if we are unremembering how to stay alive, and our forgetting what sustains us allows us to neglect and abuse the resources we no longer know how to use, underpins our further undoing. Paul Stoller's ethnographic narrative offers tools to reconnect with knowledge we had abandoned, and demonstrates how it will sustain us moving forward.

Moving through the Senses: Well-Being In and Beyond Dance

Paul Stoller (1994: 634) paints the following picture of spirit possession among the Hauka in The Republic of Niger: "It is a white-hot day in June of 1987, and the mix of sounds and smells brings the

spirits to Adamu Jenitongo's egg-shaped dunetop compound. Four mud-brick houses shimmer in the languorous heat. From under a thatched canopy at the compound entrance, the orchestra plays spirit music. The spirits like this place. Drawn by pungent smells, pulsing sounds, and dazzling dance, they visit it day and night." The sound of the dancing is described by Stoller in terms of "the patter of dancing feet on dune sand." But what does it feel like to dance? What is the role of the senses: vision and sound, touch, even smell, perhaps taste, for the dancers in this dance, in any dance? Key here is well-being, and the ability of dance and movement to evoke well-being. In this presentation, I am pleased to have the opportunity to explore well-being in and beyond dance in relation to the senses. For this, I will combine Stoller's work on the senses with my research on dance and ballet. The aim is to capture how well-being is created through dance, mainly from the dancer's point of view, but to some extent also from that of the audience. I am interested in how the dancer moves through the senses. Finally, dance is a social activity, but as Stoller (2011) notes, well-being also emerges "from the quality of our social relations – the texture of social life."

3004 Teaching Strategies Across the Five Fields

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Galerie 3

Type: Oral Presentation Session

In this session, sponsored by the Society for Anthropology in Community Colleges, presenters across the subfields discuss their approaches or ideas for engaging students in the learning environments of today. Students today tend to have different experiences and expectations of education than before, with significant changes brought about following the COVID-19 pandemic and the normalization of trenchant political discourse promoting misinformation. All of this carries profound implications for higher education as we have come to know it.

As we address these issues, we must remember that we face stiff competition in the battle for attention in an ever-increasing divisive climate. Already existing political divisiveness and media misinformation has only increased over the last few years. We propose that with engaging presentation and delivery of our material, we can achieve a broader appeal than we tend to get. In a divisive era of constricted media consumption and related over-simplification of complex issues relevant to matters long central to anthropology, it is crucial the messages we deliver are accessible to as wide a range of students as possible. Presenters in this session describe various

practices they have employed to engage students in the classroom and beyond as we continue to transition into a future marked by these challenging circumstances.

Presentation(s): Biological Anthropology Roadshow: Student-Led, Interactive Hominin Lab at Local K-12 Schools

Students at Colorado Mountain College have a unique opportunity to display their learning through instruction to younger students. Our college has an ample hominin replica collection that spans several periods of human evolution. We use these items throughout the semester in our laboratory sessions for general survey and analysis. These are useful teaching tools that allow students to directly engage with fossils and inspire the imagination towards questions of evolution, selection, migrations, and cultural advances. The culmination of the course is a visit to Steamboat Montessori School to present on the Australopithecine, Early Genus Homo, and Neanderthal skulls, diagrams, and tool replicas to elementary school students.

In this presentation, I will discuss how students cover the course and program learning objectives through this activity. This is an example of a high impact learning practice that engages students through the process of preparing and then presenting in the BioAnth roadshow. I also discuss potential for greater exposure to biological anthropology through public presentations and engagement with a wide variety of learning contexts. This displays how our students learn through sharing their knowledge to a broader audience. The response to this has been overwhelmingly positive and requests from teachers to have our students visit are frequent.

Presenter(s): Patrick Staib

Teaching the Ethnographic Method via Autoethnography

Cultural anthropology is a class that is amenable to a variety of teaching formats ranging from completely online to completely in person. Whether teaching online or in person, I have traditionally situated intro to cultural anthropology classes around teaching the ethnographic method. I have normally scaffolded students throughout the quarter to guide them in ethnographic data collection that culminates in a written mini ethnography. COVID, however, brought about a unique challenge in how I assigned term projects. Data collection via observation and interviewing of the public became a bit contentious. Therefore, I made the "pivot" to autoethnography. Autoethnography is the practice of ethnographic writing from one's own emic perspective as part of a specific group. As in traditional ethnography, autoethnography requires data collection, but in a manner that focuses on reflexivity of one's own personal experiences. Students often find it hard to write about themselves in the context of culture. However, after some scaffolding, students can

produce narratives about their personal lives while appropriately reflecting upon their place within a group. Many students find the process rewarding and as an instructor I find the assignment is effective in teaching the importance of ethnography as production of anthropological knowledge.

Presenter(s): Amy Snively

Motivating Ethnography: Student-led Ethnographic Projects along the US-Mexico Borderlands

Among the greatest challenges I have experienced teaching anthropology at Imperial Valley College (IVC) is the assumption students are passive learners. To address this, I have re-designed all my courses to emphasize students' role as active participants in knowledge production. In this presentation, I discuss the ethnography project in my Intro to Cultural Anthropology course in which students conduct ethnographic research in a local field site and collaborate with peers to critically assess their data based on what I call the 'areas of anthropological interest.' In the last two years, this ethnographic project has become the cornerstone of this course, drawing attention to facets of students' experience living along the US-Mexico border within a theoretical framework that is accessible and uncluttered. IVC serves over 8,000 students in a region of southern California bordering Arizona and Mexico known for its agriculture industry. By making ethnography central to the course, students are motivated to see themselves as active participants in knowledge production as they gain valuable insights on their lived experience in a borderland context. This approach not only fulfills course requirements but also lays the foundation to motivate students to continue drawing from anthropological concepts beyond the classroom.

Presenter(s): Arturo Marquez

Ethnographic Fieldwork Intensive: A Project to Provide Students Field Opportunities at the Largest Basque Festival in the World – For Free

Boise, Idaho is home to the densest concentration of Basques anywhere in the global diaspora. This ethnographic field project will center on Jaialdi, the largest festival in the world dedicated to the promotion and preservation of Basque culture. Five College of Western Idaho students volunteering their time and talents will assist in a larger documentation effort by visiting colleagues from the Basque Country on this historic event that will see 50,000-70,000 revelers participating from the homeland and all over the diaspora. Students will be engaging in guided interviews, audio-visual recordings, and investigating themes such as shifting gender roles, Basque nationalism references, potential tension between homeland and diaspora demographics, and other insights that speak to the current political climate in the United States. The student findings will be organized and collected as part of the larger project that seeks to compare Basque Clubs in the diaspora to homeland communities as it relates to the tension between preservation and adaptation of traditional cultural heritage. This presentation will summarize the methods and results of the students' fieldwork and explore next steps in the ongoing research.

Presenter(s): Nikki Gorrell

Addressing the Mental Challenges of our Students: Building Understanding and Taking More Effective Approaches

In recent years a variety of issues in childhood and adolescent development affecting reading, attention span, and engagement have been adversely affecting the well-being and even mental health of many students, which pose challenges to college success. Excessive smartphone use and use of social media apps in particular have been major drivers of this. The new book *The Anxious Generation: How the Great Rewiring of Childhood Is Causing an Epidemic of Mental Illness* is gaining a lot of attention for scientifically addressing this issue. Released in March 2024, this book by Jonathan Haidt, a social psychologist, analyses these issues in development, including smartphone and social media use. When this technology was new, it was being used by adults who grew through stages of childhood and adolescent development without it. But now this has become part of the development. The results, as many of us can see with many of our students, can be troubling. In this presentation, I will share some of the key points of this book to generate discussion on this sensitive and important issue, with the goal of building understanding and taking more effective approaches to working with and helping our students.

Presenter(s): Evin Rodkey

2588 The Earth in Phases: Activation, Environment, and Sensation Beyond the Subject

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Edgewood AB (4th fl)

Type: Roundtable/Town Hall

As planetary forces, emerging environmental phenomena, and the natures of the late Holocene press their ways into anthropological and sociocultural inquiry, they are raising important questions for how an anthropology of environment configures its objects. The human at the center of the discipline re-emerges: not a self-evident locus for agency, sensation, and meaning making alone, but rather as part of a raucous and shapeshifting complex of material, semiotic, geophysical, and technological entities. Likewise, the environment appears as more than a tableau of objects whose import is how they are interpreted, but as a universe of vivid and active materialities whose impacts can be so large or so small that they elude the ability of any human body to sense them. How do scholars with deep commitments to ethnography, specificity, and the event make sense of these configurations? And what kinds of ethnographic and analytic experiments are necessary for grappling with formations of humanity, technology, and environment when planets are reckoned with via their shifting material conditions for life and inquiry?

The *Earth in Phases* builds conversations on environment, materiality, ontoepistemology, and sensation to offer ethnographically-grounded scholarship for unfolding and reconfiguring new forms of knowledge that emerge from the vivid and morbid transformations of the Earth and other planets. It centers on a notion of "activation," by which we refer to concrete arrangements of

practices, technologies, environmental entities, and forces that come into unexpected constellations that reveal emerging, or previously unattended to, properties.

We build from the following three principles:

- 1 An anthropology of environment re-situates human life within an earth that is in constant flux.
2. Materiality is not a set of properties or objects in the world, but the ongoing effect and entailment of specific relations. This makes materiality an ethnographic question and a matter that ethnography, with its keen curiosity, can limn in ways that other methods and approaches may not.
- 3 Human bodies are highly-developed loci of sensory capacities, and yet contemporary environmental situations conjure and reflect an array of sensory attunements that are beyond the ability of any human body without technologies and techniques that enhance it.

7285 The Liturgical Politics of Orthodox Christian Societies

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Regent

Type: Roundtable/Town Hall

This roundtable seeks to expand our anthropological understanding of liturgy as a social experience, analytical category, and political action. In conversation between anthropologists of different Orthodox Christian communities for whom liturgy is a key emic concept, we ask how liturgy can be more fully theorized and linked to a richer study of entangled political identities, especially in settings where liturgical values confront secular state values.

While ritual, including its pivotal role in political movements (Farneth 2023), is a well-trodden category in anthropology, relatively less attention has been paid to liturgy. This is perhaps due to its colloquial understanding as simply one form of ritual. But liturgy is also a powerful tool through which authorities rise and communities establish themselves as inextricably bound together (Heron 2018). Within Orthodoxy specifically – in all of its various "national" iterations – liturgy is something both tied to high ritual and extending beyond it; it has the ability to both expand and

contract the ritual experience within different temporal modes and frame alternative capacities for social and political belonging. As Jeffers Engelhardt has written, "In an Orthodox worldview, liturgical experience and participation is the fullest experience of being human – ultimately, the Orthodox life is liturgical" (2015). For various Orthodox Christian communities, liturgy and its reverberations through public life thus work as a framework through which individuals craft their worldviews and identities. From Greece to Lebanon to the Netherlands, liturgy makes claims on its participants and influences the ethics of care, activism, economics, kinship and more within Orthodox groups.

Participants in this roundtable will examine the significance of liturgy in their local ethnographic contexts and discuss the wider implications of various forms of liturgical politics. Through this comparative discussion, we aim to craft a shared, nuanced understanding of the bounds of liturgy, its political consequences, and the lifeworlds it generates for people that may run contrary to those on offer via global identity discourses.

5536 The Privileges and Privations of Precarity

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Galerie 6

Type: Roundtable/Town Hall

In today's climate of political turmoil, the language of precarity has become both ubiquitous and contested. Once associated primarily with class positions shaped by the flexible, intermittent, and hyper-exploitative labor practices of informal economies under global neoliberalism (Han 2018; Standing 2011), the discourse of precarity now circulates across an array of social positions: from undocumented migrants and overworked students to corporate executives, cultural producers, and even racial supremacists and nation-states. This roundtable explores how precarity operates as a polyvalent register, deployed across the political spectrum to garner recognition, mobilize resources, and assert claims to care, security, and truth. As a discursive and affective resource, precarity invites critical reflection on how social hierarchies are imagined, negotiated, and reproduced—no less in its reframing of suffering as a marker of social identity or a modality of "elite capture" than in its shaping of critical consciousness, mutual aid, and redemptive witnessing (Táíwò 2022).

Rather than treating precarity as a fixed condition or universal ontology of late capitalism, this roundtable asks: What does precarity do, both for anthropologists and the subjects we study? What

kinds of narratives and moral claims does it authorize? How is it aestheticized, instrumentalized, or commodified? What political and institutional frameworks does it challenge, and which does it reinforce? And how might we, as ethnographers embedded within precarities, distinguish between "precariousness" as a shared condition of human vulnerability and "precarity" as a historically situated, politically mobilized state (Butler 2004; Lorey 2015)? What stories remain untold in the archive, the art exhibit, the activist campaign? How do informal epistemologies-uncited choreographies, fleeting gestures, or everyday refusals-shape how precarious lives are represented, understood, or erased?

In an era of hypernationalism, economic volatility, and growing attacks on academic freedom, this roundtable reflects on an anthropology increasingly shaped by precarity, both in our ethnographic encounters and within the discipline itself (Santos 2025). Drawing on grounded fieldwork, participants explore precarity across diverse sites: from South Korea's gig economy to anti-intellectualism in U.S. universities, from undocumented migrant labor to the aestheticized "suffering subject" (Robbins 2013). We examine how vulnerability becomes stylized, commodified, or institutionalized-through poetry, dance, ethnographic prose, and social media-and how these forms may transform suffering into artistic, academic, or political capital. Through situated narratives and resistant examples, we ask how anthropologists can engage the politics of vulnerability without reducing it to victimhood, linear crisis, or singular truth, foregrounding instead its contradictions, maneuvers, and moral complexities.

1961 The Spirits of Life and Death: The Transformational Nature of Alcohol Distillation

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

Alcohol has long occupied a liminal space between life and death, nourishment and poison, the sacred and the profane. This session explores the paradoxical nature of distilled alcohol-commonly referred to as "spirits"-as both a vital cultural force and a potential agent of ruin. From ancient alchemists seeking to capture the "breath of life" to modern distillers crafting artisanal liquors, the process of distillation has been imbued with mystical, medicinal, and social significance. Yet, while alcohol has historically been celebrated as a source of communal bonding, religious ritual, and economic sustenance, it also serves as a spectral presence haunting societies with its well-documented harms.

Drawing on ethnographic and historical perspectives, we examine how different cultures have understood and negotiated alcohol's duality. Why is alcohol revered as a life-giving substance in some traditions yet feared as a harbinger of death in others? How do alcohol purveyors reconcile their roles as both a source of pleasure and a contributor to addiction, disease, and social instability? Recent studies highlight the health risks associated with even moderate alcohol consumption, challenging long-held beliefs about its benefits. Meanwhile, excessive use remains a major public health concern, with links to liver disease, alcohol poisoning, cancers, and increased mortality.

This session invites papers that consider the ways in which distilled spirits, as both material and metaphor, reveal deeper anxieties about transformation, embodiment, and mortality. By tracing the ghostly imprint of alcohol across cultures and histories, we aim to illuminate how societies define the boundaries between sustenance and excess, remedy and poison, celebration and sorrow. In doing so, we ask: What can alcohol's enduring contradictions teach us about the human condition, and how do these tensions shape contemporary debates around health, consumption, and social responsibility?

Presentation(s): The Ghost of Grogue: Linger Health Effects and Harm Reduction Efforts of Locally Produced Alcohol in Cabo Verde, West Africa

Ghosts linger as harmful spiritual residues, often unnamed with unfinished business. Grogue, a sugarcane-based spirit of Cabo Verde, is analogous to the ghost, as a lingering, often harmful byproduct of a sugar plantation economy that spread through the Atlantic world beginning in the fifteenth century. The ghost of grogue continues to ensnare contemporary Cabo Verdean society as a haunting commodity often with ill effects. This paper considers these lingering societal and public health harms from grogue in contemporary Cabo Verde as well as harm mitigation strategies underway to battle these spirits. Through a review of the 2019 Alcohol Law, extant research on alcohol-related harms, government alcohol cessation campaigns and reports, and through interviews with health officials, treatment facilities, and grogue producers, this paper examines the consequences of drinking grogue in Cabo Verde. This study finds new legislation to help manage the long shadow of grogue. Laws, campaigns, and treatment facilities work to establish a new normal around the use of alcohol in Cabo Verde to ensure that these spirits are safer to drink and are consumed responsibly. Purveyors of grogue are keenly aware of its harmful effects, often distinguishing between good and bad grogue by their effects on people. Do these efforts such as the harm reduction campaign "Menos Álcool Mais Vida" help banish this evil specter without diminishing the cultural and economic importance of grogue?

The Ghost in the Glass

Alcohol is a diaphanous spirit. Culturally, metaphorically, philosophically, psychologically and socially, alcohol functions as an unseen presence in use and effect, action and consequence. It honors the dead as an offering to mourners, a remembrance of the deceased, or sacrificed to the gods who govern the afterlife. Metaphorically it is understood to elevate the mind, causing a spiritous reaction and the liberation of an interior unseen self. Philosophically it encourages analysis of character (in vino veritas), intention, consequences, moral reflection and social shame. Users become psychologically possessed by alcohol and by the ghosts of past actions that linger as lifelong and even intergenerational traces and trauma. Socially it is bound by unacknowledged rules of comportment and perception; the alcoholic becomes a social wraith subject to sanction and shame. Because of such tension, alcohol can become an intentionally avoided linguistic referent - alluded to obliquely with poetic wordcraft that obscures intoxication. Among drinkers and those in recovery, the ghost of alcohol's active presence is felt but rarely acknowledged, a lacuna circled nervously like that cold spot in the room where, perhaps, someone died. Because alcohol's effects are so freighted and conflicted the natural impulse is to look away, to ignore, to hope it isn't there. Like a ghost, we fear its presence while simultaneously questioning its existence, so we can live in peace with our haunting.

Presenter(s): Janet Chrzan

Distilling Connections from Cradle to Grave: Rakija's Role in Serbian Culture

Rakija, Serbia's iconic fruit brandy, is far more than a drink—it is a profound symbol of cultural identity and continuity that permeates every stage of life and type of interaction. Distilled from plums, apricots, and many other fruits, rakija holds a revered place in Serbian households and traditions. It is offered to guests as a gesture of hospitality, used in toasts at weddings and christenings, and shared solemnly at funerals and memorials. From cradle to grave, rakija marks life's milestones. One of its most sacred roles is within the Slava, a UNESCO-recognized intangible cultural heritage practice unique to Serbia, in which families annually honor their patron saint. Distillation of homemade rakija, legal in Serbia, uses traditional methods passed down through generations. It is a symbol of regional pride and familial identity. Rakija is also served at business meetings, in tourist sites, and is exported for consumption around the world. Commercial distilleries are expanding and refining their product, winning awards, and taking a place in beverage tourism. The number one tourist souvenir in Serbia is rakija. Our work involves making 3D tours of rakija distilleries, spectral digital twins if you will, for tourism promotion of this iconic beverage. Whether in celebration, mourning, business dealings, everyday social gatherings, or tourism, rakija is a liquid thread that weaves through Serbian life and is integral to the spirit that defines the Serbian people.

Sugar Cane Spirits and the Purging of Pain in Cabo Verde

Alcohol consumption has a long-entwined history with colonialism, labor exploitation, violence, and addiction. These have been the subject of countless studies on indigenous people's vulnerability, subjugation, and dependence from alcohol consumption brought about by European conquest. Here I propose a more nuanced understanding of alcohol use in Cabo Verde by focusing on the medical and healing use of grogue and its derivatives, which is a sugar cane spirit that is locally produced and sold across formal and informal markets, in the islands and across its diaspora. In Cabo Verde's diaspora, grogue has the synesthetic sensorial capacity to heal from *sodadi* or the longing for the homeland. It fulfills the desire for *encomendas di terra*, those gifts from the homeland that are locally produced and that have a unique capacity to smell and taste like home. In addition, in the islands this spirit heals multiple ailments, eases social relations with the dead and the living, and allegedly cures multiple maladies by purging away pain and relieving the stress of poverty. I will draw on my ethnographic research and translation of a rich literary tradition to illustrate how grogue is not just a drink but a potent multipurpose spirit that has been fully creolized and added value that surpasses that which is commonly attributed alcoholic drinks.

4298 The Various Anthropologies of Robert Brightman: A Roundtable

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 7

Type: Roundtable/Town Hall

Despite--or perhaps, because of--its concern with different ways of understanding and categorizing the world of experience, anthropology has occasionally produced scholars who themselves defy classification. Robert A. Brightman (1950-2024) was one such figure. His early fieldwork with Algonkian-speaking Cree hunter-gatherers in subarctic Canada yielded lasting insights into the cognitive and affective orientations that shaped these people's engagement with trans-species and infra-human "others." Later work revealed his remarkable range and conceptual agility, from Algonkian linguistics, windigo spirits, and Maidu tricksters; to an irreverent diagnosis of anthropological anxieties around the concept of 'culture' in the mid-1990s; to a later excavation of Joseph Mitchell's 1937 pen-portraits of Boas and other early 20th century anthropologists in the pages of the New York World-Telegram. Over a long career at Reed College (Portland, OR), he initiated more than one "generation" of students into the field in his own, *sui generis* style. This roundtable assembles colleagues, friends, and former students commenting and building on Brightman's anthropological contributions to the study of language, myth, ontology, the supernatural, and the various ways of being and doing human.

5092 The future is a foreign country: Operationalizing and acting on the world to come (Part 2)

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR D3 (3rd fl)

Type: Oral Presentation Session

In 2025, the futures for many look grim. Authoritarian forms of governance are gaining traction in much of the world, while for many people "getting by" (Kideckel 2008) and "making do" (de Certeau 1984) remain the norm. State and corporate colonialism continue to promote cultures of extractivism and frustrate grassroots efforts for sovereignty and self-determination. Climate disasters are increasing their severity and damage, forcing many to flee or abandon their homes, while the world experienced its hottest year on record in 2024. As a discipline that sheds light on inequality and oppression and seeks solidarity with the marginalized and oppressed, anthropology today often seems focused on the darker aspects of human existence (Ortner 2016) that lead to particular projections of the future, such as apocalypse.

While imagining a future in crisis can be productive for action, it runs the risk of forgoing the historical realities that lead to such framing. Further, affective reactions to an apocalyptic future may undermine the power of present-day actions, leading to the materialization of unwanted futures through inaction (Wolf-Meyer 2019). Alternately, far from encouraging paralytic inaction, anthropologists studying climate change, history and memory, speculative futures, and disasters can highlight the ways that various communities operationalize imagined and hoped-for futures. In this panel, we ask what futures people imagine for their communities and the concrete actions they take to materialize futures that at first appear spectral and uncertain. Inspired by conceptual engagements with the past, we take Keith Basso's placemaking lens to the future. Through placemaking our "country of the present" becomes suffused with historical imagination from the "country of the past" (Basso 1996, 5). If we come to understand and make our present through actions of remembering and imagining, how might those same actions help us to understand and make the country of the future?

Part 2 of this panel engages with imagining and operationalizing the country of the future through the lens of crisis, collapse, and recovery. Panelists discuss the ways that individuals and societies have begun to reassess their priorities and values in the face of past, present, and future disasters. These reflections may take the form of decades-long journeys – learning about the proper relations

amongst humans and other beings (Menzies) or our ever-shifting understanding of societal risks and vulnerabilities and how to address them (Hoffman). Other papers discuss how communities navigate uncertain environmental futures in the face of crisis, whether amongst 'anti-civilizationalists' in the Pacific Northwest (Thompsett), university students in a California classroom (Tebbe), or communities shaping their Vancouver neighborhoods (Eaton).

Presentation(s): Seeing the future in our past

Gitxaala, a north coast Canadian First Nation, is a people rooted in the past in a way that prioritizes planning for the future. hagwil hayetsk (this paper's author) is a member of Gitxaala. This presentation draws upon his reflections and research gathered over the course of a lifetime. Gitxaala history tells of times in our past when we forgot ourselves, we broke our relations with other beings and treated them with cruelty. Our histories tell how we were then met with calamity – tidal waves, floods, landslides, and famine was our reward. In the aftermath our ancestors who survived rekindled our proper relations with other beings and returned to knowing who we were. Our current world is one in which people have globally lost knowledge of who they are, living in a moment of individualist self-aggrandizing. This presentation reflects on the solutions communities like Gitxaala hold for the global society, how our past brings forward a vision of resilience and attachment to place that counters the depravity of extractivism.

Presenter(s): Charles Menzies

“I view this place as a lifeboat”: Imagining futures beyond civilization

What motivates people to build alternative worlds on the threshold of the world's end? The anti-civilization movement emerged in the Pacific Northwest during the 1980s, and is composed mostly of white, working-class people. The movement identifies civilization—colonial, agricultural, extractivist society—as the primary source of ecological and social oppression. Civilizations are also defined within anti-civilizationist (and some archaeological) theory as predestined to collapse through the overconsumption of natural resources. Today, many anti-civilizationists argue that we are witnessing the initial stages of collapse for the largest civilization ever to exist. In response, they devote themselves to developing microcosms in which more just and sustainable ways of living may prevail, often by forming land-based intentional communities based on principles of

mutualism. As part of this justice-oriented project, they seek in complex ways to support Indigenous sovereignty from their positions as settlers. In these endeavors, they are inspired as much by anthropological descriptions of stateless, non-agrarian societies, such those by James C. Scott, as they are by eco-anarchist speculative fiction writers including Starhawk. This paper draws from fieldwork with two anti-civilizational communities in rural Washington to articulate members' differing senses of future possibilities, and of what it means to prefigure alternative worlds toward an uncertain horizon.

Presenter(s): Fern Thompsett

“On Tuesday we used EJScreen in class, and on Wednesday it was gone”: Imagining environmental futures under Trump

In California, the 2025 Winter term began with the Los Angeles wildfires and never calmed down. From Trump's inauguration and subsequent executive orders to the loss of key environmental and health data to the gutting of the federal government, we lurched from crisis to crisis. Undergraduates today, raised during a major recession, the first Trump administration, and the ever-present impacts of climate change, are no strangers to crisis. In this paper, I analyze how California youth imagine the future in the context of an undergraduate course on environmental injustice where crises repeatedly reached into the classroom. I draw on three years of ethnographic observations as a lead Teaching Assistant for the course, student work, and more than 70 interviews with students. Rather than being paralyzed by the scale and complexity of the problems they were presented with, students were drawn into the work of figuring out what comes next. Youth are experts in what Adriana Petryna (2022) calls "horizon work"—the challenge of imagining futures in the face of runaway change when existing knowledge fails. I argue that, though we should not abdicate responsibility for solving problems to the next generation, we should look to them as partners in this work.

Presenter(s): Margaret Tebbe

Imagining recovery as a form of placemaking: Anticipating disaster in Vancouver, Canada

People everywhere engage in practices of making place, drawing on their traditions, histories, beliefs, and values to form and express relationships with their environment and each other. At the same time, places and our connections to them are becoming increasingly precarious, whether from climate-related hazards such as wildfires or flooding, authoritarian political climates, prohibitive living costs, or unpredictable and seemingly unavoidable geological risks, such as earthquakes. This presentation draws on ethnographic research with two grassroots neighborhood groups in Vancouver, Canada to understand the ways that people constitute place through their values and how place-based expressions of values can contribute to future disaster recovery. Drawing on the term 'otherwise' as theorized by Elizabeth Povinelli (2011) and applied to contexts of disaster recovery by Aidan Seale-Feldman (2020), I demonstrate how my interlocutors' community-building and placemaking work draws a through-line from past to future as it holds unexpected potentiality for recovery, even and especially in anticipation of future disasters. By imagining and

operationalizing future recovery efforts prior to disaster, present placemaking acts can lead to proactive rather than reactive responses to disaster risks and shape society for the better even in the prelude to disaster.

Presenter(s): Jonathan Eaton

After thirty-two years of disaster study: The enduring, the fading, and new horizons

In the face of crisis and incertitude over the last decades, time, research, expanded understanding, and new circumstances have shifted, deepened, widened, and altered many central platforms in anthropology, and certainly in the field of the anthropology of risk and disasters. Some postulations remain pertinent and valid. Others have become less accurate and efficacious. Others, once clear in definition, have become muddled or merged. At the same time, the disasters facing human communities have increased in frequency, magnitude, arena, and harm globally. From a thirty-year perspective of my particular engagement in the anthropology of risk and disasters, I address a number of the operative concepts, foci, assumptions and terms that have evolved, shifted, arisen, or come into question. These include among others, the scope of the notion of hazard going from explicit exposure to now incorporating the implicit, the distinction between probability and possibility when now much more is ever likely, and between vulnerability and precarity when exposure had shifted to constant, the returning need for deduction over induction as more overarching and less particular is needed, and more.

Presenter(s): Susanna Hoffman

7918 Thinking Through the Residual: Warring, Remembering, Memorizing, and Hybridizing

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Studio 1

Type: Oral Presentation Session

This panel focuses on the concept of the residual—those elements that refuse to disappear and make unpredictable appearances, akin to ghostly figures haunting our collective subjectivities, memories, and histories. We explore how memory and unresolved historical fragments persist despite systemic efforts to repress or resolve them. How do these "ghosts" survive amidst rituals aimed at bringing closure? In doing so, we ask: how does the past become emblematic of various forms of intertwined resistance that directly affect how relationships function in the present? How do the pasts of communities and lifeworlds continue to make symbolic appearances in the afterlives by mediating relationships of ancestry, digitized interfaces, indigeneity, coloniality, and citizenship? Our panel, through the presentations, seeks to understand how we can move beyond temporal dichotomies to focus on uncovering how continuous strands of the past mediate contextual presents. What tricks operate in producing that which lingers, what remains persistently unresolved despite processes of resolution? The residual entails an act of subtraction, representing

loss and the remains of something greater. Its latent indexical relationship to its former past form holds the dangerous potential to transform how we perceive our spatial-temporal experiences of the past, present, and future, enabling accountability and challenging hegemonic narratives (Feldman, 2004). Consequently, residuals often become sites targeted for organized erasure, detachment, or delegitimization (Feldman, 2004). The central question guiding our panel is how ghosts of the past and the residual manifest across different ethnographic contexts and how these remnants shape social practices and identities.

Our multi-disciplinary panel uses ethnographic and experimental methods to explore the residual across various sites of social action. The first presentation examines Assam in Northeast India, where interludes in ongoing violence are seen as periods of significant action and identity formation, reshaping past relationships. Another panelist recounts childhood memories in a postcolonial Indigenous context in Northeast India, finding that Christian values from British colonialism largely influenced his experiences at home, school, and with peers. Further insights are offered on "sentirpensar" (feeling-thinking), a framework rooted in Indigenous and Afro-Latine traditions, through interactions with Bolivian communities. This approach critiques Euro-American archival practices by viewing records as entities tied to ancestry and land, integrating embodied memory into recordkeeping. Lastly, we explore how the Shipibo-Konibo people in the Peruvian Amazon perceive old media influences within digital platforms, fostering collaborations and novel media hybridities.

Presentation(s): From Warring Worlds: Understanding Discursive Interludes of Unstable Milieus

Subjective shifts in choices of selfhood by different individuals have been grappled with by scholars and activists alike as discursive frameworks within homeostatic interludes. These interludes seek to rewrite histories of uncertainty onto the futurity of different collectives. As such, historicizing irreverent narratives of embattled selves that transmutate into articulate and anarchic units is an epistemological endeavor often seeking to subvert larger panoptic structures. Thus, how do imbricated struggles situated at the overlapping levels of nation, ethnicity, and the community then offer ways of representing and foregrounding individual narratives of "subjugated and damaged interiority" (Feldman 2005: 220)? I seek to provide a reread of Manoj Goswami's short story Xomiron Baruah ahi ase, which recounts the experiences of Xomiron Baruah, who returns home having spent years fighting for a new homeland. Through his return, Goswami etches the strands of a fragile community as it braces itself for political change. Foregrounding ethnographic narratives of individuals recollecting these struggles in the present, I then highlight the materiality of different movements in the present in the context of the Assamese youth. I also suggest that agitations,

protests, and movements conflict as material and symbolic assemblages that impact innate subjectivities of individuals, thereby interlinking their experiences to larger conversations of indigenous caste and ethnic entanglements.

Presenter(s): SHIVANGI KAUSHIK

Remembering through my Body Differently: Tattooing to Reconstruct Colonial Memories

Reflecting on his childhood memories, through Avery Gordon's (2008) lens of haunting, Tonsing realizes that most of his memories are shaped by colonial structures, specifically "Baptist Christian" principles. The set of beliefs explicitly rooted in the Baptist value system he was born into, such as salvation through faith, the promise of the afterlife, and believers' baptism, impacted how he sees his life on "earth" even as a child. His childhood recollections are more shaped by these religious principles than by social memories with friends and family. In this sense, the memory of his cultural dislocation operates like a ghost—what Gordon might describe as a seething presence that demands attention precisely because it was once dismissed or unseen. His memories, looking back, are overwhelmingly colonial, so inherently disconnected from the stories and knowledge that his Indigenous agency should have driven. As Gordon (2008, 63) suggests, haunting is a means of knowing what has happened or is happening in the present through disruptions, absences, and spectral presences.

In this haunting, he finds his need for a new kind of remembrance. In response to these colonial ghosts, he figured tattooing this "sacred" body, sacred in the Baptist Christian lens, could be an act of reclamation. He tattooed his body, which translates into a tool for reconstructing his memoryscape. In this corporeal space, colonial memories are contested and resistance is embodied.

Presenter(s): Suanmuanlian Tonsing

Sentirpensar: Memorizing through the Heart

Recently, as a discipline, archival studies has largely prioritized information in terms of efficiency and the ability to consume it at will, reflecting its colonial foundations. Aligning with a settler colonial perspective that asserts, I have the right to know, to access, and to have.

As such, how might discussions around records and memory work from the perspectives of Indigenous, Afro-Latine communities provide more localized and relevant methodologies within the field? Through the notion of sentirpensar (feel-thinking), this presentation examines how knowledge and, by extension, memory are embodied across Latin America, both corporeally and affectively, in relation to the world. Through interviews and discussions with highland Bolivian communities, including Aymara and Quechua-descendant members in New York City and the D.C Metro Area, I look at how said communities and worldviews engage with records and recordkeeping. I explore how records extend relationships among people, including spiritual beliefs, and the land. Where information is perceptive, slow, unfinished, and place-based. Feel-think is a political, affective, and intellectual call that engages with one's ancestral past (our

ancestors alive and past) and present to imagine a dignified future. When we consider the greater collective histories and values embedded within records, we are reminded that memory constitutes a politics of hope that re-imagines worlds.

Presenter(s): Yvette Ramirez

Media Residuals: Selfies, Shamanic Practices, and Social Media Affordances among Shipibo-Konibos in the Peruvian Amazon

Media scholars see the "newness" of media as a relational construct intersecting existing media, historical contexts, local knowledge, and user interactions (Gershon, 2017; Gitelman, 2006). This view challenges technological determinism and techno-solutionism that ascribe autonomous power to Euro-American technologies, especially digital media. For Shipibo-Konibos, an Indigenous group in the Peruvian Amazon, digital technologies provide new opportunities, like fostering the largest Shipibo public, but also pose dangers, such as selfies potentially being misused by shamans to cause harm.

This presentation explores why Shipibo-Konibos avoid posting selfies on Facebook. Historically, shamans, or "médicos," are unpredictable figures in Shipibo society (Babrec de Mori, 2012). The apprehension about sharing selfies online originates from the fear that shamans could print these images and use them to harm individuals. This prompts questions: Why must these digital photos be printed for shamans to use them? What unique significance do printed photos hold? The presentation delves into the semiotic ties between selfies and shamanic risks, examining how these fears foster media hybrids that merge "old" media, like printed photos, with digital photos on platforms like Facebook, resulting in media with agentic properties. By investigating this hybridity, I aim to understand how Shipibo-Konibos perceive media "newness" as inherently relational and imbued with presences of previous media

Presenter(s): Jennifer Sierra

6860 UnCanon: Unsettling Anthropological Theory

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Marriott **Room:** Bacchus

Type: Roundtable/Town Hall

The past is alive in the present, and anthropology's disciplinary ancestors are no exception. This panel selectively revisits an assembly of relatively useful excerpts from anthropology's inherited canons, while also punching holes in their parameters and wrestling with their colonial contexts and other ghosts. Contributors were invited to think in relation to, and beyond, a specific text of their choosing from the history of anthropology (however they define it). In some cases, the historical essays that panelists selected may have been relatively overlooked in their time, often for familiar reasons that merit ongoing attention. In other cases, authors might choose to return to a particular text from inherited canons with fresh questions in mind, interrogating what they still find

useful for contemporary social theory and living struggles today. Each panelist will reflect on related questions: what do they find useful in whatever text they chose for fresh thinking ahead? What compromised contexts and uneasy aspects need to be kept in mind? What recent writing or ongoing conceptual dilemmas in anthropology would they place the text in dialogue with?

Reflections include revisiting E. E. Evans-Pritchard to grapple with the first outbreak of Ebola in Azandeland, paired with Eslanda Robeson's travels in South Sudan (Benton); rereading early literary ethnography alongside Rachel Carson's largely forgotten interactions with her contemporaries in anthropology, and the questions raised by these exchanges for putting anthropological writing and structuralism in conversation with structural violence frameworks (Moran-Thomas); revisiting Sidney Mintz's work on sugar (and the rejoinders of his critics) to trace the kinds of politics that emerge along one chemical's commodity chain in the Caribbean across time (Agard-Jones); rethinking with Émile Durkheim's "On Suicide" to grapple with confinement and constraint against suicide in war among enlisted soldiers in the US military today (Chua); returning to "How Institutions Think" and foundational anthropological theories about institutions, in a moment marked by institutional erosion in US science and medicine on the global stage (Sangaramoorthy); and revisiting questions of class with entanglement theory and James Agee's "Let Us Now Praise Famous Men" at the mouth of the Mississippi River (McDowell). Each contributor will highlight suggested pages and historical excerpts they are thinking through/with/against in attempts to wrestle with contemporary dilemmas--offering fresh reworkings and adding to collective resources for teaching, relearning, and rethinking histories of anthropological theory and writing and their many possible uncanons.

1908 Unheard, Yet Present: Silence as a Transformative Classroom Force

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

Silence is often framed within Western early childhood education as a deficit-a sign of disengagement, passivity, developmental concerns, or failure to participate fully in classroom

discourse. This view assumes that voice and verbal expression are the primary means of learning, communication, and participation. We challenge these assumptions by rethinking how silence might be productively considered a form of resistance (MacLure, Holmes, Jones, & MacRae, 2010), unsettling the taken-for-granted logic of presence and considering silence as an active, affective force that resists adult-centric interpretation. Rather than viewing silence as a personal or individual act, we consider how it functions affectively-what forces it sets in motion. We agree with Ahmed (2004) that "Affect must be understood as both personal and more than personal, as 'intensity and force' that passes through persons with different histories and different circumstances, therefore coming into being with bodies that have different capacities to act" (cited in Boldt & Leander, 2020, p. 11). We conceptualize silence as a force that unsettles interpretation-resisting analysis and generating new thought (MacLure et al., 2010). Silence is not a void but a powerful presence-one that disrupts dominant classroom norms, challenges Western epistemologies of participation, and signals alternative ways of knowing and being.

We reconceptualize silence through stories from Turkey and Korea as former preschool teachers, examining its role in shaping relationships among students, teachers, and parents. How adults perceive students who refuse to speak reveals how silence, presence, and difference are constructed and reshaped through daily interactions. We explore how these relationships both influence and emerge through intersubjective dynamics. In this view, silence is not merely absence of speech but an affective force that opens possibilities for young learners to relate, resist, or act on their own terms, while entangled with relationships, institutional structures, and pedagogical expectations. Silence unsettles assumptions of clear communication and produces affective responses-frustration, anxiety, confusion, or fascination-among teachers, researchers, and peers. As MacLure et al. (2010) write, "Silence confounds interpretation and manifests, intolerably, the illusory status of speech as full 'presence' or living voice. Yet it also incites the search for meaning and is therefore productive" (p. 493).

This paper also examines how assumptions and expectations shape experiences of silence, deficiency, and participation. As emerging ethnographers, we reflect on how these dynamics intersect with broader trends in early childhood education. This autoethnographic study explores how we, too, became entangled in dichotomies of silence and agency. Thinking about silence as affect differently offers hope, possibility, and a renewed focus as researchers (Boldt & Leander, 2020, p. 16).

Presenter(s): Junghee Lee, Özge Ergin, Seunghoon Han

Presentation(s): Unheard, Yet Present: Silence as a Transformative Classroom Force

This paper reconceptualizes children's silence not as a deficit, but as an active and affective force that challenges adult-centric interpretations of the centrality of language. Drawing on personal classroom experiences in Korea and Turkey, we discuss how silence opens alternative pathways for agency and negotiation. We explore how it shapes and is shaped by intersubjective dynamics

among teachers, students, and parents, questioning dominant norms that speech is essential for engagement. Through an autoethnographic lens, we reveal the potential of silence in rethinking classroom interactions, opening possibilities for inspiring critical perspectives in early childhood education.

2965 Where Our Ghosts Took Us: Reflections from East Asian Anthropology

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:00 PM

Venue: Sheraton **Room:** Napoleon BR D1 (3rd fl)

Type: Roundtable/Town Hall

As anthropologists of East Asia, the ghosts we encountered in graduate school were specters of structural inconsistency, those who died young, those who died away from home, often in violent circumstances, those who died with regrets. In the field, we met the ghost as an agentive presence moving action, driving events intended to resolve a troubled mingling of living and dead, often in the intimacy of families but sometimes bearing witness to larger issues of political grievance and mass

violence. The ghost was a presence made vivid in rituals, dreams, or stories. Sometimes pursuing the ghost led us down unexpected pathways, challenging us to address new questions in our work and leading us to places we might not otherwise have gone.

The presenters in this panel, all seasoned anthropologists, describe how field encounters with ghosts inflected their subsequent research and writing. Our discussants, two PhD candidates, raise questions and pose challenges. Laurel Kendall engaged with the unsettled dead in Korean shaman ritual, trying to understand how these rituals "worked," how they became emotionally compelling, she found herself enmeshed in the question of how ghosts become real through the visual, aural, and tactile properties of the ritual, from tears to puppetry. Anru Lee focuses on how the affect of haunting not only has the potential to correct historical wrongs but can also become an instrument of capitalism. She explores how, in East Asian cultural contexts where ill death has to be amended and the sociality between the living and the dead has to be restored, ghosts can sometimes become cultural commodities because people fear or feel for them. In his research on the funeral sector in urban China, Andrew Kipnis encountered ghosts not only in cemeteries but more forcefully in the silences around actions taken but never discussed to avoid, appease and settle the spirits of the dead. He asks, "How can we secularists deal with what we feel but don't quite believe?". Laura Miller had researched yin yang masters (onmyōji) who were tasked with dealing with malicious ghosts and had taught a course on ghosts in Japan for more than a decade. When her recent research turned to "Kofun Mania," popular interest in ancient burial sites in Japan, she discovered, to her surprise, that people are doing many corny and fun things related to kofun, evading the point that powerful ghosts may be within the vicinity, even making the person in the tomb into a cute mascot or figure.

8806 Writing Beyond the Academy: How to Break into Trade Publishing

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 04:30 PM

Venue: Sheraton **Room:** Orpheus (8th fl) (access via elevator only)

Type: Workshop

Anthropologists are frequently called on to share their expertise with a diverse range of publics outside the confines of academia—from policymakers to civic organizations to the media. A critical part of this public engagement—and the place where it often begins—is the publication of a book with a "trade press" (i.e., a commercial, non-academic publisher, with a powerful marketing and

publicity apparatus). Not all academics have a desire to do this kind of work. However, for those who do, there is often confusion about where to begin, and a lack of resources to help with the process. Worse, there are sometimes institutional disincentives, in the form of tenure clocks, skepticism from colleagues, or the pressure to produce “real scholarship” that advances the field.

This workshop is designed for scholars interested in better understanding the process of finding an agent, landing a commercial book deal, writing in a more accessible register and other skills related to making the transition into writing for the general public.

The workshop features concrete, actionable tips from trade book author John Ghazvinian and anthropologist Rebecca Lester. Ghazvinian has two decades of experience as a journalist and academic, having written for such publications as the New York Times, Newsweek, The Nation and the Washington Post. His most recent book is "America and Iran: A History, 1720 to the Present" (Knopf, 2022) -- named by the New York Times as one of "100 Notable Books of 2021". He is founding director of “Scholars to Storytellers” – an initiative aimed at helping senior academics engage with general audiences. Lester is an award-winning psychotherapist, author and academic coach, as well as a professor of anthropology at Washington University in St Louis. Her most recent book is the widely acclaimed "Famished: Eating Disorders and Failed Care in America "(2019).

8818 NAPA Professional Development Workshop: Augmenting Anthropological Research with AI: Hands-On Strategies for Ethical, Impactful Practice

Start Date: 11/20/2025 02:30 PM **through** 11/20/2025 05:30 PM

Venue: Sheraton **Room:** Grand Chenier (5th fl)

Type: Workshop

This hands-on workshop invites all levels of anthropologists and qualitative researchers to explore how AI tools - such as ChatGPT, Gemini/NotebookLM, and Claude - can be thoughtfully integrated into every stage of the research process, from planning and data collection to analysis and reporting. Participants will engage in interactive exercises, work through practical research scenarios, and examine real-world case studies that showcase the power of AI-augmented research practices. By the end of the workshop, participants will see how AI can serve as a collaborative partner that strengthens their research capabilities, helps uncover insights faster, and amplifies their impact.

What to Expect

Section 1: Introduction to AI in Research

We'll begin with an accessible overview of current AI tools relevant to qualitative research. Attendees will gain familiarity with core capabilities, differences between platforms, and practical ways to begin using them immediately.

Section 2: Ethics and Best Practices

This section will explore ethical considerations, such as maintaining participant confidentiality, removing PII, and understanding the limitations of public vs. enterprise AI accounts. We will ground these discussions in the AAA and NAPA codes of ethics.

Section 3: Case Studies and Applied Practice

Participants will review real examples of AI-enhanced research across sectors, with structured opportunities to practice using AI tools in each phase of the research lifecycle—from planning to reporting.

9086 Praxis Journal Discussion

Discussion of new journal vision and scope

1995 "We're always home, anywhere." A haunting by the state.

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Bonaparte

Type: Roundtable/Town Hall

In *The Wiz* (1978), Glinda, the Good Witch of the South, gifts Dorothy and the audience with the notion that "we're always home, anywhere." A message specifically for Black Americans, displaced first from Africa by chattel slavery, and then during the Great Migration by the Jim Crow laws of the U.S. south, we are implored to carry on through the strength of our belief in a thing called home. Ostensibly inside of us, this home is meant to soothe our anguish with the world around us. More broadly applied to the subjects of empire and statecraft, home is meant to offer us hope that our individual liberation(s) exist within ourselves through our systems of (self-)belief rather than through the destruction of the state, its institutions, and the deplorable conditions they impose upon us. Home haunts us as our claims to a home haunt the aims of capitalist accumulation in making "home" unlivable. We are meant, then, to reside in resilience—anywhere, under any conditions. Narratives of resilience narrowly frame our survival of the ubiquitous and quotidian conditions of carcerality, coloniality, and perpetual displacement which haunt those outside of the narrow ideal of citizen subject, i.e. surplus populations. In the most generous terms, resilience is an unwitting form of counterinsurgent propaganda.

Anthropology has for decades emphasized narratives of resilience to characterize subjective agency under oppression by depicting adaptation to it. Programs and initiatives geared toward

community and the youth that are built through grassroots organizing (with or without state subsidy) give us hope for the future. This roundtable seeks to problematize these narratives of resilience, specifically those of home(-making), hope, and belonging, that ultimately aid state violence and neglect by making these conditions "livable". We ask these questions of narrative within the broader global and diasporic context of anti-Blackness from West Africa to the US to Latin America and the Caribbean. Does resilience to displacement further anti-Indigenous statecraft? Does the state depend on precarious Black subjects to demonstrate its capabilities and capacity for violence? Do messages of hope distract us from the gravity of our subjugation?

We posit that by encouraging communities neglected by state infrastructure or subject to institutional violence—vis-à-vis prisons, schools, policing, etc.—toward resilience (or even resistance), we are only sustaining the possibility for those conditions to exist by delaying rebellion. Rather, the politics of scholarship should strive to advocate for the destruction of oppressive regimes above hopeful depictions of survival within them.

5491 # Spectral Traces: Unveiling Power through Engaged Research on Violence

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Grand Ballroom D (5th fl)

Type: Oral Presentation Session

Spectral Traces: Unveiling Power through Engaged Research on Violence

In alignment with this year's AAA theme of "Ghosts," this panel explores how research on individual deaths and acts of violence intersects with exposing larger systems of power. By examining specific instances of state and political violence, we aim to illuminate the structural forces that perpetuate cycles of oppression, displacement, and human rights abuses across diverse contexts.

Our panelists investigate how communities grapple with the aftermath of violence, from engagement with grassroots movements to state-sanctioned forensic investigations. We consider the ways in which death, loss, and sacrifice are imbued with social and political meaning, often becoming rallying points for resistance and transformation. The panel delves into the complex relationships between violence and care, exploring how affected communities can reclaim and repurpose sites of trauma.

Central to our discussion is the role of memory and commemoration in confronting past atrocities. We examine how societies navigate the liminal spaces between remembering and forgetting, and

how mapping and documenting violent events can serve as both a scientific endeavor and a form of social mobilization. The panel also addresses the challenges of seeking justice and remedy in the wake of displacement and state violence, considering both formal legal processes and grassroots initiatives.

By focusing on specific case studies from Latin America and the Caribbean, we aim to draw broader conclusions about the nature of political violence and its long-term impacts on individuals and communities. Our interdisciplinary approach combines anthropological, historical, and forensic methodologies to uncover the often invisible structures that underpin systems of oppression.

Key themes include:

- The mobilization of death and sacrifice in social movements
- Transformation of spaces associated with state violence
- The intersection of science, law, and community action in human rights investigations
- Mapping and memorialization as tools for confronting past atrocities
- The social history and ongoing consequences of forced displacement
- Grassroots and state-led approaches to transitional justice

Through these diverse yet interconnected topics, we seek to contribute to ongoing debates about historical memory, accountability, and the enduring legacies of political violence. By examining the "ghostly" remnants of past conflicts and their contemporary manifestations, we hope to shed light on pathways toward healing, justice, and societal transformation.

Presentation(s): We Will Clear Your Name. We, Your Friends, Love You!": How Marginalized Guatemalan Youth Reject Their Abjection in the Aftermath of Death

In urban Guatemala, young adults participate in the informal economy by selling handcrafted jewelry in public parks. When a stray bullet killed Rafi Garcia, a beloved member of this community, police and journalists falsely claimed he was a drug-dealing gangster murdered by rivals in a

targeted killing. Rafi's friends mobilized an energetic response, posting rebuttals in comment threads attached to news reports and organizing a protest on the street corner where Rafi was killed. The competing narratives surrounding Rafi's death exemplify an ongoing struggle in Guatemala over who deserves to be killed and who deserves to be mourned. In this paper, I argue the actions of Rafi's friends demonstrate the latent political potential of marginalized youth who are often assumed, and consider themselves, to be apolitical. Their resilience and resistance to physical, structural, and symbolic violence offer timely lessons in the global context of resurgent political and social authoritarianism.

Presenter(s): Amir Mohamed

The Forensic Gaze: Social Mobilization, Science and the Law in the Search for Mexico's Disappeared

This paper is part of a larger project that maps the interconnections between science, social movements and the law that coalesce around the search for Mexico's disappeared. New technologies and the novel application of scientific techniques to searches for the disappeared have been a hallmark in Mexico in recent years, and collectives of those who have lost family members have been central to the deployment of them. Noting the development and emergence of a scientific community dedicated to collaborating on these issues and the nuanced shift from a political to techno-scientific forensic social movement for many collectives of families, I draw out some of the tensions and contradictions in the law's relationship to science and regarding the question of expertise. I interrogate how the promises and limits of new technology deployed by citizen-scientists in the search for the missing complicate the public persona of grieving family members, prioritizing forensic discourses at the expense of everyday memories and lives.

Territorio Cuerpo-Tierra in the Afterlives of La Cuarenta: Torture Site and Home

In Cristo Rey, a barrio built atop the ruins of La Cuarenta—once a site of torture under Trujillo's regime (1930-1961)—the past does not simply linger; it haunts the present. The neighborhood continues to carry the weight of state-sanctioned, often unspoken violence, and today holds the highest femicide rate in the country. I ask: how do women claim their community as home when they are rendered, sociopolitically, as disembodied objects—seen, but not protected; with rights as citizens, but questionable rights as humans? How do they reclaim their bodies as cuerpo-territorios and their spaces as tierra-territorios, following the framework of Maya-Xinka communitarian feminist scholar Lorena Kab'nal, in a place marked by layered and ongoing violence? And what role does Christina Sharpe's lateral care play in reclaiming spaces where trauma remains woven into the everyday?

Through reflections grounded in pláticas and the teachings of a group of women known as Las Fundadoras, I explore how memory, care, and everyday life become practices of refusal and reimagining. These women—some of the earliest to settle in Cristo Rey—carry with them stories that root the community's past in lived experience, and its future in collective strength. Their voices

reveal how, even in the shadow of authoritarian legacies and ongoing state neglect, women lay claim to their neighborhoods and resist the conditions that continue to seek to erase them.

Presenter(s): Ayleen Paola Correa Rodriguez

Ghosts of Repression: Mapping Memory and Political Violence in Bolivia

When protesters challenging the 2019 ouster of Evo Morales as president of Bolivia marched through Sacaba and blockaded the refinery at Senkata, they followed in the footsteps of decades of Bolivian protest. The resulting Sacaba and Senkata Massacres, where 21 protesters were shot dead, echoed earlier state killings at the same sites in 1985 and 2003.

As researchers on Ultimate Consequences, a digital archive of lethal political conflict in Bolivia since 1982, we reflect on the role of documentation, archiving, mapping, and storytelling in connecting past and present violence. Our archive serves as a tool to assess political violence in Bolivia, provides accessible information to researchers, and offers an open-data framework for research elsewhere. It includes information about the circumstances and demographics of deaths, historical narratives of all 92 events with two or more deaths, over 100 testimonial narratives by witnesses and survivors, and thousands of source documents.

The meanings of death, sacrifice, and loss are significant to our understandings of social movements and political repression. Memory is critical for reparations, community rebuilding and cohesion, informing how future policies are crafted and imagined. This paper explores how "ghosts" of lives lost due to political violence can be unearthed through an open data project. We aspire to reconstruct memory through rich narration of events and balance quantitative analysis with personalized accounts

4060 A Lexicon of Endurance: Articulating Black and Indigenous Feminist Futures

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Studio 7

Type: Roundtable/Town Hall

"How does one make a feminist world in the midst of continuous unraveling? A world where justice and equity prevail? How does our location in a particular corner of the world (at the center of empire, at its margins, or someplace else) shape our perception of this moment?" (Davis & Mulla 2020).

Answering the increasingly prescient call of Black and Women of Color feminist anthropologists Dána-Ain Davis and Sameena Mulla in volume 1, issue 2 of the Feminist Anthropology Journal (2020), we bring together anthropologists attending to dimensions of feminist world-making and techniques of endurance through social and sexual reproduction, political activism, and resistance in the Black Pacific, Nicaragua, Guatemala, and the UK. Following the invitation made by Davis and Mulla to contributors in "Editors' Introduction: A Feminist Coda," (2022) we explore the multiplicities of feminist praxis, reading keywords through a feminist lens to consider their value for our movement in the world. We offer Imagination/aries, In/Compatibility, In/Determinacy, and the Maternal, as mooring points for our discussion on Endurance and Futures/ity.

In our independent projects, endurance and futurity emerge as common threads. As a feminist keyword, we understand Endurance as articulating Black and Indigenous women's multiscalar commitment to persistent world-making in the face of day-to-day state and interpersonal violence, as well as crafting enduring futures Otherwise and Elsewhere. Autoethnography and interviews with Black women offer a window into how imagination serves as a mode for pursuing life-affirming reproductive futures in the Black Pacific (Cotter-Norwood). Multivalent Q'eqchi trans indigenous activism in Guatemala demonstrates the value of using compatibility to push forward plural and diverse modes of life outside of Western categorical legibility (Urizar-Ávila). Indigenous catholic women in Nicaragua fashion 'homespun' religious practices of "sacred resistance" wherein the maternal transforms their reproductive labor into revolutionary praxis (Rayo). For Black women in London, navigations of motherhood can produce possibility through indeterminacy as racialized reproductive experiences connect with broad histories of racism, coloniality, and violence evidencing enduring structures of power and their continued effects (Bazambanza).

In 2020, global movements supporting justice for racialized people raised significant questions about the nature of white supremacy in the everyday: in our homes, hospitals, and universities. Five years on, critical voices are under threat through silencing, sidelining, and erasure. At this moment, it is crucial we forefront the knowledge of Black and Indigenous women who offer us avenues beyond survival, planting seeds for sustained transformation.

Venue: Marriott **Room:** Studio 8

Type: Oral Presentation Session

Anthropology, as an academic discipline, is the knowledge of human cultures, and our methods are, by necessity, themselves steeped in human experience. Scholars from Malinowski onward

have also examined "participant-observation," one of our hallmark methods: how much is participation? How much is observation? And does such a divide echo another problematic divide: the outsider/insider dilemma (Abu-Lughod 1991; Narayan 1993). Turns towards more collaborative practices in anthropology have attempted to address these issues, and engage in collaborative or community-generated initiatives. For example, in archaeology scholars have begun excavating the contributions of local diggers, whose contributions were often elided by early archaeologists (Bruchac 2018; Mickel 2021; Quirke 2010). Projects like the Anthropology by the Wire project required students to present work to the community and gain consent before publication. The availability of cell phones and internet technology have also removed separations between "home" and "field," reshaping how research subjects experience the work done about their communities and in turn, their relationships with anthropologists. Especially in a moment when social science is under threat, anthropologists must consider how to work beyond academic silos and reach broader publics. Drawing from case studies with biological anthropology, medical anthropology, archaeology and cultural anthropology, panelists share their experiences of collaborating and coauthoring with their communities. We ask, how is our work is relevant to the people we work with and learn from? How do we translate our work and its relevance outside the narrow needs of the academy? What are the changing practices of working more collaboratively with communities?

Presentation(s): Critical conceptualizations of health: Community-led development of an Unangan Healthy Living Conceptual Framework

This research developed a conceptual framework for Unangan Healthy Living using concept mapping (CM), a participatory approach prioritizing community engagement in defining health. Guided by the principles of community-based participatory research, this study used CM to collect and analyze Unangan community members' perspectives on healthy living. The study, conducted in the Alaskan Aleutian Pribilof Islands community of St. Paul involved diverse participants across different age groups, occupations, and familiarity with traditional Alaska Native practices. Research methods followed three phases: brainstorming, sorting and rating, and interpretation during which participants generated health-related ideas during semi-structured interviews, which were then sorted into thematic clusters and using multidimensional scaling and cluster analysis (CM), and were finally visualized and validated resulting in a conceptual framework that demonstrates the principal health themes and the relationships among concepts important to Unangan health. The final phase engaged community members in interpreting the final concept map to ensure it reflects local knowledge and priorities (survey, discussion, artwork interpretation). The main outcomes include a deeper understanding of community-defined health, with an emphasis on traditional foods, and environmental, community and economic health. The framework serves as a foundation for further self-determined, community-driven research.

Presenter(s): Ruby Fried

Imaginative Recuperation and/in Ethnographic Graphic Novels

In 1965, the ancient site of Pella, Jordan, was believed to be one of the richest unexplored sites in the Near East, and Dr. Robert H. Smith got permission to excavate it. There was just one problem: Smith wasn't an archaeologist. He was a religious studies professor. So he hired six men called the Jericho men to excavate the site and train his undergraduate student diggers. That the Jericho men are not named in Smith's documentation is perhaps not surprising. Historically, local contributors working for and alongside 19th-20th century anthropologists and archaeologists received short shrift.

This paper focuses on a graphic novel project, *Excavating Pella*, which emerged from a partnership with an Arab artist and on-the-ground research in Jordan. Coauthoring with an artist created opportunities to rethink ethnographic modes of writing and inquiry. The graphic novel blends facts, documents and images from the real excavation within a fictional story that charts a friendship between one of the student excavators and one of the Jericho men, writing the Jericho men back into Pella's story. This process, which we refer to as imaginative recuperation, attempts to capture and recuperate the contributions of the Jericho men within a likely, albeit imagined, context. Imaginative recuperation offers one mode of mining archival sources and reading for the elisions.

Presenter(s): Elizabeth Derderian

An Invisible History, A Possible Anthropology: Assembling an Archive of Dark Skin in Dermatology

Under different banners— Black dermatology, ethnic skin dermatology, and skin of color dermatology— dermatologists have long attempted to deal with a so-called "problem with skin color" (Rabin 2020) that has plagued dermatology. In this paper, I present an artful inventory of the makeshift archive that I assembled on this invisibilized history. This archive includes traditional archival sources used in anthropology and the history of medicine, as well as the production of an oral history project archived on this subject (*Making Dark Skin Visible*) and the collection of materials, from obituaries to historical fiction books, from various contacts. I suggest that an ethnographic sensibility, rather than traditional anthropological or historical methods, is what allowed this project to reveal an invisible history of dark skin in dermatology. Through the stories of individual dermatologists, medical and educational institutions, and organizations like the National Medical Association that have surfaced since the mid-20th century to account for and attend to dark skin in dermatology, this project offers a reparative history of dermatology. I demonstrate how a medical anthropological approach to oral history can provide new primary sources and secondary sources that defiantly change the arc of the history of dermatology.

Presenter(s): Yesmar Oyarzun

"Collateral Damage in Unit 3": Institutional Legacies and Community Archaeology in West Philadelphia's Black Bottom

This paper discusses Heritage West, an ongoing community archaeology project co-developed by academic archaeologists and community stakeholders. Our project delves into the intertwined narratives of migration and urban renewal in the Black Bottom—a historically Black neighborhood razed in the 1960s by the Philadelphia Redevelopment Authority to facilitate the expansion of UPenn and Drexel. Our discussion here introduces the project's methods and explores the difficulties of developing a local, community-engaged project for university-based anthropologists. For us, this posed a complex challenge given historical and ongoing tensions between Penn and West Philadelphia. We critically evaluate the beginnings, fieldwork, lab, and dissemination stages of the project, including the formation and ongoing discussions with a community advisory board regarding exhibitions and future steps.

Presentation(s): &A

Water use efficiency has increased by 9%, yet water stress and scarcity remain pressing global challenges. Additionally, unprecedented disruptions in water systems between supply and demand exacerbate the issue. In this context, households play a crucial role in communicating with relevant authorities about emergencies such as pipe leaks. However, if households are unwilling to share water or dissatisfied with the system, conflicts may arise, leading to water scarcity even during non-crisis periods. To enhance household resilience and promote a sustainable water system, various benefit programs have been introduced. Despite these efforts, Kathmandu Valley, Nepal, a disaster-prone region has long struggled with water scarcity. Rural households often hesitate to share water, while urban areas fail to explore alternative resources, as highlighted in national reports. Although resilient water infrastructure is recognized, displacement due to disasters, protests reconstruction, and potential labor shortages for future water projects underscore the importance of understanding household resilience. This study employs both qualitative and quantitative methods to identify and measure household resilience indicators. Findings reveal that rural households exhibit significantly lower resilience, while all areas require improvements for

sustainable water management. Additionally, results highlight the necessity of increased investment in the environmental dimension across all regions. Therefore, this research recommends a greater focus on environmental investments. Moreover, adopting resource-to-money strategies such as water trading, and PES (paying for the ecosystem) common in other countries-could allow rural areas to sell resources to urban centers, generating financial support for holistic resilience enhancement across multiple dimensions.

Presenter(s): Namita Poudel Bhurtel

Crop Versatility Steering Resilience

Indigenous scientist Robin Wall Kimmerer asks, "How can we begin to move toward ecological and cultural sustainability if we cannot even imagine what the path feels like?" (2013, 6). Farmers across the US are rising to address this failure to imagine. They are pushing against technology-driven path dependence dictated by large agricultural corporations by reinventing established industrial farming norms and embracing solutions like improving soil health through environmental remediation, and prioritizing crop diversity and versatility (Spangler et al., 2022). Tom Özden-Schilling describes how advocates of resilience theory dissonantly "accept unconditionally the conditions of the present, even as [they] plan for a radically open future" (2022, 74). Research to understand small-scale farmers' practices and strategies to develop climate resilient farms, and how this knowledge is learned and passed on, is thus pertinent. This is especially so as the current federal administration has frozen funding to the USDA, which provides financial and research support to farmers nationwide (Crawford 2025). Given corporate overproduction and monoculturation across the United States and its international impact, small-scale farmers play a pivotal role in this movement of crop diversification, regenerative agriculture, and global food security. The efforts farmers are undertaking to build climate resilient farms are fundamental to asserting food sovereignty. Domestic farmers' responses to climate change and the practices they are adopting have been less extensively studied from an ethnographic lens. Previous literature in this realm focuses on perceptions (Mase et al., 2017), adaptations made (Ishtiaque 2023), economic implications (Burke and Emerick 2013), or charts erosion of crop diversity (Crossley et al., 2020).

Fieldwork in the Mid-Atlantic region of the United States informs my understanding of farmers' motivations, challenges and processes implemented to build climate-resilient farms. By using millets and other grains as analytics, I examine what soil health challenges farmers are facing due to climate change and what changes to crop cultivation and processing they are implementing. This research also highlights the knowledge transfer and sharing practices farmers and their communities are employing. I rely on Anderson's (2017) and Law and Lin's (2017) considerations of nurturing situated forms of postcolonial STS to think through the value of examining food sovereignty movements from both postcolonial and contemporary global capitalism lenses despite historic resistance. Capitalism and its imperial power through globalization have led to the loss and destabilization of secure food systems. Small-scale farmers are countering this destabilization through the practices they are implementing in forging climate resilient farms. This presentation will

question both intrinsically tied power structures to chart this evolution of food sovereignty movements.

Presenter(s): Anupama Cemballi

Cultural returns on investment: Determining socio-cultural value in Canada's inland commercial fisheries

Canada's commercial inland freshwater fisheries, located in the prairie provinces of Manitoba and Saskatchewan, are a major contributor to the global supply chain for walleye, whitefish, and other wild caught freshwater fish species. They are also a key contributor to the economic and cultural survival of Indigenous (First Nations and Métis) fishing communities. As part of a study commissioned by Indigenous Services Canada, undertaken in consultation with commercial fishers in 15 communities, our research team at the University of Winnipeg developed a cultural indicators framework to measure the social and cultural value generated by commercial freshwater fisheries in Canada. These indicators encompassed factors such as food security and access to culturally-appropriate food, human health and well-being, knowledge transmission through land-based learning, and political inclusion. While the primary outcome of this initiative was a technical instrument for use by government and communities, our research also forced engagement with the uneasy ways in which socio-economic "benefit" is determined by colonial and capitalist regimes of value-production and appropriation.

Presenter(s): Eric Thrift

Interspecies Terroir and the Making of Bug-Bitten Tea

Pong-Fong tea originated in Taiwan in the early 1930s as the first known 'bug-bitten' tea. Bug-bittiness, caused by Tea Green Leafhoppers (*Jacobiasca formosana*) who bite the tender leaves and buds of tea plants, trigger a chemical defense response that produces a sought-after honey fragrance. This insect-plant relationship transforms the raw tea material, shaping both the teas' flavor profile and its economic value. Because Pong-Fong tea requires tea leaves to all be picked and processed by hand, this tea has never seen its own industrialization. Drawing on interviews with tea producers in Taiwan, this study came to understand Pong-Fong tea as co-produced through the interplay of insect-plant relations, as well as the care, labor, and creativity of tea producers. More than the taste of place or taste of soil, terroir is an embodiment of and co-produced by the relations and networks within place. Through taste, consumers can directly and materially experience the relational terroir that emerges from multispecies interfaces- involving cultivars, cultivators, insects, and their environments.

Intestines of the Mountains-- Rural Waste, Cordyceps Economy, and Shifting Consumption, on Northeastern Tibetan Plateau

Rural waste is a growing problem on the Tibetan Plateau, noted for its attraction of bears to human settlements. Not only has the meaning for trash in Tibetan reinvented, the city's demand for this

level of outside goods is also a recent development. Following its blooming cordyceps economy, Zadoi county (Yushu Tibetan Autonomous Prefecture, People's Republic of China) has had an overflowing of trash in its municipal center. I investigated Zadoi's waste in situ. as a case study to understand the rural trash problem happening across the Tibetan Plateau, transforming indigenous cultural ecology as well as human and non-human relationships.

In Zadoi, the volume of trash production peaks with the cordyceps-digging season. Cordyceps (*Ophiocordyceps sinensis*; Tibetan: དམར་རྩ་དགུན་འབྱུང་ Yarza Günbu; Chinese: 冬虫夏草) is a form of caterpillar-fungus. When the larva of the moth gets infected by fungus underground, the fungus kills the larva and grows a stem above ground. In Tibetan tales, cordyceps are the intestines of the mountains. The combination of the larva and the fungus is a valuable medicine in both Tibetan and Chinese Traditional Medicines, thus making it extremely profitable. In Zadoi, cordyceps have become the sole driving force of its GDP, making up an average 67% of local income per household.

As the capital generated by cordyceps accumulated in Zadoi, so did trash. In 2013, media reported Zadoi as "City of Waste". In Tibetan, "གད་ཉིགས་" (gad nyig) means everything that can't be used and needed to throw away, which used to refer to animal furs, worn out clothes and tools, but nowadays it is also being used for modern products-including plastic bags and other non-biodegradable objects brought by industrialization.

The rapid production of trash is a material result of the transformed consumption pattern during cordyceps-digging season. To save time and labor, Tibetans have opted convenient food like instant noodles over traditional food consumptions like yak meat and dairy products. The residual food in discarded food packaging waste attracts non-humans, mostly Tibetan Brown Bear and stray Tibetan Mastiff, closer to human settlements-- creating hazardous encounters and altered multispecies relationship because of the transformed material implication of གད་ཉིགས་ (Trash).

Manipulating the "Count": Scientific Management and Commercial Fishing in Coastal Louisiana

In recent years, coastal Louisiana has been a site of tremendous scholarly attention. Important contributions have examined the political and ecological dimensions of the state's ongoing land loss crisis and have shed light on the unequal effects of Hurricane Katrina in 2005 and the 2010 BP oil spill. Yet alongside these spectacular or eventful instantiations of environmental disaster that frame much contemporary discussion on the region, a quieter and more protracted crisis of social reproduction is unfolding in the commercial fisheries. While commercial fishing historically has sustained residents on Louisiana's working coast, coastal erosion is both transforming local landscapes and rendering lives and livelihoods increasingly environmentally precarious. At the same time, fisherfolk are facing the pressures of a globalized seafood trade, encroachment of the fishing grounds by a state-backed recreational fishing industry, and tightened legislation on commercial fishing in the realm of fishery management.

This presentation draws on historical research and extensive ethnographic fieldwork in the commercial fisheries of coastal Louisiana and explores how fishermen in this context navigate the moving grounds of socio-ecological crises. Through a focus on the tensions that emerge around official categorizations and classifications of fishing zones and aquatic animals themselves, I discuss how fishermen subvert and manipulate some of the abstractions and calculations that scientific fishery management rely on to render parts of nature both governable and marketable. In doing so, the presentation discusses how these subversions elucidate scientific fishery management as a contentious terrain for both knowledge production and for the consolidation of political interests.

Presenter(s): Tilde Siglev

Meanings of milpa cropping among farmers in Guatemala's Climate Change contexts: a tale of two experiences

Extreme climate events like droughts and floods shape the outcome of milpa cropping or farming. Guatemala agriculture systems can be divided into the milpa and non milpa, which fits into rainfed agriculture and irrigation agriculture. Given the water stressed that the country is facing because of different reasons like hydrological draughts and land use changes; milpa rainfed agriculture as an ancient cultural practice represents a risk to its practitioners to harvest some corn. How are farmers from an Indigenous cultural background and Ladino or Mestizo cultural background value and faced milpa farming in a Climate Change context which is in different ecosystems? After two years of being closed to key moments of the milpa farming practices between farmers from Zacapa (Dry Corridor) and Sololá, there explanations of why keep doing milpa seems to point out cultural and socioeconomic reasons. This flash presentation makes the claims that despite cultural or ecological differences, milpa rainfed agriculture is market which production is not motivated by any external market driver, just the cultural value of corn core symbol in Mesoamerican culture.

Presenter(s): Felipe Antonio Giron Palacios

Species in Circulation: Conservation, Commodity, and the Australian Macadamia tree

What happens when a native plant becomes a global commodity-and then a conservation target-on the very landscape where it first evolved?

This presentation will explore the strange and shifting status of the Australian macadamia: once a culturally significant food and way-marker for Indigenous communities, now a high-value monocrop grown across the remnants of its native habitat, and simultaneously listed as endangered in the wild.

This project is situated in Bunjalung Nation/the Richmond-Tweed and Wide-Bay Burnett regions of Australia's North-East coast, a landscape historically cleared for agricultural production and shaped by colonial and plantation economies. The project revolves around the macadamia-a threatened genus of four tree species which are indigenous (i.e. locally native) to the study area, and subject to a 'National Recovery Plan' for conservation. While once planted by Indigenous

peoples as a culturally significant food source and way-marker, macadamia nuts are now a global commodity, and the plant is cultivated intensively in plantation form across its native landscape. These shifts have led to significant changes in how both macadamia and the wider ecosystems is understood. This project aims to analyze how practices on and around macadamia plantations create socio-ecological dynamics that influence local ecological knowledge systems. Methodologically, the study integrates archival research, market analysis, interviews, and ethnographic fieldwork with scientists, rangers, conservationists, and farmers, capturing diverse perspectives on ecological knowledge construction.

I argue that macadamia is not just a crop but a site of contested meaning—a plant through which land, labour, and scientific authority are negotiated. Drawing on multispecies ethnography, archival research, and interviews with farmers, scientists, and rangers, I explore how knowledge about macadamia is made, transformed, and circulated between local communities, conservation bodies, and global markets.

5233 Calling on Ghosts: Experiments in Anthropology

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Studio 9

Type: Oral Presentation Session

Let's enlist the help of our Elders to challenge anthropology's chequered past and dubious colonial legacy; to re-examine traditional scholarly epistemologies. It's time to re-write our shared canon and add the voices of our ancestors. We are asking critical questions such as how we bring our ancestors into our research. And how does their guidance influence our research? Are we risking reproducing the bias and harm some anthropologists have enacted on countless communities and peoples and when do we call these ancestors to account? How does listening to the spirits of our ancestors change the basic promise of scholarship, for the better?

In this panel, we invite fellow anthropologists from all sub-fields to call up their ancestors via seance, witchcraft, technological or any other means. Panelists will perform a 5 minute summoning to bring forth their ancestors into the dreary conference room and have an open discussion with us. We use a particular image, sound, object, or memory to channel the ancestor/s and allow us to speak with them. We ask our Elders to bring their wisdom but also to reflect with us on what they might do otherwise. Our presentations will channel the ghosts of places, people, and other beings from our research. We will share with you trans-dimensional sensory experiences and collective knowledge.

Presentation(s): Channelling ancestors via artificial intelligence (AI): appropriation of ancestral voices through algorithmic magic.

This presentation will bring the voices of Ancestors that I have a connection with into the room and set them in conversation with each other to pay attention to their message. I will use this experiment to highlight the potential trauma and harms, the neocolonialism and even cultural appropriation of technological advancement. Asking difficult questions about my right to speak to these Elders, and even more-so, the right of others to steal their voices through algorithmic means.

Through invocation, I will channel these ancestors via machine-learning generated mediums, asking them to share their insights on my research into machine creativity as human-AI sympoiesis. From Lao Tse to Jagera warrior, Multuggerah that defended the stolen lands where I grew up; from Boudica to unnamed ancestors from Nordic tribal landscapes; and from Hortense Powdermaker and Dorothy Parker - my sometimes intellectual guides. By sharing their mediated wisdom, I will open up for a discussion on the challenges that AI mediated knowledge presents. How has algorithmic magic twisted and distorted the words of my Ancestors? How has it revised their message and most importantly, what are the human mechanisms in place that realise and counteract this?

Presenter(s): Rebekah Cupitt

Conjuring Ghosts: an exploration of traces and falsities

How do ghosts present themselves to us? How does their presence affect us, haunt us, scare us, move us? And perhaps more importantly, how do we perceive them? How do we see them? How do we interact with them? While ghosts can be understood as spirits, the definitions open other possibilities to interrogate them, as "false images", as "reflections", as a "shadowy trace". In this evocative and experimental presentation, I would conjure a series of ghosts through photo-media. Experienced as a series of dialogues and encounters with the unknown, and the unseen, I will open a dialogue with ghosts that refuse to leave and that continue to affect me.

Presenter(s): Edgar Gomez-Cruz

A ghostly ethnography for ghostly subjects

With this presentation I will bring the voice of a house to be heard. This house is an important actor who has witnessed the end of WWI and WWII, the rise and fall of fascism, the economic boom of the 1950s and 60s and the progressive entry into the present era of uncertainty. Home to an influential family and located at the feet of the Alps in the North West of Italy, this house was eventually abandoned by its inhabitants. As the youngest of the heirs, I will in my seance tribute the greatness of this house, appeasing with it also its ghosts, the history, stories and destinies that it has contained. In my seance I will use methods resulting from the combination of sensory and visual ethnography, of art and meditation techniques hence producing an archive of images, sounds and smells in search of a narration format. Crafting the materials of this archive, I will also

craft my story, that of the storyteller, contemplating the ephemerality and situatedness of the self. A ghostly ethnography for ghostly subjects.

7367 Canonical Hauntings of the Body: On Harm, Healing, Knowledge Production, and Belonging

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** MGB - Salon A

Type: Oral Presentation Session

As battles over funding, academia, and research escalate in the U.S., this panel explores communities who persist in times of precarity through healing practices. By examining intersections of bodily exclusion and aggregation across institutional and community contexts, we highlight pathways of resistances to negligent or indifferent states. Each paper approaches the anthropological corpus as a form of epistemic geography in which bodies are mapped as sites of cartographic index and exclusion. We ask how "haunted geographies" create analytical space to interrogate the anthropological canon as a site of bodily meaning and harm and presents opportunities for healing. These papers, comprised of scholars across academic timelines and epistemic traditions, open an anti-hierarchical exchange about how harm and healing are negotiated at the intersection of canon and exclusion. Rodriguez examines how the specter of the AIDS crisis haunts contemporary responses to drug use among gay men in Los Angeles. Through ethnographic research with LGBTQ substance use services programs, the paper reveals how canonical understandings of queerness resurface amid the fentanyl epidemic, with historical tensions haunting interventions around chemsex. These canonical hauntings shape institutional responses and animate strategies that emerge as resistance to the disciplining gaze of public health. Vasquez considers Mexican Traditional Medicine (MTM) practitioners who specialize in birthworking and postpartum care in Southern California to interrogate the epistemic and methodological implications of capturing traditional knowledge systems within academic knowledge regimes. Drawing parallels between the ethnographic disciplining of MTM practices and that which is experienced by anthropologists in training, she grapples with questions of harm and explores how ethnographic practice, though disciplining, might provide opportunities for healing otherwise. Reed explores how the dismissal of whiteness by Ashkenazi Jews harms Jews of color and erases their experiences with racism. Through a critical inversion of the paternalistic historical and haunting relationship between Jewish anthropologists and Blackness, she asks what can Jewish Americans learn from African Diaspora scholarship? She suggests that Jewish identity should be reconceptualized through African Diasporic notions of identity and race as a means to deconstruct Ashkenormativity and to fuel a healing critical recognition of Jewish diversity. Arifi mediates the history of French ethnography with ethnographic fieldwork to posit how a legacy of disciplinary practice haunts ethnic identification among the French Kabyle. Particularly, they define how its corpus has codified and perpetuated hegemonic knowledges of belonging that supplant the

diaspora's autonomy in self-conceptualization. They consider, then, how its communities negotiate what it means to be Kabyle through living encounters with discursive expression.

Presentation(s): Ghosts in Queer Care

HIV/AIDS , Drugs, and Queer Public Health

This paper examines how the specter of the AIDS crisis haunts contemporary responses to drug use among gay men in Los Angeles, foregrounding how queer bodies are situated within overlapping regimes of public health, moral discourse, and anthropological knowledge. Based on two years of ethnographic fieldwork in LGBTQ substance use programs, this paper analyzes how canonical public health frameworks—rooted in abstinence and harm reduction debates—resurface amid the fentanyl epidemic, shaping both institutional knowledges and community-based interventions around "chemsex."

Reading these responses as a haunted geography, I trace how the academic corpuses—both as a disciplinary archives and professional bodies—index queer bodies as sites of risk, regulation, and exclusion. Yet alongside this disciplining gaze, grassroots harm reductionists and mutual aid networks enact alternative modes of care that challenge institutional authority. This paper opens an anti-hierarchical conversation about how harm and healing are negotiated at the intersection of canon and exclusion, offering queer care as a critical response to disciplinary legacies.

Presenter(s): Darwin Rodriguez

A Healing African Diasporic Deconstruction of Ashkenormativity

The path to whiteness has been historically documented for many European populations in the US—Ashkenazi Jews included. The complex relationship between Jewish identity and race has created a frayed trajectory that in some ways diverges from other European populations, yet the imperialistic and hegemonic nature of white American Jewish identity across the Diaspora eclipses non-white Jewish experience—a phenomenon that is certainly racializing. If Ashkenazi Jews are not white but Jewish, how do we conceptualize the identities of the nearly 2 million Jews of color that exist globally? In this paper, I explore how the dismissal of whiteness by the Ashkenazi Jewish population in the US harms Jews of color and erases their experiences with racism within the Jewish community. Through a critical inversion of the paternalistic historical and haunting relationship between Jewish anthropology scholars and Blackness, I ask what can Jewish Americans learn from African Diaspora scholarship? More specifically, I suggest that Jewish identity should be

reconceptualized through anti-imperialist African Diasporic notions of identity and race as a means to deconstruct Ashkenormativity and to fuel critical recognition of Jewish diversity—potentially healing the ongoing complex relationship between whiteness and Jewish identity and creating a space for liberatory inclusion.

Presenter(s): Naomi Reed

Mexican Traditional Medicine and the Healing of Epistemic Meaning

The stakes of this paper are two-fold. First, I ethnographically consider Mexican Traditional Medicine practitioners who specialize in womb health in Southern California, including birthworking and postpartum care. Amidst rising mortality rates among women of color, climbing clinical costs, and heightened reproductive care localisms, I examine how these practitioners can inform complementary medical systems to help improve maternal health outcomes for Latina women in the U.S. In Spanish the womb is referred to as *la matriz*, or a matrix, a structure in which and from which, something takes form. The second aspect of this analysis approaches academic anthropology as a particular kind of matrix in which knowledge production is informed by and invested in reproducing particular canons, market logics, and epistemic genealogies. I draw parallels between the ethnographic disciplining of Mexican Traditional Medicine practices, and that which is experienced by academic anthropologists in training, paying special care to professionalizing mechanisms, including qualifying examinations, the dissertation process, and navigating the academic job market. I interrogate the ambivalence and slippages between participant and observer, PhD student and practitioner, and how things come to be known in the ethnographer's body, as a type of text, and to the body of anthropology, as a professional corpus of texts and bodies.

Presenter(s): Yvette Vasquez

Bourdieu, Awal, and Me: Unraveling a Canon of Franco-Kabyle Ethnography

This analysis explores how the canon of/canonical French ethnography, constituting both the practice of its discipline and the corpus of its produced works, haunts knowledges of belonging of the Franco-Kabyle and among its diaspora. This canonical spectre is undergirded by a legacy of institutional anthropology that has codified, reinforced, and perpetuated its domination over conceptions of ethnic identification through the position of a historically rooted paradigmatic Kabylité (defined in my work as a being-of-Kabyle, or loosely "Kabyleness".) I principally evidence this lens by rereading the regimes of colonial dominion over the Kabyle through the receipts of their censal ethnologies, tracing how their racialized implications shaped institutional policy attitudes in French Algeria. I elaborate on how further anthropological works variously both supplement yet become rooted in this academic canon, interrogating the early oeuvre of Pierre Bourdieu, "reclamatory" nation-building scholar-activism in the 1960s–70s, and trends of retrospective scholarship on the 1983 *Marche pour l'égalité et contre le racisme*, among others. This discussion then turns to consider how the spectre of Kabylité, with its associated system of knowledge production, is actualized and negotiated in its living diasporic communities: caricatured in Barbès'

souk transactions, iteratively among Belleville brasseries, or reflectively — critically — through autoethnographic redefinition.

Presenter(s): Max Bowens, Vénicia Sananès, Gleb Aleksandrov, Jon Harald Lie, Karla Hernandez-Swift, Texas State University, Department of Anthropology, Sarah A. Robert, SUNY, University at Buffalo, Ramprasad Mahurkar

Presentation(s): "Let the dead bury the dead": Absent Presence in the Era of Repatriation

Between 1867 and 1910, the Peabody Museum of Archeology and Ethnology amassed a collection of 7,266 human remains, the majority of which belonged to Native Americans. Joining the Smithsonian, Penn Museum, and many other institutions, the Peabody constructed a "bone room" for the display of remains furnished by eugenic ideals of racial taxonomy and ontological hierarchy.

By 1918, remains were placed into storage. With the passing of NAGPRA in 1990, these very same remains began to be unearthed, as they became newly subject to repatriation.

On October 23, 2023, I submitted a research inquiry to the Peabody Museum regarding this collection. Thus ensued a bizarre archival project which revealed more absence than presence. As of April 2025, the only persons who can receive permission to view museum collections of physical remains are proven tribal affiliates. In the absence of remains themselves, what is available for study is a scatter of documents related to their arrival, use, categorization, and conservation, e.g. partially redacted accession records, blank anthropometric data sheets, storage protocols pertaining to chemical treatment and pest management, and correspondences between curators of physical anthropology.

My paper analyzes the ghosts, traces, redactions, and non-representational images left in the wake of these vital ancestors, revealing the extent to which human remains have transformed from being hyper-visible to a highly securitized archive in the era of repatriation. Rather than treating this archival absence as a void, my paper proposes "absent presence" as a novel methodology for archival study. Building on the work of postcolonial anthropologists (Trouillot, Thomas, Povinelli), visual studies scholars (Camp, Field) and critical theorists (Mbembe, Hartman), my paper analyzes the contemporary archival status of physical remains.

To be clear: the significance of this transition cannot be overstated. Not only are remains gradually being removed from their respective storage facilities, they have also become subject to a complex scheme of identificatory protocols which will dictate their future passage. No longer reduced,

racially typed, or otherwise taxonomized, repatriation committees composed of Native American tribal groups alongside anthropologists are working in good faith to undo old systems of classification in order to understand anew the rightful affiliation of vast numbers of physical remains. In other words, the identificatory status of "remains" are becoming "human." Through the process of repatriation, memories are reconstituted, both personal and institutional, as old images become new and speculative histories become reality.

Presenter(s): Max Bowens

Cheerleaders of the Welfare State

This paper draws on 12 months of ethnographic research on intimate welfare programs in Amsterdam to contribute to debates on the role of affect in social policy. I argue that Dutch welfare professionals act as 'cheerleaders', supporting and encouraging residents to persevere despite increasing challenges. In neighborhoods where poverty, precarity, discrimination, and distrust of the government are prevalent, these professionals work hard to build a sense of community and resilience. As their cheerleading efforts become increasingly essential to a devolved welfare state, I ask: how does their unwavering positivity engage with residents' precarious circumstances and the underlying structures that produce them.

Presenter(s): Vénicia Sananès

Hungry Ghosts in the Land of the Unburied: Conspiratorial Memory, Conspiratoriness and Mainstream Politics in Contemporary Russia

The notion of conspiratoriness, introduced by Charlotte Ward and David Voas in 2011, describes an intersection of conspiracy thinking and New Age-style spirituality evident in many contemporary social movements, conspiracy-based subcultures etc. The "spiritual" component is a prominent feature of many conspiracy theories today, including numerous such ideas gaining prominence in Russian society, media and, increasingly, politics in recent years. What distinguishes Russian conspiracy theories (or Russian versions of globally popular conspiracy theories) is their greater and growing emphasis on history, on conspiratorial reformulation of established collective perceptions of the past. It would be no exaggeration to say that Russian conspiratorial thinking revolves almost entirely around conspiratorial memory. Alexander Etkind in his seminal "Warped Mourning: Stories of the Undead in the Land of the Unburied" (2015) presented a thorough exploration of the complex nature of memory politics and memorial practices of post-Soviet Russia, the ever-prominent presence of unquiet "ghosts" of victims past in contemporary social and political life. Given this unusual importance of the past, the emphasis on history, from interpretations of specific events to essentially conspiratorial conceptualizations of the driving forces of history in general, eased the transition of conspiracy theories from the margins of the public sphere into mainstream media and politics of contemporary Russia – in the absence of a coherent productive memory policy, conspiracy thinking became the only way to reconcile inherent contradictions embedded in Russian collective memory. Based on a broad survey of online communities, on in-depth interviews and on analysis of officially published government materials,

this presentation explores the connections between conspirituality, collective memory and mainstream politics in contemporary Russia.

Presenter(s): Gleb Aleksandrov

Public-private partnerships in policy and practice: from synergy to subsidy

Public-private partnerships (PPPs) constitute an emerging normative policy agenda in international development, which see PPPs as a way to 'crowd in' private actors and capital in order to mitigate the huge development financing gap needed to attain the audacious SDGs. The promises of what PPP may unleash have caused public and private actors embrace the PPP agenda. Yet, the World Bank's 'billions to trillions'-mantra, which drives the PPP agenda, is still far from realisation, which points to a critical policy implementation challenges – which, in the words of an informant, could be conceived of as 'cultural problems inherent to the PPP agenda'.

Drawing on multisited fieldworks in Ethiopia and within the World Bank, this paper explores policies and practices related to (PPP) in international development. The World Bank fieldwork addresses the PPP policy level and implementation challenges as seen from within the Bank. The Ethiopia fieldwork, which constitutes the main core of the work, engages the practical partnership between a publicly funded NGO and a multinational corporation, which elicits more fundamental concerns to the overall PPP agenda, drawing on an ethnographic exploration of policy implementation.

The paper applies the interface concept (Long, 1989) to explore what happens in the practical encounter of public and private actors. The interface concept draws attention to the intersection of different logics and knowledge regimes. The paper argues that the PPP policy puts together actors with distinct logics that are hard to reconcile in practice: the private for-profit logic with shareholder accountability is fundamentally different from the not-for-profit development logic with responsibility to beneficiaries and funding agencies. The case analysis shows how this causes the private actor to withdraw from the PPP, thus turning the joint project into a publicly funded and subsidised proxy for private sector interests.

Presenter(s): Jon Harald Lie

Unidentified in South Texas: Institutional Decision-making in Migrant Remains Cases

In South Texas, hundreds of migrant deaths occur in poor counties that have no medical examiner. These counties are not equipped to deal with this crisis and often send remains to funeral homes. If not immediately identifiable, funeral homes bury remains in local cemeteries without state mandated DNA (deoxyribonucleic acid) sampling. State laws require unidentified human remains to have an inquest (autopsy and death investigation) and DNA sample submission to a state lab for inclusion into a federal DNA database. State laws are not systematically followed by many counties, giving rise to the long-term dead. These long-term dead have families that are searching for them; they have a right to know what happened to their loved one, and the dead have the right to be identified.

This presentation explores the decision-making processes surrounding the treatment of unidentified human remains, presumed to be migrants, by law enforcement and other agencies in two South Texas counties. We discuss key themes that emerged from semi-structured individual interviews and focus groups with stakeholders involved in processing human remains, including justices of the peace, funeral home directors, law enforcement officers, and the director of the South Texas Human Rights Center.

Key challenges that emerged in processing unidentified human remains included limited resources such as basic necessities, lack of or limited access to a medical examiner, lack of clarity regarding procedures, stakeholder roles, and responsibilities, and limited communication between cooperating agencies. We also discuss creative strategies stakeholders in both counties used to navigate challenges, including improving inter-agency communication, adapting and defining roles to improve efficiency, developing and modifying protocols to facilitate procedural consistency, and engaging in innovative resource allocation and creative problem-solving to fill service gaps.

Failure to follow and enforce laws regarding migrant remains constitutes a form of structural violence. State laws mandating unfunded procedures regarding the processing of unidentified human remains in resource-constrained counties infringe upon the human rights of the deceased and their families. Understanding the barriers faced by two South Texas counties and where improvements can be attained through advocacy for funding, expanded training programs, improved communication, and strategic reallocation of resources to strengthen identification efforts in delivering effective humanitarian aid.

Why should we care about school food politics?

Why should we care about school food politics? Government-funded school meal programs are a vital form of food, education, and care infrastructure in communities around the world. Using the lens of school food politics, we engage with what Joan Tronto (2013: 139) describes as "the larger structural questions of thinking about which institutions, people and practices should be used to accomplish concrete and real caring tasks" and to what ends.

Drawing on multiple chapters from, *Transforming School Food Politics Around the World* (Gaddis and Robert, 2024), we provide a global vista of how school food politics is transforming in productive ways who feeds whom what, how, when, and for what purpose. Responses to these and the flash presentation's title question are, we argue, the direct result of food, care, and education politics, yet the people who are most impacted by the resulting programs and policies too often experience "politics" as an abstract and distant process. By highlighting examples of "transformative" school food politics, we signal the need to challenge and change the composition and structure of school food systems, rather than accept school food politics as the purview of corporate lobbyists and elected officials.

And we theorize that policy protagonism (Robert, 2016; 2017) both pushes elected officials and other decision-makers to invest in education, food, and care infrastructure, and holds them accountable when they do not meet the needs of students and communities. Policy protagonism includes four elements: (1) defining policy "problems," (2) identifying and seeking power and resources to address those policy-worthy problems, (3) effectively "using" social categories and symbolic identities (e.g., perceptions of teachers as mothers and caregivers), and (4) demanding multiple seats at the decision-making table.

Beyond simply providing food, school meals are public programs that can be designed to improve children's health, education, and well-being; promote educational access by helping to attract and keep the most vulnerable populations in school; create new paid employment opportunities; and catalyze broader food system transitions that increase local agro-biodiversity, strengthen food sovereignty, and shift power away from multinational corporations to the communities where children are fed. Achieving these aims, however, requires a care-centered transformation in school food politics.

“The Right to Remain Wet”: Bureaucratic Forgetting, Ghostly Wetlands, and the Rewriting of Environmental Loss

What happens when an ecosystem dies- not through spectacular disaster, but through silence? This paper follows wetlands not just as hydrological bodies, but as ghosted geographies: spaces that haunt our maps, infrastructure, and environmental legalities. Drawing from long-term ethnographic engagement, archival fieldwork, and participatory interactions with residents, planners, and bureaucrats across two wetland belts undergoing rapid urban transformation, I argue that wetlands today are made absent through bureaucratic categories, framed as "wastelands," "unused land," or "technically dry." Yet these wetlands are neither lifeless nor forgotten-they appear in bird collision reports, flooding patterns, and residents' memories of childhood. They persist in the margins as "epistemic leaks"-where bureaucratic language fails to hold water.

The methodology is deeply anthropological: drawing from multi-sited ethnography, archival ethnography, legal pluralism, and environmental storytelling. I conducted semi-structured interviews with local residents, planners, and conservationists, walked the terrain alongside wetland activists, and participated in town hall forums where ghosts of loss-floods, disappearance of birds, water scarcity-were recalled. I also incorporated "ghost mapping" as a method-tracing sites erased from planning documents but alive in local memory and ecological impact. The result is a critical ethnography that unearths bureaucratic silences and reveals the affective dimensions of environmental erasure.

While environmental-legal anthropologists such as Deepa Das Acevedo, Mark Schuller, and Heath Cabot have illuminated how law governs through inclusion and exclusion of persons and communities, this work shifts the analytical gaze from the human subject to ecological subjects

themselves. Unlike existing scholarship that foregrounds the legal marginalization of migrants, minorities, or workers, I examine how ecosystems are legally ghosted, denied status, stripped of ecological memory, and rendered disposable.

This paper thus adds to political-legal anthropology by arguing that bureaucracies don't only dispossess people—they erase places. Where Cabot explores humanitarian reception, and Acevedo tracks legal disruption in institutional frameworks, I interrogate the silent bureaucratic violence toward the nonhuman, showing how modern planning systems undo socio-ecological entanglements under the guise of "progress."

Theoretically, I propose wetlands as spectral actors—entities that return to unsettle, resist, and haunt the present through infrastructural breakdowns, bird strikes, floods and revived local knowledge. My contribution is to show how legal voids are not neutral spaces but built absences that reflect deeper epistemic and ecological fractures.

Rather than a lament, this is a call: to see ghosts as remnants of loss and as agents of return.

3770 Diversity's Ghosts: MAGA Era Talk about Difference in the University

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Galerie 4

Type: Roundtable/Town Hall

The war on DEI has come home to the university. Recent changes via executive orders not only profoundly affect the research agendas and financial solvency of institutions of higher education, but also impact the daily lives of faculty, students, administrators, and staff in a multitude of visceral ways. The demand to eliminate all language that purports to discriminate against white, cis-hetero-able men has created new challenges in naming and discussing various types of marginality and discrimination. Alongside universities eliminating terms that index diversity is the concomitant order to no longer acknowledge, and therefore not support, previously established categories of race, gender, sexuality, and ability.

This roundtable aims to take stock of current political, social, economic and cultural conditions that shape universities in the current moment. It aims to understand the discursive changes underway in higher education institutions across the United States and how they impact what is still possible in our classrooms, research, writing, institutions, and activism/advocacy. What starts with a shift in representation via lexicon (i.e. "just" language) is very quickly manifesting material changes such as the removal of webpages, shutting down centers that provide important services, and the elimination of safe spaces. Moreover, dissent with government policies via peaceful campus protest or social media posts is used as a justification for student detainment, and deportation as well as for faculty tenure denial and dismissal.

The linguistic anthropologists on this roundtable will bring their research expertise in areas that fall under the broad heading of DEIA, including race, ethnicity, gender, sexuality, and ability to better understand institutional language and action today. Beginning with the 45th presidency, we invite them to use their knowledge as a starting point to understand institutional resistance and capitulation at universities.

We thus pose the following questions for participants:

What modes of surveillance and policing are becoming normalized in an anti-DEIA era?

How can instructors responsibly teach about power and inequality if they are no longer able to utter certain terms and phrases?

What alternative terminology is employed to talk about, work with, and protect difference?

How can academia push back but also work within emerging institutional parameters configured by fear, hatred, and exclusion?

Participants will share snapshots of particular challenges and obstacles, but also any new paths toward collective action that might be emerging. We will reserve time and invite participation from graduate students and contingent faculty in the room, but have only invited tenured faculty to avoid possible repercussions against vulnerable scholars.

Venue: Sheraton **Room:** Napoleon BR B1 (3rd fl)

Type: Oral Presentation Session

Ghosts imply the presence of the past--something or someone that should have been erased from reality but still haunts. Ghosts can take many forms, manifesting through colonial violence, epistemic erasure, and imperial desires. This panel explores how such presences shape contemporary struggles for justice, recognition, belonging, and memory across different geopolitical and historical contexts. Drawing from ethnographic research in the borderlands, legal systems, transborder diasporas, online consumption, and revolutionary legacies, this panel demonstrates how the spectral is entangled with power and resistance.

This panel is transnational; while each paper highlights the specificities of a particular region and theme, they connect more broadly to understand how ghosts--whether as memories, traumas, imagined empires, erased figures and narratives, or relics--provide a lens to counter and strengthen dominant discourses and histories. Each paper highlights tensions of power between historical imaginings and contemporary realities: how settler histories materialize in Texas, how colonial legacies of law perpetuate discrimination in Bangladesh, how imperial nationalist visions of history trickle through current digital markets, and exploring political contestations over guerrilla symbolic heritage in Colombia.

Paper 1 examines how ethnic violence on Indigenous communities and settler colonial imaginaries structure racialized forms of systemic violence on the US-Mexico borderlands. Demonstrating the complexity of power and resistance, Resendiz highlights how local communities contest these white supremacist imaginaries in Texas and beyond.

Paper 2 investigates digital legal databases locating the systematic erasure of Muslim women's experiences of law. Drawing on fieldwork from state courts and Islamic/customary courts in Bangladesh, Hoque explores how law is mediated in technology, highlighting how databases reinscribe the hierarchies and epistemic frameworks of Western legal systems, which is in part a legacy of colonialism.

Paper 3 explores the proliferation of imperial nationalisms and nostalgias among the material culture of the Iranian diaspora with a focus on online consumption. Mostafavi examines how ideas of a pure Persian culture and nation haunt objects as imperial specters, erasing the long history and presence of other racial, ethnic, cultural, and religious groups in Iran and in the diaspora.

Paper 4 critically examines the Colombian context, delving into the ongoing contest surrounding FARC's symbolic heritage between demobilized and non-demobilized fighters. It specifically focuses on the imagery associated with the guerrilla's deceased founder, "Manuel Marulanda," and analyzes how this representation intersects with propaganda and consumer advertising, as well as the Cold War's afterlives in Latin America.

Presentation(s): Specters of the Borderlands: Labor, Memory, and Violence in the Making of the Modern Mexico-Texas/US Border

The US-Mexico borderlands are among the most imagined and increasingly militarized landscapes of the 21st century. Often depicted as lawless and perilous, they are both portrayed as ahistorical while materially functioning as necropolitical carceral sites for undocumented border crossers. Much like Gloria Anzaldúa (1987) referred to the US-Mexico border as "an open wound," the

phantasms of how the modern border was forged linger in the memory of borderlands peoples. These specters include the legacy of Indigenous land loss, ethnic violence, military conflicts, and, most importantly, the resistance exercised by subaltern communities to colonial violence spanning the past four centuries.

This paper demonstrates how local and Indigenous communities, alongside memory workers—filmmakers, artists, and historians—labor to reckon with the phantasmagorical wounds created in the process of making and knowing the borderlands as a site of historic colonial incursions and as a space of life and resistance. Drawing on over a decade of multimodal documentary fieldwork, interviews, and collaborations across Texas, this work presents an archive of the material and aestheticized environs from central Texas to the Rio Grande, exposing the clashing of distinct visualizing colonial regimes as well as the discursive and material production of settler iconographies, in/visibilized histories, imagined mythologies, and acts of resistance materially inscribed across the landscape.

Presenter(s): Ramon Resendiz

Exorcising Data: Legal Pluralism in Bangladesh

Drawing on the concept of legal pluralism, which promotes studying law outside of state-centric and Eurocentric frameworks, my paper provides insight on how Muslim women's experiences and frameworks of justice are erased when emerging technologies are designed to treat law as singular and universal. I demonstrate my argument through two years of ethnographic fieldwork in Bangladesh, analyzing what kinds of cases get recorded in databases and who makes these decisions, countering the idea that databases are exhaustive and inclusive. Outside of state law, community-led customary courts called shalish that draw from Islamic legal philosophy are prevalent. I explore how rural women's testimonies and Islamic legal frameworks are mistranslated and miscategorized as cases move from shalish to state courts, and then from state courts to digital legal databases. Analyzing databases centering on the ghostly figures – those who are barred from fully living in the "real" world – provides a lens to see the continuing epistemic violence on groups who have been historically marginalized. Digital databases influence how knowledge and worldviews are mediated online, leading to ideological and material consequences that can deepen Muslim women's marginality in unexpected and perhaps unintended ways. As such, it is important to locate the ephemeral apparitions that appear through resistance despite the rigorous attempts to "exorcise" and "cleanse" them.

Presenter(s): Salwa Hoque

Ghosts of Empire: Imperial Hauntings in the Iranian Diaspora

In 20th-century Iran, the Pahlavi monarchy sought to "exorcise" the backwardness of a country seen through Western eyes, to create a nation simultaneously ancient, having existed unchanged for over 2500 years, and modern, exorcised of "backwards" Islamic traditions and superstitions. Such a nation-building project was also an exercise in cultural and racial purity as the state

presented Iran as a culturally Persian, racially Aryan nation, excised of Arab, Mongolian, and Turkic influences.

Despite the fall of the monarchy in 1979, the Iranian diaspora remains haunted by an imperial nostalgia (Malek 2023, forthcoming), yearning for the aesthetics of empire. This paper examines how the convergence of imperial nostalgia and Persian-centric nationalism circulates within the material culture of the Iranian diaspora, focusing on online consumption. As spirits haunt things, I examine the differing notions of an Iranian nation that possess these objects, the ghosts of an imagined and constructed Persian empire. Imperial ghost sightings abound: in high-fashion luxury purses, in independently-designed jewelry, and in decorative plates glazed with Pahlavi faces. I argue that digital markets aid in the generation of these phantoms while appropriating and erasing the long history and presence of other racial, ethnic, cultural, and religious groups in Iran and in the diaspora. Market ideologies infect diasporic politics, turning potential solidarities into fantastical apparitions.

2888 Environmental Justice and the Varieties of Activist Ethics: A Roundtable on Uncommon Cause

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** MGB Salon D

Type: Roundtable/Town Hall

This roundtable explores the questions opened up by John Mathias's new book, *Uncommon Cause*. Tracing the stories of environmental justice activists in Kerala, India, Mathias argues that environmentalism, even as it looks beyond merely human concerns, is still fundamentally about how we relate to other people. In alternating chapters, the book presents two broad approaches to environmental justice activism, each offering distinct possibilities for an activist ethics. One set of activists repudiates community ties and resists normative pressures; for them, environmental justice becomes a way of transcending all local identities and affiliations, even humanity itself. Other activists seek to ground their activism in community belonging, to fight for their own people. Each approach produces its own dilemmas. For those who would attempt to extend moral concern beyond all community boundaries: how is it possible to sustain ties with others, even other activists? For those who would align their causes with their community identities: how is it possible to reach beyond the bounds of those communities and draw others into the movement? Mathias shows how activists confront these dilemmas in diverse ways, offering insights into ethical tensions that may be more generally human, tensions between taking a stand and standing with others. In a classic author-meets-critics format, this roundtable brings together anthropologists with deep knowledge of the domains explored by the book, including the specificity of activism as a form of life, the place of embodied experience and technoscience in the politics of environmental justice,

the figures of "the people" and "the public" in South Asia, and the everyday ethics of environmentalisms.

5394 Epidemic Endings and Afterlives

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** MGB - Salon B

Type: Oral Presentation Session

Epidemics and pandemics are dynamic social, political, and biological processes with layered temporalities and unequal impacts. Viewed as emergencies requiring urgent responses from individuals, scientists, governments, and global health agencies, epidemics are often narrativized as exceptional moments that demand resolution for normalcy to return. From this viewpoint, life is divided between crisis and aftermath. But the boundaries between the two are often blurry in practice. Medical anthropologists have tracked the extended implications of epidemics, offering a holistic perspective on how they arise and endure in social, political, legal, and medical worlds (Fassin 2007; Lynteris 2014). We know that epidemics are produced and shaped by social, political, economic, technological, and environmental factors operating in conjunction and over the long term (Kelly, Keck & Lynteris 2019). While anthropologists have attended to epidemic risk and preparedness (Lakoff 2017), and while the Covid-19 pandemic has inspired much scholarship on life during the pandemic, much less anthropological attention has been paid to epidemic endings and aftermaths.

This session asks: How do past epidemics haunt the present? How "past" are they, and for whom? This session builds on important work in anthropology, history, and disability studies to examine how epidemics endure beyond the confines of their officially declared beginnings and endings. We turn an ethnographic lens to what, and who, endures after others have moved on. How do patients, families, caregivers, practitioners, scientists, bureaucrats, and others navigate life in the aftermath of epidemics? How and why do people contest the endings of epidemics, and what kinds of biological communities does such contestation produce? What socialities and temporalities dissipate, emerge, or intensify in the wake of officially declared epidemic endings?

Each of the papers addresses these questions through ethnographic attention to various epidemics, places, and temporal frames. By situating epidemic endings and aftermaths in particular historical and ethnographic context, this session advances conversations about what it means to live on in the wake of epidemics.

Presentation(s): How to Repair a Pandemic: Victimhood and Covid Temporalities in Brazil

In the face of government neglect, Brazil experienced a Covid-19 mortality rate exceeding 700,000, the world's second highest. Covid-19 victims—those who lost loved ones to the virus and those who survived with long-term effects—are now seeking justice and reparation. Their activism unfolds in the context of a pandemic that persists in the everyday—through grief, orphanhood, and lingering symptoms. The Covid-19 international health emergency, a globally regulated event, officially lasted 39 months and 3 days, from January 2020 to May 2023. However, for the bereaved, the orphaned, and the ill, it has not yet ended. This paper builds on ethnographic research conducted with Covid-19 victims to understand how they defy narratives of pandemic ending while seeking to repair ongoing state violence. Avoiding event-based approaches, I look for how Covid endures in new and intertwined temporalities. In this context, I inquire about how they make a case for pandemic reparations, how Covid temporalities shape their activism, and how their practices respond to experiences of autocratic rule. Ultimately, this paper is concerned with how authoritarian forms of governance have stretched pandemic temporalities, giving rise to biomedical and sociopolitical continuities in which the affected fight back. Covid-19 victims refuse to let it go because the violence they endured is still present. And they mobilize for justice because they need to forge new horizons of existence.

Disabled Futures and the Possibilities of Repair after Zika

The 2015-16 Zika virus epidemic was brief, but Zika continues to deeply shape the lives of those directly affected – children with Zika-induced disabilities and their families. Zika became a public health emergency when scientists discovered its link to fetal neurological malformations, now known as congenital Zika syndrome (CZS). After the number of CZS cases plummeted, Zika largely

fell off the global health radar. But over 1,800 Brazilian children are living with multiple disabilities from Zika, most of them in Brazil's Northeast region. Situated within a larger ethnographic research project on families in Bahia, Brazil living the embodied aftermath of Zika, this paper dwells on parents' struggles for repair – both mundane practices of attending to the precarious bodies of their disabled children and seeking reparative justice for Zika's damage. Drawing on observations and interviews with mothers on their grassroots advocacy work and mutual aid practices especially over the last few years, I track how Bahian mothers have pragmatically leveraged charity and local politics to meet their families' needs, and how they have come to understand themselves as part of a national community of "victims of Zika." I argue that mothers' activism to repair their worlds after Zika crystallizes key tensions in the contemporary disability justice movement in Brazil and casts into relief contradictions in Brazil's post-authoritarian promises of social justice inclusion and inclusion.

Presenter(s): K. Eliza Williamson

Long COVID Afterlives

While public health metrics and biomedical narratives announce the end of pandemics through declining infection and mortality rates, the lived experiences of affected individuals tell other (hi)stories. Drawing on ethnographic research with people living with long COVID in Brazil, this paper argues that the pandemic did not end with epidemiological trends — it persists as an unfinished critical event, woven into the fabric of ordinary life, transforming bodies, identities, and biographies. Far from being a transient post-viral condition that trends toward recovery, long COVID emerges as a chronic and often disabling state, marked by medical uncertainty, epistemic injustice, and social invisibility. Symptoms such as fatigue, cognitive dysfunction, and emotional instability are frequently dismissed by healthcare providers, reinforcing longstanding gendered and racialized inequalities in medicine. For many — especially women and marginalized groups — what is experienced is not recovery, but the emergence of a new person whose life becomes co-produced by illness. These are not merely remnants of a past epidemic: they are embodied survivals of a pandemic that, for many, never ended. By framing long COVID not as a postscript, but as a biographical rupture, the narratives grounding this work contribute to anthropological debates on epidemic temporalities, chronicity, and the politics of recognition and care.

Presenter(s): Jean Segata

“What will be Different if we Decolonize it?” Equitizing Expertise and Pandemic Afterlives at Africa’s Premier Population and Health Research Center

In the wake of COVID-19, Global Health has undergone a reckoning. Grappling with the stark disparities in mortality and vaccine distribution the pandemic exposed, health experts across the world question how to reach their goal of a better world. Coalescing around "decolonization," these critiques have turned into a massive wave of scholarship, conferences, and initiatives promising to revolutionize global health infrastructures by equitizing relations between these technocrats. This paper addresses the implications of the movement to reinvent Global Health by attending to one of

its main sites: The African Population and Health Research Center (APHRC) in Nairobi, Kenya. The largest African-run, African-led health think tank, the decolonization movement has afforded APHRC and its staff with unprecedented status, resources, and opportunities. Examining projects that seek to localize public health programming and reconfigure relations with Northern colleagues, I show how this movement has reinvigorated longstanding contradictions and anxieties among APHRC staff. I argue that moments after pandemics are key "problem spaces" (Scott 2004) where health experts wrestle with the limits of biopolitical management and opportunity for change expands. My research reveals that the afterlife of COVID-19 has resulted in a complex mix of reproduction and reprogramming—one where the scale of globality and its assumptions of interconnectivity are thrown into question.

Presenter(s): Daniel Krugman

Protective Exposure and the "Afterlife" of AIDS in Lesotho

In Lesotho's eastern Maluti Mountains, pregnancy and infancy are moments in the life course particularly susceptible to environmental, infectious, gendered, and spiritual threats. Bo-Mme mothers in the remote village of Motete engage in a range of health practices, including "protective exposure" to known harmful substances, designed to protect the young before fatal encounters occur in the community. New mothers dab infants with gasoline; feed newborns polluted substances; and strategically engage with impure persons – relating these moments to the injections and pills the baby receives at the clinic. This paper examines "exposure" as a historically evolving category of thought and material bodily practice. I draw on more than two years of ethnographic fieldwork over the past decade to describe the ways that Lesotho's situated history of HIV intervention in the early 2000's resulted in overdetermined notions of perinatal risk, and its corollary, maternal care. Two decades later, moments of "protective exposure" have become a site where this epidemiological legacy continues to manifest and unfold within the everyday lives of Basotho mothers. In doing so this work poses an implicit critique to global health narratives celebrating the approach of "epidemic control" in Lesotho. Instead, I demonstrate the ways that lived experiences of infectivity, exposure, and immunization continue to persist in the everyday lives of Basotho mothers.

Discussion

8091 Ethnographic Hauntings: Engaging Improvisation and Historicity Towards Reimagining Methods in Educational Anthropology

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Napoleon BR C3 (3rd fl)

Type: Oral Presentation Session

Building on the ways educational anthropology has been shifting to confront the global nature of racial injustice as directly tied to racial capitalism and colonialism (e.g. Abu-El Haj, 2015; Bartlett & Brayboy, 2005; Villenas 2009), this session grapples with the spectral presence (Gordon, 1997) of colonial, racialized, and disciplinary practices that continue to shape methodological approaches to educational anthropology. Drawing from the meeting theme "Ghosts," we reflect on how taken-for-granted methodological traditions in anthropological research, whose histories are inextricably shaped by US/European colonialism, continue to haunt research practices. Similarly, ongoing practices of genocide and dispossession are both haunted by the past and create conditions for hauntings of peoples experiences.

We recognize the need to simultaneously engage in critique and world building; this symposium addresses two core questions: (1) What is required to imagine educational spaces free of racial injustice? (2) How can we center methodologies, humanizing pedagogies, and liberatory theorizing that change the conditions for everyday people? We center improvisation as both an analytic and methodological orientation.

Contributors to this session draw from field-based education research situated in community-based learning, afterschool programs, classroom context, and performance spaces. Presenters take up the possibilities of improvisation as a generative practice that can move educational relationships and encounters toward joy, justice and transformation. Improvisation is treated not as mere spontaneity but as a deeply relational and historically aware practice that navigates structural constraints while holding pace for emergent possibilities. We address some structural and epistemic tensions within educational anthropology, and consider how improvisational methodologies may interrupt inherited disciplinary practices. Marin and Lindberg disrupt Cartesian ways of knowing in interaction analysis that privilege talk as a primordial locus of analysis. Harb examines how improvised dialogues in community radio can unsettle raciolinguistic hierarchies. Gzehoviak, Harris, and García-Sánchez center immigrant youth as rightful analysts of their own experiences and elevate their improvisational stories as legitimate representations of their own communities. Finally, Ali confronts the silences and absences in ethnographic archives to illuminate how racialized surveillance shapes knowledge, offering an improvisational methodology that treats absence as both evidence and method.

Framed by session co-chairs and concluding with a discussant-facilitated dialogue, this symposium invites educational anthropologists to reimagine the political, historical, and affective dimensions of methodology. In doing so, we seek to confront the haunting of our inherited methods while envisioning methodologies grounded in liberation, solidarity, and ethical attunement.

Presenter(s): Anthony Harb, University of California, San Diego, Jackson Gzehoviak, Arshad Ali, George Washington University

Discussant: Inmaculada García Sánchez, University of California, Los Angeles, Arshad Ali, George

Presentation(s): “I’m just talking, and you should too!”: Restructuring Raciolinguistic Hierarchies through Methodological and Pedagogical Improvisation

This paper explores how methodological and pedagogical improvisation shaped my ethnographic engagement with a community-engaged Spanish-language conversation course at a predominantly white liberal arts college in the New Latino Diaspora (Hamman, Wortham & Murillo 2015). Taught in collaboration with a local Spanish-language community radio program, the course brought students and community members together to record a weekly radio segment about socio-political issues that affect the Latinx immigrant community. Drawing from student interviews, archival radio data, and field notes gathered across three iterations of the course during 2020-21, my analysis centers around how the Latinx students reproduced and resisted raciolinguistic ideologies (Rosa and Flores 2017) in their valuation of their own and others' language practices. I argue that engaging in improvised dialogue with local community members and activists in Spanish/Spanglish ultimately disrupted the deficit framing of their sociolinguistic position. Centering the experiences of emergent Latinx bilinguals (García 2009), this paper builds on scholarship that is reimagining educational research and practice through social justice-oriented (Cammarota & Romero 2009), culturally sustaining (Paris & Alim 2014), and translanguaging pedagogies (García & Sánchez 2021) orientations to help shift our gaze away from structures of white supremacy and coloniality and towards sociolinguistic justice in the language classroom.

Presenter(s): Anthony Harb

Disrupting Adult-Centeredness: Immigrant Youths' Improvisational Storytelling for Transforming Community Representations in Educational Anthropology

Educational anthropology has a long history of privileging adult perspectives – such as those of researchers and community members – in research representations of minoritized communities. Drawing on community-based work conducted among Oaxacan immigrants in Southern California, this paper examines a series of improvisational stories composed by children in collaborative groups in an afterschool program. Anchoring our work in Childhood Studies (Bluebond-Langner & Korbin, 2007; James & Prout 1997), which centers youth as rightful analysts of their social worlds, we examine how children took turns adding to the story until they all agreed on an ending. Within this pedagogical framework, improvisation was deployed to encourage children to (re-)imagine representations of their communities, accommodating both critiques of inequalities in their daily lives and also their constructions of a more just society. We center improvisation as an analytic and methodological orientation that engages children's agency in representing their worlds through their own eyes, while rehearsing ways of envisioning social transformation. Inspired by Enciso's (2017) call to "engage with the ongoing politics of imagination in everyday life across silenced histories and uncertain futures" (p. 29), this paper has implications for how improvisational approaches to ethnography can create research and pedagogical spaces in which immigrant youth can engage in both just critique and joyful world-building

Co-author(s): Inmaculada García Sánchez, Amanda Harris

The Unwritten and Unseen: Haunting, Surveillance, and the Coloniality of the Ethnographic Archive

This paper engages the spectral dimensions of ethnographic research in educational anthropology, exploring how archival absences, silences, and truncated speech in fieldwork with Muslim youth are sites of epistemic tension and suppressed possibility. Drawing on Gordon's (1997) theory of haunting, Hartman's (2008) critical fabulation, and Morrison's (1987) concept of rememory, I develop an Epistemic Analytic of Absence (EAA) to examine how surveillance, racialization, and liberal modernity shape what is sayable, and knowable in ethnographic archives. Through a close analysis of a transcript with a politically active Muslim student, I show how hesitations, silences, and refusals mark moments of resistance that challenge dominant frameworks of legibility and complicity.

The paper asks how educational ethnography—often shaped by logics of documentation, legibility, and institutional containment—might be unsettled through methodological orientations attuned to absence, rupture, and speculative possibility. These absences are structured by racialized governance. This project offers a decolonial analytic that treats the unsaid as both evidence and method, inviting researchers to attune to the hauntings that emerge in the field and in the archive. It reimagines ethnographic improvisation as a historically grounded and relational practice—one that listens to silences, resists closure, and creates space for alternative ways of knowing and being in educational contexts.

8361 Frontiers of Belonging

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Rhythms II (2nd fl)

Type: Oral Presentation Session

What happens to belonging when there is no formal and representative institution, like the state, to make claims to? What alternative forms of association take shape in its stead, specifically extending to land and property? And how are these negotiations over land depoliticized and smoothed through the law, capitalist extraction, and bureaucratic management? This panel examines land, borderlands, and frontiers in global colonial, settler colonial, and imperial contexts. By attending to specific processes in the Korean DMZ, Palestinian Jerusalem, Kurdish-Iraqi borderlands, Egypt's land dispossession, and México's southern border, panelists seek to understand what is lost, buried, and extracted in the aftermath of colonial construction and destruction. In doing so, we hope to generate a discussion that illuminates how forms of belonging emerge amidst the creation and fragmentation of territorial sovereignty.

Chair: Thayer Hastings, American University, School of International Service

Presenter(s): T. Yejoo Kim, University of California, Los Angeles, Kerem Ussakli, Brandeis University, Reeham Mourad, Thayer Hastings, American University, School of International Service

Discussant: Thayer Hastings, American University, School of International Service

Presentation(s): Frontier Futures in the Korean DMZ

This paper will examine how capitalist development in the name of "peace" smoothens over the realities of US settler military occupation and South Korean sub-imperial collaboration in the case of the Korean DMZ. Building upon years of fieldwork, the paper will focus on the region of Paju that is within and right outside the DMZ boundaries. From the frontier villages that were modeled after Israeli kibbutzim to the "new cities" being developed today, Paju has been host to various village and urban development projects that purport a specific kind of neoliberal security war front by the US and South Korean military. Specifically, the paper looks at how various local to state-led "peace" projects seek to rebrand and build over an unresolved imperial present as the US expands its military presence in the emerging cold war with China. From the former cold war era (the US and Soviet Union) to the current one, the paper will examine the historical connections between the US's military and economic investments into creating war fronts doubling as peaceful "frontiers" from Palestine to Korea.

Presenter(s): T. Yejoo Kim

The Spiritual Pleasure of Serving the People': Producing Popular Belonging Along the Kurdish-Iraqi Borderlands

In this paper, I examine the role of strategic partnerships and networks between tribal men, oil & gas companies and villagers in the making of Garmiyan Region. Originally a part of Kirkuk, this region was gerrymandered into the Sulaymaniyah Governorate in 1975 as part of the Ba'ath Government's Arabization campaigns. Most of its population are dispossessed survivors of the Anfal Genocide who maintain that their tribal identity is a part of the multi-ethnic life in Kirkuk. Since the US invasion of 2003, private guesthouses reemerged from the lands of the Kurdish-Iraqi border. Traditionally serving as the agha's court, these guesthouses were thought to be in decline since the 1960s. Their resurgence as gated, lavish retreats with lush gardens is symbolic of the shifting social power of tribal notables in the region, from public authority to gated wealth. The men who own these guesthouses receive contracts for the everyday management of oil & gas companies in the region, while mediating between companies and villagers who are pushed out of their lands. Based on two years of fieldwork, I discuss how what these men call 'the spiritual pleasure of serving the people' generates privatized claims to sovereign belonging along the Kurdish-Iraqi borderlands. While recent anthropological literature has focused on how Kurds evade or are constricted by nation-states' borders to facilitate cross-mobility, I provide an instance where Kurds assert borders.

The Afterlives of Dispossession: A family's labor in Postcolonial Egypt

"Land is the only refuge," my mother once said. This sentiment is often brought up by the women in my family alongside economic hardships. Central to my research is my grandfather, a tea trader whose parcel of land, a mango field he cultivated, was dispossessed by the state in El-Saf City in Upper Egypt in 1972 under the Expropriation for Public Good law. The law granted the state sole authority to transform private property into a "public good" without fair compensation. The ambiguous definition of "public good" creates opportunities for private interests to take precedence. Following Luxemburg's and Harvey's conceptualization of accumulation by dispossession, I argue that the law, backed with state force, has become a major site for: 1) capital accumulation, 2) devaluation of personal property, and 3) alienation and transformation of political subjectivities. In this paper, I trace how properties were situated, spanning different imperial and colonial modalities of legal pluralism. I then problematize land dispossession. I ask: how does the public good become 'dispossession by law', with the manifestation of dispossession across different scales and temporalities? How do colonial and national legal structures enable the commodification of land and expand capitalist relations in post-colonial 'socialist' Egypt? And above all, what does it mean to be dispossessed? What labor of survival do the dispossessed undertake?

Landlords, Refuge and Unsettled Value in a Palestinian Borderland

Jerusalem borderland neighborhoods have become forms of refuge for noncitizen Palestinians. These territories are valued because of their frontier position on the edges of the Israeli-demarcated municipal lines and the physical separation wall. One form of bordering is reinforced by law and the other by concrete, although both are settler colonial techniques for managing surplus populations. This paper addresses the borderland neighborhood of Bir Ona on the West Bank side of the separation wall as a refuge for people whose identity cards under Israeli rule prevent them from living together in almost any other territory. Since 2003, the institution that governs the unification of personal status for married Palestinian couples separated by different legal statuses under Israeli law has been frozen. Within this extended deferral, Palestinians who could otherwise not live together do so, achieving so-called normal life, in and because of these borderland neighborhoods. Property valuation follows. By attending to the ambitions and concerns of a small-time landlord operating within this minute borderland, this paper seeks to understand how partial belonging translates into multivalent forms of value including property, the family, and and claims of founding a neighborhood.

3406 Ghostly Presences, Living Pasts: Spectral Politics of Memory and Resistance in Contemporary Asia and the Pacific

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** MGB Salon F/G

Type: Oral Presentation Session

This panel explores how colonial and political ghosts materialize in contemporary landscapes, bodies and practices across Asia and the Pacific, shaping both physical spaces and collective consciousness. Drawing on rich ethnographic research from China, Malaysia, Indonesia and Tibet, these papers from scholars at Duke University, The Chinese University of Hong Kong, University College London, Xiamen University, Columbia University, Leiden University examine how spectral traces of historical violence, displacement and trauma continue to haunt present-day communities, while simultaneously serving as catalysts for resistance, preservation and cultural reclamation.

Our panel analyzes various manifestations of these hauntings: from the transformation of female bodies and historical memories in socialist China through contemporary art (Lyu, Duke), to the complex preservation decisions surrounding colonial architecture in Lushun's heritage landscape (Xiao, CUHK). We see how war trauma endures through an elderly man's paradoxical preservation of bombing damage in his traditional courtyard house (Li, UCL), and how colonial dispossession continues to marginalize Malaysia's Mah Meri indigenous community through modern development projects (Yang, Xiamen). The panel also explores how communities actively engage with these hauntings- whether through arts festivals in Lhasa that reclaim cultural practices as civic participation (Lyu, Columbia), or through the fluid yet persistent "walls" of residential segregation in Jakarta that both divide and connect communities (Qiu, Leiden). Our discussants (Wang, Oxford; Gong, LSE) will draw connections between these diverse sites of spectral politics, while our chair Professor Andrew Kipnis, a specialist in the anthropology of China and ghost stories, will guide the conversation.

Together, these papers demonstrate how ghostly presences operate as powerful forces in contemporary life- shaping preservation decisions, influencing identity formation, and providing frameworks for resistance against ongoing marginalization. By examining how communities navigate, interpret, and sometimes harness these hauntings, the panel contributes to broader anthropological discussions about colonial legacies, collective memory, and the role of the spectral in contemporary social life. This investigation is particularly relevant to the conference theme, as it reveals how ghosts serve not only as metaphors for unresolved historical trauma but also as active agents in the production of space, memory and resistance in the present.

Presentation(s): Resurfaced Breasts and Images: Lichee Girl, Historical Memories in Socialist China, and Mao Chenyu's Contemporary Art Practice

Lichee Girl is a ghost. She lingers as a ghostly figure in the legends of Eastern Dongting Lake, Hunan, China, echoing through the fabricated lyrics of fishermen's songs. Lichee Girl was a real historical woman who lived a legendary yet tragic life and ultimately chose to suicide during the Cultural Revolution. Lichee Girl is both an exhibition and a series of artworks by Mao Chenyu. Resorting to the story of her as a medium and the geology and historical memory of Eastern Dongting Lake as its texture, it weaved a visual sequence that reopens inquiries and was exhibited at the Asia Contemporary Art Space in 2018. Lichee Girl is also a symbol—it represents the female body, specifically the shifting significance of breasts across different historical periods: wartime, the early socialist construction of China, the Cultural Revolution, and the contemporary art context. This article, based on oral histories along the shores of Eastern Dongting Lake, ethnographic research, Mao Chenyu's artistic practice, and interviews with him, explores the symbolic transformation of the female body within the ghostly image and body of Lichee Girl. It examines the reinterpretation of historical memory in the People's Republic of China, the crimes driven by collective socialist mania and fanaticism, and the rebirth and power of images and symbols under geological shifts and image reproduction.

Presenter(s): Dongkun Lyu

Heritage as Haunting: Spectral Preservation in China's Post-Colonial Memorial Landscape

This paper examines how colonial ghosts haunt both the heritage landscape and collective consciousness of Lushun, a town in Dalian City, Liaoning Province. Through the lens of hauntology, it explores how these specters manifest in heritage practices and preservation decisions, creating sites where past, present, and potential futures converge. Once a showcase of colonial modernity under Russian and Japanese rule, Lushun's heritage sites now embody a complex temporal disjunction where multiple historical moments coexist through practices of preservation, demolition, and reinterpretation. Drawing on ethnographic fieldwork at heritage sites like the Lushun Japan and Russia Prison Museum, Russo-Japanese War memorials and Lushun Soviet Union Tomb, this study investigates how colonial hauntings shape both material heritage and psychological frameworks. These ghosts operate as what Derrida terms 'the persistence of a present past' – influencing how heritage is preserved and displayed, and how residents interpret these sites and negotiate their identities through them. The paper argues that Lushun's heritage landscape represents a form of 'spectral preservation' where colonial ghosts actively shape decisions about what to preserve, demolish, and interpret, creating a heritage palimpsest where colonial trauma, pride, nostalgia, and ambivalence coexist in perpetual tension.

Presenter(s): Yiyang Xiao

Non-Monumental Trauma: Architectural Palimpsest as a Resistant Identity Production in Post-Conflict Interpretation Practices

This research examines an individual's interpretation practices at his privately owned courtyard house, a former WWII Japanese bombing site in Central China, revealing how wartime trauma continues to haunt the present. Focusing on a man in his seventies as the dwelling's guardian and household, the study investigates his dual approach: meticulously restoring traditional architectural fragments while deliberately preserving war-induced damage. This paradoxical spatial practice transforms the house as a palimpsest where colonial violence and family memory intersect. The study argues that the elder's daily repairs function as embodied performances of memory, anchoring personal identity within narratives of resistance. The preserved war traces serve as spectral evidence, reactivating histories and contesting collective forgetfulness. As the dwelling becomes a living archive, its material decay intertwines with the elder's physical aging, demonstrating how wartime trauma endures through architectural palimpsest. By understanding the interplay between the preservation of bombing traces, daily restorations, and the haunted construction of personal identity, this research highlights the critical role of personal memory practices in post-conflict cultural continuity. By analyzing the architectural-body dialogue, the study explains how unofficial memories persist through the ongoing interaction between the decaying structure and its human guardian—until both ultimately fade away.

Presenter(s): hanchun li

Ghosts of Colonialism: The Ongoing Marginalization of the Mah Meri Indigenous Community in Modern Malaysia

The Mah Meri Indigenous community of Carey Island, Malaysia, faces ongoing marginalization rooted in colonial legacies and exacerbated by modern development. During British rule, their ancestral lands were seized for palm oil plantations, disrupting their subsistence and spiritual ties to the land. Today, this historical violence is reanimated through state-backed tourism and industrial projects, such as luxury resorts and port expansions, which mirror colonial patterns of resource extraction. Ancestors' Day (Hari Moyang), their annual ritual to pray for the ancestral blessings, now unfolds under the gaze of tourists and photographers, transforming sacred acts into commodified spectacles. While tourism provides the Mah Meri with a source of income, it also reduces their cultural heritage to a marketable commodity, subject to the global neoliberal market. As the news of a new port's construction spreads, they may be displaced and face the globalized anxieties of modern development. This article explores how the spectral residues of colonialism continue to haunt contemporary socio-economic structures, perpetuating the systemic marginalization of the Mah Meri, Malaysia. Framing the past as an active, unresolved force, it argues that colonial-era land dispossession and cultural erasure reverberate through modern neoliberal policies, entrenching cycles of exploitation.

From Sweet Tea to Dancing in the Old Communities: Defeating the Ghost of Civic Marginalization through Local Arts Festival in Lhasa

Facing the ghost of marginalization, stigmatization, and assimilation of indigenous culture and knowledge systems, this paper critically examines the dynamic cultural practices and the civic impacts of the Chakhang Youth Arts Festival in contemporary Lhasa. Framed by the theories of Cultural Citizenship (Ong, 1996) and Critical Pedagogy (Freire, 1970/1993; hooks, 1994), this case study explores how the long-marginalized Lhasa communities reclaim cultural practices as alternative civic participation beyond the mainstream political civic narratives. Based on the interviews with the festival organizing team and analysis of festival documents, the findings reveal that the festival tries to create a safe public space for local communities' cultural-civic engagement by rooting art events deep into the communities, perpetuating traditional and modern senses of place, co-creating with local people, and mobilizing cultural entities. This is further aided by the examination of social media content posted by the public regarding the festival. As one of the first to examine art festivals' role in the Lhasa civic scene, this study will hopefully shed light on the understanding of the arts as unhaunted civic common grounds for the caring and mobilization of culturally marginalized communities.

Presenter(s): Siyao Lyu

Fluid Walls, Enduring Ghosts: The Colonial Afterlives of Residential Segregation in Coastal Jakarta

The specters of colonialism linger in post-colonial cities through enduring residential segregation, materializing as "walls" that segregate dwellers and haunt urban landscapes. Jakarta, a city still experiencing ethnic and racial segregation, exemplifies this phenomenon. Colonial-era planning arrangements—which spatially segregated Indigenous Indonesians and ethnic Chinese communities—continue to reverberate in contemporary mistrust, fear, and discrimination. Drawing on 2023-2024 ethnographic fieldwork in Jakarta, this article examines two adjacent settlements: a working-class fishing port settlement and a middle-upper-class gated community. The two communities are not merely divided by physical walls but are partitioned by fluid yet invisible walls—economic precarity, political marginalization, and cultural boundaries. Boundaries and divisions sustained by post-colonial neoliberal policies and bottom-up everyday practices replicate exclusion, ensuring a complicated sense of "security." This article reframes walls as dynamic, multifaceted constructs across time and reconsiders segregation as an ongoing process of haunting.

4964 Ghostly legacies of Power: Colonial Hauntology in Policymaking.

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Galerie 1

Type: Oral Presentation Session

Public policies are not fixed directives but dynamic and unpredictable formations shaped by historical legacies, institutional inertia, and complex human and nonhuman entanglements (Lea, 2020). Their unpredictability reveals the contested nature of governance, particularly in the fields of intercultural, environmental, linguistic, and public health policy, where bureaucratic routines, colonial imprints, and emotional or ideological investments often collide (Navaro-Yashin, 2012). This panel engages with policy hauntology as a shared theoretical lens to examine how contemporary policies targeting ethno-racial communities, marine and environmental management, child welfare, and language continue to be haunted by colonial and neocolonial legacies.

Building on Tess Lea's concept of policy hauntology, we explore how policies that ostensibly aim to support historically marginalized populations frequently reproduce the very inequalities they seek to redress. Intercultural health policies may promote the inclusion of Indigenous worldviews while re-inscribing colonial logics through institutional structures (Stevenson, 2014). Environmental and climate adaptation frameworks often depoliticize vulnerability, masking the racialized and class-based dimensions of risk (Hamstead, 2023), while global health initiatives may erase alternative epistemologies even as they frame their interventions as benevolent (Kenworthy et al., 2018). Likewise, child welfare and post-adoption policies often portray the state as a reparative actor while concealing structural harm and sidelining adoptee-led perspectives, thereby reproducing colonial dynamics of care and control.

These dynamics also extend into the realm of language and naming. Language policies may standardize or suppress Indigenous linguistic diversity under the guise of accessibility and administrative coherence, erasing local epistemologies. In marine conservation contexts, more-than-human actors-such as spirits, animals, winds, and ancestors-continue to resist and reconfigure dominant governance structures, revealing the ontological frictions embedded in contemporary policy landscapes.

In this session, we will present analyses that critically engage with policy hauntology across domains such as intercultural governance, environmental regulation, public health, language and naming practices, and child welfare. The papers address the ethical and political tensions of working within institutions that both sustain and challenge colonial formations and reflect on how scholars and practitioners navigate the ambivalent space between institutional critique and collaboration. We also highlight the perspectives of public officials and community actors who, while committed to justice, operate within haunted bureaucratic frameworks that blur the boundaries between care and control, recognition and erasure.

Presentation(s): Haunted by Words: The Legacy of Colonial Place Naming Policy on Education and Access in Greenland

In 1933, the newly established Place Name Commission for Greenland began to formalize maps of the island's east coast. While standardized maps of the west, earliest colonial settlements, had been in use for over a century, those for the more isolated East Coast remained piecemeal. Yet, with international recognition of Danish authority over all of Greenland in the early 20th century, efforts to extend the state's reach to the entirety of the island hastened, including mapping initiatives. As the Place Name Commission set to work, a central point of contention concerned whether Tunumiisut (East Greenlandic) place names should be used on official maps of the region or if they should instead be derived from Kalaallisut (West Greenlandic), already in use on most maps of the island. At the core of these debates was whether Tunumiisut should be considered a separate Inuit language or a dialect, a point of tension that continues to reverberate through Greenland's educational and administrative policy, under authority of the island's Self-Government. This paper focuses on colonial debates surrounding the status of Tunumiisut and how they continue to haunt language policy and equitable access for Tunumiisut speakers. Particular attention is directed toward complications related to Indigenous language policy and education, as well as intricacies of working within governmental institutions while addressing broader patterns of discrimination linked to, but not limited to, language use.

Governing Through Care: Colonial Hauntings in Norwegian Post-Adoption Care Policies

This paper situates Norway's post-adoption policies within the framework of policy hauntology, revealing how transnational adoption policy is shaped by colonial genealogies of child welfare governance. In response to evidence of illegal adoptions, the Norwegian government has created a policy limbo—neither banning transnational adoption de jure but restricting it de facto. Alongside this ambiguity, the state has introduced post-adoption and intercultural services for transnational adoptees, framed as benevolent care policies.

I argue that these services reflect an ambivalent state strategy that acknowledges past harms while reproducing new forms of institutional violence. These policies: (1) reposition the state and adoption agencies as caring actors, diverting attention from their complicity in illegal practices; (2) reinforce the authority of adoption agencies while marginalizing adoptee-led initiatives; and (3) leverage adoptee collaborators to appear inclusive while ultimately erasing their contributions.

Drawing on policy analysis and ethnographic research with adoptees and adoption agencies in Norway, this paper argues that post-adoption services are a site where bureaucratic inertia, colonial legacies, and ideological governance intersect. Ultimately, I contend that reimagining post-

adoption policy requires shifting power to adoptee-led organizations and confronting the enduring colonial logics embedded within them.

Presenter(s): Madeline Nicholson

The unmaking of the Marine Protected Area (MPA): ghostly mobilities and encounters in the demobilizing of the MPA

This article is based on 13 years of critical ethnographic and decolonial research and centers the agency and power of ghostly encounters as they regulate the manifold mobilities of the MPA in Northeast Indonesian islands. Ancestors, monsters, spirits, fish, wind, water, and different Bajo engage in daily encounters aimed at sustaining ancestral relations and dynamics in a place shaped by the collision of neocolonial biocentric/anthropocentric policy and ancestral knowledge, relationality, and alliances beyond the human. These encounters often occur around concrete bridges built by local and regional governments to intensify fishing and facilitate access for external actors.

Through critical storytelling, the article engages with grassroots notions of connection, protection, and governance of marine and island areas, tracing how these collide with colonial policing of marine space. By following the daily journeys of Muslim ecofeminists, Mbo Tibe (a water well), the Erok (a well-known wave), and a variety of fish around three bridges on Nain Island (North Sulawesi), this paper reveals mobilities deemed immobile by MPA policy, and how demobilization becomes a form of resistance enacted by more-than-human forces and alliances.

Furthermore, it suggests that Nain Island entities haunt MPA policy not only in the everyday but more importantly at epistemic and ontological levels.

Presenter(s): Elena Burgos Martinez

Ghosts of Redlining: Embodied Heat Inequality and Transit in Allapattah, Miami

This paper explores how extreme heat functions as a ghostly legacy of racialized urban planning in Allapattah, a historically marginalized neighborhood in Miami. Drawing on the concept of policy hauntology (Lea, 2020), I examine how infrastructural neglect—rooted in discriminatory practices like redlining (Hoffman, Shandas, & Pendleton, 2020)—continues to shape environmental vulnerability in spatial and embodied ways. Through the everyday act of waiting for the bus, I trace how heat exposure intersects with mobility, class, and racialized infrastructures of neglect. Transit spaces without shade or shelter become sites where colonial residues of planning are materially and viscerally experienced.

My mixed-methods research includes spatial analysis, participant observation, and interviews with residents who describe coping strategies ranging from shifting routines to saving for a car. Yet heat is often experienced as inescapable—something to endure rather than resist. This led me to conceptualize heat-embodiment: the internalization of heat on marginalized bodies (Hamstead, 2023), shaped by lingering policy ghosts.

This study contributes to anthropological debates on environmental justice by linking the spectral remains of policy to contemporary inequalities in health, mobility, and belonging. It reframes urban heat not as a technical issue but as a social and political one—an echo of racialized dispossession demanding justice-driven climate adaptation.

Presenter(s): Thais Escobar

Haunted Futures: Global Health, Pharmaceutical Promises, and the Unfinished Story of AIDS

The global health narrative of the "End of AIDS" has emerged as a triumphalist policy horizon—one where biomedical interventions, notably antiretroviral therapies (ART) and preventive drugs (PrEP), are framed as the definitive solution to a once-catastrophic epidemic. Promoted by international agencies and national governments, this vision enacts what Tess Lea (2020) calls "policy hauntology": a promise of future salvation haunted by colonial logics of governance. This paper interrogates the "End of AIDS" not as a biomedical endpoint, but as a narrative saturated with affective promises, policy spectacle, and the spectral presence of historical erasures.

Drawing from ethnographic research with people living with HIV in Colombia, I examine how global health discourses mobilize an affective economy of hope and obligation that obscures structural inequalities, epistemic violence, and embodied realities. While ART's benefits are undeniable, reducing AIDS policy to treatment adherence and viral suppression often depoliticizes HIV by abstracting it from social, racial, and economic entanglements.

This paper critiques how global health initiatives reproduce colonial logics under the guise of progress and asks: What does it mean to "end" an epidemic whose legacies persist in marginalized bodies? I propose alternative temporalities grounded in intergenerational memory, embodied histories, and collective world-making.

Presenter(s): Samuel Olah Velez

Haunted Infrastructures of Care: Bureaucratic Emotion in Indigenous Suicide Prevention Policy

This paper explores how officials in Antioquia, Colombia navigate the emotional challenges of implementing Indigenous mental health policies that, while aiming for inclusion, reproduce "phantasmic particles" (Lea, 2020)—colonial residues embedded in institutional systems—and "knots of meaning" (Pandolfo, 2018), discursive structures that confine Indigenous communities to static representations of the past. These bureaucrats also engage in care, healing, and reparation, generating tensions between their expectations and institutional constraints.

Grounded in the anthropology of the state, the affective turn, and medical anthropology, the study conceptualizes bureaucracy as an "affective landscape" (Navaro-Yashin, 2012), where "bureaucratic passions" (Aretxaga, 2003)—empathy, frustration, exhaustion—emerge through "emotional labor" (Hochschild, 1983) that mediates among state logics, Indigenous worldviews, and affects. Despite efforts to incorporate local perspectives through Participatory Action Research (PAR), structural barriers persist. "Inherited political atmospheres" (Lea, 2020) and "anonymous

care" (Stevenson, 2014) undermine policy efficacy, exacerbating what Pandolfo (2018) calls "cultural agony."

This contradiction reveals a dilemma: bureaucracy is both a site of care and oppression, where suffering is normalized. Reimagining it as a space of intercultural translation requires recognizing affect as a force in policy, and healing as political, not merely technical.

Presenter(s): Diana Solano

2816 Ghosts and parasites across relations: towards a material culture of tricks

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Balcony J

Type: Oral Presentation Session

For decades, anthropology has been concerned with those existing at the margin, in the cracks of liminality and latency, and the transformative power these positions can hold. From ghosts to parasites, all the way to jokers and tricksters, various figures and metaphors have been used to tease out such liminal generativity. And while the specificities of these vary a great deal, all seem to position agents in the periphery to the forefront, be these 'agents' persons, matter out of place, mistakes, or noisy incursions.

With such entities and processes existing within and feeding off of zones of obscurity, their spectral (Derrida, 1993) and mad (Serres, 2007[1980]) presences bring forward a latent capacity for worlds to be otherwise, upsetting and subverting linear relations and equilibria.

Along complementary lines, anthropological theorising has also been advocating for a reclamation of marginality and boundary-crossing, with the coyote (Wagner, 2010) and the trickster (Haraway, 1988) figures as emblematic of epistemic subversion, partiality, and contingency (see also: van Meijl, 2015).

In starting from these varied but complementary lines, this panel seeks to think through these conceptualisations to understand how such transformative potential is enacted and brought forward "from the margins" through material engagements. We thus seek to analytically and ethnographically engage with how such conceptual tools emerge in action and in practice, and gain their ontological and epistemic agency through and as tricks.

We understand tricks as the material, technical, perceptual, and conceptual resources that agents draw from (and engage with) in order to operationalise indeterminacy, hijacking relations by operating on the very channels that concretise such relations in the first place. In so doing, tricks bring to the forefront the cracks and fractures of time and space (Fisher, 2014) which ghosts and parasites inhabit, and frame agents and objects alike as mutual tricksters and jokers, allowing for generative disruptions to seep in. We thus foreground questions such as: how are tricks rendered

into engines of change? How are they conceptualised, brought forward and enacted from their spectral interstices? How can we think of them as simultaneously analytical devices, and concrete material practices and engagements (e.g., Coleman, 2015)?

Conversely, and wary of the critiques of such figures, which see them as too ubiquitous and powerful (Kockelman, 2017), we attempt to highlight how tricks exist in an equivocal duality: they unmask through masking, they reframe through deceiving, they generate through concealing. In acknowledging this, we seek to question how people conceptualise and draw from such uneasy potential: what happens when tricks go wrong, and what comes after? What happens when tricks are mobilised to control and regiment? How does one resist and outsmart tricks (perhaps through yet more tricks)?

Organizer: Raffaele Andrea Buono, University College London

Chair: Raffaele Andrea Buono, University College London

Presenter(s): Livnat Konopny Decleve, Hebrew University of Jerusalem, Chloe Dominique, Paddy Edgley, Alice McAlpine-Riddell, University College London, Nada Rosa Schroer, Siyu Tang

Discussant: Raffaele Andrea Buono, University College London

Presentation(s): How to see the future? Feminist Accounts of Clairvoyance and Future-Making

One of the promising potentials of the tricksters is their ability to offer new imageries and visions of the world (Haraway, 1988) and its future. Based on research on alternative political imaginations with Jewish progressive activists, this paper explores the political use of magical consciousness (Greenwood, 2005) by women activists. While peace-building practices are usually connoted with liberal ethos (Weiss, 2022), activists salvage magical traditions, unearthing them from spectral interstices, to elicit a clearer view of the future and intervene in its creation through the engagement with specific artefacts. The paper explores how talismans against the evil eye, are reframed as a tool to generate new relations of the community with others. The flower symbol ornamenting religious objects is tattooed on an activist's body to simultaneously heal it, and to reclaim feminine knowledge and propose alternative political order. Religious chants are retrieved and sung by their descendant, a woman spiritual leader, surcharging them with feminist content to empower women's leadership. Hence, traditions which were embodied and repeated for centuries (Asad, 2015), associated with the non-rational, and thus seen as inadequate to explain and act in the modern socio-political world, are re-created, re-claimed, and re-used by women activists as political tools and tricks to envision the future, and to act upon it in the present on both the personal and collective level.

Presenter(s): Livnat Konopny Decleve

The tricky techniques of sex work

Drawing on five years of ethnographic fieldwork with independent indoor full-service sex workers in London, this paper explores the uneasy, uncanny coupling of sex as work, drawing on tricks as techniques, and magic and alterity. Turning tricks – a euphemistic phrase for exchanging sex for

money and/or resources – has grasped the imaginations of the social sciences and the general public. Sex workers work in the tricky space of monetising desire and sex, and in so doing exist in the spectral locale of what Taussig calls a 'public secret' (1999). Centering body techniques, in the Maussian sense, the paper conceptualises tricks, their shadows and their phantasms. Tricks as techniques can do good, they can do bad, they can be cruel (à la Berlant, 2010). Tricks and their relationship to alterity is also explored, with sex workers drawing upon a body of knowledge of magic and spirituality to both bring them closer to the trick, while out-tricking those played on them. Occupying a trickster-like role - learning to trick and learning to get away with it - requires strategically placed smoke and mirrors to obscure the fullness of the sex workers' subjectivity. It requires a performance of liminality, with the shadow of one's self not too far behind.

Presenter(s): Chloe Dominique

Photon Traps and Cosmic Tricks: Astronomers as Tricksters

There are many tricks that haunt modern, western amateur astronomy. These techniques and hacks are deployed through practices that make the universe visible, diagnose and correct errors, and legitimise the knowledge it produces. These practices render astronomers as liminal figures within the "dual cosmos" of modernity (Abramson & Holbraad, 2014), seeking out and working within the gaps between the human and non-human world, guiding and trapping flows of photons that reach the Earth from the cosmos. By making sense of astronomers as tricksters and trappers of reality, this paper explores scientific and epistemic practices as efforts to trick the universe into legibility. Following Donna Haraway's discussion of the "God Trick" (1988), astronomical practice can also be construed as a trick that would-be-moderns play on themselves, convinced that that the impossible demands of objectivity have been met. Attending to these tricks, and particularly how their nature as tricks emerges when images fail and matter turns in unanticipated ways (Carroll 2018), this paper asserts that astronomical practice should be considered cosmopolitically (Stengers, 2010): as a site where the internal struggle for recognition between the human and other-than-human dimensions of modernity is articulated, and where astronomers reconsider the stature of humans in the world.

Presenter(s): Paddy Edgley

Performing tricks, becoming safe: Tricking safety in New York City

Through an ethnographic exploration of the use of everyday objects (sunglasses, headphones) amongst femme-presenting people in Brooklyn, NYC, this paper explores the material culture of safety and security for gendered bodies in urban spaces. This paper argues that the securitization of such objects function as safety tricks, moving beyond their functional use to subvert the male gaze, operating as surveillant, sensorial security objects. This paper also situates the body as a site of both technology of security and trickster performance, through eye contact and voice; by performing madness, women play on spectral imaginations of feminine hysteria to keep themselves safe whilst moving through the city. Following Donna Haraway, the 'trickster' or 'coyote' is reimagined as a figure for the creation and dissemination of feminist situated knowledges (1988),

reframing narratives of gendered bodies as supposedly insecure and vulnerable. By reclaiming the mythological figure of the trickster as feminist, this paper explores the trans femme experience of harnessing the power of "cyborg" sunglasses, to surveil others unnoticed on the street as a safety trick, transgressive in the context of mass surveillance of trans bodies in the US. Moreover, this paper demonstrates how such situated knowledges create fluid 'safety assemblages', of intersecting actants, positionalities and modalities, as agency flows relationally, reconceptualizing everyday security for gendered bodies.

Presenter(s): Alice McAlpine-Riddell

Water Spectres

Turning to artificial water flows of Rhineland this paper introduces water specters as a 'metaphorical vehicle' (Martínez, 2020) to disrupt spatiotemporal logics of anthropogenically transformed water bodies in (post-)mining landscapes. Infrastructuralization accelerates water's material movement and obscures relationalities and interdependencies (Hoppe 2024). These water ecologies are haunted: they embody 'traces of more-than-human histories, through which ecologies are made and unmade' (Tsing et al., 2017). They foreground tensions between presence and absence (Toso et al., 2020), unearth lost relational structures of past lifeforms (Ingold, 2000), while remaining deeply entangled with aqueous materiality. Curatorial research project Curating with Water Ecologies engages with water specters through collective mapping, listening, voicing rituals, and somatic writing. By slowing the perception of materially interconnected, trans-corporeal flows, the project creates space for trans-temporal imaginaries, disrupting industrial acceleration to reveal water as relational and its temporality as hydrosocial (Strang, 2015). By conjuring water's spectral agency and evoking water as a trickster with its own stubborn materiality, we experiment with situated aquatic epistemologies that affirm its vitality and challenge extractivist futures, without romanticizing pre-industrial pasts or essentializing pre-modern imaginaries (Haraway, 1998; Hoppe, 2021).

Presenter(s): Nada Rosa Schroer

Tricking across ruins and utopia: Spectral rebirth of housing in a Chinese rustbelt city

This paper investigates how, through tricks on indeterminacy, the material artefacts of housing in a peripheral Chinese city metamorphosized ghostly ruins of past anticipations into a financial instrument and a utopian spectre for youths at the economic bottom. I understand tricking as the appropriation, modification, and distortion of the material aspects of housing, the socio-political significance of which was produced catachrestically (Derrida, 1982) – through the abusive inscription of signs – in the context of post-marketization China. Particularly, Hegang saw an unexpected influx of young people purchasing cheap apartments. Because of local government's failure to "trick time" (Ringel, 2016) and salvage the economy, massive housing projects became surplus and were left in an indeterminate state in the late 2010s. However, since 2018, young rural migrants previously labouring in urban hubs started moving to Hegang, as they felt hopeless about prospects of upward mobility, deciding to adopt an indolent life in the rustbelt, now dubbed the

"utopia for homeownership". I consider how housing materialized through the partystate's operationalization of unsustainable constructions to pump fiscal liquidity is yet being "tricked" by rural youths to turn against state sovereignty. As such, housing was reframed into vehicles to renounce hegemonic hopes, disrupting ruling narratives of national ascendance, industrial productivity, and wealth accumulation.

3366 Ghosts of Violence, Spirits of Resistance, and Reimagining Collective Safety

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Napoleon BR B3 (3rd fl)

Type: Roundtable/Town Hall

Ghosts of Violence, Spirits of Resistance, and Reimagining Collective Safety

What lingers in the spaces between law and disorder, security and repression? This roundtable explores how ghosts - of state violence, failed reforms, colonial legacies, and lost futures - haunt policing practices and policed communities around the globe. We attend to the spectral dimensions of policing, not only as traumatic afterlives of violence but also as forces that generate resistant political imaginations, communal care, and alternative visions of safety. Across Brazil, Turkey, Kenya, the US, Jamaica, Venezuela and Thailand, we explore how haunting also opens space for reimaginings of justice, care, and community self-determination. Our panelists engage with themes such as (mis)trust, informal order, militarization, and the often blurred lines between authoritarianism and democratic aspiration, drawing on ethnographic fieldwork to surface how communities live through and respond to these spectral inheritances. Each participant will offer a short provocation, grounding their insights in specific sites and histories. These will be followed by rotating small-group conversations to foster interdisciplinary and transnational dialogue. Together, we trace the haunted contours of policing-and the possibilities that emerge when people respond not only with fear or resistance but with creativity, care, and collective refusal.

4398 Haunted by Policy: Specters of Dismantling, Displacement, and Disappearance

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Rhythms I (2nd fl)

Type: Oral Presentation Session

This panel examines the invocation of historical ghosts and spectral afterlives of current federal policies and actions, focusing on the populations, institutions, and futures that were targeted, dismantled, or rendered invisible. These policies have left behind more than political debris; they have generated social absences, institutional voids, and lingering traumas that haunt communities – in the US and abroad. The papers examine the enduring "ghosts" of policies enacted during the Trump administration, focusing on the populations, institutions, and communities that have been marginalized, dismantled, or rendered invisible. Presenters reflect on these topics from a historical and/or anticipatory perspective.

Presentation(s): The Vanishing Agency: Disorientation, Disillusionment, and the Dismantling of USAID

This paper explores the disorienting and disillusioning effects of institutional dismantling at the U.S. Agency for International Development (USAID), which became a central target of restructuring in the early weeks of the second Trump administration. Drawing on interviews with USAID Foreign Service Officers (FSOs), it looks at how FSOs have experienced the erosion of their agency's mission and meaning.

As FSOs contend with shifting mandates, suspended futures, and a vanishing sense of purpose, their stories reveal a professional haunting shaped by disorientation, disillusionment, and spectral institutional memory. Many express deep concern not only for their own roles but for the fate of critical development and humanitarian projects they have overseen across the globe—initiatives now left unfinished, under-resourced, or abandoned.

This study contributes to conversations on the lived realities of policy actors, the affective dimensions of bureaucratic labor, the vulnerability of state institutions, and the global consequences of domestic political shifts. By foregrounding the voices of those tasked with enacting U.S. development policy abroad, the paper contributes to broader conversations about the afterlives of institutions under attack—and the forms of disappearance and displacement they leave behind. It also raises questions about the unsettling of long-standing structures of global aid and governance and the reshaping of the field of International Development.

Presenter(s): Caitlin Fouratt

Erased But Not Forgotten: The Spectral Violence of U.S. Asylum Policy and the Afterlives of Resistance

Drawing on my work as anthropologist and expert witness in asylum cases, I examine the spectral dimensions of U.S. immigration policy through the lives of Guatemalan women and LGBTQ+ individuals who have long resisted a life structured by erasure. These individuals—whose very survival challenges state-sanctioned silencing—exist at the crossroads of multiple violences: patriarchal, heteronormative, and geopolitical. Their flight is not only from individual persecution, but from deeply embedded structural forces that have attempted to render their lives illegible—first in Guatemala, then again in the U.S.

I center a recent case where a young gay man, despite winning his case and being granted withholding of removal, was nevertheless unlawfully deported by ICE. His forced disappearance by the very system meant to protect him exposes the limits of legality and the haunting afterlives of anti-immigrant federal policies. The courtroom win becomes a phantom victory, and the legal apparatus itself a stage for reenacting erasure.

Anthropological expert witness work thus emerges as a form of spectral labor—testimony not only to violence, but to absence, silence, and institutional betrayal. I argue that U.S. asylum policy, especially in the wake of Trump-era dismantling, operates as a technology of disappearance: rendering certain populations disposable, unseeable, or bureaucratically dead. These policies do more than deny refuge—they haunt the lives they abandon.

Presenter(s): Debra Rodman

Here to Stay? Disappearances, Erasures, and Silence in a Newcomer Epicenter

In 2024, Denver received over 42,000 newcomers. Its mayor recently testified to Congress and Trump made a bogeyman out of the city of Aurora. Despite more welcoming policies, Colorado is haunted by its past as one of the most restrictive states. In December of 2024, we shared the final report of collaboration with Denver's immigrant worker center. Of 101 intakes, 98% planned to stay in Colorado and 100% wanted to be center members. This winter, when the center called, over 77% had vanished: wrong numbers, disconnected phones, numbers belong to new people, restricted servers, immediate hang-ups, unanswered voicemails. This paper explores these disappearances as a technology of power across scales. This includes the national visibility of the ICE abduction of

a well-known Colorado activist, as advocates have staved off disappearance through weekly detention center vigils. Nearby raids and legal violations were sanitized, but revealed by Colorado's rapid response teams. Instead of protecting them, universities advise precarious students to be invisible and remain silent as students are actively disappeared. Silences and disappearances embed into our classrooms, selves, and community work- how we show up, what collaboration looks like, and even through students who fail to show up to class for weeks. Yet it also points to sparks of re-visibility from vigils to community meetings, digital national digital national and local networks, and local political organizing.

Presenter(s): Rebecca Galembo

Haunted Memories: ICE Raids and the Guatemalan Genocide

On March 10, 2025, ICE agents raided a car wash in New Bedford, Massachusetts, arresting three Maya K'iche' men from Guatemala and sending them to a detention facility on Cape Cod. Within the next month ICE had made several additional raids locally, often at immigrants' homes in the early morning hours. Between January 20 and mid-April, nearly two dozen community members, principally Maya K'iche', have been taken into ICE custody, on at least two occasions through violent assault. This paper, based on nearly two decades of ethnographic witnessing and accompaniment with the local immigrant community, explores current immigration enforcement activity in the context of two historical traumas. The car wash raid took place almost exactly 18 years after ICE raided a garment factory in New Bedford on March 6, 2007, sending 361 people, mainly Central American immigrants, into detention. This heavily militarized action with helicopters, Coast Guard vessels, and over 500 law enforcement officers, left a deep wound in the collective psyche of the immigrant community, and many survivors of that raid still reside in New Bedford. But the 2007 raid had called forth a second, deeper layer of historical trauma that still haunts the local Mayan community – the forced disappearances, massacres, and forced displacements that struck their communities of origin during the 36-year-long Guatemalan genocide, and that brought the first Guatemalan migrants to New Bedford in the early 1990s.

Presenter(s): Lisa Maya Knauer

Reviving Reverse Racism: Competing Perceptions of DEI and Discrimination in the Trump Era

As one of his first official acts as president in 2025, Donald Trump issued a series of Executive Orders (EOs) that vilified existing Diversity, Equity, and Inclusion (DEI) programs and preferencing, equating DEI with illegal and immoral discrimination. The framing of DEI as discriminatory is counterintuitive: DEI rose in the 1980s as an apolitical and business-driven alternative to expand and diversify workplaces, in part by creating individual and organizational changes that would expand access to opportunities, the inverse of illegal forms of discrimination.

This paper assesses competing perceptions of and claims around discrimination via popular social and legal trends. Although vague, inherent in Trump's 2025 EOs is an old and persistent ghost, the resurrection of the social, political, and legal logics of reverse discrimination, which leverage rights-based discourses around identity categories and equality to redirect resources and protections

away from, instead of toward, historically marginalized communities. When paired with additional legal shifts around religious liberty in the 21st century, the logic of reverse racism has gained renewed social, political, and legal weight. Although currently in-flux, it is critical to understand how, when, and why specific discourses around DEI and discrimination are more and less successfully deployed to impact expansion and curtailment of rights and resource protections in the contemporary era.

Presenter(s): Melissa Maceyko

The Death that Engenders Ghosts: the anticipatory impact of Costa Rica's new role as a recipient of deportees from the U.S.

In February, Costa Rica's President Chaves announced that he had agreed to "collaborate with the United States in the repatriation of migrants". Soon after, 200 migrants from Central Asia and India arrived and were taken to recently-established Center for Temporary Migrant Care (CATEM), situated near the border with Panama. The full costs are covered by the United States, and the oversight of these persons falls on the International Organization for Migration. Among the migrants are Afghan women who fear returning to the Taliban-controlled country, and others who refuse to be repatriated. Despite its longstanding reputation as a country respectful of human rights and refuge, Costa Rica has not granted asylum to any of the migrants in CATEM. This situation has inflamed an already polarized population. This paper addresses the impact of federal policies on dismantling democracy abroad. To situate the problem, I first contextualize Costa Rica's cooperation with the current U.S. administration in a weakening of democratic institutions and proliferation of populist forms of governing. Then, using an anticipatory anthropology framework, I describe the birth of new specters. Before a ghost exists, death occurs. Through the eyes of human rights activists, government employees and humanitarian workers, I question what has died in Costa Rica, what forms the new ghosts take, what are the foreseen impacts of these ghosts, and how they shape their new realities and everyday labor.

1940 Haunting the Discipline: Embodied Knowledges, Artistic Praxis, and Decolonial Ethnography

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Studio 3

Type: Oral Presentation Session

The ghosts of colonialism, epistemic violence, and disciplinary constraints haunt anthropology, shaping the ways knowledge is produced, legitimized, and shared. This panel reimagines ethnographic research through embodied, poetic, and artistic practices that summon new ways of knowing, transmuting research beyond the written word into movement, sound, and visual expression. Bringing together ethnographer-poets, dancers, singers, painters, musicians, and

performance artists, this panel creates a space for scholars whose work enacts healing, community care, and decolonial praxis through artistic and embodied methodologies. How do our bodies archive histories of violence and resilience? How does artistic creation allow us to commune with the unseen, the silenced, the spirits of our interlocutors and ancestors? How does performance and creative expression materialize the spectral legacies that continue to shape marginalized communities?

We highlight the voice of Black, Indigenous, Brown, Muslim, and otherwise marginalized scholars activating ethnography as a site of collective memory, survival, and resistance. We use art as method, medium, and message, interrogating the role of the anthropologist not only as a scribe of the spectral but as a conjurer of futures. In a moment where hauntings of the past shape ongoing struggles for justice, this panel serves as a communal ritual-a space to reflect, resist, and reimagine.

Organizer: Melinda Gonzalez, Georgetown University

Chair: Melinda Gonzalez, Georgetown University

Presenter(s): Sofya Shahab, Pablo D. Herrera Veitia, Sergio Papa Ruark, AQA Section of AAA, Cydney Seigerman, University of Georgia, Melinda Gonzalez, Georgetown University, Heather Prentice-Walz

Presentation(s): What might ethnography look like if it centered care and healing at its core?

Drawing on our experience as part of the project Reconfiguring Heritage: Present engagements with communities' pasts for resilient futures, we share the learnings and challenges encountered in engaging participatory approaches to facilitate 13 youth researchers across Iraq/KRI, Syria and Jordan to design, conduct, analyse and share autoethnographic research. Through research that focuses on the ways in which affective encounters with community heritages are experienced and employed in embodied acts of everyday peace and resistance in the midst of conflict and oppression, together we are investigating how both community heritages and research praxis is being reconfigured to advance justice, agency and equity. In creating networks of researchers through regular workshops, learning circles and shared projects, we highlight the importance of trust and the role of friendship in and as method in advancing critical reflection. Sharing examples of our creative and reflective practice including visual art, poetry and storytelling that we have employed to engage with the spectral and relational dimensions of heritages through our bodyminds, we illustrate how the methods we use, might themselves, contribute to healing in the midst of violence (and what we mean by this) and discuss how a process rather than outcomes oriented approach can enable an ethos of care to sit alongside methodological depth and rigour.

Presenter(s): Sofya Shahab

Tengo's Hauntings: Lukumí Sonic Ethics and the Politics of Listening

What should an Afro-Cuban sound-based ethnography look like, feel like, and most importantly, sound like? This presentation explores how ethnographic knowledge might move beyond the written word into sonic, poetic, and multimodal forms. In Cuba's post-socialist crisis, Afro-Cuban

rap and its transformation into more body-oriented genres articulate raced critiques of Cuban society. These sonic practices operate as insurgent epistemologies, making audible the lived experiences of Black Cubans.

Drawing on Lucumí Òrìṣà/Ifá, Afro-Cuban rap, and my own experience as a Havana-born, dark-skinned man, I reflect on the methodological, ideological, and ethical stakes of sound-based ethnography. How does listening—as method and analysis—reveal alternative knowledge systems? How might field recordings become analytical, affective, and performative interventions?

Through a curated playlist of audio fragments, including Nicolás Guillén's 1964 poem *Tengo* and its 2019 reinterpretation by Popy y La Moda, I trace a sonic narrative of anti-racist protest in urban Afro-Cuban music. Engaging sound and music as analytical tools within Afro-Caribbean, Afro-Diasporic, and Global South anthropology, this presentation challenges the discipline's privileging of text. It asks how digital multimodal formats might embody the sonic hauntings that persist in the histories, bodies, and spaces of Afro-Cuban life—moving toward an ethnography that resonates, disrupts, and transforms.

Presenter(s): Pablo D. Herrera Veitia

Gender Expression through Indigenous Dance in the Central Andes of Perú

Indigenous dancers aim to transmit multiple feelings to their audience while performing cultural dances. However, few studies explore how contemporary Indigenous people tell stories through nonverbal language to communicate feelings of strength, healing, and resilience. After attending the Two Spirit Gathering in Montana, I learned about the various roles of the Two Spirit people. I now realize that being a keeper of tradition is essential for my Two Spirit identity. The project integrates Indigenous identity into the dance to decolonize binary or Western-based influences. Using performance as the healing process for myself and the community allowed me to overcome generational trauma. Collaboration, an Andean value, was used to engage with family and the local community. This project revealed that stories of gender expression survived in Native American and Indigenous cultural performances. The journey shares how gender expression in Andean dances may contribute to reducing social stigma and prejudice faced by Indigenous and Two Spirit people.

Presenter(s): Sergio Papa Ruark

Performance as Ethnography of Water Realities—Past, Present, and Future—in Ceará, Brazil

Performance creates opportunity to expand understandings of dynamic human-environment relations through embodied practice. As an ethnographic method, performance shifts analytical focus toward knowledge stored and (re)created through the body. Because it is situated in the body, performance also provokes critical reflection on social responsibility and politics of representation. In this multi-modal paper, I explore devised theatre as an ethnographic method to examine human-water relations in Ceará, Brazil. I consider how community members of Quilombo Mearim, a rural community in Ceará, and I collaborated to devise and perform the play *Changes in Quilombo Mearim's Water*. The play is an exploration of the community's past and present water realities and

their visions for more just water futures. Community members of all ages participated in the devising process, which became a site of intergenerational storytelling and future-making. Performed in the community in 2023 to an audience that included other rural dwellers and representatives from social movements, the public water authority, and the municipal government, the play centered community voices and communicated local goals to people in positions of power. Integrating recorded scenes from the performance into my discussion, I consider my social responsibility as researcher and as co-performative witness and the importance of radical flexibility in performance ethnography as research and praxis.

Presenter(s): Cydney Seigerman

Documenting What Endures: Poetry, Colonialism, and Ethnographic Refusal across the Puerto Rican Diaspora

This presentation embodies poetics as method, practice, and refusal — an ethnography shaped through the Afro-Indigenous body, diasporic memory, and ancestral knowledge. Drawing from long-term ethnographic research in Puerto Rico and her diasporas, I weave auto ethnographic poetry alongside the words of my interlocutors to trace the colonial hauntings that live in our bodies, landscapes, and everyday practices of survival.

Against extractive, colonial logics of knowledge production, I turn to poetry as a decolonial methodology — a way of being and knowing that honors the silences, the ruptures, and the spectral presences of displacement. I ask: what might the poetic offer us in reimagining anthropology's ethical and methodological futures amid climate catastrophe, austerity, and ongoing colonial violence? This work enacts ethnography not only as documentation but as a living practice of remembrance, relationality, and resistance — where art becomes archive, method, and healing.

Presenter(s): Melinda Gonzalez

Art, Ethnography, and Colonial Afterlives in Haiti

The figure of the ghost — the uninvited specter that haunts the present by collapsing it with the unfinished business of the past — has accompanied me throughout my academic career. It guides my ethnographic research on well-being in rural Haiti, where communities navigate the effects and affects of international interventions, climate change, and ongoing colonial violence. I draw inspiration from theorists who employ ghosts and haunting to grapple with the enduring legacies of colonialism and racism in so-called New World modernity (Du Bois 1903; Fanon 1961; Hall 2002; Hartman 2007; Gordon 1997; Stoler 2006).

Leaning into the ambiguous (im)materiality of ghosts, the discomfort of ethnographic positionality, and the call to extend our senses beyond their comfort zones (Lewis 2017; Tsing et al. 2017), I created a series of mixed-media paintings as a method of sharing research and sparking dialogue. Collaging original fieldnotes and surveys alongside ink, acrylic, and oil paints, these works engage with temporality, memory, and affect. They offer a sensory space to sit with the traces of trauma, survival, and resilience embedded in everyday life. My work asks: What if we welcome the ghosts

that linger — those that hover at the edges of perception, embodied in our social presence — as reminders of unfinished business, of histories not yet resolved, and of the ongoing need to reckon with the afterlives of colonialism?

Presenter(s): Heather Prentice-Walz

6396 Language, Play, and Resistance to Oppression

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Maurepas (3rd fl)

Type: Oral Presentation Session

What can we learn about oppressive systems by studying the play, the carnivalesque, and the alternative ways of interacting and being that have emerged as techniques to escape and resist forms of domination including language standardization, language oppression, and dehumanizing discourses? This panel meets at the intersection between the festival with its suspension of rules, and the hills where rebels take refuge. The papers share a concern with how anti-hegemonic tactics, in the shadow of power, tell us about the shape and trajectory of that power. The panel emphasizes the possibilities for linguistic creation in liminal settings and through anti-institutional anti-structures, while drawing together several meanings of "language" and genres of "play and resistance." We examine how individuals and communities craft alternative modes of expression—whether through subversive communication among the incarcerated or through politically charged artistic production. Each paper offers a unique epistemological understanding of "language," including speech, text, signs, and code.

We seek to share ethnographic insights toward undoing and subverting systems of linguistic/language oppression, from sites in Lebanon, Palestine, Guadeloupe, and Japan. Formerly incarcerated people in Lebanon innovate strategic forms of expression to communicate and collaborate, thereby resisting their captivity and isolation. Palestinian poetry, painting, and sculpture-making are "artistic interventions" that destabilize colonial and hegemonic discourses and imaginaries of Palestinian people, land, and state. In Guadeloupe, storytelling and folklore traditions as modalities of language reclamation and revalorization in a children's summer camp. In Japan, dialect celebrations run counter to the standardization demanded by both state and capital.

Presentation(s): Prison Lingo in Lebanon: Languages of Solidarity and Survival

This paper examines the ways that incarcerated people in Lebanon construct and deploy a "prison lingo" to communicate and collaborate with one another amidst the highly surveilled and securitized carceral system that entraps them and regulates their relationships. Turning my attention away from the dehumanizing language used by incarcerating regimes (e.g. "criminals," "inmates," "law-breakers"), I instead focus on the languages, expressions, and words concocted by the people they incarcerate. To conduct this investigation, I draw on data from semi-structured interviews with formerly incarcerated people, supplemented by media analysis, to explore how incarcerated people conjured an alternative system of communication to sustain intimate bonds, build solidarity between each other, and maneuver survival strategies. What could these innovative language practices teach us about the carceral system that holds them captive? Can "prison lingo" generate new understandings of the discursive logics through which carcerality operates, in Lebanon and worldwide? My paper addresses these questions by taking inspiration from the creative, subversive, and defiant language practices of the formerly incarcerated people I met in Lebanon.

Presenter(s): Lara Sabra

Phatics and Poetics of Socialization into Postcolonial Guadeloupean Identity Through Oral Traditions

Much of the scholarship on language reclamation that has studied children's roles within language projects primarily focuses on top-down institutional settings or environments that prioritize teaching the structural properties of language, suppressing children's own creative volition. Unlike many child-focused spaces (e.g., schools, religious groups, immersion programs), a summer camp offers a unique opportunity to study language reclamation, as it centralizes children's enjoyment while fulfilling parents' need for childcare. This project explores the reclamation and revalorization of Guadeloupean Kréyòl through child language socialization at a heritage summer camp. During the summer of 2024, I conducted ethnographic fieldwork in Guadeloupe (an overseas French department in the Caribbean) at a summer camp hosted by an organization that specializes in preserving, promoting, and disseminating Guadeloupean oral traditions, primarily storytelling. I find that children are socialized into a postcolonial construction of their identity-based ideas of resistance, primarily through the reconstruction of petit marronage and an emic understanding of the inner and essentialized Creole spirit of Caribbean people. Identity formation at the camp occurs through the phatic and poetic functions emblematic of Guadeloupean verbal arts, which are then recontextualized into everyday social exchanges.

Presenter(s): Sophia Rodriguez

Artistic Interventions as Counter-Colonial Acts in Palestine

In a world where the Palestinian subject continues to be framed through hegemonic paradigms bounded by political, economic and social crises, art offers a new angle through which Palestinians

can be seen and heard, and their futures imagined. Kiersten Scheid argues that "all art is political, because politics is not outside of art but produced through art" (2020: 443). Using art as an investigative starting point thus provides a lens through which political inquiries can be explored beyond the limitations of socio-political movements, revealing how ideologies and relations between people, land, and state are conceived. Building on Scheid's work, I offer a linguistic anthropological lens to examine how meaning is generated through artistic interventions and to investigate the connections between art and critical consciousness. I draw inspiration from Webb Keane's foundational work on semiotics and materiality (2003) and Judith Butler's notion of materialisation to investigate the emergence of critical consciousness through creative practices (art acts) and product (the experience of the art). Focusing on painting, poetry, and sculpture-making, this paper asks the following question: how can art offer an angle that broaches counter-colonial projects against hegemonic discourses?

Presenter(s): Marybelle Issa

Dialect Dialect Revolution

Economic devastation lurks on the horizon, and your beloved home town is almost certain to collapse. What do you do? Most of rural Japan faced this question in the mid-1980s and many towns attempted to become tourist destinations (most failed; see Love 2013, *American Anthropologist*). With little more than boring flat rice fields on all sides, the town of Mikawa (Yamagata) chose dialect as their attraction - though dialect had previously been considered repulsive. For a period of 17 years, youth in this small town organized a National Festival of Dialects that brought singers, storytellers, comedians, and academics from up and down the archipelago, including from indigenous communities. These events could not "save" the town. But what did they create, and reveal? In this paper I seek to answer these questions, in multiple contexts: social scenes of dialect discourse in 1990s Japan, present-day Mikawa town, and the potential futures available to all of us, from Mikawa residents to panel attendees. If celebrating dialect cannot save a community, I argue that the celebration can still reveal the contours of the threats to that community. A dialect festival stands athwart the institutions and ideologies of, specifically, the standardization that is demanded by both state and capital. Inspired by the youth of 1980s Mikawa, I address the potential for an even more ambitious degree of multidialectal, multilingual accommodation and solidarity, to replace the logic of standardization.

2847 Lessons from the ghosts of food recommendations past, present, and future

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Napoleon BR C1 (3rd fl)

Type: Oral Presentation Session

Food guidance is never neutral. Recommendations about what to eat continually shift, reshaped by science, politics, moral frameworks, racialized hierarchies, and cultural memory. Yet, each revision carries traces of past ideologies, lingering as ghosts that influence current behaviors and future trajectories. These evolving recommendations often generate uncertainty as communities navigate contradictions and complex historical legacies embedded within contemporary guidance.

This session brings together scholars examining the palimpsest of food recommendations and their complex effects on present-day behaviors, values, and inequalities. What emerges is a layered conversation about how public health messages, policy shifts, sensory memory, and archival voices continue to haunt and shape food systems today. Each paper examines how people, especially those vulnerable or navigating marginalized food landscapes, make sense of evolving advice and what these recommendations carry forward from the past.

Together, the panel explores: 1) evolutionary perspectives on human diets and their contradictions with modern nutritional policy; 2) parental experience and anxiety stemming from recent shifts in infant allergen introduction guidelines in the United States that contradict previous guidance; 3) public health messaging in Madagascar and its unintended role in increasing consumption of processed foods due to hygiene concerns; 4) how memories of school lunches influence parents' attitudes toward interaction with the school food programs of today; 5) how archival Black American cookbooks encode values and sensory knowledge to that engage in a radical and liberatory pedagogy.

This session foregrounds the dissonance between lived experience and institutional food advice. What lessons can we learn from the ghosts of food recommendations past? How do lingering policies continue to shape present-day decisions? This session will explore the evolving nature of how we come to know about the food we eat, the forces that drive change, and how we can avoid repeating the mistakes of the past.

Organizer: Erin Hosein

Chair: Erin Hosein

Presenter(s): Andrea Wiley, Indiana University, Bloomington, Department of Anthropology, Erin Hosein, Laura Tilghman, Plymouth State University, Social Science Department, Carolyn Mason, Southern Methodist University, Department of Anthropology

Presentation(s): Ghosts of the deep past: Evolutionary dietary guidance

Proponents of an evolutionary approach to nutrition have challenged standard government-sanctioned dietary guidelines, offering alternatives based on foods available to early human foragers. Both forms of guidance typically categorize foods into food groups based on their nutrient contributions. Food groups that commonly appear in standard guidance are grains/starchy staples, fruits and vegetables, dairy, and protein foods (i.e. animal sources and legumes), while those inspired by evolutionary nutrition typically remove dairy and grains and emphasize fruits, vegetables, nuts and seeds, meat, seafood, and eggs. I argue that this reliance on food groups in dietary guidance misses the deeper evolutionary meaning of the nutrient composition of foods. I

consider the ancestral, biological continuity between humans and their foods and ask: Why does a food provide its particular array of nutrients? What were those nutrients doing in the eaten organism? All organisms share fundamental life history tasks and have associated anatomical structures. Eating food means consuming a part or all of an organism engaged in life history functions. Nutrients play central roles in those functions and are used by humans in species-specific ways. By aligning nutrients with functional anatomy we find patterns in nutrient availability, better understand why foods have particular nutrient profiles, connect humans and foods in new ways, and can frame a new kind of evolution-inspired dietary guidance.

Presenter(s): Andrea Wiley

Parental anxiety in an ever-changing food allergy recommendation landscape

Recent U.S. recommendations now encourage early introduction of allergens such as peanuts and eggs as early as

4–6 months of age, a notable reversal of previous advice. Although these updated recommendations are firmly rooted in emerging scientific evidence in food allergy prevention, little research has been focused on how these substantial changes have created confusion, anxiety, and stress among caregivers. Here, we present preliminary findings that examine how food anxiety is shaped by changing public health narratives, social media, and cultural expectations. Semi-structured interviews and validated surveys were conducted with mothers of infants undergoing complementary feeding in North Carolina, where pediatric food allergy rates have increased by over 300% in the past decade. Additionally, digital ethnographic techniques were used to capture the current information landscape of food allergy advice on social media platforms. This study addresses an urgent need to understand caregiver experiences, perceptions, and choices amid shifting public health guidance and new information sources.

“Healthy food is clean food “: Food hygiene public health messages as drivers of processed food consumption in northeastern Madagascar

The Nutrition Transition refers to dietary changes as populations increase consumption of ultra-processed food, and then suffer from associated non-communicable diseases like hypertension, heart disease, and diabetes. Most commonly associated with economist Barry Popkin, the nutrition transition is often portrayed as a linear process resulting from large-scale forces like urbanization and globalization. Yet ethnographic research shows that the nutrition transition is hardly standardized, as cultural norms and socio-economic forces profoundly shape this process. This presentation will explore how this global phenomenon is playing out in the Maroantsetra region in northeastern Madagascar, based on in-depth interviews and participant observation over 4 months in 2022. Interviewees who were middle aged and elderly frequently noted the sharp contrast between what they ate growing up, and what their children and grandchildren are now eating.

Packaged foods, once rare, are now daily purchases. One surprising reason is that open-air markets and prepared food stands have been portrayed in public health messaging as potential vectors of disease from flies, dust, and vendors' unwashed hands. Thus, local definitions of "healthy" are haunted by concerns of cleanliness, and hygiene public health messages combine with changing gender norms, financial constraints, and new ideas of proper parenting, to drive the nutrition transition in this region of the world.

‘My ancestors tell me when to stop’: Engaging with cookbooks as vectors of food values and sensory knowledge

Cookbooks allow cooks of all skill levels to document and preserve their recipes, special techniques, and the stories that come with cooking. This preservation extends a chef's expertise beyond its face to face limitations, and allows them to influence present day cooking and eating. These texts become instructional manuals that rely not only on what's written on the page but embodied knowledge that must be bodily and sensorially engaged. They also encode unspoken values in how we prepare certain dishes and regard certain ingredients (Forster 2023). This form of writing is a generally important literary form, but especially so for Black Americans. Cookbooks describing and engaging with the contributions of Black Americans, which have been marginalized and denigrated, instead document and preserve a significant culinary tradition (Fretwell 2020).

I will use archival materials at the SMU Degolyer Library's Cookbook Collection and UA David Walker Lupton African American Cookbook Collection to examine the change over time in the narratives encoded within cookbooks. I will view the ways that ideas about food can linger in our memories and on our plates in the present, resulted in an embodied learning that is translated to the page. I will use these texts to explore the sensorial aspects that are documented in cookbooks, and a new way of learning from and with our predecessors—ghosts of a time past (Jenks 2022).

7092 On ghosts and haunting in Indigenous health research: Conversational insights from Indigenous research methodologies and community-led health projects

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Balcony L

Type: Conversation/Debate

Indigenous Peoples of North America are represented in popular culture as both haunted by histories of colonial violence (e.g., historical trauma) and haunting figures within settler society

whose enduring presence and (perceived) absence variably inspire pride, confusion, and guilt in settler imaginaries. Health researchers, too, have struggled to engage with these ongoing histories of colonial violence and Indigenous endurance beyond dehumanizing narratives of victimhood and tragic inevitability. The result is routine assertions of authority over representations of Indigenous health experiences, concerns, and desires, and scientific knowledge production that obfuscates the coloniality of much health knowledge and research practice. This approach has proven unfruitful in addressing Indigenous health disparities, and it has perpetuated inequity through the imposition of neoliberal constructions of self and health that distract from the colonial origins of contemporary hardship. In this conversation, participants will explore alternative approaches to research that pursue self-determined health and wellness goals - elaborating and discussing possibilities for a hauntology in Indigenous health research through community-led initiatives that support self-determined wellbeing through engagements with Indigenous knowledges, community health practices, and research methodologies. Each participant will describe an Indigenous community-driven wellness project or methodological approach wherein Indigenous People/s are agentic beings guided and strengthened by their histories toward asserting vital presence, rather than existing within settler narratives of historical loss and stoic persistence. First, Rachel Wilbur will explicate the concept of "health survivance" as a strengths-based and Indigenous-driven alternative to "resilience", demonstrating how historical stories - the narrative basis of the Native "ghosts" that haunt the public consciousness – may instead illuminating pathways to thrive across generations. Second, William Hartmann will introduce the Connecting Generations Project, which brings youth and Elders together for six months of structured engagements around cultural practices. Referencing Appadurai's "capacity to aspire," Hartmann argues that the project's health benefits can more fully be understood as creating opportunities for youth to try on Coast Salish ways of thinking, feeling, and being-not framed as wounded victims needing self-work-but a distinct subject position based in relationality, belonging, and generativity. Collectively, the participants will explore the role of – or divergence from concepts of – decolonization in relation to ideas of strength, self-determination, and resistance enacted through intergenerational wisdom and ancestral guidance as a positive form of haunting. Cesar Barreras will serve as discussant, offering reflections and posing an initial round of questions to the participants, followed by audience Q&A.

2601 Permeable Boundaries and the Biomedical Imagination: Ghostly Presences within Medical Taxonomies and Epistemologies

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Napoleon BR A1 & A2 (3rd fl)

Type: Oral Presentation Session

Health disparities compelled anthropologists and researchers to examine the haunted networks of knowledge production, where biomedical logics informed by histories of colonialism and boundary-making materialize in medical practices and institutions. Situating the biomedical imagination with the spectral "ghost" theme, we explore the tensions that haunt the clinical domain, particularly the presence of what remains illegible or unknowable within biomedical frameworks, creating an enduring ambiguity that haunts and unsettles medical certainty. We approach the following questions as productive entry points to our broader themes: How do particular epistemologies and bodies become spectralized within medical discourse and phenomena such as diagnostic tools, embodied experiences, clinical data, and histories of medicine? How do biomedicine's porous boundaries generate ghostly presences that structure and haunt medical knowledge practices? This panel examines the emergent contradictions and instability of boundary work: visible/invisible, normal/pathological, self/non-self, doctor/patient, presence/absence, health/illness, and other related boundaries. Medical documentation and protocols are haunted by the fragilities and "epistemic anxieties" of an afterlife of slavery and colonialism that shapes the legibility and disposability of certain bodies, an ongoing condition of "the wake" (Sharpe 2016; Hartman 2008; Stoler 2010). Accordingly, these tensions underlie human and non-human forces that materially shape clinical realities through invisibility and visibility. We also consider how medical epistemes and discourses become spectralized by the histories of slavery, colonialism, and the epistemic violence that erupted from it. From a hauntology of medicine, we trace how alternative ontologies and epistemologies develop that constitute and are constituted by the permeable boundaries between bodies and knowledge.

We present ethnographic work across various sites, including the remaking of subjectivities following the impacts of medical intervention defined as "Post-Intensive Care Syndrome" (Perfetti); the tensions of bodily norms regarding well-being and food between dominant WHO standards and the Indigenous Matsigenka population in Amazonian Peru (Revilla-Minaya); forms of knowledge that exist as "ghosts in the data," simultaneously present yet institutionally illegible in maternal mortality metrics (Nurse); the paradoxical (in)visibility of fibroids as both a risk factor and a lived experience that shapes the tensions between "subjugated knowledge" and biomedical epistemologies (Keyes); and the spectral and biomedical nature of the HIV epidemic in Fiji, in conjunction with the "absent-presence of unrealized global health promises" (Uzim). Through these cases, we examine the spectral nature of health and medicine to contribute to deconstructing how biomedical knowledge simultaneously produces and is haunted by its constitutive exclusions.

Presentation(s): Sensing the Invisible, Hearing the Silence: Narratives of African American Women Living with Fibroids

African American women carry a higher risk for fibroids, which produces poorer reproductive health outcomes such as psychosocial and bodily suffering. Fibroids emerge as paradoxically visible as a racialized risk factor yet invisible as a lived chronic experience, generating cycles where communal, "subjugated" knowledge and biomedical knowledge converge and diverge across clinical spaces and intertwined histories. This project maps how fibroids operate as actants within assemblages of clinical protocols, patient experiences, histories of medical racism, and the biosocial nature of race to reveal how knowledge shapes the (in)visibility of this condition. The examination of inheritance across institutional, temporal, and bodily scales reveals how inherited knowledge about race operates through assemblages of inter-embodied experiences where African American women's bodily knowledge exists and evolves alongside and against institutional biomedical frameworks. I explore the following central question: How do medical epistemologies of fibroids and reproductive health in both African American women and clinicians emerge from and shape the combination of clinical education protocols, historical medical practices, and African American women's intergenerational knowledge networks in Atlanta, Georgia? Through focus groups and interviews, I examine how intergenerational knowledge shapes both the clinical understanding of fibroids and women's lived experiences with this condition.

Presenter(s): Jasmine Keyes

Buried Beneath the Measures: Evaluating Maternal Mortality Research Paradigms in Public Health

In the United States, the maternal mortality rate (MMR) is the primary measure through which public health understands maternal mortality. It relies on the systematic collection of hospital death certificates to help researchers make sense of the maternal landscape. As a quantifiable, reproducible, and translatable metric, it is the most legible means of legitimizing the existence of the maternal mortality crisis to the state, to expand public health research. However, this datafied mode of understanding maternal mortality is more preoccupied with death than life, obscuring the experiences of those most vulnerable to early maternal death. The forms of knowledge that do not conform to the parameters of MMR slip into the shadows, becoming 'ghosts in the data,' unseen and unaddressed. What are the consequences of overlooking alternative forms of knowledge when their presence continues to haunt women's lives? Through an analysis of the history of the conception and operationalization of the MMR, I argue that public health researchers need to move outside the research paradigm that prioritizes legibility and consider the illegible: the material and

social realities of women's lives that cannot be captured by the MMR. This paper reveals 1) the limitations of the boundaries public health has set in what is considered legible for informing the MMR and 2) the impact of considering the 'ghosts in the data' on maternal mortality research practices, priorities, and approaches.

Presenter(s): Ashley Nurse

A Syndrome of Care: Examining the Afterlife of the ICU

While intensive care units (ICUs) provide life-saving treatments to patients, practices such as mechanical ventilation and heavy sedation can cause long-term emotional, physical, and cognitive problems. Accumulating research on these negative outcomes demonstrates a dual effect of biomedical progress on the one hand and the harm incurred by intensive intervention on the other. Concerned about the impacts of ICU practices on longer-term recovery, members of the Society for Critical Care Medicine (2010) proposed the name "Post-Intensive Care Syndrome" (PICS) to bring awareness to the adverse biological effects of intervention, such as muscle weakness, as well as social pathologies, such as disruptions in memory and feelings of isolation among survivors. My dissertation project analyzes how PICS captures emerging concerns about how medical practices themselves can haunt both patients and those who care for them, constituting what I call a "Syndrome of Care." Drawing on fieldwork observing ICU care and interviewing former patients, clinicians, and researchers, this project asks: What is the afterlife of extreme medical intervention? How are ambiguous forms of biomedical harm made into objects of knowledge? In exploring the emergence and exclusions of a "Syndrome of Care," I show how subjectivities, solidarities, and accountabilities are remade, as this panel proposes, by the "permeable boundaries between bodies and knowledges" at the frontiers of biomedical innovation.

Presenter(s): Ross Perfetti

Ghosts of Global Health: HIV's Haunting Legacies in Fiji's Biomedical Imagination

Fiji's HIV epidemic, the fastest-growing in the Pacific, exists as a spectral presence within global health frameworks—hyper-visible as a crisis, yet, illegible in its local manifestations. Biomedical interventions, shaped by colonial histories and neoliberal aid economies, render Fijian bodies and epistemologies "ghostly" within dominant HIV narratives. Despite UNAIDS' 2030 viral suppression targets, Fiji's HIV epidemic thrives amidst receding foreign aid and the spectral scarcity of PrEP, exposing the fragility of biomedical boundaries between "controlled" and "outbreak."

Drawing on fieldwork with Fijian health workers and communities, I argue that HIV's "ghostliness" emerges from three tensions. 1) Epistemic erasures: global health metrics obscure Fijian experiences of HIV, relegating their lived realities to the margins of biomedical legibility; 2) Haunted infrastructures: clinics dependent on erratic foreign funding become sites where colonial logics of resource allocation resurface, leaving prevention efforts in a state of suspended animation; and 3) Spectral solidarity: Fijian health workers repurpose the "ghosts" of abandoned interventions into improvised care strategies, revealing medicine's permeable boundaries. Engaging Christina Sharpe's "wake" and Ann Stoler's "colonial aphasia," I examine how Fijians navigate HIV as both a

biomedical and spectral phenomenon—where the virus's materiality coexists with the absent-presence of unrealized global health promises.

Presenter(s): Elochukwu Uzim

Haunting Well-Being: Conflicting Western and Indigenous Matsigenka Conceptions of Food, Nutrition, and Health

Western notions of well-being are used as global standards for healthy bodies, haunting and influencing the livelihoods and self-determination of minorities and Indigenous populations. This is exemplified by how malnutrition is defined by the World Health Organization, which is used by governmental health institutions to develop strategies to mitigate it. The body normality established by WHO standards corresponds to urban sample populations, often of high socioeconomic status. Despite the WHO's noble intent to identify and combat global child malnutrition, its standards misrepresent the diversity of bodies that populate the world. Furthermore, local conceptions of nourishment, health, and well-being, which are part of broader ontologies of how the world functions, are ignored. This can lead to misguided attempts to solve an externally perceived health problem without understanding what is at stake. Here, I address this challenge by exploring notions of food, health, and well-being in an Indigenous Matsigenka population in Amazonian Peru and comparing them against WHO health standards. Based on 37 months of ethnographic research, I propose that health for the Matsigenka is part of a broader condition of well-being influenced by relationships with both humans and non-humans that compose the Matsigenka world. These results will facilitate collaboration with the Matsigenka people in the development of culturally appropriate strategies to improve well-being as they conceive it.

3811 Reflexive Anthropology and John Borneman's "I Was Married to a Horse, and Other Tales by an Accidental Anthropologist."

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Bacchus

Type: Roundtable/Town Hall

HAU Books, the publisher, has been a leader in insisting on links between traditions within anthropology and changing research objects and new forms of ethnographic writing. This panel will focus on HAU Books' recently published narrative nonfiction/memoir/ethnography, "I Was Married to a Horse, and other Tales of an Accidental Anthropologist" by John Borneman. Our focus is on how "reflexivity" is changing the nature of ethnography and ethnographic writing. A concept at least a century old, reflexivity has become quite popular—and contentiously debated—in both the

humanities and social sciences. This renewed interest in reflexivity is connected to the related term "participant observation"—the epistemology dominant in socio-cultural anthropology since Malinowski. Like reflexivity, participant observation has also been subject to much recent critique, ignoring anthropology's grounding in questions of perception to refocus on the authority of the anthropologist.

Scholars across disciplines now claim to be reflexive, effacing the links to traditional meanings of participant observation, and inevitably leading to a proliferation of meanings with effects both within and between disciplinary approaches. Borneman's challenges this unsettled moment by integration the memoir and the autobiographical into the epistemology of ethnographic reflection.

This roundtable will reflect on: (1) the relation of the ethnographer to their own history and that of their interlocutors; (2) the relation of the ethnographer to participation and to their interlocutors, (3) the epistemology of the ethnographer in the face of challenges presented by Big Data and overwhelming amounts of online information; (4) the status of truth and authority in contemporary anthropological writing; (5) the relation of scenes and events to structures in the writing of fieldwork- or encounter-based research; (6) the changing relation of anthropological writing to different literary and ethnographic traditions.

2632 Rights and Obligations of/for the Dead

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Studio 2

Type: Oral Presentation Session

This panel provokes anti-colonial frameworks to further explore the significance and power of reckoning with the dead as political subjects to whom our relations might be transformed. Of systemic violence, we ask: What should we do with our inherited complicities/trauma when our ancestors are perpetrators and (non)survivors of brutality? What do we owe our/each other's ancestors, and what are the possibilities for reparative, transitional, and restorative justice?

Of "the environment" specifically, we ask: How do more-than-living entities advance our understanding of multispecies justice? For example, might the rematriation of gods, artifacts, and land shape the possibilities for resurgent politics? How might global warming be addressed through antiracist and anti-colonial abolition? What role does collective grief and mourning play in shaping visions of the future? Leaders in abolitionist and anti-colonial thought have guided similar questions: we aim to specify the pragmatic ways that we can transform our relations with the dead.

Presentation(s): Refocusing the Hauntings of Pacific Literatures for Resurgent and Regenerative Practice

Indigenous feminist literatures have been calling for a regeneration and resurgence of genealogies existing outside colonial and imperialist boundaries of existence by (re)focusing on practices of reproduction, kinship, and relational space. Here, genealogy becomes an expansive site of refusal emphasizing the deconstruction of deeply embedded values of heteropatriarchy and capitalism by looking beyond human relationships. Therefore, instead, genealogical practice expands to include understandings of responsibility, respect, love, and other principles meant to cherish relational space between all things.

Using the presence of hauntings, spiritual beings, and notions of possession in Pacific academic literature, this paper culminates a genealogy of the importance of "spiritual encounters" to emulate its use in the (re)production of anti-colonial, resurgent, and regenerative worlds. Not only are encounters with the spiritual used to explain the ongoing projects of colonialism and imperialism, but also, these examples of spiritual presence demonstrate pathways of protection and regeneration.

From this, I focus on how Pacific literature offers examples of the ways spiritual presence center relational space and emphasize responsibility for those from the past, the present, and those yet to emerge as ancestors. I end with making a connection to works regarding the *vā* within the Samoan context as a place of negotiation and the immense potential of working against and beyond violence.

Presenter(s): Olivia Palepoi

Waiting in the Charnel Forest: Environmentalism, Murder, and Cosmological Deferral

The body of environmental defender Tonguan Kamjen lies in concrete tomb just outside a forest temple in the Thai province of Nong Bua Lamphu. Tonguan and Som Hompornma were murdered after Tonguan, who was the village headman, launched an oppositional movement against a limestone quarry that was being proposed in their village. After 35 years of intense community-led opposition, the quarry has been shut. In the voided remains of the mountainside, community activists have begun the slow process of trying to remediate the quarry by transforming it into a community. But, still, Tonguan awaits cremation in the charnel nearby forest. Concerned about the karmic effects his "bad death," Tonguan's widow deferred his cremation until all permits for mining in the area have been cancelled. This paper asks it means to wait for justice from the suspended space of the charnel forest. What can we learn about environmental justice from deaths like Tonguan (and other environmental defenders like him) that have taken place in the wake of

extractive projects? On the one hand, Tonguan's death highlights the unsettled relationship between the body and the necropolitics of extraction. On the other, the deferral of his cremation suggests something about the uncertain about the cosmic nature of justice itself when hopes for remediation are deeply embedded in the earth itself.

Presenter(s): Eli Elinoff

Embodiments of Inherited War in Iraq

In the wake of the 2003 assault, the village of Yathrib, Iraq, holds toxic inheritances revealed in withered grape vines and terminal diagnoses, in the sulfurous veil of burn-pit clouds and in cancerous growths on for-now living organs. The families here, pressed close to the Bakir Air Base, bear witness to environmental violence's patient work and its invisible accumulation in bones and soil, generation after generation. As a health researcher, I document these stories as not merely health outcomes to be recorded, but as embodied testimonies of how imperial violence writes itself into flesh and bone, root and branch, outliving its original architects. Here, the river remembers what bodies cannot; bodies remember what documents can never capture. In Yathrib, each soil sample I take becomes a testimony. Each medical record I gather is a counter-archive. Each failed harvest is rebellion against official narratives of military necessity and "acceptable" losses. We are witness to a violence that exceeds human temporality: this is haunting as a political project.

Presenter(s): Nooralhuda Sami

Colonial (Un)Wounding: Bodies and Beings in/of Guåhan

In times of ongoing ruination—theft and desecration of unceded Indigenous lands, brinks of ecological collapse, the waging of wars and genocide—we continually experience and witness the grounds of anticolonial possibility. Rather than repeat, amplify, and affirm these imperial formations (Sexton and Barber 2017; Stoler 2008) this paper explores how each of us might interrupt and destabilize our inherited and accumulated complicities without invoking moves to innocence or absolution. The ideas introduced in this paper take root from ethnographic engagement with CHamorus, the Indigenous peoples of Guåhan (Guam) and the Låguas yan Gåni (the Mariana archipelago); the tåno (land); the tåsi (sea); and the taotaomo'na (the people of before). Guåhan is one of many Pacific Islands subjugated to ongoing US-colonial rule and preeminent, but familiar and ongoing, militarization and environmental desecration (Aguon 2022; Flores 2023; Vine and Arriola 2024). As a non-Indigenous US-American settler positioned in a lineage of colonizer ancestors of anthropology, this paper addresses ethnographic demands to accompany, traverse, be guided, be touched, and be implicated by our interlocutors through our colonial wound(ings); not to move beyond in the name of resuscitated renewal, but to truly reckon, unsettle, and affect toward abolitionist futures.

Presenter(s): Creighton Burns

Our Dead, The Dead, My Dead: How the (Un)Making of Collectives and Individuals in Death Engages with Power and Violence

In their persistence, The Dead, as a collective, engage with and offer a different form of representation and mourn-ability than dead individuals because of how meaning is variably imposed. Thinking about politics around death and dying dominant in the United States, it is important to consider how the power of the dead is continually made and unmade through shifting awareness and visibility around grief and memory. This presentation focuses on indexical differences and complexities through an examination of the roles of news media and county-governmental record making, looking at coroner's reports and death certificates, obituaries, and other forms of official documentation. Situated in a recent mass gravesite in Hinds County, Mississippi, I am contending with how Black death is made and unmade as a confrontation of (state, legal) power as The Dead move from a collective body to grieve-able individuals. What do identification and naming do, particularly in visible representational arenas, in the face of structural violence(s)? How can we think about the continuity of care and responsibility when moving between notions of the collective and notions of the individual? This work and analysis ask how the act of record making functions within realms of visibility and representation, with respect to how the dead are social and political actors.

Presenter(s): Taylor Borgelt

7552 Scale and the Politics of Technical Knowledge

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Galerie 5

Type: Roundtable/Town Hall

How do people fathom the scale of the pressing problems and transformations they face in the world today? Anthropologists have long shown scale not as an objective, stable, inconsequential frame, as is commonly presumed, but instead as a contested, contingent frame integral to sense-making writ large...and writ small. Ethnographers in this session will similarly think aloud about how people (our interlocutors, others, and we ourselves) engage with scale and related concepts (magnitude, measure, growth, focus, the micro/mezzo/macro, etc.). Roundtable participants will speak from their diverse experiences ethnographically studying the interscalar politics of technical knowledge in action-vis-à-vis flood risk planning in an urban watershed in Hawai'i, global medicine and ecology in Madagascar, French legal disputes surrounding failed mining projects in Guinea, transformations of tropical rainforest governance in Peru, the Chinese state's statistical governance of rural landholders' agrarian resources, and Silicon Valley venture capitalists placing multimillion-dollar bets on which tech startups will successfully "scale."

2786 Sedimented Futures: Haunted Ecologies of Extraction

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Grand Ballroom E (5th fl)

Type: Roundtable/Town Hall

What does extraction have to do with ghosts? It might sound like a strange question at first, but let's think about it. Fossil fuels--our primary energy source--are like ghosts of a past world. They're ancient remnants of ecosystems that were buried deep within the Earth millions of years ago. When we extract and burn these fuels, we release their carbon back into the atmosphere, effectively resurrecting a long-dead world, only to haunt the present with climate change (Crate and Nuttall 2024). What view of extraction comes into focus when we take seriously these haunting afterlives? Are such afterlives best understood as the "ghosts and monsters of the Anthropocene"(Tsing et al. 2017)? Or is the flourishing of multispecies accounts simply the obituary to the industrial murder of the natural world, a celebration of agencies detached from the immediate histories of their destruction (Taussig 2020)?

The suggested solution, the Green Transition, requires more extraction, but this time, it's minerals, not oil. These deposits have formed over millions of years. But, just like with fossil fuels, they are going to be extracted in a rush and out of sight, without fully understanding the long-term effects and without thinking about the ghosts that future generations will have to face. The mining waste takes the form of sediment plumes--clouds of suspended particles resulting from excavation on the ocean floor, which can smother organisms and alter water chemistry; "spectral" phenomena, existing at the threshold between the perceptible and imperceptible (Han 2024); present absence of haunted processes of "ruination" (Stoler 2013). The Green Transition not only depends on mineral extraction, though, it also requires the deployment of technologies to extract carbon emissions from the atmosphere and transform the seabed into a carbon burial ground, by using depleted oil and gas reservoirs to store those emissions. In this way, fossil capitalism lingers in spectral form and the seabed becomes haunted by the afterlives of extractive industries.

Grounding carbon in or extracting energy from the seabed means reckoning with a deep past (Ialenti 2020) while making changes way into a deep future (Irvine 2020). The seabed becomes a submerged heritage, a sedimented violence that takes us back to the bodies of those who lost their lives during the Middle Passage in the transatlantic slave trade (Childs 2024). Questions arise over responsibility for the long-term governance of carbon burial sites and the containment of what can return to haunt us. These are the "ghosts" who compel us to confront the violence of extraction and to reimagine new, alternative futures (Palermo 2022).

Participants will reflect on what haunted ecologies we encounter today, and which we are creating for tomorrow? Can we avoid creating new negative ecologies (Bond 2022)? Or are we bound to repeat mistakes of the past, and thereby, keep on pushing the world to its limits?

3765 Session 2: Revisiting the Discourse of Domination in Agriculture

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Evergreen (4th fl)

Type: Roundtable/Town Hall

Scholars in anthropology and critical agrarian studies have demonstrated how industrial agriculture has made farmers dependent on externally manufactured inputs, thereby reducing their control over production. This has transferred power away from farmers to collaborative alliances between the state, scientists, and private companies, all of which benefit from this arrangement (Kumar 2016; Stone 2022; Weis 2013). Despite widespread opposition from farmers across the world, including in Europe and Asia, the corporate concentration in agriculture has continued, expanding across various domains such as digital technologies, biotechnology, and beyond.

While corporate actors engage with farmers in developing and testing their technologies (Freidberg 2019; 2022), some of these actors hail from farming families themselves and play an important role in shaping these interactions. Their presence complicates the "stark transnational capital versus peasantry" binary in the food regimes literature (Aga, 2018, p. 671). Instead of analyzing these interactions solely through the lines of capital-centrism, imagining otherwise, or both, we aim to situate them in the everyday lives of farmers and corporate agents who work as foot soldiers of financial capital.

This roundtable seeks to ethnographically explore the ongoing corporate attempts to dominate agriculture globally, without reproducing the discourse of the "powerful." It proposes an anthropological examination of last-mile interactions between farmers and corporate actors, exploring both the fragilities and dependencies of the powerful while simultaneously analyzing their attempts to dominate agriculture. Could this way of revisiting power dynamics in agriculture provide pathways for promoting justice while also "staying with the trouble" (Haraway 2016)?

We invite participants to discuss ethnographic stories/work from diverse contexts, focusing on everyday interactions between corporate actors (including technology developers and state officials) and farmers. We will address (but are not limited to) questions such as:

- What kinds of interactions occur between corporate actors and farmers? How do these actors approach these interactions, and why?
- How is power formed within these interactions?
- Do we observe contestations within these formations? If so, are these contestations generative, and if so, in what ways?
- How have these interactions evolved historically? What roles have the emergence of digital and other technologies played in shaping these changes?
- Are the long-standing categories used to analyze agricultural change (e.g., small, medium, and large farmers) still relevant, or are they being challenged and reconfigured in these interactions?
- Do these interactions themselves offer strategies for rethinking the discourse of domination and making it more just?

6302 Settler Colonial Determinants of Health & Restorative Justice

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Marriott **Room:** Galerie 3

Type: Roundtable/Town Hall

Among the many diverse pursuits of justice around the globe, "restorative justice" has emerged as an important conceptual and practical orientation within the nascent-but-deeply-rooted field of Indigenous environmental justice. In response to the persistent settler colonial logics of elimination, which manifest through ever-changing modes of displacement and dispossession, Indigenous-led social movements are struggling to bring balance back to landscapes and relationships that are out of balance. Following the resistance and resilience of Indigenous scientists, artists, and storytellers, this session represents projects that work with decolonizing

concepts of "re-membering," "re-storying," "response-ability," and "re-mediating," as well as a whole family of cognate terms. This session will work toward broader recognition of how environmental health research and practices can be transformed with attention to local Indigenous histories, knowledges, experiences, methods, arts, and sciences. In this session, we aim to forge collaborative relationships and elaborate on a collective conception of "settler colonial determinants of health," which can serve as an anthropological contribution within the environmental health sciences. With emerging interests in Indigenous ways of knowing in environmental health contexts, settler scientists also need to know about the sociocultural contexts and histories of dispossession and displacement that set the background (and figure-ground) for their biomedical and environmental research projects. This session will explore different ways in which the academic and legal concept of "restorative justice" can be combined with the political slogan "Land Back," and jointly applied to positively improve environmental health governance in Indigenous communities, as well as non-Native communities on Native lands. The roundtable format for the session will allow for diverse genres of expression, engagement, and interrelationship between organizers, discussants, presenters, and audiences. Given our focus on "re-storying," this session remains open to the many different ways in which these stories will unfold.

4470 Shadows: Addressing Our Past, Reconciling the Present within the African Diaspora

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Napoleon BR B2 (3rd fl)

Type: Oral Presentation Session

We believe that there is an epistemological dissonance on how continental Africans, Afro Caribbeans, and African Americans (black people) experience the legacy of colonization. From an equitable lens, our research aims to empower black youth and young adults to build sustainable lifestyles. As researchers of the African Diaspora, we posit that black youth and young adults within our global community have the capacity to promote sustainable community development. Therefore, an applied anthropology curriculum needs to be developed to inform our global communities about its respective members.

As applied anthropologists researching educational praxis, we are concerned with how educational institutions articulate the shared legacies and lived experiences of black people. Using mixed methods, we will create a science and art-based curriculum that dismantles cultural boundaries

and promotes sustainable development through literary and digital arts, visual expression, and scientific analysis, but before said development, data needs to be collected to ensure that our model is inclusive. We will collect our data via panel discussions, focus groups, and questionnaires.

All of our proposed panelists are members of the African Diaspora and their work collectively endeavors to 1) repair historical injustices among black people of the African Diaspora, 2) improve the appreciation of cultural diversity within the African Diaspora by gaining mutual respect for black communities and their struggles due to colonization, and 3) increase the awareness from an etic perspective, the contributions of black communities across the world in creating sustainable environments, relationships, and lifestyles.

Presentation(s): Group Positionality in a multi-cultural Society: The Case of the Garifuna of Belize

The Garifuna people enjoy a unique position in the Caribbean demographic landscape, being both indigenous and Afro-descendant. Their journey to Belize in the Western Caribbean was the result of warfare, resistance, and refuge-seeking beginning in the early 19th century. In modern Belize, they are one of several ethnic groups that make up the ethnic and cultural landscape. This paper explores their legacy of struggle and adaptation in Belize's socio-economic and political context and through archival research and interviews with key leaders of the National Garifuna Council examines their self-perception of belonging, resource access and political representation in Belize's multicultural context.

The Garifuna people hold a unique position in the Belizean and broader Caribbean sociocultural landscape, as both Indigenous and Afro-descendant. Their migration to Belize in the early 19th century was shaped by a history of warfare, resistance, and the pursuit of refuge. In contemporary Belize, they are one of several ethnic groups contributing to the country's rich cultural mosaic. This paper explores the Garifuna's legacy of struggle and adaptation within Belize's socio-economic and political contexts. Drawing on archival research and interviews with leaders of the National Garifuna Council, it examines how the Garifuna perceive their belonging, access to resources, and political representation in Belize's multicultural society.

Family Heritage Books on Every Coffee Table, in Every Classroom

To reconcile historical disconnects and harmonize dissonance related to the Atlantic Slave Trade and its aftermath, twenty-first-century African Americans collaborate across the diaspora, publishing genealogy books (family heritage books). This paper uses music to illustrate how the Agapic Agency Theory, derived from these genealogies, illuminates their content. The theory unfolds in three parts, mirroring core functions of Black genealogies: spiritual ancestral connection via Deep Roots, intellectual understanding through Deep Knowledge (interpreting oral history and records), and embodied positive ancestral self-identity revealing Deep Self. Crafting this identity involves seeking an ancestral home—domestic surroundings rich with heroic ancestors, accessible information, and opportunities for spiritual connection and reenactment of virtuous lives. Descendants find this home by engaging with ancestral legacies within their genealogy books. Thus, Deep Roots, Deep Knowledge, and Deep Self are both recurring themes and the interacting components forming the Agapic Agency Theory. The paper concludes with practical pedagogical applications for Black genealogy book research, teaching, and exhibition.

Black for the First Time: Black Community Identification through Racial Socialization at a Historically White Institution

This article examines Black undergraduates' racial community self-discovery at a Historically White Institution (HWI), focusing on the transition from non-identification to identification with the Black community. Challenging the assumption that racially minoritized individuals are invariably socialized within their racial community, this study distinguishes community orientation from racial identity to clarify diverse experiences within the Black community. Considering varied socialization informs strategic interventions to engage Black students. The article highlights Black students entering college without Black community identification, explores Black student socialization through cultural capital and Community Cultural Wealth theories using ethnographic examples, and introduces "hubs of cultural socialization." Interview data from Black undergraduates and a faculty member illustrate how students developed Black community identification during college. This work informs recommendations for Black students and HWIs to facilitate access to desired Black community socialization.

Presenter(s): Jamaal Muwwakkil

Cultural Border Crossing:

Developing a Sustainable Educational Curricula for the African Diaspora Our research posits that all black youth and young adults in the African Diaspora acquire the knowledge and skills needed to promote sustainable development in their respective communities; however, we believe that there is a historical disconnect, or epistemological dissonance on how continental Africans, Afro-Caribbean, and African-Americans (black people) experience the legacy of colonization. Research supports that science and art heal and transform marginalized communities and those affected by traumatic experiences. Using data collected from our qualitative study, our work endeavors to 1) repair historical injustices among black people of the African Diaspora, 2) improve the appreciation

of cultural diversity within the African Diaspora by gaining mutual respect for black communities and their struggles due to colonization, and 3) increase the awareness from an ethic perspective, the contributions of black communities across the world in creating sustainable environments, relationships and lifestyles.

3818 Social Difference, Disability, Critique: Perspectives from Critical Phenomenology

Start Date: 11/20/2025 04:15 PM **through** 11/20/2025 05:45 PM

Venue: Sheraton **Room:** Grand Ballroom A-C (5th fl)

Type: Oral Presentation Session

Social Difference, Disability, Critique: Perspectives from Critical Phenomenology

"Social difference" is a key term in anthropology's repertoire, a focal point of attention for the discipline. Anthropology has offered a range of critical perspectives that challenge essentializing or dehumanizing depictions of human variation. This panel considers what critical phenomenology offers to an investigation of social difference, with special attention to the topic of disability. Ginsburg and Rapp (2013, 2020, 2024), have proposed that we consider disability as an axis of human difference which is as fundamental as other key categories in anthropology, a universal feature of all human societies (Durban 2021, Kasnitz 2020). Recent scholarship in critical phenomenology has engaged with the rich tradition of critical disability studies (Reynolds and Weiss 2024). What might be learned about critique, and about social difference, by bringing these scholarly traditions into further conversation and focusing attention on body/mind difference?

Critical disability studies foreground the social, cultural, material, structural, and political dimensions of disability, emphasizing that disability is not merely an individual or medical issue, but a phenomenon shaped, defined, and lived within a specific context. A central aim in this field is to examine ableist assumptions embedded in societal norms and institutions. Critique is not limited to an investigation of social oppression, however. It also encompasses an exploration of the creative potential that can arise with "misfitting" (Garland-Thomson 2011, 2024) and "living with difference" (Rutherford 2020). This has provided productive ways of articulating social difference that are radical and generative.

Phenomenology, as a western philosophical tradition, has always been critical, offering methods and concepts for disturbing and disorienting common sense perceptual experience. The newly emerging and multi-disciplinary field of critical phenomenology – sometimes called political phenomenology (Alcoff 2005; Jenkins and Csordas 2020) -- furthers this critical impulse by focusing on social difference. This field of scholarship complicates the concept of "transcendentals," or universal features of perception by foregrounding "quasi-transcendentals" (Guenther, 2021). Quasi-

transcendentals, while often presumed to be universal in a given society, shape and normalize certain ways of perceiving, thinking, and behaving, while marginalizing or pathologizing others. Race, gender and disability are categories that have historically often attained the status of quasi-transcendentals (Mattingly 2024). Crucially, critical phenomenology also explores how lived experience may exceed and disturb normative social orders and categories of social difference. In this way, critique becomes linked to an investigation of potentiality (Throop 2018, Dyring 2024, Mattingly 2024, 2025, Zigon 2024, Aulino).

Presentation(s): Phenomenological Critique in Anthropology and Philosophy

Edmund Husserl intended phenomenology to be a "science of true beginnings." Every time a scholar begins thinking phenomenologically it is a true beginning, not a "reinvention of the wheel" but the inauguration of a fresh perspective on human reality. If all phenomenology entails critique insofar as it discloses the taken for granted and brackets presuppositions, then the embrace of "critique" marks a new beginning in the method itself insofar as one can show that there is something new in moving from phenomenological description to phenomenological critique. In this context, my presentation has two goals. First is to draw attention to the recent parallel developments of critical anthropology and political phenomenology. These developments suggest that the true challenge for phenomenological critique is not reconciling first and third person perspectives, but to persevere in maintaining the first person perspective – that of immediacy in the lifeworld – even when addressing phenomena that appear more distant spatiotemporally and conceptually. The second goal of the presentation is to present examples from my own work on how the lived experience of two kinds of social difference can constitute the basis for phenomenological critique: that of political asylum seekers and that of demonically possessed subjects of Catholic exorcism.

Presenter(s): Thomas Csordas

The Threat of the “No Man’s Land”: A Critical Exploration of Autism, Family life, Coming of age

In this paper, I explore how families with autistic adolescents in Denmark experience and respond to the transition to adulthood. Drawing on ethnographic fieldwork with eight families, I illustrate

how coming of age entails navigating uncertain and nonlinear paths, as typical, normatively laden trajectories may not be accessible. Through the case of Leo and his family, I show how this transition demands ongoing reimagining and searching for belonging and possibilities for becoming otherwise in a world shaped by the "quasi-transcendental" (Guenther, 2021) expectations of neurotypicality and chrononormativity, and where experiences of misfitting, (Garland-Thomson, 2011) and social difference are rarely a question of chance. Engaging with perspectives from disability studies and critical phenomenology—particularly the notion of dwelling, (Zigon, 2014) I ask how coming of age on the spectrum might deepen our understanding of what it means to dwell or to search for dwelling when there is no simple way of doing so. Ultimately, I argue that families like Leo's face not only practical and bureaucratic obstacles but also profound existential challenges. They face what I call an intensified dwelling problem of reimagining and searching for ways to feel at home in the world.

Presenter(s): Anne Ramsboel

Decentering Phenomenology: Critical Experience and the Exploration of Interworlds

This talk outlines some methodological motifs of a critical phenomenology of neurodiverse world-constitution.

Drawing on Throop (ethnographic epoché) and Carel (Illness as epoché), I argue that critical phenomenology needs a decentered experiential vantage point in order to unsettle ingrained "perceptual beliefs" and open registers of shared experience that are constitutively distributed between those who inhabit a given field. Where some critical phenomenologists look to an "archive" (Guenther 2021), it is the excesses of experience itself that provide the critical decentralization in ethnographic critical phenomenology (Mattingly 2019).

Next, I analyze the shared, yet differentiated experience of life with dementia. Building on Shabot's (2022) description of the epoché-like effect of the experience of dementia, I follow Murphy's (2024) description of the "caring reduction" that exposes the relational, quasi-transcendental structures of a community of care capable of sustaining an "interworld" shared between people with dementia and neurotypical caregivers. Finally, I flesh out an "anarchaeological reduction" (Dyring 2022, 2024) that traces the generative dynamics of interworlds back to the anarchic stirrings that perpetually unsettle an interworld and the differentiated, yet entangled responses to these stirrings of people with dementia and caregivers, which perpetuate and give form to these metastable interworlds (Dyring and Grøn 2022).

Presenter(s): Rasmus Dyring

Surprise and the Singular Plural: A Disability World as Universe in Expansion

What does it mean to inhabit (and invent) a plural we across significant bodily difference and what does the event of surprise have to do with it? In asking this question, I turn to recent work in both critical disability studies and phenomenology. Disability, as a topic for consideration, has burst upon the anthropological scene in generative, paradigm shifting ways (Durban 2021; Ginsburg and

Rapp 2020, 2024; Kasnitz 2020; Reno et al. 2021). "Disability worlds" (Ginsburg and Rapp 2024) is a fruitful cultural imaginary for thinking about the pluralism of community. I investigate it phenomenologically as a "we-subjectivity" beyond sameness, a "singular plural" (Nancy 2000). Drawing upon Nancy's notion of the "event of surprise" that yields a "universe in expansion," I explore the shock of parents who witness the glee of their severely disabled nine-year-old son fly down a ski slope in an adapted chair, laughing for the first time. Their surprise generates a disorientation that calls some of their own normative assumptions about disability into question and precipitates deep shifts in family and community relations. What emerges is an increasingly experimental and pluralist disability world, a universe in expansion.

Presenter(s): Cheryl Mattingly

On Not Being Surprised

In this paper, I examine a form of everyday responsivity to recurrently expected forms of injustice, ethical breach, or personal failing, that are often categorized as events that are ...not surprising. Not surprising...and yet, in their recurrent and seemingly unending repetition such happenings are somehow still layered with an element of surprise all the same. The experience of surprise that arises in the midst of being not surprised is, I argue, a form of critical consciousness that is distinct from false consciousness, hegemony, or bad faith (even in its collective formulations). It is something quite different that requires careful phenomenological analysis. The ways that sedimented habitual orientations to the world can still yet be surprising in their seamless, lock and step, ideal typical enactments deserve both theoretical and empirical attention. The critical work this form of not-surprised/surprised does is, I argue, significant for holding open possibilities for becoming otherwise even in the midst of the most routine and despairingly predictable of engagements.

Presentation(s): "We Have to Be Our Neighbor's Keeper": Examining Barriers and Facilitators to HIV Healthcare in Rural North Florida

High rates of new HIV infections in rural Southern counties have raised concerns for public health officials for a few years now. Several states and counties have been labeled as a priority by the Centers for Disease Control for higher HIV prevalence. However, some critical areas are being overshadowed in favor of other locales in the same state. For example, despite multiple counties in Florida's Big Bend region – including Gadsden, Jefferson, Madison, and Taylor - reporting HIV rates comparable to those in major metropolitan areas like Miami-Dade, these rural counties have not been included in the CDC's priority list. This study examines the factors contributing to HIV testing disparities and risk behaviors in eight rural counties in the Big Bend region.

Using a two-phase approach, this thesis first analyzes HIV testing rates and self-reported risk behaviors using the Behavioral Risk Factor Surveillance System (BRFSS) data. The second phase involves qualitative interviews with HIV healthcare professionals to examine beliefs, attitudes, and opinions about the barriers and facilitators to HIV-related care in rural Florida.

The key findings suggest that non-Hispanic Whites, women, and persons aged 65 and older are associated with lower testing rates, while non-Hispanic Whites, males, and persons between the ages of 25 and 34 were more likely to engage in HIV-related risk behaviors. Additionally, qualitative findings indicate that social factors such as stigma, misinformation, lack of HIV health literacy, and issues with compliance from HIV patients persist in rural communities, possibly contributing to increased infection rates of HIV in these areas.

Presenter(s): Merrin Goldstein

Control and Resistance: HIV Treatment “Failure” as Sociopolitical Resistance in Kampala, Uganda

Recent HIV scholarship on Uganda has demonstrated both the great strides the country has made and persistent gaps in the response. What this public "success story" masks is that many, particularly low-income, urban informal settlement resident young men, are failing on HIV treatment and dying at higher rates when compared to other populations (women, girls, older men) living with HIV.

Based on long-term ethnographic research in Kampala, Uganda, we will explore the wider context of HIV/AIDS amongst young men in urban informal settlements including the wider political-economic developments in the country that underpin the social determinants of health. Young urban-resident men (who are perceived to be affiliated more with the opposition political parties) have become a lightning rod of sort, in a country that increasingly controls bodies through policies that may be perceived to be repressive by young people. In short, young men's bodies have socio-political meanings that underpin their experiences of and capacities to seek health and wellbeing broadly, and HIV treatment specifically.

Using a concept of "resistance," (which has multiple meanings in the context of HIV), we hypothesize that men's lack of treatment adherence might reflect a kind of sociopolitical resistance in circumstances that severely limit other forms of expression. This has implications for how we treat HIV adherence in public health practice as a "rational" endeavor.

Ghosts in the Ground: Parkinson's Disease and the Geography of Chemical Life

In certain regions of the United States, researchers have identified unusually high rates of Parkinson's disease-clusters so consistent they have been described as a "Parkinson's Belt." This flash talk explores how these patterns can be read as hauntings: ghostly imprints of toxic pasts that shape why some regions face higher Parkinson's risk today, forged through long histories of industrial and agricultural exposure. Parkinson's disease invites broader attention to the chemically saturated conditions of contemporary life, where chronic exposure is diffuse, often invisible, and unequally experienced. In this context, public health discourse increasingly emphasizes the interplay between genetic susceptibility and environmental toxins such as solvents and pesticides. Beyond a scientific concern, it is a social and political one-one that turns on how evidence clusters, how harm becomes legible (or not), and how illness maps onto specific landscapes and communities.

Presenter(s): Christopher Morris

Haunted by Risk: Queer Grief, Biomedical Promise, and the Ghosts of HIV Prevention

This paper traces the spectral politics of risk, responsibility, and remembrance in the era of biomedical HIV prevention, centering on the queer affective life of pre-exposure prophylaxis (PrEP). Drawing on ethnographic research with men who have sex with men (MSM) in Los Angeles, it explores how the uptake-and refusal-of PrEP is haunted by grief: for lovers lost to AIDS, for ways of loving foreclosed by moral panic, and for the psychic toll of being constituted as a subject of risk. Through attention to clinical encounters, peer education sessions, and intimate narratives of condomless sex on PrEP, this paper shows how MSM are compelled to navigate a landscape thick with ghosts: the enduring moral weight of condom-based prevention, the racialized logics of risk compensation, and the biopolitical afterlives of the 1980s epidemic. These ghosts shape contemporary forms of sexual subjectivity and public health governance alike. I argue that PrEP functions not only as a pharmaceutical technology but as a site where historical trauma is metabolized, negotiated, and at times disavowed. In doing so, I invite us to consider how grief and its ghostly presences animate the everyday labor of living with-and through-the promises and failures of HIV prevention in the present.

Presenter(s): William Schlesinger

Moral possibilities of repair and becoming through Lyme disease advocacy

Research reveals the enduring harms of contested illness debates on the lives of those living with illnesses defined by uncertainty, as well as the foundational role of patient advocates in shaping change around illness knowledge and systems of care. In this paper, I draw from my research on the subjectivities and knowledge-shaping practices of Lyme disease advocates and describe the ways advocates mediate past experiences of suffering and adopt moral positions regarding their

commitments to advocacy work. For many Lyme disease advocates, the disorder wrought by ongoing dissension around the illness is given coherence and meaning through moral commitments to advocacy roles. While the effects of persistent Lyme disease can be life altering, I argue that the work of advocacy can augment and reconfigure the rupture that follows living with contested illness while offering reparative and transformative potential.

Presenter(s): Carly Thompson-Campitor

Skimming the Edge of the Painful Body: An Ethnographic Exploration of the Contested Disease Category of Fibromyalgia in India

Fibromyalgia has been described as a paradigmatic contested disease category and illness (Barker, 2005; 2011). While the medico-scientific communities of doctors, physical therapists, and MHPs (mental health professionals), as well as welfare institutions providing health insurance and disability benefits in the Global North, recognise fibromyalgia as a disabling health condition, patients in India continue to struggle for (medical and social) validation of their symptoms and everyday life challenges. It is mostly rheumatologists and pain specialists who provide the testing and diagnosis for fibromyalgia, the patients often find themselves in the clinics of general physicians, neurologists, psychiatrists, and orthopaedic physicians owing to their experiences of full-body generalised pain, fatigue, psychological and cognitive challenges, hypersensitivity to environmental stimuli, and fluctuating flares of ability and disability. Amongst these medical professionals, there exists a lack of consensus concerning clinical guidelines for diagnosis and treatment and fibromyalgia's status as a disease category; which, compounded by stigmatised attitudes of apathy, disgust and neglect towards patients of chronic pain, pushes the community of patients to the margins of biomedical care regimens. While patients often wait and struggle for several years for a formal recognition of their symptoms in the form of a diagnosis, it does not spell the end of their struggles, as their pain proves to be resistant to several forms of pharmaceutical and non-pharmaceutical interventions. This paper draws on ethnographic research conducted in New Delhi over 12 months excavating the embodied and contested sociality of fibromyalgia in India. Based on evidence collected in collaboration with patients, patient collectives and support groups, biomedical experts, and health advocates, it is argued, that the case of fibromyalgia exemplifies the limits of biomedical expertise. In doing so, it asks: What does it mean to be diagnosed, and to live with fibromyalgia in India? How are the various competing strains of expertise mobilised around fibromyalgia? What does a patchworked ecology of care galvanised around a contested disease category look like? What are the ways in which syndromic pain diseases complicate the therapeutic temporalities of an ongoing past and an uncertain future? Furthermore, the paper asserts, that while biomedicine's therapeutic limits are laid bare by fibromyalgic bodies, its authority over the medical, social, and cultural lives of the patients continues to be retained and reified via legal, educational, professional, interpersonal and affective encounters.

Presenter(s): Jaya Mathur

“Seedlings”: HIV, Neurodevelopment, and Vulnerability in Urban Zambia

In the past twenty years, due to prevention of mother-to-child transmission of HIV, perinatal HIV infection has declined sharply. However, research suggests that children exposed to HIV are still vulnerable to delayed development, including language acquisition. How do we ensure that such children not only survive, but thrive?

This paper examines urban vulnerability in the context of children's language learning among families living with HIV. It is based on two years of participant-observation on an early childhood development intervention with HIV+ mothers and their HIV- children in peri-urban Lusaka, Zambia. Using interviews with implementers and participants in the intervention, it explores local meanings of vulnerability to neurodevelopmental delays from multiple perspectives. I assert that traditional epidemiological models of causation in neurodevelopment research can obscure the complexity of risk to children's development in peri-urban settlements; by using vulnerability as a biocultural framework in the context of language acquisition amongst children exposed to HIV, we can understand how the interplay of social structures, embedded in inequities of resources and power, shape everyday risks for different families in Zambia.

Presentation(s): "Now I Feel All That Pain": The Embodiment of Migrant Care Work and Debility in Canada

This flash presentation engages Jasbir Puar's (2017) concept of the "biopolitics of debilitation" to explore how care work performed by temporary migrant workers-often racialized women-in Canada is not only precarious but also debilitating, physically wearing, and pain-inducing. Canadian scholarship has shed light on migrant workers' constrained legal status, uncertain pathways to permanence, and second-class citizenship shaped by dwindling access to permanent residence (Pratt 2012; Shaw 2025; Stasiulis and Bakan 2005; Tungohan 2023; Walia 2010). Yet there has been less attention paid to the embodied, affective, and health-related dimensions of this labour, including its material and sensory effects on the body. In speaking about the difficult nature of care work alongside precarious immigration status and long-term family separation, care workers reflect on broken bones, back pain, anemia, sleep deprivation, weight loss, and heartache. The embodied

toll of care work and its debilitating effects are especially relevant in Canada's post-Live-in Caregiver Program era, as newer care work streams continue to expose workers to difficult and degrading conditions. Drawing on community-based research with migrant care workers in British Columbia, I examine how narratives of pain, fatigue, disease, and bodily exhaustion point to debilitation as a lived, embodied experience of precarity. I also reflect on how certain labour and immigration programs are upheld as symbols of a caring, inclusive Canada, while the individuals within them are rendered invisible-and their injuries and wear treated as acceptable collateral within a racialized care economy.

Educational and Career Choice for Refugee Students Across Cultures

Refugee-hub cities such as Utica, NY have been welcoming refugees into their communities since the late 1970s. In Utica, the refugee population makes up one-fourth of the city's population and the city's character has been changed visibly and in countless other ways. The refugees are credited for saving the city's economic and cultural life after massive population decline due to industry changes.

However, refugees' work experiences and perspectives on working in the American system are not well known across cultures. This study's goal is the development of best practices for refugee community members through understanding cultural perspectives on job training, employment, and careers. In order to increase STEAM participation by refugee families, it is important to understand their experiences and perspectives, and the contexts with which they approach the worlds of school and work.

Using grounded theory and visual anthropology approaches, we are conducting interviews with refugee family members about their experiences and perspectives on STEAM education, job training, early jobs in any field, their knowledge of the requirements to join STEAM fields, and their perceptions of obstacles to entry. We are reviewing family photographs from before and after resettlement to further understand context. All family members who influence family decisions about the future are invited to participate. Coming from war-torn countries including Burma, Sudan, and Bhutan, and having lived in refugee camps for years, the contextual and cultural backgrounds of the participants remain relevant to their willingness to enter STEAM fields, even many years after resettlement. This project addresses the process of culture change and the resilience of communities as they adapt to their new lives and contribute to their new communities.

Find Yourself in Tulum: Gig Labor, Tourism Development, & Soul-Searching in the Mexican Caribbean.

This research explores the lives of migrant freelance gig-workers who provide services in the informal economy of spiritual wellbeing and party entertainment offerings, which are in demand by

tourist consumers in Tulum, Quintana Roo, Mexico. The gig workers who provide these services are domestic migrants from other states in Mexico and foreign migrants from Argentina, who have established a robust diaspora in Tulum. This project confronts the paradox inherent in spiritual tourism: the consumption of products marketed as aiding in emotional and physical wellbeing which necessitates the labor exploitation, and compromises the wellbeing, of the freelance gig-workers who uphold this informal economy so vital to the broader tourism economy of Tulum. It addresses the ways migrant freelance gig-workers navigate the specific precarities of their work-lives by living in shared rooms in hostels to save rent costs or by volunteering their labor in exchange for room and board. Additionally, it illustrates the network of mutual aid among freelance gig workers established by the Argentine diaspora. Through in-depth ethnographic methods of participant observation, structured and semi-structured interviews, and life-histories, this research highlights the informal economy that undergirds tourism in Tulum, the lives of the workers who uphold this vital aspect of tourism, and how this class of workers further complicates the racial hierarchies already present in Tulum's tourism labor force. Finally, it explores potential policy recommendations that seek to mitigate the stresses that hinder worker wellbeing, specifically challenges in securing affordable housing and ensuring they receive full pay for services provided.
